One of the main pre-occupations of the past year has naturally been the question of investment policy. We have suffered a depreciation on the year in respect of securities realised or re-valued of £179,733, which represents about 3½ per cent. on our mean fund. Having regard to the fact that we have been passing through one of the greatest slumps in economic history, I think that even the critics of our well-known investment policy will agree that we have no occasion for serious disappointment. The indexes of the prices of securities, now currently compiled by various authorities, including the Institute of Actuaries, show conclusively that we have been a great deal more successful than we should have been with an average sample of the leading securities similarly distributed between the different categories. Nor has anything occurred, even in the present exceptional circumstances, to upset the principles of our policy over the period during which it has been operating. For after writing off the whole of the depreciation of 1929 and 1930, we have earned over the last ten years an average annual return on our assets—from interest and capital appreciation together—of nearly 6 per cent. free of income tax.

It will be seen on reference to our balance sheet that our holdings of ordinary shares stand at £254,000 less than a year ago, and there has been a further reduction since the close of the year; whilst at the same time our holdings of British Government securities have increased by £220,000. This movement reflects an opinion on the part of your board that it would not be safe to assume that the end of the slump is yet in sight—a matter to which I will refer in a few minutes. Our view is that we are still in the phase of the investment cycle at which it is prudent to exercise extreme caution, and we have repeatedly overhauled our list of securities from this point of view, retaining only those where we feel the price fully discounts the prospects. We have taken particular precautions to avoid risk on Foreign Government securities. It may be interesting to mention that we have now reduced our holding of European Government securities to very small dimensions, and that for many years past we have held no securities of the Australian Government or States. It is a striking testimony to the society's strength that, in spite of a period of two years of unprecedented difficulties, we start the year 1931 with a carry-forward of over £200,000, after writing off all our depreciation, and declaring not only the usual high rate of annual bonus, but also the special centenary bonus of £162,000. In addition, although the society's basis of valuation is that which is conventionally known as the "Om 3 per cent. net premium valuation," in reality the reserves include in a number of ways a considerable sum in excess of what is strictly required to satisfy the conditions of that basis, which is in itself extremely strong.

Before proceeding to other matters I would like to refer briefly to certain developments in relation to our new business which have

taken place during the year. The society is now prepared, within certain limits, to issue policies without the usual medical examination. This has been done for some years by many of the life offices and we thought the time had come when your society should offer this facility to those who are eligible. We have also during the year brought out a new form of policy—the Reinforced Income Policy—an extension of the new series of low-premium policies which I referred to in my speech in 1929. From our short experience of this new scheme I can say that it appears to supply a want. Most people can make provision for their dependents in the event of untimely death only by means of life assurance, but viewed in the light of the income produced by the capital sum assured the provision is generally quite inadequate. This inadequacy could hardly be avoided under an ordinary policy, as the cost of providing a sufficient capital sum was in many cases prohibitive. This difficulty has now been overcome. Under the Reinforced Income policy a substantial income on death is provided at a low cost, during the years when it will be most needed. For in addition to the payment of the capital sum assured with bonuses immediately on death, there is also payable an income of 12 per cent. of the sum assured until the expiry of a period of 20 years from the date of the policy. For example, assuming that the capital sum is invested at 5 per cent., a man of 25 for an annual premium of £21 3s. 4d. can, in the event of his premature death, secure for his dependents an annual income of £170 for the period stated, whilst they will still retain the capital sum of £1,000 at the end of that period. This new policy, therefore, carries us a considerable step forward in fulfilling the main function of life assurance—the adequate financial protection of dependents in the event of the premature death of the breadwinner.

Turning from our own affairs to those of the world at large, I am sorry that my gloomy prognostications of a year ago have been more than fulfilled. I then forecast that the storm centres would be found, not in Great Britain or in the United States, but in the great producers of raw materials overseas, and that we had to watch with anxiety Australia, South America, Asia and Central Europe. I added that the fall of wholesale prices had "already reached the dimensions of a first-class disaster," and that "it was not by any means certain that a further movement in the same direction was going to be avoided." These warnings, which were widely commented on at the time, have proved to be a serious understatement. Nor do I see much reason for being cheerful about the immediate future. In particular, I would emphasise that the mere lapse of a few more months of time will not by itself bring about a lasting recovery. For one thing, on the basis of our experience of past disturbances, relatively little time has yet passed by. But, apart from this, the recovery will only come, in my opinion, after the emergence of some definite new factor.

SUMMARY OF THE POSITION.

The worst of it is, moreover, that, whilst we can still do something to help ourselves out of the slough of inactivity and negative-mindedness into which we have fallen—I made, a week or two ago, some rash confidences about this to the ether, which staggered, I am told, under the impact—the main root of the problem is international in character. If I were asked to sum up briefly the essence of the present position, I should say that it is to be found in the behaviour of the creditor countries in pursuing a course of action which is calculated to bankrupt the debtor countries. We have always known that the whole course of international trade and finance depends on a steady flow of lending, equal to the amount of their surplus resources, from the creditor countries as a whole to the debtor countries as a whole. If this flow is interrupted, we know that there is no means whatever by which the whole body of debtor countries, unable either to sell their goods or to borrow, can possibly pay in gold the amount of their annual indebtedness. The contraction of credit and purchasing power attendant on their efforts to do so, in combination with the tremendous falling off in the production of capital goods in the United States and a consequent reduction in their demand for goods from the rest of the world, was bound to produce the catastrophic fall of prices which has actually occurred. Besides, a vicious circle is set up. For the fall of prices destroys the credit of the debtor countries and it becomes increasingly unsafe, from the point of view of the individual investor, to lend to them.

It is, therefore, becoming increasingly important that some sort of joint action should be taken to prevent the further deterioration of the credit of the debtor countries. Or alternatively the creditor countries must find an outlet in home investment—which, failing an early revival in general confidence, might require a very great fall in the current rate of interest—for the savings which they are no longer lending to debtor countries; for this, also, would bring considerable relief to the debtor countries by increasing the demand for their products at an improved price.

The report and accounts were unanimously adopted.

WILLIAMS DEACON'S BANK, LIMITED.

RESULTS OF A DIFFICULT YEAR'S TRADE.

CONDITIONS IN THE COTTON INDUSTRY.

WHOLESALE AND RETAIL PRICES.

MR GERARD POWYS DEWHURST'S SURVEY OF CONDITIONS.

The annual meeting of the shareholders of Williams Deacon's Bank, Ltd., was held on Thursday, January 29th, in the board-room, Mosley Street, Manchester, Mr Gerard Powys Dewhurst (the chairman) presiding.

The secretary (Mr R. Thorburn) read the notice convening the meeting, and the auditors' report.

The Chairman, in moving the adoption of the directors' report and statement of accounts, said:—

Gentlemen, I have to apologise in the first instance for certain unavoidable absences on the part of members of the board. Sir Robert Williams and Mr J. F. W. Deacon have both been unable to come to-day on account of illness, and Sir Alan Sykes is abroad at the moment.

LOSSES IN THE DIRECTORATE.

You will have seen from the report that we have to deplore the death during the year of Mr Robert Leader, who was a director of the Sheffield and Rotherham Banking Company at the time of their amalgamation with this bank, and since then has been a member of our Sheffield advisory board. His services to the bank were greatly appreciated alike by this board and his colleagues, and he will be much missed. Then only last week, since our report was issued, we have news of the death of our old friend and director, William Aldam Milner. For 23 years Mr Milner has sat on this board as one of our Sheffield representatives, and in spite of continued ill-health in recent years, he was most conscientious in the performance of his duties, and we shall all feel his loss, both as a colleague and a friend.

BALANCE SHEET ITEMS.

And now, with your permission, taking the report as read, I will turn to the figures contained in the balance sheet.

Our capital, at £1,875,000, and reserve fund, at £1,000,000, show no change, whilst our deposits, at £32,000,000, are slightly higher by some £200,000. On the other hand, our liabilities for acceptances and endorsements on our customers' account, taken together, are lower by some £280,000, lessened trade demand for this form of accommodation, coupled with the fall in prices, having a marked effect in this direction.

Turning to the other side of the sheet, our cash, at £3,786,000, is lower than a year ago by some £100,000, and at this figure represents roughly 11·8 per cent. of our deposits.

Balances with other banks show little change, but compared with a year ago we have some £900,000 less short money on the market. Bills discounted show an increase of £118,000—our holding in Treasury Bills more than accounting for the larger figure.

We have made considerable purchases of British Government securities during the year, our present holding of over £7,000,000 showing the substantial increase of £1,900,000. This figure should be taken in conjunction with the decrease of a million and a quarter in our advances shown below, which, in common with other banks, is an outstanding feature of our balance sheet. Other investments at £606,000 show an increase on last year's totals of £345,000. Our bank premises account shows little change on the year.

Taking the balance sheet as a whole, and with due regard to the difficulties of the year, it is satisfactory to find that the figures disclose such a liquid position.

PROFIT AND LOSS ACCOUNT.

Dealing now with the figures of profit and loss, our nett profit, after making the usual provisions, appears at a total of £278,626, as compared with £297,900, showing a decrease of £19,274. This profit, with the balance of £31,225 brought forward from last year, gives us a total of £309,852 now to be dealt with.

After transferring £50,000 to contingencies account, we are enabled to pay a dividend at the rate of 12½ per cent. on both our "A" and "B" shares, which was the rate paid in the second half of 1929, and carry forward to next year's account £25,477, as against £31,225 brought in.

ADVERSE FACTORS.

In view of the general trading conditions in the country, and particularly of those prevailing in the heavy industries, the reduction of profit earned by the bank is not difficult to appreciate, and, in addition, lower money rates in the latter part of the year have had a marked effect in reduced bank earnings. The clearing-house returns also provide a further indication of the diminished turnover in the business of the country, though here it is gratifying to note that our proportion of both the London and Manchester clearing shows a satisfactory increase; in fact, apart from the special difficulties of the year, the general business of the bank gives evidence of steady progress.

ARRANGEMENTS WITH ROYAL BANK OF SCOTLAND.

And now I come to a matter of special domestic interest to the bank, namely, the arrangements entered into last summer, whereby this bank became associated with the Royal Bank of Scotland, through the acceptance by our shareholders of Royal Bank of Scotland stock in exchange for their shareholding interest in Williams Deacon's Bank.

For a considerable time now, the possibility of adopting such a policy had been in the minds of the board, and our attitude may be summed up in the reply I gave to a shareholder's question on the subject of amalgamation a year ago, when I said we should consider most carefully any such proposal and would only put it forward if we were satisfied it was for the good of the bank, their shareholders and customers.

Well, gentlemen, in our opinion the arrangement with the Royal Bank of Scotland interprets most literally those provisions—the identity of this bank is preserved, the interests of our shareholders are safeguarded, the goodwill of our customers is maintained and, by the interchange of directors, this board will be materially strengthened by the benefit of their counsel and experience. I am glad to be able to report that our shareholders by their acceptance of this offer have so completely endorsed our action.

COTTON TRADE.

As regards the year under review, I am afraid the position of the cotton trade in Lancashire has gone steadily worse. With a reduction of nearly 40 per cent. in the values of the raw material, holders of stocks of yarn and cloth have had to face a very heavy depreciation, and with largely diminished exports, especially to the East; the running of machinery has been still further curtailed, with its consequent effect on production costs, and as a culmination of these adverse factors comes the news of a general stoppage of work in the weaving section of the trade. For some time now experiments have been proceeding at Burnley with the idea of reducing costs of production, by increasing the number of looms to be worked by a weaver, and from this point of view have proved successful. Obviously this necessitated a new scale of wages, but powers to negotiate on this point have been refused to the operatives' representatives and the present deadlock has ensued.

There is no need for me to stress the gravity of the situation, or its effect both on the industry and allied trades, but it does appear deplorable that this conflict of views on such a vital matter concerning technical efficiency and cost of production could not be settled by negotiation.

TRADE WITH INDIA.

Trade in piece goods between this country and India has been practically at a standstill for the last six months owing to the activities there of the Congress party, who by intimidation or personal violence have enforced the boycott of British goods on all native dealers in the principal markets; in fact, this admittedly revolutionary party can fairly claim to have effectually impeded, for political purposes, the normal flow of trade between the two countries.

In view of these activities and the vast importance of our mutual trade, one would have appreciated some more definite pronouncement at the Round Table Conference in London as to future safeguards.

Last March the import duty into India on all cotton piece goods was raised from 11 per cent. to 15 per cent., with an additional protective duty of 5 per cent. for three years on non-British goods; but a later amendment withdrew this discrimination as regards plain grey goods, while maintaining the preference of 5 per cent. as regards bleached, printed and coloured goods of British make. The political situation, however, has hardly permitted any definite conclusion as to the effect of these duties.

CONDITIONS IN CHINA.

Evidence appears of a certain improvement in the internal conditions prevailing in China, but unfortunately the continued fall in the price of silver to a record low level has accentuated Exchange difficulties, and exports to that market from this country have been still further handicapped. Bearing in mind that silver is the standard of value for millions of our customers in Eastern markets, it would seem that our monetary policy in this direction during the last ten years, as exemplified in the debasement of our silver coinage and the placing of heavy duties on silver imported into India, needs fresh consideration and possibly revision.

FALL IN WHOLESALE COMMODITY PRICES.

Taking a general view of the trade of the country, the outstanding feature is the steady and continued fall throughout the year in wholesale prices of all the principal commodities to a point approximating to and in some cases lower than the prices of 1913. Various causes have contributed to this universal decline in values, but over-production in the main necessities of life appears to have played the principal part, and this feature has been accentuated by the fact that retail prices generally to the consumer have only responded to a small extent to the reduction in wholesale values. In other words, especially as regards food and clothing, nothing like a proportionate benefit has been passed on to the consumer, nor has his purchasing power been increased by a corresponding reduction in his cost of living. Then again, whilst various efforts have been made to bolster up commodities at artificial prices, the invariable failure of these efforts has merely made the position worse.

It is also generally agreed that the unequal distribution of gold has been an important factor in depressing the price of commodities, both France and the United States of America having accumulated and immobilised large stocks of gold drawn from the Central Bank reserves of other countries.

The effect of this world-wide slump in values has fallen on this country, where industry is already taxed to its limit, with exceptional severity, and the trade returns for both imports and exports show serious declines, whilst the figures of unemployment have mounted in an alarming fashion.

EXCESSIVE GOVERNMENT EXPENDITURE.

In the meantime, Parliament continues to propose measures involving large fresh liabilities, quite regardless of whether the nation can afford it or is getting value for its expenditure. Surely, if the Geddes Committee fulfilled a useful function in the period immediately following the war, such a body, armed with plenary powers, is a vital necessity now, to insist on drastic economy in the conduct of national and municipal affairs. We have freely given our expert advice upon such matters to our Dominion friends, and might, with advantage to ourselves, adopt the principles we have recommended.

TRIBUTE TO STAFF.

In conclusion, I should like to convey to the executive and staff of the bank the best thanks of the board for their loyal and efficient services, and the keen appreciation they feel for the way in which the work of the bank has been conducted during the past year. We receive testimony from time to time from customers of the bank as to the quality of the services of its staff and, hardly less important, the manner in which they are rendered, and, as I feel on these occasions that I am not merely rendering an account to the shareholders of the bank but to all its customers, I hope I am right in saying that they would, as a body, be prepared to join in this expression of appreciation.

I have now pleasure in proposing "that the report and accounts now presented be received and approved, and be entered on the minutes of this meeting."

The Deputy Chairman, Mr B. G. Wood, seconded the motion, which was put to the meeting and carried unanimously.

Resolutions were also carried unanimously:—

Re-electing the retiring directors, Sir Alan J. Sykes and Mr George Hervey Wood.

Confirming the appointment as directors of Mr Herbert William Haldane, Mr Alexander Maitland, K.C., and Sir Alexander Kemp Wright, K.B.E., D.L.

Re-electing Messrs Ashworth Mosley and Company, chartered accountants, as auditors for 1931.

The meeting terminated with a vote of thanks to the Chairman for his conduct in the chair, to which the Chairman briefly responded.

METROPOLITAN TRUST COMPANY, LIMITED.

APPRECIATION OF INVESTMENTS.

MR ROBERT FLEMING ON CURRENT YEAR'S PROSPECTS.

The thirty-third ordinary general meeting of the Metropolitan Trust Company, Ltd., was held on the 27th instant, at the company's offices, Gresham House, 24 Old Broad Street, London, E.C.

Mr Robert Fleming (the chairman) presided.

The Secretary (Mr H. Carlisle) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, As you all know, the past year has been an anxious one for those dealing with international finance.

Over the whole world trade is stagnant. The great Republic of Brazil is contending with the after-effects of revolution; Peru the same; Cuba, with sugar selling at but a little over one cent per pound, is in the depths. Mexico still struggles with internal politics. In the Far East and South, India, China and Australia are depressed. At home, Lancashire and other almost equally important districts are in distress, while the Continent of Europe is far from happy.

REVENUE.

Amid such almost universal difficulties, we are able to present a report with little indication of the evil times through which we are passing. Our revenue of the past year, 24.80 per cent. on our ordinary stock, is fully equal to that of the previous year, which was a record one; while the market value of our holdings has fallen in comparison with most other like companies to a comparatively small extent. The depreciation in Stock Exchange values, compared with last year, is £310,000, leaving a surplus beyond our reserve and carry-forward of £415,000. So much for the present.

CURRENT YEAR'S PROSPECTS.

In the presence of such difficulties as beset the world we cannot be expected to speak with great confidence as to the future, but I think I am able to say that we do not expect our income to be so materially less than that of the present year as to endanger the payment of the 20 per cent. dividend. How much that falling off on revenue account may be will depend to some extent on the dividends we receive on our Argentine Railway ordinary stocks, which are, in present circumstances, a doubtful item. But, as our surplus revenue for the year, beyond the 20 per cent. dividend, is £23,268, a reduction in their dividends would not shake the position of the company much.

Other items of reduction might also occur in a year such as this—as Brazil, for example—though it is at present impossible to make any prediction under this heading. With regard to Brazil, I may mention that we have none of the bonds of the Federal Government of Brazil. With regard to the State, City, Railway, Tramway, Electric Light and Power, and other companies, many of which are under British management, we have so far had no default, but it is not to be expected that that huge country can come through such a time as the present without here and there some financial trouble.

THE FUTURE.

With regard to the immediate and more distant future, what can one say? I am very much at a loss, but, as the farmer said when asked if it was never going to stop raining, "It always has." So we hope that before long we may get through this stormy financial weather and be back again among smooth seas where losses are rarely recorded.

I now beg to move: "That the report and accounts, as presented, be and they are hereby received, approved and adopted, and that dividends of £2 5s. per cent., less income tax, on the preferred stock, making, with the interim dividend, £4 10s. per cent. for the year, and £13 per cent., less income tax, on the ordinary stock, making, with the interim dividend, £20 per cent. for the year, be and the same are hereby declared."

Mr Henry A. Vernet seconded the resolution, which was carried unanimously.

The retiring director, Mr H. A. Vernet, was re-elected; Messrs. Deloitte Plender Griffiths & Co. were reappointed auditors, and a hearty vote of thanks to the chairman and directors concluded the proceedings.

PROVINCIAL BANK OF IRELAND, LIMITED.

A VERY SATISFACTORY STATEMENT.

PROFITS INCREASED AND DIVIDEND MAINTAINED.

PROGRESS IN THE FREE STATE.

MR TROTTER'S ADDRESS.

The 106th annual general meeting of the shareholders of the Provincial Bank of Ireland, Limited, was held, on the 28th instant, at the office of the company, No. 8, Throgmorton Avenue, London, E.C., Mr Richard Durant Trotter (the Chairman) presiding.

The Secretary (Mr Francis S. Forde) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen, the report and statement of accounts have been in your hands for some days, and I trust you will be good enough as usual to take them as read. (Agreed.)

The statement we submit to you on this occasion, I venture to think, will be regarded as very satisfactory. You will have noticed that a great many of the banking institutions at this side have had to show considerably reduced profits, but fortunately our requirements do not call for the keeping of large sums in the money market, so that we are not at the same disadvantage as they are, which is especially noticeable having in view the very low rates ruling during the past half-year. We are in the position of being able not only to maintain our dividend at the rate of 14½ per cent., but to show somewhat increased profits. You will have observed that we deal on this occasion with net profits of £55,376, as against £52,964 in June last, and £50,794 this time twelve months ago.

DEPOSITS AND NOTE CIRCULATION.

Our deposits show a slight decrease on the total as at December, 1930, but this was to be expected, having in mind the calls made on the Irish public by the 4½ per cent. loan of £6,000,000 so successfully floated by the Free State Government in May last, and in a minor degree by the more recent and equally successful issue by the Agricultural Credit Corporation of a further £250,000 5 per cent. debenture stock.

Our note circulation, £848,650, shows a decrease compared with the figures at December last of £921,677, but this, you will remember, is owing to the redemption of our old issue, which continues in progress and follows on the new currency regulations of the Free State. You will observe the allocations we have made, and, with the £10,000 now added, our reserve fund stands at £660,000, being £120,000 in excess of the paid-up capital of the bank. Our advances show a comparatively small decrease from the figures of a year ago; but we have responded, I believe, to all legitimate demands for accommodation where, in our opinion, this could be done with reasonable safety.

The ratio of our liquid assets to liabilities stands at the high figure of about 63 per cent., which I am sure you will regard as indicating the bank to be in a sound position.

With the world-wide trade depression, which to some extent is reflected in the business in Northern Ireland, and to a lesser degree in the Free State, banking during the past year has not been without difficulty, and the continued fall in the values of securities has necessitated special watchfulness to see that proper margins were maintained. The long-hoped-for improvement in market prices has not yet come about, and it would be somewhat optimistic to say that any appreciable improvement is likely to be apparent in the near future, though it is hoped that at all events further depreciation may not occur. The fall in prices represents a huge depreciation in capital values, and it is singular that, to some extent at all events, the market value of securities appears to be regulated more by the particular dividend in prospect rather than the profits earned or by the sound position of the undertaking.

CONDITIONS IN IRISH FREE STATE.

Turning to the affairs of our own country, we are fully appreciative of the steady progress made by the Free State Government, and it is very heartening and indicative of sound and careful administration to find that the adverse balance against us shows a reduction over a period of twelve months to October last by the large figure of close on £4,000,000 on the figures of 1929. It is also gratifying to note that the figures of unemployment show a satisfactory decrease, and you will have observed that the various Free State issues have been maintained at appreciable premiums, which clearly indicates that investors have no apprehension as to the soundness of the securities.

I have referred previously to the successful issue of new stock by the Agricultural Credit Corporation to enable them to extend in suitable directions the admirable work they are carrying out for the benefit of the farmers generally.

The recently issued report of the Tariff Commission on Butter contains such a large amount of information on all aspects of the dairy trade that farmers in this line of business will be well advised to study the report carefully.

The cultivation of sugar beet has increased considerably and, according to the last return, now amounts to over 14,000 acres.

In regard to the harvest, reports seem to point to this as being, on the whole, favourable, though bad weather conditions in the autumn adversely affected matters to some degree, and some of the hay crop suffered.

Nevertheless, it is considered that prices generally are proving remunerative, and while the farmer may not have made large profits out of his labour for the year, I think it may be said he has not gone back, and this is a matter for congratulation, having regard to the world-wide depression in evidence at the present time.

While the prices of milk, butter, eggs and poultry at the fairs were lower than for the last quarter of the previous year, there was a general improvement in the prices of the cattle trade, and the number of store cattle and calves exported rose very considerably. In this connection you will have noted that the total exports from the Free State have now reached the high figure of £18,000,000.

NORTHERN IRELAND.

Turning to Northern Ireland, the past half-year has been a very difficult one for the linen trade, in view of the unsettled conditions generally, and more especially due to the dullness of trade in the United States. Generally speaking, however, it may be mentioned that inquiries for linen goods have been larger than might have been expected, but production has been wisely regulated to meet demands, and, as a consequence, stocks of yarn and cloth are low. It appears to be confidently expected, however, that at its present attractive price and durability, the demand for finished cloth will show improvement.

The outlook in the shipbuilding trade is not so hopeful for the current year, for, following a large increase in the tonnage output from the Belfast yards last year, orders to replace the work now being completed are not so far coming in.

Messrs. Harland and Wolff have again headed the list of shipbuilders throughout the world, and now have on hand the construction of the White Star Liner "Georgic," of 27,000 tons.

I have already briefly referred to the present world-wide depression, which unfortunately has continued so long. Generally speaking, it would seem that the trading community is afraid that prices of commodities, which have already fallen very considerably, may fall still lower, and therefore is unwilling to purchase beyond its immediate needs. There is thus no demand for commodities, owing to this lack of enterprise, and prices fall once more. Add to this the difficulty of bringing the costs of production into line with the new low level of prices, and it becomes evident that industry has a heavy task of reorganisation before it.

Our ancestors faced conditions which must have seemed to them just as difficult as those in which we now find ourselves, and I am convinced that we shall find that with returning confidence our trade will recover its former position in the world. We can only hope that this may soon materialise.

Referring again to our own position, I would wish to add that the present market value of our investments shows a very appreciable increase on the book cost as written down from time to time; while, in regard to bad and doubtful debts, we believe that we have fully provided for these.

TRIBUTE TO THE STAFF.

Before I sit down, gentlemen, I desire again to recognise the loyalty and fidelity of our staff, who have carried out their duties wholeheartedly, and on whose zeal the success we have achieved so largely depends. In this connection I wish to refer to the retirement of Mr Hume Robertson, which has been brought about by

the call of advancing years. We very much regret that this has to be, as Mr Robertson has proved a very efficient and capable official who never spared himself, and I may say he carries with him, after a service in the bank of fifty years, and as secretary of twenty-three years, our good wishes for his health and happiness in his retirement.

In his place we have appointed Mr Francis S. Forde, who was Chief Inspector of Branches in Ireland before coming to London as Assistant Secretary ten years ago.

I now beg to move: "That the report of the directors and statement of accounts as at December 31, 1930, already in the hands of the members, be adopted," and I will ask Sir William Goschen kindly to second this.

Hon. Sir William Henry Goschen, K.B.E.: I beg to second the resolution.

The Chairman: Gentlemen, if anybody has any questions they would like to ask before I put the motion, which has been proposed and seconded, I will be very glad to answer them.

No questions being asked, the resolution was put to the meeting and carried unanimously.

THE DIRECTORATE.

The Chairman: I now have to propose the re-election of the two directors going out by rotation. I beg to propose the re-election of Mr Robert John FitzGerald, who is very well known in the West of Ireland and over most of the Free State.

Mr H. S. H. Guinness: I have much pleasure in seconding that. The resolution was unanimously approved.

The Chairman: I now beg to move the re-election of Mr Alexander Brodrick Leslie-Melville, who has been a member of this board for many years, and is well known to all of you.

Mr R. A. Gradwell: I have pleasure in seconding the resolution. The resolution was passed unanimously.

Mr Charles S. Montefiore: Mr Chairman and gentlemen, I have very much pleasure in moving that Mr Stuart R. Cooper, F.C.A., and Mr G. Brock, F.C.A., be elected auditors for the ensuing year.

Mr Steward: I have much pleasure in seconding that. The motion was unanimously adopted.

VOTE OF THANKS.

Mr Waley: Gentlemen, before we separate I think we ought to move a vote of thanks to the Chairman and directors. It is refreshing to the shareholders of an Irish bank to know that what used to be called a distressful country is not suffering to the same extent as other countries from the world-wide depression, and knowing, as we all do, the great difficulties which banking directors have had to face during the year, I think we have every reason to congratulate ourselves on the report and balance sheet which you have been able to bring before us. I therefore have much pleasure in moving this vote of thanks.

Mr Charles S. Montefiore: I have very much pleasure in seconding that, and no remarks are needed from me, for I feel sure all the shareholders will re-echo the words of the proposer of this resolution. The vote was unanimously accorded.

The Chairman: Mr Waley and gentlemen, on behalf of my colleagues and myself may I thank you very much for your kind resolution?

The proceedings then terminated.

164 Branches in Finland

CAPITAL AND RESERVES:

SUN LIFE ASSURANCE SOCIETY.

STEADY PROGRESS—STRONG INVESTMENT POSITION.

SIR W. H. GOSCHEN'S REVIEW.

The general meeting of the Sun Life Assurance Society was held, on the 27th instant, at its chief office, No. 63 Threadneedle Street, London, E.C., the Hon. Sir William Henry Goschen, K.B.E. (the chairman of the society), presiding.

The Chairman, in moving the adoption of the report and accounts, said: If we regard the new assurances issued in the year as evidence of the progress of the society, I think we should be satisfied. The size of our business seems to depend upon the amount of energy we can afford to put into the obtaining of it. So long as our social state exists more or less in its present condition, life assurance in this country must have a great future, and the fact that life assurance forms only about 3½ per cent. of the estates of deceased persons liable to estate duty, shows that saturation point must be in the far distant future. Too much importance can be attached to new business figures, but taking them for what they are worth, 20,000 policies for sums assured of £13,000,000 are very large figures, at any rate for an office that confines its business to Great Britain.

TWO TYPES OF RISK.

We have now two distinct kinds of risk. The first is the ordinary old-established type in which each life is regarded as a separate unit. We endeavour to make the individual's benefits and payments suit his requirements, and premiums are charged having regard to the chances of longevity. The society has introduced a new form of policy which we have called "The Protector." This provides, in certain events, for periodical payments as well as a capital sum. In effect, the office acts as trustee for the beneficiaries, generally the wife and children of the life assured. Assurances on individual lives are still the principal part of our business.

The other kind of risk is that known as "Group" assurances—policies effected on the lives of groups of employees by or with the aid of the employer. There are many kinds of schemes in existence; in fact, one of the difficulties of this business is that each firm requires special consideration with a view to adapting the scheme to its own peculiar requirements. We have carried through some quite satisfactory contracts, some being in the form of assurances and some of pensions. Rates of premium are, however, on a very competitive basis, and we consider that a great part of the value of the business is in the connection obtained. It is to be feared that many firms, finding that they cannot provide superannuation on such a generous scale as that applicable to our own staff or to banks, civil servants or municipal employees, abandon the idea altogether. That is a great pity both from the firm's point of view and that of the employees, and it is up to our representatives to press home the need for making some form of provision for retirement or previous death, even if it must necessarily, owing to cost, be on a more modest scale than that originally contemplated.

YEAR'S WORKING.

The total result of our efforts is a new business quite adequate to ensure the steady progress of the society despite increased competition and depressed conditions. The name of the Sun is a great asset, and the possession of a clear contract and liberal policy-conditions and the determination to open the doors to the public as wide as possible are continually securing us goodwill and friendship.

Our interest income has been affected by the recent Finance Act, but the effect of the rise of 6d. in the rate of income-tax from last April has been neutralised by the good rate of interest obtained on new investments. The average rate obtained in the life assurance fund is at least £5 per cent. after deducting the income-tax for which the fund is liable. The rate of interest earned is one of the largest of the factors that determine the amount of bonus that we hope to declare as at the end of this year, 1931, and it is the maintenance or increase of this that requires so much attention and care on the part of those responsible for our investments. The rates of mortality resulting from the numbers of deaths fluctuate only slightly from year to year, but 1930 was somewhat better than 1929 owing to the absence of any epidemic such as influenza.

The details of the society's assets are known to the proprietors and the public through the medium of the list that we publish each year. In these days of great expectations regarding bonuses, those responsible for our investments are continually searching for high interest yields combined with undoubted security. The past year has perhaps been free from violent fluctuations such as happened during the latter part of 1929. So far as the society is concerned, I am glad to be able to tell you that the market value of our securities is considerably above the balance-sheet values, so that in addition to earning a good rate of interest, we have our funds intact.

In referring to the market values of our assets, I may repeat that periodical fluctuations are of no great concern to the society so long as the securities we hold are sound, and repayment on the due dates is secure.

The question whether it is better for the nation in times like the present that people should cut down their expenses and so save as much as possible, or whether they should spend freely, is still much disputed by our economists. Most of us, however, have responsibilities in the future either for our own old age or for those we may leave behind us; saving for these purposes is imperative. As a representative of a popular life assurance company and one who has spent his life in financial circles, I cannot help saying that I think people would do well to give more favourable consideration than they do to the merits of life assurance.

I trust that the current year will yield good results to our efforts. December 31, 1931, is the date of our quinquennial valuation. We have a year to go yet and much may happen, but I think that we already know enough to promise you satisfaction.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended January 24, 1931, amounted to £24,681,500, against ordinary expenditure of £9,613,900. After allocating £955,000 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £216,230, the week's operations, as shown below, reduced the National Debt by £14,329,000 to £7,730,232,000:—

(000's omitted.)		(000's omitted.)	
National Savings Certificates	+ 700	Treasury Bills	- 10,374
4% Treasury Bonds	+ 45	Public Department Advances	- 2,500
		4% War Loan paid off	- 2,200
	+ 745		- 15,074

A complete analysis of the National Debt at the end of the last quarter appeared in the *Economist* of January 3rd.

REPORTS AND NOTICES.

BANKS.

THE CANADIAN BANK OF COMMERCE.—The general statement dated November 29, 1930, reveals total assets of £141,188,549. Government and other public securities amount to £15,947,831. Railway and other bonds and stocks stand at £2,330,596. Call and short loans on bonds, etc., amount to £26,364,805. Balances due by other banks amount to £6,093,365. Gold and silver coin stands at £6,070,607 and Dominion notes at £9,249,229. With regard to liabilities. Deposits bearing interest stands at £81,840,111. Deposits not bearing interest amount to £25,207,704. Notes in circulation amount to £5,994,748. The profit for the year was £1,105,155. The dividend is 12 per cent. for the year, and there is also a bonus of 1 per cent., making 13 per cent. for the year.

THE DOMINION BANK.—According to a cable received by the London office of the Dominion Bank from the Head Office, Toronto, the sixtieth annual statement of the Dominion Bank for the calendar year 1930, shows a profit of \$1,409,000, or \$113,000 below the high record of 1929. Deposits are well maintained. Immediately available assets, 53½ per cent. public liabilities.

GÖTEBORGS BANK.—After deduction of taxes and applying to writing down on claims the sum of Kr. 2,887,249.45, the Aktiebolaget Göteborgs Bank, Gothenburg, report for the year 1930 net profits of Kr. 4,500,360.52. Upon adding to the net profits a sum of Kr. 3,081,951.68, brought forward from 1929, there is a total sum available of Kr. 7,582,312.20, which is placed at the disposal of the shareholders. The directors propose that a dividend of Kr. 25 per share be declared, or 10 per cent., requiring a sum of Kr. 4,375,000, which leaves Kr. 3,207,312.20 to be carried forward.

THE LONDON MERCHANT BANK, LTD.—The net profit for 1930 amounts to £50,838 (against £74,418), making with £31,485 brought in a total of £82,323. Allowing for the dividends paid during the year on the "A" and "B" shares, there remains £50,823 out of which the directors have transferred £10,000 to contingency fund (against £25,000), and now recommend the payment of a final dividend of 2 per cent. on the "B" shares, making the dividends for the year 7 per cent. on the "A" shares and 4 per cent. on the "B" shares, both subject to tax (against 7 per cent. and 5 per cent. respectively), leaving £30,323 to be carried forward.

MISCELLANEOUS.

JOHN BROWN AND THOMAS FIRTH AND SONS.—Circulars have been sent to the debenture-holders of John Brown and Company, containing proposals for the transfer of certain properties to Thomas Firth and Sons, as a preliminary to the fusion of the two companies. It is proposed to transfer the Atlas Works (Sheffield) and the Scunthorpe Works of John Brown and Company to Thomas Firth and Sons. It is indicated that further amalgamation schemes may probably follow. The total share and loan capital of the two companies amounts to some £5,000,000.

MILLS AND ROCKLEYS, LIMITED.—The second report and accounts shows a net profit, after deducting income tax, of £41,330 for the year ended October 31, 1930. The previous report showed a profit for 15 months of £48,722, i.e., yearly average of £38,977. With the amount brought forward there is £46,569 available, from which the interim dividends, at the rate of 10 per cent. per annum, on the preferred ordinary shares are deducted, leaving £26,688, from which it is recommended to pay the preferred ordinary dividend at the rate of 10 per cent. for the three months ended October 31, 1930, and a dividend of 10 per cent. on the deferred ordinary shares (last year same), and to transfer £10,000 to reserve account (last year same), leaving £9,357 to be carried forward (last year £5,238).

Commercial Reports.

MARKET SUMMARY.

The slight spurt in activity experienced in some of the coal-mining districts as a result of the stoppage in South Wales has been arrested by the resumption of work in that area. House coal requirements are still satisfactory, but the industrial demand remains stagnant and forward contracting continues on a limited scale. The outstanding feature in the iron and steel industries is the improvement in the demand for British pig iron following the reduction in prices. Although the demand for steel is still quiet, the position appears to be a little more hopeful. The principal non-ferrous metals have been dull. The market in tin was quiet on the absence of any definite news about the participation of the Federated Malay States in the restriction scheme. The principal textiles do not show any signs of an early improvement. Raw cotton gained ten points on the week, but the market in finished goods continues to be affected by the lock-out in the weaving section, and contracts including a strike clause are difficult to arrange. The London wool sales have received a stimulus from increased Continental competition, and the demand for Bradford goods appears to have shown some improvement. The rayon trade is slow to recover, and although the demand for piece-goods has been maintained, the turnover is still on a small scale. The Board of Trade's estimate of the production of rayon yarn and waste for December at 3,240,000 lbs. shows a decline of 840,000 lbs., as compared with the preceding month. Raw jute values have been well maintained, and the demand for finished goods has slightly expanded. The sale of large quantities of Russian flax has had a depressing effect on the price of the raw material, but it appears that the outlook in Northern Ireland is more encouraging, as considerable orders for linen goods have been placed by a number of large stores. Little interest has been shown in the principal food stuffs. Wheat prices are scarcely changed on the week, and the delay in Argentine shipments due to unfavourable climatic conditions has hardly affected the market. Sugar has been firmer, but tea and coffee were in poor demand with the exception of the best qualities. Beef and mutton have been steadily declining since the beginning of the year. Among miscellaneous commodities, hides declined further in value, while the demand for leather has so far failed to expand to any considerable extent. The market in timber has been more active, as a result of the offering of the Russian stocks in this country which have been taken over by the syndicate of British importers. Rubber has again been dull and featureless.

THE COAL TRADE.

Our Sheffield correspondent writes:—The export trade for steam coal has been brisker lately and prices have hardened somewhat, but little or no forward business is being transacted. Best steams are quoted 16s. 9d. and 17s., f.o.b. Hull. The industrial demand keeps at a low level, and slacks are a drug on the market. House coal is fairly active, quotations being 25s. 6d. to 27s. for best hand-picked branch, 20s. 6d. to 21s. 6d. for ordinary house, and 20s. 6d. to 22s. 6d. for best Derbyshires. Consumption of furnace coke continues at a low level, and prices are about 11s. at ovens. Accumulations at some plants have assumed serious proportions, and prices are being cut to clear, especially on export account.

Our Workington correspondent writes:—The coal trade is poorer than it was at this time a year ago. There is no punch in the demand, and Irish business is entirely of a hand-to-mouth character. The collieries are, however, working full time, and no coal is under load. Industrial fuel is in better request, and house coal is in steady demand. Shipping prices have been raised by one shilling per ton. Best round is 22s. 6d.; washed doubles, 21s.; washed singles, 19s., all f.o.b.; smalls, 16s. 6d.; best house coal, 31s. 8d., and house nuts, 30s. at station; gas coal, 28s. Local coke is from 17s. 9d. to 18s. 3d. per ton.

Our Glasgow correspondent writes:—Supplies of large coal for prompt shipment are still in short supply, although first Fife steam can be had more readily. Washed smalls, however, are more plentiful, and easy in tendency. It is notable that demand is largely for immediate shipment, and forward business is very quiet. Complaints are voiced about the difficulty of securing the quantities of coal desired, the result being considerable interruption of what in the past has been more or less regular business. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 15s. 6d.; splint best, 17s. 6d.; splint second, 16s. 6d.; navigation, 16s. 6d.—17s.; navigation second, 15s.—15s. 6d.; Hartley, 16s.; steam, 15s.; trebles, 14s. 6d.; doubles, 13s.—13s. 6d.; singles, 12s. 6d.—13s.; pearls, 12s. 3d.—12s. 6d.; dross, 10s. 3d. FIFE.—Screened navigation, 16s. 6d.—17s. 6d.; first-class steam, 13s. 6d.; third-class steam, 13s.; trebles, 13s. 6d.—15s.; doubles, 12s. 3d.; singles, 12s.; pearls, 11s. 6d. LOTHIAN.—Prime steam, 14s.; secondary steam, 14s.; trebles, 13s. 6d.—14s.; doubles, 12s. 9d.; singles, 12s.; pearls, 11s. 9d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 18s.; steam, 15s.—15s. 6d.; trebles, 14s.; doubles, 13s.; singles, 12s. 9d.; pearls, 12s.; dross, 11s.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—Business in Cleveland iron continues to improve and there is a good undertone which portends a further expansion of purchasing on the part of consumers. Deliveries are now on a better scale owing to increased contracts

London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1

in hand, and as the quantity of iron available is not large, stocks are being drawn upon to meet current needs. The elimination of Continental imports by the recent reduction of local prices is a satisfactory feature, and if trade develops as it promises to do it may not be long before more furnaces are put into operation. A fair business was reported at the weekly market on Tuesday, practically all on home account, prices being unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. In hematite there is a constant flow of orders for small parcels for early delivery, but forward buying is held up by consumers in the hope that lower prices may rule. This view, however, seems scarcely justified by the actual position, as although stocks are heavy in one or two cases the holders are firm, and with the make on the Tees reduced to two furnaces stocks have to be drawn upon. For early delivery ordinary mixed numbers are quoted at 70s. for prompt and 70s. 6d. forward, although a shade less would be accepted for suitable business. In the steel trade the orders placed with three local works, Cargo Fleet, Dormans, and Peases-Skinningrove, for 21,565 tons steel rails for South Africa has given a welcome fillip to industry, and it is understood that there are more orders of importance pending in different directions. Altogether, works in this district are likely to be much better employed in the near future. Prices are unchanged from last week, except that iron crown bars are 5s. lower at £10 10s. Business in ore is almost negligible. Best Bilbao rubio is nominally 16s. c.i.f. for early delivery, and the current freight Bilbao/Middlesbrough is slightly easier at 4s. 9d. There is a surplus supply of coke available for early delivery and producers have difficulty in making sales. Good furnace qualities are offering freely at 17s. delivered works and less has been accepted in some cases. For forward, however, higher prices are asked. The number of furnaces in blast in the district remains at 23.

Our Sheffield correspondent writes:—The customary quietude in the iron and steel industries in January has been more pronounced this month than formerly, and signs of improvement are still absent. The lack of substantial and forward orders for steel of most kinds continues to be the outstanding feature of the situation. Railway companies' specifications are being drastically curtailed and there is not much overseas demand. The Government plans for the allocation of the Chinese Boxer indemnity fund will ensure a considerable amount of work in this department in a month or two. There is no considerable demand for alloy and special steels apart from the automobile industry, whose requirements, however, are a good deal less than a year ago. Makers of best tool steels complain that orders, while numerous, are small in bulk, and foreign trade continues restricted. All kinds of finished steel goods are suffering from the reduced buying of nearly every overseas market of importance, Australia in particular. New tool lists show many reductions of prices.

Our Workington correspondent writes:—Largely owing to the renewal of activity in the steel industry on the North-West Coast, an improvement has taken place in the hematite pig iron trade. Two additional furnaces have been put into blast at Barrow, and the number in draught is now only two short of the total during the first half of last year. The whole of the make is being absorbed, but the heavy stocks have been but slightly reduced, and there is apparently no early prospect of considerable progress being made in this direction. With the consuming industries poorly employed, users are content to buy as needs arise, and no forward bookings are therefore being placed. The Midland and Continental demand is considerable, and South Wales requirements are rather heavier, but Scottish users are taking very small supplies. Prices remain fairly steady. Bessemer mixed numbers are quoted at £3 17s. 6d. per ton at Glasgow; £4 4s. 6d. at Manchester; £4 6s. 6d. at Sheffield; and £4 8s. 6d. at Birmingham. Special and semi-special brands of iron are from 2s. 6d. to 5s. per ton above these figures. There is a steady demand for charcoal iron. Malleable iron is a quiet market at £6 2s. 6d. per ton delivered at Birmingham, and there is little demand for ferro-manganese at £12 per ton export. The steel industry is more briskly employed on railway material. Orders from South America, Africa, the Dominions and home railways have been booked that will, it is expected, maintain the mills at Workington and Barrow in almost continuous operation during the remainder of the quarter. Native ore at from 18s. 6d. to 18s. 6d. per ton is in increased local demand, but the deliveries to East Coast and Scottish smelters are few and far between.

Our Glasgow correspondent writes:—With the past week several good contracts have been placed in the West of Scotland, rail makers, lifeboat builders and boiler-makers all having secured work which in the two last-named cases will keep them employed for a considerable time. There has been no expansion of business at the steel plants generally, and most of the new orders placed are for small parcels. There is a slightly better demand for large diameter tubes, but the tube trade on the whole remains quiet. So far the recent reduction in sheet prices has not stimulated demand for export. To-day's basis prices for 24-gauge sheets are £11 per ton for galvanised and £8 10s. for black, both f.o.b. or f.o.r.

OTHER METALS.

TIN.—Market generally displayed quiet features, with a good deal of irregularity at times, partial rallies being offset by liberal selling orders, lack of support from consumers, and erratic Eastern cables. Standard cash changed hands at £115 10s.-£113 17s. 6d.; three months, £117-£115 15s., £117 2s. 6d., and £115 10s. Sales in the East were reported at £120 to £118 5s. per ton c.i.f.

COPPER was accorded fair support, but initial firmness was not fully maintained, owing to subsequent realizations. Small sales in cash were recorded at £44 7s. 6d. to £44 with three months at £44 10s.-£44 13s. 9d. to £44 5s. and £43 18s. 9d. per ton.

LEAD slightly irregular, and liberal offerings were moderately absorbed. Good soft foreign pig, February, sold £13 6s. 3d. to £13 2s. 6d.; March, £13 6s. 3d. to £13 5s.; April, £13 6s. 3d.-£13 5s., and £13 7s. 6d. and £13 3s. 9d.; May, £13 7s. 6d. to £13 3s. 9d.

SPELTER maintained with business on a fair scale. January sold £12 7s. 6d.; February, £12 6s. 3d.-£12 3s. 9d., and £12; March, £12 8s. 9d. to £12 7s. 6d.; April, £12 10s. to £12 12s. 6d. and £12 11s. 3d.; May, £12 12s. 6d.; June, £12 15s. per ton.

ALUMINIUM steady. Home trade also export, £85 per ton.

ANTIMONY easier. English regulus, £38 to £45. Chinese regulus, spot, £26; January-February, £23 5s.; Chinese crude, January-February, £15 7s. 6d. per ton, c.i.f.

ANTIMONY OXIDE, January-February, £25 per ton, c.i.f.

ANTIMONY ORE, 60 per cent., January-February, 3s. 2d.; 50 per cent. ditto, 2s. 9d. per unit, c.i.f.

WOLFRAM quiet of sale. Chinese, January-February, sold 12s. 9d. per unit, c.i.f.

QUICKSILVER steady. Spot, £21 11s. 6d. to £22 5s. per bottle.

TIN PLATES remain quiet. I.C. coke, prompt and forward, 15s. 6d. per box, f.o.b. Swansea.

TEXTILES.

THE COTTON TRADE.—Liverpool, January 28th. Spot sales for the week 22nd to 28th (inclusive) are 22,000 bales, of which 9,450 are American, 900 Brazilian, 180 Argentine, 7,500 Peruvian, 2,390 Egyptian, 510 African, 850 East Indian, and 220 sundries. Imports for the same period are 53,486 bales, of which 27,365 are American, 473 Argentine, 332 Peruvian, 14,983 Egyptian, 1,662 African, 8,667 East Indian, and 4 sundries. Quotations to-day are: American Middling, 5-70; Egyptian Sakel, 8-90; Uppers, 6-57; Brazil Fair, 5-80; Peru G.F. Smooth, 6-10; West African Middling, 5-65 and East African G.F., 6-70. For the greater part of the week the market has been quiet with small fluctuations, but more activity has been seen during the last few days and prices are about 10 points higher than those of a week ago, mainly due to some moderate short covering. The Census Bureau gave the quantity of cotton ginned to January 15th as 13,592,000 bales against 14,177,000 bales last year. The report was regarded as bullish, but it had no effect on prices. Holders of cotton in the South are not pressing for sale, and any demand, however small, seems to find a shortage in contracts. The Egyptian futures market has been much more active, Sakella showing an advance of 25 points and Uppers 15 points from Wednesday, January 21st. Some speculative buying of Sakella and short covering was in evidence.

Manchester, January 28th. The market continues to be vitally affected by the lockout in the weaving section, and much uncertainty exists as to future production in view of the deadlock relating to the dispute. A fair amount of business has been under consideration, but much difficulty has been experienced in arranging terms of fresh contracts, especially with regard to deliveries. Stock lots of certain kinds of cloth have been in active request, but on the other hand some manufacturers who hold supplies are meeting with very little demand. Only occasional sales have been put through for India. It is recognised that trade developments depend upon the political situation. Less favourable advices have been received from China and business continues practically at a standstill. Some orders have been put through for Egypt and the Near East in bleaching descriptions. Useful lines have been booked in home trade fabrics. Yarn quotations have been generally firm and it is quite evident the large curtailment of output is preventing any accumulation of stocks. Not much has been done in home counts, but a few more contracts have been arranged in shipping numbers for India and the Continent.

THE WOOL TRADE.—Our Bradford correspondent writes:—The trade is now beginning to recover from the severe blow inflicted by the fall in wool values in London. This week new factors

have been introduced which encourage the belief that the downward tendency has been definitely checked. Pastoral companies and selling brokers will have every reason for satisfaction if the interest in the raw material results in the current series closing with values 5 per cent. higher than at the opening. This week withdrawals have been less numerous, and there is still a very commendable willingness to meet the market. On the bulk of the offerings there are no unreasonable reserves, and though the full selling programme is not now expected to be carried out, the entire situation is more encouraging. Besides the continued operations on the part of Bradford and other home trade buyers, Continental firms have come more into the picture. The latter have really provided the additional competition needed to make larger clearances, and to make values slightly better. No fault at all can be found with the offerings, the wools from all the Australian States being in very good order, and this is no doubt one reason for the greater interest which is being shown on both home and Continental account. Buyers are now beginning to feel that wool is a much safer proposition, and will probably demonstrate their confidence in it by continuing to operate on the market level which has been established. The news received from Australia does not indicate that prices there are much more than steady, and, consequently, any inspiration which London can provide will be more than welcome. No great development has yet taken place in Bradford. Following private advices of a better tone in London, topmakers are now a little stiffer in their quotations. The policy of spinners is still largely dictated by the state of affairs among manufacturers, many of whom are not yet able to place any big orders for yarns. At the same time the outlook is more promising, and there is no doubt that, though superficially the lead will be given by the raw material, the actual driving power is an improvement in the demand for partly and fully manufactured goods.

THE HEMP TRADE.—Manila qualities have been steady and there has been an increase in orders from spinners. Quotations: J 2, January-March, £19 15s.; K, £19 5s.; L 1, £18 10s.; L 2, £18 5s.; M 1, £18 5s.; M 2, £17 10s.; G, £21; H, £19 15s. According to a cable, last week's receipts amounted to 21,000 bales, against 31,000 last year, and 31,000 in 1929. Next week's receipts have been estimated at 26,000 bales, and at 22,000 for the following week. Manila shipments last week totalled 18,000 bales, of which 3,000 have been consigned to the United Kingdom, 4,000 to the Continent, 5,000 to the United States, and 6,000 to Japan. Local consumption at 2,000 bales leaves stocks at 117,000.

THE RAYON TRADE.—The slight improvement in the demand for piece-goods has been maintained, but the turnover is still on a relatively small scale and orders for the spring have so far been disappointingly few in number. The only bright feature is the continued support given to high-class dress materials. In the export section, India and China remained quiet, but Australia, New Zealand and Canada are showing a little more interest, and sales to Argentina have shown some improvement. Meanwhile the lock-out in the weaving section of the Lancashire cotton industry is beginning to have an adverse effect on the position. In the table below we reproduce estimates of the total production of rayon yarn during the past year for the United Kingdom and the United States. The figures for the United Kingdom have been prepared by the Board of Trade, and those for the United States by the *Daily News Record*, New York:—

Year.	United Kingdom. Lbs.	United States. Lbs.
1929	56,900,000	121,568,000
1930	48,770,000	110,208,000

1930 is the first year in which consumption has shown a considerable decline, and although prices and output have been greatly lowered, the accumulation of stocks, which are particularly heavy in the United States, could not be prevented.

FOOD.

THE GRAIN MARKETS.—A spell of mild and open weather enabled farmers to make preparations in anticipation of an early start on spring sowings, though the wet state of the ground in some districts prevents ploughing operations for the time being. Winter cereals are well established and present a healthy appearance, while comparing favourably with the condition of crops in certain Continental countries. The market continues dull and rates easy for native wheat, owing to lack of milling demand, and competition by cheap foreign varieties, but there is a good inquiry for poultry feed. On the import market, prices have maintained a fairly steady level, due largely to a good Eastern demand, principally from Oriental countries. China, in particular, purchased freely of Australian wheat up to April shipment. Quite a fair business also transpired in cargoes on European account, the movement being assisted by further depreciation of the Australian currency here, which enabled sellers to offer at attractive prices compared with Canadian grades. Millers, however, are reluctant to book far ahead owing to liberal supplies available and on passage, while ex store lots of Russian help to satisfy immediate requirements. In this connection, it is interesting to note that Soviet offerings have been renewed for alfalfa and early shipment, and prove a depressing factor. The movement of new crop wheat from Argentina has been delayed by adverse climatic conditions, but pressing offers leave no doubt of heavy shipments when working is resumed. The necessity of large exports is emphasised by the weakness of Australian and Argentine exchange rates, thus ensuring free marketing despite unremunerative prices current. Values of feeding stuffs remain weak, though partial rallies occurred regarding maize, despite heavy Argentine shipments. Continental consumption of this feeder appears to be improving, but buyers generally operate

cautiously in view of exceptionally favourable new crop prospects. Barley and oats remain featureless.

WHEAT.—Slightly irregular. No. 1 hard Manitoba, ex ship, 27s. 3d.-27s. 9d.; No. 1 Northern Manitoba, ex ship, 26s. 6d.-27s.; No. 2 ditto, 25s. 6d.-26s. 6d.; No. 3 25s.; Barusso, 63 lbs., 21s. 6d.; Rosato, 63 1/2 lbs., 21s. 6d.; Australian, 23s. 3d.-24s. 6d.; Russian, on sample, landed, 20s.-22s. 6d. per 496 lbs. English now, 4s. 8d.-5s. 6d. per 112 lbs.

FLOUR.—Quiet. London straight run, 24s. per sack for country deliveries, and 23s. London area. Of imported, Manitoba patents, 22s.-24s. 6d.; Buffalo ditto, 22s.-24s. 6d.; Australian, 20s.-21s. 6d. ex store. On c.i.f. terms, Manitoba top patents, January-February, 20s. 3d.-20s. 6d.; export ditto, 18s.-18s. 6d.; Australian, 16s. 6d.-17s. per 280 lbs. Argentine low grade, January-March, £5 3s. 9d. per ton.

MAIZE.—Unsettled. Plate, landed 16s. 3d.; ex ship to arrive, 15s.; February-March, 15s. 3d.; March-April, 15s. 6d. per 480 lbs. Yellow maize meal, £5 5s. f.o.r. London, per ton.

BARLEY.—Dull. Californian old, landed 30s.-35s.; new, ex ship, 30s.-41s. as to sample; Chilian brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, landed 14s.-14s. 6d.; ex ship, 13s.; Danubian landed, 14s.-14s. 6d.; Persian, landed, 13s. per 400 lbs.; English new malting, 6s. 3d.-12s. 6d.; feed, 5s.-5s. 9d. per 112 lbs.

OATS.—Quiet. Plate, landed, 10s. 9d.; ex ship, 9s. 9d.; Chilian tawny, landed, 13s. 6d.; whites, ex ship, 18s. 6d.; landed, 19s. 3d.-20s. 6d.; mixed Canadian feed, landed 10s. 6d.; North Russian landed 12s. 6d.-13s. as to sample; South Russian, landed 12s. 3d.-13s. per 320 lbs. English new, 5s. 8d.-6s. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years, 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Jan. 24	117,320	310,308	291,230	330,449
21 weeks to Jan. 24	2,571,727	5,516,481	5,614,781	5,180,340
Average price of English wheat per cwt.	s. d. 5 6	s. d. 9 6	s. d. 9 8	s. d. 9 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Jan. 17, 1931	101,963	256,912	36,612	s. d. 5 7	s. d. 8 1	s. d. 5 9
Jan. 24, 1931	117,320	270,015	50,868	s. d. 5 6	s. d. 8 7	s. d. 5 10
Jan. 22, 1927	330,284	470,751	99,600	11 10	11 1	8 3
Jan. 21, 1928	308,706	412,776	82,104	9 11	11 2	9 7
Jan. 26, 1929	291,230	393,327	122,248	9 8	10 3	9 5
Jan. 25, 1930	310,308	357,415	56,606	9 6	8 5	6 11

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 29, 1930.	Jan. 2, 1931.	Jan. 14, 1931.	Jan. 21, 1931.	Jan. 28, 1931.
	1930.	1930.	1931.	1931.	1931.	1931.
Winnipeg (No. 1 Manitoba), Cents per 60 lb.	14 1/2	12 1/2	5 1/2	5 1/2	5 1/2	5 1/2
Chicago (No. 2 Winter), Cents per 60 lb.	13 1/2	11 1/2	7 1/2	8 1/2	8 1/2	8 1/2

The visible supply of wheat in Canada at 61,840,000 bushels shows a decrease on the week of 585,000 bushels. Supplies a year ago stood at 75,084,000 bushels.

SUGAR.—The market disclosed steadiness, and trade buyers showed more disposition to operate. In fact, spot transactions were on an extended scale, but prices remained without change. Meantime, offers from the chief producing countries are still reservedly made and full rates asked. The terminal market opened steadier, but became quieter, though a fair amount of business was arranged. February delivery sold 5s. 8 1/2d.; March, 5s. 10d. to 5s. 9 1/2d.; May, 6s. 1d.; August, 6s. 4 1/2d. to 6s. 4 1/2d.; December, 6s. 8 1/2d. Mauritius 99 per cent. refining crystals, February-March, sold 10s. 3 1/2d. c.i.f. United Kingdom, with sales in Continental beet, 88 per cent., February-March, at 5s. 7 1/2d. c.i.f. Foreign, 96 per cent. centrifugal, quoted 6s. c.i.f. Cuban receipts last week, new crop, 22,866 tons, against 66,815 same time last year; exports nil, against 3,627; stocks, 22,417, against 69,724. Receipts of old sugar, 37,486, against 26,831; exports, 18,517, against 39,407; and stocks, 779,893, against 115,037. Stocks of new on plantations and in transit estimated at 154,000 tons. Centrals working, 97, against 139 last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending January 24th totalled 208,886 tons, compared with 248,285 last year.

COFFEE.—With the exception of East African kinds, which were freely absorbed at full rates, a quieter tone prevailed. Larger quantities from Costa Rica now come to hand and rates in most instances are decidedly easier.

COCOA.—Only retail spot sales occurred at late rates. Forward positions slow. Accra, G.F., January-March, to Continent, sold 25s. 6d. c.i.f. Terminal, December delivery, sold 28s. 6d.

TEA.—61,402 packages Indian brought to auction this week met a quiet and somewhat irregular demand. Prices ruled easier except for a few good autumnal flavoured parcels. Ceylon sales

of 29,127 packages evidenced a poor market. General run of quality marked decided falling off, and medium grades declined 1d. to 1d., with fine 1d. to 2d. A few finest sold steadily. Java and Sumatra sales mostly easier.

RICE.—In continued quiet request, but sellers asked previous rates.

BEANS AND PEAS.—The market in beans showed no essential change, though new business is still difficult to arrange. Peas have been steady on the part of sellers, but there is not much trade doing.

POTATOES.—The market in potatoes was again dull, but good qualities remained steady.

SPICE.—Pepper generally quiet and forward positions barely steady. Lampong, January-March, quoted 5 1/2d.; March-May, 5 1/2d.; Muntok, white, January-March, 9d.; and March-May, sold 9d. Cloves quiet, unaltered. London stocks of black for past week, 472 tons; white, 453.

FRUIT (Dried).—Currants steady, but trade proceeded quietly. Pyrgos, 30s. 6d.-31s.; Amalias, 31s.-32s. Sultanias maintained. Smyrna, 44s.-68s. Raisins cleared. Dates quiet of sale. Evaporated Fruits: Quiet conditions prevailed with quotations occasionally the turn in buyers' favour. Californian peaches, 1930 crop, reloaded, 42s.-56s. Almonds steady. Mazagan, spot, 85s. French shelled walnuts firm, at 185s.

CANNED GOODS.—Fruit: Trade generally is slow to expand, but the outlook is considered favourable, owing to small stocks in distributors hands, which will need replenishing in the near future. Liberal supplies of Australian are available, and move slowly, also Californian varieties on spot, but the forward position remains firm. English fruits meet with fair attention. Fish: Sardines in quiet demand with ample supplies on offer. Portuguese, 1/4 clubs, 3s. 6d. Salmon steady. Meat: Demand shows improvement at recent reduced prices. Condensed Milk and Milk Powders: There is a brisk demand for forward delivery, and powders are scarce owing to a shortage of liquid milk supplies. Dutch condensed milk, full cream, sweetened, 5 cwt. casks, 30s. 6d. Dutch full cream milk powders, 26 per cent. butterfat, roller process, 1 cwt. cases, 70s. Honey: In quiet request, with ample supplies on offer. Jamaican white, 40s. to 45s.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 9,297 tons, as compared with 9,136 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.8 per cent. of the supplies, as against 81.3 per cent. a year ago, and imported mutton, mainly New Zealand, formed 78.3 per cent. of the total supply, as against 73.6 per cent. last year. The downward tendency in beef and mutton continued during the past week and prices are now substantially below those ruling at the beginning of the year.

MISCELLANEOUS COMMODITIES.

COPRA.—A steady market has been characterised by reserve on the part of sellers. Straits, S.D., February-March, to Rotterdam, sellers, £15 10s.; Dutch East Indies ditto, £15 10s.; Ceylon, to five ports, held for £16 11s. 3d.; sun-dried, to Rotterdam, quoted £14 12s. 6d.

HIDE, LEATHER AND ALLIED TRADES.—Hides from English cattle continue to cheapen in price. The position of imported hides remains dull, and with buying restricted to narrow limits, any alteration in values is generally in buyer's favour. There has been less activity in regard to South American frigorifics and as a consequence Argentine ox have this week been sold on the basis of 6d., with light ox realising 5½d. In the Saladero market last week 16,000 Liebig Colon hides were sold by inscriptions, for which prices ranging from 6½d. to 7½d. were realised. In the River Plate quotations for several descriptions are more or less nominal in view of the small amount of business transacted of late, while for Africans and Australians values are again on a lower basis. Sole leather business is still confined to parcels for immediate needs and the best turnover continues to be on account of repairing trade requirements. All things considered, the market is steady so far as values are concerned, the only weak point being in regard to offal, of which there is a fair accumulation. Upper leathers account for a steady turnover in small parcels, particularly in regard to box and willow calf.

THE TIMBER TRADE.—The market for building woods has experienced some remarkable changes since our last report a month ago, and on the whole is in a much better position for United Kingdom operators and consumers generally than was the case in the first month of 1930. The principal event in the trade was the taking over, on January 1st, by the syndicate of British importers, of the whole of the Russian stocks in this country left in shippers' hands. These are being offered at prices in keen competition with other Russian wood on the spot market, and are creating no small activity in buying on the part of importers and merchants. Demand for softwoods generally has shown improvement compared

with a month ago, but there is still plenty of scope for improvement in view of the decline in values this year for the Russian material. As the control of the whole of the Russian import this year is in the hands of the syndicate of British importers, the c.i.f. and other forward departments are likely to be more steady than during the last shipping season, when a free market ruled. It is to be hoped that the Russo-English timber trade will not be impeded by any outside influences, otherwise the market will firm up appreciably against British consumers. The proposed 20 per cent. addition in Russian shipments this year compared with last may be set off by a reduction in output and export to the United Kingdom from Russia's principal competitors, but, on the other hand, the tendency of foreign wood exporters for years past has been to send too much rather than too little. The moot point at present is whether the United Kingdom will keep up to last year's actual consumption. Whereas the softwoods market, as already stated, shows activity, hardwoods continue to be slow in demand. Mahogany last year dropped to its lowest log importation for many years, the demand, especially for inferiors, continuing quiet. Teak is in only poor request. American hardwood lumber receipts last year were generally above consumption, consequently prices continue weak. All other hardwoods, home, Colonial and foreign, are quiet to moderate in demand. The plywood trade has improved a little this month compared with last. Imports dropped by 35 million square feet on total receipts of 417 millions. There is still room for much further improvement in demand for that material.

RUBBER.—The rubber market again experienced a lack of interest and prices show a further decline on the week. Standard sheet, spot and February, sold 4½d.; March, 4½d.; April-June, 4½d.; July-September, 4½d. to 4½d.; October-December, 4½d.; January-March, 4½d.; July-December, 4½d.; and April-June, 1932, at 4½d. To New York, estate sheet, February-March, buyers 3½d. c.i.f. London stocks increased 933 tons, landings 2,082, deliveries 1,149, stocks 80,194 against 59,984 last year; Liverpool stocks decreased 99, landings 90, deliveries 189 and stocks 42,171 against 20,063.

THE MONEY MARKET.

MONEY has been fairly stringent this week. On Thursday up to 3½ per cent. was paid for new money, and the preceding day some bankers were charging up to 2½ per cent. for their weekly fixtures, while on several occasions the market was nearly driven into the Bank. It is true that, as the Bank return shows, market resources, measured by bankers' deposits, expanded by £7,413,000, but the banks were making-up more heavily than last week, and funds were at times immobilised for other purposes. In these circumstances Monday's disbursements by the Bank on behalf of the Treasury, in respect of the Funding Loan dividend and repayments of those 4½ per

cent. Treasury bonds for which notice had been given a year ago, afforded no relief to the market, and money remained tight.

The Bank continued to sell bills in the open market until early this week, and successfully maintained market discount rates at the desired level of $2\frac{1}{4}$ per cent. No sign of the extent of its open market operations appears in the Bank return, for there increases of £1,942,000 and of £1,381,000 are recorded in Government and Other Securities. Probably what has happened is that in order to finance the disbursements alluded to above the Treasury has had to borrow on Ways and Means from the Bank, and that such borrowings were in excess of the Bank's sales of Treasury bills during the week. The fall of public deposits to the low level of £9,861,000 affords some corroboration of this suggestion, but if confirmation is forthcoming at all it will be found in the Revenue Returns for next week.

So far, the Bank's open market policy has proved a success. It has put the three months' discount rate up to $2\frac{1}{4}$ per cent., and has kept it there, though Continental buyers of sterling bills have been quoted $2\frac{3}{4}$ per cent. Nevertheless, the Continent and the United States have bought a fair number of bills during the week, and are also believed to have applied for some of last Friday's Treasury bill issue. This in turn has exercised the desired effect upon the exchanges, for in the middle of this week the dollar rate rose to \$4.86 and the franc rate to 123.94 francs. Both these rates are above the gold point, and no gold has been withdrawn from the Bank since January 28th. Thus the Bank has realised its hopes of arresting the gold outflow by means of open market operations and without having to impose a higher Bank rate.

	Jan. 15, 1931.	Jan. 22, 1931.	Jan. 29, 1931.	Feb. 5, 1931.	Previous Rate and Date Changed.
Bank Rate	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{3}{4}$ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount { Call	1	1	1	1	1½ (May 1, '30)
{ Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	$2\frac{3}{4}$	$2\frac{3}{4}$	$2\frac{3}{4}$	$2\frac{3}{4}$	...

It is, however, necessary to recognise that the situation needs continuous watching, and that the ground won is being held only with difficulty. Internally, there is still a shortage of bills, and as the weeks progress and Treasury bills are paid off, the shortage may become more acute. At present the reduction in Treasury bills is at the rate of £10,000,000 a week, and in face of this the Bank will have to sell bills on a large scale in order to keep up discount rates. So long as money remains stringent the Bank will find its task easier, provided that money does not become so stringent as to drive the market into the Bank. Once money is borrowed from the Bank to meet a passing and momentary need, it remains out of the Bank for a whole week, and once the immediate need for it has gone it is free to be used in competing for bills and so is liable to depress discount rates. It is conceivable that one reason why the market escaped the Bank this week is that the impression was abroad that resort to the Bank was to be avoided if it was humanly possible.

Externally, too, it is by no means certain that the defence of the Bank's gold stocks will prove successful. The most favourable sign is that current London discount rates are attractive to French and American short money, and it is possible that some deposits are being fixed in London on American account. The most ominous aspect of the situation is the high premium now current for forward dollars and francs. Paris three months' forward is at 5 centimes premium, equivalent to a net rate of 123.87 francs, or 2 centimes below the export gold point. New York three months' forward is $\frac{1}{2}$ cent premium, which is equivalent to a net rate of \$4.85½, or very little if at all above the gold point. It is clear that operators in both centres possess so little faith in the pound that they think it necessary to cover their spot purchases of the sterling

needed to pay for the bills they are now buying in London by forward sales, rather than to run their purchases of sterling, and that they are doing this even though the cost to them of hedging their spot exchange purchases is commensurate with the loss they would be involved in if, when the time came, they had to withdraw their funds from London in the form of gold.

Moreover, it is still true to say of the Paris exchange that there is no real strength in sterling. The reaction on Thursday from 123.94 francs to 123.92 francs is clear evidence of this, and there is no doubt that if only a moderate amount of sterling were thrown on the market there would be a sharp decline in the exchange. Although gold withdrawals from the Bank have ceased, both next week's Cape gold, amounting to £708,000, and the following week's supply of £875,000, will without doubt go to Paris, and this is further evidence of the continuance of the pressure. This week the Bank of England has had a net gold influx of £863,000, while next Tuesday £250,000 sovereigns are due from South Africa. These acquisitions, though hopeful, are small in relation to the Bank's recent gold losses. The possibility of a higher Bank rate within the next few weeks cannot yet be ruled out of account.

NEW YORK.

Money has again been easy. Call rate stood at $1\frac{1}{4}$ per cent., and in the middle of the week bankers made a further reduction of $\frac{1}{4}$ per cent. in their acceptance rates, both bid and asked, for all maturities. The bond market has been heavy, mainly under the discussions at Washington on the soldiers' bonus bill, with its suggestion of the issue of \$3,400,000,000 of Government bonds to finance the immediate repayment in cash of war veterans' twenty-year insurance certificates. Leading bankers have testified against this proposal, urging that it would be impossible to market such an issue, and that the proposal would cause existing bonds to depreciate, and would in one sense be equivalent to inflation. The latest news is that the opposition to the bill may be successful, but meanwhile some money is being frightened out of the bond market and into acceptances and other short-term channels of employment.

FOREIGN EXCHANGES.

The market was more active this week, with steady trading and a fair turnover. The tendency was generally in favour of sterling. New York, after touching 4.86, closed at 4.85½, while Montreal lost $\frac{3}{4}$ at 4.86½. Paris at one time rose to 123.94, but closed on Thursday one point worse on balance at 123.92. Brussels lost $\frac{1}{2}$ at 34.83½. Milan was appreciably weaker at 92.80, and Madrid was weak and uncertain at 48.20, against 47.20 last week. Amsterdam moved sharply in our favour to 12.09½. Berlin was better by $\frac{1}{4}$ on balance at 20.43. Switzerland depreciated sharply from 25.10½ to 25.15, and at one time touched 25.16½. The Scandinavian currencies were little affected, Stockholm losing $\frac{1}{2}$ at 18.14½, Oslo being unchanged at 18.16½ and Copenhagen losing $\frac{1}{2}$ at 18.16½. Of the South American exchanges, Rio gained $\frac{3}{4}$ d. at 4½d., Buenos Aires was unchanged at 34½, and Montevideo was better by one penny at 33½d. In the Far East the rupee was firm at 1s. 5½d., as was the yen at 2s. 0½d. Batavia weakened from 12.08½ to 12.10½. While the official Australian rate last week was £130 to £130 10s., the unofficial quotation in a narrow market ranged between £130 10s. and £132 10s. In the forward market dollars were quoted at $\frac{3}{4}$ cent. and $\frac{1}{2}$ cent premium. Paris was better at 2 and 5 centimes premium. Brussels was little changed at $\frac{1}{2}$ and 2 centimes premium for one and three months respectively. Milan was at rather wider discounts of 12 and 39 centesimi. Madrid was firmer at 5 and 17 centimos premium, against 3 and 13 centimos premium last week. Amsterdam was decidedly firmer at 1 cent and 2½ cents premium. Berlin was unchanged for one month, but the discount for three months' delivery narrowed from 3½ to 2½ pfennigs. Silver fell to 12½d. for both cash and forward, as a result of general selling after heavy sales by India on rumours of an intention to increase the import duty. The Chinese silver exchanges declined in sympathy, Hong Kong losing $\frac{1}{4}$ d. at 11d. and Shanghai $\frac{1}{4}$ d. at 1s. 2½d.

SECOND THOUGHTS ON PROTECTION.

THE publication this week under the auspices of the Federation of British Industries of a Protectionist brochure, entitled "The Passing of Free Trade," suggests some reflections on the trend of public opinion on this aspect of our economic problem. We are not here very much concerned with the text of the brochure itself, for though this author, Mr Glenday, Economic Adviser to the F.B.I., has contributed much to better understanding of the economic conditions of recent years, he has no new contribution to make on the fiscal issue. Indeed, knowing, as he does, the weaknesses of arguments for a policy of restriction, he finally entrenches himself in one of the least defensible of the protectionist trenches. When certain of our neo-Protectionists tell us that, in their view, our basic export trades are doomed, and that therefore we must concentrate on the home market and aim at a greater degree of self-sufficiency, we can follow the argument and combat the pessimism which reconciles them to a picture of a lesser Britain with lower standards of living for a reduced population. Similarly, when the Empire Crusaders preach their ideal of an Imperial economic *ἀντάρκεια*, we can meet them on the ground of fact and demonstrate the impossibility of vast schemes of artificial trade diversion. But when Mr Glenday, after starting from the viewpoint that "the paramount need of British industry at the present time is a foreign trade development policy" and that our depressed basic industries must be restored, finds in a tariff policy (with its inevitable raising of production costs) the means to this end, we find his argument unconvincing, and his conclusions explicable only by his touching faith—widely held, it is true, by his constituents—that protection in Britain would bring about a reduction of tariffs elsewhere; unless we may infer that his reasoning is distorted by the consequences of his failure to recognise the check to effective industrial reorganisation which the erection of tariff shelter would almost certainly entail.

But, although the thesis of this brochure is familiar, the nature of its public reception is not without significance. When six months ago certain leading bankers were persuaded to append their signatures to a Protectionist manifesto, the affair was regarded as a portent and as an indication that Britain's Free Trade days were numbered. To-day a plea for Protection claiming—we do not know exactly how far the claim can be pressed—to represent the views of the chief industrial organisation of the country has not created, so far as we can see, even a ripple on the surface of current controversy. What is the explanation? Why has a pronouncement, which six months ago would have been blazoned throughout the land, passed almost unnoticed? The reason, we believe, is that the past six months have taught many lessons, which have served to check, if not to reverse, the tide of informed public opinion which in mid-1930 was admittedly flowing towards acquiescence in some radical change in this country's fiscal policy.

It is worth while, then, to consider what the past six months have contributed towards the education of the country in the matter of the possible shortcomings of Free Trade or the possible merits and advantages of Protection. Several potent influences have been at work. One is the spectacular and steadily accumulating evidence that the world slump has fallen upon the chief Protectionist countries with at least as great a violence as upon Free Trade Britain. Until quite recently there was a disposition in many quarters to regard Britain as the severest sufferer and to assume that the extra severity of her *malaise* might be due to her fiscal system. But the progressive march of economic depression through the United States and Germany—to mention only two of many Protectionist countries which are now sharing fully in the general economic troubles of the period—has substantially shaken this growing belief that a simple remedy for our own troubles lay ready at hand in the shape of a tariff. Moreover, the restoration of a proper perspective in this matter has been assisted by

such studies as those of Sir Arthur Salter and Mr Love-day, who, surveying the world in general (and Britain in particular) from the impartial vantage-point of Geneva, have concluded that just as tariffs have not sheltered other countries from the economic storm, so the lack of tariffs has not been responsible for exposing Britain to its attack. It really amounts to this. When one man is sick and envious of his stronger fellows he is pathetically ready to copy any of the methods of life which, in his fevered imagination, may appear to be responsible for their comparative well-being. But when he sees these temporarily happier fellow-men fall sick of the same disease as his own he will look further and deeper for appropriate remedies. That, we believe, is the process that has been going on in this country of late with regard to the trend of public opinion on the merits of various fiscal policies.

Hardly less effective in its influence upon opinion was the brutal thoroughness with which the Dominion Premiers at the Imperial Conference killed, quartered and buried Lord Beaverbrook's attractive idol of Empire Free Trade. There can be no doubt that in the earlier days of the depression many people were sincerely impressed by his glowing picture of the vast potential markets within the British Commonwealth, and temporarily deceived by his assurance that in them we could find a full recompense for the trade denied to us by the growing nationalism and tariff walls of our European neighbours. But the pleasant picture has been rudely riddled by the arrows of trade facts and economic logic, and there are signs that the noble artist has decided to take his brush in hand and touch up his canvas. For Lord Beaverbrook's recent speeches have suggested that his mind is turning from the needs of our export industries to the plight of British agriculture, and his policy evolving towards one of purely agricultural Protection—following the precedent of Mr Joseph Chamberlain's famous campaign. It is true that, after the withdrawal of one Empire Free Trade candidate another has come forward to contest the urban constituency of East Islington. But, for all the much-advertised enthusiasms of General Critchley, we are inclined to believe that this may well prove to be the last appearance of the policy in its old form.

In these various developments lies the most hopeful tendency of the past six months. It is very much to the good that the country, contemplating the very serious conditions in most other countries, has to a large extent emerged from the state of mind in which it was inclined to search for easy panaceas which do not exist. In so far as that search is abandoned, the greater and more efficient will be the concentration on the essential and pressing tasks of industrial reorganisation and readjustment. There is another important result which follows from the recession of the wave of Protectionist inclination, which was swelling to its crest last summer. It leaves our Ministers in a stronger position in European council chambers to influence the trend of fiscal policy in saner directions and to support with their encouragement and co-operation all initiatives, whether in Scandinavia or elsewhere, for checking tariff warfare.

True, there remains Mr Baldwin. If the tide of tariff enthusiasm has receded, he at least is left by the ebb to make what he can of the tangled seaweed on the fiscal beach. Backed by the official Conservative Party, he has his twin policy of an emergency tariff at home and wide extensions of preferences to the Dominions. But we do not believe that his policy is gaining ground, either in his own party or the country at large. It may be that the swing of the electoral pendulum, after a period of lifeless Labour administration in a time of overwhelming difficulty, might put Mr Baldwin into power. But if he places these two proposals in the forefront of his next electoral programme—as he must do if he is to attempt to secure a plain mandate for carrying them into action—we regard his chances of receiving such a mandate as depreciating day by day.

THE FUTURE OF IRAK.

AMONG the matters considered by the Council of the League at its meeting in January was the proposal of Great Britain for the admission of Irak to membership of the League of Nations, which means that the Mandate for Irak will come to an end in 1932. The Council did not pronounce finally on the proposal, but the French and Italian members declared the approval of their Governments, and it is probable therefore that the proposal will become effective. The British Government is to lay a full report of the progress of the mandatory régime before the Permanent Mandate Commission, and that body will advise the Council of the fitness of the young state for emancipation.

The advance of Irak to the status of full independence has been remarkably rapid. It has been said that Article 22 of the Covenant of the League was designed rather to guide an evolution than to define a status, and Irak has never been completely subjected to the condition of a mandated territory. The mandate for the country was drafted in 1921 at the same time as the instruments for Palestine and Syria; but before it was confirmed by the Council of the League, Great Britain concluded a treaty of alliance with King Feisal, and set out therein the main terms of the mandatory relations. From the beginning there was a strong feeling in the country against the words "mandate" and "mandatory," which were misunderstood to mean an imperative requirement and one exercising authority. By the terms of the treaty the King of Irak undertook to be guided by the advice of the representative of the British Government in all important affairs concerning international and financial interests; and he was to frame an organic law and give effect therein to the principles of the Covenant of the League. The treaty was made for a limited period of years and was to terminate upon Irak becoming a member of the League of Nations, and, in any case, not later than four years from the ratification of the treaty with Turkey.

In 1926, when the Council of the League gave a decision with regard to the inclusion of the territory of Mosul in the Kingdom of Irak, it attached the condition that the treaty relations of Great Britain and Irak should be prolonged for twenty-five years. In 1927, Great Britain entered into a further treaty and gave an undertaking to press for the admission of Irak as a member of the League in 1933 provided that the country was progressing satisfactorily. Two years later the British Government, moved by the general discontent at the veiled mandate, announced that it proposed a more radical modification of its relations, and would recommend without further condition that Irak should be admitted to the League. It communicated its decision to the Permanent Mandates Commission as well as to the Council of the League, and made it clear that in its view the country was fitted for complete self-government. Meantime Great Britain proceeded with her negotiations with Irak on the assumption that the mandate would come to an end, and concluded a treaty of alliance which was signed at Baghdad on June 30, 1930, and now awaits ratification.

Article 1 of the treaty, which is to come into operation on the entry of Irak into the League, provides that there shall be perpetual peace and friendship between the two kingdoms, and there shall be established between them a close alliance "in conservation of their friendship, their cordial understanding and their good relations." There shall be full consultation between them in all matters of foreign policy which may affect their common interests. Each party will be represented at the Court of the other by a diplomatic representative. The Irak Government agrees that the British representative shall have the status of an ambassador and precedence in relation to the representatives of other Powers. The two parties are to consort together in case of any international dispute, with a view to its settlement by peaceful means; but in case either becomes engaged in war, the other will come to his aid as an ally.

Responsibility for the maintenance of internal order and the defence of the country will rest with the King of Irak; but that principle is qualified by the recognition of the permanent maintenance and protection of the essential

communications of Great Britain to the East. The King will therefore grant to Great Britain sites for air bases in the neighbourhood of Basra and to the west of the Euphrates, and authorise the maintenance of British forces at these places. An annexe to the treaty provides also for the maintenance of British forces at Hinaidi, on the Euphrates, and at Mosul for a period of five years after the coming into force of the new agreement, to give time for Irak to organise the necessary forces to replace them. The King will further give all facilities for the movement of British forces in transit across Irak.

By a further exchange of notes arrangements are made for the transfer to the Irak Government of the aerodromes and encampments of the British Air Force and the port works at Basra which were constructed during the war. The aerodromes will be purchased by the Irak Government at one-third of their original cost price, after the expiration of the period of five years during which the British Government may retain possession. The legal ownership of the railway system will be vested in the Irak Government, but the beneficial ownership will pass by lease or otherwise at a nominal rent to a special corporation to be constituted by the legislature; and the capital of the corporation will be divided between the British and Irak Governments, an amount of preferred stock representing the expenditure incurred in the construction being allotted to Great Britain. Of the five directors of the corporation two will be appointed by the British and two by the Irak Government, and the chairman will be chosen by the two governments in agreement. Similarly, the property of the Government at the Port of Basra will be transferred to the legal ownership of Irak; but the port will be administered by a special trust to be constituted by the legislature, so long as any debt owing to Great Britain in respect of the construction is outstanding. The British Government will have a voice in the appointment and management of the trust. In this way its financial interests will be protected, while the kingdom will become immediately the legal owner of its railways and ports.

The course of the new State, when it comes of age and has to "stand alone under the strenuous conditions of the modern world," may not run smooth. For Irak is a territorial compromise, without natural frontiers for the most part, and with ambitious neighbours. The mandatory Power has, indeed, helped to bring about an understanding between King Feisal and the neighbouring King of Nejd of the Hedjaz, who was the hereditary enemy of his family. In February, 1930, the Arab sovereigns came together on board an English warship in the Persian Gulf and reached an agreement of *Bon Voisinage*. It is possible that, when the kingdom becomes entirely independent, an adjustment of the frontier may be made with the neighbouring States which will simplify the position. But another difficulty for Irak will be the development of its economic resources. This is possible only with the help of foreign capital. The principal potential wealth of the country lies in the employment of its vast oilfields and the restoration of its irrigation system. From the beginning of its history, the development of its oil has been one of the dominant issues, and it is to-day a more tangled problem than ever. The country contains two great fields: that near Mosul, for which the Irak Petroleum Company has a concession, and that on the Turkish border, which is being worked by the Anglo-Persian Oil Company. The concession of the latter has been extended for a period of thirty-five years to 1936 and is in full working. The concession of the Irak Petroleum Company provides an exclusive right of prospecting for a period of four years; and the company is then required to select twenty-four plots, each of an area not exceeding eight square miles, and to begin the construction of a pipe-line from the oilfield to the sea. The period of prospecting has been extended by agreement until 1934, and the question of the course and outlet of the pipe-line has been under active consideration between the company and the English, French and Irak Governments. France has argued that the oil should be brought to a Mediterranean port under her control, and pressed for the immediate construction of a line to Tripoli or Alexandretta. On the other hand, the Irak Government desires that the pipe-line shall be carried to Haifa and be accompanied by a

railway passing through the territory of Trans-Jordan and Palestine, which would best serve her strategic and economic interests; and a concession agreement, signed on January 12th, between the High Commissioner for Palestine and the Irak Petroleum Company gives the latter the right to construct a pipe-line ending just north of Haifa in the Bay of Acre.

In this criss-cross of interests, political and economic, another element enters. A rival group, the British-Oil Development Company, is pressing for a concession in the oilfields, and claims that the Irak Petroleum Company should be held strictly to its undertaking to complete prospecting within the time limit and select its twenty-four plots so that other companies should be able to take up other areas. On the other hand, the Irak Petroleum Company is not anxious immediately to work fully the Mosul field, because of the present glut of oil; but the Irak Government is anxious immediately to draw its royalties from full production.

So much for the intricate politics of oil. For the restoration of its irrigation system, which for centuries until its destruction by the Tartars, made Mesopotamia one of the richest countries in the world, the kingdom must depend largely on attracting foreign capital. And to secure that she will have to maintain the confidence of the older States. During her first ten years of tutored independence she has received liberal assistance, financial and military, from the guardian power, which has, on the one hand, provided the basis of material prosperity, and, on the other, preserved her from the dangers of attack during the years of infancy. Under the new treaty with Great Britain she will no longer be bound to follow advice in international and financial matters; but self-interest may lead her to continue to rely on that advice.

PUBLIC WORKS.

NEXT week the House of Commons will be asked to address itself on the one hand to a Conservative motion of censure on the Government for failure to effect economies in administrative expenditure, and, on the other hand, to a motion tabled for the Liberal Party by Mr Lloyd George expressing "grave concern" at the situation of unemployment, and calling upon the Government to formulate "an extensive policy for utilising the labour of the workless in useful and essential schemes of national development . . . the works to be such as are needed for the improvement of the national equipment, and the cost to be met by inviting subscriptions to public and national loans from the capital resources which now await investment." The types of work indicated in the motion as being "of public utility" are broadly those familiarised in *How to Tackle Unemployment*; and the restatement by Mr Lloyd George of his policy in regard to public works seems likely to awaken all the old controversy, whose gamut ranges from the proposition that capital expenditure by the State as a remedy for unemployment is ineffective, if not deleterious, to the thesis, at the other extreme, that if only the expenditure be sufficiently large a permanent upward swing from depression can be given to the trade cycle. This is a subject on which Parliamentary debate has created, and is likely to create, so much more heat than light, that it is worth while endeavouring, if possible, to disentangle the real issues from the confusion. A brochure just published by the International Labour Office on "Unemployment and Public Works,"* in which the action taken, the methods employed, and the purpose aimed at in various countries is summarised and examined, affords valuable assistance to this end.

In the first place, a clear distinction should be drawn between (a) "public works" proper, i.e., works executed (either by "direct" labour or through the medium of a contractor) under public authority for a specific and useful purpose inherent in the nature of the works, and (b) "relief works," the primary purpose of whose institution is simply to provide occupation—and wages—for

* "Unemployment and Public Works." (P. S. King and Son. 4s.)

the unemployed. True, the distinction is not always as clear in practice as it is in theory; but it is very desirable that it should be constantly borne in mind. For the present situation is such that there is a great body of unemployed workers who have no desire either "to dodge the column" or to batten on the Exchequer, but in whose case the danger of demoralisation through idleness is an increasingly serious factor. To counter that danger a strong argument exists for providing occupation, organised by the State or by local authorities, as a condition of receipt of benefit. For the sake of morale, as well as to eliminate sheer exploitation of an improvidently loose Act, the case for "test work" is very strong indeed. But let us be clear: such work, if instituted, is instituted for the sake of the unemployed, or to stop abuse of the "dole," not for its own sake. And this being so, the utility, or otherwise, of "relief works" proper is not a strictly relevant consideration. Given the State's obligation to provide a man with the means of subsistence in any event, the unemployed may as well remove dandelions from the Royal Parks or wash the grimy façades of Whitehall as stand at a street corner. To put in hand works of this kind might involve some additional expenditure; but if the amount of raw material and capital equipment were small it would be possible to introduce a system analogous to that recently in force in Germany without a great increase in the present expenditure on unemployment pay. But though such schemes might be of advantage sociologically, this does not imply that the occupations would *ipso facto* be economically useful, that they would carry with them the right to wages reckoned in terms of analogous ordinary employments, or that they would do anything at all to "cure unemployment."

On the other hand, we are not likely to do very much for the morale of the worker if we set him to work at a job which he knows to be more or less useless; and from the community's point of view there would be an immense gain if by launching plans on a commercial basis—paying standard wages, taking steps to secure competitive contracts, etc.—we could secure the social advantage of taking men off the dole and at the same time produce results which are worth their cost to the country either in immediate return or as an investment which will yield results in the future in the shape of increased efficiency, health or public well-being. But once again let us be clear: "public works" as thus defined must conform to commercial tests not only as to wages paid, but also from the point of view of efficiency both of labour, administration and technique.

Whether public works run on a commercial basis can increase aggregate employment in any given phase of the trade cycle and in any country is a matter which we have no space to argue fully here. We would only say that the Treasury Memorandum of 1929, which held that the issue of a loan for public works must, as a rule, reduce other employment at least in proportion by withholding capital from investment elsewhere, embodied an attitude barely defensible then and quite untenable to-day. To argue that no enterprise financed by public investment (whether the State or a private individual be the entrepreneur) can add on balance to the volume of employment is absurd; and though in 1929, considering the then attractive pull of Wall Street, a large State loan

might have raised the general level of interest in this country, no such immediate risk exists to-day.

In short, we endorse the general argument—put forward by Professor Bowley before the Poor Law Commission as long ago as 1909 but never seriously given experimental test in any country—that public works, planned in advance, should be retarded in prosperity and accelerated in times of depression; and, further, we believe that in the present situation of the capital issue and money markets a substantial Government loan for "works" could be raised without diverting a serious amount of capital from other enterprise or raising the general level of long-term interest. But there are qualifications. Trade depressions have often been caused by over-investment of capital in a particular direction, and the case of public works is certainly no exception. Moreover, it must not be forgotten that Britain's ordinary industrial equipment is desperately in need of drastic improvement, and when the tide turns the capital requirements of trade may not easily be met from a volume of savings which, though for the moment in excess of the demand, is small in proportion to our long-term needs. In other words, there are limits to the extent to which such public investments can be made with advantage, and if continued indefinitely they would undoubtedly prejudice private industry. Thus the policy of instituting "public works" on a large scale is unquestionably one to meet a temporary situation, whose drawbacks increase as the depression is prolonged, and cannot be put forward as a permanent cure. For though we may agree with Mr Lloyd George that conditions for raising a "development loan" are propitious, and that good would be done by pressing on to-day with a programme of reproductive public works, we do not for one moment think that such schemes could turn the tide or give such a stimulus to business as to overcome the causes of the present depression.

For the cure we must look elsewhere. "Public works," says the I.L.O. report to which we have already referred, "are not a cure for deep-seated causes of unemployment, but are a desirable means of providing employment for as large a number as possible of the unemployed while other steps are being taken to improve the economic situation, such as rationalisation, lowering of costs, international trade agreements, tariff agreements and so on." For Great Britain the implications of this caveat are peculiarly significant. A predominantly exporting country, Great Britain has suffered from persistent "secular" unemployment, quite apart from the present cyclical depression, as a result partly of out-of-date equipment but mainly of our attempt to maintain wages at a level out of all proportion to selling prices of goods and the productive efficiency of labour. A stimulus to domestic trade which resulted from "works" expenditure by the State, and whose results obscured the need for fundamental restoration of our lost balance between costs and prices, would be an unmitigated disaster.

PROGRESS OF THE U.S.S.R.

So far as can be judged from the latest official data, very substantial progress has been made during the second year of Russia's Five-Year Plan. Since its inception in October, 1928, the Piatiletka has seen two major changes. The first occurred in the autumn of 1929, when it was decided, in view of the unexpectedly high level of achievement, to revise all estimates in an upward direction. The second took place last September, when it was resolved that henceforth the economic year should be identified with the calendar year, instead of being reckoned from the beginning of October to the end of the following September. The object of the change was apparently not to prolong the year 1928-9 by three months because the estimates had not been realised, but merely to ensure that before the final plan for each succeeding year was adopted, the results of the all-important harvest should be available. Actually, for the transition period October 1, 1930, to December 31, 1930, popularised in Russia as the

"shock quarter," a special plan was prepared, and, judging by the results so far available, this has been largely fulfilled.

In Year II. of the plan, ended last September, the chief obstacles to the full realisation of the programme were found to lie in transport, fuel supply, and the mobilisation of labour. The unprecedented advance in industrial activity during the past few years has put a great strain on a transport system whose efficiency, even in pre-war days, was of a very moderate order. The supply of fuel, the keystone of the economic arch, failed to keep pace with general industrial expansion, partly owing to a shortage of labour in the mining districts and partly to the impossibility of sinking rapidly enough the necessary new shafts. The third problem was noteworthy in that for years Russia has had an excess, rather than a shortage, of at least semi-skilled labour; but the absorption of millions of workers in industry during the past few years has disclosed the necessity of carefully organising and planning the use of the available supply.

The official output figures of Soviet industry for the year to September 30th last show that, while the original estimates of the Piatiletka have in most cases been exceeded by a wide margin, the revised estimates have been realised only in isolated instances. The gross output of all State industry, valued in roubles at 1926-7 prices, is stated to have exceeded that of the plan's first year by 25 per cent., while for the two years combined, output amounted to 30,500 million roubles, compared with 29,300 million roubles provided for in the original estimates. In general, the heavy industries, upon which the greatest efforts were concentrated in 1930, record the most outstanding successes. Thus, the production of coal increased by 20 per cent., of iron ore by 41 per cent., of pig iron by 24 per cent., and of steel by 18 per cent. The output of crude oil considerably exceeded even the "revised" plan, with an increase of 26 per cent. instead of 18 per cent. In the manufacture of machinery the "revised" plan was likewise exceeded, though the output of agricultural machinery fell below estimates. In the timber industry, though complete results are not yet available in London, it seems probable that the estimates were not realised.

The production of consumers' goods was less satisfactory, partly as a result of comparative neglect and partly owing to a lack of raw materials. The output of cotton cloth, for instance, actually fell by 15 per cent. compared with last year, while a shortage of raw wool was responsible for the fact that the production of woollen goods increased by only 8 per cent. against the 16 per cent. projected. In the following table the comparative results in a number of industries are given for the first and second years of the plan, together with estimates, where they are available, of the output planned for 1931:—

PRODUCTION IN SOVIET RUSSIA.

‡ Value in all years at 1926-7 prices.

In agriculture, progress was fairly general. The total area under cultivation in 1930 amounted to 127.7 million hectares, compared with 118 million hectares in 1929, while the grain harvest totalled 86.5 million tons, against 71.7 million tons in 1929, an increase of 20.6 per cent. It is now confidently hoped in Moscow that, granted a

succession of average harvests, the grain problem has been solved. There is still much to be done before the cultivation of technical crops reaches a satisfactory position, but in 1930 the area under sugar beet increased by 11.1 per cent. and the area under cotton by 23 per cent., though in the latter case the harvest was poor. On October 1, 1930, more than a fifth of all the peasant holdings in the U.S.S.R. were "collectivised," while in the grain areas of the Ukraine, Siberia, and the Upper and Middle Volga, the level of "collectivisation" reached 43.8 per cent. of the whole. The "socialist sector" of agriculture now provides over 50 per cent. of the total grain supply, compared with the 43 per cent. which it was hoped it would supply in 1933. At the same time, a marked increase has occurred in the proportion of livestock held in collective hands, and it is hoped to solve the livestock problem along the same lines as those which were followed in the organisation of grain production.

A part of the admitted hardships which the Russian people are enduring is attributable to the fact that the country is living for the future. Immense sums have been applied to capital investments and new construction during the last two years. Whereas during the three years which preceded the inauguration of the Piatiletka new construction formed only 18 per cent. of the total amount of capital works, in the Five-Year Plan it amounts to 54 per cent., or, if house-building is included, to 61 per cent. of the whole. While, in 1928-9, new industrial construction cost 430 million roubles, in 1930 it absorbed 1,000 million roubles, and in 1931 will take 3,700 million roubles of the national resources. During the past year the great tractor works at Stalingrad and the agricultural instrument works, Selmashstroi, at Rostov-on-Don, have been completed, while the "Turksib" railway was opened twelve months before the scheduled time. Work on Dnieprostroi, the large hydro-electric station near Zaporozhie, is proceeding in advance of estimates.

In the field of foreign trade, the second year of the plan brought considerable expansion. Exports from U.S.S.R. in 1929-30 totalled 1,002 million roubles, against 878 millions in 1928-9, a large proportion being represented by wheat, oil, and timber. Imports totalled 1,069 million roubles, as compared with 836 millions in the previous year. Thus the visible balance became adverse, but the export plan for 1931 suggests that shipments of the commodities above-mentioned will materially increase during the coming year.

As regards the condition of the workers, the Soviet Government claims that equally concrete achievements stand to its credit. The average wage paid to workers engaged in State industry has increased, in roubles, by 12.1 per cent. in two years. No satisfactory figures have been given, however, to show what is the real buying power of these wages. The number employed in 1930 was returned at 13,684,000, against a planned total of 12,793,000, and on October 1, 1930, 40.3 per cent. of the whole were working a seven-hour day, compared with 19.1 per cent. twelve months before.

According to the estimates for 1931, it seems that the greatest attention is to be devoted to the coal and metallurgical industries, and to oil. The planned output of coal, 83½ million tons, represents an increase of over 80 per cent. as compared with 1930. Pig-iron production is planned to increase by 60 per cent. to 8 million tons, steel production by 60 per cent. to 8.8 million tons, and oil by 50 per cent. to 25½ million tons. Production of agricultural machinery is to be more than doubled, and the output of electrical power is to be increased from 2.9 million kilowatts to 4.5 million kilowatts. The aggregate gross output of all State industry in 1931 is to exceed that of 1930 by 45 per cent., which means that 79 per cent. of the Piatiletka will have been fulfilled in three years. The total area under cultivation is planned to exceed 143 million hectares, against 128 million hectares in 1930, while in the grain belts 80 per cent. of the peasants will be "collectivised." The estimated national income for 1931 is 49 million roubles, at which figure it is practically equivalent to the original estimate for 1933. Wages in 1931 are to exceed those in 1930 by 6 per cent. while 92 per cent. of the workers in the industries controlled by the Supreme Economic Council will be working a seven-hour day.

LONDON OFFICE: 38, Threadneedle St., E.C.2

Every description of Banking Business transacted.

Past experience has shown how difficult it is for the foreigner accurately to forecast to what extent these astronomical estimates will be realised, for, while the progress made in the last two years is very remarkable, the "expectations" for 1931 are on a far more expansive scale. The points upon which greatest doubt may be felt are the adequacy of transport facilities to cope with the projected increase in production; the ability of the authorities to recruit sufficient skilled labour, particularly technicians; and, perhaps above all, the question whether the undoubted upward movement of "uncontrolled" prices (i.e., of articles not rationed in favour of the workers) may not impose too great a strain on the morale of the people.

IRON AND STEEL IN 1930.

From published monthly figures of output, supplemented by the best estimates available for those countries which do not publish monthly statistics, it appears that world production of pig iron in 1930 amounted to 78,650,000 tons, and of steel ingots and castings to 93,000,000 tons. In the case of pig iron this is 19 per cent. below the production of 1929, and in the case of steel 21 per cent. lower. Compared with 1913, pig-iron production was 1 per cent. and steel production 24 per cent. greater. Details are set out in the following table:—

WORLD PRODUCTION OF PIG IRON AND STEEL.

	1913.	1929.	1930.
(In millions of tons.)			
Pig Iron:—			
United Kingdom.....	10.26	7.59	6.20

Total.....	75.15	118.43	93.00

It will be seen that the decline, compared with 1929, was general, but was most marked in the United States, Germany and the United Kingdom, where the reductions of steel output amounted to 27 per cent., 30 per cent. and 24 per cent. respectively. In France steel production declined by only 4 per cent., while in Russia output actually increased. Naturally the United States still occupies first place as an iron and steel producer, and contributed in 1930 about 40 per cent. of the world's.

output of pig iron and 44 per cent. of the world's steel output; but it will be noticed that France now takes second place in the list of pig-iron producers, having exceeded Germany's production by over a quarter of a million tons, although Germany retains the second place as a steel producer. Great Britain retains the fourth place in pig-iron production, but drops from third to fourth in steel production. In most cases production in the early part of the year was at a level only slightly below the average for 1929, but a decline began in the spring and continued unchecked to the end of the year. In the United States, for example, steel production in the fourth quarter of the year was only 57 per cent. of that in the first; in the United Kingdom 54 per cent.; in Germany 64 per cent.; in Belgium 74 per cent.; and in France 90 per cent.

In the United Kingdom home demand was poor owing to the depressed position of shipbuilding, engineering and other industries consuming iron and steel, while export demand was curtailed owing to the fall of silver in the silver currency countries and the disturbed financial or political conditions in some of our best markets for iron and steel, e.g., Australia, India and South America. Exports of iron and steel, which in 1929 amounted to 4,379,500 tons, fell in 1930 to 3,157,900 tons. In spite of the low home and export demand, however, imports of iron and steel amounted to 2,908,300 tons, or 86,000 tons in excess of the previous year.

That imports were higher than in 1929 and exports much lower was very largely due to the demoralisation of market conditions on the Continent. Towards the end of 1929 the Continental Steel Cartel had decreed a curtailment of steel production of 10 per cent., but this decision was not only taken too late; it was not adhered to when taken. If even the huge "rationalised" works on the Continent are to work economically they must operate nearly up to capacity, and the desire for low production costs led to over-production and price demoralisation. Continental sheet bars, for instance, which at the beginning of the year were quoted at £4 15s. f.o.b. Antwerp, were £3 15s. at the end of the year after having been some shillings lower; girders fell from £5 1s. 6d. to £3 16s.; and similar falls occurred in other iron and steel products. These prices were admittedly below cost, and the report on the "Economic Aspects of International Industrial Agreements" prepared for the Economic Committee of the League of Nations, in drawing attention to the failure of the Steel Cartel's proposals for controlling prices, states: "As a result, the price of metallurgical products dropped considerably, and is at present below cost price. This is an abnormal and indeed unendurable situation; there is a complete lack of stability in the metallurgical market which is as prejudicial for the consumers as for the producers."

In Great Britain the progress of the rationalisation movement has been somewhat slow, but considerable progress was made during the past year. As from January 1, 1930, the heavy steel departments of Messrs Guest, Keen and Nettlefolds and Baldwins, Ltd., in South Wales were taken over by a new company known as the British (Guest, Keen, Baldwin) Iron and Steel Company. In Scotland, Messrs David Colville and Sons, who had already taken over the business of Beardmore's in plates, sections and rails, amalgamated with James Dunlop and Company and formed a new company, to be known as Colville's, Ltd., with a capitalisation of £4½ millions. In Lancashire, the Wigan Coal and Iron Company, the Pearson and Knowles Company, and the Partington Iron and Steel Company were amalgamated into two corporations—the Wigan Coal Corporation and the Lancashire Steel Corporation. The amalgamation of Dorman Long with Boleckow Vaughan took place in 1929, and no further expansion of this group has yet taken place. In the Sheffield district, a scheme for the amalgamation of Messrs John Brown and Company, Ltd., and Messrs Thos. Firth and Sons, Ltd., was announced at the end of January, 1931.

It was quite impossible for British iron and steel manufacturers to follow Continental prices, and British prices

remained practically stable throughout the year. The Board of Trade price index for iron and steel fell from 115.2 in January to 108.9 in December, a fall of only 6 points, whereas the index for "all commodities" fell by 22 points. The fall in the case of the iron and steel index was due chiefly to reductions in the price of pig iron, since imports of Continental and Indian pig iron were assuming substantial proportions. As a result of the acute depression, the iron and steel industry has contributed more than its quota to the increase in unemployment which took place during the year; the percentage unemployed in pig iron manufacture, which was 12 per cent. in January, had risen to 35.7 per cent. in December, while in steel manufacture the percentages were 23.7 and 50.6 respectively. Nor is the outlook immediately promising; for it cannot be said that any marked improvement has appeared in any of the chief producing countries since the turn of the year.

IRISH PROSPERITY.

(BY OUR DUBLIN CORRESPONDENT.)

THERE has been a striking difference in tone between the speeches recently delivered by the chairmen of British and Irish banks. Whereas the speeches of the chairmen of the British banks were guarded, even pessimistic, as to the future, those of the Irish bank chairmen were decidedly optimistic. The Governor of the Bank of Ireland, for example, stated that, "although the country has not come unscathed out of the general wave of depression, it is a matter of congratulation that we have not suffered as severely as other parts of the world"; and the chairman of the National Bank said, "it is satisfactory to be able to point to the healthy condition of the Irish Free State and the steady progress it continues to make in face of world-wide depression. . . . It is forging ahead . . . the morale of the people is high and their standard of living is well maintained, thus bearing testimony to a high degree of economic self-sufficiency." Similar statements occur in the speeches of the other bank chairmen, and it is impossible to resist the conclusion that the Free State has escaped, comparatively unharmed, from the prevailing world depression. It may not be without interest to indicate some of the signs of this relatively fortunate situation, and to attempt to discover some of its causes.

For many years the volume of emigration has been accepted as a reliable index of economic conditions in Ireland. In good years emigration has always fallen, while in bad years it has invariably risen. The following table shows the number of emigrants from the Free State to overseas destinations in the past five years:—

Year.	Emigrants.	
	To U.S.A.	Total.
1926	26,367	30,359
1927	23,947	27,309
1928	21,775	24,800
1929	18,119	20,882
1930 (first 10 months)	13,680	15,359

It is obvious that the tide of emigration is tending to slow down. That this is not wholly the result of conditions in the United States is shown by the unbroken decrease that has taken place during a period which has witnessed phases both of prosperity and of depression in America. While it cannot be doubted that the recent slump in America has discouraged emigration, it would appear that there must also have been some internal factor affecting the movement in Ireland. The most obvious cause of a slackening of the stream of emigration would be an increase of employment at home, and the fact of such an increase having taken place is proved by the diminution in the number of persons receiving unemployment relief. This diminution in unemployment has permitted the Government to reduce the contribution by employers and employed to the Unemployment Insurance Fund, which will become solvent in the course of a few years in spite of the reduced rates of contribution.

The trade statistics for 1930 are also satisfactory and show a decided improvement in the visible balance of trade:—

Twelve months ending	Imports.	Exports.	Adverse Balance.
Nov. 30, 1929	£ 61,676,983	£ 46,549,675	£ 15,127,308
Nov. 30, 1930	56,931,782	45,205,119	11,725,663

The reduction in the adverse balance, it will be observed, is the result of a large diminution in the value of imports; and the maintenance of the value of exports is caused largely by the increased shipments of live stock at comparatively satisfactory prices. The numbers of cattle and pigs exported in 1930 were greater than in the previous year by 59,227 and 83,963 respectively, while the numbers of sheep and horses showed a decrease of 17,917 and 117 respectively. Thus, on balance, the exports of live stock of all sorts showed a substantial increase, and the value of the exports also increased in spite of the general fall in prices. This fortunate result was caused by the relatively slight fall that took place in the price of live stock and live-stock products. The following table, quoted by Mr Colbert at the annual meeting of the Agricultural Credit Corporation, shows the decline in the price level of different groups of commodities between the average price of 1928 and the price prevailing on November 30, 1930:—

	Percentage Fall.
Vegetable foodstuffs.....	32.8
Animal foodstuffs	11.5
All foodstuffs.....	23.6
Industrial materials.....	28.8

Towards the end of the year cattle prices showed a downward tendency, and a sharp slump took place in the price of butter; but, taking the year as a whole, the decline in the prices of the principal products of Irish agriculture was more than offset by the fall in the price of feeding stuffs and other raw materials of agricultural production. The course of prices during the year amply justified the Government's policy of refusing to place any artificial impediment in the way of importing feeding stuffs, or to encourage, by means of tariffs or subsidies, the home production of cereal crops.

The public credit of the Free State improved considerably during the year. A loan of £6,000,000, bearing interest at 4½ per cent., was floated at 93, and its price is now above par, while the earlier 5 per cent. loans now stand at a higher price than the British Five per Cent. War Loan. An issue of 5 per cent. mortgage bonds by the Agricultural Credit Corporation at the price of 101 was heavily oversubscribed, and it may be taken that the Free State can now borrow all the money it requires at 4½ per cent. Dublin bank clearings were greater than in 1929, and the five principal banks operating in the Free State succeeded in increasing their profits and maintaining their dividends. The advances of these five banks declined by only 1.3 per cent., compared with a decline of nearly 6 per cent. for the "Big Five" banks in Great Britain. In short, the readings of all the "economic barometers" are comparatively satisfactory; if the glass is not rising, it has not seriously fallen.

It is obvious that the relatively high price of live stock is the principal cause of the Free State's having avoided the full impact of the economic depression. Moreover, the agricultural products in which the Free State specialises are all articles of good quality, consumed mainly by better-off people whose purchasing power in those directions is not sensitive to fluctuations in industrial prosperity. The concentration of production on such commodities has been encouraged by the Government's agricultural programme, which has aimed at an increased output of live stock and live-stock products of high and uniform quality. In pursuance of this policy, the breeding of cattle and swine and the manufacture and export of meat and dairy produce have been placed under strict regulation and control, and an attempt has been made to reduce costs of production in every direction. The wisdom of this policy is being partially demonstrated in the present depression, but it will not be fully realised at its true value until prices once more begin to rise.

Indeed, it might be said generally that the economic policy of the Free State, in contrast with that of some of its neighbours, has aimed at increasing the size rather than at improving the distribution of the national divi-

dend. The whole agricultural programme has aimed at bigger and better production; even the recently imposed duty on imported butter is justified by its supporters on the ground that it will encourage winter dairying and thus increase the volume of the output of butter available for export. The tariff on industrial products has also increased production in some of the protected trades, and the harnessing of the Shannon has provided a plentiful supply of cheap electric power, which will undoubtedly encourage productive undertakings.

In comparison with its "productional" programme the Government's "distributional" programme has been very modest. Every demand that the Free State should extend its social services whenever they were extended in Great Britain and Northern Ireland has been sturdily resisted, with the result that these services are at the same level as that at which they stood in Great Britain in 1921. The unemployment insurance fund has been very strictly administered and has been kept on a sound actuarial basis. Except during a brief period of acute distress several years ago, no uncovenanted benefit or "dole" has ever been given. The absence of the "dole" has unquestionably reduced the volume of unemployment, because wage rates have proved more elastic than they would have been if unemployment relief were available on the British scale. In this connection it is important to remember that the majority of the productive workers in the Free State are farmers and their families, who are not paid money wages, and that there is therefore no problem arising out of the "lag" between prices and wages. The fall in prices is transmitted direct to the primary producer, and the problem of unemployment, through resistant wage levels, is avoided.

The Government's refusal to extend social services and its strict insistence on economy in all branches of public expenditure have enabled taxation to be kept at a relatively low level. Income tax has been reduced to three shillings in the pound and shows no sign of rising again. The annual budget balances, and the public debt is very small—about £6½ per head of population, or 70 per cent. of one year's normal revenue. Moreover, the greater part of the debt was incurred in respect of productive undertakings, such as the Shannon Scheme and the improvement of agriculture. Owing to the excellent financial settlement made in 1925, the Free State has escaped from the burden of the British war debts, and it is not burdened with any of those international payments arising out of the war which are proving such an embarrassment to other countries. Apart from two terminable annuities amounting to £850,000 and the sums collected in respect of pre-Treaty advances for land purchase which are payable to the British Government, there are no items in the Free State's international payments that do not represent real commercial or financial transactions.

It must not be taken from what has been said above that the Free State is not confronted with many economic problems and difficulties. What country is free of them to-day? There is much poverty, both rural and urban, and there is still room for a great development of production and for an improvement in the general standard of living. An attitude of complacent optimism would be completely unjustified. The point is that, during a period of world-wide economic disequilibrium, when nations have been afflicted with innumerable evils caused by forces outside their own control, the Free State has escaped the worst ravages of the storm.

Notes of the Week.

A Warning from the Treasury.—Any lingering remnants of complacency with regard to the situation of the Unemployment Insurance Fund and the terms under which benefit can be claimed as a result of the Government's ill-timed Act of 1930, are likely to be shattered by the disquieting evidence in the form of a Treasury Memorandum presented to the Royal Commission on Thursday of last week. Sir Richard Hopkins, Controller of Finance, tabled figures of Exchequer contributions to,

and net borrowings by, the Fund summarised in the following table:—

UNEMPLOYMENT INSURANCE. (£ millions).			
Financial Year.	Exchequer Contributions.		Net borrowing by Fund.
	Ordinary Contribution.	Transitional Benefit.	
1928-29	11.75	...	11.43
1929-30	15.43	3.98	2.99
1930-31*	14.97	22.00	33.36
1931-32†	15	35-40‡	40-50

* Estimated.

† Conjectural estimate based on existing situation.

‡ Possibly more.

The effect on the Budget of the tremendous growth disclosed above in the cost of "transitional" benefit now payable directly by the Exchequer to those whose claims to ordinary benefit have lapsed, requires little emphasis. Equally serious is the steady increase in the Fund's net borrowings from the Treasury by way of loans, whose repayment, unless the task is transferred to the shoulders of the taxpayer, is very questionable. Sir Richard put the point cogently: "These vast Treasury loans are coming to represent in effect State borrowings to relieve current State obligations at the expense of the future." He added the grave warning: "Continued State borrowing on the present vast scale without adequate provision for repayment . . . would quickly call in question the stability of the British financial system." The Government Actuary, Sir Alfred Watson, giving evidence to the Royal Commission on the same day, pointed to the fact that not only had transitional benefit become in many cases "a pension" whose cost was far in excess of anything contemplated by Parliament when the last Act was passed, but that claims of many types now admissible under the Act were flagrantly at conflict with sound insurance principles. He instanced "short-timers," women who had left employment on marriage, coal trimmers earning £5 to £7 a day on two days a week, even professional footballers drawing high salaries but nominally unemployed on four days of the week, as types of claimants who could continue to enjoy existing benefits only if the contributions to the Fund were "loaded up to meet them"; and, as Sir Alfred rightly added, "the injustice of such an impost to industry, to workers generally and to the taxpayer need not be laboured." It is obvious that the present situation cannot be allowed to continue while the Government drifts on Micawber-like in the hope that some improvement in trade and employment will turn up. We are glad to note that the Treasury Memorandum has Mr. Snowden's "approval"; and we earnestly trust that the Royal Commission will lose no time in issuing an interim report giving its views as to immediate practicable policy aimed, if not at completely restoring the solvency of the Fund (though this must be the ultimate objective), at least at checking the present profligate drain.

The Trade Disputes Bill.—A week ago it appeared that one of the difficulties threatening the progress of the Trade Disputes Bill in Committee had been removed by the statement of the Solicitor-General that in his view the 1926 "general strike" would not have been legal under the terms of the new Bill. Assuming that this represented the Government view and intention, we suggested that there should be no difficulty in amending Clause I. so as to render the position quite clear. But now the position has become completely confused once more. Speaking at Watford on Friday of last week, the Prime Minister said: "The strike of 1926 was not a political strike. If it had been a political strike, this Bill would have made it illegal; if it was an industrial strike, this Bill ought not to make it illegal." This pronouncement induced Mr. Neville Chamberlain to invite Mr. MacDonald by letter to clarify the position. So far as

it has gone, the resulting correspondence has thrown no new light on the vexed question; for Mr. MacDonald evaded the real issue—which is whether the Government intend the Bill to legalise events such as those of 1926—and contented himself with saying that the opinion of the court on the events of 1926 was never taken, and that it was a point that neither he nor the Solicitor-General could finally decide. Mr. Chamberlain thereupon replied, making two points: (1) That he assumed the Prime Minister's belief to be that a recurrence of the events of 1926 would be made legal by the present Bill; and (2) that, in the view of the Solicitor-General, if that be the intention of the Government, it is not carried out by the Bill. The next word lies with the Prime Minister, who appears to be impaled upon the horns of a dilemma. Unless he agrees to amendments of Clause I. making it clear that a repetition of the 1926 strike is not legalised, he has no chance whatever of getting the Bill through the Committee stage. On the other hand, Mr. Hayday, the Chairman of the Trades Union Congress General Council, has stated that, if the general strike is ruled out by the Bill, then the T.U.C. has no further interest in the Bill. It is not easy to see where Mr. MacDonald can find a loophole of escape, and the Bill begins to look more than ever moribund.

Mr. Churchill's Lonely Furrow.—The interesting but chequered political career of Mr. Winston Churchill has this week entered upon a new phase. After representing Oldham in the Conservative interest from 1900 to 1904, he then crossed the floor, and from 1906 was almost continuously in high office, first with the Liberal Government, and then with the three war and post-war Coalitions until 1922. After an interval of two years he returned to his first love and became Chancellor of the Exchequer in Mr. Baldwin's second administration from 1924 to 1929, during which period he veered from strict Free Trade to a sort of fiscal "no-man's land" in which the feature of the landscape was a tariff for revenue. For the past five years he has overcome Conservative doubts of his orthodox Conservatism by his vigorous and untiring opposition to Socialist policy. Now this kaleidoscopic career has taken a new turn. Following his dissident speech on Indian policy, and its open disavowal by Mr. Baldwin, Mr. Churchill has withdrawn from the Conservative "Shadow Cabinet," and a courteous interchange of letters between himself and his leader reveals that, although there is no difference between the two in their opposition to the general home policy of the Government, the rift between the ex-Premier and the ex-Chancellor on the question of India is too deep to be bridged. So Mr. Churchill, although retaining his seat on the Front Opposition Bench, has withdrawn to a position of political isolation, which he has lost no time in emphasising by a vigorous speech at Manchester last week-end. What next? In the case of a personality so volatile and a past career so consistently, if brilliantly, inconsistent, prophecy is dangerous. Mr. Churchill has time and again shown an amazing ability to swim back into the main stream of popular opinion. But circumstances to-day are against him. In endeavouring to annul the work of the Round Table Conference he is making a futile attempt to put back the hands of a clock which has been wound up by the co-operative efforts of the three British parties. We have no doubt that he will plough his new furrow resolutely. But it is a very lonely one.

Italy's Flag at Kufra.—The Italian occupation of the Kufra oasis, the headquarters of the Senussi Muslim militant order in the depths of the Libyan desert, is a notable feat. Kufra lies some 500 miles south of the Mediterranean coast of Cyrenaica and 400 miles from the nearest oasis, Jalo; and 250 of these 400 miles are without water, food or fodder. This was the route taken by one of the two Italian columns which converged upon Kufra. The other column marched from Fezzan, the country in the hinterland of Tripoli, to the west of Kufra, which was occupied by the Italians last year—or, rather, reoccupied, since the Italians held Fezzan for a moment in 1914. Thus the effective Italian occupation of the

ex-Ottoman provinces of Tripoli and Benghazi, with their hinterlands, has been completed in the twenty years which have elapsed since the beginning of the Turco-Italian War of 1911. With the defeat and dispersal of the Senussi warriors, there remains no native force in North Africa which can stand up against the Italians. Such questions as are still outstanding are all between Italy and other European Powers. The occupation of Kufra does not affect the relations between Italy and Egypt; for the Italo-Egyptian Treaty of 1925 settled the Libyan-Egyptian frontier from the coast of the Mediterranean southwards as far as the boundary between Egypt and the Anglo-Egyptian Sudan, which the Libyan-Egyptian frontier strikes at right angles at the intersection of longitude 25 E. and latitude 22 N. Between the south-west corner of Egypt at this point and the north-east corner of the French territory of Equatorial Africa, which was fixed in 1923, by an Anglo-French agreement, at the intersection of longitude 24 E. and latitude 19 degrees 30 N., there is a gap where Italian Libya marches with the Anglo-Egyptian Sudan. The Italian occupation of Kufra raises the question of fixing a frontier here; and on Monday night Mr. Dalton stated, in the House of Commons, in answer to a question, that the matter was engaging His Majesty's Government's attention. There is no reason to anticipate that a settlement will be difficult; for in this region of "very light soil" (to quote Lord Salisbury's famous phrase) it does not matter very much to either party whether the line on the map is drawn rather further to the north-west or to the south-east, as the case may be. The crux will be the frontier between Italian Libya and French Equatorial Africa; for here the Italians would like to see the "rectifications of African frontiers in Italy's favour" (which the French and British Governments promised as a *quid pro quo* when Italy intervened in the Great War) interpreted by a sweeping gesture which would bring Italian territory down to the shores of Lake Chad. This is something which the French are in no mood to grant; and there are possibilities of sore feeling here.

The Gallows in Turkey.—It will be remembered that, several weeks ago, there was an abortive revolt against the present régime in Turkey at the little country town of Menemen, on the west coast of Asia Minor, a few miles north of Smyrna. Of the 105 persons who have been tried by court martial on account of this affair, no fewer than 37 have been condemned to death and 41 to various terms of imprisonment, while only 27 have been acquitted. The sentences, as they stand, are startling in their numbers and in their severity; and the seriousness with which the Government has taken this seemingly insignificant revolt is particularly interesting in view of the religious complexion which the revolt assumed. The moving spirits appear to have been a Naghibendi dervish abbot, Sheykh Esad (aged 93; on hearing his sentence, he died of shock), and his son, Mehmed Ali (aged 64). These dervishes were breaking the law of the Turkish Republic by the very fact of keeping up the practices of their order; for all dervish orders were suppressed in 1925, and the majority of those who could not bring themselves to abandon the religious life went into exile. For instance, the famous community of Mevlevi dervishes ("the spinning dervishes") which had lived for more than six centuries at Konia has now found asylum, under the French mandate, at Aleppo. Evidently the Turkish Government is alarmed to discover that some members of the forbidden orders have kept their orders alive, in secret, on the territory of the Republic for half a dozen years; and, not unnaturally, this alarm is increased when these crypto-dervishes are found to have instigated a revolt against the Government's authority. This is the first militant reaction, in the name of religion, against President Mustafa Kemal's secularising policy during the span of ten years which has elapsed since his first open breach with the Islamic "Establishment." In 1920, the last Ottoman Sultan-Caliph procured a legal opinion from the Sheykh-al-Islam (chief Islamic jurisconsult) of Turkey, declaring that "the Kemalists" were enemies of religion and that the Faithful ought to rise up against them. But

To-day we are witnessing the greatest change in values ever experienced in the history of trading. All commodities are affected. In advertising, the days of pretty pictures, threadbare arguments and stereotyped "layouts" are over, and only by means of advertisements which are vital, original, and logical can the manufacturer obtain full value for his money. We produce such advertising.

this antiquated squib made no splutter; and it was not Kemal and his policy but the Sultanate and the Caliphate and Islam itself that went to the wall. Islam suffered blow after blow at the Ghazi's hands, and this year's incident at Menemen is the first overt attempt that there has been to answer force with force. Hence, no doubt, the Government's determination to show its teeth. Yet we may doubt whether, even on this occasion at Menemen, religious feeling was the real driving force behind the *émeute*. It seems more probable that the dervishes found a following because of the desperation arising out of the economic misery which is now acute in all parts of Turkey, and perhaps nowhere more than in the Smyrna district. If this diagnosis is correct, death-sentences are no cure for the disease.

More Trouble in Brazil.—The new régime which came into power in Brazil as a result of the civil war of last October has received its first serious challenge. In the Northern State of Piahy, the local State militia, led by civilians, have overthrown the Commissioner who had been appointed to govern the State by the present Provisional President at Rio de Janeiro, Dr. Getulio Vargas. There is nothing surprising in this news, for an upheaval like that of last October was unlikely to cure either the economic or the political ills which gave the stimulus for it. The economic ills of Brazil are those which are common, to-day, to all countries in the world whose national economy depends on the world-price of certain foodstuffs and raw materials; and falls in world-prices cannot be cured by local revolutions. Hence, the economic incentive to unrest in Brazil is, presumably, as strong since the October revolution as it was before. Nor was there much reason to expect that the political cause of the October revolution would have been removed once for all by the victory of the revolutionaries—though this political, in contrast to the economic, factor is really something peculiar to the Brazilian situation. The fact is that the political unity of the immense area covered by the

United States of Brazil has always been something of a *tour de force*. At the time when Latin-American independence was achieved, the ex-Spanish colonies split up into more than a dozen separate republics, while the ex-Portuguese colonies, after their secession from the mother-country, maintained their unity with one another, first as a Brazilian Empire and latterly as a United States. Hitherto, the unity of Brazil has been maintained by the rather crude method of a virtual monopoly of political power on the part of the Central States, in the immediate neighbourhood of the Federal capital, Rio. A clique of politicians from these States practically controlled the Federal Government, keeping office, and the fruits of office, for themselves, and leaving the distant States out in the cold. The revolution of last October represented a joint effort, by the outlying States, in the south and in the north alike, to bring this unsatisfactory condition of affairs to a close. The converging movement of the Northern and the Southern forces upon Rio was victorious; but the Southerners (who correspond, in the Antipodes, to Northerners in our part of the world) were the predominant partners in the alliance. Dr. Getulio Vargas is their man; and the Northern States of Brazil are now evidently feeling that the October revolution has not done much for them. They have simply helped the South to capture the monopoly of the Federal Government from the Centre, while the weaker North finds itself out in the cold again. This feeling led the Commander of the Northern revolutionary armies, General Juarez Tavora, to withdraw at an early date from Dr. Vargas's Government, in which he had been given a subordinate post. It is now announced that he has obtained from Dr. Vargas a commission to pacify the Northern States by investigating their grievances; and it seems safe to prophesy that more will be heard of him. It is to be hoped that another civil war will be avoided.

Australian Wages.—Events have quickly confirmed the suggestion made in the *Economist* last week that the resignations of Mr Fenton and Mr Lyons might prove a heavy price for Mr Scullin to pay for the reinstatement of Mr Theodore as Treasurer to the Commonwealth Government. Early this week the result of the Parkes, New South Wales, by-election was announced; and it was found that a Labour majority of 8,774 had been turned over into a Nationalist majority of 7,524. It is reasonable to discount the rejoicings and explanations of the respective parties, and also to recall that Parkes is normally a Nationalist seat. Even so, it is a significant reply to Mr Scullin's vacillations on Australia's pressing financial problems, including the Niemeyer recommendations; and still more to the extravagant claims put forward by Mr Lang, the New South Wales Premier, immediately following his recent victory at the polls. Unfortunately, there is ground for fearing that Mr Scullin regards the Parkes defeat as good ground for making further attempts to mollify the extreme elements in his party. Two days later, Mr Brennan, the Federal Attorney-General, applied to the Arbitration Court for the postponement of its recent award reducing the basic wage by 10 per cent. from February 1st to May 1st. In support of his application, he submitted an affidavit to the effect that wage reductions alone would not materially alter the situation, and that, apart from controversial banking and currency questions, many other changes were necessary for spreading the sacrifice equitably and concurrently among all sections of the community. It is reported that discussions which have been proceeding between Mr Scullin, Mr Theodore, and Sir Robert Gibson, the chairman of the Commonwealth Bank, are now approaching fruition; and Mr Brennan in his affidavit outlined many headings which between them covered the whole field of monetary policy, the national finances, and the relation between prices, wages, and interest rates. This suggests that Mr Scullin is hoping to produce some concerted plan that will solve in one operation all the problems created by the fall in prices, and by Australia's attempt to maintain a standard of living out of all correspondence with prevailing world conditions. Australia is not the only country to be faced with that problem, for we too are beginning to realise its many

and grave difficulties. The danger is that while in theory Mr Brennan's application may be justified, in practice it may well mean that, if the Arbitration Court accedes to Mr Brennan's request, the operation of its award, which after all is a necessary step towards readjustment, will be postponed until the Greek Kalends.

Cotton Trade Lock-out.—Despite further efforts to bridge the differences existing between the two sides, there are no signs of a settlement of the labour dispute in the Lancashire cotton industry. The conversations initiated by the Prime Minister in London at the end of last week were not fruitless, but the end was very disappointing. There was some progress in the fact that both the employers and the representatives of the operatives agreed that the basis of settlement should be a further trial period of the more looms per weaver system. When the details were discussed, however, the proceedings broke down. In the first instance, the employers suggested that the system should be tried at 23 mills in 13 districts, but this proposal was later modified to 14 mills in 6 districts, 5 of the mills to be at Burnley. On the other hand, the trade union officials insisted that the trial should be limited to three mills in three districts. The idea of the employers was that the system should be confined to 80 to 100 looms in each shed, so as to enable a large number of firms to take part. Owing to the failure to agree, the representatives left London, but on Tuesday last, writes our Manchester correspondent, there was a conference in Manchester between the employers and the Northern Counties Textile Trades' Federation, an organisation of which the Operative Weavers' Amalgamation is a member. It was announced at the close, however, that no progress had been made and that a delegate meeting of the Operative Weavers' Amalgamation had been called to be held in Manchester on Saturday. It is evident the influence of the Prime Minister and other Cabinet Ministers has had very little effect upon the negotiators. In a letter sent to the leaders of both sides Mr MacDonald points out very truly that the prolongation of the dispute "will contribute nothing in the way of evidence by which these divergent opinions can be justified, nor will the industry be placed in any better position to deal with the many other problems with which it is confronted." There is every appearance of each side trying to tire the other out. It is well known that a big majority of the employers in Lancashire who have locked out their operatives have nothing to gain by the introduction of the more looms per weaver system. So far, these firms have been distinctly loyal to their colleagues, but there must be a limit to the sacrifices which can be made under the circumstances. On the other hand, there is by no means unity amongst the operatives, and a section of the extremists has protested against the Executive Committee negotiating with the employers in face of the recent ballot, which was decidedly against such action. So far as the employers are concerned, there is a danger of a truce being arranged with the trade union leaders and the agreement not being ratified by the rank and file of the operatives.

Our Index Number.—A further downward plunge of prices carried our index number at the end of January to a fresh low level at 63.3 (1927 = 100), a fall of 3.5 per cent. on the month, following a decline of 3.1 per cent. in December. As compared with a year ago, the average level of prices as measured by our index number has fallen by 23 per cent. :—

AVERAGE, 1927 = 100.

End of	Jan., 1930.	Oct., 1930.	Nov., 1930.	Dec., 1930.	Jan., 1931.
Cereals and meat	89.2	76.8	73.2	70.0	67.4
Other foods	83.1	73.7	70.2	71.0	69.5
Textiles	76.7	55.8	55.1	51.4	49.2
Minerals	52.6	79.1	79.0	78.0	75.3
Miscellaneous	88.0	77.7	77.8	75.2	72.6
Complete Index	86.1	72.4	70.9	68.7	66.3

In the cereals and meat group, which showed a fall of 3.7 per cent., movements were irregular, the heaviest declines being registered by beef and mutton prices, maize and home-grown wheat, whereas Canadian wheat, barley, oats and potatoes were dearer. Among other foods, refined sugar, Canadian cheese and tobacco were the only exceptions to a general downward movement, but the amounts of fall were comparatively small. In the textiles group, cotton prices were firmer, but severe declines occurred in the prices of wool, flax and hemp, with the result that the group index figure fell by 4.3 per cent. The minerals group was 3.5 per cent. lower, reflecting further weaknesses in non-ferrous metal prices and a reduction in the price of Cleveland pig iron. Among the miscellaneous commodities in the concluding section, linseed oil and rubber figured prominently among the declines :—

If 1924 be taken as 100, the current figure of our index number works out at 57.3, as compared with 59.4 at the end of December, and 74.4 a year ago. In a final table we show the index expressed as a percentage of the average for 1913 :—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscel- laneous.	Complete Index.
Average, 1924	168.5	215.8	214.7	149.3	122.6	166.2
" 1929	143.0	173.5	144.7	119.5	105.0	132.8
" 1930	119.5	156.1	101.1	104.6	94.7	111.5
End Jan., 1930	131.6	168.0	120.4	115.8	102.1	123.7
" Dec., 1930	103.3	143.6	80.7	97.5	87.3	98.1
" Jan., 1931	99.5	140.5	77.2	94.2	84.3	95.3

There was little in the technical position of the chief markets at the end of January to warrant the inference that the recession in prices has yet reached finality.

French Rentes and British Holders.—The publication in the form of a White Paper (Cmd. 3779 of 1931) puts *finis* to a controversy in which strong moral claims have had perforce to yield to unassailable legal rights. In the series of despatches, dated from last July to December, the British Government did its best for the holders in this country of French war loans, whose capital value has depreciated through the devaluation of the franc from £50 millions to £13½ millions, but the Government of the Republic, having declined to assent to the final

suggestion that the question "should be referred by agreement to an arbitrator of high international standing who should be asked to decide the equity of a just basis" for repayment, there is no more to be said. In any event it would be difficult now to trace in all cases the persons upon whom the brunt of this serious loss has fallen, since the stock may have changed hands several times. Whether France has been well advised to stand on the letter of the contract, notwithstanding the fact that her claim for transport of British troops during the war was settled at 27 francs instead of 92 francs to the £, is another matter. It is at any rate difficult to follow the French contention that generous treatment of British bondholders of the loans of 1915-18 would have created "a precedent which might undermine the monetary reform achieved in France in 1928."

M. Moret's Report.—M. Moret, in his first annual report to the shareholders of the Banque de France, was at some pains to explain and justify the recent huge additions to French stocks of monetary gold. Those who have been inclined to regard France as deliberately the villain of the piece would be well-advised to give his report careful consideration, for it makes it clear that within the limits of its powers the Banque de France has endeavoured to counteract the influx of gold. Instances of this are to be found in M. Moret's references to the two reductions in Bank rate made during the past year, in the bank's efforts to extend the use of international acceptances expressed in francs, and in the part it played in the constitution of the Banque Française d'Acceptations and in encouraging foreign bill operations in the Paris market. M. Moret emphasised the desire of his country to re-establish Paris as an international long-term capital market, and called attention to the substantial tax concession recently made by the Government at the recommendation of the bank. M. Moret also said that it was the ardent desire of the Banque de France to maintain the closest and friendliest relations with other central banks, and that the existence of the Bank for International Settlements was furnishing the Governors of the banks of issue with welcome opportunities for regular and fruitful meetings. So far, M. Moret had a strong and timely case to present, but other passages of his report reveal that he was also conscious of the weaknesses of the French position. He passed over, it is true, the inability of the Banque de France to adopt and execute an open-market policy, and he apparently did not feel free to discuss any connection there might be between French gold imports and the immobilisation for long periods of large Treasury and Caisse d'Amortissement balances in the Banque de France. He did, however, concede that French banks, on several occasions during 1930, in order to meet demands for francs from their customers, "were naturally induced to call home a portion of their not very remunerative foreign balances rather than resort to the rediscounting facilities of the Banque de France"; and he admitted that a large number of the fresh notes issued against gold acquisitions during the closing weeks of 1930 did not pass into active circulation, but were "very certainly hoarded." Thus M. Moret's report confirms the view already expressed in the *Economist*—that the Banque de France is anxious to co-operate to the full in establishing world monetary equilibrium; but that it is still prevented from doing so by the prevailing state of French public opinion, by the definite limits to its powers, and by the restricted character of the Paris money market.

Railways and Road Transport.—A correspondent writes:—The official announcement last Friday of the agreement reached between the L.M.S. Railway and Todmorden Corporation, whose pioneer municipal omnibus service commenced operation as far back as January 1, 1907, marks a further step taken by the railway companies to secure interests in municipally-owned omnibus services. As in the case of the four other Yorkshire Corporations, Huddersfield, Leeds, Halifax and Sheffield, with which

agreements have for some time been concluded, a Joint Omnibus Committee will be formed, consisting of an equal number of representatives of the Corporation and the railway company; and expenses and profits will be shared on an equal basis. It is now understood that there are also five Lancashire Corporations with which the L.M.S. Railway are anxious to secure close working agreement, and already negotiations are progressing with the Corporations of Lytham St. Annes and Blackpool. Although the L.M.S. Railway have thus made considerable headway with what has now developed into a settled policy of securing an interest in as many municipally-owned road services as possible, they are not the only railway company to develop their road powers along these lines. The L.N.E.R. have an equal interest with the L.M.S. Railway in the Leeds, Halifax and Sheffield services and have recently offered to purchase both the buses and trams of the Middlesbrough Corporation; while the Hants and Dorset Motor Services, in which the Southern Railway have a one-third interest, have also approached Bournemouth Corporation. The reason for this development on the part of the railway companies is not far to seek. The Omnibus Bill, which was designed to facilitate and stimulate the running of public service vehicles by local authorities, was incorporated bodily into the Road Traffic Act (as Part V), and since so much attention was given to municipal omnibus services it was reasonably assumed that when the Traffic Commissioners come to review the road services operating within their respective areas, and to examine the extent, if any, to which competing services overlap, preference may be given to services owned by local authorities.

The Deep Sea Fisheries.—The landings of British and foreign caught fish, together with imports, at the ports of Great Britain in 1930 had a first-hand value of over £23½ millions sterling, or slightly more than a million less than in 1929, though the quantity in 1930 was larger. The following is an abstract of the official returns issued by the Ministry of Agriculture and Fisheries:—

	Weight in Cwts.		Value.	
	1929.	1930.	1929.	1930.
British caught—				
England and Wales...	14,287,296	15,677,789	£ 14,444,058	£ 14,143,559
Scotland	6,774,036	6,199,821	4,672,916	4,177,775
Shellfish	...	...	378,333	377,551
Total	21,061,332	21,877,610	19,495,317	18,698,885
Foreign landings.....	1,276,056	1,483,456	1,096,989	1,152,373
Imports	2,087,072	1,933,707	3,828,350	3,482,292

In the case of England and Wales the average realised was 18s. 0½d. per cwt. against 20s. 2½d. per cwt. in 1929. This has no doubt been contributed to mainly by the large increases in the catches of the cheaper kinds of fish, notably cod, which again heads the list with 4,333,652 cwt., of 41 per cent. more than in 1929. Haddock follows with 2,445,588 cwt., an increase of 18.7 per cent. Prime fish, and other kinds such as lemon soles, hake and plaice, appeared to have maintained their value, but cod and haddock realised on the average considerably less. At the same time a rather smaller total of herrings resulted in better prices, the average being 9s. 7d. against 8s. 11d. per cwt. At Scottish ports the average realised was 13s. 5½d., against 13s. 9½d. per cwt. in 1929. The proportion of the foreign-caught fish of the total landings (British and foreign) was 6.3 per cent., against 5.6 per cent. Imports of wet fish, of which herrings needed for our curing industry, and exported from Norway during the season, form a considerable part, were slightly less in quantity and substantially less in aggregate value. As against these imports, Great Britain exported 1,431,994 cwt. of wet fish, valued at £1,459,889, as compared with 1,481,826 cwt. and £1,354,014 in 1929. This country also did a good export trade in "cured or salted" fish (not canned) consisting of herrings, 5,117,358 cwt.; and other kinds, 624,319 cwt.; against 6,035,891 cwt. and 761,576 cwt., the f.o.b. value being £5,580,084 against £6,551,175. The fishing companies are making great

efforts to develop new grounds and increase supplies, and are keeping their fleets up to date. During 1930 no fewer than 52 steam trawlers, apart from drifters and line-fishing vessels, were launched from the Humber ship-building yards, principally for Hull and Grimsby owners.

The Austrian Economic Commission.—The Economic Commission set up by the Austrian Government in May of last year, on the lines of the Balfour Committee in England, has issued a report, through a special sub-committee, on the causes peculiar to Austria of the present depression. The force of the world depression is recognised, together with the special difficulties of Austria owing to the break-up of the monarchy; but the actual period of comparison begins with 1925, which is regarded as the first year of normality after stabilisation and the Stock Exchange crisis of 1924. In many ways the report is favourable; population is practically stationary, and productivity has considerably increased both in manufactures and agriculture. Despite labour-saving devices, manufactures employ the same number of workers as in 1925. During the past five years a fall of 14 per cent. in the wholesale price index (chiefly in foodstuffs) compares with a 30 per cent. fall in the price of wholesale raw materials abroad. Owing to natural and artificial protection, the inland prices of raw materials and finished goods (wholesale) have risen by 4½ per cent., and retail prices by 8 per cent. The report finds that these comparatively favourable conditions lose their advantages through the rise in the costs of industry, which hinder Austria's competitive power abroad. Costs have been mitigated by a cheapening of credit through the fall of the Bank rate from 13 per cent. in April, 1925, to 5½ per cent. in May, 1930; but nevertheless taxation as a whole increased from 1925 to 1929 by 31.4 per cent., including the rise of employers' contributions to the various forms of social insurance from 125 to 191 million schillings. While the cost of living in the same period rose 8 per cent. wages increased by 24 per cent., although by 1929 at least 14.6 per cent. (including partly pensioned older workers, 17 per cent.) of the potential number of workers (employed and receiving benefit) were unemployed. The solutions offered by the report are: prevention of further increase of costs, and measures to reduce the present level (i.e., wage and taxation reductions); removal of hindrances to the elasticity and mobility of industry; and better understanding between employers and workers. The report sternly rebukes two popular fallacies, that increase in the productivity of labour leads to unemployment, and that matters can be improved by increased consumption. It maintains that any improvement must start through production.

Japanese Foreign Policy.—For some years it has been customary for the Japanese Minister for Foreign Affairs to deliver a speech in the Diet, early in the calendar year, surveying the course of Japanese foreign relations during the past year and the outlook for the year to come. It has fallen to the lot of Baron Shidehara, who initiated the custom, to deliver this annual speech this year; and his survey was distinguished by the importance of the events which he had to report and by the conciliatoriness of the policy which he foreshadowed. Beginning, appropriately, with the London Three-Power Naval Treaty, he dwelt equally upon its general effect, for good, on international relations and upon the particular benefits which it was bringing to Japan in reductions of taxation. Turning to China, he pointed out, first, that when the zone of the Japanese-controlled Tsinan-Tsingtao Railway again became the theatre of a Chinese civil war in the early months of last summer, the fighting came and went this time without any damage to Japanese life or property (and therefore, by implication, without any damage to Sino-Japanese relations). He spoke in hopeful and sympathetic terms of the marked change for the better which has come over the Chinese situation since the autumn; compared the efforts which the Chinese Government is making to get rid of "unequal treaties" with the similar efforts which Japan

made—and made with success—no more than a generation ago; and intimated, though naturally in rather guarded language, that Japan would not show herself unreasonably obstructive or dilatory in satisfying Chinese desires in this matter. From the point of view of future peace, Baron Shidehara's most interesting observations were those relating to that storm centre, Manchuria. He announced in general that Japan intended to attempt a comprehensive solution of Manchurian problems before long. In particular, he declared that, while Japan would oppose the construction of railways by the Chinese which infringed Japanese treaty rights by directly competing with the Japanese-owned South Manchuria Railway, she would assist in the carrying out of other Chinese railway schemes in Manchuria. These declarations are welcome; for a Sino-Japanese understanding over Manchuria would remove one of the chief ultimate dangers to international peace.

Prohibition Report — Banking Inquiry — Industry —
Trade — Prices — Treasury Operations — Money
Market.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 23.

WALL STREET, along with the rest of the country, has paid more attention this week to the Wickersham Committee's report on the Prohibition law than to business and the security markets, although efforts by both the "wets" and the "drys" to support their case with the argument that a change in the Eighteenth Amendment would aid or hurt business (depending on the point of view on liquor) are not very sincere. As a political question, Prohibition promises to play an even more important role than it did in the last presidential election, but the country knows well enough that it has had both prosperity and depression before and during the dry regime.

Some interesting testimony was offered before the Senate Banking Committee at Washington by Governor Harrison of the New York Federal Reserve Bank, by Mr. Pole (Comptroller of the Currency) and by members of the Federal Reserve Board, but it is too early to say what sort of legislation may be proposed or what chance it will have of passing Congress. A Bill to extend branch banking will undoubtedly be proposed, and will have the support of the majority of city banks, but will not be especially favoured by rural banks. Some changes in the Federal Reserve Act also may be proposed, but they will have only divided support.

Undoubtedly the country is working into a more optimistic frame of mind over the business outlook, though it seems to be making too much of some purely seasonal increases in a few industries. The case is summed up by the Federal Reserve Board in its monthly bulletin in the observation that "In early January, following year-end inventory periods, reports indicate increased employment in certain industries, particularly automobiles, steel and railroads." The steel mill operating rate has risen to around 47 per cent. of capacity, or about 10 per cent. above the average rate for December—the usual seasonal increase. Motor output is rising, and reception of the new models at reduced prices is reported to be fair. Employment may also be increasing on some railroads, but freight car loadings continue below the level of the previous year. Foreign trade figures for December and the twelve months of 1930 were about as unfavourable as had been expected. Exports of \$273 millions and imports of \$209 millions were the smallest in recent years. On the year there was a decrease of \$1,399 millions in exports and a drop of \$1,337 millions in imports, which totalled \$5,240 and \$4,399 millions respectively. Excess of gold imports was \$280,087,000, compared with \$175,066,000 in the previous year.

Commodity prices continue to weaken, but the decline has been less violent since the beginning of the year. For December the Bureau of Labour Statistics index stands at 78.4, a drop of 2½ per cent. The decline for the year was 15.8 per cent. Price changes by groups follow:—

(1926 = 100.0.)

Groups and sub-groups.	Dec., 1929.	Nov., 1930.	Dec., 1930.
All commodities	94.2	80.4	78.4
Farm products	101.9	79.3	75.2
Foods	98.6	85.7	81.8
Hides and leather products	107.4	94.0	91.2

Interest in Treasury financing plans centres in the Liberty Loan refunding operation. The Bill authorising an additional \$8,000 millions to the Second Liberty Loan Act is on its way through Congress. This will enable the Treasury to make provision for refunding the First and Fourth Liberty Loans, which are callable in 1932 and 1933 and are due in 1947. A beginning will be made on the first quarter tax date on March 15th with a flotation to take care of \$1,150,000,000 of 3½ per cent. notes then due. On February 16th the Treasury will have maturing a bill issue of \$127,000,000, which no doubt it will meet with a fresh issue.

Whether the Treasury will wish to float a long-term bond issue or short notes to replace the March maturity is not yet known, but in view of the extreme ease in the money market Wall Street looks for a long-term flotation; it thinks the Treasury could sell bonds on a 3 per cent. basis. Refunding of the \$1,933,000,000 of First Liberty Loan 3½'s, callable in June, 1932, and the \$6,268,000,000 Fourth Liberty Loan 4½ per cents., callable in October, 1933, will, of course, involve long-term financing. Some discussion has arisen whether the new bonds will be tax free, as is the case with the Liberties. While an estimate is made that the full tax exemption would cost the Government as much as \$60,000,000 a year of taxable income, it is nevertheless probable that tax-free bonds will be decided upon.

All sections of the Government bond list have mounted to new high prices. Liberty 3½ per cents. are yielding less than 2 per cent. and the Fourth Liberties are less than 2½ per cent. Long-term Treasury certificates are a little better than 3½ per cent., but short notes due in June, which are the same as time money, are 1 per cent. and the autumn and early winter maturities range from 1.30 to 1.55 per cent.

With heavy refunding operations set for the next two years, and with the prospect of a Treasury deficit, the Treasury is naturally somewhat exercised over the proposal before Congress to provide immediate payment to world war veterans of the cash surrender value of their "adjusted compensation certificates." These certificates are in reality paid-up insurance policies maturing in 1945. Every veteran is entitled to one, and 3,395,000 are outstanding. The Secretary of the Treasury estimates that their cash surrender value is in excess of \$2,100,000,000, and he declares that a bond issue will be necessary if they are to be paid, and that such financing would be embarrassing and costly. The maturity value of the certificates is \$3,420,000,000. At present, veterans can borrow on their certificates up to 22 per cent. of face value, and more than half have done so. At the beginning of the year loans were estimated at \$325,000,000 out of a possible total of \$725,000,000. Loans are handled by the Veteran's Bureau, and only about 2 per cent. have been redeemed.

New capital flotations are continuing in large volume. The total for this week was approximately \$100,000,000, as compared with \$250,000,000 in the previous week. Some of the "stickier" issues of last week were worked

off, and the market for old bonds has progressed in buoyant fashion. It is expected that the next few weeks will see a considerable further list. Some large amounts of State and municipal financing are under consideration. Issuing houses are taking care not to let the market be pressed too hard, and they are finding the continued fall in short-term money rates of considerable aid.

This week two reductions in bankers' acceptance bill rates were made, bringing the total for the year to four. These successive cuts of $\frac{1}{4}$ of 1 per cent. each have placed all maturities to include 90 days at $1\frac{1}{4}$ per cent. asked, as against the New York Federal Reserve Bank's discount rate of 2 per cent. For some time the demand for call money on the Stock Exchange at $1\frac{1}{4}$ per cent. has been so small that the banks have freely offered funds at 1 per cent. outside, and daily amounts untaken have ranged from \$25,000,000 to \$50,000,000. Scarcity of short-term investments and the dullness of the time money market have forced the banks, as yet unwilling to buy long-term second-grade bonds on a large scale, to scramble for bills. Banks are retaining bills which they themselves are issuing, leaving the dealers without much business, and meanwhile the seasonal decline in bill volume is taking place.

It is expected that the spread which now exists between the New York and the London market will to some extent relieve the pressure on sterling by attracting bill financing. Moreover, the same causes making for lower bill rates are forcing some money abroad. Eventually the situation ought to result in an overflow of long-term money into the interior, where the ordinary borrower still finds money rather difficult and expensive to obtain. Federal Reserve policy will undoubtedly be firmly on the side of cheap credit until that aim is accomplished, although there is a disposition to regard the present discount rate as low enough. Banks in this district are virtually out of debt at the Federal Reserve institution.

It is believed here that serious consideration will be given to the proposal of the Mexican Finance Minister for a downward revision of the debt agreement made last July with the committee of bankers. It is recognised that the fall in silver has greatly increased the debt service burden to the Mexican Government.

FRANCE.

New Cabinet — Budget — Conversion — Iron and Steel Output — Unemployment.

(FROM OUR CORRESPONDENT.)

PARIS, February 4.

THE Laval Ministry made a successful first appearance before the Chamber on Friday, and its declaration of policy was approved by a majority of 54 votes (312 against 258) on a motion of confidence which automatically revealed the real strength of the majority on which the Cabinet can probably count more or less permanently. The new Premier, who is the youngest man who has ever held this high office in France, made an excellent impression by his plain but tactful speech, and the outcome was a foregone conclusion long before the actual division. M. Laval summed up his policy, at the close of a reply to a somewhat disappointing attack by H. Herriot, in two sentences: "I do not look towards parties, but towards the men who represent the country. I have come here to work and not to fight." This won the approval of even part of the Left, and, with the tenour of the declaration itself, appears to have hardened the tendency towards a split in the Radical-Socialist Parliamentary Party, of which there have been indications for some time past. The division confirms the resurrection of the old Tardieu majority, but slightly strengthened. It revealed another reversal of preponderance in the Radical Left or Loucheur group of 51 deputies, 35 of whom voted for the Government and 10 (including M. Loucheur) against. Another significant factor was the unusual number of absent Radical-Socialists, of whom no

fewer than 12 were "absent on leave." The general impression in the lobbies was that the new Ministry will continue in power at least until after the Presidential elections in June, and possibly longer.

The House has this week again taken up the Budget Bill, and in a manner which gives reason to expect that the measure has now a probability of being passed before the end of March, so that a renewal of the costly method of *douzièmes provisoires* may be avoided. Much will depend, however, on the Opposition. There is a fear that, when the education grants come up for discussion, M. Herriot and his friends will make a stubborn fight in order to secure an extension of free admission to the secondary schools for fifth-form pupils (gratuitous teaching in these schools being at present limited to members of the sixth form). M. Laval made it clear last week that, although he and all the groups of the present majority had entire sympathy with the extension proposed and were convinced it would benefit youths in the larger centres, it was questionable whether it would be practicable to apply the system to the country districts, unless cash scholarships were also ensured. Further, more school accommodation and larger teaching staffs would undoubtedly be required, therefore he urged that, before further extension was considered, full information should be gathered as to ways and means. The free admission of pupils to the sixth forms of the secondary schools was hastily incorporated in the last Finance Act, it will be recalled, without preparatory inquiry of any kind, under Radical-Socialist pressure, and there is little doubt that immediate extension will now be pressed for.

Another problem that will soon call for solution is the extensive conversion of War Loan issues which it was long ago decided to put into operation, if conditions proved favourable, during 1931 and 1932. The situation has now been complicated by the fact that the present financial year will almost certainly result in a deficit of something like 1,500,000,000 francs, owing to the effects of the economic depression on the revenue, coupled with the voting of unduly generous supplementary credits, which have more than swallowed up the surplus actually realised during the earlier part of the year. Further, when drafting the Budget for the coming year, the ex-Ministers for Finance and the Budget, in order to balance the Budget without an increase in taxation, entered into a convention with the Caisse d'Amortissement, under which the latter undertook to take over for the future some 1,800,000,000 francs of debt extinction hitherto included in normal Budget expenditure. This agreement was come to, it is now alleged, by the chiefs of the Caisse d'Amortissement solely on condition that the transfer should constitute an integral part of the preparation for wholesale Rente conversion, which they regarded, and still regard, as urgent, unless their plans are to be dislocated. Experience has shown, however, that the proposal to reduce the yield of large issues of Rentes from 6 or 5 per cent. to $4\frac{1}{2}$ per cent., or possibly even 4 per cent., is meeting with strong opposition, and there is hesitation as to when the conversion scheme shall be put into operation. The Caisse d'Amortissement heads insist that if the conversion plan is not to be applied during the coming financial year the Government are under obligation to reimburse the 1,800,000,000 francs which has been taken out of the Budget. This would, of course, necessitate the entire recasting of the measure.

M. Palmade, the *rapporteur* for the Budget during the last Tardieu Ministry, estimated that the saving to be obtained by the conversion scheme as drafted would amount, if application were begun now, to 1,400,000,000 francs during the coming year, 1,800,000,000 francs in 1932-33, and 2,100,000,000 francs in the following years. As matters stand, the Chamber is faced with the alternative of either adopting the conversion plan, and thus securing the extra resources needed, or having to impose an equivalent amount of fresh taxation—which would be equivalent to re-imposing taxation suppressed only a few months ago.

Iron and steel production figures for December, which were issued yesterday, show increased tonnage under

both headings, as compared with November, but are still well below both the October returns and those for December, 1929. The total output of iron (with 138 blast furnaces in operation, against 154 in December, 1929) was 800,000 tons, against 781,000 tons in November, and 874,000 tons in December, 1929. Steel production totalled 756,000 tons, against 706,000 tons in November, and 813,000 tons in December, 1929. Total output of pig iron during the year was 10,038,000 tons, as compared with 10,453,000 tons in 1929 and 10,092,000 tons in 1928. Steel tonnage for the year was 9,425,000 tons, against 9,655,000 tons in 1929 and 9,396,000 tons in 1928. The declines registered in both steel and iron were in the second half of the year only. The situation has been aggravated by the fact that, while export trade has fallen off, imports have largely increased owing to the wide difference between world prices and French domestic rates, which has greatly favoured foreign competition in this market. Since the beginning of the year the general economic depression has become intensified in the French metallurgical industry, and January production figures are expected to show a substantial drop.

Uneasiness in regard to the continuing increase of unemployment in France has been greatly accentuated this week in consequence of an official statement at Geneva last Saturday, at the last sitting of the International Labour Bureau Council, that there are now 350,000 French workers entirely without employment, and that there are 1,000,000 others only partially employed. This announcement occasioned great surprise, owing to the totally inadequate statistical information available in regard to unemployment. The weekly returns published by the Ministry for Labour last Saturday showed that the number of workless people actually in receipt of unemployment pay was 29,465, or about 7,000 more than in the previous week, and that the number for whom the labour bureaux had been unable to find jobs had increased from 38,222 to 45,098. These data are obviously insufficient as a basis for gauging the labour situation as a whole. Nor can the system adopted by the Labour Ministry, which takes into account only industrial concerns employing over 100 workers, be regarded as adequate. In America, where a similar principle is employed, experience has proved that such methods result in an almost farcical understating of the facts. M. Emile Borel, a deputy and former Minister, goes so far as to say that "French official statistics in no way correspond to the real situation and are not to be compared with those of neighbouring countries." By the latter comment he probably refers to Great Britain and Germany, where national insurance systems automatically provide fairly exact data as to unemployment. The French national insurance system does not cover unemployment benefit, while the scale of the French "dole" is so small—equivalent to a shilling a day only—that the vast majority of the workless prefer to do without it rather than suffer the irritation of the bureaucratic procedure that accompanies it.

GERMANY.

Agricultural Relief Difficulties — Unemployment — Railway Electrification — Berlin Finance Scheme — Krupp's Losses.

(FROM OUR CORRESPONDENT.)

BERLIN, February 3.

THE conflict of opinion on agrarian relief apparently abated last week, for it was announced that the Chancellor had agreed with the representatives of the agricultural societies upon a long-term programme. In spite of the marked differences of opinion within the Cabinet, Dr. Brüning's authority would probably have sufficed to bring the dispute to an end if it had really been a question of a complete agreement with the farmers themselves, but apparently it was not. The Reichslandbund, the strongest component of the "Green Front," has passed a long resolution at its assembly in Berlin, censuring

the Government in the most severe terms, and demanding their resignation. Demands for substantial increases in duties, denunciation of the Geneva tariff agreement, non-ratification of the Polish trade treaty, relief to agriculture in the east without State control, and an immediate attack on the Young Plan were formulated in a very tempestuous atmosphere. The Brüning Government will not be in a position to meet these demands, so they will still have to reckon with violent opposition from the agricultural groups in Parliament. Whether the substantial concessions which the Chancellor was prepared to make to the farmers will command the support of Parliament and of a sufficient section of the public, if peace cannot thereby be purchased, is very doubtful.

Unemployment on January 15th amounted to 4.8 millions, against 3.1 millions last year. Of these 4.8 millions, 2.4 millions are supported by unemployment insurance, 739,000 by emergency relief, and the rest only by local poor relief, apart from assistance from private and personal sources. The situation is therefore exceedingly serious, with a quarter of all German employees, including salaried workers, out of employment. The percentage of wage earners alone must be very much higher. In these circumstances the pressure on the Government to take active measures to provide work is steadily increasing, and a commission has been set up to examine all possible methods. The question whether such measures can really diminish unemployment is, in Germany, even more difficult to answer with an unequivocal affirmative than it is elsewhere. In countries which export capital it is possible to hope that a considerable number of workers may be employed with funds that would otherwise have gone abroad, though even here it is questionable whether the check to the export of capital does not check employment in the exporting industries, but in Germany the Government can only employ workers with capital taken from private industry, and therefore probably diminish employment on the one hand as much as they increase it on the other.

In spite of these considerations the Government has now decided to give financial assistance to the Reichsbahn for the carrying out of electrification schemes. Many of the lines in South Bavaria are electrified, and it is now proposed to deal with the Vienna-Munich-Stuttgart-Strasbourg-Paris line. The Reichsbahn is to raise a loan of Rm. 50 millions for this purpose from the large firms in the electrical industry, and the Reich is to pay the interest until the enterprise begins to yield a profit. It is hoped that the scheme will provide work for 10,000 men for a year and a half.

In private industry also proposals for mitigating unemployment keep coming forward. Vereinigte Stahlwerke recently wanted to close their foundry at Meiderich-bei-Duisburg. This meant destitution for 7,500 employees, and under pressure from the Mayor of Duisburg the firm formulated conditions under which it was prepared to keep on 5,000 men. It required a 20 per cent. reduction in hourly wages and the right to curtail hours by 10 per cent. That would have meant a reduction of 30 per cent. on full-time earnings at the present tariff rates, but as short time is at present much more than 10 per cent. the workers' incomes would have been practically unchanged. All the same, the unions refused the offer for fear it should be the signal for a general attack on wages. Probably, if the scheme had been carried out, it would only have meant relief to the local labour market at the expense of employment elsewhere, as the domestic price of iron is fixed by the Cartel, so that a reduction of costs in Duisburg could not have altered the market and would merely have meant the transfer by Vereinigte Stahlwerke of contracts from its other works to those at Duisburg.

The idea of a guarantee by employers to provide regular work for a specified number of men in return for the acceptance by the unions of a reduction in hourly rates has not, however, been killed by this incident. Dr. Krupp has made a statement containing the same idea, and the unions are also considering it, but the influence of the Communists is of course being exerted very strongly against the proposal.

The plan for the relief of the Berlin municipal finances by the Preussische Elektrizitäts A.G., whose shares are all held by the Prussian State, has now been announced in outline. The city of Berlin has over 600 million marks floating debt, of which about half falls due this year. If it can consolidate this the rest need cause no anxiety, for Berlin owns vast quantities of land, worth fully a milliard, part of which it could sell on the return of normal conditions, to meet the remainder of its debt. The 300 millions which is needed for the current year, is if possible to be raised from the Preussen-Elektra, with the help of foreign capital, by the sale of the city gas and electricity works, 60 millions being paid for the gasworks and 240 millions for the electricity works. The gasworks are at present run by a special operating company, 15 millions of whose shares belong to the city of Berlin. Side by side with this company is now to be created a holding company, and the Preussen-Elektra, through its subsidiary, the Thüringen Gas-Gesellschaft, is to hold a 60 million marks interest in the two companies. The Berliner Elektrizitätswerke A.G. (Bewag), whose shares also are held by the city, is to increase its capital, which is to be divided between the city of Berlin, the Preussen-Elektra and the Reichselectrowerke. The city would realise 240 millions from the sale of its interest. The plan is financially sound and the capitalisation not excessive, but everything depends on the success of the Preussen-Elektra in securing foreign capital for taking over the debentures and financing the shares. The Preussen-Elektra itself founded a few months ago a Swiss finance company, the Continentale Elektrizitäts-Union, Basle, which is to co-operate in financing the transaction. A general willingness in principle was evident when the Preussen-Elektra made inquiries in various foreign countries, but whether any concrete result will follow the negotiations, which are already under way, is not yet clear. If an agreement on the general principle is reached, an attempt will be made to raise temporary funds to tide Berlin over its acute difficulties.

The accounts of Friedrich Krupp-A.G. for 1929-30 show a net loss of 4.45 million Reichsmarks. As Vereinigte Stahlwerke are probably maintaining their dividend unchanged and Gutehoffnungshütte, in consideration of certain large shareholders, is actually increasing it, while Hoesch and Klöckner have only reduced theirs by 1 per cent., Krupp's losses are commonly regarded as a political demonstration to justify further wage reductions. As Krupp's shares are all held by the family, there is no need in drawing up the accounts to consider the stock exchange, and the firm can therefore afford to maintain its conservative balance-sheet principles even in bad times. Coal output has fallen from 8 to 7.79 million tons, and production of raw steel from 1.59 to 1.37 million tons. Trading profit has fallen from 38.2 to 31.8 million marks. Krupp's has distributed no dividends since the inflation. Since the close of the financial year, on September 30th, business has grown still worse, and output is said to have reached the lowest point since the end of the inflation period.

CZECHOSLOVAKIA.

Business Conditions — Output — Traffic — Foreign Trade — Commercial Treaties.

(FROM OUR CORRESPONDENT.)

PRAGUE, January 26.

Economic conditions show no sign of change. The wholesale gold price index has dropped to 111.1 (July, 1914 = 100); the index for farm products, foodstuffs and fodder has declined to 101.9; while the industrial index number of raw material and manufactured goods stands at 121.1. Unemployment rose further in December to 230,766; and the economic crisis is clearly reflected in the higher number of insolvencies, which, in November, 1930, was the highest since January, 1923. Business conditions continued to be difficult in December. Coal output declined to 14,572,332 tons in 1930, against 16,521,457 tons in 1929. The consumption of coal and

lignite calculated in terms of coal amounted only to 24,299,192 tons in 1930, against 28,728,816 tons in the previous year. Similarly the output of coke declined heavily, being 2,136,080 tons in 1930, against 3,163,194 tons in 1929. The output of pig iron dropped by 6.5 per cent. to 1,536,500 tons, in comparison with 1,642,600 tons in 1929, and the output of raw steel fell by 14 per cent. to 1,835,800 tons, from 2,145,400 tons in 1929. The decline of trade prosperity is evident also from the railroad traffic returns. The number of trucks loaded on the Czechoslovak railways in December, 1930, was, roughly, 447,000, against 492,000 in the corresponding month in 1929.

Imports in 1930 amounted to 15,726.960 million Cz. K., against 19,987.858 million Cz. K. in 1929. Exports were 17,494.763 million Cz. K., against 20,498.869 million Cz. K. in 1929. Even if we take into consideration the corresponding decline of prices, the comparison of statistics by weight in the individual sections indicate that the volume, both of imports and exports, markedly diminished. Imports of raw materials amounted to 7,123.373 million Cz. K., against 9,777.879 million Cz. K. in 1929; manufactured goods to 5,149.929 million Cz. K., against 6,234.109 million Cz. K. in 1929. Exports of manufactured goods fell from 14,606.628 Cz. K. in 1929 to 12,865.596 million Cz. K. in 1930.

A commercial treaty between Czechoslovakia and Turkey was concluded on January 18, 1931. The Government has also opened new negotiations with a view to concluding a tariff agreement with Yugoslavia. This is to supplement the old general treaty of commerce based on the most-favoured-nation clause. The negotiations with Yugoslavia were meeting with obstacles primarily due to the question of concessions on the import of agricultural produce into Czechoslovakia. The situation, however, appears now to be more favourable, as the absence of a trade agreement with Hungary leaves the Government with a freer hand. It may, therefore, be expected that the negotiations with Yugoslavia will soon lead to the conclusion of a definite tariff agreement.

A new trade agreement with Hungary remains, of course, an open question. The Czechoslovak Government seem to be willing to enter into negotiations with Hungary at any time. A revision of the trade agreement with Austria is also likely to be considered in the very near future, as Austria intends to raise some of her duties and is making preparations for the revision of her whole tariff. The trade agreement with Poland is also likely to be revised, owing to some changes in the Polish tariff. Finally, the present economic crisis has brought under consideration the question of Government co-operation in export credit insurance, and in guarantees against export losses.

JUGOSLAVIA.

Agriculture — Industry — Prices — Foreign Trade — Public Finance.

(FROM OUR CORRESPONDENT.)

BELGRADE, January 14.

The year 1930 did not close altogether brightly for Yugoslavia, though the country has withstood the crisis better than some highly industrialised states. In agriculture, the continued slump in prices (the agricultural index fell from 1,854 in December, 1928, to 1,032 in 1929 and 808 in 1930) has hit heavily the maize and wheat growers, who have only just covered costs of production. Hence the peasant is inclined to change to other forms of production, especially fruit growing and poultry farming, whose products had an excellent export season. This process is actively encouraged by the Government, which is distributing apple and walnut trees and purchasing select breeding stock for stock-raising.

A further change is taking place in the gradual elimination of the middleman, who has often combined the rôles of usurer and exploiter of the peasant. The peasant prefers now to sell to the Privileged Export Society, which offers him the full international price; his greater use of

the co-operatives has given that movement (which has been dormant for several years) a new impetus; he asks for direct loans from the Privileged Agrarian Mortgage Bank, which cost him less than half the usurer's rate. Finally, the decision of the Government to lower land taxes and to free implements and goods necessary for agricultural production from import duty has helped to recoup the peasant to some extent, so that, with his infinite capacity for reducing his standard of living, he has been able to weather the storm relatively well, although he has had to curtail his purchases of town goods.

This has naturally hit industry and lowered the general standard of consumption. Judging by the amount of coal used in industry, production has declined on the average by 15 per cent. Among export industries that of timber has suffered most, owing to the severe Russian competition. The total production of the mines is also somewhat less, although copper exploitation has risen. Some indication of the extent to which consumption is lowered may be had from the comparative survey of monopoly statistics, though these figures cover only the years 1928 and 1929 and do not touch 1930, during which year the fall was sharply accentuated. Consumption of salt has gone down from 142 to 134 million kgs., or from 10.2 to 9.4 kgs. per head; that of matches from 181 to 179 million boxes (13½ boxes per head) although the boxes in 1929 were considerably smaller.

The picture of the general depression is completed by figures of turnover in banking and the fall of the index of the cost of living (compiled by the *Privredni Pregled*). The turnover of the National Bank has declined by 4 per cent., that of the chief financial institutions (semi-government bodies and bourses) by 9.6 per cent. The retail index has declined from 1,523 in December, 1928, to 1,413 in 1929 and 1,175 in 1930, the last figure being equal to 108 gold points as compared with 100 in 1913. The falling number of bankruptcies alone is reassuring; they fell to 608 from 1,063 in the previous year.

Foreign trade returns for 11 months of 1930 were: exports 6,287 million dinars, imports 6,438 million dinars. The fall amounts to 12 per cent. in export and 8 per cent. in import trade. In contrast to this, State and private finances give an apparently different picture. State receipts beat all post-war records, and for the third quarter of 1930 were 3,169 millions, or 174 million dinars more than in 1929. Indirect taxation yielded in eleven months 2,111 millions, as against 1,667 millions in 1929. This phenomenon may be explained by two facts: first, assessment for 1930 was made on the basis of the excellent returns for 1929; second, the collection of taxation, formerly very slack, is now much more efficient and rigorous. Private savings deposits have grown from 12 milliard dinars at the end of 1929 to 13,160 millions by October 1, 1930, but this accumulation is less due to any prosperity in business than to the withdrawal of money owing to industrial uncertainty. The banks emphasise the fact that the margin between deposits and outgoing loans was much more unfavourable to them in 1929. Together with this accumulation of national savings, we should notice a certain influx of foreign capital into industries, mining and municipal loans, though the amount of the influx declined sharply during the second half of the year. In consequence of the abundance of funds the interest rate has further declined from 12-16 per cent. to 8-12 per cent. on business loans, although the level in villages is still about double that amount.

CANADA.

Secessionist Agitation — Business Conditions — Results of Tariff Changes — Trade Returns — Wheat Outlook.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 15.

The winter so far has been remarkably mild, although the snowfall has been heavy, and the hardships of the unemployed have been considerably mitigated thereby. Unemployment, however, is still very serious, not only in the large cities but in the smaller towns, and the resources of all relief organisations are being continuously taxed to

the limit. On Sunday, January 11th, leaders of the farming communities in North-Western Saskatchewan met at the town of Wilkie and, after a ten hours' discussion, formulated what they called a "Charter of Liberty," of which they submitted one copy to Mr Bennett and sent another to Mr Ramsay MacDonald. In it they made the following demands upon the Federal Government:—

1. The fixing of a temporary basic price of wheat at a figure to cover the average cost of production, retroactive to August 1, 1930.
2. Abolition of all grain exchanges and speculation in the marketing of farm products, and the establishment of a 100 per cent. pool for marketing by the producers.
3. Socialisation of currency and credit and all natural resources.
4. Introduction of a system of crop insurance guaranteeing to all farmers protection against natural risks.
5. Establishment of a Board of Standards to arrive at a proper relationship between the price the farmer has to pay for the commodities which he buys and the price of commodities which he sells.

They couched these demands in the form of an ultimatum and intimated that if they were not complied with at an early date they would proceed to organise at once for the political conquest of Saskatchewan along with such other provinces as would join it for the purpose of forming a co-operative Commonwealth in the British Empire, trading directly with Great Britain on a free trade basis. Apparently leaders of public opinion in the West who are hostile to the policies of the Bennett Government are disposed to give some encouragement to secessionist sentiment, in the hope that it will frighten Mr Bennett and his colleagues into the adoption of fiscal policies more favourable to the West, or at least prevent them from raising the tariff any higher, as Mr Bennett threatened in his budget speech.

General business conditions are in a very depressed position and no immediate improvement is looked for. The car loading figure of 36,336 cars for the week ending January 4th showed a gain of 1,249 cars over the figure for the previous week, but it was no less than 8,094 cars below that for the corresponding week a year ago. The almost complete cessation of orders from the prairie provinces has been responsible for a great curtailment of industrial activity in the Eastern provinces, and the troubles of the lumber, newsprint and asbestos industries have reduced the purchasing power of many Eastern communities.

The asbestos industry, which has been an important factor in the Eastern townships of Quebec, is in a very unfortunate position owing to Russian and Rhodesian competition in its former European markets, and it has been found impossible to pay interest on the bonds of the Asbestos Corporation, whose holders have formed a protective committee. A certain element of the manufacturers are continuing to bring pressure upon the Government to fulfil its pledge of a general revision of the tariff at the forthcoming session of Parliament in the hope that it would yield them further increases, but other manufacturers are reported to have become completely disillusioned about the results of the upward tariff revision undertaken in September. For example, one of the results of the increase of duties on canned soups was to induce the Campbell Soup Manufacturing Company, a powerful American corporation, to establish a plant in Toronto. This corporation, whose brands of soup have a world-wide reputation for quality, is going to put its products on the Canadian market at a lower price than its Canadian competitors will be able to do, and the latter are now understood to be wishing devoutly that it had never been forced to establish a plant of its own in Canada. Again, it is stated that Canadian manufacturers of cocoa and chocolates are finding themselves unable to compete with the Canadian branches of English firms like Cadbury's. Furthermore, the woollen manufacturers of Canada are far from pleased with the Yorkshire woollen firms like Hirst and Company, of Batley, to acquire factories in Canada.

Undoubtedly the tariff legislation passed at the emergency session of Parliament has been responsible for a drastic curtailment of imports, but the evidence of the Canadian trade returns for November shows that

it is hurting the United States much more than Great Britain. During November imports from the United States dropped from \$70,044,000 to \$43,092,000, a decrease of 38 per cent., but imports from Great Britain only declined 6 per cent., from \$17,230,000 to \$16,153,000. Actually, despite the increased tariff duties, imports of fibre, textiles and allied products from Great Britain increased by more than half a million dollars as compared with November 1929, and there was also a gain of about \$600,000 in iron and its products emanating from Britain. On the other hand, hard times in Canada have been responsible for a marked diminution of the consumption of alcohol, and, during November, imports of alcoholic beverages from Great Britain showed a decrease of \$1,635,000. Canada's total imports for the month were valued at \$76,325,000 as compared with \$108,734,000 in November, 1929, a fall of 32½ million dollars. Exports in November were \$73,060,871. The comparative figures for December are as follows:—

	Dec., 1929.	Dec., 1930.
Imports	\$ 84,365,155	\$ 60,460,832
Exports (Canadian produce) ...	111,068,332	66,819,668

The Western farmers and the grain trade are decidedly depressed by cable dispatches from Europe intimating that there is very little hope of disposing of much of Canada's exportable surplus of wheat on the Continent of Europe, and Mr McFarland, the new manager of the wheat pools, has issued a statement preparing the public for a very substantial carry-over of wheat at the end of the crop year. On January 2nd the volume of Canadian wheat in stock in North America was given by the Bureau of Statistics at 217,055,712 bushels, which shows a decrease of roughly 700,000 bushels from the previous week's figure and is almost 12½ million bushels less than the volume in stock at the corresponding date of 1929.

AUSTRALIA.

Public Finance — Central Bank — Gold Bounty — Wheat Advances — Sheepskin Duty — Wheat Harvest.
(FROM OUR CORRESPONDENT.)

MELBOURNE, December 24.

ALTHOUGH the efforts made to secure the success of the Conversion Loan of £28,000,000 were successful, a total of £29½ millions being subscribed in cash and conversions, there is still much disappointment at the slight progress made in reducing public expenditure, especially as this is accompanied by readiness on the part of the Labour Party to enter on schemes, such as the wheat advance and the gold bounty, which will mean fresh charges on the Treasury. The banks have issued a statement to the effect that unless the Government take steps immediately to balance the budgets and to reduce costs, the time is coming when banks and others will be unable to finance expenditure, "except at the expense of widening the gap already in evidence between the costs of and returns from Australian industries." Continuance of Government demands for assistance would necessitate drastic curtailment of bank advances to customers, which would be at the expense of industries and employment. During the last three years the additional assistance in accommodation to the Australian community and Governments in Australia and London has reached a total of £70,000,000. For a number of years past there have been complaints at intervals from such bodies as Chambers of Commerce that the amount of money absorbed by Governments through loan issues in Australia tended to reduce the supply of capital available for private employment, but the present statement by the banks goes further, as it displays the effect of the recent tendency of Governments to lean more and more heavily upon the banks.

The Central Reserve Bank Bill has been further adjourned by the Senate after receiving the report of the Select Committee appointed by it. The Government opposed the appointment of the Select Committee, which

from its point of view was unnecessary, as the Bill had been approved by the Labour Party and passed by the House of Representatives; and when the Select Committee asked the Government to place it in communication with Sir Otto Niemeyer and Professor Gregory, the request was without result until the Committee communicated direct with them. The report makes it clear that the Bill requires much amendment in order to place the proposed institution in a position independent of politics, while under present circumstances it is inadvisable to change existing arrangements, under which the Commonwealth Bank is discharging the principal functions of a central bank with the co-operation of the other banks.

The Gold Bounty Bill introduced by the Commonwealth Government provides for the payment of a bounty of £1 per ounce fine on gold produced in excess of the average for 1928, 1929 and 1930, the bounty being payable for ten years from January 1, 1931. The most important object of the Bill is to assist in dealing with unemployment, while provision is made for ensuring that "fair and reasonable" rates of wages and conditions of employment, to be determined by the Arbitration Court or similar authority, shall be observed. The question of a gold bounty has been under discussion for some time past, and one criticism has been that it offers little or no attraction to investors in view of the well-known intention that the benefit should be absorbed by labour. Another criticism is that the true remedy for depression in the gold-mining industry would be to relieve it of burdens, especially those due to the protective tariff.

The Wheat Advances Bill was sprung upon Parliament and the trade as a surprise by the Labour Party caucus. Votes adverse to compulsory pooling had been given by farmers in New South Wales and Victoria about three months ago, but the eagerness of the Labour Party to apply Socialistic notions of organisation and the practical importance of doing something to conciliate the farmers' vote by the guarantee of 3s. per bushel f.o.b. led to a sudden decision. The export trade has been disorganised, business being at a standstill for the time being, and unless a substantial advance takes place in the European markets the 3s. guarantee will lead to a considerable loss to the Government.

The sudden imposition of an export duty of ½d. per lb. on sheepskins has stopped business, the sales being postponed until the new year. This duty has been desired by the fellmongering interests for many years past, but no Government has yet ventured to deal such a palpable blow at the principal country interest, and there is reason to believe that the leading members of the present Government, though bound by party discipline to carry out the instructions of the caucus, have no belief in the duty.

The wheat harvest is turning out large in quantity, but the variations in the spring weather have been followed by irregularity in individual yields, and wet weather at intervals early in December has delayed harvesting. A total yield of approximately 190 million bushels is looked for, which would mean about 4,000,000 tons available for shipment.

Letters to the Editor.

GOLD: PRICES: WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The difference between Sir Charles Harris and myself which emerges from the correspondence which has taken place under the above heading resolves itself into the question of immediate practical policy. Sir Charles Harris proposes that the employees should universally, but temporarily, have their wages reduced. He argues that such a step would not amount to a hardship as it would merely serve to restore real remuneration to the figure at which it stood before the fall in prices of recent months. I agree that some wages should be reduced. I do not agree, however, that there is any practical value in

suggesting that all wages should be reduced; in the first place because that would maintain the present relationship between wages in different industries, which is an inequitable and uneconomic relationship, as Sir Charles Harris agrees; and in the second place because, quite apart from the question of an appropriate relationship between wages in different industries, there is in my view no possible hope of persuading the employees to accept his proposal, or of convincing them that the argument based upon real remuneration which Sir Charles Harris adduces in support of his proposal, although logically valid, is "economically" sound.

I will proceed to answer the five points which Sir Charles Harris puts to me in his letter appearing in your issue of January 17th; but, before doing so, I should like at once to correct an impression of what must have appeared to be a stupid presumption on my part to which Sir Charles Harris refers in para. 2 of his letter. When I spoke of present real wages being not necessarily too high for the community to bear "if only industry were better regulated" I was not implying any criticism upon the capacities of brain or character in our present leaders of industry. I was referring to the adoption of a system of wage-regulation throughout industry such as had been mentioned in our previous correspondence. Sir Charles Harris had spoken of a "system of wages" in his first letter appearing on November 22nd; and I so far agreed with his comments in that letter upon "gold" and "wages" that I expressed the view in my own letter, on December 13th, that the chronic unemployment from which we are suffering may to a large extent actually originate from the maladjustment of wage-rates between different industries, a phenomenon which is common to most of the civilised countries. I thereby implied agreement with Sir Charles Harris that it behoved us to cure that fault systematically at home if we wished to make the best of the tide of trade whenever it should begin to turn.

Now, as to the five points on which I am asked to express my view.

1. I agree that there is no time to reconstruct the fundamentals of our economic system. I accept the dictum as axiomatic that nothing can cure unemployment which does not create in the minds of manufacturers and contractors the expectation of an improved margin of profit. But I would add that nothing can go so far to create the expectation of an improved margin of profit as a step to secure the permanent goodwill and understanding trust of the other partners to prosperity, viz., the employees; and that to secure that trust and goodwill the community is under obligation to the representatives of the employees not only to explain the necessity for any reductions of wages, but also to offer a "square deal" by meeting, as far as it is practically possible to do so, the objections to which I referred in my last letter.

2. In principle, I do not agree that because employers have lost in the past it is now necessarily "the turn of the employee." My objection to this is that it offers no standard basis on which to build an economic structure of any stability. So far as the immediate proposal is concerned, I am aware that Sir Charles Harris suggests this as an emergency measure only, but I do not agree that it is a practicable proposal for the reasons given at the beginning of this letter.

3. I agree that a return to the real wage level of a year ago as an emergency measure could not rightly be represented as serious hardship; but there remains the practical difficulty already referred to of securing acceptance of the proposal even as an emergency measure.

4. I agree that there is no possibility of securing an agreed readjustment of wage levels between sheltered and unsheltered industries throughout industry at any early date. The main difficulty is, of course, that the general readjustment would involve the movement of some wages downwards. Sir Charles Harris, however, proposes the movement of all wages downwards; and the difficulties are of the same nature over a wider field. The main objection offered to any proposal for a reduction of wages is not that the reduction is unfair unless all other wages (and salaries) are reduced as well, but that Capital, an Ogre to the unlearned working man, is assumed to be aiming to secure greater wealth at the expense of the workers. It is fundamentally that view which we have to combat. My last letter was intended to meet this point by indicating that, apart from the acceptance of the principle that it is desirable that wages themselves should be regulated as far as practicable on the basis of

- (1) Determining an appropriate "general basic level," and
- (2) Determining an appropriate relationship between wage-levels in different industries.

we strengthen our case in combating the unlearned view about Capital if we do in fact take steps to secure a more equitable fulfilment of long-term money contracts.

5. I do not demand the relinquishment of any existing contractual income on the part of the fixed-money men. That would clearly amount to a breach of contract. But I do

ask that industry (and Government) should seriously consider the possibility of modifying the existing practice in all future cases; and that, where practicable, they should arrange the early "conversion" of existing liabilities of that kind to the modified form. It is in the interest of all that they should do so. Naturally, such a practice would affect the terms of future contracts, such as rate of interest, price of issue and conditions of redemption. As regards the first two, however, I suggest that in normal times the effect would be immaterial; and, as to the amount of redemption, similar considerations apply as to the amount of interest. I submit, also, with all respect, that the adoption of such a practice would not have any prejudicial effect upon industry or finance, even although the practice were not adopted universally. Those who originally invest money for a steady return are no more apt to hope for a windfall in the form of an increase in real income resulting from a general fall in prices than they are to anticipate a decrease in real income resulting from a general rise in prices. On the contrary, an assurance of a stable real income and a stable real value for their invested money might in many circumstances be an additional attraction. On the other hand, banks, insurance companies, &c., who buy stock in the market as temporary security are then dealing with a market value, not a nominal value; and such market value is not likely to suffer more violent fluctuation than under present conditions. As regards funded Government Debt, the financial burden on the community would be more manageable, as well as more equitable to all parties.

The vital distinction between the two classes of capital, viz., capital on long loan and capital invested for profit, is precisely, I suggest, what the unlearned working man, like very many others of the general public, does not sufficiently appreciate. It is quickly apparent (from the tendencies of unemployment) when new money is not forthcoming for fresh enterprise and for the adequate maintenance of existing plant; and the worker will, I suggest, be the more ready to concede reductions in wages as a bait to capital if he understands that money (and its equivalent) lent for long periods at fixed rates is not allowed to gain at the community's expense; particularly as prices all along the channel of trade should more quickly adjust themselves to reduced labour costs when the burden on industry of fixed charges is reduced in parallel.

It is not disputed that the best cure for the exactions of capital lies in the accumulation of it. I did not intend to convey in my last letter that reduction in the rate of remuneration of capital would not be certain to follow if capital were accumulated. What I meant was that a simple reduction of wages without any approach to some system of "industrial government" was not certain to result in any degree of permanent prosperity such as would allow capital to accumulate.

Let me also state quite clearly that I agree that each industry must bear its own wages and its own responsibilities. The "responsibility of the community" is in the direction of "industrial government" as a whole; and by that I mean the appropriate adjustment as far as practicable on a scientific basis of the several factors contributing to the community's material prosperity. The Trade Unions must take an important part in this "industrial government," as rates of wages are primary factors in industry, and any maladjustment of rates must bring trouble in its train. It is for the other partners in industrial life, including loaned capital of every kind that takes a fixed rate of return, to play their part too.

In my view, the immediate need is a reduction of the wage-level in those industries where the level is highest. This would be a sufficiently important step in the right direction, and would serve as an approach to the application in due course of a policy based upon the twofold system of wage-regulation throughout industry which I have suggested.

You, Sir, in your leading article on January 10th, advocated the calling of a representative conference of Trade Union leaders and captains of industry. Such a body, which, I suggest, should remain a standing body for "industrial government" and not merely an emergency conference, might forthwith discuss the proposal of an immediate reduction in the highest wage-levels. "Capital" should consider the possibility of offering as a "quid pro quo" and as an earnest of its good faith, the determination to adopt, as opportunity offers, the practice of more equitable fulfilment of all long-term money contracts. Capital should also, as a matter of course, give an undertaking that simultaneously with reductions in wages there should be reduction in the prices of the products and services concerned. The further work of the Conference as time goes on, would be to fit the current wage adjustments into a permanent structure whose balance would be constantly regulated by reference to the two-fold system of wage-regulation referred to above, in accordance with the needs of the nation's industry regarded as one whole.—Yours faithfully,

53 Anson Road, N.W. 2.
January 26th.

Books and Publications.

EAST AND WEST.*

MANY travellers are erudite; some are observant; a few have brilliant pens. But rarely, indeed, is the combination of these qualities concentrated in one traveller as it is in Professor Toynbee. The book before us, in consequence, is a treat. It is a sparkling narrative, with thought-provoking aphorisms on every page. You can pick it up, open it anywhere and start reading with that instantaneous interest and pleasure that makes you forget that you are being most capably instructed. And wherever you chance to open the book (whether the chapter be "Top-hats and Chrysanthemums," "Yin and Yang," "Laputans or Houyhnhnms," or, indeed, any other), you will very soon decide to start again at the beginning.

Professor Toynbee motored from Calais to Constantinople, and thence his trail took him by rail, sea and road to Angora, through Syria and Iraq, through India, thence via Malaya to Hongkong and Shanghai, then Japan, Korea, Manchuria, China, Siberia, Soviet Russia, and so home to the west via Berlin. We do not propose to follow him step by step, nor, in the ordinary sense, to review his book—which would be to attempt the impossible. But we may perhaps try to indicate two reasons why everyone should read this book. The most compelling reason is that of Professor Toynbee's method. He entirely avoids the temptation besetting all travellers of delivering pontifical judgments based on brief acquaintance. Instead, he gives pictorially the first impressions made upon a trained and receptive mind. The second reason is that his trail lay through countries in which profound changes are taking place, of which the Englishman is too seldom aware.

If you want to know the precise constitutional machinery or the trade per head of population in the countries visited, you will not find it in this book. What you will find is a wealth of thought-provoking *obiter dicta*, fundamental questions freshly posed, changing scenes painted with a lightning brush, and, often, arresting prophecies adumbrated.

Too often one lays down a travel book with the wish that fewer travellers would write. One lays this book down with the wish that more writers of Professor Toynbee's calibre would travel.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Moody's Manual of Investments. Government Securities, 1931. (London) Moody's Investors' Service, Ltd., King William Street House, Arthur Street.

The early appearance of this indispensable work of reference will be widely welcomed. It contains very full information, not only about all the securities of all governments, but of the general financial position and resources of each of the countries they represent.

A Contributive Society. By J. R. Bellerby. (London) Education Services, 28, Commercial Street. 7s. 6d. net.

A stimulating essay in social theory. Mr Bellerby examines the economic system which has founded itself on "enlightened self-interest," and discusses the possibility and the effects of substituting "contributive spirit."

The Coming Rise in
GOLD SHARES

According to Mr. Angus, Gold shares offer higher yields, and better prospects of capital appreciation, than any other group of securities in time of trade depression. He applies the principles of his work Investment to an analysis of this section of the market.

SPECIALISED BUSINESS SERVICES, 19 Buckingham St., W.C.2. 5/- nett.

Newest Europe. By Martin MacLaughlin. (London) Longmans, Green and Company, Ltd., Paternoster Row. 6s. net.

An interesting account of the vital elements in the recent political and social development of certain of the most conspicuous countries in Europe to-day.

L'Europe Centrale Economique et Sociale. By Paul de Csikay. With a preface by Charles Gide. (Paris) Librairie Félix Alcan, 108, Boulevard Saint-Germain. 15 francs.

An interesting little book on Central Europe, designed to dissipate the ignorance of those who confuse Budapest with Bucharest, and think of Hungarians as a species of Austrian.

Unemployment and Public Works. (London) P. S. King and Son, 14, Great Smith Street. 4s.

An International Labour Office publication embodying the practical experience of a great many countries.

The Australian Banking and Credit System. By A. L. Gordon Mackay. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 12s. 6d.

A historical and critical study, which appears at a very appropriate moment. Its appendices containing lists of banks in existence, banks that have failed, amalgamations and branches, together with total capital and reserves back to 1850, make it also useful for reference.

The Case for Action. By Innes H. Pearse and G. Scott Williamson. With prefaces by the Right Hon. Lord Moynehan and A. D. Lindsay. (London) Faber and Faber, Ltd., 24, Russell Square. 5s. net.

A most interesting discussion of the problems attacked by the Pioneer Health Centre at Peckham.

Die Kursbildung am Rentenmarkt. By Ernst Wolfgang. (Stuttgart) C. E. Poeschel Verlag, Calwer Strasse 18. Rm. 10.50.

A very detailed study of the influences governing the value of fixed-interest securities and of the relation between the movements of their prices and those of other economic indices. In the second part, different classes of fixed-interest securities are considered separately.

L'Influence de l'Emission et de l'Amortissement des Emprunts d'Etat sur le Marché des Capitaux industriels et commerciaux. By Giuseppe-Ugo Papi. (Brussels) Goemaere, 21, Rue de la Limite.

A short monograph on the influence in the commercial capital market of the issue and redemption of Government loans.

England und Palästina. By Joseph Cohn. (Berlin) Kurt Vowinkel Verlag, G.M.B.H. Rm. 6.80.

A fully documented study of British policy towards Judaism. While the background is historical the major part of the book is devoted to the developments of the last ten years.

The Manufacturing Industries of the British Empire Overseas. Part II, Australia. (London) Erlangers, Ltd., 4, Moorgate. 2s. 6d.

A valuable statistical analysis, with very striking diagrams, of Australian manufacturing industries.

International Affairs, January, 1931. (London) Royal Institute of International Affairs, Chatham House, St. James's Square. 2s. 6d.

Includes, among a number of interesting contributions, articles on "The National Socialist Movement in Germany," by Herr Wolf von Dewall; "The Present Situation in Palestine," by Professor Toynbee; and "The International Aspects of the Wheat Market," by Dr. A. E. Humphries.

The Stock Exchange.

THE ROYAL MAIL.

THE meetings to which the debenture stockholders of the Royal Mail Steam Packet Company and the preference shareholders of the White Star Line have been summoned on February 12th for the purpose of passing a scheme for a five months' moratorium, are momentous. A great organisation with a paid-up share and loan capital of over £80,000,000, controlling the largest merchant fleet in the world, has been reduced to a condition verging on insolvency. To what extent this disaster can be attributed to world causes outside its control, and to what extent to mismanagement and an unwise financial policy, is an important question which we hope will be discussed fairly and frankly. The management has already been changed. A committee was set up in June last, consisting of Mr F. Hyde, managing director of the Midland Bank, General A. Maxwell, managing partner of Glyn, Mills and Company, and Sir William McIntock, the well-known accountant. Following the committee's report, voting control of the various companies was transferred to three trustees, namely, Mr Walter Runciman, General Maxwell and Sir William McIntock, the first-named joining the boards of all the companies concerned. The stockholders can thus rest assured that everything that skilled and prudent management can do to repair this disaster will be done; but time, an improvement in world trade—and, eventually, new financial resources—will be required before a general reconstruction scheme can be attempted. The problem of reconstruction is immense and, as we shall show in this article, it is complicated by the hopelessly involved interlocking of the finances of the associated companies.

To understand the present misfortunes of the Royal Mail group, it is necessary to go back to the years following the war, when the company and its subsidiaries were committed to a programme of expansion involving the purchase and construction of ships on a grandiose scale. In 1919, the Royal Mail group purchased 77 vessels from the Government at a cost of over £15,000,000. It was no doubt patriotic on the part of the directors to help the Government dispose of its war-commandeered fleets, but this transaction must have involved the Royal Mail group in enormous losses, taking present day values of tonnage. Vessels which had been lost during the war had, of course, to be replaced, but the Royal Mail group, not satisfied with its Government purchase, entered upon an ambitious building programme, a number of vessels being built on the extravagant "time and line" basis and costing three or four times more than they would have done in 1913. The Royal Mail group borrowed, either directly or through its subsidiaries, under the Trade Facilities Acts of Great Britain and of Ireland, no less than £15,140,886 for the construction of new vessels. Could such a programme ever have been justified as a commercial proposition unless Lord Kylsant and his colleagues had received divine assurance of ten years of unlimited prosperity? In 1927, control of the White Star Line and Shaw, Savill and Albion was acquired by the purchase from the International Mercantile Marine Company of New Jersey of the whole of the share capital of the Oceanic Steam Navigation Company for £7,000,000, of which £4,650,000 has been paid in cash and the balance of £2,350,000 is payable on December 31, 1936.

* As shown in the table on p. 300, the total holdings in the chief concerns in which Lord Kylsant is interested amount to £1,385,000 nominal.

Holdings in Argentine Navigation have now been sold.
* Companies in which Lord Kylsant is a shareholder.

There followed the acquisition of the Commonwealth Government Line from the Australian Government for a sum of £1,900,000. Interest payments on outstanding amounts under these headings are not among the least of the current financial problems of the group.

This expansion programme, in which no sign of ordinary commercial prudence can be detected, finally sealed the fate of the Royal Mail group. It is probably true to say that no vessel purchased or built immediately after the war at the peak of cost has earned sufficient to provide for the abnormal depreciation which has occurred in shipping values in the last ten years. Incidentally, it is questionable whether close connection between shipbuilding and -shipping groups has worked to the latter's best advantage, since the war. Lord Kylsant has stated that a lifelong experience as shipowner had convinced him that 4 per cent. per annum is a correct basis for depreciation. The whole of the group's vessels, he said (amounting to approximately 2,600,000 gross tons), had cost £106,000,000, and on January 1, 1930, had been written down by £54,000,000, which was over £6,000,000 more than the 4 per cent. rate allowed by the income tax authorities. This gave a book cost of £20 per ton, the average age of the vessels being 11½ years. For ships purchased or constructed at three or four times the pre-war cost of building, this would seem to be a wholly inadequate depreciation. Indeed, Lord Inchcape, at a meeting of the P. and O. Company in December, 1929, remarked that, as a rule, British shipowners endeavoured to set aside sufficient depreciation to wipe out the original cost of their vessels in eighteen or twenty years. Lord Kylsant has, in fact, admitted that his group has never earned enough profits in the last five years to meet such a rate of depreciation. On his own statement at the meeting in June last, the profits of the Royal Mail group, before charging interest or depreciation, in the four years 1926-29, had been £4,827,000, £5,697,000, £5,100,000 and £4,900,000 respectively. If depreciation at 5 per cent. had been allowed, the allocation out of profits would have amounted to £5,300,000 per annum. So that, since 1926, the Royal Mail group has never earned sufficient to allow for proper depreciation of its fleet. The group, in fact, has been burdened not merely with normal depreciation, but with a catastrophic decline in the value of ships built near the top of the short-lived post-war boom. It is this last fact that makes a proper charge for depreciation such a millstone round the neck of all the companies in the group.

It is difficult, in the light of these figures, to regard the dividend policy of the Royal Mail group as anything but reckless. The Royal Mail, the White Star, and Elder Dempster did not stop payment of dividends on their ordinary capital until 1929. Elder Dempster paid 4 per cent. for each of the three years 1926-28, and earned only 0.9 per cent., 1.4 per cent. and 2.5 per cent. respectively. The Royal Mail in the same period paid 4 per cent., 5 per cent., and 5 per cent., and earned nil, 5.19 per cent. and 4 per cent. respectively. The African Steamship Company paid 2½ per cent. in 1929, although its earnings were only 1.8 per cent. So it went on. An examination of the 1929 accounts of fifteen of the principal companies disclosed profits and income from investments amounting to £3,088,052 (after allowing an undisclosed amount for depreciation, but before charging interest) which was equivalent to 3.74 per cent. on the paid-up share capital of £51,470,750 and loan capital of £31,080,233.

What is the present earnings position? The Royal Mail has certainly had its full share of misfortunes common to the shipping industry. The South American trade from Europe and North America, in which the group is largely interested, has always had to meet difficult and intense competition, seeing that practically every maritime nation has its own services which are, in some cases, receiving Government subsidies. The Atlantic trade also suffered from acute competition after the White Star Line had been acquired, and the Australian trade has been upset by strikes and high tariffs before and since the Commonwealth Line was acquired. The West African trade has also been difficult on account of the quarrel with the vested interest in the oil and cocoa trades. Finally came the world trade slump in 1930, affecting American, South Atlantic and African routes alike. Even in normal times

the Royal Mail group would not have been able, as we have shown, to earn sufficient to cover adequate depreciation on the vessels which it had acquired or built at inflated prices after the war. The world slump gave the coup de grâce. To-day, only three subsidiary companies—Union Castle, Shaw, Savill and Albion and Coast Lines, are understood to be working at a profit.

This is deplorable enough, but the position is made much worse on account of the liabilities left over from the improvident financial policy which characterised the expansion programme and the complicated system of interlocking of the different companies by share holdings and loans. It was apparently the policy of Lord Kylsant to distribute the liabilities of the group among the associated companies as far as possible. This was no doubt the line of least resistance, when money had to be found, but the logical outcome of this policy is that when one company sinks, all sink together. The liabilities which were incurred in the more important acquisitions were never squarely faced. So complex is the interlocking in the Royal Mail group that we have compiled a chart which we hope will show more clearly the inter-company holdings of shares and loans. It is curious but significant that the only way in which this chart could be graphically presented is in the form of a vicious circle. Our chart has been based on the data regarding shareholdings given in the 1930 edition of *Fairplay's Annual Summary of British Shipping Finance*—a recognised authority. The following figures show the present position as regards the ordinary share interlocking of the most important concerns, and the effect of various changes which have taken place in the last few months:—

PRESENT INTERLOCKING OF CHIEF COMPANIES.
(Ordinary Capital only; Thousand £.)

	Companies shown in first column have ordinary share holdings in following concerns:—								
	Royal Mail S.P.	Elder Dempster	African S.S.	Union Castle	Lampport & Holt (a)	Glen Line	James Moss	Coast Lines	White Star Line (a)
Royal Mail (b)	...	433	...	1,370	1,200	1,150	350	1,130	1,501
Elder Dempster	1,010	...	1,699	1,370	1,700	1,140	350	230	1,000
Union Castle	1,070	...	...	...	...	...	...	275	959
Lampport and Holt	764	...	...	...	...	...	300	275	...
James Moss	...	...	...	...	...	...	...	90	...
Harland and Wolff	50	62	...	...	...	...	...	...	...
Pirraea Trust	...	537	37	...	50	...	...	...	...
Lord Kylsant*	624	720	1	...	50	...	...	...	...
H. and W. Nelson	...	...	...	...	...	...	...	...	500

* Including, in some cases, joint holdings with other persons, and holdings by other companies in which Lord Kylsant is interested.
† And Ocean Transport Company (subsidiary of Harland and Wolff).
(a) Includes partly-paid and fully-paid shares.
(b) Royal Mail and subsidiaries, in some cases.

In some cases the outside public's holding of ordinary shares is comparatively small. It is believed, for example, not to exceed £1,482,000 of the £5,000,000 ordinary stock of the Royal Mail Company. This means, of course, that calls on unpaid capital in such concerns as Lampport and Holt and White Star Line will fall to be met by other members of the group. It is understood, for example, that calls have been, and are being made, in the case of White Star ordinary.

The Stock Exchange, if not the public, has fully appreciated the catastrophe which has befallen the world's largest shipping combine. With the exception of the stocks of the Union-Castle and the preference shares of the White Star Line, it is well-nigh impossible to sell any of the stocks of the Royal Mail group. In a subsequent table we give the nominal quotations as compared with the highest prices recorded last year.

The story to be unfolded to the debenture stockholders of the Royal Mail and the preference shareholders of the White Star at the meetings on February 12th can scarcely be pleasing, but we suggest that more will be gained by the exercise of patience than by insistence on strict legal rights. The White Star preference shareholders, if the Royal Mail does not implement the guarantee of their dividends, can no doubt take proceedings against the Royal Mail. But what advantage would they gain? The Royal Mail debenture stockholders, who have a prior charge on Royal Mail assets, would immediately take legal action, and it is quite evident that the Royal Mail assets would not be sufficient to meet the claims

	Nominal £	Highest Price, 1929. £	Middle Prices, Jan. 28, 1931. £

of the Royal Mail debenture stockholders in full, and also those of its ordinary creditors, including the White Star preference shareholders. An opinion has been expressed by counsel, which is referred to in an Investment Note on page 306, that the stockholders of the Royal Mail are under an unlimited liability for their company's debts, but this has been immediately denied by two counsel of acknowledged authority in matters of company law. The White Star preference shareholders may argue that the appointment of a receiver for the Royal Mail would hasten the severance of the connection between the Royal Mail and White Star which a reconstruction may involve. But a receivership would not be regarded by the public as the beginning of a reconstruction, and it is surely to the advantage of White Star preference shareholders that the Royal Mail, which is their debtor, should remain as a going concern without further loss of good-will. We feel, therefore, that their real interests lie in supporting the Voting Trustees who are now in charge of the Royal Mail group's affairs. The disposal of out-lying interests and the consolidation and reorganisation of companies engaged in the same trade are being undertaken by the committee as fast as practicable. A first step towards reconstruction was taken last September when the group's holding in the Argentine Navigation Company (Nicolas Mihonovich) was sold to an Anglo-Argentine group. It would be unwise, in our opinion, to interfere with the task of reconstruction which is slowly but steadily going forward. We would, therefore, advise the White Star preference shareholders to give the trustees their full support and to wait patiently for the outcome of their labours.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

SETTLING DAYS
TICKET. ACCOUNT.
February 17. February 19.

THE opening of the new account did little to revitalise spirits which had become weary to the point of exhaustion. On every hand appeared a growing manifestation of anxiety with regard to the financial plight of the country, and as the prospect of an early general election receded dissatisfaction with the uncertain political outlook was both felt and expressed. Though in certain sections of the market, like Kaffirs and Oils, Paris came in with renewed vigour and let in a ray of hope, the general tone was one of mild gloom, while the existence of such weak spots as the Royal Mail counters induced caution. The redeeming feature of the week was the success

of the Surrey County Council loan, which was largely over-subscribed and immediately went to a quarter premium.

Gilt-edged stocks had a languid appearance, the cessation of the gold drain to France and the prospect of dearer money rates warring indecisively, while well-supported rumours of an impending issue from Whitehall and the East were accompanied by fractional losses all round. Indian loans declined perceptibly during the week, and the increased volume of selling suggested that second thoughts on the effect of Gandhi's release had proved unfavourable. Australian stocks were distinctly steadier, following the defeat of the Government candidate in the Parkes by-election, while New Zealand issues, after being marked down £1 as a precautionary measure on receipt of the news of the Napier earthquake, rallied for the most part when it became known that the first reports of the disaster had been exaggerated.

In the Foreign market, Brazilian bonds lost a point or two on rumours of a revolt in Piahy, but subsequent denials of any untoward event were followed by relative steadiness. Peruvians were marked down following the official request for a moratorium, and prices became nominal. Among Europeans, the German "Young" loans were well supported, and Austrian bonds were also prominent. Chinese issues were irregular in mid-week, but subsequently displayed a harder tendency.

The Home Rail market had hardly a single redeeming feature. Anxiety on the part of holders with regard to the trustee status of some stocks, coupled with a growing realisation that the outcome of the present wages dispute, even though relatively favourable to the companies, would not suffice to solve outstanding difficulties, led to an all-round decline, in the course of which Midland and Scottish ordinary touched 29½, the lowest on record. Undergrounds shared in the liquidation, hazy rumours with regard to the final dividend payment creating uneasiness. Argentine rails, in the Foreign section, were likewise affected by poor "traffics," resulting from unfavourable harvest operations, while Indian rails were also lower.

In the Industrial department, only the counters with a transatlantic market exhibited any tendency to rise above the dead level of stagnation. Royal Mail ordinary shares, which were once regarded as being of the "industrial gilt-edged" category, were being offered gratis to anyone who would free holders from the spectre of "unlimited liability." Swedish Match were well supported on news from Stockholm that the recent issue of "B" shares had been fully subscribed. Motors were dull, but Fords and Tillings proved to be satisfactory exceptions to the general tendency. Electrical shares were irregular, and among the supply shares Calcutta Electric declined when the terms of the proposed new issue became known. Textiles and rayons were sold, a sizeable recession occurring in the quotation for J. and P. Coats. Breweries were undecided, newspapers were weak, and bank and

INVESTMENT

by L. L. B. Angas.
(Author of "The Coming Collapse in Rubber, 1926.")

The publication of this book marks a new epoch in the science of investment for profit; no speculator, investor, trustee or stockbroker can afford to leave this work unread.

CONTENTS.

- The Business Cycle and its influence on the prices of all securities.
- How to detect the beginnings and endings of booms and slumps in single industries.
- Methods of forecasting the short-run market fluctuations which occur simultaneously every few months in the majority of ordinary shares.
- Rules for timing both buying and selling and for taking profits and losses.
- Investment policy to be followed by Trustees at different stages of the Business Cycle.
- Mistakes to avoid.

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."
Daily Telegraph: "The best book that has ever been written on investment with a view to capital appreciation."

Publishers: Macmillan & Co., St. Martin's Street, London, W.C.1. 187 pages. Numerous charts. PRICE 20/-

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

(Continued from page 301.)

insurance shares were lifeless. Imperial Chemicals, Turner and Newall and United Molasses all came on offer at different times, but mild improvements were recorded by Cables and Wireless and Babcocks, which proved to be a strong feature in a weak engineering list.

Rubber shares were overshadowed by the steady decline in the spot price of rubber from 4½d. to 3½d., and by the increase in stocks in the United Kingdom. Anglo-Dutch exhibited fresh weakness and declined sharply, while Trusts fell to 17s. 10½d., the lowest price recorded for some years. Little activity was noticeable among tea shares, and the few changes which occurred were mostly against holders. Oil shares made a poor start, with little interest from Amsterdam or Paris, but a sharp demand sprang up later for Mexican Eagles and a steadier tone supervened.

The Mining share market was less active than during the preceding week. The uncertainty of copper and tin prices and the steady decline in silver once again concentrated attention on gold-mining shares, to the detriment of other sections. Kaffirs became steadier after initial weakness, but activity halted when many shares were marked ex dividend on Thursday. Rhodesians were lethargic, and "Chartered" were again offered from Paris, though the subsequent dividend declaration was up to market expectations. In the northern section, the closing of the Bwana mine, though not unexpected, brought a marked decline. Tin shares were irregular, but gained strength with an improvement in the metal on Wednesday, while Tintos rallied on Paris support in spite of a further fall in copper.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets have developed a firmer tone. Though the prospect of legislation on the Veterans' Bonus proposals still clouds the outlook, the extreme nervousness of last week has subsided, and the bond market has turned strong again under the leadership of Government issues. After a dull start, industrials have risen, on a revival of the hope, which springs eternal, that the business recession has touched bottom for the time being at least. Dealings, however, have been narrow and the main trade "indicators" have failed to disclose much ground for optimism. Steel production has risen only to 48 per cent. of capacity (against 47 per cent. a week earlier), and car loadings have shown rather more than a seasonal decline. Market strength has chiefly been concentrated on the merchandising and amusement groups. Woolworths have been particularly well supported, on the statement that January sales showed a gain of 4½ per cent. over last year. Some railroad stocks have declined on anticipated dividend reductions. Coppers have remained firm despite the marking down of the metal by the Customs' smelters. Oils have been steady, the statistics being regarded as favourable.

INVESTMENT NOTES.

New Zealand Stocks.—The disastrous earthquake in New Zealand has not appreciably affected the market in New Zealand stocks. On the other hand, there has been a certain amount of selling on the part of holders who have become anxious at the depreciation in the exchange and the unfavourable trade situation. The following table shows the present market prices as compared with a month ago:—

	Price a Month Ago.	Present Offered Market Price.	Flat Yield %.	Yield with Redemption %.
New Zealand 5%, 1935-45	101	99½	5 1 0	5 2 0
" 4½%, 1944...	98	93½	4 16 6	5 4 6
" 4%, 1933-43	91	89½	4 10 6	5 5 6
" 3%, 1945 ...	81	79	3 17 0	5 5 0

The slump in wool and wheat prices has badly affected the export trade of New Zealand. In the year ended March, 1930, the "visible" balance of trade showed a debit of £122,000, against an excess of exports over imports in the previous year of over £12,000,000. For the year ending March, 1931, another unfavourable balance of trade must be expected, but imports are being curtailed as far as possible. The following table shows the visible overseas trade for the last three years:—

Years ended March 31.	Imports. £	Exports. £
1928	44,419,357	54,962,031
1929	45,105,865	57,154,343
1930	49,167,914	49,045,817

The depreciation in the New Zealand exchange is evidence of the difficulty which the country is experiencing in meeting its external obligations. The present rate for telegraphic transfers London and New Zealand is £109 9s. New Zealand per £100 sterling. The interest payments in London amount to about £7,600,000 per annum, the gross public debt of the Dominion being £272,883,843, of which £152,080,502 has been issued in London. If there is a large adverse balance of visible trade in the year ending March 31, 1931, it is evident that the transfer problem may become serious and that the country may have to have temporary financial assistance. The budget for the financial year (ending March 31, 1930) showed a slight surplus, but it is estimated that for the current year there will be a deficit of over £3,000,000 on account of the lower yield from Customs and a railway loss of £1,250,000. The financial policy of the New Zealand Government has, however, been essentially sound. Revenue surpluses since 1914 total about £30,000,000, which have been applied almost entirely to debt reduction or transferred to capital expenditure on development works. If there were any occasion for the New Zealand Government to seek temporary accommodation to meet its overseas interest payments, there is no doubt that help would be immediately forthcoming.

Movements in Share Values.—The issue of the latest figures of the Actuaries' Investment Index brings up to date the story of declining equity share values and slowly rising fixed interest security prices which has been characteristic of the last few months on the Stock Exchange. The Actuaries' Index was discussed in the *Economist* of November 8, 1930, page 871. The Index is revised periodically and now includes the equity shares, debentures and preference shares of all public companies operating in Great Britain with an "ordinary" market capitalisation of over £2,000,000. The nominal amount of any issue of debentures or preference shares included must, however, be at least £500,000. If the figures of

the Actuaries' Index be compared with those of various other indices, the results are as follows:—

(End December 1928 = 100.)

Class of Securities.	Index.	No. of Securities.	End of				
			Dec., 1929.	July, 1930.	Sept., 1930.	Dec., 1930.	Jan., 1931.
Industrial ordinary shares.	" Actuaries "	131	81.9	72.3	70.1	64.3	62.1
	" Fin. News "	30	84.3	75.9	74.3	69.7	68.5
	" Inv. Chron. "†	70	75.9	68.1	66.8	61.5	...
	" Bankers' Mag. "†	278	92.7	86.5	84.8	74.6	75.1
British Government.	" Actuaries "	3	94.7	100.5	100.9	104.6	104.7
	" Inv. Chron. "†	6	93.5	97.7	98.6	100.7	...
Industrial debentures.	" Actuaries "	41	94.1	95.5	96.1	98.1	98.3
Industrial pref. shares.	" Actuaries "	86	92.1	90.9	89.9	91.2	91.0
	" Inv. Chron. "†	10	93.5	94.7	93.8	94.3	...

* "General business." † "Variable dividend." "Bankers' Magazine" figures are calculated on prices in the middle of each month.

† Industrial fixed interest—includes four debentures and six preference.

The Actuaries' Index is based on a geometric average, whereas the other indices shown in the table are computed arithmetically. The figures suggest that the decline in ordinary share values has not yet been arrested. The Actuaries' Index shows a total drop since the end of 1928 (which marked practically the top of the boom) of approximately 38 per cent. The *Financial News* Index (based on 30 marked leaders) shows a somewhat smaller decline of 31½ per cent., but this may be in part attributed to the inclusion of one or two shares (e.g., Leyland Motors) which have shown a considerable rise since 1928, and tend to weight an arithmetical index somewhat heavily. The Bankers' Magazine Index includes a large amount of American railway common stock. The table shows, further, that the rise in British Government stocks which was halted in the third quarter of last year, gathered momentum in the last quarter, but has again been checked in the New Year. Appreciation in good industrial debentures has continued up to the present time, though at a slower rate than in the case of British Government securities. As regards industrial preference shares, however, it is clear that the "industrial risk" has outweighed the effects of cheap money, the curve of values showing, in fact, no upward trend. Holders of investment trust preference shares, however, had a more favourable experience, the thirteen shares included in the Actuaries' Index having risen from 96.6 at the end of December, 1929, to 103.0 at the end of last month. The broad conclusion suggested by the table is that so long as the depression continues, the axiom "buy the best" has particular relevance for the investor in fixed interest securities.

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

Royal Mail and White Star—Further Questions.—Stockholders of the Royal Mail Steam Packet Company, whose position is discussed in a leading article on page 299, were naturally perturbed this week by the publication of opinions given last year by a counsel named Mr H. B. Vaisey at the request of an interested party to the effect that they were under an unlimited liability for the company's debts in the event of a winding-up. Their anxiety was somewhat allayed by a subsequent statement issued by the Voting Trustees of the Royal Mail—Mr Walter Runciman, General A. Maxwell, and Sir William McIntock—containing a contrary opinion which they had obtained from two eminent counsel, Mr W. Gordon Brown and Mr Wilfrid Greene, K.C., who are acknowledged as leading authorities in matters of company law. This is the view which is generally recognised in the Stock Exchange. Indeed, members of the "House" long ago consulted the Royal Mail on this crucial point of stockholders' liability, and the company replied that under the terms of its articles stockholders were only liable up to the actual nominal amount of their stock. In the case of the P. & O., which is another shipping company incorporated by Royal Charter, it is expressly stated that the liability of members is limited. The common-sense, and equitable, view is that if there is no provision in the Royal Mail Charter imposing an unlimited liability on its members, the common law rule prevails, namely, that they are liable only up to the nominal amount of their shares. This question apart, it is probable that some difficulty may be experienced in inducing the White Star preference shareholders, at the meeting called on February 12th, to consent to a moratorium up to June 30th unless they can be satisfied that it is to their advantage not to press matters to an extreme, but to allow the Voting Trustees to salve what they can. A suggestion has been put forward that the White Star preference shareholders may be offered the opportunity, with the Royal Mail debenture stockholders, to set up committees of their own to act with the Voting Trustees. In this way they would obtain a *locus standi* and be made cognisant from time to time of all negotiations affecting their interests—a factor of undoubted importance in view of the complexity of the interlocking among the companies.

Boot and Shoe Company Profits.—The returns of a representative selection of boot and shoe manufacturing and retailing companies suggest that so far the industry has weathered the prevalent depression without undue strain. Indeed, though in 1930 the quantity of boots and shoes exported from this country declined by nine per cent. and their value by 11½ per cent., several companies have succeeded in recording an increase in profits. In the following table are set out the comparative results of nine companies for 1929 and 1930:—

Company.	Net Profit, 1929.	Ord. Div.	Net Profit, 1930.	Ord. Div.	Present Price.	Yield.
W. Abbott.....	£ 29,609	15	£ 24,882	10	1½	8 17 9
J. Darnell and Sons ..	42,568	12½	35,233	16	17½	9 8 3
Lennards.....	60,940	10	51,022	10	—	—
Lilley and Skinner ..	45,922	5	53,718	5	14½	7 2 10
Lotus.....	31,313	Nil	45,557	10	—	—
Public Benefit Boot Co.	50,639	10	45,447	10	—	—
Stead and Simpson ..	10,396	14	71,496	15	—	—
William Timpson ..	19,330	12½	22,216	12½	11½	10 8 4
Weber and Phillips ..						

† 10s. shares.

Four companies announced a reduced profit, but only two, W. Abbott and Lennards, reduced their dividend, the former from 15 per cent. to 10 per cent., and the latter from 12½ per cent. to 7½ per cent. The sharp decline in Lennards' profits was partly attributable to the reorganisation of shops taken over from Alfred Tyler and Sons. Lilley and Skinner again paid 10 per cent. on an augmented capital. Three companies increased their profit, but in the case of William Timpson the gross profit was actually lower, the net profit showing an advance because last year certain non-recurring items of expenditure had to be met in connection with

the purchase of the business. The Public Benefit Boot Company increased its profit by £14,244, and its ordinary shares, which last year went without a dividend, received 10 per cent. J. Darnell and Sons, who, in their prospectus of October last, prophesied a net profit of £50,000, actually made a profit of £35,283 and paid 16 per cent. on their ordinary capital, a result which, in a year of depression, cannot be regarded as unsatisfactory.

Linen Thread Company.—The depressed state of the linen industry is exemplified by the results of the Linen Thread Company, Ltd., for the year ended September 30th last. After providing for debenture interest and taxation, the net profit is £110,556—a decline of £153,993 as compared with 1929:—

	Years to September 30th.		
	1928.	1929.	1930.
Net profit	£ 263,862	£ 264,549	£ 110,556
Preference dividend.....	121,000	121,000	121,000
No. of times covered	2.18	2.19	0.91
Ordinary capital:—			
Dividend amount.....	140,250	140,250	99,000
Earned per cent.....	8.66	8.70	Dr. 0.63
Paid per cent.	8½	8½	6½
Reserve fund	—	—	Dr. 100,000
Inc. or dec. in carry forward	+ 3,612	+ 3,299	— 9,444

† Free of tax.

The directors have recommended a final dividend of 3 per cent., making 6 per cent., but have not declared the customary bonus of 2½ per cent. as in the three previous years. This somewhat generous "gesture" has involved the transfer of £100,000 from the reserve fund. At 23s. 9d. the £1 shares yield £5 3s. 8d. per cent. (free of tax), but the maintenance of a 6 per cent. tax-free dividend next year presupposes a considerable recovery in trade.

Turner and Newall Meeting.—At the annual meeting of this leading asbestos combine on January 30, Mr Samuel Turner gave shareholders a reassuring survey of the activities and prospects of the company. The reduction in dividend, he declared, was to be regarded as a precautionary measure, since it could not be expected that their company would come wholly unscathed through the prevalent depression. Nevertheless, in every phase of its activities advances had been made. Fruitful results had attended the continued research work, and new products were constantly issuing from the producing units, of which the asbestos cement pipe was an example, while another important development during the year had been the production on a factory scale of fire-proof and non-organic sound-absorption materials. The problem of raw material, which had always been one of anxiety in the asbestos industry, had been largely solved by the complete reorganisation of the mining operations of the unit companies' principal mines. In that connection, the directors had no reason to be dissatisfied with the investment in Rhodesian and General Asbestos Corporation, in view of the growing vitality of the asbestos industry as a whole. It was untrue to say that Turner and Newall had a virtual monopoly in the industry, since there was not one of their unit companies which was not subjected to active competition at home and abroad. Referring to the possibilities of exports from the U.S.S.R. during the present year, the chairman pointed out that Russia was an important producer of raw asbestos before the war, and that, granted normal development in future, there was no reason why the industry should not be able to absorb any anticipated exportable surplus from Russia without undue disturbance to trade.

Peruvian Moratorium.—The cautionary note sounded in our recent review of the outlook for Peruvian and other South American bonds (see *The Economist*, January 24, 1931, p. 174) has been speedily vindicated. The new Finance Minister of Peru, appointed since the

recent revolution, has asked for a moratorium "until economic stability is reached." He states that the Government intends to honour its obligations, but "is unable to pay interest and provide sinking funds without endangering the foundations of national economic life." No mention is made as to the probable length of the moratorium. The following are the prices of Peruvian stocks listed in London:—

	Jan. 2.	Jan. 28.	Feb. 3.
7½% (Guano)	82½	75½	74½
Nat. 6% Extl. Sinking Fund	42½	50	45
Lima Prov. Council 5%	52½	50½	50½
Lima Light and Power 6% ...	92½	90½	90½
Peruvian Corp. 5% Pref. Stk.	22	20	20
Ordinary Stock	4	4	4

The market received the news with stoicism. On Wednesday, however, Peruvian Corporation stocks fell to 19½ and 3½ respectively, on the publication of figures showing that in January last gross receipts had fallen, as compared with the preceding January, by 33½ per cent. The decline for the seven months to January 31st amounts to 27½ per cent.

Some Investment Trust Reports.—The reports published by three well-known investment trust companies this week are of particular interest, since they reveal in rather striking fashion the difference which the date of birth makes to the investment portfolio. The Sterling Trust, of which Baron d'Erlanger is chairman and Mr R. Fleming and Sir G. A. Touche are directors, was registered in 1881 and a valuation of its investments at market prices on December 31st showed a surplus over book value of £4,939,068. The Standard Trust, of which Mr A. Shepherd is chairman, was registered in 1903 and a market valuation of its investments at the same date showed a depreciation of 12.13 per cent. on their book value of £1,962,261. The Glasgow Stockholders' Trust, of which Mr P. Rintoul is chairman, is a comparatively young company, formed in 1927, and the market value of its investments at January 2, 1931, showed a depreciation of 24.89 per cent. on their book value of £1,416,807. The net revenue (after tax) of the Sterling Trust, curiously enough, showed a very slight decline from the figures of the previous year and that of the Glasgow Stockholders a very slight increase. The Standard Trust increased its revenue substantially as the result of the issue of new ordinary shares, preference shares and debenture stock. The results of the three companies for the past two years, together with percentage earned and paid on the ordinary capital, are shown in the following table:—

	Sterling Trust.		Standard Trust.		Glasgow Stockholders.	
	1929.	1930.	1929.	1930.	1929.	1930.
Net profit after tax (thousand £)	159.2	158.8	56.4	60.2	32.0	33.9
Ordinary—						
earned.....%	17.7	18.4	14.9	13.3	8.9	8.0
paid.....%	14.5	14.5	10.0	10.0	5.0	4.0
To reserve (thousand £)	24.0	25.0	10.0	10.0	25.0†	Nil

† £20,000 from premium on shares.

The directors of the Glasgow Stockholders, after paying off the expenses of the issue of debenture stock and terminable debentures, have decided to reduce the ordinary dividends from 5 per cent. to 4 per cent. The Sterling and Standard ordinary stocks are quoted in the market at 230 and 157, to yield 6.3 per cent. and 6.37 per cent. respectively.

Stock Exchange Options.—So many stocks and shares, writes a "House" correspondent, have been attacked by financial malaise that some people are asking whether, in certain cases, the decline has not been overdone. The investing power of the public is, however, so closely concentrated on "safety first" stocks that money available for investment in good industrial shares is comparatively slender. The more interest attaches, therefore, to dealings in options, which are being used, by some operators, as a means of taking an interest in shares which "look cheap," while strictly limiting possible losses if things go wrong. Option dealings, as practised under the rules and regulations of the "House," may be described

as an established method of limiting liability to a specified amount of money, in order to secure for a definite period an interest in the price fluctuations of stocks and shares. "An option may cover the purchase of shares, or their sale, or may combine the double operation, in which case the cost is usually double that for the single operation. A "call" option is the right to buy or not, at the choice of the giver, at an agreed future date, a stock or share at an agreed price. Beyond the option money, the brokerage and the contango rate, there is no further liability if the shares should not move sufficiently to give a profit on the transaction. Options can be done for a day, or for three months. The three-monthly option is the most popular one, and its cost is always comparatively cheaper than that of options for shorter periods. A brochure recently issued by a Stock Exchange firm points out that the price of an option is usually based on the marketability of the share concerned. Where a free market exists, the option rate is lower than that in a restricted market. There are, however, many other considerations. For example, it appears, at first sight, incongruous that the option-rate on Courtaulds should be about the same as that on Imperial Tobacco shares, seeing that Courtaulds stands about 31s. and Imperial Tobacco at 92s. 6d. But in the former case, the "risk" of a sharp rise is considered to be greater than in the latter. The common Stock Exchange practice is for the taker of the option money to buy half the amount of stock or shares over which he accepts the option-rate. He must, therefore, be prepared to finance his purchase for the period during which the option runs. For this reason, a "giver" for the "call" of shares is called upon to pay contango money in addition to the option rate. For the sake of illustration, a concrete example may be taken. Imperial Chemical ordinary shares stand at about 16s. 3d., at which price an option for three months can be obtained for about 1s. 6d. per share. In addition to the 1s. 6d., there is, say, 3d. for contango money, and 3d. brokerage—making 2s. per share, of which the option money and the brokerage (totalling 1s. 6d. per share) will represent the full extent of loss if the price of Chemicals at the end of three months does not permit the sale of the shares at a profit. The contango money is added to the price of the shares, and does not have to be paid for as an item of expense, but the price of Chemicals must rise from 16s. 3d. to 18s. 3d. before the giver of the option, by selling, can come out square, with neither loss nor profit, on the transaction. The sale can be effected at any time during the period over which the option runs, and if the giver should consider, for example, that it will pay him to sell at 17s. 3d., he reduces his loss by 1s. per share. Should the price rise to 20s., and he thinks it well to sell, he makes 1s. 9d. a share net profit. A sale, it is useful to insist, can be made at any time during the option's currency, and, as a rule, the bargain may be settled if the holder of the call wishes to complete the transaction then and there. But this, as a matter of fact, is an extravagance, because an option should be allowed to run for its full length whether or not the giver of the money has sold in the interval, for if a fall should take place after the shares are sold, this gives the opportunity for repurchasing, still leaving the option alive for further possibilities. According to the conventional Stock Exchange view, option dealing is the most

scientific of all means of speculation. It requires, however, a wide experience in dealing, and may be a dangerous weapon in the hands of an amateur speculator.

Markings in the Supplementary List.—On Friday, January 24th, a meeting took place between the Stock Exchange Sub-Committee and twelve jobbers, representing different markets, to discuss possible modifications in the Stock Exchange Supplementary List. It was argued that in its present form this list was unsatisfactory, since the only information it gave was the date and price of the last transaction in any particular security. If no business was done in a security for three months, its name was automatically removed from the list. Such a method, it was suggested, was misleading when, as often happened, a transaction was several weeks old, and made business extremely difficult for the holder of shares which had been removed from the list altogether. In certain quarters the view was held that when no transactions were recorded dealers should have the right to mark bids or offers until it was possible to record fresh business, while others recommended that the Unofficial List should be brought more into line with the Official List by the insertion of the date when a security went "ex dividend," and of the par value of the share. From the point of view of the jobbers, there is doubtless much to be said for revision, since, when a stock becomes inactive, and the Unofficial List consequently proves of little assistance, brokers frequently endeavour to satisfy their clients by going direct to other brokers known to have direct contact with the company concerned. From the public point of view, however, the reform proposals are more open to criticism. In New York it is recognised that securities are not suitable for public transaction until they have served a period of probation in the curb market, whereas in London permission to deal may be granted to new securities directly their sponsors have complied with certain formal requirements. It is arguable that any move which facilitates the public purchase of untried securities is retrogressive, and that, if the Stock Exchange Committee takes steps to see that the transference of stocks which have proved their right to inclusion in the Official List is made without undue delay, and at the same time provides a record of transactions in "unofficial" securities, it is doing as much as can reasonably be expected.

New Capital Issues in January.—In the table below we show the new capital raised in London by issue to the public or shareholders in January and recent years:—

Monthly Average.	(000's omitted.)			
	United Kingdom.	British Possessions.	Foreign Countries.	Total.
1924	7,051	6,023	4,370	17,444
1925	12,918	5,077	1,356	19,351
1926	10,765	4,431	4,036	19,232
1927	17,240	8,318	4,039	29,597
1928	21,965	5,263	3,526	30,754
1929	16,502	5,081	2,186	23,769
1930	14,220	5,121	2,975	22,316
Monthly Total.				
	Govt.	Other.		
January, 1929 ...	650	14,080	24,897	42,610
January, 1930 ...	500	9,033	1,671	13,989
January, 1931 ...	1,800	6,331	118	8,249

A feature of the "capital" market during last month was the marked advance in purchases of National Savings Certificates as compared with the corresponding month of 1930. Of the seven new issues to the public, the Borough of Birkenhead was responsible for £1,000,000 of 4½ per cent. stock at 99, the greater part of which was for conversion purposes, and Belfast Corporation for £500,000 at a slightly dearer rate. Two trusts, the London and Clydesdale and the Lewis Investment, seized the opportunities of cheap money. Two of the major issues were the offer of £3,000,000 of debentures by the London Power Co. and £1,000,000 by the National Shipbuilders' Securities—the first flotation under the auspices of the Bankers Industrial Development Company. The other issue was that of the Belfast Omnibus Company, which raised £100,000. Issues to shareholders were all of relatively small amount.

San Francisco.—Our mining correspondent writes:—The depreciation in metal prices is strikingly reflected in the results of this Mexican enterprise. Despite an increase of 30,000 tons in the quantity of ore treated, the operating surplus shrunk from £415,270 to £165,360; while the net profit came out at little more than one-fourth the previous year's total. No interim dividend was declared, and the final of 10 per cent., payable upon an increased capital, left an enhanced balance to go forward. We contrast the results of the past four years:—

	YEAR ENDED SEPTEMBER 30.			
	1927.	1928.	1929.	1930.
Net profits	320,029	283,130	333,589	88,360
Brought forward	114,885	129,122	125,260	172,560
Ordinary shares:				
<i>Earned</i>	320,029	283,130	333,590	88,360
<i>Paid</i>	300,792	281,992	286,280	78,280
<i>Earned</i>	42.6	37.7	43.7	11.3
<i>Paid</i>	40.0	37.5	37.5	10.0
Other allocations	5,000*	5,000*	...	...
Carried forward	129,122	125,260	172,560	182,650

* Directors' commission, since included in expenses.

The increase in capital above referred to arose from the issue of 38,600 shares, taken at 17s., in payment for certain additional plant—a very satisfactory arrangement from the company's point of view. Naturally, having regard to the condition of the metal markets, the directors decided to add only one unit to the mill instead of the two originally contemplated. Allowing for the sum required to cover the distribution, the balance sheet shows a cash surplus of £73,000, irrespective of a loan of £27,000 to a subsidiary company. Despite the restriction of the development by 28 per cent., the ore reserves, at 2,316,500 tons, display an expansion of no less than 442,000 tons. In the case of the fully blocked out material (1,763,600 tons), the increase is 389,800 tons. Since the date of the accounts lead has further declined to the lowest price recorded for some twenty years, while zinc has become cheaper than ever previously known.

Chinese Customs Loans.—In an Investment Note in last week's issue of the *Economist* on the Chinese Customs, we converted the total Customs revenues for 1930, amounting to 180,570,000 Haikwan taels, at the rate of 1s. 7.7265d. It has been pointed out to us that the average rate of exchange over the year was 1s. 10½d., which would give a sterling equivalent of £16,834,395, sufficient to cover the total interest and sinking fund payments on the Customs loans, including the total Boxer indemnity obligations, 2.3 times. It may be recalled that as from February 1, 1930, the Haikwan tael was discontinued as the basis for payment of duties on imports from abroad and a new "gold unit" substituted equal to 19.7265d. sterling. The general effect of this measure is to restore the import duties to the same percentage of dutiable value as at the time the new tariff of February, 1929, came into force and to stabilise these duties on a gold basis irrespective of any subsequent fluctuations in the exchange value of the tael. Of course, those duties which are actually paid in taels at whatever rate is fixed for the tael to the gold unit (this was at first 1½ and at the present time is 1½ Haikwan taels per gold unit, the Haikwan tael being 11.4 per cent. dearer than the Shanghai tael) will subsequently involve an exchange operation if the taels are converted into sterling. But a large part of the duties are paid (always on the basis of the gold unit) by means of demand drafts on London, and to this extent exchange operations are not involved. For this reason it is somewhat misleading to take the sterling equivalent of the Customs revenue at the average rate of exchange.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Lloyds Bank, London Merchant Bank, Midland Railway Company of Western Australia, South Metropolitan Gas, Mortgage Company of the River Plate, Turner and Newall, William Timpson, Sedenak Rubber Estates, Olympia, and Ashanti Goldfields Corporation.

CAPITAL ISSUES.

On Monday the *Surrey County Council* issued £1,500,000 of 4½ per cent. stock at 99 per cent., the yield reflecting the measurable decline in interest rates on sound trustee securities during the last twelve months. About £870,000 of the proceeds were to be applied in the repayment of existing temporary loans. The stock was very favourably received, recent issues of full trustee status having fallen considerably short of satisfying normal demand. Among other operations which are in prospect may be mentioned a gilt-edged issue (which will probably be announced over the week-end) and a corporation stock to an amount of £700,000. It is also understood that the Reading Corporation may shortly be in the market for £1,000,000.

Surrey County Council.—Issue of £1,500,000 Surrey County Council 4½ per cent. redeemable stock, 1950–70, at £99 per cent. Trustees are authorised to invest in this stock. The stock will be redeemed at par on April 1, 1970, unless previously cancelled by purchase or agreement, but the Council will have the option of redeeming the stock, in whole or part, at any time on or after April 1, 1950, on three months' notice. A rate of 1d. in the £ produces £34,400.

COMPANY MEETINGS. &c.

LLOYDS BANK LIMITED.

LARGE REDUCTIONS IN LOANS AND ADVANCES.

REASONS FOR THE LOWER RATE OF DIVIDEND.

NOT A PESSIMISTIC BUT A PRECAUTIONARY MEASURE.

EXAGGERATED "GOLD SHORTAGE" TALK.

MR J. BEAUMONT PEASE REVIEWS THE POSITION AND PROSPECTS.

The seventy-third ordinary general meeting of the shareholders of Lloyds Bank Limited was held, on the 30th ultimo, at the Cannon Street Hotel, London.

Mr J. Beaumont Pease (Chairman of the Bank) presided.

The auditors' report having been read by Sir Gilbert Garnsey, K.B.E.,

The Chairman, in moving the adoption of the directors' report, said:—Before I proceed to the examination of our report and balance sheet, I should like to take this opportunity of expressing our great regret at the resignation from our board for reasons of health of Mr Lambert W. Middleton. Mr Middleton has been associated with banking since his earliest business days, and his experience as a partner in the old private banking firm of Messrs Lambton and Company and his own shrewd judgment were of the greatest service to the bank. We shall miss him greatly, not only for his value as a director, but for his personal characteristics, which endeared him to all his colleagues both on the board and on the staff. His place has been taken by Captain C. E. Benson, D.S.O., a partner in the firm of Messrs Robert Benson and Company.

I have also to record the retirement of Mr V. W. Wanklyn and the pleasure with which we elected him to the local board of the West Yorkshire section in recognition of his services to the bank in that district.

BALANCE SHEET ITEMS.

I should like now to go through with you the main items in our balance sheet. Our capital and reserve figures remain the same as before, and I shall have something to say presently in regard to the profit and loss account.

Our current, deposit, and other accounts stand at over £364,000,000, an increase of £13,000,000 over the previous year, and constitute a record figure in the history of our bank under this heading. The items acceptances, endorsements, guarantees, and other obligations show a substantial decrease as compared with last year, and are an indication of the slackness in trade prevailing during the last 12 months.

On the other side of our balance sheet are some £55,787,000 under the heading of cash in hand and with the Bank of England, together with the balances with, and cheques in course of collection on, other banks in the British Isles. This large sum of course is entirely unremunerative, earning no interest at all, and represents no less than 15.3 per cent. of our total deposits. This is a fact which is sometimes overlooked by our depositors and others, who would like to persuade us to make a bigger interest allowance on our deposit accounts.

Money at call and short notice, which also stands at a high figure, was very unremunerative owing to the low rates prevailing last year.

Our balances with banks abroad are down by £3,000,000. On the other hand, while our trade bills show a slight reduction, there is a very large increase of £15,000,000 in the amount of Treasury Bills, another indication of the difficulty we have experienced in profitably employing our money.

For the same reason, our investments are up by over £15,000,000.

The figure at which our shares in subsidiary companies stand is based on a price below the market price or on the value of the net assets, whichever is applicable.

ADVANCES.

When we come to the item loans and advances I have to report a drop of, roughly, £16,000,000, which is a still further indication of the reduced requirements of trade.

I have in previous years given you some particulars of the analysis which we yearly make of our overdrafts. We have a net increase of 7,727 in the number of overdrawn accounts, of which 4,946 come under the heading of personal and professional. Out of the 31 groups into which our overdrafts are classified, 21 show a decrease of £17,000,000. Of these, the principal headings are Banking, Insurance and Finance; Foodstuffs and Tobacco; Cotton; Wool; and Corn. Ten groups show an increase of £4,500,000. Of these the

principal items are Retail; Building Trades; Theatres and Hotels; and Chemicals.

Other assets and accounts is an omnibus item, comprising various impersonal and suspense accounts, stocks of stamps, and freeholds and leaseholds not immediately required for bank premises.

BANK PREMISES.

There are one or two points in connection with the item bank premises which I would like to make. Owing to provisions which we have made in the past, the freeholds and cost of buildings thereon have now been written down to less than half their cost, and our leasehold premises are written down by annual instalments sufficient to wipe off the debit balances at the expiry of the leases. I think I may say that our programme under this heading is now nearing completion, and, in view of the large provision which we have made in previous years for writing down the cost of our premises, I think we can safely be satisfied with smaller allocations in the future.

While discussing this item I must not omit to mention that, during last year, we entered into our new and handsome head office building, which now houses our City office and all our head office departments, with the exception of our Trustee Department. Our Colonial and Foreign Department have still got a separate building in Gracechurch Street. The convenience and economy of centralisation in this way, we hope, will be very considerable. I should like again to remind our shareholders that the whole cost of the building of our new head office premises was entirely provided for some years ago, and not a penny of this cost has been added to our premises account. (Hear, hear.)

PROFIT AND LOSS ACCOUNT.

We now come to the profit and loss account, and you will see that our net profit brought in after making provision for rebate, income tax, and for all bad and doubtful debts and contingencies, is £2,129,515, out of which we have paid interim dividends for the half-year ending June 30th.

We have placed £200,000 to contingency fund and £200,000 to staff superannuation fund.

We recommend a dividend of 1s. 4d. a share on the "A" shares, making a total dividend of 15 per cent. for the year, and a dividend of 6d. per share on the "B" shares, making a total dividend of 5 per cent. for the year.

The balance carried forward is £511,198, about £3,000 higher than the balance brought in.

BOARD'S DIVIDEND POLICY.

Having declared profits of £2,100,000, the point of special interest to shareholders naturally is why did we not declare the usual dividend. The answer very simply is that, in our opinion, the normal banking profits for the year did not warrant it. With our largely increased deposits, and with the reduced facilities for employing them profitably in loans and overdrafts; with an average Bank rate which had fallen from £5 9s. 10d. to £3 8s. 2d.; and with a still larger reduction in the average discount rate for three months' bills from £5 4s. 2d. to £2 10s. 2d., the ordinary normal profit-earning capacity of the business during last year showed a very considerable falling away as compared with the previous year.

It is true that this was compensated by large abnormal profits resulting from the sale of investments. It is true, also, that by having greater recourse to our internal reserves, which may be legitimately used in an ordinary way, either for meeting bad debts or for the equalisation of dividends, we could have shown a higher profit figure for the year. Undoubtedly, if we had been clear that 1930 was an isolated instance, and that the results for 1931 would be of a more normal character, we probably should have recommended the usual dividend. But, after taking all the circumstances into the most careful consideration, we came to the conclusion that it would be more in conformity with the prudence and prestige of English banking, of which you shareholders are as proud as anyone—(hear, hear)—and for which you have every reason to be

grateful, if we placed the whole of the profits arising from the sales of investments to our internal reserves. (Hear, hear.) I quite agree that there is room for more than one opinion on this subject, and I shall anticipate the possible expression of some of these by alluding to them.

NEED FOR PRUDENCE.

In the first place it is not unnatural for anyone to argue that in past years we have built up these substantial internal reserves for the very purpose of meeting abnormal conditions if and when they arise, and probably we should have so used them if we had been confident that these conditions would not still continue. But without that clear expectation, would it have been wise to contemplate further inroads for the current year on our inner resources? We wish above all things to be strong and to have increasing and not diminishing strength on which to lean in years to come. One of our leading organs of public opinion stated recently: "Everything points to the probability that 1931 will be a year of grave economic difficulties." If we have erred in this respect, though we think not, we have erred on the safe side, and we believe our decision is one for which in future years our shareholders will thank us. As a commentator recently said with true wisdom: "Many companies have been the worse for paying too high dividends; none have even been the worse for paying too little." (Hear, hear.)

You must remember, too, that what we have withheld from you this year is not lost. It is still in the business, capable of earning fresh profits, and is as much your property as if it were in your pockets, and perhaps may remain your property longer than if it had been actually distributed to you. (Laughter.)

BUSINESS CONDITIONS AND BANKING PROSPERITY.

Then, further, it may be argued against our decision that it was undesirable when there was so much in industry and finance of a depressing nature to add to the depression by reducing the dividend on a class of share the return on which had come to be regarded as irreducible and immune from the troubles which vex others less fortunate. This argument is based on a misconception. It is true that bank shares have gained a stability and have maintained a regular rate of dividend through good times and bad, which gives some superficial colour to such a contention, but only because of the exercise of that same prudence in the past which I am commending to you for your acceptance now. The prosperity of banking business is dependent on the prosperity of business generally, and it has no sacred charm, other than past prudence, which can make it invulnerable to the attacks of poor trading conditions.

In arriving at our decision we had also to consider the possibility that it might give rise to certain erroneous conclusions in the minds of the public as to the reasons behind it. We realised possibly that some people might be found who would think it was a matter not of policy but of necessity. For instance, they might argue that it was an indication that the results of the liquidation of last year's troubles were proving to be more unfavourable than had been anticipated. Others might be disposed to think that the bank's position was not so strong as it ought to be for some other imaginary reason, and that our prestige might suffer in consequence.

HIGHER FIGURE OF INTERNAL RESERVES.

These were possibilities which we did not exclude from our deliberations, and if it showed some courage to arrive at a decision which we strongly suspected might stand alone, or nearly alone, in the world of English banking, and might prove to be unpopular in some quarters, it also demonstrated an unshakable belief in the minds of your directors of the fundamental soundness of the bank which could rise superior to any such mistaken inferences. (Hear, hear.) I am glad to be able to inform you that we see no reason to reconsider the conclusion we came to last year as to the amount of provision necessary. Everything points to the fact that the £500,000 we then provided will be sufficient. Nor are there any other bad debts of an abnormal nature for which we have had to make provision, and our internal reserves now stand at a higher figure than they did at the commencement of last year. (Hear, hear.)

Although we naturally sympathise with the shareholders that the return on their shares is somewhat reduced for 1930, there is no sign that our decision has proved generally unpopular. On the contrary, we have had general congratulations from various classes of business and other people best qualified to give an opinion, and of our 65,000 shareholders there have been four only who have written to express any criticism, and you will notice that the price of our shares is practically at the same figure as before our announcement.

UNFAVOURABLE BUSINESS FACTORS.

If you consider with me for a moment the circumstances in which we had to come to a decision, I think you cannot but agree that that decision was sound. Neither the enormous destruction of wealth during the War nor the greatly increased productive capacity of the world has yet been caught up. Signs of depression and want of confidence are seen on every side. The numbers of unemployed have already reached alarming figures in this country, and are increasing elsewhere. Low prices, coupled with high costs of production, form a most unpromising antithesis. The free flow of trade, already impeded by every kind of obstacle, is still further impeded and diverted from its natural course by huge international payments which have no commercial significance or basis whatever.

Vast accumulations of gold in countries which do not require them have been accompanied by an inability to discover trustworthy borrowers in those countries which might be benefited by a greater supply of that commodity. High taxation, especially in this country, has killed enterprise, while low prices have failed so far to produce new orders to any appreciable extent. These are all matters of commonplace knowledge. They have occurred before and they have passed away. I have no doubt they will pass again. But when? Our decision in regard to our dividend was not pessimistic but precautionary. If we had seen a definite term to the present difficulties, if we had seen any immediate prospect of improvement, if we had been convinced that there was a clear-cut and simple remedy which could effect a speedy cure of our evils, our recommendation to reduce the dividend might not, as I have already said, have been made. But we looked in vain for any immediate remedy of the kind.

GOLD AND BANKING CREDIT.

The constant reiteration of the cry "More gold, more gold" effects no faith cure in my unbelieving mind. Without belittling the general truth of the quantitative theory of money, I see very little reason for supposing that the present depressed state of trade is due to the operation of this principle. Even though gold may not be increasing in the same ratio as the increase of production, nevertheless the ordinary purchasing medium as expressed in the amount of bank deposits has increased in a far greater proportion. A distinguished American banker and economist, in answer to the accusation that the United States of America had rendered its gold sterile, recently made this retort: "Our net gain in monetary gold stocks from 1914 to the end of 1929 was about \$2,500,000,000 and the increase in outstanding bank credit was over \$37,500,000,000, or about \$15.5 of new credit for each dollar of new gold. Whatever that may be it is sterilisation."

If men were prepared to trade and to make purchases there is no lack of banking credit with which to make the necessary payments. The plain truth is that, for want of confidence, for want of belief that business is on the upward trend, the business world is refraining from giving more than the minimum of orders. It is true that in some spheres, on account of political or for other reasons, a large portion of the world is out of the buying market. It is also true that those engaged in primary production, such as agriculture, find that their products are fetching such a poor price as compared with that of manufactured products, that they are unable to give as many orders for ploughs or other agricultural requirements as otherwise they would. If the prices of the two were in closer affinity there would be no lack of the necessary purchasing medium, if orders were considered justifiable. It is not because of any shortage of gold that these orders are not given.

DECREASED DEMAND FOR ADVANCES.

It is not because of any shortage of gold that America and France think themselves unjustified in lending to those countries who would like to borrow. If America and France are disinclined, with their present stock of gold, to lend to would-be borrowers, does anyone suppose that they would be more disposed to do so if an addition of 100 millions of gold were suddenly made to their existing large stocks? Is any trader in this country unable to obtain credit if he is a reliable man and ready to place an order? You have seen from our figures that our advances have greatly decreased, and the reduction in our profits is largely due to the fact that our proportion of advances has fallen to 45.5 per cent. Obviously that was not in accordance with our wishes, or due to the fact that we could not or would not lend, but because there was no demand. Certainly there is a maldistribution of gold in the world, and it gives rise to many difficulties, but this talk of the use of gold, or the shortage of gold and the shortage of credit, and faults in our monetary system, as being the causes of present low prices and depressed trade, appears to be immensely exaggerated. The whole subject is a difficult and complicated one, and little understood by the ordinary man. It is all the more to

be regretted, therefore, that the suggestion should be made with every appearance of authority that all our troubles could easily be cured by some clever manipulation of monetary matters if only those in control of these things had the wit to put it into operation.

PATIENCE AND ECONOMY.

None of these critics makes any definite suggestion as to what they would do if they were in authority to deal with the situation. When Bank rate was high they said it was killing trade. Now that it is low and the position is worse, they seek for other causes. In spite of their theories about gold, now that the stock is considerably greater than it was, they fail to explain why trade is more depressed. The truth is, I believe, that what is really required is old-fashioned and has no imaginative appeal. The humdrum virtues of patience and economy are out of date, and I wish I were able to suggest something more startling with immediate promise of success. But I believe time is required in which demand can overtake supply. The Economic and Financial Section of the League of Nations recently issued a memorandum on production and trade, which pointed out that the increase of population in the world was 10 per cent. greater in 1928 than in 1913, whereas the increase of foodstuffs and raw material was 25 per cent. greater. Time and patience are also required for political unrest throughout the world to die down, and for the costs of production to be reduced so that the lower price of products of manufacture can offer more inducement to potential buyers.

DISCOURAGEMENT OF ENTERPRISE.

Trade requires some lightening of its vast load of taxation. Confidence must be restored and enterprise encouraged. Just as a recipient of the dole finds it unattractive to work for the few extra shillings which separate the dole allowance from a worker's wage, so is a capitalist discouraged from entering upon any enterprise by the fact that if it is successful the balance of profit remaining after the deduction of income-tax and surtax is insufficient to compensate him for the risks run, whereas on the other hand, if it prove a failure he has to bear the whole of the loss.

Until there is some amelioration of these hindering conditions it would seem to be necessary that no obligation, whether national or individual, should be entered into which the nation or the individual cannot afford to carry out. Neither a nation nor an individual has any divine right to possess those things which either desires to have. It all depends upon whether they are in a position to pay the adequate price, or give full consideration for the bargain.

Whether an improvement under these heads is far off or near at hand it would be foolhardy to prophesy. Some of them are in the sphere of politics; some of them are in the hands of traders themselves, both employers and employed; while others are largely psychological in character. When men believe that prices are temptingly low and are likely to improve, orders will be given, and the result on trade may be surprisingly rapid. The fact that in some commodities the price is down to a pre-War level gives us some encouragement to believe that we are not far from bottom, but in all the circumstances I have enumerated I trust that you will agree with me in thinking that for a bank a counsel of prudence is not only justified but commendable. (Hear, hear.)

THE RESOLUTION.

I now beg to move:—

"That the report just taken as read be received and adopted, and that, in accordance with the recommendation of the directors therein, a dividend be declared for the half-year ended December 31st last of 1s. 4d. on each 'A' share, making a total dividend of 15 per cent. for the year, and of 6d. on each 'B' share, making a total dividend of 5 per cent. for the year, payable, less income-tax, on and after January 31, 1931."

I shall now ask the deputy-chairman to second this resolution, but before putting it to the meeting I shall be glad to give an opportunity to any shareholder to make any comments or ask any questions which he may desire, and I shall do my best to reply. (Cheers.)

The resolution was seconded by Sir Austin E. Harris, K.B.E., the deputy-chairman, and carried unanimously.

The retiring directors were re-elected, and Messrs Price, Waterhouse and Company were reappointed auditors for the year 1931.

VOTE OF THANKS TO THE STAFF.

The Deputy-Chairman, in moving a vote of thanks to the staff of the bank for their excellent work during the past year, said:—

I am glad to have this opportunity of moving a hearty vote of thanks to the staff, from the chief general managers downwards, for their loyal, willing and efficient services during the period of exceptional difficulty through which we are now passing. There is a fine spirit of co-operation throughout the bank and a feeling of great pride in its reputation and progress.

We have been well served by our staff in the past, and I am confident that we shall receive equally good service in years to come. (Hear, hear.)

The increasing complexity of modern finance calls for the maintenance of a high standard of intelligence and efficiency in banking staffs, and, looking ahead, we have introduced staff grading and training schemes which should make our service attractive to young men of character and ability who are seeking a career. There has perhaps in the past been some justification for the prevalent idea that promotion in the joint-stock banks depended more upon seniority than ability, but, however that may be, it will not be perpetuated in this bank. The principal object of these schemes is to ensure that an appropriate standard of technical knowledge and efficiency is reached before promotion to a superior grade is gained. The period spent by exceptionally promising youths upon purely routine work will be shortened, and transfer to a higher grade will carry with it a special increment in salary. The scheme is calculated to build up that vital factor in our organisation, an adequate supply of trained men.

I cannot sit down without referring to the admirable souvenir which was designed, written and illustrated by the staff of the bank to commemorate our entry into our new premises. This work of art has received an extraordinary and well-merited measure of acclamation. I now move: "That the best thanks of this meeting be most heartily voted to the whole of the staff of the bank for their excellent work during the past year."

The resolution was seconded by Mr C. E. Barnett, and was cordially approved.

A vote of thanks to the directors for their services during the past year, and to the chairman for presiding, was carried unanimously, and the proceedings then terminated.

WILLIAM TIMPSON, LIMITED.

HIGHLY SATISFACTORY RESULTS.

The annual general meeting of William Timpson, Limited, was held, on the 28th ultimo, at Empiric House, Great Ducie Street, Manchester, Mr W. H. F. Timpson (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—I think you will agree with me when I say that, in the opinion of my colleagues and myself, the profit for the year, amounting to £111,995 19s. 5d., is, under all the circumstances, highly satisfactory.

After making provision for income tax, £26,000, the balance of profit for the year is £85,995 19s. 5d., to which must be added the amount brought from the previous year, £724 11s. 11d., leaving us with a disposable balance of £86,720 11s. 4d.

During the year the company has opened five new branch shops in important trading centres, and also an additional repairing factory, and, to cope with the company's growing needs, two further repairing factories are in course of construction.

A new retail shop is being fitted, and further branches will be acquired as suitable opportunities arise, but the directors consider that in many cases the rental or purchase price asked for available premises is above the market value, and until property owners adopt a more reasonable attitude it would be unwise to extend widely.

Throughout the year attention has been given to effecting economies in all departments, and the satisfactory results attained have only been secured by the whole-hearted and loyal co-operation of the staff.

There has been a decline in selling prices during the year, and this, of course, has affected the turnover, but it is satisfactory to note that there has been a large increase in the number of customers served. This is further evidence of the continued appreciation by the public of the excellent value and quality of our footwear.

I am glad to report that the William Timpson Pension Fund has now been established, and the capital sum required on actuarial estimate to start the fund, viz., £45,000, has been paid over to the trustees.

The final dividend on the preference shares, less tax, amounts to £10,196 14s., the instalment to the reserve for dividend on preference shares absorbs £12,500, a final dividend of 10 per cent., less tax, on the ordinary shares (making 15 per cent. for the year) amounts to £22,530 16s., and there remains the bonus to managerial, etc., staff, £7,500, and to the working directors £7,000, leaving an amount to carry forward to next year of £5,530 19s. 4d.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

SOUTH METROPOLITAN GAS COMPANY.

HOUSING ESTATES AND GAS SUPPLIES.

GOVERNMENT'S ATTITUDE TOWARDS GAS INDUSTRY.

The ordinary general meeting of the South Metropolitan Gas Company was held, on the 4th instant, at the Cannon Street Hotel, London, E.C.

Dr. Charles Carpenter, M.Inst.C.E. (the President), in moving the adoption of the report and accounts, said:—The working results of the undertaking for the past twelve months are typical of many that have preceded them, and we might congratulate ourselves upon what we have accomplished were it not for the unprecedented happenings with which we are confronted, as, indeed, is the case with every other gas company in the kingdom. As the report tells you, we had a decrease in the sale of gas in the early months of the year, due to the fact that the temperatures then prevailing were above the average. I am glad to say, however, that we are now making good this decrease, which for the year under review amounted to 2.97 per cent.

The payment of the dividend at the rate of 1½ per cent. above the basic rate of 5 per cent. carries with it the obligation to divide among our employees a co-partnership bonus amounting in the aggregate to £83,874.

I have come before you with stories of labour troubles (not, I am proud to say, our own), strikes of miners, or of transport workers, shortage and high prices of coal, disappearing dividends under war conditions, inability to maintain our work and plant in times of war, and the hampering effect of the legislative fetters upon our business. But I have never come with such a serious condition of things to place before you as I must now endeavour to do.

ELECTRICITY AND GAS.

Now one often hears the remark, "Ah! electricity is only in its infancy," but, ladies and gentlemen, it is 50 years or thereabouts since the Jablochhoff electric candle first made its appearance upon the Thames Embankment, and it was but a short time afterwards that Sir Coutts Lindsay was supplying not only his own public picture gallery, known as the "Grosvenor," with electricity from steam-driven generators installed in the basement, but had carried across Bond Street and some adjacent thoroughfares overhead wires to give a supply to some of the luxury shops of that area. From that time the business of electric supply has gone on developing until it has become the extensive organisation we know to-day.

These two great industries of gas and electricity supply have gone on developing side by side, each recognising that there were fields of usefulness for both, and each recognising that both forms of energy possessed advantages and disadvantages peculiar to themselves, and each, as I have said, by its commercial and scientific activities stimulating its competitor. Take, for instance, the distribution of power from a central source. There are a great number of instances where this is a convenience and advantage, but the applications of electricity for this purpose are not universal. For instance, the use of compressed air would be far less dangerous than electricity in a mine liable to outbursts of fire-damp, and, furthermore, a large amount of the mechanical energy consumed in the Metropolis is distributed hydraulically.

GAS EMPLOYEES AND THE MINISTER.

Now, commercially it is easier to advertise electricity than gas. We know quite well that it is only necessary to call a body-belt or a hair-brush "electric" to ensure for it a ready sale. Gas has no such advantage; it is neither novel nor fashionable any more than is "Shank's pony" as a mode of locomotion. Even so, and if gas undertakings are not wholly free from blame by reason of the fact that they have not used systematically and scientifically the medium of advertising, the fact remains that there are many people to-day who continue to use gas-lighting, not because they cannot get electricity, but because they prefer the pleasant warmth and soothing light of gas.

It is possible that this omission to advertise the acknowledged advantages of gas-light is partly, though certainly not wholly, responsible for what I will call the official and indeed the Governmental attitude to-day towards gas undertakings. In a recent letter to the Press, Lt.-Col. Ogilvie records the fact that in nearly 100,000 municipally-owned houses in this country the tenants are not allowed to choose the form of lighting or heating they prefer. He states that in thirteen areas the Local Authorities have prohibited the use of gas for any purposes whatever on their estates, and in forty-seven other cases specific uses of gas, that is, for lighting or heating, are forbidden.

This serious state of affairs has been developing, too, in this Company's area, and while we were considering what we could do to meet this new and unprecedented situation, some of our employees took the matter into their own hands, and, having regard to the seriousness to them of any part of our business being compulsorily shut down, decided first to form from among themselves a small committee and then to get into touch with London

County Councillors and Members of Parliament representing districts in which our employees were interested, either as workers or dwellers.

MINISTER OF TRANSPORT'S REPLY.

Amongst others they wrote to the Minister of Transport. I will not trouble you by reading the whole of the letters passing between these workpeople and the Minister, but I must quote from one. The Minister says, *inter alia*, "I am inclined to the opinion that the South Metropolitan Gas Company is employing somewhat undesirable means in furthering the interests of a particular commercial undertaking. Provided the public interest is served, I have every desire in public matters to be fair between the various industrial undertakings, but the South Metropolitan Gas Company does not ease the difficulties which arise out of the competition between gas and electricity by employing political methods of furthering trade interests (using their employees in the process) on lines which were alleged against the brewers before the war. At any rate, so far as I am concerned in my public work, I shall continue to be guided solely by the furtherance of the public interest, and I will not submit to attempts at intimidation, however scientific, made by political pressure of commercial undertakings."

Now, I must confess my complete ignorance of what the brewers were alleged to have done before the war. I am not like the Minister of Transport—a politician! I make the confession here to you, ladies and gentlemen, that I have never meddled in politics, and if that implies any discredit and lack of a quality which should be possessed by the head of your undertaking, I can only plead in extenuation that for over half a century I have been too deeply engaged in the scientific and technical development of a public utility undertaking in which I found myself as a young man, with ideals of the supply of pure and cheap gas, and the furtherance of the social and physical welfare and health of the employees engaged therein.

There is not a shadow of truth in the suggestion of the Minister that what has happened is of political origin engineered by this company. What did happen was that our employees took alarm over the fact that one Municipal Housing Committee after another declined the offer of this company to take the chance of the business it could get, and completely to pipe the newly-constructed houses free of cost to tenant or owner. This privilege, for, of course, it was one, the Councils, being the property owners, refused, their attitude being quite different from that of the ordinary estate builder, who is quite content for the pipes and wires to go in while building is in progress.

It is curious and certainly significant that the Councils should have taken up so peculiar an attitude. The proffered service of gas facilities would cost them nothing. Their tenants are unrestricted in the use of coal or oil; they may consume either in the Municipal tenement; but gas, No! I cannot help thinking that in some way or other this attitude may have been inspired in some measure by Whitehall.

MINISTER'S SPEECH.

It is true that in a speech made at Woolwich a little over a year ago by the Minister of Transport upon the development of the electrical industry, he is reported as saying that "he was not attacking or seeking to minimise the great gas industry, one of the most progressive industries in the country. There was room for both, and the electrical industry would be wise if it learned much from the enterprise and initiative of the gas supply industry." "Room for both," said the Minister of Transport! Some months earlier he told us through the Press his own ideal. "In my own home," said he, "electricity is lighting the rooms, is heating the rooms, though not to the exclusion of the Sunday evening coal fire in the winter, is cooking the food, giving us a constant hot-water supply, heating the flat iron and boiling the kettle." There does not seem much room for both there!

I rather think the speech at Woolwich must have been "political." If the example of the Minister goes for anything, and the influence he wields as the official propagandist of the electrical industry is certainly an enormous one, electricity on week-days and a coal fire on Sunday would not provide much occupation for gas undertakings, even though most consumers were not so fortunate as the Minister in having the borough council's station handy for the correction of domestic electrical defects. There is no disguising the fact that if his example is taken rather than his precept, the use and service of gas would be completely wiped out of existence.

The Minister of Transport is a member of a Government which stands for freedom for the citizen, justice and fair play. The gas industry of to-day does not need the assistance of Government credit to carry on and develop its business. It never has. Cannot State-supplied credit be more properly applied to find work for the unemployed? Must industrious Peter be destroyed in order to make work for unemployed Paul?

The report and accounts were unanimously adopted.

TURNER AND NEWALL, LIMITED.

PROFITS AND PROGRESS MAINTAINED.

MR SAMUEL TURNER'S REVIEW OF THE ASBESTOS INDUSTRY.

The annual general meeting of the ordinary shareholders of Turner and Newall, Ltd., was held, on the 30th ultimo, at the Royal Station Hotel, York.

Mr Samuel Turner (chairman of the company) presided.

The notice convening the meeting was read by Mr W. W. F. Shepherd, joint secretary, and the report of the auditors was read by Mr H. C. Gill, of Messrs Parkinson, Mather and Company.

Mr Samuel Turner read the directors' report, which had been circulated to all shareholders. The directors regret to report the death of Mr F. S. Newall in June last, and take this opportunity of expressing their sense of the great loss sustained thereby, and their appreciation of the services which he rendered to this company and its associates over a period of many years. The directors feel that they have lost a valued friend and able colleague, who had endeared himself to everyone with whom he came in contact.

PROFITS MAINTAINED DESPITE DIFFICULTIES.

The year under review has been one of great difficulty for all industries, and your directors are gratified to be able to confirm that despite the abnormal world economic crisis which has continued to develop during that period, the profits and progress of your company have been maintained.

You now have the figures before you, and you will no doubt feel that, in the circumstances, they are most gratifying. The progress of your company is a matter involving more than the figures of any particular year, and your directors are able to report that in every phase of its operations advances have been made, including greater economy in production and greater efficiency in distribution. Research work has continued unabated and with fruitful results.

The efforts of your directors have continued towards the consolidation and strengthening of the company's position in the asbestos and magnesia industry of the world. The position now achieved in this respect is satisfactory, and the influence of your board in the counsel of the world's asbestos industry is greater than ever. This influence is steadily exercised towards the end of attaining a rational basis of operations between the various elements engaged therein.

SUPPLIES OF RAW MATERIAL ASSURED.

Following upon the absorption of the Rhodesian and General Asbestos Corporation a complete reorganisation of the mining operations of the principal mines now owned by the unit companies of Turner and Newall is in process of development, the result of which will be a great saving in the cost of production and an improvement in quality. The problem of raw material has always been one of anxiety in the asbestos industry, which for the last thirty years has alternated between periods of scarcity amounting in some cases to famine and high prices, and periods of over-supply and low prices. Consequent upon the immensely increased mineral resources now owned by the mining unit companies of Turner and Newall, Ltd., all of which are managed by their respective boards in Africa, the manufacturing unit companies are now assured for an indefinite period of ample supplies of first-class raw material, and will thus be enabled to carry on the manufacture and marketing of their products without the recurring periods of anxiety and uncertainty which have during the past discouraged development.

THE YEAR'S DEVELOPMENTS.

At the beginning of the year under review the Quasi-Arc Company entered the Turner and Newall group. The Quasi-Arc Company is recognised as the pioneer of the electric welding industry, in which large quantities of high-grade blue asbestos are used. Twenty years ago, when the company started operations, no construction work was being electrically welded; since then this company has been responsible for the introduction of electric welding in practically all the industries which find it so useful to-day, and the future of the company is one of great promise.

The working of the international cartel, of which your company is a member, has been satisfactory, and much progress has been made during the year. Some details of this cartel were given in last year's report, and you will be gratified to learn that it is progressing steadily in the direction of the attainment of its aims and ideals.

The producing and marketing units of your company are in a state of health and vigorous activity. New products are constantly issuing from them, the most far-reaching development at present in hand being the installation of a new asbestos cement pipe factory at Widnes, the product of which will be marketed by your unit com-

pany—Asbestos Cement Building Products, Ltd., Trafford Park. Your directors have great faith in the future of asbestos cement pipes, which possess many advantages over cast iron or steel—notably they are rustless, and, owing to their light weight, particularly suitable for export. Their use is now approved by the Ministry of Health, after the most exhaustive investigation. Another important development during the past year has been the production on a factory scale of fire-proof and non-organic sound-absorption materials.

The world depression has only during the last three months affected the volume of business done by the unit companies, but it would not be reasonable to expect that they can continue to escape the effects of the economic disorder now prevailing in practically all the world's markets. Indeed, the operations of your unit companies are beginning to show a diminution. In deciding to recommend a considerable reduction of dividend your directors have in mind the necessity of keeping the company in a state of such financial strength that it shall be in a position to meet, from its own resources, any vicissitudes of the future—social, political or economic, the nature of which it is at the moment impossible to forecast.

RHODESIAN AND GENERAL ASBESTOS ACQUISITION.

The chairman further stated, with regard to the Rhodesian and General Asbestos Corporation, Ltd., that the cost to the company of this acquisition represents only the 1,309,114 ordinary shares of £1 each which were issued at par value, and that more than the nominal value of the shares so issued had been spent by that company on the opening up and development of its property prior to its absorption by Turner and Newall, Ltd.

With regard to the position of the old shareholders of the Rhodesian and General Asbestos Corporation, Ltd., he pointed out that, while it is difficult to visualise what the position of that company would have been had it remained independent, other independent producers of raw asbestos are at present experiencing very unsatisfactory trading conditions, and it is, therefore, reasonable to assume that, had it remained an independent unit, the Rhodesian and General Asbestos Corporation, Ltd., would have been quite unable to maintain its past rates of dividend, and inevitably the market value of the shares would have been very much reduced.

RUSSIA AND THE INDUSTRY.

With reference to the present position created in the industry by the possibility of large exports of raw asbestos from Russia, the chairman pointed out that this situation is not new, as before the war Russia was an important producer of raw asbestos, and that, granted normal development in future, there is no reason why the industry should not be able to absorb any anticipated exportable surplus from Russia without undue disturbance to trade.

The resolution was seconded by Mr. G. S. Newall and carried unanimously.

The usual resolution was then passed authorising payment of the ordinary dividend at 11½ per cent. for the year, subject to income tax, following which Messrs B. E. Williams, Harold Jones, John Carter and R. H. Turner, the directors retiring by rotation, were re-elected directors of the company.

Messrs Deloitte, Plender, Griffiths and Company, chartered accountants, were elected as auditors for the ensuing year.

A vote of thanks to the chairman terminated the proceedings.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

ASHANTI GOLDFIELDS CORPORATION, LIMITED.

DIVIDEND 100 PER CENT.—BONUS ISSUE.

Presiding, on the 5th instant, at the thirty-fourth ordinary general meeting of the Ashanti Goldfields Corporation, Ltd., held at River Plate House, E.C., Mr James H. Batty (the chairman), after expressing regret at the retirement of Mr Jeremiah Colman, the late chairman, and announcing that the vacancy on the board had been filled by the appointment of his son, Mr Leonard M. Colman, said that, having accepted the invitation of his colleagues to become chairman on the retirement of Mr Colman, he had felt it incumbent on him to visit the property. He had found everything in excellent condition.

During the past two years they had had exceptional geological conditions to deal with. They had two reefs which came together between levels 22 and 23, and since then the country had been very disturbed. The conditions in levels 24 and 25 were becoming more normal.

DR. MACLAREN'S REPORT.

It was mainly owing to that interesting geological feature that they had decided to invite Dr Malcolm MacLaren, the eminent geologist, to visit their property. Dr. MacLaren had completed his investigations, and his report was now in their possession. In that report he stated that in lode fissures of the Ashanti-Obuasi type in pre-Cambrian rocks gold ore might be expected to persist to great depths. On the question of the necessity of a new main shaft, he confirmed the opinion previously expressed by their consulting engineer that such a contingency was not likely to arise until No. 30 level had been reached. They had thus ample time ahead of them to make provision for the cost.

His report stated that the prospect of the concession yielding another great mine like that at Obuasi was not very hopeful. In depth, however, the old Ashanti shoot held out a real promise of further ore bodies, and vigorous exploration was urged.

Since 1925 they had made steady progress year by year in output, reduction in costs and increase in profits. Between 1925 and 1930 the output had increased from £392,079 to £614,606; the cost per ton had been reduced from 48s. 7d. to 44s. 4d., and the net profit, including London revenue, had increased from £137,155 to £320,561. He was confident that they would show still further progress during the present year. They had made a good start, the first three months showing a gross output of £173,023 and an estimated net profit of £95,425. Should those figures be repeated for the remainder of the year, the net profit would be in the region of £380,000 for the twelve months. They had in sight about five years' supply of ore.

MAL-DISTRIBUTION OF GOLD SUPPLIES.

The supplies of gold in the world were at present unevenly distributed. He believed he was right in saying that nearly 80 per cent. was held in the United States of America and France, so that there was only 20 per cent. left for the remainder of the world. Under the circumstances, it was not surprising that all commodities were a "drug on the market." It was obvious that while the mal-distribution continued and a supply was not forthcoming to make up the deficiency, gold discontinued to function and the world's currency system was out of gear. The British Empire produced nearly 75 per cent. of the world's supply and much more could be done in that direction with some encouragement. For some years gold had been neglected and enterprise had centred on base metals. Now that base metals were below the parity of gold, he looked for a change and believed that they would see attention being given to gold enterprise in the near future.

He believed that West Africa offered a fair field if they could depend on a sympathetic Government in those colonies to give gold mining a chance to be worked as cheaply as it was in South Africa. At present the harbour dues and railway rates were among the highest in the world, and because it was bullion the Government appeared to imagine it could stand any exorbitant charge.

With regard to the accounts, they could congratulate themselves on a very satisfactory financial position. The total profit was £320,561, an increase of nearly £117,000. They had paid an interim dividend of 35 per cent. and now recommended a final dividend of 65 per cent., making 100 per cent. for the year, as against 65 per cent. last year. It was proposed to increase the capital to £375,000, to alter the articles in order to authorise the capitalisation of profits or reserves and to make a bonus issue to the shareholders.

The report and accounts were unanimously adopted; the proposed increase of capital was approved, and at a subsequent extraordinary general meeting resolutions were passed altering the articles and capitalising £125,000 of undivided profits to enable the directors to make a capital bonus at the rate of 50 per cent. per share, free of tax, on the issued ordinary shares.

SEDENAK RUBBER ESTATES, LIMITED.

BENEFIT OF COMPANY'S FORWARD CONTRACTS.

The ordinary general meeting of Sedenak Rubber Estates, Ltd., was held, on the 30th ultimo, at 7, Great Winchester Street, London, Mr Philip C. Turnbull presiding.

The Chairman said that the price realised for their crop was somewhat above the year's average in the open market. For this result they had to thank the working of a forward contract which was entered into shortly after the last annual meeting, and would run to the end of 1931, supplemented by a further similar contract, both of which together would take about 17 tons monthly throughout this year at a minimum of 7½d. per lb. The utmost efforts in the way of reduction in working costs had been put forth in order to make ends meet, and that they had been successful was shown by the profit earned during the year. It was far from being one to boast about, but the directors felt justified in recommending the payment of a dividend which would practically absorb it. In better times reserves had been built up out of profits, but now, adys, when most investors found their dividends shrinking, or being entirely cut off, the Board felt they were justified in keeping Sedenak among the dividend payers.

The accounts showed an item of £4,527 expenditure on new areas in process of being planted; this consisted of just over 200 acres which were being planted out with bud-grafted rubber on the latest and most scientific lines. This increase in acreage was not so much to increase their planted area with the view of greater production, as to enable them to have higher yielding and therefore cheaper costing areas, thus admitting the older areas to be rested. In deciding the tapping policy for 1931 consideration had to be given to the question as to whether a maximum crop at a minimum price would be justified, and after mature deliberation the board decided to limit the crop to 90,000 lb. per month. The sad plight of the rubber industry had been brought about not so much by over-production as by the most extraordinary shrinkage in the consuming powers of the manufacturing countries, particularly the United States. This was a position that must right itself, and it only needed a return of something like trade prosperity to start an upward movement in manufacturing figures.

The motion for the adoption of the report and accounts and the payment of a dividend of 2½ per cent. less income tax was seconded by Mr G. M. Weekley and carried unanimously.

OLYMPIA, LIMITED.

NEW BUILDING COMPLETED.

MR PHILIP E. HILL'S SPEECH.

The second annual general meeting of Olympia, Limited, was held, on the 30th ultimo, in the Pillar Hall, Olympia, Kensington, London, W., Mr Philip E. Hill (chairman of the company) presiding.

The Secretary (Mr H. M. Draper) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The net profits for the year, after charging all expenses, including management, amount to £143,507 8s. 4d., which, under all circumstances, I hope you will consider satisfactory.

We have taken our properties at the amount of the valuation at the time our last issue was made, disclosing a surplus of £453,514 7s. 5d., which has been carried to capital reserve account. Out of this we have written off the cost of the issue in February last, amounting to £39,453 12s. 10d., and we have written down the value of the company's plant, machinery and fixtures by the sum of £52,900 to the nominal figure of £100. In the opinion of the board, these assets were conservatively valued at £53,000, but we thought it advisable to create this further reserve.

The company's new building, which in future is to be known as the "Empire Hall," has now been completed and handed over. During the year the company has acquired the freehold interest in several adjoining properties in which they previously only held a leasehold interest, so that all the properties now owned by the company are freehold. I am glad to say that our lessees and tenants are all prosperous, and, without exception, pay what I consider to be very moderate rents.

It is not the intention of the board to depart from the policy that they originally laid down—namely, that the company would operate purely as a property company and would take no part in financing exhibitions or entertainments. The national necessity, in trade interests, of a building like Olympia becomes more apparent every day, and as the lettings of our new building increase we can reasonably look forward to additional revenue. Our thanks are due to the managing director, Mr R. G. Heaton, the general manager, Mr J. Fortescue, and the staff at Olympia generally for the results they have achieved during the past year. They have had unusual difficulties to contend with, consequent upon our building improvements.

The report and accounts were unanimously adopted.

MIDLAND RAILWAY COMPANY OF WESTERN AUSTRALIA.

SET-BACK DUE TO DEPRESSION.

The annual general meeting of the Midland Railway Company of Western Australia, Ltd., was held, on the 5th instant, at Winchester House, Old Broad Street, London, E.C.

Sir George A. Touche, Bt. (the chairman) said that the outstanding feature of the accounts submitted was the break which they showed in a long record of steady and continuous progress. The gross traffic receipts of £224,414 and the net traffic receipts of £127,686 compared with figures in the previous year of £240,237 and £144,163. This falling off was in no sense due to factors peculiar to the company or to the State of Western Australia. It was the natural reflection of the difficult situation in which the whole Commonwealth of Australia had been placed. The root of the trouble was in the change brought about by world-wide declines in the prices of produce and commodities, and in the great primary products of wool and wheat the slump had been ruinously severe.

The net revenue was £127,334, which compared with £148,495 in 1929. They had transferred £40,000 to depreciation and renewals account and were placing £10,000 to the general reserve, increasing it to £110,000. They had deemed it advisable to create an exchange contingency account and to transfer £10,000 thereto. The directors recommended a dividend of 3 per cent. on the unified ordinary stock, which compared with 4 per cent. for the previous year, and was the same as that paid for the year to June 30, 1928.

The accounts for the current year would show a greater reaction to the state of tribulation which Australia was enduring than those now submitted. The remedies for the present difficult situation were more easily prescribed than taken, but a recognition of the need for them, which was frankly acknowledged by Australia's statesmen, and a spirit which did not shrink from applying them, were half the battle. The hardest task of governments at a time like this was to persuade all classes of a community of the economic necessity for measures which must be unpalatable.

There was a measure of encouragement in the fact that seasonal conditions had been favourable alike to agriculture and the pastoral industry. Without indulging in a too easy optimism, they might look forward hopefully.

The report was unanimously adopted.

LONDON MERCHANT BANK, LIMITED.

THE HEAVY FALL IN PRICES.

The fifty-ninth ordinary general meeting of the London Merchant Bank, Ltd., was held on the 5th instant, at 38 Lombard Street, London, E.C.

Mr. Edward H. Tootal, who presided, said that the year 1930 had been a noteworthy one from many points of view. Quite apart from serious political events in a number of countries, industry, commerce and finance had had to contend with conditions of a profoundly disturbing nature. The happenings which had proved detrimental to the business world had been numerous. A very important factor in the position last year had been the almost continual, and in the aggregate, heavy fall in the wholesale prices of commodities extending to nearly all Colonial produce and raw materials. Equally serious from the point of view of the competitive ability of our export trade was the discrepancy between those prices and those of manufactured articles, and also the failure of retail prices to follow expeditiously and sufficiently the source of wholesale prices.

In referring to financial events in their bearing on industry and commerce, the crisis which had overtaken the New York stock market in the autumn of 1929 must again be mentioned, because its consequences had made themselves more and more felt in 1930. Another result of the events in America had been the selling in London and New York of European and South American securities previously acquired by investors in the United States. The heavy depreciation of foreign bonds had had wider consequences than merely causing a loss to the holders, as it had rendered in some cases the raising of urgently required new loans impossible, while in other instances new long-term financing became very costly.

In contrast with most foreign bonds, gilt-edged Home securities had been an active and rising market owing to cheaper money rates. As the average Bank Rate in 1930 had been £3 8s. 5d., against £5 10s. 0d. in 1929, their interest earnings had been materially lower, the more so as the compensating advantage of an increased demand for credit accommodation, which normally resulted from easy money market conditions, had been absent during the greater part of the year. The foreign trade figures of the United Kingdom for the past year showed, in consonance with the fall of prices, heavy declines. Exports had paid for 60 per cent. of net imports, whilst for 1929 that ratio had been over 65 per cent., but the severe restriction of imports by countries such as Australia, Brazil and India, to

mention only a few, had been bound to leave its mark upon our export trade. It might be that, when the raw materials more recently purchased at lower values came to be re-exported in the shape of manufactured goods, the volume of exports would increase, because the heavy fall in the prices of commodities should benefit some categories of consumers and users sooner or later, and thereby create fresh or increased outlets for certain articles. In some such adjustment lay one hope for a gradual improvement of trade.

In summing up, they might safely say that there had never been a period in commercial history in which so many unfavourable factors had been at work almost simultaneously. The profits of merchant bankers, always sensitive to disturbances in international trade, had been affected accordingly, and the board trusted shareholders would regard their profit figure for the year of £50,838 as not unsatisfactory in the light of the entirely abnormal conditions. Including £31,485 brought in from 1929, an amount of £82,323 had to be dealt with. Of that, £10,000 had been allocated to contingency fund, while the dividend on the "A" shares and the interim dividend of 2 per cent. on the "B" shares had absorbed together £31,500. They now recommended that a final dividend of 2 per cent. be paid on the "B" shares, making the dividends for the year 7 per cent. on the "A" shares and 4 per cent. on the "B" shares, and that the remaining £30,323 be carried forward to new account. The reduction of the dividend on the "B" shares was much regretted by the board, but the state of commodity markets and the absence of definite indications of an early improvement in the export and import trades here and abroad could not be disregarded at this juncture. Changes in the trade position, however, often came when least expected, and he sincerely hoped that a year hence they might meet under more cheerful conditions.

The report and accounts were unanimously adopted.

MORTGAGE COMPANY OF THE RIVER PLATE, LIMITED.

The forty-fourth ordinary general meeting of the Mortgage Company of the River Plate, Ltd., was held, on the 30th ultimo, at the company's offices, 52, Moorgate, London.

Mr. James Anderson the (chairman) said that the year 1930 was not a happy one in the industrial history of the Argentine Republic. So far as their company was concerned, the main prejudice to them had been in the depreciation in the value of the Argentine currency, in which their capital in the Republic was invested. It was reasonable to assume that the present depression, caused by temporary adverse conditions, did not express the real value of the currency, and that a return to real value might be looked for when times improved. There was no need, therefore, to consider the depreciation in the company's assets, mentioned in the balance sheet at £137,000, as an actual loss; moreover, it was amply covered by the reserve fund of £460,000 without taking into account the big item of £102,000 carried forward. As to the assets in London, a valuation made on the prices current at the close of the year showed that the book value was more than maintained.

The net results of the year enabled the board to recommend a dividend of 18 per cent., the same rate as had been paid for the two preceding years, with a surplus of £9,196; they added £10,000 to the reserve and carried forward £102,352. On the original £200,000 paid up in cash the rate of the present dividend was equivalent to 27 per cent.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended January 31, 1931, amounted to £18,744,600, against ordinary expenditure of £8,726,000. After allocating £650,000 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £300,683, the week's operations, as shown below, reduced the National Debt by £9,068,000 to £7,721,164,000:—

(000's omitted.)			
Public Department Advances...	5,750	Treasury Bills	14,263
National Savings Certificates ...	750	4% War Loan paid off	950
4% Treasury Bonds	45	P. O. & Telegraph Money	400
	6,545		15,613

A complete analysis of the National Debt at the end of the last quarter appeared in the *Economist* of January 3rd.

† Free of income tax.

MARKET SUMMARY.

prices have been below those ruling last week, but if Mr Chadbourne's attempts to come to an agreement with Russia should prove successful, an improvement in the sugar position is probable. Tea has been a dull market, but coffee has been firmer. Among miscellaneous commodities, hides have again been weaker, and the demand for leather remains on a limited scale. Rubber shows a considerable decline on the week occasioned by renewed speculative selling and an increase in stocks.

THE COAL TRADE.

Our Sheffield correspondent writes:—Demand for best steams for export tends to improve and prices have hardened since a month ago, but there are large accumulations of small coals, sales of which are at a low level. Prices of the first-named are 10s. 9d. to 17s. f.o.b. Humber ports. For inland delivery producers quote 14s. to 15s. at pits. The house coal trade is moderate with prices from 20s. 6d. to 21s. 6d. at pits. Best hand picked branch commands 23s. 6d. or more, supplies being rather on the short side. Export sales of furnace coke are down, and prices have dropped further. The home price is about 12s. at ovens.

Our Glasgow correspondent writes:—The main feature of the market during the past week, from a domestic point of view, has been the continued weakening of prices for washed nuts, which are plentiful in all districts. This arises partly from the falling-off in home requirements, owing to the lengthening of the day and partly from the effort to satisfy prompt orders for round coal. From the

broader aspect a more important consideration is the scarcity of forward business, for colliery quotations for dealing ahead are considered much too high, while the restriction of output, besides creating difficulty in supplying brands of coal required, also raises the general production cost. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 15s.; splint best, 17s. 6d.; splint second, 16s. 6d.; navigation, 16s. 6d.—17s.; navigation second, 15s.—15s. 6d.; Hartley, 16s.; steam, 15s.; trebles, 13s.; doubles, 12s.; singles, 11s. 6d.; pearls, 11s.; dross, 10s. 3d. FIFE.—Screened navigation, 16s. 6d.—17s. 6d.; first-class steam, 12s. 9d.; third-class steam, 12s. 6d.; trebles, 13s.—14s.; doubles, 12s.; singles, 11s. 6d.; pearls, 11s. 6d. LOTHIAN.—Prime steam, 13s. 6d.—14s.; secondary steam, 13s. 6d.—14s.; trebles, 13s.; doubles, 12s. 3d.; singles, 11s. 6d.; pearls, 11s. 6d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 14s.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s.; pearls, 11s. 6d.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Depressed conditions continue to prevail on the South Wales coal market. Since work was resumed after the recent stoppage production has been restricted by the 74-hour shift, and the reduced quota for the first quarter of the year is now in active operation. Output, however, is in excess of the absorbing capacity of the market, and stocks are once again accumulating. Foreign inquiries are inactive, and the bunker demand is adversely affected by the increase in the volume of idle tonnage, which throughout the world has been estimated by the Chamber of Shipping as equivalent to approximately 12½ million tons d.w., or 13 per cent. of the existing carrying power. Prices for practically all classes are at the minima. Considerable progress has been made by the Joint Sub-committee that is negotiating the terms of a new Conciliation Board agreement, and it is expected that the new agreement, subject to the reservation of the minimum wage, the subsistence wage, and one or two other important questions for the arbitration of the independent chairman, will be submitted to a full meeting of the Joint Board next week. Shipments have steadily improved since the resumption of work after the stoppage, but they are still in volume considerably less than those at the corresponding period last year. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s. 6d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. to 17s. 9d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 15s. to 15s. 3d.; best anthracite large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubble culm, 8s. 6d. to 9s.; foundry coke, 29s. to 35s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 24s. 9d. to 25s. 3d.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—New business in Cleveland iron at the moment is quiet, but there is no weakness in the position. Consumers have their early requirements well covered and have also bought a little ahead. They are therefore now inclined to look on to see how trade develops for their manufactures. Some have good orders booked which will enable them to carry on for a few months, and there are further inquiries on the market, which if they result in business, will mean further buying of pig iron. In the meantime producers of the latter find the present production insufficient to meet current needs and have to draw upon stocks, which is a favourable market feature. A moderate business on home account was reported at Tuesday's market, mostly for early delivery, prices being unchanged, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. There is very little doing with Scotland, in spite of specially cut prices quoted for that area. In hematite a disinclination still exists on the part of consumers to place any important contracts for forward delivery, but a fair number of orders are coming along for prompt. With the very restricted make, stocks are still being drawn upon, which strengthens the makers' position. Although the general quotation for mixed numbers for early delivery is 70s., it is possible to buy some brands at sixpence or even one shilling less. For delivery a few months ahead 70s. 6d. is the figure generally asked, but this would be shaded for attractive business. In the steel trade a few orders are coming to hand and works are better employed generally. Prices are unchanged. The ore market presents no new feature and transactions are few and far between. Best Bilbao rubio is nominally 16s. c.i.f. for early delivery, and the current freight Bilbao-Middlesbrough is about 4s. 9d. Producers of coke have difficulty in making sales, and as their stocks are large the price is weak at 17s. for ordinary blast-furnace qualities delivered works. In some cases 3d. to 6d. less has been accepted. The number of furnaces in blast in the district remains at 23.

Our Sheffield correspondent writes:—The beginning of a new month has brought no relief to the depression which prevails throughout the iron and steel industry. Conditions have undergone no important change since last reported upon, although one hears that owing to the exhaustion of stocks some overseas countries are beginning to send orders for certain classes of steel material, and this movement should develop as the year advances. The open-hearth steel department continues working at less than half capacity, both in the Sheffield and Lincolnshire districts. There is a marked shortage of work in railway steel and steel bars and rods. The steel sheet department is picking up a little. Demand for shipbuilding steel keeps low. There is a fair inquiry for alloy steels and stampings for commercial cars. The price of high-speed and other special steels was reduced 3d. per lb. this week. The market for steel scrap is rather weaker. Unfavourable reports are to hand from the tool, cutlery and plate trades.

Our Glasgow correspondent writes:—Business in the West of Scotland remains disappointingly dull, and while on all sides one hears expressions of belief that trade is improving, there seems little to warrant such belief. Most of the Lanarkshire steel plants are in operation, but the orders coming in are not nearly sufficient to keep them fully occupied. There is no increased activity in the market for semis; prices for Continental material—though stiffening somewhat—are still much below home makers'. Tube makers are still finding business poor, some makers experiencing more difficulty in keeping plants going than they have had for many years. In the sheet trade business is just a shade better, but the export demand for both black and galvanised sheets remains unsatisfactory.

Our Cardiff correspondent writes:—There has been no improvement lately in the conditions of the South Wales tinplate and sheet trades. The factories in the tinplate industry are operating at less than 50 per cent. of capacity, while in the sheet industry the depression is even relatively greater. Prices of tinplates continue unregulated, and quotations per basis box on the Swansea Metal Exchange on Tuesday ranged at the further reduced figures of 15s. 3d. to 15s. 9d., compared with 15s. 6d. to 15s. 9d. the previous week, and 18s. 7½d. to 18s. 10½d. in the corresponding week last year. Some makers are holding out for 15s. 9d. per box, but there have been weak sellers of stock plates at 15s. 3d. The output of tinplates, terneplates and blackplates in South Wales last year was 814,404 tons, compared with 879,844 tons in 1929. Galvanised sheets are unchanged at the new minimum of £11 per ton for corrugated bundles. There has been no improvement in the prices of Welsh tinplate bars, but foreign bars have been quoted at £4 15s. per ton, as against £4 5s. the previous week. Shipments were slightly more active last week, but they were less than 50 per cent. of those in the corresponding period last year, and stocks are approaching 250,000 boxes, compared with 162,000 boxes a year ago.

OTHER METALS.

TIN.—The market generally presented dull features and, with sellers prominent, prices gave way, while influenced by unfavourable statistics for January, and lower Eastern cables. Later dealings marked a recovery. Shipments from the East during January were 5,115 to the U.S.A., 800 tons United Kingdom, 1,290 Continent, 338 other countries. American deliveries: Atlantic ports, 7,100 tons; Pacific ports, 110; stock, 2,488; landings, 2,416. United Kingdom stock and landing on January 31st, 23,841; total visible supply, 43,209 tons. Standard cash changed hands at £113 10s. to £112 2s. 6d., £114 12s. 6d., and £114 5s.; three months, £115 5s., £113 12s. 6d., £116 5s., and £115 12s. 6d. Sales in the East were reported at £117 10s. to £116 15s. and £118 15s. per ton c.i.f.

COPPER proved a fairly active market but offerings proved excessive, which imparted slight irregularity. Standard cash sold £43 12s. 6d. to £43 5s., and three months, £43 10s.—£43 2s. 6d. per ton.

LEAD in moderate support, but market weaker on liberal selling orders. Good soft foreign pig, February, sold £13 to £12 12s. 6d.; March, £13 1s. 3d. to £12 13s. 9d.; April, £12 17s. 6d.; May, £13—£12 15s. per ton.

SPELTER easier on free offerings of near positions, and a moderate business transpired. February, sold £12 1s. 3d. to £11 10s.; March, £12 2s. 6d. to £11 13s. 9d.; April, £11 17s. 6d.; May, £12 11s. 3d. to £12 1s. 3d.; June, £12 5s. per ton.

ALUMINIUM quiet. Home trade, also export, £85 per ton.

ANTIMONY quiet of sale. English regulus, £38 to £45; Chinese regulus, spot, £25; February-March, £22 10s.; Chinese crude, February-March, £15 10s. per ton c.i.f.

ANTIMONY ORE easier.—60 per cent., February-March, 3s.; ditto 50 per cent., 2s. 6d. per unit c.i.f.

ANTIMONY OXIDE easier. February-March, £24 per ton c.i.f. WOLFRAM easier. Chinese, February-March, 12s. 9d. per unit c.i.f.

QUICKSILVER maintained. Spot, £21 11s. 6d. to £22 5s. per bottle, as to terms.

TEXTILES.

THE COTTON TRADE.—Liverpool, February 4th. Spot sales for the week January 29th to February 4th (inclusive) are 19,000 bales, of which 10,700 bales are American, 950 Brazil, 350 Argentine, 2,750 Peru, 3,100 Egyptian, 150 African, 400 East Indian, and 600 sundries. Imports for the same period are 35,445 bales, of which 16,315 are American, 298 Peru, 1,151 Egyptian, 1,725 African, 9,812 East Indian, and 6,144 sundries. Quotations to-day are: American Middling, 5-65; Egyptian Sakel, 8-90; Uppers, 6-56; Brazil Fair, 5-79; Peru G.F. Smooth, 6-09; West African Middling, 5-65, and East African G.F. 6-69.

Manchester, February 4th. Spinners and manufacturers have experienced much difficulty in securing orders, and apart from the difficulties arising in arranging contracts as a result of the labour dispute the general demand continues disappointing. Considerable disappointment has been expressed at the failure to reach a settlement on the more-looms-per-weaver question. In piece goods for India, operations have been confined to miscellaneous lots. There are indications of the boycott of foreign goods being intensified, and for the most part the political situation is as bad as ever. Fair buying, however, has taken place for Karachi. With regard to China, the further slump in the price of silver has been a discouraging factor, and trade at the moment is being checked by the approaching New Year celebrations abroad. Now and again moderate lots of bleaching and finishing styles have been booked for Egypt, the Near East and South America, but the total sales have been unimportant. Some fair lines have been put through in home trade fabrics. On the whole, the yarn market has been quieter than last week. There can be no improvement in buying for home use just at present. Export demand continues more active, some very fair contracts being arranged for India and the Continent.

THE WOOL TRADE.—Our Bradford correspondent writes: A remarkable change has come about in the position of wool in London, prices for all descriptions having made a distinct recovery compared with the low level registered during the first week. Comparing prices then realised for portions of leading grease merino clips, with what has since been forthcoming, an improvement of 1d. to 2d. per lb. is seen. Even greasy bellies, which had been realising 5½d. to 5½d., have made 6½d. to 6½d., whilst the super combing of the same marks show an advance of 1½d. These are no doubt fairly outstanding examples of the improvements which has come about in merinos wool, but besides the recovery in prices, there has been a far more general buying spirit, and less wool has been withdrawn. No doubt the curtailment of the offerings, and putting forward small quantities daily, has done something to convince buyers of the desirability of operating whilst the descriptions wanted were available. Really speaking, the driving force was imparted to the trade when, during the first week, certain home trade buyers operated on a very large scale. The impression was then given that values had touched the bottom, and subsequent events have proved this to be true. The advance in crossbreds has not been as definite as that in merinos, but even in this description the larger offerings this week have not had the slightest adverse influence upon selling values. Indeed there is an improvement of fully 5 to 7½ per cent., particularly in fine qualities. The improvement in good greasy combing merinos is 10 per cent., but even this has not prevented buyers getting some very reasonable wools, and speculative purchases should ultimately prove to be a good investment. The Bradford market has become rather quieter, but the advance in merino tops and the strengthening of crossbreds has put an entirely different complexion upon the outlook. Top-makers are realising that further substantial requirements in all qualities of the combed article will be needed to enable the ground gained to be held, and spinners have only been partially able to cover the increased cost of wool in the prices at which they have sold yarns. It is a fact, however, that the entire position from a manufacturing standpoint is better than when the wool sales commenced.

THE HEMP TRADE.—The market in Hemp has been steady, Manila descriptions show a slight rise, £19 15s. being quoted for "J2," February-April, as against £19 10s. last week. According to a cable, last week's receipts amounted to 26,000 bales, against 27,000 last year and 51,000 in 1929. This week's receipts have been estimated at 24,000 bales and at 25,000 for next week. Manila shipments last week totalled 40,000 bales, of which 13,000 have been consigned to the United Kingdom, 6,000 to the United States, 16,000 to the Continent, 4,000 to Japan and 1,000 to other countries. Local consumption at 1,000 bales leaves stocks at 102,000.

THE JUTE TRADE.—Dundee, February 4. Some interest has been caused in the jute trade this week by the intimation received from Calcutta that the Committee of the Indian Jute Mills' Association had recommended to the meeting of the Association to be held

on February 15 that the production of hessian cloth should be curtailed further by stopping 10 to 15 per cent. of the looms, and continue working the same hours as at present after March 31st next, the date on which the last agreement expires. The Calcutta goods market has been stimulated by the news that prices at the moment are advancing, speculators dominating the situation. The stocks of hessian cloth have increased during the year 1930 from 85,000,000 yards to 242,500,000 yards at the Calcutta centre, and at the end of January a further increase was noted, the stocks being augmented by two days' output and now representing 30 days' production. Stocks of heavy goods, however, showed a decrease from 10½ days to 9 days during January. Trade has still ruled fairly slow all round and it really requires some further move on the part of the Indian mills to bring supply on a more equitable basis with demand. The raw jute market has remained quiet and prices have shown a tendency to decline, probably due to the prospects of even less being required. Good First Marks can be bought at £18 5s. and good Lightnings at £15 17s. 6d., while Daisee assortment good marks have been sold at £14 10s. and Tossa assortment rules at £15 15s., with threes at £15 10s., February/March shipment. Spinners are not showing much interest owing to the lack of demand for yarns generally. The finer spins of yarns have been quite freely bought for export to Brazil, the Government of which country agreed to postpone the date for coming into operation of the high duties which they intend to place on jute yarns entering Brazil. Spinners have now until April 1st to ship yarns, and those engaged on these fine qualities are going full speed ahead until March 5th in order to get as much as possible there by the former date. The Government of Brazil have also agreed to reconsider the question of tariffs. A fair business has been done in common 8 lb. cops at from 1s. 10d. to 1s. 11d., and in 8 lb. spools at 1s. 11d. to 2s., and now the higher rates are the lowest possible. Other yarns are quiet. Cloth continues rather dull and only occasionally is there an order of any consequence being placed. The quoted rates are from 2½d. to 3d. for 10½ oz. 40 in., and from 1½d. to 2½d. for 8 oz. Linoleum hessians are slightly improved, American buyers now specifying from old contracts. Heavy goods are quiet, though quite a fair inquiry comes in for sackings.

FOOD.

THE GRAIN MARKETS.—General rains followed by frost and snow over the United Kingdom during the past week have interrupted preparations for spring work. Winter cereals present a healthy appearance apart from slight deterioration in some districts by excessive moisture. Only small supplies of native wheat continue to come forward at the Statute markets, and despite the resistance of holders, prices marked a downward tendency owing to lack of

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 9,798 tons, as compared with 8,771 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.5 per cent. of the supplies, as against 81.2 per cent. a year ago, and imported mutton, mainly New Zealand, formed 79 per cent. of the total supply, as against 72.9 per cent. last year. The market in meat has been slightly firmer, but Argentine beef was again cheaper.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets are not very active, but the tone is steady and prices not subject to wide fluctuations. Linseed is still coming along in substantial volume, and the quantity afloat for Europe has increased to 231,000 tons, or 25,400 tons more than last week, and comparing with 160,600 tons a year ago. Demand, however, is only moderate. Plate, on spot at Hull, quoting around £9 5s.; and January to April shipment, £8 7s. 6d. Small quantities of Baltic linseed continue to arrive, current spot value being £10 12s. 6d. Cottonseed is steady, but the trade is poor and confined to near positions. Black Egyptian on spot and afloat is quoted £6 2s. 6d. and for shipment £6. Linseed oil is steady, but demand is only moderate. Raw oil, ex Hull mill, on spot is around £17 15s.; and February delivery, £17 5s.; and March, forward to August, about the same figure. Cotton oil is steady, crude Egyptian offering at £17 and common edible at £20 ex Hull. Demand for oil cakes and meals continues satisfactory and prices are maintained. Copra, which has been steady early in the week, subsequently showed an easier tendency, S.D. Straits c.f. at £15 per ton showing a decline of 7s. 6d. as compared with last week.

HIDE, LEATHER AND ALLIED TRADES.—Prices for hides from home-slaughtered cattle were again slightly easier at the auctions held at Manchester on Tuesday, when 59 lbs. and under ox and heifers made 1d. per lb. less money, while heavy cows were 1d.

per lb. cheaper. Imported hides sales continue to be confined to lots for immediate requirements, and with no speculative element apparent in any direction values have recorded a further setback. In the South American market for wet salted, sellers have accepted lower figures for Argentine ox, which have changed hands this week on the basis of 5½d., while cows have sold at 5½d., and Montevideo ox at 6½d. Although prices remain more or less steady for dry River Plates, business is restricted to a few parcels of B.A. Americanos at 6½d., and M.V. Americanos at 7½d. Inquiry has been experienced for Capes at the lower prices now ruling, and sales have been made in first and second dries at 6½d. and 5½d., while dry salted, 20-30 lbs., have been sold at 5½d. and 4½d. The Australian market is difficult on account of the fact that sellers are asking more than buyers are prepared to pay. Sole leather tanners and merchants have experienced a moderate inquiry during the week, and although trade is by no means what it should be, there is a feeling of optimism apparent in some quarters. Upper leathers find a steady outlet so far as willow calf, and black and brown glacé kid are concerned, in addition to which there has been rather more inquiry for the cheaper grades of patent. Suede and novelty leathers experience a small but steady call in certain quarters, and most distributors are anxiously awaiting signs of improvement in the shoe industry in the hopes of better business.

RUBBER.—The market in rubber has again suffered from a lack of interest, and as a result of an increase in stocks and renewed speculative selling, the spot price per lb. of standard ribbed market sheet steadily declined from 4½d. to 3½d. In forward positions, business has been done at 4d. to 4½d. for February, at 4½d. for March, at 4½d. for April-June, at 4½d. to 4½d. for July-September, at 4½d. to 4½d. for October-December, and at 4½d. for January-March, 1932. Stocks in London and Liverpool have again increased by 2,137 tons, the total being 124,502 tons, as compared with 80,358 at the corresponding date last year. Deliveries at 1,092 tons during the last week show a decrease of 246 tons, as compared with the preceding week, and are 987 tons below those for the corresponding week last year.

THE MONEY MARKET.

MONEY has again been stringent, and on Thursday 3 per cent. and more was being paid for night money. It is generally agreed that all the week the market has been narrowly escaping the Bank, and, in fact, the Bank has had to reverse its open market policy of the previous week, and to buy bills in order to relieve the pressure. Discount rates have also been very firm at a full 2½ per cent. for three months' bills, and a fair amount of French and American buying has been in evidence. Both exchanges

have responded, sterling rising to a full Frs. 124 and to \$4.86 early in the week, though neither rate was maintained as the week progressed.

Although the Bank this week had to reverse its open market policy, this does not mean that the Bank has been guilty of inconsistency. The Bank's sole object is to maintain market discount rates at levels which will be attractive to France and the United States, and the account of events given in the preceding paragraph shows how well it has succeeded. The Bank does not wish to penalise the market by driving it into the Bank, and, indeed, were it to do so, it would defeat the Bank's object for reasons described a week ago. It must also be remembered that even apart from last week's application of the hidden hand, this month is normally one of stringency, as money is steadily being taken off the market as a result of revenue collection. Hence when the Bank found that the situation needed easing, it naturally proceeded to give some assistance, especially as it was able to do so without depressing discount rates.

These movements are to some extent masked in this week's Bank return. The increase of £3,641,659 in Public Deposits is clear evidence of revenue collection, but Government Securities have fallen by £7,279,282, a movement which *prima facie* is not in accord with the Bank's buying of bills. The probable explanation is that just as last week sales of bills by the Bank were more than off-set by Government borrowing on Ways and Means—so that Government Securities showed an increase—so this week the Bank's purchases of Treasury bills have been more than off-set by the repayment of these Government borrowings, with the result that Government Securities have fallen. Discounts and Advances have risen by £3,272,548, but none of this increase is due to market borrowings. Thanks mainly to a contraction of £2,241,007 in the note circulation, the Reserve is £2,467,905 higher.

As a result of these and minor changes, Bankers' Deposits have fallen by £4,920,137 to £57,655,497. This is a fairly low figure, and so it is not surprising that money has remained tight. In some quarters, the opinion has been expressed that this stringency will persist until the end of March, and now that it is clear that the Bank is going to help the market when it can, that will not be entirely a bad thing. The first need, however, is to keep discount rates up at the level at which they now stand, and especially the rates at which tenders are made each Friday for Treasury bills.

	Jan. 22, 1931.	Jan. 29, 1931.	Feb. 5, 1931.	Feb. 12, 1931.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount / Call	1	1	1	1	1½ (May 1, '30)
Houses / Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2½	...

The urgency of this need is clear when it is realised that the resistance of sterling against the franc is still very limited. Already sterling has reneted from the week's high point of Frs. 124 to Frs. 123.95, and the three-months' forward rate is Frs. 123.86, or well below the gold point. The Bank is still unable to add appreciably to its gold holdings, for when £324,000 of gold was somewhat unexpectedly offered for sale this week, it was bought on Belgian account at 84s. 11½d. an ounce, and next week's Cape gold is expected to go to Paris. The following week, £500,000 in sovereigns will arrive from South Africa, and these, of course, will go into the Bank. Still, the main point remains that sterling is only holding ground and not gaining it, and that is why high discount rates are still desirable.

The January returns of the nine English clearing banks reflect mainly the return to normal conditions after the disturbances due to preparations for the end of the year.

This explains the reduction since December of £18.1 millions in cash:—

	January, 1930.	October, 1930.	November, 1930.	December, 1930.	January, 1931.
Capital and reserves	130.5	132.1	132.1	132.2	132.1
Acceptances	14.4	116.4	116.3	117.4	114.9
Deposits (including undivided profits, &c.)	1,767.5	1,791.2	1,800.8	1,839.1	1,836.1
Total liabilities	2,052.4	2,039.7	2,049.2	2,088.7	2,083.1
Coin, notes, balance at bank, and cheques in course of collection	248.0	239.3	237.8	267.0	243.9
Money at call	139.9	141.9	135.1	140.6	141.1
Investments	259.6	283.3	291.0	295.7	306.9
Discounts	242.9	236.0	309.5	319.7	327.7
Loans and advances	96.9	92.3	91.8	91.2	907.4
Over for accept., premises, &c.	202.9	156.9	157.1	158.5	156.1
Total assets	2,062.4	2,039.7	2,049.2	2,088.7	2,083.1

The steady decline in advances continues, and consequently there have been further substantial increases in bills and investments. Thus, once more the January averages reflect the prevailing trade depression.

Money in New York has again been easy, and even the spasmodic recrudescence of activity on Wall Street last Tuesday failed to move call rate from its now "normal" level of 1½ per cent. At the end of last week, a further general cut of ¼ per cent. was made in the rate on bankers' acceptances, and new record low rates were consequently established, thirty- and ninety-day maturities being quoted at 1½-¼ per cent., and six months' maturities at 1½-½ per cent. Time money has lately been on offer for thirty days at the extremely low rate of 1 per cent., or the same as the "outside" call rate, and it has been possible to obtain three months' time money at no more than 2 per cent.

The Foreign Exchange market was fairly active this week, and sterling maintained its recent strength against most currencies, although there was some reaction at the close. New York went from 4.85½ to 4.86 after 4.86½. Montreal was ½ better at the same level. The Paris rate rose from 123.92 to 123.95, after having touched 124.00, and Brussels was considerably weaker at 34.86, as was Milan at 92.86 after 92.88. The approach of the elections and possible internal troubles induced fresh irregularity in the peseta, which weakened from 48.20 to 49.40. Amsterdam, after touching 12.11, lost a point on balance at 12.10½. Berlin at one time touched 20.45½, but recovered to 20.44½, against 20.45 last week. Switzerland weakened from 25.15 to 25.17½, after being 25.18. The Scandinavian exchanges were again steady, Stockholm losing ½ at 18.15, Oslo gaining ½ at 18.16½, and Copenhagen losing ½ at 18.16½. The South American exchanges were better, with the exception of Rio, which lost ½d. on balance at 4½d. Buenos Aires recovered sharply from 34½d. to 35½d., as did Montevideo from 33½d. to 34½d. In the Far East the rupee was very steady at 1s. 5½d., but the yen weakened slightly to 2s. 0½d. Batavia fell away from 12.10½ to 12.11. In the forward market dollars were firmer at rather enhanced premiums of ½ cent and ¾ cent. Paris was decidedly stronger at 6 and 9 centimes premium, against 2 and 5 centimes last week. Brussels was better at one centime premium for one month's delivery, but unchanged at 2 centimes premium for three months. Milan remained at discounts of 11 centesimi for one month and 32 centesimi for three. Madrid was firmer at 9 and 28 centimos premium, as compared with 5 and 17 centimos premium last week. Amsterdam also was better at 1½ cent and 3½ cents premium, as was Berlin at slightly lower discounts of ½ pfennig for one month's delivery and 2 pfennigs for three. Silver established new low records at 12d. for cash and 11½d. for forward, but recovered at the close to 12½d. and 12½d., a gain in each case of ½d. on the week. The Chinese silver exchanges, which had been weak and irregular, rallied in sympathy, Hong Kong improving to 11½d., a net loss on the week of ½d., whilst Shanghai gained ½d. net at 1s. 2½d.

THE CHANCELLOR AND ECONOMY.

THE debate on public economy in the House of Commons on Wednesday began as a party sham fight and ended as a State occasion. In moving a vote of censure on the Government for profligate expenditure, Sir Laming Worthington Evans produced familiar statistics and framed a familiar indictment, to which Mr Snowden responded by arraigning the expenditure record of the late Conservative administration. All this was good party debating, but it contributed nothing towards the solution of the very formidable problems with which the country is faced. Had the debate ended there, or continued on those lines, the country would have been given nothing more useful or edifying than a picture of its chosen representatives throwing stones in a house built of peculiarly brittle glass. But, happily, in the middle of his speech Mr Snowden abandoned the rôle of political debater for that of an anxious and statesmanlike Chancellor; and before the House rose two really useful things had been done. Firstly, the Chancellor has accorded official and grave recognition to the financial position and needs of the country; and secondly, the Government had acquiesced in the appointment of a small, independent, expert committee to advise upon ways and means of public retrenchment.

The turn in the debate was dramatic. At one moment Mr Snowden was poking political fun at the Opposition. The next moment the Chancellor was speaking: "I say with all the seriousness I can command that the national position is so grave that drastic and disagreeable measures will have to be taken, if Budget equilibrium is to be maintained and if industrial progress is to be made." This stern warning led the Chancellor up to the following passage, which, since it goes to the very roots of current economic problems, we make no apology for quoting in *extenso*:—

"An expenditure which may be easy and tolerable in prosperous times becomes impossible in a time of grave industrial depression. The right hon. gentleman made a quotation from my last Budget speech that I was anxious to avoid the imposition of any further imposts upon industry. In view of the deeper depression since that time, I feel the importance of that statement to-day more than I did twelve months ago. I believe, if I may put it so bluntly as this, that an increase of taxation in present conditions which falls on industry would be the last straw. Schemes involving heavy expenditure, however desirable, will have to wait until prosperity returns. This is necessary—I say this more particularly to my hon. friends behind—to uphold the present standard of living, and no class will ultimately benefit more by present economy than the wage earners. I have been active in political life for forty years, and my only object has been to improve the lot of the toiling millions. That is still my aim and my object, and if I ask for some temporary suspension, some temporary sacrifice, it is because I believe that that is necessary in order to make future progress possible."

Those who have been insistently proclaiming the necessity for a national effort of common sacrifice to restore economic equilibrium, and for a clear lead from the Government, find in these striking words an adequate and satisfying epitome of their doctrines. And that this statement is no pious lip-service to sane policy is proved both by the Chancellor's promise that "in the general sacrifice members of the Cabinet are prepared to make their substantial contribution," and by his acceptance—albeit rather lukewarm and reluctant—of a new "Geddes Axe" committee. The country now knows that the Chancellor is in earnest, that the Treasury will frown upon all but really essential expenditure, and that the Government will set the country an example in the "temporary suspension" of the pursuit or maintenance of standards which are temporarily unjustified by the circumstances of the moment. We do not consider that our Cabinet

Ministers are over-paid. On the contrary, we have advocated an increase in the Prime Minister's emoluments. Nevertheless, we welcome their promised essay in self-sacrifice, because a lead from the top cannot fail to produce a profound psychological effect throughout all ranks of society, from which involuntary sacrifices are being demanded. The measure of the practical usefulness of Mr Snowden's statement is the heated opposition that it aroused from a group of left-wing Socialists.

So far so good. But one or two pertinent questions remain to be answered. Mr Snowden, by his own admission, is faced by a serious deficit; yet, to use his own phrase, further taxation falling upon industry would be the "last straw." How then will he balance his accounts? Partly, presumably, by retrenchment and by stopping up indefensible holes in the unemployment insurance system. But the gap will be wide. Assuming—and we can only read his words in that sense—that he is intent on keeping new taxation down to an irreducible minimum, does he consider that the present emergency justifies a less orthodox sinking fund policy? Is debt repayment to share in his scheme of "temporary suspension"? On the one hand Mr Snowden must be fully alive to the fact that laxity in sinking fund policy would both check the fall in the debt charge and impair the chances of successful debt conversion. Yet, on the other hand, there will be, we think, a large measure of agreement that the present emergency temporarily absolves the Chancellor from the duty of interpreting orthodoxy in the matter of sinking funds in the heroic sense. But Chancellors do not disclose Budget secrets in advance, and his precise meaning must remain a matter for conjecture.

Another vital question is whether the new "Axe" committee can succeed in indicating the field for really substantial retrenchment, and in rallying public opinion to force such retrenchment upon the Government. It is a little disquieting to find Sir Eric Geddes addressing a letter to the Press arguing that a committee on the pattern of the one over which he presided would be "analogous to using a small pruning knife when an axe or saw is needed." Mr Snowden, too, pointed out a fundamental difficulty when he remarked that of our present expenditure no less than £620 millions is statutory. The dilemma, as Sir Eric Geddes sees it, is that questions of policy must remain in the hands of the Cabinet, and that, outside changes of policy, the field for economy is very small to-day compared with that which existed in 1921. We agree. But there is surely a way out. Sir Donald Maclean, who moved the Liberal amendment calling for the new committee, made it clear that the terms of reference should be such as to enable it to advise on matters of policy. This is essential, in our view, if the committee is to be successful. Policy, it is true, must in the ultimate resort, always be the responsibility of the Cabinet. But may we not hope that a fearless and strongly-manned committee may be able to recommend modifications of policy which will both involve very substantial savings and also command the support of the majority of the country? Sir Eric points out that his committee "endeavoured to encroach as little as possible on questions of policy... realising that these would remain for the exclusive consideration of the Cabinet." We venture to remind him that his committee recommended substantial cuts in the Navy, Army, Air Force, Education, Health, and Pensions, and we pointed out in the *Economist* at the time (February 18, 1922) that "these reductions raise in almost every case very far-reaching questions of policy." Again, the recommendations of the Incheape Committee in India touched vital questions of Government policy, especially that of the size and composition of the Army.

If, then, the Government are really in earnest—as Mr Snowden clearly is—they must follow up an excellent beginning by taking two steps. The first is to select as members of the committee a few men of recognised integrity, courage and political impartiality; the second to draft the terms of reference so as to make it quite plain

that, although ultimate decisions on policy must inevitably be reserved for the Cabinet, the committee is not to be debarred, by fear of impinging upon forbidden ground, from making any and every recommendation for economies which they may consider to be desirable and proper in the interests of the nation as a whole. The result, we admit, might well be a programme which no Cabinet could adopt *in toto*, and which the present Cabinet might find largely unpalatable. But at least this much would be gained. There would be brought into being a real economy programme for the country to accept or reject, and public retrenchment would become a live and practical issue. We look to Mr Snowden, whose courage is not doubted, to act in this sense and to act quickly.

THE SLUMP.

THERE is no parallel in times of peace to the far-reaching, well-nigh universal depression of 1930. No part of the world has been left untouched by the severe slump in commodity prices; agricultural countries, encumbered with unsaleable stocks, have suffered a disastrous reduction in their purchasing power and are faced with a very great difficulty in paying their debts; and manufacturing countries are burdened with a mass of unemployment still growing to unexampled dimensions. The three chief industrial countries of the world have, in fact, between them probably 14 millions out of work. Measured by any test, the volume of the world's industrial production has fallen immensely; the 20 to 25 per cent. fall in the foreign trade of leading countries in a single year is an unprecedented change to have occurred over so wide an area; and the repercussions on the budgetary position of countries all over the world has been disastrous.

Exposed, like her neighbours, to the full fury of this storm, Great Britain is beset also with difficulties which are peculiar to herself, and for which she alone can find the cure. Mr Snowden's speech, dealt with in the previous article, is a welcome sign that the Government is alive to the need of drastic action to deal with some of the chief of these problems. But it is idle to hope that a country which is the greatest trading nation of the world can remedy the international crisis by any action of its own, or even escape its inevitable consequences by shutting itself up in an economic fortress and attempting to maintain a price level divorced from that of the world in general; or that it can find a substitute for its all-important foreign trade, commerce and shipping in an artificially inflated home market. It is natural, therefore, when we stop to take stock of the situation, that we should ask ourselves what is the nature of this crisis into which we have been flung so precipitately and in what condition can we hope to emerge from it?

One of the many questions that press for an answer is suggested by the heavy fall of prices. Is this slump due to the fact that production is really in excess of the world's needs, is it due simply to disorganisation and unbalanced production, or is it due to the collapse of the monetary system of the world? The question is of very great significance, for, if it is the result of unbalanced production, exaggerated by tariffs and other schemes for maintaining artificial prices, the cure will be a long one; it takes time even in the most developed countries to divert population from one occupation to another, and in countries or in districts with only one or two economic activities the process of adjustment may involve prolonged distress. To the extent, on the other hand, that it is due to, or, at all events can be cured by monetary action, recovery may be much more rapid.

We are not among those who think that monetary policy is alone responsible for the present situation, but the suggestion in certain quarters that the gold problem and monetary policy have nothing to do with the matter is a very inadequate and short-sighted view. The fact that world production, both of primary products and of manufactures, has recovered since the war, and now considerably exceeds pre-war production, is no reason whatever for drawing the all too simple conclusion that prices must naturally revert to a pre-war level. In the last century

there were at least two long periods when prices were rising at the same time that immense strides were being made in both manufacturing and agricultural production. The price level depends on the use that is made of the standard of value, and the great changes that have been made in the world's banking and currency systems since the war mean that the processes which determine the price-level start from an entirely new basis. The fact that it is difficult to control the value of gold in a world where there is so little unity of monetary and economic policy does not mean that there is a "natural" level of prices—there is certainly no special sanctity about the price-level of 1913.

These reflections bring us to a second leading question: Are we in an exceptionally severe depression of a type similar to that experienced in pre-war trade cycles, which were with some justification regarded as rhythmical movements in the world's economic progress and in which recovery succeeded depression in more or less orderly sequence? Or are we in the presence of an historic upheaval in economic conditions which will ultimately involve drastic changes in world trade and economic life? Now it is clear that so long as the nations are still obsessed with the idea that every one of them can and should do everything for itself and believe that by a policy of exclusiveness it is possible to carry out the laudable ambition of maintaining an exceptionally high standard of living, so long as the future of Russia and her ambitious economic experiments is wrapped in obscurity, and the economic situation of India and China highly uncertain, it is singularly difficult to forecast the future of world trade. But just as it is human to imagine in times of boom that prosperity will last for ever, so in depression there is always a tendency to fear that it may never return. Nor is the situation so radically different from past experience. It is not right to assume that pre-war cycles were merely movements of a pendulum idly swinging backwards and forwards. In every period of the nineteenth century great changes of a more or less far-reaching kind were taking place, accompanied by shifting of the centres of gravity of population, trade and agricultural and industrial production. On a balanced view there is no reason to doubt that the pendulum is playing a very important part in the present crisis, and that the curtailment of economic activity is creating conditions which will at the proper time generate a new forward movement. Indeed, there are already signs that the downward rush has spent most of its force.

What, then, will be the nature of the reaction, and when and how will it come? These are questions to which the answer can be no more than a matter of guesswork; but there is one aspect of the recovery on which it is worth while to reflect for a moment—namely, the future course of the price level. Are we likely to see commodity prices recover to 20, 30 or 40 per cent. above the present figure, or will prosperity be slowly rebuilt on a very small recovery from the existing low basis? Consider for a moment what this last possibility implies. Unless the scales are to be weighted for a long time to come against the agriculturists of the world, wages and salaries of all sections of the community, retail prices and the cost of personal services of all kinds will have to be revised downward, while all fixed charges (including a large part of the taxation of all countries) will become a greatly increased burden which can only be escaped by defaults or arbitrary reduction of interest. Countries which have already written down large amounts of public and private debts by devaluation of their currencies may find this increased burden less intolerable than those in which no such violent change has been made; but it is a mistake to suppose that any can escape the consequences or that this is purely a British difficulty.

It is true that our national debt charge is the heaviest in the world; but if there is no recovery of prices all debtor countries will find themselves in grave difficulties. The commercial debts of the countries of South America, for example, though less than those of Australia, are very great; and so are those of many European countries. The greater part of the Budget of India's Central Government is such that it cannot quickly be adjusted to price movements, and if prices and commerce do not recover, it

will not be possible to obtain the resources so urgently needed for the social and economic development of that country. Even in the United States, which has a small Government debt, and has been in the happy position of being able to finance so much of its industry in recent years by means of shares, there has been created an enormous volume of bonded debt by public bodies, semi-public undertakings and large corporations. In short, if wholesale prices of primary products do not recover to meet retail prices and wages, the world will be faced with a very severe and difficult process of readjustment which may mean a decade of difficulty involving friction and widespread social disturbance, and probably a violent disturbance of the world's monetary arrangements. Fortunately there is ground for confidence that there will be some recovery of prices from their present level in the not distant future. One argument only need be mentioned to support this view: in no country—even in those with the most flexible of wage systems—can costs of production be very rapidly adjusted, and, since output of many commodities is now taking place at a loss, prices must inevitably before long be restored, by the elimination of marginal producers, to a level which will cover costs. That is to say, equilibrium may well be re-established by falling wages meeting rising prices half-way.

If, then, we conclude that monetary policy—to which we might perhaps add a wise treatment of inter-governmental indebtedness—may play a rôle in facilitating revival: that in the present depression there is a considerable element of the swing of the pendulum already perhaps close to its turning point; and that we may expect to escape some part at least of the painful adjustment that would be needed if we had to readjust all economic relationships to a pre-war level of prices, we shall give a not entirely pessimistic answer to the question posed in our annual supplement, "The Commercial History of 1930," in which we ask whether it surpasses the wit of man to solve the paradox of economic distress in the midst of superabundance.

AUSTRALIA IN DANGER.

As it is always good to face realities, the "default" speech of Mr Lang, Premier of New South Wales, at the Conference of Australian Premiers may be welcomed. What Mr Lang, the politician, feels compelled to say is not very important; but the occasion to which his speech drew attention is of the utmost importance to everyone in the Empire. Here was a conference of Australian Premiers summoned to consider the grave economic plight of their country. The national income of Australia, whose total production is estimated at about £450,000,000 a year, has suddenly been cut down by £100,000,000 a year or even more. The export of wool in the financial year to June, 1930, brought in only £36.5 millions, against £61.6 millions in the previous year; and the export of wheat £10 millions, against £20.3 millions. And

since June, 1930, wool and wheat prices have continued to fall. Apart from the loss of export income, long-term overseas borrowing, which had been proceeding at the rate of £30 millions a year, has been entirely eliminated since 1929. It is small wonder that unemployment in Australia is severe, that business depression is widespread, that State and Federal Budgets cannot be balanced, and that, in spite of drastic import restrictions and prohibitive tariffs and the formation of an exchange pool in London, the Commonwealth Government has been unable, without banking help in London, to secure sufficient sterling exchange to meet the £36,000,000 interest due each year on the external debt of the governments and public authorities.

This was the desperate situation which confronted the Conference of Australian Premiers. Three plans for relief were submitted for their consideration. The first was put forward by the Treasury officials, who advised an annual reduction of £15 millions in the Commonwealth and State Government expenditures, the revision of the old age, invalid and war pensions, and maternity bonus, a reduction in the salaries of Government officials, the elimination of overlapping and duplication in the public services, and an expert inquiry into the whole problem of railway control and finance. This plan, at any rate, had a sense of realities. It recognised that Budgets had to be balanced, that Government expenditure had to be reduced, and that costs of national production had to be brought down. But the Treasury proposals were not even considered, for Mr Scullin maintained that the officials had exceeded their instructions by making recommendations.

The second plan was Mr Lang's. This intransigent Labour politician began by declaring that Australia should not pay any further interest to British bondholders until Great Britain had dealt with the Australian war debt in the same manner as she had settled her own debt with the United States. It is reported that negotiations to this end have already been opened up; but though this proposal should have the sympathetic attention of the British Treasury, its acceptance, apart from its sentimental effects, would bring no great relief to the Australian Budget. The overseas debt of the Commonwealth and States amounted to £574 million at June 30, 1930, whereas the balance outstanding of the war debt to the British Government (£92 millions funded in 1921) is only about £80 millions. The remainder of the war debt—£190,075,790 at June 30th last—is held in Australia in the shape of internal loans. The interest paid by the Commonwealth Government to the British Treasury in respect of the funded war debt is at the rate of £4 18s. 4d. per cent. with £1 1s. 8d. per cent. additional for amortisation. But Mr Lang went on to propose that within Australia the interest on all Government loans should be reduced to 3 per cent. (which he said would bring down by half the interest rates on farms and factory mortgages) and that the gold standard should be abandoned for a paper currency based on the wealth that Australia could produce. New South Wales, he added, would refuse to pay any further interest on its overseas debt.

This threat does not affect the British bondholder, for, under the Financial Agreement Validation Act of 1929, the Commonwealth took over the debts of the States and assumed their obligations to the bondholders. New South Wales could default in her payments to the Commonwealth Treasury, but could not impose default on the overseas bondholders. As regards the gold standard, Mr Lang remarked that the only reason it was observed was because the Bank of England wanted it. But why, he asked, could not the paper £ be the monetary unit—a purely book-keeping unit based on the proceeds of the annual national production? If the producers in Australia were paid with the paper currency, the whole of the revenue from the surplus exported overseas could be applied, after paying for imports, to the amortisation of the external debt. In other words, Mr Lang threw default in the face of the British bondholders, but envisaged the halcyon day when they would be paid off altogether. As for his currency plan, it may be pointed out that Australia went off the gold standard when the Federal Government prohibited the free export of gold in December, 1929, and enabled the Commonwealth Bank to acquire the gold reserves held by the private banks. Over £30 millions of gold have been shipped to London under the aegis of the Federal Government in order to meet Government obligations overseas. We believe that there is no surplus gold left in Australia beyond the amount required to preserve the Commonwealth Bank ratio of gold to notes.

The third plan before the Conference was that of Mr Theodore, the reappointed Federal Treasurer. As against the default and paper currency policy of Mr Lang, Mr Theodore advocated inflation on hardly less unorthodox lines. To reduce Government expenditure would not, he said, solve the serious economic problems of Australia. To cut down wages and pensions without reducing the interest on war debt and other debts was inequitable. Hence he proposed to restore prices to the 1929 level, thus reducing the real value of wages and the real income of the rentier classes on equal terms, by means of credit inflation, the detailed measures of which he has not announced. This plan, he said, would increase the national income by £100,000,000 and provide work for 100,000 to 200,000 people. It stands to the credit of Mr Theodore's colleagues that his policy met with a mixed reception. The Conference adjourned after resolving that each Government should undertake to balance its Budget within three years and that an "appropriate monetary policy" on the lines of Mr Theodore's plan for the promotion of production should be examined by the Board of the Commonwealth Bank and the Federal Treasury. Meanwhile it agreed to the flotation of a loan of £6 millions to assist the wheat growing industry, of which £3.5 millions are to be paid as a 6d. per bushel export bounty up to October 31st.

Whether the Commonwealth Bank will agree to Mr Theodore's proposals any more readily than to Mr Lang's may be doubted, but the depressing part of the situation is the attitude of Australian politicians. They are still refusing to face economic realities; they are still trying to find a short cut to prosperity. The painful truth is that there is no short cut. The road to prosperity lies along the straight and narrow way of drastic cuts in Government expenditures, reduction in the national costs of production, and the abandonment of the traditional policy of overseas borrowings—save only for definitely productive purposes. The 10 per cent. cut in the basic wage recently proposed by the Federal Arbitration Court was a reasonable beginning, but even this has been postponed at the request of Mr Theodore to allow his plan to be worked out. Yet there can be no question about the efficacy of a solution along the orthodox economic lines. The causes of the present crisis in Australia are beyond dispute, and there is now an extensive literature* on the subject which any politician may read to advantage. In the last century Australia has had four financial crises, which have been clearly analysed, docu-

mented and labelled by Mr Gordon MacKay, Lecturer in Economics at the University of Adelaide, in his book, *The Australian Banking and Credit System*. The last serious crisis, which was in 1893, arose out of speculation in land and properties, and brought about the failure of twelve Australian banks. The present crisis, fortunately, is in no way attributable to unsound banking or property speculation. It is a crisis which was precipitated by the catastrophic collapse in the values of wheat and wool, but which had its origins in the unsound borrowing policy pursued by Australian Governments over the period 1922-1928. Dr. Gordon Wood, of the University of Melbourne, has studied the correlation between imports of capital and changes in national prosperity in his book, *Borrowing and Business in Australia*. He has shown clearly the advantages and disadvantages of the recent orgy of Government borrowings. Over the period from June, 1919, to June, 1928, Australia met a debit balance on her international account of £275 millions by borrowing overseas on long-term to the tune of £266 millions, of which £226 millions represented Government and municipal and £40 millions business loans. The ratio of debt interest to production rose during this period from 10.8 per cent. to 13.3 per cent.; and the effect of this colossal overseas borrowing on the primary producing industries was disastrous. The swelling tide of imports led to demands for higher tariffs from the protected manufacturers; the higher tariffs put up internal prices and led to demands for higher wages from the labour unions; the higher wages increased the national costs of production and the State Budgets; and, the higher the Governments' expenditures became, the more the Governments borrowed overseas. This was the vicious circle around which Australia was travelling when she was arrested by the world fall in commodity prices.

What is to be the outcome of the present *débâcle*? There has been no clearer analysis of the Australian problem than was contained in Dr. Frederic C. Benham's *The Prosperity of Australia*, which was first published in 1928, and has now achieved a second edition. We agree with Dr. Benham that Australia, having got itself into difficulties by inflating its internal prices, cannot get out of these difficulties without deflating prices, which means in this case reducing wages and accepting temporarily a lower standing of living. The immediate steps to be taken, in our opinion, involve a substantial cut in wages and salaries, a surtax on income derived from interest and rents (so as to meet the argument that labour and capital should make equal sacrifices), and a high premium on sterling until the balance of international payments is restored. The depreciation in the exchange has this great advantage: it raises the income and spending power (measured in Australian £s) of the export industries. Nevertheless much depends upon a recovery in wheat and wool prices, and, if this be deferred, the restoration of Australia to economic health is bound to be a protracted business. There is no doubt that Australia will require temporary help from overseas if interest on overseas loans is to be met, but it is equally certain that no loan will be forthcoming if Australian politicians are not prepared to give satisfactory assurances of sound financial behaviour.

RETRENCHMENT ON THE RAILWAYS.

In addition to the interest naturally attracted by any proceedings which affect the earnings of a very large body of workpeople, a special significance attaches to the present hearings of the National Wages Board for Railways. Elsewhere in this issue we refer to the peculiar disabilities imposed on Great Britain, in this phase of collapsing prices and trade depression, by the rigidity of our structure of costs and wages. In that rigidity—fatal to the maintenance, by readjustment to altered values, of our export trade—the greatest single factor is the "pegging," by Trade Union resistance, of rates of wages in the industries more or less immune from competition; and, if we except the Jeshurun-like army of State and municipal officers and subordinate employees, there is perhaps no section of "sheltered" labour whose remuneration affects British production costs so widely and deeply

as that of the six or seven hundred thousand workers on the railways. Thus the proposals submitted to the Wages Board and, still more, the arguments adduced to defend and to attack them, have obviously a far-reaching importance in relation to our whole economic position.

For practical purposes we may dismiss the claims for improved conditions put forward by the Unions; these are the common form of counter-attack from an insecure line of defence. The substantial point before the Board is the companies' proposals: to reduce weekly wages, broadly, by 6s.; to abolish the guaranteed day and the guaranteed week; to make the acceptance of a daily "spread-over" enforceable in any grade; and to eliminate overtime for night work and work on Sunday. These demands, drastic in their scope, were preferred doubtless on the old bad basis of horse-dealer's haggling which has embittered and obstructed most British wage adjustments of this generation; but, discounting the normal "margin for bargaining," we have here a set of proposals—to economise in working costs at the expense of labour—for whose acceptance the companies have pressed in all seriousness.

What is the companies' case? Reduced to essentials, the argument pleaded on their behalf by Mr Lazenby falls under three heads:—

(1) *Railway net revenue is inadequate to remunerate stockholders reasonably.*

In 1929 net receipts were £5½ millions below the standard revenue (£50½ millions) approved by the Statutory Railway Rates Tribunal; in 1930 the deficiency would be £13½ millions; and in 1931 probably £16½ millions. That is to say, in 1931 net revenue would be only £34 millions, against £45 millions in 1929. Fixed and prior charges require over £33 millions; and it must be made possible to attract fresh capital.

(2) *Net revenue could not be augmented by increasing charges.*

An increase in charges would (a) be detrimental to trade, and (b) hinder the railways in meeting road competition. "The companies must be placed in a better position to concede reductions of rail charges, at least in cases in which this would aid them to retain or recover traffic."

(3) *Wage costs are (i) a necessary avenue for economies; (ii) justifiably reducible.*

The wages and salaries bill was £17 millions, for the four railway groups, in 1913; in 1929 it was £114 millions—an increase of 143 per cent. In the "conciliation grades" the average increase in wages was 120 per cent., as compared with an increase in living costs of 55 per cent., and in the general wage level of 70.75 per cent. The companies' proposals for these grades would give average wages of 51s. 11d. per week, and average earnings, including overtime, of 57s. per week, or an increase of 11s. 6d. and 13s. 1d. per week, respectively, over the pre-war figures raised by 55 per cent. The guaranteed day and week, and the rigid application of an eight-hours' day were inordinately expensive.

In refutation of these arguments the Unions have made the following submissions:—

(a) Present wage rates are not unduly high, having regard to the railwaymen's "economic needs and the requirements of social amenities."

(b) The railway stockholders have no just claim to regard "standard revenue" as their right, regardless of economic conditions. They must share in the common sacrifice, if any.

(c) The railways are over-capitalised, and are paying now for reckless distribution of earnings before the war.

(d) Management (e.g., toleration of private wagons) is inefficient.

(e) It is unfair to ask for wage reductions unless the benefit is to be passed on to the consumer.

What conclusions the Wages Board will reach, after weighing these conflicting arguments, we do not know. The reflections which will occur, we suggest, to the mind of the average impartial observer are briefly these:—

To plead statutory warrant for eating a cake which you have not baked is lunacy; but if claims to enjoy unconditionally "standard revenue" are untenable, so equally are claims to draw a fixed, supposedly "just," wage, irrespective of what net earnings (after deducting from gross traffic receipts the costs of coal and other non-wage expenses) may be available.

Though it would be unwise yet to conclude that we must accommodate ourselves to a level of wholesale prices as low as it was in 1913 and is to-day, any reasonable estimate of price probabilities in the near future suggests that even current railway gross revenue cannot be maintained without grave damage to our whole national economy. The gross "railway receipts" of the four groups, if British industry and commerce are not to be

SKANDINAVISKA

KREDITAKTIEBOLAGET

Swedish stocks
and bonds

fatally penalised, may well have to be scaled down by lower charges to, say, £150 millions (against £182 millions in 1929), even in the event of some recovery from the present acute trade depression increasing the physical volume of traffic.

The working results of 1927-29 showed an average annual margin of only £9.3 millions, after meeting debenture interest and prior charges, for distribution to "equity" stockholders. Default on the prior charges would render it impossible for the railways to raise the fresh capital for development which they will certainly need; to pass all dividends on "equity" stocks would render even fresh debenture issues extremely expensive; and in 1930 the "equity" margin was negligible.

Admittedly the capitalisation of the British railway system is high by comparison with that of American and Continental systems, but different physical conditions and legislative obligations imposed on the British railways largely explain the difference. It is difficult to argue, on the basis at least of replacement costs, that the British railways are now "over-capitalised," and, in any case, the larger amounts allocated out of revenue since the war to replacements and renewals suggest that the present ratio of real asset values to nominal capital is appreciably better than in 1913.

Even if management is susceptible of betterment in detail (though the extra cost of hauling private wagons is Parliament's responsibility, the amenities of British railway stations, and, above all, the standard of railway catering, are perhaps the worst in Europe) administrative improvements could do comparatively little, given existing freight and fare rates, to recapture traffic or increase net earnings.

Average weekly earnings of railwaymen may not be such as demonstrably to give an "undue" margin for luxuries (the latest official return reveals average payments ranging from 51s. 1d. in the case of goods porters to 101s. in the case of engine drivers); but the fact remains that (i) large classes of relatively unskilled railway labour, e.g., permanent-way undermen (average earnings 54s. 7d. per week), are substantially better off than analogous farm-workers; (ii) that the cost of retail food has fallen and is continuing to fall; (iii) that heavy sacrifices have already been made by the stockholders. Not only have investors in the "equity" stocks (whose dividends in any case have to bear high post-war taxation) seen the amount available for distribution to them dwindle in 1930 to near vanishing point; it should also be remembered that, at present Stock Exchange prices, debenture and share capital of the four groups with a nominal value of some £1,100 millions, has a market value of only about £650 millions.

In short, though the companies weakened their case by repeatedly harking back to their "right" to "standard" net revenue, and by equivocating when asked to say whether the benefit of lower wages would be passed on to the consumer (it would have shown a better grasp of realities had they stated emphatically that rates must and would be reduced) we are convinced that the weight of the evidence is overwhelmingly in favour of a substantial cut in payments to labour. How the cut is to be effected, the Wages Board in its wisdom may be left to decide. For our part, we should be inclined to think that economies resulting from a more elastic working day might be preferable to a drastic reduction in basic rates, though some reduction in any case seems inevitable. Even though com-

plete abolition of the guaranteed week might be a socially retrograde step re-introducing an undesirable element of casualisation, great savings could be effected without hardship by abandoning the present rigid eight-hour shift system of work. In these and similar details there is ample room for negotiations between the companies and the Unions. What is first and foremost to be desired is that the Wages Board should enunciate clearly and convincingly the principle that, unless the railways are to repudiate their obligations and so give confidence in British financial solidity an irreparable blow, working expenses must be reduced; that cold economic facts, within the limits of the so-called "capitalistic" system, cannot be twisted to support a theoretic claim to "fair" wages; that we cannot permanently carry "sheltered" wages on a level higher than that imposed on workers in industries directly open to competition; and that the quicker the all-round readjustment of wages to conform to the past two years' fall in selling prices of goods, the better will be our none too roseate prospects of national recovery.

THE WICKERSHAM REPORT.

(BY A CORRESPONDENT.)

THE Commission appointed by President Hoover to investigate the problem of the prohibition laws and their enforcement made public its long-awaited report on January 21st. Headed by Mr George Wickersham, a distinguished New York lawyer, who had been Attorney-General in the Cabinet of President Taft, its other ten members included four well-known judges and representative figures like Mr Newton D. Baker, a former Secretary for War, and Miss Ada Comstock, the head of Radcliffe College, and about a year and a-half had been occupied in its investigations. The report offers an exhaustive survey of the processes of prohibition in the United States and other countries, and gives an account of their results and the causes of their failure or partial success. Reviewing the abundant testimony which it had taken about the operation of the prohibition laws in the United States, the Commission frankly expresses its dissatisfaction with the existing system of enforcement of the prohibition laws. It finds that, as a result of their failure widely to influence the American people in the direction of abstinence, a significant change has taken place in the social attitude towards drinking. They declare that:—

There is a mass of information before us as to a general prevalence of drinking in homes, in clubs and in hotels; of drinking parties given and attended by persons of high standing and respectability; of drinking by tourists at winter and summer resorts, and of drinking in connection with public dinners and at conventions. It finds a conflict of evidence about drinking by young people, but admits that votes taken in universities reveal an attitude of hostility to, or contempt for, the law among those who are likely to be the leaders of the next generation. Evidence showed that in a State like Virginia, where dry sentiment is strong and the machinery of enforcement is as efficient as it can hope to be, the arrests for drunkenness in Richmond, the capital, have been growing steadily and increased by one-third in five years, while in Kansas, which has had State prohibition for fifty years, the death-rate from alcoholism has been rising sharply.

The report deals at length with the manifest evils which have developed in the machinery of enforcement, the enormous difficulties of recruiting an organisation which would honestly and wholeheartedly undertake the enforcement of the laws, and the undoubted corruption which now exists on every side. It finds that the bootlegging fraternity rely upon three main sources of supply for their wares: beverages smuggled from abroad, the diversion of industrial alcohol and the illicit distilling of whiskies and brandies. As regards the former, Canada is the chief source of importation, and, apparently, the King Government's ban upon direct liquor exports to the United States merely served to divert the traffic via St. Pierre Miquelon and Bermuda; substantial quantities are still entering of rum from the West Indies, of brandy from France and of gin from Holland. But the Commission finds that illicit dis-

tilling has become for the time being the chief source of supply, and that, thanks to the high development of this industry which, often carried on to-day in plants comparable in size to the old lawful distilleries, is "well organised, has found how to shift locations systematically and has learnt to calculate for the seizure and destruction of stills as part of its overhead," a steady volume of whisky, much of it of good quality, is put into circulation at prices which are "a convincing testimony of the ineffectiveness of enforcement against this source of supply."

The Commission also deals broadly with the state of public opinion, the graft and corruption now prevailing, and the economic, political, geographical and physiological difficulties which are an obstacle to effective enforcement, and it then discusses the strain upon the law courts, the prosecuting machinery and the penal institutions which prohibition has imposed. It records lawyers as deploring everywhere, as one of the most serious effects of prohibition, the change in the public attitude towards the Federal Courts.

"Formerly," the report says, "these tribunals were of exceptional dignity, and the efficiency and despatch of their criminal business commanded wholesome fear and respect. But the effect of the huge volume of liquor prosecutions which has come to these courts under prohibition has injured their dignity, impaired their efficiency and endangered the wholesome respect for them which was once entertained. Instead of being impressive tribunals of superior jurisdiction, they have had to do the work of police courts, and that work has been chiefly in the public eye. These deplorable conditions have been aggravated by constant presence in and about these courts of professional criminal lawyers and bailbond agents whose unethical and mercenary practices have detracted from the valued institutions."

The point here made is buttressed with concrete evidence. It is admitted that it is practically impossible for the Federal Government by itself to enforce the Volstead Act, and, consequently, what is for all practical purposes local option exists. The Commissioners, therefore, admit most of the facts upon which the opponents of the prohibition laws have been basing their case for their repeal or reform.

All the Commissioners admit the existence of notorious evils in the prohibition regime, and it is, therefore, surprising to find that ten of them declare themselves, at least temporarily, in favour of the continuance of what President Hoover called "a noble experiment." They pronounce against the restoration of the legalised saloon in any shape or form, against the adoption of a system of Government control of liquor sales either by the Federal or State authorities, and against a modification of the Volstead Act which would permit the manufacture and sale of light wines or beer. They find, however, that there is, so far, no adequate observance or enforcement of the prohibition laws, and that the present organisation for enforcement, although it has been greatly improved since the enactment of the Bureau of Prohibition Act in 1927, is still inadequate. Therefore they advocate that the Federal appropriations for the enforcement of the 18th Amendment should be substantially increased and that there should be introduced certain improvements in the statutes and in the organisation, personnel and equipment of the enforcement system in order to give it the greatest practicable efficiency. The ten Commissioners signed the report subject to the right to make individual reservations, and every one of them, as well as Mr Monte M. Lemann, of New Orleans, who refused to sign the document at all, has exercised this right. Mr Lemann delivers the verdict that the 18th Amendment cannot be effectively enforced without the active and general support of public opinion, that such support simply does not exist, and since there is no prospect that it can be obtained, the only alternative is the repeal of the Amendment. Five other Commissioners, including Mr Newton Baker and Dr. Roscoe Pound, the Dean of Harvard Law School, agree with Mr Lemann in despairing of the possibility of correcting the existing evils under the present system. Mr Baker urges that the 18th Amendment should be repealed and the whole problem of policy in regard to intoxicating liquors turned over to the States; while Mr Henry W. Anderson, a corporation lawyer, submitted in a lengthy memorial a plan for the creation of a series of privately-owned and publicly-regulated corporations. Miss Ada Comstock, the solitary woman member, favoured an im-

mediate change, but in the direction of a revision of the 18th Amendment rather than its repeal. On the other hand Mr George Wickersham, the Chairman, and the four judges sitting on the Commission, took the view that an experiment of such far reaching and momentous consequence should not be abandoned after seven years of imperfect enforcement, and expressed varying degrees of hope that a further trial under more efficient machinery would produce a great improvement in the liquor situation.

The publication of the report has naturally evoked a flood of comment and controversy throughout the United States. From the "dry" point of view, the most important development was the whole-hearted espousal of the "dry" cause by President Hoover in his special message to Congress transmitting the report. He declared himself in complete accord with the view of the ten Commissioners that the repeal of the 18th Amendment would be no cure for the inherent abuses of the liquor traffic; expressed approval of the constructive steps proposed to eradicate the social economic and political evils which have been revealed; and emphasised that it was the duty of himself and all executive officials to enforce the law with all means at their disposal.

The "Wets," while deriving some encouragement from the fact that six members of the Commission obviously regard repeal of the 18th Amendment as inevitable sooner or later, are decidedly contemptuous of the report. The New York *Evening Post*, asserting that the Commissioners are "dry" in their general report, but "wet" in their separate reports, thinks it is not a pretty exhibition by honourable men, supposedly seated around a table to solve a great national problem. But the Press generally expresses disappointment with the report, and thinks that it leaves the prohibition question still adrift. Yet all commentators agree that the decision of Mr Hoover to emerge flat-footedly on the "dry" side, overshadows everything else. Clearly he will now have to bend his energies to carrying the Republican party with him, and, as the Democrats are now virtually certain to nominate someone "wet," like Governor Roosevelt, as their Presidential candidate, a straight "wet" versus "dry" fight is promised for the election of 1932.

"IF —"

THE "conditional sentence" is the grand exception to the rule that grammar is an uninviting science; for the particle "if" is intriguing in every language—in the tongues of men and angels, in the speech in which the dramatist and the novelist spin the web of men's and women's lives, and in the kindred speech in which the historian discourses upon public affairs. And now eleven men of letters have had the happy thought of writing as many exercises on the potentialities of our particle in the domain of history, and have published the results of their fancies in a single volume.*

It need not be said that the book is entertaining; the list of authors' names speaks for itself. But while the authors are alike in being adepts at their art, they represent between them a remarkable variety of nationalities, backgrounds, outlooks, idiosyncrasies; so that, in comparing their contributions, it is particularly illuminating and instructive to notice the points on which their minds converge. These points must surely reveal thoughts that are very widely diffused through the minds of the present generation. We observe, then, with interest that, out of the eleven contributors, three—Monsieur Maurois, Mr Belloc and Mr Fisher—take Revolutionary and Napoleonic France for their theme, and that four of them—Monsieur Maurois, Mr Belloc, Mr Churchill and Herr Ludwig—lead their chains of "ifs" up to the question whether any contingency, or concentration and cumulation of contingencies, could have availed to prevent the Great War. Here we seem to discern the *Weltanschauung* of our generation: the French Revolution as

* "If: Lapses into Imaginary History." By Winston Churchill, Emil Ludwig, André Maurois, G. K. Chesterton, Harold Nicolson, Ronald Knox, H. A. L. Fisher, J. C. Squire, Hilaire Belloc, Philip Guedalla, Milton Waldman. (Longmans Green, 1931. 21s. net.)

the dominant feature in the background of the landscape; the Great War as the dominant feature overshadowing the valley through which it has fallen to us, in our day, to make our pilgrimage.

Yet while these eleven *jeux d'esprit* converge on these two points, they range themselves, from another standpoint, in two antithetical groups. There is one school which amuses itself by postulating the least possible change in the smallest possible event and by deriving from this, with the utmost historical plausibility, a succession of changes which broaden and deepen until, by the time we reach our own age, the face of the world has been transformed. Perhaps the cleverest of the exercises in this vein is Mr Belloc's "If Drouet's cart had stuck." In June, 1791, Drouet fails to bring off his historic coup of stopping the career of Louis XVI's coach, in its dash for safety, by wheeling a cart out of a shed so as to block the roadway at Varennes. The cart sticks; and therefore . . . in 1928 Great Britain finds herself under the suzerainty of a Holy Roman Emperor ruling all Europe from Vienna! We will not rob the reader of his pleasure by showing him the map of Mr Belloc's road. He must play the game of follow-my-leader over Mr Belloc's bridge of "ifs" by reading the book for himself. But, just to indicate the manner of this school, we will venture upon an essay or two ourselves.

If young King Alexander of Greece had not been bitten by a pet monkey he would not have been cut off on the threshold of manhood on October 25, 1920; Monsieur Venizelos would not have been beaten at the elections on November 14th, or King Tino have returned to Greece on December 19th; France and Italy would not have had an excuse to throw over the Greeks and support the Turks (which they had been longing to do, for fear a Greek victory might bring predominance in the East to Great Britain). Then Mustafa Kemal would have been crushed in 1921; the whole of the Middle East, from the Straits to the Pamirs, would have followed suit to India and Africa in falling under the rule of European Powers, while China—deprived of the example and the stimulus of the Middle Eastern *risorgimento*—would have succumbed to the joint control of Great Britain, the United States and Japan. If that small monkey had not been moved to make that bite, how stupendously different the face of Asia would have been in this year of grace 1973. Why, poor old Nordic Man would have been sitting in the seats of the mighty from Constantinople to Shanghai and from the Cape to Vladivostok at this moment when actually it is China who has set the seal upon her supremacy in the Pacific and the Indian Ocean by annexing British Malaya and concluding an offensive and defensive alliance with Egypt. There is still one grain of comfort: India, now encircled by Chinese imperialism on both flanks, seems disposed, in this year, 1973, to rejoin the British Commonwealth again. But think what high destinies for the White Race were bitten off short by those simian teeth. . . .

That is one school for you; but there is also the other school, which is too sceptical and ironic to allow itself these amusing flights of fancy. This second school's motto is *Plus ça change, plus c'est la même chose*. Mr Fisher, for instance, makes Napoleon, after Waterloo, escape to the United States; but, for all the difference this escapade makes to the course of history, the Eagle might just as well have been immured in St. Helena after all. Restless as ever, he puts himself at the head of the South American insurgents against the Spanish dominion in the New World and founds an immense Latin American Empire; but the resulting Latin America is not very different from the Latin America which we know; and in a trice Napoleon is off again to conquer India from the British—and founder in a gale in mid-ocean on the way! In North America and in Europe, where the history of the next century was to be made, Napoleon's last escapade has faded out without leaving a ripple.

Monsieur Maurois reaches the same conclusion in another way:—

The celestial historian whose task it is to compare these possibilities, more numerous than the pieces of sand on the river bank, soon discovers that the history of human societies, viewed over a

fairly long period, is always more or less the same. The facts change; on one hypothesis there is a little more suffering, on another a little more order, but a hundred years sooner or a hundred years later, things reach the same point. . . .

This coincides oddly with the latest pronouncements of our physical scientists, who are telling us nowadays that "the Laws of Nature" are more like an actuary's averages than the Ten Tables that came down from Sinai. On this theme the classic apologue is the passage in Lewis Carroll's "Sylvia and Bruno" about the machine which could put back the clock of events. Machine in hand, we stand at a street corner and see successively a basket fall off a coster's cart, a cyclist spin round the corner and come to grief over the basket, and the same cyclist lying unconscious and broken-limbed. Now we can do some good! Now we can make the world better than it would have been! We set back the clock to the moment before the passage of the coster's cart. The cart passes and the basket drops as before, but this time we rush to pick it up; and, the next instant, the cyclist rounds the corner and whizzes past without mishap. Hurrah! But we have cheered too soon; for, when the moment comes at which, in the unpurged version, the cyclist had been lying unconscious and broken-limbed, there he is after all, lying in that tragic posture just the same.

But of course the theme of *Plus ça change* can be worked out comfortably as well as tragically if we choose. "If Germany had not gone Communist in March, 1931," we may ponder in 1981, "if . . . But then it really would have made very little difference when one comes to think it out dispassionately. When Germany went Communist, the Communists in Russia shouted that the victory was theirs, and the Capitalists in America wailed *Tout est perdu!* But the mills of economic necessity grind inexorably; and, even if the gallant Dr. Brüning's bourgeois Government had held its own, the state of bliss in which we live to-day—we mechanised, mass-productive robots—could not have failed to materialise. Under a Capitalist or a Communist label, the predestined movement of history was bound to come this way. Why, if the March Revolution of 1931 had been a White Revolution in Moscow instead of a Red Revolution in Berlin, it would have been just the same story. In the names of Benjamin Franklin and Henry Ford, we should have been doing just what we are doing, and living just as we are living, in the names of Marx and Lenin. The world would still have been our familiar robot world of to-day."

Projected forwards, these reflections on human life's "Strange Interlude" are perplexing; and it is perhaps better that we should be encouraged to confine our hypothetical speculations to the past. If you read "If," you will be—perhaps not wiser, but certainly not sadder than before.

Notes of the Week.

Forty Millions More.—The Minister of Labour, Miss Bondfield, is condemned to play the rôle of Oliver Twist, and this week she announces her intention of coming again to the House of Commons, plate in hand, to ask for a larger helping than ever. A memorandum published on Thursday as a White Paper,* explains a Financial Resolution which is to be proposed relative to unemployment insurance. This resolution, it appears, is to grant powers to increase from £70 millions to £90 millions the maximum which the Treasury is authorised to lend to the Unemployment Insurance Fund. When seeking an increase of £10 millions last November, Miss Bondfield explained that she would have to ask for more before the end of the financial year; for the Fund is out-of-pocket to the tune of roughly £1 million a week. So far as this goes, therefore, the resolution follows expected lines, although it is rather ominous that the extension of borrowing powers by as much as £20 millions should be de-

* Cmd. 3788. Price 1d.

manded while the Royal Commission is sitting to consider the whole problem of the fund. We suggest that the figure should be halved, and Parliament thereby assured an earlier chance of reviewing the situation. A further part of the Resolution, however, is disturbing in the extreme, and seems to us to be a direct negation of the general policy laid down by Mr Snowden on Wednesday night. In this part it is proposed to extend for six months, from April 18th to October 18th, the date on which, under existing legislation "transitional benefit" begins to expire. During this period it is apparently the intention of the Government to continue to pay "transitional benefit" at existing rates, and the cost of the extension is estimated at £20 millions, of which £13 millions will fall in the Budget year 1931-32, and the other £7 millions presumably go to swelling the deficit of the current year. We sincerely hope that the House of Commons will refuse to pass the Resolution in this form. With a Royal Commission about to report, and with a volume of information accumulating as to the wasteful and inequitable working of the system, it is preposterous to ask the House of Commons to give it a clear run for eight months from now. Long before then the Government should be in a position to propose to the House a complete overhaul. In the light of his speech in the economy debate, it is difficult to see how the Chancellor himself can possibly support the Resolution.

Anti-Bolshevism and Commonsense.—The debate in the House of Lords at the end of last week was significant in that it revealed a very real sense of repugnance sincerely felt in wide circles of opinion in this country at the accounts, to which considerable publicity has recently been given, of conditions in Russian convict camps, and, particularly, those concerned in part with the supply of timber exported to Great Britain. The exact evidential value of the various affidavits and statements made as to these camps is not a matter of great practical moment. There is little room for doubt that persons judged to be criminals—justly or unjustly—under the laws of the U.S.S.R. are apt to have treatment meted out to them no less harsh than that familiar in Czarist days. Equally, it is futile to endeavour to argue that the vast population of Russia is, as a whole, groaning under a tyranny from which it actively desires to escape or to secure whose destruction it would welcome foreign aid. The weight of evidence is quite to the contrary. This being so, we would ask the proponents of a policy of "boycotting the Soviet Slave State" what precisely they would like to do. Simply to prohibit the import of Russian goods into this country would, obviously, be an ineffective step, costing us the loss of our now not inconsiderable exports to that country; for the danger—and it is a real one—which we have to apprehend from Russian dumping lies in our foreign markets, particularly in the East, not at home. On the other hand, to seek to organise a world economic blockade of Russia would be quite impracticable; and, even if such a scheme could be realised, it does not follow that the Soviet State could not survive, for, though the fulfilment of the Five-Year Plan would be seriously hindered, the Government might be able to use effectively this evidence of a hostile world ringing Russia round as a means to nerve the Russian people to greater and greater sacrifices. That the sort of civilisation which the Soviet Government is endeavouring—with considerable material success—to create is revolting to Western conceptions of "the good life" may be readily admitted; and that ultimately Communism and Individualism cannot live together in Europe without dangerous strain is an arguable proposition. But though all European countries may well have to concert steps for meeting the monopolised trade of Russia with measures of control on their side, politically the way to repel the "Bolshevik menace" is not by idle denunciation of slavery and talk of boycott, but by using all our efforts to ensure that Western Europe does not fail, from lack of organisation, from economic nationalism, childish fears and mean suspicions, to produce for the masses of its citizens material conditions on whose account "capitalism" cannot be fatally arraigned and of which it need not be ashamed.

Alarums and Excursions.—By all accounts East Islington is proving one of the brighter elections. The comic relief is provided mainly by the "Crusaders" at the expense of the Conservative candidate's prospects, while issue has been vehemently joined between the Liberal and Labour candidates on the allied questions of unemployment and wages. The fun began when the Labour candidate seized upon a passage in a recent broadcast address by Mr Seeborn Rowntree as evidence that the Liberal Party were in favour of a general reduction in wages. In reality, Mr Rowntree only supported a reduction in wages as a last resort after every other means of cutting down production costs had been tried, and he both implied that such a step would be a confession of failure and urged that if it had to be taken it should fall upon everyone engaged in industry, and not, as in the past, upon the working classes alone. Subsequent events were not unmixed with irony. First of all came a letter to the *Daily Herald* from Mr Pugh, who lent his weight as a leading trade unionist in favour of the real gist of Mr Rowntree's address, which Mr Pugh described as "a courageous call for national action to deal with unemployment." Next, some unkind person pointed out that the only wages under direct Government control were those of the Civil Service, and that Mr Snowden had in point of fact just announced that a drastic cut in the Civil Service bonus was about to be made. Next, Mr Rowntree wrote to the Labour candidate, pointing out that he was sure she was using his address under a misapprehension as to its real purport. Finally, after Wednesday's economy debate in the House of Commons and Mr Snowden's speech, Mr W. J. Brown, a Wolverhampton Left-Wing Labour member, has written to the unfortunate Labour candidate at Islington regretting that he cannot give her his blessing. While the actual value of Mr Brown's blessing has still to be assessed, there is no doubt that Mr Snowden's "stern warning" may intensify the already serious dissensions in his party; and it will be instructive to learn from Sunderland, where another vacancy has occurred, what is thought of the Government in one of the most depressed areas of the country. Meanwhile, at St. Marylebone, one of the safest Conservative seats in the Kingdom, a comedy of a different order has been played out to a happy conclusion. Sir Rennell Rodd, the sitting member, threatened to retire at the next election, whereupon the Conservative Association's selection committee set to work to choose a new candidate. By a strange coincidence, there was a sudden influx of no less than 53 new vice-presidents to the association, and it was rather tactlessly noticed (a) that anyone could become a vice-president by the simple process of subscribing five guineas; (b) that many of these new vice-presidents lived outside the constituency; (c) that vice-presidents were *ex officio* members of the selection committee; and (d) that the selection committee was far from unanimous in its choice of candidate. A situation developed which would have proved impossible both for the new candidate and the association. In the end, an influential body of St. Marylebone Conservatives, including Captain Reid, upon whom the selection committee's choice had fallen, pressed Sir Rennell Rodd to reconsider his intention to retire; and Sir Rennell Rodd has gracefully complied. All's well that ends well? Perhaps; but it is difficult to find in these forays and manoeuvres in the constituencies much appreciation of the real needs of the country at a time of national economic crisis.

Dr. Brüning Holds Fast.—On Saturday, February 7th, a debate in the Reichstag—nominally on the subject of the estimates for the Chancellor's Department—led to a closing of the ranks on both sides and a significant trial of strength. The Nazis, supported by the Right Wing Nationalists and co-operating with the Communists—attempted to overthrow the Government in successive motions; but the German People's Party and the Economic Party rallied to the Government's support, with the consequence that all the hostile motions were defeated by majorities ranging from 72 votes to 111.

This Tuesday the 10th there was a second encounter, in which the victory of the Government and the discomfiture of the Nazis was more signal. By large majorities, the Reichstag carried various reforms of parliamentary procedure which were designed to frustrate the Nazis' tactics of obstruction; and it also suspended the parliamentary immunities of a number of Nazi and Communist Deputies who had committed acts which would bring a private citizen under the arm of the law. Eventually the Nazis left the House in a body with the intimation that they intended to boycott it until further notice—a gesture which, though made with a grand sweep, was really a confession of weakness. The Communists remained in their seats, and the Right Wing Nationalists were left in the air. Thus the extremists' aspiration to carry the Reichstag, and thence the Government, by storm has been frustrated by a rally of the constitutional parties. This development is encouraging; for while the co-operation between the two extreme wings is a purely destructive and therefore precarious alliance against a common opponent, we may reasonably hope that a middle bloc, once formed, would realise its fundamental common aims and interests sufficiently to hold together at least until Germany—and Europe with her—has emerged from her present perilous pass. Grim as the economic and financial situation is this winter in Germany, we believe that it can be successfully surmounted by the stoicism and energy of the German people, guided by the wisdom and courage of the German Government, if only the wild men in Germany do not succeed in upsetting the political applecart. How can we, in the rest of the world, strengthen Dr. Brüning's hands in fighting a battle in which world-interests are at stake? Probably we can do nothing dramatic. Neither in the domain of Reparations nor in that of Disarmament can we put it in Dr. Brüning's power to bring back to the German people results so sensational as immediately and finally to put the Nazis out of countenance. What we can do, in both the economic and the political field of international affairs, is to convince the German people, by a consistent policy in things small and great, that we are working strenuously and sincerely—under difficulties only less formidable than theirs—for the establishment of a world order which will be tolerable for Germans as well as for the rest of mankind. In the field of politics, Mr Henderson showed what could be accomplished at the last session of the Council of the League of Nations. Mr Henderson himself is the last person at this moment to rest on his oars. This Tuesday, in a notable speech, he launched an international disarmament campaign in preparation for the Disarmament Conference which is to meet a year from now. This is the right reply to the Nazis. The Nazis are promising their countrymen to achieve the impossible. The best way to open the German people's eyes, and to dissuade them from making a false move which might be irretrievable, is for us to convince them that we are too honest to promise impossibilities yet are enough in earnest to do the utmost that lies in our power in the common interest of the world, Germany included.

The Coming Elections in Spain.—General Berenguer's Government have taken the plunge. Last Sunday they published a decree ordering elections for the Cortes—for the Chamber on March 1st and for the Senate on March 15th. Simultaneously, the rights of meeting, association, propaganda, free speech and other activities indispensable for the genuine working of parliamentary institutions have been restored by the re-establishment of the relevant constitutional guarantees, and the censorship has been raised since Monday. Further, the Government have announced that they will not take advantage of their power to "make" the elections. Undoubtedly, these are the right things to do, and the Government have done them, at last, with a fine gesture. It remains to be seen whether they have not done them too late. Had General Berenguer published this decree, with this commentary, a year ago, on the morrow of the fall of the Directory, he would have had a fair prospect of obtaining the co-operation of all.

parties in a restoration of the constitutional regime; and the picture of the King, in the public mind, as the bearer of the ultimate responsibility for half a dozen years of dictatorship might have been effaced by a new picture, more to the public liking. The risk of letting loose a revolution would have been far smaller than it is now that this unhappy year has passed. It has been a year in limbo, under a regime which has been neither one thing nor the other, but which has acquired much of the odium of the dictatorship owing to the dictatorial measures into which it has been led while "marking time." Hence the abortive but significant revolutionary outbreak of a few weeks ago, and the alienation from the monarchy of a large and influential section of the upper class and the intellectuals. As soon as the Government's intention to hold a general election became known, the Republicans, the Socialists and the "Constituents" proclaimed their resolve to boycott it, and the Government have so far failed to dissuade them from their decision by conciliatory moves. The first of these moves, which was made last week, was the reversal of the Government's previous decision not to carry out its constitutional obligation to hold provincial and municipal elections before the national elections for the Cortes. Last week it was announced that elections for mayors were to be held in all towns that were not provincial capitals. The Government's second concession—embodied in the preamble to the general election decree—is to invest the Cortes, now to be elected, with certain constituent powers. The Cortes, on this occasion, are to be empowered to revise anything in the existing constitution that may be susceptible of modification within the framework of monarchical institutions. This has not, however, induced the "Constituents" to think better of their boycott, so far. Evidently the next few weeks in Spain will be critical.

Engineers' Wages.—Yet another industry is added to the list of those in which the question of readjustment of wage costs to conform with the general fall in prices has arisen. Last week, at a conference between the Engineering and Allied Employers' Federation, and the executive committees of the unions in the industry, Sir Allan Smith emphasised the gravity of the situation in which the engineering industry finds itself, particularly in respect to the lessened volume of exports. With a view to securing lower production costs, and a consequent improvement of competitive ability, the employers made four main proposals, namely:—(1) That the working week should be lengthened from 47 to 48 hours; (2) that overtime should be computed by the week instead of by the day; (3) that the present agreement relating to extra payment for night shifts should be modified; and (4) that payment by results should be so fixed as to enable a man of average ability to earn 25 per cent. on the base rate instead of 33½ per cent. as at present. The employers did not propose any all-round reduction of standard wages, and in this we think they were well advised. In engineering, as in many other British industries, the burden of labour costs has been inflated unduly by rigid demarcation rules and other working conditions justifiable by no canon of economic law. If some relief in these respects can be secured, as is clearly a matter of urgency, the case for maintaining basic wages at their present level is much stronger—a consideration which, we hope, will be taken seriously into account by the unions before they meet, as arranged, on February 24th to frame their reply to the employers' proposals.

Cotton Trade Lockout.—Since a week ago, writes our Manchester correspondent, the probability of an early settlement of the labour dispute in the cotton industry has become worse rather than better, and the deadlock is decidedly pronounced. On Saturday last there was a long and excited meeting in Manchester of the General Council of the Operative Weavers' Amalgamation. The Council consists of about 160 representatives. It was announced at the close that after a protracted discussion the Council emphatically declared that they were not pre-

pared to give their Central Committee authority to proceed with a ballot of the members of the Amalgamation upon the question of a scientific experiment on the more looms per weaver system. It is understood that the vote against negotiating was carried by 114 to 49. It has been learned unofficially that when the employers and the trade union officials were in London in consultation with the Prime Minister it was the suggestion of the Government that the proposed further experiment should be confined to three mills that are at present stopped in three districts. It seems that when the operatives on Saturday last were considering the question of giving the Committee power to negotiate a settlement with the employers, it was suggested that the new form of experiment should include one closed mill to be put on the more looms per weaver system, but the remainder of the experiment to be sets of looms in different sheds. It is believed that if such a proposal was brought before the employers it would receive favourable consideration. On the whole, therefore, the two sides are not very far apart, but the stumbling block to progress is the fact that the Committee of the operatives has no power to effect a settlement with the employers. It is understood that the officials of the Ministry of Labour still have the matter in hand. On Tuesday last the Committee of the employers met in Manchester and reviewed the situation in the light of the decision of the Weavers' Amalgamation. Mr John Grey, the chairman of the employers, said that they were anxious to seize any and every opportunity to urge a settlement by agreement and reason, and not merely by a triumph of brute force. He pointed out that, however long the conflict might last, reason and agreement would have to prevail and a settlement be arrived at with mutual consent. There are rumours in Manchester that certain employers are agitating for the dispute to be widened by a claim being made for a general reduction in wages and an increase of working hours. Other employers, however, are decidedly against action of this kind, but the matter may be raised again at the end of this week if there is no other move towards a settlement. A few manufacturers have become tired of the dispute and are reopening their mills, but at the moment there are no signs of any general breakaway. The situation is causing dismay amongst many leaders of the industry, and if there is a continuance of distrust amongst the operatives of their leaders, it looks as though the reputation which Lancashire has had for conciliatory methods in labour disputes will be lost. It is also being realised that in view of what has happened during the last few weeks there seems to be little probability of a reduction in production costs being achieved so far as labour is concerned in the proposals which are constantly being considered for the reorganisation of the industry.

Higher Cotton Prices.—Our Manchester correspondent writes:—In trading circles there has been some surprise during the last few weeks at the rising tendency of raw cotton prices. With regard to the American staple, the low point for middling on the spot in Liverpool, 5.12d. per lb., was reached on December 15, 1930, whilst on Wednesday last the quotation was 5.91d. The advance, however, has been more striking in Sakel Egyptian cotton, as the price for fully good fair on the spot in Liverpool on December 29th was 7.60d. per lb., whilst on Wednesday last the figure was 9.45d. During the last couple of months the position with regard to the American staple has altered very little. The weekly statistics relating to supplies have been bearish, and the visible supply is now of record dimensions. The strength of prices has been largely due to the shortage of contracts in the futures market and the support given by the Farm Board in America. Considerable attention in trading circles has been centred on the position of Egyptian Sakel cotton. During the last few weeks there has been freer buying by the trade and also by speculators. The Egyptian Cabinet has passed a law limiting the cultivation of Sakel cotton to definite areas in the Northern Nile delta. According to a report

prepared by the Ministry of Finance, the quantity of Sakel cotton consumed each year is about 1,500,000 cantars, and it is urged by the Government that the yield should be restricted to that amount. The feeling is growing, therefore, that prices for Sakel cotton, despite the recent advance, are reasonable. It may be pointed out that whereas there are substitutes for most cottons, Sakel qualities have a special market, and they are absolutely necessary for the production of certain fine yarns.

January Overseas Trade.—A search through the detailed lists of the January trade returns reveals very little to counteract the unfavourable impression made by the totals. These totals, shown below, compare even less satisfactorily with those of a year ago than did the December returns:—

MONTH OF JANUARY. (000's omitted).					
	1931.	Increase or Decrease as compared with			
		January, 1930.		January, 1929.	
	£	£	%	£	%
Imports	75,570	-26,271	-35.8	-40,976	-53.1
British exports	37,564	-20,699	-55.5	-23,316	-62.1
Re-exports	6,037	-2,137	-35.1	-3,773	-62.5
Total exports	43,601	-22,836	-52.4	-27,089	-62.1
Excess of imports over total exports	31,969	-3,435	-10.7	-13,887	-43.4

Imports and re-exports are both down by over a quarter of the 1930 level, and exports of British produce are more than one-third lower in value than they were last January. A few raw materials, namely wool, some oil seeds, petroleum, wet hides and chemical woodpulp were imported in slightly larger quantities; but imports of iron ore and scrap were only half as great, and imports of raw cotton little over two-thirds as great as in January, 1930. Against this must be set the fact that imports of manufactured goods also declined, for the most part; exceptions were pig iron and copper, tanning materials and fertilisers (all of which may from certain points of view be regarded as raw materials, and the increase in their imports, therefore, as some indication of trade activity), watches, woollen tissues, gloves, cotton and rayon hosiery, fuel oil, buttons, oilcloths, cosmetics and starch. The decline in our principal exports appears only too plainly from the following table:—

SOME LEADING EXPORTS.				
Month of January.				
	1929.	1930.	1931.	
Coal	4,472,651	5,493,410	3,271,331	tons
Pig iron and ferro-alloys	49,498	40,445	18,743	tons
Railway material	51,635	43,597	10,694	tons
Total iron and steel	421,191	351,846	167,373	tons
Textile machinery	11,618	9,060	4,898	tons
Total machinery	52,175	46,213	32,857	tons
Cotton yarns	16,923,900	13,156,500	11,336,500	lbs.
Cotton piece-goods	379,342,300	313,183,000	155,623,900	sq. yds.
Wool tops	31,245	27,197	23,993	centals
Woollen tissues	12,424,500	9,695,100	6,717,300	sq. yds.
Worsted tissues	1,138,300	4,394,000	3,677,500	sq. yds.
Linear piece-goods	6,411,200	6,539,200	5,650,800	sq. yds.
Boots and shoes	67,111	67,571	46,095	doz. pairs
Leather	2,016	22,657	12,886	cwt.
Paper and cardboard	401,851	403,583	299,822	cwt.
Locomotives	4,218	4,475	4,549	tons
Motor cars and chassis	4,258	3,211	2,498	number

Exports of cotton piece-goods are only half what they were last January, while the declines in exports of pig iron, railway materials and textile machinery are even worse. Locomotives alone show a slight increase, but ships, commercial vehicles, and certain chemicals, notably coal-tar products, potassium compounds and dyestuffs, which do not appear in the table, have all done slightly better than a year ago. These few signs of life, together with the fact that some exports whose totals are down have improved their position in particular markets, must suffice for assurance that, when world trade revives, British exports will be ready to share in the recovery.

Argentine Gold Policy.—Our Buenos Aires correspondent writes:—In theory, the decision of the Argentine Ministry of Finance to authorise continuous employment of the Conversion Fund of \$30,000,000 gold held abroad for the purpose of providing cover against sales of drafts by the Banco de la Nacion Argentina, is equivalent to the reopening of the Conversion Office. For, with the proceeds of the drafts—proceeds received in Argentine paper notes—the Banco de la Nacion will withdraw from the Conversion Office gold at the statutory rate of \$100 gold for \$227.27 paper. This gold it will ship abroad when necessary, by that means providing fresh cover for further drawings, and will repeat the process as and when the weakening of exchange makes such action desirable. Whether the practical results of this measure will be what is aimed at depends largely on whether the Banco de la Nacion takes a broad view of its faculties or merely niggles at the position, peddling out small sums to importers and altering its policy without notice from one day to another. There is reason to fear that too much reliance is placed in Argentine official circles on the "moral" effect of the announcement made in regard to future gold withdrawals, and too little attention paid to the actual state of the market. Indeed, a leading article in *La Prensa* does not hesitate to say that it is merely playing fast and loose with the exchange to make loans to local exporters, who are thereby enabled to keep back the bills they would otherwise draw against shipments of produce. The monetary situation in Argentina to-day is marked by inflation of the means of payment as expressed in terms of paper currency. Of the 1,200 millions in notes in circulation, 400 millions are in the banks and 800 millions in the hands of the public, while bank deposits are rising. Only by shipping specie freely and drawing freely at the same time for the benefit of remitters who, day in and day out, must fulfil their foreign commitments, can the Argentine peso be brought up to something near its gold parity.

The Oustric Inquiry.—Our Paris correspondent writes:—Recent developments in connection with the Oustric inquiry, and its far-reaching ramifications, have now made this matter the outstanding problem of the moment. In the belief that the investigation of the circumstances attending the authorisation for the quotation of Snia Viscosa shares here had been sufficiently advanced to justify the drafting of recommendations, the Commission last week requested M. Buyat, one of their number, to prepare a report. M. Buyat, after considering the question, pointed out that three courses were open to the Commission, to recommend (1) that the alleged guilty parties should be sent for trial before the Senate, sitting as a High Court; (2) that they should be sent to the assizes; or (3) that they should be called before Parliament and publicly disgraced. Personally, he intimated, he favoured a High Court trial. At this stage one or two members emphasised their opinion that the Commission has not yet accumulated sufficient evidence to justify them in making recommendations of any kind. This view seems to have prevailed, and the question of drafting a report gave place to the taking of further evidence—which has already brought several further surprises. M. Oustric was again summoned to appear before the Commission this week, and he confirmed, in person, his previous written refusal to give evidence, by declining to be sworn (which, under French law, renders him liable to a fine of anything from 100 to 1,000 francs), and he was told that his refusal would be communicated to the judicial authorities. M. Raoul Péret, who was again convoked before the Commission, replied by letter flatly refusing to appear, on the ground that the Commission, by their discussion of potential recommendations, obviously regarded him as already incriminated. Meanwhile, public opinion is becoming agitated at the slowness of the Commission's proceedings. It is being publicly asserted that the long drawing out of the Snia Viscosa inquiry, by members of the Left in the Commission, is intentionally designed to bore the public to such an extent that inquiry into the Naphte de Bakou, "Gazette du Franc" and other "affairs," in which several politicians belonging to the Left are alleged to have been concerned, may be safely suppressed.

The German Chemical Industry.—Our Berlin correspondent writes:—The I.G. Farbenindustrie reports that in the last quarter of 1930 there was a general tendency among its customers to reduction of stocks, so that the business of the new year should not be hampered by previous stock accumulations on the part of colour users. The dyestuffs market has been well maintained in spite of the unsatisfactory state of the textile industries. The change of fashion in the direction of dark shades, and the comparatively favourable situation of the paper industry, have balanced a considerable part of the decline in the activity of the textile industries. Export has been maintained at about the same level as in the other principal producing countries. There has been a decline in the market for nitrates, but this was mainly confined to sulphate of ammonia, and the demand for special products remains almost unchanged. In view of the general depression the state of the market for photographic materials may be considered satisfactory. Artificial silk prices declined, and the pressure of foreign competition increased still further. The sale of pharmaceutical products continued active. The general condition of I.G. Farbenindustrie, considering the world-wide depression of trade, is to be regarded as thoroughly satisfactory.

Shipping Freight Index Number.—During the greater part of January the whole cargo freight market showed a steadier tendency, and our index number, compiled on the basis of monthly average rates, works out at 94.5, as compared with 94.8 a month ago, and 94.4 at this time last year. Recent movements of the various group indices are summarised below:—

AVERAGE 1898-1913=100.

	Average, 1913.	Jan., 1930.	Nov., 1930.	Dec., 1930.	Jan., 1931.
European Waters	110.0	104.2	89.5	89.7	88.0
North America	113.1	91.2	85.0	86.9	90.1
South America	123.4	95.1	90.4	93.8	90.1
India	106.3	97.8	99.8	103.8	101.3
Far East and Pacific	117.4	85.2	81.0	85.2	88.8
Australia	127.9	88.1	107.7	109.5	108.6
Total	116.3	94.4	92.2	94.8	94.5

Outward coal business was adversely affected by the stoppage of production in South Wales, and homeward grain traffic showed no signs of general expansion; but Argentine maize moved rather more freely, and there was a fair inquiry for tonnage from Australia and the Eastern rice ports. North American rates were also firmer, though the number of charters actually concluded was small. Towards the end of the month a weaker tone again developed in all sections, quotations from the Plate moving sharply downwards. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

AVERAGE 1898-1913=100.

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home Trade	78.2	- 0.2	South America - out- wards	74.9	- 1.6
Bay - outwards	101.6	- 5.5	South America - homewards	105.3	- 5.8
Bay - homewards	91.9	...	India - outwards	98.2	- 4.8
Mediterranean - out- wards	83.4	- 2.5	India - homewards	106.5	...
Mediterranean - homewards	91.6	- 1.7	Far East, Aus- tralia	88.8	+ 3.6
North America	90.1	+ 3.2		108.6	- 0.9

Expressed as a percentage of the average for 1913, the total figure of our index number for January works out at 81.2, as compared with 81.5 in December, and 81.2 a year ago. Little improvement can be expected until the present enormous volume of laid-up tonnage has diminished.

The Indemnity Mutual Marine Assurance.—This company is a subsidiary of the Northern Assurance Company which acquired the share capital in 1917. Like most marine companies, it has recently passed through a very lean period characterised by heavy underwriting losses and a continually declining rate of dividend. The 1930 report, which, under the form of accounting peculiar to marine companies, shows the final results of the 1929 underwriting account, is, however, for the first time definitely encouraging. A halt has been called to further reductions in dividend, the account has been closed without a loss, and the new 1930 underwriting account has experienced a very favourable first year. The results of the last six closed underwriting accounts are as follows:—

Year.	Premium Income.	1st and 2nd Year Claims.	Expenses.	Transfers to Suspense to Close Account.	Surplus + or Deficit -.
1924	£ 750,229	£ 650,048	£ 33,995	£ 68,076	- £ 1,889
1925	613,170	550,256	32,106	61,366	- 30,558
1926	611,516	548,762	31,587	166,167	- 135,000
1927	630,100	562,737	32,116	35,246	...
1928	458,016	341,711	32,505	77,800	...
1929	378,231	301,462	29,919	46,850	...

The 1930 premium income is slightly lower at £361,649 than that of 1929, but whereas claims and expenses in 1929 left a balance of only 57 per cent. of the premiums to enter upon the second year, the 1930 account has emerged from its first year's experience with a balance equal to 65 per cent. of the premiums. As already stated the dividend has been maintained at the same rate as for 1929, namely 28s. per share, and the cost, £73,868, has been fully covered by interest earnings of £77,113. The balance sheet of the company is a strong one. The total funds amount to over £2,000,000 compared with a premium income of under £400,000, and the book value of the assets no doubt includes a certain amount of hidden reserves.

Life Assurance Bonus Announcements.—A number of life offices have now made announcements as to the rate of bonus declared for the valuation period ended December 31, 1930. The Royal Exchange, in respect of the recently completed quinquennium, have declared a compound reversionary bonus at the rate of 40s. per cent. per annum, compared with 35s. per cent. per annum for the previous quinquennium. The National Mutual have maintained their annual compound reversionary bonus at the rate of 51s. per cent. per annum for whole life assurances and 45s. per cent. for endowment assurances. The Scottish Amicable Life Assurance Society have announced that in respect of the quinquennium ended December 31, 1930, a compound reversionary bonus has been declared at the rate of 42s. 6d. per cent. per annum, which compares with 40s. per cent. per annum for the quinquennium 1921-25 inclusive. In addition, the society has decided to pay an interim bonus for the current quinquennium at the full rate now declared in respect of all claims by death or survival. The Prudential has increased its rate of reversionary bonus for the year 1930 in respect of whole life assurances from 50s. per cent. to 52s. per cent. per annum, and has maintained that for endowment assurances at the same rate as before, namely, 46s. per cent. per annum. The directors of the Wesleyan and General Assurance Society have declared reversionary bonuses for the year 1930 at the rate of 42s. per cent. simple for endowment assurances and 48s. per cent. simple for whole life assurances. These rates are the same as those declared for the years 1926-29 inclusive. The London Assurance, in respect of the quinquennium ended December 31st last, have declared: to policyholders in the old series a bonus equivalent to a cash distribution of 55 per cent. of the ordinary whole term premiums paid during the quinquennium; to policyholders in the 1911 series a compound reversionary bonus at the rate of £2 5s. per cent. per annum, calculated on the sum assured and existing bonuses. An interesting announcement is that of the National Provident Institution, whose valuation as at December 31, 1930, was for a broken period from November 20, 1927. For whole life assurances a simple rever-

sionary bonus at the very high rate of 60s. per cent. per annum has been declared, gradually increasing after attainment of expectation of life to as much as £5 per cent. per annum. This rate compares with 50s. per cent. per annum for the previous quinquennium, in addition to which a further bonus of approximately 10s. per cent. per annum was paid after survival of the expectation of life. For endowment assurances varying rates of bonus have been declared according both to age at maturity and to duration in force. Full details of the rates declared compared with those paid in the preceding quinquennium are as follows:—

Maturity age	1927 Bonus Per Annum.	1930 Bonus Per Annum.	In force 15 years or less.	In force over 15 years.
	%	%	%	%
55 ...	43s.	43s.	43s.	53s.
" 60 ...	48s.	48s.	48s.	58s.
" 65 ...	53s.	53s.	48s.	63s.
together with a further 5s. % p.a. payable on survival only.				
together with a further 10s. % payable on survival only.				

Accompanying the announcement as to the rates of bonus is a statement to the effect that the basis of valuation has been maintained as heretofore. After declaration of these bonuses the carry-forward has been increased from £392,000 to £409,000.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during January amounted to 914,576 ozs. of fine gold, as compared with 908,492 ozs. produced during December. In January, 1930, the output amounted to 882,801 ozs. of fine gold. The following table shows the monthly output since the beginning of 1925:

Months of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

December ...	791,455	836,157	851,225	859,761	851,134	908,492	...
Total ...	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	914,576

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	May, 1930.	June, 1930.	July, 1930.	Aug., 1930.	Sept., 1930.	Oct., 1930.	Nov., 1930.	Dec., 1930.	Jan., 1931.
Gold mines	202,182	201,324	201,111	202,257	205,061	206,778	205,030	203,473	209,442
Coal mines	15,028	14,943	14,670	14,788	14,706	14,482	13,973	13,763	13,865
Diamond mines	5,340	5,126	5,490	5,754	5,767	5,032	4,748	4,607	4,325
Total	222,550	221,393	221,271	222,799	225,534	226,292	223,751	221,843	227,632

There was a marked increase in the number of natives employed at the gold mines during the month.

At the meeting of the Royal Statistical Society, on the 17th inst., Mr D. Caradog Jones, M.A., will read a Paper entitled "The Social Survey of Merseyside." The meeting will be held in the hall of the Royal Society of Arts, John Street, Adelphi, W.C.2, at 5.15 p.m.

A course of eight public lectures on "America Since the World War" will be delivered at University College, Gower Street, by Professor David S. Muzzey, Ph.D., of Columbia University, New York, on Mondays and Thursdays at 5.30 p.m., beginning Thursday, February 19, 1931. The chair will be taken at the first lecture by The Right Hon. Lord Loch, C.B., C.M.G., M.V.O., D.S.O. The lectures are open to the public without fee or ticket.

UNITED STATES.

Ex-Service Men's Bonus — Money — Savings — Industry — Mexican Debt — Moratorium.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 30.

AGITATION over the huge proposed Government outlay of cash to war veterans greatly disturbed financial markets. Until recently politicians in and out of Congress have done a good deal of squabbling over appropriations to relieve unemployment and to provide assistance in certain rural areas where last summer's drought aggravated the usual state of destitution. Lately the American Legion endorsed a plan on which they had hitherto frowned, for the Government to pay immediately in cash either the face value or the present value of the so-called adjustment compensation certificates granted them some time ago. Such payments would involve approximately \$3,400,000,000 on face value, or over \$2,000,000,000 on present value.

The mere possibility of the Treasury having to raise such a sum sent shivers down the spine of the bond market. Governments sagged heavily, the banks being large sellers. Virtually all the gain of the past few weeks was speedily lost, and weakness spread to other sections. Some recovery, however, took place on the growing feeling that President Hoover would veto a cash payment Bill, and that Congress might not be able to muster the necessary two-thirds vote to override the veto.

Soldiers' adjusted compensation certificates are in effect paid up insurance endowment policies, maturing in 1945. They were issued in 1925, and intended as a substitute for a general pension system. The certificates provide for loans from the Government, at the present rate of 6 per cent., to the extent of cash surrender value, which now amounts to about 22½ per cent. of face value. Of the 3,395,000 certificates outstanding, approximately 1,600,000 have been used as security for loans, estimated at \$325,000,000. Only about 2 per cent. of these loans have been repaid.

Mr Mellon, Secretary of the Treasury, has made out a strong case against the passage of any Bill providing for a large cash outlay. He estimates a Treasury deficit in any case at \$375,000,000 for the fiscal year ending June 30 next. He has said that the national debt this year will be reduced by only \$65,000,000. The Treasury has a maturity of \$1,100,000,000 to meet next March, and in the next 2½ years must refund about \$8,000,000,000 of maturing Liberty bonds. Cash bonus payments would, it is calculated, increase annual interest charges by \$200,000,000.

Treasury estimates are that \$2,000,000,000 of Government bonds are held by individual investors, and that member banks of the Federal Reserve system hold \$4,000,000,000, to say nothing of holdings by other banks. A fresh large issue would, of course, tend to depress the price for old bonds, and Secretary Mellon fears that it would be impossible to float all on savings capital, and that much would have to be provided for by bank credit. He points out the danger of renewed inflation, which he fears would only prolong business recovery, perhaps after a momentary inflationary boom.

The market is in full accord with Mr Mellon that another large Government bond issue, or the probability of it, would kill the market for other new issues, particularly foreign bonds, and thereby retard genuine trade improvement. Bankers generally and those who take the long-range view are opposed to the payments. On the other hand, the ex-soldiers naturally would like to have the money. It is probable that they have always felt that sooner or later they would get pensions in addition to the insurance policies, and doubtless they will. Also small merchants, motor manufacturers and others who think they would benefit from increased circulation are inclined

to favour the cash distribution plan, hoping for at least a momentary stir in trade.

Meanwhile a considerable increase in borrowing on certificates has taken place since the first of the year, with the increase in unemployment and the exhaustion of private savings. Borrowings are now running at the rate of \$1,000,000 a day, against an average for last year of \$5,000,000 to \$8,000,000 a month. The Treasury has just offered a \$60,000,000 Bill issue to cover increased cash needs. This issue will probably not affect new borrowing to take care of the \$127,000,000 of maturing bills next month. It is thought that a new low-price will be bid by the banks on the current offering, probably $1\frac{1}{2}$ per cent.

Short-term money has been easier than ever, and four reductions in bankers' bill rates brought the open market rate to $1\frac{1}{8}$ per cent. asked for 90-day maturities, the banks buying as well as holding bills accepted by themselves. The Federal Reserve Bank also has cut its buying rate to $1\frac{1}{8}$ per cent. to make good a portion of maturities in its portfolio, amounting this month to about \$48,000,000. Nevertheless this week's statement shows a sharp drop in bill holdings. Open market rates meanwhile have recovered $\frac{1}{2}$, largely as a result of the fright of the bond market over talk of a new Government issue, which has resulted in some selling by the banks.

Some interesting figures have just been published on savings bank deposits for 1930. The National Association of Mutual Savings Banks estimates deposits at a new high record of \$9,464,732,000 at the end of 1930, a gain of approximately \$1,000,000,000. Careful analysis of these figures, however, indicates that the bulk of the increase has been due to commercial money rather than to private savings. Commercial banks, corporations and rich individuals, unable to find profitable employment for all their surplus funds in ordinary channels have taken advantage of the high rates, ranging here from 4 to $4\frac{1}{2}$ per cent., paid by the savings banks. The amount which the savings banks will accept from one name is limited, but various devices are used to overcome this obstacle, such as deposits in names of employees. Corporation money probably accounted for 60 per cent. of the gain, and of the remainder it is estimated that half came from individuals who ordinarily do not use the savings banks. In many parts of the country the rush to savings banks was spurred by distrust of the commercial banks, due to the large number of failures.

Little change has taken place in the industrial situation. Unemployment has, undoubtedly, risen. Government figures place the total at 5,000,000 for December, and recent estimates of the American Federation of Labour show a further considerable rise in January. Raw materials and wholesale commodity prices have been somewhat steadier, but retail prices are weak and wage reduction talk seems to be on the increase.

Corporation earning reports for 1930 are running about midway between the pessimistic and the optimistic estimates of a few weeks ago. The United States Steel Corporation reports net earnings of \$9.12 a share, or more than \$2 in excess of annual dividend requirements, but the corporation failed to cover the dividend in the last quarter. Earnings were less than half those of 1929, which were \$21 a share. Profits in December in particular were negligible. Some of the other large steel companies failed to cover dividends. The average rate of operations for the steel industry is now around 47 per cent. of capacity, which is slightly better than the average rate for the last quarter of 1930, but there is no certainty of much further advance immediately ahead. Railroad traffic is showing only a slow seasonal increase, but is far below that of a year ago. The motor trade is hopeful, and estimates of output of 175,000 cars are made for January, against 155,000 in December. Last year's official figures of production are 3,354,870 vehicles.

It is learned that a moratorium on Mexican debt service transfers has been agreed upon by the committee of bankers with the Mexican Finance Minister, and that the modified agreement will be presented for ratification by the Mexican Congress. Payments are not to be reduced, but no deliveries in gold need be made for a period not to exceed two years.

FRANCE.

Bankers' Negotiations with Germany — Prices — Industry — Stock Exchange — Capital Issues.

(FROM OUR CORRESPONDENT.)

PARIS, February 11.

THE Chamber continues steadily at work on the Budget, and has now disposed of about one-half of the departmental estimates. M. Laval, the new Premier, has made it clear that any marked recurrence of delay in completing the work in hand will be followed by the imposition of night sittings, in order that the Finance Bill may be got through before the beginning of the new financial year on April 1st, and this appears to have had good effect.

The fact that negotiations appear to be in progress between the German Government and an international banking group, in which the Banque de Paris is understood to represent French interests, became known here through second-hand reports from Berlin, which represented the proposed banking credit operation as taking the form of "a French loan to Germany." In this form the news of the negotiations undoubtedly seriously alarmed a very large section of French public opinion, and provoked the notification of several interpellations of the Government. Now that the real facts are more or less known, and it has been made clear that there is no question of any public issue, this alarm has been allayed. The incident, nevertheless, has been significant, and has emphasised the increased nervousness that has been felt here since the development of Hitlerism at the last German elections. Had the banking groups concerned thought fit to take the public into their confidence by making known the facts of a perfectly innocuous banking operation, a disagreeable impression might easily have been avoided.

The general index of wholesale prices at the end of January is 494, a drop of four points on the month, 82 points since January, 1930, and 129 points on the average in 1929. The detailed figures are as follows:—

	(July, 1914 = 100.)	End of November.	End of December.	End of January.
General index figure	(45)	504	498	494
French products...	(29)	565	565	567
Imported do.	(16)	395	377	364
Foodstuffs	(20)	516	525	533
Raw materials	(25)	494	475	462

It will be noted that the figure for foodstuffs has risen no fewer than 8 points on the month and 17 points since November. This is due almost entirely to the dearth of vegetable foods, owing to the poor crops after the bad weather last autumn. Meat is now dearer than for some years past, owing principally to the shortage of fodder. The drop of over 100 points in mineral and metal prices during the past six months, and of nearly 150 points in textile raw materials (all of which the French are compelled largely to import) has, of course, been due to the general drop in commodity prices in the world markets. The fact that French domestic prices are still being maintained at a level considerably above world prices for the some commodities is now receiving serious attention here. It is difficult, however, to see how they are to be appreciably brought down, in view of the general internal situation, and particularly in presence of high production costs, due to steadily-increasing burdens on industry (despite recent taxation reductions), and particularly to the recent coming into operation of the national insurance law, which is proving appreciably more costly than was expected.

The index figure for the end of January, representing the prices of 13 articles of household consumption, is returned at 651 (1914 = 100), or an increase of 12 points on the month, 41 points since the end of June last, and 75 points on the average of 1929. The cost of living for a Paris working-class family of four persons at the end of the fourth quarter of 1930 (food, lighting, heating, rent, clothing and sundries), which is a much more comprehensive figure, is 597, against an average of 556 in 1929 and of 519 in 1928.

Industrial production figures for December show a drop in the general figure of under 1 per cent., which is considerably less than was expected. The general figure is returned as 134 (1913 = 100), against 135 at the end of

December, 144 (the high record figures) in January, March, April, May and June, and means of 139 for 1929 and 127 for 1928. In other words, after a world slump lasting nearly a year and a half, French industrial output in December was still 34 per cent. above the pre-war level, 7 per cent. above the general average in 1928 and only 5 per cent. lower than the average in 1929. The mean figure for 1930 works out at a trifle over 140, or nearly 2 per cent. above that for 1929, and over 16 per cent. better than in 1928. With the exception of the leather industry, which has recovered another 2 points on the month, the rubber goods trade (the figure for which has risen 8 points on the month, and is returned as 899, against 100 in 1914), and the paper industry (which stands unchanged at 111), the other leading industries generally show declines of a single point, while that for engineering is 3 points down on the month. The monthly figures for the motor industry work out at a mean for the year of 640, against 657 in 1929 and 610 in 1927.

The index of Bourse quotations of 300 French issues of variable yield at the end of January is 365 (1913 = 100), against 349 in December (the lowest registered for over three years), 425 at the end of September (a month before the Oustic group collapse), 496 at the end of January, 1930, and averages of 507 in 1929 and 415 in 1928. The weekly figure issued to-day, representing the general index figure at the close of trading last Saturday, shows a further improvement of 7 points to 372. The figure for the end of January for 17 foreign issues quoted here is 427, against 411 at the end of December, and means of 675 in 1929 and 659 in 1928. The general index of quotations of 3 per cent. Rentes, Crédit Foncier 3 per cent. and 4 per cent. bonds, and 3 per cent. and 4 per cent. railway and industrial bonds (35 issues) is returned for the end of January as 95.7, against means of 85 in 1929 and 81 in 1928.

Total new French capital issues here in 1930 were 21,925,000,000 francs (as compared with 18,808,000,000 francs in 1929 and 13,800,000,000 francs in 1928), thus setting up a new high record. New companies' share capital represented only 622,000,000 francs, against 996,000,000 francs in 1929 and 1,068,000,000 francs in 1928. Increases of capital by old companies were 3,765,000,000 francs, against 7,320,000,000 francs in 1929 and 5,484,000,000 francs in 1928. Mortgage and other bond issues totalled 17,538,000,000 francs, against 10,492,000,000 francs in 1929, and 13,800,000,000 francs in 1928. The monthly average issue was 1,827,000,000 francs. The record month was October, with 3,142,000,000 francs of new offers of shares and bonds, which included the great Crédit Foncier conversion issue of 2,200,000,000 francs. The average rate of interest offered for bond issues during the year was 4.68 per cent., as against 5.36 per cent. in 1929 and 6.03 per cent. in 1928. The average return from issues of variable yield during 1930 was 3.37 per cent., against 2.70 in 1929 and 2.72 in 1928. The average return from issues of fixed yield in 1930 was 3.82 per cent., against 4.89 per cent. in 1929 and 5.33 per cent. in 1928. Total new issues in December were 2,684,000,000 francs, of which 596,000,000 francs were railway bond issues, 13,000,000 francs new company share capital, 210,000,000 francs increases of capital by old companies, and 2,088,000,000 francs new bond issues by old companies. The average interest offered by new bond issues in December was 4.95 per cent., the highest during the year.

GERMANY.

Parliament — New Standing Orders — Foreign Loan — Railways and Road Competition — Export Credits.

(FROM OUR CORRESPONDENT.)

BERLIN, February 10.

THE Brüning Cabinet has enjoyed conspicuous success in the introductory skirmishes at the reopening of the Reichstag, and the vote of "no confidence" was rejected by a substantial majority. The Government is unable for the moment to turn its attention to the important matters in hand as it is still occupied in securing the

parliamentary debates against obstruction, and in ensuring some degree of protection against the degenerate demagoguery practised by the National Socialists and the Communists. Among the means to this end are the reform of the rules of procedure, an Act prohibiting members of Parliament from appearing as the responsible editors of newspapers or periodicals, and the rejection of a proposal of the Hitlerites and Communists that the Reichstag shall refuse its consent, without inquiry into the individual circumstances, to any criminal proceedings against its members. Most of the divisions on these questions have been taken, and the will of the Government, who found a very effective supporter in Herr Löbe, the President of the Reichstag, prevailed. The big questions, the Budget and the question of agricultural relief which is closely bound up with it, are still to be settled, but the victory in the preliminary skirmishes has greatly strengthened the Government's hand for the main battle.

The new standing orders for the Reichstag contain an important financial provision. A bill brought in by members of the Reichstag which may involve an increase in expenditure or a diminution in revenue is only to be debated if it includes proposals for balancing this increase or diminution, and the proposals for increasing expenditure and those for balancing the increase must be voted on together. As the Reichstag has occasionally in the past, in order technically to cover increased expenditure, made an upward revision of the estimates of revenue which sometimes, but not always, turned out to be right, such dangerous methods of balancing are now proscribed. A revised estimate of revenue or expenditure is only to be valid compensation for a corresponding change on the other side of the balance if the Government of the Reich approves it.

This reform, the principles of which had already been advanced in parliamentary Bills and experts' proposals, is certainly worth something. As a matter of fact, however, the Reichstag is not nearly so accommodating as might be supposed from the numerous complaints in the Press, and the responsibility for excessive complaisance with the demands of particular interests, at the expense of the Exchequer, lies far more often with the administration than with Parliament. Before the formation of the Brüning Cabinet the Reichstag usually showed far more will to economy than the Government; and even Herr Brüning learnt his methods of handling financial questions not in the Cabinet, but in Parliament.

According to reliable reports, the negotiations with a consortium of foreign banks for a foreign credit are on the verge of completion. Lee Higginson and Company are at the head of the consortium, though the American share of the credit is only a quarter of the total of \$32 millions. The French are to take a third. There were internal political difficulties in the way of French participation, but they have evidently been overcome. English, Swiss and Dutch banks are also participating. The conditions are not favourable to Germany; the interest is $6\frac{1}{2}$ per cent., which is out of all proportion to the present state of the money markets of the world. Still, this may mean the beginning of the reopening to Germany of the international money market. It is against all reason that the overstocked money markets of the world should not overflow into the one great industrial country with a large unsatisfied demand for credit. Incidentally, Germany has just received a small industrial credit—a \$7½ million American bank loan at 7 per cent. for five years, for the Rheinisch-Westfälische Elektrizitätswerk.

The railway company has taken fresh steps to meet its old bugbear, the competition of motor goods transport. The effectiveness of this competition depends on two things: first on the convenience of motor transport, which, by taking the goods from door to door relieves both consignor and consignee of trouble; and second, on the peculiarity of the railway tariff which charges expensive goods at a higher rate than cheap bulk goods, and so offers an incentive to the consignor of valuable goods to use the road companies which have no such differentiation. The Reichsbahn is now instituting a door-to-door service, and has concluded a contract with a well-known

firm of carriers, Schenker and Company, which will make possible the quotation of through rates inclusive of collection and delivery charges. Schenkers are pledged to share the collection and delivery business with other carriers, but although they receive no monopoly, their position will be extremely advantageous, and protests from other carrier firms have already begun.

In an attempt to combat the second cause of the strong competition from road transport, the Reichsbahn is obliging all carriers who wish to join the new collection and delivery organisation under the leadership of Schenkers to abstain from long-distance goods transport by road, except with the consent of the Reichsbahn. The railway company has no desire to attack short-distance road transport, which it rightly considers to have the technical advantage, and which it is even willing to subsidise in order to make its plans more acceptable to the motor industry.

The Golddiskontbank is negotiating with a consortium of banks, under the leadership of the D. and D. Bank, for a relaxation of the conditions under which bills arising out of the financing of exports to Eastern countries, especially Russia, are rediscounted. As these bills have an average maturity of 9-24 months, they are not suitable for the Reichsbank itself. The Golddiskontbank, whose function since its latest reorganisation is the financing of exports, is prepared to provide up to Rm. 100 millions, but only for those bills which carry a 70 per cent. guarantee by the Reich and States. Unguaranteed Russian bills are still only discounted privately at rates between 25 and 30 per cent., a prohibitive level which forces the exporting firms to keep them in their own portfolios.

AUSTRIA.

Revenue Distribution — Railway and Housing Economies — Iron Industry — Commercial Policy — Foreign Trade — Stock Exchange — Banking.

(FROM OUR CORRESPONDENT.)

VIENNA, January 31.

THE hotly disputed question of the distribution of tax revenue has at last been completely settled. It changes the quotas to be received by the various provinces from general taxation in favour of the provinces at the cost of Vienna, and increases the veto rights of the Federal State over the financial administration of the individual provinces and municipalities. The new arrangement is to remain in force until 1935. At the same time, the special taxes on automobiles have been dropped, and in place of these a Federal State tax has been imposed in the form of an increased price for motor spirit. The bulk of the proceeds will be divided among the individual States, and will permit them to do more road work than they have done so far.

The Government and the Opposition agreed to put the new Bill through Parliament quickly. This agreement afforded a friendly basis on which to pass a number of other important Bills dealing with national and general economy. This was the more desirable, as economic conditions are becoming steadily worse, while some measure of relief from the burden of taxes is urgently needed. The difficulty lies in the fact that the revenue from normal taxation is declining, and that reduction in taxation would only aggravate the evil. The only compromise that can be made lies in the direction of retrenchment.

The Federal Railways have to face a similar situation, for they will have a deficit of 50 to 60 million schillings this year. As it is not practicable further to increase railway fares and rates, it is necessary to reduce the number of railway servants, which is fully 15,000 in excess of requirements. In the circumstances it is impossible to make rapid headway with electrification, for though it may effect savings in running costs the initial outlay is considerable.

The administration has declared that it will not accept any further applications for State advances for the pro-

motion of house building. About 400 million schillings were to have been used for this purpose over three years, and this sum has already been exhausted by the first year's applications. Up to the present it has not been possible to place the housing scheme loan abroad, but about 100 million schillings have been advanced by the banks and savings banks in the form of credit.

The notice to terminate all the collective agreements, which the Alpine Montangesellschaft had made with its workmen and employees, has created some commotion. The company demanded a wage cut of 8 per cent. to 10 per cent., which would, it is estimated, together with other retrenchments, increase its gross profits by three million schillings. It is doubtful, however, whether the company will be in a position to maintain its prices. In contrast to Czechoslovakia and Germany, the Austrian ironworks have not reduced their prices. Activity in the production of crude iron is 19½ per cent. below normal; unfilled orders are only 29 per cent. of normal; and the Alpine's output of iron ore is only 71,200 tons, which is only about half of the output figure for the year 1929. The demand for a further increase of the duty on iron is meeting with great difficulties, but it may be successful.

The most important trade treaty negotiations still to be undertaken are those with Hungary, Yugoslavia, Czechoslovakia and Switzerland. During the last negotiations in Budapest the question was raised of an agreement that Hungary should take from Austria in industrial products the value of the farm produce taken by Austria from Hungary. The sliding-scale duty on sugar has not benefited the consumers; on the contrary, the augmented duty has made sugar seven groschen dearer. It is characteristic of the increasing poverty that consumption of butcher's meat during the past month is only 64.8 per cent. of that of the corresponding period of last year.

The value of total imports in 1930 was 2,733.9 million schillings, against 3,317.7 millions in 1929, and the value of exports was 1,882.8 millions, against 2,219.6 million schillings. Efforts are now being made further to reduce imports, particularly by promoting consumption of domestic coal. It should be possible to make an improvement in this direction, for of the 1.15 million tons of house coal burnt in Vienna last year only 2.6 per cent. came from the domestic mines, and the rest was imported. In spite of the keen competition negotiations are in progress for the erection of no fewer than three pipe works: the Alpine Montangesellschaft is co-operating with Witkowitz in regard to the manufacture of gas and water pipes, a second project is being studied by the Felten Works, while a third works for the same purpose is being founded with the aid of Swiss and Czechoslovakian capital. One is naturally inclined to wonder where all the consumers are suddenly to be found for so much piping.

There is a demand that the Federal State should promote exports by assuming 70 per cent. of the credit risk on a sum not to exceed 100 million schillings to cover deliveries to Russia, Turkey, China, the South American States, and Greece. For the moment the Government does not seem disposed to accept this heavy risk.

The turnover on the stock and share market is slight. The price index of the Austrian shares negotiated on the Vienna Exchange was 1,339 in November, 1,295 in December and 1,262 in January. The biggest drop was observable in electricity shares and those of the machine and wagon building works. The index of Czechoslovakian shares traded on the Vienna exchange sank from 2,263 to 2,120, and that of the Hungarian shares traded here from 881 to 830. The public still continues to put its spare money into savings deposits or to buy small quantities of fixed-interest stock, which has lately gone up a little in value. The mortgage institutes have been able to place even more mortgages, though they are exercising a certain caution in view of the indebtedness of agriculturists and are examining estates and property very carefully before issuing credits. This is the more important as the value of land has fallen as a consequence of the crisis in agriculture.

At the end of the year savings deposits at the principal institutions in Vienna and the important provincial towns amounted to 1,879 million schillings, an increase of 260 millions as compared with the end of 1929. Unemployment has not yet reached its height. In the middle of January there were 316,993 unemployed in receipt of benefit, while there were a further 42,000 unemployed without benefit. The banks are continuing to reduce their staffs. Issue and stock exchange business is at a standstill, and the accounts about to be published will show profits on interest and commission account only. The National Bank has no intention at the moment of making any further reduction in the Bank rate, though the call for accommodation is very slight and short-term foreign credits are offered in abundance. A modification of the Bank rate is hardly feasible, as the banks and savings banks dare not further reduce the interest they pay on deposits.

ROUMANIA.

Political Situation — New Loan — Proposed Roumanian Bank of Agriculture — Usury Law.

(FROM OUR CORRESPONDENT.)

BUCAREST, January 17.

WITH Vintila Bratianu, who died a few days before Christmas, disappeared a personality who exercised a very far-reaching influence on the destinies of this country during the last ten years. His single-mindedness and patriotism, as well as his undoubted ability, made him very valuable to the Liberal Party and the country. Unfortunately he held an exaggerated opinion concerning the possibilities of Greater Roumania's inherent wealth, and his uncompromising attitude on economic questions resulted in precipitating and aggravating an economic crisis which, through well-known outward influences during last year, has become acute to an unprecedented degree. The same characteristics of the man and the attitude which they prompted him to take on the constitutional question on the return of King Carol, caused a split in his party, thereby jeopardising its very existence, and might possibly have brought about his eventual withdrawal from the political arena.

The leadership of the party is now entrusted to Mr Ducea, the able lieutenant of the two Bratianus, but who has yet to prove his capacity as leader where so far he has been only follower. The indications are that he possesses the confidence of the King, and the chances of the Liberal Party returning to power have undoubtedly been enhanced. It is probable that he will endeavour to bring about a reconciliation with the dissentient section of the party under G. Bratianu. Meanwhile, endeavours are being made by the Government and Opposition parties to come to an understanding on economic questions. If they should be crowned with success a very important step would have been made towards greater stability in economic and administrative measures.

Interest in political and financial circles centres for the moment in the negotiations which are being carried on in Paris for the second issue of the Monopoly Institute loan. The first issue, bearing 7 per cent. interest, was made at the time of the stabilisation at the price of 88, including a 5 per cent. commission to the issuing houses. This loan is now quoted in Bucarest at about 79½. It is reported that the second issue will be made dependent on the conclusion of an arrangement with the foreign holders of certain pre-war municipal loan bonds somewhat on the lines of the arrangement concluded with holders of the Roumanian pre-war State loans. The negotiations have been carried on for a long time already, and now representatives of leading Bucarest banks have been called to Paris in this connection. The wisdom of launching the loan at this moment is questioned in many quarters, as by increasing the burden of payment for interest and sinking funds which is weighing on the Monopoly Institute, it reduces the revenue of the State from this source at a time when revenue from all sources is declining. On the

other hand, funds are urgently needed for many purposes, by no means the least important of which is the maintenance of the rate of exchange in view of diminishing exports and a consequent unfavourable balance of payments.

Two important new Bills have been introduced into Parliament. The first provides for the foundation of the Roumanian Bank of Agriculture with a capital of 650 million lei, 500 millions of which is to be paid by the State while 150 millions are to be found by public subscription. The State will forgo for thirty years all remuneration and amortisation of the capital invested by it, and the funds so obtained will serve to reduce interest and to assist agricultural debtors. The bank will issue bonds to bearer for an amount three times its capital, interest thereon to be guaranteed by the State in lei and in foreign currencies. It is also authorised to issue within the country conversion bonds at par bearing 11 per cent. interest. The purpose of the new foundation is to assist the farmer. The bank will take over, on certain well-defined conditions, debts of agriculturists which are subject to interest of more than 12 per cent. It is evidently hoped to attract foreign capital by guaranteeing the bonds also in foreign currency, but it is doubtful whether the foreign capital will be forthcoming.

The second Bill is aimed against usury. It fixes legal interest at 5 per cent. above the discount rate of the National Bank. This would bring legal interest to the figure of 14 per cent. at the moment. It is actually 12 per cent. now. Interest charges are not allowed to be higher than 9 per cent. above the discount rate of the National Bank. This is more than is charged now in Bucarest, at least by the more important banks, but the provinces complain that the maximum is too low, stating that they work under different conditions and do not enjoy the same facilities as the Bucarest banks. It is very improbable that this law will stamp out usury, but the measure must be regarded as an attempt by the Government to ingratiate itself with the masses of the population, among whom agitation has been carried on for some time with regard to this question.

NORWAY.

Budget Estimates — New Loan — Bank Results — Unemployment.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, January 31.

FOLLOWING the assembly of the new Storting on January 12th, the Minister of Finance presented the Budget Estimates for the financial year 1931-1932. The Budget balances with a sum of 376.5 million kroner, which exceeds that of the preceding period by 1.3 million kroner. Ordinary expenditure amounts to 326.3 million kroner, and capital expenditure to 50.1 million kroner, as against 324.9 and 50.2 million kroner respectively for 1930-31. Among the chief revenue items Customs receipts rank foremost with an estimate of 105 million kroner, against 106 million kroner for the preceding financial year, while direct taxes aggregate 68.5 million kroner, against 67.5 million kroner. The Budget Bill provides for the abolition of the so-called "Beverningsskat" (Consumption or Restaurant Tax), and includes appropriations for the amortisation of the State debt to an amount of 27 million kroner. A 20 per cent. reduction in fares on the State railways is also proposed, and the Bill also provides for the cancellation of the tax on funds, reserved according to the Bank and Joint Stock Companies Act, and for compensation in cases where income is derived from funds that have been assessed previously. Otherwise, the Government have not considered it expedient, under the present difficult conditions, to propose further reductions of rates and taxes.

The new 4½ per cent. Government Loan, amounting to 87 million kroner, of which 30 million kroner have been guaranteed by a syndicate of Norwegian banks and insurance companies, has been offered for subscription from

January 20th at a rate of 96½ per cent. The lists have been withdrawn to-day, and it is estimated that the loan has been fully subscribed, chiefly, of course, by holders of the 1918 Loan bonds, which can be tendered in payment of subscriptions to the new conversion loan.

The money market continues very easy. The note circulation of the Norges Bank has diminished in the course of the month, and on January 23rd stood at 287.3 million kroner. Loans and discounts have also decreased somewhat, while deposits and balances abroad have increased, especially the former. The question of a reduction of the bank rate will, as has been the case lately, chiefly depend on international developments, but there seems at any rate to be sufficient justification for such a step as far as domestic conditions are concerned.

A large number of the private joint-stock banks have now published their balance sheets for 1930. It appears that the turnover, especially in the case of the "big three" in Oslo, shows an appreciable increase, and that the consolidation of the position, that was commenced a few years ago, has now been carried a stage further. According to a computation published in the *Aftenposten* concerning 33 private joint-stock banks, there was an increase of 8.4 per cent. in the item "Interest and Discount" as compared with the previous year; profits (before appropriations for bad and doubtful debts, etc.) increased by 9.4 per cent. and dividends by 4.4 per cent. The average rate of interest allowed to depositors was lower by nearly one-quarter during 1930 than during 1929, while the average discount rate for bills, etc., declined by less than one-fifth, a fact which automatically brought an increase of bank earnings.

Unemployment figures are increasing, and at 28,600 are higher than at the corresponding period of any previous year (except 1927). With an addition of 60 per cent. for districts without labour exchanges, the figure will reach 45,800, as against 43,500 on December 15th last. The commodity price index of the Statistical Central Bureau of Statistics for January 15th is 135, against 136 for December 15, 1930.

NEW ZEALAND.

Export Prices — Farmers' Difficulties — Unemployment — Railways.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, December 20.

THE opening of the export season has brought to New Zealand farmers a new realisation of what the fall in world prices means to them. Three years ago the average price for New Zealand wool was nearly 17d. per lb. The average price received for wool sold at local sales during the present season has been in the neighbourhood of 6d. per lb. Last year the pay-out to dairy farmers was approximately 1s. 6d. per lb. for butter-fat, while at present most dairy factories are paying farmers about 9d. per lb. for their butter-fat. Hides, skins and tallow have fallen heavily in price and the reduction has diminished substantially the returns both of farmers and of the meat export companies. Frozen meat has suffered less from the price decline, but the official index number of all export prices is now only 3 per cent. above the 1914 level, and it is anticipated that the volume of exports, which brought £56 millions in 1928 and 1929, will be worth only about £40 millions for the current season. Local prices paid for farm products are also determined by export prices, hence it is expected that the reduction in the farmers' income below the levels of two years ago may be in the neighbourhood of £20 millions. Up to date, however, production has continued to increase.

So far, the impact of falling prices has fallen mainly on pastoral farmers producing for export, but a considerable part of the demand for the products of the other industries comes from farmers, and a reduction of farmers' income means that further losses will be suffered by the more sheltered producers. Signs of depression are already in evidence. Imports are falling slowly, and despite a substantial increase in customs duties, revenue

from customs has declined. The total bank debits to private accounts, an excellent indicator of business activity, is 8 per cent. lower for the first ten months of 1930 than for a similar period in 1929. Building permits and land transfers also show substantial declines. No adequate figures of unemployment are available, but there is no doubt that it is increasing.

In the circumstances it is not surprising that the farmers are clamouring for reduced costs of production. A recent official index number of farm costs estimates that those costs were recently 64 per cent. above their level in 1914. With prices round about 1914 level, it is obvious that farm production must shrink greatly unless costs of production are reduced. Many representative meetings of farmers have been held and strongly worded resolutions have been passed demanding, first, the suspension or abolition of the Arbitration Court, whose awards have fixed labour costs in many industries at high levels during recent years; second, the abolition of the graduated land tax; and third, drastic reductions in customs duties and other taxation. There can be no doubt that in certain cases interest and rent will have to be remitted during the present year, and if prices do not advance beyond present levels some reductions in mortgages will have to be made. A number have, in fact, been made already. A suggestion of a moratorium on mortgage payments met with much opposition and little support, and the objection of the acting Prime Minister that the Government could not support a moratorium because State institutions held nearly half of the total mortgages in the country, was very significant. Organised labour strenuously opposes any interference with Arbitration Court awards, but in at least one industry a body of unemployed workers has suggested that the award should be suspended in order to enable them to obtain employment.

The Government is procrastinating. The responsibility for dealing with unemployment has been placed on the shoulders of an Unemployment Board. The personnel of the Board is far from impressive and it is plainly groping for a policy. A poll tax imposed under the Unemployment Act, together with a £1 for £1 subsidy from the Consolidated Fund, is expected to yield about £1 million per annum. From this the Board is subsidising relief work at standard wages (14s. a day; a rate introduced by the present Government), which are high enough to attract many impoverished farmers and some farm labourers into the ranks of the unemployed. Despite the strong recommendations of a recent Commission, the Government has so far refused to remove the railways from political control. The returns for the first half-year suggest that the railway deficit on its interest bill for the current year may approach £2 millions. Certain charges have been increased, but a large amount of over-staffing remains and many internal economies suggested by the Commission are still unattempted.

Letters to the Editor.

PROGRESS IN THE U.S.S.R.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I notice that in your article last week on the second year of the Soviet Five-Year Plan, you state that the average wage paid to workers engaged in State industry increased, in roubles, by 12.1 per cent. in two years. You then proceed to cast some doubt on the value of the increase by saying "no satisfactory figures have been given to show what is the real buying power of these wages." Few persons, probably, would challenge your assumption that a measure of inflation has occurred in Russia: according to official returns, currency in circulation increased from 2,642 million roubles in October, 1929, to 4,263 millions in October, 1930, an increase of 60 per cent. in one year, which far and away exceeds the by no means inconsiderable advance in trade turnover. Whereas, however, in a capitalist economy, such inflation would bring about a proportionate or more than proportionate rise in

prices, in Russia 95 per cent. of the goods turnover is transacted in markets where prices are rigidly controlled. In these markets, according to the index published by the Russian State Bank, retail prices were, if anything, slightly lower in October, 1930, than in October, 1929. In the circumstances, we should expect inflation to result in a marked goods shortage, and this can, in fact, be measured by the extent of ration cards and queues. The 12.1 per cent. increase in money wages which you note does not, however, entail a depreciation in purchasing power per rouble, and the worker is considerably better off, since he has a money surplus with which he can purchase those commodities the sale of which is not restricted. Also, there can be no question of the upward movement of "uncontrolled" prices "imposing too great a strain on the morale of the people," when "uncontrolled" goods represent only 5 per cent. of the total available. Prices in the private market can, and will, soar to astronomical heights until private trade finally disappears, but these prices have long since ceased to be a matter of any significance to the Russian worker.—Yours faithfully,

Clapham,

February 10th.

[But if "controlled" supplies are not available, is the worker better off?—Ed., *Economist*.]

PAUL WINTERTON.

GOLD: PRICES: WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am grateful to E. M. D. for his full and reasoned answers to my questions, and to you for allowing full scope to an argument ending in so near an approach to agreement. The difference between us is reduced, as E. M. D. says, to a question of immediate practical policy; and on that I may perhaps add a last word.

E. M. D. argues that while the "immediate need" of a wage reduction in selected industries would be difficult to secure, and a general readjustment between sheltered and unsheltered wages impossible at any early date, my proposal of an all-round cut would encounter "difficulties of the same nature over a wider field" to such a degree as to be valueless. That contradicts my personal experience, no longer quite recent but considerable, in the practical handling of wages questions. I found wage-earners largely impervious to logic, but most responsive to the appeal of equal treatment as they understand it—not the ultra-scientific doctrine of "equal sacrifice" which can only be stated in curves and graphs, but "if anything's to be done, we will all stand in" by a levy of either a fixed sum or a flat proportion of wages (the latter being obviously the way to counter the action of the price-fall). Few workmen will break away from "share and share alike"; most will go into the last ditch if threatened with what they would call victimisation.—Yours faithfully,

C. HARRIS.

Cookham,

February 10th.

THE REMEDY?

TO THE EDITOR OF THE ECONOMIST.

SIR,—I write as a life-long Free-trader who has for fifty years worn that badge, but who now finds himself "perplexed in the extreme." I pay a tribute to the splendid dialectic of your "Second Thoughts on Protection," but though the display is magnificent, the meal is not satisfying.

My troubles are these: (1) Our export industries have been languishing for ten years, not for eighteen months as those of other countries. Can we ever compete in the world's markets against Czechoslovakia, Italy, Japan, etc., and now Russia, unless our standard of living from top to bottom is reduced to something nearer their level. One of the Labour leaders told me that his followers would rather starve and die than consent to a reduction of wages and social services or an increase of hours. Do you think it can be done? Is that what you mean by "industrial reorganisation and adjustment"? If so, why do we not all plainly say so? (2) The Home markets are open to the inroads of all the low standard nations and our manufacturers are beaten there.

My perplexity is this. How are our unemployed ever to be put to work again? Our producers are beaten in the international competitive markets and equally in the Home markets. The Barbarians are upon the civilisations as of old. America will now be in as bad a way as we are in world markets, but they reserve the Home markets for competition amongst themselves.

What are we in England to do? The masters and managers will not willingly give up their golf, motoring, bridge, Riviera, and long holidays. The men will fight to starvation against longer hours, piece-time work, less wages (witness the votes of the Lancashire weavers on Saturday last). They must have their football and ca' canny.

If you have a remedy, please dispense it to us, neat, not covered with jam.

In the middle of last century the men were at their work (to my knowledge) at six in the morning. The masters soon after. Leaving-off time was six at night. This was when England was made.

Now the country by legislation gives 46 hours a week, with bread and circuses, which, being translated, is doles and cinemas, and the Barbarians are upon us. May Heaven and the Economist help us!—Yours, etc.,

Staines.

J. S.

February 12th.

[We do not believe it to be necessary (as our correspondent seems to suggest) to put the clock back in the matter of working hours or the standard of living to the middle of last century. But we do believe, with Mr Snowden, that a temporary "suspension" of progress and temporary all-round sacrifice by every section of the community are demanded by the temporary circumstances of one of the most severe depressions in history. In every class of the community, from the highest capitalist to the humblest wage-earner, earnings must be brought into a proper relation to effective service. The process is not easy, but it has got to be done here, as it is being done in other countries.—Ed., *Economist*.]

THE UNILEVER ENQUIRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In a letter which appeared in the *Economist* of November 29, 1930, I expressed uneasiness as to the figures given in the Unilever report on international middle-class living costs, representing the taxes paid in respect of the earned incomes of families of man, wife and two children of school age in the eight countries under review; and said that it would take some time to obtain an independent statement of the amounts payable. I have since been in correspondence with the statistical authorities of the several countries and am now able to give the purport of their replies.

The question was not easy to formulate. If I asked for the taxation of incomes of the par equivalent of £500, £1,500 and £3,000 per annum, I should get figures on a different base from those given in the Unilever table, inasmuch as the total income in each country was there made to vary with the supposed cost of living; and if I asked for the taxation payable on the income computed by the Unilever inquiries, I should be giving an income figure which included as an important element the taxation item in question. I accordingly asked for figures on both bases and have interpolated, where necessary, to find the approximate taxation on the income which, after the correct tax is deducted, leaves a net income equal to that shown in the Unilever tabulations.

I may say briefly that the taxation figures given in the Unilever report for Great Britain, Germany, Sweden and France are approximately confirmed by my correspondents.

For Holland the nominal figures appear to be correct, but, says my correspondent, "to these amounts should be added the 'personal' taxes on the rent value of the inhabited house, the value of furniture, expenditure on servants, &c., besides which both province and community impose additional taxes, the amount of which is fixed by themselves." My correspondent furnishes me with a printed schedule of the "personal taxes," which appear to be considerable; but I cannot reduce them to a form in which the appropriate amounts could be added to the figures given in the Unilever report so as to make them represent correctly the taxes payable in Holland.

For Denmark the compilers of the Unilever report would appear to have overlooked the fact that "when declaring his income the taxpayer has the right to subtract the amount of tax paid in the year for which the income is being declared"; also, that "in late years the tax rates for Copenhagen have been reduced by 10 per cent." Applying interpolation to the two sets of figures given by my Danish correspondent, the correct figures appear to be approximately £60, £210, and £450; instead of the Unilever £76, £313, and £690.

For Norway, the taxation figures given by my correspondent, adjusted by interpolation to give the same net income as shown by the Unilever inquiry, are £76, £321, and £670, instead of the £100, £461, and £906 given in the Unilever table.

The Belgian figures given in the Unilever report stir my Belgian correspondent to indignation. Apart from other substantial errors of basis, the compilers would appear to have overlooked the fact that "in place of the super-tax there has been introduced a special equivalent tax based on certain elements of expenditure which reflect the style of living of the taxpayer." These include house, servants, horses, motor-cars, boats, &c. These taxes are not easily related in summary

form to the income tax and communal tax, but since they are designed to give the same yield as the former super-tax, it is reasonably safe, says my correspondent, to apply the 1928-9 ratios. On this basis the taxation in Belgium of incomes which, when tax is deducted, yield the net incomes shown in the Unilever table are round about £40, £170, and £750, instead of the Unilever £21, £86, and £187, and Belgium moves, at one stride, from the lowest-taxed to the highest-taxed country.

My uneasiness in regard to the Unilever taxation figures was based on nothing more than a feeling that, in a table where other figures were demonstrably erroneous the taxation figures must be held suspect. This uneasiness was increased by obvious wide discrepancies between the Unilever figures and the only official figures I had readily at hand. The results of these direct inquiries show that my doubts were not groundless.

The subject investigated on behalf of Messrs Unilever is one of very greatest interest and importance. The figures arrived at by the methods and data hitherto adopted are, as I have shown, worthless. May I suggest that the compilers should revise their work in the light of this correspondence and offer to the Royal Statistical Society a paper setting out their data, methods, and results for examination and discussion by the Fellows of the Society; or, if that is not feasible, should publish a report embodying the fullest detail of their data and procedure. —Yours faithfully,

London, S.W.1.

Books and Publications.

AN EXPERIMENT IN INDUSTRY.

THE further historians of industry extend their researches into the detailed history of individual industries and individual firms, the more does it appear that the generalisations of the older economists apply only to "the average"—that is, to nobody. It is generally stated that the growth of industry during the industrial revolution was a happy-go-lucky, one-man, personal affair, in which great fortunes were made without business science, almost without combinations and without care for the employees. But the early history of the famous firm of Boulton and Watt, carefully told and fully documented in this study by Mr Erich Roll,* gives the lie to almost all these statements. No doubt the firm of Boulton and Watt was non-typical in many ways; nevertheless, its history, as shown here, is a very interesting case of a firm developing, within fifty years, from eighteenth-century methods to those usually associated with the last quarter of the nineteenth.

The first part of Mr Roll's study does not add very much, except in documentation, to the admirable brochure of Mr Lord, published some years ago under the title *Capital and Steam Power*. Most students of the period familiar with the early characteristics of the Soho works, with the batty or journeyman system of labour prevalent in the West Midlands, against which Boulton and Watt had to struggle, and with the devious method they adopted of charging for their engines by asking that a proportion of the saving effected in fuel should be paid annually to them—a method which few manufacturers would care to revive to-day and which certainly laid them open to the maximum of disputes. The difficulties of manufacture, also—the difficulties of finding metal-working firms on the spot who could accurately cast the parts of the machines for which Boulton and Watt made the design—are also well known, though, perhaps, all are not aware that, as early as 1780, Boulton was seriously considering the possibility of securing a ready service of spare parts for the repair of his engines. So far, however, these

difficulties, like the unending difficulty of finding good workmen who would not get continually drunk and getting hold of sufficient coin to pay their wages, are not unusual experiences of the period. But in the latter half of this book, Mr Roll recounts the development of the Soho Foundry, Mr Roll recounts the development of the firm into an "efficient modern business," mainly under the influence of James Watt the younger and Boulton's son. In the annals of the second stage many interesting facts emerge, of which the most notable is the amount of "scientific management" that was applied both to the lay-out of the shops, to the routine of work in them, and to the actual speed at which the machinery and the machinist were supposed to work. The work's sick insurance scheme, and the attempts made, in the case of copper production, for example, to get the masters to combine against falling prices by a restriction of output, and a "freezing-out" of the more inefficient concerns, are only two other cases of the same spirit of modernity. An interesting story and a valuable book.

PROBLEMS OF LEGAL REFORM.

THE fruits of much reading and of a good deal of thinking, on possible avenues of law reform are presented by Mr Clair Mullins in the interesting volume which he has entitled "In Quest of Justice."* Of the need for rationalisation in legal as well as in economic affairs Mr Mullins is firmly convinced. The London Chamber of Commerce and other business organisations have been perturbed of late about the heavy costs of litigation as well as its delays and uncertainties, and Mr Mullins, who classes himself with "the progressive minority of lawyers"—he regrets the general conservatism of the profession—feels that very soon it will be recognised that inquiries should be set on foot. Then reforms must come, "for present conditions cannot be seriously defended."

The book, in which the author's proposals for reform are put forward, is made more readable by the layman by reason of the fact that it is pleasantly discursive about the law in fiction, about the personalities of legal luminaries, and so on. Its purpose is quite serious, nevertheless. The author touches on the strictness of our law of evidence, discusses the relaxation of fixed rules allowed by the procedure of the Commercial Court (a section of the King's Bench Division of the High Court), suggests that something should be done by making more use of facilities of this kind already open to the practitioner, and comes finally to his main point. This is to revert to the original idea of the Judicature Acts that there should be only one final appeal from the High Court. The legal members of the House of Lords (to whom a further appeal now lies) would then be left free to undertake constructive work (subject to Parliamentary approval) in reforming our law. They could, it is suggested, gradually codify "our vast judge-made law," and also declare doubtful points of law instead of these being left open, as at present, until some unfortunate litigant comes along with a case involving the question to be decided. This certainly is a controversial point, and English lawyers have always made a stand against rulings on hypothetical questions such as were given under the Roman system. The law lords could also, the author thinks, assist by improving the form of new legislation so as better to ensure that Bills mean what Parliament really intends.

In view of the extent to which business circles have been interesting themselves in the subject, Mr Mullins' book has appeared at a very appropriate time, and his vigorous, though restrained, statement of his proposals is a useful contribution to the discussion of the matter. His survey includes many incidental questions, such as the County Court system, the "poor persons" procedure, bureaucratic justice, and so forth, and upon all of them he has some points to make.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Problems of the Japanese Exchanges, 1914-1926. By Junnosuke Inouye. (London) Macmillan and Company, Ltd., St. Martin's Street. 10s. 6d. net.

A valuable contribution alike to the financial history of Japan and to the study of foreign exchanges.

French-English and English-French Dictionary of Commercial and Financial Terms, etc. By J. O. Kett-ridge. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 25s. net.

This dictionary comes as a boon and a blessing to all business people who have to deal with French publications or correspondence. It is a very good twenty-five shillings-worth.

Britain's Economic Illness. By Henry Somerville. (London) Harding and More, Ltd., 119, High Holborn. 3s. 6d.

The author rejects the various remedies which are being canvassed at present, and suggests instead a form of gild socialism.

The Future of American Industry, Its Problems and Needs. By Magnus W. Alexander. (New York) National Industrial Conference Board, 247, Park Avenue.

Reprint of an address.

Second Interim Report of the Gold Delegation of the Financial Committee. (London) George Allen and Unwin, 40, Museum Street. 1s.

Dawson's Accountant's Compendium. By the late S. S. Dawson. Fifth edition. Revised by A. L. Morell and W. B. Cullen. With an Appendix on Scots Law by A. G. McBain. In two volumes. (London) Gee and Company (Publishers), Ltd., 6, Kirby Street. 50s. net.

A most valuable book of reference, consisting of articles arranged in the form of an encyclopedia.

Taxation as it Affects the Doing of Business Abroad in England, France, Germany, U.S.A. (London) Sweet and Maxwell, Ltd., 2 and 3, Chancery Lane. 7s. 6d. net.

The first volume in a foreign law series published in English, German and French.

Manuel des Valeurs Cotées aux Bourses Suisses Volume II—Obligations. (Basle) Banque Commerciale de Bale.

Includes, in addition to the usual Stock Exchange information, particulars of the currencies and relevant taxation of the countries whose bonds are dealt in on the Swiss Stock Exchanges.

Foreign Trade with Special Reference to the Cotton Trade and to the Payment for a Motor Car from Abroad. By Gilbert Beard. (London) John Heywood, Ltd., 20-22, St. Bride Street. (Manchester) 121, Deansgate. 6d.

An able little pamphlet in which the advantages of foreign trade are skilfully demonstrated by a simple analysis of the Trade Returns.

Production and Trade. By E. G. R. Taylor. (London) George Philip and Son, Ltd., 32, Fleet Street. 12s. 6d. net.

A useful survey of geographical conditions affecting production and trade in almost every country in the world.

The Banker. February, 1931. (London) Financial Newspaper Proprietors, Limited, 20, Bishopsgate. 2s. 6d.

Includes articles on "Gold, Business and Psychology" and "India under Safeguards."

The Bankers' Magazine. February, 1931. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

The leading article is devoted to a review of the Bank Balance Sheets. There is also an article on the census and remedies of the industrial depression.

Wirtschaftsgemässe Gestaltung der Arbeitslosenversicherung. By Dr. Erich Häussermann. (Nürnberg) Verlag der Hochschulschulbuchhandlung Kriecher and Company. 2 Rm.

A plan for the reform of the German unemployment insurance system.

La Crisis Mundial y el Oro. By Carlos Montesino G. (Santiago de Chile) Imprenta Rapid.

A discussion, in Spanish, of the problem of the instability of the value of money.

Les Effets Economiques et Sociaux de la Guerre en Serbie. By Dragoljub Zovanovitch. (London) Oxford University Press, Warwick Square. 8s. 6d. net.

A Carnegie endowment publication.

The National Income of Hungary. By Frederick de Fellner. (Tokio) L'Institut International de Statistique.

An interesting statistical study.

I Mercati del Vino e dell'Olio D'Olive. Il Mercato del Rayon. Il Mercato della Seta. Il Mercato del Grano. By Giorgio Mortara. (Milan) Università Bocconi.

Commodity market studies by an economist of Professor Mortara's standing are particularly valuable in present conditions. The text is in Italian.

Nuovi Problemi di Politica Storia Ed Economia, December 15, 1930. (Ferrara) S.A.T.E.

Includes an essay by Dr. Carlo Pagni on Mr Snowden and his fiscal policy, in which the conclusion is reached that drastic public economy is indispensable to economic revival in this country. The text is in Italian.

Elastizität der Nachfrage. By Jakob Marschak. (Tübingen) Verlag von J. C. B. Mohr. (Paul Siebeck.) 10.50 marks.

A very intensive monograph on elasticity of demand.

Die deutsch-italienischen Handelsbeziehungen. By Dr. Paul Schubert. (Bethel bei Bielefeld) Buchdruckerei. 3.50 Rm.

A monograph on the commercial relations of Germany and Italy since the foundation of the Italian kingdom.

Prices of Illinois Farm Products from 1921 to 1929. By L. J. Norton. (Urbana) University of Illinois, Agricultural Experiment Station.

A statistical account of the course of prices of twenty Illinois farm products during the period 1921-29.

Italy To-day, January, 1931. By Friends of Italian Freedom. (London) Hendersons, 66, Charing Cross Road. 6d.

Contains an article by Professor Salvemini.

Estonia. (Tallinn) Office de Publicité.

A beautifully illustrated brochure with numerous articles on Estonian history, art and economics.

The Coming Rise in

GOLD SHARES

by L. L. B. Angus.
According to Mr. Angus, Gold shares offer higher yields, and better prospects of capital appreciation, than any other group of securities in time of trade depression.
He applies the principles of his work Investment to an analysis of this section of the market.

SPECIALISED BUSINESS SERVICES, 19 Buckingham St., W.C.2 5/- nett.

The Stock Exchange.

GILT-EDGED STOCKS.

THROUGHOUT the last two troubled years, gilt-edged securities, with certain exceptions, have shown their traditional strength. The market has maintained its reputation as a dealer in pounds or in millions, which caters alike for the banker, the insurance company, the widow and the orphan, and offers a safe roadstead for investment resources when the Stock Exchange is swept by its periodical gales.

Though gilt-edged stocks are still the *doyen* of the Stock Exchange, the events of the last sixteen years have not left their position entirely unaffected. Such factors as the increased yield which India has lately deemed it necessary to offer on new issues of stock, and the effect of Australia's past borrowing and present financial troubles on the prices of her stocks, have been fully dealt with in the *Economist*. Even the position of British Government stocks has changed since the war. The Stock Exchange List shows an outstanding total of Government stocks, issued since 1914, of £4,700 millions (omitting short-dated issues such as Treasury bonds), which puts the £276 million of pre-war 2½ per Cent. "Consols" in the shade. The "cover" for interest and principal is, naturally, less extensive than in pre-war days. The total tax revenue of Great Britain in 1915-14 represented about 7 per cent. of the national income and the service of the national debt absorbed 15 per cent. of the total tax revenue. In 1930-31 tax revenue calls for 17 or 18 per cent. of the national income, and the debt service for

44 per cent. of the tax revenue. Yields on long-dated British Funds of 4½ to 4¾ per cent. to-day compare with £3 11s. 6d. per cent. on "Consols" in July, 1914.

The rise in gilt-edged prices during recent months has been welcomed by the whole financial community. Before its continuance can be confidently predicted, however, its underlying causes demand careful analysis. While the prices of British Government stocks, in the last resort, reflect the world's appraisal of British Government credit, quotations on any given day may be due to many other factors. It is a text-book axiom that cheap and dear money, other things being equal, involve, respectively, high and low prices for gilt-edged stocks, while long-period changes in the price of capital—exemplified by the decline in the average rate offered on new bond and debenture borrowings in London from 8.09 per cent. in 1921 to 5.96 per cent. in 1930—are also a relevant factor. Stock Exchange and business depressions, like that of 1930-31, again, bring many millions of "unemployed" resources temporarily into the gilt-edged market. While these conditions are largely uncontrollable by the British Government, the latter can influence the price of the Funds in innumerable ways; more particularly by its policy as regards expenditure, taxation, debt reduction, new borrowing, the conversion of maturing liabilities, and by changes in the proportion of floating to funded debt.

The interplay of these various forces, during the last decade, can be traced in the chart on the previous page, which shows, side by side, the movements, since 1920, of Bank rate, 5 per Cent. War Loan and two long-term Government stocks. On the whole, the impression given is disappointing. Until money rates began to fall, towards the end of 1929, the advance in gilt-edged prices which followed the cessation of war and post-war loan issues would seem to have been arrested for nearly eight years. The chart shows a certain correlation between money rates and gilt-edged prices, but it is difficult to dissociate the lack of resiliency shown by the latter between 1922 and 1929 from certain features of British financial policy. The following table is significant in this connection. It reveals that the period of large Budget surpluses came to an end in 1923-24, that the expenditure side of the Treasury balance sheet has more or less steadily increased since 1924-25, that the amounts actually applied to debt reduction have averaged £42 millions annually during the last five financial years, against £117 millions in the previous quinquennium, and that while debt reduction and conversion operations have slightly relieved the annual interest burden of the debt (apart from that of Treasury Bills and Savings Certificates), they have not greatly reduced its nominal total:—

(000'000 omitted.)

Financial Year ended March 31.	Total National Revenue.	Total National Expenditure.*	Surplus or Deficit.	Amount Actually Applied to Debt Reduction. ^a	Total Charge for Debt Interest and Management. ^b	Total Dead-weight Debt on March 31.
1914	£ 198	£ 197	+ 1	£ 8	£ 17	£ 650
1921	1,426	1,195	+ 231	252	328	7,574
1922	1,125	1,079	+ 46	71	307	7,554
1923	914	812	+ 102	125	299	7,742
1924	837	769	+ 68	88	307	7,541
1925	799	795	+ 4	49	312	7,598
1926	812	826	- 14	36	308	7,559
1927	803	842	- 39	23	319	7,555
1928	843	839	+ 4	65	314	7,501
1929	835	818	+ 17	57	311	7,560
1930	815	829	- 14	23	312	7,479
1931	873†	871†	+ 2†	...	...	...

* Including sinking fund.

^a Budget estimates. In addition, the Colwyn Committee pointed out that £87 millions in cash, mostly due to non-recurrent transactions, was applied to debt reduction between 1920-21 and 1925-26. These extra moneys may have totalled about £100 millions by the end of the current financial year.

^b Total interest charges, exclusive of amounts for Treasury bills and National Savings Certificates, have been as follows: 1923-24 onwards (in millions)—£281, £281, £275, £275, £272, £256.

It is clear that investors in gilt-edged securities, whether they are endeavouring to frame a short-term or a long-term policy, must give the closest possible attention to the British budgetary position. It is not too much to say that the course of gilt-edged prices in the last twelve months has been a game of "pull-devil-pull-baker," in which cheap money, in a trade depression, has triumphed over definitely unfavourable "Exchequer" influences. The temporary check to rising values last April may be associated with a Budget which endeavoured to meet enhanced revenue requirements mainly by increased direct taxation. To-day the Budget of 1931-32 is beginning to cast its shadow over the market. As yet there are few tangible signs of a speedy upswing in trade and industry which, by raising the national income, would, *pro tanto*, alleviate the burden of higher taxation.

Market disquietude, however, with the trend of British public finance, has been lately intensified by two developments. The first is the statement by the Treasury, in its evidence submitted, on January 29th, to the Royal Commission on Unemployment Insurance, that "continued State borrowing (for unemployment relief) on the present vast scale without adequate provision for repayment by the Unemployment Fund would quickly call in question the stability of the British financial system." Borrowing for unproductive purposes, the Treasury declared, was now on a scale which in substance obliterated the effect of the Sinking Fund. This year, it was declared, the Unemployment Fund would borrow from £33 to £36 millions from the Treasury, and in the coming year would borrow £40 to £50 millions, or even more. This official description of unemployment relief as a Danaides Jar into which vast loans are being poured in order to relieve current State obligations at the expense of the future, shook

the confidence of the gilt-edged market more than any other event of recent months. Its effect was greatly intensified this week by Mr Snowden's grave pronouncement on the national financial position, on Wednesday, and, even more by the Ministry of Labour Memorandum, issued on Thursday, covering a proposed increase of £20,000,000 in the borrowing powers of the Unemployment Fund, and an extension of Transitional benefit. The significance of these developments is discussed on pages 331 and 338 of this issue.

A second arresting influence has been the impression that a conversion operation of 5 per Cent. War Loan—the prospects of which were eagerly canvassed a few months ago—is by no means certain to take place during the present spell of cheap money. To-day, the high yield of £4 16s. per cent. on War Loan (which compares with one of £4 8s. per cent. on 4 per Cent. Consols, and £4 6s. per cent. on 4 per Cent. Funding Loan) is a resultant of the theoretical possibility that the £2,096 millions of this loan, with its Treasury option of repayment at three months' notice, will be converted on a lower interest basis at any time, and the fear (to which Mr Snowden's statement of February 5th regarding the "foolishness" of rumours of conversion operations perhaps unintentionally appeared to give confirmation) that conversion may, in fact, be indefinitely postponed. Some weeks ago there was a tendency for War Loan to fall or remain stable, while long-dated stocks were rising. An opposite tendency in the next few weeks might be a sign that certain holders were exchanging from long-dated stocks into War Loan on the argument that if no conversion can be successfully carried out in the near future, the higher yield of nearly ½ per cent. on War Loan becomes very attractive. From 1922 to 1929, as our chart shows, this stock obstinately remained about par. Its huge nominal amount, with its "risk" of repayment in 1929 or later, has for years been a millstone round the neck of the British Government, preventing its credit from moving very far from a 5 per cent. level. If the current state of the Government's finances, or any other cause, were to postpone the conversion of this stock until the next spell of abnormally cheap money, whenever that might be, the prospects of a further significant rise in gilt-edged prices, over the next few months, would be greatly reduced.

So much for "Treasury" factors. Those who have recently followed the day-to-day movements of gilt-edged stocks will, however, be aware of the extreme sensitiveness they have shown to changes in the prospects of the London short loan market. Three weeks ago, when the return of the Governor of the Bank of England from the Continent was followed by official intervention to screw up discount rates in the money market, gilt-edged prices immediately reacted to the suggestion that the central authority had decided to take an independent initiative in checking the outflow of gold from the national reserves, and, if other means failed, would take the ultimate step of raising Bank rate. The unsettlement caused by this fear left the market unusually susceptible to the influence of rumours—like last week's report of an enormous "Development Loan"—which would normally have obtained slight credence. The threat of dearer money has been averted for the time being, but it remains as a disturbing possibility in the background.

The general conclusions suggested by this survey are that the 1930 rise in gilt-edged stocks was based on cheaper money rather than on any permanent increase of confidence in the financial position of Great Britain. But in 1931, to the normal reactions of trade depression on the national income and the Budget, there has been added the immediate effect of increased unemployment in the shape of increased Treasury borrowing for the Unemployment Fund. Consequently, the world trade depression, which by bringing about cheap money has raised the prices of gilt-edged stocks, is now strengthening the downward tendency by lessening confidence in the budgetary position. During the next few weeks the latter factor must become increasingly prominent, even though the money market outlook may remain satisfactory. A recovery in world trade, whenever it comes about, will ultimately involve higher money rates, but this is scarcely a factor of which investors need take immediate cognisance.

ROYAL MAIL REVELATIONS.

White Star Line preference shareholders and Royal Mail debenture stockholders came to last Thursday's meetings prepared for unpleasant surprises, and were not disappointed. The gist of Sir William McIntock's frank and lucid *expose* was that, if the group assets were valued on a reasonable basis as "going concerns," the whole of the Royal Mail ordinary capital of £5,000,000 had been lost, and only £1,809,855 of the £3,800,000 of preference capital was represented by free assets. The White Star Line had lost the whole of its ordinary capital, and possessed surplus assets of no more than £3,952,320 against its preference capital of £5,000,000.

Sir William's remarks were confined almost entirely to an unimpassioned professional statement of facts, with a minimum of comment. Taking, first, the White Star Line, Sir William showed that the company's main assets are of a threefold nature. Its shares in the Oceanic Steam Navigation Company have a present value of £3,000,000, against a book value of £7,000,000. It holds 56 per cent. of the ordinary shares of Shaw, Savill and Albion, which are to-day valued at £30 a share, against a purchase price of £42. It owns seven vessels of the Aberdeen Commonwealth Line, valued at £1,900,000, against a book value of £2,232,684. All these estimates (together with many others made in the course of the investigations) are to be regarded with reserve. They are arrived at on a "going concern" basis, and are admittedly well above present "break-up" value. Of the 4,000,000 £1 ordinary shares in the White Star, which were issued to companies within the Royal Mail group, £1,000,000 had been paid up when the Voting Trustees took control, and the whole of the remaining £3,000,000 has since been called. Of this total £2,500,550 is still due, and it is hoped that eventually £2,275,550 will prove to be "good," though at present only the Union Castle Company is in a position to meet its calls.

The liabilities of the White Star Line are onerous. They include: (1) £2,350,000 due to the American vendors of the shares of the Oceanic Steam Navigation Company, due in 1936; (2) £400,000 owing to the vendors of the Shaw, Savill and Albion shares (payable in annual instalments of £100,000); (3) £1,320,000 due to the Australian Government for the Commonwealth ships (payable in eight years at £165,000 per annum); and (4) £350,614 owed to Shaw, Savill and Albion for expenditure incurred in reconditioning certain vessels.

The finance of the White Star deal would appear to have been ill-advised from the outset. Firstly, in the opinion of the Voting Trustees, the price of £7,000,000 paid for the Oceanic Company's shares was extravagant. Secondly, there was little justification for the raising of so large a proportion as £5,000,000 of the company's capital requirements by fixed interest shares, or the guaranteeing of the preference dividend (requiring £325,000 per annum) in perpetuity by the Royal Mail Company. Thirdly, the White Star Company undertook commitments (up to April, 1928) of £10,960,000 and raised only £6,000,000 in paid-up share capital (preference and ordinary) leaving £4,960,000 on loan, at a very heavy interest charge. Finally, the ability of the White Star to pay its preference dividends was made to depend on the receipt of dividends from its principal operating subsidiary, the Oceanic Company. The latter's financial resources were strained by its efforts to make annual distributions—so much so that the 1929 payment was rendered possible only by an addition to the company's already heavy bank overdraft.

The Royal Mail Company's position is similarly involved. The Trustees value its fleet and its investments in fully owned subsidiaries at £6,000,000, against a book value of £9,371,734—the £1,000,000 investment in R.M.S.P. *Mea Transports* being treated as of no value. The "cut" in the valuation of the partly owned subsidiaries is even more drastic, investments of £8,598,316 being reduced to about £3,000,000. Of this, shares in the Union Castle and Coast Lines companies account for as much as £2,600,000. In addition, the company has freehold and leasehold properties valued at

£1,133,353. Altogether, the assets of the Royal Mail Company on a "going concern" basis are put at £13,965,573, and the actual liabilities, as at December 31, 1930, at £12,156,018. The surplus of £1,809,855, however, is dependent on the liabilities which may emerge in respect of certain contingencies.

The past dividend policy of the company has been injudicious, to say the least. For the four years 1926 to 1929 the published profits were arrived at after transferring large sums from internal reserves and taking credit for dividends from fully-owned subsidiaries, which the latter, in fact, did not earn. During these years, when adjusted trading results would have shown substantial losses, the Royal Mail Company paid dividends to its shareholders aggregating over £1,000,000. Last year the Royal Mail Company made a loss of £345,749 before providing for depreciation or the losses of subsidiaries, but before crediting certain profits on the sale of ships and investments.

The debenture and share holders were clearly impressed by the gravity of the facts revealed at the meetings and their comments showed a commendable restraint. The resolutions for a moratorium to the end of June and the raising of £250,000 ranking with the 4½ per cent. debentures, were passed by large majorities, and arrangements were made for the appointment of a committee representing the Royal Mail preference shareholders, to consult with the Voting Trustees in the preparation of a scheme dealing with the whole position.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
February 17.	February 19.

Though the market again found it difficult accurately to weigh up the value of conflicting tendencies, a distinctly better tone prevailed in most departments. Whispers of a forthcoming trade revival met with considerable scepticism, despite the receipt of more satisfactory news from America. The fact that the prospect of dearer money had temporarily receded into the background failed to offset the growing fears with regard to the forthcoming Budget, which Mr Snowden's speech on Wednesday night did little to allay. Weak spots were again in evidence, noticeably in Australian securities and Home Rails, but with the revival of Continental interest Internationals led a general forward movement in other markets.

Gilt-edged opened in good form, and for a time the Conversion loans went ahead, while War Loan were a strong feature, but Mr Snowden's speech, and the Ministry of Labour memorandum on unemployment insurance brought about a marked reaction. Indian loans were dull on the renewal of nervous selling, combined with the quotation of the largely oversubscribed 5½ per cent. issue at a discount. Australians registered a complete break on Monday, following the receipt of news of Mr Theodore's inflation proposals and Mr Lang's threat of default in payment of interest. Declines of from seven to eleven points occurred in most descriptions, and quotations became nominal. Small improvements occurred later when the Loan Council in turn repudiated Mr Lang, but New South Wales bonds relapsed further.

Foreign bonds appeared less satisfactory than formerly, Brazilians revealing reactionary tendencies, despite an improvement in the milreis. A feature was the temporary decline in Chinese counters, on unconfirmed rumours that China would ask for a moratorium on her gold bonds if the price of silver declined further. The silver position is discussed in a Note on page 362. Peruvians were dull and unsupported. Among Europeans, City of Vilna bonds went ahead on a favourable official announcement with regard to a settlement (discussed on page 360). German issues were well maintained, the Nazi demonstration having little effect on quotations.

Home rails were better on Monday, but quickly relapsed as the day of dividend reckoning approached. Fears were

largely justified when it was announced that, though the Great Western would pay 5½ per cent. for the year, the London Midland and Scottish would pay only a further 1 per cent., making 2 per cent. for the year, of which no more than ½ per cent. had been earned. The ordinary fell to 27½, while most other issues were marked down. Among foreign rails, Argentines were a better market on improved traffic receipts, while several improvements were recorded among Americans.

In the industrial market, interest centred in the Transatlantic section, where shares continued to forge ahead. International Nickels, Columbias, and Radio Corporation were in keen demand, while Cables and Wireless were exceptionally firm on Thursday. Leyland Motors advanced on the news of a 20 per cent. dividend, which came as a pleasant surprise to the market. Textiles were mainly firm, in spite of the gloomy outlook in Lancashire, but Courtaulds continued to evince weakness pending the expected dividend announcement. Royal Mail stocks were marked up in anticipation of a favourable outcome of Thursday's meetings, which are dealt with in a leading article on page 354. Swedish Match and Kreuger and Toll suffered from profit-taking, but Unilevers remained firm, together with others in the provision group. Harrods added a fraction despite the fall in profits. Guinness were firmer on the usual interim dividend, while Coal and Engineering shares were harder for choice. Newspapers improved, but bank shares, especially Australians, were less satisfactory.

Oil shares opened with a fresh burst of strength, which was not maintained. Eagles were again in demand from Paris, and Royal Dutch were bought from Amsterdam, but quieter conditions obtained later in the week. No expansion of business was witnessed among rubber shares, but Paris continued to support her favourites, and the tone remained steady. Teas came in for renewed selling.

In the mining share market fresh support was forthcoming for gold-mining shares, and Kaffirs again found favour, though a certain inactivity became apparent on Thursday. West Rand advanced on unconfirmed rumours of a good "strike," but Central Mining drooped. Business in Rhodesians was at first almost non-existent, but the market hardened, and "Chartered" advanced, while the Northern issues at last showed signs of life. De Beers advanced in mid-week, but failed to hold their rise, and Australians were weak in sympathy with Government bonds. Tin shares showed some improvement, though no fresh news came to hand with regard to the "quota" scheme. Tintos and Tharsis advanced sharply on improving copper prices and Paris support.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Early this week the leading price averages broke into new ground for the year, with the bears in full retreat. The market's activity (which is described at length in an "Investment Note" on page 358) was based on technical factors rather than on any decided change in the position of trade and industry, and had only a limited amount of public investment support behind it. Nevertheless, prices put up a strong resistance when the inevitable professional profit-taking appeared on Wednesday on the eve of the "Abraham Lincoln" holiday. The report of the railroads on the consolidation question, published on Tuesday, declared that no substantial working economies could be expected from consolidation, which on other grounds was declared impracticable. The Federal Court has approved the merger of Standard Oil of New York and Vacuum Oil, despite the Standard Oil dissolution decree of 1911. The Government is to appeal against the decision in the Supreme Court. The failure of the appeal would probably be followed by negotiations for a merger agreement between Standard Oil of New Jersey and Standard of California.

INVESTMENT NOTES.

The Stock Exchange and Mr Snowden's Speech.—Mr Snowden's speech on Wednesday, which is discussed elsewhere in this issue, was closely examined on the Stock Exchange. Its immediate effect was a general fall in the longer-dated British Government stocks, such as 3½ per Cent. Conversion, though 5 per Cent. War Loan was hardly affected, the stock being regarded nowadays as a more or less short-dated security. The vagueness of the speech, writes a Stock Exchange correspondent, caused a certain amount of selling, though, apart from its intangible character, Mr Snowden's pronouncement was considered a step in the right direction. That the speech might cause a cleavage in the Labour ranks was fairly generally assumed, but speculation was concerned mainly with the concrete ideas underlying Mr Snowden's somber warning. One theory was that the Chancellor

was contemplating increased death duties, a super-surtax, or some other imposition that would strike directly at large accumulations of wealth. Another was that Mr Snowden might be contemplating an appeal to holders of British Government fixed-interest securities to accept lower rates of interest, but this opinion was not given credence in the more responsible quarters. Until more tangible announcements are made by Mr Snowden as regards the direction of his promised economies, the Stock Exchange markets will be inclined to suspend final judgment. In the meantime, however, the initial reaction of the "House" has not been favourable. When the Chancellor's pronouncement was followed, on Thursday, by a Ministry of Labour memorandum covering an increase in borrowing by the Unemployment Fund from £70 millions to £90 millions, the marking down of security prices spread from the Consol market to shares of the industrial class.

A New York Recovery.—A recovery on the New York Stock Exchange developed this week with surprising suddenness. Strong buying was seen on Saturday last, and on Monday and Tuesday the "bears" were rushing to cover. As usual, sentiment was not influenced so much by trade returns—which showed no more than the usual seasonal improvements in certain industries—but by an outside event of unexpected character. In this case it was a political event. Business sentiment had been depressed by the demand, strongly voiced by Senator Borah, for the introduction into American economies of something resembling a "dole" system, as well as by the prospect of legislation on the Veterans' Bonus proposal. After the Democrats had threatened to force an extra session of Congress if relief for the unemployed were not voted, the outlook for Wall Street seemed black. When, however, a compromise was reached whereby President Hoover approved of a loan of \$30,000,000 for the drought areas in return for the passage of his appropriation measures, confidence returned to the stock market, and the buying began. From February 2nd, when common stocks touched their last low level, the Dow Jones indices have now shown a rise of 10½ per cent. for industrial shares, and 2 per cent. for railroad stocks as the following table will show:—

	Feb. 2.	Feb. 3.	Feb. 4.	Feb. 5.	Feb. 6.
20 representative rail shares.....	108.26	108.54	107.97	107.74	107.43
30 industrial shares ...	164.48	169.88	171.45	169.36	170.01

	Feb. 7.	Feb. 9.	Feb. 10.	Feb. 11.
20 representative rail shares.....	107.78	109.00	111.17	110.48
30 industrial shares ...	172.98	177.45	181.09	181.97

Rises were well-spread throughout the list, but there were numerous special advances as a result of "pool" operations and drives against the "short" interest. Representative stocks are shown in the next table:—

	Price Feb. 2	Price Feb. 11		Price Feb. 2	Price Feb. 11
Anaconda	32½	37½	Radio Corpora- tion	15½	18½
Electric Power and Light ...	47½	51½	Standard Oil of New Jersey...	47½	50½
General Motors	38½	45½	Union Carbide...	59½	63½
North American	70½	82½	United Carbon...	26½	27
Paramount	45	49	U.S. Steel	140½	146½

The influence of New York was immediately felt on the London Stock Exchange, International Nickel and Columbia Graphophone being especially prominent. Both Paris and Amsterdam joined in the upward movement, and oil shares in particular benefited from the attention of both these centres. To what extent the public has participated in the "bull" movement it is difficult, at the moment, to gauge, but the increasing volume of dealings indicates that something more than the usual "professional" or technical recovery has been in progress. In the two-hour session on Saturday last, 1,200,000 shares changed hands, as against 1,700,000 on the whole of the previous day. On Monday dealings increased to 4,100,000, on Tuesday to 4,800,000, and on Wednesday to 4,700,000. Although optimism is tempered in most quarters by the expectation that no quick recovery is possible in the

present state of world trade, it may be that sentiment in New York has now changed for the better. It will be interesting to watch its immediate development in the stock markets.

Home Railway Dividends.—This year's batch of home railway dividends naturally makes unpleasant reading for stockholders. The Great Western alone has borne out the expectations of the more optimistic section of the market, though its total dividend is reduced from 7½ per cent. to 5½ per cent. The Southern has halved its deferred dividend, and the London Midland and Scottish is paying a final dividend of 1 per cent. entirely out of reserves. The total L.M.S. payment of 2 per cent. falls by 1 per cent. to attain the minimum laid down in the Trustee Acts, and the company's prior stocks revert to "Chancery" status:—

		Dividends.				
	Stock.	1925.	1927.	1928.	1929.	1930.
L.M.S.	Ord.	3	4½	5½	4½	2
G.W.R.	Ord.	3	7	5	7½	5½
S.R.	Def.	1½	2	2	2½	1½

The Metropolitan Railway is paying a total of 3½ per cent. for the year, against 4 per cent. for 1929. This setback is due less to a fall in net revenue than to enhanced debenture interest requirements. Though the reductions had been approximately discounted in the other cases, the ordinary stocks were weak following the announcements, and the prices of London Midland and Scottish fixed interest stocks were marked down on their change of status.

	Highest and Lowest Prices.				Present Price.	Yield at Present Price.*
	1929.		1930.			
	High.	Low.	High.	Low.		
L.M.S. Ord.....	59	47½	57½	31	27	£ s. d. 7 14 0
G.W.R. Ord.	90½	78½	94	62½	67½	8 11 0
S.R. Def.	34½	27½	32½	21½	19½	6 18 0

* After deducting final dividend.

The London and North-Eastern dividend has not yet been declared. A small payment (from reserves) is expected on the preferred ordinary. The relatively strong position of the Great Western becomes increasingly clear, year by year. The dividend policy of the London Midland and Scottish is difficult to understand. The board might conceivably have decided to make a special effort to maintain the full trustee status of its stocks—even at the cost of drawing on reserves to the extent of about £2,300,000, in order to pay a 3 per cent. ordinary dividend—on the ground that any other policy would have prejudiced the company's future borrowing power. On the other hand, the directors might have argued that, in a severe depression, the end of which was not in sight, conservation of available resources was an obvious duty. On this reasoning, as no earnings were available for the payment of a final dividend, they might have restricted the year's distribution to the 1 per cent. interim paid last July. As things are, they have laid themselves open to the accusation of making the worst of both worlds. Under Clause 1 (1) (r) of the Trustee Act of 1925 and Order XXII (Rule 17) of the Supreme Court the prior charges and preference stocks of the railway will remain eligible for the investment of trust funds in England and Wales so long as the railway pays any dividend whatever on its ordinary stock. In Scotland (where London Midland and Scottish stocks have been widely held since the amalgamation with the Caledonian and other Scottish lines), the debenture stocks will remain eligible investments, but the 4 per Cent. preference 5 per cent. redeemable preference and 4 per Cent. preference (1923) will no longer be eligible for new investment, though trustees are under no obligation to sell their existing holdings. Thus both the great British

railways, which have a heavy stake in the North and in the country's basic industries, have found it impossible to meet the full provisions of the British Trustee Acts—an eloquent commentary on the state of the great export trades, the loss of the railways' former "monopoly" position, and, it must be added, on their policy of "dividing profits up to the hilt" in previous years.

General Store Profits.—The extensive fall in prices, and the publicity given to the financial difficulties of Waring and Gillow affected the market for store company shares last year. Many of the leading concerns make up their accounts during January, and their reports will be available during the next few weeks. The preliminary figures so far issued suggest that the companies have experienced, on the whole, less unfavourable conditions than might have been expected. Though Harrods' profits have fallen from £834,000 to £752,000, the company has maintained its 20 per cent. dividend, without dividing the whole of the year's earnings. Its subsidiary, D. H. Evans, actually records a small increase in profits (from £110,000 to £116,000) and has raised its dividend from 25 per cent. to 30 per cent. Maple and Company show an appreciable falling off in earnings. These would appear from the preliminary statement to be in the neighbourhood of £320,000, against £402,000 last year, and the dividend is reduced from 12½ per cent. to 9 per cent. The large provincial house of Lewis's, however, which has stores in Liverpool, Manchester and Birmingham, has shown a gratifying increase in earnings from £774,000 to £866,000, and has maintained its dividend. The figures are given on another page. On the whole, these results are not surprising. The retail business of the country has been maintained remarkably well throughout the depression, as the Board of Trade indices show. Though profit figures have been struck after writing down stocks to current values, the fall in retail prices has attained nothing like the catastrophic dimensions of that in wholesale prices and is scarcely

likely to have much exceeded 10 per cent. on the average. The process of adjustment between wholesale and retail prices may proceed further during the next few months, and it is quite possible that in a year's time the large stores may find it necessary again to write down stock values to some extent. Inventories, however, are in no case excessive, and provided retail business maintains its recent comparatively satisfactory record prospects are reasonably good in the case of well-managed companies which have no embarrassing outside commitments.

London Power Company.—The report of the London Power Company consists of 135 words, and is a meagre document in view of the size and importance of the undertaking. During 1930 the output increased from 733,238,288 units to 819,438,020 units—an increase of 11.75 per cent. as compared with 23.46 per cent. in 1929. The kilowatt demand increased by 4.77 per cent., against 11.45 per cent. The following concerns are now controlled by the London Power Company:—Brompton and Kensington, Central Electric, Charing Cross, Kensington and Knightsbridge, London Electric, Metropolitan, Notting Hill, St. James and Pall Mall, and Westminster. All these take their electricity from the company until 1971, (when all will be handed over to the Joint Electricity Authority), except the Metropolitan, which has bound itself only for ten years. The London Power Company's capital of £50,000 is held by the constituent companies, the investing public being interested in the debenture stock, of which £13,608,400 was outstanding on December 31st last. No issue was made by this company during 1930. The following table shows the results for the past three years:—

	1928.	1929.	1930.
Total receipts	1,651,864	1,953,447	2,043,388
Generation, repairs, &c. ...	999,961	1,062,652	1,066,917
Sinking funds	271,740	316,643	406,593
Debt interest	377,163	571,152	566,878
Ordinary dividend—			
Amount	3,000	3,000	3,000
Per cent.	6%	6%	6%

The sinking funds and interest on debentures were just covered in 1930. Should it, at any time, be impossible for the company to meet these charges, each constituent concern will provide a percentage of the deficiency equal to the proportion the amount of electricity purchased by it during the year bears to the total amount of electricity sold by the company during the period. The work on the Battersea site is progressing, and the plant of the first section (130,000 k.w.) is on order. The company's 5 per cent. debenture stock touched 104½ last year. At the present price of 103 the stock yields £4 17s. 1d. per cent.

Leyland Motors.—This company, after accumulating nearly a million to the debit of profit and loss during the post-war slump, has now rehabilitated itself in distinctly creditable fashion. A dividend of 20 per cent. has been declared on the ordinary capital, representing the first payment of this kind since 1919. The gross profit for the year ended September 30 last was £699,000, a decline of £62,000 as compared with the previous year, and £180,000, as against £120,000, is to be added to the reserve fund. In 1929 the company paid the arrears for seven and a half years on the 7½ per cent. cumulative preference shares, wiping out the arrears to December 31, 1927, and in June last the arrears were extinguished. This paved the way for a resumption of the payment of the ordinary dividend. The net profit would appear to

INDUSTRIAL ENGINEER, trained CIVIL AND MECHANICAL (47) A.M. Inst. C.E. 9 years Chief Engineer, largest manufacturing company in Australia. Extensive knowledge conditions all States. Will advise on business, financial and technical sides, firms interested in Australian trade. Will investigate schemes on spot if required, arrange agencies or manufactures in Australia. London University training. Good war record.

Box 31. ECONOMIST, 8 Bouverie Street, London, E.C.4.

be in the region of £450,000, assuming that the amount of £66,000, mentioned as to be carried forward, is the balance of the net profit after paying dividends and making the allocation to reserves. At the present price of 52s. the yield on these shares is £8 6s. 8d. per cent. The market had been inclined to adjust its dividend estimates downwards before the announcement, and appreciable activity subsequently developed in the ordinary shares.

Imperial Tobacco Company.—The accounts of this great tobacco combine for the year to October 31st last serve to strengthen the excellent impression given by the preliminary figures (discussed in the *Economist* last month). Increasing consumption of tobacco and cigarettes and declining prices for leaf have combined to raise profits from £9,967,098 to £10,177,046, and ordinary dividend from 23 per cent. to 23½ per cent., out of 24.9 per cent. earned on the ordinary capital.

	1928.	1929.	1930.
Net profit	9,599,706	9,967,098	10,177,046

To reserve	500,000	487,925	500,000
Other allocations	250,000		
Carried forward	1,169,098	1,176,468	1,190,539

† Plus share bonus of 25 per cent.

* Tax free.

Some £500,000 is transferred to reserve account, which now stands in the balance sheet at £5 millions, and £1,190,539 is carried forward to the next account, against £1,176,468 brought in. The company's financial position is immensely strong, no less than £10 millions of assets taking the form of Government and trustee stocks. Stock-in-trade, including leaf in transit, is down by nearly £400,000, but whether the decline is due to the reduced cost of raw tobacco is not stated. Cash totals £4,667,638, against £4,426,579. At the present price of £4 7s. per share, the £1 ordinary shares give a yield of £5 8s. per cent., tax free, allowing for a final dividend and bonus of 16½ per cent.

City of Vilna Bonds.—On February 5, holders of City of Vilna 5 per cent. bonds were notified by their committee that the payment of interest coupons would be resumed on May 15th next. This followed on a statement of August 15th last, in which the committee advised bondholders against disposing of their bonds at the prices then ruling in the market. The latest circular reproduces a letter, dated February 5th, from the Commercial Counsellor of the Polish Legation in London, declaring that the Ministry of Finance, Warsaw, has requested the City of Vilna to make arrangements for the payment of the coupon dated May 15th next, and has also decided that the service of the loan shall be regular. This has been interpreted as an intimation that the payment of both interest and principal is now guaranteed by the Polish Government. The last coupon was cashed in London on May 1, 1915. The question of dealing with arrears to November 15, 1930, is now under consideration, and the committee have hopes that a substantial payment will be obtained in the near future. Vilna was formerly a most important railway centre between Eastern and Western Europe. In 1929 its population was 190,000, against 218,000 in 1912, when the loan was floated. At present some £446,820 is outstanding of an original sum of £449,160 issued at £96 per cent. Poland's decision has given considerable satisfaction in London, and the resulting enhancement of her prestige may have valuable results in the future, she desires to utilise the financial facilities of this market. The City of Riga might well follow her example, and end a default which has no extenuating feature.

New Capital in 1930—Nature of Borrowers.—In the *Economist* of January 31st we discussed the price of new capital in London during 1930. The figures given in our article may be supplemented by the following table, which shows the main groups of borrowers during the year:—

NATURE OF CAPITAL OFFERED ON THE LONDON MONEY MARKET.

	Total. 1929.	Ordinary Stocks or Shares. 1930.	Preference Stocks or Shares. 1930.	Debentures, Bonds, &c. 1930.	Total. 1930.

† Five per cent. Conversion Loan £67,000,000, less £1,600,000 net encashments of National Savings Certificates.

It will be seen that industrial borrowings were much less considerable in 1930 than in the previous year. In 1929, governments and municipal authorities, at home and overseas, raised £108 millions of new capital in London, and general industry (including transport) some £177 millions. Borrowings in the former category, however, increased in 1930 to £181 millions, while those in the latter fell to £81 millions. In other words, "public" borrowers accounted for over two-thirds of the total new issues in London last year, and "industrial" borrowers for less than one-third. The figures are an eloquent commentary on the effect of trade depression on the capital market.

Oil Shares.—The activity in the oil share market which developed this week does not appear to have had its origin in any striking development in the oil industry. Indeed, the production of crude oil in America for the week ended February 7th increased by 30,550 barrels to 1,116,500 barrels a day. Trouble, in fact, has been encountered in maintaining the restriction of output programme. The independent producing companies in Oklahoma have protested that their State is bearing more than its fair share of the restriction plan. The operators in the Oklahoma City field in particular have demanded an increase in the allowable output of their field to 10 per cent. of its potential production, which is estimated at not less than 5,000,000 barrels a day. The output of the entire State of Oklahoma at the present time is in the neighbourhood of 450,000 barrels a day. The request of the operators of the Oklahoma City field is being considered by the Oklahoma Corporation Commission, and it appears likely that some increase in the output of that field will be allowed. In other producing areas, notably in California, restriction of output is being rigidly enforced, and the improvement in the statistical position of the American oil industry recorded last year has not yet been upset. The refiners have agreed not to "stock up" petrol—the usual practice in the winter in anticipation of the spring demand—but to bring their stocks of gasoline down to approximately 40,000,000 barrels by next April, as against 55,000,000 barrels as at April 1st last year. Crude oil "runs" to refinery stills have, therefore, been restricted to about 10 per cent. below last year's level. Neverthe-

less, gasoline stocks are still increasing, and gasoline prices remain extremely weak. It was, no doubt, with the idea of raising internal gasoline prices that the independent companies demanded a tariff on foreign oil imports and, pending a tariff, an embargo. This was aimed at the large oil groups such as Standard Oil and Royal Dutch-Shell, which are producing in Mexico and Venezuela and shipping part of their output to the East Coast of America. A tariff bill was introduced in Congress and met with considerable support, but has now been postponed until the next session. An embargo on foreign oil is not considered feasible, as it would infringe the commercial treaties existing between the United States and Mexico and Venezuela, but an import tariff sooner or later seems inevitable. To what extent this would affect the Royal Dutch-Shell group is a matter for conjecture. From the competitive point of view, a more serious menace to the Royal Dutch-Shell group lies in the merger between the Standard Oil Company of New York and the Vacuum Oil Company, which has now received judicial approval. These two companies are the chief rivals of the Royal Dutch-Shell group in European and Eastern markets. A merger between the Standard Oil Company of New Jersey and the Standard Oil Company of California is now considered possible. Meanwhile, dividend distributions by both American and British oil companies are bound to be conservative in view of the low level of oil prices. The Standard Oil Company of Indiana has reduced its dividends from \$2.50 to \$2 per share, and the Standard Oil Company of Kansas from \$2 to \$1 per share. The Royal Dutch-Shell Transport final dividends are not announced till June, but it is estimated that, allowing for the effect of lower petrol prices in Great Britain and Europe, and the loss of Shell Union dividends for half a year, Shell Transport and Royal Dutch may suffer a reduction in net revenue equivalent to dividends of 5 per cent. and 4 per cent. respectively.

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Silver and the Producer.—Among the numerous repercussions of the steady decline in the value of silver one of the most significant is the effect of the fall on those mining companies which rely on the silver content of their ore to defray total production costs. During 1930 the cash price of silver fell continuously from 21½d. per troy ounce on January 2nd to 14½d. on December 31st, and the price has since dropped below a shilling. The decline is probably due partly to the same world causes as those which brought about the general fall in commodity prices, and partly to Government sales of silver following the widespread demonetisation of the white metal and the adoption of a gold bullion standard by Indo-China in February last. The last annual returns of the most important silver mining companies reveal that the decline has materially contributed to the decrease in profits in those cases where silver is an important factor in earnings. Thus San Francisco Mines of Mexico reported a decline in profits from £333,589 in 1929 to £88,362 in 1930, though the situation was also unfavourably affected by an uncertain power supply and by the collapse in zinc prices. The profits of Burma Corporation declined from £1,054,842 to £693,603, though the falling off in base metal prices again proved an additional source of loss. Mexican Corporation turned a loss of £23,131 into a profit of £55,171, the loss on silver being more than offset by the successful exploitation of sulphide ores. The position of Santa Gertrudis, whose profits increased from £280,075 to £297,523, was affected by the fact that the growing value of her gold interests, following the decline in commodity prices, offset the poor returns from silver. In all cases the accounts were made up to June or September, 1930, so that the worst effects of the slump were still to come. The problem of the future of silver is undoubtedly difficult. On the one hand it is difficult to censure governments for seeking some cheaper medium than silver for their subsidiary currency, while, on the other, it must be conceded that the effect on Eastern trade, particularly that of China, of a depreciating standard of value must be highly deleterious. Finally, so far as the producers are concerned, since silver is a by-product, any appreciable decline in its value must inevitably be accompanied by an increased cost of production and/or an increased price for the base metals.

Company Registrations in 1930.—The list of company registrations at Somerset House, which is compiled annually by Messrs Jordan and Sons, of Chancery Lane, not unexpectedly reveals a considerable falling off in registrations during last year. The aggregate nominal capital of new companies totalled £103,725,362, compared with £229,568,122 last year, and of that amount private companies accounted for £57,924,827, against £73,375,965. Though the number of private companies increased slightly from 8,049 to 8,082, public company registrations numbered only 328, against 623, bringing the total down from 8,672 to 8,410. Moreover, of the 328 public companies, many represented amalgamations or reconstructions, which are the inevitable corollary of prolonged depression. Messrs Jordan and Son draw attention to certain interesting features of the year, including the collapse of the Allied Stores merger, which promised to be the biggest event of the year, and the appearance of more than forty companies formed to exploit "midget golf" courses, many of which must be already suffering from a marked flagging of public interest. During the year, ten companies were incorporated with capitals of over £1 million, six being in the first half-year and four in the second, whereas ten years ago (in 1921) the number was forty-six. Practically all the "millionaire" public companies were concerned with

iron, coal and steel mergers. The greatest amount of capital among public companies was absorbed by the group "iron, brass, etc.," at £15,700,200, while mines accounted for a further £12,497,955.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Gas Light and Coke Company, Railway Share Trust and Agency, Railway Debenture and General Trust, Sterling Trust, Standard Trust, United States and General Trust, and San Francisco Mines of Mexico. At the annual meeting of the Gas Light and Coke Company the chairman stated that in his opinion it was grossly unfair that a Minister of the Crown, whose duty it was to be impartial, should so far forget his public position as to come forward as special pleader for a particular industry, and not only recommend the use of electricity in general terms, but advocate the installation in particular of electric fires and cookers for domestic use.

CAPITAL ISSUES.

The most important new issue of the week was made by the *Government of India*, which offered no less than £12 millions of stock for cash, a further £5 millions being available for conversion by holders of India 5½ per cent. stock, due January 15, 1932. The new stock has a maximum life of seven years and carries a running yield of 5½ 13s. 6d. per cent and a yield, on redemption in 1938, of 46 0s. 4d. per cent. Early in 1929 the Government of India obtained £9,100,000 in London on a yield basis of almost exactly 5 per cent. A year later, in February, 1930, when political agitation in India had affected the Government's credit, some £5,940,000 (cash) was obtained, for three years, at £11s. per cent. In May the Government borrowed £6,930,000 (cash) on bonds with a maximum life of five years, yielding 46 4s. 9d. per cent.; and in October, £12 millions in bonds, with a maximum life of seven years at 6 per cent. Thus, in little over twelve months, India has obtained nearly £37 millions in the London market, all her issues being on a "short-term" basis (though the "currency" has shown a tendency to lengthen with each issue) at prices which suggest that the authorities regard 6 per cent. as an appropriate index of India's credit at the present time. Despite the political situation, India's finances are in a healthy condition, but her requirements in the next few years must inevitably be considerable, and presumably the Government does not wish to tie India's hands too far ahead. The last two issues, however, have been criticised as having a currency too long for the money market and too short for the private investor. The present issue was rapidly over-subscribed, but fell to a discount of ½ on "stag" selling in the market. A second issue was that of the *Reading Corporation*—a full trustee stock giving a flat yield of a shade over 4½ per cent., which the market regarded as "giving nothing away." The *London and National Property Company* issue of £2 millions 5 per cent. First Mortgage Stock was secured on the new central office block for Shell-Mex. Ltd., which is being erected on the Hotel Cecil site. The issue was made under good auspices, and was quickly subscribed. It represents a type of issue which has become popular during the present period of cheap money, a wealthy group floating a separate property concern which raised debentures on its own security. Other examples have been Cunard House and Lewis's Investment Trust. The method has its advantages from the borrower's point of view, but subscribers should appreciate that their security depends on the earning power of the properties charged.

Government of India 5½ per cent. Stock 1936-38.—Issue of £12,000,000 stock for payment in cash at 497 per cent. and offer of a further amount of like stock in exchange for holdings not exceeding £5,000,000 nominal of Government of India 5½ per cent. stock, due January 15, 1932, at the rate of £103 12s. 6d. of the new stock for each £100 nominal of Government of India 5½ per cent. stock, 1932, surrendered. The stock is a trustee security. If not previously redeemed, it will be repaid at par on July 15, 1938, but the Secretary of State for India reserves the right, on three months' notice, to redeem the stock at par on or after July 15, 1936.

Reading Corporation.—Issue of £700,000 4½ per cent. redeemable stock, 1931-61, at £99½ per cent. The principal will be repayable at par on March 15, 1961, unless previously cancelled by purchase or agreement, the Corporation having the option of redemption in whole or part on or after March 15, 1931, on three months' notice. The rateable value of the borough of Reading is £693,909, and a rate of one penny in the £ produces about £2,790.

London and National Property Company.—Offer for sale at 200 per cent. of £2,000,000 5 per cent. first mortgage debenture stock. Shell-Mex. Ltd. has agreed to take a lease of the whole of the freehold property on the site formerly occupied by the Hotel Cecil, on which property the stock is secured. The stock is to be redeemed on or before April 15, 1967, by the annual operation of a cumulative sinking fund. The stock not previously redeemed is to be repaid on April 15, 1967, at par.

[Other Stock Exchange information, including the latest summary of balance sheets, oil outputs, reports and notices, profit and loss figures and dividend announcements, will be found on page 373, under the heading "Company News."]

COMPANY MEETINGS &c.

GAS LIGHT AND COKE COMPANY.

COMPANY'S BUSINESS "SOUND TO THE CORE."

GOVERNMENT BOOSTING OF ELECTRICITY.

A VIGOROUS PROTEST AGAINST DISCRIMINATION.

SIR DAVID MILNE-WATSON'S SPEECH.

The ordinary general meeting of the Gas Light and Coke Company was held, on the 6th instant, at Horseferry Road, Westminster, London, S.W.

Sir David Milne-Watson, LL.D., D.L. (the Governor), presided.

The Secretary, Mr W. L. Galbraith, read the notice convening the meeting. The report and accounts were taken as read.

The Chairman, in moving the adoption of the report and accounts, said: I propose first to deal with the capital account. We have expended during the year a total of £1,005,000. We have depreciated our ships and stoves by £117,000, making a net increase in the capital of £888,000.

Expenditure this year has been exceptionally heavy, partially due to the large number of mains which have had to be laid in the areas we have taken over in recent years, and also to the work we have done at the request of the Government in respect of gas-holders, mains, and other plant.

AN EXCEPTIONALLY MILD YEAR.

You will have seen from the report that we have experienced a decrease in business of 2½ per cent. During the second half of the year the increase in our business was normal, but it was not sufficient to make up for the decrease in the sales of gas during the first part of the year, when we experienced exceptionally mild weather. In the year 1929 we had an abnormal increase in the first six months of over eight per cent. owing to the severe climatic conditions then prevailing and, therefore, it was only to be expected that with a mild winter in the following year there would be a falling-off in gas sales. There is no reason, therefore, for anxiety with regard to the company's position. During the year we had an addition of 25,000 consumers and sent out 90,000 additional gas appliances. This is eminently satisfactory, and in due course we shall reap the reward.

The decrease in gas sales cost the company £180,000.

The cost of coal was more by £75,000, due chiefly to the fact that the percentage of coal gas made was larger than in the corresponding period. This led to a reduction in the proportion of water gas made and there was a saving of £52,000 on oil.

SERVICE TO THE CUSTOMER.

The large figure spent on repairs and maintenance of mains and service pipes, repair and renewal of meters and stoves is an indication that the company is pursuing its established policy of giving satisfaction to its consumers. Rentals of meters and stoves show a satisfactory increase. With regard to residuals, coke and breeze show an improved position, having brought in over £100,000 more. Tar and its products were not so satisfactory, and the revenue from them shows a reduction, a matter which we hope may be remedied in future years. The one feature which is thoroughly unsatisfactory is sulphate of ammonia, on which, in 1929, we made a profit of £77,000, and last year a loss of £16,000. For this unpleasant result the company is in no way responsible.

UNSATISFACTORY SULPHATE MARKET.

The unsatisfactory market position has been brought about by the large quantity of nitrogen which is now being extracted from the air by synthetic plants, not only in Great Britain, but also in Germany, France, Italy, the United States, Japan, and elsewhere. There is no prospect of the situation improving, inasmuch as it is the policy of the countries mentioned to possess their own nitrogen plants, not only for producing the fertilisers they require but also as a home source of nitrogen in the event of war. We received about £12 a ton for sulphate before the war, and to-day we obtain less than £5 per ton. We cannot avoid the manufacture of sulphate of ammonia, as we are not allowed to run the ammoniacal liquor into the sewer and are compelled to work it up into sulphate of ammonia. We are doing all we can to find means to remedy the position, and research is taking place all the time to see whether any other use for ammoniacal liquor can be discovered.

DIVIDENDS.

The balance transferred from revenue to profit and loss was £1,810,000, as against £1,883,000 for the previous year. This balance,

after allowing for interest on borrowed money and dividends distributed in respect of the June half-year, leaves £804,000, from which to pay dividends for the December half-year.

This enables us to declare the usual dividends on the 4 per cent. consolidated preference stock and the 3½ per cent. maximum stock, and a dividend at the rate of £5 12s. per cent. per annum on the ordinary stock. These dividends leave £122,000 to be carried forward to the credit of the current year's account, as against £160,000 last year.

THE LORD MAYOR AT BOW COMMON.

With regard to the company's works, everything is being done to keep them thoroughly up to date. At Bow Common the works have been reconstructed and in June the Lord Mayor of London did us the honour of opening them officially. Work is progressing on a large installation of coke ovens at Beckton, a reconstructed retort house has been completed at Fulham and another at Nine Elms, and at Brentford and Southall the work on vertical retorts and other plant is nearing completion.

NEW SHOWROOMS.

New showrooms have been opened at Barking Road, and others are in course of erection at Woodford, Harrow, Hackney and Acton, and we have acquired sites at Billericay, Rayleigh and Wickford for further showrooms.

The Grays and Pinner Gas Companies were taken over at the beginning of last year and the reorganisation of these new districts is nearing completion. There is no doubt that they will prove of great value to the company.

NEW GASHOLDERS.

New gasholders have been erected at Southall and Richmond, and others are in course of erection at Beckton, Battersea, Kensal Green and Harrow. Considerable discussion arose as to the Harrow gasholder and strong local opposition was encountered on the score that it would spoil the view from the top of Harrow Hill. The Harrow District Council, however, after discussing the matter, dropped their opposition on the understanding that they are to be notified when we reach 180 feet and that they should be allowed to have a say with regard to the painting of the holder.

In the summer of 1929 we were approached by the Government and asked whether we would put certain constructional work in hand at an earlier date than otherwise, on the understanding that the interest on the money so expended would be found for us for a period of years. We agreed, and accordingly we are in the process of expending some £500,000 or £600,000 on plant which will, of course, be ultimately needed. The work is proceeding rapidly and the expenditure for the year is included in the capital expenditure already referred to.

You will realise that during the past year we have not been idle but have been pressing forward with work for the ultimate benefit of the company. In this connection we are actively continuing our research work, without which little real progress can be made.

LOW TEMPERATURE CARBONISATION.

The low temperature plant at Richmond has been operated during the year, and we have come to an arrangement with the Government Department concerned to carry on work there for another year. "Gloco," the smokeless fuel produced, has been generally considered satisfactory. Unfortunately, however, the process has not been a commercial success. The tar produced has been found unsuitable for roadwork and is only at present saleable for fuel. Research is being actively carried on, however, in the hope of finding some better use for this product.

The Coal Mines Bill has now become an Act, but it is perhaps too early to say what its effect will be so far as the gas industry is concerned.

SOUTHEND-ON-SEA AND BRENTWOOD COMPANIES.

The company is promoting a Bill to provide for the transfer to this company of the undertaking of the Southend-on-Sea and Brentwood Companies, and for such other purposes as will be explained

to you at the extraordinary general meeting to follow at the close of this meeting.

During the autumn we made an issue of 2½ million 4½ per cent. redeemable debenture stock, which was applied for no less than twenty-six times over. It is very gratifying to find that the public hold gas stocks in such high repute.

PROTEST AGAINST MINISTERIAL PROPAGANDA FOR ELECTRICITY.

I should like to draw your attention to a subject on which we feel very strongly, namely, the boosting that is being given to electricity by the Government and many local authorities. I am not complaining particularly of this Government, as we experienced the same thing under the previous Government, and apparently it is becoming the common practice in Government circles, whatever their complexion. Recently we had the spectacle of the Minister of Transport holding meetings in the cities of London, Manchester, Leeds and Glasgow, and I wish, on behalf of this company and the industry generally, emphatically to protest against his action.

It is grossly unfair that a Minister of the Crown, whose duty surely it is to be impartial, should so far forget his public position as to come forward as special pleader for a particular industry, and not only recommend the use of electricity in general terms, but advocate the installation in particular of electric fires and cookers for domestic use. We may ask ourselves how a Minister of the Crown thinks that he is benefiting the country by advocating the displacement of gas fires and cookers by electric fires and cookers. What advantage is it to the unemployed of the country if a gasworker is put out of employment in order that an electrician may be found work?

STRANGE IDEAS OF "FAIR PLAY."

It will be a bad day for Governments and for industry if this precedent is followed and if Ministers of the Crown are engaged in boosting and advertising particular trade interests to the detriment of others. What would be said if the President of the Board of Trade were to stomp the country in support of gas at the expense of electricity, or in favour of motors as against railways? Not long ago the Minister of Transport, in speaking at a public meeting, called attention to the way the gas industry fought, and apparently he thought he was making the "amende honorable" in so doing, very much as if a warrior, after beating down an opponent by unfair means, called upon his followers to admire the fortitude and fighting qualities of the man he was trying to destroy. No! These are not our ideas of fair play. The unfortunate part of it is that the injustice does not end there, as the example set by a Minister of the Crown is followed by local authorities owning electricity undertakings where, taking heart no doubt from the lead given them, they do everything in their power to prevent the tenants of their housing estates from using gas.

The following letter was recently addressed to the tenants of Council houses by the Clerk of a Corporation in the North of England:—

"It has been brought to the notice of the Corporation that the gas company have been canvassing tenants of the Corporation houses with a view to having gas installed.

"I am, therefore, instructed to inform you that, by the terms of your tenancy, you are not entitled to agree to the gas company installing gas in your premises, without the previous consent, in writing, of your landlord, the Corporation.

"In no circumstances, therefore, must you permit gas to be installed in your premises. If this is done it will be regarded as a breach of the conditions of your tenancy, and the Council will be compelled to serve notice to quit and take steps to obtain possession of your house."

In a part of our own district the Local Council concerned, who are the landlords, went so far as to ensure that the gas pipes which had been installed in the houses should not be used for a gas supply for any purpose by taking the extreme step of filling these pipes with liquid cement.

IS THIS A FREE COUNTRY?

We rub our eyes and wonder if we really live in a free country. This conduct is all so un-British. It is a breach of two principles to which we have laid claim with pride in this country—first, liberty of the subject, and, second, unbiased administration of their districts by the local authorities—and strong steps ought to be taken to prevent its continuance. When one reads of all this activity on the part of this particular Minister, one begins to wonder whether an element of doubt is creeping into the minds of those responsible as to whether the electricity scheme is going to be the financial success promised. Will the Government be called upon ultimately to implement the guarantee they have given? Might not this account for some of the desperate remedies adopted and for the abnormal activity of the Minister of Transport at the present time?

INDUSTRY FETTERED BY OUT-OF-DATE ACTS.

There is another matter on which I desire to say a few words, namely, the dilatoriness of Government departments in dealing with new legislation urgently required by statutory industries. We, as everyone knows, carry on our business under certain general Acts of Parliament. These general Acts of Parliament can really be regarded as the minutes of a superior board of directors. The principal provisions under which we work date as far back as 1847, when gas was a monopoly. To-day, as you are all aware, it is not a monopoly. It is face to face with acute competition not only from electricity but also from oil, and yet we are still fettered in many respects by the operation of out-of-date Acts. It is true that Parliament gave us some relief in 1920 and again in 1929, but delay after delay is encountered when we endeavour to get the industry put upon a proper basis. The Government National Fuel and Power Committee recommended in 1928 that certain alterations should be made in the general law governing gas undertakings, and this was recommended even more strongly by the Government Area Gas Supply Committee last year. For some time we have been agitating to obtain amending legislation to give us the freedom already accorded to our electrical rivals, but so far all we know is that a Committee is being established to consider the matter. We are thankful, however, for small mercies, and I would therefore urge that the Committee should get to work at the earliest possible date and legislation immediately follow.

DELAYS SERIOUS FOR THE INDUSTRY.

These delays are most disheartening and very serious for the industry. A year is a long time in our history, although it may not seem so to the politician. When it is unanimously admitted that there are grievances which ought to be put right, what would be thought of a board of directors who postponed carrying out reforms for two or three years because they would not give the time for their discussion? If Parliament assumes the role of a directorate and takes upon itself the control of an industry, the least it can do is to give sufficient time to attend to that control, and if things are wrong put them right forthwith. I am not complaining of any particular department, but I am complaining of the attitude Governments adopt towards statutory industries which in effect they control. It is the fashion to say that more industries should be controlled, and my reply is that until we see that control is not another word for delay, the country should be most reluctant to allow any other industries to be put under Government control.

I think I would be lacking in my duty if I did not refer to the serious position in which this country finds itself to-day.

It used to be the accepted maxim that one should live within one's income—and I for one believe that this simple maxim is as true to-day as it was. It is important for an individual, and for a trading concern, but even more for a Government, whose expenditure for the most part is unproductive.

NEED FOR ECONOMY.

This fundamental principle of economics is easily understood by everyone, but is being lost sight of at the present time, and the public mind confused by the different and contradictory theories put forward by financial experts.

Theories with regard to the influence of the gold standard, over-production and lack of purchasing power are no doubt important subjects for discussion. We may, however, have to wait a long time for a solution of these questions. In the meantime, what can we do to help ourselves? The principal thing is to give up extravagance, and not pursue a policy of spending what we cannot afford. This is a thing that can be put in hand immediately while we are waiting for these world problems of over-production, distribution of gold, etc., to be discussed and, if possible, settled by the experts. There was a time, not so long ago, when taxation was considered as only to be resorted to with reluctance, but now no further excuse for taxation is considered necessary than that the object is desirable, whether the country is in the position to afford it or not. Until the country comes to its senses on this subject, there is no hope for a general improvement.

THE COMPANY'S FOUNDATIONS SOUND.

Coming back to our company, I may say that I consider our business sound to the core, and, provided the dice are not loaded against us with regard to boosting electricity and that the price of coal is not unduly increased by Government intervention, the prospects of the company are excellent.

Before I close I should like to pay tribute to the good work done during the past year by all ranks in the company. We have an excellent general manager in Mr Foot, and a most capable chief engineer in Mr Hardie. Our controller of gas sales, who is so well known for the good work he has done for the gas industry, was appointed chairman of the Government Committee on Education for Salesmanship, and was recently knighted by his Majesty the

King. I am sure you will wish to join with me in heartily congratulating Sir Francis Goodenough on this honour.

BENEFITS OF CO-PARTNERSHIP.

Our co-partnership scheme attained its majority last year. Since its inception there has been a steady growth of the co-operative spirit in the company with an increased realisation by the co-partners of the value of the common good. This co-operative spirit has contributed very largely to the success of the company, and I should like to say how gratified I am when, from time to time, I get unsolicited testimony from gas consumers saying how considerate, attentive and anxious to please our staff is. This, I think, is the best test of the working of the co-partnership ideal in the company.

It is, indeed, no longer a question of taking things easily and waiting for business to come. It is a struggle all the time. For that purpose we are continuing to train our staff for the strenuous fight that lies before us. No effort will be spared to see that the company's work is well done and that the consumer is given complete satisfaction.

The report and accounts were adopted.

At the subsequent extraordinary general meeting, the Chairman explained that the main object of the Bill was to take over the Southend-on-sea and Brentwood Gas Companies' areas, which were promising and capable of satisfactory development.

The Bill also proposed to give the company power to invest a certain amount of money in concerns closely allied to their business.

THE BASIC PRICE.

He added: Perhaps the most interesting section of the Bill is the one in which we propose to adopt what is called the basic price principle—a method which Parliament has already agreed to in the case of the South Metropolitan Gas Company and other London and Provincial companies. The adoption of the principle will be to the advantage of the company as well as to the consumer.

A resolution that the Bill be approved was adopted.

STANDARD TRUST, LIMITED.

SATISFACTORY INVESTMENT POSITION.

The twenty-eighth annual general meeting of the Standard Trust, Ltd., was held, on February 11th, at the company's office, 25-31 Moorgate, London, E.C.

Mr Richard S. Guinness, who presided in the absence through indisposition of the chairman of the company (Mr Alfred Shepherd, W.S.), read the speech prepared by that gentleman, in the course of which he said that the income received was larger by nearly £7,000, due to a considerable extent to the new money received during the year. The directors now recommended final dividends on the increased capital of 2½ per cent. on the preference stock and 6 per cent. on the ordinary stock, transferring to staff superannuation fund £584 and £10,000 to general reserve, bringing the latter up to £150,000.

On the assets side the investments had increased by about £200,000. As to the valuation of their investments, in view of the general condition prevailing in most countries it was to be expected that there would be a considerable fall. The valuation now made showed a depreciation of 12·13 per cent. on the balance-sheet figure, but against that there was the reserve fund and carry-forward. If these were deducted from the cost the loss was reduced to under 4 per cent. on the book value, a position which he thought might be considered not unsatisfactory.

With regard to the distribution of investments in Australia and New Zealand, the trust had a percentage of 4·63. These investments were almost entirely ordinary investments such as a trust company would be likely to make in companies operating in Australia, and only 1·3 per cent. of their investments was in companies domiciled in Australia, where repayment, if made, or realisation, if effected, would be in Australian currency.

Within the last month or so shareholders had had the opportunity of hearing or reading the views of eminent bankers and economists on the present position of trade and financial affairs. He hesitated to criticise the views of these gentlemen, but with all deference would like to express his opinion on two points—first, that it seemed to him the curtailment of expenses and the practising of strict economy on the part of individuals, public bodies, and the Governments were essential; and, secondly, that no one should allow anything to interfere with the policy of thrift which he was sure could not materially injure the prospects of a revival of trade and prosperity in this country, and could only endure to the advantage of those who practised it.

The report and accounts were unanimously adopted, and the dividends recommended were approved.

STERLING TRUST, LIMITED.

DIVIDEND MAINTAINED—ECONOMIC POSITION AND OUTLOOK.

The fourteenth ordinary general meeting of the Sterling Trust, Ltd., was held, on the 10th instant, at Winchester House, Old Broad Street, London.

Sir George A. Touche, Bart., who presided in the absence, through indisposition, of the Chairman (Baron Emile d'Erlanger), said that the accounts submitted related to a year of extraordinary depression, the intensity of which, and the consequent cheapness of money, had dominated the course of investment values. In these circumstances, it was gratifying to know that the experience of this Trust was better than that indicated by the movement of values generally. While they had suffered a shrinkage in market values, he was glad to say that, owing to careful selection and the provision which had been made for contingencies in past years, the valuation on December 31st last of their 544 investments exceeded in the aggregate the sum of £4,939,068 at which they stood in the balance sheet. That they were able, after nearly two years of crumbling prices, to report any margin over book value was very encouraging.

COUNTRY'S ECONOMIC POLICY.

Whether they would long continue to be able to say there was no depreciation depended in substantial measure on the conditions which might prevail in this country. They could hardly be worse than they were at present. The pity of it was that we appeared to be making no satisfactory progress towards a better state of affairs. If a trade revival came we were far from being in a good position to take advantage of it in competitive markets. Our costs were all wrong. Our industries were overburdened by legislative interference and taxed out of the running. Happily, there were evidences that we were on the eve of great changes in the economic policy of the country. Bankers, industrialists and the more thoughtful and observant elements in the Labour party were all realising the folly of slavish persistence in fiscal methods which belonged to the days when men played cricket in tall hats. Right-thinking about economics, however, was hardly yet an attribute of our 28 million electors. The stability of the nation's financial fabric, already threatened, depended on how these puzzled electors might vote; yet they did not even know that it was they who would suffer most if the fabric fell.

The fact that at present the largest percentage of the investments of this Trust was in Britain would not be mistaken as an indication of satisfaction with existing conditions. It represented rather a conviction that the common sense of the nation would insist on a return to methods of economic sanity.

The income from their holdings in the past year, at £277,718 showed an apparent reduction of nearly £4,000, but the income was shown after deduction of tax, and £6,600 more had been deducted in 1930 than in 1929. The apparent decrease, therefore, was more than accounted for by the marauding instincts of the Chancellor of the Exchequer, who, under the Finance Act, 1930, added another 6d. to the already penal rate of income tax. That Act was the dirge of industry and the presage of increased and continuing unemployment. It could not be expected that prosperity would be restored unless the present crippling expenditure was reduced enormously. Considering the many defaults the past year had seen, and the dividends which had been passed or reduced, the experience of this Trust spoke well for the discrimination with which its investments had been selected.

DIVIDEND.

The dividend for the year on the ordinary shares was being maintained at 14½ per cent., and a balance of £80,154 was being carried forward, being, in substance, a supplementary reserve. It made the reserve virtually £555,000, or more than 63 per cent. on the ordinary capital. It would have been possible to increase the dividend to 15 per cent., but the directors would rather progress slowly than have to go back.

Nobody really knew what the future had in store except that whether flowing or ebbing, every tide would turn. People were asking: When and where will the turn for the better begin? It was easier to answer the second part of the question than the first. There were many who believed it would begin in the United States of America and flow over the border to Canada. As yet there was no convincing sign that the decline was at an end in either of those countries. It was, however, anticipated by those who had made a close statistical study of what had happened after past periods of sub-normal business that the decline would cease in the present half-year and that a moderate improvement would ensue. An upward turn certainly seemed about due, but it could not help revenues of the current year. For this reason, if for no other, the directors would like to see a little more of the trend of events before considering any increased distribution.

The report and accounts were unanimously adopted.

UNITED STATES AND GENERAL TRUST CORPORATION, LIMITED.

APPRECIATION OF INVESTMENTS.

MR MELVILLE BALFOUR'S REVIEW.

The forty-first ordinary general meeting of the United States and General Trust Corporation, Ltd., was held, on the 12th instant, at the registered office, Gresham House, Old Broad Street, London, Mr Melville Balfour, M.C. (the chairman of the company), presiding.

The secretary (Mr Hildred Carlisle) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The gross revenue shows an increase of some £8,000 over that of last year, but this is on a larger capital, we having since last February issued the small balance of the authorised share capital and the unissued debenture stock, the proceeds of which the company has not had the full use of during the period covered by this report.

After paying debenture and preferred stock interest, we are able to recommend that the same final dividend as last year—namely, 9 per cent., making 14 per cent. for the year—be paid, and to carry forward an increased amount of £27,255 12s. 5d., as against £12,161 5s. 3d. in the previous year.

CAPITAL VALUES.

As regards capital values, we are able to state that there was a surplus over the book cost of investments of about £100,000 on December 31st, which was not the best day to make a valuation. This surplus shows a shrinkage of slightly less than 10 per cent. on that existing on the corresponding date last year. Under the very exceptional conditions that have prevailed during the past twelve months I hope the stockholders will not think this unsatisfactory. Too much importance need not be attached to this valuation, the supreme test of a security being the revenue it produces, its value being susceptible to a variety of influences, political, economic and financial. If values were abnormally high two years ago, during the past few months some of them have been abnormally low; the pendulum has swung a long way in the opposite direction. At one time in recent years, when 3½ per cent. Conversion Loan, now quoted at 81, stood at 72½, no one suggested then that because of this it was necessarily a bad investment.

WORLD CONDITIONS.

It is quite outside the province of this meeting to attempt to analyse the causes of the recent depression, which have probably been more acute and prolonged than anyone living has experienced. Some distinguished authorities appear to disagree on the subject, and it is easy to become involved in a vicious circle of politics and economics and of cause and effect. The price of the world's chief products has been disastrous and the purchasing power of nations reduced to the lowest level, but, if one looks at the political and economic conditions of such countries as Germany, Russia, India, Egypt and Australia, not to mention South America—where most of the countries have been in a state of open revolution—it is not to be wondered at that trade is bad, but rather that there is as much trade as there is.

CURRENT YEAR'S PROSPECTS.

That this state of things can continue indefinitely is unthinkable, and the pendulum will surely swing in time, if slowly, to greater prosperity. There must, however, be an unpleasant aftermath, and it is not easy for a company such as this to forecast its revenue for the current year with the same accuracy as usual. There are bound to be serious reductions in certain dividends, and the possibility of default in more than one country cannot be ignored. It is therefore satisfactory to have an amount carried forward which is equal approximately to 5 per cent. gross on the deferred stock.

DIVIDEND.

I now have to propose: "That the report and accounts, as presented, be and they are hereby received, approved and adopted, and that dividends of £2 10s. per cent., less income tax, on the preferred stock, making with the interim dividend 5 per cent. for the year, and £9 per cent., less income tax, on the deferred stock, making with the interim dividend 14 per cent. for the year ended December 31, 1930, be and the same are hereby declared."

Mr F. H. Ramsden seconded the resolution, and it was carried unanimously.

The retiring director, Mr Melville Balfour, M.C., was re-elected, and the auditors, Messrs Price, Waterhouse and Company, were reappointed.

SAN FRANCISCO MINES OF MEXICO, LIMITED.

EFFECTS OF LOW METAL PRICES.

The eighteenth ordinary general meeting of the San Francisco Mines of Mexico, Ltd., was held, on the 12th instant, at Winchester House, Old Broad Street, London.

The Right Hon. the Earl of Denbigh, K.C.V.O., who presided, said: I need hardly remind you that since October, 1929, the beginning of the financial year under review, prices of all commodities have suffered severely as a result of the extraordinary depression which has spread over the world. This has affected the values especially of raw materials, and of metals not the least. Perhaps production during the few years to 1929 had gone ahead rather too fast, but the main trouble has been due to the quite exceptional falling off in consumption, with the result that, although the position led to an appreciable reduction of the world's metal production in 1930, consumption has declined at an even greater rate and unsold stocks have grown instead of falling off as a result of the generally lower output. Happily we sell our product currently and therefore have not to carry stocks, but the prices we have received have, of course, been influenced by the general position. For the twelve months to last September lead averaged £19 13s. 10d. per ton as compared with £23 2s. 5d. in the previous year, zinc £18 12s. 6d. per ton as against £25 16s. 2d., and silver 20·9d. per fine ounce as against 27·5d., the average fall in all three metals being 22 per cent.

The scale of our production increased from 307,450 tons of ore in 1928-29 to 337,480 tons in 1929-30. In spite of a very satisfactory reduction in costs, our profits suffered severely, especially as regards zinc. The operating profit has been brought down from £415,267 to £165,359, and our net profit from £333,589 to £88,361, while the dividend of 1s. for the year compares with 3s. 9d. The amount carried forward is increased from £172,565 to £182,653.

THE ORE RESERVES.

There has been a very considerable advance in our ore reserves, those blocked out increasing from 1,458,900 to 1,763,600 tons, or by 21 per cent., and the partly blocked out from 435,600 to 552,900 tons, or by 27 per cent. The Brown vein continues to develop well and is likely to bulk increasingly as compared with the San Francisco vein. Of the reserves 54½ per cent. apply to the San Francisco vein, 20½ per cent. to the Brown vein, 10½ per cent. to the Footwall vein, and 10 per cent. to the Madronos vein, other lesser veins making up the balance. A year earlier the proportion applying to the Brown vein was only 8 per cent.

Metal prices have been falling almost monthly for a long time. So great has been the decline that lead, zinc and silver, taken together are now standing, after allowing for the improvement of 10 per cent. in the past two or three days, at about 55 per cent. of the prices of 1913, a result which even a few months ago one would have thought to be out of all reason. The new financial year has therefore not opened well. Though we increased the output to 136,340 tons for the four months to January, as compared with 94,010 tons for the corresponding period of the previous year, our declared operating profit has amounted to only \$156,496 as compared with \$294,521.

While our position as regards profits is for the time being greatly influenced by the state of affairs in the world to-day, there is another side to the picture. You may be assured that when metal prices recover, we have a mine with an exceptional quantity of ore reserves awaiting treatment. While we must expect the San Francisco vein, which has served us so well and will continue to do so for many years to come, to recede in importance as time goes on, we are being reinforced to a substantial extent by the Brown vein, as I have already mentioned, and, apart from our original property, we have added considerably to our mining area with a view to securing the future. In the Clarines we have a mine which we hope will prove to be a considerable asset, and we have already in that mine, as a consequence of the small amount of development already done, some hundreds of thousands of tons of ore which we do not take into our calculation of reserves as it will not be available until transport arrangements have been made. The San Francisco mine is in good shape, and the operating cost last year was 16s. 7d. per ton as against 19s. 1d. in the previous year, while all we require to enable us to show good profits is a satisfactory level of metal prices. One can perhaps get some encouragement from the fact that during the five years to September, 1929, although metal prices in general fell during the period, we were able, by increasing the milling capacity and reducing the operating cost per ton, to show net profits averaging £314,000 per annum, while we paid dividends of either 3s. 9d. or 4s. each year. The period under review has unfortunately broken the sequence, and I do not venture to say what the current year will show, but I do feel that the present condition of world affairs is altogether abnormal, and that after a time we shall again be able to show much better results.

The report and accounts were unanimously adopted.

RAILWAY SHARE TRUST AND AGENCY COMPANY, LIMITED.

CAPITAL AND RESERVE INTACT.

The forty-second ordinary general meeting of the Railway Share Trust and Agency Company, Ltd., was held, on the 12th instant, at Winchester House, Old Broad Street, London, E.C.4.

Mr Richard S. Guinness (the chairman) said that the past year had witnessed contraction of trade in practically every industry, and the precipitate fall of commodities had caused severe and widespread dislocation in the commercial and financial world. The depression had grown in intensity, and to-day showed little, if any, sign of lifting in the near future. Their company, even with its well-distributed list of investments, had felt the effects of the depression, and for the first time for several years the revenue showed a decrease—only about £1,000—instead of an increase. By far the most important reductions were in respect of their South American holdings. These alone accounted for more than the difference shown in the total revenue.

The company's chief holdings in South America were in the leading railways of the Argentine Republic, and, while they might look for a further reduction in the dividends to be received in the present year, the companies were so well and conservatively managed that any improvement in the conditions obtaining in that country should soon be reflected in a return to normal dividends. The board recommended a final dividend of 6 per cent. upon the ordinary stock, making with the interim dividend 10 per cent. for the year, and leaving £25,784 to be carried forward.

The valuation of investments made as at January 15th last showed that both capital and reserve account were intact, and in addition he was pleased to say that, notwithstanding the severe fall in values which had taken place during the past year, there was still a substantial surplus over and above the amount at which the investments stood in the balance sheet. (Applause.) In November last the board decided to take advantage of the demand for high-class fixed interest-bearing investments, and placed £100,000 4½ per cent. debenture stock on just under a 5 per cent. basis. A good deal of that money had still to be invested, and as no interest was credited until actually received, the revenue for the past year had received no benefit from the investments that had been made, although the interest accrued on the stock issued had been charged.

The report and accounts and dividends recommended were unanimously approved.

RAILWAY DEBENTURE AND GENERAL TRUST, LIMITED.

DIVIDEND MAINTAINED.

The fifty-eighth ordinary general meeting of the Railway Debenture and General Trust Company, Ltd., was held on the 12th instant, at Winchester House, London.

Mr Richard S. Guinness (the chairman) said that a year ago he had referred to the general fall in values all over the world. The difficulties that they were then facing had, however, become during the year very much accentuated, and there would be general agreement that the Trust's revenue account had held up well, as it showed an increase of nearly £1,000 in the interest received from investments. The board were therefore enabled to recommend the same dividend as last year, after once more transferring £15,000 to reserve. The defaults and reductions in dividends experienced were directly due to world conditions, and a large proportion arose from the Trust's holdings in the ordinary stocks of the Argentine railways.

The board did not anticipate, unfortunately, any improvement in revenue from those holdings during the coming year: in fact, in their estimate they had allowed for further considerable reductions in income. It had been an unusually difficult matter to make an estimate of revenue for the coming year and the directors could only hope that they had been conservative. The result indicated, however, that although the income would show a fall, it should not on estimate be of sufficient extent to alter materially the transfer to reserve or to prevent the maintenance of the present dividend. At the same time, in deciding on the dividend declaration next year the board would be largely influenced by the conditions then ruling, and although in theory the amounts transferred to reserve account were available for distribution as dividend, to encroach upon that account or to make any substantial reduction in the annual allocation to that account in order to maintain the dividend would be reversing the policy that had proved so successful in the past.

Of the total investments of the company, 70 per cent. was in bonds and Government loans, and 14½ per cent. in preference shares; consequently, in respect of some of those fixed interest bearing securities which were or might be temporarily in arrear, the interest should be recovered in future years.

The valuation showed a further depreciation on the year, the amount being £226,000, equivalent to nearly 8 per cent. upon the book value of the investments, or a fall of 6½ per cent. during the year.

The report and accounts and the dividend recommendation were unanimously approved.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended February 7, 1931, amounted to £36,969,900 against ordinary expenditure of £22,586,700. After allocating £490,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £238,653, the week's operations, as shown below, reduced the National Debt by £13,655,000 to £7,707,509,000:—

(000's omitted.)			
	£		£

Messrs Samuel Montagu and Company write on February 11, 1931, as follows:—

SOUTH AFRICAN EXCHANGE RATES.
The South African Banks quote the following rates :—

OVERSEAS DOMINION RATES.
COMMONWEALTH OF AUSTRALIA AND DOMINION OF
NEW ZEALAND.

* All rates (Australia and New Zealand) now based on £100—LONDON.

The total remittances from the Government of India to the Secretary of State for India in Council effected by purchases of sterling in India, from April 1, 1930, to February 7, 1931, were £5,395,000. During the same period £7,843,936 was transferred from the sterling reserves against corresponding contraction of currency in India. Of this amount, £5,209,736 was to meet sales of sterling in India, while the balance was required for Home Treasury purposes.

Statement showing the form in which the balance of the Reserve was held on January 31, 1931 :—

<i>In India :</i>		
Gold		4,548,895
<i>In England :</i>		
Cash at the Bank of England	4,671	
Gold	2,152,334	
British Treasury Bills:—Value as on January 31, 1931	12,642,277	
Other British and Dominion Government Securities:—At or below market value on January 31, 1931	20,651,823	
		<u>35,451,105</u>

The following statistics of imports and exports of gold for week ended February 12, 1931, are issued by the Statistical Department of H.M. Customs and Excise :—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
<i>From—</i>	<i>£</i>	<i>To—</i>	<i>£</i>
France	349	Poland	2,550
Roumania	679,430	Germany	76,300

				Sovs. for export.....	4,000
	Total	251,377		Total	102,744

Net arrivals. £ 148,633

The Bank of England gold reserve against notes amounted to £140,350,917 on the 4th instant (as compared with £139,485,856 on the previous Wednesday), and represents a decrease of £7,274,705 since December 31, 1930. The shipment of bar gold which arrived from South Africa this week amounted to about £708,000, none of which was available in the open market yesterday, having been sold forward. However, about £325,000 from an outside source was on offer, and was disposed of at the fixed price of 84s. 11½d. per fine ounce. The whole of this gold was consigned to Belgium, who again appears as an important purchaser in the London market. Movements of gold at the Bank of England during the week have resulted in a net influx of £175,695. Receipts totalled £254,711, of which £250,000 was in sovereigns from South Africa, and withdrawals consisted of £25,000 in sovereigns taken for export and £54,016 in bar gold.

The week under review opened with prices at 12½d. for cash and 12⅞d. for two months' delivery, but, on the 6th instant, free selling on account of the Indian Bazaars and China found the market poorly supported and caused a sharp fall of ½d. to 12¼d. and 12⅞d. A further fall of ½d. on the 9th instant brought quotations down to yet another record low level, namely, 12d. for cash and 11⅞d. for two months'. The low prices thus reached attracted buying, support being given by the India Bazaars, who bought silver for prompt shipment as well as to cover bear sales; consequently, the market made a good recovery, especially as sellers showed more reluctance following steadier advices from Shanghai. The free selling from America has not continued; on the contrary, American operators have been keen buyers at the lower rates. China has both bought and sold. A premium on silver for cash delivery was re-established during the week and varied between ⅞d. and ¼d.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 2nd instant to mid-day on the 9th instant :—

IMPORTS.	£	EXPORTS.	£
Germany	9,856	British India	487,534

Messrs Samuel Montagu and Company write on February 11, 1931, as follows:—

SOUTH AFRICAN EXCHANGE RATES.
The South African Banks quote the following rates :—

OVERSEAS DOMINION RATES.
COMMONWEALTH OF AUSTRALIA AND DOMINION OF
NEW ZEALAND.

* All rates (Australia and New Zealand) now based on £100—LONDON.

The total remittances from the Government of India to the Secretary of State for India in Council effected by purchases of sterling in India, from April 1, 1930, to February 7, 1931, were £5,395,000. During the same period £7,843,936 was transferred from the sterling reserves against corresponding contraction of currency in India. Of this amount, £5,209,736 was to meet sales of sterling in India, while the balance was required for Home Treasury purposes.

Statement showing the form in which the balance of the Reserve was held on January 31, 1931 :—

<i>In India :</i>		
Gold		4,548,895

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of January are as follows: Production of oil, 40,060 tons; deliveries, 41,450 tons.

THE ATTOCK OIL COMPANY, LTD.—Production for January, 12,068 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended January 28th: Venezuela, 35,504 barrels; Trinidad, 20,145 barrels. Total, 55,649 barrels. Production for the week ended February 4th: Venezuela, 35,454 barrels; Trinidad, 20,188 barrels; total, 55,642 barrels. Production for January: Venezuela, 157,313 barrels; Trinidad, 95,200 barrels; total, 252,513 barrels. Deliveries for January: Venezuela, 143,440 barrels; Trinidad, 79,694 barrels; total, 223,134 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of January amounted to 108,840 barrels, or approximately 15,549 tons.

SERVICE PETROLEUM COMPANY.—Cables received from Roumanian manager state that production from the company's oil wells at Gura-Oenitzei, Moreni and Ceptura for the week ended January 18th was 3,900 tons (27,300 barrels), and for the week ended February 1, 1931, was 4,952 tons (34,664 barrels).

STEAUA ROMANA (BRITISH), LTD.—Production of the Steaui Romana Company, Bucharest, for the month of January was 88,950 tons.

TAMPICO OIL, LTD.—The total production on the company's properties in Mexico during December was 22,198 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,665 barrels. The total production on the company's properties in Mexico during January was 22,307 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,673 barrels.

TOCUYO OILFIELDS OF VENEZUELA, LTD.—Oil produced during January, 1931, 2,382 tons.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during December, 24,400 tons; oil purchased during December from other companies, 48,450 tons. Oil produced during January, 23,550 tons; oil purchased during January from other companies, 47,650 tons.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended January 3, 1931, was: Bolivar district, 86,447 m. tons; Maracaibo district, 16,064 m. tons; total, 102,511 m. tons. Production for the week ended January 10, 1931, was: Bolivar district, 83,409 m. tons; Maracaibo district, 17,305 m. tons. Total, 100,714 m. tons. Production for the week ended January 17th was: Bolivar district, 82,342 m. tons; Maracaibo district, 18,117 m. tons. Total, 100,459 m. tons. Production for the week ended January 24th was: Bolivar district, 83,541 m. tons; Maracaibo district, 16,737 m. tons. Total, 100,278 m. tons. Production for the week ended January 31, 1931, was: Bolivar district, 84,513 m. tons; Maracaibo district, 16,808 m. tons; total, 101,321 m. tons.

REPORTS AND NOTICES.

GOVERNMENT STOCK, &c.

SAN PAULO (STATE OF) 7 PER CENT. COFFEE REALISATION LOAN 1930.—The returns for the seventh month's operation of the scheme of the above loan as compared with the fixed minimum figures are as follows:—Special tax, 3s. per bag, seventh month, £195,075; redemptions, Government coffee, £62,500; planters' coffee, £112,500; port entries, 980,549 bags. Total for seven months, from June 30, 1930: Special tax, £1,237,466; Government coffee, £437,500; planters' coffee, £787,500; port entries, 6,724,576 bags. Minimum to be received for year ended June 30, 1931: special tax, £1,905,000; redemptions, £750,000; planters' coffee, £1,350,000; port entries, 10,000,000 bags. Santos stock available on January 31, 1931, was 1,050,086; the fixed minimum is 1,000,000 bags.

BANKS.

SWISS BANK CORPORATION.—The net profit for the year 1930 (including the carry-forward of £40,770 from the previous year), amounts to £683,267, against £724,343 for 1929 (including a carry-forward of £28,611). At the annual general meeting, to take place on February 27th, the board will recommend the allocation of £20,000 to the pension fund, the payment of 8 per cent. as for the preceding year, the placing of £80,000 to the reserve fund, and the carrying forward of £41,017. The reserve fund, including the amount carried forward, will thus reach a total of £2,160,000—i.e., 33½ per cent. of the paid-up share capital of £6,400,000.

THE BANK OF NOVA SCOTIA.—The net profits of this bank for 1930 amounted to \$2,535,600, as compared with \$2,761,100 in 1929. Four quarterly dividends of 4 per cent. each have been paid, absorbing \$1,836,200. Dominion Government tax on circulation amounted to \$115,400, against \$100,000; contributions to officers' pension fund to a similar sum (against \$110,000); while \$400,000 was written off the bank premises and \$1,000,000 placed to reserve fund, as compared in 1929 with \$400,000 and nil respectively. The balance brought forward is \$534,800, against \$1,465,800. The balance sheet records a total of \$263,115,700, as compared with \$274,241,400. Deposits are lower at \$200,042,300, against \$205,737,400, while current loans in Canada amount to \$89,755,800, against \$102,339,200, and current loans outside Canada to \$16,114,300, against \$20,643,100. Call loans within the country totalled \$30,813,100, as compared with \$32,376,900, while those abroad amounted to \$7,298,100, against \$12,763,000. Investments stood at \$48,752,600, against \$37,209,600.

MISCELLANEOUS.

AUSTRIAN AND HUNGARIAN PRE-WAR UNSECURED PUBLIC DEBTS ISSUED IN GOLD OR FOREIGN CURRENCIES.—The Council of Foreign Bondholders announce that ratification has now been signed, by all the Successor and Cessionary States concerned in the above debts, of the additional agreement made between them and the Caisse Commune on December 13th last. The substance of this agreement was contained in a notice issued by the Council on December 22, 1930, and the full text will be available upon application at the Council House, 17 Moorgate, London, E.C.2, on and after February 9th.

DICKINS AND JONES, LIMITED.—The directors of Dickins and Jones, Ltd., announce a profit for the year ended January 31, 1931, of £115,910, against £129,367 for the previous year. After paying the interest on the debenture stock and the dividend of 5½ per cent. on the preference shares, the directors recommend a final dividend of 14 per cent. for the half-year, making 12 per cent. for the year on the ordinary shares, the same as last year, the amount carried forward being £42,908, against £47,748 last year.

JOHN BROWN AND COMPANY, LIMITED.—At meetings of the first mortgage debenture holders and the second mortgage debenture holders of John Brown and Company, Ltd., the proposed amalgamation of part of the undertaking with Thomas Firth and Sons, Ltd., was approved in so far as the proposals affect the debenture holders.

WEMBLEY STADIUM, LIMITED.—The report and accounts for 1930 show a profit during the past year of £48,053, which is £7,729 more than in 1929. After allowing for debenture interest, depreciation and other writings off, and also taxation reserve, there is a balance of £33,380 to be dealt with. The directors recommend the payment of a dividend on the preference shares, and also, for the first time since the company was formed in 1927, a payment of 17½ per cent. is proposed on the deferred shares. During the past three years a total profit of £101,431 has been made. Including the dividend recommended for last year, the sum of £59,287 has been paid in dividends to shareholders. Debenture stock outstanding is now £15,915. £10,535 of the debenture stock was redeemed during 1930. The balance outstanding on the preliminary and registration expenses has been written off.

WOLVERHAMPTON CORPORATION 3 PER CENT. STOCK, 1924-54.—Williams Deacon's Bank, Ltd., give notice that in order to prepare the dividend warrants due March 1, 1931, on Wolverhampton Corporation 3 per cent. stock, 1924-54, the books will be closed from February 15, 1931, to February 28, 1931, inclusive.

Mr John Edward Cowen has been elected a director of the Tyneside Investment Trust, Ltd.

Mr William Francis Robertson has been appointed a director of the Scottish Union and National Insurance Company, in succession to the late Mr James Simpson Craig.

The directors of the Legal and General Assurance Society, Ltd., have made the following appointments: Mr Vernon E. Boys to be assistant manager, Mr G. W. Bridge to be agency manager, Mr C. S. Johnson to be city branch manager, Mr H. T. Jennings Clark to be assistant foreign fire manager.

At a general meeting of the Life Offices' Association, held on January 19, 1931, Mr W. Penman, actuary and life manager of the Atlas Assurance Company, Ltd., was elected chairman, and Mr C. R. V. Coutts, manager and actuary of the Provident Mutual Life Assurance Association, was elected deputy chairman.

Commercial Reports.

MARKET SUMMARY.

The low level of activity in the coal trade is reflected by the January exports, which, at 3.3 million tons, compare with 5.5 million tons for the corresponding month last year, while bunker shipments at 1.2 million tons have reached a new low level. Industrial demand shows no signs of expansion, and requirements for heating purposes, which have formed a mainstay of the market during recent months, are beginning to slacken off. Apart from an increased demand for British pig iron, business in the iron and steel industries continues slack. It is interesting to note that the restriction of production enforced by the International Raw Steel Cartel amounts to 30 per cent. for the first quarter of this year, and it appears that at its meeting at Düsseldorf next month, the cartel may even increase the restriction for the second quarter. Non-ferrous metals have been decidedly more active, all showing a rise in price on last week. The new materials of the principal textile trades have been firm. Unfortunately the dispute in the weaving section of the cotton industry has not yet been settled, and its hampering influence on the market in finished goods is becoming more and more felt. The wool trade has remained quiet, but there has been a slight improvement in the demand for rayon goods. The principal foodstuffs have been more active. Wheat advanced on the news of the delay in the Argentine harvest, and reduced crop estimates for Australia. Increased confidence in the sugar position is mainly ascribed to the hope of an early ratification of the Chadbourne Scheme by the Government of the Dutch East Indies, and to rumours of decreased cane supplies from Porto Rico. Coffee, cocoa and tea have been weaker, while meat prices continued the downward tendency which had begun early in January. Among miscellaneous commodities, vegetable oils and oilseeds have been steadier, while hide prices were again lower. Rubber has been firmer as a result of an improvement in the demand from the United States.

THE COAL TRADE.

Our Sheffield correspondent writes:—The position of the South Yorkshire coal market is unchanged. Best steams are in regular demand for prompt shipment, but forward business is being held up by the current high prices (17s. f.o.b.) which it has been necessary to quote since the subsidy ceased. Medium qualities move slowly and there is still a glut of small fuel. The household demand is mainly for the cheaper qualities. Best house coal is quoted at 20s. 6d. to 21s. 6d. at pits, and best hand-picked branch commands 26s. or even more, but is not selling freely. There are heavy stocks of blast furnace coke on hand notwithstanding the curtailment of output. Best brands are worth 11s. to 11s. 6d., but there are cheaper prices about, as low as 10s. having been accepted to clear stocks.

Our Glasgow correspondent writes:—Business tends further to diminish on the Scottish coal market, and the result is a continued weakening of prices. Washed nuts are plentiful in all districts; and large coal moves less readily than recently. The seasonal falling-off in home requirements has brought an increase in supplies available for shipment and at the same time some shading of prices for household varieties. The labour outlook appears more hopeful, an extension of the spread-over having, it is understood, been agreed upon. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 15s. 6d.; splint best, 17s.; splint second, 16s. 3d. navigation, 16s. 6d.-17s.; navigation second, 15s.-15s. 6d.; Hartley, 16s.; steam, 15s.; trebles, 13s.; doubles, 11s. 9d.-12s.; singles,

11s.; pearls, 10s. 9d.; dross, 10s. 3d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 6d.; third-class steam, 12s.; trebles, 12s. 6d.-13s. 6d.; doubles, 12s.; singles, 11s.; pearls, 10s. 6d. LOTHIAN.—Prime steam, 13s. 6d.-14s.; secondary steam, 13s. 6d.-14s.; trebles, 13s.; doubles, 12s. 3d.; singles, 11s. 6d.; pearls, 11s. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 14s.; trebles, 13s. 6d.; doubles, 12s. 6d.; singles, 11s. 9d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Although current inquiries continue scarce on the Cardiff coal market, employment at the collieries this week has been regular and shipments active. Colliery companies have now to conform strictly with the conditions of the output regulation scheme, and the dock authorities are complaining of an actual shortage of coal, particularly of large grades. The supply of tonnage is good, and at the Cardiff Docks this week many vessels have been waiting their turn for loading berths. Prices, however, are nominally unaltered. As anticipated, the negotiations between the representatives of the employers and the workmen have resulted in the signing of a new agreement for a period of three years, but both the subsistence wages and the subsistence allowance questions have been referred to the Independent Chairman, who, it is expected, will be nominated in time to attend a meeting of the new Joint Board which has been convened for February 23. The current approximate quotations are as follows:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dross, 18s. 6d. to 19s. 6d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. to 17s. 9d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 15s. to 15s. 3d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; ruddy culm, 8s. 6d. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 25s. 6d. to 26s.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—There is little new in connection with Cleveland iron. Business is on a small scale, but requirements are well maintained against contracts, and inroads are being made into stocks, the quantity available from the current make being still very limited. Trade at the present time is practically confined to home consumers, there being very little export demand. Continental foundry iron continues to be offered to Scotch founders at much below Cleveland prices and orders for the latter are therefore considerably below expectations. Only a moderate business was reported at the weekly market on Tuesday and this was made up of small quantities on home account for early delivery. Prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. The position of hematite is rather weaker. Orders are not coming to hand very freely and makers are now willing to accept 60s. for ordinary mixed numbers for early delivery, although there are one or two that prefer to hold rather than accept this figure. For delivery a few months ahead 70s. is generally quoted, but there are no orders of importance offering to actually test the market. The ore market is practically idle. Best Bilbao rubio is nominally 16s. c.i.f., and the current freight Bilbao-Middlesbrough is 4s. 9d. Coke is in abundant supply and although the general quotation is 17s. delivered works for ordinary blast-furnace qualities, 16s. 9d. and down to 16s. 6d. has been accepted in some instances. In the finished trades some departments are better employed and there are indications of further expansion. Prices for steel materials for home, subject to the increased rebates, are: Plates, £8 15s.; angles, etc., £8 7s. 6d.; joists, £8 15s. Among other quotations heavy steel rails are £8 10s.; iron crown bars, £10 10s.; 24-gauge black sheets, £8 10s.; and 24-gauge galvanised corrugated sheets, £11, all for home use. One or two constructional orders of fair importance have been secured by local firms during the last week and there are prospects of more to follow. The number of furnaces in blast in the district is unchanged at 23.

Our Sheffield correspondent writes:—There is still no sign of the tide of depression turning as regards the heavy steel branches. Producers are still awaiting a buying movement, but large orders and contracts continue on the meagre side and there are possibilities of output of open-hearth steel being curtailed further unless an early change for the better occurs. Many of the workpeople suspended for the Christmas holidays are still unemployed, which indicates that the position has receded since December. Some good contracts are on hand for special steel lines required in modern engineering. The overseas position continues unfavourable as regards all sections of local trade. The call for corrosion-resisting alloys tends to shrink, although a considerable tonnage is being sold. Prices of iron and steel are on the easy side, but makers hold the view that concessions would fail to increase buying while the present stagnation continues.

Our Glasgow correspondent writes:—The position remains practically unchanged in the iron and steel trades in this district. The pig-iron market is very quiet and furnaces in blast are able to produce more than sufficient to meet all requirements. At the steel plants work is scarce and irregular. Makers of material for the use of structural engineers are relatively better employed than those specialising in shipbuilding materials, as a majority of the structural engineers are now confining their purchases to British steel and also they are much better off for work than are the ship-

builders. Continental semis are being offered here at exceedingly low prices, but there is little business being done, partly, it is said, on account of the heavy stocks already on the hands of users and partly because an increasing number of firms are taking advantage of the rebate scheme. Tube makers remain quiet and also the export trade in both black and galvanised sheets; the demand from home users shows some expansion this week.

Our Cardiff correspondent writes:—Business on the Swansea Metal Exchange on Tuesday was again quiet, and the works are employed at only from 50 per cent. to 55 per cent. of capacity. Many mills have been idle under the output control scheme, and there is no apparent prospect of an immediate improvement. Prices have been a shade steadier at from 15s. 6d. to 15s. 9d., compared with 15s. 3d. to 15s. 9d. the previous week. South Wales tinplate bars are unaltered at £5 per ton, but foreign bars are weaker, and are reported to have been bought at prices ranging down to £4 5s. per ton. Tin has been firmer at from £116 5s. to £117 15s., compared with £112 2s. 6d. to £113 12s. 6d. the previous week. There was an improvement in shipments last week, and stocks have consequently been reduced to 234,544 boxes.

OTHER METALS.

TIN.—The expectation of an early statement by the Government of the Federated Malay States to take part in the restriction scheme which has the support of the principal producing countries strengthened the market. Wednesday's price of standard cash at £117 10s. 0d. to £117 12s. 6d. per ton compares with £114 2s. 6d. to £114 15s. 0d. quoted on the corresponding day last week, and "three months" at £118 17s. 6d. to £119 0s. 0d. shows a rise of £2 15s. 0d. Stocks in London and Liverpool warehouses at the end of last week at 23,024 tons, show an increase of 415 tons on the preceding week.

COPPER.—The market in copper, in common with that of the other non-ferrous metals, has been decidedly more active. Mine production and refinery production in the United States during January were on a slightly lower level than in December last, and stocks of rough and refined copper in North and South America, which stood at 513,035 tons at the end of January, show a decline of 10,040 tons as compared with the preceding month. After reducing its quotation from 10.05 cents per pound to 9.80 cents c.i.f. Continent over the week-end, Copper Exporters, Inc., subsequently raised its price to 10.05 cents on Tuesday, and to 10.30 cents on Wednesday. The London metal market quickly responded, and Wednesday's price for "standard" at £46 2s. 6d. to £46 3s. 9d. per ton, shows an increase of more than £2 on the week.

LEAD.—There was an improvement in the demand for lead, and Wednesday's quotation for soft foreign pig lead at £13 15s. 0d. to £13 16s. 3d. shows recovery of nearly £1 from the low level reached last week.

SPELTER.—Spelter was an active market, supported by speculative buying, and Wednesday's prices for G.O.B. at £12 12s. 6d. to £13 1s. 3d. per ton show a gain of about £1 on the week.

Among other non-ferrous metals aluminium remained unchanged at £85 per ton, and nickel sold at last week's price of £170 to £175 per ton. Antimony was slightly easier at £24 10s. 0d. to £25 10s. 0d. per ton for "foreign," but quicksilver rose 3s. per bottle to £22 15s. 0d.

TEXTILES.

THE COTTON TRADE.—Liverpool: February 11th.—Spot sales for the week 5th to 11th (inclusive) are 19,000 bales, of which 8,440 are American, 900 Brazil, 400 Argentine, 5,550 Peru, 1,400 Egyptian, 1,000 African, 850 East Indian and 460 sundries. Imports for the same period are 77,783 bales, of which 17,767 bales are American, 5,051 Brazil, 181 Peru, 11,200 Egyptian, 3,101 African, 27,826 East Indian, and 12,857 sundries. Quotations to-day are: American Middling, 5-91; Egyptian F.G.F. Sakel, 9-35; F.G.F. Uppers, 6-75; Brazil Fair, 6-06; Peru G.F. Smooth, 6-36; West African Middling, 5-91; and East African G.F., 6-96. During the past week the market has shown more steadiness in spite of continued depressing conditions, and prices are about ½d. per lb. higher. The chief buying has been from Bombay and Alexandria. The reversing of straddles and the South inclined to hold for higher prices has forced some shorts to cover. Reports from America indicate a slight improvement in consumption there. Fertiliser sales are reported to be 28 per cent. lower than this same time last year, and with the mild winter some land has been prepared, but so far little indication has been shown of the reduction in acreage likely for the new crop. Fears are expressed that the mild weather may mean a heavy insect survival.

Manchester: February 11th.—Since a week ago the market has been under the influence of a hardening movement in raw-material rates and in some quarters inquiry in yarn and piece-goods has broadened. Difficulties in arranging transactions, however, are more pronounced than ever as a result of the continuance of the lockout. Very few buyers have been prepared to give a strike clause in contracts. On the whole, advices from India have been

slightly better and a fair amount of cloth inquiry has come through, but merchants complain of definite bids being scarce. Retail quantities of light goods have been sold, chiefly for Calcutta and Karachi. Operations for China remain practically at a standstill and no developments are likely until after the Chinese New Year. A little more inquiry has been about for the Near East and South America, but the sales have been unimportant, and rather less activity is now showing itself in home-trade fabrics. Quotations in American and Egyptian yarns have gone against buyers, but it has been difficult for spinners to secure advances. Only a moderate trade has been done in home counts and export numbers.

THE WOOL TRADE.—Our Bradford correspondent writes:—Conditions in the wool trade are still encouraging. The London sales have closed since last writing without the development of any further outstanding feature. Competition was good, even on the last day or two when interest sometimes wanes. Values having recovered substantially from the low level seen during the first week without getting back to a parity with December, simply means that the trade has found a working basis. Perhaps it would have been a good thing if more wool could have been passed into users' hands, for 90,000 bales is a big quantity to carry forward to next March, particularly as there will be further big arrivals before then. The policy of sellers has, however, been sound. No good whatever can be done by forcing wool on to an unwilling market, and cable information received from Australia and elsewhere since the sales closed shows that values are holding their own very well. The Cape market is more settled, and the continued steady offering of wool will no doubt meet with a good response from buyers. It is known in Bradford that large quantities of tops were sold forward during the recent period of activity, and these requirements will have to be met in wool at the best price possible either in London or Australia. With regard to operations in the latter markets, the policy of some Australian interests is to transfer capital to London. In this way there is a reasonable prospect of a profit being made on the wool, and financial interests are safeguarded. The big buying movement in London which resulted in a marked recovery in values was prompted by extensive sales of tops and yarns, and the entire industry is now on a much sounder footing. The Bradford market is rather quiet, but there is still some turnover in all commodities. Having satisfied their requirements for the time being, spinners are now rather indifferent, but except for such occasional forced sales as are found in any market, it is impossible to buy tops at less than a week ago. Topmakers are prepared to await developments.

THE HEMP TRADE.—The market has been weak during the greater part of the week, but on Wednesday buyers were more in evidence, while sellers adopted an attitude of reserve. Manila "J.2." February-April was quoted at £19 per ton on Wednesday, which shows a decline of 15s. on the week. According to a cable, last week's receipts amounted to 27,000 bales, against 34,000 last year. This week's receipts have been estimated at 25,000 bales, and at 27,000 for next week. Manila shipments last week totalled 17,000 bales, of which 3,000 have been consigned to the United Kingdom, 6,000 to the Continent, 2,000 to the United States, and 6,000 to Japan. Local consumption at 1,000 bales, leaves stocks at 114,000.

FOOD.

THE GRAIN MARKETS.—Drying winds and spells of sunshine during the past week enabled farmers to resume field work, and preparations are proceeding for Spring sowings. Improved climatic conditions also benefited winter crops, which are recovering from excessive rains, and the general agricultural outlook remains favourable in the United Kingdom. Moderate supplies of native wheat were available at the statute markets, but prices were too high compared with foreign sorts to stimulate milling interest, business being mostly for poultry feed. Trading on the import market has assumed considerably larger proportions of late, and an outstanding feature was the liberal absorption of Australian cargoes and parcels both to European and Oriental destinations. Canadian grades also received attention from United Kingdom and Continental millers, and with the new Plate crop now moving in volume, a firmer market resulted. Stimulating cables from Argentina and North America supported the advance, a good export demand on Eastern account inducing Canadian sellers to raise their limits, while the delayed Argentine harvest, and reduced crop estimates, both in that country and Australia, were influencing factors. Buyers, however, still confine purchases to near at hand parcels and early shipments, in view of large prospective Plate shipments, and the renewal of Russian grain chartering for March loading. Huge tonnage bookings are now taking place from the River Plate, and with substantial Commonwealth shipments, supplies coming forward

† Duty on Tea repealed as from April 22, 1929, inclusive. Figures transferred from Group F to Group E.

will probably be more than adequate for consumers' requirements. Chartering has opened for Spring loading from Montreal, and it is certain that the shipping movement will be resumed on an active scale in the Danube and Black Sea shortly. The United States is the only country that is not pressing supplies for export, and the position there is becoming more difficult by favourable winter crop prospects. Home milled flour was advanced by 1s. per sack, and a fair business transpired, but North American moves off slowly for shipment. The general tone of feeding stuffs also improved under a steady demand for Plate maize from both U.K. and Continental consumers.

WHEAT.—Again firmer. No. 1 hard Manitoba, ex ship, 30s. 3d. 31s.; No. 1 Northern Manitoba, ex ship, 29s. 6d.-30s.; No. 2 ditto, 28s. 6d.-29s. 6d.; No. 3, 28s. 3d.; No. 4 Manitoba, 27s.; Barusso, 63 lbs., 23s. 6d.; Rosafe, 63 lbs., 23s. 3d.; Australian, 23s. 6d.-24s. 6d.; Australian (on sample), landed, 21s.-24s. per 496 lbs. English, 4s. 5d.-5s. 2d. per 112 lbs.

FLOUR.—Firm. London, straight run, 24s. per sack for country deliveries and 23s. London area. Of imported, Manitoba patents, 22s.-25s. 6d.; Buffalo ditto, 22s. 6d.-26s.; Australian, 18s. 6d.-18s. 6d., ex store, per 250 lbs.

MAIZE.—Firm. Plate, landed, 17s. 6d.; ex ship to arrive, 16s. 3d.; February-March, 16s. 6d.; March-April, 16s. 9d. per 480 lbs. Yellow maize meal, £5 10s., f.o.r. London, per ton.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1930.	Feb. 11, 1930.	Jan. 1, 1931.	Jan. 28, 1931.	Feb. 4, 1931.	Feb. 11, 1931.
	1929.	1930.	1931.	1931.	1931.	1931.
Winnipeg (No. 1 Manitoba).....	148½	127½	56½	57	60½	64½
Chicago (No. 2 Winter).....	130½	119	79½	80½	79½	79½

The visible supply of wheat in Canada at 62,535,000 bushels, shows an increase on the week of 1½,000 bushels. Supplies a year ago stood at 75,180,000 bushels.

SUGAR.—At the prevailing low level of prices, the market is very sensitive, and the news of a decline in cane supplies from Porto Rico coupled with the hope of an early ratification of the Chadbourne scheme by the Government of the Dutch East Indies, resulted in an improvement in demand. The market became decidedly firmer, and on Thursday morning quotations of refined sugar were raised 3d. per cent., thus cancelling out last week's decline. Wednesday's sales of raw futures included March delivery from 5s. 9½d. to 5s. 10½d. as against 5s. 7d. to 5s. 7½d. on the same day last week; May from 6s. 0½d. to 6s. 1½d. as against 5s. 11d. to 5s. 11½d.

COFFEE.—The market in coffee has been quiet, and prices were scarcely changed on the week, but good qualities continue to be well supported.

COCOA.—Transactions in cocoa have been small in quantity, and prices were below those of last week. On Wednesday, Accra, fair fermented, sold at 21s. to 26s. per cwt. as against 23s. to 28s. last week. Futures were easier, in sympathy with spot prices.

TEA.—The weakness of the market has continued, and prices show a further decline. Wednesday's price of Indian Pekoe was from 8d. to 1s. 4d. per lb., as compared with 8d. to 1s. 11½d. at the same day last week. Ceylon grades have been generally better supported than those of Indian origin, and C. Pekoe realised from 9d. to 1s. 11d., as compared with 9½d. to 1s. 11½d. last week. Although week-to-week fluctuations are normally governed by the quantities offered at the auctions, it is known that this year's production will probably exceed that of last year, despite the continuance of restriction.

RICE.—The market in rice remained dull, with quotations unchanged at 11s. 9d. per cwt. for Burma No. 2, cleaned, spot.

POTATOES.—Supplies were plentiful, but although the market was quiet, quotations remained at last week's level.

SPICES.—The spot market in pepper was steady, with little change in quotations, but forward values hardened on reserve of sellers, and fair support. Black: Landed in London last week, 25 tons; delivered, 30; stocks, 440 tons, against 1,126 a year ago. White: Landed, 78 tons; delivered, 50; stocks, 501 tons, against 1,219 a year ago.

MEAT.—The downward tendency in meat prices which began at the beginning of the year has become more marked in foreign beef and mutton. Wednesday's price of Argentine chilled hindquarters, at from 3s. 4d. to 3s. 10d. per 8 lbs., compares with 4s. 10d. to 5s. 4d. at the beginning of the year, and New Zealand frozen mutton, which realised from 3s. 6d. to 4s. 2d. for 8 lbs. two months ago, stood at 2s. 8d. to 3s. 8d. on Wednesday. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,521 tons, as compared with 9,129 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.7 per cent. of the supplies, as against 82.6 per cent. a year ago, and imported mutton, mainly New Zealand, formed 77.9 per cent. of the total supply, as against 78.1 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets generally are steady, but only a moderate business is passing. Linseed is firmer in sympathy with wheat, but consumers are not following the advance. Prior to this some trade had been done on Continental account, mainly in Plate on passage, for which £8 7s. 6d. was paid. Current value on spot at Hull and for seed near at hand is £9 5s., and for shipment to April, £8 12s. 6d. Shipments continue on a large scale from Argentina, the total on passage to Europe having increased to 275,900 tons, or 45,900 tons more than last week, and comparing with 174,300 tons a year ago. Small quantities of Baltic linseed are coming to hand. A fair trade has been done in cottonseed in near positions, and values are firmer, black Egyptian affloat quoting £6 7s. 6d., February loading £6 5s., with March and April somewhat less. Linseed oil, following the rise in seed, is firmer, raw oil on spot ex Hull being held for £17 10s.; February and March-April £17, and May-August £17 5s. Cotton oil is quiet, crude Egyptian, ex Hull, offering at £17, and common edible at £19 10s. Demand for oil-cakes and meals continues good, and prices are about unchanged. The market in copra has been firmer, Wednesday's price of S.D. Straits c.i.f. at £15 5s. per ton showing a rise of 5s. on that of the corresponding day of last week.

HIDE, LEATHER AND APPLIED TRADES.—Lower prices continue to be realised for hides from home slaughtered cattle, the sales at Manchester this week again recording reductions of from 1d. to 1 1/2d. per lb. on ox and heifers. The market for foreign hides continues dull and uninteresting, in spite of the fact that prices have again moved in buyers' favour, the actual turnover is disappointing. In the South American market Argentine ox have changed hands at 5 1/2d., while light ox have dropped to 4 1/2d., and Montevideo ox to 6 1/2d. Dry hide from the same origin are also weaker, B.A. Americanos being quoted at 6 1/2d., and M.V. Americanos at 7 1/2d. Small business has been done in Cape hides at 5 1/2d. and 4 1/2d. for dry salted firsts and seconds, 20/30 lbs. and 6 1/2d. and 5 1/2d. for drys. Australian hides at origin are quoted too dear for much business on this side, and sales during the week have been very small. The turnover in sole leather has shown a slight improvement, and although the bulk of the business is still confined to small quantities, buyers appear to be taking more interest in the future of the market. English and wet-salted hides have been taken up moderately well in all weights for the repairing trade, in addition to which the demand from the footwear manufacturing and for dry hide bends has been better. Steady trade is experienced in the upper leather section, and although orders are usually for small lots, the business is regular.

RUBBER.—An improvement in the demand from the United States, coupled with a slight decrease in the stocks in the United Kingdom, resulted in a better tone in the market at the beginning of this week. The spot price for standard ribbed smoked sheet at 4d. per lb. shows a rise of 1/2d. as compared with that of the corresponding date last week. For forward positions, business has been done at 3 1/2d. for February, at 4 1/2d. to 4d. for March, at 4 1/2d. to 4 1/2d. for April-June, at 4 1/2d. to 4 1/2d. for July-September, at 4 1/2d. to 4 1/2d. for October-December, and at 4 1/2d. to 4 1/2d. for January-March, 1932. Stocks in London and Liverpool have decreased by 46 tons, the total being 124,456 tons at the end of last week as compared with 81,243 tons at the corresponding date last year. Deliveries at 2,012 tons during the last week show an increase of 920 tons, as compared with the preceding week, and are 12 tons above those of the corresponding week last year.

THE MONEY MARKET.

MONEY this week has been erratic. On Monday and on Tuesday morning it was extremely stringent, and at times up to 3 1/2 per cent. was paid. By Tuesday afternoon, however, it had suddenly become so easy as to be almost unobtainable at rates running down to 2 1/2 per cent. It remained easy until Thursday, when it firmed up again to 2 1/2 per cent. In the discount market, the rate on three-months' bills had been pulled up as high as 2 1/2 per cent. by the beginning of the week, but, when money became easier rates naturally sagged, and by Thursday the three-months' rate was no better than 2 1/8 per cent. Even this last rate,

however, represents an advance on the preceding week, which shows that the Bank's efforts to maintain high discount rates are still proving successful.

Various explanations have been heard of Tuesday's sudden ease in money. The Bank return reveals a further contraction of £3,114,901 in the note circulation, with a consequent increase of £3,074,405 in the Reserve. This contraction is purely seasonal, for the note circulation usually falls to its lowest point at this time of year. There has also been an increase of £2,178,698 in Other Securities, a movement which is always difficult to explain. Government Securities have contracted by £980,083, possibly due to Treasury bill maturities, and Public Deposits have risen by £1,664,403, presumably as a result of revenue collection. When all these movements are off-set against each other, they lead to an increase of £3,490,043 in market resources as measured by Bankers' Deposits. This to some extent accounts for the ease in money, but as Bankers' Deposits now stand at the relatively moderate figure of £61.1 millions, this explanation is very partial.

The truth is that the money market is the victim of countless cross-currents, which can neither be foreseen nor measured. Revenue may be transferred to the Bank a day later than had been expected, or some Government Department such as the Post Office may one day make an exceptionally large payment. External influences may also come into play. Thus this week it has been suggested that one cause of the ease was extensive American buying of bills, and another cause put forward was that the Commonwealth Bank was pressing on the market sterling that it has in hand in readiness for the redemption of £5,000,000 of Australian Treasury bills maturing on March 2nd. The real point is that market resources depend upon two factors, namely, the amount of money in existence, and the extent to which that money is immobilised for other purposes, or is being transferred from one holder to another. The second factor is quite incalculable, but more often than not is the most important of the two.

	Jan. 29, 1931.	Feb. 5, 1931.	Feb. 12, 1931.	Feb. 19, 1931.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)
Bank's Deposit Rate..	1	1	1	1	1½ (May 1, '30)

Houses / Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2½	...

Meanwhile the essential point is to maintain high market discount rates, and there is much to be said in favour of keeping the three months' rate at its present level of 2½ per cent. There is no doubt that recent political developments have had a prejudicial effect upon the exchanges, for in addition to a reaction during the week in spot rates, the premiums on forward francs and dollars have again increased. Three months' forward francs on Thursday were quoted at a premium of 20 centimes, equivalent to a net forward rate of Frs. 123.72. Were the spot rate at or above par, this spread of 20 centimes would not call for any comment, for the margin now existing between London and Paris interest rates is such as to require a spread of about 30 centimes before it becomes profitable to buy francs spot and sell them forward, holding the money in Paris in the meantime. The spot rate, however, is now so low as to mean that the forward rate is 17 centimes below the export gold point. This either means that certain operators are automatically covering themselves forward without realising exactly what they are doing, or else that they do not feel absolutely confident of being able to draw gold from London in three months' time.

The first explanation is *prima facie* unlikely, for it can only arise in cases where a foreign buyer of sterling bills is covering himself by forward sales of sterling, without finding out how the forward rate stands in relation to the

gold export point, as well as to the spot rate. In any case, there is no doubt that foreign financial centres, with their imperfect acquaintance with British politics, have been led to take a serious view of British finances by the events of the past fortnight. While it would be an exaggeration to talk of a "flight from the pound," the monetary developments described above reinforce the view that if gold losses are to be prevented, it is of far greater importance to maintain the high status of British credit than to maintain high discount rates in the City.

It is semi-officially reported that the Argentine Government has completed its preparations for balancing the budget, and that it has definitely decided to bring the peso back to parity. A sudden restoration to parity of the peso would be neither practicable nor desirable, and so the intention is to bring about a very gradual improvement, so as to relieve traders from the disturbances that a violent monetary readjustment would cause. It will be interesting to see if these intentions can be carried out, without the recovery either being too quick, or else being interrupted by unfavourable reactions.

Money rates in New York have developed a firmer tendency. Although call money has remained at 1½ per cent., it has this week been a definitely stronger rate, with less outside money available. More significant still, the downward trend of the rate on bankers' acceptances has at last been reversed. Late last week an increase of ½ per cent. was announced, and according to the latest reports, a second increase is not impossible. The bond market has been weak. The Soldiers' Bonus Bill is passing through Congress, and though the original provisions have been watered down, the cost is still estimated at from \$500 to \$700 millions. Imports for January, 1931, were \$183 millions, against \$209 millions for December and \$310 millions for January last year. Exports were \$250 millions, against \$273 millions for December and \$411 millions for January last year.

The Foreign Exchange market was irregular but fairly active. Earlier in the week the tendency was against sterling, but there was a partial recovery towards the close. New York went from 4.86 to 4.85½, after being as low as 4.85¼. Montreal improved from 4.86½ to 4.85½. Paris gained three points at 123.92. Brussels improved by ½ to 34.85½, as did Milan by four points to 92.82. Madrid was at one time nominal owing to the political uncertainty, but after touching 50.00 recovered to 47.30, against 49.40 last week. Amsterdam moved in our favour to 12.10½, after being ½ higher. Berlin gained ½ at 20.44. The South American exchanges were firmer than for some time past, Rio being steady at 4½d., while Buenos Aires gained ¼d. at 36½d., and Montevideo ¼d. at 34½d. In the forward market one month's dollars were unaltered at 3½ cent premium, but the three months' rate rose by ½ cent to 3½ cent premium. Paris also was better at 7 and 20 centimes premium, against 6 and 9 centimes last week for the two periods, as was Brussels at 3 and 5 centimes premium against 1 and 2 centimes premium last week. Milan improved by 2 points for one month at 9 centimes discount, and by 5 points for three months at 27 centimes discount. Madrid, after some uncertainty, closed the week appreciably stronger at 12 and 30 centimos premium. Amsterdam was fractionally better at 1½ cent and 3½ cent premium, and Berlin was practically unchanged at 3 pfennig and 1½ pfennigs discount for one and three months respectively. Silver prices fell by ¾d. for both cash and forward to 12½d. and 12½d. respectively, chiefly as the result of persistent China sellings in a small market. Still India is inclined to buy at present levels. The China silver exchanges declined in sympathy, Hong Kong losing ¾d. at 11d. and Shanghai ¼d. at 1s. 2½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Boulevard Street, London, E.C.4.

THE OPEN CASH-BOX.

ON Wednesday night at 11.17 p.m. Parliament completed a bad day's bit of work. By 279 votes to 218—a division for whose result the Liberal Party, in supporting the Government, incurred an unenviable responsibility—the House of Commons agreed, firstly, that the Minister of Labour should "sweeten the jack-pot" of an already hopelessly insolvent Unemployment Insurance Fund by no less than £20 millions of additional borrowing; secondly, that Transitional Benefit should be extended under existing conditions—at an estimated further cost of £20 millions—for six months after the date, April 18th, on which benefit payments under that head were due to begin to expire. In the light of this Vote and of the Government's calculated reluctance to press the Royal Commission for an early Interim Report, there is every reason to fear that, at least until next autumn, nothing will be done even to inaugurate the process of dealing with this critical situation. Yet, as the minutes of evidence taken before the Royal Commission demonstrate, the crucial facts are simple enough; the gravity of the present position is painfully obvious; and the first steps to be taken—setting aside points of administrative detail within the proper province of the Departments—are already clear beyond dispute.

Let us very briefly recapitulate the essentials of the immediate problem. Given continuance of the present figures on the Live Register—say, 2,650,000 persons, of whom about 2,100,000 are claimants to Ordinary Benefit, 400,000 are drawing Transitional Benefit, and 150,000 are non-recipients—the Fund's debt at March 31, 1930, will be in the neighbourhood of £75 millions. For the financial year ending March 31, 1932, calculations of cost must necessarily be guesswork, for it is impossible to forecast the numbers that will be unemployed. There are also minor difficulties—for example, in estimating the rate of transference from "Ordinary" to "Transitional" Benefit. Nevertheless, the figures submitted to the Royal Commission by the Accountant-General of the Ministry of Labour in relation to a Live Register of 2,300,000, and the later estimates put in by Sir Richard Hopkins of the Treasury, make it possible to form a provisional budget by making certain assumptions. The following figures assume that the number unemployed will remain round about a figure of 2,650,000, and that Transitional Benefit will continue to be paid throughout the year:—

UNEMPLOYMENT FUND ACCOUNT.			
INCOME.		EXPENDITURE.	
	£Mn.		£Mn.
(A.) Ordinary Benefit—		Ordinary benefit, administration, and debt interest	86
(i) Contributed by employers and employed	28	Transitional benefit and administration	40
(ii) Contributed by Exchequer out of Budget	15		
(iii) To be borrowed	43		
(B.) Transitional Benefit—			
(iv) Contributed by Exchequer out of Budget	40		
	126		126

Thus, even if unemployment during the next financial year does not average more than the present figure, not only will the Exchequer have to find £55 millions out of the Budget, but by March 31, 1932, the debt will have risen to some £120 millions—an increase of debt which will practically absorb the whole sinking fund provision of recent years. The figures show that income items (i) and (ii), which constitute the normal resources of the fund, are to-day only meeting about one-third of the outgoings and that the total expenditure is considerably larger than our total expenditure upon armaments. Moreover, he would be a bold man who would confidently assert that we shall not have to deal with a still larger

total of unemployed than that on which these figures are based.

How has this critical situation, which manifestly jeopardises the equilibrium of the Budget, come to pass? On the one hand, admittedly, there is the influence of the world depression of 1929-31, which has placed on the Insurance Fund a strain which, with the aid of the most rigorous administration, it could not have borne unsupported; on the other hand, there has been, particularly since 1927, the contributory factor of optimistic and generous open-handedness on the part of successive Governments, and particularly of the Government in office to-day. Between 1920 (the pre-war rate of 7s. per week benefit, single or married, was then raised to 15s.) and 1927, the history of Unemployment Insurance was one of steadily increasing benefits—particularly in respect of dependents—notwithstanding the decline in the cost of living; but the cash-box was protected to some extent by the rule limiting benefit to one week's pay for every six contributions. The Act of April, 1928, removed this protection; instead, it provided (a) that claimants with not less than thirty contributions to their credit in the preceding two years might draw benefit for 78 weeks, provided they were meanwhile "genuinely seeking work," and (b) that, for a "transitional" period, claimants should be entitled to benefit if they had paid eight contributions in the past two years, or 30 contributions at any time since 1920 or (in certain occupations) since 1911. Last stage of all: the Act of 1930 abolished the "genuinely seeking work" proviso; still further eased the conditions imposed on "transitional" beneficiaries; and made their cost a direct charge on the Exchequer. The result was an immediate increment of 160,000 claimants to Transitional Benefit, of whom only 50,000 (it is pertinent to note) had been previously claiming poor relief; and while the slump in trade has been responsible for a further increase in the number of transitional beneficiaries to 400,000, as compared with 140,000 a year ago, those statutorily entitled to benefit under the "30 contributions" rule are now considerably more than double the number which the Fund can pay for out of income—even if the Exchequer covers all Transitional Benefit—at present rates of contribution.

The facts and figures thus marshalled are so formidable that there is a danger lest public opinion may be induced by the Government to acquiesce in "letting things rip," for the simple reason that restoration of the Fund to a sound actuarial basis (a condition which involves not only making the Fund self-supporting, but also repaying a debt now soaring unchecked to £100 millions) may seem a hopeless task. That way—let us not mince words—lies disaster. Though the objective of restoring the Fund to self-supporting solvency cannot be realised in a day—nor can it, indeed, be fully accomplished until the weight of the present acute trade depression has been partly lifted—a beginning can, and must, be made at once. The longer remedial measures are delayed, the more drastic must be the action that will inevitably be forced upon us.

The first step must be to recognise that workers whose claims to statutory benefit—even under the present easy conditions—have lapsed, cannot properly be regarded as "insurable." Those now classed as "transitional" beneficiaries have lost—some temporarily, some permanently—all claim to benefit from an insurance scheme. Their right to public assistance, in cases of need, is indefeasible, and will be readily conceded; but such assistance must be conditional on acceptance by the recipients, if required, of (a) any work (public or private) at market rates of pay, or (b) pure relief work—as a test—at unemployment rates of pay. We do not suggest that the cost of assistance should necessarily be transferred from the Exchequer to the rates, though local administration might be desirable; what we do maintain is that the modification of the "transitional" conditions suggested above would eliminate most of the notorious abuses

of the 1930 Act now practised, and would reduce the charge for so-called transitional benefit in the next year's Budget from £40 millions to well under £30 millions, without inflicting any hardship. On the contrary, "test" work and a "means" limitation are urgently necessary if wholesale demoralisation is to be avoided.

The next step is to take emergency measures to arrest the rake's progress of the Fund proper. Here the Government Actuary, Sir Alfred Watson, has indicated the obvious lines of wisely-conceived policy. Since benefits were scaled up to meet the higher post-war cost of living, there is no moral or contractual obligation to refrain from scaling them proportionately down. Accepting the post-war principle of supplementary dependants' benefit as fair and actuarially defensible, the fact remains that present rates of benefit could be reduced by at least one-third and still give the same purchasing power as they did in 1921. Let us not ask too much of democracy; let the rates be reduced by one-fifth. Then, if contributions were increased by 5d. per week per man (with proportionately smaller increases in the case of women and juveniles) the Fund's deficit, according to Sir Alfred Watson, would be reduced to the relatively manageable figure of £10 millions per annum, on the basis of the present Live Register position. Not only so; after a brief period, either (a) the diminution of the Live Register as a result of trade improvement, or (b) the progressively accelerating passage of claimants from the Fund to the proposed "publicly-assisted" class, would enable the Fund to become wholly self-supporting. Who would pay the extra contributions? Here, again, the answer is clear. The Exchequer will be sufficiently hard-pressed if it is to carry the requisite "public assistance"; we cannot afford economically to increase costs of production by imposing an additional charge on employers' wage bills; but the employed can fairly be asked to assume this fresh obligation (which they cannot possibly, under present conditions, pass on to wage costs) as a just off-set to the heavier taxation which the wealthier income-earners will doubtless have to bear in order to finance the support of those "lapsed" from the Insurance Fund.

In this short outline of policy we have endeavoured to suggest simply the immediate legislative actions which appear to us to be urgently required. The questions whether the "30 contributions" rule should be permanently supplemented by a stricter limitation than at present on the number of weeks' Ordinary Benefit receivable, whether a more acid test of willingness to work should be restored, and what should be the ultimate rates of contribution and benefit when the present emergency has been surmounted—these and other issues may well be left for the Royal Commission's deliberate investigation; but, so far as immediate exigencies are concerned, the Commission can tell the Government nothing it did not know before the Commissioners were appointed; and the time to act is now.

The objections may doubtless be raised—by the Labour Party, that such proposals are "inhuman"; by the cynic, that no conceivable Government will carry them into effect. The first objection we rebut: the most mistaken kindness at this juncture is to delude people into the belief that pensions for the able-bodied unemployed, at rates little below the economic wage in many trades, can indefinitely be maintained, regardless of individual need, save at the risk of placing on our national finances a quite intolerable strain. Moreover, the matter by no means ends with the Exchequer case. For one thing, continuance of the payment of benefits, whether on "covenanted" terms or as pure relief, on a scale and in conditions quite disproportionate to our national means and to the economic level of unsheltered wage-rates, is gravely prejudicial to the readjustments absolutely essential if our competitive power in the export markets is to be restored, and our industrial mechanism to function efficiently. Further, if the principle of insurance is not disentangled from the morass of dole expenditure, a serious injustice will be done to contributors, and the whole scheme will be discredited and ultimately destroyed beyond repair.

The second objection—that of the cynic—we must leave to the arbitrament of the nation. Admittedly, there is little sign of action from the present Cabinet; but facts

remain facts, and the impossibility of continuing unemployment insurance as an undisguised dole, on the basis of a supposedly inexhaustible cash-box, wide open to every claimant, remains impossible. If a political leader will have the courage to tell the country straight that it has two alternatives—(1) a tightening of the belt by every class of the community, employed or unemployed; (2) a risk of undermining the financial solidity on which our economic life depends—we do not yet despair that the choice will rest on the course of sanity and retrenchment.

THE SPANISH CRISIS.

THE situation in Spain is disquieting. For eight years, now, the clouds have been piling up, and for more than one year—ever since the resignation of the Directorate—the storm has been threatening to burst. Each time, so far, the deluge has been stayed after the fall of the first few warning drops. But the cloud-bank does not disperse. It piles higher and higher; and it is to be feared that, when the break in the political weather does come at last, it will be far more violent, and perhaps destructive, than it need have been if the discharge had taken place betimes.

One example of this curious political phenomenon was the abortive rising of last December. Another is the abortive Cabinet crisis of this week, which has ended as inconsequently as it began. The immediate background was the late Prime Minister, General Berenguer's, decision to hold a general election for Cortes which were to be invested with certain exceptional "constituent" powers, but this without any substantial inroad upon the powers assigned to the Crown by the Constitution of 1876. The move failed to win the co-operation of the Republicans and the Socialists, but part of the Constituent group was induced to participate in the elections by the concession that the new Cortes were to have a "semi-constituent" character and by certain other liberal gestures—the lifting of the censorship and a partial implementing of the constitutional requirement that a general election for the Cortes should be preceded by elections for the local authorities (on whose conduct the "making" of Spanish elections largely depends). On Saturday, the 14th, however, the prospects of an election on these terms were suddenly destroyed by the action of two politicians of "the old gang" which was pushed off the stage of Spanish politics in 1923 by General Primo de Rivera's pronunciamiento in that year. Count Romanones and the Marquess de Alhucemas announced that, as soon as the Cortes had met, they would demand fresh elections for a Constituent Assembly. This announcement (unexpectedly following the decision of these two leaders to nominate candidates for the elections which General Berenguer had decided to hold) knocked the bottom out of General Berenguer's plans. He resigned, and a decree cancelling the general election was signed by the King.

At mid-day on Monday King Alfonso took what seemed, at the moment, like a courageous and statesmanlike step towards relieving the political tension. He commissioned Señor Sanchez Guerra—a veteran Conservative leader who has publicly criticised the King in unmeasured terms—to form a Cabinet, without any limitations on its membership, to preside over a Constituent Assembly. Señor Guerra sought to take full advantage of his mandate by constructing a new Government on a genuinely representative basis; and, with this in view, he visited, in prison, certain of the Republican Socialist leaders who are awaiting trial on charges of complicity in the abortive rising at the end of last year. This move was a failure, and it settled the fate of Señor Guerra's whole endeavour. Once more the Socialist and Republican leaders refused to co-operate—in the hope, apparently, that, sooner or later, their intransigence would make a revolution inevitable. But the rebuff which they administered to Señor Guerra did not leave the situation where it was, for the incident aroused the Conservatives to action. While Señor Guerra was laboriously executing his mandate by seeking a Cabinet on a narrower basis, the Duke of Maura and his associates appear to have been advising the King to withdraw the concessions, on the part of the Crown, on which Señor Guerra's programme depended. It was, in fact,

one of the Constituent Group's conditions that the King should agree to the suspense of the power of veto and of certain other prerogatives assigned to him under the Constitution of 1876 until the proposed Constituent Assembly should have decided either to ratify that Constitution or to reform it.

Thus, when, shortly after mid-day on Tuesday, Señor Guerra returned to the palace with a list of names for a Cabinet in his pocket, he came out again, after a short interview with the King, to announce that he had failed in his task after all. Thereafter, the King consulted Count Romanones and the Marquess de Alhucemas, and also the Constituentist Don Melquiades Alvarez. Señor Guerra had advised the King to entrust Don Melquiades Alvarez with the task in which he had failed himself, but this advice was not followed. Instead, the Press censorship was re-imposed that evening; and on Wednesday the crisis was shelved—not solved—by the formation of a Monarchist Coalition Cabinet. The new Prime Minister is a sailor, Admiral Aznar; and the Liberals, Count Romanones and the Marquess de Alhucemas, who precipitated the crisis, emerge in possession of portfolios, side by side with the Conservatives Señor de la Cierva and the Duke of Maura. General Berenguer returns to office as Minister of War. The Catalan leader, Señor Cambó, who is personally incapacitated by ill-health, is represented by Señor Ventosa, who has been given the Ministry of Finance.

Thus, King Alfonso has retrieved all the powers of the Crown and has secured a Ministry which is prepared to serve him on these terms. But what will be the end thereof? For this is a Ministry without a policy. If General Berenguer's compromise plan proved impossible last week, it will be doubly impossible now, when the Constituentists will assuredly have been driven into the arms of the Republicans and Socialists. Once more, the real issues in Spanish politics have been momentarily faced, only to be hastily shrouded again; and, once more, this rather futile proceeding has distinctly diminished the chances of a peaceful and constructive solution. At the moment, it looks as though Spain could hardly escape a choice of two evils: on the one alternative, a revolution; on the other, a new military dictatorship. Nothing but a dictatorship can now keep the prerogatives of the Crown intact; and it is hardly possible to see how anything short of a revolution can now bring into office those political parties which, between them, represent the great majority of the Spanish nation. The blame for this unhappy development must be divided between the revolutionary intransigence of the Republicans and the Socialists and the autocratic intransigence of the King. But such apportionments of blame are unprofitable. We can only hope that somehow Spain will find a reasonable way out of the *impasse* into which the political perversity of her pastors and masters has led her.

MR LLOYD GEORGE AND THE CITY.

MR LLOYD GEORGE's reputation as the most outstanding political figure of our time rests securely on the many and great services which he has rendered to his country. Not the least of these has been his ability to make the nation face up to facts; and in recent years he has almost acquired the reputation of a Cassandra by his constant reiteration that all is not well with England. But there have undoubtedly been occasions when Mr Lloyd George's judgment or his temperament have misled him into act or speech that has proved to be a disservice. His attack on the City of London in the House of Commons last week was such an occasion. When Mr Lloyd George speaks of the City's "frigid and flapping penguins" even the victims can afford to smile at his inimitable railery. But it becomes a very grave matter when an Elder Statesman seriously makes the sweeping assertion that the City of London is always wrong in policy and judgment and is the deliberate obstructor of progress and prosperity.

This attack is general in form, but its weight is necessarily directed mainly at the Bank of England, for the Bank is at once the leader of City opinion and the chief instrument of monetary policy. We urge no claim to

The MERCANTILE BANK of INDIA

LIMITED.

Head Office: 15, Gracechurch St., London, E.C.3

CAPITAL AUTHORISED £3,000,000

CAPITAL PAID UP £1,050,000

RESERVE FUND & UNDIVIDED PROFITS... £1,646,506

Branches and Agencies throughout the East.

infallibility either for the Bank of England, which we have not hesitated to criticise from time to time, or for the banking community generally; nor would we attempt to argue that City men are more free than any other community from political prejudices. But we do not forget that the policy of European reconstruction, of re-establishing stable currency conditions, and of promoting monetary co-operation which have been the guiding principles of Mr Norman's policy for the last ten years has had the sanction of a whole series of international conferences, in some of the earlier of which Mr Lloyd George himself played a leading rôle.

Starting from what we believe to be an inaccurate reading of the history of the past decade, assuming a false antithesis between the supposed interests of industry and finance, and imputing a narrow and reactionary outlook where in fact there has often prevailed a much wider view of world affairs than that prevalent in political circles, Mr Lloyd George's speech must inevitably have three definitely mischievous results. It must strengthen the unreasoning belief that the City can wax fat on the misfortunes of the rest of the country and so hamper the efforts that are being made to strengthen the association between banks and industry; it leaves the City to assume that, if Mr Lloyd George's policy prevails, the steps that have laboriously been taken to restore Britain's credit and to maintain her finances may be reversed—thus undermining the confidence of the investor at home; and it gives the impression abroad of a challenge to the principles on which British credit has been re-established. This is a deplorable result—at all events to those who believe with Mr Snowden that the maintenance of our credit is vital and of more importance to the workers of the country than to any other class of the community. A depreciation of something approaching £100 millions in the value of British securities is a heavy price to pay for a debating triumph.

Our most serious complaint is thus against the general tone of Mr Lloyd George's speech. But let us look at some of his charges seriatim. Mr Lloyd George's first count is this: "Rapid deflation was a mistake and it had an injurious effect." He is clearly referring to the early post-war years, and therefore we can only assume from this laconic utterance that he is imputing to the leaders of the City the blame for the collapse of the post-war boom. We see no way in which such a charge can fairly be substantiated. That boom, as everyone knows, was caused by the artificial stimulus of world-hunger for goods after four and a half years of war. It collapsed, as it was bound to collapse, as soon as the force of that special stimulus was spent. If any criticism lies against the City it is certainly not for restriction of credit at that time; it would be easier to make the case that the City was too generous in boom financing and afterwards too gentle in the application of a financial purge—a gentleness that resulted in the accumulation and persistence of huge frozen credits. If fault there was—and who except politicians would claim to have been always right in those bewildering times?—it lies in the opposite direction to that in which Mr Lloyd George attempts to place it.

There is, moreover, another side to the question. It is true that in monetary as in military matters civilian Ministers must look to their experts for advice. But theirs is the final responsibility, and Mr Lloyd George

can certainly not have forgotten that after the war, and, indeed, until comparatively recent times, the Treasury played as important a rôle—and, indeed, in the post-war boom and slump possibly even a more important rôle—than the Bank of England. It was under Mr Lloyd George's own Government that the famous Treasury minute was issued by Mr Austen Chamberlain, providing for the steady contraction of the Treasury Note issue. The description of the City as deliberately obstructing the well-intentioned plans of the Government of the day for promoting national prosperity is a fantastic travesty of the situation in the past decade under Coalition, Tory and Labour Governments, all of whom have assumed responsibility in varying degrees—whether by legislation or by administration—for the policy that has been pursued.

We pass on to the much more formidable charge that the City was responsible for a precipitate return to the gold standard, which "dealt a staggering blow at our export trade." The case for the gold standard is clear. From 1920 to 1925 the supreme obstacle to the recovery of international commerce and of our own export trade was the persistent and riotous instability of the exchanges. To restore stability was the greatest of British industrial needs. Britain's lead in resuming the gold standard in 1925 was successful in restoring comparative stability. That the return to gold was precipitate is a view shared by certain authorities, including some prominent bankers; but the alternative was to prolong uncertainty. It was the F.B.I. that declared some months before Mr Churchill took the plunge that whatever might be the arguments for and against this or that course, the vital thing for industry was that it should have a definite decision and a sure and certain basis on which to found its calculations. Of the Committee of four who advised Mr Churchill to take the step when he did, only one was a City man, and finally the last straw that turned the scale was the urgent representations of the Dominions, one of whom had already decided, and another of whom had indicated its intention, to take a step which would have tied them monetarily to the £ and divorced them from the £ if Great Britain had hesitated. What a reflection for our present-day Crusaders!

It would undoubtedly have eased our problem if we had devalued the £ and returned to gold at, say, \$4.40 to the £, and we have repeatedly dissented from the ultra-Conservative view of the City that this would have been a breach of faith. But we have to consider public opinion as it is, not as we would like it to be; and before the change finally took place we were sharply reminded that the mere suggestion of devaluation created abroad a distrust of London and weighted the scales against us in the struggle between New York and London—the issue of which was still in doubt—for commercial and financial predominance.

The return to gold at pre-war parity necessarily involved readjustments in our economic life, and though these were painfully made, the fact remains that in the four following years the numbers employed in this country reached the highest level ever attained in Great Britain and at the highest known standard of living. It is true that the gold standard throughout the world has not worked fully according to our expectations, and the subsequent downward drift of prices has meant that we have now to face still further readjustments. But those who think that we should have done better to stand out and endeavour to maintain an arbitrary domestic price level and, in spite of our vast overseas interests, face all the risks of fluctuating exchanges, should reflect on the monetary history of recent years. Experience has shown that the attempt of Governor Strong to maintain stable prices in America—in the interests not only of American but of world prosperity—produced quite unexpected reactions and landed us all in a speculative mania, which precipitated the present disastrous crisis. Would Mr Lloyd George, if he had had the responsibility at the critical moment for the welfare of the millions of the population who depend on our international trade and finance, have been prepared to run the risk of an artificial price level—subject at all times to manipulation under

political pressure, based on index numbers on the making of which even the experts cannot agree, and controlled by a technique which has never been tried and very few even claim to understand?

One major count and several minor ones remain. "They (*i.e.*, the City) are using the whole of their tremendous influence for the purpose of restricting the raising of money for national development." In its literal sense this is simply untrue. Certainly, much money to-day is lying idle, and bankers would gladly apply these funds to the financing of really sound and reproductive enterprises, whether public or private. What City opinion is definitely opposed to is the raising of big national loans for vague purposes as yet unspecified. Looking forward to the time when trade revives, the City foresees a very great demand for financing industry which may strain the resources of British saved capital. But show the City to-day a sound and reproductive project, and quick over-subscription of the necessary capital is a certainty.

But even with this list of arrows Mr Lloyd George has not emptied his quiver. He complains that the City flourishes while industry languishes. Does he mean that the City likes dear money? If so, any City man would point out the fallacy of his supposition. The City prospers when industry prospers. It may be, too, that Mr Lloyd George has in mind the theory, dear to many Socialists, that British industry suffers because of London's functions as an international money market. The reverse is nearer the truth. London's ability to attract balances from all over the world tends to cheapen the financing of home industry.

Two arrows remain, but their points are very blunt. The world depression is largely due, says Mr Lloyd George, to the mishandling of gold supplies by the "money Barons." Here the Bank of England is certainly "not guilty." It is London that bears the brunt of the strain created by the maldistribution of gold; and it is London that is supremely interested in finding a remedy. No one who knows the facts could find the Bank of England responsible for the fact that co-operation in central banking policy has so far been disappointing in its definite results. Now for the final barb. The leaders of the City, apparently, are engineering a flight of capital from London to queer the pitch of the progressive parties. The accusation is preposterous. No sane man will cut off his own nose to spite his face, and the picture of Mr Norman and Mr McKenna deliberately driving foreign balances away, cheapening sterling exchange, and depressing the value of gilt-edged securities for political motives is too topsy-turvy even for "Alice in Wonderland."

So much for Mr Lloyd George's indictments. With the eloquent imagery for which his perorations are famous, he declared that the Government cannot "build the City of God" because "the City of London occupies the site." Let us change the metaphor. The tree of prosperity grows from the seeds of confidence, and those most delicate seeds will not sprout unless they are carefully tended and watered. Speeches like that which we have been discussing tend to scorch and sterilise. We look to Mr Lloyd George to take an early opportunity of undoing the harm that he has done to the cause of national recovery.

WORLD TRADE IN 1929.

THE time necessary for the collection and analysis of world trade statistics is so great that their detailed examination is never possible until more than a year after the completion of the period to which they relate. In the depths of the profound slump of 1931, therefore, we are invited by the publication of Volume I. of the League of Nations Memorandum on International Trade and Balances of Payments, 1927-29,* to don "a sorrow's crown of sorrow" and remember the happier things which happened nearly two years ago.

In spite of the fall in prices which took place during 1929, the value of world trade, as nearly as it can be

* Allen and Unwin. 4s.

computed from a mass of statistics sadly lacking in uniformity of principle as between different countries, continued to rise. World imports increased from \$33,764 millions in 1927 to \$34,639 millions in 1928 and \$35,343 millions in 1929; exports in the same years were \$31,378, \$32,499 and \$32,742 millions respectively. The difference between imports and exports is due to a number of factors, of which the inclusion in import prices of the cost of freight and insurance is the most important.

The Continental distribution of this increase in world trade is shown in the table below, in which the trade of each continent, including trade between the countries of that continent, in 1928 and 1929, is expressed as a percentage of that in 1927:—

INDICES OF GROWTH IN WORLD TRADE, BY CONTINENTAL GROUPS.
1927 = 100.

	Imports.		Exports.		Total.	
	1928.	1929.	1928.	1929.	1928.	1929.
Europe, including U.S.S.R.	103	104	103	107	103	105
North America	101	106	107	104	104	105
Latin America	102	106	104	102	104	104
Africa	107	114	109	108	108	111
Asia, excluding Asiatic Russia	103	105	99	98	101	101
Oceania	92	92	103	103	97	97
Total	103	105	103.5	104	103	104.5

The most conspicuous changes in the table are the rapid growth in the trade of Africa and the decline in that of Oceania. Of the remaining groups, it is noticeable that Europe shows the smallest increase in imports and the largest increase in exports.

The peculiarities in the development of world trade in 1929 may largely be attributed to four factors. In the first place, the bad harvests in the main cereal-exporting countries, coinciding with bumper harvests in most European countries, helped to reduce European imports and to diminish the exports of the two American groups and of Oceania, while India and China bought wheat in large quantities. Secondly, a rise in the standard of living and the tendency to increased investment expanded the trade in manufactured articles and in capital goods more than that in staple goods and raw materials, and therefore tended to encourage European exports more than imports and more than the exports of newer countries. Thirdly, there was a tendency on the part of lending countries to export less capital, so that the European borrowing countries were forced to curtail their imports. Finally, the effect of these developments on the volume of trade was reinforced—as far as values were concerned—by the fall in prices, which was, towards the end of the year, most marked in the case of vegetable foodstuffs and raw materials, and therefore affected the exports of manufacturing countries in a smaller degree than those of countries which export mainly agricultural produce.

In consequence largely of these circumstances, Europe was the only continental group whose exports in 1929 were greater than in 1928, while European imports increased less than those of any other group except Oceania. The table below shows the changes in the percentage distribution of trade:—

PERCENTAGE DISTRIBUTION OF WORLD TRADE, BY CONTINENTAL GROUPS.

	Imports.			Exports.			Total.		
	1927.	1928.	1929.	1927.	1928.	1929.	1927.	1928.	1929.
Europe, including U.S.S.R.	55.9	56.2	55.7	47.2	47.0	48.3	51.8	51.7	52.2
North America	15.7	15.5	15.9	19.3	19.9	19.3	17.4	17.7	17.5
Latin America	7.2	7.2	7.3	9.5	9.7	9.3	8.3	8.4	8.3
Africa	4.4	4.6	4.8	4.5	4.7	4.7	4.4	4.6	4.7
Asia	13.7	13.8	13.7	16.4	15.7	15.4	15.0	14.7	14.5
Oceania	3.1	2.7	2.6	3.1	3.0	3.0	3.1	2.9	2.8

The increase in Europe's share of world trade is very marked, though, if freights were included in the import figures of the United States and Canada, the North American percentage of world imports and of total trade respectively would be about 17.1 and 18.2 per cent., and

TREBLE THE INCOME

you will leave your dependants by means of the new "SAFEGUARD" Policy which guarantees them £3 per week free of Income Tax from each £1,000 Assured, in the event of your death.

the European share would be less by almost the same amount. In view of the fact that the imports of European countries rose, although there was no increase in the exports of countries in other continents, and a substantial increase in their imports, it is probable that the increase was largely due to a continuation in that growth of trade between European countries themselves which has resulted in recent years from the increasing part played by trade in finished manufactures.

In 1929, the countries of Europe appear to have had a total passive visible balance of trade amounting to nearly four milliard dollars, but when allowance is made for freight, insurance, middlemen's profits, reparation deliveries and under or over-valuation, this is reduced to \$3,100 millions. As an offset to this it is calculated that Europe's net income from investments amounted to \$1,500-1,600 millions; from shipping earnings, \$900-1,000 millions; and from tourists' and immigrants' remittances respectively \$240-300 millions each. When the services of banks and insurance companies are added, it appears therefore that the total exports, visible and invisible, of European countries, at least balanced their imports in 1929. The apparent active balance of North America is wiped out when the undervaluation of United States imports and the exclusion of freights from the import statistics of the United States and Canada are taken into account. The sharp decline in North American exports in 1929 was entirely due to the decline in Canadian grain shipments to Europe.

The share of the British Empire in world trade declined during the years under discussion, as the following table shows:—

BRITISH EMPIRE TRADE.
(Million dollars.)

	Imports.			Exports.			Total.		
	1927.	1928.	1929.	1927.	1928.	1929.	1927.	1928.	1929.
Total, British Empire	10,228	10,132	10,464	8,780	8,954	8,775	19,008	19,086	19,239
Total, less United Kingdom	4,897	4,899	5,053	5,329	5,433	5,225	10,226	10,332	10,278
Indices (1927 = 100):	%	%	%	%	%	%	%	%	%
Total, British Empire	100	99.1	102.3	100	102.0	99.9	100	100.4	101.2
Total, less United Kingdom	100	100.0	103.2	100	102.0	98.0	100	101.0	100.5
British Empire, percentage share of world trade	30.3	29.3	29.6	28.0	27.6	26.8	29.2	28.5	28.2

The merchandise balance of the Empire is more passive than this table suggests, owing to the fact that certain bullion and specie shipments from Australia, South Africa, Canada and the Gold Coast are included in the export figures, but not in the imports. Re-calculated to allow for these discrepancies, the passive balance of the whole Empire increased from \$1,580 millions in 1928 to \$2,169 millions in 1929, chiefly owing to increased imports into the United Kingdom and Canada, together with a decline in Canadian exports.

Among individual countries, it is noticeable, though not surprising, that those which are most industrialised show least change in their foreign trade figures, whereas those which specialise in the production of oil and certain other minerals, notably Venezuela, Chile and Persia, show increases far above the average, and many of the predominantly agricultural countries, especially

Roumania, Cuba, Malaya, Australia, Ceylon, Bolivia, Argentina and Mexico, show actual decreases.

Some idea of the development of the foreign trade of various countries during recent years, with the effect of price changes roughly eliminated, may be gathered from the following indices, extracted from a fuller table in the Memorandum:—

QUANTUM INDICES OF IMPORTS AND EXPORTS.

1913 = 100.

	Imports.			Exports.		
	1927.	1928.	1929.	1927.	1928.	1929.
Denmark	138	144	147	167	174	170
Finland	137	159	155	143	141	150
France	109	116	133	146	148	147

United States	180	181	206	157	164	168

^a Domestic Exports

[†] Net Imports.

The most noticeable developments in the last three years are the rapid growth in exports from Germany, Italy and the Scandinavian countries, the increase in imports into France, Norway, Sweden, New Zealand and the United States, and the decline in German imports. Swiss trade was maintained at about the pre-war level, while British exports, though rising slightly, were far below it.

A chart in the Memorandum, based on such data as were already available for the first half of 1930, shows, as was to be expected, a steep decline in world trade, out of all proportion to the fall in prices. When the analysis for the whole year is available it is likely to show, in addition to the reversal of the expanding trend of the last few years, a considerable degree of reorientation of trade, owing to the change in the character of demand which has been brought about by slump conditions. Meantime, the League Memorandum is valuable in providing a picture of the world trade position on the eve of the depression, and pre-depression tendencies and conditions may be of no small importance in helping us to estimate the relative success with which various countries will emerge from the ordeal.

BANKING IN THE UNITED STATES.

(BY A CORRESPONDENT.)

WHEN the Stock Exchange speculation came to its disastrous end in the autumn of 1929, many American financiers publicly rejoiced that the crisis of 1929, unlike those of 1907 and earlier, was confined entirely to the capital market and was not accompanied by more than temporary disturbances either to industry or to the banking and financial structure of the country. All the world now knows that the first of these boasts was woefully premature, and events of the last few months have led to some questioning of the soundness of the banking system. The present is a suitable moment for reviewing that system, as the appearance of several annual reports, notably those of the Comptroller of the Currency and of the New York State Superintendent of Banks, has coincided with the inception of "hearings" before Congressional Committees, at which the leading bankers of the country are testifying.

According to the Comptroller's figures, total bank deposits increased between June 30, 1929, and the same date in 1930, from \$57,911 millions to \$59,847 millions, whereas demand deposits declined from \$24,350 millions to \$24,099 millions. On the other side of the account, loans, discounts and overdrafts fell from \$41,433 millions to \$40,510 millions, while investments increased from \$17,349 millions to \$17,945 millions. Moreover, this decline in loans has been less rapid as regards loans on securities than as regards "all other" loans (which latter

are usually taken as an indication of industrial and commercial borrowing). Between January, 1930, and January, 1931, the loans on securities of the "reporting member banks in leading cities" declined from \$7,733 millions to \$7,425 millions, or by \$308 millions, while "all other" loans declined from \$8,974 millions to \$8,414 millions, or by \$560 millions. Credit supplied to the security markets by bank investments and through loans on securities to the banks' customers has evidently not been liquidated as quickly as that represented by brokers' loans, which declined in the same period by about \$2,100 millions. According to the same statistics, the average bank in the United States has a capital of about \$160,000, deposits of rather less than \$2½ millions, and loans of about \$1,700,000.

There is very little reason to doubt that the majority of banks in the large cities are in a sound position. It is still the pride of the New York and Chicago Clearing House Associations that none of their members has ever failed. Among the smaller banks, however, the carnage was far greater in 1930 than in any other year. In the course of the year, 1,326 banks, with \$904 millions in deposits, were forced to close their doors. This compares with 372 banks with \$129 millions in deposits in the normal year 1928, and 182 banks with \$233 millions in the "panic year" of 1907. By far the largest suspension was that of the Bank of United States in New York City, with over \$160 millions belonging to more than 400,000 depositors. Apart from this, the largest totals both of suspended banks and of deposits involved are for the Federal Reserve districts of Chicago and St. Louis, comprising the States of Illinois, Michigan, Indiana, Iowa, Arkansas, most of Wisconsin, Missouri and Kentucky, and parts of Tennessee and Mississippi. This sufficiently illustrates how the Middle West has suffered from the double blow of agricultural and industrial depression.

Most of these failures can, undoubtedly, be blamed on the depression, but in some of the more spectacular cases, notably that of the Bank of United States, the difficulties appear to have been the result of mismanagement and "frenzied finance." Most of the large banks in New York City now have "security affiliates," and are, consequently, committed in the stock market to a greater or less extent. Apart altogether from illegalities such as are coming to light in the case of the Bank of United States, it is believed that these subsidiaries, and through them the banks themselves, have suffered very heavy losses during the last fifteen months. Moreover, there have been other undesirable features of this development, such as the temptation to banks to invest trust funds in securities sponsored by their affiliates. Mr J. A. Broderick, the New York State Superintendent of Banks, himself a practical banker and, through the State examining system, perhaps in the best position to know the true condition of these "security affiliates," asked in his recent report for legislation to prohibit officers of banks from being associated in any way with corporations dealing in securities. This question is also being examined by the Senate Committee on Banking and Currency, and it is possible that legislation will be introduced into Congress to curb the tendency.

Another subject which is agitating banking circles in the United States is the problem of branch banking. This whole question, like so many others, is immensely complicated by the existence of forty-nine different bodies of law under which banks may be set up and function. Broadly speaking, there are three types of banks, national banks (automatically members of the Federal Reserve System), State member banks, and State non-member banks. Under the present state of the law national banks are allowed to have branches only in their home city where this is permitted by State law, and State member banks may not have branches outside their home city except such as they had under State law in 1927. In nine States, of which California is the chief, State non-member banks are unrestricted as to branches, in twelve more States branches are restricted to the home city, and in the remaining twenty-seven States branches are prohibited altogether. The chief advocate of branch banking for national banks is Mr J. W. Pole, the Comptroller of the Currency, who maintains that the change would lessen

bank failures, diffuse capital, now concentrated in the cities, into the country districts, and tempt more banks into the national system, where they would come under the direct control of the Federal Reserve system. Mr Pole proposes that national banks be allowed to open branches within "trade areas," which he conceives as the spheres of influence of the chief banking cities. These areas would be of no particular size, unconnected with any political boundaries, and possibly overlapping each other. As an alternative, he suggests that branch banking be permitted within each of the twelve Federal Reserve districts.

The trend of banking opinion, as revealed both by deeds and by words, appears to be moving strongly in favour of such a change, though it can hardly be said to have the support of a majority of the bankers of the country as yet. Several influential members of the Federal Reserve Board are known to favour it, and the American Bankers' Association, always until now a staunch advocate of the unit bank, passed a resolution at its last annual meeting in favour of county-wide branch banking. The American county is a very small unit, with an average population of only about 40,000, but this resolution is undoubtedly only a first step. In June of last year there were only some 305 banks operating branches outside their home cities, with 1,148 branches, as against more than 23,000 unit banks, but the number is slowly increasing. Far more significant is the development of bank "chains," where a number of banks are connected through a holding company, or some similar device. The fact that this growth has been very largely confined to States where branches are prohibited shows that the "chains" are only a makeshift for branch systems, and it has been estimated by Mr Frederick A. Bradford that nearly a quarter of the loans and investments of all the banks in the country are those of banks with State-wide branch systems or in groups or chains. During the first six months of 1930 the loans and investments of these banks increased by \$340 millions, or 2.47 per cent., while the loans and investments of all other banks diminished by \$650 millions, or 1.45 per cent. By this typically American method of evading the law, the banks of the country are quite rapidly approaching a branch system in fact, if not in law, and in the opinion of many competent observers it is only a matter of time until the law is changed.

PREFERENCES—A DOMINION VIEW.

On Wednesday last, Lord Beaverbrook with great insistence informed the electors of East Islington that the Prime Minister of Canada, at the Imperial Conference, "advocated Empire Free Trade." On reference to the report of Mr Bennett's speech, we find that what he actually said was that "In our opinion Empire Free Trade is neither desirable nor possible." In the face of such misrepresentation it is perhaps worth while to try and ascertain the real mind of the people of the various Dominions towards the question of tariff policy. The following letter, from our correspondent in Christchurch, commenting on the reception in New Zealand of the debates at the Conference gives an illuminating picture of the state of opinion in the most distant of the units of the Empire, and shows how very different is the point of view from that depicted by some of our hysterical politicians.

THE reports of the Imperial Conference published in the Dominions have given many people seriously to think. These reports depict Imperial Preference as having been the main issue before the Conference, and make it appear that the Dominion Prime Ministers strongly urged the claims of Dominion products to a substantial measure of preference in British markets, largely on the ground that the Dominions have given preference to British goods, and that "Imperial Economic Unity," whatever that may mean, is essential to the maintenance of a united Empire. But there has been so little of reasoned statement, so much of mere political catch-phrases, that the issue has been made to appear quite unreal even to the average resident of the Dominions.

It must not be forgotten that in all the self-governing Dominions there are many leaders of industry, commerce and thought who were born and trained in Great Britain, and who have never lost the outlook gained from their British experience. Moreover, there are keen students of Imperial affairs who are familiar with the general principles and the main facts of Empire trade, and who have read publications such as the Reports of the Balfour Committee. These people, however, are not in politics, and they realise that the political representatives they send to Imperial Conferences may understand adequately neither the basic facts of Imperial trade nor the public opinion on preferences of the Dominions they purport to represent. Probably no Prime Minister in the Dominions holds his position on account of his views on Imperial affairs. The Dominions are, for the most part, obsessed with their internal concerns. Here questions and issues are many and complex, opinions and parties change, and it is difficult enough to secure in Parliament even rough representation of public opinion on local matters. Imperial matters are often regarded as outside the field that Parliament is primarily concerned with. Moreover, public opinion in the Dominions would not welcome British interference with Dominion fiscal policy; on the other hand, it certainly would not support any suggestion of Dominion interference with British fiscal policy.

It happens that there exist fairly strong leanings towards economic nationalism in the Dominions, and protectionist policies are the result. Imperial sentiment, finding some expression in advocacy of Imperial Preference, has proved very useful as a stalking-horse for Protection. Usually the Dominions grant preference to Britain by retaining their tariffs against British goods, and raising substantially their tariffs against foreign goods. The next step is to narrow the definition of British goods by increasing the percentage of British output in the products imported. Judiciously used, such methods can be made to lead to a measure of protection for local industries that public opinion in the Dominions would never sanction were it not for their strong Imperial attachment. Governments support the procedure on account of the increased Customs revenue it brings, politicians talk about binding the Empire closer together, and local manufacturers benefit.

But the bewilderment in the Dominions is increased by uncertainty as to what Britain really wants. There is no doubt that they sympathise with the Mother Country in her present difficulties, and many of their people are ready and anxious to help if any clear plan of mutual aid should be laid down. They know that one party in Britain advocates protection of British manufactures—that, they consider, is Britain's affair. Some in Britain speak of Imperial economic unity without defining how it

is to be effected. It is known in the Dominions that about 26 per cent. of British imports come from other parts of the Empire, and about 74 per cent. from foreign sources, that such imports, particularly from Empire sources, are mainly foods and raw materials, and that these imports cannot be taxed without raising costs of living and of production, and so adding to the present difficulties of Britain's export industries. Should Britain choose to grant preference to Empire products, the Dominions would welcome the increased security and the better prices that would result in their principal market, but they would regard these benefits as pure strokes of luck—there are few people in the Dominions who would press for them or suggest that they have any valid claim to them. There are many, on the other hand, whose conscience is somewhat uneasy regarding Imperial trade. They realise that while Britain admits Empire products free the principal Dominions impose tariffs on British goods, and that, even though some preference be given, British exports are not permitted to compete freely with local products in Dominion markets. Further, Britain buys substantially more from the self-governing Dominions than they buy from her, and if Imperial trade is to be encouraged a beginning might well be made with a lowering of Dominion tariffs on British goods.

It was probably not expected that the Dominion Prime Ministers would suggest any complete plan for the encouragement of Empire trade which would be of advantage to all parts of the Empire. It is doubted whether any such plan could be designed. It might have been anticipated, too, that certain Prime Ministers would group themselves to support a common policy which would benefit the Dominions they represented, regardless of its effect on Britain. But it is surely wrong to suggest, as has been suggested, that any real disappointment exists in the Dominions because Britain has refused to tax imports from foreign sources in order to give preference to Empire products. The facts are that, speaking generally, the Dominions were ready to support any sound plan for increasing Empire trade, and were quite ready to help both Britain and themselves. They looked to the Imperial Conference to find a plan that would recognise the facts of Empire trade, and that, if adopted, might stimulate both trade and production within the Empire. No such plan has been found, and the issue remains where it was.

Notes of the Week.

Mr Snowden and Economy.—A week ago we were congratulating the Chancellor of the Exchequer upon his promise of a firm stand in the cause of national retrenchment and upon his recognition of the need for a common sacrifice and a national effort. His speech in the economy debate last week alarmed the spendthrift section of his party so much that a party meeting was specially called on Tuesday, at which Mr Snowden apparently climbed down, and explained that his much-discussed speech did not mean what we and many others had naturally assumed that it meant. "Common sacrifice," he is reported to have said, did not mean any sacrifice by the wage-earner. Economy did not mean cutting down rates of insurance benefit, transitional or otherwise, or retrenchment in social services; while the "drastic and unpleasant measures" demanded by the situation only meant increased taxation to balance the Budget. This looks like weakening under party pressure, but the report of the meeting was accompanied by rumoured threats of resignation. Mr Snowden can hardly escape the necessity for some increase of taxation; but he is well aware that there is no source of revenue which will not make the situation more difficult and that a modest cut in defence expenditure will not fill the bill. The Chancellor has a deservedly high reputation for courage and persistence, and we are confident that when the test comes he will not hesitate to take the steps that the situation obviously requires.

A Drastic Programme.—The National Confederation of Employers' Organisations has now entered the field with a manifesto in which industrial Capital puts forward a programme not unfairly describable as "hard-faced." Starting from the premises that unemployment is a reflection of our inability to hold our export trade, and that this inability arises from excessive costs of production due to disproportionately high wages, unemployment and other social benefits, and direct taxation—the manifesto reaches the conclusions that existing rates of unemployment benefit should be reduced by 33½ per cent. and this curtailed benefit confined to claimants with six contributions to their credit for every week's benefit drawn; that claimants failing to satisfy the foregoing condition should be transferred to a relief scheme on a means test basis; that wages of Governmental and local authorities' employees should be scaled down to conform to corresponding "unsheltered" rates; that Trade Boards should have their statutory wage-fixing powers limited to that of imposing "anti-sweating" rates; that a new Geddes Committee should fix an aggregate sum (considerably smaller than at present) to cover all Social Services expenditure; and that so long as unemployment exceeds 5 per cent. there should be no more talk of "restrictive" legislation affecting conditions of employment. There is so much sound sense in the Confederation's ably-written pamphlet, so many arguments and proposals which we wholeheartedly endorse, that we regret that this influential organisation of employers should have "laid it on so thick." Demands for restoration of the "one-in-six" rule for unemployment insurance beneficiaries, so drastic a cut in unemployment benefit rates, arbitrary lump-sum fixation of Civil Votes and the denial for what may prove to be an indefinite period of the right of the State to regulate conditions of employment—these are crudities which will merely evoke unhesitating opposition from organised labour. Taking, as we do, a grave view of the situation of our industries and of our national finances, we would, nevertheless, beg employers to realise that there can be no going back to pre-war conditions, still less to those of 1831. Labour, for all the mouthings of the Left Wing in Parliament, is beginning to recognise that it must make its sacrifices; but acceptance of that necessity will not be without travail, and grave risk of disaster, unless Capital is at pains to prove to Labour that it is asking for the essential minimum. This pamphlet would carry more conviction if it had been more explicit as regards the contribution which Capital will make in this national crisis.

A Political Medley.—It is a day's task to read the past week's contributions made by our political leaders, actual and aspiring, to the discussion of the nation's economic crisis, and it is a day for the most part wasted. While Mr Baldwin and Sir William Morris have been indulging in a little community singing of the familiar ditties, "Free Trade has been our downfall" and "Protection is our salvation," Lord Beaverbrook, in his favourite fancy dress as a Prosperity Crusader, has been riding a plunging horse through the ranks of his Conservative fellows. The spectacle may be amusing, but the amount of light and guidance that emerges is unfortunately imperceptible. The most astounding political performance of the week was that of Lord Beaverbrook, who, according to his own organ (the *Evening Standard*), claimed at East Islington that at the Imperial Conference of 1930 the Prime Minister of Canada "advocated Empire Free Trade." The truth, of course, is that Mr Bennett, in his famous "Canada First" speech, ruled out the possibility of anything in the nature of Empire Free Trade, and in this he was explicitly supported by the other Dominion Premiers. His Lordship has been complaining bitterly of misrepresentation, but we defy him to produce any case of misrepresentation so flagrant as this of which he himself is guilty. Worthy of more attention than all these contributions of which we have spoken is the plea of Sir William Morris and his organisation, the National Council of Industry and Commerce, for the salvation of agriculture. It is a cogent exposition of the protectionist view, and although we cannot accept the premise from

which it precedes—that the home market is more important than the world market—nor the conclusions which it reaches (taxes on foreign foodstuffs and a wheat subsidy), it is at least a serious and thoughtful contribution from a slightly new angle.

British Policy in Palestine.—The explicit formulation, in detail of British policy in Palestine is a good thing in itself; but the fashion in which it is being accomplished is not altogether happy. Last autumn we had a White Paper which mildly gratified the Arabs and made the Zionists very angry. Last Saturday there was made public an exchange of letters between Mr Ramsay MacDonald and Dr. Weizmann which seems calculated to produce mild gratification in Zionist quarters, while news of the anger which it is arousing among Palestinian Arabs is already coming in. In this last correspondence, the Prime Minister tells Dr. Weizmann that he is interpreting the autumn White Paper in order to demonstrate that it is all in line with a British policy which has never varied; on the other hand, Dr. Weizmann tells Mr MacDonald that his letter has "re-established the basis for co-operation" between the Zionist organisation and the Mandatory Power—which is another way of saying that the White Paper has been re-interpreted in a manner which amounts to a revision or even a reversal of policy. Where is this to stop? For the obvious cue for the Arabs, now, is to bring to bear upon the Government the same degree of pressure that the Zionists have been exerting during the past four months, in the hope of extracting a re-interpretation of the re-interpretation. Is not this very like what is technically called "an infinite regression"? In these circumstances, it is important to make out whether Mr MacDonald's letter does really alter the terms of the White Paper, or whether it simply clears up ambiguities and corrects certain clumsy turns of phrase which had wounded Jewish susceptibilities. In support of the latter view, it can be pointed out that the Government re-affirm their intention of retaining their control over immigration into Palestine (a control which they have always exercised), as well as their intention of investing the British High Commissioner with "some centralised control of transactions relating to the acquisition and transfer of land during such interim period as may reasonably be necessary to place upon a sure foundation the development scheme" for which a loan is to be arranged. At the same time, Dr. Weizmann's view that Mr MacDonald's letter really revises or reverses the White Paper has certain points in its favour. For example, the landless Arab cultivators who are to be provided for before State lands can be made available for Jewish settlement, are now defined as being only those who "can be shown to have been displaced from the lands which they occupied, in consequence of the lands passing into Jewish hands." On the other hand, the congestion of the Arab agricultural population in the hill country is to be relieved by local development, "without, save in exceptional cases, having recourse to transfer." Again, in regard to the Government's power (which is to be retained) of fixing a "labour schedule" of wage-earning immigrants, Mr MacDonald re-introduces a consideration which was raised in Sir John Hope Simpson's report but was not referred to in the White Paper. "Consideration will be given to anticipated labour requirements for works which, being dependent on Jewish or mainly Jewish capital, would not be or would not have been undertaken unless Jewish capital was made available." This last consideration is obviously pertinent and reasonable. But it remains a misfortune that policy should be decided—whether well or ill—by the process of "Pull Devil, pull Baker."

Naval Conversations.—The distinctive quality which Mr Henderson has revealed as a foreign minister is a persistence which does not weary of well doing and at the same time does not defeat its own ends by producing a sense of weariness and irritation in the minds of the other

parties concerned. This spirit, which the British Secretary of State has lately displayed at a session of the League Council at Geneva and at a public meeting in London at which he inaugurated a disarmament campaign, is also apparent in his efforts to promote a naval understanding between France and Italy. This is an object of first-class international importance, since anything like a race in armaments between these two Powers would affect Great Britain—who finds herself their neighbour in the North Sea and the Mediterranean—and would thus undermine the figures on which a stabilisation of British, American and Japanese naval armaments was founded in the Three Power Treaty concluded in London last year. Hence, in this Franco-Italian difficulty, all the parties to the Three Power Treaty are ultimately concerned. But, inasmuch as Great Britain would be the first of the three to feel the effect, it has naturally fallen to the British Government to offer its friendly offices to the French and Italian Governments, in so far as the services of a third party may be found useful in helping the two principals in this affair to arrive at an agreement. In this transaction, Mr Henderson has been represented by a Foreign Office official, Mr Craigie, who visited Rome in December and is visiting Paris now. Mr Craigie's task is to prepare the ground for bringing France and Italy into a numerical ratio with one another and with Great Britain—thus opening the way for an enlargement or supplementing of the existing Three Power Treaty which would produce the same result as the abortive Five Power Treaty that failed to materialise last year. This is a task that requires a large fund of tact and patience. At the same time, it is a field in which these qualities have a real prospect of being rewarded. For, in this field, the path to success lies through an unwearying consideration and reconsideration of details. Thus, though the temper of the Press, both in Rome and Paris, may be unpropitious, there is no reason to despair of success.

King Alexander Visits Zagreb.—The recent visit of King Alexander and Queen Marie, of Yugoslavia, to Zagreb, the capital of Croatia, and the second city of the United Kingdom of the Serbs, Croats and Slovenes, seems to have been made on the spur of the moment and against the inclinations of the King's Serb advisers at Belgrade; but in the minds of disinterested observers there can be no doubt that the visit was an act of statesmanship—one of those personal gestures, vivid in themselves, which are apt to have important political consequences when they are made at the right moment by the right man. National sentiment is an elusive thing; and the Croats are more likely to be convinced by King Alexander's presence in their midst than by any administrative arrangements or constitutional guarantees that Yugoslavia is not a pseudonym for the "Greater Serbia" which the Croats fear and abhor. Of course, the Croats have good grounds for this apprehension—the grounds which the present dictatorial regime has not dissipated but solidified; for, under parliamentary regime and dictatorship alike, the Serbs retain their hegemony in the new State; and, the more high-handed the system of government, the more heavily it presses upon the subordinate elements in the population of the kingdom. The moral of the history of Yugoslavia during these first dozen years is that national feeling is something entirely subjective, which is not necessarily bound up with any particular objective factors whatsoever. The objective basis of the Yugoslav State is community of language. Take a linguistic map of Europe; draw a line round the Serbo-Croat bloc (handling your pencil so as to be generous at the expense of Germans, Magyars and Bulgars, and niggardly where the Serbo-Croat language happens to march with the Italian); you will find that you have described the political frontiers of Yugoslavia as they run to-day. But no stroke of the pencil can reconcile the Croat to being dominated by the Serb. If it is his destiny to be dominated by somebody, he would rather be under the domination of the German, Austrian or the Magyar—rulers to whom he has been taught by long tradition and usage to accustom himself. Dominated,

as he now is by the Serbs, it is no comfort to him to be reminded that his new masters speak his own mother-tongue. This community of language is outweighed, in its effect on his feelings, by the cultural gulf of which he is so acutely aware. To bridge this gulf will require all the statesmanship that King Alexander can muster.

The Education Bill.—By a majority of 168 votes to 22 the House of Lords on Wednesday rejected the Education Bill. In so doing they administered a formal *coup de grâce* to a measure robbed of any serious prospects of life by the amendments forced on the Government by its Catholic supporters in the House of Commons. Until the controversial issue of the non-provided schools has been composed, there is no chance of the Government putting through an agreed Bill raising the school age. Under present circumstances, this is perhaps as well. However sincerely we may endorse the principle of extended education, there are obvious limits to the amount which can be devoted to such an object in the present budgetary situation.

Australia and New Zealand.—Australian financial affairs are still drifting. The Commonwealth Bank has refused to have anything to do with Mr Theodore's plan for "restoring the 1929 price-level," and has promised its aid "subject to the adoption of equitable reductions in all wages, salaries and allowances, pensions, social benefits of all kinds, interest and other factors affected by the cost of living." Nor has Mr Theodore had much better fortune at the hands of the Premiers' Conference, which has adopted a three-year plan that includes proposals for the reduction of all public service salaries in conformity with the fall in the cost of living, for the imposition of a special income tax of 3s. 6d. in the pound on interest on Commonwealth and State loans in lieu of the present 1s. 6d. supertax, and for substantial reductions in bank interest rates. Meanwhile the opening of a by-election campaign in East Sydney has provided the occasion for a general re-statement of Labour aims, and in short, recent messages suggest that there is still no prospect of definite or immediate action being taken. A welcome contrast to this inaction and abortive discussion is to be found in New Zealand. Here the Government has issued a definite programme, which begins with a 10 per cent. reduction in all State salaries, continues with proposals for additional taxation, and ends with the statement that further possibilities for economy are being explored. A clear-cut and determined statement, especially as it comes at a time when New Zealand still lies under the shadow of the earthquake, will do much to maintain confidence in the economic integrity of the Dominion.

Shipowners and the Depression.—In the light of all the now only too familiar data illustrating the severity of the 1930 slump in world trade, it was scarcely to be expected that British shipowners, in the annual meetings of their organisations, would have much cause for self-congratulation. The reports both of the Chamber of Shipping and of the Liverpool Steamship Owners' Association dwell inevitably on the difficulties of a gloomy year which ended with no less than 2½ million gross tons of British shipping laid up out of commission. Freights were low and cargoes scanty; gross revenue of "tramp" shipping declined by probably 20 per cent.; the loading factor of liners was only four-fifths of the normal pre-war standard; State subsidies in a number of foreign countries intensified the competition arising from the world glut of tonnage; and many fixed charges, such as Suez Canal and British port dues were a heavy burden on diminished earnings. Signs of appreciable recovery in freights and in the volume of cargoes are still lacking; and the situation is not one which investors in shipping securities can view with much satisfaction, quite apart from the peculiar financial difficulties surrounding the R.M.S.P. Company and its unfortunate satellites. The only consolation is that physically the British mercantile marine has been maintained during the past decade at a high pitch of

efficiency, and that (in contradistinction to the position of dock and harbour authorities) shipowners have succeeded in securing from their direct employees' labour organisations agreements providing for reasonable rates of wages and working conditions which do not impose on the industry an undue burden of costs. If harbour charges could also be scaled down to an economic level, the shipping industry would be much better placed to withstand the storm.

Cotton Lockout Ended.—Our Manchester correspondent writes:—The lockout in the manufacturing section of the cotton industry was brought to a close at the end of last week, when the employers decided to call off the lockout notices and to discontinue the eight-loom experiment which has been conducted at Burnley for a period of nearly two years. Mr John Grey, the acting chairman of the Cotton Manufacturers' Association, in making the official announcement, said that the primary consideration which had dictated the employers' action was the fact that the leaders of the operatives' trade union had no power to negotiate. The manufacturers were also impressed by the very grave warning as to the condition of industry and finance in this country that was given by Mr Snowden in the House of Commons last week, and they had to consider the effects of a continuance of the more looms dispute in its relation to that appeal. Furthermore, the cotton trade was holding an Exhibition in London, and they recognised the situation whereby "we are seeking to increase sales to the world by this great exhibition effort and at the same time giving to the world an exhibition of folly by continuing the dispute for a relatively minor question which ought to have been taken up by mutual consent." The employers' statement concluded by saying that the more looms to a weaver system could not be ignored. It had proved itself to be successful, both technically and economically, and, in the employers' opinion, was bound ultimately to extend. With regard to the question of industrial reorganisation, which has been one of the cries of the rank and file of the operatives, the employers state that they recognise that much would have to be done in this direction, but there was one thing that the operatives should bear in mind—that the cause of the dispute was a sincere attempt on the part of the employers to bring down costs of production without at the same time reducing individual earnings. "The question of our ability to compete abroad still remains, and will have to receive the further earnest consideration of all engaged in this industry. We are prepared to discuss with our operatives the question of technical reorganisation and to take into consideration many aspects of the industry when the proper atmosphere for doing so has been re-established. By our action in calling off the lockout we are making a gesture of goodwill." The general lockout in the industry had been in progress a month, and the strike at the Burnley mills had been going on for six weeks. It is estimated that the dispute has cost the industry between six and seven million pounds. In this dispute the fact that between 50 and 60 per cent. of the operatives in Lancashire were unemployed before the dispute began and were drawing unemployment benefits had a vital influence on the situation, and the money received from that source, along with lockout pay, enabled the workpeople to maintain their resistance for a much longer period than in the old days. In view of the vital need for the reduction of costs in Lancashire the weavers' "victory" is likely to prove barren. If rationalisation on these lines is to be opposed with such intransigence by Labour, the outlook is dark.

Iron and Steel Production.—The production and foreign trade figures for iron and steel for January were awaited with more than usual interest on account of the very unsatisfactory position revealed in December, when, it will be remembered, production both of pig iron and steel were the lowest since operations were resumed after the coal stoppage of 1926, and imports exceeded exports by the unprecedented total of 113,500 tons. It was almost inevitable that pig-iron production should decline still further, for the number of furnaces in blast at the beginning of January (76) was sixteen less than at the

beginning of December; it is not surprising, therefore, that pig-iron production fell from 349,800 tons in December to 337,200 tons in January, which is little more than half of the production in January, 1930. The most encouraging feature was that nine blast furnaces resumed operations during the month, which, after allowing for two being blown out, makes the total blowing at the end of the month 83. We pointed out last month that the extremely low production of steel was partly to be accounted for by the extended Christmas holidays taken at many works on account of lack of orders. Some slight accumulation of orders took place as the result, and production in January rose to 402,000 tons, compared with 337,200 tons in December; this is lower by 369,000 tons than production in the previous January. The slight improvement in the steel production is reflected in the percentage unemployed in that branch of industry, which fell from 50.6 in December to 45.2 in January. The balance of 113,500 tons of imports over exports in December was reduced to 54,400 tons in January, although, unfortunately, this was not due to an increase in exports (which actually declined by 2,100 tons to 167,400 tons), but by a decrease of 61,200 tons to 221,800 tons in imports. Imports of pig iron at 22,100 tons were the lowest since August, and it may be hoped that, as a result of the cut of 5s. in the price of Cleveland pig iron, imports of pig iron will still further decline in February. Other products to show a marked decline were sheet and tinplate bars (52,900 tons to 31,100 tons); billets, blooms and slabs (64,600 tons to 56,200 tons); and steel bars, rods, etc. (37,300 tons to 30,400 tons). Exports of the various iron and steel products were at approximately the same level as in the previous month. The price index for iron and steel products fell slightly from 108.9 in December (1913 = 100) to 108.5 in January, and for the first time since August, 1921, are above the "all commodities" price index which fell from 108.9 in December to 106.9 in January.

Employment and the Cost of Living in January.—There was some fluctuation in the state of employment during January, the net result of which was that at the end of the month the numbers unemployed, although higher than in the week immediately before Christmas, showed a reduction as compared with the end of December. According to the *Ministry of Labour Gazette*, among the workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at January 26th was 21.5, as compared with 20.2 per cent. at December 22nd, and 12.4 per cent. at January 27, 1930. It is estimated that on these dates the numbers of insured persons in work were 9,128,300, 9,397,600 and 10,064,000 respectively. Those registered as "wholly" unemployed amounted to 1,875,330 at January 26th, as compared with 1,766,398 a month ago, and 1,076,099 a year ago, while the number of persons temporarily without work totalled 607,443, which was 167,187 less than at December 22nd, and 275,013 more than a year ago. Of those normally in casual employment, 109,887 were unemployed at January 26th, against 102,099 a month ago, and 82,990 at this time last year. The latest returns of the Ministry show that on February 9th 2,637,131 persons were registered as unemployed. This includes 1,897,836 wholly unemployed, 627,245 temporarily stopped, and 112,050 usually in casual employment. With regard to the cost of living, the index number of the Ministry of Labour continued its downward course, registering at January 31st 52 per cent. above the level of July, 1914, as compared with 53 per cent. at the end of December, and 64 per cent. a year ago. For food alone the corresponding percentages were 36, 38 and 54 respectively.

Prevention of Disinheritance.—The authoress of "The Disinherited Family" is launching an attack on another form of disinheritance, and though the chances of a private member's Bill have seldom been poorer than they are at present we wish Miss Rathbone luck in her efforts to deprive the tyrannical parent or spouse of the ancient right of cutting off with a shilling. The Wills and Intestacies

Next time you think of your advertising, let us consider it together and ask ourselves:—

1. "Exactly what do we wish people to know about your product?"
2. "Who are your potential customers?"
3. "How can these people be reached most economically?"
4. "Precisely what do we wish to accomplish through advertising?"

(Family Maintenance) Bill is modelled, with certain variations, on the Scottish principle. It provides for a priority payment to the surviving spouse of half the value of the personal chattels, plus £1,000, or half the net estate other than personal, whichever is the less, plus interest at 5 per cent. per annum from the date of death until payment. Of the surplus of the net estate after this payment, one-half is to be set aside if there is a surviving spouse but no surviving child, or if there is a surviving child but no spouse; one-third if there is a surviving spouse and any surviving child above the defined age but no surviving child below the defined age; and two-thirds if there is a surviving spouse and a surviving child under the defined age. The defined age is the age attained two years after the completion of full-time education, but may not exceed 23 years unless the child is physically or mentally incapable of self-support. The portion set aside is to be held in trust for a spouse until death or remarriage and for a child until it reaches the defined age or dies not having reached that age. The children share their provision equally. The annual income, when added to any independent income, shall not exceed £2,000 in the case of a widow or widower and £300 in the case of any one child. The general principles of this Bill seem sensible, and the limitation of children's rights to £300 a year during the age of dependence leaves parents all the necessary freedom to deal with ne'er-do-well offspring. The measure should not prove seriously controversial, and we hope that Parliament will be able to find time for it.

Provident Mutual Life Assurance Association.—The 1930 report of this association records a further quantitative expansion in every direction. The association's business is largely derived from railway workers, and a feature of it is that premiums are paid automatically by deduction from wages. Notwithstanding the depressed conditions of 1930, new business has shown a large expansion from £1,941,265 to £2,297,457. The nature of the

business is indicated by the fact that the number of policies issued in 1930 was 21,270, and the average sum assured was therefore slightly over £100. The premium income has been increased by some £42,000 and is now £915,000, compared with a life assurance fund of £7,737,000. The expansion of business is responsible for a slight increase in the expenses, which have grown from 13.6 per cent. of the premiums to 14.5 per cent., and the rise in the standard rate of income tax has been responsible for a small decline in the rate of interest from £4 17s. per cent. net to £4 14s. 6d. per cent. net. The rates of interim bonus have been maintained for the current year at the increased rates declared at the last quinquennial valuation at the end of 1927, namely, from 45s. per cent. to 50s. per cent. per annum for whole life and 40s. per cent. per annum for endowment assurances. There have been numerous changes in the constitution of the assets in the balance sheet during the year, though the movements follow similar lines to those noted in the 1929 balance sheet a year ago. There has been a further realisation of British Government securities, though on a smaller scale than formerly, and Indian and Colonial Government securities have been reduced from £160,000 to £115,000. Foreign Government securities have been increased from £428,000 to £500,000. A normal increase has been shown in the debenture group and also in the preference share group, and further purchases have evidently been made of ordinary shares, which have risen from £1,013,000 to £1,188,000, and now represent about 14 per cent. of the total balance-sheet assets. There is no direct indication of capital profits or losses in the balance sheet, and the Stock Exchange securities are stated to have been taken at or below cost. The certificate as to the value of the assets now states that they are "in the aggregate fully of the value stated less the investment reserve fund," the last five words being an addition to the certificate as given in former years. It is fair, therefore, to draw the inference that there is now an undisclosed depreciation in the book value of the assets equal to something less than the amount of the investment reserve fund of £160,000. Apart from this the association has, of course, a considerable carry-forward amounting to £170,000 from the valuation of 1927, in addition to the security afforded by the stringent methods employed in the valuation of liabilities.

Ex-Service Men's Bonus — Banking Committee — Industrial Output — Capital Issues.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 7.

AFTER a brief but sharp setback on what perhaps were exaggerated fears of a huge Government bond issue to provide for a cash distribution to ex-soldiers, the bond market has recovered about half the lost ground. The plan of the more irresponsible and demagogic politicians to saddle the Treasury with a new loan of around \$3,400,000,000 quickly brought vigorous protests from the country's leading bankers and economists. The latest suggestion, endorsed by Mr Owen D. Young, that the Government make cash advances only to those veterans who may be actually in need of assistance, has much to recommend it. Although it may involve the payment of as much as \$500,000,000, that sum is acceptable to bankers and the bond market as a relief from the much larger amount first proposed. There is, of course, little to be said in favour of full cash payments on the veterans' insurance policies to those with jobs, and it is fairly certain that President Hoover will veto an extreme measure. Passage of a Bill late in the present session of Congress (which ends on March 4th) might enable the President to delay action until the expiration of the life of the present Congress, when the Bill would automatically die.

One effect of the uncertainty over the bonus affair was to stifle the market for new capital flotations. Offerings this week were only approximately \$20 millions, compared with \$200 millions last week and \$250 millions in the previous week. A good many new loans are on the way, and will come out as soon as times are more propitious. The largest now under consideration is a \$75,000,000 loan, mostly of a refunding nature, for the New York Central Railroad, which during recent years has been able to do most of its financing with share issues. As it is prevented by law from selling new shares below par and as the price for the existing shares is too close to that price for comfort, the road has been forced to resort to bonds.

Mr Young was a witness this week at a hearing on national banking laws before the Senate Banking Committee. Other prominent men, including the Comptroller of the Currency and the Governor of the Federal Reserve Bank of New York, had testified to the need of changes in the bank laws and on points of Federal Reserve policy. Mr Young held that the root of the evils of banking practice in this country, which brought more than 1,200 failures in 1930, is in the generous and indiscriminate granting of charters to operate. Blame for this he laid to the fact that charters are available either under the national banking system or under the systems of the several States; that rivalry to extend one system at the expense of the other exists, and that in any event too much laxity prevails.

Mr Young, who is a director of the New York Federal Reserve Bank, would amend the Constitution to give the Federal Government authority over all banks, if it is found that it has no such authority now. This view is not accepted by bankers generally, even though it would tend to place a check on the chartering of new banks, inasmuch as it would involve a curtailment of States' rights. In any event, Mr Young would require all banks to become members of the Federal Reserve system, and then strengthen the powers of the system over members to the extent that disciplinary measures could be used to check violations of sound banking practice even within the law. He pointed out that of the 7,000 banks which have failed in the last ten years, five out of six have been State banks and not members of the Federal Reserve system.

On the question of branch banking, which is the ostensible subject of the Banking Committee's present investigation, Mr Young thought there was no escape from such a system, but he would confine it within definite geographical limits. It is probable that a Bill based on these hearings will be drawn up, but nothing is likely to be done before the next session of Congress. Chances for an extra session are about even. In addition to the soldiers' bonus matter, on which a vote will surely be taken this month, the Mussel Shoals controversy is still raging. Then there is the squabble over the appropriation for general relief. It now looks as though President Hoover will agree to a \$25,000,000 appropriation, to be used in the drought areas, provided no extra session of Congress be foisted upon him. His stand against this appropriation, which he characterised as a species of dole, was approved by the best elements in the country; but no one wishes to see an extra session of Congress, and such an appropriation would in any case be rather difficult to head off.

For the moment the improvement in the steel trade has slowed down. Mills are now operating at about 48 per cent. of capacity, or but little better than the rate of a fortnight ago. Steel ingot output last month was 2,483,206 tons, an increase of 475,432 tons over December but a decrease of 1,312,884 from a year ago. The average rate of operations last month was 46 per cent. of capacity, against 38.5 in December and 70 per cent. last year. Pig iron production increased 3 per cent. to 1,714,266 tons, the first gain since last April. Railroad traffic has fallen slightly, and is running far under that of recent years for this season. Motor production for January is estimated by the National Automobile Chamber of Commerce at 184,000 vehicles for this country and Canada, a rise of 14 per cent. over December but a drop of 35 per cent. from a year ago. Business failures in January, as reported by Dun's, were 3,316, the highest figure ever reported for a single month. This figure does not include bank casualties.

Commodity prices, while firmer in raw material sections generally, continue to decline over most of the wholesale list. Both the Dun's and the Bradstreet's indices show a drop of approximately 2½ per cent. for January.

The recent 90-day non-interest-bearing bill offering of \$60,000,000 by the Treasury was taken at a record low rate of between ¾ and 1 per cent. The February maturity of \$127,000,000 will, it is expected, be replaced with a larger issue, perhaps as great as \$200,000,000, to supply the Treasury with cash until the March 15th income tax date. The bill offering of this week was entirely the result of demands for cash for borrowing on soldiers' compensation certificates. Thanks to the mid-month spurt, January's new security flotations amounted to about \$637.4 millions, of which about one-third was for refunding. New flotations were more than four times the volume in December, but fell about 20 per cent. below that of January of last year. Public utility borrowing led with about 50 per cent. of the total. Railroads were next with nearly 30 per cent. Share offerings only reached about \$100 millions. In addition to the above total for corporation issues, there were Canadian provincial loans of \$33 millions.

FRANCE.

Budget — Education — Unemployment — Balances Abroad — Foreign Trade.

(FROM OUR CORRESPONDENT.)

PARIS, February 18.

NIGHT sittings of the Chamber were begun towards the end of the week in order to complete the Budget discussion before the end of the month. The effect of M. Laval's effort for speeding up the work in hand was immediate, and the system of sitting all night is being continued with equally satisfactory results. A good deal of time, nevertheless, has been devoted to a full-dress debate (during the discussion of the Education Estimates) on the favourite Radical-Socialist doctrine proclaiming the supreme importance of the extension of free secular education to the secondary schools. The Government, while notoriously in favour, in principle, of the application of the Radical thesis, is opposing the further extension asked for on the ground that it is impossible, for the time being, to find the necessary additional funds. Free entry to the secondary schools, so far as the sixth (or lowest) class is concerned, was brought into operation a year or so ago. The effect has been, in one of the Paris schools, to increase from 185 to 250 the number of children belonging to the class in question, which is regarded even in this country, where school classes are normally extraordinarily large, as being too unwieldy for practical teaching. More school accommodation and larger teaching staffs are obviously needed, and this will require time and heavy additional expenditure. The debate on the subject is still unfinished, but whether public opinion is seriously interested seems doubtful.

The general economic and industrial situation is obviously growing worse. There are no exact figures of unemployment except in regard to those actually in receipt of benefit, which are slowly increasing every week. The official return issued for the week ending last Wednesday reports 32,300 workers in receipt of relief, against 28,500 in the previous week. The number unable to secure employment at the Labour Exchanges was 50,715, an increase of 5,750. Reductions of labour are reported in several trades, metallurgical industries being chiefly affected. The institution of a five-day week is apparently meeting the situation fairly well in the northern coalfield. In the midland field there is some agitation as the result of proposals for wage reductions. That the situation is as yet by no means taken seriously may be gauged from the fact that the Chamber Finance Commission yesterday decided to limit the credits to be applied for in regard to unemployment relief to a maximum of 20,000,000 francs, or £160,000.

The revenue returns for January show that total recoveries from normal and permanent sources, in respect

of the General Budget (exclusive of receipts by the Caisse d'Amortissement) totalled 4,295,122,800 francs, or 136,000,000 francs less than Budget estimates and 332,000,000 francs less than in January, 1930. In this connection it should not be overlooked that taxation relief amounting to about £40,000,000 has come into effect during the past year or so.

A writer in one of the Paris financial newspapers estimates that the total French balances abroad now amount to about 10,000,000,000 francs, most of which is being employed in short-term loans on not very remunerative conditions, in Great Britain, America, Germany and other countries. In view of the nominal rates for money existing here at present, the universal opinion in banking circles here is that there can be no question of this enormous volume of funds being brought back to France. For one thing, quite apart from the impossibility of finding profitable employment for it, the effect would be to send the franc so far above gold point that the Bank's reserve of gold would be increased to a still more unwanted level than at present, with disastrous effects on internal prices. This unusual situation was undoubtedly one of the contributing causes to the desire of the French banks to participate in the credit operation for the benefit of Germany, which was brought to a definite decision on Monday last.

In view of the hesitation of the Finance Ministry to authorise the introduction of further foreign issues here, the Coullisse authorities are steadily pushing forward the plan for assimilating a large number of the shares in South African and other companies already quoted here to those belonging to the same companies which are dealt in on the London and other markets. Henceforward, instead of dealings being allowed in this market in only a limited number of shares in certain companies, all the shares in such companies will soon be able to be dealt with, both in Paris and elsewhere, on practically the same conditions, without discrimination of any kind. A beginning has already been made with Tanganyika and two other issues, and this week statutory notices are published freeing Geduld and Union Corporation shares from the shackles that have hitherto hampered dealings in them in this country.

The foreign trade returns for January show a sharp drop on the month in both exports and imports. Imports were 3,816,897,000 francs (4,436,839 tons), against 4,330,935,000 francs (5,014,401 tons) in December, and 4,753,887,000 francs (5,204,656 tons) in January, 1930. Exports were 2,573,756,000 francs (2,359,146 tons), against 3,220,937,000 francs (2,966,039 tons) in December and 3,704,583,000 francs (3,914,910 tons) in January last year. All categories of both imports and exports were affected, with the exception of foodstuffs entries, which were 186,960 tons (232,000,000 francs) larger than in December. The largest drop was in imports of raw materials, which were 20 per cent. less in quantity than in January, 1930, and 12 per cent. lower than in December, the next largest being one of nearly 15 per cent. in the value of exports of manufactured goods, as compared with December, and of over 20 per cent. as against January, 1930. Nothing could mark much more clearly the sudden extension of the general economic depression to this country since the beginning of the year.

The returns of French foreign trade "by countries," which are now available for the past year, indicate that Great Britain continued to be this country's best customer by far, with total purchases of French products amounting to 6,839,000,000 francs. The Belgo-Luxemburg Union came second, with 5,440,000,000 francs, and Germany, Switzerland, United States, Italy, Holland and Spain next, in the order given, and all showed much lower totals than in the previous year. The heaviest drop in French exports was in those to Belgium-Luxemburg, which were 1,785,000,000 francs lower, while those to America fell off 899,000,000 francs, or over 25 per cent. Germany occupied first place in the list of countries exporting to France, with a total of 7,906,000,000 francs, or 1,294,000,000 francs (16 per cent. more than in 1929 (this total including reparation payments in kind). American imports into this country were 6,089 millions, or 15 per cent. lower than in the previous year, while purchases

from Great Britain fell from 5,827,570,000 francs to 5,249,291,000 francs, or nearly 10 per cent. French trade with Russia last year comprised imports of Soviet products (chiefly oil) totalling 886,000,000 francs, or an increase of 98,000,000 francs, and exports to Russia of 170,000,000 francs, or a drop of well over 30 per cent.

About 12½ per cent. of the French imports last year came from the Republic's colonies and protectorates, and over 20 per cent. of the total exports were consigned to those regions. France has always maintained a free and protected market for herself in her colonial empire, while the free entry of colonial products into France itself is carefully regulated, and the quota system largely used to protect home production. The quota system is used especially in regard to entries of Algerian wines, wheat, fruit, etc., the quantities admitted free being systematically fixed every month by presidential decree. "Colonial foodstuffs" constitute a distinct classification in the Customs tariff, and are in many cases subjected to import duties, on the same principle as those applied to products from countries not under French control.

GERMANY.

Nazi Discomfiture — Foreign Credit — Agrarian Relief — Coal Syndicate Dispute — January Trade.

(FROM OUR CORRESPONDENT.)

BERLIN, February 17.

THE withdrawal of the National Socialists from the Reichstag is patently a sign of weakness. Their friends, the Hugenberg Nationalists, fully realised this and followed them only with the greatest reluctance. The gesture of withdrawal would only have had point if it could have been followed up by direct revolutionary action, but there is not the remotest question of that. What Herr Hitler failed to do in 1923 cannot even be attempted now. Even apart from the fact that the severest trade depression is less productive of a revolutionary spirit than such catastrophic inflation as Germany experienced in 1923, and that Herr Brüning is much stronger than the Cabinets of that time, the strongest protection of the State is the unity which exists among its highest executive organs. The Hitler *putsch* of 1923 was possible because the defensive forces of the State were crippled by Bavarian opposition to the Government, whereas to-day Bavaria, the point of origin of the National Socialist movement and the principal centre of its organisation, is no less watchful than Prussia against any illegal actions on the part of the National Socialists, and the Bavarian Prime Minister, Herr Held—in spite of small differences of opinion on the subject of tax laws which in Bavarian opinion seem to encroach on the rights of the States—is supporting the Chancellor with no less determination than his Prussian colleague, Herr Otto Braun.

The influence of the National Socialists in Thüringen and Brunswick is negligible in comparison with the defence forces of these and many of the smaller States. The withdrawal of the National Socialists from the Reichstag will therefore find no complement in any kind of action, and even the effect of their agitation meetings seems to be diminishing. It took a great deal to rouse the propaganda organisation of the Social Democratic Party against the National Socialists, but it has now been in action for some weeks, and this comprehensive party organisation has in many districts completely stifled the Nazi propaganda with meetings, banners and newspapers. The effect is reinforced, in Catholic localities, by a complete clerical boycott. The bishops have strictly forbidden any Catholic priest to show any form of sympathy to the National Socialist movement.

All this does not mean that the tide of National Socialism has subsided. The withdrawal of the Nazis from the Reichstag certainly betokens a discomfiture, whether they return or not; but it need not be a defeat. Not until after the summer elections in Bavaria at the soonest, and possibly not until the Prussian elections

next spring, will it be possible to see whether a turning point has been reached. Everything, of course, will depend upon the course of business, which seems recently to have shown some signs of improvement.

The negotiations for the interim financing of the Reich sale of railway preference shares have now been concluded. The advance to be provided by the foreign bank consortium is not after all to be \$32 millions, but Rm. 119½ millions, or about \$28½ millions. Besides Lee, Higginson and Co., the consortium consists of the Banque de Paris et des Pays Bas, the Schweizer Kreditanstalt and the Schweizer Bankverein, Rothschilds, Baring Brothers, Higginson and Co., and Schroeder, all of London; Mendelssohn and Co., of Amsterdam, Nederlandsche Handels Mij. and the Skandinaviska Kredit A.B. The French are taking over, not a third as originally planned, but about a quarter. The delay has been due partly to the change of Government in France and partly to formal difficulties in Paris. No special security is being given for the advance, which will be repaid by instalments between July, 1931, and December, 1932.

The Cabinet has approved a new form of the "Osthilfe" Bill, in which the relief scheme follows the lines of the Silverberg Plan discussed in a previous letter. The plan envisages the formation of a fund of Rm. 500 millions out of the proceeds of the industry tax, which is to belong to industry, but to be lent to agriculture for the replacement of short-term credits at high rates by long-term loans at low rates of interest. The fund is to be gradually augmented in the course of the next few years by the raising of loans to a further 370 millions. The Reich and Prussia would give a joint guarantee of 25 per cent. to cover defaults on mortgages. A further 10 per cent. is collectively pledged by the farmers whose mortgages are being converted, so that the good farmers are in effect going surety for the bad ones. Defaults in excess of these guarantees will be met by the fund. Although industry is very well protected against loss, it is hoped that the representatives of industry will insist on very careful selection of debtors from the point of view of their suitability to receive credit.

Representatives of industry, agriculture and the Government are jointly to examine applications for credit. If the two former are in favour of granting an application, the conversion can proceed without the agreement of the Government representatives, but in that case the guarantee of the Reich and State ceases to be operative. This scheme will only come into effect if the Budget is passed by Parliament. If the Budget has to be put into effect by emergency decree, the Osthilfe scheme will be cut down to the dimensions of that proposed by the Government last summer.

The Ruhr coal syndicate has become involved in an interesting dispute with the Deutsche Continentale Gasgesellschaft in Dessau. The Dessau Gas Company owns the Westphalia mine, in the territory of the Ruhr Syndicate, and also the Magdeburg Gas Works, a central gasworks in Magdeburg. It had intended to send coal from the Westphalia mine direct to Magdeburg, not through the syndicate, as this would be a delivery to its own works, and therefore constitute "own consumption" in the sense of the cartel agreement. Delivery for "own consumption" is much more advantageous than delivery through the syndicate, as it is not included in the sales quota and pays a lower contribution to the syndicate. The syndicate, however, places a narrower interpretation on the relevant clauses, and refuses to recognise these coal deliveries as "own consumption" because the gasworks naturally sell the coke which is incidentally produced. The Dessau Gas Company cannot afford syndicate coal for the Magdeburg works, and so is obliged to use English coal. It has, therefore, lodged a complaint with the Ministry of Economy. The case is particularly important because the syndicate agreement expires again in March, and in the present circumstances the Dessauer Gasgesellschaft would not be disposed to renew it while it would be difficult for the Ministry of Economy to renew it compulsorily.

Imports increased in January to Rm. 715 millions against Rm. 681 millions in December, while exports fell

from Rm. 902 millions in December to Rm. 775 millions in January. This means an export surplus of about 60 millions, but when statistical errors are allowed for it becomes about 150 millions against 222 millions in December. In the two preceding years there was an especially large passive balance in January: 216 millions in 1928 and 213 millions in 1929. The severe decline in foreign trade turnover is only to be explained by the effects of the world depression.

HOLLAND.

Depression — Capital Market — Banking — Foreign Trade.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, February 4.

NOT only is Dutch agriculture passing through a most difficult period, but Dutch industries are also undergoing the effects of the prevailing trade depression to a more and more serious extent. Further retrenchment and the discharge of workmen is the result, and the general decline is illustrated by the state of the capital market. One would have to search back very far in the annals of the Netherlands capital issues market to find a month recording such a poor showing as January, 1931. In contrast with last year, when the economic depression confined its influence on our issues market chiefly to the proportion in which the total issues were divided amongst the various classes of borrowers, it is now finding expression in the extraordinarily low amount of the total issues. The figures for January in each of the last four years are shown below:—

(Thousand guilders.)

1928	34,738	1930	51,037
1929	68,210	1931	10,444

This lack of activity in the capital issues market, together with the reduced turnover in stocks and shares and the low rates of interest, have had a detrimental influence on the profits of the Dutch banks, and several of them have announced reduced dividends for 1930. Negotiations have been carried on between several Dutch provincial banks and brokers with a view to the flotation of a central bank at Amsterdam to offset the competition of the big banks. A provisional committee has been formed to work out the details of the scheme, and it is understood that the new institution is to be called N.V. Central Bank. It is believed that the foundation meeting will be held in June.

The great drop in prices during 1930 is also reflected in the Netherlands trade balance. Imports in 1930 amounted to 31,884,000 tons, with a value of 2,418 million guilders, as compared with 30,989,000 tons and a value of 2,752 million in 1929. The value of exports declined in a larger proportion. In 1930 merchandise weighing 16,605,000 tons, with a value of 1,719 million guilders, was exported, as against 16,301,000 tons and a value of 1,989 millions in 1929.

The export balance of our trade with England in 1930 was 6 million guilders higher than in 1929, the figures being:—

(In million guilders.)

	Imports.	Exports.	Balance of Exports over Imports.
1928	252	432	180
1929	258	408	150
1930	227	383	156

The most striking decline in imports from England were in yarns, which dropped to 22,000 tons (26,000 in 1929), with a value of 27.3 million guilders (37.7 in 1929), and in fabrics, which recorded a decline to 16,500 tons (19,600 in 1929), with a value of 29.3 million guilders (39.6 in 1929). In our exports to England there was a decline in bacon to 43,500 tons (against 47,300), with a value of 42.6 million guilders (against 49.5). In the case of other dairy products, the quantities exported were larger than in 1929, but the values show a decline. The exports of flowers, bulbs and other horticultural products to England

showed an improvement, the value increasing by 4.1 million guilders. There was also an increase in the exportation of vegetable oils and train oil.

At the end of January the Netherland Bank lowered its official discount rate from 3 per cent. to 2½ per cent. owing to the very easy Amsterdam money market. This measure should not have a great effect on the Amsterdam Stock Exchange or on business activity, because the difference between the official Bank rate and the open market rate is very great. Private discount rate ruled between 1 per cent. and 1½ per cent., and "prolongation" was quoted at 1½ per cent.

BULGARIA.

Price Discrepancies — Unsuccessful Protective Policy — Foreign Trade — Banking Legislation.

(FROM OUR CORRESPONDENT.)

SOFIA, January 24.

BULGARIA is witnessing a large and continued decrease in the purchasing power of almost every class of consumer. For this, the continued weakness of prices of agricultural produce prevailing in world markets is the official justification, but had other important factors not been operative in the process of gradually widening the gap between agricultural and industrial prices, many of the peasants would have found substantial compensation in the favourable results of their production of eggs, fruit, tobacco and other goods not so heavily affected by the fall of prices abroad.

The Government has deliberately and steadily pursued a high tariff policy, chiefly on two grounds: first, as a source of budgetary revenue, and secondly, in order to protect industries whose costs are much higher than those abroad. In the first case, the yield of duties went to the Treasury, but in the second it went to the industries where, in too many instances, it melted away as a consequence of inadequate organisation and deficient management.

There are no precise statistical data to illustrate the growing discrepancy between agricultural and industrial prices, but it is a fact of daily experience that the products of local industry and imported goods are artificially held at prices much in excess of those prevailing on other markets. The raising of the customs co-efficient, in 1930, has aggravated the position, without even increasing the revenue, and this state of things has brought about an almost unprecedented deadlock in nearly all branches of economic activity, the consequences of which are beginning to make themselves acutely felt by the Treasury. Receipts are reported to be at least 900 million leva short of the estimates, after 600 million leva short-term accommodation by the National Bank has been exhausted. The Government, at last realising the situation, is endeavouring to fill up the gaps by emergency legislation. The much discussed and criticised Grain Purchasing Office has been put into operation with apparently little effect in strengthening prices. An all-round reduction of the salaries of the notoriously underpaid State employees has been decreed, but no serious attempt is being made at dealing in a constructive and radical way with the major points at issue, such as protection, high tariffs and excessive State expenditure.

The Government's financial policy has never met with such a widespread and thorough criticism as in the last two or three months. Misgivings are loudly expressed, even among the supporters of the party in power, and the prospects of the coming elections are by no means reassuring for the Government. Much emphasis is being laid on the foreign trade results for last year, which are shown below:—

(Thousand Levas.)

	Imports.	Exports.	Balance.
1929	8,162,017	6,097,356	-2,064,661
1930	4,605,096	5,927,800	+1,322,704

(In Metric tons.)

	Imports.	Exports.
1929	495,884	299,393
1930	326,437	532,064

The heavy reduction in imports can hardly be considered normal; it is very probably a result of the much advertised imports restriction policy, of the diminished purchasing power of consumers and of the clearing of the heavily overstocked position of importers and distributors. However, these results have enabled the National Bank to maintain a satisfactory ratio of gold and gold-exchange cover to sight liabilities.

Having regard to the heavy deflation of credits and trade commitments in 1930, there have been very few collapses of banks, though losses have been sustained by every banking undertaking in the country. In order to strengthen the banking organisation as a whole, the Protection of Savings Act has recently been put into force. According to its main prescriptions, the opening of new banks or branches of banks is subject to authorisation by the Minister of Finance, to be granted after certain requirements essential to public safety have been complied with. One-tenth of sight liabilities must remain in liquid money, eligible trade bills, or State bonds lodged with the National Bank. Two-thirds of bank assets are to be covered by adequate securities, or good trade bills, which must have a duration of 90 days. Commercial and speculative transactions are prohibited. Balance sheets are to be published in an officially prescribed form to give a true and clear position of every bank's affairs. The accounts and operations of all banks are to be audited by delegates of a special Banking Board at the Ministry of Finance. Heavy penalties are provided for failure on the part of directors or executives to comply with these prescriptions. According to expert opinion, this measure will probably bring about a widespread amalgamation of smaller banking concerns and increase the security of the whole banking system.

CANADA.

Western Provinces — Premier's Visit to Washington — Wheat Situation — Effects of Steel Duties.

(FROM OUR CORRESPONDENT.)

OTTAWA, January 28.

LAST week Eastern Canada had its first spell of severely low temperatures this year; on the whole the winter has been remarkably mild. The news of Western conditions continues to be very depressing, but the relief measures which are being organised by the provincial administrations, with the help of the Federal Government, are now beginning to operate, and through the Red Cross and other organisations supplies of food, clothing and fuel are being distributed to indigent families. Meanwhile Mr. Beatty, the President of the C.P.R., has gone ahead with his scheme for a farm finance corporation which would use its capital as a revolving fund to enable prairie farmers to buy livestock and diversify their operations; apparently he has secured a very sympathetic response from banks, mortgage companies and industrial corporations, and been able to raise the necessary capital.

Business conditions generally remain thoroughly depressed, and many firms are known to be just keeping their heads above water in the hopes that the advent of spring will give a general filip to trade. The difficulties of industrial firms who were largely dependent upon the Western market are illustrated by the recent announcement that the Massey-Harris Company, the largest manufacturers of farm implements in Canada, have found it necessary to pass their preferred dividend. The car-loading figure for the week ending January 17th, placed at 47,115 cars, shows a gain of 3,149 cars over the figure for the previous week, but it is still 8,858 cars below the figure recorded for the corresponding week of 1930. Production of steel ingots and castings during December, estimated at 56,101 tons, showed a decline of 22 per cent. from the previous month's figure and was 33 per cent. under the figure for December, 1929; the decline for the whole year 1930 was 26.6 per cent. Pig-iron production in December also fell off 17 per cent.

compared with November, and was less than half the figure for December, 1929.

Speculation is rife in Ottawa about the purposes of the visit which Mr. Bennett is to pay to Washington next week. It is suggested that he will discuss most of the problems which are pressing for solution between the two countries, such as the St. Lawrence Waterway, the problem of the "border commuters," broadcasting arrangements, and the difficulties about rum running, and there is also an idea that he will try to induce the American Government to impose an embargo upon Russian imports of newsprint and lumber, which have curtailed the American demand for similar Canadian products and have had a very adverse effect upon the fortunes of Canadian workers and investors. At the annual meeting of the Canadian Forestry Association, held in Montreal last Friday, a resolution was unanimously passed asking the Bennett Ministry to move for the prevention of imports of Russian forestry products produced by forced labour into British countries.

With wheat prices virtually stationary, not only the farmers but the whole business community of the prairies are in a very pessimistic mood. The Dominion Bureau of Statistics, in a recent bulletin, tries to offer them some comfort by estimating that the exportable surplus of Canadian wheat at the end of 1930 was 253 million bushels and that this figure was not unreasonable. It pointed out that in the first five months of the present crop year, which began on August 1st, the exportable surplus of 398 millions then forecast had already been reduced by more than one-third, and also that there had been a gain of eight million bushels in December, 1930, over the export figure for December, 1929. It was also argued that for the remaining seven months of the crop year the five-year export figure per month had been 20 million bushels, and that, if this figure was equalled in 1931, there was a prospect of a total of 140 million bushels being sold abroad before August 1st. This would reduce the possible carry-over to 113 million bushels, which would be smaller than the carry-over on July 31, 1930, and it was also contended that there was the possibility of a further reduction of this amount because the low price of wheat would induce farmers to feed large quantities of the poorer grades to livestock. But it is also plain that the severe competition of Australia and Argentina (who through lack of adequate storage facilities have of necessity to sell their crops quickly) will prevent effectually any rise in prices, and the prospects are that for some time to come Western Canada's wheat will have to be sold below cost. It is understood, however, that the Bennett Ministry is contemplating negotiations with other wheat-producing countries to secure concerted action for a stabilisation of wheat prices.

Previous reference has been made to the apprehensions of certain groups of Canadian manufacturers that the increased protection granted to them last September was about to produce untoward results for them in the shape of intensified domestic competition within the tariff barrier, and now the steel companies have begun to share these fears as a consequence of the announcement that the United States Steel Corporation is laying plans for the establishment of a Canadian plant costing 60 million dollars. Before the work of construction is actually begun the directors of the United States Steel want some guarantee of tariff stability, and arrangements have been made for Mr. James A. Farrell, the president of the corporation, to discuss the matter with Mr. Bennett. Naturally many Canadian protectionists are claiming that this move is proof of the efficacy of the heightened tariff as an instrument for stimulating Canada's industrial growth, but the directors and shareholders of the existing steel companies of Canada, the Algoma Steel Company, the Steel Company of Canada, and "Besco," can scarcely be expected to view the prospect in the same light. They know that the capacity of the existing steel mills is well in excess of the local demand for the lines of steel products which they make, and they foresee a rapid diminution of their dividends. Indeed, it is an open secret that some of the shrewder leaders of the

Canadian steel industry tried to stave off any tariff increase for fear of precisely this development. Mr. Bennett can give no permanent assurance about tariff stability, but it is understood that Ministers are prepared to give encouragement to the project of the United States Steel Company on the theory that if a large proportion of the steel products now imported from the United States can be manufactured in Canada, even by American capital, an important fruit will be the diminution of the heavy adverse trade balance which Canada now has in her commercial intercourse with her neighbour.

JAPAN.

Banking Conditions — Foreign Trade — Balance of Payments — Bank Amalgamations.

(FROM OUR CORRESPONDENT.)

TOKYO, January 12.

THREE more banks were added to the list of failures during December, bringing the total number of casualties, since the wave of bank suspensions set in in October, to nineteen, with aggregate deposits of nearly 120 million yen. But the outbreak of bank failures was arrested by the early part of last month without the general banking situation being in the least impaired. Despite apprehensions of an unusually severe end-of-the-year stringency, December 31st was negotiated without undue difficulty. The Bank return shows that the note issue at the close of the year was 205.5 million yen lower than a year ago, while advances were 74.5 millions higher, and after the turn of the year both rapidly contracted. The money market has appreciably relaxed, and day-to-day loans are obtainable at as low as 2½ per cent. The stock market, which was further depressed by a fresh break in the price of silver, has become firm in anticipation of an early reduction in Bank rate. The downward movement in commodity prices has slackened. The Bank of Japan's wholesale index number for December last, following the fall of 1.5 per cent. in November and of 2.5 per cent. in October, registered a drop of 0.9 per cent. on the month, and is now 27.8 per cent. above the pre-war level.

The value figures of foreign trade for last year reflect the low prices and the trade depression, which has been especially severe in the case of this country owing to the return to the gold standard at the beginning of the year. The 1930 returns disclose that, as compared with the preceding year, imports at 1,546,075,000 yen declined by 670 millions, or 30.2 per cent., and exports at 1,469,850,000 yen fell by 678.7 millions, or 31.6 per cent. The decline in imports is widely spread over the whole list, but is substantial in raw materials, while the decrease in exports is mainly accounted for by textiles—raw silk, silk fabrics and cotton manufactures being responsible for more than four-fifths of the shrinkage. Trade with China also reveals a heavy contraction. Japan's imports from China during 1930 amounted to 278,374,000 yen, and exports to her to 399,424,000 yen. As compared with 1929, imports and exports show decreases of 87.2 millions and 126.4 millions respectively.

According to the tentative estimates of the balance of payments in 1929, lately published by the Treasury, Japan had a credit balance of 12.9 million yen in her international transactions, as against a debit balance of 171.8 millions in 1928. While the excess of merchandise imports and net Government payments abroad totalled 266.8 million yen, or 161.4 millions less than in 1928, the official estimate of invisible exports was 279.7 millions, or 23.3 millions higher. Invisible items, on balance, are set out below in comparison with the preceding year:—

OFFICIAL CALCULATION OF INTERNATIONAL PAYMENTS.

(Million yen.)

Debit.	1928.	1929.
Excess of merchandise imports (including Korea and Formosa)	333	168
Net Government payments abroad	95.2	98.8
Total	428.2	266.8

Credit.

Net income from overseas investments and business and emigrants' remittances	80.1	89
Net national shipping income	138.3	159.1
Tourist expenditure, &c.	15.3	15.3
Other items	22.7	16.3
Total	256.4	279.7

Excess of income over expenditure — 171.8 12.9

The official calculation of invisible exports for last year is not yet available, but, according to the private estimate of the chairman of the Yokohama Specie Bank, the 1930 merchandise excess of imports of 161.5 million yen was more than offset by net invisible items, Japan's income from international transactions, including gold and capital movements, amounting to 805.2 millions and expenditure to 634.4 millions. The chairman estimated repayment of loans and new investments abroad during the year at just the same amount as the gold efflux of over 300 millions, and expressed the opinion that this is a fairly satisfactory record for the first year of the effective gold standard.

The bank amalgamation movement is making steady progress. During 1930 the number of ordinary commercial banks was reduced by 99, that of savings banks by five, and that of chartered banks by five. Of the above reduction of 109, 89 went out of existence by way of merger and 20 ceased to exist owing to bankruptcy and voluntary liquidation. The total number of Japanese banks at the end of last year was 897, as against 1,006 in 1929 and 1,162 in 1928.

Letters to the Editor.

UNILEVER INQUIRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The following is our reply to your correspondent's letter in your issue of the 14th inst.

The taxation figures forming part of the comparison of equivalent salaries in eight European countries do not purport to show the *total* taxation in these countries (see our letter to you of November 17th last). Where taxes are definitely related to and separately charged on rents, servants, &c., such taxes are regarded as part of the cost of accommodation or of the hire of servants, as the case may be. This answers the criticism of the Dutch tax figures.

With reference to the comments on Belgian taxation, the "reasonably safe" method of your correspondent's Belgian friend is found to have been unsafe—because the operation of the present law is to reduce the old super tax considerably. The figures for direct taxation given in our statement were right at the date of its compilation. At that time the super tax was abolished by the 1930 Budget and the "projet de loi" contemplated the substitution of a personal tax, the incidence of which on the standard incomes was small (estimated at nil, £5 and £30 on the three groups). Subsequent to the investigation the personal tax was considerably increased on incomes over Frs. 300,000 by reintroducing certain features of the super tax. Our figures do not reflect this increase because they were compiled before it was known. If it were included, only the highest income of the three groups would be affected, and the tax figure for this group would be in the neighbourhood of £246 (instead of the £187 shown in our table).

We have not been able up to the present to investigate your correspondent's figures in respect to Denmark and Norway, but as the computations used by us have been made by experts in the respective countries, we have no reason to doubt their accuracy. In Norway there is municipal as well as State income tax to be considered, and the former varies from 3 per cent. to 20.4 per cent. in the several townships.

In conclusion, we would add that our figures were compiled for internal use, and have not been challenged by those whom they directly concern and who are resident in the various countries.—Yours faithfully,

THE COMPILERS.

Books and Publications.

ECONOMIC AMERICA, 1492-1930.

For many years Professor Bogart's "Economic History of America" has served very many students as an introduction to the remarkable story of the rise of America from a colonial backwater to a position of industrial and commercial pre-eminence. It is good news, therefore, that he has now written a new book* on the subject on a good deal larger scale and with less of the text-book atmosphere about it.

Dividing the subject into three periods, Professor Bogart describes briefly the main developments in the principal spheres of economic life (agriculture, manufacture, commerce, banking and currency, transport, population and labour) as they characterise the colonial period and the periods before and after the Civil War. His arrangement does not obviate frequent repetition, but this is in any case difficult to avoid, and a less serious fault in a book which will find its chief use as a college text. There are about 50 maps and charts, but no illustrations. The inclusion of a few good line blocks illustrating such things as technical inventions, a description of which is often attempted in the text, would be an advantage. The utility of the book would also be increased if an account of the main trends in economic thought were related to the main developments described.

An omission which is to be regretted is the absence of reference to the charitable and social welfare activities which are struggling to remedy some of the evil consequences of the inequality in the distribution of wealth in America and to supplement a tardy recognition by the State of some of the elementary demands of social justice. Three other small matters also invite comment. First, the account of the Land Bank scheme of 1739 in Massachusetts would have been more complete if some reference had been made to the failure of similar projects in England (1696) and France (John Law and the Mississippi Company, 1716-1720). Secondly, in his explanation of the American failure to maintain maritime supremacy when British iron ships were beating the famous New England clippers, Professor Bogart does not point out that the proximity of British coal and iron to the sea-coast gave Great Britain an advantage which was more decisive than the "unreasoning confidence in our wooden sailing vessels" to which he ascribes the American defeat. And thirdly, sometimes (as on p. 521) it is not always clear whether dollar values are adjusted to allow for currency fluctuations, a point which, as the author himself makes in other places, is of great importance in assessing such things as the extent of the export trade.

Criticisms on points of detail would be unfair to a book of this scope unless a tribute was at the same time paid to the author's very just sense of proportion, his clear, even if not very energetic style, and his very sound treatment of questions which have been very much longer controversial in America than in this country. The book should find increasing usefulness in future years, not only in America, but, it is to be hoped, here also.

* "Economic History of the American People." By E. L. Bogart, Professor of Economics, University of Illinois. 8vo, pp. xii, 797. Longmans Green and Co., 1930. 16s. net.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Fight for Financial Supremacy. By Paul Einzig. (London) Macmillan and Co., Ltd., St. Martin's Street. 7s. 6d. net.

After examining the advantages and disadvantages as financial markets of London, New York, and Paris, the author comes to the conclusion that London will ultimately emerge supreme as the world's leading banking centre.

A Realist Looks at Democracy. By M. Alderton Pink. With a Preface by Aldous Huxley. (London) Ernest Benn, Ltd., 154, Fleet Street. 10s. 6d. net.

A provocative essay, at the end of which the author reaches the conclusion that democracy will die a natural death through the increasing apathy of the electorate.

The Economic Life of Soviet Russia. By Calvin B. Hoover. (London) Macmillan and Company, Ltd., St. Martin's Street. 12s. 6d. net.

A careful and considered examination which should be widely read. Mr Hoover endeavours to explain and resolve the bewildering conflict between the various accounts of Russia given by different observers.

The Case for Agriculture. Presented by the National Council of Industry and Commerce, 92, Fleet Street.

The scheme of Sir William Morris and his colleagues for the rehabilitation of British agriculture.

La Crisi Economica Mondiale. By Prof. Filippo Carli. (Rome) "Politica Sociale," Via Francesco Crispi, 10.

A very short essay, in Italian, on the world economic crisis.

Dreifache Krise. By Erich Welter. (Frankfurt-am-Main) Societäts-Verlag.

A discussion of the world crisis with special reference to Germany.

The Coming Rise in Gold Shares. By L. L. B. Angas. (London) Specialised Business Services, 19, Buckingham Street. 5s. net.

An interesting forecast in which Mr Angas examines the economics of the gold-mining industry and discusses the outlook for gold-mining shares.

Dictionary of Income Tax and Surtax Practice. By W. E. Snelling. Eighth Edition. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 25s. net.

This extremely useful book of reference has been brought completely up to date, but the law covering recent years is still included in order to eliminate the necessity of reference to older editions.

International Labour Review. January, 1931. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

This issue contains special articles on "French Legislation on the Dismissal of Workers," "The European Lignite Industry," and a tabular analysis of the unemployed insurance legislation in force in various countries.

The Incorporated Accountants' Year Book, 1931. (London) Society of Incorporated Accountants, Incorporated Accountants' Hall, Victoria Embankment.

Contains lists of officers, committees, branches and members and general information about the society and its activities.

Report from the Select Committee on Central Reserve Bank Bill. (Canberra) H. J. Green, Government Printer. 1s. 8d.

The Coming Rise in

GOLD SHARES

by L. L. B. Angas.

According to Mr. Angas, Gold shares offer higher yields, and better prospects of capital appreciation, than any other group of securities in time of trade depression. He applies the principles of his work *Investment to an analysis of this section of the market.*

The Stock Exchange.

PRE-WAR INVESTMENT TRUST COMPANIES.

ONLY as recently as May, 1930, Dr. G. T. Moody wrote, in a foreword to a book on the English Investment Trust Companies: "In my time there have been only two serious and prolonged upheavals in the City." Now there have been three, while Dr. Moody is still, happily, with us. The first crisis to which Dr. Moody refers, namely, the Baring crisis, followed within a few years upon the formation of a number of large investment trust companies. The crisis brought disaster, for no reserves had been accumulated. Several companies ceased dividends on their ordinary stocks, and some even on their preference stocks. In many cases the capital of the companies was substantially written down. When the second upheaval came in 1914, most of the companies had accumulated reserves and they continued during the period 1914-1918 to pay dividends to shareholders. Some even increased their dividends during this period. Now a third crisis has arrived—originating in a world trade depression which has affected the values of commodities and securities to a disastrous extent. It is gratifying to find that the pre-war investment trust companies, so far as they have yet published their results, are emerging from the test as satisfactorily as in 1914-18. There have been no reductions in dividends, while in the majority of cases profits have not only been maintained but increased. The same statement, unfortunately, cannot be made of the post-war investment trust companies whose accounts we shall examine in a later article.

The success of the pre-war investment trust companies is attributable partly to the conservative financial policy which they have pursued for a long period of years, and partly to the practice of holding the major proportion of their funds in fixed interest securities—with emphasis on the first-named factor. If an investment trust company distributes, say, only 75 per cent. of its net profits and re-invests the balance, a constantly increasing income will be derived from a constantly increasing reserve fund, which will enable constantly increasing dividends to be paid on the ordinary stock. As Mr Glasgow remarks in his book on the English Investment Trust Companies, the height of a trust company's prosperity is reached when reserves have been built up and book values written down to such a pitch that even if the dividend is regularly increased the company's rate of earning is likely to increase at a still greater rate. The company then begins a progression which mathematicians call "geometric."

	1930	142,066	78,574	26.19	20	29,077	2,247	6.92
Total of above	1928	114,3106	795,143	15.49	14.76	215,139	3,142	5.94
	1929	127,867	878,031	16.71	15.11	278,312	28,123	6.18
	1930	129,949	897,293	16.62	14.98	186,528	61,625	6.29

This is the position which the pre-war investment trust companies had arrived at when the great slump fell heavily upon the security markets. It must not be supposed that investment trust companies, in a period of trade depression, sell all their ordinary share holdings and re-buy at advantageous prices. Few markets would be able to withstand the shock if investment trust companies switched out of ordinary shares into bonds with each downward move of the trade cycle or from bonds into ordinary shares with each upward move. Since the average investments held by the trusts of this country amount to about five times the total capital, and the combined capital exceeds £200,000,000, the total investments held by British trust companies may be in the neighbourhood of £1,000,000,000. "Switching" in the stock markets by investment trust companies on the grand scale is therefore a physical impossibility.

For our present analysis we have selected eight pre-war companies which have lately issued their reports. The tables show the revenue and capital results for these companies for the past three years.

Taken as a whole, these eight companies show an increase of 2.1 per cent. in the combined profits, as compared with 1929 and of 13.6 per cent., as compared with 1928. It must, however, be remembered that all these concerns show their profits after tax, and consequently in some cases the amount earned per cent. is shown as less than the dividend declared; nevertheless, after allocating certain sums to reserves, there is an increase in the sum carried forward, the explanation being that taxation payable on dividends is taken into account before reaching the net profit, though the dividend is shown gross. The amount distributed in dividends by these companies in 1930 represented 14.98 per cent. of capital, as compared with 15.11 per cent. in 1929, increases in capital having been made by two companies in the interim. One point of particular interest is that the amount carried to reserves during the present year is below the additions made in 1929. A truer appreciation of the position, however, can be arrived at by the additions to, or deductions from, the "carried-forward" amounts. On this basis, it will be seen that the companies retained £248,153 of their 1930 net profits, against £250,189 in 1929. The revenue obtained by the companies averaged 6.29

* Market valuation stated to exceed book value of investments.
† Slight depreciation reported, but said to be covered by reserves.
‡ Not stated.

per cent. of their total investments, as compared with 6.18 per cent. twelve months previously. Net earnings, calculated on the same basis, remained the same at 3.83 per cent.

During the year British Assets Trust, Government Stocks and Others, Scottish Investment, and the Second Scottish Investment Trust reduced their reserve accounts, the greatest change being made by the Second Scottish Investment Trust Company, Ltd., whose reserve fund was reduced from £680,000 to £280,000. Of the four remaining trusts, the Mercantile Investment and the Rio Claro showed their reserve at a higher figure than in 1929. The combined funds were £708,144 less than was the case twelve months before, while ordinary capital, increased in three cases, was £142,669 greater than in 1929. In the accounts of the British Assets Trust, the Scottish Investment and the Second Scottish Investment Trusts, the book-values of the investments were lower than those shown in the previous accounts, but the eight companies returned a total increase of £587,692. The Scottish Investment Trust, whose reserve fund was reduced by exactly half to £250,000, shows its investments £246,907 lower at £3,320,633. Apparently the reduction in reserves has been applied to writing down investments which are stated to exceed the market valuations of November 1st last by £90,811. In most cases the percentage of reserves to investment is not arithmetically impressive, the figures ranging from 3.01 per cent. to 19.18 per cent. The average for the eight companies is 9.77 per cent.

Our final table shows the present market prices as compared with the highest and lowest for 1930:—

Company.	Highest 1929.	Highest 1930.	Latest Price.	Earnings, %	Div., %	% Yield on Earnings.	% Yield on Divs.
British Assets Trust*	45/3	38/-	25/-	31.29	20	6.26	4.00
Gov. Stocks and Others	273	214	160	11.33	10	7.08	6.25
Mercantile Investment	350	344	313	15.71	16½	5.46	5.27
Metropolitan	430	407	370	19.22	20	5.22	5.41
Omnibus	207	182	152	10.49	10	6.90	6.58
Rio Claro Rly. and Investment	223	195	156½	13.07	10	8.35	6.39
Scottish Investment*	23/6	25/-	17/6	23.97	20	6.85	5.71
Second Scottish Investment*	36/-	29/6	17/6	26.19	20	7.48	5.71

* Shares of 5s. denomination.

It will be noticed that a comparatively low yield is obtainable on the shares of the British Assets Trust. This arises out of the avowed policy of the directors of declaring low dividends, but offering shareholders each year the opportunity to acquire new shares on bonus terms. For example, in March, 1928, new ordinary shares were issued to shareholders at 15s. per share in the proportion of one for every seven held; in April, 1929, one new share for every 16 held at par; in March, 1930, one for every 20 shares held at par; then, in June, 1930, 5 per cent. preference shares were issued at 5s. credited with 2s. 6d., in the proportion of one new preference share to each two ordinary shares. Again, this year, the directors propose to issue new ordinary shares of 5s. at par in the proportion of one new share for every 20 shares held. In view of the heavy taxation in this country, this distribution policy may become increasingly popular with investment trust companies.

The conclusion suggested by a careful analysis of the figures set out in this article is that the pre-war investment trusts of Great Britain has shown stability in the face of a critical situation. The highest compliment one can pay to the various managements is to say that, in the light of their traditions and internal strength, such a result is completely in accord with expectation. For it is clear that the strength of these companies is internal—that it has been built up by long years of consistently conservative treatment of available resources, and has not "automatically" accrued as a result of any particular policy of "spreading" investments or investment risks. This lesson has not always been fully acted upon by American and other overseas adapters of British investment trust theory—nor, it may be added, was adequate stress laid upon it in every new trust prospectus published in this country in the years preceding the slump of 1930. Its relevance to current conditions will be made apparent in a later article, in which the results of representative post-war trust companies will be discussed.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 3.	March 5.

A RECRUDESCENCE of nervous selling marked the opening of the new account, and throughout the week the trend of quotations was steadily downwards. Although Transatlantic counters were again fairly active, there was still no sign that London dealers had been infected by the "revival" in New York, and business remained restricted in most departments. The "revised version" of Mr Snowden's speech, following protests from the rank and file of the Labour Party, caused, if anything, a rather worse impression than the original statement, and emphasised the depression caused by the growing prospect of disequilibrium in the national accounts. In isolated sections, as, for instance, Argentine Rails, exceptional improvements were registered, but the gains were more than offset by the heaviness of high-class securities, which cast a shadow over the "House."

The slump in Gilt-edged was broken only by a certain amount of bear covering on Tuesday, after which most quotations touched the lowest point of the year. The causes of the decline are outlined in a note on page 406. Home corporations were dull, the new Surrey and Reading loans both being offered at a discount. Indian loans developed fresh weakness in sympathy with home government securities, and dealings in the new 5½ per Cent Loan also opened at a discount, though the tone generally improved later. Uncertainty as to which of the conflicting forces in Australia would prove to be predominant induced further selling of Commonwealth stocks, the New South Wales issues being the worst sufferers. New Zealand descriptions were weak, and South Africans little better. Foreign bonds were mostly inactive, Argentines being a notable exception, while the "Dawes" and "Young" loans were well supported in the European section. Brazilians registered cumulative declines. Perus were weak, and Chinese sagged persistently.

Movements in the Home Rail market were once again almost entirely against holders, the continuance of "traffic" declines and uncertainty regarding the outcome of the wages negotiations militating against any revival of confidence. Serious losses were recorded on all lines. Midland and Scottish ordinary declining to 24½, a new low record. The reports which have been published so far are discussed in a Note on page 408. Undergrounds were mainly firm on the satisfactory accounts, also analysed on page 408. Among Foreign Rails, Argentines went rapidly ahead on the improved financial prospects of the Republic and the more encouraging harvest outlook, optimistic operators beginning again to look for small dividends from the better lines.

Marked heaviness pervaded the industrial section, and, where improvements occurred, they were due rather to special circumstances than to a strengthening of confidence. Breweries were again marked down on fears of impending taxation, while Imperial Tobacco and "Bats" led declines in the tobacco section for the same reason. Fords came into request on anticipations of a good report, and National Omnibus advanced on the successful preliminary negotiations with Thomas Tilling, which lost a fraction. Textiles were out of favour, and Courtaulds, in the Rayon group, came in for renewed selling, though American Celanese improved. Nitrate shares were little affected by the latest "Cosach" scheme (discussed on page 407), which was only partially understood. Transatlantic counters were in a less-flourishing condition, but International Nickels were a firm spot. "Record" leaders were again in evidence and moved up. Unilevers were dull. Banks and insurance shares declined in sympathy with gilt-edged.

The oil share market was disturbed by news of increased output of crude oil from America, and, in the absence of Paris support, prices ruled lower generally. The Royal Dutch-Shell group were not affected by the judgment

against Anglo-Saxon petroleum. Among rubbers, Trusts and Anglo-Dutch continued on offer, the former on the near approach of the accounts, while United Sua Betong lost ground. Tea shares were as lifeless.

The mining share market did not wholly escape the effects of the general lack of confidence, and prices tended downwards. Business in the Kaffir section was more restricted than of late, and gains and losses were about equally divided. "Tanks" and "Zams" improved appreciably, but "Chartered" were heavily sold on the report. Northern issues were steadier, and Congo Border advanced on "inside" support. A continuous crop of rumours with regard to tin restriction failed to impress the market, and shares remained dull. Wiluna recovered after initial weakness. Tintos were in request, and Ashantis also went ahead.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The stock markets advanced into new high ground this week, and immediately attracted increased profit-taking. In mid-week, indeed, the entire list turned reactionary. A factor in the change was the menace of the Veterans' Bonus Bill, which threatens to compel heavy Government borrowing. The measure was passed by the House of Representatives by a majority of 363 to 39, but the Senate may endeavour to cut the proposed rate of interest from 4½ per cent. to 2½ per cent. Any disagreement between the two Houses on this question might allow President Hoover to veto the Bill without sufficient time for its re-enactment over his veto before Congress rises on March 4th. In the mid-week share reaction, specialities like Auburn Auto and J. C. Case suffered severely, but the movement also included seasoned market leaders like U.S. Steel, reports of a slight reduction in the latter's operations disappointing those who expected a steady seasonal improvement in the spring. The steel industry generally has now reached 50½ per cent. of capacity. Though authorities like Mr John McHugh, chairman of the Executive Committee of the Chase National Bank, continue to forecast a speedy improvement in business, current indications afforded little solid evidence of any major movement. Last week's car loadings failed to show even a seasonal improvement. Copper shares have shown moderate strength on the firmness of base metals, but the sluggishness of oil shares has reflected distrust of recent developments on the producing side of the industry.

INVESTMENT

by L. L. B. Angas.

(Author of "The Coming Collapse in Rubber, 1926.")

The publication of this book marks a new epoch in the science of investment for profit; no speculator, investor, trustee or stockbroker can afford to leave this work unread.

CONTENTS.

- The Business Cycle and its influence on the prices of all securities.
- How to detect the beginnings and endings of booms and slumps in single industries.
- Methods of forecasting the short-run market fluctuations which occur simultaneously every few months in the majority of ordinary shares.
- Rules for timing both buying and selling and for taking profits and losses.
- Investment policy to be followed by Trustees at different stages of the Business Cycle.
- Mistakes to avoid.

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."

Daily Telegraph: "The best book that has ever been written on investment with a view to capital appreciation."

Publishers: Macmillan & Co., St. Martin's Street, 20/- London, W.C.1. 187 pages. Numerous charts. PRICE 20/-

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

NOTE.—Shares with a New York quotation, or with foreign quotation, are shown at the closing price on the last day of trading. Shares are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date the final date of redemption is taken when the stock stands at a discount, and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

BERLIN.

Following the heavy decline in quotations at the end of last year, January developments brought fresh disappointment. Sales by both home and foreign holders continued, and all leading securities fell to new low levels. The unfavourable tendency was principally due to the state of the money market and the foreign exchanges. Withdrawals of foreign credit and the flight of German capital occasioned a heavy demand for foreign exchange in spite of the active trade balance, and in a few weeks the Reichsbank had to part with over Rm. 300 millions of foreign exchange. This prevented the usual seasonal relaxation of the money market in January; rates were high and the nervousness of the Stock Exchange continued. At the very end of January the long expected turn came, both in the foreign exchanges and in the security market, and in the first week of February securities experienced a definite rise, a lively demand causing a considerable improvement in the prices of popular shares; I.G. Farben rose from 110 to 140, Siemens from 140 to 180, Salzdettfurth from 180 to 210. Other shares advanced only very slowly, but the average index rose 8 per cent. It depends upon political conditions and upon the future course of interest rates whether the improved tendency of the Berlin securities market will last. If Germany were to receive long and short-term money from abroad within the next few months so that the present rate of 8-10 per cent. for long-term investments could be reduced, the present level of quotations, which is still very low in comparison with last year, could hardly continue.

Official "Cosach" Quotations in all cases.

AMSTERDAM.

Generally speaking, markets were satisfactory on the Amsterdam Stock Exchange, and decided advances were scored all round, not only by the leading favourites, but by the less popular lines. Among indus-

trials, Unilever and Phillips were well to the fore, and gained 10 per cent. and more in a day. Among artificial silks there was a brisk demand for General Art Silk Unions, in sympathy with Berlin. Under the influence of better prices for the commodity, rubber shares also recovered. Tobaccos and sugars were firm. Interest in sugar shares was stimulated by the formation of the "Visoco," an association of Dutch East Indies sugar enterprises founded with the object of negotiating on matters concerning the restriction of production. Undoubtedly this can be regarded as being an initial step towards putting the plan evolved out of the Chadbourne scheme into practice, but it should not be overlooked that this agreement is not in force yet, and it is to be doubted whether the Government of the Dutch East Indies will be inclined to enforce upon the entire sugar-producing industry measures which do not meet with the full approval of all the parties involved. It is computed by Dr. Geerlings that at the end of the current Java crop year on April 30, 1931, 400,000 tons of sugar will be left unexported; some other experts estimate that the carry-over will be 500,000 tons. On the corresponding date last year the quantity was 144,000 tons. Oil shares were firm, in conformity with the better tendency on Wall Street. The tone of shipping shares was, generally speaking, a trifle better, although trading was still very restricted.

INVESTMENT NOTES.

The Gilt-edged Reaction.—To what extent the reaction in the gilt-edged market is attributable to Mr Snowden's speech last week, and to what extent to Mr Lloyd George's, it would be invidious to say. But there can be no doubt that the confidence of the investor in British Government stocks has been rudely shaken at a critical time. With the sterling exchanges in a by no means stable condition, it is important, above all things, to prevent the withdrawal of foreign balances for this or any other reason. The extent of the reaction which has overtaken the gilt-edged market since the day before Mr Snowden's speech can be seen from the following table:—

	Feb. 12.	Feb. 13.	Fall.	Present Yield.
2½% Consols	57½	55	2½	4 10 11
4% Consols 1957 or after	90½	86½	3½	4 12 0
3½% Conversion 1961 or after	80½	77½	2½	4 12 0
4½% Conversion 1940-44	101½	99½	1½	4 13 0
4½% Funding 1960-90	93½	90½	3½	4 15 9
4% Victory Bonds, 1976	96½	94½	1½	4 6 6

So far the selling has not assumed large proportions. The fall in prices has been over-accentuated by the technical conditions of the gilt-edged market. Professional dealing

had carried prices up to a high level, and a considerable "bull" account had been built up. The correction of this bull account has occurred, however, at an unfortunate time. Whereas, a few weeks ago, it was possible to deal closely in £100,000 of stock, it is now common to find a half-point quoted in as little stock as £20,000. In other words, dealers are unwilling to take stock, and it would be impossible to unload large blocks of British Government securities in the present condition of the markets. To this pass has the Stock Exchange been reduced by political events outside its control. No substantial recovery is expected until after the Budget—for reasons which we discussed in a leading article last week.

A Royal Mail Disclaimer.—The wording of certain questions regarding the Royal Mail position put in the House of Commons this week, suggests than an unwarranted construction has been placed in some quarters on Sir William McLintock's reference, at the meeting on February 12th, to the dividend policy of the company between 1926 and 1929. In his statement, Sir William showed that the published profits of the R.M.S.P. Company during this period were arrived at after the transfer of large sums from internal reserves and after taking credit for dividends from 100 per cent. subsidiaries which were not, in fact, earned from the trading operations of the companies during those years. Sir William further pointed out that the "adjusted trading results of the company and its 100 per cent. subsidiaries together would show substantial losses for those years," but that the company, nevertheless, had paid to its shareholders dividends amounting in all to over £1,000,000. The suggestions made in certain irresponsible quarters, that these statements amounted to a constructive accusation of fraud against the Royal Mail directors, and that the papers should be forwarded to the Public Prosecutor, argue both an ignorance of the elementary principles of company finance and a loose reading of Sir William McLintock's statement, and scarcely merit the distinction of even a semi-official *démenti*. There is, of course, nothing criminal in the payment of dividends out of reserves, internal or external. Many companies, in fact, protect their shareholders from the full effect of jolts and jars in their trading experience by following precisely this policy in periods of temporary adversity. A policy which is thoroughly legal, however, may in some circumstances be more than inexpedient. In the case of the Royal Mail, the repeated dividend payments between 1926 and 1929 undoubtedly tended to deplete the company of liquid resources at a most critical period. If the voting trustees had held at their disposal, to-day, half the ordinary dividends paid out during those four years, there would have been no occasion to hold last week's meetings at all. The greatest financiers and captains of industry, however, are liable to make errors of judgment in the matter of over-generous dividend policy, without leaving any reflection on their good faith—though the subsequent results in this case have been disastrous.

Gas versus Electricity.—The grievances of the gas industry have been ventilated at the recent general meetings of the Gas, Light and Coke Company, the South Metropolitan Gas Company, Commercial Gas and South Suburban Gas. The trouble arises from the different attitudes adopted by the Government to the electricity and gas industries—to the first an enlightened supervision, but to the second a disregard so complete that it still carries on the Statute Book gas legislation dating back to the last century. Both Sir D. Milne-Watson at the meeting of the Gas, Light and Coke Company, and Dr. Carpenter at the meeting of the South Metropolitan Gas Company complained bitterly of special pleading on behalf of electricity by the Government in the person of the Minister of Transport and by many local authorities. The Minister of Transport has apparently given details of the remarkable benefits in his household which have followed upon the introduction of electricity and the banishment of gas. Various instances have been given of alleged victimisation

of the gas industry by local authorities in connection with their housing estates. In nearly 100,000 municipally-owned houses in this country tenants, it has been stated, are not allowed to choose what form of light and heat they will use. In thirteen localities the local authorities have prohibited the use of gas for any purpose whatsoever. In 47 other cases, the use of gas for lighting and heating has been forbidden. There is no doubt but that two such important public utility undertakings as electricity and gas should be developed in co-ordination, and not in opposition. The gas industry, as Dr. Carpenter stated, asks for "a fair deal." Parliament can at least revise the antiquated Acts which now hamper the gas industry's development on rational modern lines by laying down the amount of capital it can raise, how it can raise it, the interest to be allowed on it, and so forth. In France, Germany and America the development of the gas industry is going hand-in-hand with the development of electricity. There would appear to be no good reason why in this country, with its huge domestic coalfields, the same policy should not be followed.

"Cosach" Moves On.—Seasoned railway travellers are painfully familiar with the advertised "express" which meanders like the slowest local train at the beginning of its run, and only achieves a respectable burst of speed when the patience of passengers is beginning to wear thin. "Cosach," the Chilean nitrate combine, which obtained legislative sanction in Chile last summer, dragged its slow length into New York station four months ago. Its subsequent delay in working up a head of steam has been unofficially attributed to insufficiency of fuel supplies. An authoritative statement has now been made by Messrs Aikman (London), Limited, in their annual review of the nitrate industry, from which it would appear that Cosach is now definitely to move forward. Messrs Aikman's review recalls the original features of the plan (which have been discussed in detail in earlier issues of the *Economist*), but shows that the intervention of a world economic crisis prevented those concerned from raising the necessary new capital to build two important nitrate plants which had been projected. These have been postponed for the present, and other measures agreed upon have reduced the amount of new capital immediately required. The wording of the circular suggests the making of sacrifices by various parties, particularly by the Chilean Government, which was to have received, between 1930 and 1933, a minimum of £16,650,000 from Cosach in return for its abolition of the export duty of £2 10s. per ton. The payment for 1930 has already been collected in the form of export duties, and the remainder will be funded, so that only its service will be a direct charge on the profits of the combine. Messrs Aikman anticipate that 95 per cent. of the productive capacity of Chile will join Cosach, and that by working the cheapest producers at full production and keeping only sufficient capacity employed to supply the market's

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C. 3

GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

requirements, the cost of production should not exceed £3 5s. per ton f.o.b. Chile. If the total Cosach charges (including amortisation and preference dividends) be added, together with freight costs, the aggregate expenses of delivering the product in the principal consuming markets may be put at about £6 15s. per ton, against a selling price to-day round about £8 7s. 6d. per ton. On these terms, Messrs Aikman believe, "Cosach" should not only be able to work profitably, but to negotiate for a more favourable agreement with the synthetic producers. Such an agreement, they suggest, might include the fixing of the price of Chilean nitrate at a price per ton not higher than that of nitrate of lime and other similarly constituted fertilisers. In the meantime, all earnings on the ordinary shares of Cosach will be conserved for the first three years of its existence to strengthen the company's position. It would appear that banking interests, to which the Chilean nitrate industry as a whole is appreciably indebted, have successfully insisted on a conservative policy both as regards immediate finance and the treatment of any profits which may accrue in the early years of working. It is far too early as yet to attempt to estimate the dimensions of earnings, even in 1931. Further particulars of the revised finance of the plan (which apparently is to include the raising of cash by means of a bond issue) must precede a more detailed judgment on the merits of the "Cosach" scheme under present conditions.

Great Western and Southern Railways.—The accounts of the Southern Railway and Great Western Railway, the two "group" companies which have so far issued their reports, are summarised in the following table, which sets out the results for the past three years. Detailed analyses of the railway figures will appear in the *Economist* as usual when the complete results are available.

(000's omitted.)

		Railway Gross Receipts.	Railway Expenditure.	Miscellaneous Income (net).*	Ordinary Stock.				Carried forward.
					Earned for Div.		Paid.		
					Amt.	%	Amt.	Rate.	
Great Western	1928 ...	£ 30,486	£ 24,476	£ 110	£ 2,160	5.1	£ 2,123	5	£ 105
	1929 ...	31,028	24,309	255	3,301	7.7	3,220	7½	186
	1930 ...	29,590	23,617	147	2,241	5.22	2,361	5 7/8	65
Southern	1928 ...	23,019	18,447	801	2,039	2.1	2,009	5 1/2 Def.	136
	1929 ...	22,993	18,175	775	2,193	2.6	2,167	5 1/2 Def.	162
	1930 ...	22,396	17,928	721	1,705	1.03	1,773	5 1/2 Def.	93

* Road transport, steamboats, canals, docks, hotels, parcels service, etc.

In the case of the Great Western, gross receipts declined by £1,438,000, while economies in working expenses resulted in a reduction in railway expenditure of £692,000. How far savings during the past year will necessitate increased expenditure in the future is not wholly apparent, but it is noticeable that only £573,224 was expended on "Maintenance of Roads, Bridges and Works," against £816,635 in 1929. Net receipts from miscellaneous sources declined from £255,000 to £147,000, most of the fall being accounted for by a sharp drop in the receipts from docks and harbours. The ordinary capital earned only £2,241,000, against £3,301,000, while the amount of the distribution was £2,361,000, of which a part was not earned. The carry-forward likewise declined from £186,000 to £65,000. In the case of the Southern Railway, gross railway receipts showed a falling off of £597,000, while savings in expenditure accounted for £247,000. Miscellaneous net receipts contributed only £721,000, against £775,000, a large part of the difference being attributable to the fact that a loss of £2,217, against a profit of £22,436, was made on the collection and delivery of parcels and goods. Here, again, economies were effected at the expense of maintenance, the expenditure

on Roads, Bridges and Canals being £27,790 down at £489,937, and on Permanent Way £48,415 down at £591,309. Dividend on preferred ordinary and deferred ordinary capital absorbed £1,773,000, earnings being only £1,705,000, and the carry-forward was reduced from £162,000 to £93,000.

Underground Railway Results.—The accounts of the Underground Electric Railway Company for 1930 suggest that a progressive development policy is bearing satisfactory fruit. Income from investments brought in £1,235,829, against £1,159,028, and miscellaneous income £23,792. Expenditure declined by £28,760 to £40,560, giving a net income of £1,219,061, compared with £1,113,213 for the previous twelve months. Fixed charges absorbed only £351,676, against £518,466, and the ordinary dividend rate was increased from 7 per cent. to 8 per cent., absorbing £856,865, compared with £581,301.

Year to December 31.	1928.	1929.	1930.
Income from investments	1,118,473	1,159,028	1,235,829
Miscellaneous income	35,325	23,505	23,792
Expenditure	68,277	69,320	40,560

Brought forward	169,761	262,504	*352,192
Debt interest, &c.	535,881	518,466	351,676
Commission, discount, &c., written off	10,000	10,000	10,520
Ordinary capital:—			
Paid £	446,897	581,301	856,865
Earned %	8.8	8.2	8.0
Paid %	7	8	8
Carried forward	262,504	265,950	352,977

* Including £86,242 transferred from special reserve for equalisation of interest.

The five companies which contribute to the common fund recorded aggregate traffic receipts of £15,848,088, an increase of £750,495 on last year's total. The greater part of this increase, however, was provided by the London General Omnibus Company, which achieved an advance of £853,717, while of the aggregate increase of £149,963 in net receipts, the L.G.O.C. provided £149,425. The sum of £1,156,537 paid in dividends on ordinary capital compared with £1,150,426 last year and represented an average distribution of 5.74 per cent., against 5.69 per cent. in 1929. The carry-forward, at £504,305, exceeded the previous amount by £20,519.

(000's omitted.)

Year.	Traffic Receipts.	Expenditure.	Miscellaneous Receipts (net).	Earned for Dividend.	Common Fund.		Carried forward.
					Paid.	% (average).	
1928	£ 14,942	£ 12,046	£ 1,053	£ 1,173	£ 1,127	5.69	£ 461
1929	15,098	12,288	1,080	1,150	1,127	5.69	484
1930	15,848	12,889	1,029	1,157	1,136	5.74	504

The total sum appropriated to reserves for contingencies and renewals was £923,727, of which £298,981 was charged direct to expenditure, and £624,746 carried to reserve for contingencies and renewals. In 1929 the addition to this fund was £547,659. The accumulated reserves of the common fund companies now amount to £6,854,625, while in addition the trustees of the Lots Road Power House Depreciation Fund hold £265,103. The total sum expended by the companies on new works and improvements in 1930 was £2,895,000, and new works projected involve the expenditure of £13,184,000, of which grants from the Treasury under the Development (Loan Guarantees and Grants) Act, 1929, form a considerable part. Contracts have already been placed for the extension of the London Electric Railway from Finsbury Park to Cockfosters, and work has been started on the Western extension of the London Electric from Hammersmith, while a number of stations and escalators are in process of reconstruction.

Selfridge's and John Barker's.—In a note in the *Economist* last week we showed that the net profits of four store companies had fallen during the past year from an aggregate of £2,120,060 to £2,054,000—a not unsatisfactory result in a year of depression. The preliminary figures issued this week by Selfridge and Company and John Barker's serve further to emphasise the powers of resistance of the country's retail business. The net income of Selfridge and Company totalled £366,277, compared with £401,492 in 1929, after allowing £45,000, against £60,000, for depreciation. After payment of the preference dividend, which, including that of 12 per cent. on the staff participating shares, was covered nearly twice, the balance of £176,745 represented 23.6 per cent. on the ordinary capital. Though the previous dividend of 20 per cent. was therefore fully earned, the distribution was reduced to 10 per cent. in order to conserve resources. The carry-forward was reduced from £147,774 to £133,315. The accounts of John Barker for the year to January 31st last reveal a slight reduction in net profit from £468,685 to £466,140, though the latter total is considerably in advance of the figure for 1929. Ordinary dividend is maintained at 20 per cent., out of 38 per cent. earned:—

	Year to January 31.		
	1929.	1930.	1931.
Net profit	£ 444,901	£ 468,685	£ 466,140
Brought forward	289,818	291,010	297,254
Preference divs.	46,175	46,175	46,175
No. of times covered	9.6	10.1	10.1
Ordinary capital:—			
Earned, £	398,726	422,510	419,965
Paid, £	221,266	221,266	221,266
Earned, %	36.0	38.2	38.0
Paid, %	20	20	20

Rebuilding reserve	100,000	125,000	150,000
Pension fund	10,000	10,000	10,000
Written off goodwill	25,000	35,000	...
Written off fixtures	41,268	25,000	35,000
Carried forward	291,010	297,254	300,953

The sum of £150,000 was added to the fund for the rebuilding and modernisation of premises, against £125,000 last year. No further amount was written off goodwill, but a further sum of £85,000, against £25,000, is to be written off fixtures, fittings and furniture. The carry-forward was increased from £297,254 to £300,953. The ordinary £1 shares give a yield of about £7 8s. per cent., allowing for a final dividend of 15 per cent.

Warehouse Company Results.—The decline in the earnings of the majority of warehouse companies, last year, is regrettable but scarcely surprising. The ten companies which have published results since the beginning of this year all reveal declines in net profit, and two show a balance on the wrong side. In the following table, comparative results are set out for the past two years.

Company.	Net profit, 1929.	Ord. Div. %	Net profit, 1930.	Ord. Div. %
	£		£	
Bradbury Greatorex	78,199	12	63,358	12
Cook, Son & Co.	147,739	2½	117,172	5
Copestake Crampton	23,786	3½	14,390	2
Crookers	10,007	3	Dr. 419	Nil
Devas Routledge	14,837	10	8,714	7½
Fore Street Warehouse	18,324	5	13,317	5
Foster Porter	15,047	5	7,094	5
Hayes Candy	21,441	8	18,132	6
Pawsons and Leaf	18,588	5	Dr. 2,490	2½
Rylands	225,908	8	106,892	4

Six companies have reduced their dividend, and one—Crookers—has passed it. Three have maintained their dividend, and one—Cook, Son and Company—has doubled its payment, though its net profit reveals a decline from £147,739 to £117,172. The amount of the dividend was £50,069 for 1930, compared with £33,379 for 1929, the ordinary capital having been reduced during the year from £1,335,180 to £1,001,285. Though all the companies have been badly hit by textile trade depression and falling prices, they should quickly react to improved general conditions, whenever these occur.

Tilling-National Omnibus Merger.—This week's offer by Thos. Tilling to purchase the £1 ordinary shares of the National Omnibus Company at 43s. and the outstanding options (on ordinary shares, at par) at 22s., marks the culmination of a series of steps beginning in 1927, when—before the railways had even obtained statutory power to engage in road transport—negotiations were initiated between the National Omnibus Company and the Great Western Railway. During the subsequent period the National Company has changed its status from that of an operating to a holding company, in partnership with the railways. When the present proposal has been carried through, National Omnibus will become an intermediary holding company controlled by Thos. Tilling. The arrangement will secure for the latter control of the National's shareholdings in, and management of, Western National Omnibus Company, the Southern National Company and the Eastern National Company. In each of these concerns, voting control is already divided between the National Company and the railways. The three operating companies will be important additions to the growing list of partnerships between the railway groups and Thos. Tilling. The terms should be entirely satisfactory to the ordinary shareholders of the National Company, who have already received a capital bonus and a return of capital during the last twelve months. The 7 per cent. preference shares are not directly concerned in the offer, but their investment status should be appreciably enhanced. If all National shareholders accept, the total purchase consideration payable by Tillings will be £491,000, this figure including compensation to two retiring directors who are being replaced by the purchaser's nominees. The last balance sheet showed that Thos. Tilling held British Government and other securities and cash totalling £731,494, so that the acquisition may well be financed without any fresh issue of capital. Such a policy would be in accord with the company's traditions during the last decade, in which the "internal" financing of the company's extended interests has been made possible by conservative dividend distributions.

45th Year.

Containing fuller and more up-to-date information than any other book of reference.

THE MINING YEAR BOOK

formerly known as
MINING MANUAL & MINING YEAR BOOK
1931

By WALTER E. SKINNER.

Price 20/- net.

Post free (Inland), 20/9; Post free (Abroad), 21/6
962 pages. In Demy 8vo, bound in RED Cloth.

The International Standard Reference Work on the World's Mines.

COMPLETE AND UP-TO-DATE PARTICULARS concerning 1,420 Mining Companies operating in all parts of the world. Gold, Diamond, Copper, Tin, Platinum, Silver, Iron, and other Mines, Collieries, Exploration and Mining Investment Companies, arranged in alphabetical order.

South African and Foreign Mining Companies are fully dealt with.

PARTICULARS given of each Company include the Directors and other officials; date of establishment; seat of operations; description of the property, with the purchase consideration; plant erected or in course of erection; present working results; ore reserves, details of capital; calls; dividends paid; and the financial position as disclosed by the latest accounts. Highest and lowest prices of the shares for the last three years; also latest prices.

DIRECTORS (3,530) and Mining and Consulting ENGINEERS and MINE MANAGERS (918), and their addresses, and names of the Companies with which they are connected.

SUPPLEMENTARY INDEX of private, dormant, or Companies which have ceased to be of public or market interest. One of the most useful and important features of the book. It is the only List of its kind published.

STATISTICAL TABLES are given at the commencement of the volume, showing yearly outputs from the principal gold mining companies, and monthly and annual production of the World's principal Mining Fields, and the highest and lowest prices of base metals for the past eight years.

DICTIONARY OF MINING TERMS.—An up-to-date glossary covering 440 Mining terms, by the use of which Mining developments can easily be followed, and the difficulty of understanding technical phraseology quickly mastered.

To be obtained from all Booksellers, or direct from the Publishers, WALTER E. SKINNER, 15, Dowgate Hill, London, E.C. 4, AND "FINANCIAL TIMES," 72, Coleman Street, London, E.C. 2.

The "Chartered" Report.—Our mining correspondent writes:—That the profits of the British South Africa (Chartered) Company for the year ended September 30th would show a substantial falling off was a foregone conclusion. In 1928-29 no less than £456,500 was brought in as balance of profits on realisation of investments. Last year, of course, market conditions were unfavourable, but it had scarcely been anticipated that transactions in this regard would show a deficit—although a small one. There is, again, a loss on the operation of the estates. It is less than before, but is supplemented by a writing off of £11,000 in respect of citrus trees uprooted. The net result is a balance insufficient by £40,000 to cover the usual dividend of 1s. 3d. per share. For the preceding period there was a bonus of 9d., and for 1927-28 one of 3d. Investments now figure at £6,065,300, a shrinkage of approximately £200,000. Public or brokers' quotations are available for all save an unimportant amount of the total. They considerably exceed book values. The directors intimate that they "have written off such depreciation as they consider necessary":—

* Including £4,201 written off investments.

The future of the company is, of course, to a considerable extent bound up with that of the copper industry of Northern Rhodesia. It will be remembered that during the boom of some twelve months ago one of the "bull points" for Chartered was the revenue which the company stood to receive as royalties on copper production. In the meantime the price of the metal has fallen seriously. Nevertheless, preparations for production are proceeding apace; in fact, more than one undertaking is likely to start sooner than was originally expected. A tabulation of the proved ore reserves in the different properties shows what might be termed the astronomical total of 449,000,000 tons, the average value being 4 per cent. This computation obviously represents something like 18,000,000 tons of copper—less loss in extraction. The views of the Chartered directors as to the outlook for the metal, and for the different companies, will doubtless be attentively read by those interested. On the basis of the distribution for the past year the yield is slightly under 5 per cent.

Bwana M'Kubwa Closing Down.—This month's announcement that the Bwana M'Kubwa mine is to be closed down ends a remarkable record of company promotion. The company was registered in 1922 as a reconstruction of a company formed in 1910. It acquired copper and other concessions in Northern Rhodesia, the two copper mines being Bwana M'Kubwa and N'Kana. No dividends have been paid, but the company has never lacked capital funds. In 1923 the capital was increased from £400,000 to £900,000; in 1924 to £1,500,000; in 1926 to £2,000,000 and in 1928 to £3,500,000, in addition to which £1,000,000 7½ per cent. debentures were issued. At the company's meeting in December, 1925, when the Bwana M'Kubwa mine was approaching the production stage, Mr (now Sir) Edmund Davis, the chairman of the company, drew a comparison with American copper-

producing companies, to the great advantage of Bwana M'Kubwa. "In 1924," he said, "ten of the well-known American copper-producing companies made very large profits out of treating 44,428,508 tons of ore, assaying from 0.825 to 1.98 per cent. copper, the average being 1.181 per cent. copper, and the dividends paid being \$32,751,528. I invite you to compare these figures with those relating to our Bwana M'Kubwa mine alone, where we have present an average copper value of close upon 4 per cent." Again, at the company's meeting in December, 1926, when the Bwana M'Kubwa mine had started production, shareholders were reminded that twenty-three of the largest American companies had made huge profits out of ore containing on the average only 1.59 per cent. of copper. They were then informed that the Bwana mine had ore developed averaging 3.9 per cent. copper, and that "the costs of the American-worked mines are about what it is estimated our own will be." In spite of these promises the profit and loss account of the company at March 31, 1929, showed a debit balance of £313,145. In the year to March 31, 1930, the company's revenue, from the sale of copper, amounted to £459,182, and its accounts showed a credit balance of £60,250, but this was subject to the auditors' note that no provision had been made for depreciation in machinery, plant and buildings since April, 1927. The statement that the mine is now to be closed down was accompanied by the following two lines of explanation:—"At prices at present obtained and likely to be obtained in the near future, copper cannot be produced at a profit from the low-grade ore of the Bwana mine. By the beginning of 1932 production will commence on the high-grade ore of N'Kana mine." But shareholders would scarcely have imagined from the addresses of Sir Edmund Davis that the ore of the Bwana M'Kubwa mine was of particularly low grade. Bwana M'Kubwa is now a holding company, its interests having been fused with those of the Rhodesian Congo Border Concession and the N'Changa Copper Mines in December, 1930. The merger proposes to take the name of Rhokana Corporation, so that henceforth Bwana will march on as the third star in Rhokana's banner. Not long ago the 5s. shares of Bwana M'Kubwa were quoted at 35s. They are now quoted at 5s. 6d.

German Bank Reports.—Our Berlin correspondent writes:—The Reichskreditgesellschaft has recently published its accounts for 1930. The shares of the big German banks fell by over one-third last year, to the accompaniment of rumours of exceptionally heavy losses from bad debts and from declines in security values. The accounts of the Reichskreditgesellschaft do not confirm these rumours. The profits of this bank, on an almost unchanged volume of business, have declined very slightly. The dividend on the 40 million Reichsmarks capital has, indeed, been reduced from 8 to 7 per cent., but this is chiefly a precautionary measure. The bank is anxious to increase its reserves, as the duration of the depression cannot be foreseen. It is true that most of the German bank balance sheets will probably show a less favourable result. This is not, however, due to the fact that the entire capital of this bank is directly held by the Reich, for in its conduct of business the Reichskredit is a private bank. It differs from most of the big German banks in that it conducts an easily supervised centralised business with a relatively small number of large customers and possesses no subsidiaries or deposit banks. In consequence it lost little from the numerous bankruptcies of last year, and even its stockholding losses were kept within small limits. The Reichskreditgesellschaft has a very good name in foreign banking circles. The relatively small decline in its creditors from 626 million to 597 million Reichsmarks was due to the reduction in German deposits; there was no diminution during 1930 in the money received from abroad. The Hamburg mortgage bank reports an unchanged dividend of 10 per cent. Its share capital of 9 million Reichsmarks is to be increased to 12 millions. Sales of new mortgage bonds rose to nearly 35 million Reichsmarks, the highest level for any post-war year, and the record would have been even higher had not the September elections reversed the movement. The increase was confined to 8 per cent. mortgages. The volume of

7 per cent. was reduced by 3.3 million Reichsmarks as compared with the previous year. In spite of the increased issues in the balance sheet the holdings of gold mortgages rose from 163 to 188 millions, and the mortgage bonds outstanding rose from 152 to 181 millions. The replacing of 8 per cent. by 7 per cent. mortgages is considered premature by the Hamburger Hypothekbank, which is sceptical as to the future of the 7 per cent. type.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British and Hungarian Bank, Provident Mutual Life Assurance Association, Imperial Tobacco, South Suburban Gas, Bah Lias Rubber Estates, and Bovril. At the Imperial Tobacco Company meeting, Lord Dulverton referred to the words of caution recently uttered by the chairman of the British-American Tobacco Company with regard to its next final dividend, and their bearing on the affairs of Imperial Tobacco. He pointed out that the accounting periods of the two companies were on different dates, and said that they felt that it would be unduly straining their policy of caution and conservatism if they recommended a smaller distribution on account of something which might possibly affect one particular source of revenue in two years' time. Presiding at the meeting of Bah Lias Rubber Estates, Mr Eric Miller stated that, in spite of a reduction in output by a proportion of producers, the shipments of rubber during 1930 were more than 110,000 tons greater than the absorption by manufacturers, and even in January, 1931, the output was nearly 70,000 tons, against a world absorption of less than 55,000 tons.

COMPANY MEETINGS, &c.

IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.
INCREASED PROFIT AND DIVIDEND.

The twenty-ninth annual ordinary general meeting of the Imperial Tobacco Company (of Great Britain and Ireland), Ltd., was held, on the 17th instant, in Bristol, the Rt. Hon. Lord Dulverton (chairman) presiding.

The Chairman, in the course of his address, said: Turning first to the balance-sheet, the first item is land, buildings, plant, and machinery—at cost, less amounts written off—£5,120,021, an increase of £150,329 over the previous year. The increase represents the net expenditure on additions to buildings, plant, etc., at our various branches, less amounts provided for depreciation. Goodwill, patent rights and trade marks stand at £9,422,581, as in previous years, being the cost (as reduced by the sale of goodwill of the export business in 1903) less amounts written off. As I have said on previous occasions, this is a very conservative figure, having regard to the extent of the company's business, the profits earned, and the great commercial value of our brands and trade marks.

INVESTMENTS IN SUBSIDIARY COMPANIES.

Investments in subsidiary and associated companies amount to £10,457,078, an increase of £195,680. As stated in the balance sheet, in the aggregate the market value of investments in associated companies is largely in excess of the book value. This excess, as you are aware, is chiefly due to the company's holdings in the British-American Tobacco Company. I shall have something more to say about our interest in that company before I sit down. Loans to, and current accounts with, subsidiary and associated companies amount to £2,448,275, an increase over last year of £1,127,277, due principally to expanding trade. Stock-in-trade, taken at approximate cost, including leaf in transit and advances to branches abroad for purchase of leaf, etc., amounts to £28,945,519—a decrease of £395,217. I should like to dwell for a moment on this item. Certain references have been made to a fall in leaf prices last season, and, although it is never considered appropriate to go into too much detail at these meetings, I think it only right that our shareholders should be given some indication of the way in which the company is affected. Owing to the magnitude of the company's operations and its time-honoured policy of maintaining large stocks of selected leaf which are drawn upon over a period of years, the advantage or disadvantage arising from abnormal conditions which may operate in the tobacco markets in any one particular year is reduced to the absolute minimum. We are thus little affected by temporary fluctuations in the price of our raw material; we buy plentifully from a good crop, and sparingly when good tobacco is scarce. That policy, ably carried out as it is by our excellent leaf buying organisations, is one of the greatest sources of strength to our company.

Turning to the other side of the balance sheet, the capital issued remains at the same figure as last year, namely, £50,350,561.

The general reserve account has been increased by £500,000 transferred from profit and loss account, and now amounts to £5,000,000.

PROFIT AND LOSS ACCOUNT.

The net trading profit for the year, and interest and dividends on investments (including considerable sums derived from dividends on capital employed outside the United Kingdom), after fully providing for all charges, depreciation of property, plant, etc., bonus to customers, taxation, and £10,000 for directors' fees, amounted, with the item of transfer fees, etc., to £10,187,045, an increase of £209,947, as compared with the previous year. After transferring £500,000 to the general reserve account there remains a balance of profit for the year of £9,677,045. Adding to this balance of £9,677,045 the undivided profit brought forward from last year, £1,176,469, there remains an amount to be dealt with of £10,853,514. Out of this total, the dividends upon the three classes of preference shares, representing a capital of £12,857,936, have been provided. Upon the ordinary share capital of £37,492,625, an interim dividend of 7 per cent., free of tax, was paid on September 1 last, and it is now proposed, with your approval, to declare a final dividend of 9 per cent., and a bonus of 1s. 6d. per share, both free of tax, making a total for the year of 23½ per cent., which is an increase of ½ per cent. over the dividend for the year 1929. After these allocations, there will remain to be carried forward to the current year, as undivided profit, the sum of £1,190,538. That this result is satisfactory, from the strictly financial point of view, will, I am sure, be generally agreed. The fact, however, from which you will justly derive no less satisfaction—and it is one which I think reflects the greatest

credit on our manufacturing and selling branches in this country and the Irish Free State—is that in a year of acute industrial depression and exceptionally keen competition the volume of our trade has shown a satisfactory increase. We can, therefore, derive not only comfort, but confidence from the knowledge that the base on which the strength of this company is founded—the goodwill attaching to our brands—has been made still more secure.

GIFT TO STAFF AND WORKPEOPLE.

It is difficult to express how much we all owe to the loyalty and devotion of those in our employ. I can safely say that no company is better served, and it is with the greatest personal pleasure that I ask your endorsement of the decision of your directors to make, as on many previous occasions, a gift to staff and workpeople over and above their ordinary salary or wage. The general conditions of the gift remain the same, the directors reserving to themselves a discretion to grant or withhold a share in the gift in any case which may appear to them to require exceptional treatment.

REVIEW OF THE TRADING POSITION.

It is customary on these occasions for your Chairman to comment on the trading conditions of the year that is past, and to say a few words as to the prospects for the year upon which we have already entered.

In general, as we are only too well aware, last year was one of acute industrial depression. In the tobacco trade in particular it was certainly one of extremely keen competition; in fact, in the form of coupons and gift schemes the competition was intensified.

Such schemes are inconsistent with the policy on which our business has been built up. As I have said before, we always put quality first, and the value is in the goods we sell. Our policy in this matter has quite definitely been welcomed by the trade, and it is one which the consumers of our products and the public generally have not been slow to appreciate. It is a matter for satisfaction that the increased volume of our trade has been achieved by the well-merited popularity of our goods themselves.

CURRENT YEAR'S PROSPECTS.

When we turn our eyes to the immediate future we cannot ignore a matter which closely affects our interests. I refer to the recent speech of the chairman of the British-American Tobacco Company at the annual meeting of that company, in the course of which some words of caution were uttered as to their next final dividend, and in view of the fact that there has been a certain amount of comment regarding the bearing of these words upon your company in the light of its interest in the British-American Tobacco Company, I think it well to say a word or two in that connection.

The fact is that the accounting periods of the two companies end on different dates. The accounts now before you include the final dividend paid by the British-American Tobacco Company in January, 1930. The accounts for our current year will include the final dividend we have already received from the British-American Tobacco Company in January of this year. The final dividend to which the chairman of the British-American Tobacco Company referred will not be carried into our accounts until our year, which will terminate on October 31, 1932, and will consequently not be under the consideration of the shareholders until February, 1933. Therefore, although it is and has always been the aim of your directors to adopt a policy of caution and conservatism, we felt that we should be unduly straining that policy if, on account of something which may possibly affect one particular source of revenue in two years' time, we were now to recommend to you that the distribution should be less than is in our opinion amply justified by our results and present position.

Having dealt with that point, I will proceed to my unenviable task of prophecy. It is, at the best of times, a rash proceeding to endeavour to forecast the trend of human events, and at the present time many exceptional and abnormal difficulties cloud the horizon. Nevertheless, I shall make an attempt, and I shall try, on the one hand, to avoid raising unjustifiable hopes, and, upon the other, adding another shadow to the prevailing gloom. We regard our trade during the first three months of the current year as satisfactory, but for the rest of the year—if I am to prophesy—I must begin with at least two hypotheses. If none of the fresh clouds, which at the present time in different quarters darken the industrial horizon of the country, break into a storm; and if the depression of the past twelve months does not increase in intensity—with the result that the purchasing power of the public undergoes a further contraction; then I see no reason why the results of the present year's working should not be at least as satisfactory as those of the year now under review. I now have pleasure in moving: "That the report and accounts for the year to October 31, 1930, now presented, be received and adopted," and I will ask Mr. H. W. Gunn to second the resolution.

Mr. H. W. Gunn seconded the motion, which was unanimously agreed to, and the usual formal business having been transacted, the proceedings closed with a cordial vote of thanks to the chairman.

PROVIDENT MUTUAL LIFE ASSURANCE
ASSOCIATION.

GRATIFYING PROGRESS.

The annual general meeting of the Provident Mutual Life Assurance Association was held, on the 18th instant, at the offices of the Association, 25-31 Moorgate, London, Mr. Owen Hugh Smith (the chairman) presiding.

The Manager and Actuary (Mr. C. R. V. Coutts, F.I.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: It is remarkable that the world-wide depression in trade and industry has not affected the progress of the Association. Our funds have increased by nearly £600,000 to £7,737,000, and our premium income by £42,000 to £915,000. It must not be assumed, however, from these figures that by some miracle our many thousands of members engaged in industry have passed through this difficult year unscathed. You will see from the accounts that the amount paid out on surrender of policies shows a substantial increase, and there is also a considerable addition to the loans on the Association's policies, as shown in the balance sheet. The increase in these items is due in the main to the reduction in staffs, which has thrown many of our members out of work to join the ranks of the unemployed. Although our members are drawn from all classes of the community, large numbers of them are assured under staff schemes, which we believe were first devised and put into operation by this Association. This plan, with the wise co-operation of the employer, enables the wage-earners to assure their lives by premiums paid in weekly instalments deducted from their wages at the same rates of premium as those enjoyed by the salaried and professional classes, who pay yearly premiums.

FAVOURABLE MORTALITY EXPERIENCE.

The gross rate of interest earned on our funds is £5 10s., which is identical with that of the previous year. The rate, after deducting income tax, is £4 14s. 6d. The reduction in this is, of course, due to the increase in the rate of income tax imposed in last year's Budget. The rate of expenses to premium income has risen slightly to 14.5 per cent., thus reflecting the increased volume of new business. Claims by death, £187,000, show very little variation compared with those of the previous year, £179,000. The actual mortality is only 51 per cent. of that expected by the tables we employ. We know that these tables are now out of date, but, after making every allowance for the fact that the tables employed are obsolete, there is no doubt that our mortality is and has remained for many years very favourable.

I now turn to the question of our investments. We have held fast to what we believe to be the fundamental principle of life insurance investment policy—that we should invest our funds as far as is practicable to cover our liabilities. Our liabilities are to pay the sums assured under our policies, most of which we hope will not become claims for many years to come. We have, therefore, continued to invest our funds, as in the past, mainly in the form of well-secured, long-dated bonds or stocks, with the result that, in spite of the increase in income tax, our net interest revenue is £20,000 more last year than it was in the previous year.

We have taken the opportunity of increasing our holding of mortgages on property in this country. These mortgages are based on conservative valuations of the properties made by our surveyors, and in each case we have included in the security a policy which provides for the ultimate redemption of the amount advanced.

The increase under the heading "Railway and other Ordinary stocks" is in the main due to investments in some of the smaller gas and water companies' stocks in this country, which carry a fixed rate of interest, but are technically classified as ordinary stocks. These securities, though they do not possess a free market, we consider very suitable for our funds, because they are well secured and many of them are ultimately absorbed in larger undertakings, with a consequent increase in capital value.

Previous to 1930 we considerably reduced our holdings in certain Dominions and foreign countries, whose securities have fallen heavily during the past year. On the year the fall in the aggregate market value of our investments is 2.3 per cent. of the mean fund. After taking into account the investment reserve fund, the market values of our assets still exceed the book values, in spite of the very severe falls in many securities during the past two years. In this respect we are reaping the reward of our conservative policy in the past of not bringing into account any capital profit or appreciation on our securities.

What may be called our "trading profit" for the year amounts to £232,000, and we have had no hesitation in deciding that the interim bonus should be continued at the full rate of bonus declared for the last quinquennium.

Mr. Herman B. Sim seconded the resolution, and it was carried unanimously.

ANOTHER PROSPEROUS YEAR.

INCOME TAX AND BRITISH EXPORTS.

Presiding at the thirty-fourth annual general meeting of Bovril, Ltd., held, on the 19th instant, in London, the Lord Luke of Pavenham (chairman) said that the directors met the shareholders again with pleasure and were able to present a satisfactory report and set of accounts.

This island of Britain was not a spot selected by Providence on which to give over 40,000,000 people an easy time; it was, in fact, a remarkable historical phenomenon that so many people had been kept here in greater comfort than in most other parts of the world. The industry and energy of previous generations had built up a great export trade, and by their savings, a store of investments abroad—it was only with the receipts from exports and interest on overseas investments that food and comfort generally could be brought into this island. They had been warned that, owing to high costs, their export trade had decreased, but little had been said of the fact that their investments abroad were becoming denationalised. A company registered here had to pay not only the taxes of the country in which it worked, but also the taxes of this country. This double burden was becoming greater than they could bear, if they were to compete successfully with local companies, and so, gradually, great concerns operating abroad were being transferred to companies registered in the countries in which they carried on business, thus saving English taxation on their reserves, on depreciation, and in fact on all except the dividends remitted to shareholders who happened to live here.

DRIVING COMPANIES TO REGISTER ABROAD.

The only thing that kept the majority of such companies still here was the prejudice or patriotism of those who controlled them, but excessive taxation would strangle this altruistic control and would loosen the ropes that bound these valuable assets to this country.

In the case of the Argentine alone, three great companies (involving several millions of capital), for long registered here, and paying income tax in this country, had during the last six months dropped their connection here and registered local Argentine companies to take over their businesses in that country.

It was not only the income tax that was lost to this country—a British company, trading overseas, controlled the orders for plant and goods that were sent out to the lands in which they worked, because the management was centred here; and because the management was centred here, and was in touch with British manufacturers, British exports were assisted—transfer of the undertaking meant a local board of directors, and gradually the certainty of orders for Britain was weakened. They should observe carefully why the final break would take place. The Inland Revenue authorities of this country held that if a company, registered overseas, showed any signs of being controlled from here, British income tax would be payable by the concern that so controlled it, and, therefore, to avoid double taxation, a British concern operating overseas must transfer the control overseas also, with every likelihood of eventually completely severing this link, so that it might buy locally, or from Germany or America, instead of being a kind of tied order-giver to this country. In fact, their income tax laws not only drove companies to register abroad, but insisted on them being free from British control, thus handing over those assets to foreign management, and Americans and others were usually ready to buy such control.

SUGGESTED INCOME-TAX REFORM.

The only way to rectify this unfortunate state of affairs would be to make income-tax laws for overseas concerns different from those at home. For instance, to avoid penalising such companies and driving them away altogether, they should see that the local foreign shareholder was free from British tax, and that allowances for reserves and depreciation were as favourable as those permitted by the taxation laws of the overseas country concerned.

To show how a British company could be hit at home and abroad, he would mention that, although Argentine Estates of Bovril, Ltd., were probably the largest owners of cattle in Argentina, and farmed at least as industriously as any, they had recently been dubbed absenteees in two provinces, simply because the company was registered in England. The penal taxation in one province meant a 100 per cent. addition to their land tax.

The report and accounts were unanimously adopted. Proposing the re-election of the Duke of Atholl as a director, Sir James Crichton-Browne, M.D., LL.D., F.R.S., said the Duke brought to the service of the board an honoured name, a large and varied knowledge of affairs, and a genial personality, and one further very special qualification for the post in a confirmed faith in Bovril.

The resolution was carried unanimously.

SOUTH SUBURBAN GAS COMPANY.

OFFICIAL "STUMPING" FOR ELECTRICITY.

The annual ordinary meeting of the proprietors of the South Suburban Gas Company was held on the 13th instant, at the Cannon Street Hotel, London, Mr Charles Carpenter (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: Taking the year as a whole we have done rather more than pay our way, and we consider there is full justification in our results for the payment of dividend on the ordinary stock at the same rate as last year, namely, 6½ per cent. per annum.

Speaking generally, we have had worse years than the past one, and we have also had better. We may, however, sleep contented in our beds, to use the late Lord Fisher's expression for security, were it not for the fact that a cloud of unknown portent hangs over us, as over the entire gas industry to-day. I allude, of course, to the remarkable and extraordinary attitude taken up by one of the Ministers of State in the matter of the sale of electric energy. Parliament has never discussed nor, I suggest, visualised the extermination of gas undertakings. It has always regarded them as having a permanence similar to waterworks, railways, harbours, and so forth. With this in mind it has hedged round their financial activities with all kinds of restrictions. The evidence of the last fifty years has shown there is an important field of usefulness which the gas industry can occupy, notwithstanding the competition of its more fashionable rival, electricity. If the choice of use is left to the public's unfettered judgment I have no fear whatever of the result. I do not want to be disrespectful to a high official of State, but I feel bound to deplore his action of "stumping" the country, and advocating a method of relieving industrial distress by a panacea the wildest and most extravagant that could be conceived. Only in England, I believe, would it be possible to put forward a case like that fathered by the Minister of Transport. Who would imagine that any municipality would commit such an act of sabotage as to fill up with liquid cement the gas pipes in houses of which they were owners so as to prevent their tenants enjoying the source of light or heat they preferred? The gas industry asks but one thing—a fair deal. It asks that every member of the public, wherever he lives and whoever's house he occupies, may have free choice as to how he may light it, cook in it, warm it; in fact, how he may occupy it.

The resolution was carried unanimously.

BAH LIAS RUBBER ESTATES, LIMITED.

MR ERIC MILLER ON THE STATISTICAL POSITION.

The twentieth annual ordinary general meeting of the Bah Lias Rubber Estates, Limited, was held, on the 18th instant, at 2, 3 and 4 Idol Lane, London.

Mr H. Eric Miller (the chairman), in moving the adoption of the report and accounts, said that after deducting the loss of £1,595 from the unappropriated profit brought forward, there remained to the credit of profit and loss account £49,222, which it was proposed should be carried forward. As would be seen from the balance sheet, the financial position of the company was a strong one, for which they could not be too thankful in these difficult times.

In conclusion, the chairman said: I do not intend to go into detailed statistics with you, but the fact remains that, in spite of a reduction in output by a proportion of producers, the shipments of rubber during 1930 were more than 110,000 tons greater than the absorption by manufacturers. Even in the month of January, 1931, the output was nearly 70,000 tons, against a world absorption of less than 55,000 tons, and this in spite of the fact that a number of producers are definitely curtailing their tapping operations. "None are so blind as those that will not see" and it is almost waste of time to stress, as I have repeatedly done, the utter folly of continuing a policy of full output as so many producers are still doing. The history of 1921-22 in that respect is just repeating itself. A continuance of over-production will force the price of rubber still lower, and, unless there is intervention by the Governments concerned, financial distress will gradually bring about the elimination of the weaker units.

Stocks of tyres and other manufactured rubber goods have been reduced during 1930, but until definite indications of improving trade bring about a return of confidence, it is more than likely that users will continue to run their tyres out and the manufacturers to keep their stocks of tyres and manufactured goods on the low side. It is no use producers banking on an upward turn coming unless and until they bring their own rate of production into harmony with the demand by manufacturers. We are satisfied that our policy of selective tapping and moderated production is the only sensible one. If all producers would shape their policy accordingly the industry might be put on a much sounder basis in a short space of time.

The reports and accounts were unanimously adopted.

BRITISH AND HUNGARIAN BANK, LIMITED, BUDAPEST.

RESULTS OF THE PAST YEAR.

DEVELOPMENT OF THE BANK'S BUSINESS.

The board of directors of the British and Hungarian Bank, Ltd., considered at its meeting held on February 12, 1931, the final accounts for the business year 1930 (the 40th of the company).

The balance sheet figures prove another development of the general business of the bank. The following are the main balance sheet items as of December 31, 1930, the respective figures for 1929 are quoted in parenthesis:—

PROFITS AND ALLOCATIONS.

Gross profits P. 8 millions (P. 8.1 millions). Net profits P. 3,408,055.38 (P. 3,482,618.92).

Therefrom on 460,000 shares 11 per cent. dividend will be paid, i.e., P. 5.50 per share, being altogether P. 2,530,000 (last year on 360,000 shares P. 7 each, i.e., 14 per cent., totalling P. 2,520,000).

Allocations to reserve fund P. 250,000 (P. 250,000), and to pension reserve P. 325,000 (P. 325,000). Balance carried forward to 1931 P. 183,348 (P. 172,161).

BALANCE SHEET.

Own capital P. 40 millions. Deposits and creditors P. 146.5 millions (P. 132 millions). Own dollar and pound sterling mortgage bonds outstanding P. 11.1 millions (P. 11.3 millions). Cash in hand P. 15.7 millions (P. 12.4 millions). Bills P. 64.4 millions (P. 63 millions). Turnover of bills discounted P. 358 millions (P. 315 millions). Advances on securities quoted on the Stock Exchange P. 2.1 millions (P. 3.1 millions). Advances on grain P. 9.1 millions (P. 4 millions). Debtors P. 69.6 millions (P. 65.1 millions). Sinking fund mortgage loans P. 12.4 millions (P. 12.6 millions). Total of balance P. 211.5 millions (P. 196.3 millions).

STOCKS AND SECURITIES.

Stocks and securities held have been included under observance of same severe estimates as in the past. Naturally, the very considerable fall in prices caused by Stock Exchange depression has been fully considered in the balance sheet.

SATISFACTORY PROFITS.

The profits stated, which exclusively show results of the bank's general business, are very satisfactory, for they were made without any dividend being received on the shares of the International Machinery Trading Company, Ltd. Owing to the world agricultural crisis the latter company only attained during the past business year 60 per cent. of its turnover of the year before, and consequently the net profits it made were considerably lower than those in 1929. These profits, under agreement with the large foreign shareholders of the said company, will be allocated to reserves.

On the occasion of the forty years' anniversary celebration of the company, the board of directors will propose to the general meeting that the pension reserve, which, as stated above, is being increased to P. 2,000,000, should be allocated to the strengthening of the bank's pension fund and also to the benefit of the old pensioners' pension and assistance fund.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended February 14, 1931, amounted to £31,030,700 against ordinary expenditure of £4,951,400. After allocating £620,000 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £452,741, the week's operations, as shown below, reduced the National Debt by £25,912,000 to £7,681,597,000:—

(000's omitted.)

National Savings Certificates	+ 800	Public Department Advances	- 4,350
		Treasury Bills	- 21,762
		4% War Loan paid off	- 200
		P.O. Telegraph Money	- 400
	+ 800		- 26,712

A complete analysis of the National Debt at the end of the last quarter appeared in the *Economist* of January 3rd.

	Kenya.....
	Other Countries.....
Total declared value of imports.....	Total declared value of exports.....

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1931.	ARRIVALS.	1931.	WITHDRAWALS.
Feb. 13	Nil	Feb. 13	Bars sold.....
14	Nil	14	Sovs. for export.....
15	Nil	15	Sovs. for export.....
16	Nil	16	Sovs. for export.....
17	Nil	17	Sovs. for export.....
18	Nil	18	Sovs. set aside.....
19	Nil	19	Sovs. for export.....
Total.....	4	Total.....	79,991

Net withdrawals, £79,987.

Messrs Samuel Montagu and Company write on February 18, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £140,527,954 on the 11th instant (as compared with £140,350,917 on the previous Wednesday), and represents a decrease of £7,097,668 since December 31, 1930. About £950,000 of bar gold arrived from South Africa this week, nearly all of which had been sold forward to France. The same quarter also secured £20,000 of the £75,000 which was available in the open market yesterday, the remaining £55,000 being taken for India and the Home and Continental trades. Movements of gold at the Bank of England during the week have resulted in a net efflux of £88,367. Receipts totalled £864 and withdrawals £89,231; of the latter, £20,833 was in sovereigns "set aside," £16,000 in sovereigns taken for export, and £52,398 in bar gold.

SILVER.

The recovery in prices made at the end of last week was not maintained, buyers showing hesitation at the higher level. Offerings on China account met with poor resistance and falls of ½d. on both the 12th and 13th instant brought quotations down to 12½d. for cash and 12d. for two months' delivery. Covering operations on account of the Indian Bazaars caused only temporary improvement, bears as yet showing no disposition to follow a rising market. America has been willing to sell, but support was also forthcoming from the same quarter. Owing to the China New Year holidays, which commenced yesterday, the market was quiet at the close of the week. The following were the United Kingdom imports and exports of silver registered from mid-day on the 9th instant to mid-day on the 16th instant:—

IMPORTS.	EXPORTS.
U.S.A.....	British India.....
Mexico.....	Other countries.....
Canada.....	
Other countries.....	

£148,487 £142,597

No fresh Indian Currency Returns have come to hand. The stocks in Shanghai on the 15th instant consisted of about 91,000,000 ounces in sycee, 153,000,000 dollars and 940 silver bars, as compared with about 91,000,000 ounces in sycee, 153,000,000 dollars, and 1,530 silver bars on the 7th instant.

REPORTS AND NOTICES.

MISCELLANEOUS.

COURTAULD'S PRELIMINARY FIGURES.—As predicted by the chairman, at the last annual meeting, the net profit for 1930 was below that of 1929. The net earnings were £1,469,420 lower at £2,274,408, as compared with those of the previous period. After paying the preference dividend of £400,000 the percentage earned on the ordinary shares was 7.81 per cent., as against 13.95 per cent. in 1929, resulting in the ordinary dividend being reduced from 10 per cent., free of tax, to 6 per cent., free of tax.

December 31.	1928.	1929.	1930.
	£	£	£
Net profit	5,171,997	3,743,828	2,274,408
Preference dividend.....	400,000	400,000	400,000
No. of times covered	12.9	9.4	5.7
Ordinary dividend—			
Amount	3,600,000	2,400,000	1,440,000
Earned %	19.9	13.9	7.8
Paid %	15.0†	10.0†	6.0†
Reserve fund	1,000,000	...	...
Written off investments	...	1,651,856	925,339
Inc. or dec. in carry-forward	+ 171,997	— 708,028	— 490,931
† Free of tax.			

After paying the ordinary dividend, the sum of £925,339 was written off investments, thereby reducing the amount carried forward by £490,931 to £195,756. As in the previous year, the sum written off was placed against Continental investments.

Commercial Reports.

MARKET SUMMARY.

The general situation in the coal trade is still far from satisfactory. There is a brisk export demand for best steam coal from Cardiff and Sheffield, and household requirements are substantial. Consumption of industrial fuel, however, continues on a very limited scale and there is still little forward contracting. Little headway has been made by the iron and steel industries during the past week, and the recent improvement in pig iron has barely been maintained. The "finished" departments are still suffering from a lack of new orders. The heavy pipe foundries in Derbyshire are among the few sections in which business remains good. Production in the tinplate industry in South Wales is restricted to about 50 per cent. of capacity, but nevertheless stocks continue to increase. With the exception of tin, non-ferrous metals have all reacted from the higher level of prices attained last week. The further advance in tin is mainly ascribed to the fact that the restriction scheme is almost certain to come into operation at the beginning of March next. There has been a slight improvement in the position of the principal raw materials of the textile trades. Cotton values have again advanced some 15 points, and the higher level of raw wool prices has been maintained. The termination on Monday last of the lock-out in the weaving section of the cotton industry coupled with a better outlook in India has created more confidence in Manchester, while in the wool industry the increased absorption of raw wool by manufacturers is pointing to an expansion in the demand for Bradford goods. The demand for rayon fabrics is still slow to expand. A slight improvement has become noticeable in the jute industry, but business in cloth is still on a limited scale. The principal foodstuffs have been quiet. The market in wheat has been dominated by Canada and Argentina, and decreased estimates for the latter country's crop resulted in a slight improvement in prices. There have been no new developments in the sugar position, but the final agreement of the Chadbourne scheme will probably be signed in March next. It appears that serious steps are taken by the Brazil Government to improve the position of coffee. Indian tea has again been cheaper, but Ceylon qualities received better support. Among miscellaneous commodities, vegetable oils and oilseeds have been firmer, while hides still show a sagging tendency. Rubber has not maintained its improvement, and the market has again been rather dull.

THE COAL TRADE.

Our Sheffield correspondent writes:—There is a fairly brisk prompt demand for best steams for export and prices are firm at 16s. 9d. and 17s. f.o.b. Humber ports. Very little contract or forward business is coming forward. Demand for industrial fuel continues dull, and there are considerable accumulations of slacks and secondary qualities. Household demand is substantial. Ordinary best house is quoted from 20s. 6d. to 22s. at pits, and best washed up to 26s. The market for coke is as depressed as ever, and supplies exceed consumption. Prices of furnace coke range from 10s. 6d. to 11s. 6d. at ovens.

Our Glasgow correspondent writes:—The state of affairs in the Scottish coal trade is well illustrated by the volume of shipments for the past week, these amounting to about 175,000 tons, against 197,000 tons in the preceding week, and 265,000 tons in the corresponding week last year. Inquiry is, perhaps, a shade more active, but the outlook remains unpromising. Washed nuts are plentiful, and, owing to a seasonal falling-off in home requirements, round coal less scarce than recently. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 15s. 6d.; splint best, 16s. 9d.; 17s.; splint second, 16s. 3d.; navigation, 16s. 3d.; navigation second, 15s. 15s. 6d.; Hartley, 16s.; steam, 15s.; trebles, 13s.; doubles, 11s. 9d.-12s.; singles, 11s.; pearls, 10s. 9d.; dross, 10s. 3d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 6d.; third-class steam, 12s.; trebles, 12s. 6d.-13s. 6d.; doubles, 12s.; singles, 11s.; pearls, 11s. 6d. LOTHIAN.—Prime steam, 13s. 6d.; secondary steam, 13s. 3d.; trebles, 13s.; doubles, 12s.; singles, 11s. 3d.; pearls, 11s. Ayrshire.—Unscreened navigation, 16s. 6d.; splint, 17s.; steam, 14s.; trebles, 13s. 6d.; doubles, 12s. 6d.; singles, 11s. 9d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Although the number of long-period contracts placed with the collieries is far below normal, the demand for coal, and particularly for the best steam descriptions, continues fairly regular, and little part time working is reported from the various districts. It must be borne in mind, however, that part of the current business represents deliveries deferred owing to the stoppage of work in the first fortnight of January, and the majority of collieries hope to be able to produce the whole of their prescribed quotas for the first quarter. The shipments are not quite as heavy as they were in the weeks immediately preceding the Christmas holidays, but under the marketing scheme stocks are being kept down to a relatively low figure. Prices are nominally unchanged, but with few exceptions they are ruling at the scheduled minima. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dross, 18s. 6d. to 19s.; Black veins, 18s. 3d. to 18s. 6d.; Eastern Valleys, 17s. to 17s. 9d.; Western Valleys, 18s. to 18s. 3d.; best small steams, 13s. 6d. to 13s. 9d.; cargo smalls, 12s. to 12s. 6d.; coking smalls, 15s. to 15s. 3d.; anthracite best large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 25s. 3d. to 25s. 6d.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—The market for Cleveland iron has fallen into a state of lethargy and transactions are now almost entirely confined to small quantities for early delivery. The principal local consumers' requirements are practically covered for the first quarter and there is little trade with Scotch users owing to the keen competition of Continental foundry iron. Very little demand exists on export account, but some satisfaction is gained from the fact that Continental iron is no longer competitive in this district and only a few hundred tons have recently been received in completion of old contracts. The weekly market on Tuesday was distinctly quiet, only a small business being reported. Prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. The hematite trade is dull. Orders are only for small quantities for early delivery, little disposition being so far shown by consumers to enter into contracts for forward delivery. For prompt, mixed numbers are obtainable at 69s., and for delivery four or five months ahead 69s. 6d. would probably be accepted if substantial business were offered. In the finished trades some departments are working more regularly, but new orders are urgently wanted, particularly in sheets, where the export demand is very poor, and home requirements only moderate. Prices are generally unchanged. News is just to hand that orders have been placed with local foundries, Pease and Partners, Ltd., Middlesbrough, Tees Side Bridge and Engineering Works, Ltd., Middlesbrough, and Head, Wrightson and Company, Ltd., Thornaby-on-Tees, for 10,000 tons, 4,000 tons, and 5,000 tons respectively (total, 19,000 tons) of railway chairs for home railways. This is very welcome business and will cause an extra demand for pig iron. There is no improvement in the demand for ore and consumers have considerable arrears of old contracts of practically all descriptions still to take out. Best Bilbao rubio remains nominally 16s. c.i.f. for early delivery, and the current freight Bilbao-Middlesbrough is about 4s. 9d. Coke is freely offered, but there is only a very limited demand. Ordinary blast-furnace qualities are now obtainable at 16s. 6d. delivered works. The number of furnaces in blast in the district remains at 23.

Our Sheffield correspondent writes:—There are still no signs of a turn in the tide of iron and steel trade depression. Unemployment tends to increase and is heavier by 7,000 than at the close of

December. Indian competition is now a factor in the pig iron market. Consignments from India have arrived at several English ports since the beginning of the year and some considerable new purchases are reported. Steel makers report a multitude of small orders. Consumers are buying with extreme caution and cannot be induced to place substantial orders notwithstanding the favourable state of the markets. Steel scrap has again eased owing to the absence of buying and restricted deliveries. The present limited production of open-hearth steel is with difficulty being maintained. Inquiries are poor in number and consequence. The heavy pipe foundries in the Derbyshire district have been well employed for a long time and the opening of the season for outdoor excavation work is bringing large new orders. Recent improvements in gas and water-pipe manufacture have had good results both in the home and export markets. Toolmakers are quiet and the cutlery and plate factories have little to do.

Our Glasgow correspondent writes:—The depression in the iron and steel trades in Glasgow and the West of Scotland shows no abatement, and in practically every department the situation is much the same as during the past few weeks. In no branch does there appear any feature of outstanding interest. Generally there is a continued scarcity of export business, but in the manufactured iron trades the Canadian business is again opening up and there have been a considerable number of inquiries and several orders received in this district during the past week for the Canadian trade. The home demand is maintained generally, but no decided improvement noted. Prices are unchanged, to-day's prices being: Ship plates, 1/2 in. and up, £8 15s. per ton; sections, £8 per ton; both subject to usual rebate; and galvanised corrugated sheets, 24-gauge, £11 per ton.

Our Cardiff correspondent writes:—Production in the tinplate industry continues to average only about

Among other non-ferrous metals, aluminium remained unchanged at £85 per ton, while nickel sold at last week's price of £170 to £175 per ton. Quicksilver was slightly easier at £22 8s. 9d. to £22 10s. per bottle as against £22 15s. last week, but there was no change in the price of antimony, which remained at £24 10s. to £25 10s. per ton for "foreign."

TEXTILES.

THE COTTON TRADE.—Liverpool, February 18th. Prices show an advance on the week of some 16 points, better reports from New York and an easier political feeling in India being the cause of more optimism. When contracts are wanted, very little seems to be offering. The U.S. consumption for January is 454,000 bales against 415,000 bales for December and 577,000 for January last year; the daily rate of consumption, which is the best indication, being 18,900 bales for January, against 17,700 for December and 18,900 bales for November, the rates for these months last year averaging 23,000 bales. Preparations for the coming season are well in hand and are reported to be ahead of last year. There has been a scarcity of rain, but this was relieved last week. Temperatures have been higher than normal, which points to an unfavourable survival of weevils. Spot sales for the week 12th to 18th (inclusive) are 24,000 bales, of which 11,750 bales are American, 1,750 Brazil, 600 Argentine, 5,000 Peruvian, 1,750 Egyptian, 1,250 African, 950 East Indian, and 950 sundries. Imports for the same period are 17,297 bales, of which 6,169 are American, 351 Brazil, 154 Argentine, 963 Peru, 3,634 Egyptian, 5,963 East Indian, and 63 sundries. Quotations to-day are: American Middling, 6-05; Egyptian Sakel, 8-60; Uppers, 7-17; Brazil Fair, 6-15; Peru G.F. Smooth, 6-45; West African Middling, 6-00, and East African G.F., 7-05.

Manchester, February 18th. The termination of the labour dispute, which resulted in the mills resuming work on Monday morning, has caused a more cheerful tone to prevail throughout the Manchester market. Inquiry in yarn and cloth has broadened, and although a large number of mills remained closed down owing to shortage of contracts, there are indications of more machinery being restarted at an early date. Better news has been received from India. It is realised that the conversations between the Viceroy and Gandhi may have an important effect upon trade. There is evidence that the dealers in the bazaars are eager to resume ordinary trading relations. More demand has been about in light bleaching cloths and fancies for Calcutta, Karachi and the up-country districts, and some encouraging transactions have taken place. In some centres a shortage of piece-goods is reported. Inquiry has been mentioned in white shirtings for China, but business will not develop until the New Year celebrations are over. Rather more contracts have been arranged for the smaller markets. The demand in American and Egyptian yarns has broadened and more business has been done. Prices generally are still unsatisfactory.

THE WOOL TRADE.—Our Bradford correspondent writes:—Most of the developments associated with wool are favourable to selling interests. The demand is very well maintained, and the raw material is passing into users' hands at a creditable rate. Doubts have been expressed as to whether all the wool which is being bought in Australia will go into consumption immediately on its arrival here. The presence of any big quantity of second-hand offerings in Coleman Street would admittedly operate against any definite advance, particularly as there is already a fairly large quantity of Australian and New Zealand wool in the London warehouses awaiting sale. The main consideration to-day is, however, not the quantity to come forward, but the price at which it is obtainable. There is reason for saying that any nervousness now felt about the absorption of current supplies at a profitable level is due more to recollection of past failures when wool was much dearer than it is to-day, than to anything being wrong with the present rate of consumption or prospects for its continuance. The tendency in all Australian selling centres this week has been against the buyer, there being active competition on Continental and other foreign account. The fact that stocks of tops in France and Germany are fairly large has not prevented big operations on account of the former country, and the South American crossbred market has made a further move against the buyer. Quotations for tops are very firm, strong efforts being made, particularly in merinos, to get prices into line with the cost in Australia. Within the past week there have been further reasonable sales, and now all the leading makers are either asking protective prices or refusing to quote at all. Their policy is not to sell unless they can realise prices which cover original cost, and certainly nothing less than 23d. is needed for a good 64's top to accomplish that to-day. Spinners are also pressing hard for an improvement in yarn prices, but though reports have been published of certain merchandising and retail houses placing orders for big quantities of textile goods, the West Riding has not yet reaped any benefit in the running of its machinery. At the same time there is sufficient ultimate demand on the one hand, and sufficient confidence in the raw material on the other, to justify the belief that wool values are quite safe.

THE JUTE TRADE.—Dundee, February 18th. It was expected that the Indian Jute Mills Association would have declared last week-end their policy for further restriction of output of hessian cloth, but some delay has been occasioned by Government intervention. It is understood that the Government of India consider the proposals recommended by the mills' committee too drastic, and that the stopping of 24 per cent. of the hessian looms, besides working only 40 hours per week, will throw a considerable number of workers out of employment. It is believed, however, that the mills will agree to the change of working conditions after March 31st next, on which date the present agreement expires. A 54-hours week, with a stoppage of one week per month, constitutes the present working arrangement. Stocks of Hessians have accumulated to abnormal dimensions, and this has led to a severe depression in prices of these goods. Since the mills commenced to negotiate for further curtailment, however, values have decidedly improved. The lowest previous price for 10 oz. 40 in. was 16s. 9d., and of 8 oz. 13s. 4 1/2d., but to-day's values are 21s. for 10 oz. and 16s. 9d. for 8 oz. Bazaar speculators have been operating freely and this has been mainly responsible for the advance in prices. Actual demand has not increased much. The raw jute market has continued to fluctuate, without showing much change. Daisie assortment has been down to £14 2s. 6d. and up to £14 15s., with to-day's price £14 10s.; threes sold at £14 2s. 6d. and fours offered at £13 10s. February/March. Tossa assortment rules at £15 17s. 6d., threes at £15 15s. and fours at £14 5s., same shipment. Good first marks are anything from £17 15s. to £19, while lightnings are quoted from £15 15s. for SV to £16 5s. for red H. February/March. Jute yarns are very quiet all round and it requires actual business to test the prices which spinners would accept. In some cases these are lower. Since the rate of 1s. 10d. was done for common 8 lb. cops and 1s. 11d. for 8 lb. spools, buyers are not inclined to pay more, though spinners are quoting 1s. 11d. and 2s. respectively. The finer yarns are quieter, though spinners are all very busy with deliveries for Brazil before the increased tariffs come into force on April 1st next. For local deliveries next month, the lower rates of 2s. 3d. for fourth grade 8 lb. Rio warp and 2s. 6d. for third grade are being accepted. Twist is firm at from 3 1/2d. to 3 3/4d. for 3-ply 8 lb., and a fair business has recently been concluded. Rove is irregular and some cheaper prices have been possible, viz., £21 for 48 lb. and £16 10s. for 200 lb. Carpet yarns are slow again. Only small quantities are still being bought by consumers of jute cloth, and there is not the improvement in trade that might have been expected through the firmness of the Indian market. No increase in prices here has yet been recorded and the rates of 2 1/2d. for 10 1/2 oz. 40 in. and 1 1/4d. for 8 oz. must be accepted by manufacturers before

they can obtain even the small orders going. Linoleum Hessians and heavy goods are without movement.

THE HEMP TRADE.—This week's heavy receipts resulted in considerable selling, which had a depressing effect on the market. Prices declined 15s. per ton early this week, but recovered slightly on Wednesday when Manila "J2" February-April was quoted at £18 15s. per ton as compared with £19 on Wednesday last week. Last week's receipts amounted to 26,000 bales, against 31,000 last year. This week's receipts have been estimated at 29,000 bales and at 26,000 for next week. Manila shipments last week totalled 17,000 bales, of which 5,000 have been consigned to the United Kingdom, 5,000 to the Continent, 2,000 to the United States, and 5,000 to Japan. Local consumption of 1,000 bales leaves stocks at 121,000.

FOOD.

THE GRAIN MARKETS.—Climatic conditions over the United Kingdom during the past week were not favourable for outdoor work, rain and snow interrupting preparations for spring sowings, and some time is necessary to allow the land to dry out before ploughing can be resumed, particularly on heavy soil. Autumn sown cereals, however, have made good progress, and the wheat plant presents a healthy appearance. Native wheat continues in light supply at the statute markets, the tone being steadier in sympathy with foreign sorts, but milling demand is still lacking, and business mostly confined to best samples for poultry feed. Steady conditions prevailed on the import market, following higher North American cables, and a reduction in the Argentine crop estimate. Buyers, however, appear to have covered pressing needs by recent liberal purchases, and were not disposed to follow the higher limits of Canadian sellers. More attention is given to Australian supplies, which offer on more reasonable terms, while Argentine and Russian descriptions were also supported. Large shipments are taking place from the seasonal exporting countries, with a marked increase in floating supplies. Heavy freight bookings from Argentina indicate a substantial movement, while an unexpected increase in Russian clearances proved a somewhat depressing factor. A feature was the earlier bookings of wheat this season for spring loading from Montreal to Continental and Mediterranean destinations compared with initial operations in July last year, indicating a desire by Dominion sellers to resume the export movement at the earliest opportunity. Although international prices are largely governed by North America and Argentina, attempts to raise values above current level prove difficult in face of large world's visible supplies, despite steadily increasing purchases by European consumers. The demand for home-milled flour proved quieter following the recent advance in prices, while North American parcels are difficult to move, being held above the parity of this market. Australian for shipment, however, was pressed for sale, business being reported down to 16s. c.i.f. terms, though slightly more money is now asked. Feeding stuffs are fully steady, but trade marked no appreciable expansion.

WHEAT.—Steady. No. 1 hard Manitoba, ex ship, 29s. 3d.-29s. 9d.; No. 1 Northern Manitoba, ex ship, 28s. 9d.-29s.; No. 2 ditto, 27s. 9d.-28s. 9d.; No. 3, 26s. 6d.; No. 4 Manitoba, 25s. 9d.; Barusso, 63 lbs., 23s. 6d.; Rosafe, 63 lbs., 23s. 6d.; Australian, 23s. 6d.-24s.; Russian, on sample, landed, 22s.-25s., ex ship, 21s.-24s. per 496 lbs.; English, 4s. 6d.-5s. 6d. per 112 lbs.

FLOUR.—Maintained. London straight run, 24s. per sack for country deliveries, and 23s. London area. Of imported, Manitoba patents, 22s. 6d.-25s. 6d.; Buffalo ditto, 23s. 3d.-27s. 6d.; Australian, 18s. 6d.-19s. 6d. ex store per 280 lbs.

MAIZE.—Firm. Plate, landed, 18s.; ex ship to arrive, 16s. 9d.; February-March, 16s. 9d.; March-April, 16s. 9d. per 480 lbs. Yellow maize meal, £5 10s. f.o.r. London per ton.

BARLEY.—Quiet. Californian old, landed, 30s.-35s.; new ex ship, 30s.-41s. as to sample; Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, landed, 15s. 3d.; ex ship, 14s.; Persian, landed, 14s. per 400 lbs.; English malting, 6s. 3d.-13s. 9d.; feed, 5s. 9d.-6s. per 112 lbs.

OATS.—Fully steady. Plate, landed, 11s., ex ship, 10s.; Chilean tawny, landed, 13s.; whites, ex ship, 18s. 6d.; landed, 19s. 3d.; North Russian, landed, 12s. 6d.; South Russian, landed, 12s. 3d.-12s. 9d.; ex ship, 11s. 9d.-12s. per 320 lbs.; English, 5s. 8d.-6s. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years, 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930	1928-1929	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Feb. 14.....	Cwts. 101,361	Cwts. 217,170	Cwts. 277,114	Cwts. 277,908
24 weeks to Feb. 14.....	2,896,549	6,232,058	6,482,568	6,101,480
Average price of English wheat per cwt.....	s. d. 5 2	s. d. 9 0	s. d. 9 9	s. d. 9 6

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.

Feb. 15, 1930.....	217,170	235,368	40,470	9 0	8 0	6 5

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Feb. 19, 1930.	Jan. 2, 1931.	Feb. 4, 1931.	Feb. 11, 1931.	Feb. 18, 1931.
Winnipeg (No. 1 Manitoba).....	148 1/2	116 1/2	56 1/2	60 1/2	64 1/2	63
Chicago (No. 2 Winter).....	130 1/2	110 1/2	79 1/2	79 1/2	79 1/2	79 1/2
Cents per 60 lb.....						

The visible supply of wheat in Canada at 62,342,000 bushels, shows a decrease on the week of 193,000 bushels. Supplies a year ago stood at 74,971,000 bushels.

SUGAR.—The market has been quiet during the past week, and a rise on Thursday last week of 3d. per cwt. for refined sugar has been maintained. Raw futures have been slightly firmer, Wednesday's sales, including March delivery from 5s. 10 1/2d. to 5s. 10 1/2d., as against 5s. 9 1/2d. to 5s. 10 1/2d. on the same day last week; May delivery from 6s. 1 1/2d. to 6s. 2d., as against 6s. 0 1/2d. to 6s. 1 1/2d.; August, from 6s. 4 1/2d. to 6s. 5 1/2d., as against 6s. 4d. to 6s. 4 1/2d. Meanwhile, preparations are being made for the meeting of the participants of the Chadbourne Scheme at Cannes in March, in order to sign the final agreement. It appears that an organisation has been formed at the Hague, to be known as the "Association of Managers of Java Sugar Plantations for arriving at export quotas by means of international contracts" for the purpose of concluding the necessary agreements with the other parties to the Chadbourne Scheme.

COFFEE.—Steadiness characterised the market in coffee, and good liquoring qualities were again well supported. The world's visible supplies at the beginning of February at 5,458,000 bags show an increase of 269,000 bags as compared with the previous month. The quantity held by the Defence Committee in Brazil at the beginning of February amounted to 21,739,000 bags. A decree has been promulgated in Rio de Janeiro authorising the purchase of all the stocks of coffee available on June 30th next, at a maximum price of 60 milreis per bag of Santos No. 5 type. The stock guaranteeing the Sao Paulo twenty million sterling loan is exempted.

COCOA.—Business in cocoa has been on a limited scale, but the market was steadier. Accra, fair fermented, February-April, at 21s. 9d. per cwt., value, f.o.b., London contract, shows a rise of 2s. 6d. on last week. The market in futures was quiet.

TEA.—The downward tendency in the price of Indian tea continued during the past week and quotations for all common and medium descriptions were from 1d. to 1d. below those of last week. Even the finer qualities met with a less active demand, although satisfactory rates were forthcoming for the good autumnal sorts. Ceylon teas marked an improvement on last week, which is due to a general improvement in the qualities offered.

RICE.—Rice has been dull and Wednesday's price for Burma No. 2, cleaned, spot at 11s. 6d. per cwt., shows a fall of 3d. on the week.

POTATOES.—Supplies have again been considerable in amount, and although the demand was on a limited scale, prices remained unchanged.

SPICES.—An improvement in the demand for pepper, met with reserve by sellers, resulted in firmer prices. Wednesday's price of black Singapore at 6 1/2d. per lb. shows a rise of 1/2d. on the week. Black: landed in London last week, 66 tons; delivered, 4; stock, 502 tons, against 1,104 a year ago. White: landed, 75 tons; delivered, 55; stock, 521 tons, against 1,195 a year ago.

MEAT.—The market in meat has been irregular, but the downward tendency in the price of beef and mutton has not yet been arrested. Wednesday's price of 4s. 8d. to 5s. 4d. per 8 lbs. for English long sides compares with 5s. to 5s. 8d. on the same day last week, and New Zealand frozen mutton was sold at 2s. 8d. to 3s. 6d. per 8 lbs., against 2s. 8d. to 3s. 8d. last week. According to the Smithfield Market official report, supplies of meat during last week amounted

Increasing Interest in South American Markets

THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of Latin-America. With Branches and Sub-Branches in South America, in London, Bradford and Manchester; in France, Belgium, Portugal and U.S.A.; with the concentrated experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description. Status reports are supplied on request, and a Monthly Review of Market information is issued free on application.

BANK OF LONDON & SOUTH AMERICA LIMITED

"TRANSAT"
the Open Sesame to

ALGERIA, TUNISIA, MOROCCO, THE SAHARA

To have visited North Africa without having seen the great oases of the Southern Sahara, is to have not seen the country at all.

Intense sunshine, Cloudless skies, Oceans of golden sand, Flower-decked oases, "Arabian Nights" cities of Central Sahara, Imperial cities of Morocco, Palaces and Fountains, Mosques and Minarets, an unfolding panorama of bewildering sights—more Eastern than the East.

NORTH AFRICAN MOTOR TOURS

Whether you wish to arrange an independent private tour or a grand luxe tour of your own design, to use your own car, to take cars in the fixed itinerary coaches, to make a combined Rail and Car tour, to make a desert crossing—the "Transat" has irreproachable arrangements—and its famous 44 "Transatlantique" hotels that have made all this possible.

Write for booklet: "The Magic of Islam."

to 9,110 tons, as compared with 9,238 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.4 per cent. of the supplies, as against 82.4 per cent. a year ago, and imported mutton, mainly New Zealand, formed 80.3 per cent. of the total supply, as against 72.5 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—A firmer tone has been imparted to linseed by the second official estimate of the yield of the Argentine crop placing the probable output at 1,750,000 tons, as against 2,144,000 tons given in the first estimate. The large decrease is attributed mainly to excessive rains during the harvest. In spite of the reduction the total is still substantial and half a million tons in excess of last season's second estimate. There are still large supplies at hand, the quantity afloat for Europe having advanced to 281,200 tons (including 4,500 tons from India), this setting up a new record and comparing with 184,400 tons afloat a year ago. Prices have hardened, current value of Plate on spot at Hull being around £9 15s. and for shipment £9 10s. Cottonseed is dearer, but only a slow trade is reported, black Egyptian on passage and for shipment being quoted £8 5s. Linseed oil is in only moderate request and prices erratic, but on the whole dearer, in sympathy with seed. Current value of raw oil on spot (ex Hull mill) is £19; February and March-April delivery, £18 10s.; and May-August, £19 5s. Cotton oil is steady, crude Egyptian ex Hull being quoted £18 and common edible £20. Oil cakes and meals continue in good demand and prices generally are unchanged. Copra was dull early this week, but later it showed more steadiness. The price of S.D. Straits c.i.f. at £15 2s. 6d. per ton compares with £15 5s. on the same day last week.

HIDE, LEATHER AND ALLIED TRADES.—Prices for cattle hides were barely steady at the auctions held at Manchester this week, the three top weights in clear ox and heifers selling at the previous week's figures, while the three bottom weights were from 3d. to 1d. per lb. lower. Although advances are being talked of in con-

nection with certain kinds of imported hides the market continues weak for practically all descriptions, and business is difficult to negotiate. In the South American market sales of wet salted Argentine ox at 4½d., and bulls at 3½d. Dry hides from the River Plate have shown little variation in price, B.A. Americanos being quoted at 6½d. and M.V. Americanos at 7½d. Sales of Capes have been made on the basis of 5½d. and 4½d. for first and second drysalted 20-30 lbs., with 6½d. and 5½d. paid for first and second drys. Australian hides are inclined to recede from the prices quoted last week; at any rate, holders are more inclined to listen to offers. A fair turnover has been done in many descriptions of sole leather during the past week and on certain lines tanners appear to be well sold up. This is more particularly the case with light weight English and wet salted, for which there has been quite a respectable call. Medium and heavy weights in repairing bends have also been asked for to a lesser degree, while the inquiry for the lighter weights in dry hide varieties are also a fair market. Sales of upper leather continue to be chiefly concerned with black and brown glaze kid, for which the call remains fairly satisfactory. Willow calf is also selling in moderate quantities, but inquiry for box calf has fallen off considerably. Patent, however, has shown further improvement.

RUBBER.—Last week's improvement was not maintained and adverse statistical factors have depressed the price. On Wednesday, however, more interest was taken in the commodity, and the official spot price per lb. for standard ribbed smoked sheet was 3½d., as compared with 4d. on Wednesday last week. In forward positions, business has been done at 4d. to 3½d. for March, at 4½d. to 4d. for April-June, at 4½d. to 4½d. for October-December, and at 4½d. to 4½d. for January-March, 1932. Stocks in London and Liverpool have increased by 655 tons, the total being 125,111 tons at the end of last week, as compared with 82,336 tons a year ago. Deliveries, at 2,044 tons, during the past week show an increase of 32 tons, as compared with the preceding week, and are 755 tons above those of the corresponding week last year.

cent. has been the effective rate. Last week's Treasury bills were also allotted at practically 2½ per cent., this being the highest rate recorded for many months.

The Bank return records an increase of £3,535,000 in the note circulation. This is only the beginning of the normal seasonal expansion, which begins in the middle of February, and continues, with the usual fluctuations at the holiday periods, for the remainder of the year. As the Bank, however, is gaining practically no gold at the moment—the return shows a net increase of only £386,000—the effect of this increase in the note circulation was to reduce the reserve by £3,149,000. Simultaneously Public Deposits have risen by £1,054,240. It is not certain to what extent this increase is due to the influx of revenue, for much depends on the days on which old Treasury bills matured and new bills fell due for payment this week. Finally, discounts and advances were reduced by £1,171,000, presumably owing to the maturity of bills in possession of the Bank, so that these three causes alone, had other things remained unchanged, would have brought about a contraction of nearly £5.4 millions in market resources.

As the market was already short of funds, such a depletion would have been more than the market could have stood, and so, early this week, the Bank had to give some relief. It did so mainly by buying early April bills, at the high rate, it is reported, of 2½ per cent. Some indication of the extent of these operations is given by the increase, shown in the Bank return, of £3,768,000 in Government securities. Thus, in the end, market resources, as measured by Bankers' Deposits, were reduced by only £2,074,000 to £59,072,000. This figure, though small, was just big enough to keep the market out of the Bank.

	Feb. 5, 1931.	Feb. 12, 1931.	Feb. 19, 1931.	Feb. 26, 1931.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)
Banks' Deposit Rate...	1	1	1	1	1½ (May 1, '30)
Discount { Call	1	1	1	1	1½ (May 1, '30)
Houses { Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2½—1½	...

For reasons already explained in the *Economist*, there is no desire to bring the market into the Bank, if only because if the market borrowed from the Bank for a week, a day's stringency would be succeeded by a temporary glut of funds. At the same time, it must be recognised that it is still essential to maintain discount rates, and that for this to be possible, the market must be prepared to look ahead. Thus on Wednesday last money was a little more comfortable, and there was also an improvement in the Paris exchange to Frs. 124, based apparently on nothing more substantial than favourable Paris reactions to Mr Snowden's statement on the recent Franco-British Treasury conversations. These developments stimulated a demand for bills, which extended to the point where the three months' discount rate was only kept with difficulty at 2½ per cent.

Now it must be realised that the French and American money which has been attracted here by higher discount rates must be kept here if gold losses are to be avoided; and the fact that both forward francs and dollars have this week risen to higher premiums is a warning of the difficulty of keeping foreign funds in London. The bills bought during the past few weeks on Paris and New York account will eventually mature, and their holders will then have to be tempted to buy fresh bills. For these reasons it appears advisable to keep London discount rates at their present level of 2½ per cent., and while the market must to some extent be guided in their operations by the needs and conditions of the moment, it is permissible to suggest that were the market to drive rates down below their present level, they would be acting in a way not wholly in accordance with the country's needs, and

might find themselves faced with the consequences of such corrective action as was necessary to restore equilibrium.

In New York greater activity on Wall Street led to a slight stiffening in call rates. Inside money was quoted consistently at 1½ per cent., but the outside rate which recently has been only 1 per cent., rose to 1½ per cent. on Tuesday, the day following Washington's birthday. The following day, however, it relapsed to 1 per cent. The rate on bankers' acceptances was raised by another ¼ per cent. at the end of last week. Brokers' loans, according to the most recent statistics, have been reduced by \$23 millions to \$1,772 millions. It is known that owing to the higher discount rates now current in London a fair amount of short money has been transferred from New York to London. While call rates in New York have so far failed to respond appreciably to the greater activity on Wall Street, it remains to be seen whether, if this activity continues, some of the American money now in London may not be attracted home again.

Business in the exchange market was more active, and turnover on a larger scale than during the previous week. Sterling displayed a firmer tendency against most foreign currencies. The American exchange, after touching 4.85½, closed at 4.58½, as against 4.58½ a week ago. Montreal was also slightly higher at 4.85½. The Paris exchange was influenced considerably by the Anglo-French Treasury *communiqué*, and up to Thursday the rate was distinctly more favourable to London, touching 124.00 on Wednesday, and after temporary reactions closing at 123.98. On Thursday, however, the market was inclined to attach less importance to the results achieved by the Paris monetary conversations, and a sharp reaction to 123.95½ occurred in the franc quotation. Bussels was lower at 34.84½, as was Milan at 92.79. Madrid at first improved steadily to 45.15, but a break then took the rate to 46.30. Still there was a net gain of one peseta on the week. Amsterdam continued moving in favour of sterling, the closing rate being 12.10½. Berlin was steady between 20.43 and 20.44. Sterling was in considerable demand against Swiss francs, rising to 25.22½, as against 25.18 last week. The close was 25.21½. Among the South American exchanges Buenos Aires was firm and closed at 37d. Rio was slightly easier at 4½d. The Eastern exchanges were unchanged, with rupees at 1s. 5½d. and yen 2s. 0½d. In the forward market dollars moved to a wider premium with the rise in the spot rate, being quoted ½ cent and ¾ cent premium. The close was somewhat better at ⅙ and ⅙ cents premium. Paris forwards were also in strong demand, 12 centimes premium being quoted for one month and 24 centimes premium for three, as against 7 and 20 centimes a week ago. Brussels forwards were at premiums of 1 and 2½ centimes respectively. Forward Madrid was extremely erratic, one month moving between 2 centimos and 11 centimos premium, and three months between 14 and 30 centimos premium. The close was uncertain at 6 centimos and 19 centimos for one and three months. Amsterdam forwards were in better demand at premiums of 1½ cents and 3½ cents, but Berlin forwards were nearer to par at ½ and 1½ pfennigs discount. A strong demand was in evidence for forward Switzerland at premiums of 4½ and 9½ cents for the two periods. Silver was in demand during the week on Chinese account, and rose rapidly to 12½ on February 24th, but relapsed at the close to 12¾d. for spot and 12½d. for forward. Hong Kong was 11½d. and Shanghai 1s. 2½d.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade price movements, currency, and production of the leading commercial countries of the world. Its contents include an Index of electricity production, and a series of indices of British trade activity. A special feature of our Supplement this month is an article giving the results of recalculating our index number of wholesale prices, in relation to 1913, using our revised post-war list of commodities as a basis.

POLITICAL CONFUSION AND ECONOMIC HOPE.

It has been fashionable of late to talk vaguely about the apathy of the electorate towards political affairs and of a waning public belief in the usefulness of Parliament as an instrument of government. Such talk has received at least some vindication from the polling figures at recent by-elections. In more than one instance the total of votes polled represented less than 50 per cent. of the enfranchised constituents, and even the picturesque vigour of the Crusaders failed to persuade as many as half of the voters of East Islington that it was worth their while to record a vote for or against any candidate.

For a democracy to lose interest in the proceedings of representative democratic institutions is unhealthy. Recent by-elections perhaps suggest not so much indifference to national affairs—which are indeed very much in the mind of the average elector—as a complete divorce between public opinion and the various partisan, mostly unconvincing programmes put forward by various political factions. Indeed, at the present time perplexity resulting in abstention from the polls is easily intelligible. How shall we blame the man in the street for a waning faith in Parliament when an experienced ex-Cabinet Minister and practical business leader of the calibre of Mr. Walter Runciman proclaims among his reasons for retirement from politics that he has lost confidence in the usefulness of the House of Commons? Who, again, can be surprised that millions of voters are completely bewildered by cross-currents in the political stream so numerous and illogical that the most practised observer finds them difficult to follow or to apprehend? The confusion which exists at Westminster to-day is by no means confined to the splits in each of the three parties. That aspect is in itself perplexing enough. Inside the Labour Party Mr MacDonald and his faithful followers are opposed by two separate groups under the leadership respectively of Mr Maxton and Sir Oswald Mosley. Among the Liberals Mr Lloyd George and Sir John Simon, who fought side by side at the general election for the Liberal unemployment policy, have parted company on a divergence of view as to whether the Government should be bolstered up or destroyed. Nor are the domestic affairs of the Conservative Party more harmonious in nature. Mr Baldwin repudiates his late Chancellor, Mr Churchill; and the former and Lords Beaverbrook and Rothermere, though all three put Empire development in the forefront of their programmes, are engaged in war to the knife. Small wonder if the humble voter gives up trying to understand what effect his vote will have if given to any particular candidate, or if he decides to abstain from the polling booth, as the line of least resistance.

All this is difficult enough. But the difficulty is much more than that which is sometimes presented by the task of judging between divergent but clear-cut policies advocated by different groups. The confusion is worse founded by the inability of political leaders of all colours to present to the country any policy adequate to meet the most pressing of our existing troubles. Even worse, individual policies are guilty of real or apparent incongruities and contradictions within themselves. The Prime Minister, elected on the plea that in Socialism we had the only cure for unemployment, makes no move to apply Socialist remedies, and exhorts private enterprise to go boldly forward, while his Cabinet does nothing to tackle the public extravagance which handicaps such enterprise with the burden of high taxation. The Liberals have laid themselves open to the public belief—unfair, perhaps, but widespread—that they are simultaneously calling for public economy and for reckless expenditure on public works; and it is the Liberal leader, not the Socialist, who, by his criticisms of the City, lays verbal siege to the citadel of the capitalist system. Orthodox Conservatives urge that production costs must be reduced, and yet propose to raise them by means of a tariff; while Mr Churchill calls at one and the same time for retrench-

ment and for a reactionary policy in India which would have most dangerous repercussions and might easily involve the country in a very heavy bill for repressive action.

Only one group leader has put forward a "national policy," and that is Sir Oswald Mosley, who rushes in where angels fear to tread. But the brochure* in which it is expounded is entirely unconvincing. Sir Oswald errs at the beginning, for he starts from the assumption that the decline of our export trades is permanent and must be progressive. This leads him to advocate extreme concentration on the home market ("our greatest asset"), which is to be protected by bulk control of imports, and to support the Beaverbrook idea (long since exploded) of a vast diversion of trade into Empire channels. He is involved, by his concentration on the home market, in the policy that standards of living and social service expenditure must be maintained at all costs, even though the cost be the failure of our export trades to regain a competitive basis; and his way out by means of a British Fiatletka is scarcely practical politics at the moment.

To put the matter tersely, all our political leaders, if they are not following will-o'-the-wisps, are groping for a policy in the darkness of the economic depression. They are, perhaps, no more to blame than their counterparts in other countries. For where in the world to-day is there to be seen in action a comprehensive national policy, good or bad, unless it be in Italy under Fascism, or in Soviet Russia under Communism—two systems which are, and probably will always remain, foreign and repugnant to the temperament and judgment of the British people?

It is unreasonable, then, to expect our statesmen to evolve a short cut out of the economic morass. But it is not unreasonable to call upon them to clear up some of the present confusion and to fix their attention on a few definite first steps which are urgently needed. The first and most urgent is clearly the checking of the costly abuses of the dole and the sound reform of the unemployment insurance system. The second, the all-round application of the "axe" to all superfluous or wasteful State expenditure. These two steps, energetically taken, would go far towards re-establishing confidence; and the re-establishment of confidence would be quickly reflected in trade improvement, and would give employers fresh heart to proceed with the work of effective reorganisation and readjustment. For the rest, the best contribution which any Government can make is zealously to promote peace and confidence in the international sphere, and in this direction it cannot be said that Mr Henderson is either idle or unsuccessful.

It is weary work waiting while, with or without the help of Cabinet and Parliament, the economic clouds roll slowly by. At times the sky has seemed so thick that pessimists have almost persuaded themselves that this is no passing storm but perpetual darkness. But although he would be a bold man who prophesied that days of sunshine are really near, we may at least be grateful that in the past week or two the sun has been making valiant, if fitful, efforts to break through. A number of important commodities have taken an upward turn in price, which may or may not prove temporary, but which in any case is a welcome change from the long-continued downward slide. Partly owing to this upward turn Wall Street has developed a definite cheerfulness, which has not gone without reflection on the London Stock Exchange. The Anglo-French Treasury conversations, while barren of sensational result, have shown that international efforts for financial co-operation are proceeding on lines which promise at least some success. The Franco-Italian naval *rapprochement* is a substantial gain, for it not only promises to round off the London

* "A National Policy." By Sir Oswald Mosley. (London) Macmillan and Company, Ltd. Price 6d. net.

Naval Treaty, but also makes the way a little smoother for the pursuit of armament restriction on land and in the air. In India a truce with the irreconcilables appears to be nearer. At home, the British Trade Fair has attracted more attention than was hoped for from foreign buyers, while the increase in the total of unemployed has shown some signs of halting.

Some of these occurrences are as yet of dubious or intangible importance. But in the aggregate they are suggestive of at least a slight improvement in the general outlook. And to those whose hearts are still heavy we would venture to suggest a rather more solid reason for comfort. Two years ago the alarming fact about this country was that she appeared to be failing to ascend to the level of moderate prosperity achieved and held by many other countries. This experience gave birth to the fear that, as the great depression gathered force, Britain would suffer more gravely than any other country. This has not occurred, and when we remember the natural and inevitable sensibility and vulnerability of Britain's peculiar economic position in the world it is remarkable that, after eighteen months of accentuated depression, she should be weathering the storm better than some of her chief industrial rivals.

In our view the reason for this is that in the three years preceding the slump—in spite of Sir O. Mosley's defeatist views regarding our international trade—we had been slowly strengthening our competitive position by rationalisation and by a slow process of readjustment of costs. The landslide in trade and in prices has made a new adjustment of prices, wages and salaries probably inevitable. But we stand at a lesser disadvantage than before. If we will only pursue as our main, indeed our sole, objective the preparing of the country to resume its place as the leader of world trade; and if this is our guiding line in all spheres of policy—economic, financial and political—there is no reason why we should not be the first to benefit from the turn in the tide.

THE NAVAL CONVERSATIONS.

THE exchanges of views between the British, French and Italian Governments over French and Italian naval ratios have rather suddenly gathered momentum and at the same time taken a hopeful turn. The favourable situation which has at last arisen as a result of long and patient negotiations, conducted under difficult psychological conditions, is evidently regarded by the statesmen concerned as being something of first-class importance. At any rate, Mr Henderson and Mr Alexander have put aside all other business at a few hours' notice in order to visit Paris and Rome and discuss in person, with their French and Italian colleagues, certain concrete proposals that are now on the table. Arriving in Paris on Monday afternoon, they made sufficient headway there to warrant their moving on to Rome within twenty-four hours. The conversations at Rome are taking place at this moment; and it is possible that, before this issue of the *Economist* appears, the definite success or failure of the whole transaction will have been announced. In the meantime, it is only possible to report that all the external symptoms are promising, and to recall the history of the affair and the issues at stake.

The issues are really momentous. Not only the outlook for peace in Continental Europe but the preservation of the comprehensive naval limitation agreement of last year between the British Empire, Japan and the United States is involved in the Franco-Italian controversy which is now, we hope, on the point of being settled to the satisfaction of all parties.

The peace of Europe is involved because the post-war tension between Italy and France is a disturbing factor which has steadily extended its range. Its place of origin is North Africa, where France, with no surplus population in need of new homes overseas, is in possession of all the desirable territories, while Italy, with a growing population

that presses for outlets, has nothing but the leavings: Tripoli and Benghazi as against Tunisia, Algeria and Morocco. This Italian grievance is half a century old; but it has been accentuated by a clause in the London Treaty of 1915 (the treaty in virtue of which Italy intervened in the war on the side of the Allies), whereby Italy is promised a rectification of frontiers in Africa in her favour at the expense of Great Britain and France. The trouble has also, of course, been rendered more acute by the rather aggressive form of Italian national consciousness that has prevailed under the Fascist regime. During the last five or six years the disturbing effects of this Franco-Italian trouble have spread from North Africa to South-Eastern Europe, where the two Powers have been competing with one another in building up rival followings of satellites—Italy enlisting Albania and Bulgaria and Hungary under her banner as against France's followers—Jugoslavia, Roumania, Czechoslovakia and Poland. This is an unpleasant development, because such rival hegemonies have been potent causes of European wars in the past.

But the situation was not seriously disquieting so long as only two great Powers were concerned—especially in a Europe which is still under the shadow of a terrible war and which has found a new organ of international co-operation in the League of Nations. So long as it was a pull between the League system and spirit on the one side and the Franco-Italian rivalry on the other, there was little fear that the underlying causes of the Franco-Italian trouble would prove permanently intractable to League of Nations treatment. The new, and profoundly disturbing, factor which entered into the European situation last year was the threat (symbolised in the Nazi and Communist gains in the general election for the Reichstag last September) that Germany might abandon the policy of fulfilling the treaties and working through the League, which she had been pursuing for seven years under the leadership of Herr Stresemann, and might, so to speak, "turn savage." This possibility opened up a really alarming prospect that the division into two camps, which already existed between two powers and their satellites, might become extended again, as it was before 1914, to the whole Continent. The lines which the division might take this time were indicated at the last session of the Preparatory Commission for the Disarmament Conference, when Italy, Germany and Russia frequently voted *en bloc* against France and her allies. A *détente* between France and Italy would do more than anything, at this moment, to check that dangerous tendency. If France and Italy succeed, this week, in agreeing upon their naval ratios, it is safe to prophesy that the steadying effect of such agreement will make itself felt quickly and powerfully throughout Europe.

It will also make itself felt in the world at large, since French and Italian naval armaments are the link between the problem of disarmament and security on the European Continent and the same problem as it presents itself in the outer world. To the United States and Japan, of course, the strengths of the French and Italian navies are of no more direct concern than, say, those of the Chilean, Argentinian and Brazilian navies are to the British Empire; but the British Empire is unfortunately unable to regard with the same indifference the strengths of two Continental European fleets which potentially command British sea communication both in the Channel and in the Mediterranean. The strength of the British Navy is necessarily determined with reference to French and Italian naval strength as well as to American and Japanese; and, through this inevitable factor in British naval calculations, French and Italian naval strength becomes of indirect but vital interest to the United States and to Japan likewise. For either France or Italy, or *à fortiori* the two together, are in a position to set the pace for the British Empire in certain important categories of naval armaments, and thus, indirectly, to set the pace for all the "High Seas" or "Principal" Naval Powers.

On this account, one of the chief concerns of President Hoover and Mr MacDonald, when they were preparing for the London Naval Conference the year before last, was to make sure of French and Italian as well as

Japanese co-operation in the proceedings. When the Conference met no effort was spared in attempting to bring France and Italy into line with the other three Powers. And when the failure of this attempt had to be acknowledged in the adjournment of the Conference without the inclusion of France and Italy in the crucial Part III. of the Treaty, the other parties continued—with well-meant and well-received importunity—to labour at the task of converting the three-Power agreement for the comprehensive limitation of naval armaments into a five-Power agreement.

There are two problems to be solved: to secure agreement on a ratio between France and Italy respectively and the three "High Seas" Naval Powers; and to secure agreement between France and Italy as to their relative strengths *vis-à-vis* one another. The second problem is, of course, by far the more difficult of the two. If it were only France or only Italy whose ratio had to be adjusted to those of the British Empire, Japan, and the United States, the adjustment would be easy—or, at least, no more difficult than the adjustment between the three "High Seas" Powers which was accomplished in London last year. The *impasse* as between France and Italy has been the crux; and, so long as that *impasse* exists, the agreement reached between the three "High Seas" Powers remains precarious—as witness the last article in Part III. of the London Treaty:—

If, during the term of the present Treaty, the requirements of the national security of any High Contracting Party in respect of vessels of war limited by Part III. of the present Treaty are in the opinion of that Party materially affected by new construction of any Power other than those who have joined in Part III. of this Treaty, that High Contracting Party will notify the other Parties to Part III. as to the increase required to be made in its own tonnages within one or more of the categories of such vessels of war, specifying particularly the proposed increases and the reasons therefor, and shall be entitled to make such increase. Thereupon the other Parties to Part III. of this Treaty shall be entitled to make a proportionate increase in the category or categories specified, and the said other Parties shall promptly advise with each other through diplomatic channels as to the situation thus presented.

In other words, the three-Power agreement, unless and until it were converted into a five-Power agreement, had to be contingent instead of absolute.

During the ten months that have passed since the signature of the Treaty on April 22, 1930, it has hitherto proved impossible to reconcile Italy's claim to parity, in total naval strength, with "the strongest Continental European Naval Power," and the French contention (resembling the British contention *vis-à-vis* the United States) that, in apportioning ratios, account should be taken of the relative extent and importance of the objects which the respective navies are called upon to defend. The French Government has been inclined to maintain an attitude of courteous intransigence—relying, no doubt, on the present superiority of the French fleet over the Italian and on the financial ability of France to out-build Italy if the latter should attempt anything in the nature of a race in naval armaments. The Italian position

is more difficult, inasmuch as Italy is asking for a drastic change, whereas France is simply declaring herself content with an existing situation. Nor was the Italian position improved by the flamboyant speeches which Signor Mussolini delivered last May. On the other hand, such conciliatory and constructive proposals as were made last year were of the Italian Government's making. On June 3rd Signor Grandi proposed that both Powers should suspend all naval construction until December, in the hope of arriving at an understanding in the interval. The French Government left this proposal unanswered for more than a month and then merely agreed that no more keels should be laid down before December 1st—an empty concession, since by that time both Powers had already laid down all the keels which were to be laid down by December 1st according to their respective programmes. In August, again, Italy proposed that Franco-Italian parity should be accepted in principle, but that in practice it should be translated into an "equivalence" which would leave France a margin of actual superiority during the period for which the London Naval Treaty was to run. This latter proposal, likewise, fell through. Thereafter Mr Henderson and Mr Hugh Gibson took a hand, and latterly Mr Craigie, of the Foreign Office, in successive visits to Rome and to Paris, has brought the discussions to the point at which they stand to-day. If Mr Henderson can now convert Mr Craigie's "try" into a "goal," his steadily rising reputation as an international player will be notably enhanced and the cause of peace will be signally furthered.

THE REDISTRIBUTION OF LABOUR.

Last November the Ministry of Labour, in publishing its annual analysis of numbers employed in various industries, drew attention to the fact that, owing to changes in the conditions of insurance against unemployment, the movement in the numbers insured in a given industry was no longer an accurate guide to the expansion or contraction of that industry. An analysis of numbers actually in employment in insured trades was promised, and has now appeared in the February issue of the *Ministry of Labour Gazette*.

The figures for persons employed have been arrived at by subtracting the number unemployed in each group from the number insured in that group, no deduction being made for persons who are absent from work from sickness or other causes which do not affect the unemployment figures and are not relevant to a consideration of the volume of employment available. The figures are taken as at the end of June in each year, the time of the annual count of insured workpeople, and the indices are shown as a percentage of the June, 1928, figures, which

are the earliest available on a comparable basis. The difference in the movement of the numbers insured and those actually in employment is illustrated by the following table:—

INDICES OF ESTIMATED NUMBERS INSURED AND ESTIMATED NUMBERS OF INSURED PERSONS IN EMPLOYMENT.
(June 1923 = 100.)

	Persons Insured.	Insured Persons in Employment.		Persons Insured.	Insured Persons in Employment.
June, 1923...	100.0	100.0	June, 1927...	105.6	108.6
" 1924...	101.6	103.8	" 1928...	106.5	107.2
" 1925...	103.5	102.9	" 1929...	108.4	110.5
" 1926...	104.8	90.2	" 1930...	111.2	106.1

The fact that the employment indices for 1924, 1927, 1928 and 1929 were higher than the indices of persons insured shows that improvement in trade, as compared with 1923, had absorbed some part of the unemployed as well as the natural increase in population. In 1925, 1926 and 1930, on the other hand, the reverse was true, and by December, 1930, the index of insured persons in employment had fallen to 100.2.

The following table shows the growth, during recent years, in the numbers employed in some of the more important industrial groups in Great Britain and Ireland:—

GROWTH IN THE ESTIMATED NUMBERS OF INSURED WORKPEOPLE IN EMPLOYMENT.

	Estimated Numbers of Insured Persons aged 16-64 in Employment.	June, 1930.	June, 1927.	June, 1928.	June, 1929.	June, 1930.
Silk and artificial silk	60,855	148.5	137.0	199.6	179.4	179.4
Electrical wiring and contracting	16,512	139.5	149.5	160.8	173.3	173.3
Tramway and omnibus service	151,487	124.5	134.7	147.5	153.8	153.8
Electrical engineering	153,208	132.8	135.8	144.4	148.8	148.8
Public works contracting	145,250	140.8	126.6	139.3	146.7	146.7
Electrical cables, wire and lamp	94,304	120.0	126.6	139.3	146.7	146.7
Distributive trades	1,622,112	127.9	132.2	135.9	140.0	140.0
Hotel, boarding-house, club services	311,257	126.4	129.4	136.3	136.0	136.0
Road transport not separately specified	161,858	125.6	131.9	136.0	135.3	135.3
Furniture making, upholstery, &c.	112,602	125.3	130.4	135.2	134.2	134.2
Laundries, dyeing and dry-cleaning	131,892	121.0	126.2	131.1	132.7	132.7
Local government	249,107	108.4	112.1	120.1	122.2	122.2
Motor vehicles, cycles and aircraft	214,696	126.8	125.3	134.4	125.2	125.2
Printing, publishing and book-binding	256,368	114.0	116.4	119.7	122.2	122.2
Building	726,268	126.5	123.5	126.8	121.8	121.8
Food industries, not separately specified	101,658	119.7	118.7	122.0	120.7	120.7
Professional services	122,079	109.3	111.6	115.6	119.3	119.3
Shipping service	113,192	115.6	112.8	114.3	108.0	108.0
Tailoring	183,962	110.8	109.9	109.9	107.9	107.9
Commerce, banking, insurance, finance	224,790	100.5	100.6	103.4	104.2	104.2
Gas, water and electricity supply	154,198	101.8	100.8	100.3	101.1	101.1

Apart from the artificial silk and motor industries, which are recognised examples of young industries still in the stage of rapid expansion, growth during recent years has been most marked in the electricity industries, in those branches of manufacture which cater for the building industry (among groups not shown in the above table, artificial stone and concrete, heating and ventilating apparatus, paint and varnish, brick and tile making, clay, sand, gravel and chalk pits, and wallpaper making all showed very much more than the average rate of growth between 1923 and 1930), and in various kinds of services. The more detailed table from which the above figures are taken clearly illustrates the effect on industry of the rising standard of living, for, apart from the groups already mentioned, those which show the greatest expansion are, broadly speaking, those which cater for recreation, as, for example, toys, games and sports apparatus, entertainments and sports, and musical instruments. Among the few industries which continued to increase between June, 1929, and June, 1930, the electrical industries, some of the industries ancillary to building, tramway and omnibus services, laundries, dyeing and dry-cleaning, printing, publishing and book-

binding, and, owing to unemployment relief schemes, public works contracting and local government, were the most noticeable.

In contrast to the list of increases, in which manufacturing industry, with certain important exceptions, plays a comparatively small part, the table of industries in which decreases have occurred consists almost entirely of manufacturing industries, and predominantly of what used to be regarded as our staple industries. These figures are largely influenced by trade depression; but in a number of cases labour-saving machinery has doubtless played some part:—

DECLINE IN THE ESTIMATED NUMBERS OF INSURED WORKPEOPLE IN EMPLOYMENT.

	Estimated Numbers of Insured Persons aged 16-64 in Employment.	June, 1930.	June, 1927.	June, 1928.	June, 1929.	June, 1930.
General Engineering: Engineers' Iron and Steel Founding	499,399	103.2	104.2	105.8	98.7	98.7

Coal mining	25,372	99.4	103.3	98.2	74.2	74.2
Coal mining	813,711	79.7	69.4	74.0	69.2	69.2
National Government	103,148	89.3	77.3	72.5	67.2	67.2
Total of all industries and services, including those not shown above ..	10,493,951	108.6	107.2	110.5	106.1	106.1

Of the principal textile and heavy industries, engineering, shipbuilding and cotton were above the 1923 level until the onset of the 1930 depression, but employment in coal mining, iron and steel and the wool textile industries has never regained the level of June, 1923.

Both in 1923 and in 1930 just over half the number of insured people in employment were comprised in the ten largest groups, but, though nine of the ten groups were the same in both years, the order was slightly different, and the percentage of the total represented by some of the groups was substantially changed, as the following table shows:—

NUMBERS AND PERCENTAGE OF TOTAL INSURED WORKPEOPLE IN EMPLOYMENT COMPRISED IN TEN LARGEST GROUPS.

June, 1923.			June, 1930.		
Industry.	Number Employed	Percentage of Employed in all Industries	Industry.	Number Employed	Percentage of Employed in all Industries
Coal mining	1,211,559	11.9	Distributive trades	1,622,112	15.5
Distributive trades	1,180,548	11.6	Coal mining	813,711	7.8
Building	626,440	6.1	Building	726,258	6.9

* Insured persons aged 16 and over. † Insured persons aged 16-64 inclusive.

The most significant changes are the decline in the part played by coal mining, the immense absolute and relative expansion in the distributive trades and the departure of the wool textile industries from the list, in favour of the motor industry.

These changes in the distribution of labour as between different occupations have naturally resulted in changes in its geographical distribution. Attention has frequently been drawn to the southward trend of industry since the

war, and the latest figures, incorporated in the table below, show that it has been accentuated by the depression:—

GEOGRAPHICAL ANALYSIS OF INSURED PERSONS IN EMPLOYMENT.*

	Number aged 16 and over at June, 1923.	Number aged 16-64 at June, 1930.	Index numbers, June, 1923 = 100.		
			June, 1928.	June, 1929.	June, 1930.
London	Thousands. 1,810	Thousands. 2,093	115.8	119.7	119.0
South-Eastern ..	693	873	123.5	128.0	129.9
South-Western ..	691	789	113.2	117.0	117.9
Midlands	1,510	1,572	106.2	111.0	107.2
North-Eastern ..	1,741	1,638	99.0	103.0	97.1
North-Western ..	1,759	1,660	107.4	108.0	97.0
Scotland	1,110	1,083	104.2	104.8	100.4
Wales	583	443	82.1	84.6	78.6
Northern Ireland	211	205	98.0	107.2	96.9
Great Britain and Northern Ireland	10,108	10,357	106.8	110.0	105.5

* Excluding persons insured under special schemes for the banking and insurance industries.

The steady decline in employment in Wales, after a slight interruption in 1929, has been resumed; North-Eastern and North-Western England, which showed some signs of recovery in 1927 and 1929, had fewer insured persons employed in June, 1930, than in 1923; employment in Scotland and Northern Ireland declined to about the 1923 level; while South-Eastern and South-Western England continued their steady upward trend and London showed only a very slight fall from the 1929 peak.

It is becoming increasingly evident from these annual analyses that this country's habit of regarding itself as mainly a producer of coal, textiles, and iron and steel, with its industry concentrated around the coalfields of the North, the Midlands and South Wales, is gradually becoming an anachronism. The part played in our manufacture by the newer industries, and the increasing proportion of labour in occupations other than manufacture, are circumstances of which sight must not be lost in the framing of economic policy.

FORD IN EUROPE.

(BY A CORRESPONDENT.)

In an article published not long ago in the *Economist*, an attempt was made to analyse the position of the Ford Company of England, having regard to the approaching entry into production of the new factory at Dagenham. It was pointed out at the time that the success of the Dagenham venture depended on the increase of sales within the markets controlled by the British company. The total consumption of these markets during 1929 only reached 100,000 units, whereas the prospectus of the Ford Motor Company issued in December, 1928, estimated it at 120,000. Great Britain was largely responsible for the failure to reach the estimated figure, but, as has been already shown, this shortcoming should be made good as soon as there is a factory producing 100 per cent. British cars within the British Customs frontier. The low price which has given Ford a 40 per cent. share of motor consumption in the United States will then be more nearly available in Great Britain, and the doubling of sales should not present a difficult task. The production figure which has been announced for Dagenham is 200,000 units per year; 25,000 cars were sold in Great Britain during 1929; and with a probably substantial drop in prices, a sale of 50,000 cars during the first year of Dagenham production should be feasible. On the other hand, Continental sales during 1929 numbered only 75,000, and the doubling of this figure presents a far greater problem.

Ford is playing an increasing part in motor production in every European country; in many small countries which have no motor industry of their own, almost the whole market is shared by Ford and General Motors, since other European manufacturing companies, while able to compete within their own frontiers, cannot compete on foreign

An amalgamation of 20 banks, among
which is the OLDEST COMMERCIAL
BANK OF SWEDEN
established in 1830

ground protected by high tariffs. In countries such as France, Germany and Italy, Ford claims a very substantial percentage of sales and competes very successfully with the most popular and low-priced national makes. Nevertheless, to attain the dominating position in the Continental markets which a Dagenham export figure in excess of 100,000 would entail, a very real price advantage is essential.

Now, save in a minor degree, Ford prices cannot be reduced in any one country unless an increasing proportion of materials and parts is manufactured or bought locally, and is not subject to heavy import duties. The fact that the Continental companies will be able to obtain their supplies from Dagenham instead of from Detroit will not help them appreciably. Transport costs will be less, but the duty weighs as heavily on goods imported from Britain as from America. In France, any decrease in transport costs will be offset by the recent increase in the tariff affecting imported cars and parts. The lowering of the selling price in each country and consequent increase in sales depend primarily, therefore, on the progress made by each company in manufacturing and buying locally. A review of the position in a number of Continental markets will thus give some idea of the prospects of the subsidiary companies in each of which the British Company holds a 60 per cent. interest.

Each of the various Ford companies established in Europe exports to markets which are either geographically or colonially related. The French company's factory is at Asnières, and it is here, perhaps, that the greatest progress can be made with regard to local purchasing of materials and parts. There is reason to believe that nitro-cellulose, lacquers, oils, varnishes and lubricants, roller and ball bearings, tyres, steel pressings, steel forgings, electrical outfit, tools, body material, glass, disc wheels, mufflers, chassis springs, seat springs, wooden parts, rubber mats, carpets and accessories are all being manufactured or obtained in France; and it is hoped that further development of local purchasing will save the French Ford Company from having to increase their prices substantially as a result of the increase in the import duties. No sales figures are available for France, but to judge by experience of road travelling in France, Ford sales are considerable and increasing.

In Germany exact figures are available in the form of registrations by makes, and it is thus possible to obtain some picture of Ford's position in an average European market in which it has to compete with a vigorous national industry under the heavy handicap of Customs duties. During the first six months of 1930, Ford sales of passenger vehicles (commercial vehicles are excluded from these statistics) numbered 4,295; this figure represents 17 per cent. of total sales in the medium horsepower group, 9 per cent. of total sales of cars in Germany, and 31.7 per cent. of total sales of imported cars. Total production for the period, which includes commercial vehicles and an export business of about 10 per cent. to Austria, Czechoslovakia and Hungary, numbered 7,809, which may be compared with a total output for the whole of 1929 of 5,210. The development of Ford activities in Germany up to last summer was unimpeded by the depression which hit the German motor industry severely; for while total German motor production for the first half of 1930 showed a fall of 22 per cent.,

Ford production increased 55 per cent.; turnover for this period was £1,400,000, compared with £1,800,000 for the whole of 1929 and with £600,000 for the whole of 1928. A new factory is being constructed at Cologne, which is expected to start producing in a few weeks; special terms were offered the company by the city as an inducement to build there; and it has been announced that 2,000 men will be employed there and a hundred cars produced a day, though, as with Dagenham, it must be remembered that employment and output are not likely to be constant—when stocks are piling up it is the Ford practice to suspend production, every effort being made to re-engage the same employees when production recommences. The Berlin works, which have hitherto served Germany and the neighbouring markets, will not necessarily be closed down, but will probably be retained, as will Trafford Park, Manchester, in England, as an assembly centre. Cologne's position on the Rhine will offer the Ford company water transport for distribution down the Rhine and Danube to the Near East. The price of models in Germany, though recently subject to 5 per cent. reduction, still stands above the prices ruling in Great Britain. But the new factory and the close association with the I.G. Farbenindustrie, a large Ford shareholder and a potential supplier of many Ford requirements, promise lower prices in the future.

No public issue of shares has yet been made by the Ford company of Italy, which remains a private company owned by the Ford Motor Company, England. Negotiations for manufacturing facilities of one kind or another have been going on for some time; but a scheme for co-operation with the Isotta Fraschini company has long been under consideration, and, while nothing definite has yet been agreed, would seem to be the one most likely to be brought into effect. Under this scheme, as at present understood, the new Ford will be assembled at the Milan works of the Isotta Fraschini company, the Ford company taking up 49 per cent. of the re-organised capital of the Isotta Fraschini company—a holding which, it has been said, might amount to £1,000,000. The Ford company would acquire the right to manufacture the Isotta Fraschini aeroplane engine in the United States. Local manufacturing facilities, such as this scheme would offer, should enable the new Ford to be sold in Italy for about £140 and thus to share with Fiat the entire cheap car market of Italy; for the Italian tariff is so high as to exclude any foreign low-priced car. A newspaper report has stated that the car as produced in Italy will be called the "Ford-Isotta-Fraschini," an association which may give rise to one or two witticisms, but which is well merited after the old "T" model's music-hall reputation has so seriously prejudiced real appreciation of the new "A" model. The Italian company exports to the Near East and, of course, to Italy's colonial possessions.

In Spain, where the Ford company has an assembly plant at Barcelona, Ford sales represent 32.4 per cent. of total car registrations, which were, in 1929, 36,910. Sales of Ford passenger vehicles during the year numbered 6,904 and of commercial vehicles 5,123. Ford's plans in Poland would seem to have been abandoned, for the project to build an assembly plant at the new port of Gdynia has not been carried any further. Russia comes under the province of the American parent company, and while Mr Ford has been invited to grant a licence to a Soviet plant to manufacture under the direction of Ford engineers, no particulars are available on this side of the Atlantic. Assembly plants are established in almost every leading European country, the most recent to be opened being one at Istanbul, Turkey. New and bigger assembly plants are also being constructed in Stockholm, Antwerp (in place of the present works at Hoboken), and Rotterdam.

An interesting development in the financial organisation of Ford in Europe lies in the establishment of a Ford investment company registered in Luxembourg. This company will act as a clearing-house for all the European Ford companies, controlling the collective investment of the reserve funds of some companies, lending funds to others of the companies who may require them for the construction or extension of plant.

THE DIRECTION OF OVERSEAS TRADE.

AFTER the heavy all-round decline shown by the trade returns for 1930, it was only to be expected that the analysis of the trade of that year according to countries of origin and destination, included in the January Trade and Navigation Returns, should resolve itself into a study of comparative rates of decrease. This has, in fact, proved to be the case, and few indeed are the countries with which our trade in 1930 was greater than that in 1929.

Trade with European countries suffered least. Whereas our total imports declined by 14 per cent. to £1,044,840,194 and our exports of British produce and manufactures at £570,552,946 were 20 per cent. lower than in 1929, imports from and exports to European countries fell by less than 7 and 14 per cent. respectively. Trade with individual European countries is shown below:—

* Including dependencies.

A substantial increase appears in our imports from Russia, and small increases in those from Poland, Austria, Hungary and Roumania. These were very much more than offset by declines of nearly £9 millions in imports from France, and nearly £8 and £6 millions in those from Holland and Belgium respectively, together with declines of £2.3 millions each in imports from the Scandinavian countries, Germany and Spain, and small falls in imports from the remaining countries. To Russia and Norway alone did we succeed in increasing our exports, while those to Germany declined by £10 millions, to Holland by £6 millions, to Belgium by £4½ millions, to France and Spain by £3 millions each and to all other countries by smaller, though relatively high, amounts. Exports to Germany are now one-third lower than in 1913, while imports from her are more than double the pre-war value.

Imports from and exports to non-European foreign countries are shown below:—

TRADE WITH FOREIGN COUNTRIES OUTSIDE EUROPE.
(000's omitted.)

	Imports from				British Exports to			
	1913.	1928.	1929.	1930.	1913.	1928.	1929.	1930.

Colombia.....	1,089	2,276	2,106	1,399	1,693	3,654	3,241	1,553
Peru.....	1,378	6,710	6,462	4,483	1,488	1,954	2,007	1,443
Chile.....	5,359	9,104	10,615	7,347	6,010	5,128	9,196	5,963
Brazil.....	10,008	4,685	7,293	8,132	12,465	16,034	13,383	7,955
Uruguay.....	2,749	7,026	5,651	7,382	2,916	3,106	3,723	3,561
Argentina.....	42,485	76,789	82,447	56,744	22,641	31,210	29,074	25,270
Other foreign countries (non-European).....	9,540	17,428	15,024	12,805	7,215	10,677	11,854	8,711
Total.....	257,154	386,640	395,537	306,647	341,800	170,789	169,396	119,203

This group shows the largest decline: imports were 22½ per cent. lower in 1930 than in 1929, and exports 30 per cent. lower. Imports from Brazil and Uruguay were higher, but those from all the other countries shown were lower, and the fall in imports from Egypt, the United States and Argentina amounted to £9½, £42½ and £26 millions respectively. Except for Persia, none of these countries took more of our exports in 1930 than in 1929, while the United States took £17 millions less, Brazil, China and Japan each about £5½ millions less, and the Argentine nearly £4 millions less. Many of these countries afforded far less good markets for our produce than before the war, though Egypt, Turkey and Brazil were the only ones from which we imported less in 1930 than in 1913. The third table shows our trade with the Empire:—

TRADE WITH BRITISH COUNTRIES.
(000's omitted.)

	Imports from				Exports to			
	1913.	1928.	1929.	1930.	1913.	1928.	1929.	1930.
Irish Free State.....	£ 45,147	£ 45,087	£ 45,087	£ 42,953	£ 35,080	£ 36,078	£ 34,498	£ 34,498
West Africa.....	5,174	11,458	11,336	8,173	6,601	14,827	12,316	10,730
South Africa.....	12,495	24,146	24,309	20,334	22,185	31,503	31,536	26,464
India and Ceylon.....	56,218	78,246	77,995	64,576	74,458	89,862	84,147	56,943
Straits Settlements.....	15,880	10,167	14,173	9,134	5,835	11,434	12,272	7,464
Australia and Papua.....	38,065	54,463	55,685	46,543	34,470	55,725	54,375	31,738
New Zealand.....	20,338	47,274	47,727	44,939	10,838	19,288	2,393	17,868
Canada.....	30,488	57,143	46,410	38,160	24,795	34,466	35,008	28,904
West Indies.....	2,116	5,344	5,327	5,139	2,339	5,111	5,043	4,749
Other possessions.....	10,742	30,197	30,743	24,291	13,785	30,372	31,283	38,745
Total.....	191,516	363,585	358,842	304,142	195,307	327,668	324,451	248,103

Here the decline is greater than in our European trade but less than in our trade with other foreign countries, imports being down by 15½ per cent. on 1929 and exports by 23½ per cent. Both imports from and exports to each of the countries specified fell off, and the decline was especially severe in trade with India, Australia and Canada.

The result of the different rates of decline in the three groups has been to redistribute the proportion of our trade with them as follows:—

PERCENTAGE OF BRITISH TRADE WITH BRITISH, EUROPEAN AND OTHER FOREIGN COUNTRIES.

	Imports.		British Exports.	
	1929.	1930.	1929.	1930.
European foreign countries.....	38.2	41.5	32.3	35.6
Other foreign countries.....	32.4	29.4	23.2	21.0
British countries.....	29.4	29.1	44.5	43.4

Exports of imported merchandise showed a decline of 20 per cent. to £86,980,279. Those to British countries declined by 15 per cent., and those to foreign countries, which formed over three-quarters of the total, by 23 per cent. The severest falls were in re-exports to Germany (— £6 millions, to) the United States (— £5 millions) and to France and Belgium, which fell about £3 millions each.

RE-EXPORTS.

* Including dependencies.

In view of these figures Sir Oswald Mosley's recent assertion that "we are losing ground in nearly every other market" except the Empire seems somewhat dis-

ingenuous. Actually, though during the past year we have lost ground almost everywhere, our European markets have withstood the pressure best, probably because their trade is more diversified than that of most of the newer countries. Evidence has been accumulating of late that European countries are each other's best customers, and a commercial policy which makes light of that evidence may do incalculable harm to the overseas commerce on which Britain is so dependent.

THE B.I.S. AT WORK.

Speaking to his shareholders recently on the fall of prices, Mr C. E. Neill, Vice-President and General Manager of the Royal Bank of Canada, declared that "these wide fluctuations in the money value of output are clearly a monetary phenomenon which, if properly understood, could be prevented. . . . If the central banks of all the countries on a gold basis should deliberately adopt a common policy they could, within a certain time lag, raise or lower the price level almost at will." The British bankers, on the other hand, in their recent speeches rather warned the public not to expect too much from banking co-operation, and the second interim report of the League of Nations Gold Delegation also emphasised that the depression was not due to purely monetary influences, and therefore could not be cured solely by a joint monetary policy. But whatever view be held as to the precise weight to be attached to central bank action, it is certain that the policy of the central banks is a major influence in the situation and that, whether it be by organising joint action or by refraining from action, the monthly consultations at Basle are of prime importance. We therefore make no apology for reproducing the substance of an address given in Paris recently by Mr MacGarrah, President of the B.I.S., to the American Chamber of Commerce in Paris, in which he sketched the progress, organisation and policy of the bank.

After explaining the international character of the bank, with its twenty-two participating banks, its operations in twenty-four currencies, and its staff drawn from ten different nations, and having referred to the studies that have been made with regard to the organisation of facilities for central dealings in foreign exchange and the adjustment of gold movements, Mr MacGarrah proceeded to describe the work of the bank.

While in the popular mind the bank's activity in connection with the German debt payments is regarded as its principal operation . . . the truth is that this duty has already become the smaller side of the work. . . . Consequently nearly the whole thought and energy of the bank are devoted to other financial fields. Reparation funds proper represented on our last balance sheet under 20 per cent. of our total assets, which then amounted to about \$340,000,000. Similarly, it is a mistake to consider that the institution is one for handling the so-called inter-Ally debts. While Creditor Treasuries may use us like any other bank as a depository for funds which may or may not be ultimately employed to discharge public debts as well as private debts, there is no provision in the Young Plan or in the bank's statutes by which the bank collects from the principal debtor on the one hand and remits directly to the principal creditor on the other.

In addition to the seven founder banks or groups, viz., the central banks of Belgium, England, France, Germany and Italy, the Yokohama Specie Bank of Japan and Messrs J. P. Morgan and associates of America, shares were at once allotted to the central banks of Sweden, Switzerland and Holland, and subsequently to those of Austria, Bulgaria, Czechoslovakia, Danzig, Denmark, Finland, Greece, Hungary, Poland, Roumania, Esthonia, Lithuania and Latvia. The proceeds of the subscriptions were invested in the respective markets of the subscribers. About 35,000 shares out of 200,000 remain for issue to central banks in other countries of the world whose currencies are on the gold or gold-exchange standard. The issue of shares to Portugal and Yugoslavia is awaiting the stabilisation of their currencies. The bank's technical organisation has been placed at the disposal of the central bank of Spain.

The growth of the banking department of the institution has been rapid. The first balance sheet of May 31st of last year showed assets of approximately 300,000,000 Swiss francs. The statement of January 31st last disclosed assets of slightly over

1,700 million Swiss francs. This advance has been primarily due to the co-operation of central banks, which deposit a steadily increasing portion of their foreign currency reserves with us. Such reserves now represent one-half of our assets and liabilities. Another one-quarter relates to deposits of central banks for the account of their Treasuries, and the remaining quarter represents our paid-in capital and permanent deposits entrusted to us pursuant to The Hague Agreements. No deposits have so far been accepted from private banking institutions or individuals.

The Bank does not publish the interest rate it pays for deposits lest it be mistaken as something in the nature of a world discount rate, and alterations in our terms given a significance they do not have. I may say, however, that at present we are allowing one average rate for all currencies on the gold or gold exchange standard."

On the question of the geographical distribution of the bank's growing funds, the President said that hitherto they had not considered it appropriate to publish such business details, giving as one of the reasons that "one of the functions of the bank is to assist the exchanges in times of anticipated stress or temporary need, and it would hardly be helpful to advertise a situation we were assisting to correct by disclosing the changing directions which our funds take." Whether this is a conclusive argument against the powerful considerations which have been urged from time to time on the other side is open to doubt, but at least Mr MacGarrah lifted the curtain a little way.

I may add that we have, and have had, substantial investments in Germany which, as a debtor nation, naturally requires foreign capital. In fact, of our total investments at the end of the last calendar year about 25 per cent. were placed on the German market. The Reich's special need is for longer term credits. Consequently, of our investments for periods of six months or more, over 95 per cent. have been made within Germany. While I cannot discuss our investments in detail, I can say that they are very widespread and that, contrary to some current reports, only a small fraction is placed in the Balkan States, and nothing in countries whose currencies are not yet stabilised.

We may hazard a guess that if the whole schedule were given, it would appear that far the largest investment is in the United States, for though the B.I.S. is not officially a clearing house for international debts, in fact most of the treasuries authorise it to pay the money received from Germany straight to America, and the bank must accumulate its resources against the date of payments.

Dealing with its investment policy, Mr MacGarrah observed that in view of its important main functions the bank subordinates the profit-making aim to a consideration of the effect on central banking policy, the foreign exchanges and the improvement of world credit. The following are its guiding principles:—

The maintenance of great liquidity. This is requisite because half of our funds constitute the foreign exchange reserves of central banks. Such reserves must be quickly forthcoming in emergencies. Besides, to serve as a stabiliser of the exchanges, the bank must be ready to move funds rapidly from one point to another. Consequently, though a third of our funds are placed with us for over thirty-seven years, only 10 per cent. are invested for over six months and nothing over two years, eight to three months being the preference.

We have endeavoured to relate investments directly to the promotion of trade and commerce, national or international, and consequently are large holders of commercial and export bills. We do not finance governments. . . .

We have been prepared, however, to act as trustee for government loans. We are now trustees for the two German loans popularly known as the "Dawes" and "Young" Loans, and also for the Austrian Government 7 per cent. Loan of 1930. We have also been asked to serve as trustee for certain other government loans which will be issued in the near future. . . .

With due regard to our commitments in a given currency and to liquidity, we have endeavoured to move capital from markets where it is superabundant to markets where it is needed.

We move capital from markets of low interest rates to markets of high interest rates, in order to help the trend towards a levelling out of rates and to assist commerce and agriculture in those centres where the interest rate is excessive. Thus, with proper security, we have made advances in certain Eastern European countries.

We have moved our funds in ways aiming to be helpful to currencies which are temporarily or seasonally weak. . . .

We have endeavoured to avoid competition with existing agencies or private banking enterprise and instead to supply new facilities which have hitherto been lacking or unco-ordinated.

Finally, we make investments with a view to organising credit mechanism in monetary centres where necessary instruments of credit are lacking. . . .

The President added that the right of veto which each central bank has over the operations of the B.I.S. in its market has never yet been exercised.

In certain markets we have the central banks as our sole agent and correspondent. In others we have relations with private banks, but only through the intermediary of the central bank. In some markets we work directly with private banks, where the central bank is not prepared to act for us but has no objection to our operating with private banks, but the central bank concerned is fully apprised of every operation undertaken.

Referring to the co-ordinating influences of the bank, the speaker stated that, in addition to the meetings of the board, contact was maintained by repeated visits of central bank officials to Basle and return visits of the officers of the bank and by "a practically continuous series of gatherings of experts to study problems of common concern. It is now an open secret that the recent decision of several central banks to accept a common standard of gold fineness is the outcome of the governors' conversations in Basle."

The President then proceeded to the very interesting problem of future policy, and spoke of two great needs of the movement.

The first is the encouragement of the transfer of capital from the short money market, where it is so plentiful that it is practically impossible to invest even at low rates, over into the intermediate credit market where the supply is insufficient, and to the long-term market where the supply is woefully inadequate. The next need is the reopening of great capital markets, like that in the City of Paris, to foreign financing, especially at intermediate and long term.

The speaker welcomed the recent address of Governor Moret, in which the latter stated that it was good policy to encourage foreign loans at long terms, and expressed the hope that there would soon be such a re-establishment of confidence in America that it would resume the rôle of supplier of funds to sound foreign borrowers.

He then proceeded to make in the following interesting passage the suggestion that the investments of the B.I.S. might be of importance not only in their direct effects, but as an example and an encouragement to others.

The B.I.S. endorses the view that intermediate credits are necessary and desirable; and to demonstrate that its interest is not merely academic its board has authorised the bank gradually to invest \$25,000,000 in such credits of from six months' to two years' maturity. The B.I.S. hopes that its example will set a fashion that will be followed by others who have greater resources which can be utilised in this type of financing.

In conclusion the speaker observed that "under present economic conditions the pressing requirement of the moment to ameliorate world trade and business is the active expansion of long-term credits and foreign lending, which in turn demand political tranquillity and stability, both national and international, to render them practically possible. It is most appropriate that I should mention this subject before the American Club in the City of Paris, because it is upon Paris and upon New York that, owing to the special conditions now prevailing in London, the opportunity and the obligation fall to help themselves by helping others, through making long-term investments." It is to be hoped that the expression of these views representing the joint opinion of the chief central banks of the world may do something to accelerate the processes to which Mr MacGarrah refers.

Notes of the Week.

Indian Developments.—The face of the political situation in India is that of the Sphinx. The secret of the nature of Mr Gandhi's conversations with Lord Irwin has been well preserved, and there is little to be gained by speculating on the outcome. According to cabled reports from India to the London Press, those members of the Round Table Delegation, such as Sir Tej Bahadur Sapru and Mr Jayakar, who have been in contact with the Mahatma since their return to India, profess to find in him more signs of "sweet reasonableness"; and the message which Mr Gandhi has sent to his followers deprecating the use of pickets in circumstances involving a risk of a breach of the peace possibly supports this view. On the other hand, the Mahatma's statement in his newspaper, *Naraji Van*, that intensive boycott of foreign cloth is "the greatest task before the country" can hardly be construed as of good omen for a more accommodating attitude on

the part of Congress extremism, whose damage to India's economic welfare is already illustrated by the nature of this year's budget. Differing profoundly as we do from the Indian policy propounded by Mr Winston Churchill, and somewhat surprisingly endorsed by the Central Council of the National Union of Conservative and Unionist Associations, we are by no means inclined to criticise the policy of the Viceroy in pursuing by every means consonant with the dignity of Government a *rapprochement* with the Congress leader. At the same time there is an obvious danger—so successfully, perhaps *malgré lui*, does Mr Gandhi attract the limelight—that these conversations with Lord Irwin may distract public opinion in India from the work of the Round Table Conference itself and the case which the Indian Delegation to that Conference has to lay before India. We hope that an announcement by the British Government of its plans for taking up the constitutional problem at the point at which the Conference left it will not be long delayed, and that the Cabinet will appreciate the paramount importance of sending to India, to conduct further negotiations, not only a statesman of the highest calibre, but one who, like Lord Sankey, has already won Indian confidence in the past proceedings.

The Trade Disputes Bill.—The Standing Committee of the House of Commons on Thursday evening passed the official Liberal amendment to Clause I. of the Trade Disputes Bill after two days of discussion. The amendment provided that a strike or lock-out shall be illegal "if the effect at any time, by reason of its extension or continuance, is to expose the community, or any substantial portion of it, to danger to health or safety by interfering with the supplies or distribution of essential food, water, light, medical or sanitary services, or other necessities of life." From the outset the Labour members of the Committee made it clear that the amendment was unacceptable to the Government. Sir James Sexton, for instance, said bluntly: "When a strike is declared it is war against society. . . . The only way we can succeed is to stop supplies." Similarly Mr Hayday, President of the Trade Union Congress, described it as a wrecking amendment. Clearly the trade unions have no use for the Bill thus amended, and although no statement of the Government's intention is available up to the time of going to press, it is thought probable that the Government will drop the Bill and make the whole question of strike legality an issue at the next general election. If the Bill is dropped it is all to the good. It has no bearing on the pressing economic problems of the day, and it has wasted a great deal of Parliamentary time. With this red herring removed from the political path, it should be easier for the House of Commons to settle down to more useful work.

South America and the World.—South America has figured rather prominently in the Press during the past week. Sir Eric Drummond, the Secretary-General of the League of Nations, has just returned to Geneva from a journey down the east coast of the continent. The Prince of Wales and Prince George are at this moment in Chile, at the mid-point of a journey which has carried them down the west coast of the continent and is to bring them home the other way. And a new revolution has broken out in Peru. Is this just a fortuitous collection of occurrences, or is there some common factor at the back of them all? Perhaps we can discern some such factor in the new-found solidarity of the world, South America inclusive. The South American Republics can no longer live—or die—unto themselves under the insulating *ægis* of the Monroe Doctrine. The fresh outbreak in Peru is doubtless to be explained in large measure as a reaction to the distress produced by the slump in the world market for South American exports (an export trade on which the economy of most South American countries has now come to depend). The previous revolution, which occurred in Peru last summer, was the first in a whole series of successful or abortive revolutions which ran through South America last year, without sparing even a country like

Argentina, which had established almost as great a reputation for political stability as the English-speaking countries. In Latin America, political revolution, so far as it is not a personal affair, is apt to be the expression of economic *malaise*. But, if South America needs the world-market, the South American market is equally needed by the manufacturing countries of Europe and North America. The Princes' tour synchronises with a "drive" that is being made for the promotion of British trade with South American countries. And, since, in the world of to-day, the economic aspect of international relations is becoming more and more closely integrated with the political aspect, it is not surprising that the Princes' visit should coincide with Sir Eric Drummond's "drive" on behalf of the League of Nations. The Secretary-General of the League was chiefly concerned with Brazil and the Argentine; for the two leading countries of South America have hitherto sat more lightly to the League than the rest. Brazil, who gave notice of withdrawal simultaneously with Spain, because she was not granted a permanent seat on the Council side by side with Germany in 1926, has not, like Spain, returned to the fold, but has allowed her membership to lapse. And the Argentine has been a passive member ever since she failed to carry certain proposals of hers at the first Assembly in 1920. Indeed, it is doubtful whether, in Argentinian law, Argentina is properly a member of the League, since the Government's act of adhesion has never yet been ratified by Congress. Possibly the world slump has inclined South American public opinion to recognise that, for good or evil, every country nowadays is deeply concerned in the general fortunes of the world. Peru can no more live in isolation than China, or Brazil than Poland, in the world as it is.

An American Withdrawal from Nicaragua.—On Friday, February 13th, it was announced at Washington, by the Secretary of State, Mr Stimson, that the President of Nicaragua, General Moncada, has approved an agreement under which all United States marines in Nicaragua are to be withdrawn by June, except a small contingent on non-combatant duty. This announcement heralds the close of a remarkable chapter in the relations between the United States and one of those Central American republics that exist under her shadow. The interest of the United States in Nicaragua is particularly close, because the route for a second inter-oceanic canal in Central America lies in Nicaraguan territory. The United States holds an option for constructing this canal; and the time when the traffic-capacity of the Panama Canal will be exceeded by the demands upon it is already sufficiently within sight to have moved the United States Government, last year, to put in hand a survey of the Nicaraguan "second string." With these considerations in mind, public opinion (not only outside the United States, but also in certain North American circles) was inclined to take a cynical view of United States policy when, in 1926, Mr Stimson himself, as the special representative of President Coolidge, imposed peace upon the main combatants in the Nicaraguan civil war of that year. Thereafter, when one Nicaraguan combatant, General Sandino, refused to come into line, and when United States marines were sent into the interior of Nicaragua to bring General Sandino to heel, the odium under which United States policy was already suffering became accentuated. Nevertheless, the professions which the United States Government made from the outset have now been made good. While some United States marines were campaigning against General Sandino, others were supervising a Nicaraguan general election. And this election, held on November 4, 1928, resulted in the return of General Moncada, the insurgent leader who had been compelled by Mr Stimson to lay down his arms two years before. Thus, perhaps for the first time in Nicaraguan history, a political issue was settled by the vote and not by the sword—and this under conditions which ensured that the vote should be genuinely representative of opinion. The election, thus peacefully and efficiently conducted under the auspices of the United States, produced an immediate *détente* in Nicaraguan party animosities. Its further fruits are apparent in the decision, now announced, that

the presence of United States marines in the country can be dispensed with. In the half sordid, half pathetic annals of the relations between the weak and the strong, this is a welcome chapter.

The Last Terra Incognita.—The conquest of the Poles, and even the discovery of the sources of the Nile, are events that are still within living memory; and even after the tropical forests and the Arctic ice had been mastered by the explorer, the sands of the desert still defied him. Man did not really become master of the desert until he had equipped himself with caterpillar-wheeled motor-cars and aeroplanes. It is these that have conquered the African Sahara. But there is a sister desert, the Rub'-al-Khali, or Empty Quarter of Arabia, which has only been conquered within the last few months—the news of the feat has arrived this very week. It is a wonderful achievement; for the hero of it, Mr Bertram Thomas, is no native of the surrounding Arab countries, but an Englishman; and at the same time he has not done his journey in an aeroplane or a motor-car or any other new-fangled machine from the West, but on camelback. In fact, he has used the Arab "ship of the desert" to make an overland voyage which no Arab, so far as we know, has ever made before him. For the Arabs, who range at will over the steppes and sands of the other three-quarters of their peninsula, have a holy terror of the Empty Quarter, and skirt its fringes with superstitious shrinking. Mr Thomas, on the contrary, has plunged into the unknown and cut right across the Empty Quarter from Dhufar, on the south-east coast of Arabia (roughly half-way between Aden and Muscat) to Dohar, a place on the east coast of the Qatar Peninsula that sticks out into the Persian Gulf. Intrepid though the journey was, it was no foolhardy venture that succeeded by a stroke of luck, but a carefully considered sequel to a series of reconnaissances. So Mr Thomas has caused the last *terra incognita* to be expunged from the map of the world. It is strange that the tract which defied the explorer's efforts the longest should have lain so near to some of the most frequented routes—the routes by which Muslim pilgrims converge annually on Mecca, and the route by which Americans and Europeans travel (calling at Aden on their way) to India and the Far East; that the Arabian hinterland of Aden and Mecca did not yield up its secret till we had become familiar with Central Africa and established a nodding acquaintance with the Poles.

Anglo-French Monetary Discussions.—The *communiqué* issued on Tuesday, summarising the progress of the recent conversations between the representatives of the British Treasury and of the French Ministry of Finance, may have disappointed exaggerated hopes raised by antecedent rumours that some spectacular agreement was on the point of being concluded; but, though the wording of the statement is somewhat colourless and guarded, its general tenor is by no means unsatisfactory. The *communiqué* places it on record that the French authorities have been, and are, anxious to avoid any measures tending to bring about abnormal gold movements. Though the view is held in Paris that the methods of managing public funds in France cannot have the influence on gold movements sometimes attributed to them (the immobilisation of Treasury balance is, of course, referred to), the French Treasury announces its intention "of continuing to take account in this respect, so far as consistent with its own requirements, of the repercussions which the operations of the public accounts might have on the monetary market." It is further stated that the two Treasuries are in agreement in attaching cardinal importance to the resumption of foreign lending on a normal scale by the "creditor countries," though it is recognised that the present credit difficulties are largely due to lack of confidence on the part of the investor. It is agreed that it is desirable to take any practicable steps to promote effective co-operation between loan markets, and in this connection it is hoped that good results may come from the schemes being explored by the League of Nations with a view to facilitating the placing of

agricultural credits in Central and Eastern Europe. So far, so good; and if it be objected that the *communiqué* expresses pious aspirations rather than concrete plans for co-operation, the answer is that the technique of international monetary co-operation cannot be evolved, as it were, over-night. It is of great importance that friendly contact between the authorities in London and Paris should have been established and, further, that there should be an assurance that this contact will be maintained and strengthened by exchanges of views in the future.

The Balance of Payments.—The current issue of the *Board of Trade Journal* contains the usual annual estimate of our balance of foreign payments, including goods, services, interest, etc. The details, which are, of course, only approximations and liable to a considerable margin of error, are as follows:—

BALANCES OF INCOME AND EXPENDITURE IN THE TRANSACTIONS (OTHER THAN THE LENDING AND REPAYMENT OF CAPITAL) BETWEEN THE UNITED KINGDOM AND ALL OTHER COUNTRIES.

	1928.	1929.	1930.
	In £ million.		
Excess of imports of merchandise.....	352	382	387
Bullion imports (+) or exports (—).....	+6	—16	+5
Excess of imports of merchandise and bullion.....	358	366	392
Estimated excess of Government receipts from overseas*	15	24	21
Estimated net national shipping income†.....	130	130	105
Estimated net income from overseas investments	270	270	235
Estimated net receipts from short interest and commissions	65	65	55
Estimated net receipts from other sources	15	15	15
Total	495	504	431
Estimated total credit balance on items specified above	137	138	39

* Including some items on loan accounts.

† Including disbursements by foreign ships in British ports.

Comparing 1930 with 1929, it will be seen that on "trading account" there has been an increase of £5.0 millions in the adverse commodity trade balance; and decreases of £3.0 millions in Government receipts, of £25.0 millions in shipping earnings, and of £10.0 millions in receipts from short interest and commissions. These add up to a "loss" compared with last year of £43.0 millions, to which must be added an estimated contraction of £35.0 millions in net income from overseas investments, and also a figure of £21.0 millions, representing the replacement of £16.0 millions of bullion exports in 1929 by £5.0 millions of bullion imports in 1930. Thus there has been a total contraction of £99.0 millions in the country's final credit balance on "current" as opposed to "capital" account, and the 1930 credit balance stands at the very low figure of £39.0 millions. This contraction of £99.0 millions, unwelcome though it is, is easily explained. The trade depression has reduced the earnings of British ships, bad trade and low commodity prices have made inroads into the profits from acceptance commissions and general financial business, short interest rates are appreciably lower than in 1929, and income from overseas investments of an industrial character has also felt the effects of the trade depression. It will be noticed that this year there has been a revision of the estimates of the net income from overseas investments, the figures for 1928 and 1929 having been scaled down by £15.0 millions. The *Board of Trade Journal* explains that in 1929, as a result of investigations made by Sir Robert Kindersley, the Board revised its estimate of the net interest receipts from foreign investments for recent years, giving a figure of £285 millions for 1927 and 1928, this figure being substituted in the estimate for 1927 for £270 millions, which was the figure previously given for that year. The figure of £285 millions was retained for the year 1929, as it appeared that the reduction in profits of certain companies about balanced income from new investments. The Board has, however, reconsidered its estimate as a result of the investigations made by the *Economist* and published by us in two series of articles, the first of which appeared in March, 1930, and the second in October and November,

1930. Our readers will remember that as a result of our investigation we suggested that the figure of £285 millions was excessive by about £30 millions. The Board points out that our investigation was based upon a sample covering something over 40 per cent. in the case of issued capital of British companies operating abroad and companies registered abroad in which British capital is invested, and it is, of course, impossible to be certain that a sample inquiry—even covering so large a proportion as 40 per cent.—is accurate. Moreover, the Board suggests that the *Economist's* calculation makes an insufficient allowance for the capital built up out of reserve, and its examination of the data given in the annual reports of the Commissioners of Inland Revenue does not appear to require so large a reduction of the estimate as we have suggested. They have, therefore, provisionally taken the intermediate step of reverting to the basis of the estimate employed until three years ago and substituting £270 millions for £285 millions in the estimates for 1928 and 1929 pending further inquiries which Sir Robert Kindersley is making. We shall have occasion to refer to this matter and to the views expressed by the Board of Trade on a subsequent occasion.

Deadlock in Australia.—The week's news from Australia suggests that Mr Scullin's position is becoming more and more uncomfortable. On the one hand, the unity of the Labour Party is being increasingly impaired by the domestic quarrels of the Caucus in New South Wales; on the other hand, little progress is being made by the Commonwealth Premier in bringing about the essential agreement between the Cabinet and the banks. On February 13th, it will be recalled, the Conference of Premiers adopted a so-called "Three-Year Plan" for dealing with the financial problem. Its main heads were a reduction in public service salaries to equal the fall in the cost of living; a flat rate of 3s. 6d. in the £ income tax to be imposed at the source on the interest on Commonwealth and State loans which are subject to federal income tax; the preparation of plans to relieve unemployment by a Council representing the banks and Governments; immediate action to fund the floating debt; the provision of overseas interest by the banks from an exchange pool; and finally, substantial reductions in bank interest rates. Following prolonged negotiations between Mr Scullin, Mr Theodore and the bankers during last week-end, it was announced at the Premiers' Conference, on Wednesday, that the bankers were unfavourable to this plan. Mr Theodore then appears to have put forward the notorious scheme for inflation by the Commonwealth Bank which was adopted last November by the Labour Caucus. Acceptance of this wild-cat proposal by the Premiers' Conference seems unlikely, and Mr Scullin, faced with this impasse, has a difficult task in deciding what his next move shall be.

Sheffield and South America.—The mission of Sheffield manufacturers which went to Brazil, Argentina, Chile, Uruguay and Peru to investigate the possibilities of improving the sale of their goods has now issued its report.* The relative loss of ground by British exporters to these and other South American markets, as compared with the progress made by Germany and the United States, which is illustrated by a table of official export statistics, is attributed in part to the effects of the war, which forced upon South Americans the discovery that cutlery and tools could do satisfactory work even when not branded with the word "Sheffield," but mainly to that old bugbear of British trade, neglect of the markets. Very few Sheffield firms have adequate representation in South America, and visits from managing directors are infrequent, so that manufacturers have lost touch with changes in requirements. The most serious development, whose effects might have been forestalled if

Sheffield firms had been more closely in touch with their South American customers, has been the substitution of cheaper types of goods for the high quality products formerly bought from Sheffield. It is believed that in some cases competitive qualities are already available in Sheffield, and that the immediate need is to find means of placing the manufacturers of these in touch with South American importers. Smaller points, which in the aggregate make up a substantial balance in favour of our competitors, especially of Germany, who has made great strides in these markets in the last three years, are attention to convenient terms of payment, to the quotation of c.i.f. terms including the supply of cases, to methods of packing, to frequent replacing of samples, and to the preparation of catalogues with special regard to the peculiar requirements of the market. A further minor point worthy of attention is the study of the intricacies of the tariffs of these countries. Remarkable instances are quoted of the ingenuity of German firms in so adapting their goods to the peculiarities of tariff specifications as to secure the lowest possible rates of duty. The most important recommendations made by the Mission with a view to remedying these deficiencies in the British handling of the market are: the formation of a special South American section of the Sheffield Chamber of Commerce; the appointment of a special Sheffield Trade Commissioner to follow up the work of the Mission; the grouping into selling organisations of non-competing Sheffield firms; and more frequent and less hurried visits to the market by principals and managing directors. The personnel of the Mission, which was headed by the then Master Cutler, is calculated to inspire the confidence of the Sheffield manufacturers, so that we may hope that steps will be taken to carry out these recommendations.

British Production.—Industrial activity last year, as reflected in the Board of Trade index of production, was 7.6 per cent. lower than in 1929, and 2.1 per cent. below that of 1928. The following table shows the figures for the respective groups in each of the last three years, and in the September and December quarters of 1930:—

INDEX OF PRODUCTION (1924 = 100).

Group.	Year 1928.	Year 1929.	Year 1930.	Sept. Quarter, 1930.	Dec. Quarter, 1930.
1. Mines and quarries	89.2	96.8	91.3	84.3	91.4
2. Iron and steel and manufactures thereof	102.3	114.0	88.8	80.0	65.8
3. Non-ferrous metals	119.3	120.5	119.1	128.6	118.3
4. Engineering and shipbuilding	113.1	121.0	116.7	112.2	106.5
5. Textiles	99.9	92.5	79.3	71.5	75.2
6. Chemical and allied trades	110.3	115.8	101.2	104.2	94.5
7. Paper and Printing	(a)	(a)	(a)	(a)	(a)
8. Leather and boots and shoes	102.0	98.5	101.4	98.3	95.0
9. Food, drink and tobacco	101.9	106.0	104.9	108.3	109.4
10. Gas and electricity	125.0	135.8	139.7	(a)	(a)
Total of manufacturing industries (2-10)*	109.4	115.5	106.3	103.3	100.9
Total of all groups (1-10)*.....	105.5	111.8	103.3	99.4	99.0

* Including also various industries not specified above.

(a) Adequate information not available. Information received is included in the general index.

A comparison of the past year with 1929 shows a decline in each group with the exception of gas and electricity, and leather, boots and shoes. The recession in activity has been most pronounced in the iron and steel, textile, and chemical groups, which declined by 22 per cent., 20 per cent. and 12.5 per cent. respectively. The output of coal was about 5 per cent. below that of 1929. A relatively small decline of 3.6 per cent. in the engineering and shipbuilding group is ascribed to the improvement, during the latter half of the year, in electrical engineering and allied industries, which partially offset the depression in shipbuilding and marine engineering. As the quarterly figures of the complete index show, there has been a downward trend in the volume of production throughout the year, whereas in 1928 there was a recovery of over 8 per cent. in the last quarter, and even in the last quarter of 1929, though the depression had

* "Report of the Sheffield Industrial Mission to South America." H.M. Stationery Office. 1s. 3d.

already set in, the index rose 3 per cent. above the level of the third quarter:—

	1924 = 100.			
	March Quarter.	June Quarter.	September Quarter.	December Quarter.
1928	109.3	103.6	100.2	108.4
1929	110.6	112.0	110.7	114.0
1930	110.9	103.1	99.4	99.0

In the past quarter a seasonal increase in coal and textiles was outweighed by a further recession of activity in the heavy industries, in non-ferrous metals, and in the chemical trades. The London and Cambridge figures for the four quarters of the past year (109.6, 100.9, 90.7 and 93.5 respectively) show a different trend. The decline in this index was more rapid in the first three quarters, but was followed by a small recovery in the last quarter. This is partly due to the fact that, whereas according to the Board of Trade figures the production of non-ferrous metals was 8 per cent. and that of chemicals 9 per cent. lower in the fourth than in the third quarter, the London and Cambridge indices for the same groups show rises of 4 per cent. and just under 1 per cent. respectively. These divergences, arising from differences in compilation, serve to emphasise the fact that, as long as complete data covering all branches of industrial activity are not available, it is impossible to construct an index which exactly reflects the changes in the total volume of production.

World Rayon Production in 1930.—For the first time for many years the extraordinarily rapid progress of the world's rayon industry suffered in 1930 a slight setback. The following table shows the output of rayon yarn in the principal producing countries, with an estimate of world production and consumption:—

PRODUCTION OF RAYON YARN. Million lbs. (excluding waste.)									
Period.	U.K.	U.S.A.	Italy.	Germany.	France.	Japan.	World Production.		World Consumption.
							Total.	British proportion of total.	
1924 ...	24.2	38.7	18.5	23.7	12.3	1.4	141	17.2	Not known
1925 ...	26.4	51.0	24.0	25.0	14.0	2.8	173	15.3	"
1926 ...	25.5	61.5	35.0	26.0	17.5	5.5	219	11.6	"
1927 ...	38.6	75.0	36.0	31.0	21.0	8.0	267	14.5	275
1928 ...	52.0	98.7	47.0	41.0	30.0	12.0	347	15.0	328
1929 ...	53.1	122.1	59.0	45.0	37.0	18.0	403	13.2	398
1930 ...	47.0	100.0	65.2	46.0	37.7	34.5	389	12.1	368

Although world production in 1930 shows a decline of 14 million lbs., the decrease was confined to the United States and the United Kingdom, whose output declined by 22 million lbs. and 6 million lbs. respectively. Elsewhere the outstanding feature was the rapid advance of the industry in Japan, which nearly doubled its output during the past year. Italy, too, made considerable headway with an increase of 6 million lbs., while France and Germany both slightly exceeded their previous figure. A comparison of world production with consumption shows that in spite of a reduction of 14 million lbs. in output, there remained a surplus of yarn amounting to 21 million lbs. As will be seen from the above table, the proportion of the world's rayon yarn produced in this country has been steadily declining from 17.2 per cent. in 1924 to 12.1 per cent. in 1930.

Higher Wool Prices?—After their prolonged decline, the prices of fine wools have lately been firmer. The outlook, writes a Bradford correspondent, favours the probability of still higher prices. In the first place, consumption is by no means unsatisfactory. Low prices have led to greater demand for fine merino wools, and merino combers in Bradford have been working since the strike of last summer at a higher percentage of capacity than they have enjoyed for some time. Whereas cross-bred consumption is far below normal, manufacturers

who have turned in the last few years from botany worsted to the production of rayon fabrics are in some cases turning back to high-class worsted again, finding orders more plentiful. In the second place, wool, unlike cotton or wheat, has not been subject to the influence of artificial methods of supporting prices and output. In both Australia and South Africa the past eighteen months' low prices have led to reductions in flocks and considerable slaughter for mutton purposes. Stocks of fine wool overseas are not abnormally high, and reduced production for the next two years may be regarded as almost certain. Under these conditions, since the flocks cannot be rapidly increased again, higher prices for fine wools are a long-run probability, and it is not surprising that a number of people desirous of transferring balances from Australia to London should have purchased Australian wool. Their calculation—by no means unreasonable—is that by holding the commodity for a few months, and then re-selling in London, they may obviate the greater part at least of the loss which an ordinary exchange transaction would involve.

The Swiss Bank Corporation.—The Swiss Bank Corporation is, by common consent, one of the leading international banks; and its balance sheet and, still more, its profit and loss account will therefore repay study at the present moment. The main features of the balance sheet, which is summarised in the first table, are a steady increase in fixed deposits, a marked increase in bills, and (since last year) a small contraction in acceptances and advances. The increase in fixed deposits is easily explained by the greater amount of money now lying idle as the result of bad trade, and the decreases in advances and acceptances are less than might have been feared.

	Dec. 31, 1928.	Dec. 31, 1929.	Dec. 31, 1930.
	£ mill.	£ mill.	£ mill.
Fixed deposits	7.35	9.10	9.84
Time deposits	16.79	22.50	21.78
Sight deposits	19.55	18.17	20.32
Acceptances	4.70	4.77	4.39
Cash	2.80	2.66	3.81
Balances with other banks	9.77	11.30	11.07
Bills receivable	9.70	13.08	14.29
Investments	2.9	3.4	3.3
Advances	27.02	29.90	29.73

The profit and loss account, which is presented with a commendable amount of detail, is particularly instructive.

	Dec. 31, 1928.	Dec. 31, 1929.	Dec. 31, 1930.
	£ mill.	£ mill.	£ mill.
General expenses and taxes	0.94	0.99	1.06
Provision for bad and doubtful debts, depreciation, &c.	0.05	0.08	0.08
Discounts	0.66	0.72	0.61
Interest	0.27	0.35	0.43
Commissions	0.46	0.49	0.52
Investments and syndicates	0.16	0.15	0.16
Coupons, foreign moneys, &c.	0.06	0.06	0.07
Net profit	0.61	0.69	0.64

Despite the expansion in the bank's bill portfolio, there has been a decline of £110,000 in earnings from "discounts," which is readily explained by the fall in rates. "Interest," on the other hand, shows a somewhat surprising increase of £80,000, although advances and investments are both lower than a year ago. Other items, such as commissions, investments and syndicates, display a general improvement, and, as the report shows, the bank had its full share during the past year of a fairly extensive amount of world long-term financing business. Unfortunately, the bank's general costs, including taxes, increased by £70,000, so that, with the diminished return from discounts, net profits fell by £53,000. Allocations of £40,000 made in 1929 to the reserve fund are not being repeated, and the contraction is thus reduced to £13,000. Hence, the bank is easily able to repeat its dividend of 8 per cent., and its directors and management are to be congratulated on the way in which they have guided the bank with small loss through a difficult year.

Anglo-International Bank.—In view of the intensity of the trade depression and the general fall in prices, it might have been expected that the principal items in the accounts of this bank, and also the profits for the year, might have shown a contraction since 1929. This, however, has not happened, for with the single exception of advances, which have fallen to £44,000, there has been a general increase. The salient figures in the accounts are given below:—

	Dec. 31, 1929.	Dec. 31, 1930.
	£ mill.	£ mill.
Deposits	4.41	4.55
Acceptances	2.56	3.03
Cash	0.13	0.20
Money at call	0.40	0.52
Bills receivable	0.44	0.75
British Government securities (including Treasury bills)	0.60	0.75
Investments in banking and industrial undertakings, &c.	0.63	0.59
Advances	3.76	3.32
Profits to date	0.12	0.12

The increase in acceptances is particularly notable, for most banks have suffered a marked decline in this class of business. Such a decline is the natural result of bad trade and low prices, and this bank is to be congratulated upon the way in which it has improved its position in the face of the present adverse circumstances. Another matter for congratulation lies in the small increase in the bank's profits from £117,695 to £120,475. As in past years, no dividend is declared, the year's profits being retained in hand, mainly for reserve and contingencies. Still, the low level of interest rates, and the less fortunate experience of other banks, makes this increase in profits, small though it is, a notable achievement.

INSURANCE NOTES.

Pearl Assurance Company.—The 1930 report of the Pearl shows that, while the volume of new life assurance business transacted in that year fell off both in the ordinary and in the industrial branches, the profits earned (more particularly the rate of profit earned) underwent a further expansion. The valuation results of the last three years are shown as follows:—

ORDINARY BRANCH.			
	1928.	1929.	1930.
	£	£	£
Surplus earned during year	837,363	980,508	1,105,580
Brought forward from previous year	73,798	113,113	76,355
	911,161	1,093,621	1,181,935
Allocations:—			
To Policyholders' bonus	617,375	684,132	736,013
„ Shareholders' account	154,344	171,033	183,692
„ Investment reserve fund	...	135,196	150,000
„ Staff pension fund	26,329	26,905	26,274
„ Carry forward to next year	113,113	76,355	85,956
	911,161	1,093,621	1,181,935

INDUSTRIAL BRANCH.			
	1928.	1929.	1930.
	£	£	£
Surplus earned during year	359,334	1,004,895	1,208,679
Brought forward from previous year	86,296	96,959	117,284
	445,630	1,101,854	1,325,963

„ Investment reserve fund	...	64,804	200,000
„ Staff pension fund	73,671	73,095	73,726
„ Carry forward to next year	96,959	117,284	138,387
	445,630	1,101,854	1,325,963

The feature of the allocations in both branches is the further substantial amount set aside for investment reserve fund, bringing the amounts of these funds in each

case to £300,000. As the total life funds in the two branches now amount to over £54 millions, these are still comparatively small reserves, though the book value of the assets no doubt covers a further undisclosed hidden margin for contingencies. The reversionary bonus declared in the ordinary branch has been maintained at the same rate as before, namely, 46s. per cent. on the sums assured in force. In the industrial branch in which profit-sharing was inaugurated in 1929, the sum allocated has again been utilised to provide a reversionary bonus on all policies now in force which were effected prior to 1924 at rates equivalent in the case of whole life assurances to 16s. for policies subject to a weekly premium of 1s., and in the case of endowment assurances to 12s. for policies subject to the same weekly premium. With regard to the new life assurance business, the single premiums received were heavily reduced, following upon the Finance Act, 1930, and this has been largely responsible for the decline in new sums assured from £11,652,887 to £10,377,395. In the industrial branch new sums assured were issued in respect of nearly 1½ million policies for £19,980,266, compared with £20,603,266 in 1929. In both branches the company has evidently experienced a favourable mortality year, the amount paid in death claims showing a reduction. Interest earnings, in spite of the rise in income tax, were maintained at £4 14s. 4d. per cent. net in the two branches combined, compared with £4 15s. 2d. per cent. net in 1929. The expense ratios in the ordinary and industrial branches respectively were 10.8 per cent. and 32.9 per cent., in both cases a substantial reduction on the corresponding figures for the previous year. The balance sheet shows two features of interest. In the first place mortgages on properties outside the United Kingdom have been increased during the year by £660,000, and now amount to £785,000. This item appeared for the first time in the 1928 balance sheet. The other item of interest is the further large increase in the amount invested in British Government securities, which are responsible for an unusually large proportion of the total assets, amounting to nearly 40 per cent. The name of the company has been associated for so many years with the conduct of industrial, and more recently with ordinary life assurance, that it is not generally realised that it now also has a flourishing business in fire and general insurance, this development having been started in 1919. In 1930 the total premium income in these branches showed a small increase, and now amounts to £665,000, and after taking account of interest earnings, contributed to profit and loss account a sum of £61,633, compared with £47,757 in 1929. In spite of the increase of £200,000 in paid-up capital, the dividend has been maintained at 50 per cent. net at an additional cost of £75,000. At the present price of 12½ for the £1 fully-paid shares, the yield is approximately 4 per cent. net.

Scottish Provident Institution.—This institution issued 3,677 new life policies in 1930, compared with 3,888 in 1929. Proposals were received for a total amount of £3,860,000, but owing to non-completions, etc., and more particularly to a large increase in the amount re-assured with other offices, the total net new business showed a decline from £3,098,580 to £2,891,393. On the other side of the picture the institution appears to have had an extremely favourable year for death claims, the amount paid out under this heading being £779,256, compared with £908,977 in the previous year. The ratio of the amount of the actual to the "expected" claims is stated to have been under 60 per cent., compared with 69 per cent. The total funds show a further large increase, and now amount to £22½ millions. Of this sum, £200,000 has been transferred, in 1930, to the investment reserve fund, increasing it to £500,000. The rise in the income tax has been responsible for a small decline in the net rate of interest earned, from £4 18s. 4d. per cent. to £4 15s. per cent. The expense ratio of 17.24 per cent. (compared with 17.98 per cent.) appears at first sight to be high, but is largely explained by the fact that the institution, which has a special method of bonus distribution, charges unusually low rates of with-profits premium. During the year the amount invested in mortgages on properties within Great

Britain and Northern Ireland has been reduced from £1,408,000 to £1,294,000. For the first time for some years British Government securities show an increase, amounting to over £400,000. A rise in foreign Government securities has been approximately balanced by a fall in foreign provincial securities, while both the items of debentures and preference stocks have undergone a normal increase. There has also been a further small rise in the amount invested in ordinary stocks, the total investment in this form of security being now £2,611,000, or approximately 12 per cent. of the total assets. The chairman, in his speeches at the last two annual meetings, has afforded a certain amount of information as to the value of the institution's Stock Exchange securities. From this it appears that on December 31, 1929, the market value of the Stock Exchange securities showed a substantial surplus over the value at which they stood in the books. At the annual meeting, held this week, he stated that the difference between the market value of the Stock Exchange securities and the values at which they stand in the balance sheet, shows a depreciation of less than three-fifths of 1 per cent. This depreciation, amounting to approximately £100,000, is amply covered by the investment reserve fund of £500,000.

United Kingdom Provident Institution.—The year 1929 was a bonus year for the institution, and, as usually happens on such occasions, was characterised by an increased volume of new business. This circumstance explains a falling off in total new business in 1930 from £3,335,080 to £3,079,723, the reduced amount being practically equal to the 1928 total. The fund appears to have followed a normal course of expansion and has increased from £18,232,000 to £18,860,000. The only item of particular interest in the revenue account is "Surrenders," which are responsible for an increase from £128,000 to £201,000, to be explained partly, no doubt, by the conditions of trade depression. Bonuses in cash, as might be expected following upon a bonus distribution, have increased from £1,500 to £11,000. The rate of interest earned by the institution is on the low side in comparison with other companies, though, in spite of the rise in income tax, it was increased during the year from 4 11s. 11d. per cent. net to 4 12s. 3d. per cent. net. Expenses, on the other hand, are substantially below the average, and the expense ratio of 1930, namely, 13.4 per cent., compares with 12.4 per cent. in 1929. In addition to an increase of £200,000 under the heading "Mortgages on Property," the balance sheet shows several important changes during 1930. British Government securities have undergone a reduction of nearly £500,000, and United Kingdom municipal securities a reduction of over £150,000. Indian and Colonial Government securities have been reduced by £161,000, and Colonial municipal securities have been increased by almost the same amount. Foreign Government securities have gone up by £180,000 and foreign municipal securities by £135,000. Practically no increase is shown in the holding of preference and guaranteed stocks, but debentures, both home and foreign, have risen by £740,000.

Marine and General Life.—This highly respected society is the smallest amongst the Mutual offices, though founded in 1852. As its name suggests, it has always had a close connection with the shipping industry, and its present chairman and deputy-chairman, Mr. A. M. Lubbock and the Hon. R. D. Denman, are directors of the R.M.S.P. and P. & O. Company respectively. In spite of the fact that 1929 coincided with the closing year of the quinquennial period, and the circumstance that the 1930 Finance Act cut out single-premium policies as a source of business, the society succeeded in slightly increasing the total sums assured granted under new policies in 1930, the amount having risen from £333,606 to £358,871. The rise in the standard rate of income tax has been responsible for the drop in the net rate of interest earned from £4 19s. to £4 16s. 11d. A small reduction in expenses has been more than counterbalanced by a rise

in commission paid, and the expense ratio has risen from 16.8 per cent. to 18.8 per cent. The total assets amount to just over £3½ millions, of which an unusually high proportion, namely, 82 per cent., is invested in Stock Exchange securities. In valuing its assets the society adopts the conservative practice of giving immediate effect to all depreciation, but of taking credit for no appreciation, with the result that at the end of 1929 the book values of the assets included a certain amount of hidden reserve, in addition to which the society carried forward from the 1929 valuation the sum of £84,000.

National Mutual of Australasia.—This important Australian mutual office, with assets of over £30,000,000, transacts a larger proportion of its total business in this country than any other of the Dominion offices. In the year 1928, for instance (the latest year for which the information is available), approximately 25 per cent. of the total business was attributed to the United Kingdom. Commenting on the report a year ago, we noted that the new business showed a decline owing to a reduction in the amount of endowment policies issued, and in policies issued for single premiums. This same tendency has been continued during the year ended December 30, 1930, with the result that the total new business has declined from £9,863,350 to £9,201,023, but no information is furnished as to the business separately transacted in this country. The association has been accustomed to earning a high rate of interest on the funds, and the net rate earned has increased somewhat during the year under review, being £5 6s. 11d. per cent., compared with £5 6s. 0d. per cent. in the preceding financial year. The business has always been characterised by a moderate expense ratio, having regard to the United Kingdom organisation, and the figure worked out last year at 13.8 per cent., compared with 14.2 per cent. in the year 1928-1929. In view of the depreciation which has occurred in Australian Government securities during the past three years, the greatest interest attaches to the balance sheet. The latest year for which the Board of Trade returns are available is that for the year ended September 30, 1929, and on that date the total assets amounted to £32,000,000. The distribution of these assets was as follows:—

	£
Mortgages on property outside the U.K.	8,756,000
Loans on the Association's life policies	5,202,000
Other loans	1,081,000
British Government securities	712,000
Indian and Colonial Government securities ...	8,098,000
Indian and Colonial municipal securities.....	1,642,000
Other Stock Exchange securities.....	2,543,000
Properties	1,792,000
Other assets	2,342,000
	£32,168,000

It may be assumed that the item "Indian and Colonial Government and Municipal Securities" is mainly Australian, and the same, no doubt, applies to "Mortgages." Holdings of Australian Government and municipal securities are no doubt for the most part in the form of internal bonds, which have depreciated to a much lesser extent than have sterling securities. For instance, the movement of the prices of Commonwealth of Australia 5 per Cent. Stock, 1945-75, may be compared with that of Australia 5½ per Cent. Stock, 1943:—

	Prices on		
	Sept. 30, 1929.	Sept. 30, 1930.	Feb. 19, 1931.
Commonwealth of Australia 5% Stock, 1945-75 (External Loan) ...	94	85	65
Australia 5½% Stock, 1943 (Internal Loan)	99½	91½	89½

According to the certificates attached to the balance sheet, the values of Stock Exchange securities on December 30, 1929, were "the respective amounts at which they were purchased after proper allowance in the case of redeemable stocks to provide for redemption at par." The association has an investment fluctuation reserve of £181,000.

Soldiers' Bonus — Public Finance — Share Market — Industry — Money.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 13.

AFTER many quick changes in sentiment towards a Soldiers' Bonus Bill, the Ways and Means Committee of the House of Representatives has reported to Congress a Bill which may go through. Whether President Hoover will sign it is difficult to say, but pressure on him to do so will be strong. He has already been criticised for his opposition to food relief appropriations, and the bonus bill now before Congress merely increases the present loan limit on the soldiers' compensation certificates to 50 per cent. of face value and lowers the rate of interest which the Government shall charge borrowers from 6 to 4½ per cent.

Mild as this Bill is compared with the first proposal to pay outright the entire face value of the certificates, involving approximately \$3,400,000,000, the outlook is considered gloomy by banks holding large portfolios of Government bonds and by corporations which had hoped to borrow in an exceedingly easy money market. The Treasury will be obliged to provide cash for the bonus by long-term financing. It is estimated that at least \$700,000,000 will be required should the Bill pass. If all ex-soldiers took advantage of the Bill to borrow their full allowance at the reduced rate, nearly two billions would be required.

An indication of how much the Treasury's credit has already been hurt by the increased needs for soldiers' loans under existing provisions and by the outlook for further financing will be available when bids are submitted shortly on the recent tender of \$150 millions of discount bills. The issue will retire \$127 millions falling due and provide additional money for soldiers' loans.

Bids made on a \$50 millions issue a fortnight ago were accepted at an average rate of around 1 per cent. Some predict that the best the Treasury will be able to do this time will be close to 2 per cent., although others regard that figure as too high. Changed conditions have caused revision of ideas on Treasury financing for the March 15th tax quarter, when approximately \$1,100,000,000 in 3½ per cent. notes must be refunded. It had been planned originally to deal with that by a long-term issue, but a portion at least must be covered with short-term borrowing. Definite plans probably cannot be made until next month, when more will be known about soldiers' bonus and the market for Government securities.

Recently the Treasury again cut the interest rate which it requires banks to pay on its deposits. The new rate of 1 per cent. will make it more desirable for banks to subscribe to short-term notes and certificates, whenever offered, because payment by banks for such issues is made by crediting the Treasury with a deposit. Probably it would be possible for the Treasury to refund the entire amount due in March with a note or certificate issue, but since many holders of the maturing notes took them as a conversion of the Second Liberty Loan bonds and desire to continue as long-term investors, it is likely that the Treasury will issue at least \$250 millions in long terms. At present the Treasury would probably have to pay at least 3½ per cent. on long terms.

Pessimism over the state of Government finance has increased recently. The Under-Secretary of the Treasury, in a speech here a few days ago, suggested that the deficit for the current fiscal year might reach \$500 millions. It may easily be greater than that in the 1932 fiscal year, with increased expenditures and the prospect for smaller corporation and individual earnings this year than in 1930.

General business sentiment has been helped a good deal by nearly a week of advance in the share market. Naturally the rise has been hailed as a sign of clearing skies, and the market's signal failure to forecast correctly

just a year ago is largely forgotten. Undoubtedly the firmer tone has had much sound buying under it, by investors who are confident that the worst has passed. At the same time, there is no longer any great press of liquidation. Many who sold last year to establish losses for tax purposes have sought to replace their securities. The main stimulant has, however, come from speculative cliques and individual professional operators who have seized the opportunity which excessively cheap money and an overcrowded short interest has given them. The short interest has proved larger than was generally supposed and volatile issues have run up sharply. The increase in speculation on the long side is indicated by a rise this week of \$33 millions in brokers' loans, the first upturn for twenty weeks, apart from a negligible advance at the beginning of the year which had nothing to do with market conditions.

Obviously the advance is based on hopes of business improvement rather than on visible signs of it. Such recovery as has taken place is only seasonal in some instances and less than that in others. The steel trade has had no more than seasonal improvement, operating around 50 per cent. at present. Motor producers have not sold many cars since the beginning of the year, although they have manufactured more. Building has been stagnant. Railroad traffic has risen slightly, but the gain is below normal and car loadings are still down to the 1921 level. Earning statements for January show continued declines. The copper industry is making some progress. Surplus stocks of refined metal were down 3,000 tons in January, the decline being about the same as that for December. It will take a long time to reduce them to manageable proportions, but the end to the increase is encouraging. Prices were marked up to 10 cents a pound in the hope of attracting buyers who had refused to take metal at 9½ cents, but the market remains thin.

Conditions in the oil industry are growing rather more unsettled. It is now believed that the proposal to restrict imports cannot pass this session of Congress, and it is generally opposed by the oil industry, with the exception of the very small producers in the mid-continent area. The greatest apprehension has been raised by the increasing output of a new pool in East Texas, which is threatening the shaky price structure. Some satisfaction was felt by the Court decision permitting the Standard Oil Company of New York to merge with the Vacuum Oil Company, and it is likely that the Government will not appeal to the Supreme Court. The decision is liked principally as significant of a changing attitude of the courts towards large industrial combinations, for the actual benefit to Standard Oil of New York is not generally expected to be great, as little can be done towards reducing operating expenses.

Credit is still too plentiful and the recent export of funds in search of better short-term employment has made no appreciable difference. Banks are finding it difficult to place all their money day to day at the 1 per cent. rate which has been almost unbroken since the beginning of the year. This week's statement of the Federal Reserve system shows unchanged holdings of Government bonds and member bank discounts, but bill holdings are down slightly, leaving a reduction of \$17 millions in total credit outstanding and an increase in the reserve ratio to 83.5 per cent. Gold movement is negligible. Reporting member banks reveal a continuation of the process of increasing investments and diminishing loans, both against security collateral and for commercial purposes.

FRANCE.

Disarmament Discussions — Monetary Conversations — Colonial Loans — Impending Conversions.

(FROM OUR CORRESPONDENT.)

PARIS, February 25.

THE visit to Paris of the British Foreign Secretary, for the purpose of furthering, in conference with the Quai d'Orsay, an agreement on naval disarmament, has occupied a large

amount of space in the Paris Press, while the renewed conversations here between British and French Treasury officials, in regard to the general international monetary situation, have been allowed to pass almost without comment. The reason is perhaps not far to seek. French opinion is deeply interested in the question of naval disarmament from the fact that, as it is generally considered here, this country occupies a much more difficult situation and stands to lose much more, from any agreement in this regard, unless some means can be found to modify the Italian attitude, than it can hope to gain from any eventual agreement in regard to its monetary policy.

Reading between the lines, it is not difficult to gather that the impression here is that France is being asked to make concessions in respect of her own monetary interests which do not appear to be likely, from her own point of view, to bring her any corresponding advantages, however beneficial they might prove to other countries. Paris is less inclined than London to attach great weight to the intangible value of "established contacts" and of "frank and cordial conversations." Opinion here is disposed rather to emphasise the statement in the *communiqué* that "the present credit difficulties are largely due to the lack of confidence on the part of lenders," and that "borrowers themselves must take all possible steps to restore that confidence." In other words, the French investor in foreign loans issued here has been so despoiled by defaulting countries since the war that, unless the latter are prepared to make good the losses they have caused, they need not expect to be able to borrow any more French money. Still less encouraging, perhaps, is the preceding statement in the *communiqué*, in which the French Treasury definitely declares that "the conditions of the management of the public funds in France have not had the consequences on gold movements which have sometimes been attributed to them." These two declarations—in spite of the repetition once more in the same *communiqué* of the French Government's frequently expressed desire to encourage foreign loans on the French market—appear to sum up in unmistakable terms the present settled policy of this country; and the pending issue here of loans to Roumania and Jugoslavia, taken in conjunction with the difficulties that have barred the way to other would-be borrowers, in spite of the powerful support given to some of them by the banks, confirms the view that France, for some time to come, will continue to be, at best, a somewhat "selective" foreign lender.

The laws recently passed by the two Houses, authorising the issue of the following colonial loans, are promulgated by Presidential decree published in this morning's *Journal Officiel*:—

	Million francs.
French Western Africa.....	1,570
Indo-China	1,250
Madagascar.....	700
French Togoland.....	65
Cameroons	15
New Caledonia	95

Expenditure authorised in New Caledonia totals 130,435,000 frs., but 35,435,000 frs. of this amount is to be furnished "from other resources." Other issues which are already being made, or will be shortly, include those on behalf of Morocco, Tunis, Roumania and Jugoslavia. The various colonial loans will absorb only about £36,000,000 of the huge mass of capital awaiting investment, and would form no obstacle, other things being equal, to a number of important foreign loans of the ordinary pre-war type; nor would the new *Crédit Foncier* issue of 1,500,000,000 frs., which has just been announced, or the same institution's more important conversion loan of 2,500,000,000 frs., which is due shortly. Legal notices have just been published in view of an issue of 742,900,000 frs. by the group organised to finance the mobilisation of war damages awarded some years ago to the great metallurgical concerns in the north and east of France. This issue is designed to replace, by new issues at 4 per cent., the outstanding balance of 6 per cent. issues made in 1921 and 1922. A similar operation was carried out not long ago by the colliery concerns in the Nord and the Pas de

Calais, and another is announced to be in preparation for issue shortly.

The most important operation of the near future, however, still awaits definite decision. This concerns the commencement of the plan for the comprehensive conversion of a large number of the Rente issues. The 1925 Four per Cents., the 1915-16 Fives, the 1920 Fives, and the 1920 Sixes, as well as several issues of 5 per cent. and 6 per cent. bonds, delivered to *sinistrés* in lieu of cash, are now convertible. On May 1st next the 1927 6 per Cent. Rentes will become convertible, and on July 10th the 6 per Cent. Obligations, issued in the same year. At the present moment the credit of the State is represented by an interest rate of about 3½ per cent. Three per Cent. Irredeemable Rentes, at 88, yield, as nearly as possible, 3.40 per cent., and the 3½ per cent. issue about the same, so that the moment for the putting into operation of the conversion plan would appear to be rapidly ripening. In these circumstances it is difficult to suggest that there is any prospect of the issue of any appreciable quantity of foreign loans in this country for some time to come.

GERMANY.

Proposed Tariff Increases — Industrial Opposition — Unemployment Insurance Problems — Motor Industry.

(FROM OUR CORRESPONDENT.)

BERLIN, February 24.

DURING the last week the Cabinet has been obliged to give further serious consideration to agricultural questions. Agreement having been reached within the Cabinet, the "Osthilfe" bills were sent back to the Reichsrat, and discussion turned to the tariff demands which have been put forward by the Minister of Agriculture, Herr Schiele. So far the tariff policy of Germany has been primarily one of protecting grain growers. The protection of rye necessitated a rise in the prices of barley and maize, and so fell very hardly on hog raisers, and the raising of the prices of fodder, grain and bran has been detrimental to the dairy interests, so that there necessarily arose a demand for compensatory tariffs on cattle products. To this were added long-standing complaints of farmers and market gardeners about the import of fruit and vegetables, and, more recently, the really catastrophic fall in timber prices in consequence of Russian dumping.

Herr Schiele is, therefore, asking for increases in the duties on bacon and lard, compensatory duties on cattle, the initiation of commercial negotiations which would pave the way for further increases in the duties on eggs, vegetables and fruit, and a substantial rise in the rate of duty on butter and pulses. It appears that he has secured, at least nominally, the agreement of the Cabinet to most of these proposals, though Dr. Trendelenburg, for the time being in charge of the Ministry of Economy, which has had no Minister for several months, has pointed out the dangers to German export in a very vigorous memorandum to the Chancellor.

Industrial circles have also begun to display much more activity in their opposition to increases in the agricultural duties. The Association of German Industry has passed a resolution pointing out that German exports provide work for more than three million wage-earners and salaried employees, and that these exports would be seriously threatened by the measures at present contemplated. Increased unemployment in industry would mean diminished purchasing power with which to buy the products of German agriculture. Excessive duties would, therefore, do great and lasting damage to agriculture, while the relief to be expected from them would be only transitory.

This pressure may very likely have some effect, as the decision on the question of duties will not only rest with the Reichstag. In many cases existing duties will not be

altered, but the Government will be empowered to raise them according to the result of negotiations with other countries and according to the movement of prices. If industry stands firm it may be able to effect something in this connection, even if agrarian influences are paramount in the Reichstag itself. The bounds of resistance to agrarian protectionism are set by the weakness of the Government's parliamentary position. Dr. Brüning's great energy and outstanding gift of leadership are constantly cramped by the necessity of securing small agrarian groups for the maintenance of a majority. Industry could have rid itself of the danger of excessive protectionism if it had allied itself last summer with the Socialist working classes and maintained in existence the old Reichstag and the "Great Coalition."

There is still a dangerous lack of co-ordination in the provision for unemployment benefit. During the first six or twelve months, according to the number of previous contributions, unemployed persons receive insurance benefit. For the next thirty-two weeks they receive emergency benefit on a lower scale, and only in case of necessity. After that the commune provides relief for an unlimited period, but this is preceded by a still closer inquiry into the applicant's need, and covers only the bare necessities of life. This threefold division was reasonable as long as it could be assumed that every tolerably competent worker outside the specially depressed trades would find work again within six or twelve months. Emergency benefit, originally confined to certain specified trades, provided for workers in particularly depressed industries and communal relief for those who had become unemployable. But since unemployment has reached its present level, and now that it is the fate of every worker, once dismissed, to go through all three stages, the system appears unnecessarily complicated and its financial basis increasingly inadequate. Moreover, it is felt to be unjust that the test of necessity for emergency benefit should be less severe than that for poor relief, as recipients of the latter, owing to the longer time they have been out of work, are the most severe sufferers.

The Association of German Towns has brought a Bill before the Reichstag providing for the complete amalgamation of emergency relief and poor relief, so far as the latter is concerned with the unemployed. The States would have to contribute to the expense, in order to lighten the burden on the communes, and the Reich would be required to bear a larger share. This reorganisation would not solve all the problems, but would merely free the communes from the danger of having their finances radically disorganised by the growth in the number of the unemployed. It would also be rather more economical and equitable, as there would no longer be two separate standards for inquiry into need. The price of this, however, would be a considerable hardship to skilled workers, in that they would not, as at present under emergency relief, be able to prolong the enjoyment of a somewhat higher standard of living than the lower paid unskilled workers, for the unified benefits would only cover bare necessities. It is also doubtful whether the Reich and the States could meet their additional share of the cost.

The outstanding event of this week is the Berlin Motor Exhibition, which offers a chance of estimating the economic importance of the German motor industry, its progress, its difficulties and its relation to foreign competition. In 1930 only about 100,000 cars were sold in Germany, against about 130,000 in the preceding year. Of these, 28,000 were of foreign manufacture in 1930. There are, however, some branches of the market in which there is no foreign competition. The most important of these is in the class of small private cars costing under Rm. 3,000, which are mainly supplied by Hanomag, D.K.W. and by B.M.W. under the English Austin patent. The German market for commercial vehicles is also entirely in the hands of the German industry, except for the small truck class, in which Chevrolet and Ford also compete. On the other hand, there is very substantial foreign competition, amounting to 40 or 50 per cent., in the sale of medium-

size and large private cars. The import of complete cars is relatively small, but the foreign factories which have a large market in Germany have in recent years built assembly plants in which imported parts are assembled. Ford, Chevrolet, Buick, Essex and Chrysler are the most frequently seen American cars, and Fiat and Citroën the chief European competitors. There are only three German producers whose sales exceed those of foreign models: Opel, in which General Motors are controlling shareholders, a long way the first, Adler and Mercedes-Benz.

The severe competition has forced motor car prices down by about 20 per cent. during the past year. There can be no hope of profits in view of the enormous depreciation; before dividends can be paid an expansion of the market, with the consequent more economical utilisation of plant, is absolutely necessary. The foreign assembly plants, on the other hand, have in some cases made substantial profits. The German Ford works have done best, with a net profit of Rm. 3.3 million, against Rm. 2.2 million in the previous year, but they are only paying a 10 per cent. dividend on their capital of Rm. 15 million. Ford is building a large factory in Cologne, in which the manufacture of cars, mainly out of German materials, is to begin in April.

SWEDEN.

Money Market — Stock Exchange — Production.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, February 6.

IN lowering its discount rate from 3½ per cent., at which it has stood since April 3, 1930, to 3 per cent., the Riksbank has merely done what has been expected since last spring. There can be no doubt that the Riksbank has pursued an unnecessarily restrictive discount policy. As in other countries, the depression has occasioned here a marked reduction in the demand for credit. The consequence has been an excess of liquid funds in the commercial banks, which in its turn has involved a very remarkable change in their relations with the Riksbank. This development was stimulated by the fact that the fall in interest rates abroad made it more profitable for the commercial banks to sell their foreign investments to the Riksbank than to obtain liquid means from it on ordinary account. The already strong position of the krona, which was due to Sweden's relatively favourable position during the depression, was thus further accentuated. The greater part of last year was characterised by the sale of exchange, which raised the quotation of the Swedish krona and forced the Riksbank on several occasions to peg the pound in order to avoid the risk of gold imports. Gradually the bulk of the short-dated foreign claims were transferred to the Riksbank, whose reserves thereby

touched a record. The present year has not brought any material change in the situation.

It is possible that another circumstance has played a part in the lowering of the discount rate. The Government is on the threshold of a large conversion operation, in so far as the 6 per cent. 1921 loan, of which Kr. 94 millions are outstanding, may be notified for redemption at three months' notice on February 15th. In addition, the 1921 premium bonds of Kr. 100 millions may be converted in the early autumn. In the very comprehensive conversions of last year—no less than Kr. 445 millions in all—the State invited loans at $4\frac{1}{2}$ per cent. and the price of issue was below par. These bonds now stand at 104 $\frac{1}{2}$ to 105, so that it is fairly certain that the rate this time will be 4 per cent.

On the definite news of the new Kreuger issue there followed a very pronounced fall, which began with Kreuger stocks and gradually spread to all other stocks. Some large realisations were effected and in a number of cases new low records were reached. Clearly the match issue was not the sole cause. The general sense of insecurity and indifferent trade prospects, as well as a number of political motives, naturally played an important part, but the effects were magnified by the entirely unexpected Kreuger transactions. Normally, the New Year optimism results in a considerable rise in Stock Exchange quotations—last year of Kr. 292 millions. This year there was a fall of Kr. 178 millions, measured by the so-called A-list shares. The significance of this may best be seen by a comparison with the fall for the whole of last year, which amounted to Kr. 188 millions.

The general impression is that the depression has touched bottom, but this does not mean that there is any certainty when an improvement will set in. There is a marked reluctance to take risks and a waiting attitude in business circles. Great interest, therefore, attaches to the fuller statistical data now available for last year, by the aid of which it is possible to form an accurate opinion of the influences of the depression on Swedish economic life. Broadly speaking they confirm the view that these effects have been surprisingly small. Measured by *Svensk Finanstidningen's* index number of production, the volume of output remained unchanged in December at 120 (1923-24 = 100). The average for the third quarter was 122, compared with 134 a year earlier. The decline is much more clearly visible during the second half-year. Whereas in 1929 the quarterly averages were 140, 136, 132, 134—a remarkably even series—the corresponding figures for 1930 were: 149, 134, 126, 122. Had it not been that industry showed a surprising increase of output during January-May, the decline in the second half of the year would not have appeared nearly so great, and the average for the whole of last year was as high as 131, compared with 135 in 1929. Thanks to favourable developments in foreign trade during the latter part of the year, the trade balance was less passive than had been expected, at under Kr. 103 millions.

POLAND.

State Salary Reductions — Commercial Treaties — Timber Exports — Budget Deficit — Trade.

(FROM OUR CORRESPONDENT.)

WARSAW, February 16.

THE main activity of Parliament during the past six weeks has been in connection with the Budget project for the fiscal year which begins on April 1st. The Deputies have voluntarily voted a reduction of their own salaries by the elimination as from April 1st of the 15 per cent. bonus which was added to all salaries of State employees several years ago to meet the increased cost of living, and which has come to be regarded as a permanent addition. The Budget Committee of the Sejm has also recommended that the Government should apply this 15 per cent. reduction to all State salaries; but it has been decided that,

for at least the first quarter of the next fiscal period, this reduction will not be made. If, however, the Budget for the first quarter of the year shows a deficit, the expectation is that the Government will give heed to the recommendation of the Budget Committee in this respect, and in the meantime, a revision of the tax rate on officials' salaries will be equivalent to a wage reduction of about 10 per cent. as from April 1st.

The Government have recently organised a campaign for forcing a reduction in retail prices, laying particular stress on the present excessive disparity between the returns to the primary producer and what the consumer pays at the retail shops. At the same time, however, the official spokesmen have definitely declared themselves opposed to wage reductions, so that the Government are not disposed to lead the way in an assault on wages.

Besides passing the new Match Monopoly Act required by the terms of the loan agreement with the Swedish Match Company, signed last November, and the first reading of a Road Fund Bill providing for additional taxes to be levied on motor vehicles in order to finance in part the Government's road building programme, the Sejm has ratified a dozen or more commercial treaties and other international agreements that have been arranged during the past two years, but which could not be submitted to the previous Parliament because of its hostility to the Administration. The most important of these is the commercial treaty with France signed in April, 1929, under which Poland revises and enlarges the preferential Customs duties on a number of French products (including fresh fruits and vegetables, bicycle and motor tyres, rubber shoes, cosmetics, etc.). When this treaty passes the Senate and the ratification procedure has been completed, the duty revisions prescribed therein will, of course, be made applicable to all countries having most-favoured-nation agreements with Poland.

It is expected that the next step in this direction will be the ratification of the commercial treaty with Germany signed in March, 1930, as the Government have finally announced their intention of submitting this treaty to Parliament and then leaving it to Germany to assume responsibility or otherwise for the continuation of the so-called Customs war which began in 1925. It is expected, however, that German ratification will follow, since the Poles make no secret of the fact that by extending most-favoured-nation treatment to imports from Germany (both actual as to duty rates and in principle as to import quotas) they are giving under the commercial treaty much more than they are receiving. The only certain and immediate benefit of a tangible character to Poland by this treaty is the export of 320,000 tons of coal monthly from Upper Silesia to Germany (which practically means from one German mine-owner to another) and a problematical export of from 200,000 to 350,000 pigs per annum. Germany's total pig imports at present, however, aggregate less than the minimum quota specified under the treaty, so it is not at all likely that the entire Polish contingent would be used. As an offset to this, Germany's refusal to renew the timber convention which expired on December 31st last has greatly restricted Poland's most important outlet for wood, and even when the commercial treaty becomes effective it is feared that Russian products will continue to supplant Polish wood in the German market. Despite the Customs war which has prevailed since 1925, Poland supplied about 40 per cent. of Germany's total timber imports in 1927, 32 per cent. in 1928, 29 per cent. in 1929 and less than 18 per cent. in 1930. On the other hand, imports from Russia increased from 3 per cent. of the total in 1927 to more than 10 per cent. of the 1930 total.

With 1930-31 Budget revenue running approximately 10 per cent. below the estimates, the returns for the first nine months (i.e., to December 31, 1930) show a deficit of 6 million zlotys, plus about 13 million zlotys, representing the amount the Treasury had overdrawn the Unemployment Fund by that date. The preliminary Budget figures for the month of January show a surplus (of about 1 million zlotys), and the Finance Minister has informed the Sejm that he does not anticipate a deficit for the full year in

excess of 30 million zlotys. In the next fiscal year the Treasury will receive the proceeds of the new Match Monopoly and also, it is anticipated, of the loan from the French group now under negotiation to complete the Upper Silesia-Gdynia railway line, on which the Ministry of Communications has already expended a considerable amount, and which is expected to be reimbursed to the Treasury out of the French loan. While it is fully recognised that the next fiscal year will be very difficult, it is believed that the Swedish and French loans will enable the Ministry of Finance to scrape through, and that thereafter the anticipated improvement in financial and economic conditions will permit the Treasury adequately to provide by taxation for Budget expenditure at the present rate.

The monthly index of industrial production compiled by the Institute for Economic Research (average 1925-27 = 100) shows a decline from 114.2 in September last to 99 at the end of December. The highest point, 130, was reached towards the end of 1928. With the curtailment of Polish timber exports to Germany, and the difficulties which have arisen with Czechoslovakia over pig exports in consequence of the abrogation in December last of the Czechoslovak-Hungarian commercial treaty, Poland's foreign trade problem has been greatly intensified. In virtually all lines the depression is being increasingly felt, and the number of registered unemployed manual workers not entitled to insurance benefit has reached a new record in excess of 350,000.

CANADA.

Business — Industry — Prairie Problem — Attacks on Bank Policy — Parliament — Tariff Revision.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 10.

THE Eastern Provinces of Canada have experienced two weeks of cold weather, with substantial snowfalls, but in the West the winter has remained abnormally mild with very little snow. This condition eases the problem of wintering stock, but, on the other hand, with the subsoil exceedingly dry as the result of last year's drought, the absence of a heavy carpet of snow in the prairies augurs ill for the moisture reserves which are indispensable to a good grain crop.

It is claimed that the business situation has shown signs of improvement since February began, but the level of activity is still well below that recorded a year ago. The car-loading figure for the week ending January 30th, at 46,604 cars, though only 1,009 cars below the figure for the previous week, is no less than 12,471 cars, or 21 per cent., below the figure for the corresponding week of 1930. Wholesale houses report a more satisfactory demand for groceries, winter sports equipment and rubber products, but most country storekeepers are still loaded with unsold stocks, and orders from the prairies are very meagre. Retail merchants are only able to maintain their sales at a fair volume by means of persistent advertising and price cutting. There is some evidence now that retail prices are at last coming down, and both food and clothing are substantially cheaper than they were last autumn.

In the industrial field many factories are short of orders, and in Toronto and other industrial centres manufacturers are giving their married employees four days' work per week and the single ones only two or three. Senator Robertson, the Minister of Labour, lately admitted that there were 300,000 people out of work in Canada at the end of January, an increase of 100,000 since the Bennett Ministry took office in July under definite pledges to cure unemployment; part of the increase is due to the normal winter unemployment, but it is larger than usual this year. Some industries, however, are picking up; the boot and shoe factories are reasonably busy, the motor plants have increased their scale of operations, and the transportation equipment firms are getting the benefit of substantial contracts lately placed by the railways; while

the Dominion Government has awarded contracts to the amount of \$500,000 with various aircraft companies. One helpful psychological change is visible in the growing realisation that there will be no short cut out of the present trough of depression, and that an optimistic viewpoint will not suffice to restore prosperity, but must be reinforced by the abandonment of uneconomic practices and the adoption of sound policies by the business community and governments. How serious the setback of 1930 has been may be gauged from the fact that a survey of the earning records of 83 Canadian corporations for the year shows a decline of nearly 17 per cent. in the amount available for dividends; amusement and textile manufacturing companies were the only ones to show any increase over the figures for 1929.

The outlook for the prairie farmers still remains very dark. Wheat prices have risen a little, but the spread between the price of Canadian wheat and its competitors in the European market is thought to be too high to last. Wheat exports have been moving at the rate of more than 4 million bushels per week since the year began, but the stocks in store at the end of January were estimated at 203 million bushels, and it is considered unlikely that they can be disposed of at a price which will repay the cost of production. So, while the measures organised by the Federal Government in co-operation with the Prairie Provincial Administration are now beginning to operate for the relief of actual want and suffering among the prairie grain growers, which in some areas had become acute, nothing has been done to solve the fundamental problem of the prairies, the provision of foreign markets which will yield the grain grower an adequate return for his labours and remove his present apprehension that he may be submerged to the level of the peasantry of Eastern Europe in his standards of living. Whatever hopes were raised about the possibilities of a good outlet in China for Canadian wheat have vanished as a result of a report by Mr Marler, the Canadian Minister in Tokio, who was despatched to investigate the situation in China, and finds that the depreciation of the Chinese currency and other adverse factors are fatal obstacles to any serious development of an export trade with that country. The western farmers are being deluged with exhortations to turn to mixed farming, and Mr Beatty, the President of the C.P.R., has secured the necessary capital of five million dollars for his Agricultural Credits Corporation, which is designed to be used as a revolving fund to enable the western farmers to buy livestock. Already many of them are turning to hog-raising, and brood sows on the prairies are bringing enormous prices, but here again the problem of foreign markets has to be solved, and there is a prospect of a superfluity of hogs next year.

Bitter complaints have been forthcoming from the West about the rigid attitude of the banks in regard to credits to farmers; in view of their experiences with the wheat pools they have been adopting a very conservative policy about their prairie commitments. But the agitation which has arisen has evidently impressed the Bennett Ministry for last week Mr Weir, the Minister of Agriculture, presumably with the authority of the Cabinet, went to Toronto, and in a public speech rebuked the banks for their attitude, citing several cases where farmers with good security had been refused credit. He also issued a blunt warning that if the banks would not furnish adequate credit to deserving farmers, somebody else must and would. Some Western progressive members have also lately been in Ottawa trying to persuade Mr Bennett to countenance a temporary abandonment of the gold standard and encourage deliberately a depreciation of the Canadian dollar by 20 per cent. They argue that such action would operate as a bonus upon Canadian exports, and they calculate that the Canadian manufacturers should be sympathetic to the idea as it would afford them so much additional protection against foreign competitors. But it is unlikely that Mr Bennett, who is sternly orthodox in financial matters, will lend an ear to such suggestions.

Meanwhile the Premier and his colleagues are busy with preparations for opening of Parliament on March 12th. The problem of the Budget presents many difficulties, as a deficit of at least 60 million dollars is now regarded as

inevitable, and speculation is rife about what form the necessary dose of increased taxation will take. It is generally assumed that the income tax, which the King Ministry reduced, will be raised, and Mr Bennett is on record as having advocated in the past the impost known as a "turnover" tax. There are also indications that the Government, after many doubts and hesitations, is going to carry out its promise, made at the emergency session last September, that it would undertake a general revision of the tariff at the regular session. In view of the resentment in the West over the recent tariff increases and the secessionist murmurings which have developed, one wing of the Cabinet has notoriously been anxious to postpone any further tariff revision until more auspicious times, but those manufacturers who failed to receive any tariff largesse at the emergency session have been exercising persistent pressure upon Ministers at Ottawa. Scores of briefs, setting forth the clamant need of various industries for more protection, have been submitted to the Cabinet, and a vigorous protectionist lobby has been in progress. So the Bennett Ministry has reluctantly arrived at the conclusion that it cannot evade its pledges to carry out a general upward revision of the tariff, and has announced that a Committee of the Cabinet will hold special hearings at which representations for and against existing schedules may be made. The changes will mainly be upward, but it is believed that they will be confined to the general and intermediate schedules, and that the British preferential rates will be left untouched at least until the adjourned Imperial Economic Conference has held its sessions.

ARGENTINA.

Exchange Depreciation — Prices — Failures — Money Market — Public Economy.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, February 3.

CONDITIONS in Argentina continue to be influenced by two main factors; the depreciation of the currency, as registered in terms of foreign exchange, and the persistent decline in cereal prices. Wheat is \$5.50 paper per 100 kilos spot Buenos Aires, maize \$3.70, and linseed \$10.70. On costs of cultivation, as generally estimated, these are disastrous figures, and the steady fall shows very clearly that the supposed advantage to producers from the depreciated exchange is a myth. Practically all Argentina's wheat is by now in the hands of exporters, or their direct representatives, and the producer has been obliged to cut his losses. The situation of linseed and maize is somewhat similar.

The commercial result of this year's harvest is frankly disastrous; but it will not be irremediable unless the country persists in keeping exchange at a figure that is already having a serious reaction upon practically every form of industry and production. As yet, little use has been made of the faculty to establish recurrent shipments of gold in order to raise the quotation of the Argentine dollar. Banks' cable drawing rate is virtually pegged at 34½d. on London, and at 144.50 on New York. Below this the rate cannot now fall, humanly speaking, but while the Government persistently refuses to ship its surplus gold no rise is to be looked for. Thus, the country is condemned to suffer a loss which amounts, on the basis of the import figures for the first half of 1930, to \$26,000,000 gold a month; and if continued for a year would amount to \$709 millions paper. These figures are, naturally, only estimates, yet there is no denying the stark truth of the lesson they enforce, and *La Prensa* has on various occasions spoken out in no uncertain tone warning the powers that be of the disaster that must ensue if this well-intentioned yet short-sighted and mistaken policy is kept up much longer.

The general financial position of the country, though sound, is admittedly one of extreme delicacy, and the fact that commercial failures for the month of January totalled \$46,194,635 paper, as compared with \$15,681,354 paper for January of 1930, is a bitter commentary on the commercial situation. Improvement of the quotation of

the Argentine dollar is to-day almost as important to the reorganisation of the country as is the very necessary insistence upon a consistent policy of economy and reduced expenditure in every department of the State and private life. Failing this there is grave danger that Argentina may awaken some day to find herself in a position not unlike that of her neighbour Brazil, though such a possibility is still far distant.

Meanwhile, frequent rumours of large foreign loans from European sources are voiced from time to time, and, apparently, with a certain amount of foundation. Official *démentis* notwithstanding, one can read between the lines that various tentative offers of money both from Paris and from London have been made. American financial interests are, apparently, not so much to the fore at the moment, but this may be merely because the Argentine Ministry of Finance considers that the time is not yet ripe for a large long-term loan on the conditions they consider suitable. There is, indeed, no immediate call for any large sums of ready money. Argentina at the moment enjoys a plethora of the means of payment, though it is now generally recognised that the superfluity of funds in the local money market is tantamount to inflation, and, therefore, may be suspect as unhealthy. There is, however, no question that the present Government, though hopelessly at sea in this matter of exchange depreciation, are working heart and soul for the economic re-establishment of the country, and the maintenance of law and order. Their programme of national economy is being firmly insisted upon, and the salaries of everyone in the national administration have been remorselessly docked on a sliding scale ranging from ½ per cent. for those wage-earners receiving \$105 paper per month to 22½ per cent. on the highest salary paid. There is a general feeling that things to-day are healthier all round in Argentina, for which reason it is all the more important that business men and investors should be freed from the numbing check to enterprise which is exercised by the actual state of the exchanges.

Letters to the Editor.

THE F.B.I. AND THE GOLD STANDARD.

TO THE EDITOR OF THE ECONOMIST.

SIR,—My attention has been drawn to a reference made to the views of this Federation in connection with Great Britain's resumption of the gold standard in 1925 in an article entitled "Mr Lloyd George and the City," which appeared in the issue of the *Economist* dated the 21st inst.

As this article is calculated seriously to mislead the public regarding the views taken by the F.B.I. in connection with that momentous decision, I shall be obliged if you will be good enough to insert the following explanation:—

The article states:—"It was the F.B.I. that declared some months before Mr Churchill took the plunge that, whatever might be the arguments for or against this or that course, the vital thing for industry was that it should have a definite decision and a sure and certain basis on which to found its calculations."

It is perfectly true that at the time that the question of returning to the gold standard was being considered by a Committee presided over by Lord Bradbury, this Federation emphasised the need of industry for monetary stability. But they were most careful to point out that such stability could not be achieved by Great Britain acting alone. To quote from the actual written evidence submitted to Lord Bradbury's Committee in July, 1924: "that stability cannot, in their opinion, be achieved by one country acting alone, but only by a joint agreement on the part of the principal trading countries of the world to re-establish a common monetary standard."

This quotation, it may be added, is taken from the concluding paragraph of a report which was almost wholly concerned with stressing the disastrous consequences to British industry which the F.B.I. anticipated must inevitably follow a return to the gold standard at that time.—Yours faithfully,

F.B.I.,

21, Tothill Street, S.W. 1.

February 24th.

Guy Locock,

Acting Director.

[We regret that Mr Locock should think that we misrepresented the position of the F.B.I. in 1925. The various statements of the Federation at that time certainly make it quite clear that the Federation was nervous of the results if Britain acted alone, and constantly stressed the importance of international action; they were anxious that when the chief countries had returned to gold steps should be taken to carry out the Genoa policy of endeavouring to stabilise gold prices; and in any case they were seriously concerned at the necessity of bringing British and American price levels to a parity if this was done by depressing the British level. We venture to suggest, however, that the statement in our article was not unfair in view of the following extracts from a letter written by the Federation to the Chancellor of the Exchequer in March, 1925:—

"The expiration of the Gold and Silver (Export Control) Act of 1920 in December next would . . . seem to render some decision on the question inevitable in the near future. . . ."

" . . . It is . . . of such importance to all engaged in industry, both employers and employed, that the present uncertainty should be dispelled, and that industry should be able to make its plans for the immediate future with a definite knowledge of the general monetary conditions to be anticipated, that the advantages of an early declaration by His Majesty's Government would seem to outweigh the objections which might, in more ordinary circumstances, be urged against such a course."

"In conclusion (the Federation) desire to state clearly that in their opinion since Great Britain is the principal international clearing house both for money and goods, any step which would lead to a general return to a gold standard by the principal industrial countries in the world would be greatly to the benefit of British industry."

It will be recalled that the currencies of Sweden, Germany, Switzerland, Hungary and Czechoslovakia had already been restored, either *de jure* or *de facto*, to a gold basis; that Holland, Australia, South Africa and New Zealand took the same step or undertook to do so at the same time that Great Britain returned, and that within two years, either *de jure* or *de facto*, stabilisation was achieved by France, Italy, Belgium, Poland, Denmark and Finland. In five of the European countries the restoration was made on the pre-war parity. It may be argued that we should have established a new ratio to gold, but it certainly cannot be held that we acted alone.—Ed., *Economist*.]

MR GLADSTONE AND THE CITY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—You are very severe in your comments on Mr Lloyd George's attack on the City. In this connection the following from Lord Rendel's papers may be of interest:—

"Mr G. said he had, he feared, never been in good odour in 'the City,' and that in truth he had never been much impressed with 'City' men of his day. . . . In all his thirteen budgets he had derived nothing from 'the City' or 'City' men. And he did not see that the House of Commons itself had fared much better."—Yours, etc.,

Reform Club, Pall Mall, S.W.1.

Books and Publications.

KELLY'S DIRECTORY.

Few works of reference are so useful both to the business man and to the private individual as Kelly's Post Office London Directory.* It covers the administrative county of London and the Borough of West Ham, and its four main sections consist of a classified trades directory, a commercial directory, a somewhat selective private residents' directory and a streets directory, which last is particularly useful for locating vaguely remembered places of business whose exact name is not known.

In addition, there are separate sections on Chambers of Commerce, law, transport and hotels, banking, members of Parliament, postal information, Government and municipal officials and clergymen. A street plan, a one-inch map, and a thorough index complete the usefulness of this indispensable volume.

* Kelly's Directories, Ltd., 186, Strand, W.C.2. 55s.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Rationalisation of German Industry. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. \$3.00.

A general analysis of German industry from the point of view of production and distribution, followed by a detailed examination of the coal, potash, iron and steel, electro-technical and chemical industries. There is also a chapter on the balance of payments.

The Dynamics of Industrial Combination. By H. A. Marquand. (London) Longmans, Green and Co., Ltd., 39, Paternoster Row. 12s. 6d. net.

A discussion of combination and rationalisation with special reference to the part played by finance.

Political Handbook of the World. Edited by Walter H. Mallory. (New York) Council on Foreign Relations, Inc., 45, East 65th Street. (London) Royal Institute of International Affairs, Chatham House, St. James's Square. \$2.50.

A very useful reference book, revised to January 1, 1931, giving the essential information on the rulers, the political parties, programmes and leaders, and the Press of sixty-two countries.

International Labour Review. February, 1931. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d.

Includes articles on "Old-Age Pensions in the United States" and "The Continuous Working Week in Soviet Russia."

OFFICIAL PUBLICATIONS RECEIVED.

The Stock Exchange.

THE STATUS OF HOME RAILWAY STOCKS.

THE depression of 1930 has not merely driven the fixed-interest stocks of the largest British railway from the full Trustee List to sanctuary within the Chancery List. It has confirmed the view that, under contemporary conditions, home railway equities (with certain exceptions) have exchanged their former status of investments for that of speculative media.

All the four railways, under the grouping effected by the Act of 1921, have a decidedly "high-gear" capitalisation, i.e., a high proportion of fixed interest stock to equity stock. Every £1 of ordinary capital has £3.35 of fixed interest capital ranking in front of it on the London Midland and Scottish, £3.80 on the London and North-Eastern, £2.43 on the Great Western, and £1.65 on the Southern. The disadvantages of this form of capital structure, from the investor's viewpoint, are mitigated, by many British companies in other industries by a policy of fixing on a relatively low initial ordinary dividend rate, which can be maintained in good times and bad, and of gradually "filling out the equity" by the accumulation of strong reserves. The railways, by contrast, have chosen annually to pay out practically the whole of each year's available earnings. As a result, all the jolts and jars of trade variations have been passed on to ordinary stockholders, and Stock Exchange values have fluctuated in a manner recalling the dervish dance of the foreign exchanges in the years immediately following the war. During the last four years L.M.S. ordinary have been as high as 79½ and as low as 24½. L.N.E.R. preferred have fluctuated between 56½ and 13, the deferred between 22½ and 4½, and Southern deferred between 45½ and 18½. Even the Great Western, whose post-war record has been much the best of any of the four groups, has seen its consolidated ordinary stock standing since 1927 as high as 103½ and as low as 62½.

The characteristic feature of a speculative counter *par excellence*, such as a rubber or tin-mining share, is that, over a relatively short period, it may yield its holder an income far above the average for securities in general, or no income at all. This is precisely the position to which trade developments and past dividend policy have brought the majority of home rail ordinary stocks. L.M.S. ordinary, for instance, are quoted to-day at 25½. A falling off of only 4 per cent. in total net earnings this year as compared with 1930 (apart from receipts from extraneous sources) would leave L.M.S. ordinary with an earnings yield of nil; while a return to the level of profits

(000's omitted.)

* After all expenses, but before debenture interest.
 † In 1930, excess of dividends over year's earnings made up as follows: £212,000 brought forward; £392,000 profit on realisation of investments; £488,000 reserve for income-tax released; £279,000 appropriation from general reserve.
 ‡ On preferred ordinary: nil on deferred; £500,000 to general reserve.
 § On preferred ordinary: Excess of dividend over earnings made up by profit on realisation of investments £123,000; transfer from general reserve £100,000. Nil on deferred stock.
 ¶ Excess paid over earned derived: £121,000 brought forward; £150,000 profit on realisation of investments.
 †† Preferred ordinary: Deferred received 2½ per cent., out of 2.6 per cent. earned, in 1929, and 1½ per cent., against 1.03 per cent. earned, in 1930; excess paid over earned (£65,000) being drawn from amount brought forward.

of 1929 would give a purchaser, at present prices, an earnings yield of no less than 18 per cent.

Last year, the trading experience of the great British railways was less unfavourable than that of their counterparts in many other countries. Nevertheless, the two largest British railways taken together, earned only ½ of 1 per cent. on a total of £173,000,000 of equity stock. As the preceding table shows, debenture requirements were covered 4½ times and preference requirements only 1½ times on the "best railway" (the Great Western), while on the London and North Eastern debentures were met only 2½ times, and preference dividends were not quite covered.

All the groups paid out, in dividends for 1930, appreciably more than they earned. The L.M.S. drew no less than £1,370,000 of a total dividend of £1,904,000 from sources other than the year's trading. The reasons for this policy are not easy to follow. Events in the latter part of the year showed that, on balance, not even the interim dividend of 1 per cent. had been completely covered. As the final of 1 per cent. involved the depletion of the company's internal resources by a further £952,000, without preventing its prior stocks from lapsing from the full Trustee List to the Chancery List, it would seem that the dividend was decided upon for no better reason than that the hungry sheep looked up—and were fed. This action might have been praiseworthy had it been part of an effective "stable dividend" policy backed by an extensive "dividend equalisation fund" accumulated in past years. The L.M.S., however, has a general reserve fund of only £2,571,000, against a total ordinary capital of £95,202,000.

Depreciation in home railway securities during the last few years has not been confined to ordinary stocks. In the following table we show the present amounts, prices and yields of "senior" debenture, guaranteed, and preference stocks, as well as the ordinary stocks of the four groups:—

	L.M.S.	L.N.E.	G.W.	S.R.
"Senior" Debenture—				
Rate of interest	4%	3%	4%	4%
Present price	74½	54½	82½	78½
Yield %	£5/7/5	£5/10/1	£4/17/0	£5/2/0
"Senior" Guaranteed Stock—				
Rate of interest	4%	4% (1st)	5%	5%
Present price	73½	69½	100½	99
Yield %	£5/11/11	£5/15/2	£5/2/0	£5/3/9
"Senior" Preference—				
Dividend rate	4%	4% (1st)	5%	5%
Present price	52½	51½	92½	88½
Yield %	£7/18/6	£7/18/5	£5/11/0	£5/16/3
Ord. or Pref. Ord.—				
Present price	25½	14½	67	61½
Dividend yield	£8/3/3	£1/14/3	£8/11/9	£8/9/6
Earnings yield				
Deferred Ord.—				
Present price	...	5	...	19
Dividend yield	...	...	...	£7/0/10

It will be seen that the investor demands an appreciably higher yield from L.M.S. and L.N.E.R. prior stocks than from the similar securities of the other two groups, or from trustee stocks in general. The "best" preference stocks of both these great railways yield around 8 per cent.—a figure associated with the preference issues of speculative concerns. The yield compares, incidentally, with £4 15s. 3d. per cent. on the 5 per cent. cumulative preference shares of British American Tobacco and of £5 1s. 3d. per cent. on the 6 per cent. cumulative preference of Guinness and Company. These, it is true, are cumulative shares, but neither, on the other hand, is a trustee security.

Though contemporary trade depression may have intensified the decline in home railway stocks, its root causes

go deeper. Investors have undoubtedly been perturbed by the downward "secular trend" of railway receipts, apart altogether from the ups and downs of the annual figures. Even in 1929, admitted by all railway men to have been a relatively good year, gross receipts were considerably below those of 1923, the first year after grouping. The following table shows the relevant figures as regards gross receipts, expenditure and net income for 1913 (presuming the present grouping), 1923, 1929 and 1930, the 1913 figures being shown as 100 in each case. Close comparison between the 1929 and 1930 figures for railway gross receipts and expenditure, and those for earlier years, has been rendered impossible by changes in compilation made under a Ministry of Transport order. This qualification, however, does not vitiate the broad conclusions which the figures suggest:—

(1913 = 100.)					
		1913.	1923.	1929.	1930.
L.M.S.	Railway gross receipts ...	100	169	152	142
	Railway expenditure	100	217	192	185
	Total net income (including miscellaneous receipts*)	100	101½	88½	69
L.N.E.	Railway gross receipts ...	100	168	152½	144
	Railway expenditure	100	214	185	178½
	Total net income (including miscellaneous receipts*)	100	98	91	78
G.W.	Railway gross receipts ...	100	180	172	164
	Railway expenditure	100	229½	212	205½
	Total net income (including miscellaneous receipts*)	100	109	108½	92½
S.R.	Railway gross receipts ...	100	171	165	161
	Railway expenditure	100	220	207½	204½
	Total net income (including miscellaneous receipts*)	100	104½	109	102½

* From docks, hotels, steamers, etc., and interest.

* From docks, hotels, steamers, etc., and interest.

A downward trend in gross receipts is not, in itself, conclusive evidence of decadence. It may reflect the closing down of unremunerative services. For instance, if no railway were to run trains north of Inverness, the gross receipts of the L.M.S. and L.N.E. would show a permanent drop, but net earnings would be substantially improved. Unfortunately, only a comparatively minor part of the fall in gross revenue of the last seven years can be explained in this way, a much larger part being attributable to depression in basic British industries and loss of railway traffic to competitive transport agencies.

The railways have undoubtedly been hampered by the survival of restrictions and disabilities imposed upon them as general carriers at a time when their "monopoly" position was much more in evidence. They cannot refuse to handle unremunerative traffic if it is offered them, and their powers of "rationalising" by closing down activities which "do not pay" are decidedly limited. The "standard revenue" provisions of the Act of 1921 limit their maximum earnings, without effectively insuring them against a drop in profits below any given figure. Their rating burdens, as compared with those of their competitors, are inequitable. Labour in the industry has pressed home the advantages of its "sheltered" position to obtain an increase in wages, which is reflected in the expenditure figures of the preceding table, and to maintain rigid service conditions which gravely limit administrative elasticity in the face of changed conditions. It is now seen that post-war grouping, which was based, not on a scientific re-allocation of the railway mileage of the country, but on a reshuffling of the pre-war ownership of railway capital, has not given, and is unlikely to give any spectacular results. It has saved some lines from ruin, and has enabled managements to achieve economies of several millions a year—which are by no means to be despised. That the economic efficiency of the British railway system as a whole has increased is undeniable, but how far this has resulted from grouping and how far from other causes (such as the pressure of increased outside competition) it is difficult to say.

The figures given in this article (which we hope to supplement with our usual detailed analyses during the next few weeks), suggest that the investor's interests will best be served by a "selective" attitude towards railway stocks in the near future. Modest buying of home rail securities early this week was actuated partly by hopes of

a substantial improvement in general trade conditions before the end of the year and partly by anticipations that the National Wages Board's award, to be made shortly, will provide for a reduction in the wage level. These "bull points" would, of course, apply to all British railways. On other grounds, however, it is clear that the Great Western stands in a class by itself. It is the most homogeneous of all the groups. It has always successfully emphasised its individuality. It possesses what many in the industry regard as the best railway property in Europe, and it has only one really "black spot"—South Wales—in its system. Next comes the Southern, which at the outset had possibly the greatest scope for the economics of grouping. This company's interests lie entirely in the "prosperous half" of England, and being of a passenger rather than of a goods character, have been predominantly advanced by a vigorous electrification policy, by which the company, alone among the group railways, has attested its sensitiveness to the long-term trend of post-war transport development. The L.M.S. and the L.N.E.R. are not only compelled to maintain (doubtless much against their will) a large number of unremunerative and anachronistic services; they have the heaviest stake in the pre-war distribution of industry in Great Britain. Apart from any internal changes they may make, or any alteration in their relations to the State, the future of these great railways is inextricably bound up with the re-orientation of British industry, particularly of the Lancashire cotton trade in the case of the L.M.S. and the heavy steel industries of the North-East Coast in that of the London and North Eastern.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 3.	March 5.

FOLLOWING a week of inspissated gloom, a more cheerful tendency accompanied the opening of the second half of the account, and quotations were cautiously marked up in most markets. The "House" could not lose sight of the fact that basic conditions showed little change, and that Budgetary considerations had still to be reckoned with, but a certain amount of over-selling led to a favourable reaction, while the strength of sterling, and the Chancellor's statement with regard to the French gold conversations, were regarded as encouraging features.

Gilt-edged stocks managed to thrive on the crumbs of comfort scattered by the Treasury, and movements, though not spectacular, evinced a steady upward tendency. Funding and War Loan being again prominent. Home corporation issues made further progress. Australians improved at the outset. The Conference of Premiers made new proposals for the treatment of Australia's financial problems, and news of a cleavage in the ranks of the New South Wales Labour Party encouraged more cheerful views. Important gains were registered, the 4½ per cent. New South Wales 1935-45 Loan adding as much as eight points in a day. Indian securities were firm, the political outlook being no worse, and New Zealand stocks advanced. In the Foreign market, Perus became a nominal market on receipt of news of a revolutionary outbreak. Argentines were maintained in spite of a reaction in the exchange, but Brazilians continued to sag. Among Europeans, the German loans again attracted attention, and Austrian Sevens were in demand. Chinese loans were flat.

The Coming Rise in GOLD SHARES

by L. L. S. Angus.
 According to Mr. Angus, Gold shares offer higher yields, and better prospects of capital appreciation, than any other group of securities in time of trade depression.
 He applies the principles of his work *Investment to an analysis of this section of the market.*

(Continued from page 449.)

The Home Rail market was more cheerful than for some time past, and several improvements were recorded earlier in the week, particularly in prior charges. Dullness ensued, however, on the publication of a batch of very poor "traffic" receipts, while the market was not impressed by the attitude of the Great Western chairman with regard to the reduction of salaries and fees. The London Passenger group was firmer on the week's improved results. Foreign Rails were inclined to dullness, apart from Antofagastas. Argentine "traffics" were better than usual, particularly those of the Central, but the market was not impressed and quotations fell away. American rails proved erratic.

Despite the presence of several weak spots, the Industrial section cast off much of its despondency, and changes were mostly in favour of holders. Irregularity developed in mid-week in Transatlantic issues, as a result of profit-taking, but Radios continued to attract attention. Cables and Wireless pursued an uneven course, a decline following the receipt of disappointing "traffic" figures for January, though a firmer tone ensued subsequently. Among Engineering descriptions, Guest, Keen declined on unfavourable rumours, but their subsequent official denial brought some improvement. Leylands led a decline in the motor group, consideration of the report inducing more selling than buying. The Courtaulds report likewise produced an unfavourable impression, though the market had largely discounted the unsatisfactory trading position. Tobacco shares advanced steadily and Breweries also recovered much of their previous loss, the idea being prevalent that if further taxation were imposed by the Budget it would again be passed on to the consumer. Insurance shares strengthened, and Electrical Supply shares (the outlook for which is discussed in a Note on page 453) were in steady demand.

The Oil Share market failed to share in the general improvement, vague fears of a "cut" in petrol prices undermining confidence. Amsterdam was a seller of Royal Dutch, and Paris evinced little interest, though V.O.C. proved a bright feature. Rubber shares were somewhat steadier after a quiet week. United Sui Betong were out of favour, and relapsed, but Trusts and Anglo-Dutch again reported progress. Business among Tea shares was restricted, but buyers predominated.

A temporary lull occurred in the Mining share markets, and Kaffirs were irregular. Daggafontein was strong, and Rand Mines and "Johnnies" were both firmer. The effect of the meeting was to depress "Chartered," which suffered a serious relapse, but "Tanks" and "Zams" were in request and moved up. Northern issues were harder than of late, and Diamond shares advanced. Little interest was apparent in tin shares, despite the confirmation of the restriction proposals by the Malayan Government, and the report of London Tin was not well received. Tintos fluctuated uncertainly, but Ashanti Goldfields again went ahead.

FOREIGN STOCK EXCHANGES.

NEW YORK.

After Monday's holiday, for Washington's Birthday, the upward swing in prices continued on Tuesday. The impetus of the movement was entirely sentimental, no definite news being forthcoming of developments to which a bullish interpretation could be given. Gains of one to ten points were registered in oils, rails, chemicals, utilities and selected industrials. Much speculative activity centred on Radio Corporation, which rose nearly four points on a revival of merger rumours with Columbia Graphophone. Exceptionally, Warner Brothers Pictures showed weakness on bank liquidation. In mid-week, however, profit-taking which had previously been readily absorbed, was much augmented, utilities and amusement issues being the worst sufferers—the latter being affected by the filing of a suit in California claiming infringement of talking-picture patents. The leading stocks lost from 2 to 5 points, and the technical position showed signs of strain, as a result of an over-rapid rise without the backing of improved trade conditions. Firm conditions, however, again obtained on Thursday. The position is further discussed in a Note on page 453.

INVESTMENT NOTES.

The Wall Street Recovery.—The recovery in the New York Stock Exchange, to which we drew attention in the *Economist* of February 14th, has made further progress. It is evident that the movement is more than "professional" and that the public is returning to the Stock Exchange in greater numbers. The total of shares changing hands daily has increased from 1,700,000 on February 6th to 5,300,000 early this week. The advance has been orderly and practically all sections of the market have participated. The peak of the present movement was reached on Thursday, and the extent of the advance achieved up to February 24th, as compared with the low levels ruling on December 16th, is shown in the following table :—

(Dow, Jones' Index.)

	Dec. 16.	Feb. 2.	Feb. 6.	Feb. 10.	Feb. 17.	Feb. 24.
20 railroads	91.65	108.26	107.43	111.17	109.55	111.75
30 industrials	157.51	164.48	170.01	181.09	179.86	193.90

It will be observed that railroad stocks have advanced by nearly 20 per cent. and industrials by 23 per cent. Allowance must be made for "bear" covering, which is always responsible for a sharp upturn when the trend changes, but the present rate of progress is clearly too rapid to last. On Wednesday some profit-taking set in, but the upward trend was resumed on Thursday. The stock markets usually move in advance of trade, but no one seriously imagines that business in America is likely to improve by 20 per cent. within the next few months. The most that can be said is that sentiment in America has changed. Improvement in business is not much more than seasonal, but at any rate trade has ceased to recede. The steel industry has been increasing its operations and in the last week rose a further two points to 52 per cent. of capacity. The U.S. Steel Corporation is believed to have worked, recently, at 53 per cent. of capacity, an increase of 1 per cent. Car earnings have been showing an advance but are still 20 per cent. below the level of twelve months ago. There has been an improvement in retail trade, though activity is also below last year's level. Perhaps the most encouraging feature has been the increase of 21 per cent. in the number of building permits for New York City as compared with December, and 13 per cent. as compared with January, 1930. It is clear that the recovery on the New York stock market is not entitled to go much further in view of the current state of business, but it may be recalled that last year the process of discounting a recovery in trade in the spring or summer went on steadily from the autumn to the middle of April. Whether another big break in the market will occur in April or May this year is a question which many American investors are asking.

Electricity Supply Companies.—At a time when almost every major industry is making heavy weather, the progress of the electricity companies stands out in welcome relief. Of the eight concerns whose results for the past three years are shown in the table below, six increased

their net profit in 1930, and only one, the Chiswick Electricity Supply Corporation, reduced its dividend, the "cut" from 16 to 12 per cent. resulting from reductions in the retail price of current, made at the request of the Ministry of Transport. In the aggregate, the eight companies recorded net profits totalling £1,415,705, compared with £1,234,245 in 1929, and £1,223,257 in 1928.

Name of Company.	1928.		1929.		1930.	
	Net profit.	Ordinary	Net profit.	Ordinary	Net profit.	Ordinary
	£	%	£	%	£	%
Chiswick Electricity Supply	24,442	16.3	25,174	16.7	25,445	14.5
Electrical Distribution of Yorkshire	78,281	12.2	96,481	11.2	106,319	9.8
Midland Counties Electric	168,064	6.6	211,079	7.9	233,196	8.6
Northampton Electric	50,679	11.2	64,455	11.6	64,613	11.7
North Metropolitan Electric	325,365	22.7	355,492	19.9	398,269	23.6
St. James' and Pall Mall	107,702	16.8	79,189	11.5	70,341	9.9
Westminster Electric	157,654	11	161,292	11.4	184,964	13.9
Yorkshire Electric Power	310,070	14.5	341,083	13.2	332,558	13.3

The progressive trend of earnings is strictly "according to plan." It is a commonplace that this country has lagged seriously behind America and some Continental countries in the production and supply of current, and it is impossible, as yet, to estimate to what extent the very high elasticity of demand for electricity will result in increased consumption, once the national "grid" system is completed. The official returns of the Electricity Commissioners for the past three years, which show a constant increase in current generated every month, compared with the corresponding month of the previous year, are sufficient indication of present tendencies. Recent legislation affecting the industry has, on the whole, been well received by both producers and consumers. While it is certain that profits and dividends will be continually reviewed by the authorities, with a view to bringing down retail prices to the lowest possible level, cheap production and a widespread extension of demand for current should ensure a consistent return and a widening "equity" to the investor. The trend of prices of the companies' ordinary shares since 1929 is shown in the following table :—

Company.	Highest 1929.	1930.		Price, Feb. 26, 1930.	Present "Flat" Yield (%).
		High.	Low.		
Chiswick Electricity Supply £1	69½	56½	36/3	39/6	£ 5 d.
Electrical of Yorkshire £1	47/4	38½	31/10	33/9	6 5 0
Midland Counties Electric £1	35/6	31/3	25/6	27/6	5 5 6
Northampton Electric £1	53/6	48½	40/6	45/7	4 9 3
North Metropolitan Electric £1	58/3	50½	44½	47/6	4 6 0
St. James' and Pall Mall £1	27/9	22½	24½	28/6	5 14 6
Westminster Electric £1	27/3	22½	24½	29½	6 5 9
Yorkshire Electric Power £1	37/6	35/3	30/4	33/9	4 14 0

The decline in quotations from the highest of 1929 has been relatively moderate, while present prices are, as a rule, little below the highest of 1930. The fact that the yield on the shares of the London companies is in every case considerably higher than in the case of the provincial companies is due largely to the fact that, under the electricity legislation of 1925, the London companies are to be taken over by the Joint Electricity Authority in 1971, under special terms of payment covering assets acquired

Castbury
Maker
of Fine Chocolates.

subsequent to July 29, 1925. In the same way, the Chiswick Electricity Supply Corporation can be purchased by local authorities at the end of any five-year period from 1914 to 1939 in the case of its Chiswick undertaking, and from 1914 to 1934 in the case of its Aberystwyth undertaking, or subsequently under the Act of 1888. Ten of the London companies are also under agreement to take their current from the London Power Company, whose 6 per cent. ordinary shares they hold. The London Power Company is debarred from making any "profit," all surplus being carried to the company's sinking funds, but the constituent companies guarantee a proportion of the fixed charges of the London Power Company if its own receipts are insufficient to meet all obligations.

Courtaulds Bad Year.—Shareholders in Courtaulds, who were informed a fortnight ago that the ordinary dividend was being reduced from 10 per cent. tax free to 6 per cent. tax free, have learned with dismay from the report that no profit whatever was shown on the company's trading in Great Britain last year. The company's income was, in fact, derived entirely from interest and dividends on investments, including a final dividend for the previous year received from America. Unprofitable trading conditions were reflected in renewed falls in the value of the company's Continental share holdings, from which £925,339 was written off out of net revenue, following an appropriation of £1,651,856 twelve months ago:—

	Years ended December 31.

* Free of tax. † To writing down Continental investments.

The directors' conservatism, which has always marched on the border of pessimism, is exemplified in the phraseology of the report, which admits no gleam of light in any quarter. For once, however, the picture would scarcely appear to be overdrawn. Practically all "current" items in the balance sheet are down—stock-in-trade by £408,176, creditors by £698,895 (this item includes taxation and contingencies' reserve), debtors by £165,749, and cash by £1,689,865. The last-named amount, however, would appear to have been expended mainly in the purchase of further British Government and other marketable securities, which have increased by £1,931,641 to a total of £11,742,523, and are clearly a very present help in time of difficulty. The report admits that a certain amount of weak competition has been eliminated from the rayon industry in the last twelve months, but declares that the volume of "effective potential production" is still in excess of present requirements. The latter, however, are subnormal—the rapid increase in rayon consumption being sharply checked last year, when the world's absorption was less than in 1929. Whenever recovery occurs, however, the strength of Courtaulds financial and tactical position will be clearly revealed. Nevertheless, recent events have shown that, quite apart from the aftermath of the "bubble" company boom, the newest textile industry is subject, like the older textile trades, to wide and disturbing fluctuations in earnings between good and bad times. Courtaulds ordinary shares, at 31s. 3d. (including a final dividend of 3 per cent. tax free), yield 3.9 per cent. tax free.

Harrods.—The accounts of this famous departmental store, on the whole, are not unsatisfactory in view of the difficult conditions of 1930. Net profits show a decline of £74,206 to £752,482:—

	Year to January 31.		
	1929.	1930.	1931.
Net profit	767,656	826,688	752,482
Brought forward	108,556	108,533	142,200
Preference dividend	300,000	300,000	300,000
No. of times covered	2.5	2.7	2.5
Ordinary capital:			
Earned £	467,656	526,688	452,482
Paid £	442,679	443,021	443,039
Earned %	21.4	24.7	20.5
Paid %	20	20	20
To reserve	25,000	50,000	25,000
Carried forward	108,533	142,200	126,643

The percentage earnings and dividends of the company's ordinary capital for the past decade are shown in the following table:—

ORDINARY CAPITAL.					
Year to Jan. 31.	Earned.	Paid.	Year to Jan. 31.	Earned.	Paid.
1922	Nil	5	1927	21.3	18½
1923	8.1	8	1928	22.2	20
1924	13.5	11	1929	21.4	20
1925	16.0	15	1930	24.7	20
1926	21.0	16	1931	20.5	20

The sum of £25,000 is set aside for "special reserve," which, however, is earmarked for alterations and depreciation of freeholds. No addition has been made to general reserve, which stands in the balance sheet at £1,000,000. The carry-forward item has fallen from £142,200 to £126,643. At their present price of 2½ the £1 Ordinary shares give a yield of about £7 7s., allowing for a final dividend of 15 per cent.

Selfridge and Company.—Although this famous store company itself withstood last year's depression in gratifying fashion (its gross profit declining only from £481,312 to £481,097), other factors contrived to reduce net earnings by 26½ per cent.—from £339,336 to £248,934. The company's guarantee of a 25 per cent. dividend on the ordinary shares of William Whiteley cost it no less than £56,508, against £31,002 in 1929. It is difficult to see how the immediate future can be expected to relieve the company of this burden. Taxation requires £58,000 compared with £38,000, and a special contribution to Selfridge Provincial Stores takes £10,000. Dividend on the £750,000 ordinary capital, at 10 per cent., is only half last year's allocation.

	Year to January 31.

* Net.

For the third year in succession no addition is made to reserve account, which stands in the balance sheet at £425,000. The amount set aside for depreciation is £15,000 less at £45,000, some £10,000 of this sum representing depreciation of interests in subsidiaries. Obviously no estimate of the probable future earning power of Selfridge's can be framed without reference to the company's liabilities, direct and indirect, outside its own business.

Manchester Ship Canal.—The accounts of the Manchester Ship Canal for the year ended December 31st last reflect the depression in the industries of Lancashire and the North. The total seaborne traffic and barge traffic tonnage showed a decline of 4.1 per cent., at 6,290,625

tons. The net profit was £99,713 lower at £279,790, and covered the preference dividend less than 1½ times:—

	December 31.		
	1928.	1929.	1930.
Total tonnage	6,256,895	6,558,589	6,290,625

Reserve fund	...	...	7,000
Inc. or dec. in carry-forward	—12,545	+11,068	+624

The falling off in receipts was partly due to reductions in the company's charges. At 6s. the £1 ordinary shares yield £7 2s. 7d. per cent.

Investment Trust Reports.—Five more pre-war investment trust companies have issued their 1930 reports in the last few days. With one exception all show an increase in revenue and net profits. The capital results, however, vary greatly. The Merchants Trust, which was formed in 1889, and is managed by Robert Benson and Company, reports an investment depreciation of 1.73 per cent. on the balance-sheet figure of £3,629,369. The International Investment Trust, registered in 1888, disclosed a slight decline in income and profits and an investment depreciation of about 5 per cent. on the balance-sheet figure (less reserves of £2,068,334). Both these trusts publish a list of holdings in their investment portfolios. The market valuation of the investments of the United States Debenture Corporation, formed in 1899, showed a depreciation of 6½ per cent. on the balance-sheet figure of £4,535,548. On the other hand, the Scottish Western Investment (1907), which belongs to the Fleming group, reported a substantial surplus at market valuation for investments over the balance-sheet figure of £2,749,592. The Caledonian Trust (1910), another of the Fleming group, had a depreciation of only 0.5 per cent. on its investments of £2,395,224. The trading results for these companies over the past two years are shown in the following table:—

	Merchants.		International.		Scottish Western.	
	1929.	1930.	1929.	1930.	1929.	1930.

The highest and lowest prices last year, the present market prices and the dividend yields are shown:—

	1930 Prices.		Present Price.		Div. Yield.	
	High.	Low.	Price.	Price.	Div.	Yield.
Merchants Trust	267½	248	229	14	6.11	
International	130	123	170	10	5.88	
Scottish Western	...	...	385	19	4.93	
Caledonian	338	300	305	16	5.24	
U.S. Debenture Corporation	264	231	237	15	6.33	

The United States Debenture Corporation is amending its articles so as to authorise the issue of preference shares

carrying interest below 5½ per cent., as the directors are satisfied that 5 per cent. preference shares can be issued on relatively more favourable terms than 5½ per cent. The company is also increasing its authorised capital by £302,000 to £3,000,000.

H.P. Sauce.—During the past financial year this progressive company acquired the business of Messrs Lea and Perrins, Ltd. Some 351,420 additional £1 ordinary shares were issued, including 100,000 issued as fully paid to holders of ordinary shares in H.P. Sauce and 251,420 to shareholders in Lea and Perrins, Ltd., by way of consideration for handing over the assets of their company. The results of the acquisition are reflected in the net profit, which has grown by £77,377 to £236,903. The ordinary dividend is maintained at 30 per cent.:—

	December.		
	1928.	1929.	1930.
Net profit	153,172	159,526	236,903

Written off investments	...	9,443	...
Increase in carry-forward	3,618	12,966	1,343

The Lea and Perrins' purchase accounts for the lion's share of the increase of £275,300 in shares held in subsidiaries, which now stand at £312,816. Holdings of Trustee stock have increased by £65,527 to a total of £572,763, and cash is £36,606 greater at £101,229. Liquid assets exceed current liabilities by £596,959, compared with £512,358 a year earlier. The ordinary shares, at £5, yield £6 7s. 8d. per cent.

V. STASINSKAS, Governor.

J. PAKNYIS, Vice-Governor.

J. MASULIS, Directors.

I. MUSTEIKIS, Directors.

B. MINIATAS, Chief Bookkeeper.

At the annual meeting of stockholders of the Lietuvos Bankas, held February 14th, 1931, 7 p.m., at the Bank's offices, Kaunas, presided over by Mr. J. Tubelis, reports of the Directors, of the Advisory Board and of the Auditing Committee were presented. The reports were by motion unanimously carried, ordered received and filed. It was further voted to pay to the stockholders 10 per cent. dividend.

Building Society Reports.—The first batch of building society reports shows that the year 1930 was one of continued expansion in the movement. The largest society in the country, the Halifax, increased its total assets by over £10 millions to £70 millions, and the second largest, the Abbey Road, by nearly £12 millions to £31 millions. The Halifax increased the number of its accounts by 40,947, a record figure. The total shareholders and depositors in the Abbey Road increased by 62,652. The Halifax now has 438,628 members, the Abbey Road has 197,471 shareholders and depositors. Another London society, the Westbourne Park, showed a rise in total assets of £1,675,000 to £9,007,000. The figures suggest that the movement is still advancing with much greater rapidity in the South than in the North of England, though the largest societies do not now confine their operations to any particular part of the country. Whether the pace of 1929 and 1930 can be long maintained is an open question, and it remains to be seen whether the Southern societies, in particular, will follow the lead recently given by the Abbey Road and place a limit on the amounts of new money from shareholders.

Burndeft Wireless.—A further stage in the troubled history of Burndeft Wireless is signalised by the report of the committee of shareholders this week, that they see no possibility of continuing the business without the provision of substantial capital. As a public company Burndeft goes back to 1925, when the wireless business started and managed by Mr Burnham at Blackheath was taken over. The first trading period resulted in a loss (attributed by the directors to a temporary slump in wireless) and although nearly half a million pounds of capital had been raised from the public the concern was soon running short of capital. Various devices were resorted to, including a loan on debentures from Phillips, but three years after its large capital had been secured the company had to reconstruct and Burndeft Wireless (1928), Ltd., rose from the funeral pyre of Burndeft Wireless. Now, after two years of trading, the reconstructed company, which made in 1929-30 a loss of £21,867, seems to have reached the end of its resources, and a receiver and manager have been appointed. The whole story is instructive. A business with technical skill and an excellent reputation, enjoying an early start in a new and growing industry, prosperous in every way except that it was believed to have suffered from want of capital, applied to the investor successfully. Why has so great a promise been so completely belied? The explanation would appear to be in the sphere of management. In its early days Burndeft had a sound technical staff, of sufficient business capacity to run a small business with credit. But the influx of capital was fatal, because the managers who could run the small business proved unable, apparently, to run a big one. As the committee say in their report, "there is evidence of the machine not working well as a whole, due largely to the absence of a responsible head." This particular concern was not so big that a really capable administrator with adequate authority might not have pulled it round, but really capable administrators are rare. The story of Burndeft is a useful warning that when a business outgrows the brains of its management it is in jeopardy.

Tin Restriction.—That most public of mysteries, the new scheme for tin control, was in no way cleared up by the announcement of Dr. Drummond Shiels, Under-Secretary for the Colonies, on Friday of last week. The Imperial Government has, it appears, approved in principle of restrictive legislation in Nigeria and Malaya; but this sanction is subject to the Government's further approval of the details of the plan. The date for the start of restriction operations is fixed as March 1st. The market was, not unreasonably, disappointed to find that matters were not at a more advanced stage. London prices had risen in anticipation of a more favourable an-

nouncement. This week, in spite of strong support, the general tone has been less firm; the Eastern market, in the meantime, has been selling fairly heavily. Even restriction's supporters can scarcely take exception to the caution implied in the attitude of the Colonial Office. Objections to the details of restriction proposals are, as a rule, more potent with Governments than those urged against the general principle. Very properly, the Colonial Office has expressed a wish to be satisfied as to the protection afforded to consumers against an excessive rise in price. There are other matters, not specifically mentioned by Dr. Shiels, which will doubtless be considered with an equal gravity. The surplus stock which, at present, gives buyers a tactical advantage in the market, will need stable finance. Output capacity still exceeds the probable needs of a normal year, and arrangements must, therefore, be made for eliminating the unwanted producers. The national quotas must be equitably distributed, and all participants must be assured that the plan, once started, will be effective. Finally, the Government may well require some assurance regarding the adequacy of the statistical control. The past year's experience of the Tin Producers' Association has served to emphasise both the ease with which over-optimistic estimates can be made, and the dangers which result from acting upon them. This point is of particular importance in the light of the statement by the Senior Warden of Mines, Federated Malay States, that Siam, Burma and the lesser producing countries are not to be consulted regarding the scheme until the latter is actually working. From this it would seem that fully a sixth of the world's output comes outside the scheme, and, further, is situated in the more recently developed fields, where the possibility of expansion is, *prima facie*, greatest. After the experience of the rubber industry, the Imperial Government may well desire some assurance that there will be no considerable growth of "outside" production.

Income Tax on "Kaffir" Dividends.—The revival of interest in South African gold-mining shares gives special relevance to the position as regards income-tax liability, which is not always clearly understood. The common practice in calculating the yields obtainable on Kaffir shares is, firstly, to deduct from the dividends declared an amount sufficient, when reinvested at compound interest, to amortise the purchase price over the estimated profitable life of the mine; and, secondly, to calculate the net yield with the resultant figure as a basis. This method, however, entirely ignores the fact that the rate of income tax chargeable on Kaffir dividends is lower than that on dividends declared by British companies. This, in fact, appreciably benefits the recipient of Kaffir dividends. A resident British holder of "Kaffirs" is subject to income tax on dividends at the full rate of British tax (4s. 6d. in the £), less Dominion tax relief (at present 2s. 3d., namely, half the British rate). He is thus liable at the "relieved" rate of 2s. 3d. This is charged, however, not on the dividend declared, but on the amount which, after deduction of tax at the rate of relief (2s. 3d.), gives the amount declared, i.e., on the "grossed-up" dividend. A simple algebraic calculation shows the net result of this procedure to be that the amount of dividend received (subject only to super-tax) is approximately 87½ per cent. of the dividend declared. The amount of dividend received under similar circumstances by a shareholder in a British company (with tax at 4s. 6d.) is 77½ per cent. of the dividend declared. To put the same thing another way, such a shareholder would receive as much, net, from a "Kaffir" declaration of £100 as from a British company declaration of £112.7. For purposes of comparison of net receipts, obtainable by a shareholder, for example, last year's West Springs dividend of 10 per cent. should be related to one of 11.27 per cent. by a "home" company. By the same formula Crown's 67½ per cent. compares with 76 per cent., while New Modder's declared 132½ per cent. looks even more imposing when thus scaled up to 149½ per cent. It is the "scaled-up" figure which should be the basis of subsequent adjustments for amortisation.

A.E.G. and Siemens.—Our Berlin correspondent writes:—The results of the two important electro-technical undertakings, Siemens and A.E.G., have been awaited with great interest this year in German financial and industrial circles. The business year which ended on September 30, 1930, was the first unfavourable year after a very successful period, and heavy losses were sustained on stocks, owing to the depreciation of metal prices. Both this stock depreciation and the decline in contracts placed by local authorities hit most severely the high-power section of the industry which is concerned with the construction of large power plant, dynamos, transformers, etc., so that the A.E.G. and Siemens-Schuckert (a subsidiary of Siemens and Halske) which conduct this branch of the business have had to reduce their dividends substantially. Siemens-Schuckert are distributing 7½ per cent. against 10 per cent. in the previous year, on a capital of 120 million Reichsmarks, and whereas last year 3 million Reichsmarks was carried to reserve, no such provision is made this year. The turnover of A.E.G. in 1929-30 only declined from 580 million to 520 million Reichsmarks, but the gross profit declined in a much higher ratio, from 40 million to 30 million Reichsmarks. In order to make the net profit cover a 7 per cent. dividend on the ordinary shares, against 9 per cent. last year, the amount written off for depreciation has had to be heavily reduced, from 8.9 millions to 3.8 millions. The serious deterioration of the prospects of this industry is best indicated by the decline in the unfilled orders of the A.E.G. to 250 million Reichsmarks on January 2, 1931, from 350 million Reichsmarks a year before. The low-power section of the industry, which caters for telephone, telegraph, radio and talking films, has done much better. Siemens and Halske have been able to maintain their dividend of 14 per cent., though here, too, there has been a decline in net profits, so that there is no allocation to reserve this year, whereas last year 2½ millions were carried to reserve. The dividend is being maintained partly for other than industrial reasons. In January of this year the company issued \$33 million participating debentures in New York. The issue was made on the basis of a 14 per cent. dividend, and the company was under a moral if not a legal obligation not to let its first distribution fall below this level. In spite of these considerations, the unchanged dividend has made a very good impression on the Berlin Stock Exchange, where it is regarded as evidence of the fundamental strength of German industry.

Vereinigte Stahlwerke.—This German mining trust, formed in 1926 by the amalgamation of a large number of companies, and now by far the largest producer of coal, iron and steel on the Continent, has had to reduce its dividend for the year ended September 30, 1930, from 6 to 4 per cent., writes our Berlin correspondent. Total sales declined by 13 per cent. to 1,250 million Reichsmarks. Gross profit declined only by 8 per cent. to 262 million Reichsmarks, in spite of the decline in prices. Net profit, however, at 31 million Reichsmarks, against 48 million Reichsmarks, is over one-third lower, for bond interest, taxes and provision for depreciation have not diminished. The 800 million Reichsmarks ordinary shares have always paid 6 per cent., and this is the first reduction. There was a prolonged conflict about the rate of dividend. Some large shareholders and bankers, in the interest of the Stock Exchange, spoke in favour of maintenance of the usual rate, whereas the directors wished to pass the dividend altogether, in view of the deterioration of conditions in the opening months of the new business year. The decision to distribute 4 per cent. represents a compromise. The balance sheet was favourably received by the Stock Exchange, as an even worse showing had been expected. The depression is very clearly reflected in the item "stocks," which has risen, in spite of the decline in prices, from 191 Reichsmarks to 270 Reichsmarks, owing to the heavy increase in unsold output of coal and steel. The principal shareholders of Vereinigte Stahlwerke are the Gelsenkirchener Bergwerks A.G., the Phoenix A.G. and the Rheinische Stahlwerke. These companies will also be under the necessity of reducing their dividends for the past year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Great Western Railway, Southern Railway, The Underground, Pearl Assurance, Clerical, Medical and General Life Assurance, Scottish Provident Institution, Manchester Ship Canal, British Assets Trust, Telephone and General Trust, Wandsworth, Wimbledon and Epsom District Gas, City Offices, London and Thames Haven Oil Wharves, Borax Consolidated, Selfridge and Company, and Jeremiah Rotherham. Presiding at the annual meeting of the Great Western Railway Company, Viscount Churchill informed shareholders that an analysis of the figures showed that no less than 82 per cent. of the total decrease in general merchandise traffic, and over 76 per cent. of the decrease in other minerals traffic, was accounted for by the fall in traffic forwarded from South Wales stations. At the annual meeting of Borax Consolidated, the chairman said that the board believed the position of the company had been materially strengthened, firstly, by the development of its new borate mine and the works at Wilmington, California, and, secondly, by its recent acquisition of an interest in the potash industry. At the annual meeting of the Scottish Provident Institution the chairman pointed out that statistics recently published established the remarkable fact that England was still much under-insured as compared with her neighbours, especially the United States and Canada, and it behoved every thinking man seriously to ask himself if he had taken out sufficient life assurance to protect his dependants in the event of his death.

Plymouth and Stonehouse Gas Light and Coke.—Sale by tender of £70,000 5 per cent. perpetual debenture stock, minimum price £97 per £100 stock. The issue is being made to repay the 7½ per cent. debenture stock due for redemption on March 31, 1931.

Oxford and District Gas.—Sale by tender of £51,000 5 per cent. perpetual debenture stock, minimum price £98 per £100 stock, yielding at that price £5 2s. per cent. The net revenue of the company for the year to December 31, 1930, was £46,357, covering interest on loan capital, including the present issue, nearly five times.

COMPANY MEETINGS, &c.

PEARL ASSURANCE COMPANY, LIMITED.

"WONDERFULLY GOOD RESULTS."

GRATIFYING PROGRESS IN INDUSTRIAL BRANCH.

ANOTHER INCREASE OF NEARLY £5,000,000 IN FUNDS.

MR GEORGE TILLEY REVIEWS A DIFFICULT YEAR.

The sixty-seventh annual general meeting of the Pearl Assurance Company, Ltd., was held, on Thursday, February 26th, at the Registered Offices, High Holborn, London, W.C.1. Mr George Tilley (the chairman of the company) presided.

The Secretary (Mr W. N. Proddow, F.C.I.S.) having read the auditors' certificate,

The Chairman said: Ladies and gentlemen,—Before dealing with the matters covered by the report, I would like to mention that our esteemed president, Mr Shrubbsall, has now passed the 60th anniversary of his entry into the service of the company. I am sorry he is not here present to-day to receive in person the congratulations which we all tender him, but he found it desirable to seek sunshine in a climate warmer than England in February. You will be glad to know, however, that he is a regular attendant at our board meetings, and from the fund of his wide experience gives great help to my colleagues and myself in the problems with which we have to grapple.

Coming now to the 67th annual report and statement of accounts, I am in the fortunate position of being about to record a tale of results which, especially when regard is had to the times of almost unparalleled difficulties which are affecting this nation, and, indeed, the whole of the civilised world, must be regarded as wonderfully good.

THE PAST YEAR.

When we met to review the operations of the Company at this time last year we were suffering under some of the first results which followed the breaking of what may be called the boom period through which some countries, particularly the U.S.A., had been passing. At that time most people had latent, if not strongly expressed, hopes that the worst had been seen, and that some recovery might reasonably be looked for before the end of another year. Unfortunately, any such hopes were doomed to disappointment, since, economically, not in this country alone, but throughout the world, there has been experienced rapidly falling prices and the conditions of gloom and stagnation normally attendant upon such falls. We may not yet be at the end of this period, but without venturing far into the realms of economics we can comfort ourselves with the reflection that reaction is a natural law, that heretofore depressions have passed away and given place again to periods of active progress. Judged on this simple basis, and by reference to similar cases in the past, it would seem that a turning point cannot be far distant.

Notwithstanding the adverse features of the period, however, we have solid ground for satisfaction in a record of what has been achieved since I last addressed you. In periods of economic instability insurance shows a high degree of stability, and when the citizen, as investor, realises by painful experience the superior advantages of a safety-first policy, he is attracted to the contracts offered by a good assurance company. It is this, I think, which accounts for the fact that when nearly every type of business and enterprise shows signs of diminished activity, insurance is successful in maintaining its position and popularity unimpaired. The instinct which prompts people to turn to insurance in times of difficulty is thoroughly sound and one which deserves encouragement.

I venture to think that one of the consequences of the economic changes through which we have been passing is to give an added importance to the work of institutions such as our own. In recent years there has been a growing tendency to place the main burden of increases in taxation on the higher ranges of income and on the capital of large estates, with the result that these sources, from which in the past has been drawn a large proportion of the capital required for the development and re-equipment of industrial production, have become less and less fruitful. Latterly there has occurred coincidentally a sharp fall in prices unaccompanied by a corresponding reduction in money wages, so that the purchasing power, measured in terms of the wages and salaries of those who have remained in employment, has increased. The combined effects of these processes has been to transfer much of the control of the surplus production of the country from the hands of wealthy individuals and corporations to the multitude of wage and salary earners.

LIFE ASSURANCE COMPANIES AND NATIONAL THRIFT.

In these circumstances it has become more urgently necessary that the utmost possible shall be done to encourage savings by those in enjoyment of the lower ranges of income in order that the impaired sources of capital may be made good. To be made available as capital for the development of industry, these small savings must not merely be aggregated, but they must be given a degree of permanence. While according the fullest recognition to the work of the National Savings movement and of the savings banks, I feel that it is fair to say that life assurance institutions are the most energetic and the most successful advocates of thrift among the wage-earning and salaried classes, and that a very important element in their success is their ability to point to the encouragement afforded by the life assurance abatement of income tax. This abatement of income tax in respect of life assurance premiums has been a feature of our income tax laws for more than three-quarters of a century, but I am sure that at no time was its retention more indisputably justified in the best interests of the nation. It is true that in proportion as the abatement achieves the object of encouraging thrift and provision for dependents in the form of life assurance, it results in loss of tax revenue, but if these difficult times are to become less difficult it is necessary to take a wider view of this question than the mere immediate effect on the yield of the income tax. It was very gratifying that this wider view received so much recognition in the House of Commons last year that a Government proposal to restrict still further the amount of the abatement was subsequently abandoned. In common with other life offices, we are and have been unwilling to lend ourselves to the exploitation of the abatement as a device for tax evasion, but I do plead that the use of the abatement in life assurance propaganda shall not be so hedged about with restrictions and restraints as to hamper us in making legitimate use of its designed encouragement of thrift.

ORDINARY BRANCH.

In one direction this year we have not written as much business as usual. I refer to assurances of large amounts effected under the single premium plan with the help of a loan. The Chancellor of the Exchequer concluded that the assured under such types of policy benefited too great an extent by reason of tax exemption, and a section was incorporated in the Finance Act of 1930, referring to this type of contract, which deprived it of one of the advantages which had largely contributed to its popularity. Hence the item of single premiums this year in the ordinary branch amounts to £52,265, as compared with £873,398 for the previous year.

The loss of premium from this special cause is perhaps the chief reason for our not having recorded the usual handsome increase in the premium income of this branch. We need not greatly regret, however, the diminution of this class of business, since the premiums in question, being in the main financed by loans from the company, never represented in their nominal amount real investment in life assurance.

You will have seen by the report on the valuation of this branch by our actuary, Mr. Austin, that a reversionary bonus of £2 6s. 0d. per cent., on the sums assured was recommended, and the recommendation adopted by the directors. This is a striking comment on, and endorsement of, what I have stated on the subject of the desirability of life assurance in general, and of assurance with the Pearl in particular, as a medium of safe and profitable investment. This is the third successive year for which this rate of bonus has been declared, it having risen from one of £2 for the year ending December 31, 1924. While we can maintain bonuses at rates not less favourable than that now declared (and under present conditions we feel quite confident that we can), we can hardly fail to attract a large volume of business from both old and new policyholders desiring to share in the prosperity of the company.

INDUSTRIAL BRANCH.

The progress of this branch has been especially gratifying, particularly when regard is had to the adverse economic conditions which have obtained in the period under review, although it is to be noted that we have been free from any great industrial strife,

either during the year or in the immediately preceding period. Owing to the sympathetic treatment by the company of its policyholders when strikes and lock-outs have brought exceptional and widespread distress, the full adverse effects of these disasters upon our figures are rarely seen until the lapse of a considerable period of time. Frequently we have kept on our books in full benefit thousands of policies which by ordinary rules and conditions would have lapsed by reason of non-payment of premiums. Experience shows that although these policies need to be nursed over long periods, sometimes extending to several years, a large proportion of the policyholders so dealt with are able to recover their position and to bring their policies back within the ordinary conditions of premium payments. Another contributory cause to the good results shown has been the absence of any severe epidemic of influenza—always a great influence upon the figure of claims paid.

AUTOMATIC PAID-UP POLICIES.

In the course of the year a decision of great importance to industrial branch policyholders was taken by the directors, whereby as from September 1st last paid-up policies are automatically granted and set up in respect of every policy upon which premiums cease to be paid, provided that not less than two years' premiums have actually been paid. This decision was arrived at partly for the reason that it meets certain difficulties arising out of the Industrial Assurance Act, 1923, which were experienced in dealing with those policyholders who lapsed their policies and re-entered by effecting fresh assurances; but it has other advantages to commend it. Thus those policyholders who do not wish to continue or who are forced by circumstances to discontinue payment of premiums, are now secured of every benefit that could reasonably be expected in return for their premium payments. Upon a cessation of premium payments a period of grace is allowed varying from four to thirteen weeks, during which the assurance remains in force and payment may be resumed. Failing this, those qualified are protected by the grant of a paid-up policy of an amount not less than that given in accordance with the bases set out in the Industrial Assurance Acts of 1923 and 1929.

BONUS—INDUSTRIAL BRANCH.

We initiated last year a policy of granting bonuses on policies in this branch by the allocation for the purpose from surplus of a sum of £508,671. You will, I doubt not, be pleased to see from the report that we are able to continue this benefit, for which purpose an allocation of £553,850 has been provided from the surplus of this year. This will provide for bonuses at the same rates as were granted last year to those policies to which the scheme applies. On whole life assurances the rate is 1s. 4d. for each policy, subject to a weekly premium of one penny, or a monthly premium of fourpence, and in proportion for policies subject to premiums of other amounts. For endowments and endowment assurances, a bonus of 1s. 0d. for each policy subject to a weekly premium of one penny or a monthly premium of fourpence, and in proportion for policies subject to premiums of other amounts. Thus, on a whole life policy subject to a weekly premium of 1s. 0d., the bonus would be 16s. payable at death. Thus, in two years we have voluntarily allocated over £1,000,000 for the purpose of increasing the contractual benefits under policies of over seven years' duration.

Voluntary distributions of surplus to industrial branch policyholders on such a magnificent scale as has been adopted by this company in recent years (and in this connection I have in mind the addition of over £9,000,000 to sums assured granted in 1926) are striking and significant developments in the history of the business. As shareholders I am sure that you will heartily approve the policy of the board in consistently improving the value given to our policyholders, so attracting the support of the public on the best of all possible grounds.

EXPENSES.

The rate of expense at which we operate is always a subject of interest and importance, not only to you as shareholders, but also to our policyholders, since both bodies benefit more or less directly by good management reflected in a low rate of operating expense.

In the ordinary branch the rate is 10·80 per cent. of the premium income, showing a fractional increase, but this is more than accounted for by the drop in the single premium business, with which subject I have already dealt. We have, in fact, attained a satisfactorily low rate as compared with the rates of other offices.

In the industrial branch the rate is 32·86 per cent. of the premiums—the lowest point we have ever attained—and is a decrease from the previous year of nearly one and one-third per cent.

I feel assured that our steady progress in this direction is a cause of gratification to everyone connected with the business.

FIRE AND OTHER CASUALTY INSURANCE BRANCHES.

Contrary to previous custom, I propose to deal this year with these branches conjointly, as their interests and activities are to a great extent bound up together, and are becoming more so as time goes on.

The combined premium income of these branches amounted to £664,568, representing an advance of £15,478 upon that of the previous year. You will see the figures relating to the respective branches in the report before you.

In the fire branch claims paid and outstanding equalled 56·9 per cent. of the income, whilst expenses accounted for 45·1 per cent., and with the release of premium reserve there is a small trading surplus. Our experience in respect of our direct business at home has been very satisfactory, and the same may be said, speaking generally, of our foreign business. The experience of the United States and the re-insurance business, however, has not been so favourable as in the past. We have been sharing the common experience in these two last-mentioned fields, and taking everything into consideration I feel that we may be well satisfied with the results achieved.

Expenses, unfortunately, show a further increase, due partly to constantly increasing acquisition costs, to which I have referred on a previous occasion, but attributable also to expenses incurred in the expansion of our organisation throughout the world. Money spent in that direction, however, must be regarded as being in the nature of capital expenditure from which we will benefit in the future, and I am not, therefore, unduly disturbed on that account.

Turning to the accident branch, there has been, I am glad to say, an advance in all sections. Whilst claims paid and outstanding are somewhat higher at 48·4 per cent., the ratio of commission and expenses of management has dropped from 32·7 per cent. to 31·4 per cent., which is a very welcome feature.

As I have just stated, we are still pursuing a policy of steady expansion throughout the world. The current and widespread trading depression has, however, robbed us of some of the gains that we could reasonably have anticipated under more normal conditions, but I feel convinced that in laying the foundation of our business as we have been doing in these branches during a period of depression, we are building on surer ground, and that we will benefit accordingly when the long-looked-for revival sets in.

FUNDS AND INTEREST.

The funds of the company as shown in the balance sheet now amount to £63,318,401, and again show a growth of nearly £5,000,000 since the previous accounting.

The management of investments has this year presented problems of unusual difficulty for all institutions. The credit of many borrowers has undergone a rapid deterioration, and the protection of the company's funds has called for exceptional vigilance. The field for new investments has become very restricted, and it is much to be deplored that the very urgent needs of credit in many countries cannot be met, either because of political instability or because of the incurable inability of politicians the world over to realise that when income fails a reduction of expenditure is inevitable, and that delay in effecting it merely aggravates the difficulties. If the requisite adjustments were effected promptly and with justice and equity to all classes, we should not so often witness the apparent perversity of credit failing in its purpose of facilitating the exchange of goods just at the moment when goods to be exchanged are most abundant.

In our efforts to keep intact the values of our enormous investments we rely on a careful choice in each case and a considered distribution of the risks in relation to types and classes of security, as well as to a spreading in geographical areas. Further, we regularly keep the existing holdings under review. To my mind, a good distribution of risks, aiming at the production of good average results, is the soundest principle upon which it is possible to act, and in the long run is bound to be the most profitable. I do not mean, of course, anything like an equal proportion of various types, but a strictly reasoned one. Thus we hold a specially large proportion of British Government stocks, although this is due partly to the fact that in the course of our business we have issued a large number of policies securing to the holders War Loan, Funding Loan, and Victory Bonds.

At the end of the year 1929 there had been a serious fall in the value of investments, and in addressing you last year on that subject I referred to an allocation then made to our investment reserve funds in the following words:—"This additional safeguarding of our position was determined on partly because of the troubled financial history of the past year; not that it had become necessary by reason of anything that we have experienced, but rather as a further safety margin against the possibility of anything unforeseen which may happen in the future."

Well, ladies and gentlemen, as you probably know, perhaps by some personal experience, there has since then occurred a further and very severe fall over a great range of securities. I can, however, immediately reassure you on the matter that must be in your minds as to how we have been affected, and I am gratified to be able to inform you that, taken as a whole, the actual market value of our securities shows a very substantial appreciation over the

year. Notwithstanding this very gratifying fact, we are continuing the policy of providing a margin of safety for our policyholders by allocating to our investment reserve funds a further sum of £350,000 from the ascertained surplus of the year.

The gross yield on the assurance funds shows an increase, but the greater part of this increase is the result of a combination of accounting features rather than a real increase in the gross rate yielded by our investments. The yield on the assurance funds reflects not merely the earning power of the investments, but also the extent to which the interest on the investments representing special reserves goes to swell the interest on the investments representing the actual funds.

STAFF PENSION FUND.

We are allocating to this fund from the surplus of the year the usual substantial contribution of £100,000, which, when added to the fund standing in the balance sheet, makes a total of £1,080,879.

The interest earned on this fund provides at the present time the bulk of the calls made upon it, so that the annual allocations are reserved nearly in full, and increase the income accordingly.

This would not be the case to so marked an extent, however, were all the pensions we grant charged on the fund, since, in actual fact, there is a number of pensions granted to members of the staff who do not qualify under the terms of the fund proper. In the course of time we anticipate that the moneys in the fund itself, in addition to the income, will be drawn upon to reinforce the ever-expanding stream of payments, but in the meantime I am sure you all feel great satisfaction in the contemplation of the growth of this provision for the needs of those who bid us farewell on retirement from active work after long and faithful service.

NATIONAL HEALTH INSURANCE.

I desire once more to commend to your attention the prominent part played by your company and its representatives in that great branch of social activity, National Health Insurance. Our connection with this work through the National Amalgamated Approved Society shows a continuation of the efficient and successful working that has characterised it in the past.

The Pearl membership continues to increase and during the year 1930 our representatives enrolled 52,452 new members. There was paid to our insured members no less than 1,124,830 benefit payments in respect of sickness, disablement and maternity benefits, amounting in all to a total of £734,071. During the year our representatives were responsible for the payment of no less than 41,520 maternity claims amounting to £89,886.

The smooth working and steady progress of this branch of our activities is evidence of the care and attention paid to the work by our representatives, and also of the efficient organisation built up by Sir Thomas Noill and his officers at the head office of the society. To all concerned in this work I tender most cordial thanks on behalf of this company.

The committee of the National Amalgamated Approved Society, on which we have three representatives, including myself, are grateful that the Government has passed the prolongation of Insurance Act, 1930.

They have by this means dealt with the problem of maintaining on an insurance basis the insured status of those genuinely unemployed workers of the country which would otherwise have been lost at the end of the past year as a consequence of the prolonged industrial depression.

The new Act is a valuable safeguard for persons who are genuinely unemployed, and gives what is most needed, maintenance of their membership and medical benefit. This latter benefit by helping the members to retain health, and consequently the capacity for employment, is of inestimable value to them.

SURPLUS OF THE LIFE FUNDS.

The total surplus for the year from the life funds amounts to £2,507,898, and this has been dealt with as follows: To policyholders, £1,289,863; to staff pension fund, £100,000; to investments reserve funds, £350,000; to profit and loss account, £543,692; while £224,343 is carried forward.

PROFIT AND LOSS ACCOUNT.

In addition to profits from the life funds, there has, during the year, been carried to this account from the fire and accident branches a total of £37,000, and the balance of the account at the end of the year amounts to £160,553. This, with the addition of the amounts transferred from the life branches, totals £704,245, out of which it is proposed to pay £265,025 as a final dividend to the ordinary shareholders.

The report was adopted, other ordinary business was transacted, and the proceedings terminated with a vote of thanks to the chairman.

THE SCOTTISH PROVIDENT INSTITUTION.

MUTUAL LIFE ASSURANCE.

SUCCESSFUL RESULTS OF THE YEAR.

GROSS NEW BUSINESS RECORD.

The ninety-third annual general meeting of the Scottish Provident Institution was held in Edinburgh on Wednesday, February 25, 1931, Mr J. Maxtone Graham, C.A., in the chair.

The Chairman, in moving the adoption of the report, said:—

The report, covering the year 1930, having been advertised in the papers of last Saturday and a copy having been handed to each member on entering this room, I presume that I may hold it as read.

NEW BUSINESS FIGURES.

The gross new business completed, amounting to £3,452,893, is the largest total ever recorded in the institution's history. The net business, however, does not constitute a record, as we reassured with other offices no less than £561,500, as against £91,500 in the previous year. The reason for these large reassurances is that in many cases we received proposals for sums above the maximum which we retain at risk on any one life. While we regard these large policies as a proof of the suitability of our distinctive system to present-day requirements and of the public appreciation of our low rates of premium, we do not specially seek this big business. We are a mutual office. For ordinary assurances the rich man and the poor man, if they are of the same age, pay the same rate of premium, and we like nothing better than to see our risks well distributed over a large number of policies for moderate amounts.

So far as the claims by death are concerned, we have again had a most favourable experience, the ratio of the amount of actual to "expected" claims being under 60 per cent.

TOTAL FUNDS.

The total funds as at December 31st last amounted to £22,495,464, practically 22½ millions sterling, showing an increase during the year of £873,121. Of this sum £200,000 has been transferred to the investment reserve fund, raising it to £500,000. I think you will agree that, under existing conditions and with aggregate funds of 22½ millions, it is a sound and prudent provision to have a substantial reserve fund. When I tell you that the difference between the market value of our Stock Exchange securities and the value at which they stand in the balance sheet shows a depreciation of less than three-fifths of 1 per cent. you will appreciate that the increase in the reserve fund has been made not because it is demanded by the present position, but really as a provision against the future, into which the vision of the most expert financial authorities cannot penetrate to any far extent.

The rate of interest realised on the total funds was £5 11s. 9d. per cent., or £4 15s. per cent. after deduction of income tax. The yield is somewhat less than last year, but, looking to the increase in the rate of income tax, the drop from the net rate of £4 18s. 4d. per cent., earned the previous year, was not unexpected.

ADVANTAGES OF LIFE ASSURANCE.

I cannot remember a year fraught with so much anxiety and which ended with the future so obscure as 1930. Seldom has there occurred a period of such unrelieved and universal depressing sweeping like a miasma over every continent and country. The process of recovery, when it sets in, must inevitably be gradual. It is, however, satisfactory to feel that the great financial institutions in the country are so circumstanced that they can await the turning of the tide without apprehension. But what of the individual investor, who, during the past year, has seen the value of his securities crumbling to the extent of 20 per cent. or more, and who, in many cases, will have to face a consequential reduction in his income? There is only one sure and certain method by which he can at once cover the loss in capital value, and that is by an investment—and I use the word advisedly—in a life assurance policy. To restore the value of your estate at an annual expenditure of a few pounds per cent. is surely purchasing peace of mind at a cheap rate. I am sure that there are many to-day who do not realise the fact that they can, by means of life assurance, cover the depreciation of their capital in event of their death, or, what is perhaps more important, save the forced realisation of sound securities at prices below their intrinsic value.

NATION STILL MUCH UNDER-INSURED.

Statistics recently published establish the remarkable fact that, as a nation, we are still much under-insured as compared with our neighbours, especially the United States and Canada, and it behoves every thinking man seriously to ask himself if he has taken out sufficient life assurance to protect his dependants in the event of his death. Our low premiums and our equitable system cannot fail to be attractive to such as these. There is a vast number of people in

this country still unprotected who can afford to open a policy for £100, £250 or £500 and who ought to do so. The doors of practically every office in the country are open to them, and it would be for their benefit and for the good of the nation if they made the small sacrifice necessary to secure this provision.

The motion was seconded by Mr James B. Adshead, J.P., and carried unanimously.

SELFRIDGE AND COMPANY, LIMITED.

WHOLESALE AND RETAIL PRICES.

The twenty-third annual ordinary general meeting of Selfridge and Company, Ltd., was held, on the 26th instant, at the company's Store, Oxford Street, London.

Mr H. Gordon Selfridge (chairman and managing director) said that the year 1930 had started by showing reasonable increases in their returns over the corresponding periods of the previous year. February and May had practically balanced 1929, while March, April and June had put them well into black figures. July had shown a small loss, but the first six months had been substantially on the right side. The second six months had not been so good. Prices had continued to fall. A greater volume of merchandise had been more and more necessary to equal the amount in sovereigns of the corresponding months of 1929, and with that had come also a further decrease in the buying strength of the consuming public. They, therefore, in company with all similar distributing houses in the country, had found it necessary to increase more than ever the number of customers. In that they had been reasonably successful, for their figures showed that they had served several hundred thousand more customers than during any previous year.

Prices in their Store were continually being pulled down as rapidly as their first cost of production made possible, but they still saw occasional public criticisms that retail prices were failing to keep pace with wholesale reductions. The basis which these critics had to go on is the so-called "Wholesale List," as supplied by the Board of Trade, and when one analysed that "Wholesale List" one found in it very many items which were not even remotely related to the cost of living and which in no way enter into the question of the average price in retail distribution. For example, the list included pig iron, wrought-iron hoops, steel angles, boiler plates, rivets, ship plates, etc., copper, tin, lead, zinc, nickel, raw cotton, wool rags, yarns, raw silk, jute, hemp, sulphuric acid, ammonium sulphate, sodium carbonate, mechanical wood pulp, Australian tallow, raw linseed oil, cowhides, calf skins, rubber, etc., etc. The list also included wheat, corn and bread (which incidentally was now sold at the same price as in 1913), barley, oats, maize, meal, rice, also such articles of daily consumption as milk, butter, cheese, potatoes, onions, oranges, sugar, tea, coffee, cocoa and tobacco.

But the list of "Producers' Prices" on such a list as above should not be looked upon as a "Wholesale" list. It was, instead, practically a list of the "costs of production of raw materials." The difference between such costs and the finished product was made up almost entirely by wages or other labour costs, and these were practically all high and very much above pre-war. The price, for example, of a lady's dress or child's frock, or man's overcoat or suit, or nearly any article of wear, should not be compared with the price of raw wool, which, incidentally, was a very small item in its cost, but should be compared instead with these few shillings worth of wool and, in addition, the labour costs in all of the many different processes which go to build that wool into the finished article.

The great distributing house paid the manufacturer for the wool, which was a small item, plus the labour, which was a large factor, and these, added together, made the article cost more than pre-war. Their contention was that retail prices had followed the reductions which had been obtained from the manufacturers and had been quickly passed on to the public, and that the great stores had been foremost in helping to reduce the cost of living.

They would start within a month or two a very great but not rapid scheme of premises enlargement. They had realised that the store was too small. The throngs of customers on their various floors were often almost too great. With that fact evidently and continually before them, they had approached some time ago the heads of the two estates who held most of the land between their store and Wigmore Street. Leases for 90 years had been made and the directors would begin very shortly a building on the corner of Duke and Somerset Streets measuring about 230 by 200 ft.

But, inasmuch as they would not quite require the entire complete building at once, they would build at the start only the ground floor and three basements. This structure they hoped to have at least partially ready for next Christmas trade. Then, as they might require the additional space, they would cover more land with their building and add the upper stories to those about to be built. The report and accounts were adopted.

CLERICAL, MEDICAL AND GENERAL LIFE ASSURANCE SOCIETY.

QUINQUENNIAL VALUATION AND BONUS.

The 107th annual meeting was held, on the 26th instant, at the Chief Office, 15, St. James's Square, London, S.W.

Mr Francis E. J. Smith (the chairman) said: Gentlemen,—We have a story to tell you which you will, I think, regard as being thoroughly satisfactory. An increase in the net new life business of over £200,000, a substantial advance in the premium income, a decrease in the amount of the death claims, a decrease in the ratio which the expenses of management bear to the premium income, and, finally, an addition, after all outgoings had been accounted for, of £369,000 to the life assurance fund—these are indeed features upon which a society holding its 107th annual meeting may well congratulate itself.

The report and accounts were unanimously adopted.

The "Bonus" meeting was afterwards held.

The Chairman, in the course of his speech, said: After our confident prophecy a year ago the directors are glad that they can now declare £1,285,990 as the society's divisible profit for the 4½-year period which ended on December 31st last with over £82,000 carried forward. In 1926 we divided £1,028,000 as the result of five years' working.

Glancing now at the progress of the society in the last 4½ years, the average annual number of new policies has risen to 2,187, having nearly doubled in the last 14½ years, while the annual average of the net new sums assured has risen by over three-quarters of a million pounds. Our life assurance fund has risen in the last 4½ years by £1,593,109. The average net annual rate of interest earned during the 4½ years was £4 15s. 9d. per cent. As to our assets, we pride ourselves on publishing a full list of investments so that you, or any intending policyholder, may gauge his security.

We have retained the shares of the Clerical, Medical and General Canadian Investment Company at their purchase price of £5,000. The company has invested £584,865 in some 353 mortgages in Toronto at remunerative rates, sub-mortgaging them to us at 6 per cent., a rate which leaves the company a margin out of which to pay expenses.

The General Reversionary and Investment Company's shares have been retained at £726,696. This book value is very amply secured, for we have valued the assets of this company on the most stringent tables. The valuation discloses an excess over the book value of the shares amounting to £113,412.

Our latest subsidiary, the Investment Trust Company, has been in existence less than a year. The paid-up capital is £250,000, entirely owned by us. On December 31st there was a depreciation on the securities purchased amounting to £19,823 8s. 5d., just under 10 per cent. of the invested capital, but on February 19th the depreciation had fallen to 5.41 per cent. Launched in difficult times, the company is carefully husbanding resources, has written off all preliminary expenses out of revenue and has paid no dividend for the broken period of the twelve months.

As to the society's Stock Exchange securities, we have written up no single security, and where book values have been higher than the market values taken at lowest selling prices less accrued interest—we have written down our book values to those figures. This has cost us £76,638 and left us in the proud position of being able to say that no Stock Exchange security has been written up, or stands in the books at a price exceeding either its market value or its cost price. The market value on December 31st exceeded the book value by no less than £145,738.

Turning now to the valuation of our liabilities, we have, for the ninth time in succession, valued all our life assurance and annuity contracts on a 2½ per cent. basis. In the case of the non-profit life assurances, we have set up additional loading reserves which raise the total to £126,038.

We have increased our bonus maintenance reserve fund from £300,000 to £400,000, and have, of course, maintained the permanent reserve of £50,000 required by our Acts of Parliament. By subtracting the total liabilities from the life assurance fund, we reach the net surplus of £1,289,855 available for division. Adding to this the £78,714 already paid as interim and intermediate bonus, our gross surplus becomes £1,368,569, of which the directors are now dividing £1,285,900, and are carrying forward an undivided surplus of £82,579.

Regarded from the cash bonus point of view, whole life policyholders are now receiving, on an average, about 52 per cent. of all the premiums paid by them during the valuation period just closed. In 1926 this class of policyholder received, on the average, 46 per cent. and in the three previous quinquenniums, 41 per cent. The effect of our bonus upon policies under the prime cost, or discounted bonus, system, is very noticeable, although the premiums are so low as to be nearly identical with the usual non-profit rates. The report and accounts submitted were received and recorded.

GREAT WESTERN RAILWAY COMPANY.

RESULTS OF A DIFFICULT YEAR.

FURTHER SUBSTANTIAL ECONOMIES.

The annual general meeting of the Great Western Railway Company was held, on the 25th instant, at Paddington Station, London, the Right Hon. Viscount Churchill, G.C.V.O., in the chair.

The Chairman, in moving the adoption of the report and accounts, prefaced his remarks by referring to the changes on the board and to the criticism which is periodically raised in certain quarters in regard to the number of directors on railway boards. As the result of the amalgamations under the Railways Act, 1931, the number of directors on the Great Western Board was fixed at 25, and in the aggregate a substantial saving in directors' fees for the group was effected. He had very carefully considered whether it would be of real advantage to the company to reduce the number. In his view it would be unfortunate if, owing to some limitation in regard to numbers, the board were deprived of the assistance they now received from these directors, whose experience in the world of commerce and industry made their services extremely valuable, and also from those members who were in close touch with local interests and the requirements of the districts which they represented. Continuing, he said the receipts from railway and ancillary businesses amounted to £34,346,867, as compared with £36,184,053, a decrease of £1,837,186. Of this decrease £1,438,557 was attributable to the railway and £324,534 to the docks. These heavy decreases reflected the acute state of depression from which the country suffered during the greater part of last year. The number of passengers carried fell by 7,603,942, or 5.75 per cent., and the tonnage of merchandise and coal was 6,675,845 less, or 8.16 per cent. The gross expenditure on railway and ancillary businesses amounted to £28,226,477, compared with £29,208,791, a decrease of £982,314, which was more than 50 per cent. of the reduction in the gross revenue, and was a result which reflected the greatest credit on all concerned. The Chairman was satisfied that the efficiency of the undertaking had not been impaired by this reduction. Net receipts from railway and ancillary businesses amounted to £6,120,390, compared with £6,975,262, a decrease of £854,872, and the net revenue for the year amounted to £6,987,146, compared with £8,198,644, a decrease of £1,211,498. With the balance brought forward from last year's account, amounting to £186,227, plus £150,488 representing profit on realisation of investments, the net revenue reached a total of £7,323,861. After meeting all prior charges the amount available for dividend on the ordinary stock enabled the payment of a dividend of 3½ per cent. for the past half-year, making 5½ per cent. for the whole year, and leaving a balance of £65,396 to be carried forward.

POSITION IN THE SOUTH WALES COALFIELD.

Turning to the report, Lord Churchill referred to the serious depression in trade which obtained during the greater part of last year. This depression, he was sorry to say, still continued, and there were no indications that a trade revival was yet in sight. The position in the South Wales coalfield had been adversely affected by the uncertainty which had prevailed in consequence of the introduction of the Coal Mines Act during a period of falling prices, and, although he hoped the three years' agreement which had recently been concluded between the colliery owners and the unions would bring about a greater degree of stability in the industry, he regretted to say the stoppage which took place in January resulted in a heavy loss to the company. Their coal carryings last year were 4,357,000 tons less than in 1929, the decrease in shipment traffic being 2,417,000 tons, and in land sale traffic 1,940,000 tons. The decline in the land sale traffic was mainly due to the depressed state of the iron and steel trade. There were forty-five blast furnaces situated on the company's system, and of these only five were now in blast, and the general position of this industry could only be regarded with grave anxiety. During the past year the tonnage of iron and steel traffic originating on the company's system declined by over 1,750,000 tons, a reduction of 30 per cent. compared with the year 1929, but even this did not represent the full seriousness of the present situation, as the traffic had been steadily decreasing during recent months, the figures for December being 46 per cent. below those for the corresponding period of 1929, and in the case of pig iron 63 per cent.

DUMPING OF FOREIGN GOODS.

He was informed that pig iron was being dumped into South Wales at 2s. to 4s. per ton below the South Wales prices, and that roughly 86,000 tons were imported last year at their South Wales docks. Had this pig iron been manufactured in South Wales it would have meant that an additional 280,000 tons of coal, iron ore, limestone, etc., would have been conveyed by the company. A similar position obtained in regard to manufactured iron and steel goods. The business of the Great Western Company in South Wales

was largely dependent upon the coal and iron and steel trades, and, in view of the depressed state of these industries, it was perhaps not surprising to find that their losses in both passenger and freight traffic were much greater in this particular area than in any other part of the company's system. An analysis of the figures showed that, in addition to the heavy loss in coal traffic, no less than 82 per cent. of the total decrease in general merchandise traffic and over 76 per cent. of the decrease in other minerals traffic was accounted for by the fall in traffic forwarded from South Wales stations.

The figures published by the Ministry of Labour in regard to unemployment indicated the serious position which obtained in South Wales, and in the Chairman's view no material improvement could be expected until steps were taken by the Government of this country to prevent the dumping of foreign goods and to place the heavy industries in a position to meet foreign competition.

He need hardly say they had been making every endeavour to render assistance to the iron and steel industry. The schemes which they had undertaken with Government assistance had enabled them to place large orders for iron and steel, and in addition they had considerably extended the use of steel sleepers in carrying out their relaying programmes. They had also quoted a large number of exceptionally low rates to meet the needs of the industry, and he thought they could fairly claim to have played their part in endeavouring to bring about a revival of trade.

The Chairman, having dealt at length with the question of wages, continued:—With regard to the second annual review of the standard and exceptional charges by the Railway Rates Tribunal in pursuance of the provisions of the Railways Act, 1921, the tribunal approved a small addition to the standard revenue in respect of capital expended since the previous review was made, and they decided that no modification of the charges should be made for the year ending June 30th next. In coming to this decision the tribunal took the view that under present conditions no modification of charges would be likely to enable the companies to earn their standard revenue, and they intimated that they were satisfied that the deficiency was not due to lack of efficiency or economy in management.

CO-OPERATION WITH ROAD TRANSPORT.

Lord Churchill then commented on the progress of the company's endeavours to promote further co-operation between passenger services on the railway and the road. They had acquired an interest in practically all the principal road motor companies operating in Great Western territory, and the amount invested in those undertakings up to the present was approximately £2,500,000, on which they were receiving a return of about 6½ per cent.

From a financial standpoint this return might be considered satisfactory, and their policy of co-ordination, as opposed to competition, had enabled better facilities to be given to the travelling public, particularly in the direction of interavailability of return tickets and the improvement of connections between rail and road services. The final report of the Royal Commission on Transport, which was issued in December last, had been awaited with a good deal of interest. As the Commission mentioned, there were, and always would be, criticisms of railway management, but the Great Western Company had never shirked the fullest investigation into the efforts which they had made, and intended to go on making, to satisfy the requirements of those who used their railway system, and it was a matter of no little gratification that in some instances the Great Western were singled out for special mention in the Commissioners' report.

In conclusion, the Chairman said that, although the company's business suffered so severely from trade depression, they had not relaxed their efforts to improve the efficiency of their services, and he was glad to say that a good deal of progress had been made in this direction during the past year.

THE OUTLOOK.

Although the prospects in the coal, iron, and steel industries were still very gloomy, the recent agreement between the owners and the men in the South Wales coalfield should place that industry in a more favourable position to secure contracts abroad. They were looking forward to an increase in the shipments of anthracite coal, as that section of the coalfield well maintained its traffic at their docks last year, and he understood there was a likelihood of additional business with Canada being obtained.

When the trade of the country revived—as he sincerely hoped it would do before long—the Chairman looked forward with confidence to the proprietors reaping the fruits of the expenditure which was now being incurred to increase the efficiency of the undertaking.

The report and accounts were adopted, and the bill submitted to the special general meeting was approved.

THE UNDERGROUND.

LONDON'S TRAFFIC PROBLEMS.

The annual general meetings of the Metropolitan District Railway Company, London Electric Railway Company, City and South London Railway Company, Central London Railway Company, London General Omnibus Company, Ltd., Metropolitan Electric Tramways, Ltd., London United Tramways, Ltd., South Metropolitan Electric Tramways and Lighting Company, Ltd., London and Suburban Traction Company, Ltd., and Underground Electric Railways Company of London, Ltd., were held, on the 26th instant, at the Caxton Hall, Westminster, London.

The Right Hon. Lord Ashfield (the chairman) said: We meet to-day under the shadow of proposals which may radically alter our relations one with another, for the Minister of Transport has given notice of a Bill by which he seeks to transfer the ownership and control of your several undertakings to a London Passenger Transport Board, and in exchange for your present stocks and shares to issue to you bonds or securities of different classes of this board. Now we cannot help but pursue a consistent policy. We have always held that there were great advantages to flow from a co-ordination of all the means of passenger transport in the London traffic area, so that the planning of its development might take place on unified and well-considered lines and so that wasteful and injurious competition might be extinguished.

In so far as the Minister of Transport has this in mind, he is entitled to our full support. But we must remind ourselves of our own history, because in that history, brief and recent though it be, can be learned the lessons which must guide the future of London transport. For I think it is fair to say that the Minister of Transport could not have brought forward his scheme if it had not been for the policy which we have pursued and executed in the last 16 years, for it was in 1915 that the Act of Parliament was secured which first established our common fund and so laid the wide and sure foundation upon which a more comprehensive structure could be built.

GOVERNMENT'S SHARE OF REVENUE.

Dealing with the results of the last ten years and the allocation of revenue, the Chairman said: It may surprise you to learn that there is still another party interested in our results because of the share of the revenue which it obtains from them. I refer to the Government, central and local. In 1921 we paid in rates and taxes £601,896. In 1930 we paid almost exactly double, £1,210,135. Further, in 1921 we had thrust upon us statutory obligations for national insurance and other matters affecting our staff, costing £81,511. In 1930 these obligations had again almost doubled, amounting to £157,943. In addition, the companies voluntarily found £80,410 for the welfare of the staff in 1921 and £158,961 in 1930. Omitting what we paid voluntarily, in 1921 we paid out £683,407 to meet statutory demands made on us, and in 1930 £1,368,078, or £684,671 more.

It is true that our revenues meanwhile have increased, but while this increase measures only 23 per cent. the tolls which we pay to the Government have increased 100 per cent. The Government, central and local between them, without taking any risks in the business, now enjoys an aggregate return exceeding your return as shareholders.

A WARNING.

The result is, indeed, striking, and I must utter a clear word of warning that, so far as human foreknowledge can be trusted, we cannot see that these undertakings can be used as instruments for further taxation and, at the same time, fulfil their functions and their duty to the public and their employees. It must be borne in mind that duty includes the constant expansion of the facilities afforded to the vast population of London for travelling to and from their daily occupations. It is a duty which the companies endeavour to fulfil, yet they cannot do so if they are deprived in an ever-increasing degree of their available surplus. It may be suggested that the loss by taxation should be made good at the expense of the travelling public; but we are satisfied that we should not add appreciably to our revenues by increasing our fares. The present scale of fares is, in our opinion, producing the maximum revenue possible. Or it may be suggested that the shareholders should bear the additional burden, but I would remind you that the return to those persons who have invested their money in these undertakings is still of a modest description, and no one can reasonably expect them to give up any part of that modest return in order to widen the extent of our activities. To make such an attempt would only be to dry up the springs of capital.

I should perhaps give you notice of yet another Bill which we hope to promote in the present session of Parliament, but for which we have not yet obtained the necessary consents. We have in mind to promote a Bill which will enable us to build an exten-

sion of the Bakerloo Section of the London Electric Railway from the Elephant and Castle to Camberwell Green, a distance of 1½ miles, at a gross cost of £1,875,000, approximately.

GREEN LINE COACHES.

Another venture of the year 1930 was the formation of a new company—Green Line Coaches, Ltd. The whole of the shares of this company are held by the London General Omnibus Company and it is to be regarded as one of its subsidiaries. So long as the motor coaches running in and out of London went long distances and charged fares on the basis of these long distances, we could disregard them, but when they suddenly turned to running between the outskirts of Greater London and the centre, charging fares of 1s. and even less, we were compelled to take steps for the protection of our traffics. Ever since 1912 we have been operating long distance omnibuses to points on the circumference of the London traffic area, and we have built up a substantial traffic upon these routes by maintaining services all the year round, even if in the earlier trial years and during the winter months this involved us in some loss. Now we see the traffic, which we have diligently built up at some expense, taken from us and our labours wasted. The patient omnibus stopping from point to point to serve the route is outstripped by the speedy coach, so that once more we are faced with the running of our country omnibuses at a loss. There would appear to be no remedy except by the provision of coach services of our own, and realising this we have now in operation a complete alphabet of routes running from London to all the important centres of population on the outskirts of London within a radius of 25 to 30 miles. These routes employ 250 motor coaches, and our aim will be to give a reliable and comfortable service in every way as good as other services which have been given by your group of companies. Only by this means can we retain and satisfy our passengers.

The coach business has come to stay. As I have already told you, Green Line Coaches carried four millions of passengers in 1930 although it was not in full operation that year. This year the coaches are already carrying passengers at the rate of nearly 200,000 per week and a substantial growth is certain to accrue. They have created a fresh class of traffic which was neither on the omnibuses nor in the railways. Some part has indeed been diverted from one or other, but some part represents that itch for movement which an efficient and convenient traffic facility creates. The public must be served; there is no check or stop to it. But the coach business in London has, unfortunately, taken on a controversial character.

The policy of restriction is the antithesis of our policy as a group of companies. It is the policy of failure. The briefest glance at history will reveal this.

THE MINISTER'S SCHEME.

Before I come to deal with the affairs of your companies as revealed in the annual reports and accounts, which I have to present to you, I must return once more to the important subject of the co-ordination of London traffic and say just a few further words to you about the scheme of the Minister of Transport. I am sorry that I can give you so little information, but although we have met the advisers of the Minister on several occasions, no concrete proposals have been put before us which it would be our duty to put to you. If you have read the newspapers you will know almost as much as we do about the Minister's intentions. This is not to accuse the Minister and his advisers of delay or neglect. The questions at issue are of extreme difficulty. We have been face to face with them for many years. No one can step in and take them on hastily, thinking to answer them easily and truly. Haste may be fatal to any settlement.

I can commend the caution and care of the Minister, but until there is something specific upon which to proceed, I can only reaffirm our policy—your policy, as I venture to express it—that so long as the Minister's scheme will provide for the continued progress and expansion of the undertakings to serve the public, for enterprise and skill in management, for the security and welfare of the staffs which we employ, and at the same time will afford you a fair exchange for your stocks and shares, it will be our duty to assist and help him at every point. That exchange must give you protection against any impairment of your security so that your capital investment may remain intact and yield you a fair return, based upon what we have been able to provide for you under our present management, and for some equitable share in the future prospects of your undertakings.

When you come to study the results for the present year, I am confident that you will find that economies in costs have been made which will offset the adversities which have diminished our traffic receipts, so that when next year I come to present to you the results for the year 1931 you will have no reason to be less satisfied with them than you should be with the results that I present to you to-day. Our spirit remains one of optimism.

The reports were unanimously adopted.

SOUTHERN RAILWAY COMPANY.

INCREASE IN NUMBER OF PASSENGERS.

The annual general meeting of the Southern Railway Company was held, on the 26th instant, at the Cannon Street Hotel, London. Brig.-Gen. the Hon. Everard Baring, C.V.O., C.B.E. (the chairman), said that their gross receipts from railway working showed a decrease of £596,000. Passenger train traffic receipts had declined by £405,000, goods train traffic receipts by £167,000, and miscellaneous receipts by £24,000. They had again to record a remarkable increase in the number of passengers carried during the year, namely, 11,633,000. In the electrified area they had carried 12,592,000 more passengers than in 1929, with an increase in receipts of £192,000. Outside the electrified area the number of passengers had decreased by 959,000 and the receipts by £544,000.

Throughout the line the average fare per journey, excluding season ticket holders, had decreased by just under 1d. per passenger journey. To arrest that decrease they had considered it necessary to raise slightly a certain number of their cheap fare tickets. The ordinary merchandise traffic had again suffered by reason of the depressed state of industry, and, to a certain extent, through more intensive road competition, but the greatest falling off had been in the carriage of coal, which had decreased by 328,000 tons, with a falling-off in revenue of £117,000.

He turned to railway expenditure next and to a brighter side of the picture. Railway expenditure showed a decrease of £246,000, brought about almost entirely by better organisation and by the exercise of strict economy, and he could say that they were reaping those benefits of amalgamation which could only be attained after years of preparation.

The total decrease in net receipts was £404,000, and the amount available was £6,134,000, or £114,000 less than in 1929. They recommended a dividend on the preferred ordinary stock of $\frac{3}{4}$ per cent., making 5 per cent. for the year, and a dividend on the deferred ordinary stock of $\frac{1}{4}$ per cent.

The past year had been a very anxious and trying one, and the present year had opened in an atmosphere of depression and want of confidence seldom equalled, but they had the consolation of knowing that they had not suffered quite so severely as the other three group railways. They were doing all they possibly could to stem the loss in traffic receipts. Under the new traffic manager they had organised an efficient staff of canvassers; they had supplemented their cartage services and were continually improving their railway services with the view to encouraging traffic, both passenger and goods, but unfortunately the usual amount of traffic was not passing.

Last year he had given them particulars of the various omnibus companies with whom they had entered into agreements, and in whose undertakings they had acquired a financial interest. They had slightly extended their activities during the past year, and at the present time had invested in those companies over £1,300,000. The dividends which they had received, or would receive, gave them a return on the total amount invested of over $\frac{5}{2}$ per cent. per annum, but, what was more, they had arrived at a means of co-ordination which would inevitably lead to the benefit, not only of the railway company, but of the omnibus companies and the public.

With each of the omnibus companies they had established a joint committee, whose duty it was to see that the interests of both parties were co-ordinated by the issue of combined tickets available by railway and omnibus, by the inter-availability of tickets and by the correlation of fares and services wherever possible. They now had a financial interest in nearly all the large omnibus companies operating through their district outside the London traffic area.

Within the London traffic area they had lately been subjected to most severe and unfair competition from certain long-distance express omnibus services. They understood that a Bill was to be submitted to Parliament for the setting up of a London Traffic Authority. Under the original proposal that Authority would have been invested with extensive powers which might have been used to the detriment of the main line railway companies. They had, however, been in close touch with the Minister of Transport on the matter; he had shown every inclination to secure fair treatment for the main line railway companies, and it might be said that there was every indication that their position would be properly and adequately safeguarded.

With regard to the proposals for the reduction of wages now before the National Wages Board, the matter was *sub-judice*, but he would say that the directors would gladly share in any sacrifice that had to be made. The points for and against any reduction in wages had been fairly and ably argued, and he had no reason to think that an amicable solution would not be found in what was, after all, a time of national emergency.

The report and accounts were adopted, and, at a subsequent special meeting, a Bill proposed to be presented to Parliament was approved.

MANCHESTER SHIP CANAL.

EFFECTS OF STRIKE—TRAFFIC DEVELOPMENTS.

The annual meeting of shareholders of the Manchester Ship Canal Company was held, on the 23rd instant, in the Houldsworth Hall, Manchester. Mr Alfred Watkins presided.

Mr Watkins, in the course of his speech, referred to the death of Capt. Bacon, chairman, and to his election as chairman. Continuing, he said: The year 1930 commenced in a promising way, and the traffic was well maintained until April, when the unofficial strike of the dockers took place. That strike was little short of a crime. It took place without the slightest notice and without any reasonable cause. It brought no advantages of any importance to the men, but it caused a serious loss to the company, and not only in the Ship Canal undertaking but also in the Bridgewater undertaking.

The net receipts of the whole undertaking—Ship Canal, Bridgewater Canals, and working of railways—amounted to £760,641, and miscellaneous receipts to £49,672, making a total of £810,313. Deducting from this miscellaneous charges, chief rents, way leaves, rent of elevators, dock and transit sheds, together amounting to £108,637, there remains a net revenue for the year of £701,676, as compared with £796,754 for 1929—a decrease of £95,078.

Adding the balance of £27,565 from last year's account, there is a total of £729,241. From this must be deducted interest on loan capital, £421,885, leaving a balance available of £307,356.

The dividends recommended are $\frac{3}{4}$ per cent. on the Manchester Ship Canal Corporation preference stock, 4 per cent. on the preference shares, 2 per cent. on the ordinary shares, and £7,000 has been transferred to reserve for contingencies and repairs, absorbing a total of £279,166, and leaving a balance of £28,190 to be carried forward to next year's account. In all the circumstances of the case I venture to think the result is better than might have been expected. As you will see, we have recommended the payment of dividends absorbing practically all the profit for the year.

TRAFFIC DEVELOPMENTS.

Last year you were informed that Messrs Bowaters were erecting a large paper mill at Ellesmere Port. The mill is now completed and working, and we are assured of large imports of the raw material used in the mill, and also of exports of the finished products. The English and Scottish Co-operative Wholesale Society have opened their new tea warehouse at the Manchester Docks, and in December last the first cargo of tea for the new warehouse arrived at Manchester in the steamer "Makalla" from Calcutta and Colombo, carrying, I believe, the largest cargo of tea ever imported in one vessel to the United Kingdom. Messrs R. and W. Paul have purchased land from the company near Ordsall Lane and are there erecting a provender mill which is nearing completion. This we hope will lead to an increased import of grain to Manchester. We have other inquiries and negotiations in hand in respect of sites at various points on the canal.

You will doubtless have observed the efforts that are now being made by the Empire Marketing Board and other trade organisations to develop the consumption of Empire products. Needless to say, we all wish this movement every success. It has always struck me as remarkable that with the teeming population of Lancashire and Yorkshire there has not been a greater import to the North of England ports of New Zealand and Australian products. A determined effort is now being made by the New Zealand Government and the New Zealand Dairy Produce Board to develop the North of England markets, and we are advised that a steamer is about to leave New Zealand for Manchester with large consignments of butter and cheese. It is hoped that the distributors and buyers in this district will support the sale of those products on arrival and thereby encourage further shipments.

I feel that it would be idle for me at this juncture to attempt to forecast what may happen in the future regarding the development of your company's business. Everything depends upon events affecting the country's foreign trade as a whole. The export trade is the lifeblood of the country, but I am afraid there is no hope of any permanent improvement until the cost of production in all our basic industries is reduced by at least 15 per cent.

In the end those engaged in industry, employers and workers alike, will have to decide whether it is worth their while to accept the conditions under which alone foreign trade is possible in the competitive world conditions of the present time. I can only say that the Port of Manchester has fully maintained its competitive position with the other ports of the country, and there is no doubt that any improvement in trading conditions would produce immediate beneficial effects in the prosperity of your undertaking. The reduction in receipts for the past year, after taking into account the saving in local rates, amounted only to 5.9 per cent., so that only a relatively small improvement is required to enable us to regain our position.

The report was adopted.

WANDSWORTH, WIMBLEDON AND EPSOM DISTRICT GAS COMPANY.

CONTINUED EXPANSION—CHAIRMAN CONFIDENT OF FUTURE.

The ordinary general meeting of the Wandsworth, Wimbledon, and Epsom District Gas Company was held, on the 24th instant, at the Hotel Metropole, Northumberland Avenue, London, Mr Frank H. Jones (chairman and managing director) presiding.

The secretary (Mr W. H. Cromarty, F.C.I.S.) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said:—During 1930 your company has laid over thirty-two miles of new mains and connected 6,167 new consumers, while the number of stoves, cookers, etc., has increased by 11,208, and you may ask what have we got to show for it. Well, during 1930 we had only a very small increase in the sale of gas, and had to spend a good deal of new capital. Your board can keep control of expenditure, but we cannot control climatic conditions or the ups and downs of the prosperity of our district.

During the year under review we have, as you know, taken over the Kingston Gas Company. We have raised £500,000 5 per cent. debenture stock, and we shall soon have to raise some more capital to meet our obligations in the more southern portions of our area, where, as most of you know, a very great deal of new building is going on, and, ladies and gentlemen, we have done something else in 1930.

We have reduced the selling price of gas by .4d. per therm in the whole of the area of the old Mitcham and Wimbledon Company, and we have also reduced the price of gas by 1d. per therm since July 1 in the Kingston area. These reductions in price were given following the very definite policy of our company laid down long ago to sell gas as cheaply as possible consistent with giving an abundant and efficient supply to all our consumers.

THE DIVIDEND.

On the expenditure side of the revenue account you will see that the employees' share of the profits is over £25,000, and we, the shareholders, get the same figure, which is the reason I shall be able to propose presently that a 7 per cent. dividend be declared. That is 2 per cent. more than the basic dividend of 5 per cent. On the receipts side you will see our receipts for gas are down. This is not due to selling less gas, but is entirely due to the reductions in selling prices that have been mentioned.

The total result of the year's trading for the Wandsworth undertaking for the whole of 1930, and including the last six months of the Kingston Company, is that, after paying all interest and the June dividends, there is a balance left of £62,391. The final dividend for the whole undertaking requires £56,927, leaving a surplus to carry forward to the current year of £5,463. This means we have to take £20,628 from our carry forward.

As I have told you in previous years, it is very difficult to strike a balance exactly. In the year we are in we must budget for a surplus, so as to add to our carry-forward.

You will see that the reserve fund and the special purposes fund are both increased considerably, for two reasons. Firstly, similar accounts of the Kingston Company are amalgamated with our funds, and, secondly, the appropriate amount of interest accrued to each fund is added. One more figure I must call your attention to in the balance sheet. You will see we have investments in securities amounting to £207,392, of which £172,000 are outside the company. This is a much greater figure than that which appeared in our balance sheets a few years ago.

All our works and plant have been well maintained during the year. Our working results—that is, what our different works do with a ton of coal—compare not unfavourably, on the whole, with those of similar undertakings. There are many more details I could tell you, but I have tried to give you a general picture of your undertaking, and I do not wish to bore you.

As to the future I must say a few words. The Sutton Gas Company and ourselves, as you know, have entered into an agreement to amalgamate, and, as that agreement is now before the Board of Trade for their scrutiny, I think I should say no more than that I hope it will be approved. What is the future of the gas industry? I have spent most of my working life trying to do something for it, and I am in a position to view it both here and abroad from many different angles, and to-day I feel more confident that it has a greater future than ever.

I cannot sit down without paying tribute to all the people that work for the company. I see a great many of them, and the result of the work of all of them. I do not claim, and they would not claim, that we are a perfect company. We are not, but I can assure you that the majority are daily and weekly striving to make our company a really first-class one in the service that is given to our consumers and to you. The large majority are stockholders in the company, and between them they to-day hold £114,867 of the company's stock.

The report and accounts were unanimously adopted.

BRITISH ASSETS TRUST, LIMITED.

MR ROBERTSON DURHAM'S REVIEW.

The thirty-third ordinary general meeting of the company was held in the Gartshore Hall, 116, George Street, Edinburgh, on Wednesday, February 25th, Mr A. W. Robertson Durham, C.A. (chairman), presiding.

In moving the adoption of the report and accounts, the Chairman said: You will have heard with much regret of the loss the company has sustained through the death of Mr Bowhill. He was an original director of the company, so that his connection with it extends over the long period of over thirty-two years. He was also a director of the Edinburgh American Land Mortgage Company (now Second British Assets Trust, Ltd.) for a number of years before the control was acquired by this company. He rendered valuable services to the company and always took a keen interest in its affairs, and his presence will be much missed at our meetings.

The accounts have been in your hands for some time now, and with your permission I do not propose to deal with them in detail.

"A TRYING TIME."

You will all appreciate what a trying time we have come through during the past year following upon the disastrous events of the previous year. I am afraid we have still a long way to go, especially in this country, before we can expect to see anything like normal conditions again. The Chancellor of the Exchequer has told us of the grave state which the finances of the country are in, but he says nothing about taking steps to remedy the situation, not even regarding the growing burdens in connection with the dole, which are costing the country millions a year.

MATERIAL INCREASE IN REVENUE.

Notwithstanding all this we are again able to show a material increase in the revenue. Although we made issues of ordinary and preference capital last year to the shareholders on terms that meant a material bonus, the balance earned on the ordinary shares this year amounted to over 40 per cent. as against 37 per cent. last year. As you will have seen from the report, we have again decided to make an issue of new ordinary shares to the shareholders, which will be allotted at par as nearly as possible in the proportion of one new share for every twenty shares held. We have as usual prepared a conservative estimate of revenue for the current year, and while we do not expect the results to be as favourable as those shown for the past year, we expect to have a substantial margin after maintaining the dividend of 20 per cent. on the increased ordinary capital. In common with all other trust companies we have met with a material shrinkage in the value of our assets, but after deduction of the capital reserve and contingent funds there is still a surplus over the book cost, and our general reserve fund is intact.

AMERICAN INVESTMENTS.

You will no doubt be interested to know that we have a substantial amount of our funds invested in America, and fortunately only a small proportion in Australia. Both the rise and fall in security values in the United States has been greater than in other parts of the world, but since the close of the year it is almost the only country that has shown any material improvement in market values. For example, we have recently heard from a leading utility investment company in the United States, in which our company has a substantial interest, that a valuation on February 11 showed an appreciation of over 25 per cent. as compared with the valuation made at December 31, 1930. This, of course, is an exceptionally favourable result, but goes to show that a distinct improvement in values is taking place. I am glad to say that we have made a material increase in the value of our American investments since the close of the accounts, although not to the same extent as this.

We had pleasure in reporting to you that the Marquess of Linlithgow had agreed to join our board, and his appointment falls to be confirmed to-day. I consider that we are fortunate in having secured his services as a director, which I am sure will be of great benefit to the company.

The Chairman completed his remarks by moving the adoption of the report and accounts and the payment of the dividend recommended therein. The motion was seconded and adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

TELEPHONE AND GENERAL TRUST, LIMITED.

INCREASED PROFIT AND DIVIDEND.
FIELD FOR FURTHER EXPANSION.

The fifth ordinary general meeting of Telephone and General Trust, Ltd., was held, on the 26th instant, at the Incorporated Accountants' Hall, London, W.C.

Sir Alexander Roger (the chairman of the company), who presided, said that the net profit for the year amounted to £77,114, as compared with £35,909. It was true that during the year the trust's capital had been substantially increased, but the growth in profit was only partly due to that, and he thought shareholders had every reason to be satisfied with the figures. The directors recommended the payment of a dividend of 8 per cent., less income tax, on the ordinary shares, as against 6 per cent., less tax, for last year, carrying forward £26,636.

Shareholders had been called together on two occasions during the year to sanction increases in the authorised capital, and the total now stood at £1,300,000, as against £710,000. A valuation of the trust's investments made at December 31, 1930, showed the valuation to be in excess of the figure shown in the balance sheet, while the valuation to-day showed some improvement over the figures of December 31st last, all of which was something to be proud of in these days. Their subsidiary companies were progressing satisfactorily; shareholders would be pleased to read the statement at the foot of the balance sheet to the effect that those companies all showed profits.

A NEW SUBSIDIARY.

The directors had decided that the volume of work in the way of auxiliary services given by the trust to its subsidiary and associated companies had now reached a stage when those services should be segregated from the investment business which formed the real activities of the trust. The board had, therefore, constituted a new subsidiary—"Telephone and Associated Services, Ltd."—which would take over from the trust, as from March 1st next, those activities which might be described by the word "Services." It was anticipated that that step would enable the trust to take advantage of further development in that direction, with resultant benefit to their revenue.

While he would not like to say that the trust's expansion would continue each year at the same rate as in the past year, it was perfectly true that there was further scope for their activities, both in a general way, and by further development of their associations and relationships with important allied concerns of an international character playing a great part in the furtherance of their mutual business interests.

Deeply interested as they were in the telephone industry, it was pleasant to remember that an efficient telephone service became more and more an essential part in the daily life of business and the individual, and even in these times there was recorded a steady increase in the number of telephone subscribers throughout the world. 1930 had seen, for example, rapid extension in the number of international telephone connections made available. Eleven new direct radio services had been established, which, by means of land line connections, made available international telephone service to individual subscribers in ninety-two telephone groups. The result was that, while at the beginning of 1930 there had been seventy-four different international telephone radio services in regular daily use, by the end of the year that number had increased to 177.

THE TELEPHONE HABIT.

Trunk telephone services in this country and in many others were steadily becoming more prompt and efficient and at the same time not so costly. Gradually, but surely, the telephone subscriber was beginning to realise that, when his telephone was installed, he was immediately provided with inter-connecting facilities to the whole of the existing subscribers, not only in his own country, but, with the development of international telephone, most of the countries in the world. The progress in telephony led to the cultivation of the telephone habit and the increasing use and development of the telephone generally.

The telephone industry in this country was very much alive to the situation, and the Telephone Development Association, whose work deserved the warm support of every section of the telephone industry, was carrying on an active educative campaign designed to encourage the telephone habit among all classes of our population. It was satisfactory to note that the good example set by that association here was being followed by other countries.

The board believed that there was still a considerable field of activity and expansion lying ahead of this company, and, despite the gloominess which now prevailed, perhaps he would not be regarded as too optimistic if he said that he hoped and believed the trust would further improve its position during the coming year.

The report and accounts were unanimously adopted.

LOST.—Within the past twelve months, all over the country, much money invested in stocks and shares; owners desirous re-creating estates.

FOUND.—A gilt-edged security liable to appreciate, not depreciate; carries rights to income tax rebates; buyable in a rising market; creates an immediate estate. Apply LIFE DEPT., THE LIVERPOOL AND LONDON AND GLOBE Insurance Company, Ltd., 1, Dale Street, Liverpool.

JEREMIAH ROTHERHAM AND COMPANY, LIMITED.

STRONG FINANCIAL POSITION.

The thirty-third annual general meeting of this company was held, on the 25th instant, in London.

Mr Joseph Hockley (the chairman) said the results, no doubt, were somewhat disappointing to the shareholders, as they were to the directors, but they would readily realise the effect that a fall in values of 10 per cent. to 15 per cent.—and in some cases even as much as 20 per cent.—had on the sales and profits, and the extra turnover required to make that up. The board fully realised the difficulties that confronted them, and had not left a stone unturned in their endeavours to further increase the business. In this respect they had opened up fresh avenues which had brought many new accounts to the company. Upon a revival of trade they would certainly reap the benefit of their efforts. It was not possible to foretell when the revival would come—it might come sooner than many of them imagined—but he felt convinced that directly prices touched rock-bottom and began to rise, the confidence of buyers would be re-established, resulting in freer buying instead of the present hand-to-mouth purchases.

The net profit, after providing for interest on debenture stock, directors', trustees', and auditors' fees, income tax, and bad debts—including provision for any they considered at all doubtful—amounted to £23,457. The volume of trade last year was equal to that of the previous year, and would have shown a much better result had it not been for the reasons he had previously stated. The financial strength of the balance sheet was unquestionable. If they took the liquid assets (excluding the stock of £291,856) over liabilities, they had a surplus of £585,989, or not very far short of the ordinary share capital. Adding the amount brought forward from last year to the net profit this year they had a disposable balance of £92,450.

Deducting the dividend on the preference shares for the half-year to July 15, 1931, and the interim dividend on the ordinary shares paid on September 1st, they were left with £69,450. They proposed to apply this as follows:—A dividend of 5 per cent. per annum on the preference shares for the half-year to January 15, 1931, and a final dividend at the rate of 6 per cent. per annum on the ordinary shares, making with the interim dividend 6 per cent. for the year, leaving to be carried forward £46,450.

The report and accounts were adopted, and a resolution to appoint two additional directors was defeated.

THE LONDON AND THAMES HAVEN OIL
WHARVES, LIMITED.
DIVIDEND AND BONUS MAINTAINED.

The thirty-third ordinary general meeting of this company was held, on the 25th instant, at Winchester House, London.

Before the ordinary business was taken Mr Thomas C. J. Burgess (one of the managing directors) announced his appointment as chairman in succession to Lord Kysant, retired, and strongly appealed to the shareholders to re-elect Lord Kysant as a director when that motion came before the meeting.

The Chairman went on to say: It was proposed to pay a final dividend of 5 per cent. on March 28th and a bonus of 5 per cent., free of income tax, up to 4s. 6d. in the £, to be paid on June 30, 1931—the same as for the last six years—and it was proposed to carry forward £146,969, or about £31,600 more than was brought into the accounts. The board did not take a pessimistic view of the future. They had behind them a record of solid service for their clients and the most conservative finance and careful management to assist them in meeting the trials and difficulties that must inevitably arise.

It was because of the board's conservative policy in the past that the company had been able to withstand the strain of present-day difficulties better than many concerns which had in days of prosperity been less cautious, and whatever the future had in store the directors felt they could meet it with confidence. The handling of oil products for the trade was a highly specialised business in which the company had been pre-eminently outstanding for over thirty years. The company had over 1,000,000 tons of tankage. It owned about 1,700 acres of freehold land with over three miles of frontage to the Thames, five deep-water jetties with two for smaller craft, and four freehold and two leasehold properties in the London area, also facilities for the distribution of petroleum, and refineries capable of handling very large quantities of crude and other petroleum products. Further, it had a staff of highly trained technical people. The reorganising and developing of the refinery position at Thames Haven and other developments, as well as the completing of the company's plans in France, necessitated an extension of their financial resources, and the shareholders would shortly have put before them a financial proposal to deal with the situation.

The report was unanimously adopted, and Lord Kysant was re-elected a director.

THE CITY OFFICES COMPANY, LIMITED.
SUCCESSFUL YEAR—FIFTY YEARS OF PROGRESS.

The annual general meeting of The City Offices Company, Limited, was held, on the 24th instant, at the offices of the company, Palmerston House, Old Broad Street, London, Mr E. M. Rodocanachi (Chairman) presiding.

The Chairman said it was most gratifying to the Board to put so favourable a report before the shareholders for the past year—a year disastrous for many great institutions. Thanks to the company's policy of granting long leases they had security of tenure in bad times, and were in the fortunate position of having no empties, even this year, when many of the company's neighbours had numerous empty offices. Perhaps the latter were wrong in their policy in not reducing rents in bad times. He preferred to reduce rentals to attract demand rather than to keep premises empty. Mr Snowden and his Government were causing great anxiety in the City, and in trade and industry generally. The policy of the Government in not taking advice from experts in the City, as Governments were accustomed to do sixty years ago, was, in his opinion, detrimental to the public interest. The Government, County Councils, and Municipalities must now reduce taxation to enable the country to save and to replace lost capital.

That meeting was his jubilee as a director, he having been elected in February, 1881. (Applause.) For the year 1880 the gross rentals were £42,836, against £100,604 for 1930; ground rents were £14,936, against £7,756 for 1930, the reduction being due to the company's policy of buying in its ground rents whenever possible. Rates and taxes in 1880 were £6,388, against £19,527 for 1930. The dividend for 1880 was 9s. a share, and as the capital had not been altered at that date, the 9s. included 6s. for the £10 Three per Cent. Debenture Stock allotted to each shareholder on the alteration of the capital in 1897. The dividend for 1930 was 31s., being a net increase of 28s. in the 50 years. In 1880 they had £5,575 unlet, but last year, and at the present moment, the company had not any vacant office for the company's account in any of their buildings. Their rentals had more than doubled in 50 years. History told them that real property had always increased in value since records had been kept, and he saw no reason why this increase should not continue.

The report and accounts were unanimously adopted. The formal business having been transacted, a vote of thanks was accorded to the chairman, and he was presented with souvenirs in commemoration of his 50 years' service to the company.

BORAX CONSOLIDATED, LIMITED.
DEVELOPMENT OF POTASH ORE.
LORD LEVEN AND MELVILLE'S SURVEY.

The thirty-third ordinary general meeting of Borax Consolidated was held, on the 25th instant, at the Cannon Street Hotel, London, E.C. The Right Hon. the Earl of Leven Melville (chairman) presided.

The Chairman said that the past year did not show a profit much in excess of the previous twelve months, but actually the company had done better, as it had made a substantial recovery in its profit-earnings capacity compared with the six months to September 30, 1929, which was a bad time for the company, as they were then completing the reorganisation of mines and works, since completed, and they are now getting the benefit of the low cost from them. Unfortunately, the volume of business was not yet sufficient to offset the present low prices of the company's products, which had, however, remained at stable figures during the year. Therefore, the position must, in that limited sense, be considered as satisfactory. A revival of business, and a consequent increase in sales, was the remedy. The situation had had their constant attention, and they had concluded that, to strengthen the position of the company and to hasten the recovery of its earning capacity, it had become necessary to supplement the products in which it was now interested by the inclusion of potash. Owing to the present close association between borax and potash, due to the joint production in the United States from Lake brines of these two products, it became evident that the company must either develop its property at Searles Lake, California, by working the brines there for the production of borax and potash, or become associated, if possible, with any promising development which might occur by the discovery of beds of potash ore. An opportunity was offered to the American branch of their company to take a substantial interest in an American company which was developing beds of potash ore, the existence of which had been shown by the cores from a number of boreholes spread over a large area. A shaft was being sunk when the company's associates became interested. This had now been completed, and had a very large daily tonnage capacity. It had opened up a number of beds of sylvite, the most suitable potash ore for sale either as mined or for conversion into muriate of potash. This constituted the first discovery of high-grade potash soluble in water in the form of sylvite made in the United States, and marked a very important phase of the industry. The United States Government had been very anxious to promote the discovery of potash in order that they might be independent of outside sources of supply of one of the most important elements in the fertiliser and other industries.

The demand for potash for agricultural purposes was very large and in most countries was rapidly increasing. There was, therefore, every prospect that the American company would command its share of the potash trade, and, according to the estimated cost of mining, as made by the engineers in charge of the mine, and of the cost of refining, as made by the chemists who had studied the refining of the ore, the cost of production of the crude salts as mined and of the refined salts would be such that a very substantial margin of profit on the present selling prices could be expected. It was anticipated that a refining plant would be in operation by the end of this year, and Borax Consolidated should afterwards substantially benefit from the investment of its American branch in the company which had developed this enterprise.

Following upon a full review of the accounts, he said that the board had confidence that the position of the company had been very

materially strengthened recently, firstly, by the development of its new borate mine and the works at Wilmington, California, and, secondly, by its recent acquisition of an interest in the potash industry. These advantages, with a recovery in trade generally, thereby increasing the volume of the business, would, the board anticipated, enable the company eventually to recover its dividend-earning capacity comparable to that it enjoyed for so many years. The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended February 21, 1931, amounted to £31,063,000 against ordinary expenditure of £7,337,400. After allocating £1,842,000 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £216,640, the week's operations, as shown below, reduced the National Debt by £21,617,000 to £7,659,980,000:—

NOTICES.

The National Provincial Bank Ltd., announce that a new branch of the bank is now open at 42, Leicester Square, W.C.2.

Barclays Bank Ltd., announce the opening of a new branch at 113 Wells Road, Totterdown, Bristol, and of a new sub-branch at Front Street, Frosterley, Co. Durham.

Company News.

REPORTS AND NOTICES.

The 1931 edition of *The Stock Exchange Official Intelligence* will be published on March 25th. This will be the fiftieth annual issue of this official work.

MISCELLANEOUS.

CITY OFFICES COMPANY, LIMITED.—The revenue account for the year 1930 shows a balance of £35,620, compared with a balance of £35,122 for 1929. The sum of £4,000 is transferred to general reserve, against £3,500, while £3,000 is put to equalisation of dividend fund, against £4,000. The preference dividend absorbs £1,299. The ordinary dividend is raised from 30s. per share to 31s. per share, less tax. The carry forward is increased from £1,234 to £1,283. The receipts for 1930 amounted to £100,604, against £100,288 for 1929. Cash is at £9,623, against £10,227. The meeting was held on February 24th, at Palmerston House, 34, Old Broad Street, London, at 12.30 p.m. Mr E. M. Rodocanachi, the chairman, was presented by the shareholders with a silver gilt standing cup of Elizabethan design, to commemorate his jubilee as a director of the company. The staff also presented Mr Rodocanachi with a silver inkstand, the inscription speaking of the esteem and affection in which he is held throughout all grades of the staff. Mr Rodocanachi, who has been chairman of the company for the last 37 years, is also a director of the Midland Bank. The City Offices Company, Ltd., owns valuable freehold and leasehold sites in the City of London and has paid dividends averaging over 12 per cent. for some years.

GUEST KEEN AND NETTLEFOLDS, LIMITED.—Rumours have recently been current on the Stock Exchange which have had an adverse effect on the price of the shares of Guest Keen and Nettlefolds. A statement has been published on the authority of the Chairman (Sir John Field Beale). The statement is as follows: "There is no foundation of any sort for the rumours which have been in circulation that the company has recently lost large sums by speculation in investment or in exchanges. Nothing of the sort has occurred. On the contrary, the business of the company is proceeding in an ordinary manner apart from reduced turnover due to the serious trade depression."

LEYLAND MOTORS.—The accounts of the Leyland Motors, which is paying a dividend of 20 per cent. on its £900,000 of ordinary share capital, the first payment since 1919, have just been issued. They show that gross profits for the year to September 30, 1930, were £62,023 below the preceding year's figures. The net balance was £193,129 lower at £366,245. This is accounted for by an additional £65,008 for income tax, £4,765 for depreciation, and arrears of directors' remuneration £52,984. After deducting preference dividends, including two years' arrears on the 7½ per cent. preference, amounting to £140,081, as against £324,600, including arrears for 1928-29, the available balance is £385,511, compared with £279,347. The general reserve is to be increased to £300,000 by the allocation of £180,000 (against £120,000), and the ordinary dividend requires £139,500, leaving £66,011 to be carried forward, as against £159,347 brought in. The full-time directors have offered to waive their claim to the £52,984 provided they are indemnified against any claims against them for super-tax in respect of the amount, and that an appeal lodged by the company against the Court's decision is withdrawn. The meeting will be held in Leyland on March 4th, at 3 p.m.

MERCANTILE INVESTMENT AND GENERAL TRUST.—We are asked to contradict the statement inadvertently made in a table on page 401 of our issue of last week, to the effect that the Mercantile Investment and General Trust Company belongs to the "Robert Fleming" group. For purposes of record we would ask our readers to note that the board of this trust company is as follows: Sir Miles Martinson (chairman), Mr J. H. Clifford Johnston, Sir Robert Kindersley, Viscount Mersey, and Mr W. K. Whigham. Its manager is Mr A. H. Wynn, and its joint secretaries, Messrs W. E. Taylor and W. F. Croft.

week, and a general rise in prices was recorded. Tin advanced on the announcement by the Under-Secretary for the Colonies that the Government approved the tin restriction scheme in principle. It should be noted, however, that it is restriction of output in one way or another rather than any marked increase in consumption which is responsible for this rise in metals. The prices of textile raw materials show a further advance, and the outlook of the cotton and wool industries is definitely more encouraging. The demand for rayon goods has been better lately, and British production of yarn and waste in January at 3,870,000 lbs. shows an increase of 630,000 lbs. as compared with December. No important change is recorded in the situation of the principal foodstuffs and prices have been comparatively steady. It is interesting to note, however, that meat, which so long seemed to be relatively immune from the general fall in prices, has again been lower. Among miscellaneous commodities, hides have declined further in value, while the rubber market suffered from a lack of interest.

THE COAL TRADE.

Our Sheffield correspondent writes:—The Coal Mines Act has now come into force and the output of the pits in this district is being controlled. In some cases the fixing of the quotas is the cause of dissatisfaction and interference with trade. For export there is a fair prompt demand for best steams, but forward business is as weak as before. Quotations are 17s. 3d. to 17s. 9d. f.o.b. Secondary coals and smalls are neglected and output is excessive. The house-coal trade is steady. Best Yorkshire brands are quoted at 20s. 6d. to 22s. at pits. Hand-picked branch fetches up to 27s. The depression in the market for blast-furnace coke continues, prices being 10s. 9d. to 11s. 3d. at ovens.

Our Workington correspondent writes:—The coal trade is brisk. As the Whitehaven pits have not worked since the Haig Pit disaster, there is a shortage of production, and demand is difficult to satisfy promptly. Ireland is the mainstay of the market, the Cross-Channel shipments of house and gas coal being heavy. Industrial fuel is in only fair request, but there have been Continental sales of small coal for briquetting purposes. Prices are unchanged. Best round is 22s. 6d.; washed doubles, 21s.; washed singles, 19s., all f.o.b.; smalls, 16s. 6d.; best house coal, 31s. 8d.; and house nuts, 30s. at station; gas coal, 28s. West Coast coke is in steady demand at from 17s. 9d. to 18s. 3d. per ton, and the whole of the make is being absorbed.

Our Glasgow correspondent writes:—Inquiry from abroad remains quiet, and with home requirements showing a seasonal falling off the outlook is not very promising. Washed nuts are very plentiful in all districts, and as a result production of round coal is being further curtailed. First Fife steam is practically unobtainable for prompt shipment, and Dysart Main has a firmer trend. Lothian steams and Lanarkshire prime splint being steady. Shipment prices (f.o.b. district ports):—LANARKSHIRE.—Ell best, 15s. 6d.; splint best, 16s. 9d.; splint second, 16s.; navigation, 16s.; navigation second, 15s. 15s. 6d.; Hartley, 15s. 6d.; steam, 14s. 6d.; trebles, 13s.; doubles, 11s. 9d.-12s.; singles, 11s.; pearls, 10s. 9d.; dross, 10s. 3d. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 13s.-13s. 6d.; third-class steam, 12s.-13s.; trebles, 12s.-12s. 6d.; doubles, 11s.; singles, 10s. 6d.; pearls, 10s. 6d. LOTHIAN.—Prime steam, 13s.; secondary steam, 12s. 9d.; trebles, 12s.-13s.; doubles, 11s. 9d.; singles, 10s. 6d.; pearls, 10s. 9d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 12s.; singles, 11s. 3d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—Business on the Cardiff coal market this week has been extremely quiet. Large coals are commanding a steady sale at minimum prices, but great difficulties are being experienced in the disposal of small coals owing to the extremely depressed condition of the pig-iron and other branches of the iron and steel industry in South Wales and Monmouthshire, and at some of the collieries the stocks of unwashed grades are again accumulating. Shipments are appreciably below normal and last week they totalled only 439,500 tons, compared with 587,949 tons in the corresponding month last year. The fears of a stoppage in the Nord and Pas-de-Calais coalfields of France have apparently led to inquiries for washed coals, but otherwise the market has been featureless. Mr Ferdinand Schiller, K.C., the independent chairman of the Joint Coal Board, presided over a meeting of representatives of employers and workmen on Monday, convened for the consideration of the claims of the two sides relating to the minimum wage rate and the subsistence allowances, and his award is anticipated in the course of the next few days. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dross, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. to 17s. 9d.; best small steams, 13s. 6d. to 13s. 9d.; coking smalls, 15s. to 15s. 3d.; cargo smalls, 12s. to 12s. 6d.; anthracite, best large, 36s. to 37s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; foundry coke, 29s. to 35s.; patent fuel, 19s. 6d. to 20s. 6d.; pitwood, ex ship, 25s. to 25s. 6d.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—The market for Cleveland iron is steady. Although purchases lately have been small, additional quantities will now be necessary to cover the

orders for railway chairs recently placed locally by home railways. This will mean an increased call on makers' stocks and as the reserves were already drawn upon to meet current contract requirements, the statistical position is quite a favourable one, though there are no indications yet of any extra furnaces being put into blast. Producers, however, are using more iron at their own works, which promises to extend, and an increase in the make may not be altogether a remote possibility before long. A moderate business on home account was reported at the weekly market on Tuesday and prices were unchanged, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t. Trade with Scotland continues disappointing owing to the very low prices at which Continental iron is offering on that market. In hematite the position is a little better. Fair home sales have been made lately and a few moderate-sized lots have been sold for export, but all for early delivery, there still being no disposition on the part of buyers to contract ahead. With the present very low production stocks are being steadily reduced. Ordinary mixed numbers are obtainable at 69s. per ton for early delivery and 69s. 6d. forward, though more is asked for some brands. In the finished trades the departments producing railway and structural materials are fairly well employed, but the sheet trade continues quiet and there is very little demand for shipbuilding materials. Prices for steel for home consumption, subject to rebates, are unchanged, viz.:—Plates, £8 15s.; angles, etc., £8 7s. 6d.; joists, £8 15s. Other prices for home are: heavy steel rails, £8 10s.; iron crown bars, £10 10s.; 24-gauge black sheets, £8 10s.; 24-gauge galvanised corrugated sheets, £11. The ore market shows no change, there being an almost entire absence of new business. Best Bilbao rubio is nominally 16s. c.i.f. for early delivery, and the rate of freight Bilbao-Middlesbrough for prompt tonnage is about 4s. 9d. Coke is weak and lower at 16s. delivered furnaces for ordinary qualities, and the supply is in excess of demand. The number of furnaces in blast in the district remains at 23.

Our Sheffield correspondent writes:—Suppliers of raw materials report a slightly better tone in several iron and steel centres, but it is too early to decide whether this is the beginning of a general revival. It is a good sign, however, that the market for steel scrap has hardened and that the present supply of such material barely meets consumption. The position in Sheffield is unchanged. Orders from home sources and several overseas markets are increasing, but while the number is large their individual smallness is disappointing. Inquiries, too, are unsatisfactory. While there may be improvement in demand for quality steels, conditions are almost stagnant in the crude and basic steel departments, and foreign orders generally are decidedly scarce. Leading Sheffield firms are installing the new high-frequency electric furnace for melting crucible steel. One of these produces as much fine steel as a dozen coke-fired crucibles and the innovation is causing the dismantlement of many of the latter. The new system of melting is much more economical than the old. The tool branches are moderately employed, but stagnation is general in cutlery and plate. Prices of most finished steel products have declined.

Our Workington correspondent writes:—The reduction of two shillings per ton in the price of West Coast hematite pig-iron has not brought to Cumberland and North Lancashire smelters the increase in business that might have been expected at a time when East Coast hematite is the dearer metal, and it is due entirely to the greater activity in the steel industry on the North-West Coast that two additional furnaces were lighted and that the number in operation between Workington and Ulverston is now eight. The Scottish demand remains poor, that from South Wales is small, and only to Continental and Midland users are normal supplies being delivered. Nothing more than early or immediate needs have to be satisfied. Forward business of any considerable extent is lacking. The best that can be said of the position is that the make is being absorbed, and that occasionally there are slight inroads into the heavy stocks accumulated last year. Prices are firm and steady, with Bessemer mixed numbers quoted at £3 15s. 6d. per ton at Glasgow; £4 2s. 6d. at Manchester; £4 4s. 6d. at Sheffield, and £4 6s. 6d. at Birmingham. Low-phosphorus iron is 2s. 6d. to 5s. per ton above these figures. Malleable iron is a somewhat better trade since the cut of 5s. per ton, and is now £5 17s. 6d. per ton delivered at Birmingham. Ferro-manganese is quiet at £11 15s. per ton home and £12 per ton export. While hardly any orders are at present being obtained by steelmakers, those booked in January represent a tonnage that will keep engaged the mills at Workington on rails, sleepers and fish-plates for South African, Crown Colonies and the home railways until well into April. Native ore is in rather brisker local request at 16s. 6d. to 18s. 6d. per ton. East Coast and Scottish requirements are poor.

Our Glasgow correspondent writes:—Things remain very quiet in the West of Scotland, most of the steel plants working only part time, but even so the output exceeds the tonnage of orders coming in. Tube makers continue badly off for work, as are also bar-iron makers. In the sheet trade there is a somewhat better home demand for galvanised corrugated sheets, these being in considerable request at present for sheds, &c., for agricultural purposes. Export trade remains poor. During the week it is announced that Messrs Wm. Denny Bros., Ltd., of Dumbarton, have secured an order for a turbine steamer from the Southern Railway Company for their Channel Island service. It is also announced that the Glasgow firm of Henry Lees and Company have received a contract for mechanical coaling plant for coaling railway locomotives from the L. & N.E. Railway Company.

THE FALL IN PRICES

A Statement of Policy by Cadbury Bros. Ltd. of Bournville

BANKERS and economists are emphasising the necessity for a reduction of retail prices as a step towards better trade.

It has always been our policy to pass on to the public any reduction in costs arising from cheaper raw materials or increased productive efficiency. Accordingly during the last twelve months alone we have reduced the price of our Milk and Plain Chocolate Blocks 16 per cent. and 25 per cent. to 10d. and 9d. per half-pound respectively, without any alteration in the quality whatsoever. We shall continue to follow this policy, the success of which was proved in 1930. That year, despite depressed conditions, was a record one in the sales history of our firm.

The chart below shows that the price of Cadburys Milk Chocolate has been falling more rapidly than the Ministry of Labour index of food prices during the post-War period, and is now 16 per cent. below the pre-War selling price.

Issued by Cadbury Bros. Ltd. from Bournville, the Factory in a Garden

FIRE. LIFE. ACCIDENT. MARINE.
 Edinburgh: 35, St. Andrew Square.
 London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1.

Our Cardiff correspondent writes:—A slightly improved tone marked business on the Swansea Metal Exchange on Tuesday, when inquiries both on Continental and Australian account were a little more active. Prices, however, are showing a hardening tendency under the influence of the continued rise in tin which is now quoted at £122 7s. 6d.-£123 15s., compared with £118 2s. 6d.-£119 15s. a week ago. The quotations for steel bars are unaltered.

OTHER METALS.

TIN.—On Friday, February 20th, the Under-Secretary for the Colonies announced in the House of Commons that the Government had approved in principle the passing of legislation by the Government of the Malay States and of Nigeria to regulate the production and export of tin, with effect from March 1st. In spite of the qualified nature of the Government's approval, the market quickly responded, and the price of standard cash advanced further from £120 7s. 6d.-£120 10s. per ton on Wednesday last week to £123-£123 5s. on Monday. Later, however, it became apparent that no immediate improvement can be expected in the statistical position, although the scheme covers about 87 per cent. of the total production, and quotations relapsed to £121 7s. 6d.-£121 10s. on Wednesday.

COPPER.—Although demand in the United States has not shown any marked improvement, exports have been rather more active, which led Copper Exporters, Inc., to advance their price on Thursday last week from 10-30 cents per lb. electrolytic to 10-55 cents, c.i.f. Continent. The turnover of the metal in this country has lately been increasing, and prices, though relapsing occasionally, continued their upward trend. Wednesday's price of standard copper at £47 7s. 6d. to £47 10s. per ton compares with £45 12s. 6d. to £45 13s. 9d. on the corresponding day last week.

LEAD.—The demand for lead has shown some improvement during the week, and the metal was well supported, particularly in forward positions. Wednesday's price for soft foreign lead at £14 7s. 6d. to £14 10s. per ton compares with £13 10s. to £13 12s. 6d. last week.

SPELTER.—At last week's low level of prices, spelter was subject to considerable speculative buying, and quotations for G.O.B. advanced from £12 6s. 9d.-£12 13s. per ton on Wednesday last week to £13 2s. 6d.-£13 8s. 9d. on the corresponding day this week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals nickel remained again unchanged at £170 to £175 per ton, while aluminium sold at last week's price of £85 per ton. Antimony remained steady at £24 10s. to £25 10s. per ton, "foreign," but quicksilver declined from £22 9s. 4½d. per bottle on Wednesday last week to £22 7s. 6d. on the corresponding day this week.

TEXTILES.

THE COTTON TRADE.—Liverpool, February 25th.—The markets have shown quite a steady undertone and prices are some 11 points higher on the week. The chief demand has come from India and Egypt, where operators have been reversing straddles. Trade advices the world over seem a little more optimistic and quite a fair business has been done in America. The recent advance has not brought much fresh business into this market, however, though some improvement is noticeable. Spot sales for the week 19th to 25th (inclusive) are 35,000 bales, of which 16,720 are American, 2,050 Brazilian, 450 Argentine, 7,500 Peruvian, 4,150 Egyptian, 1,300 African, 1,350 East Indian and 1,480 sundries. Imports for the same period are 30,933 bales, of which 16,577 are American, 6,880 Brazilian, 4,381 Egyptian, 793 African, 2,168 East Indian and 134 sundries. Quotations to-day: American Middling, 6-29; Egyptian Sakel, 10-06; Uppers, 7-42; Brazil Fair, 6-44; Peru G.F. Smooth, 6-74; West African Middling, 6-29; and East African G.F., 7-34.

Manchester, February 25th.—Prices in the market have tended to go against buyers in sympathy with the further upward movement in raw material rates. It has been difficult for spinners and manufacturers to secure advances, but inquiry has tended to broaden. Rather more demand continues to be met with in piece-goods for India, and better advices are being received as to clearances on the other side. A more hopeful feeling prevails with regard to the political situation. Light fabrics have been sold on a freer scale for Calcutta, Karachi and Madras, but practically nothing can be done for Bombay. Operations for China remain very restricted and there will have to be a further improvement in exchange rates before trade can broaden. Printing, bleaching and dyeing fabrics have attracted rather more attention for Egypt, South America and the Continent, and some useful lines have been booked for the Dominions and the home trade. A more hopeful feeling prevails in the weaving branch. Quotations in American and Egyptian yarns have stiffened and rather more business has been under consideration, but very few users have been prepared to place orders of weight. Some fair lines have been put through in two-fold yarns for India.

THE WOOL TRADE.—Our Bradford correspondent writes:—A very encouraging state of affairs is revealed in home and overseas wool markets. Competition at all public auctions is quite good, and there is a definitely firm tendency in values. At sales held this week in Melbourne and Sydney prices have gone definitely against the buyers, cable information stating that merino wool bought for Bradford would cost fully 1d. per lb. more in the top than could be realised. This has naturally created a very determined attitude among topmakers, and there is reason for saying that the raw material is once again setting the pace. In some quarters the rapid movement of the Australian clip is being regarded somewhat critically on the ground that the volume consumed by machinery does not correspond with arrivals. It is known that banks are prepared to make large advances to firms who have been accustomed to operate heavily in wool, and even admitted that large weights are being shipped from Australia in lieu of cash. Both merinos and crossbreds will be sufficiently reasonable when offered at the next London sales to be quite an attractive proposition, and there is no reason why values should not show distinct firmness. Crossbred wool is coming forward much more slowly than merino, owing to the fact that requirements are comparatively small. Nevertheless, prices are quite firm. In Bradford there is a very large consumption of merino tops and yarns. Besides the ordinary Bradford trade big quantities are being used for hosiery purposes. Neither spinners nor manufacturers are buying freely, and the former are making a strong point of the fact that the advance in yarn prices is not commensurate with the advance in tops. At the moment even the latter are not advancing at the same rate as wool, but they did not fall quite so low as the raw material in the slump.

THE HEMP TRADE.—Selling pressure coupled with absence in demand resulted in a decline in prices during the week. On Wednesday, Manila J2, February-April, was quoted at £17 10s. per ton, as compared with £18 15s. on Wednesday last week. Last week's receipts of "Manila" amounted to 28,000 bales, against 27,000 a year ago. This week's receipts have been estimated at 27,000 bales and at 25,000 for next week. Shipments from Manila last week totalled 19,000 bales, of which 2,000 bales have been consigned to the United Kingdom, 2,000 to the Continent, 6,000 to the United States, 8,000 to Japan, and 1,000 to other countries. Local consumption at 1,000 bales leaves stocks at 131,000 bales.

THE GRAIN MARKETS.

WHEAT.—Climatic conditions over the United Kingdom do not yet favour active field work, the saturated condition of the ground in many parts of the country militating against preparations for Spring sowings. The condition of winter cereals gives satisfaction, especially on light soils. Native wheat was in better demand at the principal statute markets, and with offerings on a light scale, prices manifested a hardening tendency, especially for best samples. There was not much change in the position of imported descriptions, and fair purchases made by United Kingdom and Continental millers, chiefly of Australian and Plates, tended to keep values at a steady level. Although new Southern Hemisphere supplies are coming forward rather slowly, shipments are now proceeding at a good pace, with a further increase in floating supplies to Europe. The reduction of 4 million quarters in the second Argentine official estimate was rather larger than expected, but produced no appreciable effect on this side in view of the much larger surplus available for export, compared with last season. With ample supplies of Plate and Russian wheat on hand, buyers are content to cover only pressing requirements, while reluctant to pay the comparatively higher prices asked for Canadian grades. The movement in Argentina is gaining strength, and Russia is still making substantial contributions for the time of year. Although larger quantities are now being taken by importers, the supply position is more than adequate to fill all requirements. Some attention is directed to North American surplus holdings. Chartering from Montreal has commenced much earlier this year, and foreshadows large shipments when navigation can be resumed. Selling pressure may become pronounced, especially if official support in the United States is withdrawn at the end of May next. Prices were as follows:—No. 1 hard Manitoba, ex-ship, 28s. 9d.-29s. 3d.; No. 1 Northern Manitoba, ex-ship 28s. 3d.-28s. 9d.; No. 2 ditto, 27s. 3d.-28s. 3d.; No. 3, 26s. 3d.; No. 4 Manitoba, 25s. 3d.; Barusso, 63 lbs., 23s. 3d.; Rosafe, 63 lbs., 23s.; Australian, 23s. 6d.-24s. 6d.; Russian on sample landed, 21s.-24s. 6d.; ex-ship, 21s.-25s. per 496 lbs. English new, 4s. 6d.-5s. 6d. per 112 lbs.

WHEAT FLOUR.—Trading remains quiet, but prices tend firmer for home milled in sympathy with wheat, Australian parcels showing a hardening tendency for shipment, with spot stocks here much reduced. Quotations: London straight run, 24s. 6d. per sack for country deliveries, and 23s. 6d. London area. Of im-

ported, Manitoba patents, 22s. 6d.-26s.; Buffalo ditto, 22s. 6d., 26s. 6d.; Australian, 19s.-19s. 6d. ex store. On c.i.f. terms, Manitoba top patents, February-March, 23s.-23s. 3d.; export ditto, 21s. 6d.-20s. 9d.; Australian, 16s. 6d. per 280 lbs. Argentine low grade, January-February, £5 10s. per ton.

BARLEY.—Barley was quiet but steady. Quotations: Californian, old, landed, 30s.-35s.; new, ex ship, 30s.-41s., as to sample; Chilean, brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, landed, 15s. 9d.; ex ship, 14s. 9d.; Persian, landed, 14s. 3d. per 400 lbs. English-malting, 6s. 3d.-13s. 9d.; feed, 5s. 9d.-6s. per 112 lbs.

OATS.—The market in oats has been quiet, but last week's prices have been maintained. Quotations: Plate, landed, 11s.; ex ship, 10s.; Chilean, tawny, landed, 13s.; whites, ex ship, 18s. 6d.; landed, 19s. 3d.; North Russian, landed, 11s. 9d.-12s. 6d.; South Russian, landed, 12s. 3d.-12s. 9d.; ex ship, 11s. 9d.-12s. per 320 lbs. English, 5s. 8d.-6s. per 112 lbs.

MAIZE.—A steady tone governed the market for feeding stuffs, and values of maize improved under a good consumptive demand. New crop Plate, however, was obtainable at a discount owing to prospects of a record yield. Quotations: Plate, landed, 18s. 6d.; ex ship, to arrive, 17s. 3d.; March-April, 17s. 3d.; April-May, new crop, 17s. per 480 lbs. Yellow maize meal, £5 15s. f.o.r. London per ton.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Feb. 26, 1930.	Jan. 2, 1931.	Feb. 11, 1931.	Feb. 18, 1931.	Feb. 25, 1931.
Winnipeg (No. 1 Manitoba).....	148½	114	56½	64½	63	62½
Chicago (No. 2 Winter).....	130½	105½	79½	79½	79½	79½

OTHER FOODS.

SUGAR.—The market in sugar has again been quiet, and prices of British refined underwent no change. Raw futures have again been firmer, reaching their highest level on Tuesday; there was a slight reaction on Wednesday owing to selling pressure and limited demand. Wednesday's sales included March delivery at 5s. 11½d., as compared with 5s. 10½d. to 5s. 10½d. on the corresponding day last week; May at 6s. 2½d. to 6s. 2½d., as against 6s. 1½d. to 6s. 2d.; August at 6s. 5½d. to 6s. 6½d., as against 6s. 4½d. to 6s. 5½d., and December at 6s. 9½d. to 6s. 10d., as against 6s. 9d. to 6s. 9½d. The course of the Chadbourne scheme is still the main topic of the market. The final ratification is expected to take place in March, and it is hoped that Mr. Chadbourne will be successful in inducing Russia to become a party to the scheme. The acreage which will be

sown on the Continent during the coming Spring may influence prices to some extent, but although there will probably be a reduction of sowings, definite information on this point is not yet available.

COFFEE.—The demand for coffee was good, and steady prices were realised at the auctions with finest qualities strongly supported. Last week's movements of coffee were as follows:—Brazilian, landed in London, 251 bags; delivered for home consumption, 71 bags; stock, 2,805 bags, as against 6,120 last year. Central American, landed, 14,283 packages; delivered for home consumption, 3,470; exported, 3,004; stock, 86,786 packages, against 76,947 last year. Other kinds: landed, 14,005 packages; delivered for home consumption, 3,697; exported, 4,760; stock, 88,748 packages, against 55,652 a year ago.

COCOA.—The market in cocoa has been easy at the beginning of the week. Later, the commodity received better support in New York, and London prices responded. Wednesday's price for Accra, fair fermented, February-April, at 20s. 3d. per cwt., f.o.b., London contract, shows a rise of 3d. on the week. Futures were quiet, but slightly firmer on the week. Last week's movements were as follows: Landed in London, 4,902 bags; delivered for home consumption, 6,896; exported, 890 bags; stock, 188,508 bags, against 171,932 last year.

TEA.—The quantities catalogued for this week's auctions comprised 55,424 packages of Indian, 27,289 packages of Ceylon, and 11,725 packages of Java and Sumatra tea. Good Indian qualities were well supported, but common teas showed a decline, particularly marked on Wednesday. At Tuesday's auction of Ceylon tea, buyers were quick in supporting finest qualities, but as in the case of Indian, the lower grades suffered a decline.

RICE.—Rice was a steady market at unchanged rates.

POTATOES.—The continuous excess of supplies over current requirements resulted in easier prices.

SPICES.—The market in pepper has been quiet, but last Wednesday's prices have been maintained. Movements of pepper in London show no particular change. Black: landed in London last week, 33 tons; delivered, 43; stock, 492 tons, against 1,090 last year. White: landed, 30 tons; delivered, 56; stock, 494 tons against 1,116 a year ago.

MEAT.—The market in meat has again displayed an easier tendency. Wednesday's price of 3s. 8d. to 4s. 2d. per 8 lbs. for Argentine chilled hindquarters compares with 3s. 10d. to 4s. 4d. on the corresponding day last week, while English wethers sold at 5s. 4d. to 6s. 4d. per 8 lbs., against 5s. 8d. to 7s. last week, and English pork realised from 5s. to 7s. 8d. per 8 lbs., against 5s. 8d. to 8s. a week ago. According to the Smithfield official report, supplies of meat during last week amounted to 9,655 tons, as compared with 9,268 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.7 per cent. of

the supplies, as against 81.9 per cent. a year ago, and imported mutton, mainly New Zealand, formed 80.1 per cent. of the total supply, as against 76.5 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—After a period of firmness and advancing values, a rather quieter tone prevails. Linseed has been in fair demand, especially in near positions and for shipment up to £9 7s. 6d. was paid, since when on lower Plate options and a slight depreciation in the exchange prices eased to about £9 5s., but recovered to £9 12s. 6d. for all positions to April. Shipments from Argentina continue on a liberal scale, while the quantity afloat for Europe has increased to 291,100 tons (including 1,900 tons from India), or 10,000 tons more than last week and comparing with 165,800 tons a year ago. Cottonseed has given way, and black Egyptian afloat and for February loading offers at £6 10s., but buyers hold off. A good demand has been experienced for linseed oil, values of which sharply advanced, raw oil on spot, ex Hull, mill, reaching £19 15s., with March-April delivery quoted £19 5s. Later positions are at a small premium. Cotton oil is firmer and dearer, crude Egyptian, ex Hull, quoting £19 5s., and common edible £21 10s. prompt. Other seed oils also are steadier, and in cases quoted more money. Oilcakes and meals continue in good demand, and prices are steady and about unchanged. Copra has displayed more steadiness this week. Wednesday's price for S.D. Straits c.f.f., per ton, at £15 7s. 6d., showing an advance of 5s. as compared with the corresponding day last week.

HIDE, LEATHER AND ALLIED TRADES.—Light ox and heifer hides were again cheaper at the auctions held at Manchester on Tuesday, a reduction of 4d. per lb. being recorded on the two bottom weights. Cows, 50/50 lbs., were also 4d. per lb. cheaper, while all other weights together with bulls and irregulars sold at the previous week's figures. Although a rather better feeling seems to animate the market for imported hides, business continues to be difficult to negotiate and sales for the most part continue to be confined

to the usual small parcels. In South American wet salted hides business has been done in Argentine ox on the basis of 5½d. to 5¾d., while second ox have changed hands for tanners in this country at 5d. In dry hides M. V. Americans are now on offer at 7½d., and B. A. Americans at 6½d. More interest than for several weeks past has been shown in Capes, sales of which have been made at 5½d. and 4½d. for first and second drysalted 20/30 lbs., while 6½d. and 5½d. has been paid for first and second drys. Business in regard to Australian hides is difficult owing to the difference in the rate of exchange. Turnover in regard to sole leather has been of a fair average so far as English and wetsalted bends—more particularly for the repairing trade—are concerned. Inquiry has covered most weights, but the lighter averages have been most sought after, together with a moderate call for the heavier descriptions. Dry hide bends are only wanted in the lighter weights, and the turnover in mediums and heavies has been on very modest lines. In the upper leather section business for the most part is confined to day-to-day requirements, with the bulk of the inquiry for black and brown glacé kid. Fair trade is being done in willow calf and to a lesser degree in box, while at the same time there is a continuance of the inquiry for the cheaper grades of patent leather.

RUBBER.—Little interest has been shown in the market for rubber during the past week, and a further increase in United Kingdom stocks had a depressing influence on prices. Wednesday's official spot price per lb. for standard ribbed smoked sheet at 3½d., compares with 3½d. on the corresponding date last week. Forward positions have been neglected with an easier tendency. Business has been done at 3½d. for March, at 3½d. to 3½d. for April-June, at 3½d. to 4d. for July-September, at 4d. to 4½d. for October-December, and at 4½d. to 4½d. for January-March, 1932. Stocks in London and Liverpool have increased by 1,555 tons, the total being 126,666 tons at the end of last week, as compared with 82,429 tons a year ago. Deliveries, at 1,420 tons, during the past week show a decrease of 624 tons, as compared with the preceding week, and are 641 tons below those of the corresponding week last year.

THE MONEY MARKET.

this operation had previously been lent in the market by the Commonwealth Bank with whom they had been lodged. Probably the real explanation of the ease that prevailed early in the week was the familiar one of heavy Treasury bill maturities, accentuated possibly by discrepancies between the dates at which the old bills matured and the new ones fell due for payment. Some colour is lent to this suggestion by the fact that by Thursday money was becoming tighter. This looks as if payments for new bills were mainly concentrated in the latter half of the week.

Despite the easier tendency of money, discount rates were on the whole well maintained, for although on Tuesday the rate fell from a weak $2\frac{1}{4}$ per cent. to a full $2\frac{3}{4}$ per cent., it did not fall below the latter rate. On that day the Bank of England sold a few May bills at $2\frac{3}{4}$ per cent., but the Bank return suggests that this was little more than a warning gesture, for if Government and Other Securities were added together their net change during the week was an insignificant increase of £63,000. Thus apparently the market is acting upon the view advanced here a week ago that the rate should not be allowed to fall below $2\frac{3}{4}$ per cent. Last week's Treasury bills were allotted at practically $2\frac{1}{4}$ per cent. The explanation of this high rate was that the bills were an unpopular maturity with the banks, and that the market was therefore able to tender for them at higher rates without much danger of being outbid. For this reason it was suggested that the bills to be tendered for on March 6th might be allotted at a lower rate, but against this it must be remembered that if Treasury bill payments at the end of the week are going to make money as tight as it was before, there may not be any appreciable change in the rate.

Meanwhile, the course of the foreign exchanges shows that the open-market policy of the Bank continues to prove efficacious. The New York rate remains steady, and the Paris rate has risen to over Frs. 124 for the first time for nearly a year. The premium on forward francs is several points smaller than it was a week ago, which is another favourable sign. So far, the Cape gold has continued to go to Paris, and it is understood that the bulk of the gold due on March 10th has also been bought forward on Paris account. It must be remembered that these French forward gold purchases are practicable because the exchange required to finance them is also bought forward at the same time, and the wide spread between spot and forward rates has brought the latter below the gold point. Now that the spot rate is rising, and the spread between the two is becoming narrower, it is possible that the point may soon be reached at which these forward gold purchases will cease to be profitable, especially as the price at which they are made is, to some extent, a matter of arrangement. So far as can be ascertained, the gold due in London on March 17th has yet to be disposed of, and in any case it would be wrong to assume that the Banque de France has permanently replaced the Bank of England as the immediate and principal absorber of the world's new gold.

Recent American news, as summarised in the following paragraph, shows that conditions on Wall Street have quietened down, and that in any case the recent outburst of stock market activity never reached the point where it led to a marked expansion in brokers' loans or was in danger of raising the existing low call rates. Thus, there seems no reason to fear at present the withdrawal of such American short money as is at present lodged in London, and this means that there is no apparent reason why the

American exchange should relapse any further. The fears recently aroused in international banking circles by pronouncements regarding the state of British national finances are also to-day less in evidence, and, taking a broad view of the situation, sterling appears to be in a stronger position than it has been for some time. It does not follow, however, that it is safe to relax the efforts made to maintain high discount rates in the London market. The present margin of $\frac{3}{4}$ per cent. between Bank rate and market rate is by no means unusually narrow, and it is still to be hoped that it will not be allowed to increase.

Apart from any definite action taken to maintain discount rates, the main question in determining the level of discount rates lies in the relation between the influx of revenue, on the one hand, and the release of Government funds through the weekly excess of Treasury bill maturities over issues, on the other hand. Both sides of this equation have now assumed considerable magnitude, and up to a point they will cancel each other out. On the other hand, revenue collection, payments for new Treasury bills and disbursements in respect of maturing Treasury bills between them involve large and irregular movements of funds, a state of affairs that always makes money stringent. So there should be no difficulty in maintaining discount rates at the desired level.

In spite of last week's rise in New York stock prices and the increase in activity on Wall Street, brokers' loans only rose by \$26 millions, the latest figure being \$1,798 millions. Call money has, consequently, remained easy. The inside rate is still $1\frac{1}{2}$ per cent., and early in the week money was lent freely "outside" at 1 per cent. Despite a set-back this week on Wall Street, leading bankers have expressed greater confidence in the stock market outlook, and the rise in steel production to 52 per cent. of capacity is regarded as a favourable factor. The week's gold arrivals include \$1,200,000 from Uruguay, and \$5,475,000 from the Argentine. A further amount of \$4,000,000 is to be shipped from the Argentine early next week.

The foreign exchange market was dull and inactive, with fluctuations as a rule within narrow limits. New York moved slightly in our favour to 4.85 $\frac{1}{2}$. Montreal improved by $\frac{1}{16}$ to 4.85 $\frac{1}{2}$. Paris depreciated sharply to 124.02, and Brussels also was weaker at 34.85. Milan gained seven points at 92.72, and Madrid appreciated from 46.30 to 45.20. Amsterdam moved strongly in our favour to 12.12 $\frac{1}{2}$, against 12.10 $\frac{1}{2}$ last week. Berlin lost $\frac{1}{4}$ at 20.43 $\frac{1}{2}$. Switzerland, after touching 25.44, improved to 25.23 $\frac{1}{2}$, a loss on balance of one point in the week. The Scandinavian currencies were variable, Stockholm improving to 18.13 $\frac{1}{2}$, while the Oslo rate rose to 18.16 and Copenhagen to 18.16 $\frac{1}{2}$. Rio weakened by $\frac{1}{4}$ d. to 4 $\frac{1}{4}$ d., Buenos Aires gained $\frac{1}{16}$ d. at 37 $\frac{1}{16}$ d., and Montevideo was also better at 35 $\frac{1}{4}$ d. In the Far East the rupee was very firm at 1s. 5 $\frac{3}{4}$ d., as was the yen at 2s. 0 $\frac{3}{4}$ d. In the forward market one month's New York was unchanged at $\frac{1}{16}$ cent premium, but the three months' rate weakened to a premium of $\frac{1}{16}$ cent, against $\frac{1}{8}$ cent last week. Paris was quoted at reduced premiums of 8 and 19 centimes, and forward Brussels also weakened to $\frac{1}{2}$ centime and 1 $\frac{1}{2}$ centimes premium for the two periods. Milan went to 11 and 30 centesimi, and Madrid was decidedly weaker at premiums of 3 and 14 centimos, against 6 and 19 centimos last week. Amsterdam weakened slightly to 1 $\frac{1}{2}$ and 3 $\frac{1}{2}$ cents premium. Berlin was at slightly wider discounts of $\frac{1}{4}$ pfennig and 2 pfennigs for one and three months respectively. The premium on forward Geneva declined slightly to 4 centimes for one month and to 8 $\frac{1}{2}$ centimes for three. The silver market was quiet, with prices slightly higher at 12 $\frac{1}{2}$ d. for cash and 12 $\frac{1}{4}$ d. for forward, a rise of $\frac{1}{16}$ d. and $\frac{1}{4}$ d. respectively. The China silver exchanges rose in sympathy, Hong Kong by $\frac{1}{4}$ d. to 11 $\frac{1}{4}$ d., and Shanghai by $\frac{1}{4}$ d. to 1s. 2 $\frac{3}{4}$ d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

THE OPEN QUESTION.

WE suggested last week that various economic developments, although individually dubious and intangible, provided in the aggregate some ground for hope that the general outlook has improved. The burst of optimism which is conspicuous in some quarters should be severely discounted; for it is only natural that watchers for the economic dawn, with eyes long strained on the horizon, should fondly imagine that they see a roseate streak before it has really appeared. Nevertheless, there is sufficient evidence to-day that the recent progressive darkening of the skies has, whether temporarily or permanently, ceased. For the first time for over eighteen months the fall in our index number of commodity prices has been checked, while the long-continued increase in the figure of those wholly unemployed has given way to a small decline which, although it may or may not be merely seasonal, is at least a welcome change. On the whole, opinion is gaining ground in responsible quarters that the rapid downward slide has ceased, and that, even though substantial recovery be yet afar off, we have quite possibly touched the bottom of the great depression.

These signs of economic improvement, such as they are, have a strong bearing upon the political situation. So long as the curve of trade activity continued to move heavily downwards, there was always present the likelihood of the development of a discontent which would overthrow the existing Administration, and, at the same time, with the probability of a long-continued aggravation of economic difficulties ahead, there was an obvious temptation for the Government to ride for a fall and leave their successors to face a sea of trouble. In proportion as the economic situation changes for the better, the threat from the Government's enemies loses force, and the will of the Government to continue in office increases; and it may be assumed that brighter hopes of future trade recovery are in some degree responsible for Mr MacDonald's recent announcement of his determination to remain in power until the Indian constitutional question is settled, and the Disarmament Conference of 1932 has been held. Other influences have, of course, worked strongly in the same direction. The outstanding success of Mr Arthur Henderson in bringing France and Italy to agreement, and thereby rounding off the London Naval Treaty, has increased the prestige of the Government, which has also gained substantially—pace Mr Churchill—from the success of Lord Irwin in making terms with Mr Gandhi.

We have, therefore, a new political situation in which the Government's motive for remaining in office has been greatly strengthened and in which its ability to put this motive into effect has become less dubious. Again, this week's events in the House of Commons suggest that in the political maze at Westminster the Government's path has been rendered easier than was thought likely a few weeks ago. The acquiescence of the Trade Union group in the dropping of the Trade Disputes Act is significant proof not only that the Government have no intention of challenging the opinion of the country on any major issue, but also that no considerable body of Labour supporters wish to compel it to do so. Precisely the same indication of a growing cohesion and discipline in the ranks of the bulk of the Labour Party is given by the surprising smallness of the vote from the Government back benches against the second reading of the Alternative Vote Bill. Moreover, the various small dissentient groups inside the Labour Party show no signs of making headway. The Mosley revolt has attracted unexpectedly little support; Sir Charles Trevelyan's resignation has caused scarcely a ripple on the political waters; and among the Clydeside group there is no evidence either of determined leadership or successful recruiting. Finally, if it be true that the weakness of the Opposition is the strength of the Government, then the present Government must be judged to be fairly firmly in the saddle, for, as we note on a later page, the crisis in the Conservative

Party has at last come to a head, and questions both of Conservative leadership and of Conservative policy are in the melting-pot.

It is, therefore, becoming increasingly possible that the present Government both can and will remain in office for at least another eighteen months. This is a prospect which will be viewed with very mixed feelings. On the one hand, we agree with Mr MacDonald that a change of administration during the progress of the Indian negotiations is in itself undesirable, and in view of the success which has attended the Government's efforts in the sphere of foreign policy, starting with the Anglo-American rapprochement and continuing through to the Franco-Italian naval agreement of this week, we have no wish to see a change at the Foreign Office before the all-important Disarmament Conference. It is essential also to consider what might be the result of an appeal to the country at the present juncture. Of all possible results only two seem in any degree likely. If the Conservative Party could compose their quarrels and show a united front to the electorate, it is conceivable that Mr MacDonald's Cabinet might be replaced by one that was pledged to a policy of indiscriminate and high protection, a result which in our view would be deplorable. The alternative would be the return of the Labour Party with a new mandate, and possibly an independent majority, to carry out far-reaching and costly schemes of a socialistic nature. That prospect certainly is no less alarming. As regards other possibilities, we are as yet far away from the time when party regrouping may give us another choice in some such direction as that of the revival of a Liberal-Unionist Party. So much may be said at least for the negative advantage of the present Administration's retention of office. On the other hand, it is impossible to contemplate with complacency the indefinite continuance of the extravagant expenditure and ineffective unemployment policy which have been a cardinal feature of the Government's record in domestic affairs.

Two questions, therefore, arise. What price is the country prepared to pay in the shape of unsatisfactory domestic administration for a continuity of a successful foreign policy through a period of supreme international importance? The second is the question, posed not long since by Sir John Simon, how far fear of what a General Election might bring about should properly frighten us into a tolerance of an unsatisfactory regime? For our own part we find the answer to these questions to hinge very largely upon the Government's willingness and ability to tackle in earnest and without delay the whole system of unemployment insurance and transitional benefit, whose present working is sapping the resources of the nation. In a recent issue we suggested reforms by which the Unemployment Insurance Fund could be brought within sight of solvency, legal abuses under the present Act discontinued, and large savings made to the Exchequer, without any injustice or hardship being imposed either upon the actuarially insured or upon recipients of dole relief. The measures involved would admittedly be unpalatable to a large section of the country, but they are essential, not merely as a method of eliminating waste at a time when economy is imperative, but also as a stage, and a vital stage, in the task of restoring to this country adequate competitive ability to prosper when general trade recovery returns.

Now it is in some ways easier for a Labour Government to carry this task to completion than for a Conservative; for any Conservative action on the lines required would be liable to misrepresentation as a deliberate attack by the capitalist upon the rights and livelihood of the worker. If the present Government will set about this task in grim earnest, it is assured of the full support of the Conservative and Liberal Parties. It therefore has the power to put it through. In short, Mr MacDonald and his Cabinet are presented with a unique opportunity of

continuing an honourable record in foreign policy through the next critical years and also of leading the way in the reconditioning and readjustment of the economic life of the country in conformity with the irresistible requirements of changed conditions.

It is quite clear that bold statesmanship of a rare quality is needed, and there is much less reason than we could wish to see for confidence that the present Government can rise to the occasion. Will they utilise the opportunity offered, or forfeit the credit which they have won in the field of international affairs by yielding to the temptation to seek electoral advantage, like certain of their Australian contemporaries, in following the line of least resistance in the whole sphere of social expenditure and economic readjustment? The matter will soon be put to the proof—by the Budget, by the Cabinet's attitude in several pending wage issues, and above all by the action or inaction which follows the Report of the Royal Commission on Unemployment. What remains to-day an open question must be answered in the next few months, and the answer will affect profoundly the course of British history in this generation.

THE NAVAL AGREEMENT.

EVENTS have moved rapidly since we discussed the naval conversations in our last issue, and Mr Henderson has now scored the success for which Mr Craigie's earlier work had prepared the ground. By the end of last week Mr Henderson and Mr Alexander had reached an agreement with the Italian Government on the proposals which they had brought with them to Rome as a result of their previous conversations at Paris. Last Sunday they secured the French Government's acceptance of the results of the conversations at Rome; and therewith the new arrangement between France, Italy and Great Britain was completed. It only remains to obtain the concurrence of the other signatories of the London Naval Treaty of April 22, 1930, that is, the United States, Japan and the Dominions; and this concurrence is really a foregone conclusion.

It is true that from Japan there came certain very human complaints that France, under the new agreement, seems to have been more indulgently treated in the matter of submarines than Japan was last year at the London Conference. The French arguments about the protection of French communications with Africa apply, *mutatis mutandis*, say the Japanese, to Japan's communications with the mainland of Asia. But there is no likelihood that the Japanese will press their grievance (if they have one) so far as to reopen a question which was settled at London with such difficulty as between Japan, the United States and the British Empire. After all, the French might build any number of submarines without threatening Japanese security. What really matters to Japan is that the French shall not go to lengths which will impel Great Britain to increase her navy by availing herself of the contingent clause in the London Naval Treaty, Part III, which we cited last week and this object has presumably been achieved. We may take it, then, that the consent of the non-European parties to the London Naval Treaty will be forthcoming without delay, and that thereupon the new Franco-Italo-British understanding will be implemented by writing into the London Treaty, Part III, the figures now agreed upon for the limitation of the French and Italian navies. Thus the London Treaty will become a Five-Power Treaty through and through, instead of being, as it has been so far, a mere Three-Power Treaty in respect of its most important chapter.

Pending the concurrence of the Overseas Powers, the figures for the French and Italian navies which are to be written into the London Treaty are being kept confidential. But in knowing that these figures are such as to bring France and Italy into line with the British Empire, the United States and Japan on an agreed ratio, we already know the most important fact about them. We can also venture upon certain surmises. For instance, the limitation expressed in these figures is comprehensive. It covers all categories of naval armaments, over and above the capital ships and aircraft-carriers which were covered in the Washington Treaty. Furthermore, it is not simply

a limitation but a reduction of existing construction programmes. For the period of the Treaty (that is, until the close of 1936), the two Powers are to build for replacement, on a reduced scale, and not for increase. In the third place, the agreement is framed entirely in concrete terms. It deals with specific vessels, armaments and tonnage, and it leaves Italy's claim, in principle, to parity with France both unwithdrawn and unaccepted for the next half-dozen years. After that the parties can reopen the question, "without prejudice," if they choose. But will they choose? If the course of Franco-Italian relations during the interval runs smooth, it is conceivable that they may prefer to negotiate a fresh reduction, once more in concrete terms, for a further term of years. Or, again, they may elect to call it parity before the first term of six years has run out. For our British and American experience seems to show that parity comes to mean, in practice, any set of figures that are accepted by two parties with mutual goodwill. In fact, parity means equivalence, not in those objective quantities that are denoted by figures, but in that subjective psychological value which the Chinese have taught us to call "face."

As Mr Henderson said in the statement which he made when he arrived in London on Monday, "the outstanding feature of the success, whatever may be the limitation imposed upon one category of ships or another, is the political achievement." If French and Italian statesmanship rises to the occasion, it will now proceed, without delay, to grapple with those North African problems which have been at the back of the Franco-Italian naval controversy and which, conversely, may now yield to settlement in the good atmosphere created by the removal of the naval difficulties. In themselves, these North African problems are not serious. The two principal heads are the status of the Italian settlers in Tunisia and the rectification of frontiers between the Italian possessions in Libya and the French Protectorate of Tunisia (and possibly French Equatorial Africa as well). If these vexatious and long pending questions could be settled out of hand the seal would be set upon the improvement in Franco-Italian relations which the naval agreement has inaugurated. But it must be added that the utmost generosity which France could be expected to show in this North African field would not enable Italy to solve her fundamental problem of providing an adequate outlet for her population. This is a problem of large dimensions which can only be solved on the grand scale. Yet, is it too much to hope that some solution for it may emerge from the development, on the economic side, of the Briand Plan for a European Union? If once the trouble between Italy and France is removed—as it will be if the naval agreement is followed up by a North African agreement—then the prospects of "closer union" in Europe will be improved very considerably. And some perceptible lowering of the internal barriers to the flow of goods and population from one compartment of Europe into another would do more to ease Italy's problem than the political transfer of many thousand square miles of "the very light soil" of the Sahara.

But, though a Franco-Italian *détente* may give an impetus to the Briand Plan, it can hardly carry it this far unless the limitation of naval armaments, now happily achieved as between five Powers, is confirmed and extended to the land and air armaments of all countries at the forthcoming general Disarmament Conference. "The immediate effect of the agreement," said Mr Henderson on Monday, "will be that our three countries will enter the Disarmament Conference in the closest friendship and, without making any pact whatever against any other country, that friendship should mark the discussions that will take place. It has been suggested that the result might be a combination of the three countries against a fourth country. I wish to emphasise the fact that no Mediterranean Pact, or any other pact, has ever been mentioned throughout the whole of the discussions." It will be remembered that "a Mediterranean Locarno" was mooted at the London Conference last year as a possible means of giving France security in return for an acceptance by France of the Italian claim to parity. Since, in the new agreement, this Italian claim has been suspended, the question of a Mediterranean Pact evidently does not now arise.

The other possible pact, to which Mr Henderson clearly alluded, was some understanding that, in consideration of the new naval agreement, Great Britain and Italy should support the French policy in regard to land armaments against the German policy at the Disarmament Conference next year. Such an understanding has been hinted at in the French Press; and it is satisfactory to find it authoritatively and emphatically denied. Not, indeed, that it was a likely story *à priori*; for why should Italy be supposed to have given France any such *quid pro quo* for the new naval agreement when, after all, it is Italy, more than France, that has made the concessions which have rendered the agreement possible? At the last session of the Preparatory Commission for the Disarmament Conference Italy took her stand side by side with Germany and the U.S.S.R. in demanding a really substantial reduction of armaments all round. At that time, when the Franco-Italian naval controversy was still unsettled, the French had some reason for fearing that this Italian move might be aiming not so much at disarmament as at a new combination of forces in Europe to balance—or outbalance—the French system of alliances. Meanwhile, Italy has conclusively proved her good faith by making substantial concessions, embodied in the new naval agreement, to France individually. We may hope that, when the Disarmament Conference meets, Italy will champion the cause of reduction with no less insistence and with still greater authority than before. With each step that we make in advance it is becoming more difficult for the French to persuade their neighbours that French security is still unprovided for. One day the French will no longer be able to persuade even themselves. Perhaps that day will dawn on the polling day of the French General Election, which will occur while the Disarmament Conference is in session. In any case, we can say confidently that, as a result of last week's work, the outlook for the Disarmament Conference has been enormously improved. What started almost as a forlorn hope has become a practical proposition. Let us go on doing our best, during these next twelve months, to make this crucial conference a success.

THE FINANCES OF INDIA.

THE Budget unfolded last Saturday by Sir George Schuster revealed a deficit of unexampled dimensions, resulting from a combination of world depression and political disturbance. The boycott and political uncertainty are matters which are within India's control. The world depression, on the other hand, is something which she shares with other countries and can do little by herself to influence. Any attempt, therefore, to look ahead and appraise India's future financial situation requires that the influence of these two great causes of depression should be distinguished. Sir George Schuster, in his Budget speech, however, made no attempt to analyse the deficit from this point of view, but stated that he would circulate a paper dealing with the commercial situation of the country and its causes. To this aspect of the question we shall return.

Those who have followed the recent history of India realise that the great increase in the Budget of the Central Government since the war has been based mainly on Customs revenue, with a much smaller contribution from the income- and super-taxes. Indeed, apart from the salt tax, the Centre has very few other sources of revenue, since revenue from the land tax, from liquor taxation and from stamps, as well as from State domains, has been allocated to the provincial governments. Seeing that agricultural incomes are exempt from income-tax and that the revenue from this tax comes—apart from salaries—mainly from one or two specialised industries, it follows that the main sources of revenue at the Centre are far more vulnerable to the influences of trade depression than the revenue of, say, the British Government. On the other hand, the expenditure of the Centre is very largely of a fixed contractual nature. The greater part of it consists of the cost of the Army; the pay of the Civil Service is fixed on long-term agreements; while the debt

charges, though not relatively large, and pension payments are equally incapable of reduction.

In the face of these comparatively inelastic charges, Sir George Schuster finds himself with a deficit of 13½ crores for the current year, 1930-31, instead of a surplus of 0.86 crores, and with a gap between revenue and expenditure to be filled in 1931-32 of 14½ crores. These figures are arrived at as a result of the following changes:—

	Revised Estimates, 1930-31, compared with Budget. Crores.	Budget, 1931-32, compared with Budget 1930-31. Crores.
Customs and excise	- 9.50	- 8.00
Income, etc., taxes	- 2.20	- 4.50
Other taxes	- 0.40	- 0.66
Total taxes	- 12.10	- 13.16
Railway receipts	...	- 0.38
Post and telegraph receipts	- 0.89	- 0.80
Financial items	- 1.38	- 3.76
Other receipts	- 0.05	...
Total	- 14.42	- 18.10
Deduct estimated budget surplus	+ 0.86	+ 0.86
Deficit	- 13.56	- 17.24
Economies in expenditure 1931-2	...	+ 2.73
Final deficit 1931-2	...	- 14.51

These figures mean that the Customs revenue is likely to fall short of the estimate by about one-sixth, but that in the coming year the fall will be slightly less—about one-seventh. Income tax, on the other hand, shows a bigger drop next year than this, the fall being no less than 25 per cent. The fall under the heading of financial items both this year and next is due mainly to the contraction of the currency and the consequent reduction of profits arising therefrom.

It will be seen that Sir George Schuster has contrived to reduce his deficit of 17½ crores for 1931-32 to one of 14½ crores by economies and various adjustments. The chief of these is the saving of 1½ crores in the Army estimate. The Finance Member explained that with the helpful collaboration of the Army authorities, and in view of the present financial stringency, this saving had been made possible, partly by extending the period of the stabilised Budget by one more year, partly by taking advantage of the reduced cost of various articles and savings effected by the military in their economy campaign, and partly by postponing expenditure on the ordinary military engineering services. A warning was given that it may not prove possible to repeat the whole of these savings. After taking credit for a windfall of 54 lakhs received from the sale of the Indo-European Telegraph undertaking, balanced, however, by special expenditure on the census of 34 lakhs, and on the aviation services of 19 lakhs, the civil estimates are lower by 98 lakhs as a result of economies totalling 1.26 crores, less a certain number of normal automatic increments.

Sir George Schuster reiterated his frequently expressed opinion that it is of supreme importance at this critical juncture, when great changes are in contemplation, that those whom he termed the "old managers" should hand over the finances of India in a sound condition, and that those on whom the responsibility would subsequently rest should give an earnest of their intention to maintain them in that condition if the credit of India is to be maintained. He, therefore, eschewed any attempt to make subtle adjustments or to resort to those measures of camouflage which have had an irresistible attraction for the Chancellors of the Exchequer of some other countries when placed in similar difficulties, and bluntly proposed to provide ample cover for his deficit by a general increase of his main items of revenue, namely, Customs and income-tax. The comparatively small 10 per cent. schedule of the Customs is to be raised to 12½ per cent.; the main schedule, now 15 per cent., including the duty on cotton, is to be raised to 20 per cent.; while the luxury schedule, now 30 per cent., is to be raised to 40 per cent. The effect of these increases on the various classes was not separately shown in his speech,

but together they amount to somewhere about 30 per cent. on the average, whereas the Finance Member expects to add to his revenue about 10 crores (9.82 crores to be precise), i.e., an increase in the present reduced Customs revenue of under 25 per cent. Sir George Schuster made special reference to an increase of 2 annas in the silver duty, making a total of 6 annas an ounce, and also to the sugar duty. The Tariff Board, it will be recalled, has just reported in favour of a heavy protective duty for the sake of stimulating the Indian sugar industry, but as this recommendation has not yet been debated, Sir George has not adopted at this stage the proposal to impose the high duty of 7½ rupees per hundredweight, and is imposing one of 1½ rupees per hundredweight purely as a revenue proposition.

So far as the income-tax is concerned, additional rates are imposed on all taxable incomes from the lowest to the highest; additional graduations are made in the income-tax classification, which now ceases at 40,000 rupees; while new graduations are also imposed in the super-tax. The combined effect of these changes is to produce an evenly graduated scale and to add an extra charge of about 25 per cent. on all incomes. The Finance Member added that steps would also be taken to prevent leakage in the income-tax figures due to the regulations relating to income received from overseas investments. The new system will remove one of the inducements which at present exist to invest Indian capital abroad, and it will also bring in additional revenue, though he has taken no credit for this in the revenue estimates. The net effect of his income-tax changes will be to produce 5 crores of additional revenue, and thus a little more than make up for the slump in the income-tax yield.

The Customs increase will certainly not facilitate trade. Its effect upon Lancashire is dealt with elsewhere by our Manchester Correspondent, and in general it is to be deplored that in times like these India's main tariff should have to be raised from what may be described as a moderate tariff level of 15 per cent. to one of 20 per cent., which is certainly approaching the high tariff level. But it is difficult to see that Sir George Schuster could have succeeded in raising the income tax by more than 25 per cent. without risking losing revenue by evasion, and until India broadens the basis of her taxation and is prepared to raise more direct taxation, there is no other source open to the Finance Member. There are indications in the cabled summary of the Budget speech that these increases are to be regarded as provisional surcharges levied in order to enable the Government to raise the same revenue from a lower turnover of trade. But this method certainly has its dangers, seeing that many of these duties will have a protective effect and be very difficult to remove when the crisis is passed.

It remains briefly to consider the situation disclosed by Sir George Schuster and created by his new proposals in relation to the future financial requirements of India. Readers of the Simon Report will recall that for political, economic and social reasons one of the urgent needs of India is that the Provinces should have funds available for so-called "nation building" services, and that the report of the Financial Assessor proposed that these resources should be forthcoming in part from a surplus which is likely to emerge in the course of years in the Central Budget from expanding revenue combined with a stationary or falling expenditure, but in the main from new sources of taxation. So far as new sources of taxation are concerned, Sir George mentioned that he was discussing with the Provinces the possibility of raising revenue from tobacco, and that a duty on matches was also in contemplation, though this could not be developed to produce important sums until some form of economic union between British India and the Indian States could be established. The very important question of making agricultural incomes liable to taxation was not touched upon, but this was hardly to be expected in view of the expression of opinion in the Viceroy's Despatch of October last in which the Government of India said:—"We have some sympathy with the view expressed by more than one province that it is a form of taxation which should only be imposed by a representative and responsible Government."

As regards important measures of economy at the Centre, Sir George quite properly observed that substantial reductions in the Army were a matter involving political questions and had already received special consideration at the Round Table Conference. He did, however, discuss at length the problem of the cost of India's Civil Service. Speaking as an outsider, he expressed the view that India had one of the finest Civil Services in the world, and that she got full value for her money in good administration. But with growing Indianisation the case for a lower level of salaries gets stronger every year. He pointed out that a cut of 10 per cent. of officers' salaries would produce a saving of only 1.60 crores, of which the Centre would get 38 lakhs and each province on the average 14 lakhs. Sir George thought that the proper way to deal with established servants with definite contractual rates was by way of income tax, which falls on everyone living in the country. Any other method would be a breach of contract. These arguments, however, do not apply to future entrants, and the Government has decided to hold a conference at Simla with representatives of provincial governments at which the possibility of revising the terms of service of new entrants will be considered. Sir George, moreover, announced that a retrenchment committee is to be appointed, consisting of five non-official members of the Assembly and two officials, for the purpose of exploring the possibility of further and more permanent economies in expenditure.

The key to the financial position, however, is quite obviously the prospect of increased revenue, and it will be remembered that a year ago Sir George Schuster himself in his Budget speech spoke of some of the additional taxation then imposed as laying the foundation for a surplus which would make possible the transfer in future years of some of the Central revenue to the Provinces. The present slump in revenue has obviously postponed this possibility. There is, however, reason to hope that in view of the decision of Congress to take part in the framing of the new constitution, part of the drop due to the boycott and the political situation in the past year may be regarded as temporary and that this part of the gap will be quickly refilled. But to the extent that the drop in revenue is due to world causes and to the fall in the price level of agricultural products, the Chancellor of the Exchequer of India is faced with the same problem that faces most other countries of the world, and none of them will be able to give the answer until we know to what level world prices are likely to recover after the present slump. If prices remain at their present level, India's total national income will be reduced and she will be faced either with the task of scaling down fixed charges to something like a pre-war level, or with a situation in which her Central charges are definitely an increased burden on the country. In this latter event any contribution from Central revenue towards expenditure on the economic and social development of India will be further postponed through the earmarking of the whole of her large Customs revenue and the proceeds of the income tax for the primary functions of defence and administration. Her interest, therefore, like that of most other countries, is bound up with a return to a higher level of general and in particular of agricultural prices, and whoever is in charge of India's monetary policy should be anxious to co-operate with other countries to this end.

BRITISH RAILWAY RESULTS.—I.

LAST week, in the leading article of our Stock Exchange section, we reviewed the position of home railway stocks, and reached the conclusion that the Great Western Company is now in a class by itself, while the London Midland and Scottish and the London and North Eastern, burdened as they are with the service of most of the hardest-hit industrial areas, stand at the opposite end of the scale, with the Southern Railway in a position mid-way between. This conclusion is borne out by a more detailed analysis of the railway accounts.

On the revenue side of the balance the picture is far from cheerful in any of the four lines, as the table below shows:—

GROSS RECEIPTS. (000's omitted.)								
	Passenger Trains.		Freight Trains (excluding livestock).		Total Railway Receipts (including livestock).		Total Gross Receipts (including ancillary businesses).	
	1929.	1930.	1929.	1930.	1929.	1930.	1929.	1930.
	£	£	£	£	£	£	£	£
London Midland and Scottish ...	28,723	27,217	42,997	39,575	73,195	68,241	81,661	76,445
London and North Eastern ...	19,097	18,368	35,367	33,021	55,561	52,391	63,295	59,825
Southern ...	16,969	16,554	5,656	5,492	22,993	22,396	25,507	25,890
Great Western ...	12,781	12,350	17,654	16,625	31,028	29,590	35,184	34,347
	77,570	74,499	101,674	94,713	182,777	172,618	207,647	196,487

Receipts, both from passenger trains and freight trains, were lower than in 1929 in each group, and though the effect of the severe industrial depression was naturally most marked in the revenue from freight traffic, which fell by nearly 7 per cent., the general diminution in purchasing power, combined with road transport competition, reduced revenue from passenger trains by more than 4 per cent. In the second table passenger traffic is analysed in more detail:—

PASSENGER TRAFFIC.* (000's omitted.)								
	Total Number Carried.		Receipts.		Average Fare per Passenger.		Coaching Train-miles.	
	1929.	1930.	1929.	1930.	1929.	1930.	1929.	1930.
			£	£	s. d.	s. d.		
London, Midland and Scottish ...	315,748	298,906	18,865	17,714	1 2 34	1 2 22	89,306	88,967
London and North Eastern ...	213,613	205,717	12,064	11,377	1 1 55	1 1 27	62,195	61,891
Southern ...	208,638	216,523	11,707	11,269	1 1 45	1 0 49	50,150	52,443
Gr. Western	132,359	124,755	8,781	8,298	1 3 92	1 3 97	39,311	39,598
	870,538	845,881	51,417	48,658	1 2 18	1 1 81	241,462	242,899

* Excluding season ticket traffic.

The number of passenger journeys decreased on three of the four lines; the Southern secured a remarkable increase on the electrified lines, with a resultant expansion of £192,000 in the revenue from those lines, but this was more than counterbalanced by a fall of £544,000 in receipts from passengers on other parts of the system. The group has since decided that in some instances fares were too low, and some of the cheap fares have now been revised upwards. On the Great Western the decrease in the number of passengers was greater than in the revenue and there was a small rise in the average fare. Fewer train-miles were worked on the two larger groups, but on the Great Western and the Southern there was a small increase.

Goods traffic, as was to be expected, shows even more unfavourable results:—

FREIGHT TRAFFIC (LIVESTOCK EXCLUDED) (000's omitted.)								
	Tonnage.		Receipts.		Average Receipts per Ton.		Freight Train-miles.	
	1929.	1930.	1929.	1930.	1929.	1930.	1929.	1930.
			£	£	s. d.	s. d.		
London Midland and Scottish ...	149,333	139,646	42,997	39,575	5 9 10	5 8 01	53,125	51,054
London and North Eastern ...	150,983	138,719	35,367	33,021	4 8 22	4 9 13	40,597	39,517
Southern ...	17,769	17,347	5,256	5,492	6 4 44	6 3 98	7,089	7,078
Gr. Western	81,815	75,139	17,654	16,625	4 3 79	4 5 10	22,686	22,168
	393,891	370,851	101,674	94,713	5 1 04	5 1 29	123,497	119,817

The Chairman of the Southern Railway stated that the bulk of the decline in freight revenue on his group was due to the reduction in the tonnage of coal carried; in this

Branches and Agencies throughout the East.

INTEREST ALLOWED ON DAILY CREDIT BALANCES.

respect 1929 was an exceptionally good year, so that comparison is unduly unfavourable to 1929. Coal from the Kent collieries, however, continued to increase. The London Midland and Scottish experienced the most severe decline, but two charts with which the Chairman illustrated his speech show that the decline in tonnage since 1927 has only just kept pace with the fall in the index of national production, while the effect of the depression on the gross and net revenues of United States and German railways has been far more pronounced than on the London Midland and Scottish revenue. This may be good evidence that the unfortunate results of last year's railway working are attributable more to general causes than to conditions peculiar to the railways, but it does not prove that British railway costs and charges are not themselves unduly high.

Average receipts per ton of freight carried were higher than in 1929 on both the London and North Eastern and the Great Western, owing to a relatively greater decline in traffic of the lower-rated grades. The comparatively small diminution in freight train mileage on all four groups, in spite of the reduction in tonnage, is an example of the indirect loss which the railways suffer from road competition, in that they are obliged to maintain a full service however far each train may be from carrying a sufficiently large load to be economic.

The last table shows the freight tonnage under three principal heads, together with the proportion which revenue under each head forms of the total freight revenue:—

FREIGHT TRAFFIC (LIVESTOCK EXCLUDED). (000's omitted.)						
	Merchandise.†		Coal, Coke and Patent Fuel.		Other Minerals and Merchandise.‡	
	1929.	1930.	1929.	1930.	1929.	1930.

* Originating on the company's lines. † Classes 7-21. ‡ Classes 1-6.

"Merchandise," which includes the more highly-rated classes of goods, accounts for a lower proportion of the receipts of the two larger groups, and a slightly higher proportion of those of the others, but in all cases the absolute amount, as well as the tonnage, was less than in 1929. That the decline is not greater is due to the fact that the depression in the textile areas and the effect on the lighter merchandise of road competition were already being painfully felt in 1929. All except the Southern owe a larger proportion of their receipts to coal. Tonnage under each heading declined in all groups, but the Southern enjoyed a small increase in the revenue from "other minerals and merchandise."

The fortunes of the various ancillary undertakings have varied very much from group to group. On road transport the London Midland and Scottish and the London and North Eastern have turned their respective losses for

1929 of £5,992 and £17,230 into profits for 1930 of £8,342 and £3,078 respectively. The Southern experienced a smaller profit under this head, and the Great Western a smaller loss than in 1929. Revenue from steamboats declined except in the case of the Great Western, where the net loss was smaller. The London Midland and Scottish reduced the loss on its canals, but the canals of all the other groups showed a drop in net revenue. The two smaller groups received a smaller net revenue from docks, while the London and North Eastern enjoyed a rise in revenue from this source, and the London Midland and Scottish experienced a smaller deficit than in 1929. Hotels, restaurants and dining cars had a worse year except on the Southern, where the loss on them was reduced. Collection and delivery of parcels was a source of net loss in every instance, but, except on the Southern, where it made a profit in 1929, the deficit was reduced in 1930. On balance, the three groups which derived a net revenue from their ancillary undertakings in 1929 received a smaller income from this source in 1930, but the London Midland and Scottish succeeded in reducing the net loss from these businesses from £287,000 in 1929 to £191,000 in 1930.

Happily the most gloomy chapter of the story is now told. The expenditure of the railways in 1930 reflects economies in working consequent upon the measures of rationalisation which have been proceeding during the last few years. With this side of the account we hope to deal next week.

THE PRUDENTIAL.

THE total assets of the Prudential now amount to £241 millions, the operations of the year 1930 having contributed an increase in the total of nearly £12½ millions. Of this total, £232 millions belong to the life branch (ordinary and industrial combined), £3½ millions to the fire, accident and marine branch, and the balance of £5½ millions is represented by various special funds. Exactly how strong the company really is is known only to the directors and management, but the aggregate of the disclosed reserves and their variety form an impressive total. A study of the balance sheet has enabled the following compilation to be made:—

Ordinary life branch carry forward	£ 210,912
Industrial life branch carry forward	288,923
Life branch—Investment reserve funds	10,250,000
General branch—Excess over usual 40 per cent. premium income reserve—fire and accident	617,262
Excess of marine fund over 2 years' premium income	230,722
Profit and loss account	123,011
Common contingency fund	1,914,179
Contingency fund	350,000
Special contingency fund	2,414,699
Share premium account	945,574
Total	17,345,282

But this is not all; for a note to the balance sheet states that "the assets set forth therein are, in the aggregate, in excess of the value stated." The amount of reserves concealed beneath this bland statement cannot be estimated; but, in spite of the blizzard of depreciation, they are probably even yet considerable.

Since the company is the largest corporate investor in this country it is always of interest to examine the distribution of its assets. The investments are chosen with a catholic taste, every item in the statutory classification of assets being represented by a substantial figure. The broad results may be indicated under the following groups:—

Mortgages and loans	£ 35,442,000
Loans on the company's own policies	7,298,000
Stock exchange securities:—	
British Government	58,722,000
British municipalities	5,883,000
Indian and Dominion Government and municipalities	11,882,000
Foreign Government and municipalities	16,277,000
Debentures	37,310,000
Preference stocks and shares	19,630,000
Ordinary stocks and shares	29,956,000
Property investments	13,148,000
Life interest and reversions	273,000
Miscellaneous	5,129,000
Total	240,950,000

Relatively to other life assurance companies the Prudential has a more considerable stake in Stock Exchange investments, which comprise 75 per cent. of the total. The large holding of British Government securities may be noted, and also, at the other end of the scale, the substantial interests in ordinary shares. One measure of the success with which these huge totals are managed is the fact that the interest earnings last year represented no less than £5 5s. 8d. per cent. net on the combined funds.

If the static position is a study in strength and stability, the dynamic position, as reflected in the earnings, is even more striking. For, briefly stated, the total profits earned in 1930 were £9,683,064. The life policyholders take by far the largest portion, £6,279,605; bonuses to the outside staff absorb £642,209; reserves benefit by £1,569,583; while the shareholders receive the balance of £1,191,667. The shareholders' portion is approximately one-eighth only of the total profits, though (by reason of the small capital) this suffices for a dividend on the "A" shares at the handsome rate of 9½ per cent., free of income tax.

The life branch completely dwarfs the activities of the general branch, and is responsible for about 98 per cent. of the total profits. The steady growth in the life branch profits is now less remarkable than their absolute amount, as may be judged in the following table:—

Year.	Ordinary Life Branch. Fund. £	Profits. £	Industrial Life Branch. Fund. £	Profits. £
1926	81,454,000	2,742,063	102,129,000	4,624,586
1927	84,040,000	2,868,073	108,216,000	5,203,614
1928	87,105,000	2,884,124	113,108,000	5,444,404
1929	90,105,000	3,203,959	117,481,000	5,739,419
1930	93,928,000	3,355,794	124,057,000	6,156,705

It is clear from these figures that the industrial branch has been growing at a faster rate than the ordinary branch, not only quantitatively, but also in profit-earning capacity. Bearing in mind the growth in the national social services and the deepening of the trade depression, the rate of absolute growth is interesting and significant. In 1930 the industrial branch issued over 2½ million new policies, compared with 2,365,000 in 1929, and there are now in force over 26 million policies subject to premiums amounting to £19 millions per annum. Approximately one out of every two inhabitants of the United Kingdom has a Prudential policy. The growth in the profits earned has been assisted by a continually increasing rate of interest, and also by a spectacular reduction in the expense ratio. The following table shows the improvement in both branches:—

Year.	Ordinary Branch.		Industrial Branch.	
	Net Rate of Interest.	Expense Ratio.	Net Rate of Interest.	Expense Ratio.
1920	4 s. 2	12.9	4 s. 0	40.5
1927	4 14 8	11.2	5 9 0	25.5
1928	4 16 6	10.8	5 7 7	24.9
1929	4 19 7	10.4	5 9 11	24.8
1930	4 19 10	11.9	5 9 10	24.7

As is now well known, the savings in the industrial branch have been made possible by a reorganisation of the collection of premiums on the basis of allotting definite areas to each agent and changing over remuneration from a commission to a salary system. The effect of the reduction in the expense ratio from 40 per cent. to 25 per cent. is such that the annual saving on the present premium income is approximately £2,700,000. The corresponding benefit to the present fund from the rise in interest earnings amounts to nearly £1½ millions per annum.

The rates of reversionary bonus to the ordinary branch policyholders are now 52s. per cent. on the sum assured for whole-life assurances, and 46s. per cent. for endowment assurances, compared with 50s. per cent. and 46s. per cent. respectively a year ago. The industrial branch has now for many years enjoyed the benefit of a profit-sharing scheme voluntarily conceded by the company. In the case of policies effected on or after January 1, 1923, an ordinary reversionary bonus is granted, and for 1930 the rate is the same as before, namely, 34s. per cent. on the sum assured. For pre-1923 policies the rate varies with duration in force, and the bonus is payable only in the event of a claim arising within a period of years, now increased from fifteen years to sixteen years.

The company's general branch is a post-war development, and recent results, owing to a disastrous marine experience, have been none too happy. The marine account, however, has now been entirely reorganised, fresh underwriting arrangements have been completed, and the account has been greatly curtailed in size. In pursuance of this policy the premiums in 1930 were halved as compared with 1929, and the fund now amounts to four years' premiums. In the other departments a very satisfactory fire account has turned a loss of £7,000 in 1929 into a profit of £60,000 in 1930, but the miscellaneous department has experienced a loss of £5,500, compared with a profit of £16,700. The combined results of the general branch, and the effect of the marine account on the whole, may be seen below:—

	1926.	1927.	1928.	1929.	1930.
Net trading surplus	— 120,359	— 546,117	— 61,665	— 102,970	— 64,296
Marine	95,928	127,570	94,802	134,124	124,456
Fire, accident, &c.	— 24,431	— 418,447	33,137	31,154	60,160
Net interest earnings	64,967	72,251	93,320	112,913	110,405
Total	40,536	— 346,196	126,457	144,067	170,565

A dividend was declared in the general branch (on the "B" shares) for the first time in 1928, when 25 per cent., free of tax, was paid at a cost of £66,667. This rate was maintained in 1929, and is now repeated for 1930. Assuming that the marine account can now take care of itself, it is clear that interest earnings would even now permit a substantially increased rate of dividend, and recognition of this fact, combined with the great potential future of this branch, presumably accounts for the low yield on the shares, which, at 35s., return only £3½ per cent. gross.

BRÜNING OR HITLER?

(BY A CORRESPONDENT IN GERMANY.)

MEASURED in terms of sheer pessimism, December, 1930, was probably the blackest month in German history since 1923. Some time in January, however, a change occurred, and, during the last month or so, it has been possible to observe a growing feeling that the worst is over—at least for the time being. It is as yet impossible to speak of a revival of optimism, although a marked rise on the Stock Exchange from the lowest levels has taken place. The difficulties to be faced by those responsible for the Government and the business of the country are immense and perhaps are still not fully realised. The only really concrete grounds for optimism lie, economically, in the development of the balance of trade, and, politically, in the temporary stabilisation of the parliamentary basis of the present Government.

The improvement thus depends on intangible rather than on tangible considerations. Most important of all is undoubtedly the growing authority of the Chancellor. Dr. Brüning is, to say the least, a very remarkable man. He has undoubtedly a touch of the fanatic in the best sense of being a convinced believer in his mission. A bachelor and a Catholic, he lives in the most simple, almost monastic, manner, concentrating exclusively on his work. Although no public announcement has ever been made, since Dr. Brüning is the last man to seek self-advertisement, it is rumoured that he returns a large proportion of his scanty emoluments to the State. With this personal character he combines both unquestionable firmness and tactical skill. When he assumed office in the spring of 1930 his Government was insecurely based upon a parliamentary minority, and the support even of that minority was not to be depended upon. From the beginning he had to reckon with the bitter opposition of the extreme parties; he has been attacked by the right wing of his supporters for his supposed willingness to compound with the Social-Democrats; the left wing of his supporters, through the mouth of the powerful Democratic Press, raised a violent outcry against his utilisation of the power to make decrees under Article 48 of the Constitution; and he was blamed almost as severely by the same quarters for his unwillingness to form a Grand Coalition with the Social-Democrats after the September elections. (These elections, incidentally, were almost universally hailed as a Government defeat.) Throughout all this Brüning went quietly on with

his work, paying as little attention to these attacks as he did to the abuse heaped upon him by the extreme parties. From the beginning, he has taken the line that there is no alternative to his programme, so that if the Reichstag will not have it, or at least a programme of equally drastic reform, it must be put through by other means—meaning President von Hindenburg and Article 48.

The results of this firm stand are now at last beginning to show themselves. The country is gradually waking up to the fact that, for the first time since Dr. Luther stabilised the mark, it is really being led. Not only is the body of moderate opinion which is the direct support of the Government rallying more firmly around it, but the Socialists, in spite of the fact that the policy of the Government is diametrically opposed to what they have been preaching for years, seems likely to give active support in putting the Budget through. It should be realised that it is by no means easy for parties dependent upon popular votes to support a Government programme which, if proposed for England, would probably frighten the hardest Conservative. Although this is not stated in so many words, the policy undoubtedly implies a considerable reduction of the general standard of living. Wages and salaries are to be reduced all round, and, although the Government has made some attempt to bring down the cost of living in order to sugar the pill for the masses, the policy of extreme agricultural protection seems likely to prevent the workers receiving anything like full compensation for their cuts. The leaders of business in Germany frankly declare that, in their opinion, a cut in real wages sufficient to restore an adequate margin to the profits of enterprise is the only cure for unemployment. In this connection a most significant suggestion was lately advanced, according to which the employers should bind themselves, against a certain percentage wage reduction, to re-engage the same percentage of unemployed and to guarantee the whole staff a certain number of working hours per week. This suggestion seems unlikely to be accepted in this precise form, but it is felt that there is, nevertheless, a fair chance of putting through some such scheme and thus effecting an appreciable reduction of unemployment. Wages, it should be remembered, have already been reduced in many leading trades, while the reduction in salaries has been practically universal. It is impossible to deny that the German people, on the whole, are taking their medicine thoroughly.

The extreme Right, Nationalists and National Socialists, have shown their displeasure at the consolidation of the Government's position by a general exodus from the Reichstag. The Nationalists were cautious enough to keep a back-door entrance open by emphasising the temporary character of this move, but the Hitlerites have crossed the moat and burned their boats. Unless they can, by widespread agitation in the provinces, produce a big swing of opinion in their favour, they seem likely to look rather foolish, whether they stay out of the Reichstag indefinitely or not. Precisely, this swing of opinion, however, does not seem likely to materialise at present; indeed, the trend seems rather to be the other way. The National Socialist movement gained its strength, not only from economic distress and discontent, but at least in equal measure from general dissatisfaction at the weak and often corrupt regime of party bargaining from which Germany has suffered during the past few years. Dr. Brüning has always maintained that what the Germans wanted was a strong Government, and, if the doubtful voters who contributed a very considerable proportion of the six million odd Nazi votes come to realise that Hitler is less likely to give it them than Brüning, they may well transfer their allegiance. Most competent observers, both in Berlin and in the provinces, agree that since January the Nazis have been on the defensive, whereas until then they were definitely attacking with some success. The Socialist Republican Reichsbanner organisation has been exceedingly active lately, and Nazis with whom one engages in conversation tend to say less about their own activities than about the "brutal" attacks to which they are subjected by their opponents. A very competent British observer put the situation in a nutshell by saying that the September wave of Hitlerism is subsiding, but that other waves might follow, larger or smaller according to circumstances.

If the Brüning Government's policy meets with some success, particularly by reducing unemployment, the situation may show very considerable improvement both politically and economically. A general revival of confidence would undoubtedly produce a fundamental change in the financial position of the country. In common with many other debtor nations, Germany is suffering from an intense shortage of capital brought about by withdrawals of funds and sales of investments held abroad, as well as by the difficulty of renewing old and obtaining fresh credits. Unlike many other debtor countries, however, the shortage is aggravated by a serious flight of domestic capital. As a result, money is tight; first-class bonds yield 8-10 per cent.; and, as far as the banking situation is concerned, the recent statement of the chairman of a British bank, that no sound borrower in England need hold up his enterprise for lack of the necessary credit, would make any German banker's or industrialist's mouth water. There is thus an immense scope for improvement, and any appreciable flow of capital into Germany could scarcely fail to have important repercussions on the general business situation.

It is thus by no means out of the question that the current year will see a substantial recovery. How far that recovery can proceed is a matter of conjecture, and must depend largely on the political developments with which 1932 is bound to be crowded. If the Germans decide to make a move on Reparations, that year will probably see the bulk of the relevant discussions; the results of the Disarmament Conference will be vital; and in domestic politics there will be elections both for the Presidency and for the Prussian Diet. The results of the latter can scarcely fail to depend on the former, especially as regards disarmament. The issue should be frankly faced. Although the German Right are now showing distinct signs of developing a more reasonable policy under the strong light of publicity, a new nationalist wave, brought about by the humiliation of a courageous government on a question on which every German is convinced that his country is in the right, would set back the clock many years. If Europe prefers Hindenburg and Brüning to Hitler and Hugenberg, it will have to act accordingly.

Notes of the Week.

The Indian Truce.—The agreement reached late on Tuesday night between Lord Irwin and Mr Gandhi, and initialled on Thursday with the approval of the Viceroy's Council on the one hand, and the Working Committee of the Congress Party on the other, is one of the most important landmarks in the history not only of India, but of the Empire. Even if the co-operation of the Congress Party had been withheld, the work of formulating a new Constitution for India on the lines discussed at the Round Table Conference must have gone on; for when great changes of the kind now contemplated have been set in motion there can be no turning back. Mr Churchill's advice to put back the clock is not a practical alternative for this country, for it would lead, as *The Times* observes, to nothing less than the loss of India. But there is a vast difference between the inauguration of a new Constitution in co-operation with all parties in India and an attempt to inaugurate it with the support of a portion only of Indian public opinion. Clearly, if the most active, and even fanatical, of Indian parties, which has unquestionably captured the imagination of immense numbers of Indian men and women, had been left outside in an attitude of hostility, the task of those responsible for directing the new regime would have been one of the utmost difficulty. The existence of Nationalist minorities when South Africa and Ireland were launched upon their career of self-government called for high qualities of courage and wise statesmanship on the part of those who were responsible for launching those countries on their new career. But the difficulties in India would be far greater still. In both those countries there were large loyal and homogeneous populations. In India the white population is a tiny fraction of the whole; a federal Con-

stitution for India is an experiment in government on a scale which has never yet been attempted; and if the forces of Nationalism in India were organised to obstruct these efforts, they would be able to make immense play by appealing to the sentiment of the East against what would be represented as the domination of Western ideas, if not of British suzerainty. We can, therefore, well understand and sympathise with the great efforts that have been made by Sir Tej Bahadur Sapru, Mr Jayakar, Mr Sastri and others of the Round Table delegates to procure the co-operation of Mr Gandhi and his Congress friends in this tremendous new experiment. From the narrower economic point of view of this country, too, there is a vast difference between launching an agreed Constitution and introducing one into a divided and partly hostile country. Lord Rothermere, apparently with a complete lack of understanding of the great forces that are stirring in the East, talks of the policy of a firm hand and of forcing India to take British goods. Apart altogether from the sheer impossibility of such a programme—which incidentally would strange the public opinion not only of Japan, but of America and other countries—the recent figures of our trade have shown the great power of the weapon of the boycott. In spite of present Lancashire doubts regarding the immediate outlook, there can be no question but that in the long run it will be to the advantage of the whole of our Indian trade to deal with a friendly instead of with a hostile India. The question has been raised as to the effect upon India's revenue of the agreement regarding salt, which permits coast-dwellers to make salt for domestic purposes from sea water; but many of those who have studied the question have long held that this concession would not be unreasonable, and we may be sure that Sir George Schluter, who is well aware of the present and prospective importance of the Salt Tax, would not have made this concession if it would have serious budgetary repercussions. From whatever angle this agreement is looked at, it is one on which both Lord Irwin and Mr Gandhi are most sincerely to be congratulated; for it opens a brighter prospect of a satisfactory settlement of the Indian problem than has seemed possible for a long time past. If it leads to this happy result, it is one of the most important steps yet taken towards establishing the relations between the Western world and Asia on a harmonious basis.

The Conservative Leadership.—South Paddington—East Islington—St. George's, Westminster: the Press Lords' by-election Fun Fair has now really "reached the West End" in the stronghold of Metropolitan Conservatism. Last Friday Sir Ernest Petter, having announced that any official Conservative candidate for this constituency ought to be opposed, saved the generalissimo commanding the Crusade and United Empire Parties the trouble of searching for a protagonist (after all, the Navy and the Army Retired List is not inexhaustible) by consenting to stand himself. His decision was followed by his unqualified adoption as *protégé* of the anti-Baldwin Press, with the further inconvenient result for Conservative headquarters that Colonel Moore-Brabazon, one of the short list of prospective official candidates, immediately withdrew on the ground that, since Mr Baldwin's leadership was clearly to become the chief issue, he could not "allow himself to be manoeuvred into pleading a cause he had not wholly at heart." So far no alternative official candidate has been definitely adopted, although at the time of going to press the name of Mr Duff Cooper is freely mentioned; and the Conservative Whips are apparently delaying their application for a writ. The situation, for Mr Baldwin, is becoming almost intolerable, and the question of leadership of the Conservative Party obviously cannot long be left where it is.

A Liberal-Unionist Party?—With conflicting cross-currents and antagonisms more visible than clear-cut policy in all the three political parties, it is natural that the possibility of new party orientations and groupings should be freely explored. A common line of exploration leads to the territory ranging from the extreme

right wing of the Labour Party, through the Liberal Party to the progressive wing of the Conservative Party, and it was this *terrain* that was evidently in the mind of Sir Edward Grigg, when, in a speech at the Queen's Hall on Tuesday, he pleaded for the revival of the Liberal-Unionist Party. Apart from certain formidable difficulties of a personal nature, the main obstacle to this form of political coalition is, of course, the cleavage of opinion on the fiscal issue, and how great is that obstacle was once more illustrated by Sir Edward's speech, in which the demand for Liberal-Conservative co-operation was coupled with a demand for a full programme of protection and preference. Sir Edward, ex-Liberal M.P. himself, can hardly hope that co-operation can be achieved without give and take on both sides; but on the basis of his speech it would be all "take" on the Conservative side in the fiscal sphere. Of far greater significance was a speech delivered on the same day in the Free Trade Hall at Manchester by Sir John Simon. By his eminence as a lawyer, by his outstanding public services, especially as chairman of the Indian Commission, and by his detached position on the right wing of the Liberal Party, Sir John has become the focal centre of many political eyes, both at Westminster and in the country; and when he, with a long record behind him as a protagonist of orthodox Free Trade, moves so far across the fiscal bridge as to advocate (by implication) a tariff for revenue, the gesture becomes one of definite political significance and importance. Having stressed the need for balancing the budget and the undesirability of higher direct taxation, Sir John remarked: "I feel bound to invite my fellow-countrymen—those who, like myself, have inherited Free Trade traditions among them—to ponder on the fiscal methods we may be bound to adopt." The words in their context can only be interpreted as an expression of willingness to consider the imposition of a tariff for revenue purposes. But is Sir John ready for an even further retreat from the Free Trade position? The question is suggested by the final paragraph of his speech, in which he says: "The despondency which pervades so many British trades suggests that we have to judge fiscal remedies not only by their economic consequences, but by their psychological effects." We invite Sir John to elaborate and explain. Can it be that he, a past-master of logical thought and argument, would have us throw logical economic argument to the winds and try vaguely to cater for the requirements of a false psychology? To put it bluntly, does Sir John want Britain to try, as America tried and failed so lamentably by the Smoot-Hawley tariff in 1929, to create an artificial trade stimulus by injecting into our economic system a strong dose of the virus of protection? It is important that Sir John should answer both these questions clearly, and we sincerely hope that both will be answered in the negative.

Monsieur Briand on his Foreign Policy.—The debate in the French Chamber, last Tuesday, on the estimates for the Ministry of Foreign Affairs, was devoted almost exclusively to Franco-German relations; and although Monsieur Briand made a brief (and necessarily non-committal) statement on the naval agreement in the course of the proceedings, Franco-German relations were the main subject of his principal speech. Monsieur Briand had to meet an elaborate attack from Monsieur Franklin-Bouillon, who inveighed against what he represented as being the policy of Germany, and argued that, in the circumstances which he assumed to exist, the notion of a Franco-German rapprochement was chimerical. He asked Monsieur Briand, among other things, whether, in the naval negotiations, he had obtained an undertaking from Italy that she would cease to support Germany in her demand for the revision of the peace treaties. Monsieur Briand began with the common-sense proposition that "it was necessary to prevent nations from everlastingly attacking one another, and to this end the Franco-German problem must be solved." He took the line that the two countries could work together in a friendly spirit even if, on certain important matters, they found themselves unable to accept one another's desiderata. Through co-operation, even under difficult conditions, progress could be made—and the speaker skill-

fully illustrated his point by reminding his audience of his own achievements, ending up with the Briand-Kellogg Pact and the Briand Plan for "closer union" in Europe. His skill was, perhaps, greatest when he was talking about the two critical questions of disarmament and treaty revision; for he pointed out that the French Government had resisted German pressure thus far, without committing himself to any indication of what French policy would be in the future, *e.g.*, at the Disarmament Conference. It was natural that this debate should turn upon Franco-German relations, considering the militant temper which has been displayed in Germany since the successes of the National Socialists and the Communists at the General Election for the Reichstag last September. It is fortunate that the debate did not take place before the League Council meeting in January and the discomfiture of the "Nazis" in the Reichstag last month. These events have cleared the air; and at the moment it looks as though Herr Brüning's Government will hold its own until the return of spring comes to its aid by diminishing the terrible figures of German unemployment. So long as the Brüning Government remains in office, we may be reasonably sure that the Stresemann "policy of fulfilment" will be maintained. But Dr. Brüning cannot fight this battle without support. The support which he most needs is some evidence that the Disarmament Conference will not be made ineffective. In this matter, French policy during the next twelve months may be decisive, for good or evil.

Party, People and Dictator in China.—The direction in which the political tide in China is flowing is indicated by the resignation, this week, of Mr Hu Han-min from his position as State Councillor and President of the Legislative Board at Nanking. Mr Hu Han-min is one of the leading politicians on the right wing of the Kuomintang Party, and at the same time one of the leading champions, in China, of the system of government by a single party dictatorship. He has resigned because the Standing Committee of the Central Executive of the Kuomintang Party decided, last Monday, to draft a provisional constitution for China to be submitted to the National Convention which is to meet in May. This decision, like the previous decision in virtue of which the National Convention is to be summoned, represents a victory for the views of President Chiang Kai-shek and "the Young Marshal" Chang Hsueh-liang of Manchuria, and Mr T. V. Soong, the Nanking Government's Minister of Finance. Mr Hu Han-min's resignation means that these opposing views have definitely prevailed, at any rate, for the time. The victors would say that the issue is one between party dictatorship and parliamentary democracy. Mr Hu Han-min would reply that it is really an issue between two forms of dictatorship: the rule of a Party and the rule of a clique of War-Lords and their civilian satellites. The Kuomintang Party, he would say, represents the politically conscious and experienced and mature element in the Chinese nation at the present stage of Chinese political development; and a dictatorship by an organisation representing this element is the nearest approach that the Chinese people can make towards self-government for the moment. In Dr. Sun Yat-sen's apocalyptic vision of the coming of the Chinese political millennium, this is "the period of tutelage"; and if this period is prematurely terminated, the effect will be, not to hasten on the beginning of the millennial period of

parliamentary democratic self-government, but to throw China back into the lately transcended "period of militarism" by replacing the dictatorship of the Party by a new dictatorship of War-Lords. This is Mr Hu Han-min's case—to which his opponents will retort, first, that the Kuomintang is by no means fully representative of political China to-day, and, second, that it has already gravely abused its powers. Mr T. V. Soong will testify that the mercantile and manufacturing class, which every efficient Finance Minister wishes to have at his back in order to govern the finances of his country with the consent of the governed, is at present virtually excluded from political power. And there will be testimony from all over China that, although Mr Hu Han-min at Nanking may be a "sea-green incorruptible" of as pure a dye as Robespierre, the local representatives of the Party in the country districts are often oppressors of the poor. These are the arguments, and only time will show which view is right. Much turns upon the National Convention which is to meet in May.

Navy Estimates.—The Navy Estimates for 1931-32, published this week, show at £51,605,000 a reduction, when account is taken of the supplementary estimate of last July, of £342,000 as compared with the estimates for 1930-31. (Including a further supplementary estimate for 1930-31 now presented to the tune of £495,000, the decrease is £837,000.) In the statement by the First Lord of the Admiralty, which accompanies the estimates, it is pointed out that the gross total of the estimates for the coming year is £1,818,779 less than that of 1930 (again including the July supplementary), owing to a reduction of £1,476,579 in the Appropriations-in-Aid. This decline in the Appropriations is largely due to the completion in the current year of the instalments made by the Federated Malay States towards the cost of the Singapore Base, a heavy fall in the earnings of the Admiralty Oversea Oilers resulting from the depression in the shipping freight market, smaller anticipated payments by the Dominion Governments, and other similar causes. In the following table we show the expenditure and personnel of the naval service in recent years as compared with pre-war:—

Year.	Total Expenditure.		Personnel.
	Thous. £		
1913-14	48,833		142,960
1924-25	55,694		99,453
1925-26	60,005		100,284
1926-27	57,143		100,791
1927-28	58,123		101,916
1928-29	57,139		100,680
1929-30	55,988		99,300
1930-31*	52,442†		97,050 (a)
1931-32*	51,605		93,650 (a)

* Estimate.

(a) Maximum in year.

† Including supplementary estimates amounting to £703,200.

The building programme includes provision for commencing two six-inch gun cruisers, one cruiser of 5,000 tons, nine destroyers, four sloops, three submarines and several minor vessels. Of the £51½ millions of estimated expenditure in the coming financial year, £5,294,000 represents provision for new construction, which compares with £5,534,000 in 1930-31, and an average of rather more than £9 millions for the previous four years. Taking the average total expenditure for 1926-27 to 1929-30 as £57 millions, it will be noted that after allowing for a reduction of £4 millions on account of new construction, a net saving of only one million has been effected on other expenditure, as compared with that in the earlier years. In view of the fall in the cost of living and in commodity prices generally during the past two years, and the vital need for economy in all Government expenditure, the taxpayer will be inclined to question forcibly whether this relatively small decrease in operative and administrative costs represents the maximum reduction that could have been effected. It is almost impossible for the layman, as it is for the average Member of Parliament, to point to any particular detail in the individual Votes as indicative of extravagance, but we find it hard not to believe that the Retrenchment Committee which Parliament has appointed can discover, if it tackles the job in earnest, substantial means of saving without necessarily impinging on questions of high naval policy.

The Revenue.—At this season of the year the forecasting of the position of the revenue returns on March 31st becomes an intriguing, if not very profitable, pastime. On the income side of the account, the inflow of tax receipts has been going rather better for Mr Snowden than might have been expected two months ago. Thanks mainly, of course, to the enhancements of direct taxes which take effect this quarter, tax revenue on February 28th shows an increase of £11.6 millions over last year's receipts, against an increase of only £1.6 millions realised up to December 31st, and an expansion of £39.8 millions estimated for the whole financial year. Whether or not it be as a result of a "squeeze" in collection which may leave next year with an abnormally low proportion of "carried-over arrears," income tax, surtax and estate duties look like living up very nearly at least to the Chancellor's expectation of an aggregate £34 millions increase. On the other hand, the Customs position has deteriorated since December 31st, and receipts from Excise and Stamps are heavily down. In consequence of loss of income from these sources Mr Snowden will probably have to face a total revenue deficiency on March 31st of not less than £15 millions. The expenditure position is always more difficult to forecast, and comparisons with a year ago are complicated on this occasion by the fact that last year's return included March 1st, on which day there are substantial disbursements of interest. Making allowance for this factor, we are inclined to suggest very tentatively that when the balance is struck on March 31st revenue will be insufficient by at least £25 millions to meet outgoings, including the full amount of £360 millions provided in the last Budget for debt interest and sinking fund. If, however, savings on interest in excess of Budget estimates are not devoted to redemption of debt, but are regarded as some offset to the increased charge made on the revenue in respect of unemployment, the deficit can perhaps be made to appear smaller, and Mr Snowden may be satisfied to take a lower figure than £25 millions as the deficit to be carried forward to his next Budget, along with the balance of £9½ millions from last year's deficit outstanding.

Our Index Number.—For the first time since July, 1929, our index number of commodity prices at the end of last month shows an upward movement, and, though the percentage increase is only one-third of 1 per cent., it is at least satisfactory that the prolonged downward sweep appears momentarily to have been arrested. As compared with a year ago, the fall in the average level of prices as measured by our index number amounts to 21 per cent.:—

AVERAGE, 1927 = 100.

	Feb., 1930.	Nov., 1930.	Dec., 1930.	Jan., 1931.	Feb., 1931.
Cereals and meat	85.4	73.2	70.0	67.4	66.4
Other foods	85.0	70.2	71.0	69.5	68.0
Textiles	74.7	55.1	51.4	49.2	50.6
Minerals	90.5	79.0	78.0	75.3	76.9
Miscellaneous	87.0	77.8	75.2	72.6	72.7
Complete Index	84.2	70.9	68.7	66.3	66.5

A further encouraging feature is that whereas the movement of food prices was irregular, resulting on balance in a further appreciable decline, a considerable number of important raw materials moved upwards, and both the textiles and minerals groups showed a rise of over 2 per cent. Among cereals and meat there was a sharp increase in the price of maize; and imported wheat, flour and Argentine beef were also distinctly dearer. On the other hand, there were substantial falls in the price of both English and imported mutton, bacon, rice and English wheat. The fall of 2.2 per cent. in the other foods group reflects a further cheapening of cocoa, and, notably, a marked recession in tea prices. In the textiles group both cotton and wool moved upwards, whereas the trend of other textile materials, particularly hemp, was downwards. Iron and steel and coal prices showed no change; non-ferrous metals were all dearer. In the miscellaneous section a rise in the

price of linseed oil was offset by declines in the case of tallow, rubber and creosote.

If 1924 be taken as 100, the current figure works out at 57.5, as compared with 57.3 at the end of January and 72.8 a year ago. In a final table we show our index number recalculated, in a manner explained in last week's Monthly Trade Supplement, as a percentage of the average for 1913.

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	159.9	169.9	210.6	145.2	131.5	159.3
1928	145.0	149.4	161.7	111.9	114.3	135.1
1929	115.6	136.8	141.9	116.2	112.7	117.2
1930	113.4	122.9	99.1	101.6	101.5	105.8
End Feb., 1931	119.5	122.2	115.1	110.1	108.4	115.9
Jan., 1931	84.3	110.8	75.8	91.5	90.4	91.3
Feb., 1931	92.9	108.4	78.0	95.5	90.5	91.6

It will be observed that even wholesale foodstuffs, taking the average of the two first groups in the index, are now approximately at their pre-war level.

The Australian Inflation Proposals.—Although the Premiers' Conference was equally divided on the question, the Federal Government is apparently going ahead with its proposals to relieve the situation by creating an issue of fiduciary currency of a maximum amount of £18,000,000. As the most recent return of the Commonwealth Bank records a note issue of £45.6 millions, against gold holdings of £15.6 millions and securities and other assets of £30.0 millions, it is not surprising that Mr Tranter, the chairman of the Associated Banks, has roundly condemned this scheme, and has once more declared that the country must make a determined effort to reduce expenditure and balance the Budget. Although the Government seems determined to press forward its inflation measures, the outcome is extremely uncertain, for there is no doubt that they will be rejected by the Senate, in which case a dissolution of both Houses and a general election seem inevitable. If that happens, a Labour defeat is quite on the cards, and this would mean so radical a change in the whole position as to nullify the value of any forecasts at the present moment. Taking the short view, in some respects the situation has changed for the better, for the Premiers' Conference has rejected Mr Lang's repudiation proposals, and has refused to give his administration in New South Wales the further borrowing powers it sought. Furthermore, Mr Scullin has successfully reconstructed his Government, with the ex-

clusion of the three extremist Ministers, and his action has been endorsed by the Labour caucus. On the other hand, Mr Theodore has now committed himself to the somewhat hopeless attempt at reducing the yield on Government securities to 5 per cent. by means of purchases in the market, and it is difficult to see how he can hope to succeed so long as the financial deadlock prevails. Still, all these events are of comparatively minor importance, for if the Government persists in their proposals, it is clear that their inevitable rejection by the Senate will very quickly bring matters to a head.

The International Mortgage Bank.—The recommendation of the League Financial Committee that an international institution should be formed to lend money on mortgage to agricultural interests through the medium of existing national and local channels has been quickly followed by definite action. On March 3rd a new bank was founded in Basle under the title of the International Mortgage Bank. The share capital is to be Frs. 25,000,000 Swiss, of which Frs. 5,000,000 will be paid up, and further capital will be raised in the form of debentures. The President is Dr. Rudolf Miescher, of Basle, and the Vice-Presidents Dr. Arnaud Dreyfus, of the Swiss Bank Corporation, and Dr. Adolf Jöhr, of the Credit Suisse. The objects of the bank are stated to be the granting of credits in Europe by taking over mortgage bonds and debentures from the leading mortgage banks, and possibly the direct granting of loans on mortgage. The bank has a lengthy and influential list of sponsors drawn from Zurich, London, Paris, Berlin, Stockholm and New York, whose calibre is revealed by the fact that they include the Swiss Bank Corporation, Messrs Helbert Wagg, Messrs Higginson and Co., Lazard Frères, the Skandinaviska Credit A/B, Kreuger and Toll, the Chase National Bank, and the German "D" banks. As to the merits of the scheme, we recently discussed in some detail the Report of the Finance Committee of the League of Nations on the general question of agricultural credits, and observed that their ampler provision would be most useful if they were accompanied by measures for stimulating greater diversity of agricultural production. But, apart from the requirements of agriculture, there is a crying need for the diversion of a part of the existing plethora of short money into medium and long-term channels. To this end, and to the more even distribution of the available capital supplies of Europe, the new bank should make a substantial contribution, and we welcome its establishment as a useful addition to the mechanism of co-operative international finance.

Lancashire and India.—Our Manchester correspondent writes:—Better prospects for trade with India, as a result of the Irwin-Gandhi agreement have been considerably offset by the new Indian Budget, which enacts that instead of 15 per cent. on cotton goods the new Customs duty will be 20 per cent. Further information with regard to this matter is required. It will be remembered that a year ago it was ultimately arranged that the duty on plain grey cloth, which was then 11 per cent., should be raised to 15 per cent., or 3½ annas per lb., whichever was the higher. Owing to the low prices for cotton goods it has invariably been the case that 3½ annas per lb. has been operative and manufacturers are anxious to know whether the additional 5 per cent. is to be added to the actual amount of tax previously paid in practice. Another point of interest is that Sir George Schuster, the Finance Minister, in introducing the Budget, made no reference to the preference of 5 per cent. for British manufacturers. The situation was discussed at several meetings in Manchester on Tuesday last. The members of the India section of the Manchester Chamber of Commerce took a serious view of the position and it was decided to ask the Joint Committee of Cotton Trade Organisations to give early consideration to the question. Meetings have also been held this week of the Committees of the Federation of Master Cotton Spinners' Associations and the Cotton Spinners' and Manufacturers' Association. It is possible that joint action will be taken by the several Associations in Lancashire and that ultimately a request will be made

for the Secretary of State for India to receive a deputation. Owing to the boycott of foreign goods it has been very difficult to estimate the effect of the increase in the duties of a year ago, but it is now recognised that a tax of 20 per cent. will make it practically impossible for Lancashire manufacturers to regain the trade lost during the last few years in coarse and medium goods.

Retail Distributors.—This association may congratulate itself upon a very active year's work in 1930 as revealed by its annual report. In addition to the launching, in co-operation with the Bank of England, of a monthly index of the volume of retail trade, upon which comment was made in the *Economist* of September 27th, the association embarked upon preparations for the construction of a retail price index. Such an index would be of inestimable value, and the association hopes to be able, with the aid of the Bank of England, to begin its publication during the current year. Another activity of public importance was an investigation into the proportion borne by goods of foreign manufacture to total stocks of retail merchandise, as a result of which the association estimates the proportion at 10.15 per cent. Other achievements of the year were the killing of a scheme for selling goods to the public at wholesale prices in order that the profits might be devoted to charity; the bringing of pressure to bear on manufacturers of proprietary merchandise to boycott coupon schemes; and the presentation of evidence before the relevant committees of inquiry on the hours of work of shop assistants, the fixation of retail prices, and the proposal to set up a Trade Board for the catering trade. Numerous minor inquiries into trade matters for the guidance of members are also in progress.

INSURANCE NOTES.

Clerical, Medical and General Life Assurance.—The 1930 report of this society is accompanied by a report on the valuation of liabilities for the period from July 1, 1926, to December 31, 1930, and denotes a position of great strength and prosperity. For the eighth time in succession the extremely low rate of 2½ per cent. interest has been assumed in the valuation of liabilities. The results of the last two valuations are shown below:—

	June 30, 1926— 1921-1926.	Dec. 31, 1930.
Trading profits earned in period	1,265,438	1,471,231
Capital profits earned in period.....	181,560	21,326
Brought forward from previous valuation	1,394	37,262
	1,448,392	1,529,819
Allocations:—		
To Bonuses to policyholders	925,767	1,157,391
Staff pension fund	70,000	50,000
Shareholders	115,363	139,849
Reserve for maintenance of bonus.....	300,000	100,000
Carried forward to next valuation ...	37,262	82,579
	1,448,392	1,529,819

The policyholders are entitled to nine-tenths of the divisible surplus and the shareholders to the remaining one-tenth, and it will be seen that the allocation to policyholders is well within the trading surplus earned. A feature of the society's method of bonus distribution is that the rates of reversionary bonus are not uniform, and increase not only with duration in force, but with the age at entry and the rate of premium. The bonus is calculated first of all as a cash percentage of the premiums paid during the valuation period, and thereafter converted to a reversionary bonus. It is stated that in the case of whole-life policies the cash bonuses declared represent on the average 52 per cent. of the premiums paid during the 4½ years, compared with 46 per cent. and 41 per cent. respectively for the two previous valuation periods. The equivalent reversionary bonuses for whole-life assurances range from 44s. 8d. per cent. per annum for age 20 at entry, to 73s. 8d. per cent. per annum for age 60 at entry, for policies five years in force, these rates increasing

with each year's duration. The allocation to Bonus Maintenance Reserve Fund raises that fund to £400,000, and, after allowing for other reserves, including the statutory reserve fund of £50,000, it is claimed that the total reserves now exceed by more than £1,000,000 the usual 3 per cent. valuation standard, which is usually regarded as fully adequate for valuation purposes. In his speech at the annual meeting the chairman was able to point to evidence of sound progress during the valuation period, noting, amongst other things, that the Life Assurance Fund had risen from just under £9,000,000 to just over £10,500,000, and that the premium income had been increased from £668,000 to £774,000. Actually in the year 1930 new life assurances were issued for sums assured of £1,913,711, compared with £1,700,842 in 1929. The net rate of interest earned was £4 13s. 8d. per cent. and the average net rate of interest during the 4½ years was £4 15s. 9d. per cent. The expenses of management, after allowing for the cost of the annuity business, represented 14.9 per cent. of the premium income in 1930. The society makes a particular feature of disclosing in the report a complete list of the Stock Exchange securities. A number of changes have taken place during the year in this list, the most interesting being a fairly considerable reduction in British Government securities. The existing holding of British Government securities now consists of £26,500 5 per Cent. War Loan 1929-1947, £200,000 4½ per Cent. Conversion Loan, and £9,000 4½ per Cent. Victory Bonds. The society's investment policy has been associated largely with mortgages, and in more recent times with Canadian mortgages, the latter being now represented by £585,000, mainly on residential property in Toronto, where the amount originally advanced in no case exceeds 55 per cent. of the society's valuation, and the rate of interest is 6 per cent.

Refuge Assurance Company, Ltd.—This company has its headquarters in Manchester, and the greater part of its *clientèle* in the North of England. Notwithstanding the handicap of adverse trade conditions, the company continues to show a satisfactory amount of progress each year, accompanied by indications of good profit-earning capacity. The results of the annual valuation in 1930 are included in the annual report, and they are as follows:—

	1928.	1929.	1930.
Ordinary Branch:—			
Surplus earned during the year	1,077,630	1,089,490	1,108,804
Brought forward from previous year	726,447	725,592	537,821
	1,804,077	1,815,082	1,646,625
Allocations:—			
To bonuses to policyholders	880,636	924,535	964,691
Shareholders account ...	97,849	102,726	107,188
Investment reserve fund	100,000	250,000	...
Carry forward to next year	725,592	537,821	574,746
	1,804,077	1,815,082	1,646,625
Industrial Branch:—			
Surplus earned during the year	267,024	467,092	481,463
Brought forward from previous year	37,571	44,715	49,691
	604,595	511,807	531,154
Allocations:—			
To bonuses to policyholders	407,728	164,842	164,948
Shareholders account ...	52,152	47,274	42,812
Investment reserve fund	100,000	250,000	250,000
Carry forward to next year	44,715	49,691	73,394
	604,595	511,807	531,154

The annual reversionary bonus in the ordinary branch has been maintained at the rate of 44s. per cent. on the sums assured. In the industrial branch a voluntary profit-sharing scheme was conceded for the first time in 1928. The amount allocated for this purpose in 1930 has again been applied to increase the benefits under various tables in order to bring them into line with those now offered under the current and more favourable prospectus. No allocation has been made on this occasion from the ordinary branch to investment reserve fund, but the 1929 allocation from the industrial branch has been repeated. The amount of the investment reserve fund in each branch

is now considerable, being £975,000 in the ordinary branch, compared with a fund of £31½ millions; and £875,000 in the industrial branch, compared with a fund of £15½ millions. The only information furnished as to the value of the assets is that contained in the certificate attached to the balance sheet to the effect that they are in the aggregate fully of the value stated less investment reserve fund taken into account. So far as new business is concerned, the totals have been well maintained in both branches. In the ordinary branch policies for new sums assured were issued for £6,481,784, compared with £6,479,796. The number of new policies issued in the industrial branch, namely, 934,972, was almost the same as the 1929 total, but the corresponding sums assured show a reduction from £17,711,086 to £17,368,126. We are glad to observe a small reduction in the expense ratio in both branches, for the high rate at which the business has been worked has been the subject of criticism in former years. In the ordinary branch the proportion of expenses and commission to premiums has been reduced from 15.6 per cent. to 15.1 per cent., and in the industrial branch is now 36.5 per cent. compared with 31.1 per cent. The increase in the net rate of income tax has been responsible for a fall in the combined net rate of interest earned in both branches from £5 3s. 1d. per cent. to £5 0s. 9d. per cent. The company has a very small capital amounting to 150,000 shares of £2 each fully paid, and the allocations to profit and loss account were sufficient to maintain the dividend at the rate of 50 per cent.

The Scottish Widows' Fund.—The most remarkable feature of the satisfactory report for 1930 of this society is the large expansion in the amount of new business which has taken place under the new management. After deducting re-assurances, the net sums assured under new policies issued in 1930 were £3,492,000, compared with £2,899,759 in 1929. This increase is achieved notwithstanding that the amount re-assured with other offices has risen from £92,500 to £228,000, and in spite of a considerable reduction in single premium business as a consequence of the sur-tax legislation in the Finance Act, 1930. The net new business constitutes a record in the society's history, while the gross total has been exceeded only once, in 1920. It seems that the society has taken advantage of the financial *débâcle* of 1929 to press home the great advantages which life assurance has to offer, not only as a protection, but as a high-class gilt-edged investment. The chairman, in his speech at the annual meeting, stated, with justice, that "The increased new business, coming in a year of acute industrial depression, is particularly gratifying, and, I think, indicates a return to 'Safety First' investment after the Stock Exchange boom of the preceding years." As an indication of the high bonuses paid by the society in the past, it is stated in the report that the bonuses added to policies becoming claims by death in 1930 represented, on the average, as much as £161 2s. for each £100 originally assured, though even this does not show the full effect of bonus additions owing to a number of policyholders having commuted from time to time bonuses for cash or reduction of premiums. The society's interest earnings are on a lower level than the average of other offices, and have been slightly reduced in 1930, owing to the rise in income tax, from £4 14s. 9d. per cent. net to £4 12s. 3d. per cent. net. The expense ratio, however, has always been very moderate, and amounted in 1930 to 12.45 per cent., compared with 11.24 per cent. in 1929. Among the changes in the balance sheet during the year may be noted a reversal of the trend, previously noted, towards reduced holdings of British Government securities. In commenting on this the chairman observed that it has seemed desirable, in the general and universal state of uncertainty, to increase British Government securities. This movement has been accompanied by further purchases of ordinary shares, which now total £1,200,000, compared with £719,000 in 1929. Substantial reductions have been made in the society's investments in Indian and Colonial Government securities, Colonial municipal securities, and in foreign Government and municipal securities. It was disclosed a year ago that the 1929 balance sheet showed a substantial margin in the difference be-

tween the market values and the balance-sheet figures. The society is to be congratulated on being able to state that, even in such a year as 1930, this margin has actually been increased.

Maritime Insurance Company, Ltd.—The 1930 balance sheet of this company shows a strong position. The shares are fully paid, and, as compared with the total capital of £500,000, there is a general reserve fund of £200,000 and a profit and loss account of £285,000. Considering that the company has been controlled since 1924 by the Scottish Union and National, it is unfortunate that the underwriting accounts are not presented in an intelligible manner. The claims are lumped together into one item irrespective of the underwriting account in respect of which they have arisen, and the only observation possible from this mode of treatment is by a comparison of the amount paid in claims for a number of years past. From this comparison it would appear that the experience has undergone an improvement, which is confirmed by the fact that the transfer to profit and loss account has been raised from £15,000 to £20,000. The dividend has been maintained at the same rate as before, namely, 6 per cent., but there is obviously scope for a very considerable increase in the rate of dividend, since the net interest earnings amount to over £60,000, compared with a dividend at present costing only £23,000.

Overseas Correspondence.

UNITED STATES.

Business — Prices — Soldiers' Bonuses — Public Finance — Wheat Situation — Foreign Trade.

(FROM OUR CORRESPONDENT.)

NEW YORK, February 20.

THE feeling toward the business outlook continue moderately cheerful, nourished by a firm tone in the security markets rather than by much actual increase in trade activity. Improvement is confined chiefly to the steel and motor industries. Operations in steel are rising very slowly, the average rate now being slightly above 50 per cent. of capacity. Rumours of price advances have little basis in fact. Hope is strong, nevertheless, that motor buying, already feeling moderate stimulation, will increase considerably in the spring, at which time also the building industry ought to improve. Generally, however, the movement of goods into consumption, if increasing at all, is doing so slowly. Railroad traffic fails to rise above the 1921 level, nor has there been the usual seasonal increase since the first of the year. Freight loadings for the first month and a half are 20 per cent. lower than for the same period of last year, against estimates of shippers' associations made a few weeks ago of a 5 per cent. decline.

Commodity prices continue to decline. The Bureau of Labour index for January is 77.0, a drop of 1½ per cent. on the month. A year ago the index was 93.4 per cent. However, the decline for each of the two preceding months was 2½ per cent., so that the rate of fall may be diminishing.

INDEX NUMBERS OF WHOLESALE PRICES.

(1926 = 100.0.)

	January, 1930.	December, 1930.	January, 1931.
All commodities	93.4	78.4	77.0
Farm products	101.0	75.2	73.5
Foods	97.2	81.8	80.1
Hides and leather products ...	105.1	91.2	88.6
Textile products	89.4	72.4	71.0
Fuel and lighting materials ...	79.9	70.5	69.8
Metals and metal products.....	101.2	90.0	89.3
Building materials	96.2	84.4	82.9
Chemicals and drugs	93.0	84.8	83.6
House-furnishing goods	97.3	91.3	91.1
Miscellaneous	78.7	66.9	64.7
Raw materials	94.0	74.2	72.9
Semi-manufactured articles ...	93.0	74.3	73.4
Finished products	93.3	81.9	80.5
Non-agricultural commodities...	91.4	79.4	78.2
All commodities, less farm products and foods	90.3	79.0	77.8

Price weakness is being increasingly felt in the retail field. The Labour Bureau's weighted index for retail prices in January shows a drop of 3 per cent. from December and 14½ per cent. from a year ago.

Building construction is still hampered by the difficulty of securing mortgages at low rates, the surplus of speculative buildings, falling rents and maintenance of comparatively high costs of construction. Permits issued in large cities for construction last month were 22.4 per cent. fewer than in December, according to the Bureau of Labour statistics, and were 13.7 per cent. under a year ago. Some improvement is noted in the fact that permits for residential construction, the backbone of the building industry, dropped only 18.2 per cent.

Whatever the upshot of the soldiers' bonus question, the Treasury will be faced with financial problems for the next few years. The Treasury cannot now count on patriotic feelings to carry loans, as they could in the case of the Liberty Loans. With the recent rapid rise in soldiers' loans, and the additional demands of the Farm Board, the Treasury may have to sell bills or certificates on or before March 15th in addition to refunding \$1,100,000,000 of 3½ per cent. notes due at that time. Probably \$100,000,000 will be needed for the Farm Board and drought relief. Tentative plans, it is understood, are for an issue of about \$500,000,000 of 3½ or 3¼ per cent. long-term bonds and the balance in certificates. The Treasury would like to reduce the current short-term debt to manageable proportions in preparation for refunding \$6,250,000,000 of Fourth Liberty 4½ per Cents. in three years. The financial community is interested in what the Treasury may do with the First Liberty 3½ per Cents., due in 1947, but callable next year. Short-term debt is composed of \$2,749,000,000 of certificates and 3½ per cent. notes, \$210,000,000 of Treasury bills, and, counting the First 4½ per Cent. Liberties planned for redemption or refunding in 1932, of an additional \$536,000,000. This floating debt of nearly \$3,500,000,000 is causing some anxiety in view of the constant increase, the prospect of lower tax collections and a heavy Treasury deficit, and the large refunding issues set for the next few years.

Brokers' loans have begun to rise slightly, the increase of nearly \$60 millions in the past fortnight reflecting the activity of pools and re-entry on a small scale of the public in the share market. Security loans for reporting member banks direct to customers are also up a little after months of decline, but commercial loans are still falling. Federal Reserve credit is down \$26 millions on the week, the drop coming almost entirely in smaller member bank borrowings. Bill rates have stiffened slightly, and interest rates charged customers by the banks in leading cities are slightly higher; but there has been even less than seasonal firmness. Banks are having difficulty in employing funds at less than 1 per cent. in the call market and are adding to their bond investments.

In its current review the Federal Reserve Board notes a great increase in the liquidity of the banks of the country during the past fifteen months. This came about through a drop in total volume of outstanding credit and a decrease in the proportion of assets depending on local situations and the customer relationship. Their position was also strengthened by the liquidation of \$5,500,000,000 of security loans made by non-banking lenders.

Little hope is entertained that the Farm Board will be able to extricate the country from the muddle of pegged wheat prices. Actual wheat held and futures contracted for amount to about 200,000,000 bushels, and the Board apparently will not support the market for this year's crop. The chairman and another member will retire shortly, and their parting shots warn the country that a reduction of about 25 per cent. in production will be necessary to maintain the current spread of about 20 cents a bushel for wheat between the domestic and the world market. This is, of course, quite out of the question in the absence of a severe drought.

Bank failures are reported in large number, but the mortality is not so great as it was in the closing months of last year. January failures were 197, compared with 344 in December and 254 in November. Foreign trade

figures for January were the poorest since the war. Exports, at \$250 millions, were the smallest since 1914, and imports of \$183 millions were the lowest in ten years. The net gain of gold in January was \$34,372,000. Canada's tariff against American automobiles has caused no great stir, since Ford, General Motors and certain other manufacturers already have provided against such contingencies by building plants across the northern border. Yet the country is coming to realise more clearly that it cannot hope to revive its foreign trade fully so long as its foreign loans are low and its merchandise imports are so far below outward shipments.

FRANCE.

Budget — Unemployment — Coal Industry.

(FROM OUR CORRESPONDENT.)

PARIS, March 4.

THANKS to the adoption of intensive working by the Chamber, with as many as three sittings in the twenty-four hours, as well as two sittings on Sunday, there is now a bare chance that the Budget Bill will get through both Houses before the new financial year begins on April 1. M. Laval has incurred a certain amount of criticism, in view of the ruthless obstructionist warfare indulged in by the Socialists, for not having followed M. Tardieu's example in freely resorting to the system of posing the question of confidence. With thin attendances of tired deputies, however, and with the Socialists ever on the watch to defeat the Government by a surprise division, the Leader of the House has merely had the choice of two evils, and has rarely raised the question of confidence.

For all practical purposes this is the last Budget before the General Elections. The result has been an exceptional volume of eloquence, with an eye to the valuable electoral publicity available through the *Journal Officiel*. An even worse consequence has been the substantial increase, in many cases, of proposed expenditure already approved by the Finance Commission. The Budget estimates, as they left the Finance Commission, yielded a surplus of only £840,000, on total expenditure amounting to £401,000,000. The effect of the numerous increases in proposed expenditure—due almost entirely to Socialist insistence, but to some extent also to demands by the Radical section of the Opposition—has not yet been announced. There are fears, however, that the estimated surplus has already been more than wiped out (apart from the recent unemployment credit), and that the efforts of the Opposition to embarrass the Government by causing the Bill to go to the Senate hampered by a substantial estimated deficit have proved regrettably successful. Should this be the case, the restraining hand of the Senate will, doubtless, be firmly applied, but this can only lead to a further prolonged struggle before the measure can receive presidential approval.

Public attention is now focussed principally on the question of unemployment. In view of the increased figures of workless, the amount to be allotted by the Budget to unemployment relief—which it was originally proposed should be 25,000,000 francs, but which was increased to 100,000,000 francs—has been raised to 125,000,000 francs. It is now realised that the Ministry for Labour figures officially reported at Geneva a few weeks ago, estimating that the number of totally unemployed in this country was at least 350,000, substantially understated the case, owing to the fact that the census on which they were based covered only industrial concerns employing 100 workers and upwards. There are now 153 municipal and departmental unemployment funds in operation, and the fact that the proportion of unemployed actually drawing allowances is under 40,000 is undoubtedly due to the fact that the French working-class horror of any form of pauperism is still a very real factor. The traditional French habit of saving is based not only on the determination to leave something to the next generation, but to provide for possible hard times. It is notorious that, to-day, hundreds of thousands of workless French people are living

on their scanty savings, rather than appeal to the public funds on which they have every right to draw. And this in a country where "voluntary effort," as we understand the term, in connection with hospitals, churches and a hundred other things, is practically non-existent, and where the State is relied on almost completely to do what is necessary.

The French newspapers are emphasising the necessity, in connection with this problem, of avoiding the "terrible errors" whose consequences are now being experienced across the Channel and in Germany. The Tardieu Government, many months ago, foresaw the practical certainty of the arrival of the present economic crisis, and prepared for it by drafting a great plan for the development of the country's economic plant, with the double object of consolidating the country's economic stability and, at the same time, providing help for industry and employment for labour. The application of this plan has been delayed by party political strife and frequent Ministerial crises, but is still slowly approaching legal sanction. Meanwhile, the National Economic Council, which was asked towards the end of last year "to consider what measures might be taken with a view to remedying the unemployment crisis," has, this week, presented a valuable report, from the pen of M. Moreau-Néret, one of the Masters of the Conseil d'Etat, covering the whole of the factors involved.

The report states that the proportion of workers employed less than 48 hours a week at the beginning of January was 14 per cent. (against 3.4 per cent. in January, 1930), and that of those working less than 40 hours per week was 2.9 per cent. (against 0.6 per cent.). Dealing with the question of foreign labour, the report estimates that there are at present about 3,300,000 foreign workers in this country, as compared with 1,132,000 in 1911 and 2,507,635 at the date of the 1926 census. While recognising the necessity for importing this large mass of foreign labour, in order to make up for the shortage due to war losses and to maintain increased industrial production (which the Statistique Générale estimates at 34 per cent. more than in 1913), the report strongly advises that the doors should be closed against further entries, save in exceptional cases, and that agricultural labour should be recruited primarily from unemployed workers and only afterwards from foreign sources. Another important recommendation is that every possible effort should be taken to stay the "flight from the land," and that a check should be imposed on entries of French native workers from North Africa, where they are already barely sufficient for local agricultural and industrial needs. The public works suggested as most suitable to meet the present crisis are, for all practical purposes, those comprised in the Tardieu plan for economic development, and comprise roads, waterways, ports, aviation, hydraulic and electric power, postal, telegraphic and telephonic extension, railway development (including supplies of materials), shipbuilding, provision of additional schools, hospitals, sanatoria, and cheap housing.

Coal production figures for January show an increase of 180,000 tons on the December output, but were still 361,000 tons, or about 7 per cent., below those for January, 1930. The total output was 4,637,440 tons for the 26 working days, against 4,458,467 tons for the 25 days in December and 4,998,138 tons in January, 1930 (26 working days). The increase in December was almost exactly equivalent to one day's average output, and was consequently due to the extra day in January. The average daily output in January, 1931, was 178,363 tons and in December 178,339 tons, against 192,236 tons in January last year. The labour force employed was 300,594 units, or 1,769 below the total in January last year. The February figures will show a further drop owing to the adoption of the system, in consequence of the accumulation of stocks at the pitheads, of laying off labour by sections, equivalent to a cutting down of hours by one day per week all round. The output of metallurgical coke by the colliery plants in January was 423,789

tons, or within half a dozen tons of the December total and about 9,000 tons more than in January, 1930.

In spite of the slackening in demand from industry and the continued increase in imports of foreign fuel, wage reductions have so far been negligible, whereas in Belgium wages have already been cut down by 15 per cent.; and a further cut of 5 per cent. is foreshadowed. Foreign competition by British and other exporters continues so keen that the Midland collieries, in order to secure renewal of contracts with the P.L.M. and other railways, have found it necessary to cut down selling prices in their tenders by 15 per cent. Railway contracts (except in connection with the Est, Nord and State lines, which are to continue under steam traction) are gradually becoming less and less attractive, as the total electrification of the rest of the lines progresses. Coalowners and the Government have been in conference, with a view to accelerating consumption by public bodies, and thus enabling wages cuts and labour reductions to be avoided.

GERMANY.

Minister's Visit to Vienna — Berlin Foreign Credit — Unemployment and Wages — Germany and the Young Plan.

(FROM OUR CORRESPONDENT.)

BERLIN, March 4.

HERR CURTIUS departed on Monday evening for Vienna, accompanied by the Secretary of the German Chancellery and his economic advisers. Dr. Brüning, who was originally to have been a member of the party, decided, in view of home political conditions, to remain in Berlin. If the Chancellor as well as the Foreign Minister had gone to Vienna the visit would have had a significance in the eyes of the world which it cannot now have. Herr Curtius arranged the visit with Dr. Schober in Geneva, where he already lent his support to the proposals put forward by Austria for paving the way to the ultimate formation of a European Union. It may be assumed that commercial-political questions of this character will be the chief subjects of discussion in Vienna.

An account was given in these columns a few weeks ago of the attempt of the State-owned Prussian Electricity Company to procure for the city of Berlin 300 million Reichsmarks of foreign capital by the sale of the Berlin Gas and Electricity works. So far the negotiations, which have been proceeding both in Paris and in Switzerland, have led to nothing, but meanwhile interest in the project has been forthcoming from another quarter, and Herr Dannie Heinemann, of the Brussels company "Sofina," who has for some time worked in co-operation with the Gesellschaft für Elektrische Industrie (Gesfütet) here, has come forward with an offer. Negotiations have been going on for several weeks, and the facts have only just become known, owing to an indiscretion. Sofina is demanding, as the price of a loan to the city of Berlin, a majority of Bewag (Berlin Electricity Company) shares. Bewag is only an operating company, and holds the electricity works, which belong to the city, only on lease. The proposal is that the position of the company should be converted from that of concessionaire to that of actual owner, that its shares should continue to be held by the city of Berlin, and that it should itself be responsible for the loan. A minority of shares would be held by the Reichselektrowerke and the Preussenelektra. Pending the completion of arrangements, the group is prepared to raise an interim credit of 75 millions, and it is said that a large number of German banks would be associated in this.

The Sofina project has aroused very vigorous opposition here, especially political opposition. The Socialist Left objects to a public undertaking passing into private hands, the Nationalist Right to the "surrender" of valuable public property to "foreign capital." In the other pan of the scale is the urgent need of Berlin, whose debt is smaller than before the war but consists to a disproportionately large extent of short-term liabilities, and also the fact that public utilities are undoubtedly at present

the most suitable section of German industry for the raising of foreign credit. For this reason, if the Berlin transaction materialised, it would only be the first of a series.

Trade-union leaders of every shade of opinion met the President of the Reich last week to discuss the problems which are causing them serious anxiety. The task of the unions at present is extraordinarily difficult. The huge volume of unemployment is threatening the tariff wage system, and here and there workers are showing a disposition to work for less than the standard rate. Employers want to combat unemployment by further wage reductions; the unions by short time. There is, however, no doubt that a section of the employers is aiming at the abolition of wage agreements and of unemployment insurance. The chief preoccupation of the union representatives at their meeting with the President was to prevent the power of the State being used, through arbitration, to bring about a second series of wage reductions, and to secure it as an ally for the protection of the present system.

No announcement has been made as to the official wages policy for the next few months. The Minister of Labour, Dr. Stegerwald, in his speech before the Reichstag, only defended the wages policy of the immediate past. He pointed out that the doctrine that high wages create and maintain prosperity has been exploded, especially in the United States and in Australia; but he declared that a general wage reduction of 20 to 25 per cent., as demanded by the employers, would be no panacea. The Minister did not commit himself on the question of a legal reduction of working hours, but he stated most emphatically that he would tolerate no undermining of the principle of wage agreements, arbitration, and social insurance. The Chancellor expressed similar views in addressing the German Wholesale Trade Association.

The proposed agreement between employers and trade unions, which was to bring about in effect a reduction in hourly rates, cannot apparently be pursued any further, as the employers are obviously not in a position to guarantee employment for whole industries, but can only guarantee it for individual business. As this would enable them to shut down some works in order to fulfil their obligations of providing work in others, it would not be of the slightest use to the unions. For similar reasons the attempt to avoid closing down the Ruhrort-Miederich mine, by means of an agreement with the unions, was unsuccessful.

The speech of the President of the Reichsbank, Dr. Luther, at the opening of the Leipzig Fair, was an admonition, not to thoughtless optimism, but to calmness. "Even the most passionate advocates of revision in Germany are perfectly clear that no German could carry his desire for revision so far as to be unwilling to meet promptly private debts, including the private debts of the Reich." If the word "moratorium," which was used in connection with the German efforts to secure a revision of the Young Plan, has given the impression abroad that Germany is aiming at anything in the nature of a suspension of payments, that, said Dr. Luther, is completely erroneous. It is, however, high time that a great change took place in the world. "Those Powers which have abundant capital will have to come to the rescue of the peoples of the civilised world."

Dr. Schacht, in a statement to the Press in Stockholm, also emphasised the fact that there is no question of Germany's defaulting in any circumstances on her private obligations or on those of public corporations. He gave, somewhat indiscreetly, an outline of the measures which he would take if he were Dictator of Germany, but this was one of his temperamental statements, made with an eye to the effect on the public, which should not be taken too seriously. The phrase which has attracted most attention was his declaration: "If I were Dictator of Germany, reparation payments would cease at eight o'clock to-morrow morning." Even if this has been correctly reported, it cannot bear the interpretation which has been put upon it abroad, for Dr. Schacht expressly added that he wished to see the Young Plan carried through, but that

this was only possible if the other parties to it carried out their obligations. By that he seems chiefly to mean, as his new book, "The End of Reparations," shows, that the International Bank in Basle will have to assist by means of credits exports from Germany to less developed countries.

BELGIUM

Public Works — Railway Improvements — New Channel Steamers.

(FROM OUR CORRESPONDENT.)

LOUVAIN, February 27.

BELGIUM has been carrying out a substantial programme of public works construction, though not actually designed for the mitigation of unemployment, the programme will probably be hastened on with that object in mind.

The digging of the Canal Albert, which is to link Antwerp directly to the River Meuse at Liège, was begun in 1930, and is progressing normally. It is expected to take eight years, and to cost 1,000 million francs. In Brussels the enlargement of the Charleroy canal is proceeding rapidly. The project of digging a tunnel under the river Scheldt in Antwerp has just been put in hand; its execution will require about 300 million francs, but it will greatly increase the value of the hitherto useless left bank.

No decisive vote has yet been cast in Parliament on the question of a railway line across the capital to join the Northern and Southern stations. This was first decided upon in 1900, and the work was begun before the war. It was discontinued during the German occupation, and after the war the restoration of the devastated areas absorbed all the available capital. In 1924 the Government proposed to abandon the scheme, but although the Senate rejected the Bill, the works have not been resumed. The directors of the National Railways Company would like to transform the Northern station of Brussels and abandon the proposed connecting line, but it will be difficult to secure the necessary legislation, as the Senate does not seem disposed to abandon the first scheme. Impressive speeches in favour of the connection have recently been made in this assembly.

The uniting line would be constructed with six tracks and have a station in the centre of Brussels. Part of the junction railway would be laid underground. The scheme would involve a great deal of construction work in the capital, but the estates to be crossed by the railway have already been expropriated, and a large part of the buildings have already been demolished. About 750 million francs would have to be expended on this undertaking; but if it was abandoned 250 millions would be required for the equipment of the stations, so that the actual cost of the connection would be 500 millions. Supporters of the scheme claim that certain estimates of outlay have been over-valued, and that the undertaking could be financed with 400 millions, while part of the expropriated land could subsequently be resold for about 200 millions, so that the final net cost would only be 200 millions.

Opponents dispute both these valuations and the usefulness of the connection, and they further assert that the tunnels would be noxious and even dangerous because of the smoke, though actually electric engines would be used on the junction line. Since the stations of Brussels will have to be modernised and enlarged for the exhibition which is to take place there in 1935, the problem will have to be settled pretty soon.

The question of railway electrification is also to the fore. Reports favourable to the electrification of the line Brussels-Luxembourg via Namur, as well as that of the Ourthe, have been received, and electrification of the Brussels-Antwerp line is also likely as a means of competing with motor transport. The Belgian Railways Company, Ltd., is going to contract for 1,000 goods wagons, which will be ordered in lots of 250 trucks in order to force the producers to combine for the rationalisation of construction. For the international passenger service twenty metal coaches have been ordered and will be presently delivered.

The equipment of all goods wagons with the air brake, as in Germany, will be completed this year at a cost of over 400 million francs, and the use of this apparatus will enable the company to dismiss thousands of brakemen and accelerate the service of the goods trains.

The last of the new packet-boats of the Ostend-Dover line (which belongs to the Belgian State) will soon be launched, and this line will then possess four new very fast steamers which will be much more comfortable than those which they replace. In 1930 the Ostend-Dover line reached record figures in the transport of passengers, who were 450,000 against 417,000 in 1929.

SWITZERLAND.

Depression — Industry — Foreign Trade.

(FROM OUR CORRESPONDENT.)

GENEVA, February 21.

THE economic situation of Switzerland was altogether very unsatisfactory in 1930 owing to the world crisis, though the depression was less marked here than in many other countries. The resistance of Switzerland may be accounted for by the country's moderate industrialisation during the past years and by a timely constitution of reserves of which the whole economic body is now enjoying the benefit. Swiss industry was also able to avail itself of sufficient capital at comparatively low rates to ensure its maintenance and the modernisation of its equipment.

The consequences of the crisis are shown in the 1930 foreign trade returns. Imports have not been affected to the same extent as exports, and there has been an increase in the import of manufactured goods, which is a sign of the comparatively favourable situation of the home market, the purchasing power of which has so far not been seriously affected. Exports, on the other hand, have considerably decreased in value and weight, and the decline is important even if allowance is made for the slump in prices.

Imports during 1930 were £106,568,064, compared with £111,353,930 in 1929, a drop of £4,785,866, or about 4 per cent., the decrease being greatest in cereals, fruit and raw materials. Exports reached a value of £70,700,063, as against £84,178,184 in 1929, a decrease of £13,478,121, or nearly 16 per cent. The drop is especially striking in textiles, watches, manufactured articles, metallurgy and animal products. The four chief industries are severely hit by the slump, as appears from the following figures:—

Exports of	£ million.	
	1929.	1930.
Watches	12.2	9.3
Silk	13.3	9.7
Cotton	10.6	7.0
Machines	9.3	8.9
	45.4	34.9

The adverse balance for 1930 is £35,868,001, against £27,175,746 in the previous year. That adverse balance is expected to be partly made good by the receipts of the banking and insurance industry, of the export of electric power, by income from foreign securities, and by the earnings of the hotel industry, though these last will be much lower than usual.

Apart from the general decline in the quantity and value of exports, the outstanding feature of 1930 is the drop in commercial exchanges with the United States in consequence of the enforcing of the new Customs tariff. Swiss exports to the United States, which aggregated £8,300,000 in 1929, fell to £5,767,000 in 1930. The feeling of bitterness caused here by the United States economic policy was reflected in a big decrease in Swiss purchases from the United States, which were £8,192,000, as against £11,648,000 in 1929. The decrease was greatest in imports of motor cars, oil and petrol.

Trade with Great Britain was rather active. Imports from her reached a value of £9,277,339, compared with £6,712,852 in 1929, while exports to her aggregated £10,507,571, as against £11,523,967 in 1929. The rise in British imports is due, on the one hand, to big purchases

of gold, and, on the other hand, to the fact that Swiss importers bought from Britain some products—namely, oil and petrol—that they previously imported from the United States.

The five chief sources of Swiss imports were again Germany, France, Italy, Great Britain, and the United States; but Great Britain held in 1930 the third place, while she had the fifth in 1929; these five countries were also the best clients for Swiss goods, Great Britain retaining the second place she already had the previous year. Exchanges with these countries were as follows:—

	Imports from		Exports to	
	1929.	1930.	1929.	1930.
Germany	27.9	28.0	14.2	11.2
France	19.5	18.0	7.2	7.3
Italy	8.1	7.4	6.3	4.8
Great Britain	6.7	9.2	11.5	10.5
U.S.A.	11.6	8.0	8.3	5.3

The results for January, 1931, which show a further decline both in imports and exports, indicate that the crisis has not yet reached its bottom, and prospects for 1931 are very gloomy indeed.

FINLAND.

The Money Market — Foreign Trade — The Level of Prices — Presidential Election.

(FROM OUR CORRESPONDENT.)

HELSINGFORS, February 24.

THE money market as usual grew much easier in January. The insignificant demand for credit was due, besides the usual seasonal conditions, chiefly to depressed trade, reduced imports and further restriction in the most important work of the season, forest felling. The position of the Bank of Finland bears clear traces of the reduced demand for credit; its total credits have fallen off in January by 79.2 million marks to 855.7 millions, whereas at the end of January, 1930, they amounted to 1,307.9 millions. The reserve of foreign currency at the end of January was 732.4 million marks, compared with 705.2 millions a year ago. During the first half of February the development continued in the same direction, but the changes were of no great importance. On February 14th the note reserve amounted to 804.4 million marks, compared with 648.5 millions a year before. The ordinary cover represented 74 per cent. of all liabilities payable on demand, as against 66.3 per cent. a year earlier.

The deposits of the joint-stock banks increased in January by 164.1 million marks, compared with only 32.7 millions in January, 1930. The greater part of this increase was in short-term deposits. Credits grew slightly by 13.3 million marks, whereas in January, 1930, they fell off by 26.0 millions. In the position of the joint-stock banks towards other countries there was an improvement in January, their net foreign indebtedness dropping from 134.2 to 103.4 million marks, compared with 262.3 millions a year ago.

Foreign trade fell considerably in January both in volume and value. The value of imports amounted to only 223.3 million marks, against 309.0 millions and 504.5 millions in January, 1930 and 1929 respectively. The decrease was partly due to unusually heavy imports in October-December, 1930, in anticipation of increases in Customs duties. The reduction in exports was appreciably less. Their value amounted to 248.5 million marks in January, against a little over 300 millions in the last few years. The balance of trade was thus unusually favourable for the time of year.

Though the wholesale price index for January was unchanged at 86, against 94 in January, 1930, the index for imported goods dropped one point to 73, against 89 a year ago, and the index for exported goods also dropped one point to 80, against 96 in January, 1930. The cost-of-living index also is still falling, principally owing to the fall in the price of foodstuffs.

On February 16th the election was held of the President of the Republic for 1931-37. The election was

made by 300 electors who had been chosen in the middle of January by general suffrage, and the candidate of the Right, the present Prime Minister, P. E. Svinhufvud, was proclaimed President of the Republic. President Svinhufvud has long been a champion of Finnish independence; he was the head of the Government that proclaimed Finland's independence and subsequently the first head of the State of the new realm.

CANADA.

Business Conditions — Tariff Hearings — Motor Tariff — Grain Marketing.

(FROM OUR CORRESPONDENT.)

OTTAWA, February 25.

BUSINESS conditions are, if anything, slightly improved. The production of steel in January amounted to 57,598 tons, an advance of 3 per cent. over the 56,101 tons recorded in December but a decline of 50 per cent. from the figure reported for January, 1930. The production of pig iron during the month was 7 per cent. lower than the December figure, and only about 40 per cent. of the figure for January, 1930. The output of motor vehicles in January, at 5,000 cars, exceeded by 16 per cent. the total of the previous month, but was 37 per cent. below the figure for January, 1930. Other industries are showing parallel small gains from their low levels of production, but they are still well below the level of activity shown a year ago.

The manufacturers, faced with a shrinkage in their Western markets, have apparently converted the Bennett Ministry to the view that they must be given greater shelter against foreign competition than the tariff revision at the emergency session offered. At any rate, evidence accumulates that the Ministry is ready to go ahead with a general upward revision of the tariff. Last week there took place two public tariff hearings by a special committee of the tariff which is supposed to do the work of the now defunct Tariff Advisory Board, and at each of them the Ministers present showed a very definite bias in favour of the manufacturers. The applicants for tariff changes were not compelled, as they had been before the Tariff Board, to make public their briefs, and as a consequence the spokesman of the agrarian interest who was present to oppose tariff increases was placed at a hopeless disadvantage.

Manufacturers have received in addition great encouragement from the change made last week in the Customs regulations for imports of motor vehicles from the United States. By an Order in Council the discount from the American listed price which Canadian dealers importing cars from the United States will be allowed for purposes of valuation for Customs duty has been arbitrarily fixed at 20 per cent. Hitherto 25 per cent. has been the normal discount allowed by American vendors of cars, and in some cases 30 per cent. has been given, but henceforth, if more than 20 per cent. is given, the dumping provisions of the tariff will be applied. It is calculated that the change is tantamount to an increase of 15 per cent. in the protection available to the motor manufacturers of Canada. Naturally the changes are very popular in Ontario cities like Oshawa and Windsor, where increased business for the Canadian plants of the General Motors Corporation and the Ford Company is anticipated, and it is claimed that various American manufacturers of high-priced cars will now be compelled to establish their own factories in Canada. The matter, however, is certain to be aired in Parliament, for the Western Progressives have session after session raised the question of motor prices in Canada and contended that the large spread between the Canadian and American prices for the same type of car was unjustifiable and simply meant that the motor interests of the United States who dominate the Canadian industry wholly were using the Canadian tariff to extract an unfair toll from the Canadian user of cars. Now this situation is likely to be aggravated, though the Government claims that it has secured a guarantee from the Canadian manufacturers that prices will not be increased.

The Bureau of Statistics has published figures showing that the export movement of Canadian wheat during the first six months of the present crop year beginning August 1, 1929, has amounted to roughly 156 million bushels, as compared with 96 millions during the parallel period of the previous year. In one sense this gain of 60 million bushels is encouraging, but all intelligent grain experts are aware that it can be largely attributed to the action of the Federal Farm Board in deliberately holding United States wheat off the world market and leaving Canada as the sole source of North American supplies. As a result, sales of a large quantity of Canadian wheat have been made, but at a figure well below the cost of production. Whether this sacrifice will be profitable in the end is uncertain, for as long as the heavy stocks of wheat held by the United States Farm Board are overhanging the market there is no assurance of a stabilisation of grain prices.

Meanwhile interesting revelations have been made about the liabilities in which the provincial administrations of the three prairie provinces are involved by their guarantees to the banks in connection with the advances made by the latter for the crop of 1929. Up to date, according to the Prime Minister of Manitoba, they reach the sum of \$22,455,983, of which the Government of Saskatchewan will have to shoulder 12½ millions, Manitoba about 3½ and Alberta 6½. These figures were calculated on the basis of the wheat prices of February 16, and as some of the 1929 crop is still unsold the liability may be reduced if prices rise further. Naturally, the taxpayers of the West do not like the prospect of this heavy burden, but the governments say that they are protected against any ultimate loss by reason of the fact that they hold as security the country and terminal elevators and the office buildings owned by the three provincial pools, which are valued at a figure well in excess of the pools' indebtedness. But it is a security which it will be difficult to liquidate, and obviously at present prices of grain many years must elapse before the pools will be able to pay their debts and regain control of their properties.

JAPAN.

Foreign Trade — Export Credits — Rice Crop — Money — Stock Exchange — Prices.

(FROM OUR CORRESPONDENT.)

TOKYO, February 12.

THE returns of our foreign trade for last month again show a substantial decline, especially in imports, when compared with January, 1930, though a considerable part of the decrease is accounted for by lower prices. Imports for the month were 79,098,000 yen, or 43.2 per cent., lower than in January, 1930, while exports fell by 40,473,000 yen, or 27.7 per cent. As the contraction in imports was by far the heavier, there was a favourable balance of 1.8 million yen for the month, compared with an import excess of 36.7 millions for the same month of last year. The balance in favour of exports, though insignificant, is unusual for the month in which the heavy import season is normally at its height. This may be explained partly by the sharp shrinkage in imports of raw cotton.

Little use has been made of the export credit scheme, which was inaugurated on August 1 last. According to an official report, the guarantees used by exporters up to the end of January amounted to only 876,935 yen, the number of bills guaranteed being 528. The details of the guarantees given in respect of exports to the countries covered by the system are as follows:—

Geographical Division.	No. of Bills.	Sum payable. Yen.
Africa.....	282	356,049
South America.....	142	266,341
Russia.....	12	177,065
Central America.....	49	51,885
Asia Minor.....	32	18,966
Balkan States.....	11	6,629
	528	876,935

The estimate of the rice crop for 1930 was revised by the final report of the Department of Agriculture and Forestry

recently published, and the year's actual yield placed at 66,882,000 koku, an increase of 1,577,000 koku upon the previous estimate. The yield is higher by 7,325,000 koku (12.3 per cent.) than in 1929, and is 7,430,000 koku (12.6 per cent.) above the five years' average. The total value at the ruling price is 1,205 million yen, or a decrease of some 450 millions upon the preceding year. The cocoon crop for last year is put at 106,464,000 kamme, valued at 304,245,000 yen, against 102,093,000 kamme (655,001,000 yen) in 1929. Thus the farmers' loss of revenue from rice and cocoon totalled over 800 million yen.

A few more suspensions of small provincial banks were reported in the latter part of January, but the general monetary situation has remained undisturbed. Money is appreciably easier, despite the usual year-end requirements in the rural districts where the lunar calendar is generally followed. The bank return for February 10th showed that the note circulation, at 1,096,874,000 yen, was 88.2 millions lower than a year ago. Fine bills are quoted at a rate considerably lower than the official minimum. As there is no avenue of employment for idle funds, the 5 per cent. Treasury bond issue, which was offered last week, was subscribed five times over, but the stock markets failed to maintain an earlier appearance of strength, owing partly to a further break in the price of silver. The commodity markets on the other hand are more or less steady. As the cotton trade shows signs of improvement, the master spinners have agreed to relax the curtailment of operations by 3.6 per cent. as from April 1st. The downward movement in commodity prices, however, has again been accelerated. The Bank of Japan's wholesale index number for last month registered a fall of 1.4 per cent. The decline is largely accounted for by such articles as *miso*, *sake*, salt (State monopoly), tea and Japanese paper, which have been sheltered from foreign competition; unsheltered goods were already down to the international level.

Letters to the Editor.

THE STANDARD OF LIVING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The true line of cleavage in politics to-day is between those who have a dodge to restore prosperity without sacrifice and those who believe that our hope lies in the universal return to a simpler life. A few days ago Mr Baldwin was telling us that with the help of a tariff he could maintain our standard of living, and about the same time you were publicly praying for a politician brave enough to tell us that we have all got to tighten our belts. It seems unlikely that your prayer will be answered until we have all come to believe that the belt has got to be tightened. When we are established in that belief there will be politicians in plenty to preach to the converted, but meanwhile one who is not a politician may perhaps suggest that every class of the community, both here and in America, has thought far too much about maintaining its standard of living, and that the taproot of our troubles lies in this pre-occupation and in the tricks and devices that have been resorted to all over the world to keep our living at too high a pitch.

It is unfortunate that the phrase "standard of living" is generally said with a class bias, so that an attack on the standard is always supposed to be an attack on the working class. In fact, the working class is not the only one that has pushed its standard of living up and is trying to keep it up. The middle class is definitely involved in the same enterprise, and as I compare the expenditure in every form of comfort and luxury—food, drink, travel, holidays, cars, education—of the families of my own class to-day with the corresponding expenditure of twenty years ago, I claim no right to throw all or most of my stones at the working man.

A universal rise in the standard of living means only one thing; it means that the trade and industry of the world are being called upon to provide every individual of the world with a larger spending income. If they can do so, well and good. If they cannot the strain becomes too great; there is a collapse, slight or serious in proportion to the strain imposed; and until the strain releases there can be no recovery.

Have there not been, apart from our British dole, signs enough and to spare of the strain thrown on to the machinery

of trade? All the artificial dodges that we have seen employed for manipulating values—tariffs, inflations, wheat-pools, valorisation schemes, restriction schemes, price agreements—all are in essence the same and all have the same goal. Their essence is to take something worth a shilling and pretend that it is worth eightpence, and their goal is to keep up artificially the profits and the standard of living of those busied in the output of the commodities. And all are barriers to trade.

On the other side of the shield we see the manipulation of the consumer. Having decided that a shilling is really eightpence we take the next step and say that an income of four hundred a year is really an income of six hundred. We do this by scientific salesmanship and hire purchase, and we recruit an army of persuasive young men to teach the consumer that he is really much richer than he thinks he is, and that the old notion of keeping expenditure inside income is a piece of out-of-date Victorian nonsense. A few weeks ago, sitting in a house that is too big for me, listening-in on a wireless set too expensive for my means, I heard Mr Keynes telling me that the duty England expects of every man is to throw his money about more heartily. I felt then like an inmate of a drunkards' home being told by his physician that the cure was whisky, whisky and still more whisky.

Unless we can learn to think a good deal less about keeping up our standard of living and a good deal more about keeping expenditure inside income, I do not believe that there is a gleam of hope for us. The return to a simpler life and simpler life will be painful and involve a great deal of suffering, but major operations, painful though they are, save lives. Yours, etc.,

Gerrards Cross.
March 3, 1931.

FEDERAL RESERVE POLICY.

ACCORDING to one extreme school of thought monetary policy should be determined by the statistical indices of tendencies in economic life. All that the monetary authorities would have to do is to collect the figures of price indexes, production, railway traffic, unfilled orders, etc., and the material thus collected would itself indicate what action, if any, is necessary to bring about the desired readjustment. The rôle of central bank governors and boards would thus be reduced to that of super-robots, engaged in simple arithmetical operations to calculate the Bank rate. According to the other extreme, the authorities should have a complete freedom of action in determining monetary policy according to their individual judgment based on common sense, instinct and experience. In his book* on the history of Federal Reserve policy during the past decade, Professor Harold Reed strikes a fair synthesis between the two extremes. After having analysed the policy of the Federal Reserve authorities during the comparatively stable period of 1921-27, the boom of 1927-29, and the slump of 1929-30, he arrives at the conclusion that economic guides to reserve policy should not be narrowly defined, though certain guiding principles should serve as points of departure to that policy.

Even during the period of stability, the policy of the Federal Reserve authorities was subject to heated controversy. The statistical material as to economic tendencies was the same for both opponents and apologists of the monetary authorities; and yet the conclusions inferred from them were mostly diametrically opposed to each other. The author's main purpose was to indicate the multiplicity of factors which must necessarily enter into the formulation of credit policies by the Federal

The Coming Rise in GOLD SHARES

According to Mr. Angus, Gold shares offer higher yields, and better prospects of capital appreciation, than any other group of securities in time of trade depression. He applies the principles of his work *Investment to an analysis of this section of the market.*

SPECIALISED BUSINESS SERVICES, 10 Buckingham St., W.C.2 6/- nett.

Reserve administration. As he rightly points out, monetary laws do not operate with the precision so often implied in formal treatises. Under some circumstances an excess of credit may manifest itself in one field, under other circumstances in another. He emphasises that indices of commodity prices constitute only limited evidence of the adequacy of the general volume of bank credit. While opposing the dogmatic application of statistics in the administration of monetary policy, Professor Reed is equally opposed to the other extreme, claiming that all should be left to the discretion of management. An administration with no guiding principle to serve at least as a point of departure must tend to veer from one extreme to another, from perhaps a too narrowly restrictive policy to one of excessive liberality. Like the rest of us, Federal Reserve officers and directors are human, and are subject to the same contagious influences of undue pessimism and extravagant optimism as operate upon the minds of business men. The author quotes the reduction of the New York Bank rate in 1927 as an example for the necessity of guiding principles. In his opinion, the reduction in itself was not a mistake, but it ought to have taken place during the early part of the year. What was lacking in 1927 was a standard for determining the degree of credit alleviation required. While in the early part of that year such alleviation was genuinely wanted, in the latter part of the year, when the Bank rate was actually reduced, it merely created superfluous monetary ease and was largely responsible for the Wall Street boom.

How quickly books dealing with current monetary problems become out of date is characterised by Professor Reed's remarks on the reduction of Bank rates after the collapse. In this book, written in August, 1930, he regards 3 per cent. as the minimum level of the Bank rate, and raises the question whether it was not premature to fire away all the ammunition by reducing the Bank rate to that "minimum" figure before the arrival of the psychological moment when a reduction might stimulate a strong revival. Within about four months, the New York Bank rate was lowered to 2 per cent., and in many quarters even that figure is not considered the irreducible minimum.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Changes in the Structure of World Economics Since the War. By Dr. Felix Somary. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 7s. 6d. net.

An important contribution to the literature of economic internationalism. Dr. Somary discusses with the tempered judgment of an experienced banker such questions as the reorganisation of the British Empire; Europe in Relation to the United States; France and Germany; Russia and Europe; and the Effects of the Monopolistic Movement.

British Banks and the Finance of Industry. By S. Evelyn Thomas. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 12s. 6d.

A most timely book. There are chapters on general monetary policy, the need for rationalisation of industry, and the relation of British banks to agriculture, and the British and Continental traditions of the relations between banking and industry are compared and criticised.

The Root Principles of Investment. By H. Cope West. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 15s. net.

An interesting guide for the investor who is willing to expend personal effort upon the selection of his investments.

Markets of London. By Cuthbert Maughan. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 6s. net.

A descriptive account of the transaction of business in the commodity markets.

The Annals of the American Academy of Political and Social Science. January, 1931. (London) P. S. King and Son, Ltd., Great Smith Street.

This volume is devoted to a collection of special articles dealing with the advent of industry to the southern states of America, its consequent problems and their possible remedies.

POST-WAR INVESTMENT TRUST COMPANIES.

In an article on the "pre-war" investment trust companies, which appeared in the *Economist* of February 21st, we found that the companies analysed had so far been able to stand the shock of the world slump without loss of revenue or reduction of dividends and for the most part without having to admit depreciation on their investments. This was explained by the fact that they had been able to build up reserves by writing down the book values of their investments out of capital profits and by pursuing a conservative dividend policy over a long period of years. The records of the younger investment trusts, formed since the war, is, naturally, less satisfactory than that of their elder brethren, for the obvious reason—that they have not as yet had sufficient time to build up large investment reserves. Some of them acquired their equity holdings near or at the top of the market, and having had inconsiderable capital profits to apply to reserve, and having distributed in dividends nearly the bulk of their income over the few years of their existence, they have exposed their investment portfolios to the full blast of the depreciation in security values. The shareholders of many of these post-war companies have thus been sharply reminded that investment managers do not work miracles, and that if time and the markets are not on their side the investment trust, by the mere process of "spreading" its holdings, does not afford them any magical security of capital and income.

In this article we propose to analyse the recently published accounts of five representative post-war investment trust companies. The Great Northern Investment is an independently managed Scottish trust formed in 1924. The English and New York Trust and the New York and General Trust were registered at the beginning of 1928, the first under the auspices of Robert Benson and Company, the second under the chairmanship of Lord St. Davids. The London Canadian Investment Corporation was formed in May, 1928, under the auspices of Wood, Gundy and Company, a well-known Canadian finance house, with Sir Herbert Holt as chairman. Finally, we have the London Stockholders Investment Trust, registered in October, 1928, with Mr J. R. Govett as chairman.

In its last report the Great Northern Investment merely declared that the market valuation of its invest-

ments exceeded the book value, but did not give the amount of the excess. The English and New York disclosed a depreciation on its investments (at cost) of 19.6 per cent, London Canadian a depreciation of 25.6 per cent., and London Stockholders a depreciation of 29.4 per cent. The New York and General was mute upon the point of market valuations. Particulars regarding these companies are shown at the foot of this page.

The question of depreciation in market values is intimately related to that of the distribution of holdings in the portfolios of the various companies. The following particulars, given by three of the five concerns, are of special interest:—

PERCENTAGES OF TOTAL INVESTMENTS.

	English and New York.	London Canadian.	London Stockholders.
Bonds	40.5	29.7	26.7
Preferred	24.5	18.2	32.8
Ordinary	35.0	51.1	40.5
	100.0	99.0*	100.0
U.S.A.	28.0	22.3	27.1
Great Britain	22.2	8.2†	16.0

* Approximately 1 per cent. was held in cash and call loans.

† British Empire outside Canada. Holdings in Canada represented 48.8 per cent.

If we assume an average decline of nearly 45 per cent. in "business" equity stocks between January, 1929, and December, 1930—based on the indices of the *Investors' Chronicle* for British equities (40 per cent. depreciation) and the Dow Jones indices for American industrials (50 per cent. depreciation)—the "average liability to depreciation" of the English and New York Trust, with 35 per cent. in ordinary stocks, would come out at about 16 per cent. or less, and the London Stockholders, with 40 per cent. in ordinary stocks, at 18 per cent. or less. This calculation assumes that the value of the holdings in bonds and preferred stocks would have remained constant or have appreciated, and that the depreciation in stocks other than those of the United States and Great Britain was of the same proportions as in the case of these two countries. The actual results show a larger depreciation than the "average liability" figures, but in view of the large element of approximation involved

* Not stated.

† Not shown, but the market valuation of investments is stated to exceed their balance-sheet valuation.

‡ Including amount of profit and loss account carried forward.

in the "liability" calculation, this fact cannot, of course, be interpreted as a criticism of the directors' policy. The case of the London Canadian is not comparable, for it was intended to have its centre of gravity in Canada. Its Canadian holdings actually represented 48.8 per cent. of the total. The "Investors" index of the Canadian Bureau of Statistics shows a decline in security values of 44 per cent. over 1930.

The revenue position of these companies is set out in the next table:—

Company.	Year.	Income after payment of interest.	Available for Ordinary	Per cent. Earned	Div. Declared.	To Reserve.	Carried Forward	Gross Revenue Investment.
English and New York.	1928	£ 17,042	£ 8,042	2.68	2 1/2	...	£ 2,042	3.58

	1930	249,709	133,124	8.24	6.67	...	30,228	4.44
Total of above	1930	246,610	119,903	7.42	6.59	...	36,225	5.38

* Formed May 8, 1928. † Formed October 24, 1928. ‡ Period May 8, 1928, to December 31, 1929. § Period October 24, 1928, to December 31, 1929.

In spite of the issue of debentures by the London Stockholders Investment and by the New York and General Trust the revenue of these two companies declined. On the other hand, the London Canadian was able to maintain its income at approximately the 1929 level, although its capital and loans remained the same. This company is in the happy position of having raised its capital at an average rate of 4.6 per cent. It will be seen that the earnings on its ordinary capital last year amounted to 9.7 per cent. As regards the dividend policies of these five companies, it will be observed from the above tables that the New York and General, London Stockholders and Great Northern did not actually earn the amounts they distributed. The greatest degree of prudence was shown by the London Canadian, which has not yet paid a dividend on its common shares.

Our final table gives the highest prices of the equity stocks of these companies recorded in 1929 and 1930, the present market prices, and the yields on earnings and dividends:—

Company.	High, 1929.	High, 1930.	Latest Price.	Earned %	Div. %	% Yield on Earnings.	% Yield on Divs.
English and New York	141	100	88	6.64	5	7.54	5.68
Great Northern Investment	305	237 1/2	202	8.16	9	4.04	4.45
London Canadian	£ 7 1/4	£ 2 1/4	17 1/2	9.71	...	6.47	5.88
London Stockholders	£ 1 1/4	21/-	17/-	4.63	5	5.45	...
New York and General	259	157	132	8.14	10	6.16	7.57

* No par value. Present issued capital represents 11/8 paid up per share.

We propose to supplement the analysis of these five companies with an examination of further reports, as and when they become available, before attempting to draw final conclusions regarding the record of post-war investment trusts. The results so far published, however, suggest that, while all allowance must be made for the exceptional difficulties of the present period, some of these companies have not shown, as yet, decisive evidence of exceptional wisdom in the management of investments. It is clear that, failing adequate reserves, the spreading of risks and distributions of holdings, common to investment trust practice, does not in itself afford adequate protection for the stockholders' capital in a share market depression. It should be remembered that investment trusts, being too large to operate in narrow markets and move in and out, are largely tied to the strings of their portfolios.

THE "WHEELER" BANKRUPTCY.

THE announcement, on Tuesday, that a receiving order had been made against Arthur Wheeler and Company, of Leicester, on the petitions of the two partners in the firm, created little stir on the London Stock Exchange, and failed to interrupt the slow but steady improvement in share values. Though the firm was much the largest "outside" stockbroking house in the country, Sir Arthur Wheeler, its head, had never held extended commitments on the Stock Exchange; his orders were taken up and paid for, as a rule, within one or, at most, two accounts—the firm's financing being effected in other quarters. During recent months the decline in public interest in many of the stocks sponsored by the firm had also tended to reduce its business with the Stock Exchange to a minimum.

Sir Arthur Wheeler based his nation-wide stockbroking business upon prolific postal advertising, his postage and printing bill being put in the neighbourhood of £20,000 a month. The firm, however, was scarcely a "bucket-shop" in the normal sense of the term. It did not charge excessive commissions, or deliberately attempt to foist upon clients shares in ventures which its principals believed to be unsound. Only on a *bona fide* basis could a business with a *clientèle* estimated at 50,000, and an annual turnover which may have run into seven figures, have maintained itself for so many years. Sir Arthur Wheeler, in fact, exemplified the uses of advertisement in a profession which has always resolutely set its face against broadcast publicity.

Sir Arthur Wheeler's activities, however, went beyond mere "outside" stockbroking. He was a company financier on an ambitious scale, and used his connections with investors throughout the country to market the securities he sponsored, which were generally of an industrial character. Many London houses maintained a conservative attitude towards Sir Arthur Wheeler's flotations, though none could be described as "ramps" even by unfriendly critics, and some achieved measurable success as profit-earners. Certain "Wheeler" shares, however, failed to obtain a really free market. Though the firm's "finance" business was very profitable—particularly during the boom of 1928-29—its activities, being based mainly on the *selling* of shares rather than on a normal "both-ways" business, left an exposed flank to the ill-effects of a severe investment depression like that of 1930.

It is understood that Sir Arthur's recent difficulties have been aggravated by his efforts to support the market for some of the shares in which he was interested. An unfortunate offer for sale of 499,000 shares of 10s. in J. Darnell and Son at 16s., made by the Gresham Trust, Limited, last October, is understood to have left him under the necessity of taking up a large amount of stock, and to have limited his ability to obtain credit in other directions. Thus Sir Arthur's flair for the placing of share issues, which brought him a baronetcy in 1920 for his services as a distributor of War Loan, proved his undoing when, in the end, it played him false.

It is too early as yet to assess the possible extent of the losses falling on the firm's clients, both directly and as a result of the depression in the value of "Wheeler" securities. The following table shows the recent movements of a number of these shares:—

Share.	Highest, 1929.	Highest, 1930.	Beginning Feb., 1931.	Beginning March, 1931.	March 4, 1931.
British Hosiery Trust (21/-)	22/6	21/9	17/6	15/1 1/2	15/1 1/2
J. Darnell (10/-)	...	...	16/-	12/6	12/6
Debenhams Securities, ord. (5/-)	16/7	11/2	5/-	4/9	4/-
Henry Glave, dtd. (1/-)	3/3	3/-	1/11 1/2	1/9	1/1 1/2
Gresham Trust, ord. (1/-)	4/9	4/6	1/6 1/2	1/6	1/6
Low Temperature Carb. (2/-)	3/6	2/-	1/1 1/2	1/-	5 1/2 d.

The Charterhouse Investment Trust has informed its shareholders that it is in no way connected with or involved directly or indirectly in the failure of Sir Arthur Wheeler's firm. The extent to which the firm's bankers are concerned will doubtless appear in due course.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
March 17.	March 19.

LAST week's more cheerful atmosphere continued this week, prices showing a measurable all-round improvement. A more hopeful view was taken of the outlook, both politically and generally. The carry-over from the last account was easily arranged, the open position in most cases being negligible. The position in Wall Street was regarded with some caution, but money conditions were a stimulating influence—particularly the strengthening of sterling. Sir Arthur Wheeler's bankruptcy had no adverse results on the Stock Exchange, except in the cases of concerns with which he is actively connected. News of the agreement between the Viceroy and Mr Gandhi caused an improvement in Indian shares.

Despite the March 1st disbursements, the gilt-edged market opened quietly, prices moving within narrow limits, with, however, an upward tendency. Later in the week, hopes were entertained that the Treasury deficit would not be as great as originally expected. Improvements were general, Funding Loan leading the way. Consols, both Old and New, gained appreciably. Slight profit-taking occurred on Wednesday, but little stock came on the market and prices closed firm. Mr Scullin's victory over the Left Wing in the Federal Parliamentary Caucus sent Australian bonds upwards, New South Wales 5 per cents. 1935-45 advancing by 10 points to 65. The market canvassed the possibilities of a general election following the deadlock reached between the Australian banks and Mr Theodore.

An improvement in the trade balance induced a little buying of Brazilians, another factor being the sinking fund operations. Argentines and Chileans were firm. The reassuring statement by the German Chancellor regarding the "Young" issue attracted a certain amount of attention to German loans. Chinese issues were firm.

In the Home Railway market the bears showed signs of nervousness. The report of the National Wages Board was awaited with a certain hopefulness. Prices, after going ex-dividend, maintained the previous week's gains. A bad week's traffic figures depressed prices slightly, but firmness again supervened on Thursday. Argentine rails hardened on satisfactory traffic returns from the Great Southern and Central Argentine. Dividend fears induced selling of North Americans, but Canadian Pacifics were firm on improved earnings for February.

In the industrial markets, conditions remained firm. Wall Street was uncertain. Columbias and Gramophones changed hands freely, but Brazilian Traction eased slightly. After initial firmness, Cables and Wireless became irregular. Engineering shares improved on a fair investment inquiry, Babcock and Wilcox leading the way. Motors were a mixed market, Austin and Napier being in moderate demand, while a slight falling off occurred in Fords. Electricity shares remained in the forefront, Egham and Staines being strong on the Metropolitan Electric's announcement of a "share-for-share" issue, and benefiting further by the publication of improved earnings by the City of London Electric. Courtaulds improved following the hopeful trend of the chairman's speech. The textile market showed a modest recovery, with Bradford Dyers and Cotton Spinners in the van. Breweries were in demand on a more hopeful interpretation of Budget possibilities, Guinness being particularly firm. Tobaccos showed to advantage, "Bats" and Imperial Tobacco closing appreciably higher. The newspaper section was uncertain, but became active as the week progressed. Harrods were helped by the chairman's speech and the acquisition of Shoobred's. Imperial Chemicals improved on the eve of the dividend declaration. Cuts in tyre prices caused a temporary recession in Dunlops. Banks were firm, Australians improving in sympathy with the Government stocks. Insurance shares obtained renewed investment attention.

Early in the week, Oil shares were quiet, on the cut of 2d. in the price of petrol, though an improvement appeared later. Paris and the Continent offered Royal Dutch and Shells freely in London. The improvement in the price of raw rubber was reflected by the market leaders, Trusts advancing sharply, while Anglo-Dutch and United Sua Betongs were better. Tea shares fell on the abandonment of the restriction scheme, mainly owing to dissatisfaction with the Dutch attitude.

Metal prices rose during the week, and a corresponding improvement was shown in share values. The public, however, evinced rather less interest in Kaffirs. Paris sold Rio Tintos in anticipation of a reported £2,000,000 debenture issue. "Johnnies" were quiet, but Modders were in demand, both in London and Johannesburg. London Tin were firm on the chairman's vigorous defence of the restriction scheme. Among Australian mines Lake View and Star had a slight fall on profit taking, but good news regarding work on equipment caused a sharp rise in Wilumas.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Wednesday saw the end of the Seventy-first Congress, which has not entirely covered itself with glory or, recently, provided the Stock Exchange with very many bull points. The tone of Wall Street was reactionary. Trading opened with a wave of profit-taking and renewed short-selling, induced partly by poor railroad earnings. A rally was initiated late on Tuesday, but further irregularity followed. Rails continued to be the cynosure of professional bear activity. The steel industry maintained its slow expansion, activity being reported at 53 per cent.

INVESTMENT

by L. L. B. Angus.

(Author of "The Coming Collapse in Rubber, 1926.")

The publication of this book marks a new epoch in the science of investment for profit; no speculator, investor, trustee or stockbroker can afford to leave this work unread.

CONTENTS.

- The Business Cycle and its influence on the prices of all securities.
- How to detect the beginnings and endings of booms and slumps in single industries.
- Methods of forecasting the short-run market fluctuations which occur simultaneously every few months in the majority of ordinary shares.
- Rules for timing both buying and selling and for taking profits and losses.
- Investment policy to be followed by Trustees at different stages of the Business Cycle.
- Mistakes to avoid.

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."
Daily Telegraph: "The best book that has ever been written on investment with a view to capital appreciation."

Publishers: Macmillan & Co., St. Martin's Street, London, W.C.1. 187 pages. Numerous charts. PRICE 20/-

of capacity, as compared with 52 per cent. last week. Hopes of a rise in the prices of steel products for the second quarter, however, are waning. The automobile industry has recently contributed largely to new steel orders. Utility stocks improved in mid-week, Congress rising without passing the Muscle Shoals Bill (which provided for virtual Government operation of the power resources there) over the President's veto. Oils lost ground, the industrial situation being regarded with uneasiness. Coppers responded only moderately to the increased price for the metal decided upon by American Copper Exporters. Broadly, while the February rise in share values was regarded as having run temporarily ahead of technical market factors, its resumption in the near future was fairly generally looked for. A Note on the trend of American company earnings appears on page 509.

PARIS.

During the first fortnight of this month the Paris Bourse had a much better tone. The end-of-January settlement gave the market a healthier appearance, while the measures taken by the Chamber Syndicale, which will tend to make potential bears a great deal more prudent, encouraged clients to purchase or repurchase. At the beginning of the second week a marked slowing-down of activity accompanied professional profit-taking, but good news from foreign centres and the better tendency of commodities affected markets favourably, and the resistance of share values was in no way weakened. At the settlement of the 15th, money was firm at ½ per cent. During the ensuing fortnight the market generally was rather hesitant, but apart from certain fluctuations in the non-speculative counters, movements were very limited, and declines, where they occurred, were small.

CANADA.

The Canadian stock markets have recently discarded, at least temporarily, their atmosphere of pessimism. They were dull and slack during the first week of February, but the upward movement in New York at once produced a sympathetic response. The "bear" forces were completely routed for some days. Much of the buying was of a speculative character, but a certain proportion came from genuine investors, who were convinced that the bottom had been reached. Substantial gains were recorded by market leaders like Brazilian Traction, International Nickel and Consolidated Smelters. Pulp and paper stocks, however, failed to participate, remaining under suspicion on reports that the newspaper publishers of the United States were bent upon forcing another cut in the price of newsprint. Oil stocks made a temporary display of strength, but traders showed little enthusiasm. The bond market remained very steady, a good deal of local money remaining available for investment in high-class bonds. The stocks of well-established gold mines continued to attract public attention, issues like Dome and Hollinger rising considerably.

INVESTMENT NOTES.

American Company Earnings in 1930.—The New York Stock Exchange has suffered the reaction which everyone anticipated after the steep advance of last week. A better feeling, however, remains, and in view of the extent of the "short interest" in the market it is considered likely that the reaction will not proceed very far, and that the upward trend will before long be resumed. The dangerous period for the "bulls" will be April and May, when the accounts for the first quarter of this year of the leading industrial companies will be published. If these reports are so disappointing as to give the impression that a trade recovery is another six months removed, the reaction in the stock markets may be as severe as that which occurred in April of last year. Meanwhile, the market is examining the reports of various industrial groups for the twelve months of last year. According to *Moody's Investors Service*, the net earnings of 744 corporations showed a decline of 23.2 per cent. in 1930 as compared with 1929, the totals being \$2,978.9 millions, as compared with \$3,880.5 millions. The Standard Statistics Company's analysis of the net earnings of 709 corporations showed a decline of as much as 35 per cent. as compared with 1929. According to Standard Statistics, the aggregate reduction in earnings, when all the corporation returns have been published, will amount to approximately 40 per cent. Some of the details of Moody's analysis are given:—

NET EARNINGS OF AMERICAN CORPORATIONS IN 1930 AS COMPARED WITH 1929.
(In Thousands of Dollars.)

Industry.	No. of Co.'s	1929.	1930.	Per cent. change in 1930.
Agricultural implements	3	27,752	17,584	-36.6
Amusements	3	19,984	22,312	+11.6
Automobiles and trucks	9	209,413	158,933	-24.1
Less General Motors	8	34,095	7,834	-77.0
Auto and aviation accessories	10	18,026	4,024	-77.7
Chain stores	9	63,744	57,785	-9.3
Chemicals	9	61,637	39,354	-36.1
Electric equipment	5	7,522	5,980	-20.5
Food products—				
Beverages	3	17,522	18,233	+4.0
Biscuit (National Biscuit Co.)	1	21,424	22,880	+6.8
Other baking	5	23,209	18,030	-22.3
Canning and preserving	2	3,915	1,637	-58.2
Food—miscellaneous	4	41,342	31,037	-24.9
Mail order	5	45,334	8,707	-80.5
Oil producing and refining	11	72,966	51,385	-29.6
Steel and steel products	12	341,826	162,870	-52.3
Tyres and rubber	7	36,041	1,917	-94.7
Tobacco—				
Cigarettes	3	55,564	61,873	+11.4
Cigars	6	12,712	8,584	-32.5
Light, power, gas and traction (11 months)	95	906,500	923,771	+1.9

Railroads have been analysed separately, the reports of sixty-three companies showing a decline of 44 per cent. in net earnings as compared with 1929. Generally speaking, American industrial earnings have not receded below the level of 1926-27, with the exception of those of automobiles and trucks, chain stores, mail order, oil producing and refining, tyres and rubber companies. Oil producing and refining, and steel and steel products are above the level of 1927 but below the level of 1926.

Stock Exchange Procedure.—Two important changes have been recently announced in Stock Exchange procedure. From Monday last the Share and Loan Department of the Stock Exchange has taken over the certification of transfers of the shares of all companies quoted in the Official List. This follows upon a recommendation of the sub-committee who investigated certain questions arising out of the Hatry failure, when the "trace" of bargains in some of the Hatry stocks revealed grave irregularities. Last year the Share and Loan Department took over the certification of transfers in respect of certain large industrial companies, while on January 2nd last the scope of its operations was extended to include all shares in the "Commercial and Industrial" section of the Official List. On January 29th it was announced that the whole of the companies in the List, from "Railways"

to the "Electric Light and Power" section, would come under the new arrangements. The latest announcement sets the coping stone on the change. The Stock Exchange Committee's decision on the "arbitrage" question (which was discussed in a leading article in the *Economist* of December 6, 1930) has also been embodied in a new rule (No. 200a). This lays down that the Committee may keep a register of non-member arbitrageurs, and may determine the qualifications necessary for entry, how applications for registration shall be made and the conditions upon which they will be accepted. A broker doing business for any arbitrageur on the register may charge not less than one-half the minimum scale of commission on all transactions stated by the arbitrageur to represent arbitrage business undertaken for his personal account, not being directly or indirectly business transacted by him as agent for any third party. Finally, a new clause (No. 2) has been added to Rule 90, dealing with the compulsory marking of bargains done with or between non-members, and a new form of marking slip has been circulated.

Restriction—Tea, Tin and Rubber.—Restriction is a strange mistress—ever disappointing, but never lacking new suitors. Within the last week the tea industry has cast her away, the tin industry has called the public to witness her nuptials, and the rubber industry, looking up in tatters from the street after six years of the lady's company, has sighed wistfully for former caresses. This week's decision to abandon the proposed extension of tea restriction over 1931 is not unexpected, in view of the dissatisfaction felt by many British growers at last year's disappointing results so far as the Dutch East Indies were concerned. Whereas Northern India actually reduced her crop last year by 11.30 per cent. (partly as a result of unfavourable climatic conditions), Southern India by 9.27 per cent., and Ceylon by 4.93 per cent., the reduction in Java and Sumatra was practically nil, against 6.30 per cent. agreed upon. The native grower, who now accounts for 25 per cent. of the total Java tea, was the main stumbling block in this, as in other restriction schemes. As regards tin, it was announced, last week-end, that a meeting held at the Colonial Office representing the four Governments concerned and other tin interests, had agreed upon the system of regulation to be adopted. The main points in the agreement were that the scheme should have effect from March 1, 1931, that the basic world tonnage should be taken at 145,000 long tons a year, and that initial quotas for the four restricting countries should be as follows:—Malaya, 53,853 tons; Bolivia, 34,260 tons; Dutch East Indies, 29,910 tons; and Nigeria, 7,750 tons. "Invariable" percentages based on these initial quotas were agreed upon as the ratios applicable to all alterations of the basic tonnage. In normal circumstances, the scheme is to operate for two years. The initial quotas are fixed for at least six months, and subsequently cannot be altered at shorter intervals than three months, while each of the Governments has agreed to allot its national quota among

HARRIS, FORBES & COMPANY LTD

77 CORNHILL, LONDON, E.C.3

GOVERNMENT, MUNICIPAL, RAILWAY, PUBLIC UTILITY, INVESTMENT TRUST AND INDUSTRIAL FINANCING

the individual producers concerned. The "timing" of the scheme may be altered by special agreement in urgent circumstances, and any participating Government which demands an alteration of the tonnage quotas may withdraw after six months if a unanimous agreement is not come to. These terms are being submitted for the approval of the Governments concerned. The scheme, it will be seen, does not include direct price control. No complete details have as yet been published of the arrangements by which it is proposed to protect consumers from "excessive prices." Experience of rubber restriction under the Stevenson Scheme showed that, in a rising market, three months may be a dangerously long period for rigidity of production. It is worth recalling that in the eleven weeks between May 9th and July 25, 1925, the average London spot price of rubber rose from 1s. 11d. to 4s. 5d.—an increase of no less than 130 per cent. Meanwhile, the action of the Dutch East Indian Government in sponsoring tin and sugar restriction has revived the agitation for the reimposition of restriction in the rubber industry. The Committee for the Protection of Interests of Dutch Rubber Producers—representing the growers—came over to London on Thursday to open discussions with British interests. So far, the Dutch Government has been adamant in its refusal to countenance rubber restriction in the Dutch East Indies, mainly on the ground that it cannot be effective, since half the acreage in the industry is under native control. It is understood that the basis of the present discussions is a plan advocated by Sir George Maxwell, based on a pivotal price of 9d. per lb., with a 25 per cent. restriction of exports when prices fall below this level, and a special export tax of, possibly, 10 per cent. on native production, which would otherwise be excluded from the plan. The market is sceptical of the success of the latest efforts, but speculative buying has raised the price of rubber this week from 3½d. to 4½d.

SALMON P. CHASE, Secretary of the U.S. Treasury under LINCOLN

Corporate Trustee Service

MATERIAL benefits are gained by appointing The Chase National Executors and Trustees Corporation to act as executor and trustee under your will.

These include continuous corporate life, varied financial experience and unquestioned responsibility.

Moreover, as a subsidiary of The Chase National Bank of the City of New York, the extensive facilities and wide experience of the bank as a whole are at the disposal of the executive officers of this corporation in the administration and settlement of estates; a decided advantage particularly where the estates include American or other foreign assets.

All the directors of this Corporation are officers of The Chase National Bank.

Write to the Management for full particulars.

**THE
CHASE NATIONAL
EXECUTORS AND TRUSTEES
CORPORATION, LTD.**

10 MOORGATE, LONDON, E.C.2

A subsidiary of The Chase National Bank of the City of New York.

Lower Petrol Prices.—The weakness of the oil situation in the United States, to which we referred in a leading article in the *Economist* of November 29th last, has at last found expression in a cut of 2d. per gallon in the price of petrol in this country. This was announced by the Shell, Anglo-American, Anglo-Persian and National Benzole Companies this week, and was immediately followed by a similar cut in the price of Russian petrol. There is no doubt that the cut was overdue. The last reduction was made in September last year, when the retail price was reduced by 2d. from 1s. 6½d. per gallon. Since that date the bulk price of petrol ex refinery in Oklahoma has fallen by nearly 40 per cent. At the same time, tanker freight rates have fallen by another 2s. a ton, being now at the rate of 10s. per ton of oil carried from the Gulf to Continental ports, as compared with 30s. per ton at the beginning of last year. Seeing that petrol of commercial grade can be purchased in America and delivered in bulk at United Kingdom ports at 3d. to 3½d. per gallon, it is not surprising that there has been a considerable increase in the marketing of petrol by independent American companies in opposition to the national distributors in this country. The City Service Company, the Texas and the Sinclair are the leading American independent companies which have invaded the British market, undercutting the combine prices by 2d. or 2½d. per gallon. The changes which have been made in the "combine" price of petrol in the last two years have been as follows:—

Date of Change.	Retail price per Gallon, English Area.		Amount of Change.
	s.	d.	
March 1, 1929	1	7	+ 2½
November, 1929	1	6½	— 0½
September 23, 1930	1	4½	— 2
March 3, 1931	1	2½	— 2

Russian petrol is still selling at 2½d. below the combine price. Since the beginning of this year there has been a further deterioration in the American oil situation. The output of crude oil has increased; stocks of gasoline have risen and a new shallow oilfield discovered in East Central Texas is threatening to upset the existing balance between crude oil supply and demand. Some of the principal American refiners agreed last year not to stock up gasoline during the winter months, as is their winter practice, but to reduce the total stocks of gasoline to 40,000,000 barrels by next April. Nevertheless, refinery stocks have increased last month from 39,780,000 barrels to nearly 43,000,000 barrels at the present time. The best that can be said is that present stocks are some 7,000,000 barrels less than stocks on hand a year ago. That the large oil companies in America take a serious view of the prevailing over-production is evidenced by the cut of 2 cents per gallon in the retail price of gasoline in California this week.

Cotton Textile Conditions.—Faced with the first trading loss in the history of the Bradford Dyers Association, Sir Thomas Robinson gave an informative, but gloomy, analysis of the position of the textile industry at the company's recent annual meeting. In the course of his speech, he pointed out that England had seen normal or even boom conditions in foreign textile industries during the last ten years, when Lancashire and Yorkshire had been suffering from shortage of orders. The world economic troubles of 1930, he declared, had merely added to the more permanent burdens of the textile industry. If the average export of cotton piece-goods for the five pre-war years were taken as 100, exports for 1930 were down to 37.4 per cent., against 56.5 per cent. in 1929, and 59.5 per cent. in 1928. At the same time, the exports of woollen and worsted tissues for 1930 were only 68.7 per cent. of the average exports for the three preceding years. At the head of the temporary adverse factors, Sir Thomas cited the disturbance of the Indian market by political dissensions; the reduced purchasing power of Java and Malaya following the slump in rubber and tin; the decline of the Dominion markets; the unrest in the South American republics, and the decay of Chinese business which accompanied the fall in silver. Factors of a more

permanent nature were the extension of foreign domestic manufacture under shelter of tariff walls, and the heavy burden in this country of taxation, social services and relatively high wages. Few people would quarrel with the main features of Sir Thomas' diagnosis, but there is no reason to believe that the historical decline of British textiles during the post-war years could not be arrested by a united effort by the industry to put its house in order.

Further Electricity Supply Company Results.—In the *Economist* of last week the results of eight electricity companies were discussed in the light of current tendencies. The reports of seven additional companies are now available, and from the table which we give below it will be seen that the upward trend of profits is well maintained.

Name of Company	1928.				1929.				1930.			
	Net Profit.		Ordinary.		Net Profit.		Ordinary.		Net Profit.		Ordinary.	
	£	%	£	%	£	%	£	%	£	%	£	%

* Earned per cent. not calculated as depreciation and reserve not separated.

Six out of seven companies record an advance in net earnings, varying from a few thousand pounds to over £80,000. The Isle of Thanet Electric Supply alone announces a small decline. In the aggregate, the net profits of the seven companies have advanced by £178,100 compared with the results for the previous year; but in every case the ordinary distribution remains the same.

Cammell Laird.—The directors of this Birkenhead ship-building and engineering concern announced on Wednesday a profit of £28,083, after charging depreciation and paying debenture interest. This amount compares with a profit of £11,810 for the previous year. Once again no dividends are to be paid on the 5 per cent. preference and ordinary shares, and the credit balance of £43,889 is to be carried forward, compared with £16,931 a year ago. The preference dividend is now in arrears since 1924, and nothing has been earned on the ordinary capital since 1924, or paid since 1922. In June last debenture holders approved the adoption of a scheme by which the date of repayment of the 5 per cent. and 4½ per cent. debenture stocks, which otherwise fell due on July 1, 1930, should be extended for a period of five years, the rate of interest in each case being increased to 5½ per cent. As long as any part of these stocks remains outstanding no dividend will be paid to the shareholders of the company.

London Tin Corporation.—Comparison between the accounts of the London Tin Corporation for the years ended September 30, 1929 and 1930, respectively, is rendered difficult, if not impossible, by reason of the amalgamations which were concluded at the end of 1929. In addition to the acquisition of various tin-producing companies in Nigeria, the corporation absorbed two financial companies of the Anglo-Oriental group, namely, the Tin Selection Trust and the London and Malayan Tin Trust. These amalgamations were doubtless fully justified as part of the rationalisation of the Anglo-Oriental group, and in making the exchange of shares between the London Tin Corporation, the Tin Selection Trust and London and Malayan Tin Trust, the oppor-

tunity was taken of writing down a good deal of non-redeemable capital. The London Tin Corporation has now an issued capital of £2,597,105 in £1,305,775 7½ per cent. cumulative participating preference shares of 10s., and £1,291,330 ordinary shares of 10s., as against a capital on September 30, 1929, of £694,000. The corporation now declares a net profit of £274,290, as against £137,035 in the previous year on the smaller capital, the total being divided as to £133,795 in respect of profits on tin ore sales and £175,616 in respect of dividends, commission, transfer fees and net profits on investments. The results for the past three years compare as follows:—

	1927-28.	1928-29.	1929-30.
Average capital for year	£ 383,425	£ 550,000	£ 2,586,835†
Net profit (subject to tax)	193,354	137,035	274,290
Preference dividends	...	...	19,541
Ordinary { Earned	50.43%	24.92%	...
{ Paid	40%	20%*	Nil
{ Amount of dividends	160,000	88,000	Nil
Reserves	Nil	54,223	70,000
Written off	...	...	25,847
Carry forward	60,432	38,462‡	97,966

* Further 10 per cent. scrip dividend was distributed in preference shares.

† Actual issued capital at September 30, 1930.

‡ Less income tax and directors' additional fees.

The directors have wisely decided to conserve their cash resources by passing the dividend on the ordinary shares. The reserve accounts have now been re-arranged so as to make each reserve approximately 20 per cent. of the book value of the relative assets. The investment reserve account stands at £500,000, properties amortisation account at £150,000, depreciation reserve account at £50,000 and general reserve account (after allowing for the allocation this year) at £150,000, making a total of £850,000. The voluminous report discloses several interesting facts. In Nigeria the output of the corporation's mines is restricted to 68 per cent. of the normal and production costs have been reduced to £56 per ton concentrate free on rail, mainly as a result of the regrouping of the various producing units and the provision of hydro-electric power from the Nigerian Electric Supply Corporation's station at Kurra Falls. The Associated Tin Mines of Nigeria, Ltd., of which the company is the largest shareholder, has reduced its costs to £60 per ton concentrate, its output being 55 per cent. of normal. At this week's meeting, the chairman, Mr John Howson, vigorously defended the policy of tin restriction, but admitted that he regarded it as a temporary policy and considered the expansion of world demand a more important and lasting factor.

Baltimore and Ohio Railway.—The Baltimore and Ohio Railway last year suffered a drop in operating revenue as compared with 1929, from \$245,418,776 to \$206,660,436, the decline thus being 15.79 per cent. Some \$7 millions less was spent on maintenance of way and structures, and \$10 millions less on maintenance of equipment. The total operating expenses declined by 15.19 per cent.—from \$180,570,034 to \$153,142,375—and, after deduction of all charges, net income was \$21,423,770 against \$28,767,908.

Head Offices:
LIVERPOOL and LONDON.

The common stock, however, received an extra $\frac{1}{2}$ per cent. :—

	Year to December 31,		
	1928.	1929.	1930.
	£	£	£
Net earnings	29,100,931	28,767,908	21,423,770
Dividend on 4% preferred stock	2,354,528	2,354,528	2,354,528
Common stock :—			
Earned %	12.43	10.30	7.43
Paid %	6	6½	7
Amount	12,911,275	15,367,783	17,940,687
Surplus	13,835,128	11,045,597	1,128,555

The total accumulated surplus of the company now stands at \$109,861,329, a decrease of \$4,607,457 compared with last year. During the year the company acquired all the \$16,834,000 twenty-year 6 per cent. gold bonds and more than 96.50 per cent. of the \$22,000,000 fifty-year 3½ per cent. gold bonds of the Chicago and Alton Railroad, at a cost of approximately \$23,000,000. The purchase, which is in accordance with the plan of the Interstate Commerce Commission for the consolidation of railroads, has placed the Baltimore and Ohio in a potential position to acquire the whole of the property, subject to underlying funded indebtedness and claims aggregating about \$50,000,000. Other acquisitions are also reflected in the balance sheet.

Modder B.—Our mining correspondent writes:—In last year's "Note" the conclusion was arrived at that this company's 5s. shares, at the then quotation of 14s. 6d., were fully valued. The present price is about 11s. 6d. During 1930 a somewhat increased tonnage of ore was crushed at a lower cost ratio, but owing to decline in grade the working profit showed a reduction of £31,200. Miners' phthisis absorbed £17,770, against £18,240, and taxation £67,490 in place of £81,770. Maintenance of the dividend at the rate paid for several preceding years involved a draft of nearly £46,000 upon the carry-forward :—

Year ends December 31.	1928.	1929.	1930.
Ore milled (tons)	830,000	836,000	840,000

* Including forfeited dividends and credit on capital account.

Despite the performance of an additional 2,020 feet of development work, the ore reserves display a shrinkage of 293,600 tons, the average being also 0.34 dwt. lower. Values on the Main Reef header were "satisfactory." Prospecting on the upper headers failed to open up any payable material, although a large tonnage of low-grade ore will become available for reclamation. Negative results attended three boreholes put down from the surface to test the main reef series in the area adjacent to the north-eastern boundary of the property (i.e., in the direction of the Modder East). Prospecting on the South Reef, both by cross-cutting and drilling, also proved so disappointing that work was discontinued. Summarising the prospects, the consulting engineers observe "it is unlikely that the profits can be maintained at the average of recent months." The one bright spot consists in the strength of the financial position, the surplus assets amounting to £291,050.

New Capital Issues in February.—In the following table we show the new capital raised in London by issue to the public or shareholders, in February, and in recent years :—

	(000's omitted.)			
	United Kingdom.	British Possessions.	Foreign Countries.	Total.
Monthly Average.	£	£	£	£
1924	7,051	6,023	4,370	17,444
1925	12,918	5,077	1,356	19,351
1926	10,765	4,431	4,036	19,232
1927	17,240	8,318	4,039	29,597
1928	21,965	5,263	3,526	30,754
1929	16,502	5,081	2,186	23,769
1930	14,220	5,121	2,975	22,316

	Monthly Total.				
	Govt.	Other.			
	£	£			
January, 1930	500	9,033	1,671	2,785	13,989
January, 1931	1,800	6,331	118	Nil	8,249
February, 1930	350	13,034	9,065	Nil	22,449
February, 1931	2,450	4,368	13,705	50	20,573

Capital issues last month were of much the same dimensions as a year ago, but their distribution showed numerous significant changes. Sales of National Savings Certificates exceeded encashments by as much as £2,450,000. Only one Government issue was made during the month, namely, the Government of India 5½ per cent. loan of £12,000,000, issued at £97 and redeemable in 1936-38. The Surrey County Council raised £1,500,000 in 4½ per cent. stock at £99, and the Reading Corporation £700,000 in 4½ per cent. stock at £99½. Of the ten industrial flotations of the month only one was available for public subscription, the London and National Property offering £2,000,000 in 5 per cent. debentures at £99. The Calcutta Electric Light and Power Company, which offered £300,000 £1 ordinary shares to shareholders at a premium of 11s., made the only important issue of ordinary shares. The Rhodesian Anglo-American, Ltd., offered shareholders £1,500,000 in 7 per cent. ten-year notes at par.

Amsterdamsche Liquidatiekas.—Our Amsterdam correspondent writes:—The accounts of the Amsterdamsche Liquidatiekas for the year 1930 reveal a marked decrease in profits due to the lower rate of interest and losses on debts. Gross profit totals Fl. 1,180,000, against Fl. 1,404,000 for the previous year. Net profit at Fl. 630,000 compares with Fl. 858,000 for 1929.

	1930.	1929.	1928.	1927.
Gross profit	1,180	1,404	1,325	1,328
Depreciation on debtors	210	200	...	...
Reserves	...	...	109	122
Operating expenses	340	346	343	331
Net profit	630	858	873	875
Dividend	6%	7½%	7½%	7½%

The capital of the company amounts to Fl. 8 millions. Loans on securities total Fl. 25,571,000, against Fl. 33,019,000 in 1929. Creditors and deposits have fallen from Fl. 11,196,000 to Fl. 10,523,000. The dividend on common shares is reduced from 7½ per cent. to 6 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: London Midland and Scottish Railway, Refuge Assurance, Scottish Widows' Fund and Life Assurance Society, Sun Life Assurance Company of Canada, Prudential Assurance, United Kingdom Provident Institution, United States Debenture Corporation, Midland Counties Electric Supply, Harrods, Leyland Motors, London Tin Corporation, Maple and Company, Maidenhead Brick and Tile, and B. Morris and Sons. At the meeting of the Midland Counties Electric Supply Company the chairman informed shareholders that they had connected 7,072 new consumers during the year, bringing the total up to 33,253, while their output had increased by nearly 9,000,000 units to a total of 174,500,000. Presiding at the annual meeting of Harrods, Sir Woodman Burbidge said that in one week in January cash sales had amounted to £144,192 and sales to account customers to £330,986, totalling £475,178, which he believed to be the largest sum taken in any one week by any retail store in the world.

CAPITAL ISSUES.

Though various new issues are in prospect (including a rumoured Nigerian issue and an offer on behalf of Fortnum and Mason, the foreign warehousemen and grocers), the inactivity of the market was broken this week only by a single offer, that of the *National Canning Company*. The company is taking over an established business formed shortly after the war, with the co-operation of large fruit growers at Wisbech. The operating company's profits have grown since the twelve months ended May 31, 1928, from £8,688 to £41,162 in 1929-30, and were £17,980 in the half-year ended November 30th last. The factory has been extended and the new plant will be in full production in the coming season. A fair proportion of the issue was placed firm before the public offering by the British Shareholders Trust. The issue was over-subscribed, applicants up to fifty shares receiving allotment in full and the largest subscribers only about 10 per cent.

EXCERPTS FROM THE ANNUAL REPORT OF THE AMERICAN TELEPHONE AND TELEGRAPH COMPANY FOR 1930.

The depression which affected business in general during 1930 inevitably affected the telephone business, but not in a way or to an extent to disturb the fundamental objectives of the Bell System. It has been able to continue to improve and extend telephone service.

There was a net gain in the number of telephones installed of 122,500 which compares with 821,400 in 1929. The total number of local telephone conversations was 2 per cent. and the total number of toll and long-distance conversations was 1 per cent. above 1929.

Average investment in plant and other assets of the System increased 14.5 per cent. Total assets at the end of the year amounted to \$5,000,195,000.

Total operating revenues of the System exceeded those of 1929 by \$33,000,000, or 3 per cent. The property has been fully maintained and full depreciation charged. Current maintenance and depreciation charges were \$29,000,000 more than in 1929. Total operating expenses, including these charges and taxes, increased \$43,000,000. The net earnings were \$267,874,000, which is \$8,800,000 less than in 1929 and at the rate of 5.8 per cent. on the cost of plant and other assets.

The number of stockholders of the American Telephone and Telegraph Company at the end of 1930 was 567,694, an increase of 97,893 for the year.

During the year 2,579,407 shares of stock of this Company were offered to stockholders of record May 23rd and 2,061,897 shares were issued in exchange for convertible bonds. This resulted in an average number of shares outstanding of 15,856,696 as compared with 13,113,746 in 1929. The earnings of the Company per average share outstanding were \$10.44 compared with \$12.67 in 1929.

Confident of the continued economic growth of the country and the even more rapid growth of the telephone business, more than \$15,000,000—which is somewhat in excess of any previous year—was spent for development and research for future improvements, and expenditures for additions, betterments and replacements amounted to \$585,000,000, substantially the same as in 1929 which had the largest construction programme for any year in the history of the System.

In order to operate the business with the maximum efficiency and economy in the long run, these programmes looking in part to the future were undertaken and the resulting expenses incurred in a time of depressed business.

The management of the Bell System has been guided during 1930, and will continue to be guided by the policy stated in 1927:—

"The fact that the ownership is so widespread and diffused imposes an unusual obligation on the management to see to it that the savings of these hundreds of thousands of people are secure and remain so. The fact that the responsibility for such a large part of the entire telephone service of the country rests solely upon this company and its associated companies also imposes on the management an unusual obligation to the public to

see to it that the service shall at all times be adequate, dependable and satisfactory to the user. Obviously, the only sound policy that will meet these obligations is to continue to furnish the best possible telephone service at the lowest cost consistent with financial safety. This policy is bound to succeed in the long run and there is no justification for acting otherwise than for the long run."

The construction programme of 1930 was planned to take care of the growth of the business, and to carry forward betterments and replacements, such as the change from manual to dial operation, and the change from open wire to cable lines. These were normal. Added to this, in 1930, the System constructed plant beyond that necessary for immediate use to provide a greater margin than had existed since the war. Experience with rapid expansion in boom times has indicated the wisdom and economy of putting in a margin of plant in slack times.

Three hundred new buildings and major additions ranging from small one-storey structures to modern large combination administration and equipment buildings involving expenditures of \$60,000,000 were completed during the year.

Some 5,000 miles of additional toll cable were put in use, or one-fourth of the cable mileage in service at the beginning of the year. Seventy-five per cent. of the cities of 50,000 or more inhabitants are now connected with the toll cable network.

The full economies of mass production cannot be had in telephone service, and as the number of telephones in towns and cities grows, it would cost more to give each subscriber access to a constantly increasing number of telephones in his exchange area, if the technical development of the art did not balance these increased costs. There appears to be no reason in sight why the continued new economies brought about by development in the telephone art should not offset this general tendency toward higher costs which otherwise would accompany extension of the service.

Service Improvements and Extensions.

In the last five years the per cent. of Bell System toll wires in cables has risen from 58 to 77 per cent. This transition from open wire is continuing and means not only greater security against interruption by storms but better transmission.

The year 1930 set a new record in accuracy and speed of telephone service, partly due to the larger margins of plant, but in large measure to improved operation.

The rapidity with which long-distance calls were completed continued to increase during the year. The per cent. of calls handled without the person making the call hanging up the telephone was 82 in 1930, as compared with 70 per cent. in the previous year. There have also been improvements in the standards of transmission. These transmission improvements, being gradual, do not catch the public attention,

but they greatly increase the ease and comfort of telephoning and decrease the amount of repetition in telephone conversation.

About one-half of the telephones installed in 1929 were put in under the appointment plan, by which the subscriber sets the day on which he wishes the telephone to be installed. During 1930 more than 83 per cent. of the telephones were put in under this plan and 96 per cent. of the appointments were met.

As the result of improved methods and improved administration and training, the telephone plant is increasingly free from trouble. In 1930 there was trouble on a subscriber's line on the average only once in every 22 months as compared with once in every 20 months in 1929. Also 90 per cent. of the troubles are corrected on the day reported, as compared with 87 per cent. in 1929.

The net gain of 122,500 telephones in spite of general business conditions was in part due to the creation of special sales forces and the fact that over almost all of the System the general body of employees were trained to act as sales representatives while attending to their other duties. In many districts nearly every employee sold one or more of the many forms of telephone service.

Since January 1, 1930, service from the United States has been opened to some 1,350,000 additional telephones in Eastern and Southern Europe, to more than 450,000 telephones in Australia, and to about 400,000 telephones in South America and Mexico. Work was started on a short-wave radio transmitting telephone station at Dixon, and a receiving station at Point Reyes, California, designed to talk with Hawaii and with ships at sea, and later, if arrangements can be made, with the Philippines, Alaska, Japan and China. Work is also under way on radio telephone channels to Bermuda and Brazil which will be completed during 1931.

In January, 1927, the United States had telephone connection only with Canada, Cuba and the Mexican border. To-day practically any telephone in the United States can be connected with any one of 32,200,000 out of 35,300,000 telephones in the world.

Telephone calls across the Atlantic in the four years since such service was started have increased six-fold. In addition to the original long-wave radio telephone channel, there are now three short-wave channels. The experimental lengths of the proposed transatlantic telephone cable which have been built and tested confirm the work of the Bell Telephone Laboratories, where the new alloys and insulation necessary for such a cable were developed and where the design of the cable was made.

Financial.

In January 1930 the American Telephone and Telegraph Company sold \$150,000,000 Thirty-Five Year 5% Gold Debentures dated February 1, 1930.

On April 16 the Company offered its stockholders of record May 23rd, one share at par for each six shares of stock held. The subscriptions to this offer provided \$241,895,832 for the Company's treasury during 1930, and will provide an additional amount of approximately \$16,000,000 during 1931.

The conversion privilege of the Ten-Year Convertible Gold Debenture Bonds dated July 1, 1929, became effective on January 1, 1930. From January 1 to May 23, 1930, the bonds at face value could be exchanged for stock at \$180 a share, and thereafter until December 31, 1930, at \$166.88 per share. By the end of the year \$206,189,700 of face value of bonds had been converted into stock by about 130,000 bondholders, yielding the Company cash premiums of \$164,855,341. Only \$12,923,000 face value of these bonds remained unconverted at the close of the year. During 1931 the conversion price, subject to adjustment as stated in the indenture, is \$175.46 per share.

On September 30, 1930, the American Telephone and Telegraph Company bought the Teletype Corporation by

exchanging 150,000 shares of its own stock for the 150,000 shares of Teletype Corporation stock. The shares of Teletype Corporation stock have been sold to the Western Electric Company.

The Company has called for redemption on March 1, 1931, at face value, all outstanding 4½% Convertible Gold Bonds dated March 1, 1913, and due March 1, 1933. At the end of the year \$1,870,800 of these bonds were outstanding.

During the year 313,020 shares of this Company's stock were issued under the Employees' Stock Plan to Bell System employees upon completion of instalment payments extending over a period of about three and one-half years. At the end of 1930 payments were being made under this plan on about 1,640,000 shares. In furtherance of the Company's policy to encourage thrift, the plan has been amended to permit employees to apply dividends from shares owned that were acquired under employee stock plans toward the instalment purchase of additional shares of stock under the plan. To help those who might have unusual personal obligations arising out of the general business situation, employees purchasing stock under the plan were notified on December 1, 1930, that they could suspend their instalment payments for a definite period of six months. Of the 320,000 employees purchasing stock, about 5,000 have availed themselves of this privilege.

During the last ten years the capital obligations of the Bell System in the hands of the public have about trebled. They were \$1,107,417,000 on December 31, 1920, and \$3,271,619,000 on December 31, 1930. During that period the bonds and other debt decreased from 54 to 34 per cent. of total capital obligations, while the number of stockholders increased more than 300 per cent.

The number of stockholders of this Company at the end of 1930 was 567,694. The average number of shares held by a stockholder is 32, with no single individual holding as much as 1 per cent. of the total capital stock. Of the total number of stockholders more than 100,000 are Bell System employees, with an average holding of about ten shares each.

It is the aim of the Bell System to maintain its employee forces on as even a basis as possible, for that is equally advantageous to the employees and to the efficiency of the organisation. It is likewise the aim of the Bell System to offer employment on a basis that will enable its employees to meet the vicissitudes of life with the maximum assurance possible. The Bell System pays sickness, accident and death benefits, and pensions. The employees do not contribute to these payments, which amounted to \$7,803,000 in 1930.

At the same time, to aid employees in providing for themselves for a higher degree of economic security, all of the companies of the System have thrift plans to encourage employees to save. These plans include the opportunity to buy stock of the American Telephone and Telegraph Company by deductions from salary, an arrangement for depositing salary deductions in savings banks and an arrangement for using salary deductions for the payment of life insurance premiums. The use of any of the plans is left entirely to the discretion of the employee, and more than 80 per cent. of all employees participate in one or more.

Under these plans in the year 1930 the employees of the Bell System, including the Western Electric Company and the Bell Telephone Laboratories, saved about \$70,000,000, or 10 per cent. of the payrolls. (In 1929 the amount saved was about 8 per cent. of the payrolls.) The money thus saved can be kept or spent for meeting the emergencies of hard times, the education of children, the building of a home, supplementing pension payments after retirement, or for any other purpose which the employee may consider best serves his or her need.

Although not appearing on the balance sheet, the greatest asset of the Bell System is the skill, energy and character of the hundreds of thousands of men and women who make up its organisation, who have during the past year rendered a more efficient service than ever before.

COMPANY MEETINGS, &c.

LONDON MIDLAND AND SCOTTISH RAILWAY COMPANY.

EFFECTS OF TRADE DEPRESSION ON RECEIPTS.

LARGE REDUCTION IN WORKING EXPENSES.

SIR JOSIAH STAMP'S INTERESTING REVIEW.

The eighth annual general meeting of the London Midland and Scottish Railway Company was held at Euston Station, London, N.W. 1, on Friday, February 27, 1931, Sir Josiah Charles Stamp, G.B.E. (chairman of the company), presiding.

The Secretary (Mr Owen Glynn Roberts) having read the notice convening the meeting,

RESULTS OF THE YEAR'S WORKING.

RAILWAY TRAFFIC RECEIPTS.

The Chairman, in moving the adoption of the report and accounts, said:—Not only in Great Britain, but throughout the world, last year was one of extremely bad railway traffics as a result of the world-wide depression in trade. While, as compared with 1929, the loss of receipts in this country was not so severe as abroad, it has to be remembered that we have been comparing with a series of bad years, due to the position at home, and the combined effect was to make 1930 probably the worst year since the opening of the railways constituting our undertaking. While all the British railways suffered, our undertaking suffered most, owing to its predominating interests in Lancashire, Lanarkshire and the Northern industrial area. Not only was there a heavy loss in merchandise traffics, but the extensive unemployment, with its reduction of spending capacity, caused a further severe decline in passenger receipts. I have tried to show the effect of this depression on railways by a percentage graph for the United States, Germany and the L. M. S. Company.

As will be seen from the financial statement, the total decline in railway receipts was nearly £5,000,000, and, if we compare with 1927, the decrease amounts to £9,600,000—or about 12½ per cent.

To some extent the loss in the year of £5,000,000 was mitigated by a reduction in working expenditure of just over £2,000,000, or 40 per cent. of the loss in traffic—a reduction which represents a tremendous effort when regard is had to the very large proportion of railway expenditure which does not change with the volume of traffic. The reduction follows the substantial savings in the two previous years, and, compared with 1927, amounts to £5,500,000. Your directors would like to acknowledge the heroic efforts of their officers in these most difficult times.

There are some who talk scoffingly of railway economies, but a reduction of railway expenditure from the rate of £67,000,000 per annum immediately before amalgamation to £56,000,000 in 1930 is a very considerable achievement, especially as two-thirds of the 1930 expenditure was for labour and the rates of wages have not fallen materially. This economy was accompanied by a marked improvement in the service afforded to the public, and without a reduction of the standard of maintenance and safety.

SUBSTANTIAL SAVING UNDER EACH HEADING OF EXPENDITURE

Comparing 1930 with 1929, it will be seen that, under each heading of expenditure, there has been a substantial decrease, and, very broadly, this is made up of £900,000 for maintenance, £1,000,000 for operating and £200,000 for other expenditure. To some extent these savings reflect lower prices, though in some cases, such as coal, prices were higher than in 1929, and to some extent they represent the natural effect of reduced traffic. The important factor, however, because of its permanent nature, is the fructification of economies which have been rendered possible by heavy expenditure on renewal and modernisation of the company's plant and equipment.

With this general reduction in expenditure it would be invidious to refer to particular sections, but I wish again to make clear that our renewal policy has not been departed from, and the maintenance expenditure continues to be charged with provisions for renewal of wasting assets on the same definite basis as before.

Deducting the saving in expenditure from the loss in receipts, there is a reduction in the net railway receipts of £2,873,000, and if you will follow the table before you, you will see that the other businesses have had varying fortunes.

BOARD'S DIVIDEND POLICY

Your board gave very close consideration to the rate of dividend on the ordinary stock to be recommended to you. They had to balance the desirability of continuing a dividend of not less than 3 per cent., because of its possible effect upon the Trustee status of the prior stocks, against the undesirability of making the very large call, which would have been necessary, upon the general reserve fund for 1930, and possibly for the year 1931 also, failing a great improvement in trade and favourable issues from the present proceedings in regard to the labour rates and conditions of service. The importance of conserving the general reserve in the interests of all classes of stockholders was overriding.

On the actual results of the year's working a dividend of a little over 1 per cent. could have been paid, as the profits on investments and the income-tax adjustment mainly arose in 1930. It was felt, however, that the ordinary stockholders of the company, who have suffered severely by the course of trade in recent years, were entitled to receive some further payment, and, after very full consideration of the position, the recommendation to make a payment for the year of 2 per cent. was decided upon.

ROYAL COMMISSION ON TRANSPORT.

The Final Report of the Royal Commission has now been issued, and deals with co-ordination and development of transport.

I would like to pay a tribute to the manner in which the Commission have handled the vast and complicated question remitted to them. Their report is most valuable, and the views expressed about the railways will receive the careful attention they undoubtedly call for.

In general, I may say that the only points on which we consider there is much more to be said are those where, without taking specific evidence from the railways, adverse conclusions have been reached. Perhaps I may refer briefly to one or two. I preface my remarks by expressing the appreciation we all feel of the very full recognition accorded railway companies of the services they have rendered, and are rendering, to the country.

QUESTION OF SPEED.

I take first the statement that, practically speaking, there has been no improvement in locomotive speeds during the last 80 years. This question was not raised when I was before the Commission giving evidence for the railways, and I do not think they would have expressed themselves quite in that form had they had the full facts before them.

The Commissioners appear to have come to their conclusion on certain information regarding one or two trains 80 years ago, and, even if the facts are right regarding these, they are hardly adequate data to apply to the 12,000 or 13,000 trains we run daily—even in the winter months. They also entirely ignore the fact that the trains of 80 years ago are not comparable with those of modern times. In regard to weight, comfort of passengers, safety, etc., the trains of to-day are as different from those of 80 years ago as are the motor cars of 25 years ago from those of to-day, but I will continue to confine my remarks to the question of speed.

PRESENT AND PRE-WAR EXPRESSES.

In the summer of 1930 there were on the L. M. S. 35 express passenger trains running daily distances of upwards of 100 miles without a stop, including the two non-stops of 300 miles between Euston and Carlisle, whilst the fastest scheduled speeds between the following points ranged from:—

55.53 m.p.h., 10.0 a.m., Liverpool to Euston, between Mossley Hill and Euston.

56.04 m.p.h., 10.40 a.m., Euston to Liverpool, between Euston and Stafford; to

59.18 m.p.h. between Willesden and Birmingham with the 9.10 a.m., Euston to Wolverhampton;

to quote only three trains.

For general travel I would instance that 33 trains between London and Birmingham, Liverpool, Leicester and Kettering had a lower average running speed in 1913 than the 53.78 miles per hour of 40 trains in 1930.

The longest non-stop in the summer of 1913 was the 11.10 a.m., Euston to Rhyl, a run of 209 miles. We now have several trains with an average non-stop run of 265 miles over the western section of our railway.

In the face of these particulars it cannot be said that this company has had no regard to the speed of express passenger trains.

As regards our performances compared with other countries:—The distance from Chicago to St. Paul's is 410½ miles, and the speed of the fastest train is 39.4 m.p.h. From Berlin to Munich, 418½ miles, the fastest speed is 46.5 m.p.h.

With the L. M. S. "Royal Scot" from London to Glasgow, 402 miles, the average speed is 48.7 m.p.h.

RAIL AND ROAD TRANSPORT.

In 1928 we acquired our road powers, in 1929 we made our financial arrangements with the chief existing interests, and in 1930 the progressive policy of co-ordinating railway and road passenger transport throughout the area of the L. M. S. system has been firmly begun. There are now few of our districts, other than London, in which we have not a measure of common interest with the principal omnibus operating companies, and where the railway and road officers are not in close collaboration in regard to traffic arrangements to ensure the most effective employment of the joint resources.

At 570 places inter-availability of tickets has been established between the railway services and our associated omnibus services for local journeys, and combined road and rail tickets have been introduced in a number of instances. These facilities have been much appreciated by the public and are being gradually extended.

Omnibus services have been modified to make contact with sixty-three L. M. S. stations where the arrangements did not previously permit of the ready exchange of railway and road passengers. The resources of the associated road companies have also been employed in numerous instances to facilitate the use of railway excursions by passengers from outlying districts.

The times of trains and omnibuses have been modified to give better connections one with the other at various places, and the correlation of the two arms of transport, wherever possible, is now the constant objective instead of each mode of transport acting, as hitherto, independently of the other in framing its arrangements.

The railway organisation is being used for the advantage of both railway and omnibus companies for securing traffic for omnibus companies where such traffic cannot be railborne, whilst arrangements are in operation for mutual assistance in cases of breakdown or pressure—a number of instances having occurred where such assistance has been given by one party to the other.

CLOSING UNREMNERATIVE BRANCHES.

For some years prior to the acquisition of road motor powers by the railways, the L. M. S., in common with other railway companies, suffered severe decline in traffic on many sections of the line, particularly in districts where, by the position of villages and stations, omnibus facilities had provided the public with a more convenient mode of transport than the railway was able to give, consistent with economy.

As soon, therefore, as advantage could be taken of our powers, steps were taken to economise by closing certain unremunerative lines and stations for passenger traffic, and arrangements made, where necessary, for our associated omnibus companies to meet the situation created by the withdrawal of the train services by modifying the omnibus services.

Inquiries have covered a very wide field, the extent of which will be gathered from the fact that, on 40 branch lines, withdrawal has already been, or is about to be, effected, and there are about 40 others in course of investigation.

The results are reflected in the closing of 107 stations for passenger traffic, several of which have also been closed for goods traffic, with an estimated saving at the rate of £50,000 per annum. In the near future 64 additional stations will be closed, resulting in a further estimated annual economy of £22,000.

ELECTRIFICATION SCHEMES.

WIDENING AND ELECTRIFICATION BETWEEN BARKING AND UPMINSTER.

Good progress is being made with the construction of the new lines for electric traction between Barking and Upminster, a distance of 7½ miles. At present electric train services operated by agreement with the District Company between London and places on our L. T. and S. Line, terminate at Barking, and these works will enable

electric train services to be extended to Upminster. This widening and extension of electric services was necessary in order to deal with the rapidly increasing local traffic, particularly in connection with the London County Council's Housing Estate at Becontree. This scheme provides for at least 26,000 houses, of which we understand 19,500 have been constructed.

MANCHESTER, SOUTH JUNCTION AND ALTRINCHAM JOINT RAILWAY.

The M. S. J. and A. Railway is owned jointly with the L. and N. E. Company, and in 1928, consequent upon the decline in the local passenger traffic by reason of acute tramway and omnibus competition, and developments taking place along the route, we decided jointly to equip the railway between Manchester (London Road) and Altrincham for an electric suburban passenger service, the total estimated cost being approximately £470,000. The indications were that our revenues from local passenger traffic would continue to fall increasingly unless we afforded a greatly improved service, and it was estimated that the provision of an electric passenger service would, within a period of five years, enable us, not only to retain our present carryings, but increase them to a remunerative extent.

The scheme includes new stations at Dane Road (Ashton-on-Mersey) and Navigation Crossing (Altrincham) and the equipment and opening of the Old Trafford Cricket and Football Ground Station as a permanent residential station. The work has to interfere as little as possible with existing traffic, but the progress made encourages the hope that the electric services will be in full operation in from four to six months' time.

Schemes have been under consideration for the electrification of a number of other provincial suburban lines, but we have not been able so far to ensure remunerative arrangements.

Last year I mentioned the proposed electrification in the Wirral Peninsula as one of the schemes submitted to, and approved by, the Advisory Committee of the Treasury for grant under the Development Act. Arrangements with the Mersey Railway for the establishment of a through electric service from and to the Wirral Peninsula via their railway to and from Liverpool, and consideration for an alternative scheme, are not yet complete.

SCIENTIFIC RESEARCH.

The eminent scientists whose names I gave you last year are now actively associated with us; the Advisory Committee on Scientific Research began its work last July, and the advantages of close association between the technical officers and outside members are being increasingly felt. The research work which the committee has inaugurated is directed towards the problems of urgent practical importance, such as increasing the durability of the paint on carriages and the reduction in the wear of rails and tyres. Quite apart from these major investigations, the frequent informal discussions between members of the committee will undoubtedly help us to solve some of our less outstanding problems. We have also had a small joint committee investigating the questions of locomotive water and fuel economy, and the work dealing with water promises to yield early results of considerable benefit to the company.

STAFF.

As indicated in the directors' report, the company's proposals for modifications of rates of pay and conditions of service of salaried and wages staff were rejected by the trade unions, who submitted counter proposals, and the respective claims were referred to the Central Wages Board. As no agreement could be reached, the parties referred their claims to the National Wages Board, and it is anticipated their findings will be published early in March.

Sufficient publicity has been given already to the question, and I need not go into it in detail, indeed it would not be proper at this stage for me to do so; we regret having to suggest these alterations in the wages and conditions of the staff, but the financial situation is such that we have no option. I am glad to say that, wherever I have made inquiry, I have been told that the spirit and service of the men have not been affected by the discussions taking place.

FUTURE PROSPECTS.

Although we are in touch with nearly all the industries and interests of the country and have ample opportunity for making a general survey, it is not the custom at our annual meetings, as it is with the big banks, to give any extended analysis of our industrial and economic position.

That the outlook for British industry is difficult and perplexing beyond all experience there is no doubt whatever. One difficulty I have in publicly making a frank and balanced estimate is that our

own British people tend, by complacency and Micawber-like resilience, not to accept unfavourable judgments at face value, but to divide the result by three, while at the same time foreign observers, by lack of understanding of our psychology, multiply it by three. As soon as our people have the collective wisdom to readjust our costs and standards to the competitive levels of our output; to recognise new conditions of markets and industrial methods; to come out of a fool's paradise of social expenditure, it will be found that the underlying strength of Britain's position is still very great indeed. The readjustment must come soon, for that strength is being rapidly undermined.

The revenue available for your ordinary stock is exceedingly sensitive to the total trade and production of the country—it may be said that a change of approximately 2 per cent. in that trade volume has an effect of 1 per cent. on the potential dividend.

This arises from the fact that a very large proportion of expenditure does not change with traffic, and out of every £100 in receipts only the last £20 is available for a return on all our capital, of which not more than £5 goes to ordinary stock, which thus bears the brunt or enjoys the boon of the fluctuations on the whole £100.

It is thus impossible for me in the uncertain outlook—it is only certain that our traffic receipts for 1931 are already nearly £997,000 below last year—to prophesy, even if the outcome of the applications to the National Wages Board on the subject of wages were known to me. But what is abundantly clear is that the great economies we have made, which have been so far swamped by the large decrease in traffic and charges, are to an important extent permanent, and if your economic case before the National Wages Board receives proper recognition we shall be in a good position to reap the advantage of a revival in trade, when it comes, in its effects upon our balance of net revenue available for the ordinary stock.

UNITED STATES DEBENTURE CORPORATION, LIMITED.

SATISFACTORY RESULTS—STRONG POSITION.

The ordinary general meeting of the United States Debenture Corporation, Ltd., was held, on the 3rd instant, at Winchester House, Old Broad Street, London, Mr Nathaniel Spens (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—You are all aware of the trying circumstances which have existed throughout the world during the past year and of their disastrous effects on practically every country in the world. So far as this company is concerned, I am glad to say that, in the circumstances, the results obtained can be regarded as generally satisfactory. That our investments, having a book value of over £4,500,000, should during this past trying year have depreciated to the extent of 6½ per cent. only, or a little over one year's purchase of the dividend which they earned, must, I think, be regarded as good a result as one could reasonably expect.

INCOME ACCOUNT.

So far as our income account is concerned, the decrease is only £4,500, or under 2 per cent. less than what we received last year, and the net result is that, after meeting all expenses and after payment of the same dividends on our debenture, preference and ordinary capital as last year, we increase the balance of revenue carried forward by over £8,000.

We have had carefully to consider what may await us in the year now before us, and, as we shall suffer, no doubt, further losses of income, it is satisfactory to realise that we have reserved in the past out of revenue such considerable amounts that there is in revenue reserve and the balance carried forward an amount of nearly £200,000, and that our reserve funds on capital account amount to more than three times the existing total depreciation. This illustrates in what a strong position the company is for meeting, if thought prudent, any temporary deficiencies that may arise.

As you are aware, it is the habit of this company that each of your directors should in turn occupy the chair, and for this reason it interested me to contrast the position of the shareholders as they now stand with the position they were in when I last performed this duty in 1927. At that time we had not made our latest issue of ordinary stock, but on referring to what I then said I find that I told the shareholders that our 4 per cent. debenture stock was valued at about 75 per cent., our preference stock at par, and the £300,000 ordinary stock, to which our original capital had been reduced, at about 260 per cent.

When we decided to issue more ordinary capital we felt that the price of issue should approximate to the market value of the ordinary stock. In point of fact, you will remember that we did issue such ordinary stock to our shareholders at 25½ per cent., guaranteed to be subscribed, whether the shareholders took it or not, at 250 per cent. From this decision many advantages have accrued. The premium which we received on the new capital increased our total reserves to a figure almost the same as that of the whole ordinary stock in issue, and these reserves operate for the better security of all concerned, debenture and preference stockholders as much as ordinary stockholders. Further, by increasing our nominal ordinary capital we obtained the power to issue further 5½ per cent. preference stock and correspondingly additional debenture stock.

CAPITAL ISSUE TERMS.

Under our existing articles we are not permitted to issue further preference stock except at the same rate as the existing stock, but, as stated in the report, and having regard to the condition of similar stocks and the very special security which we give both our debenture and preference stockholders by so largely restricting our investments to debenture and preference securities of other companies, we are led to believe that we shall be able to issue a five per cent. preference stock upon relatively better terms than those on which we could issue our existing five and a half per cent. stock. Manifestly, if we are able to do this, it will be an advantage to all concerned, and we are hopeful that the opportunity will occur to issue further debenture and preference stocks on favourable terms, and thereby make a very substantial addition to the company's income.

Having obtained these powers we shall, of course, be guided in the actual issues that we may make by the terms upon which we find we can get satisfactory investments of the kind we invest in to yield us a profitable return.

The resolution was adopted *nem. con.*

The chairman announced that a meeting would have to be called on March 17th to sanction the proposed alterations in the articles of association and the increase of share capital, and asked stockholders who had not already done so to send in their proxies.

REFUGE ASSURANCE COMPANY, LIMITED.

STEADY PROGRESS IN A DIFFICULT YEAR.

LOWER EXPENSE RATIOS.

INCOME EXCEEDS £11,000,000.

BONUS TO ORDINARY BRANCH POLICY-HOLDERS MAINTAINED
AT £2 4s. PER CENT.

FURTHER ALLOCATION OF PROFITS TO INDUSTRIAL BRANCH POLICY-HOLDERS
AUTOMATIC FREE POLICIES.

FUNDS £49,368,247.

The sixty-seventh annual ordinary general meeting of the Refuge Assurance Company, Ltd., was held, on the 2nd instant, at the chief office of the company, Oxford Street, Manchester.

Mr J. Wilcock Holgate (the chairman of the company) presided. The Secretary (Mr John W. Moss) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, which were taken as read, and after referring to the appointment to the board of Mr W. H. Aldcroft, F.I.A., the late general manager and actuary, and to the consequent appointments of Mr S. G. Leigh, F.I.A., as general manager, and Mr Cyril Clegg, F.I.A., as actuary, and also the newly created position of agency manager occupied by Mr Albert Swift, said:—

Gentlemen,—In submitting the report and accounts, I have again to remind you that the eminently satisfactory progress which they record has been achieved despite an accentuation of the deplorable industrial conditions which have prevailed during recent years in this country, and particularly in the North, where the bulk of our business is situated. It is encouraging, therefore, to report that the business of the company continues steadily to expand, and I feel that this successful opposition to adverse conditions is an achievement which we may regard with justifiable satisfaction, throwing into relief, as it does, the inherent strength of our organisation.

The total premium income amounted to £8,952,759, an increase of £295,574 over that of the previous year, and the total net interest income was £2,219,533, showing an increase under that heading of £97,193. Our total funds now stand at £49,368,247, showing an increase of £3,422,542. The amount paid in claims by death or maturity during the year was £4,542,969—a figure which represents the payment of approximately £15,000 each working day—and the total sum paid under this head since the inception of the company is now £66,023,623. The aggregate surplus shown by the valuation of the two branches of the company's business is £2,177,779, which includes £587,512 brought forward from the previous valuation. After the transfer of £250,000 to the investments reserve funds, a transfer which brings the amount of those funds up to £1,850,000, it is proposed to allocate £1,129,639 to the policy-holders and £150,000 to the shareholders, the balance of £648,140 being carried forward.

INDUSTRIAL BRANCH.

In the industrial branch the results of the year's working are convincing evidence of the value attached by the insuring community to the policies in this branch.

The business of life assurance, whether in the industrial or the ordinary branch, is essentially one having a very intimate connection with human nature; and human nature being what it is, there is a tendency in times of prosperity for people to underrate the value of the provision which they possess in their policies against the onset of evil circumstances. With the coming of difficulties as regards the present, and doubts regarding the future, the true value of a life policy becomes apparent, and I feel that this consideration, coupled with the quality of unequalled security possessed by endowment assurance as a means of investment, has been an important factor in the continued vitality of life assurance during these last few years.

In the industrial branch the new business consisted of 934,972 policies, assuring the sum of £17,368,136. The premium revenue was £4,941,590, an increase of £202,416 over the corresponding figure for 1929, and the net income from investments, after deduction of income tax, was £800,972, showing a net yield of £5 10s. 6d. per cent. on the assurance fund of this branch, the corresponding figure for the preceding year being £5 11s. 7d. per cent. The death claims amounted to £1,713,413, and £314,360 was paid to policy-holders under matured endowment assurances. The expense ratio for the year was 36.52 per cent., showing a decrease of 0.59 from the corresponding figure of 37.11 per cent. for the preceding year, and the

claim ratio (including survivals) was 41.04 per cent., as compared with 45.18 per cent. in 1929 and 38.70 per cent. in 1928.

The industrial branch fund now amounts to £15,649,128, having increased by £1,312,586 during the year.

INDUSTRIAL BRANCH VALUATION.

The valuation of this branch has again been made on the basis of the English Life Mortality Table No. 8 Males, with interest at 3 per cent. for all classes of policy except adult single whole-life assurances by weekly premiums, and infantile whole-life assurances by weekly premiums not exceeding one penny, which are valued at 3½ per cent. As regards these policies, the percentage thrown off the office premiums before valuation varies from 35 per cent. upwards, and provides in every case a net positive liability. The remaining policies, including the whole-life assurances by monthly premiums, have again been valued on a strict net premium basis.

The resulting surplus is £531,154, which includes £49,691 brought forward from the preceding year. As I have already indicated, the sum of £250,000 is transferred to the investments reserve fund, and in pursuance of the policy introduced two years ago it is proposed to set aside £164,948 for allocation amongst the policy-holders in this branch. From the remainder it is proposed to allocate to the shareholders the sum of £20,312, and to declare a dividend of 7½ per cent., absorbing £22,500, the balance of £73,394 being carried forward unappropriated.

The number of industrial branch policies at the valuation date was 6,563,726, assuring the sum of £93,046,796, and the average duration of the policies was ten years and eight months.

ALLOCATION OF PROFITS TO POLICY-HOLDERS IN THE INDUSTRIAL BRANCH.

The announcement of an allocation of profits to policy-holders in the industrial branch for the third consecutive year is one which is to me a source of peculiar pleasure. It is, of course, the case that policies in this branch are, in form, non-profit; but improvements in benefits, whenever possible, constitute a logical step in the development of that policy of "service" to which this company has always attributed so great an importance and which is, I firmly believe, one of the most important attributes of any successful business to-day.

As a result of the previous allocations of profit in 1928 and 1929, the benefits of our older policy-holders are now on the scale of our latest—the 1927—prospectus under all tables except whole life policies under tables 1, 2, 3, and 12, 13, 14. It is proposed to apply the present allocation to increase to the 1927 scale of benefit the amounts payable under claims in respect of deaths which occur under these whole life tables between to-day and March 6th of next year.

There is no doubt that the increases of benefit we have been able to grant have not only proved exceedingly popular, as was, of course, only to be expected, but have also reacted favourably upon the company's business and connections.

ORDINARY BRANCH.

In the ordinary branch, I think you will agree that the results we are able to show are very satisfactory. The increase in the premium income is gratifying evidence of our ability, even in adverse circumstances, to extend our connections, whilst the expense ratio, at 15.15 per cent., shows a reduction of 0.43 per cent. as compared with the previous year. It is probable that your particular interest on this occasion will be directed towards the question of the bonus we are able to declare on our with profit policies, and you will be glad to learn that the rate is maintained at the figure of £2 4s. per cent. This announcement will no doubt be very welcome, more especially in view of the anxieties which the

present progress of events, not only in industry but also in finance generally, cannot but evoke.

The number of policies issued in the year was 49,951, assuring the sum of £6,481,784, the annual premiums payable thereon being £447,493, and the single premiums £98,965. The premium revenue for the year was £4,011,168, an increase of £93,157 over that of the previous year, and the net income from interest, after deduction of tax, was £1,418,561. The net rate of interest earned on the assurance fund of the branch was 4 16s. per cent., as compared with 4 19s. per cent. in respect of the previous year. Payments under the head of claims amounted to £2,515,152, of which £762,481 was paid in respect of deaths, and £1,752,671 to policy-holders under matured endowment assurances. The number of deaths which occurred in the year was well within the expectation.

The ordinary branch fund now amounts to £31,205,452, showing an increase during the year of £1,865,198.

ORDINARY BRANCH VALUATION.

The ordinary branch has again been valued by the Om table of mortality in conjunction with interest at 3 per cent. Only the net premiums, corresponding to the ages at entry, have been taken into account, and on this stringent basis the valuation reveals a surplus of £1,646,625, which includes the sum of £537,821 brought forward from the previous year. Out of this surplus it is proposed to maintain the reversionary bonus at the present figure of £2 4s. per cent. on with profit policies, absorbing £964,691, and to allocate £107,188 to the shareholders, the balance of £574,746 being carried forward unappropriated.

The total number of ordinary branch policies existing at December 31, 1930, was 547,937, assuring the sum of £66,483,566, including bonus additions of £7,142,259.

MORTALITY.

Turning now to the question of mortality, a question naturally of supreme importance to a life office, you will be glad to learn that our experience during 1930 was substantially better than that of 1929.

This circumstance was not unlooked for, and is in accordance with previous history in this connection. You will remember that a particularly severe influenza epidemic occurred in 1929. In the usual sequence of events an exceptionally heavy death-rate is followed by a period of sub-normal mortality, and as a matter of fact, our own experience goes further, and leads us to expect that mortality generally will be heavier this year than last, an expectation which is already being justified by the facts.

INVESTMENTS.

The assets of this company amounted on December 31st last to nearly £50,000,000—in fact, it is anticipated that this figure will actually be reached within the next two or three weeks. When we remember that practically the whole of these assets are represented by investments spread over a wide range of securities, not only in this country and the British Empire overseas, but throughout the rest of the world, and when it is further recalled that there have been times during the period under review when, for one cause or another, it has seemed difficult to discover a spot on the earth where events were tending in the right direction, then it will be realised that the year 1930 has not been one by any means free from anxiety with respect to the handling of our funds. I am pleased to inform you, however, that, in spite of the world-wide economic upheaval and the consequent depreciation in practically all investments other than strictly gilt-edged securities, I am able to report that, based on market values, our stock exchange securities in the aggregate show an appreciation during the year. This information will, I think, be received with gratification by our shareholders and others interested, and in itself affords evidence of the class of securities held by the company. There have also been substantial profits on realisation of investments which have been applied in writing down book values, in addition to which it has been decided, in view of the uncertain outlook, to add a further £250,000 to the investments reserve funds, which now amount to £1,850,000.

Whilst, however, we have reason for considerable satisfaction with the position relative to our securities, its maintenance depends very largely upon circumstances over which, as a company, we have no control. The industrial and financial outlook as regards this country gives one much food for thought, and there is no doubt, in my mind, that the chief requirement preliminary to a recovery is a frank facing of the facts, and an early return to economic realities by all grades of society. The present weight of taxation is crushing down business enterprise, and the possibility of still heavier demands can only be regarded with grave concern. A very great responsibility at present rests on the Governments and

peoples of this and other countries to adopt a financial policy calculated to restore that confidence which is so essential if prosperity is to be regained.

Reverting to our own accounts, the net interest of £2,219,533 received during the year represents a net yield per cent. on the combined life assurance funds of £5 0s. 9d., against £5 3s. 1d. in the preceding year. This reduction in the net yield will not surprise you, having regard to the increase in the rate of income tax and to the fact that, for new investments during the year, the rate available on first-class securities was considerably lower than for some time past. Further, you will remember that I expressed the view two years ago that appearances seemed to suggest that we should have some difficulty in maintaining the yield then earned.

Referring to the increase of £3,422,542 in the funds during the year, holdings in British Government securities at £10,681,669 are higher by £177,721, and otherwise the principal changes under the various classifications show increases under the headings of:—

Debentures and debenture stocks, £1,413,512.

Preference and guaranteed stocks, £671,327.

Mortgages on property within the United Kingdom, £322,324.

Ordinary stocks and shares, which now constitute 2.95 per cent. of our total investments, have increased by £203,142, and slight decreases in our holdings of foreign municipal securities, loans on parochial and other public rates, Indian and Colonial Government securities, and investments in house and office property, in the order named, have occurred.

AUTOMATIC FREE POLICIES IN THE INDUSTRIAL BRANCH.

It is appropriate, I think, that I should refer at this point to a very important step which we took last year in connection with our industrial branch. I need hardly remind you that throughout our history it has been our continuous endeavour to give to our policy-holders the utmost benefit their premiums can provide, and you will remember that last year I gave you some figures illustrating the manner in which the sum assured for a given premium has been increased from time to time. There still, however, remained the problem of the policy-holder who is compelled by force of circumstances to allow his policy to lapse, and in the scheme of automatic free policies which was introduced last year we believe the solution has been found. Under this scheme, any policy-holder in the industrial branch who allows his policy—with the exception of certain infantile policies—to lapse at any time after the payment of two years' premiums receives at once, and without any application on his part, a free paid-up policy for a reduced amount, payable under the same terms as his original contract; and policy-holders, therefore, after the payment of premiums for a very short period, are fully secured against loss in the event of being unable to continue their assurances.

Dealing as we do in the industrial branch with a class of the community which pays weekly premiums, and whose financial resources are often fluctuating, it is clear that lapses cannot be entirely avoided, however ingeniously a company works to that end; but we do feel that in this new system of automatic free policies we have a scheme which deals generously with a lapsing policy-holder and which adds considerably to the value of our policies.

NATIONAL HEALTH INSURANCE.

Turning now to another branch of the company's activities, I have to report that the "Refuge" continues to play an important part in the administration of the national scheme of health insurance. On behalf of the National Amalgamated Approved Society, with which, as you know, we are associated for the purposes of the National Health Insurance Acts, the company administers the National Health Insurance of a membership of 660,000, an increase of 5,000 over that of the previous year. In the course of the year 1,194,560 payments of benefit were made, amounting to £749,622, including £81,721 in respect of maternity benefit. In the preceding year the corresponding payments of benefit numbered 1,328,474, amounting in all to £829,101. The number of new members admitted during the year to the "Refuge" section of the society was 41,050.

In addition to the sum of £749,622 paid out in sickness, disablement, and maternity benefit by our representatives on behalf of the society, the very considerable sum of £119,785 in additional treatment benefits were received by "Refuge" members during the year. These additional benefits are paid out of the disposable surplus which emerges at periodical valuations, and during the present quinquennium, which expires on July 4, 1931, treatment benefits amounting in all to the sum of £475,513 have been received by our members.

I think you will agree that the figures I have quoted afford a striking indication of the value of the services we render to our policy-holders additionally to those normally associated with the activities of a life assurance organisation.

EXTENSION OF CHIEF OFFICE.

It may perhaps be regarded as evidence that there yet remains some optimism in the business world in that last year we decided

to put into immediate operation a scheme for the extension of our present chief office, which we have had under our consideration for some time. There is no doubt that within two or three years considerable further accommodation will be essential, and it appeared to us that we should be performing an act of some social service by beginning building operations without further delay.

Our new extension will be on the Whitworth Street frontage, and will increase our present accommodation by one-half. The site is now practically cleared, and we hope that during the present year good progress will be made with the actual building.

TRIBUTE TO STAFF.

In concluding my remarks, I desire particularly to pay a very sincere tribute to the cheerful and unfailing support we have received throughout the year from our officials and general staff, both at chief office and in the field.

The management are well aware how difficult sometimes have been the conditions under which the work of the company has been carried on. Indeed, it is impossible that they should not know, inasmuch as they themselves have to cope with the aggregation of the difficulties which affect individual members of the staff, and they feel that in the results of the year they may read the persistence of that spirit of energy and loyalty which we have come to associate with members of our staff and which, as heretofore, it will be our aim constantly to maintain.

We have received valuable support from our staff organisations, and I take this opportunity of expressing our appreciation of the spirit of helpfulness which animates the counsels of these associations, and which does so much to increase their effectiveness. Periods such as these are testing times for employers and employees, and we are happy to find that our relations with our staff organisations continue on a basis of mutual understanding.

Gentlemen, I have now much pleasure in moving the adoption of the annual report and accounts.

The report and accounts were adopted.

The appointment to the board of Mr. William Hancock Aldcroft, F.I.A., was confirmed, and Messrs. William Proctor, John William Moss, and John Thomas Shutt were reappointed directors.

Messrs. Walton, Watts and Company were reappointed auditors.

The meeting closed with a vote of thanks to the chairman.

B. MORRIS AND SONS, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The annual general meeting of B. Morris and Sons, Ltd., was held, on the 4th instant, at Winchester House, Old Broad Street, London.

Mr W. Somers L. Schuster (the chairman) said that the profit for the year to December 31st last was £12,671, as compared with £18,401. They had not done, perhaps, quite so well as in previous years. Considering, however, the general state of business the world over he did not think the results they showed were at all bad.

Mr Arthur J. May (managing director) said that last year had been a most difficult one from a trading point of view, and unfortunately there had been no expansion of cigar sales in this country.

It made a tremendous difference to the cigar trade when there was more money about, as sales depended on the prosperity of the country much more than in the case of cigarettes or tobaccos.

The company manufactured "Grandilla" whiffs, which were made entirely from very mild cigar tobaccos and retailed at the same price as cigarettes—namely, 20 for 1s. The whiff was very suitable for ladies. Shareholders must remember that, with regard to all their productions, they relied on the quality and competitive price of their goods. When things improved they should get their share of the trade, as they had a large number of brands that were maintaining fair sales on quality and price alone. They were doing their best to develop their cigarette trade, and they would shortly be putting on the market a Virginia cigarette which they were hoping would develop into a good profit earner.

They had conserved as far as possible the assets of the company and the financial position was particularly good. In view of the fact that they anticipated that by June they would need to invest £50,000 not required in the business, they had circularised their preference shareholders as to whether they would agree to a reduction of the preference capital by repayment of half that capital. Judging by the replies received the directors would be able to get the special resolution necessary carried by the requisite majority, and to comply with the law they would, when definitely decided, call extraordinary meetings to pass the necessary resolutions. They were looking forward to better results in the near future.

The report (in which was proposed a dividend of 5 per cent. on the ordinary capital) was unanimously adopted.

LONDON TIN CORPORATION, LIMITED.

TIN INDUSTRY RATIONALISED AT LAST.

AN IMPORTANT EMPIRE ASSET PRESERVED.

A BRIGHTER OUTLOOK.

The annual general meeting of the London Tin Corporation, Ltd., was held, on the 4th instant, at River Plate House, Finsbury Circus, London, E.C.

Mr John Howeson, the chairman, who presided, pointed out that as recently as 18 months ago the utter lack of organisation left the tin industry at the mercy of every successive wave of depression. In the Dutch East Indies two single producers supplied annually half the quantity produced in the F.M.S., and were so well organised as to be capable of surviving under conditions which would bring Malaya to its knees. With that fact in mind, British producers had just cause to commend the recently concluded International Convention to which the Dutch authorities were parties.

Without that agreement, and with the continuance of the futile process of sectional annihilation, a large part of the Empire production would have been bankrupted. Shareholders in that corporation, which controlled by far the largest body of British production, had good reason to acclaim the victory that had been won, a victory of sane and progressive counsels.

Normal economic conditions had been upset and under-consumption prevailed; and the tin industry, weary of waiting for the law of supply and demand to right its trouble, had met the inevitably reduced demand by rationing production. Another result of the international agreement would be the supply of funds for a vigorous programme of research and development. Restriction of output should be regarded as a temporary means of safeguarding the industry—expansion of demand was more important.

So far as the corporation itself was concerned, the net profit transferred to appropriation account was £274,290. Deducting from the total sum available—£312,752—the proposed allocations to reserve, etc., and allowing for the interim distributions already made, there would be a balance of £97,964, which the board recommended should be carried forward.

THE FUTURE.

As to the future, the Chairman thought they might fairly take a more optimistic view than would have been justifiable at any time during the past 18 months. The initial quotas of the four signatory countries were fixed at 36,000 tons a year less than 1929—a stringent cut seeing that over-production in 1930 was only 14,000 tons—and compared with the heavily restricted output of 1930 there was a further reduction of no less than 20,000 tons. Moreover, the immediate objects of the international agreement were stability and a fair price, and the intelligent handling of the present stock position was therefore a necessary corollary to the regulation of outputs. The leading producers in all countries would take steps to make sure that that important task was not left unfulfilled.

The figures he had cited and the comparisons he had drawn were based upon the initial quotas for which the scheme provided. Those figures showed that under all ordinary circumstances the desired equilibrium would be attained without difficulty or delay, and that the requirements of consumers would gradually make some inroad into the stocks. A steady increase in the price until it regained an equitable level was therefore assured. Nobody could wish that the climb should be unduly steep, and nobody desired that the stocks should melt away too rapidly. That would destroy all prospect of the stability which was a cardinal objective of the scheme.

On the other hand, it was clear that enforced curtailment must be compensated by a corresponding improvement in the price; and if altogether unforeseen conditions should arise, or if for any other reason the essential equilibrium should be slow to materialise, the quotas would be varied as might be necessary to ensure the complete success of the scheme. He would say, therefore, without any doubt in his mind, that the scheme would succeed in its purpose. They could not, of course, afford to antagonise their customers, but the objects of the scheme were no less desirable in their interest than in that of the producing industry.

NO DESIRE FOR UNECONOMIC PRICES.

He had had the advantage at various times of discussing these matters with some of the principal consumers and also with leading metal interests in the United States, and he had no hesitation in saying that they were altogether opposed to uneconomic prices. They recognised that, while the present civilisation endured, there must be a constant increase in the demand for all basic products. They had no wish to purchase their requirements of tin at below production cost; on the contrary, they preferred, and they said so categorically, that all essential producers should make a reasonable profit, so that there might be adequate inducement to provide for the increasing needs of the future.

The report and accounts were unanimously adopted.

SUN LIFE ASSURANCE COMPANY OF CANADA.

(INCORPORATED IN CANADA IN 1865 AS A LIMITED COMPANY.)

NEW ASSURANCES REACH COLOSSAL TOTAL OF £145,000,000.

STRIKING RESULTS FROM COMPANY'S INVESTMENTS.

At the annual general meeting held at Montreal the President (Mr T. B. Macaulay) disclosed remarkable statistics regarding the growth of the company, its record for 1930 and the success of the company's investment policy. In the course of his address, Mr Macaulay said:—

I move the adoption of this report with deep satisfaction. The statement covers the sixtieth year of the company's activities, and is worthy of our Diamond Jubilee.

New assurances paid for increased by £10,526,230 to a new high level of £145,002,492. The rapidity of our growth may be judged by the fact that this total is nearly seven times as great as the corresponding amount of but seven years ago, and the total assurances in force now stand at £588,431,831. That in a year like 1930 we should be able to report such a volume of new business and such a remarkable persistency is eloquent testimony to the popularity of the company, the confidence of its policyholders, and also to the zeal and ability of our great field organisation. We are represented everywhere by men with whom I am proud to be associated, and to them I extend our thanks and hearty congratulations.

ASSETS NOW EXCEED £120,000,000.

The income advanced by nearly £2,700,000 to £38,975,265, and the assets now stand at over £120,900,000.

The interest earned on the mean ledger assets was 6.44 per cent., while the net profit from sales and redemptions amounted to over £575,000.

The mortality experience continues highly favourable. In 1929 the claims by death were but 59.4 per cent. of those predicted by the mortality tables, while in 1930 they were even lower, being but 57.6 per cent. of those expected.

Ample provision has been made for outstanding claims. Our agencies encircle the globe, but the moment a claim occurs it is reported by cable and entered in our liabilities. A substantial sum is also set aside to cover cases not yet even heard of. We pride ourselves on our prompt and helpful service to policyholders, and a very large proportion of the claims entered as outstanding were already paid, although the accounts covering those payments had, by reason of distance, not yet been received at head office.

COMPANY'S EARNINGS CONTINUE TO GROW.

It is unfortunately not necessary to emphasise that the year just closed has been one of severe depression, and that the market values of all securities have dropped to much less than even the lowest levels of 1929. No securities have escaped, not even the soundest and most seasoned. The Stock Exchange is but a vast auction mart, and in a time of depressed business, when everybody is short of cash, even the choicest securities may at times almost go begging. It is, of course, absurd that securities bought for permanent holding should have to be valued at the prices which may happen to be bid on any one day of the year, but such is still the rule. One cannot but wonder what would happen if all mortgages had to be put up to auction and valued block after block at the prices which might be bid on December 31st by a group of people who at the time happened to have but little money to invest. A mortgage may even be in arrear, but it can still be carried at its face value. It is only in regard to stocks that the auction basis of valuation prevails. This unfair system has, however, done us one good turn, for it has accentuated the quality of the company's holdings. Our earnings continue to grow, for even in this year of depression the dividends actually received on the shares of common stock owned by us were in 1930 nearly £206,000 in excess of the dividends on those same shares in 1929, and we are confident that dividends will continue to increase during the years to come. Moreover, even by the abnormally low Stock Exchange prices of December 31st, the market value of our total holding of common stocks was £1,746,687 in excess of cost. This showing is in itself a highly gratifying one, but, in addition, during the past few years the company has received £6,597,748 as further profit from sales, rights and special dividends.

On the other hand, the market values of our bonds and preferred stocks are slightly less than cost, and it will also be noted that in our liabilities we carry a large contingency reserve to provide for possible depreciation in mortgages and real estate. Apart entirely from the large profits which have been made, the present excess in the market value of our common stocks over cost is sufficient to cover all shrink-

age in the market value of our bonds and preferred stocks, and an ample allowance for possible losses on mortgages. On our total investments we can say that we have not in many years lost even one dollar, for the profits have much more than offset the trifling losses. The only effect of the shrinkage in Stock Exchange values has been to reduce that portion of the excess in market values which we last year felt justified in bringing into our accounts. It does not mean that we have lost anything, for, as I have already said, we are in the happy position of being able to say that for many years we have not lost one dollar. How many other companies can make a similar statement? The reduction of nominal surplus is of but temporary and passing importance. If we were to take the prices prevailing even to-day, the valuation of our assets would already be raised by about £3,100,000. There has been no reduction in our real earnings, and it is a great pleasure to announce that profits on the generous scale of distribution in force last year will again be paid on all policies entitled to participate during the coming year.

A TEST OF UNPARALLELED SEVERITY.

But though our investments have been subjected to a test of unparalleled severity and have emerged triumphant, the experiences of the past eighteen months have been useful in other respects. Years ago, to avoid any suggestion of speculation, we adopted the policy of permanent holding, protecting ourselves against reaction by building up huge margins of safety. We did not depart from this policy even in the summer of 1929, when the excess of market prices beyond those at which our stocks were listed in our assets had risen to a figure so huge that I will not even mention it. While the policy of permanent holding is absolutely sound in principle, circumstances may arise when it may be prudent even for permanent investors to modify it—when, in fact, it may be wise to convert excess of market values into cash profit. In other words, there may be a time to sell as well as a time to buy, and the time to buy is certainly when everything is deflated, money scarce, bidders few and prices low.

In our outlook on the future, there is one fact which for our company stands out in glowing letters. No one believes that the present state of business depression and low values will continue for ever. We may disagree as to the length of time that will elapse before conditions again become normal, but that good times will come again no one doubts. And when good times do return, what will be the value then of the stocks now held by us at these rock-bottom figures? What possibilities does this feature hold for our policyholders?

THE COMPANY'S INVESTMENT POLICY.

Investments in well-selected common stocks of corporations of long-established profit-earning power supplying some necessary commodity or service, if bought at the right time, have but one undesirable feature—their liability to fluctuations in market value which could largely be overcome by an improved method of valuation. Bonds and preferred stocks are less open to this objection, and, fortunately, this is a favourable time for the purchase of those securities also, and it is the intention of your directors to take this opportunity to increase our holdings in these other forms of investment.

I think you will agree with me that the report is indeed a remarkable and highly gratifying one.

DEPRESSION NOW IN ITS LATER STAGES.

In closing, I would make a few remarks regarding the depression now happily in its later stages. A reaction from the Stock Exchange boom was inevitable, and the depression of a year ago was unavoidable. General business, however, was normal, there was no inflation of commodity prices, little sign of over-production, no excessive inventories or doubtful debts, and it was not unreasonable to hope that the reaction would be largely confined to the stock markets where it began. Notwithstanding these expectations we have had in 1930 one of the major depressions of history. When we search for the cause it is difficult not to conclude that this second reaction, at least in the degree of its severity, was entirely unnecessary, and could have been avoided. Its distinguishing feature has been the rapid and severe drop in prices, the average commodity price level being now 20 per cent. lower than a year ago. This reduction has been the chief cause of trouble in 1930. A drop in prices is equivalent to a

MIDLAND COUNTIES ELECTRIC SUPPLY COMPANY, LIMITED.

SUCCESSFUL RESULTS—STEADY PROGRESS.

The eighteenth ordinary general meeting of Midland Counties Electric Supply Company, Ltd., was held, on the 2nd instant, at Winchester House, Old Broad Street, London, Mr George Balfour, J.P., M.P. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that it was pleasant in these very difficult times to submit a report and accounts recording steady progress. Under normal industrial conditions the increase in all departments would have been much greater. The policy of remodelling the company's traction systems and of extending its electricity services with the greatest possible speed until all their territory was covered had been fully justified. The company's transmission lines now reached the boundary of the power company's territories in all important directions, and had made possible supplies in a large number of rural districts.

PROGRESS OF TRACTION PROPERTIES.

So far as their experience went to date, the board had no reason to change the hopeful view he expressed a year ago as to steady progress with the traction properties. During the current year the board were bringing the traction properties into a condition which should enable them, if advisable, to separate them entirely from the lighting and power interests, possibly by parting with them to people who were wholly engaged in operating traction properties.

With reference to the observations of Dr. Carpenter, of the South Metropolitan Gas Company, and of Sir David Milne Watson, of the Gas Light and Coke Company, at the recent meetings of those undertakings, as to the activities of a Minister of the Crown engaging in propaganda on behalf of the electricity supply industry, he (the speaker) felt that they had just cause for complaint when the weight of the Minister of Transport or his Departments was thrown in the scale in favour of one industry against another. He (the chairman) could imagine the outcry of the electricity supply industry if the position were reversed, and the gas industry were fed with State-aid and propaganda in competition with the electric-supply industry. The electricity-supply industry asked for nothing more than a fair field and no favour.

LARGE INCREASE IN CONSUMERS AND OUTPUT.

With regard to the principal part of the company's business, during the year about £460,000 had been expended on extensions, the greater portion of which could obviously only make a very small contribution to the revenue of last year. The board had no doubt that all recent and present expenditure would produce results amply justifying the outlay. They now had a total of 900 route miles of high-tension lines, and 731 route miles of low-tension mains, while their public lighting services were supplied to two boroughs, twelve urban districts, and sixty-three parishes. They had connected 7,072 new consumers during the year, bringing the total up to 33,253, while their output had increased nearly 9,000,000 units to a total of 174,500,000. The company were installing an additional 30,000 kw. turbo-generator at the Spondon station, ready for the service of the increased demand as soon as the plant was in operation.

LOW AVERAGE PRICES MAINTAINED.

The average prices received from customers throughout the Derbyshire and Nottinghamshire area was 0.8d., and, in the Leicestershire and Warwickshire area 1.17d., with a general average of 0.95d., and it was significant that the company could maintain those low average prices, bearing in mind that the consumers were scattered over 2,910 square miles, and that they employed 900 miles of high-tension lines to reach the low-tension services to connect consumers' premises. The variation in prices in different counties was entirely due to the variation in the type and magnitude of industrial load. In December last the company obtained a special order for domestic supplies in the district in the vicinity of Ashbourne, Western Derbyshire; there was only one application for an order still outstanding, and when that was obtained 95 per cent. of the power company's territory would be covered by special orders.

The balance at the credit of the profit and loss account, including £4,578 brought forward, amounted to £265,853, comparing with £242,650. It was now proposed to pay a final dividend on the ordinary shares at the rate of 9 per cent. per annum for the half-year to December 31, 1930, making, with the interim dividend, 7 per cent. for the year, less tax, and to carry forward to next account £5,067. As to the outlook, the consumption of electricity for the first two months of the current year continued to show a very satisfactory increase, and, assuming trade conditions were no worse than at the present moment, the company would be able to record a satisfactory growth of business during the current year.

The report and accounts were unanimously adopted.

bonus to persons in receipt of fixed salaries or wages, but that bonus has come from the rest of the community—notably from the farmers and others who produce raw materials.

This has reduced the purchasing power of the public, curtailing consumption and causing a reduction in activity and profits in all lines of business, with severe unemployment among even the wage-earning class.

Could this condition have been prevented? Without going into technical details, there is a fairly general agreement among economists that this drop in the average commodity price level has been caused by a change in the actual value of the dollar, which, in turn, depends on the amount of currency and currency credits outstanding. If too many legal tender notes were issued prices would be raised disastrously, as happened in Germany. It is an astonishing fact that even when people in all the rest of the world were talking of the depreciation of the mark resulting from the progressive increase in German currency, not one person in a thousand in Germany itself realised that any change was taking place in the value of their currency. To them the mark was the mark, and unchangeable. They deplored the mounting prices, and attributed this phenomenon to every imaginable cause except the real one. Conversely, if the amount of circulation be curtailed the opposite result follows, and we can have a disastrous reduction in prices, and this is exactly from what we are now suffering. The curious fact is that, like the Germans, we think of our dollar as unalterable, and attribute the fall in commodity prices to many causes which at best are but minor and contributory. We fail to realise that the prime cause is the alteration in the value of the dollar itself.

DEPRESSION WORKING ITS OWN CURE.

But what of the future? Even in the absence of action which might be taken to stabilise the dollar, this depression, like all others, will slowly, painfully work its own cure, as is, in fact, now happening. That cure comes through the accumulation of the combined savings of the people of the North American continent. These savings, deposited in the banks, give these institutions a steadily increasing amount of money which they are able to lend to brokers and others on call. Call loan money is now remarkably cheap in New York. Then comes the slow, steady absorption of stocks by small purchasers. This has been going on quietly for a long time, and the numbers of shareholders in the great corporations have been mounting steadily week after week. Meanwhile, brokers' loans, which reached a peak of over £1,397,000,000 in the autumn of 1929, are now down to £352,600,000, and every week sees a further reduction. This means that stocks are passing more and more into the hands of people who do not need to borrow to pay for them. It also means that the great New York banks must look for other investments to replace those paid off, and they consequently have to buy more and more Government bonds, which they can, if necessary, convert immediately into cash. This gradually makes an improved bond market, such as we have been seeing in the last few weeks. This, in turn, means that the great railway, utility and other corporations that need capital for extensions begin to realise that the time has arrived when they can finance their requirements through the issue of bonds to the public. That is the stage at which we have now arrived. Every successful bond issue means more money made available for capital expenditures, the beginning of new work and the lessening of unemployment.

IMPROVEMENT NOW HERE.

It also usually means the repayment of money borrowed from banks for work already done, and this puts further sums in the hands of the banks for the purchase of high-grade bonds. With every depression the improvement is first seen in the bond market, and that improvement is certainly now here. The great industrial corporations can, as a rule, now look forward to improving earnings. They have accumulated raw materials at low prices; the shelves of their customers are comparatively bare; neither they nor their customers have large inventories to liquidate, and, with the gradual return of purchasing power, their outlook is good. During all this depression the earnings of the lighting departments of the great electric companies have been remarkably well maintained, and the earnings of their power departments will increase as soon as business becomes more normal. The stock market generally discounts an improvement in earnings several months ahead, and I am inclined to believe that time will show that the low day of the stock market was on December 16th last. I do not suggest, and do not expect, that there will be anything spectacular in our recovery, but I am one of those who believe that you cannot keep this continent down. There may be pessimists who still think that everything is going to the bow-wows, but I do not know them. I grant unreservedly that our future depends largely on the stabilisation of the dollar, but I am an optimist. We are facing the dawn of a new era of, I hope, great prosperity, and in that prosperity the Sun Life Assurance Company of Canada and its policyholders should share to the full.

THE PRUDENTIAL ASSURANCE COMPANY, LIMITED.

CHAIRMAN'S SPEECH.

(Abridged.)

The annual general meeting of the Prudential Assurance Company, Ltd., was held on Thursday, March 5, 1931, at the Chief Office, Holborn Bars, London, Sir Edgar Horne, Bart., the chairman of the company, presiding, and in moving the adoption of the report and accounts said :—

I have much pleasure in presenting to you the 82nd report of the directors, which shows that continued progress has been made in every branch. The assets of the company are now over 240 million pounds, and the income from all sources exceeds 44 million pounds.

The following statement deals with the general branch :—

Premiums Received.	1930.	Increase or Decrease, 1930 over 1929.
Fire	£ 841,869	+ £ 2,157
Sickness and accident	141,311	+ 8,078
Employers' liability	97,815	+ 3,303
Miscellaneous	603,472	+ 149,129
Marine—Old account	4,600	— 171,075
New account	117,225	+ 58,846
Sinking fund	153,897	+ 64,242
All classes	1,960,189	+ 114,680

Loss Ratios.	1930.	Increase or Decrease, 1930 over 1929.
Fire	Per cent. 52.6	— 3.6
Sickness and accident	34.2	+ 1.4
Employers' liability	44.8	+ 10.9
Miscellaneous	49.7	+ 5.6

In the general branch the loss ratios have been favourable and each of the above sections shows an underwriting profit.

The marine fund is, in our opinion, ample to cover the outstanding liabilities.

The ordinary branch statement is as follows :—

Description.	1930.	Increase or Decrease, 1930 over 1929.
New sums assured	£ 18,814,714	+ £ 1,207,765
Total premiums received, including single premiums	11,561,834	— 151,850
Total premiums received, excluding single premiums	11,137,106	+ 473,190
Sums assured and accrued bonuses in force	195,809,243	+ 8,261,794
New policies £500 and upwards	8,850,774	+ 318,974
Consideration for annuities granted	370,352	+ 282,200
Death claims	2,304,947	+ 50,820
Endowments matured	6,527,137	+ 928,221
Surrenders	1,602,212	+ 489,068

Excluding single premiums, there has been a gratifying increase in the ordinary premiums received.

The following statement contains figures for the industrial branch :—

Description.	1930.	Increase or Decrease, 1930 over 1929.
No. of new policies issued	2,525,089	+ 159,958
Sum assured under new policies	£66,104,404	+ £2,922,168
Premiums received	£18,121,855	+ £736,680
Death claims paid	£5,046,997	— £482,008
Maturity claims paid	£3,681,818	— £1,389,031
Surrenders paid	£2,356,710	+ £502,453
Expense ratio	24.69%	— 10%
No. of policies which became free policies	879,423	+ 654,081
No. of free policies in force	3,443,063	+ 724,194
Total No. of policies in force	26,067,964	+ 983,493
Total sum assured and bonus	£488,217,702	+ £16,760,346

The total sums assured under new policies issued in this branch amounted to £66,000,000, which is not only a record, but is a striking testimony of the extent to which the public are availing themselves of the benefits of assurance by means of weekly and monthly payments.

In May last we inaugurated the system of automatic free policies, which ensures that a policy on which payment of premiums is discontinued becomes automatically a free paid-up policy without any action on the part of the policyholder, provided at least one year's premiums have been paid. The right of restoration to full benefit within one year on evidence of health and payment of arrears is not affected by the grant of automatic free policies. The effect of the scheme is that where a full year's premium has been paid, the contract is not brought to an end by failure to pay premiums but the policyholder secures a definite benefit for the whole of the premiums paid.

In the ordinary branch a reversionary bonus has been declared for 1930 on whole life assurances at the rate of £2 12s. 0d. per cent., an increase of 2s. per cent. on the rate declared for the previous year, and on endowment assurances at the rate of £2 6s. 0d. per cent., which is the same rate as for 1929.

In the industrial branch a reversionary bonus has been declared at the same rate as last year, viz. : £1 14s. 0d. per cent. of the sum assured in respect of policies issued since January 1, 1923. On policies issued before 1923 the bonuses range from 12½ per cent. to 70 per cent., according to duration, and the period for which these rates have been guaranteed is increased from 15 years to 16 years, except in the Irish Free State, in which case the guarantee is for one year only. Since the commencement of the profit-sharing scheme over £23,000,000 have been allocated for bonus to policyholders in the industrial branch.

In the industrial branch the expense ratio has decreased from 40.5 per cent. in 1920 to 24.69 per cent. in 1930. The saving effected by this reduction, together with an interest margin of nearly 2½ per cent. over our valuation rate, has resulted in very satisfactory distributions to our policyholders under our profit-sharing scheme.

Notwithstanding adverse influences, the fall in market value of our own assets during 1930 has been relatively small, and it gives me much pleasure to be able to report that the aggregate market value of our investments is still higher than the book value, without taking into account the large investment reserve funds at our disposal.

You will notice from the report that this year instead of increasing our investments reserve funds we are applying £500,000 from the profits of the ordinary branch and £500,000 from the profits of the industrial branch directly towards writing down the value of investments in the books.

The margin between the market values and book values existed before the writing down.

With regard to our investments in foreign countries it will, I think, interest and reassure you to know that the financial collapse in the United States of America has had little direct effect on us, since, before it occurred, we had reduced our investments in that country to negligible proportions.

The gross return on funds which were permanently invested during the year amounts to the satisfactory rate of over 6 per cent. per annum.

The provision made by a life assurance policy is unique and in a well-managed and prosperous company the security offered is unimpeachable, and if the policy is effected under the with-profit plan the capital sum assured is not only guaranteed, but increases from year to year as the result of annual bonus additions. At a time of financial depression and shrinkage in capital values of other investments, this is a consideration of the first importance.

One of the principal objects we had in view in the recent increase in the capital of the company was to enable us to extend our operation to our Dominions, Colonies, India and abroad. We are already obtaining a large amount of business in India, and we have started operations in East Africa and Malaya. A licence to carry on life assurance in Canada has been obtained and active arrangements are being made to organise our agency staff in that Dominion, as well as in Australia and New Zealand. Other fields are also being

prospected. Our agencies for the conduct of general branch business in all parts of the world are also being actively developed.

In Europe reinsurance agreements have been entered into with the Lebensversicherungs Gesellschaft Phönix of Vienna and the Towarzystwo Ubezpieczeń Przewozów of Warsaw.

This review of our business shows that after 82 years the company has lost nothing in vitality and progressive energy. Our prospectus contains all the usual forms of insurance, and we are always prepared to offer attractive rates for any other contingency against the effects of which it is desirable to provide protection.

The company transacts trustee and executorship business.

The response of the staff both at home and abroad to the call for increased efficiency and enthusiasm in the face of the general depression has been most gratifying, and is well reflected in the figures I have the pleasure of presenting to you to-day.

THE SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY.

BENEFITS OF "INDEPENDENCE" POLICY.

MR A. W. ROBERTSON DURHAM'S REVIEW.

The 117th stated annual meeting of the Scottish Widows' Fund and Life Assurance Society was held in the society's office, Edinburgh, on Tuesday, March 3, 1931, Mr A. W. Robertson Durham, C.A., F.F.A. (chairman of the ordinary court of directors), presiding.

The Chairman, in opening the proceedings, expressed his regret—which would be shared by all present—that the President, Lord Strathmore, was unable to be present and take the chair.

The Deputy-Manager and Secretary read the notice convening the meeting and the minutes of the 116th stated annual meeting, held on March 4, 1930, which were approved; and the report and accounts were taken as read.

RECORD NEW BUSINESS.

In moving the adoption of the report and accounts the Chairman, after referring to the changes which have taken place in the directorate, said :—In the year under review we record a substantial increase in the new assurances completed, which amounted to the gross sum of £3,720,000, of which £228,000 was re-assured, leaving net new sums assured of £3,492,000. This represents an increase over the preceding year of £727,000 gross and £592,000 net after deduction of re-assurances. The total of net new business constitutes a record in the society's history, while the gross total has been exceeded only once, namely, in 1920. The increased new business, coming in a year of acute industrial depression, is particularly gratifying, and I think indicates a return to "Safety First" investment after the Stock Exchange boom of the preceding years.

INCREASE IN FUNDS.

The operations of the year have resulted in our funds increasing by £739,000, and the total funds now stand at £29,019,014. The manner in which this large sum is invested is shown in the balance sheet, and does not, I think, call for any detailed comment. In the speeches from this chair in recent years we have referred to the policy of the board in gradually reducing the large holdings in British Government securities as favourable opportunity offers and replacing them by suitable securities giving a higher yield. You will notice on this occasion the trend has been in the opposite direction. It is unnecessary to remind you that 1930 has been a peculiarly difficult year for all those responsible for the investment of large funds. With falling money rates and so much uncertainty in different parts of the world, it has seemed desirable—at any rate for the time being—to increase our holdings in British Government securities.

There has also been some increase in our holding in ordinary stocks, which still form a very small percentage of our invested funds. I need hardly add that these stocks have been selected with the greatest care, and bearing in mind the society's traditional reputation for caution. I referred last year to the special problems of 1929, and indicated that our stringent valuation of investments, made on the basis of the market selling prices at the end of the year, showed a substantial margin in the difference between the market values and the balance-sheet figures. I am happy to be able to tell you that our valuation, made on the same stringent basis, namely, the market selling prices as at December 31st last, shows that this margin increased materially during the year.

FAMILY "INDEPENDENCE" SCHEME.

From time to time during the past twelve months there have been references in the Press to a new type of family assurance. A feature of the scheme has been the provision of a temporary income to a

widow in the event of the husband's death during the first fifteen or twenty years after the issue date of the policy. Generally speaking, we do not favour special schemes. They are often more attractive in appearance than in actual effect. We have always recommended ordinary whole-life with-profit assurance for family provision purposes, and we still recommend it as giving the best value for premiums paid. Nevertheless, in the interests of our members we explore the possibilities of any new idea so that we may constantly offer the best which life assurance can provide. In pursuance of this policy we have considered the family income plan, and so convinced are we of the effective manner in which it provides for the peculiar and often difficult circumstances which surround the early years of married life that we have prepared a scheme under the title of the "Independence" policy.

A copy of the booklet describing the scheme will be sent to members with the annual report. In it the "Independence" policy is fully described, but I wish to draw particular attention to two features, which do, I believe, distinguish our scheme from all others. The first is an option which secures a fixed monthly income to the widow not only in the event of the husband's death during the first fifteen years after the policy has been issued, but even in the event of the husband's death after the family has grown up. A husband may thus have the comfortable feeling of having provided an assured income for life to his widow whenever his death may occur.

BENEFITS OF NEW POLICY.

The second option, which so far as we know is unique, enables a man to provide for an increase in the family income on the birth of each child after the issue of the policy. All the father has to do in order to get this benefit is to give satisfactory replies to the questions on a "non-medical" proposal form, and to pay a small additional premium. I commend this new scheme strongly to our members, and ask them to read the booklet very carefully. If they would like further information we shall be glad to hear from them, but should the scheme for any reason not interest them or any member of their family, I ask them to make a point of passing on the booklet to one of their friends who is likely to be interested. In this way they will be helping to do their share as members of this mutual fund in promoting the business of their own society.

The directors' report and the accounts as audited were adopted unanimously.

MAIDENHEAD BRICK AND TILE COMPANY, LIMITED.

SUCCESSFUL RESULTS—FOREIGN COMPETITION.

The eleventh ordinary general meeting of the Maidenhead Brick and Tile Company, Ltd., was held, on the 2nd instant, at River Plate House, Finsbury Circus, London.

Mr Horace Boot, M.Inst.C.E., M.I.Mech.E., M.I.E.E. (the chairman), in the course of his speech, said that the profits on trading were £27,870, and the net profit £28,323, which was £869 less than the previous year, principally on account of the lower prices and keener competition which the company had to meet.

The amount available for distribution was £29,721, and the directors recommended the payment of a final dividend of 7½ per cent. (making in all 15 per cent. for the year) on the preference shares and a dividend of 70 per cent. on the ordinary shares. The amount to be carried forward was increased from £1,397 to £2,624. The freehold land and buildings stood at £95,457, which was considerably below their actual value to-day.

The Chairman then dealt with the rapidly increasing cost of national schemes and social welfare, and the way in which they increased the cost of production to the detriment of the manufacturers competing with the foreigners. He pointed out that wages in many instances represented nearly 80 per cent. of the total cost of manufacture, and, therefore, the purchase of foreign materials meant that there was less money to be spent in the towns and villages by the workmen of this country. There was also the loss to the collieries and railways, inasmuch as coal was not used which would otherwise be, and the effect of purchasing foreign products meant that the general public had to pay additional doles. It had been stated by public bodies and certain builders that the reason for buying foreign bricks and tiles was because supplies could not be obtained in this country. This was not true; the reason was that the foreign bricks and tiles were slightly cheaper, but they could get a sufficient supply in this country if they were prepared to pay a reasonable price, and thus do their duty towards maintaining the standard of living necessary for the working men.

The Minister of Health had stated that, with regard to the housing problem, he was satisfied that within the next five years the annual output of houses by local authorities within the State schemes would be 70 to 100 per cent. higher than it had been during the past three or four years.

The report and accounts were adopted.

LEYLAND MOTORS LIMITED.

ALL ARREARS OF PREFERENCE DIVIDEND PAID.

MANY DIFFICULT TRADING PROBLEMS.

MR J. H. TOULMIN'S SPEECH.

The twelfth annual general meeting of the shareholders of Leyland Motors Ltd., was held at the head offices of the company at Leyland, Lancashire, on Wednesday, March 4, 1931, at 3 o'clock in the afternoon.

Mr J. H. Toulmin, J.P. (the chairman of the company), presided. The Secretary (Mr T. Phillips-Conn) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the report and accounts, said that for the first time for a number of years the ordinary shareholders alone were present at the meeting as all the arrears of preference dividends were now paid.

He stated the gross profit for the year to September 30th last was £690,171, being £68,123 less than last year, and the net profit, after making full provision for income tax, depreciation and all contingencies, was £366,244, a decrease of £193,128 from last year's profit, the difference being accounted for by the decrease in gross profit, the increase in the income tax payable and the additional remuneration payable to the full-time directors under Article 84 (A).

He then referred to the petition which had recently been presented to the Lancashire Chancery Court for an interpretation of Article 84 (A), owing to the objection which had been taken by certain shareholders to the payment of any remuneration under that article as provided for in the previous year's accounts. He stated that the result of the petition was to increase the sum payable by £52,984, but reminded the shareholders that a resolution approving a compromise would be submitted later in the meeting.

After briefly reviewing the balance sheet, he stated the directors recommended that £180,000 should be transferred to general reserve fund, that a dividend on the ordinary shares of 20 per cent. (less income tax) for the year ended September 30th last, absorbing £139,500, be paid, and that the sum of £66,010 12s. 6d. be carried forward.

TRADING CONDITIONS.

Reviewing trading conditions generally, he went on to say that the directors continued to attach considerable importance to the overseas markets as an outlet for the company's products, but that, owing to abnormal conditions throughout the world, trade, both at home and overseas, had been accompanied by many difficult problems. The immediate outlook was not very promising so far as the overseas markets were concerned, but he thought the result for the year was highly satisfactory, and stated that, since the close of the financial year, the company's turnover had been well maintained. He referred to the keenness of competition for the lessened number of orders now being placed, but said the company's present order book was satisfactory, and he saw no reason why this position should not continue, as he believed the Leyland vehicle could not be excelled by any manufacturer as regards reliability, economy or workmanship. Two of the directors had recently made tours abroad, one to Canada and the other to Australia and New Zealand, where friendly contacts had been made and information obtained which would be of great value to the company. The company were showing a representative range of models at the British Exhibition shortly to be held in Buenos Aires.

NEW MODELS.

The Chairman referred to the new two-ton models which the company was producing at its Kingston Works, stating it was anticipated the first models would be available for sale at an early date. He added that he was confident it would maintain the high reputation which Leyland had always possessed for the excellence of its products.

Dealing with heavy-oil engines, he stated that the company had been carrying out experiments for several years past, but the directors would not put on the market any vehicle until they were fully satisfied that it was entirely reliable.

TRIBUTE TO STAFF.

He concluded by expressing the appreciation of the directors of the excellent work done by the staff and the employees generally, and moved the adoption of the report and accounts.

The motion was duly seconded, and, after the Chairman had replied to certain questions put by individual shareholders, was carried by the meeting.

The various resolutions confirming the payment of preference dividends were then passed, followed by the resolution declaring a dividend of 20 per cent. (less income tax) on the ordinary shares

of the company in respect of the year ended September 30, 1930, to be paid on March 5, 1931, to all ordinary shareholders on the company's registers on February 17, 1931.

Mr C. B. Nixon was re-elected a director, and the retiring joint auditors—Messrs. George A. Touche and Company and Messrs. Davies and Crane—were re-elected.

DIRECTORS' REMUNERATION.

The chairman then referred to the question of the additional remuneration to the full-time directors under Article 84 (A). He recalled that this Article had been included over 20 years in the Articles of Association of the original company to provide additional remuneration to the founders of the business, and had been adopted successively by Leyland Motors (1914), Limited, and then by the present company, and that it had been specifically referred to in the prospectus issued in 1919.

He stated that the provision of £8,713 under this Article in the previous year's accounts would have been paid to the directors concerned in July last had not a protest been lodged by a certain shareholder in such a manner as to necessitate the matter being referred to the court.

VICE-CHANCELLOR'S RULING.

The Vice-Chancellor ruled that the profit or loss of each year must stand by itself, and that when a profit was shown in any year there had to be added back to that profit the income tax and part-time directors' fees charged against it. From the total so ascertained there had to be deducted one year's gross dividend on both classes of preference shares, whether or no such dividends were in fact actually paid, and that on the balance so ascertained 4 per cent. was to be paid to the full-time directors. In the event of the adjusted profit shown in any year being less than one complete year's gross dividends on the two classes of preference shares, or in the event of a loss of whatever amount being shown in respect of any year, no remuneration under this Article would be payable in respect of that year.

The Vice-Chancellor further ruled that the remuneration under this Article was additional to any salaries or other remuneration which they might receive under any other Article or agreement.

RESULT OF DECISION.

The result of this decision had been that the provision to be made under Article 84 (A) to September 30, 1929, had been increased by the sum of £52,984.

The chairman continued that an appeal had been lodged, but if the compromise, to which he was going to refer, was approved this appeal would be withdrawn. He stated that counsel had advised that even if the higher court upheld the decision there would of necessity be further legal proceedings before a final settlement could be effected, and that it appeared a case for a satisfactory compromise. This compromise was contained in the resolution which was then passed authorising the board, on behalf of the company and by way of compromise, to accept the offer of the three full-time directors to waive any claim to the sum of £52,984, and to accept in full settlement of their right to remuneration under Article 84 (A) to September 30, 1929, the sum of £8,713 as originally provided; to indemnify the full-time directors against any claim that might be received for income tax, super tax or surtax in respect of the sum of £52,984, and to withdraw the appeal.

The proceedings closed with a vote of thanks to the chairman and directors.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

HARRODS, LIMITED.

RECORD NUMBER OF CUSTOMERS AND SALE FIGURES.

The forty-first annual general meeting of Harrods, Limited, was held, on the 2nd instant, at the company's premises, Brompton, London.

Sir Woodman Burbridge, Bart., C.B.E. (chairman and managing director), presided.

The Chairman, in moving the adoption of the report and accounts, said that the year 1930 for this country, and most of the other leading countries of the world, had been a very bad year for trading, and, in those circumstances, the results of the past year's trading which he had to submit must be considered satisfactory. The net profit for the year was £752,481, and compared with £834,188 in the previous year. The final dividends of D. H. Evans of £45,029, and of Dickens and Jones of £23,416 were not included in Harrods profits for the year under review, and the amount of £68,445 was therefore being carried forward.

The accounts showed a break in their seven years' record of steady and continuous progress, but notwithstanding that decrease their last year's trading had produced some outstanding features of sufficient interest and importance to justify special reference. Year by year Harrods continued to serve an ever-increasing number of customers, and in that respect last year constituted a record, which proved the increasing popularity of their business.

Another interesting fact was that their one week's sale last January was the most successful in the history of the business. More people visited the Store, more purchases were made, both for cash and account customers. The total amount of trade during that week was a record. The cash sales amounted to £144,192 and the sales to account customers was £330,986, making a total of £475,178. I believe that was the largest amount taken in any one week by any retail store in the world. (Hear, hear.)

HIGH QUALITY OF GOODS.

There appeared to be an impression in a section of the community who would be only too happy to join the army of Harrods' regular customers that the prices charged were higher than elsewhere. It was by reason of the policy Harrods had consistently upheld in regard to the quality of the goods they offered that they occupied the position to-day in the esteem and confidence of the entire world. Harrods valued that confidence far too highly to contemplate for one moment any alteration of policy. The immense scale of purchases made by Harrods and its associated companies, and their direct dealings with manufacturers, prompt cash payments, and rapid turnover made possible the offering of values not easily duplicated by houses less favourably placed. Of the total purchases of Harrods 85 per cent. represented British goods, and of the remaining 15 per cent. the larger proportion consisted of goods not manufactured in this country. For many years they had instructed their buyers never to buy merchandise abroad which could be bought at home. At the same time, they considered there was room for much greater development in the sale of Dominion and Colonial productions. This house had for many years past, by special exhibitions, displays and in other directions, used every effort to popularise and increase the sale of Empire goods. They would continue to do so, and thus promote the mutual interests of the Mother Country, the Colonies and Dominions. For the fourth year in succession they were paying a dividend of 20 per cent.

SUBSIDIARY COMPANIES.

The staple trade of Lancashire during the past year had been the worst experienced for many years. They were all, he was sure, very glad to hear that the cotton strike had been settled and work resumed. In view of such favourable trading conditions, it was not surprising that their Manchester business, Kendal Milne, showed a decrease in turnover and net profits. The present outlook being so uncertain, they had again decided to delay for another year at least the erection of the new building for their store in Manchester.

As regarded Dickens and Jones, the net profit amounted to £115,910, as against £129,367. The dividend for the ordinary shares of this company was continued at 12 per cent. The results of D. H. Evans for the past year showed a net profit of £115,583, as compared with £110,092. Harrods held the entire ordinary share capital of this company.

As to the purchase of the stock and goodwill of Messrs. James Shoolbred and Co., Limited, Harrods looked forward to being entrusted with a large percentage of the 30,000 account customers of that old-established company, and had anticipated that the acquisition would prove a valuable asset to their business.

Sir Harry K. Newton seconded the resolution, which was carried unanimously, and the formal business was approved.

UNITED KINGDOM PROVIDENT INSTITUTION.

MR WALTER RUNCIMAN'S ADDRESS.

TEN YEARS' PROGRESS.

REDUCED PREMIUMS.

BUDGETARY EXTRAVAGANCE.

The annual meeting of the members of the United Kingdom Temperance and General Provident Institution was held on Wednesday, March 4th, at the Cannon Street Hotel, London, E.C.

The Right. Hon. Walter Runciman, M.P. (Chairman of the Institution), presided.

TEN YEARS' PROGRESS.

The Chairman, in presenting the report and moving the adoption of the balance sheet, said: Ladies and gentlemen,—I have now been for ten years the Chairman of the Institution and I wish to-day to examine its growth during that period. The total assets, which in 1920 stood at £10,187,032, now amount to £18,960,141, an increase of £8,773,109, while the gross interest on these funds has increased from £552,455 a year to £1,021,872—very nearly double. At no time have we departed from the policy of conservative and solid finance, yet the net rate of interest earned has been worked up from £4 1s. 11d. per cent. to £4 12s. 3d. Our members are thus secure in the quality of their assets, while the rate of interest earned makes the Institution's policies a thoroughly sound and remunerative investment.

The total annual income from all sources has increased from £1,355,000 to £2,120,000, while the total sums assured and bonuses have grown from £28,289,388 to £46,436,325. In 1920 the net new business secured was £2,002,000, compared with £3,080,000 last year, the sixth successive year in which the net new assurances exceeded £3,000,000. At the same time, by better organisation and prudent management, expenses have been kept down and the percentage of expenses to premium income was actually lower last year than in 1920.

REVISION OF RATES.

From time to time, as changing conditions demanded, we have revised the rates of premium charged for new assurances. Usually, though not invariably, these adjustments have been in a downward direction, and now, as a result of recent investigations, a further revision has been decided upon. In the leaflet enclosed with your copy of the annual report you will see examples of the reduced rates for whole-life without-profit policies. Reductions have also been made in the rates for without-profit endowment assurances and—to a lesser extent—in the rates for with-profit policies, both whole-life and endowment assurances. The reduced rates should prove attractive and the increased business secured should contribute to the profits accruing to our with-profit policyholders. The reductions apply to new assurances only. It is impossible, for obvious reasons, to make them retrospective.

INVESTMENTS: EFFECTS OF FALLING PRICE LEVELS.

Let me now offer you a few remarks on movements in finance which have a direct bearing upon our investments. In the first place, let me say that if past experience can be taken as a guide, a falling price level would lead to rising prices for British Government securities in the long run. In order that this may be the eventual outcome, the credit of the British Government must (as in the past) be considered by the world as absolute. If once faith were lost in the good word of the British Government, no action of the Bank of England could suffice to stem the outward flow of capital from Great Britain that would ensue. Fortunately, there is no likelihood of that happening.

The disagreeable features about the latest fall in commodity prices are, first, that the fall was due chiefly to maldistribution of gold and only in a minor degree to increasing production of commodities, and secondly, that the fall in prices has every sign of being permanent. These two factors taken together mean that the revenue side of the British Budget has suffered a reduction in terms of money which can only slowly be made good as British production increases in the course of time.

EXTRAVAGANT BUDGET EXPENDITURE.

At the same time there have been huge additions during the year to our already gigantic expenditure, and intolerable direct taxation is increasing so violently that the Exchequer had to resort to using up its reserves, and has no further funds to draw upon, now that the evil day has arrived. Mr Snowden admits that the people of this country are taxed up to the hilt.

Part of the additional expenditure was, no doubt, due to the necessity of providing for the profligacy of the previous Parliament, but that plea will not exonerate this House of Commons from the charge of adding £27 millions in expenditure to a Budget that was already swollen to the point of destruction.

Now, at the eleventh hour, extravagant expenditure is to be stopped. Let us hope so. And since it is admitted on all sides that the field for economies in the non-statutory expenditure is too small to yield adequate results, it is evident that Parliament must not shrink from the task of dealing with statutory expenditure, while maintaining in their integrity all contractual obligations.
