The Economist

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventive of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CXII.

BEING FROM JANUARY, TO JUNE, 1931, INCLUSIVE.

LONDON:

PUBLISHED AT THE ECONOMIST OFFICE,
8 BOUVERIE STREET, FLEET STREET, LONDON E.C. 4.

MCMXXXI.

THE MONEY MARKET.

As had been feared, the market was this time subjected to unusually severe pressure over the turn of the year, for although some of the clearing banks gave a little assistance at the end of December by buying March bills and lending money into January, in other cases callings at the last moment were heavier than had been anticipated. Consequently, to judge from the Bank return dated December 31st, the market had to borrow—including the loans made by the Bank on Christmas Eve—a sum of no less than £43.6 millions, while the Bank, during the last fortnight of the year, also added £27.1 millions to its holdings of Government securities. Bankers' deposits

on the last day of the year amounted to £132.4 millions, an increase over the previous week of £68.3 millions. These figures give some idea of the intensity of the strain laid upon the market at the turn of the year, and additional evidence is afforded by the report that the latest comers to the Bank for accommodation had to borrow for as long a period as nine days.

Money and discount rates have naturally possessed this week an artificial character, for Wednesday's stringency was, as usual, both preceded and followed by days of extreme ease. On Wednesday itself, day-to-day loans, when obtainable, were concluded at rates running up to $3\frac{1}{2}$ per cent. and even higher, while three months' bills were quoted at $2\frac{5}{8}$ per cent. spot, and at $2\frac{1}{2}$ per cent. for delivery the following day. On Thursday, when the banks had released their surplus funds, money was in abundance, and rates were practically down to 1 per cent. Discount rates also eased in sympathy, three months' bills being quoted down to $2\frac{3}{8}$ per cent., but it was expected that once repayments to the Bank had drawn the surplus money off the market, higher discount rates would once more be established.

	Dec. 11, 1930.	Dec. 18, 1930.	Dec. 23, 1930.	Jan. 1, 1931.	Previous Rate and Date Changed.
Bank Rate	$\frac{5}{8}$	$\frac{5}{8}$	$\frac{5}{8}$	$\frac{5}{8}$	$\frac{5}{8}$ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Discount (Call)	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Houses (Notice)	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{5}{8}$	$2\frac{5}{8}$	$2\frac{5}{8}$	$2\frac{5}{8}$	...

On Christmas Eve, the note circulation rose to its peak of £379.7 millions, this representing an expansion during the previous four weeks of £28.6 millions. In 1929, the Christmas expansion in the note issue was only £25.0 millions, and it is also noticeable that the 1929 Christmas peak was practically identical in height with that of ten days ago. When allowance is made for the fall in prices since a year ago, it is clear that the Christmas demands for currency—and presumably Christmas trade—have been maintained wonderfully well, but it must be remembered that currency is needed at Christmas for other purposes, such as rent and other quarter-day payments, besides for use in the shops. Since Christmas Eve, £10.9 millions of notes have returned from circulation, and the Bank's Reserve has been correspondingly strengthened.

No gold was withdrawn from the Bank on French account on December 31st, but this was due solely to the fact that New Year's Day is a public holiday in France, and so the Banque de France was not open to take delivery. The flow of gold to France will probably continue at least for the present month, and while there is some talk of American short money coming to London as the result of the rediscount rate reduction to 2 per cent. in New York, it is still premature to place much reliance upon such a movement taking place. As regards the outlook in the London market itself, the period of revenue collection and also of Treasury bill redemption is now beginning, while in a short time the market will be disturbed by the big movements of funds entailed by the payment of the final call on last autumn's Treasury Bond issue and the redemption of the 4 per cent. War Loan. Hence it seems natural to look for periods of stringency in the money market, accompanied possibly by a tendency of discount rates to ease as Treasury bills are repaid.

NEW YORK.

Last week's reduction in the New York rediscount rate from $2\frac{1}{2}$ to 2 per cent. has since been followed by a reduction from 3 to $2\frac{1}{2}$ per cent. in the Boston Reserve Bank's rate. Nevertheless, money rates in New York have been considerably higher, partly because the rediscount rate reductions inspired talk of coming gold losses, but mainly because of heavy callings by the banks in order to meet end-of-the-year requirements. As a

result, call money rose to 4 per cent. on Monday, and though it has since eased to 3 per cent., this last rate is higher than the 2 per cent. which was in force during recent months. Commercial paper is quoted at $2\frac{1}{2}$ -3 per cent. for prime names. Further bank suspensions have been reported, including that of the Aldine Trust Company of Philadelphia. Gold arrivals include \$4,000,000 from Canada and \$1,650,000 from Cuba.

THE STOCK MARKETS.

Business in the Stock Markets was on a restricted scale, but the tone was steady for the most part, under more helpful New York advices. Gilt-edged recovered after an easier opening, but foreign bonds remained heavy. Home rails were featureless, with business at a low ebb, but further liquidation of Argentine rails was effected. Industrial quotations were slightly firmer, no considerable selling of "Mond" issues followed the announcement of Lord Melchett's death. Rubber and tea shares remained idle, but oil shares showed a modest rally on Continental buying. A moderate business was done in Rand shares, and a minor professional buying movement in tea shares followed the recovery in the metal on proposals for compulsory output restriction.

THE COMMODITY MARKETS.

Uncertainty and inactivity characterise the coal trade, and the market in Cardiff has been completely disorganised by the dispute. The tardiness, with which activity in the iron and steel industries is being resumed, indicates that firms have not much work on hand. The cotton trade remains quiet, and the immediate outlook is not very encouraging. The Bradford market is quiet, but steady. Hides and leathers continue weak, but prospects in the leather trade appear to be reasonably good. Vegetable oils and oilseeds declined sharply. There has been no improvement in the wheat situation.

THE FOREIGN EXCHANGES.

After considerable activity in connection with end-of-the-year business, the foreign exchange market has lately subsided into apathy, this being accentuated by the fact that all Continental exchanges were closed on New Year's day. The New York rate was $\frac{1}{2}$ lower at 4.85 $\frac{1}{2}$, and Montreal was weaker by the same margin at 4.86 $\frac{1}{2}$. Paris moved sharply in our favour, losing 6 points at 123.66. Brussels gained $\frac{1}{4}$ at 34.76 $\frac{1}{2}$, and Milan was rather firmer at 92.75. Madrid was again irregular, and went from 45.00 to 46.20. Amsterdam, after some fluctuation, improved by $\frac{1}{2}$ to 12.06. Berlin was very weak, and went from 20.36 to 20.38 $\frac{1}{2}$. Switzerland, after touching 25.00 and 25.05, settled down a good deal weaker on balance at 25.04 $\frac{1}{2}$. Of the Scandinavian exchanges, Stockholm and Oslo were weaker at 18.13 and 18.6 $\frac{1}{2}$ respectively, but Copenhagen was unchanged at 18.16 $\frac{1}{2}$. Of the South American currencies Rio lost $\frac{1}{2}$ d. at 4 $\frac{1}{2}$ d., Buenos Aires was very weak and lost $\frac{1}{4}$ d. at 35 $\frac{1}{2}$ d. after touching 34 $\frac{1}{2}$ d., and Montevideo lost $\frac{1}{2}$ d. at 35 $\frac{1}{2}$ d. In the Far East the rupee was steady at 1s. 5 $\frac{1}{2}$ d., and the yen lost $\frac{1}{4}$ d. at 2s. 0 $\frac{1}{2}$ d. Batavia was fractionally weaker at 12.06 $\frac{1}{2}$. In the forward market dollars were quoted at $\frac{1}{2}$ and $\frac{3}{4}$ cent premium. Paris was at rather narrower discounts of 2 and 4 centimes. Milan was at 15 and 43 centesimi discounts. One month Madrid was unchanged at 3 centimos premium, but three months was three points better at 12 centimos premium. Amsterdam went from par and $\frac{1}{8}$ cent premiums to $\frac{1}{2}$ premium for both periods. Berlin was rather better at 2 and 5 pfennigs discount. The silver market was very dull, and prices established new low records at 14 $\frac{1}{2}$ d. for cash and 14 $\frac{1}{2}$ d. for forward. The China silver exchange reacted differently, Hong Kong remaining unchanged at 1s. 1 $\frac{1}{2}$ d., whilst Shanghai lost $\frac{1}{2}$ d. at 1s. 5d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Boulevard Street, London, E.C.4.

FROM DECADE TO DECADE.

71r.
SEARCHING for words appropriate to speed the Old Year and hail the New, our eyes alighted on the following:—"Seldom have the outstanding features of our economic position been more unfavourable at this season than they are this year. With unemployment rife, short time general, demoralised stock markets, stocks of goods that are difficult to sell—or even unsaleable—when offered below cost of production, and a consequently uncomfortable feeling on the part of all who own them or have lent money against them, we have a most depressing setting for the festival which in pagan times welcomed the turning of the sun towards longer days and more genial warmth. The economic machine is seriously out of gear, and it will take all the best efforts of us all, working in harmony to that end, to keep it working and get it back to its old efficiency." These words might have been penned yesterday. In fact they were not. They are extracted from our columns of just ten years ago. And, again, just nine years ago we find ourselves to have been writing of the "feeble flickering" of our economic life and of "the darkest hour" which normally precedes the breaking of the dawn.

The years have passed. The world, and Britain with it, is deep in troubled waters again. And so, eschewing for once the customary task of surveying the past year and setting out pious hopes for its successor, we would ask our readers rather to think not of years but of decades, to throw their thoughts backward and forward, to survey the differences in the situations facing 1921 and 1931, to reflect on the story of what the past decade has performed or failed to perform, and to estimate the main outstanding tasks allotted to the new decade which has opened this week. To wish our readers "a happy New Year" might well evoke a grim smile on the faces of the majority. But what is one year? A mere twinkling of an eye in the boundless range of history. Let us lengthen our view just a little and seek sound reason to hope instead for "a happier and more prosperous decade."

The economic ailment of 1921 was, as we have reminded ourselves by contemporary quotation, acute; but it was very different in origin and fundamental diagnosis from the ailment which, with similar outward symptoms and manifestations, besets the world to-day. What was happening then was a collapse, inevitable but foreseen by few, of a great, artificial, inflationary boom created after the war by the world's need to replenish stocks at all costs after four and a half years of starvation. Having enjoyed a brief and happy stay in a fool's paradise, the world was brought up sharply against the hard facts of economic truth. To-day the story is a very different one. The present depression is due to causes far more complicated than the pricking of an inflationary bubble. After years of patient readjustment and struggle most countries had between 1923 and 1928 won their way to what appeared to be a reasonable level of normal activity, and the greatest disappointment about the present situation is that—except in the peculiar case of the United States where, owing to that country's unique advantages, a pinnacle of prosperity had been reached—the fall is not from a permanently untenable high level of well-being, but from what eighteen months ago was coming to be regarded as a hardly won and barely adequate base line of normality, from which further slow advances might be made by hard work and sound policy. In Britain, too, the disappointment is the deeper because the level attained before the arrival of the depression fell far short of satisfaction. Britain had her especial obstructions to surmount—the great labour upheavals of 1926 and the abnormal "rigidity and inelasticity" and other obstinate characteristics of her economic system recently summed up by Sir Arthur Salter. In brief, the comparison between 1921 and 1931 is this. In the former year the transition was from the clouds of fictitious values to the

bedrock of reality; in the latter—again excepting America—from a barely satisfying level into the slough of despond.

But does this necessarily mean that the past decade has nothing to show on the credit side? On the contrary. Hard though it may be for us amid our present discontents to realise it, it has in many respects been a period of progress—slow, difficult, laboured, perhaps—yet progress. Try to set out a profit and loss account. The items on the debit side are painfully clear—the sluggish march towards disarmament and peace, the persistence of the economic nationalism born of war, the slowness (particularly in Britain) of financial and economic readjustment to a world in transition. It is understandable, perhaps even excusable, that pessimists of to-day wring their hands and complain that the statesmen have failed to lay the foundations of peace, the bankers to rule out the anomalies which obstruct the working of the gold standard, employers to lay sound plans of reorganisation, and labour leaders to face the necessity of adjusting incomes to productivity. Yet there are, happily, substantial items on the credit side. In spite of the disastrous Ruhr episode, the Rhineland has been evacuated five years ahead of Treaty schedule; fantastic reparation claims have been brought in touch with reality by the Dawes and Young Plans; the Washington Treaty and the London Agreement have limited the threatened race for naval supremacy; the Treaty of Locarno and the Kellogg Pact have built fresh bulwarks against a sudden war; the relations between the two great Anglo-Saxon nations have been lifted from threatening embitterment to cordiality; the riot of the exchanges has been stayed; and the League of Nations has wrought economic salvage in Central Europe. Much has been done in the immense task of liquidating the war. That liquidation cannot be completed in one decade. We continue to pay for the war in many ways—in inflated budgets and high taxation, in super-nationalism, in tenacious clinging to new standards of living no longer economically justified, and in the loss of the men who would now be claiming the key positions of authority, guidance and management.

From this brief recital emerges the picture of the demands upon the decade just commenced. First and foremost comes the task of restricting armaments and providing that degree of security without which real prosperity is unattainable. Next, and a good second, the substitution of economic co-operation for selfish nationalism in a world which grows day by day more interdependent. And in our own country the co-operation of capital and labour in creating elasticity in the economic machine; the dispersion of the illusion of a bottomless State purse; the education of all-powerful demos in the relentless facts of world economics; the evolution of representative institutions in a manner suited to the handling of economic problems; finally, and above all, leadership capable of promoting these essential movements.

We do not despair. We believe the world to be saner, both politically and economically, than ten years ago. In Britain, too—in spite of "dole" fantasies which threaten demoralisation—we believe that the will to work is greater than in the days when the slogan was "homes for heroes," and "make Germany pay for the war." The tasks before us are as formidable as at any time in our history. But our capacity to perform them is undiminished, if we will only use it. Our national advantages remain; the character of our people has not changed; the march of science is playing into our hands. The opportunity is there for us to grasp, and in spite of all the discouragements of the present, our reading of history is that our country will not, when faced by the great alternative, choose the primrose path of dalliance which leads to littleness and low standards, rather than the rocky road of endeavour that leads back to the position which Britain can and should occupy in the community of nations. Believing this, it is with good heart and confidence that we wish our readers a "happy new decade."

FOREIGN POLICY OF THE UNITED STATES.

THE most remarkable, and the most welcome, feature of American foreign policy to-day is that it is attracting the interest and arousing the concern of the American people. In the United States, foreign affairs are coming to be studied both more deeply and more widely. A continuous scientific study is carried on at New York by the Council on Foreign Relations, with its meetings (including an annual address by the Secretary of State) and its publications (an Annual Survey of American Foreign Relations and a quarterly journal: *Foreign Affairs*); more popular discussions, on a high level, are conducted by the Foreign Policy Association, with its branches all over the country; there is an annual summer school at Williams-town, Massachusetts; and there are the annual lectures on the Harris Foundation in the University of Chicago. The fringe of this rapidly growing movement is represented by the interest in the world beyond the borders of the United States which moves American tourists in their thousands to spend their savings on foreign travel—particularly on travel to that east-off city of destruction: Europe. The gulf between the scientific studies of the Council on Foreign Relations and the vague impressions of the globe-trotter is enormous; but in a national perspective these both appear as aspects of a single phenomenon: the American people is becoming aware of its relations with the rest of the human family.

This is good news; for a great nation which believes that it has no foreign relations and boasts that it has no foreign policy may be a great danger to itself and to the world. And the American nation would have been particularly dangerous if it had settled down into this frame of mind. For their national experience has made the Americans an impatient people. From the middle of the eighteenth century to the close of the nineteenth—from the end of the seven years' war to the outbreak of the Spanish-American War—the Americans were turning their backs on the rest of the world, and were concentrating their energies upon the material development of an empty continent. This tendency was at its height during the second half of the nineteenth century, and the tide turned a generation ago.

But the Americans have not yet recovered the normal degree of international consciousness—and this in a generation which has seen international interdependence developed to an unprecedented degree through the increasing scale of economic operations. Into this delicate and dangerous intercourse of nations the Americans have re-entered in our days, bringing with them a temper acquired from the entirely different experience of a rough-and-ready intercourse with physical nature.

The qualities which the battle of life evokes in the pioneer and in the diplomatist are exactly antithetical. Your successful pioneer is a man who takes liberties with his environment, who carries a whole continent by storm. His business is with brute matter, not with human beings of like passions with himself; audacity and improvisation are the signs under which he conquers; and if caution and tact and a sympathetic understanding of other people's points of view had been his dominant traits, they would never have carried him west of the Alleghenies. The diplomatist's virtues are the pioneer's vices. But what happens when the pioneer succeeds so well that he subdues his continent by main force and so bursts beyond its bounds into new relations with the rest of the world? Is not the converse likely to be true? Are not the pioneer's virtues likely to work havoc when he turns away from hewing down his forests and ploughing up his prairies in order to rub shoulders again with his fellow men? Will he learn how to move as one must move in crowded places, walking circumspectly without giving offence or taking it? Or will he jostle his way through, seeing men as trees walking and failing to realise until too late that these walking trees are really dangerous wild animals of his own species?

These rather alarming questions have been raised, in our time, by the re-appearance of the American people on the stage of international affairs. And they are beginning to be answered now, in reassuring terms, by the

systematic and intelligent study of international affairs to which the Americans are addressing themselves. This is the most timely piece of self-education, on the grand scale, that is in progress in the world to-day.

When we pass from the study to its object, we look at American foreign policy as it is revealed to us in American expositions*, our eye is caught and held by a series of unresolved contradictions. For instance, the American horror of foreign political entanglements is still as great as it was when it first crystallised, a century and a half ago, in George Washington's famous warning. Yet the horror, which was originally felt for all entanglements, without exception, has, irrationally and unconsciously, become a localised horror of entanglements in one particular quarter. It remains limited to entanglements with Europe, mainly because Europe happened to represent the entire world for Americans in Washington's time. The horror has not attached itself to entanglements in regions with which the United States has only come into contact more recently. For example, there is no horror, in American minds, of entanglements in the affairs of the Pacific and the Far East. On the contrary, the United States has gone out of her way to entangle herself in this direction. She has annexed the Philippines; she has interested herself in China much as nineteenth century England used to interest herself in Turkey; and her attitude to Japan may be likened to the attitude of nineteenth century England to Russia. In fact, Americans now take it for granted that "the Far Eastern Question" is their affair, very much as we made "the Near Eastern Question" our affair in an age when we prized, as highly as the Americans do to-day, our "splendid isolation" from "the Continent."

If one asked an American to explain the apparent contradiction between his outlook towards Europe and towards the Far East, he would probably say off-hand that it is a matter of common sense, because the Far East is part of the New World of enlightenment and opportunity, whereas Europe is an aged and repeatedly exploding powder magazine. But this explanation will not hold water. Anybody who has visited Manchuria or Shanghai knows that it is just as dangerous to be entangled with these places as with Constantinople or with Upper Silesia. The contrast presented by the American attitudes towards Europe and towards the Far East has no basis in reason; but it is nevertheless a hard fact of first-rate international importance.

Then there is the unresolved contradiction between the Monroe Doctrine and the policy of the United States in the Caribbean. The Monroe Doctrine is a perpetual warning to the imperialistic Powers of Europe to keep their hands off the republics of the New World. Yet, in her Caribbean policy, the United States is behaving towards the weakest of these sister-republics just as the European Powers have behaved towards their victims and for just the same reasons. In fact, there is a ridiculously close parallel between the steps which the United States has been taking in order to control and protect the vital line of communications between her Atlantic and Pacific coasts, which runs through the Panama Canal, and the steps which Great Britain took, in her time, to control and protect her route through the Suez Canal to India. While the United States is dominating one Caribbean republic after another to suit her own national interests, she is talking "Pan-Americanism" as eloquently as ever. How has she the face? She has it because Great Britain's eldest daughter has richly inherited the family gift of "British hypocrisy." Did we not talk as eloquently about protecting the Oriental peoples against Russian aggression at the time when we were putting Egypt and Cyprus in our pockets? All the same, British experience seems to show that this contradiction cannot be kept up permanently. The United States may find herself compelled to choose between her Caribbean policy and her "Pan-American" policy sooner or later.

There is one other remarkable contradiction in American foreign policy. The Americans have a horror of com-

* "Survey of American Foreign Relations, 1930." By Charles P. Howland. (London 1930. Milford. 24s. net); "Interpretations of American Foreign Policy." [Lectures on the Harris Foundation, 1930.] Edited by Quincy Wright. (Chicago 1930. University of Chicago Press. \$5.00).

mitting themselves to any precise and positive international obligations for the preservation of peace; and yet they show by their acts that they are most sincerely pacific. The proof lies not so much in the fathering of the Kellogg Pact as in the acceptance of naval parity with the British Empire. Has it ever happened before that a nation which had the strategic position and the economic resources and the technical ability to make itself the mistress of the seas was content to go shares in that thalassocracy with the leading naval power of the day? How easily Germany succumbed to this lure of sea power. If the acceptance of parity is creditable to us, it is creditable to the Americans too. But the paradox remains. The nations which have the least desire to make aggressive wars are also the least willing to enter into positive commitments for making aggressive wars impossible.

MONEY IN 1930.

THE monetary conditions of 1930, both in London and other centres, mainly reflected the world business and stock market depression that followed the "crash" on Wall Street towards the end of the preceding year. Idle trade and ebbing stock markets reduced the demands for accommodation made upon the banks, and consequently threw surplus resources back upon their hands. Industrial inactivity and low commodity prices equally reduced the number of commercial bills coming forward for discount, while British Government debt operations during the year were the cause of a contraction of £91 millions in the Treasury bill issue. Thus at the same time as bankers were having to invest in bills and securities funds which normally they would be lending to their customers, the supply of bills was reduced to much below the volume of preceding years.

The keynote to the monetary history of 1930, therefore, is a redundancy of short money, a keen demand for bills, and as a consequence a headlong fall in discount rates, both official and unofficial. It is no accident that the year should have closed with the New York Reserve Bank's rediscount rate at the record low level of 2 per cent., or that for eight months of the year the Bank of England should have maintained its rate at 3 per cent. Nor is it an accident that for most of the year the London market rate of discount upon three months bank bills should have been very nearly a full point below Bank rate, whereas in more normal times a margin of barely $\frac{1}{2}$ per cent. may be expected.

In the first of the following diagrams, we show the weekly course of Bank rate and market rate of discount for three months' bank bills during the past year.

BANK RATE AND MARKET RATE.

The year opened with five months of extreme ease and steadily falling discount rates. Although tax collection during the first quarter of the year as usual withdrew money from the market, its effect was more than offset by the return of money to the market as the result of

the net redemption during this period of £191 millions of Treasury bills; while in April, after the end of the financial year, the collection of taxes ceased to be a disturbing factor. Hence, although during these four months Bank rate was reduced, in successive stages of $\frac{1}{2}$ per cent., from 5 to 3 per cent., the margin between Bank rate and market rate was never less than $\frac{1}{2}$ per cent. and was often greater than 1 per cent.

The summer months witnessed greater stringency, largely because the drain of gold to France, which had been so prominent a feature of the previous year's history, was renewed. Even though during the spring of 1930 French demands for gold had remained dormant, the French banks were still in possession of large foreign balances, and were still obliged to draw upon them whenever they were faced with special demands from their customers. In the summer of 1930 such demands arose, first in connection with the share issue of the Bank for International Settlements, then as a result of the issue of the Reparations loan, and later owing to the recurrence of the same considerations, including the need for greater liquidity on the part of the French commercial banks, as applied in 1929.

As usual, the full brunt of the French demand fell upon London, but at Whitsuntide the Bank of England let it be known that henceforward it would exercise its right of delivering standard gold against sales. As the Banque de France was only willing to buy fine gold, the effect of this change was to reduce the gold export point of the franc exchange from Frs. 123.91 to Frs. 123.65. Consequently, France contented herself for a time with buying from London only the new Cape gold which arrived each week, and switched over to New York for the satisfaction of the remainder of her needs. During July and August she took \$65 millions of gold from the United States.

The French pressure thus relieved, money in London once more became extremely easy, and until the end of October market rates of $2\frac{1}{8}$ and $2\frac{1}{4}$ per cent. were the general rule. In November, however, came the French bank failures caused by the Oustric collapse. This shook the confidence of the French public, and led to a steady and sustained withdrawal of currency by depositors. In self-defence, the French banks had to realise their foreign balances, even at a loss, and sold sterling until the exchange fell below the new gold point of Frs. 123.65. Early in November withdrawals of standard gold from the Bank of England on French account began, and they have continued ever since. The efflux has been at the average rate of about £300,000 a day, this being the limit of the refiners' capacity, but it has now gone on for practically two months, and there is no sign of its coming to an end.

As a later table shows, these losses to France had so far been balanced by gains—mainly from Australia and South America—effected by the Bank during the course of the year, and so the Bank has not found it necessary to raise its rate, especially as such a course of action would in no way check the French drain. On the other hand, the money market responded to this November renewal of French gold demands, especially as it was reinforced for a few days in December by an outflow of gold to Germany. The result was that there was a steady rise in market rate, until a week before Christmas it stood at $2\frac{1}{8}$ per cent. At the end of the year $2\frac{3}{8}$ per cent. was quoted. Judged by normal standards, both these rates are more reasonable than the low and unprofitable rates of $2\frac{1}{8}$ and even 2 per cent. in force in the early autumn. On January 1st rates as low as $2\frac{3}{8}$ per cent. were quoted, but these were due to the artificial abundance of money following the turn of the year, and were regarded as purely temporary. Higher rates were looked for, so soon as the Bank had been repaid its end-of-the-year loans.

The tables on the next page show that in 1930 the margin between Bank rate and market rate was as high as $\frac{1}{2}$ per cent. As bill-brokers obtain the bulk of these funds at a minimum rate of 1 per cent. below Bank rate, it is clear that they have had an unprofitable year. Bills have proved an unremunerative form of investment to the banks as well, for the year's average rate of $2\frac{1}{4}$ per

cent. compares unfavourably with those granted for fixed and other deposits, especially during the early months of the year.

The next chart reviews the position of the Bank of England during the past two years, the latest points shown on the curves relating to December 24th. It will be seen that the Bank's gold holdings fell, under the influence of French and American demands, to £129.1 millions at the end of September, 1929. Subsequently gold returned from America as a result of the Wall Street collapse, while bad trade and falling commodity prices forced Australia and several South American countries

to send gold to London in order to meet their commitments abroad, which would normally have been covered by exports. Thus the Bank's gold stocks rose to £163.3 millions at the end of April last. The renewal of the French gold demands then reduced the Bank's gold to its present level of £147.6 millions, or a net $\frac{1}{2}$ per cent. during the two years of just over five millions. London, therefore, has successfully played the part of the world's banker during a very critical two years and at the same time maintained her supply of "cash" (i.e., gold) practically intact.

The other curves in this chart need but little comment. The Reserve of course varies directly with the Bank's gold stocks and inversely with the note circulation, and the influence of the last-named is mainly seasonal. Bankers' deposits and Government Securities also mainly reflect such seasonal influences as the preparations for the half-year balance sheets at the end of June and December and the payment of the Five per cent. War Loan at the end of May and November. Once these fluctuations are removed, it is clear that, in its internal as well as in its external operations, the Bank has successfully maintained an even keel.

The final chart, on the opposite page, shows fluctuations in the three chief foreign exchanges during the year. The franc rate is a reflection of events already discussed. The mark exchange reveals a general impression of strength, with the exception of the early autumn, when the partial success of extremist parties at the elections shook confidence abroad. This led to a withdrawal of funds from Germany, and so caused a depreciation of the mark, forced a rise in the Reichsbank's rediscount rate, and led to the loss of a certain amount of gold. The dollar exchange has remained well inside the gold points. London and New York were both unattractive centres for the employment of short money, while bad trade and low prices reduced the normal commercial demand for foreign exchange on both sides. The United States continued to absorb gold, but almost entirely from Japan and South America.

There remains the important question of the distribution of the world's gold stocks, and here it must be

BANK OF ENGLAND.

confessed that 1930 has only made matters worse. The relevant facts are set out in the following table:—

GOLD HOLDINGS OF CENTRAL BANKS AND TREASURIES.
(In £ million.)

	End 1928.	End 1929.	Change during 1929.	End 1930.*	Change during 1930.	Change during two years.
United States...	770	802	+ 32	843	+ 41	+ 73
France.....	258	356	+ 98	426	+ 70	+ 168

Total ...	1,901	1,950	+ 49	2,024	+ 74	+ 123

* Estimated in part on the basis of the latest returns available. † Dec. 24.

During the past two years France and the United States have added £241 millions to their gold stocks, and now between them own over 60 per cent. of the total gold accounted for in the table. The chief losers over the two years have been Germany, Japan, Argentina and Brazil, whose combined holdings have fallen during the two years from £400 to £282 millions. If to this reduction be added the net accretion of £123 millions to the world total, the result is a figure which corresponds to the combined French and American gains, so that in the aggregate the remaining twelve countries in the table stand practically where they did two years ago.

FOREIGN EXCHANGES.

Thus the maldistribution of the world's monetary gold has become accentuated, and the arguments advanced in Sir Henry Strakosch's memorandum, published with the *Economist* of July 5th, are reinforced by this adverse development. Whether or not this maladjustment is the sole cause of the year's catastrophic fall in the price-level may be open to debate, but at least it is an important cause, and for this reason alone it is to be hoped that the considerations advanced in that memorandum and also in the interim report of the League of Nations Gold Delegation, will speedily lead to concerted action. The Bank for International Settlements, whose foundation was one of the principal events of the year, provides a common meeting-ground on which central bankers can discuss these matters, while as a recent speech of the Bank's chairman indicates, the Bank itself is already beginning to develop a world policy designed to relieve

the strain. Thus there is something to which we can look forward with hope in the future, but in the meantime it must be admitted that the monetary history of 1930 not only reflects the low ebb to which trade has fallen, but also contains one at least of the chief causes of the depression.

THE SHADOW OF THE BUDGET.

The revenue returns for the first nine months of the State's financial year suggest unmistakably that the problem which the Chancellor of the Exchequer will have to face in framing his next Budget will contain as its first, though by no means its only, element a substantial deficit for 1930-31. The return, which we print in full on a later page, of revenue and expenditure to December 31st, reflects, as was to be expected, the influences of the world-wide trade depression whose incidence has aggravated the difficulties confronting finance ministers in almost every country in the world. The gross figures, including self-balancing revenue, show receipts from all sources amounting to £486.5 millions, an increase of £17.4 millions on the corresponding figure a year ago, whereas total expenditure at £667.1 millions has increased by £28.2 millions, leaving a deficit to date of £180.6 millions, against £169.8 millions at this date in 1929, and £97.6 millions two years ago.

Since the influx of revenue is normally heaviest in the final quarter of the financial year, and since the benefit of the increased rate of Income Tax will be fully reflected in the three months yet to come, forecasts of the ultimate balance of revenue and expenditure are clearly subject to a wide margin of error. Nevertheless, examination of the accounts in detail leaves little room for doubt that Mr Snowden's anticipations of receipts under several heads at least will be proved by the event to have been unduly optimistic. In the following table we show the main items of revenue as estimated in the last Budget, and as realised in the first three-quarters of the financial year, together with the comparative figures a year ago:—

REVENUE (excluding self-balancing accounts). (Million £.)

	Year's Receipts.			Nine Months' Receipts.		
	Actual 1929-30.	Estimated 1930-31.	Estimated Inc. (+) or Dec. (-).	To Dec. 31, 1929.	To Dec. 31, 1930.	Inc. (+) or Dec. (-).
Customs	119.9	122.7	+ 2.8	90.8	91.0	+ 0.2
Excise	127.5	129.9	+ 2.4	98.4	95.5	- 2.9
Motor Duties	4.9	4.9	—	1.8	1.7	- 0.1
Income Tax	237.4	260.0	+ 22.6	75.3	79.3	+ 4.0
Sur-Tax	56.4	58.1	+ 1.7	15.1	17.8	+ 2.7
Estate, &c., Duties ..	79.8	83.0	+ 3.2	58.7	60.4	+ 1.7
Stamps	25.7	27.0	+ 1.3	17.3	13.3	- 4.0
E.P.D. & Corp. Profits Tax	2.2	1.7	- 0.5	...	...	...
Land Tax, &c.....	0.9	0.8	- 0.1	0.2	0.2	...
Total Tax Revenue ...	654.7	694.5	+ 39.8	357.6	359.2	+ 1.6
Non-Tax Revenue ...	79.5	78.9	- 0.6	60.9	60.2	- 0.7

The estimate of £78.9 millions receivable from non-tax revenue in 1930-31 is exclusive of the appropriation budgeted for of £16 millions from the Rating Relief Suspense Account; and this amount, not included in the £60.2 millions shown above as received in the first nine months of the year, has already been appropriated in full by the Treasury. With regard to tax revenue, whatever may be the eventual yield for the full year from Income Tax, Surtax and Estate Duties (and, however unconscionable may be the application of the fiscal thumb-screw in the next three months, it is unlikely that the estimates of the last Budget will be completely realised), it is evident that Customs, Excise and Stamps will to a considerable extent disappoint Mr Snowden's expectations.

Turning to the other side of the account, we show in the next table similar comparative figures of the main heads of expenditure, again excluding the self-balancing accounts.

The fall in short-term interest rates—a feature of the monetary history of 1930, with which we have dealt in a previous column—has already enabled the Treasury to save in the cost of interest and management of the National Debt substantially more than the amount

anticipated in last year's Budget. On the other hand, apart from the disquieting consideration that the Treasury has already provided over £20 millions this year by way of loan (and, in fact, this is an irrecoverable subsidy) to the Unemployment Insurance Fund—an issue not included in the foregoing table—there is an increase to date of nearly £52 millions in expenditure on account of civil and revenue votes, against a total estimated increase for the year of £49 millions.

EXPENDITURE (excluding self-balancing accounts). (Million £.)

	Year's Issues.			Nine Months' Issues.		
	Actual 1929-30.	Estimated 1930-31.	Estimated Inc. (+) or Dec. (-).	To Dec. 31, 1929.	To Dec. 31, 1930.	Inc. (+) or Dec. (-).
Interest and Maintenance of National Debt	307.3	304.6	- 2.7	272.4	254.4	-18.0
Payments to Northern Ireland Exchequer	5.5	6.0	+ 0.5	3.4	3.9	+ 0.5
Other Consolidated Fund Services	16.6	3.3	-13.3	9.8	1.9	- 7.9
Supply Services—Army, Navy and Air Votes	113.0	110.1	- 2.9	85.9	84.6	- 1.3
Civil and Revenue Votes	258.6	307.8	+ 49.2	180.4	232.1	+ 51.7
Total Ordinary Expenditure	701.0	731.8	+ 30.8	551.9	576.9	+ 25.0
New Sinking Fund (1928)	47.7	55.4	+ 7.7	36.4	39.1	+ 2.7

Bearing in mind the necessary caveats with regard to possible expansion of revenue from direct taxation in the final quarter ending three months hence, we are inclined to fear that Mr Snowden may have to deal with a revenue deficit of anything from £5 to £10 millions, combined with an unprovided for increase in outgoings of somewhere between £20 and £25 millions. If this forecast be approximately correct, and if the final deficit for the year prove to lie between £25 and £35 millions, the task which the Chancellor of the Exchequer will have in framing a Budget next April, with the knowledge that the yield per penny of direct taxation is certain to show a substantial decline in the ensuing year, will be unenviable.

THE WEAKNESS OF INSURANCE DEPOSITS.

(BY A CORRESPONDENT.)

IN 1870, British insurance companies were for the first time forced by Act of Parliament to lodge a deposit with the Government as a protection for their policyholders. Since that date a number of other Acts have been passed imposing fresh liabilities of the same kind, and this week the most recent of these Acts, the Road Traffic Act, has come into force, demanding from every company that is an authorised insurer (if not exempt under a previous statute) an additional deposit of £15,000 for its third-party motoring risks. This event has led to a state of affairs that calls for a little healthy ventilation.

The facts are that at least one insurance company which has become an authorised insurer by the deposit of £15,000 has notoriously been in financial difficulties for some months past. It has admittedly not been able to meet its claims as they are presented, but has delayed payment and conserved its resources by dilatory methods and by making such arrangements for postponement as its policyholders will consent to. Its embarrassment has not been disguised, and there can be little doubt that one of its reasons for delay and slow payment this year has been the necessity for collecting its £15,000 to be recognised as an authorised insurer by the Ministry of Transport or the Board of Trade.

Men of business will doubtless realise that the Government in drawing up its list of authorised insurers does not pretend to guarantee the solvency of the companies or to give the public any undertaking that they will continue to meet their liabilities; but the public is not composed entirely of business men, and it will be widely assumed that a concern which carries so high-sounding a title as "authorised insurer," officially bestowed, is

strong enough to deserve support and confidence. That a weak company should be able to advertise itself as an authorised insurer under the Road Traffic Act is clearly an undesirable thing. But apart from this there are two special considerations to which the attention of the Board of Trade ought to be called:—

(1) By taking from a weak company a sum of £15,000 and earmarking it for a special class of policyholder the Government is doing an unmistakable injury to other policyholders who have claims against the company unsettled. These policyholders accepted the security of the company at a time when they thought, and thought rightly, that the company's full assets were available (subject to any earlier deposit) for the settlement of the company's general liabilities, and now at a critical moment a large part of the assets on which they had relied are sequestered and put into cold storage for one particular section lucky enough to catch the eye of Parliament.

(2) While the deposit earmarked for motoring claims improves the position of the motor policyholder as against other classes of policyholder, it does not give even to him an adequate security, for the strength of a company rests not on its assets immobilised in the keeping of the Accountant-General, but on the reserves and funds available for its day-to-day business and on the skill and soundness of its management. A single claim might easily absorb the whole amount of the deposit, and if a large motor account is being written, a mere £15,000 would go but a short distance towards meeting the liabilities of the motor department. To attach a value to such a deposit, even from the point of view of the protected policyholder, we must know what is the extent of the liquid assets, what is the size and nature of the business that is being transacted, and from what funds the deposit was supplied. A deposit supplied from current premiums is little better than useless.

Useless, too, is a system of deposits which, like our present system, takes no account of the size or the quality of the business that the particular insurance company is undertaking. As things stand, if a company has by Act of Parliament to make a deposit at all, then, whether its business is vast or trivial, speculative or safe, its deposit is exactly the same. A life company which is writing £2,000,000 of new business in 1930 keeps deposited the same figure of £20,000 that it first deposited in 1870, when its annual new business was only £50,000, and from a small accident company whose motor risks are made up of privately owned cars in agricultural districts the same deposit is demanded as from a company writing a big motor account in heavy catastrophic risks, like long-distance motor coaches. If £15,000 is adequate for the one, it is absurdly inadequate for the other; but no attempt is made to distinguish between the two.

And if this plan of deposit-taking is of little use at home, it is very definitely injurious to British interests abroad. A British Government which demands deposits of fifteen and twenty thousand pounds as a condition precedent to a company doing business in Great Britain can have no grounds for objecting to any foreign Government adopting the same precautions; and many are the Governments that have adopted it since we began to do so sixty years ago. Insurance cover is one of the most valuable branches of Britain's export trade, but the deposit system, which was started to provide security, has been developed to provide protection, and there are now few countries in the world which do not by setting up a deposit barrier check the freedom and hamper the business of our great insurance interests. It has been estimated that an insurance company which wished to do fire business in some fifty countries of the world would have to tie up in deposits no less than £560,000 of its assets, and if to fire it added marine and accident business that figure would be doubled and amount to £1,120,000.

The Board of Trade and such other departments as are interested in the control of insurance companies are now so well accustomed to regard a deposit as the natural guarantee of security that it will probably not be easy for them to shift their point of view and consider any

alternative plan. But in view of the injury which has been done to British companies by foreign deposits, and in view of such unfortunate results as have already sprung from Section 42 of the Road Traffic Act, the responsible officials might well ponder the possibility of adopting for more general use the system of supervision used for the underwriting members of Lloyd's. Way back in the nineteenth century the Committee of Lloyd's adopted the deposit system and made every new member deposit in trust a sum of £5,000. The Committee did then what the British Government does to-day—it took the same deposit from everybody, whatever the nature and the size of his business, and having taken the deposit left him to carry on. But rather more than twenty years ago the Lloyd's policy in this respect was completely changed, for the Committee then realised that a continuous check on an underwriter's figures was more valuable than a fixed deposit of securities. The deposits were continued, but they were fortified by what is known as "the audit" and by a limitation of the size of every man's business in accordance with the value of his deposit. By the audit the Committee of Lloyd's set up a standard of solvency to which every underwriter must attain, and each year he must prove to the Committee that he has not fallen below that standard; while by limiting the size of the premium income and by satisfying themselves of the sources from which the deposit is supplied, the Committee see to it that the foundation is sound and that the structure imposed on it is not top-heavy. To submit insurance companies to the same kind of supervision might be a matter of difficulty, but it would be worth while to go to some trouble to prevent such absurdities and inconsistencies as flow from the present method, and if it were possible (as in time it might be) to secure international action, the gain to insurance interests from the lowering of national barriers would be enormous.

A GREAT INDUSTRIALIST.

"UNTIMELY" is the epithet usually applied to the demise of youth. But although Alfred Moritz Mond, first Baron Melchett, had passed well beyond the span of three score years when fate laid its hand upon him last Saturday, the epithet is in a peculiar sense applicable to his death. It is applicable to the close of a political career only recently reorientated and in its new direction still far from the fruition of its promise. It is applicable to the removal of the hand of the master builder from a vast fabric of industrial development on which much work remains to be done.

This being so, Lord Melchett's place in British history will be determined largely by the success or failure of those upon whose shoulders his mantle will fall. For such mistakes as he made—and mistakes there needs must be in the performance of tasks so vast—his succe-

sors will perhaps bear the blame; but failure or success on the part of his successors in completing the great industrial structure which he founded will redound to the ultimate fame or belittling of the architect initiator. We leave for description on another page the ramifications of his industrial enterprises and the steps that led to their creation and expansion. The scope and range of interest and achievement there revealed will surprise all who were not conversant with the extent of his activities. From the catalogue it is possible to draw a picture of the man—a man of bold imagination, with vision not limited by national or Imperial boundaries; a man who clearly foresaw that in a world whose economic interdependence was daily growing the need for industrial co-operation was every day more urgent; a fervent prophet of bigness; an apostle and vigorous ensuer of the doctrine, which British industrialists have been admittedly too slow to accept, that effective reorganisation is essential to British manufacture if it is to live in a changed world of large-scale units of production in ever closer and keener competition. His giant creations may prosper or they may fail; the structures he planned may be storm-proof or essential weakness may be disclosed; and, without detracting from Lord Melchett's great gifts in the rôle of industrial field-marshal, it may be frankly admitted that in details of organisation his touch was less sure, while his policy in company refinancing was frequently open to criticism. Nevertheless the vision of the architect remains, and to whatever degree failure he ultimately mingled with success, who can say what would have happened had not the hand of the master been removed at a moment when economic difficulties of unprecedented magnitude had to be faced and when the task of fuller and more cohesive development yet remained to be achieved?

In the minds of the masses Lord Melchett's name had become synonymous with a new and more organised capitalism, and the caricaturist had found in him a model for the man with the bulging money bags and the puller of a thousand industrial strings. And it is so, perhaps, that he may pass into legend. But his memory deserves far more than that at the hands of the historian. He was something more than the typical industrial Colossus, long familiar in other industrial countries, such as Germany and the United States, but comparatively new to Britain. If history treats him fairly, it will place very prominently on his record the broadness of view which characterised his industrial leadership in the critical days that followed the General Strike of 1926. At a time when organised labour was wearied by defeat and depleted of the sinews of war, many, far too many, employers seized upon what they regarded as a golden opportunity to drive the hardest possible bargains. Sir Alfred Mond read the opportunity in another and a bigger sense. In the picture, as he saw it, of the labour ranks disillusioned at last as to the effectiveness of belligerent policy, he

detected a real chance of founding the basis of a practical co-operative machinery worked in unison by the accredited leaders of employers and employed. His initiation of what became known as the Mond-Turner Conference (the final report of which was published on Thursday), may, in spite of his more spectacular activities, come to be regarded as his greatest service to the country. For although those discussions have not wrought the miracles of which he may have dreamed, they did much to further mutual appreciation of common problems, and, as a great trade union leader admitted the other day, the mere fact that they have taken place has brought about a change in the circumstances and in the atmosphere of industrial negotiation.

In such a career and in such a character anomalies and contradictions are inevitable, and of these perhaps the strangest and most deplorable is the fact that during the very period when his vision was becoming more and more international he began late in life to denounce the creed of fiscal freedom, to the championship of which he devoted a major part of a parliamentary career which once bade fair to eclipse his industrial feats. Arresting, too, in its rarity is the combination in one mind of high and enlightened idealism with a hard practical realism—a combination which in Lord Melchett was most clearly illustrated by his almost fanatical belief in the possibility of attaining human progress through the practical application of scientific knowledge and discovery.

We cannot expect to find that Lord Melchett was the only Napoleon into whose dreams of bigness the insidious germs of mere megalomania never crept in. But upon one point there may be general agreement. In Lord Melchett the country has lost, as Zionism has lost, as the Empire has lost, a devoted servant and leader, a captain of commanding personality, a man of very wide knowledge and memory beyond most men of his time, of unbounded vitality and indefatigable industry. Whatever his mistakes or failures, whatever the defects of his qualities, the country at this moment, when real leadership is one of its greatest needs, can ill spare a man who harnessed his unusual ability to what he conceived to be the chariot of real and sane progress.

Notes of the Week.

The Coal Stoppage.—Counsels of despair have unhappily prevailed in South Wales, and on Thursday an almost complete stoppage of work began. It is significant of the tragic folly of this outbreak of industrial hostilities that the issues which eventually separated the disputants were by no means wide. Originally, it will be recalled, the colliery owners in South Wales proposed that when Part I of the Act of 1930 came into operation on December 1st, a 7½-hour day should be worked on each day of the week except Sunday, whereas previously the hours had been eight on Monday to Friday and seven on Saturday; that the minimum percentage to be added to the basic (1915) rates should be reduced from 28 per cent. to 10 per cent.; and that the subsistence wage of 7s. 10½d. per day to the lowest paid workers should be cut to a figure under 7s., and overtime payments drastically restricted. These terms were rejected by the miners, and a stoppage at the beginning of last month was averted only at the last moment by the miners' acceptance "under protest" of an alternative offer that existing wage rates should be maintained and that eleven 8-hour shifts per fortnight should be worked. This arrangement was to last until December 31st, and shortly before Christmas the South Wales miners submitted to the National Board, in the absence of agreement locally, a claim that instead of this 88-hour fortnight (a system which meant the loss of one day's pay per fortnight in the case of day-wage men), a 45-hour week with six working days should be inaugurated as from January 1st. Having considered this claim, the National Board recommended that up to March 31st there should be no alteration of existing rates of pay, and that hours of work below ground should be 7 hours

36 minutes on Monday to Friday, and 7 hours on Saturday, or alternatively, 7 hours 40 minutes Monday to Friday and 6 hours 40 minutes on Saturday. These recommendations the coal owners, who had consistently declined to recognise the National Board, were unwilling to accept, and, since the miners' refusal to extend beyond December 31st their assent to the "spread-over" system, temporarily arranged, made it legally imperative that the mines should adhere to the statutory 7½-hour maximum, they put forward on Wednesday of this week fresh terms on that basis. These were that piece-workers' rates of pay should be unaltered (earnings would, of course, be reduced by shorter hours) and that the minimum percentage on basic wages, overtime payments and other conditions should be maintained, with the exception that day-wage men's pay per shift should be reduced by one-sixteenth. These proposals proved as unacceptable to the miners as the alternative of continuing an eleven-day fortnight, and the stoppage began, notwithstanding that the owners had proposed that, failing agreement by January 14th on the conditions to operate from February 1st onwards, reference should be made to an independent arbitrator. For this deplorable deadlock it is beside the point to endeavour to apportion blame. The mineowners' final proposals were a substantial advance on those which they had made a month before, and neither the South Wales miners nor the National Board have seriously contested the proposition that the coalfield is not at this juncture able to make ends meet on a rigid 7½-hour day without economies in wages. Given the fact that the principle of some kind of spread-over had been accepted by the miners in South Wales, and that the owners had tacitly admitted, to judge by their last offer, that wage rates could not be drastically reduced without real hardship, it is difficult for the general public to understand how it was that a working compromise could not be achieved. We must hope that on Saturday, when negotiations are to be renewed, wiser counsels will prevail.

New Year Honours.—The Honours List, which, according to tradition, was issued on New Year's day, is of less interest to the City than usual. Indeed, the financial world has only three prominent representatives. Sir William Plender, by his outstanding services in accountancy, both to the State and industry, fully earns the Peerage, whose conferment, we regret to note, coincides with a great bereavement; while two Baronetcies fall to leading figures in insurance circles, Sir George May, secretary of the Prudential, and Mr Ernest Debenham, who is a director of the Royal Exchange Assurance Corporation as well as of Lloyds Bank. The list, as a whole, is characterised by discrimination and discretion. Science and the Arts and many forms of real public service are recognised, and purely political rewards are laudably inconspicuous. Few could have cavilled at the Prime Minister had he seized the opportunity to reinforce his weak Front Bench in the House of Lords. But he has resisted the temptation, and is entitled to credit for putting into practice the formula "honour where honour is due" far more successfully than any of his predecessors at Downing Street.

The Pope Reviews the Year.—At the close of every calendar year it is customary for the Pope, in reply to a Christmas greeting from the College of Cardinals, to review the history of the past twelve months from the standpoint of the Vatican. His Holiness has just surveyed the events of 1930, and it is interesting to observe the proportion and perspective in which he sees them. Assuredly he spoke for both the conscience and the common sense of the average man when he shot an arrow at the dragon of nationalism. It was difficult, he declared, for peace to prevail between the nations "if in place of the old and genuine patriotism there should reign and be diffused an egoistic and unbending nationalism"; and he defined the evil spirit of nationalism in terms which all of us—Catholics and non-Catholics—

may take to heart. The Catholic Church is international by definition, and its tradition of internationalism—handed down from an age before modern nationalism was conceived—may prove to be one of the supremely valuable treasures in our social heritage. Considering this potential value of the Catholic tradition, we regret that His Holiness thought fit, in the course of the same survey, to stress other elements in the Catholic tradition which surely belong altogether to the past. It will be remembered that, after the conclusion of the Concordat between the Vatican and Italy in 1928, the Italian Government passed a law which brought the position of non-Catholic cults in Italy—e.g., Protestantism and Judaism—into line with the new position accorded to Catholicism. This law was really inevitable; for while the civil law of a modern state may restrict the social and legal scope of all religious cults impartially, it is incompatible with what is best in the spirit of the modern state that any differentiation should be made in the degree of liberty accorded to this cult and that. It therefore seemed unfortunate when the Pope intimated his displeasure at this law at the time of its passage. On the present occasion he has returned to the charge in a complaint against "the non-Catholic, and even anti-Catholic, proselytism which is being carried on in Italy, and especially in Rome itself." He maintains that this is not covered by the new Italian law, and that it is a direct violation of a clause in the Lateran Pact, in which "the sacred character" of Rome is recognised. In the same vein, he complains that, after the return of King Boris and Queen Giovanna to Bulgaria, the Catholic marriage ceremony which was performed at Rome has been supplemented by the ceremonial of the Bulgarian Orthodox Church. With all respect, we submit that this is an untenable position; for, while the essence of the Catholic Church is its universality, it has no monopoly. If it is good that Catholicism should range from China to Peru, it cannot be bad that Judaism and Protestantism should have a footing in Rome. The power of the Churches in the modern world will be in proportion to their freedom from local ties; as an antidote to earth-bound nationalism, it may be an immense power for good; but they will nullify this power unless they learn to exercise it in concord and co-operation.

The League and Latin America.—The visit which the Secretary-General of the League of Nations, Sir Eric Drummond, is paying to Latin America at this moment is happily conceived. For the Latin American States members at present constitute by far the largest and most important single group of members outside Europe; their membership is a standing witness to the fact that, notwithstanding the non-co-operation of the United States, the League is a world-wide institution whose services are at the disposal of states in every continent; and this characteristic of the League is of fundamental importance in an age when continents as well as countries are being dwarfed by a system of society whose natural range of operation is now on the world-wide scale. The structure of the League by no means rules out the possibility of regional organisations within the world-wide framework. This is recognised in the Covenant itself, with explicit reference to the Monroe Doctrine—a reference which cannot be very agreeable to Latin American feelings so long as the Monroe Doctrine remains a unilateral policy of the United States and has not been transformed into a co-operative policy of all the fully self-governing states of the Americas, from the Argentine to Canada. Meanwhile, the practical possibility of harmonious interplay between a world organisation like the League and a regional organisation like the Pan-American Union was brilliantly demonstrated at the time of the conflict between Bolivia and Paraguay in the Gran Chaco. On that occasion the Council of the League intervened, as in duty bound, on its own initiative, but remitted the task of conciliation to the Pan-American Organisation as soon as it became apparent that the latter was able and willing to act effectively. There was no question of a conflict of jurisdictions or of

a jealousy prompted by narrow-minded considerations of prestige. In fact, Pan-Americanism is not the obstacle to the progress of the League in Latin America. If anything impedes that progress, it is the local rivalries and susceptibilities of the Latin American states among themselves. At the beginning, Brazil played the part of the leading Latin American country in the activities of the League—a natural position in view of the size of her territory and population, but a position which gave offence to the Argentine. The consequence was that the Argentine—nominally an original member—has held aloof from the proceedings of the League almost from the start; and even the subsequent withdrawal of Brazil has not yet induced the Argentinian Government to modify its policy appreciably. Brazil withdrew because, when Germany received a permanent seat on the League Council, other claimants to the same privilege were asked to be content with seats of the new "semi-permanent" kind. In these circumstances, Poland submitted with a good grace; Spain withdrew and came back; Brazil withdrew and has not come back so far. These differences in behaviour correspond to the respective distances of the three countries from the political storm centre of international affairs. Politically remote and sheltered, the Latin Americans are apt to feel that a League which is a necessity for Europeans is a superfluity for them. Nowadays, however, we are suffering from an economic storm which has no storm-centre, since the depression is world-wide. The slump in prices has hit the Latin Americans as hard as anybody; and the idea of a world-wide organisation, capable of dealing with world problems on the world-scale, may therefore appeal to Latin American minds with an entirely new force when it is translated into economic and financial terms.

The Politics of Lilliput.—Public opinion in Andorra, San Marino and the Vatican City will doubtless be concerned at the news of the rebuff which the cause of parliamentary government has just received in the sister-state of Monaco. On Boxing Day, the Prince of Monaco promulgated a decree suspending the constitutional organisation which he had bestowed upon his subjects in 1911 and 1917. The functions conferred on the Monegasque National Council in those years are to be exercised—and this only in a consultative capacity—by the Council of State, while the functions of the Municipal Council and the Communal Council are to be exercised by a Special Delegation. The preamble to the decree arraigns the "party rivalries, degenerating into personal quarrels, which for some months have been giving rise to demonstrations and disorders." The indictment sounds harsh in view of the statistical facts; for it is difficult to understand how personal quarrels could ever have risen to the level of party rivalries in a body politic where Leviathan has such a modest number of heads. Monegasque politics must be rather like those of that short-lived universal church which drove to its oecumenical council (in Peckham) catholically in a four-wheeler and departed schismatically in two hansom cabs. Surely the "prejudice to public order and to the regular administration of the county" which this Monegasque storm in a teacup has caused can hardly have been so "grave" as the Prince avers. But perhaps the damage to "the economic life" of the Principality, which he

mentions in the same sentence, explains the drastic suspension of Monegasque constitutional liberties. For the Monegasquians do not live by taking in each other's washing. Their livelihood depends on a pilgrim traffic—though not quite of the same kind as that from which their brethren the Vaticanians and the Palestinians and the Hijazis make their livings. But the pilgrims who frequent Monaco resemble other species of the genus in one crucial point. They are shy birds, who, at the least suspicion of Bolshevism on the Riviera, might take wing, like the swallows, across the Mediterranean and alight, perhaps, at Tangier. The Tangerines already have a scheme afoot for capturing the Monegasquians' business from them. So, after all, His Serene Highness is probably well advised in deciding to take no chances. Thus the Principality reverts to that *régime* of pure autocracy, of the Renaissance type, which already prevails in the City of the Vatican. Let Andorrans and Sanmarines, on their barren and unfrequented mountains, cling to their republicanism if they will. They have nothing to lose by it. Monegasquians and Vaticanians, who live in the Great World, cannot afford to stand out against the political fashion of the times.

National Savings.—In its report for the year ended March 31, 1930, the National Savings Committee expresses itself satisfied with the progress of the savings movement. The sales of certificates were the largest for several years, though, as the following table shows, encashments also exceeded those of the two preceding years:—

	(000's omitted.)		
Year ended March 31st.	1927-28.	1928-29.	1929-30
No. of Certificates sold	46,761	52,342	52,624
Cash value of certificates sold	£37,409	£41,874	£42,099
Average number of certificates sold weekly	899	1,007	1,012
Repayment of certificates excluding interest	£46,784	£43,083	£45,297
Grand total of certificates sold since 1916	852,558	904,900	957,524
Cash value of above	£667,656	£709,530	£751,629
Amount of principal remaining invested on March 31st.....	£362,448	£361,239	£358,041
Estimated total amount due to certificate holders, including accrued interest	£483,500	£483,240	£480,000

The fact that the total amount due to holders has fallen by almost exactly the same sum as the principal outstanding indicates that the encashments must have consisted largely of old certificates, the withdrawal of the interest on which has been sufficient to balance the year's accumulation of interest on the remainder. Of the certificates issued, £989,507 were issued in exchange for first issue certificates, and of those cashed, £930,307 were transferred to 4½ per cent. Conversion Loan, 4 per cent. Savings Bonds, or Third Issue Certificates. This latter figure compares with £2,080,975 in the preceding year, and, whereas the net decrease in this class of investment in that year amounted to only £223,374, in the year under review it was £3,256,705. This is not surprising, in view of the economic conditions which characterised the closing months of the period. That it does not denote any decline in the strength of the movement is shown by the increase in the number of savings associations from 28,174 at March 31, 1929, to 29,273 at March 31, 1930.

Bankers' Clearings in 1930.—The return of the Bankers' Clearing House for last year showed that town clearings amounted to £38,783 millions, as against £39,936 millions in 1929, metropolitan clearings to £1,812 millions, as against £1,882 millions, and country clearings to £2,964 millions as against £3,079 millions. The grand total came to £43,558 millions, as against £44,897 millions. In view of the inactivity of the Stock Exchange and the contraction in the volume of new capital issues, the shrinkage of only £1,153 millions in town clearings seems surprisingly small, but the explanation is that town clearings comprise a huge mass of routine payments, mainly arising from money market and allied operations,

which are not affected to any great degree by the general state of business. The decrease of £70 millions in metropolitan clearings is in the main an indication of the state of retail trade in London, and as this decline amounts to only 2.8 per cent., it is fully explained by the fall in London retail prices. Perhaps the most surprising result of all is the decline of £115 millions, or only 3.7 per cent. shown by country clearings. When allowance is made for the falling-off in business and for the fact that 1930 wholesale prices were on the average only 36 per cent. of those current in the previous year, this contraction is unexpectedly small. It is noticeable, however, that the percentage steadily increased as the year progressed, until for the fourth quarter of the year alone it was as high as 7.5 per cent. Even this last figure, however, is much smaller than that representing the fall in wholesale prices. The provincial clearing house figures, however, tell another story. Clearings at Bradford for the whole year contracted by as much as 27.2 per cent., and for the fourth quarter alone by no less than 33.4 per cent. The year's decreases for Liverpool (19.1 per cent.) and Manchester (17.9 per cent.) were nearly as bad, while those for Sheffield (12.9 per cent.) and Leicester (11.4 per cent.) were serious. With the exception of the last-mentioned centre, the contraction is accentuated in every case where comparison is confined to the last quarter alone.

Governor Stringher.—Our Turin correspondent writes: The death, on Christmas Eve, of Signor Stringher, Governor of the Bank of Italy, is a grave loss both to the bank and to the country. Born at Udine in 1854, Senator Stringher was a student at the Venice School of Economics during the time when Italy's greatest nineteenth-century economist, Francesco Ferrara, was director of the school. In 1875 he was called by Signor Rodio to the Central Statistical Office at Rome, and he rose rapidly from one responsible office to another. The Bank Act of 1893, of which, as Inspector-General of the issue banks, he was the principal author, was the outcome of the banking crisis which followed the Banco Romana scandals and the note forgeries of that year, and still remains the foundation of Italian banking law. Signor Stringher became a Member of Parliament in 1900 and was soon appointed Under-Secretary of State to the Treasury. On the death of Signor Marchiori he was appointed Director-General of the Bank of Italy and in this office, which was changed to that of Governor in 1928, it was his duty to administer the Act of which he had been the main author. Under his guidance the Bank of Italy greatly improved its position and successfully withstood the crisis of 1907 and the still greater strain imposed by the war. Small of stature and unassuming in manner, Signor Stringher was noted alike for his courtesy to visitors and for his ability to soften, by the manner of its utterance, the negative reply which it is perhaps the first duty of the Governor of a bank of issue to know when and how to give. It is difficult, if not impossible, to determine whether he made a firm enough stand against government pressure for constant new note issues during the war, but it is certain that he made a firmer stand than many of his colleagues in other countries and that he subsequently succeeded in reducing the issues from over 22,000 million lire to less than 16,000 millions. The balance sheet of the Bank of Italy at the time of his death is a testimonial to the soundness of his administration. In addition to his practical banking activities, Signor Stringher held a chair at the University of Rome for some years and was a member of many learned societies. His annual reports to the shareholders of the Bank of Italy will remain a classic source of the economic history of Italy during the first thirty years of this century.

Cotton Labour Troubles.—A serious position has arisen in the Lancashire cotton industry as a result of the determination of the weaving employers to introduce the "more looms per weaver" system, and the refusal of the trade unions to accept the terms put forward or to

negotiate with the employers on the general question. It is the intention of the employers, writes our Manchester correspondent, to put this system into operation on January 5th, and the Operative Weavers' Amalgamation have decided to withdraw the labour of their members from any sheds where the system is started. It may be pointed out that so far back as March, 1929, an experiment was begun at Burnley, with the approval of the local operatives' association, in order to ascertain the advantages or otherwise of weavers working eight looms instead of the usual four, the weavers being assisted by helpers who do labouring work, such as carrying weft and cloth. This experiment was confined to ten firms, and each firm was limited to running 4 per cent. of their looms under the revised conditions. After a twelve months' trial, the Cotton Spinners' and Manufacturers' Association, which embraces all the employers' local associations in Lancashire, wished to extend the system, but the workpeople by ballot decided against such a development. Two or three months ago the employers drew up a wage scale for running six, eight or ten looms under the new system, and this was submitted to the trade unions, but the latter refused to negotiate on the proposals. This action was followed by the decision of the employers to allow their members to work the new system from January 5, 1931, one of the conditions being that no firm should work more than 25 per cent. of their looms in this way during 1931. At the time of writing a deadlock exists; but it is expected in Manchester that Sir Horace Wilson, the Chief Industrial Adviser to the Government, will intervene and endeavour to arrange a joint conference between the employers and the trade union officials. The chief objection of the workpeople is that this innovation will mean a large displacement of labour, but the employers have offered to introduce the new system very gradually, and it is designed to reduce appreciably the costs of production and thus enable Lancashire to regain some of her lost trade.

Mr Bennett and Western Canada.—In a letter written a fortnight ago, which appears in our Overseas Correspondence columns, our Ottawa correspondent describes the acute distress in the western provinces of Canada, and mentions various measures proposed for the relief of the western farmers. Meanwhile Mr Bennett, in a broadcast speech last Tuesday, has announced a definite policy. He stated that the Government had already taken steps, by extending credit facilities and by other arrangements which he thought it wiser not to discuss, to prevent forced liquidation of the 1930 crop, but he wisely rejected the idea of a guaranteed wheat price, on the ground that a large part of the wheat has to be absorbed by external markets. The Prime Minister expressed approval of Mr Beatty's plan for establishing a farm finance corporation, with transport companies, banks, insurance, mortgage and industrial companies as shareholders, to assist cereal farmers to embark on mixed farming, and stated that a capital of some five million dollars would be used as a revolving fund. Mr Bennett also declared that the Government was occupied in finding permanent markets for Canadian products by protecting the home market, extending Empire trade, and revising treaties with foreign countries, and it is difficult not to read into his words a hint of possible further tariff increases. He expressed himself hopeful of an increase in Empire trade as a result of the continuation of the Imperial Conference next summer, and he announced that on representations by himself to the French Government of the urgency of the promised adjustment of Franco-Canadian trade in wheat, which has almost been killed by repeated rises in the French tariff, the French Government had undertaken to purchase between 7 and 9½ million bushels of the 1930 wheat crop. Further, the Canadian Minister to Japan was on his way to China to attempt to procure a similar guarantee for the purchase of a million bushels. Many of these measures should contribute in some degree to alleviate the situation. An abandonment of their sole dependence on grain would permanently strengthen the position of the farmers, and anything ministerial sales-

manship can do to procure guaranteed markets will *pro tanto* relieve the present situation. But how tariff protection of the home market can help anybody without disproportionate injury to those who most need assistance, it is for Mr Bennett to explain.

Bank of Montreal.—The report of this bank for the year ended October 31st clearly reflects the fall in commodity prices and the spread of the trade depression. As is shown by the following figures, extracted from the bank's balance sheet, there has been a general contraction in the bank's earnings and resources, which, as stated in the general manager's address to the shareholders at the annual general meeting held on December 1st, is directly due to the fall in security and commodity prices. The chief exception to this contraction is to be found in investments, which have risen by \$53,000,000. This shows that the Bank of Montreal, like the majority of banks throughout the world, has had to divert to gilt-edged securities resources for which in more normal times other and more remunerative forms of employment would have been found.

	October 31, 1929.	October 31, 1930.
	\$ thousand.	\$ thousand.
Notes in circulation.....	45,465	39,724
Deposits not bearing interest.....	178,284	148,046
Deposits bearing interest	594,049	540,977
Gold, notes, &c.	116,965	100,047
Balances due by banks outside Canada...	30,728	35,119
Call and short loans in Canada	39,407	17,841
Call and short loans in U.K. and U.S.A.	115,506	60,922
Investments	129,611	182,640
Loans and discounts	435,976	359,703
Net profit for year	7,071	6,519

The heavy fall in call loans, both at home and abroad, is the direct consequence of the prevailing stock market depression and inactivity all over the world. The contraction of \$76,000,000 in loans and discounts is in one sense reassuring, for it dissipates any fears lest the Canadian banks may have become too inextricably involved in the impasse arising from Canada's huge wheat stocks and the collapse of wheat prices. It is also reassuring to learn that the general managers' address called into question the wisdom of placing such widespread reliance upon one type of crop, especially when the bulk of it must be exported. The report also states that considerable progress is already being made with the development of mixed farming, and this, again, is encouraging news. Nevertheless, Canada is still mainly an agricultural country, dependent upon foreign markets, and as the report admits, stable conditions in the world at large are needed. Until these are restored, many of Canada's difficulties will continue, and Canadian banks, in their turn, will have to exercise some circumspection in maintaining a balance between the requirements of their customers and the need of maintaining in times of falling prices an adequate margin of security.

New Life Assurance Business.—New Year's Day has produced the customary batch of announcements of new Life Assurance business transacted in the year 1930. After making allowance for the natural reluctance of those offices which have failed to register an increase, to make

Treasury, 31st December, 1930.

an early public pronouncement of the fact, it is not a little surprising to find that the statements so far made indicate a remarkable all-round increase. Thirteen offices have so far published their returns, and of these only two show a smaller New Business in 1930 than in 1929. Considering the depth of the trade depression in 1930, and the added circumstance that Single Premium Sur Tax Saving Policies were cut off as a source of New Business, as a result of the Finance Act, 1930, the increases recorded are a fine tribute to the vitality of British Life Assurance and of the internal organisation of the offices concerned. The actual returns of the 13 offices are as follows:—

Company.	1929.	1930.
Atlas	3,919,560	4,100,000
British Equitable	516,325	530,000
British General	482,131	508,154
Equitable	965,264	975,000
Equity and Law	1,646,345	1,890,046
Friends' Provident	1,645,844	1,840,000
Legal and General	7,953,864	11,366,352
London Life	2,927,608	3,126,514
National Mutual	859,635	813,403
National Provident	1,215,234	1,637,000
Pearl	11,652,887	10,377,395
Prudential	17,606,949	18,800,000
University Life	167,895	168,225
	51,559,541	56,132,089

The first company on the list, the Atlas, pursues an aggressive New Business policy, and in addition to its Life Assurance business transacts a considerable volume of Sinking Fund Assurances, the amount last year being £2,840,000, compared with £3,550,000 in 1929. Accompanying the New Business statement is an announcement to the effect that the Interim Bonus for the year 1931 will be maintained at the rate of 48s. per cent. compound. It is further stated that the profits earned by the Life Department during 1930 were again large, and that the payment of a bonus of 48s. per cent. compound absorbs only about two-thirds of such profits. The "Old Equitable" shows a moderate increase in Life Business, but the Sinking Fund and Annuity business transacted is on a reduced scale. In 1929 Sinking Fund policies were issued for £175,000, but the corresponding figure in 1930 was £150,000. Again, Deferred Annuities in 1930 were issued for £75,000 per annum, compared with £97,500 per annum in 1929. The increase in the Equity and Law figures is not only substantial in itself, but is still more worthy of mention inasmuch as a considerable proportion of this Society's business in the past few years has been due to Single Premium Sur Tax Saving policies, a source which has almost entirely been denied to it in 1930. The Legal and General figures show yet another remarkable increase on those of the previous year, the 1930 amount, it will be seen, being over 40 per cent. in excess of that for 1929. In addition the company transacts a very large Annuity business which has recently been considerably augmented by the inauguration of Group Pensions on the American system. This latter innovation is probably responsible for a tremendous expansion in the 1930 Deferred Annuity business, which was responsible for new policies of annuities of £569,100, compared with £109,745 in 1929. In addition to the Life Assurance business of the London Life, Sinking Fund policies were issued in 1930 for £111,955, compared with £611,163 in 1929. Moreover the Association has a large Annuity Department, and in that department issued new Immediate and Deferred Annuity policies last year providing for annuities of £114,888, compared with £125,224 in 1929. Although the National Mutual net total is down somewhat, it is of interest to mention that the gross business is slightly in excess of that for last year at £1,094,653, and the difference between this and the net figure indicates that a very considerable proportion of the business has had to be reassured with other offices. The Prudential can usually be relied upon to produce a comfortably increased business, and 1930 is no exception to the general rule. Included in the total the company states that £8½ millions was in respect of policies for over £500, compared with £7,700,000 in 1929.

Overseas Correspondence.

UNITED STATES.

Business Conditions — Prices — Foreign Trade — Crop Values — Money — Railroad Merger — Mexican Credit.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 20.

THE removal of the menace to confidence involved in the failure of the Bank of United States and the supplying of capital to numerous brokerage houses in need of assistance checked the pressure of necessitous liquidation in the share market sufficiently to give prices a chance to turn against an over-extended "short" position. There has been no organised support of shares or of bonds, but in view of the uninterrupted decline in the markets for more than two months, a sharp rally was not surprising.

Much is being made of the sighting of business improvement in some directions, but this does not seem to apply to basic industries. Forward buying is increasing in steel, but the industry is still operating below 40 per cent. of capacity. Railroad traffic is at the low level of 1921, and the motor trade has no assurance that its hopes of larger sales next year will be realised. Holiday retail trade has been on the whole excellent, but merchants complain of much reduced profit margins. Such revival of business courage as might have been induced by the more favourable factors in the situation is damped by the continuous decline in commodity prices. The Farm Board is obtaining an additional \$150,000,000 from Congress, which presumably it will spend largely in a fruitless effort to peg the price of wheat and cotton. No great faith is placed in the Farm Board, and recently cotton has sunk to new low levels. There are also disturbing declines in silver, rubber, sugar and other important commodities, while the gradual rise in unemployment naturally restrains public buying of necessities as well as of luxuries.

Wholesale prices in November dropped 2½ per cent., according to the Bureau of Labor Statistics index, and retail prices of foods fell 2 per cent. Farm products account for the principal decrease in wholesale prices. Raw materials as a whole were lower, but manufactured goods were steadier. A comparison of prices by groups follows:—

INDEX NUMBERS OF WHOLESALE PRICES.
(1926 = 100.)

Groups.	1929.	October, 1930.	November, 1930.
All commodities	94.4	82.6	80.4
Farm products	101.1	82.6	79.3
Foods	98.8	88.6	85.7
Hides and leather products	108.4	96.5	94.0
Textile products	91.5	73.8	73.3
Fuel and lighting materials	81.7	75.1	71.8
Metals and metal products	102.3	90.4	90.2
Building materials	96.0	85.8	85.6
Chemicals and drugs	94.0	86.0	85.2
House-furnishing goods	97.1	95.3	95.2
Miscellaneous	80.1	68.8	67.8
Raw materials	94.8	80.0	76.8
Semi-manufactured articles	95.6	75.5	75.6
Finished products	94.2	85.6	83.7

Foreign trade, as anticipated, fell sharply in November. Exports, at \$289,000,000, were 12 per cent. below the October level and 30 per cent. below that of the same month of last year. They were smaller than for any November since 1914. Imports, at \$204,700,000, showed similar declines and were the smallest for any November since 1916. The excess of exports is comparing favourably with last year. For the eleven months it amounts to \$715,137,000, compared with \$724,892,000 in the previous year. Exports for the eleven months are down \$1,245,971,000 and imports are lower by \$1,236,216,000, a striking reminder of this country's dependence on

foreign trade to remove its surplus of crops and manufactured goods.

In spite of unsatisfactory trade, bankers' acceptances continue to rise. During November there was a gain of \$63,174,000, and at the end of the month the total of \$1,571,417,000 was within \$86,000,000 of the high figure of a year ago. The drop in wholesale prices of about 15 per cent. for the year probably accounts for the decline of 5 per cent. in bills outstanding. Some attention is drawn to a gain of \$14,600,000 in credits extended to finance goods stored or in transit abroad, as indicating the help given by American banks to foreign countries. The bulk of the gain for the month was, however, in domestic warehouse credits.

Some measure of the extent of the trade recession in rural communities may be gained from the recent report of the Department of Agriculture on the value of 1930 farm crops. The value of the nation's principal crops, on the basis of December 1st prices, is placed at \$6,274,824,000, a drop of about 27 per cent. from the level of a year ago. This loss in value was suffered from crops raised on an acreage of 366,507,000, compared with 364,522,000 last year. The drought had something to do with it, but the lower value has been principally a reflection of all-round price declines. In spite of low prices, however, and the exhortations of the Farm Board, farmers are planning to plant nearly as much wheat as ever. The Department of Agriculture estimates that autumn sowing of wheat was only 1.1 per cent. less than a year ago and 1.4 per cent. lower than the five-year average.

After a flurry around the tax date, caused as much by the efforts of banks and individuals to pile up currency reserves owing to fears excited by the bank failures, short-term money rates have dropped back to the former ease. Money rates now are as low as they ever have been since records were kept. Brokers' loans have declined by \$2,250,000,000 over a period of twelve successive weeks, and are at the lowest since 1925, standing but slightly above \$2,000,000,000. The drop has been accompanied by a decrease in reporting member bank loans on securities. The bulge in these loans early this year has entirely disappeared, and the present level is about \$50,000,000 below that of the end of 1929. Still, at \$7,800,000,000 it is about \$2,000,000,000 larger than three years ago, when price levels for shares were nearly the same as now. The larger total easily can be accounted for by the enormous rise in share flotations during the period, but nevertheless it is believed to constitute a potential source of further liquidation in the market.

Member bank loans classed as "all other," which include commercial loans, expanded this autumn about as much as last year, although the total was lower. This is explained by the increased purchase by the banks of bankers' acceptances, which are reported under the "all other" loan heading. This class of loan is now falling sharply. Reserve bank credit outstanding has been virtually stationary at \$1,000,000,000 since early in the year, but a considerable expansion took place in the current week.

Wide attention is focussed on the discussions taking place among the executive heads of the four large Eastern trunk line railroads—New York Central, Pennsylvania Railroad, Baltimore and Ohio, and Chesapeake and Ohio-Nickel Plate-Erie (the Van Sweringen lines)—with a view to a consolidation of all eastern lines outside New England into these systems. If agreement could be reached, it is believed that other mergers would shortly follow, and that the proposed amalgamations into nineteen or twenty systems for the whole country would be accomplished. Merger negotiations are believed to have the earnest support of the Administration. Washington has been assured that once the question is settled the railroads can proceed with their expansion and improvement plans, involving the expenditure of large sums. Comprehensive merger plans, moreover, would solve the problem of the weaker roads, which are finding it difficult to meet their obligations owing to traffic depression.

A Mexican credit of anywhere from \$5,000,000 to \$25,000,000 may be announced shortly by the National City Bank. The credit is desired by the Mexican Government principally for its moral effect on exchange speculators, and in case of actual use it is believed that the credit will be amply protected.

FRANCE.

Budget — Development Works — Unemployment — Prices — Profits.

(FROM OUR CORRESPONDENT.)

PARIS, December 31.

In the programme for the coming session the Budget will have first place. The Finance Commission of the Chamber finished its examination of the expenditure side of the measure last week, and its proposals prove to exceed by about 250,000,000 francs those put forward by the Tardieu Cabinet. The Budget, as it will come before the Chamber, will present a total, in round figures, of 50,500,000,000 francs, with a problematical balance of revenue. So far as can be gathered, the recommendations of the Finance Commission embody to a great extent the proposals put forward by M. Germain Martin, the former Budget Minister, who has now succeeded M. Paul Raynaud as Finance Minister.

Whether the revenue estimates, which were drawn up several months ago, will prove satisfactory, in view of the darkening of the general French economic outlook during the past few weeks, remains to be seen. The first eight months of the present financial year have resulted in a realised surplus of 1,102,000,000 francs, but it is known that supplementary credits opened since April 1st have already totalled over 1,200,000,000 francs (including an additional expenditure of 650,000,000 francs for national defence, chiefly due to the precautions thought necessary in view of the Hitlerist menace in Germany since the last German elections), so that very careful handling will be necessary if a deficit on the current year is to be avoided. As under the previous Budget, no additional taxation is proposed—nor, indeed, would any fresh burdens on the taxpayer, in view of the present not very satisfactory economic outlook, appear to be either necessary or advisable. A decree authorising the opening of a credit of 200,000,000 francs, to provide for proposed reductions of direct taxes, appeared recently in the *Journal Officiel*.

The Tardieu Government's plan for the expenditure of 17,500,000,000 francs during the next five years on improving the nation's economic equipment now appears to be doomed. The principal Opposition argument against the scheme, until a month ago, was that it did not go far enough, and was both niggardly and inadequate in its scope. M. Palmade, the new Budget Minister, indeed, urged that the amount to be spent should be doubled, if any appreciable benefit was to be obtained. Since the Opposition of a month ago replaced the Ministry in office, however, its whole attitude towards the plan for economic development has been reversed. No definite decision has yet been taken, but it is now generally understood that the new Ministry has decided to cut the total contribution to be demanded from the accumulated surpluses of the Treasury for the first year's application of the plan from 5,000,000,000 francs to 2,500,000,000 francs. Only the most urgent works in connection with port, road and inland waterway development, and electrification of the rural districts, are to be undertaken during the coming year; and in those cases in which the proposed improvements have both a general and a local character, the local authorities and chambers of commerce and other bodies are to be called on to share in the cost.

The general economic depression throughout the world is at last visibly making itself felt in this country. A slight further drop in production, a shrinkage in the volume of Christmas trade, and the continued increase in unemployment, coupled with a continued rise in retail

prices, notwithstanding the substantial fall in wholesale prices during the past three or four months, have all combined to produce widespread pessimism, which is beginning to voice itself loudly in the newspapers. That this feeling is exaggerated, however, is evident from all the data. The total number in receipt of unemployment pay during the week ending December 20th is returned as 10,686 (against 8,936 in the previous week), of whom 9,164 were in the Paris area. The number of workers unable to find employment through the labour bureaux during the same week was 20,126, or within 50 of the total for the previous week; 11,790 of these also being in Paris and the Seine Department. Unemployment therefore seems to be practically confined to the capital and the surrounding district, and this may be largely accounted for by the falling off, for obvious reasons, in the various luxury trades on which Paris to a great extent depends. Reports from the provinces give no serious ground for pessimism, either in general industry or in agriculture; and the number of foreign workers brought into the country every week continues to exceed that of the repatriated.

The question of the inconsistency between wholesale and retail prices is more complicated, and is the subject of a sharp controversy, which has so far produced no effective arguments. The explanation probably lies in the circumstance that France, by reason of her protective tariff, her subordination to the fact that she is both an agricultural and an industrial country, the far-reaching influence of writing off four-fifths of the value of the franc, the complexity of her taxation system, and her careful fostering and maintenance of her home market, occupies a position unparalleled by any other country. There is also the question whether the French indices of wholesale and retail prices and the cost of living are compiled on sound principles. The figure for retail prices certainly cannot be accepted without hesitation, as it covers only thirteen articles, of which eleven are foods, while that representing the cost of living of a typical working-class family is vitiated, so far as comparative purposes are concerned, by the special situation in this country of the rent factor.

Profit levels for the past year have apparently been well maintained, and in many cases, judging from the results already made known, appreciably increased. The Bank of France dividend for the year ending at Christmas is announced as 620 francs net, or 62 per cent., against 520 francs for 1929, 350 francs for 1928, 300 francs in 1925, and 190 francs, or 19 per cent., in 1914. Bank of France 1,000-franc shares, which were quoted before the war at around 5,000 francs, stood in the neighbourhood of 25,000 francs during 1929, and on December 31st last at 24,690 francs. They closed to-night at 18,000 francs, representing a yield at present levels of almost exactly 3½ per cent. The vast majority of the shares are held in single units.

GERMANY.

Proposed Customs Agreement with Balkans — Agricultural Credit Relief — Bank Balance Sheets.

(FROM OUR CORRESPONDENT.)

BERLIN, December 30.

A DIFFICULT decision in German trade policy is likely to be called for in the New Year. For some time the States of South-east Europe, which are suffering severely from the world economic crisis, have been trying hard to conclude a sort of Customs alliance with some great European industrial country. They wish, in return for preferential rates on the exports of such a country, to secure a preference for their agricultural products, and this was the idea behind the conferences of Sinaia and Bucharest.

From the point of view of the south-eastern States, Germany would be the most suitable partner in such an arrangement. She requires a large volume of food imports of exactly the kind which these countries produce, and she is very favourably situated from the point of view

of transport, so that she could make excellent use of a preference on industrial products and therefore could afford to pay a proportionately high price for it. The only other country which could enter into a similar agreement is Italy, who would undoubtedly, for political reasons, be very glad to do so. Economically, however, Italy is not a very good complement to Roumania, Hungary, Yugoslavia and Bulgaria, so that it is doubtful whether preferential relations would in this case be so profitable, to say nothing of the fact that, to Yugoslavia at least, closer association with Italy would be as distasteful as association with Hungary and the other Balkan States would be attractive to Italy. It may therefore be assumed that the south-eastern countries have made known their wishes in Berlin with particular emphasis, and there is no doubt that official circles in Germany are giving very serious attention to the proposal.

The most difficult consideration for Germany is the question of the states with which most-favoured-nation treaties are at present in operation. The concurrence of all these states would be necessary for the establishment of preferential duties as between Germany and the Balkans, and Germany would presumably have to purchase it with fairly substantial concessions.

The structure of the scheme also offers many difficulties. However much the system of preferences might strengthen Germany's competitive position in the south-eastern markets of Europe, the purchasing power of the Balkan countries would none the less depend to a great extent on their being given credit. Germany herself cannot grant such credit, so that the question arises what the relationship of Czechoslovakia and Austria to a German-Balkan customs alliance would be. In view of their geographical position and their own agricultural distress, these countries would hardly remain unconcerned spectators. On the other hand, as highly industrialised countries, they would not altogether fit into the system.

These difficulties, however, would probably be overcome if the project appeared unmistakably desirable from the German point of view. The supporters of the scheme urge that Germany would secure a certain market, while on the rest of the world's markets she has to continue, with diminishing hope of success, a struggle against the dumping of other industrial countries and against the even more serious intensification of the protectionism of importing countries. For the moment that is not a conclusive argument, as German export trade has on the whole been very well maintained during the depression, but who can deny that every country which depends on export must watch the growth of protectionism throughout the world with the greatest anxiety? Whether there is to be a reorientation of German trade policy in the direction of closer relations with the Balkans depends ultimately, therefore, upon the development of the protectionist movement in the rest of the world.

Herr Hugenberg has recently drawn up a programme for freeing farmers from debt which will probably become the real platform for the immediate future of the extremist agrarian groups. The scheme involves the abandonment of the principle which has hitherto governed agricultural relief in this country, that of helping only those who can thereby be set on their feet. Hitherto, before credits or subsidies were given, the ability of the farmer to become self-supporting was carefully scrutinised and his methods were supervised for a long time afterwards. Herr Hugenberg, on the contrary, proposes, without individual supervision, to carry through a general wiping out of agricultural debt, at the expense partly of the State and partly of the creditors. This would engulf such immense sums that no Government could carry out the scheme, but the promise of such radical measures from a political leader of Herr Hugenberg's standing is giving rise to hopes which can never be fulfilled, and whose disappointment may have the most undesirable result of helping to engender a radical spirit among the agrarian masses.

After the marked decline in deposits shown by the October bank balance sheets, in consequence of the credit crisis, the November balance sheets show every

sign of returning calm. Whereas in October alone the large banks lost 580 millions deposits and increased their acceptances by 106 millions, in November the decline in deposits was only a further 15 millions and acceptances only increased by 18 millions. At the same time the banks have endeavoured to secure a more liquid position. While loans were still rising in August and September, they fell by 119 millions in October and by 97 millions in November. This reduction is, of course, rendered easier by the further contraction in the volume of production, but the banks have had to work hard, for credit is at present by no means easy to call in.

The cessation of the withdrawals of money, especially foreign withdrawals, has enabled the banks to reduce their rediscounts at the Reichsbank, which had risen during October by almost 300 millions, by 138 millions, in the course of November. Their own bill holdings have in consequence risen by 62 millions in November, after a fall of 264 millions in October, their balances with other banks have risen by 33 millions and their advances against goods by 54 millions. Contangos and Lombards have again fallen 22 millions in consequence of the further contraction in Stock Exchange turnover. It is, however, remarkable that it has been possible, even in November, to reduce securities by 12 millions and participations by 25 millions. It is impossible to tell from the figures how far that reduction was due to falls in quotations and under-valuation, and how far to sales. All the banks are now trying to lighten their holdings of securities by selling parcels of shares outside the Stock Exchange.

CZECHOSLOVAKIA.

**Trade Depression — Agricultural Protection —
Commercial Treaty with Hungary — Budget —
Taxes — Money.**

(FROM OUR CORRESPONDENT.)

PRAGUE, December 19.

THE trade depression in Czechoslovakia is manifested in much the same way, though with not such a high degree of intensity, as elsewhere. The general depression in agriculture is evident from the decline in prices, which, in its turn, is encroaching on farmers' profits and prompting the search for measures of relief in the most pressing cases. Industrial prosperity also has declined remarkably. The textile industry is the greatest sufferer, but other sections, too, are badly hit by the prevailing depression. Building activity shows a noticeable decline, and there is a similar tendency in the iron, building, earthenware and coal trades. The engineering trade is suffering as a result of diminished capital outlay. Those industries which depend most on exports, as, for example, the sugar, malt, glass, leather, earthenware and china industries, are feeling the economic crisis in the export markets very keenly.

Unemployment has increased. During the last month there were 154,615 registered persons seeking employment. Reduction of output is under consideration in certain industries, notably the textile industries, and a Bill to limit the establishment of new sugar factories is contemplated, in harmony with the tendency to international regulation of the output of this commodity.

The volume of export trade has substantially diminished, but an active balance has been retained. During the months January to November, 1930, imports amounted to Kr. 14,439.6 millions and exports Kr. 16,049.1 millions.

To relieve the general distress the Government have introduced into Parliament a Bill authorising an extraordinary credit of Kr. 150 millions, to be utilised for the support of those sections of the community which have been hit most harshly by the economic depression. A number of new Bills for the relief of agriculture have been introduced since the beginning of the crisis, and some of those whose aim was to protect the production of corn and cattle were carried. They included laws regulating the preparation of bread made of rye-flour

and laws giving preference to home products in the consumption of public institutions. New specific Customs duties on cattle and increases in the duties on corn, flour and pigs were introduced, to take effect only if the respective prices fall below a specified level. Further, a compulsory mixing of foreign and home corn in the mills was decreed, and a definite ratio was laid down for the proportion in which foreign flour may be mixed with home flour.

These new duties could not have been put into effect under the commercial treaty with Hungary, as the duties laid down in the treaty were valid for importation not only from Hungary, but also, under the operation of the most-favoured-nation clause, for imports from practically all other countries. After an unsuccessful attempt to deal beforehand with Hungary about the revision of the commercial treaty, this was finally denounced, the date of termination being December 15, 1930. Before the expiry of this term there were some attempts at a provisional agreement, based on the most-favoured-nation clause. These, however, produced no result, and thus, as from December 16th, Czechoslovakia and Hungary are bound by no agreement in their reciprocal tariff relations, a state of affairs which, in view of the very close commercial relations between the two countries, is very unfavourable for both parties. At the same time, the disappearance of some of the duties contained in the expired treaty is affecting trade relations with other countries.

The Czechoslovak Parliament has just concluded its budget labours for the year 1931. Expenditure totals Kr. 9,838.5 millions, and revenue is estimated at Kr. 9,843.8 millions. Both sides show a substantial increase compared with the figures for 1930, the expenditure giving an excess of Kr. 545.3 millions and the revenue Kr. 497.7 millions. The budgets of the years 1926-1930 were based on the principle of stability in the State expenditure with the view to a steady easing of the budget burdens. For the year 1931 the Government expenses show an increase, and the principle of stability has been abandoned. This increase runs counter to the general policy of lowering prices which the Government has been encouraging.

During the past years reserves have been accumulated, which attained an amount of two milliard crowns by the end of 1929, and will have to be considered in covering the increased expenditure. The creation of new reserves will be hardly possible under present circumstances.

The necessity of increasing the revenue prompted some corrections in the fiscal system. The reform of the direct taxes in 1927 was expected to put the fiscal system on a sound basis for years to come. The decline of the yield from direct taxation led to a revision, in the course of which, beside some adjustment of details, the scale of the special profits tax was raised. The beer duty was also raised and the financial administration of the autonomous provincial bodies newly adjusted.

The bank note circulation has declined in recent months, and amounted to Kr. 6,320 millions at the end of November, 1930. The prescribed gold cover and other gold assets were 49.3 per cent. The money market has enjoyed a plethora of short-time and call money; the credit business of the National Bank has declined.

JAPAN.

**Money — Budget Estimates — Foreign Trade —
Prices — Cotton Combine — Census.**

(FROM OUR CORRESPONDENT.)

TOKYO, December 10.

TWELVE banks, with aggregate deposits of 84 million yen, closed their doors during the last two months, and at the beginning of this month another bank failure was reported. This has naturally caused a certain amount of nervousness and added to apprehensions that the end-of-the-year stringency would be unusually severe in view of the difficulties of industrial finance. Monetary stringency has been in evidence, and the expansion in the

note circulation is more than could be accounted for by the seasonal pressure. The banks that failed are, however, mostly small institutions in out-of-the-way towns, and there is no sign of the effects spreading to other banks. Meanwhile, the liberal lending policy which the Industrial Bank of Japan has pursued since its change of governor has materially relieved the difficult position of certain industrial corporations.

As clearing banks have been maintaining a policy of more than ordinary caution, money has still been rather scarce, but now that fears for the year-end have been to a great extent allayed, there has been this week a marked recovery in the stock market; share prices have appreciated, and cotton and electrical shares in particular have gained much of what they lost during recent months. There is admittedly room for doubt whether a bullish view is justified by the circumstances. Commodity markets, though the general situation still remains depressed, show signs of a slight improvement in many sections.

According to the Budget estimates for the next financial year, which begins on April 1, 1931, the total national expenditure is to be 1,448 million yen, showing a substantial decrease of 160.6 millions upon the current year, and of 325.5 millions upon last year. Savings in the fixed charges by way of economy and the postponement of undertakings amount to 127.3 million yen, while some 46 millions is allowed for new items of expenditure. The estimated revenue for the fiscal year 1931-32 is placed at 1,428.9 million yen, revealing a small deficit of 19.1 millions against the approved expenditure.

In order to balance the Budget the German reparation receipts are allocated and the credit allowed by the State Monopolies to the tobacco sellers is shortened. This means that the sinking fund is raided to the extent of the deflection of the German indemnity from the purpose of national debt redemption. A large part of the saving to be made as a result of the London Naval Treaty is reclaimed by the Navy on the so-called naval replenishment programme, and only 134 millions, or 26.3 per cent., of the total is allotted to the redemption of taxes. A petty sum of a little more than 9 millions is apportioned for next year "for relieving the nation from the onerous burden of taxation." This is a disappointment to the taxpayer. The taxes to be reduced are land tax, business tax, and duties on sugar and textiles.

The November trade returns are much less unsatisfactory than those for recent months, for imports were lower by 7 million yen than in October, and exports 11 millions lower. When compared with the corresponding month of 1929, the November results are still more disquieting, imports and exports showing a heavy reduction of 51 millions, or 35 per cent., and 54 millions, or 54 per cent., respectively. The contraction occurred through the whole list of imports and exports, but the worst disappointments in imports are iron and steel and raw cotton; while on the export side the textile trades are particularly discouraging, the aggregate exports of raw silk, silk goods and cotton piece-goods amounting to only 64 millions, as against 105 millions a year earlier. The apparent adverse balance of trade for the first eleven months of this year totalled 93.2 million yen, as against 67.9 millions for 1929. The gold exports during November amounted to 15.2 millions, bringing the net total efflux since January to 319.4 millions.

The downward movement in commodity prices continues, though with less severity than in October. The Bank of Japan's wholesale index number for November registered a drop of 1.5 per cent. on the month and of 23.1 per cent. as compared with November, 1929. The decline is largely accounted for by such comparatively minor articles as beans, tea, beef, ramie and matches; while wheat, cotton yarn, copper and timber have developed an upward tendency.

It has been announced that, subject to the usual formalities, the Tokyo Boseki, a big Osaka cotton spinning company, will take over the Godo Boseki, another large cotton mill. On the completion of the merger scheme, ratified by the shareholders concerned, the Tokyo will con-

trol 42 mills with 1,225,000 spindles and 16,400 looms, which represent 17 per cent. of the total Japanese spindleage. It is stated that the proposed amalgamation is intended to consolidate the companies' position and strengthen their competitive power in markets at home and abroad. This notable cotton mill combine has found general acceptance as a step that will give a lead to other spinning companies, whose reorganisation is overdue.

The results of the national census taken on October 1st last disclose that the total population of the country amounted to 64,447,728, males numbering 32,388,369 and females 32,059,355. This is an increase of 4,710,902 upon the 1925 figure, and an average yearly increase of 942,180, or 1.5 per cent., during the five years since the previous census, as compared with 754,754, or 1.3 per cent., in the 1920-25 period. Males are 329,014 more than females, the proportion of males remaining practically unchanged at 101 against 100 females. The rate of increase is higher in urban districts than in rural districts, the town-dwellers representing 24 per cent. of the whole population, as against 21.6 per cent. at the time of the previous census. The density per square kilometre is now estimated at 169, as compared with 157 in 1925.

CANADA.

**Winter Conditions — Widespread Distress — Farm Relief
Prospects — Wheat Pools — Revenue — Trade
Returns — Prices.**

(FROM OUR CORRESPONDENT.)

OTTAWA, December 16.

THE Canadian winter has so far been very mild, although the snowfall up to date in the Eastern provinces has been heavier than usual. Merchants report that their Christmas sales, while below the level of a year ago, are on the whole better than was expected. On the other hand, the general business depression shows no sign of lifting, and, indeed, seems to be growing rather worse in some parts of the country. Curiously, it is the Maritime provinces, which a few years ago were in a poor economic plight, that are to-day relatively more prosperous than any other part of Canada. In the more highly industrialised provinces of Quebec and Ontario there has been a further curtailment of industrial activity and the unemployment problem remains grave. It is claimed that the special programme for unemployment relief which was planned by the Federal and provincial governments in co-operation with the municipal authorities and the two great railways has probably absorbed about 135,000 unemployed, but it is also estimated that there are still at least an equal number who are without work. Meanwhile there is only left some 8 million dollars of the special unemployment fund voted last September and this sum will not go very far to meet the calls upon it.

Unfortunately the hardship and distress are not confined to the towns. In areas in the northern hinterland of Quebec and Ontario, where the pioneer settlers, while they are clearing their land, rely for their living upon the sale of pulpwood, this commodity is either unsaleable or the prices are so low that the settlers only get a miserable pittance for their labours. As a result hundreds of settlers in this area are very hard pressed for sustenance and are demanding cuts in railway rates which will enable them to get a decent price for their pulpwood. There is reported to be an equal degree of distress and hardship in the more recently settled districts of the prairies where the farmers are solely dependent upon their grain revenues. Their purchasing power has practically vanished and every line of business is being adversely affected as a result. Even the woollen manufacturers, who expected to derive great benefit from the recent tariff increases, now admit that business is worse than a year ago as a consequence of the almost complete cessation of orders from the prairies. How seriously the aggregate income of the country has been

affected by the slump in the prices of agricultural products is demonstrated by a bulletin just published by the Bureau of Statistics, which places the total value of Canada's principal field crops in 1930 at \$629,146,000, as compared with \$948,981,400 in 1929 and with \$1,125,003,000 in 1928. According to these figures the purchasing power of the farming community has been reduced by one-third compared with last year and is not much more than half of what was available in 1928. The most serious decline has been in wheat, whose value fell from \$319,715,000 to \$173,589,000.

The Press has given almost unanimous endorsement to proposals made by Mr Beatty, the President of the Canadian Pacific Railway, that the Federal Government should devise immediately some scheme of relief for the Western farmers. He advocated, *inter alia*, that the Government should assume part of the financial obligations undertaken by the three prairie Governments in connection with their guarantees of bank advances to the wheat pools, and that these Governments, having had the strain upon their credit resources thus relieved, should provide succour for their own distressed citizens. The *Manitoba Free Press* and other Western papers welcome this recognition by Eastern interests that the prairie provinces are entitled to some succour, but they are not satisfied that the remedies proposed by Mr Beatty will go far enough. They take the line that the best policy for the West is to get rid of the wheat stocks which it now holds for the best price it can, but at the same time to insist upon fundamental economic changes which will lower the cost of producing grain to a level where it can effectively meet foreign competition in the international markets.

Premier Bennett reached Ottawa on December 13th and since his arrival he has had prolonged conferences with Mr John I. MacFarland, who, under pressure from the banks and the Bennett Government, has assumed the management of the Central Selling Agency of the wheat pools, and has already made some important changes in policy. He has announced that all the overseas agencies are to be closed. Henceforth the pool will do its marketing in Europe through the old-established channels. Mr MacFarland has also ordered the discontinuance of the propaganda work on which the pool officials had been spending considerable sums each year, and is instituting rigid economies in many directions, but the steps which he has taken are viewed with suspicion by many farmers and the charge is being made that the complete annihilation of the pool has been decided upon. There is evidence, however, that the pool members are not prepared to countenance this, but rather are bent upon the establishment of a compulsory pool which would include every prairie grain grower.

The revenue returns for the month of November again show a very serious decline, and collections were only \$19,539,004. For the first eight months of the present fiscal year the total decline in revenue amounts to 55½ million dollars. But one satisfactory side of the financial position is the somewhat remarkable increase in the gold reserves held by the Canadian Treasury. On December 16th its holdings of gold amounted to 108 million dollars, against a note issue of 168 million dollars, whereas on the same date in 1929 the holdings of gold were only 62 million dollars, against a note issue of 165 million dollars.

The November trade returns are also very unsatisfactory; the following are the figures:—

	1929.	1930.
Exports	\$111,068,871	\$73,060,871
Re-exports	2,177,634	1,551,162
Imports	108,733,697	76,363,802

These figures show that there has been a decline in foreign trade of roughly 70 million dollars, as compared with November last year, and the aggregate decline for the first eight months of the current fiscal year amounts to \$432,851,387. For the fall in the value of exports the low price of wheat is largely responsible, for whereas in November, 1929, 22,444,000 bushels of wheat exported

were valued at \$28,550,931, the 31,217,924 bushels exported last month were only valued at \$21,676,080. There was also a large decline in the value of newsprint exported, which fell from 13¼ to 9¼ million dollars, and the export of motors was reduced by more than half. The only item which showed practically no decrease was wheat flour, because the low price of wheat is enabling the Canadian flour mills to recover some of their lost foreign markets.

Commodity prices in Canada continue to show a downward tendency. The Dominion Bureau of Statistics index number of wholesale prices (1926 = 100) fell from 81.4 in October to 79.8. Forty-seven quotations were higher, 123 were lower, while 332 remained unchanged. The most important decline was in the item vegetable products, which fell from 81.4 to 79.8. The pace of the decline in retail prices is still lagging far behind that of wholesale prices; whereas at the beginning of the year the general index figure for retail prices, rents and costs of services combined, was 102.2, and it had only fallen by November to 96.9, the parallel drop in wholesale prices had been from 96.6 to 79.8. Moreover, the retail decline is attributable solely to the fall in the prices of food and clothing; fuel and rent have remained stationary.

NORTHERN IRELAND.

Shipbuilding — Linen Industry — Parliament.

(FROM OUR CORRESPONDENT.)

BELFAST, December 16.

THE industrial depression which has been experienced generally during the second half of 1931 has, naturally, affected Belfast and the North of Ireland. This is especially the case in connection with the shipbuilding industry, and, although the Belfast shipyards have been well employed during the past year, the difficulty experienced in securing new orders is causing anxiety for the future. An official announcement was recently made by Messrs Workman, Clark (1928), Ltd., that, as from December 20th, their shipyard would be closed for a period not exceeding two months. This decision—which will affect about 4,000 men—has been rendered necessary by the depressed state of the shipping industry, which has led shipowners to request delay in the construction and delivery of new vessels. At present the firm has 75,000 tons deadweight of shipping on hand, including four large tankers, the owners of which are stated to have no need for immediate delivery owing to the state of the freight market.

In the linen industry trade continues to be slow, but it is hoped that some improvement may be experienced with the New Year. At present there is little active demand, but it is felt that stocks in the hands of wholesalers and retailers must be low, and will soon be in need of replenishment. A suggestion which seems worthy of being followed up has been made recently in regard to the marking of linen goods with the country of origin, or, at least, with the word "Foreign" in the case of all linen goods of non-British origin. At present Continental and British linens are sold indiscriminately, and an application under the Merchandise Marks Act for the marking of imported linens with the country of origin might enable the linen trade to take advantage of the undoubted preference on the part of the retail purchaser for home and Empire goods. Meanwhile, the linen trade is at least benefiting from cheap raw material. Northern Ireland flax is selling at an average price of less than 5s. per stone, as compared with between 9s. and 10s. a stone a year ago. Farmers are, naturally, dissatisfied with the low prices which are being offered for flax, and, in consequence, the supplies of fibre offered at local markets have been relatively small as growers are holding back in the hope of an improvement in prices.

Although flax prices are almost fifty per cent. below the level of a year ago, the market for some other classes of agricultural produce is rather better. Potatoes,

although realising only between £2 and £3 per ton, are at least better than a year ago, and there is a prospect of a further improvement in prices as the season goes on. Oats, however, are realising only 5s. 6d. per cwt., and several cargoes of Russian oats which have arrived during the past few months have been the cause of much resentment. The main interest of Northern Ireland farmers, however, is in connection with the production of livestock and livestock products. While there has been some improvement in the trade in livestock recently, the market for such important products as milk, butter, eggs and pork is distinctly worse than a year ago.

The autumn session of the Northern Ireland Parliament was a relatively short one, and a number of important measures were left over until the spring session. A Motor Vehicles and Road Traffic Act was passed dealing with compulsory insurance against third-party risks in respect of all motor vehicles, along similar lines to the scheme which has been adopted in Great Britain. An Agricultural Produce (Meat Regulation) Act was also passed. The latter measure represents another addition to the code of marketing legislation designed to improve the conditions under which agricultural produce is exported to Great Britain. In the past, complaints have been received regarding unsound meat exported to Great Britain, but in future no fresh meat will be allowed to be exported unless the animal has been inspected, both before and after slaughter, and killed on registered premises. In the case of bacon and hams, all pork carcasses will be inspected on arrival at the curing establishment.

Letters to the Editor.

ANALYSING THE WORLD SLUMP.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The last sentence in the left-hand column of page 1108 in your issue of 13th inst. concludes with the words "a problem of which much more is likely to be heard, namely, how in the long run we are to persuade active workers of every category to accept for their services a lower return in terms of money, while the *rentier* is automatically enriched by every reduction in prices to which the producer, in the widest sense, is asked to accommodate himself." I do not think this problem insoluble, but Sir Arthur Salter's proposal to solve it by taxation that shall discriminate between income from fixed-interest securities and that from ordinary shares, has already raised well-grounded protests in the correspondence columns of *The Times*. The debentures and the preference capital of many industrial concerns were subscribed long before the war, so that the holders of these securities have been for many years, and still are, at a disadvantage in comparison with the ordinary shareholders. Yet Sir Arthur Salter says "holders of debentures . . . as distinct from shareholders, secure an unjust advantage as prices go down." The fact is that ever since the beginning of the inflation period they have suffered considerable disadvantage, as prices have gone up, without complaining of unjust treatment. Ordinary shareholders have been entitled to receive a bigger amount in proportion to their invested capital than have the debenture or preference shareholders. The latter class agreed to this from the beginning on condition that if and when trade became bad their claims should be completely satisfied before the ordinary shareholders received further dividends. They have paid a definite and considerable price to the ordinary shareholders for this privilege. If a contract means anything, they are entitled to that for which they have sacrificed hard cash. Ordinary shareholders cannot claim that they have at least a moral claim to break their contract, for when ordinary shareholders have received large dividends they have not offered to preference or debenture holders anything more than was legally due. Further, debentures—so far as they are not held by insurance and other similar concerns—and preference shares are held as a rule by smaller capitalists than those who can afford to take the risk of ordinary shares. Hence Sir Arthur Salter's proposal would penalise the smaller capitalist, whether directly or through an insurance company, for the benefit of the larger.

Sir Arthur Salter says: "Industry can never be healthy and elastic in its organisation unless its capital is mainly in the form of shares, whose dividends vary with prosperity and impose no charge in bad times. An industry, working on debenture capital and sterling overdrafts, whose real weight increases with falling prices, becomes waterlogged in times of depression, and requires drastic action to make it float again." The juxtaposition of these two sentences rather slurs over the important difference between debentures and cumulative preference shares. The former do undoubtedly impose a severe drain on resources in bad times, but the latter do not. As regards the first of the two sentences just quoted, it is true that, from the point of view of the debenture or preference shareholders, the larger the proportion of ordinary capital the better; but is there any reason to suppose that concerns in which the ordinary capital is relatively small are less efficiently managed than those where it is large? Does the history of such concerns as Lever Bros. suggest that a large proportion of fixed interest capital leads to inefficiency? Sir Arthur Salter's statement on this point may be correct, but it should not be accepted without careful examination of a large number of cases.

Nevertheless, the problem stated by you remains. Even if Sir Arthur Salter's contention which I have just questioned is correct, can the problem be solved in a way that shall be fair as between holders of fixed-interest securities and ordinary shareholders? There are two suggestions that I would make, and the first one is necessary if the second one is to be adopted. My first suggestion is that perpetual debentures already issued should by law cease to be perpetual, and that some compensation for the alteration should be given to the present holders. For instance, the rate of interest might be raised by one-twentieth in consideration of the debentures being made terminable at some specified date, say thirty years hence. My second suggestion is that, supposing Sir Arthur Salter to be right about the adverse effect of fixed-interest securities, all existing redeemable debentures should be converted into cumulative preference shares, ranking in priority to any existing cumulative preference shares, and retaining very much the same rights that they already have in case of a default on interest; for instance, if the cumulative dividend were two years in arrear, the holders of these prior cumulative shares could take the same action that they can at present under the debentures trust deed. Even so, it would seem proper for some compensation to be given to the present debenture holders—at the expense of the existing preference and ordinary shareholders—because in case of a wind-up ordinary creditors would then rank in front of them. Again, assuming for the sake of argument the correctness of Sir Arthur Salter's contention, it might be necessary to convert certain preference shares into ordinary shares; if so, the existing ordinary shares should be converted into deferred shares.

Whatever modification may be desirable in the structure of British industrial concerns, there is no need to be unfair as between one class of investor and another. Even if in certain cases there would be nothing whatever left for the ordinary shareholders, that contingency was distinctly contemplated when the debentures were issued; and to deprive debenture shareholders of their rights under articles of association, when ordinary shareholders have already received consideration in hard cash for those rights, would be quite unfair, and could not fail to increase materially the cost of future issues of fixed-interest securities, whether preference or debenture. If taxation is to be altered with a view to increasing the proportion receivable by the investor, the alteration should not be of a kind that will discriminate between fixed-interest income and other investment income. It should not penalise the small investor for the benefit of the large.

If all existing debenture and preference shares were made redeemable, is it not likely that the problem you raise would solve itself in the long run? For if investors in new fixed-interest securities expect a continuous fall in commodity prices, they will presumably realise that this fall will be equivalent, in terms of commodities, to a premium at time of repayment. Thus the advantage that fixed-interest investors would obtain from a fall in commodity prices would tend to be taken into account in the terms of issue of all fixed-interest securities; indeed, that tendency has already begun to show itself. It may be desirable to limit, either by law or by custom, the length of time for which such issues may run.

Perhaps I should mention that I am not personally more interested in fixed-interest securities than in ordinary shares, but I believe that even ordinary shareholders would ultimately suffer, though not as much as the holders of fixed-interest securities, from any unfair treatment of the latter class.

Yours, etc.,
Hoswall, Cheshire.
December 19th.

T. G. G. POWELL.

ANALYSING THE WORLD SLUMP.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of December 13th you printed two extremely interesting summaries of the causes of world trade depression. In both, the premier place was accorded to over-production of certain commodities. In the same article you gave figures showing the great increase in the production of certain other commodities in 1929 over 1928.

Now, a common argument to-day is that the height of taxation is crippling industry, that every increase in taxation cuts deeper into the fund from which capital investment is drawn. Do not these views conflict rather sharply with what is stated to be the cause of unemployment, namely, over-production? If there is definite over-production in certain foods and increasing production in various other industries, does it not indicate that, if western civilisation be taken as a unit, capital investment has for the moment reached saturation point? And that consequently still further inroads could be made on income, via income tax, without endangering the immediate future of capital investment? In a word, is not Mr J. A. Hobson in his economics of unemployment justified by the summaries above referred to? There appears to be too much saving at one end of the social scale and too little spending at the other, the latter, unfortunately, enforced because of the excessive saving which is possible to the investing class.

In your issue of December 20th you conclude a leader with these words: "The lesson to be pondered is the vital necessity, not of spending less but of 'earning'—nationally and in the real sense—more." Now earning more means producing more. Is this addressed to those who are already producing so much that they cannot sell it, or to the others, in the hope that soon they, too, will be in the same unhappy plight? You will remind me, of course, that Sir Arthur Salter has pointed out that in a properly functioning world earnings should in total approximate to the world's productive capacity and that what is wrong is the system of exchange and distribution. Quite. But the world is not properly functioning in this respect, and it is doubtful whether it ever does. A lopsided distribution is responsible for this tragedy of hunger and plenty. Recently, in the *Political Quarterly*, Mr Keynes said his only fear was that if taxation went beyond a certain point, capital, owing to its great mobility, might find other homes; and the *Nation* has spoken of the possibility of a "flight from the pound." The answer to these fears is the over-production already mentioned. Capital is not likely to go abroad at present, where it would probably fare no better than at home and might very likely fare worse. What is indicated, then, seems to be the overhauling of our ideas on distribution rather than exhortations to produce more in a world in which, beyond a certain point, the more we produce the more we suffer.—I am, Sir, yours faithfully,

177, Hill Street, Glasgow.
December 22nd.

JOHN MACLEOD.

[Our exhortation "not to spend less but to earn more" was actuated by two considerations: (1) Panic curtailment of normal expenditure will aggravate, not remedy, the slump in trade; (2) consumption without production spells national impoverishment. We differ profoundly from Mr MacLeod in his assumption that "a lopsided distribution" is an inherent cause of the depression; nor, we suggest, can betterment be achieved—save within narrow limits—by redistributing wealth collected by the fisc. On the contrary, taking a long view, there is grave danger lest unduly high direct taxation may result in a capital shortage highly prejudicial to progress.—Ed., *Econ.*]

THE FUTURE OF THE RAND.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Holders of South African shares will have read with interest the article on Kaffir shares in your issue of December 13th, in which you rightly say that "gross flat yields are no criterion of the relative merits of respective Kaffir shares," and in which you "advise shareholders to examine monthly, quarterly and yearly results with the utmost care."

While quite in agreement with your advice, I fear that this is rather a counsel of perfection. Few investors realise, for instance, what nominal "working" profits mean in relation to actual dividends. In the case of West Rand Consolidated, as an example, the whole of the working profits for 27 years, and about £3,000,000 in addition, have been sunk in development and capital expenditure. In the case of Government Areas, no less than 55 per cent. of the profits accrue to the Government as the rental under which the mine is leased. Examples could be multiplied.

The real acid test of mine value is dividends. But they are a guide only when coupled with an estimate of the life of the mine. Even if an expert knew the dip of the reef and the current percentage of payability, it is doubtful whether he could figure out an estimate of the life of a Rand mining property. The percentage of payability forms, in fact, an insuperable bar to an accurate estimate of life. Most people would give a minimum of ten years, for instance, to the Consolidated Main Reef, New Modder and Modder East—all under control of the Central Mining Corporation. It would puzzle the manager himself to gauge the general percentage of payability and to gauge the probable maximum life of any of them.

And how many holders of Rand scrip realise the extent to which the centre of payability on the Rand has changed? Twenty years ago nearly the whole burden of the Rand's dividends was borne by the Central Rand. In 1910 only three of the Far East Rand companies were paying dividends, viz., Kleinfontein, Van Ryn and New Modder. Even in 1914 the mines of the Central Rand were able to pay dividends totalling £6,355,158 (with a working profit of 8s. 4d. per ton) out of a total distribution by the whole field of £8,092,240. But in 1929 the West and Central Rands only made a total "working" profit of £2,479,000 (or 2s. 9d. per ton) and dividends of £1,133,872—out of a total distribution for the whole field of £8,385,018.

These so-called "working" profits are in fact most illusory, being partly, and sometimes wholly, absorbed in taxation, Government share of leased mine profits, capital expenditure, redemption of debentures, phthisis fund, etc. The real investment value of the Rand goldfield is shown by the dividends per ton milled, as under:—

West Rand—Randfontein, West Rand Consols, etc. (last five years)	Nil
Central Rand—Durban Deep to E.R.P.M. (1929)	1 7½
Far East Rand—Modder to Springs (1929)	11 1½
South-East Rand—Sub Nigel (last six months)	25 0

The striking disparity between the Eastern and Western Rands accounts for the fact that 86 per cent. of the dividends of the whole field are now borne by the Far East and South-East Rand.

A much more pregnant possibility has, however, been disclosed. Until lately the theory was very generally held that the Sub Nigel ground was a continuation of the pay stream running from the Modder to Daggafontein. But a paper recently published in the *Johannesburg Mining and Industrial Magazine* by a Rand engineer (Mr G. W. Bond) proves for a practical certainty that this is not the case. The underground plans of Springs shows that the Modder pay stream is continuing south-east into Daggafontein, while the pay shoots of the Sub Nigel are heading due north-west. Moreover, Mr Bond gives details of the investigations of Dr. Pirow (now State Mining Engineer) into the matrix of the two streams, by which the Sub Nigel stream is shown to be most significantly different from that of the Modder. In short, it is practically proved that the Modder and Nigel pay streams are two parallel depositions, both running from north-west to south-east.

If this well-founded deduction is accepted, it follows that the Nigel district should be the southern prolongation of the pay shoots outcropping on the Central Rand from, say, the Nourse to the E.R.P.M. Equally significant is the fact that the stream has not diminished in value in its south-west flow of about 15 miles. Very much the contrary. The Sub Nigel is giving, in fact, a higher profit per ton than any mine has ever earned on the Rand (although it is not quite fair to compare the narrow slopes of the Sub Nigel with the wide stoping of the Central Rand).

Further, if these deductions are accepted, it would seem to follow that the ground to the south-east of the Sub Nigel is likely to carry values similar to the latter. One may even go farther and say that on general probabilities these areas (Spaarwater, Maraisdrift, etc.) might be even richer than the Sub Nigel, for the reason that the highest grade of the Central Rand is not found towards the East (E.R.P.M.) but towards the old Robinson and Ferreira mines (now worked out) to the west. All this is still theory, of course, but Rand mining geologists will agree that it accords with the known data.

The State Mining Engineer, whose estimates are naturally the most authoritative available, has stated that the mines now producing are exhausting at the rate of about 5 per cent. per annum, so that in about 15 years three-quarters of the present producers will have been worked out. These estimates, however, do not take into account new mines of the F.E.R. which will come into production within a few years, beginning with East Geduld, Daggafontein and Grootvlei. Still less do they

envisage the possibility of a new line of mines being opened on the south-east flank of the Sub Nigel. And if there is a virgin Rand lying *perdu* in the Far South-East, it is at least as likely to yield the 25s. profit of the Sub Nigel as the 1s. 7½d. of the Central Rand.—Yours faithfully,
6, Broa Street Place, E.C. 2. W. A. WILLS.

THE NATIONAL DEBT.*

This book is a chronicle, detailed and accurate, both of the life history of the National Debt itself in the last two and a half centuries and of the experiments in debt redemption which have occupied the same period. The author has also dealt at some length with the development of opinion about the Debt, especially in the eighteenth and early nineteenth centuries.

The story is interesting; but not very encouraging: So far as opinion goes, some fallacies have indeed been out-lived. No one now holds, for example, as did Price in 1772, that it is a matter of indifference whether the debt carries a high or a low rate of interest on the ground that the higher the rate the faster will a Sinking Fund accumulate at compound interest. And we are at last fairly certain that a Government is no better able than a private individual to repay its debts unless it has a surplus of income over expenditure. This, however, does not represent a very advanced stage of economic wisdom; and there is little evidence that attention will be paid in practice even to the few commonsense opinions about the Debt that have won general acceptance.

Certainly Mr Hargreaves' account of all the attempts at debt redemption from the Sinking Fund of 1716 onwards is a sorry tale. Every kind of fund has been tried. We have had Walpole's compound Sinking Fund swelled by the profits of conversion; we have had terminable annuities; we have experimented with the principle of the fixed annual debt charge; we have had specific redemption funds and depreciation funds attached to particular loans. None has been proof against raiding, direct or indirect, and few have enjoyed more than a short spell of undisturbed operation. There can indeed be few more fruitful sources of economic sophistries than the arguments, revealed in Mr Hargreaves' study, by which successive Chancellors of the Exchequer and their friends have justified their abandonment of whatever Sinking Fund arrangements they themselves or their predecessors may have introduced. Taxation for debt repayment will lower the rate of interest and so drive capital abroad (Lowe); it deprives the taxpayer of money that should fructify in his pocket (Grenville); it is simply bad for trade (Sir Robert Horne); or it is a waste of good money that might otherwise be spent on the development of the social services (the I.L.P.).

Such are the arguments which have generally prevailed in practice. Nothing indeed stands out more clearly from Mr Hargreaves' book than the faint prospect of success which lies before any sustained and consistent plan for wiping out a debt of real magnitude. His table showing the nominal total of the Debt and the annual Debt charge from 1697 to 1925 is an eloquent testimony to the ability of Chancellors of the Exchequer to resist everything except temptation. There are, of course, and always have been, the advocates of drastic measures (the Labour Party's proposal for a Debt redemption levy was anticipated by Ricardo in 1820 and Hutcheson in 1721), but these have shown a genius for missing their opportunity.

* "The National Debt." By E. L. Hargreaves. Arnold. 15s.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]
(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Making of a Constitution. By Hon. Sir Henry Braddon. (London) The Australian Book Company, 16, Farringdon Avenue, Farringdon Street. 5s.

A very interesting account, designed for people who "at times find themselves embarrassed by lack of constitutional knowledge," of the evolution of the British Constitution.

Essays and Addresses. By Hon. Sir Henry Braddon. (London) The Australian Book Company, 16, Farringdon Avenue, Farringdon Street. 5s.

The subject-matter of these addresses ranges from "The Olympic Games" and "Determination and Success" to the Australian wool industry and the French assignats.

Statistics of the Iron and Steel Industries (1930). (London) National Federation of Iron and Steel Manufacturers, Caxton House, Tothill Street. 5s. 5d. post free.

An unique and indispensable collection of iron and steel statistics of all producing countries. It covers, in so far as the figures are available, output, imports, exports, consumption of materials, numbers employed, prices, and Customs duties. The British figures are especially detailed.

The Stock Exchange.

THE STOCK EXCHANGE IN 1930.

THE past twelve months have continued and aggravated the misfortunes which afflicted the speculative investor in the previous year. The collapse in ordinary share values, it may be recalled, began in London in February, 1929, some eight months before its onset in New York. There were only two periods of respite in last year's decline. First, a recovery in industrial ordinary shares began in the first week of March under the influence of cheap money, and continued until April in sympathy with the rise in American common stocks. The fresh slump in the New York stock markets in the middle of April, which followed upon the realisation by the American public that there could be no trade recovery by the summer of 1930, was the signal for a further collapse in ordinary share values on the London Stock Exchange. Save for a minor upturn at the end of June the decline continued until nearly the end of August. At this point occurred the second recovery of the year, partly as the result of the further influence of cheap money and partly by virtue of the "squeezing" of bear operators. After the first week in September this gave place to a period of stagnancy, with a just perceptible downward movement, and it was only in mid-December that prices broke below the low point touched in August. The following price indices of the *Financial News* show the limits of each of the year's secondary cycles:—

"FINANCIAL NEWS" INDEX THIRTY INDUSTRIAL ORDINARY SHARES.
(Average price 1928 = 100.)

Sept. 30, 1929 100.6 | Feb. 28... 82.7 | Aug. 22... 72.9 | Dec. 17... 70.0
Jan. 1, 1930 86.7 | Mar. 31... 88.8 | Sept. 4... 80.7 | Dec. 31... 71.7

* Lowest for year.

The rise in gilt-edged and high-grade fixed-interest securities, however, provided a welcome contrast to the depression in ordinary shares. If British Government stocks were at first somewhat slow in responding to the influence of cheapening money rates, responsibility lay chiefly with the increase in direct taxation imposed by the Budget, to Government conversion operations (the issue of 4½ per cent. Conversion Loan in February involved £60,000,000 of cash subscriptions), and to heavy borrowings by home corporations at somewhat dear rates in the first half of the year. Reductions in Bank rate from 5 per cent. to 4½ per cent. on February 6th, to 4 per cent. on March 6th, to 3½ per cent. on March 20th, and to 3 per cent. on May 1st, were, however, reflected in a rise of 3½ to 5 points in long-dated British Government stocks, and in the second half of the year another

x = Ex dividend.

4 to 5 point rise was scored. Australian stocks were an exception to the upward trend of Dominion Government securities. As the financial difficulties of the Commonwealth Government increased, the market in Australian stocks became nominal and declines of from 10 to over 15 points were recorded during the year. India stocks, on the other hand, showed a slight recovery.

Foreign bonds, in general, did not participate in the "cheap money" boom, owing to political unrest, revolutions and deterioration in Government finances. The mere mention in New York of a possible moratorium for Germany under the Young Plan caused general liquidation of German bonds, particularly the 5½ per cent. German Reparations Loan which was issued in June. South American Government bonds suffered from the various revolutions, Brazilians being a centre of depression. On the other hand, China bonds enjoyed a substantial recovery. Apart from securities possessing a high degree of "political" risk, rises in market prices predominated. The fixed interests securities of public authorities and public utilities enjoyed considerable appreciation, but wherever the factor of trade risk applied prices held back, and the market showed increasing discrimination as the trade depression deepened:—

Apart from the debenture stocks, the interest on which was regarded as beyond question, the market in railway stocks was perhaps the most depressing on the Stock Exchange. The heavy fall in home railway ordinary stocks was followed by wholesale liquidation in the stocks of Argentine and other South American railway companies, which had to meet not only a heavy decline in traffic receipts as a result of the severe agricultural and mining depression, but also serious exchange losses. Defaults in payments of debenture interest by United Railways of Havana and Cordoba Central served to

deepen the gloom. Canadian Pacific also followed the general downward trend:—

x = Ex dividend.

As regards other equity shares, a representative list of which is given in the next table, an unbroken decline in market values was registered. Many unfavourable reports and disconcerting statements were issued—for example, by Hudson's Bay, United Molasses, and Guest, Keen and Nettlefolds—and the confidence of shareholders was seriously upset. Even where satisfactory reports were forthcoming, shares were frequently sold on the anticipation that the next reports would be less reassuring. Stocks which had a New York market presented an even worse appearance at the end of the year than British industrials confined to the London market:—

The speculative markets were exposed to the full effects of the catastrophic fall in commodity prices. Dealings

in rubber shares became nominal, and tea shares met with little or no investment interest. Oil shares, which had maintained their ground in the first part of the year, collapsed in the second half as a result of extensive cuts in oil prices in America and the nervousness that was felt at the final dividend distribution of the leading oil companies. The only exception to the extensive fall in mining shares was provided by the Kaffir market, partly on account of the increase in dividends declared by a number of the leading Rand mines, and partly on the recognition by speculative investors of the special position enjoyed by gold-producing companies in a period of falling commodity prices. Copper shares were heavily sold in the latter part of the year, and diamond shares presented throughout a depressed appearance:—

The year closed, inevitably, in an atmosphere of insipid gloom, with business at a low ebb except in gilt-edged securities, which had received a further stimulus from the reduction in the New York Federal Reserve rate to 2 per cent. in Christmas week. Stock Exchange revival in 1931, as always, must attend on general trade revival, though it may antedate a recovery in economic prosperity by some months, as the decline in security values in 1929 antedated the industrial depression of 1930. The best that can be said is that, provided no unexpectedly weak positions are disclosed, the bulk of really heavy "distressed" liquidation of securities appears to be completed, and London is ready, so far as technical conditions go, to respond to better trade influences whenever these are apparent. London, however, is an international money market, and must, if necessary, be prepared to face the implications of the fact that internal readjustments may have reached a less advanced stage in other centres, such as New York, Paris, Brussels, and Amsterdam.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
January 6.

ACCOUNT.
January 8.

A WEEK broken by the Stock Exchange holiday of January 1st produced no large volume of business, but the

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yield on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 25.)

sufficed, in the absence of definitely unfavourable news, internal or external, to give prices a firm tendency in the majority of cases.

Dealings in gilt-edged stocks were on a small scale, but an early feeling of hesitancy gave place to firm conditions in mid-week, when a more favourable construction was placed on monetary tendencies. Five per Cent. War Loan was in demand and Four per Cent. Consols showed conspicuous strength. India stocks also achieved a moderate recovery, but renewed comment on Australia's economic difficulties induced a fall in Commonwealth stocks. Dealings in privately-placed issues by Stirling County Council and Nottingham City (of 4½ per cent. stock in each case), opened at 98½ and 99½ respectively.

The foreign bond market had a heavy appearance. Brazilian loans were bought after confirmation of the news that funds had been remitted to meet the overdue interest payment on Rio State Sevens, but prices eased later on American selling. The further weakness of the peso caused renewed selling of Argentine stocks. Chinese issues remained in moderate demand. Among European stocks, German Loans suffered from year-end realisation.

Little business was done in the home rail market. Last week's earnings showed that Christmas traffic had been greater than was anticipated, but attention was concentrated rather on the bearish dividend prospects suggested by the fifty-two weeks' figures, which are discussed on page 29. Among foreign rails, the slump in Argentines continued, and was accentuated by the early weakness of the exchange and the unencouraging nature of the traffic returns. Central Uruguay, however, showed some recovery, and San Paulos were marked better. American railroads improved on the announcement regarding the Eastern consolidation plan (dealt with on page 31), and Canadian Pacific enjoyed a measurable recovery on a relatively encouraging November revenue statement.

The industrial markets had a more cheerful tone, though dealings were of less than normal volume. Lord Melchett's death caused a temporary marking down of "Mond" issues, but as no selling occurred, prices thereafter remained steady. Much interest was centred on Hudson's Bay shares, which were further marked down on the eve of the special committee's report, which is dealt with in an Investment Note on page 30. This proved a less sensational document than had been anticipated. International stocks were quiet at the outset, but subsequently became firmer on improved conditions in Wall Street. Turner and Newall further declined on a correct anticipation of the dividend which (as shown on page 32) was reduced from 17½ per cent. to 11½ per cent. on an increased capital. Steel and engineering shares were affected by the threat of a coal stoppage in South Wales, but motor shares, particularly Leylands, remained in selective demand. Textiles held their ground despite growing uneasiness regarding the labour outlook in Lancashire. The customary interest of investors in the large store shares, in the weeks preceding the announcement of

annual results, was exemplified by demand for Harrods. Brewery shares were maintained, but tobaccos were irregular. Newspaper shares lost ground. Among shipping issues, Royal Mail were a nominal market, reports being current of internal difficulties in the carrying out of reorganisation measures. The passing of the White Star preference dividend (the implications of which are discussed on page 31) came as no surprise. Insurance shares obtained investment attention and bank shares were firm, though the market remained narrow.

Rubber shares were again neglected, the number of bargains marked on Monday being the lowest for many weeks. Prices were easier where changed. Tea shares, similarly, were lifeless, though one or two of the larger issues showed a slight recovery on a very limited number of orders. After a shaky start, oil shares showed a quotable improvement, mainly on Continental orders, the cessation of which was subsequently reflected in a further shading of prices. Shell and Royal Dutch improved and Burmahs were in moderate demand from the East. American crude oil production showed a further decline.

Mining shares were not without reassuring features, despite holiday quietude, and the proximity of the settlement of the long account. After a weak opening, Kaffirs took a turn for the better, Goldfields moving up on Paris support, while other counters, including Central Mining and "Johnnies" were favourably affected. Northern Rhodesian shares again became fairly prominent, the "merger" companies in particular receiving attention. Though the advance in tin—the metal—was checked, renewed restriction talk (criticised on page 33) brought about a general rise in tin shares. Rio Tintos were in demand in the middle of the week, though copper failed to hold an early advance.

FOREIGN STOCK EXCHANGES.

NEW YORK.

An unexpected reduction in the New York Federal Reserve Bank's rediscount rate from 2½ to 2 per cent. last week helped sentiment over Christmas, but did not prevent further selling at the beginning of this week. The Bank's anxiety to help the market was not dissociated, in some quarters, from the investigation which is to be opened into the working of the system. End-year influences were reflected in a rise in call money, at one time, to 4 per cent., on the usual seasonal withdrawal of funds to the interior. Selling to establish losses for taxation purposes also gave the markets a weak aspect at the outset. Later, end-year influences petered out, a moderate amount of professional short-selling was readily absorbed, and prices strengthened appreciably. President Hoover's announcement that a consolidation plan had been agreed upon as regards the Eastern railroads was well received, New York Central

immediately advancing 4 points and Baltimore and Ohio nearly 5. Business conditions showed no evidence of early change. Commodity prices were steady, with a rising tendency in copper. An early reduction is expected in motor tyre prices. The readiness of Wall Street operators to take profits remains the surest sign of lack of confidence in any sustained rally in share values at present.

By VISCOUNT D'ABERNON THE ECONOMIC CRISIS ITS CAUSES AND THE CURE

ONE SHILLING NET

HODDER & STOUGHTON

The figures make unwelcome reading for railway stockholders, but suggest, at least, that last year's decline in revenue was due to trade depression rather than to a further permanent loss of traffic to the roads. There is a suggestive similarity in the ratio of decline in all the main sources of revenue, in contra-distinction to the railways' experience in 1929 when, in a relatively good year, passenger receipts fell by 2½ per cent., while merchandise earnings were constant and coal and coke receipts increased by 8½ per cent. In the next table the revenue of the four group lines and the two London companies is compared quarter by quarter:—

(000's omitted.)

	Group Lines.					London Lines.

* Includes receipts from independent omnibuses acquired during 1930.

The table reveals one feature not easily explained—namely, that traffic losses in the fourth quarter were less considerable than in the third quarter. As regards passenger traffic, this may be assigned chiefly to seasonal causes, but as regards goods traffic, the check to the speed

of the downward movement in receipts is significant. The task of estimating possible dividends is more difficult than usual. The market was not impressed by the expenditure figures revealed in the railways' interim statements last July, but it is known that, in the latter half of this year, the various managements have been making strenuous efforts to economise in labour and other costs, while maintenance and other charges should have benefited from the lower price of raw materials. In the following table we have endeavoured to estimate the unknown factors, on broad lines, and to show the approximate dimensions of earnings available for ordinary dividends:—

(In £000's.)

	G.W.R.	L.N.W.R.	L.M.S.R.	S.R.
Decline in gross traffic receipts, 1930.....	£ 1,476	£ 3,219	£ 5,002	£ 622
Estimated decline in other receipts* (net), 1930.....	75	55	50	50

ord. in 1930..... Percent.	4%	—2.2%	0.25%	0.45%

Note.—These figures make no allowance for interest on new capital issued during 1930, against which may be set, e.g., the fact that no account has been taken of additional receipts which may have accrued from profits on realisation of investments.

* Docks, steamers, hotels, etc. † Preferred Ord. ‡ Deferred Ord.

Though these results can only be very approximate, they suffice to give stockholders the main bearings of their position. The Great Western may be presumed to have earned between 3½ and 4 per cent. on its ordinary stock, and the Southern to have covered its preferred dividend with a little to spare. The Midland and Scottish, however, has earned little on its ordinary capital, and may possibly deem the transfer of its prior stocks to the "Chancery list" a lesser evil than that of drawing on reserves to pay a final dividend of 2 per cent. in addition to the 1 per cent. interim declared in July. On this showing it is difficult to see how the earnings of the North Eastern can have fully covered its second preference dividend requirements, though the company may the more readily decide to pay the dividend on this stock in full by virtue of its conservatism in putting £500,000 to reserve a year ago.

Lord Melchett and Industry.—In its broader aspects the passing of Lord Melchett forms the subject of an article on page 9 of this issue. From the investor's point of view, the steps by which Alfred Moritz Mond rose to prominence in British industry are of special interest. In 1895 that Mond left the Bar in order to devote himself to the family business of Brunner Mond, which had been founded by his father and Mr John Tomlinson Brunner twenty-two years before. His application to the problems of management bore early fruit in increasing influence, and in a relatively short time he was appointed managing director of the company, and also managing director of the Mond Nickel Company. Under his leadership, Brunner Mond made rapid strides as a pioneer of experimental chemistry, developing, among other things, the manufacture of synthetic ammonia from atmospheric nitrogen. His interests gradually crystallised along the lines of rationalisation and large-scale industry, and culminated in 1926 the formation of Imperial Chemical Industries—an amalgamation of Brunner Mond, Nobel Industries, British Dyestuffs Corporation, and United Alkali Company—with its issued capital of over £76 millions. Some years earlier he had played a leading part in the setting up of

the important combine which, under the name of Amalgamated Anthracite Collieries, with an issued capital of nearly £8 millions, controls about 80 per cent. of the Welsh output of anthracite. Elsewhere he held the position of chairman of the advisory committee of the International Nickel Company of Canada, with which the Mond Nickel interests were merged in January, 1929, and was chairman of Magadi Soda Company, the Finance Company of Great Britain and America, and the Industrial Finance and Investment Corporation. In addition he was at the time of his death a director of South Staffordshire Mond Gas Company and the Westminster Bank, and of two companies with interests in Palestine. At a directors' meeting of Imperial Chemical Industries on Wednesday, Sir Harry McGowan was elected chairman and managing director, and Lord Reading president of the company.

Hudson's Bay Affairs.—The special committee of four proprietors of the Hudson's Bay Company (Messrs. A. Shepherd, W. Sandford Poole, H. M. Trouncer and G. Watson), which was appointed last July, following the formulation of serious charges against the company and its directors by Mr C. L. Nordon, has published this week a report which exonerates the directors from charges of bad faith, but describes a number of past transactions as "unfortunate." It appears that, during the war, the company undertook certain shipping and other business, which it wisely discontinued on the return of normal conditions. Certain business offered to the company was, therefore, made over, without consideration, to another concern, the Merchant Trading Company, in which the then governor and deputy-governor of the Hudson's Bay Company had a shareholding interest. It was subsequently decided that the latter company should acquire shares in the Merchant Trading Company. Accordingly, certain shares were bought from Mr C. V. Sale, the then deputy-governor, for £60,000—a transaction which, the committee are advised by counsel, might have been rescinded had a claim been pressed at the time. As regards the most weighty of Mr Nordon's complaints, under contemporary conditions, the committee refuses, in effect, either to bless or to condemn the policy of establishing modern stores in Canada. The implication, however, of its recommendation that this part of the business should be segregated and placed under the ægis of a separate company, would seem to be that the committee regards it as a departure from the real scope of the company's business. The company's new buildings in London, the committee believe, are earning a reasonable rental. Hudson's Bay House is producing 4.66 per cent. (which should ultimately rise above 5½ per cent.) on its cost of £338,000, and Beaver House 3 per cent. on £658,000. These percentage figures are not convincing in themselves, and would have carried greater weight if the committee had related them to representative figures of other property-owning concerns in the same areas. The committee, again, appears to weaken a sound case when, as a preface to a declaration that the accounts should be framed so as to give more information, it censures the governor for giving an incomplete explanation of the circumstances under which another fur concern (C. M. Lampson and Company) was acquired, but refuses to assume the responsibility for itself disclosing the details. The report will be considered at a meeting of proprietors, which has been called for January 16th, at which Mr Nordon will propose certain far-reaching changes. In all probability, however, the committee's report will be adopted as it stands, and, after the acceptance of the resignation of the governor, Mr C. V. Sale (who is not in agreement with the recommendation for the establishment of a separate Canadian stores company), the size of the board will be reduced, and a manager appointed with the task of improving the company's trading position. In this connection, the special committee is prepared to act in a consultative capacity. While shareholders will be relieved to learn that there is nothing unsound in the company's internal position, it is clear that recovery must, by present indications, be a gradual process, contingent upon the return of economic prosperity to Canada and the establishment of sounder

conditions in the fur trade. The ordinary shares, which touched 93s. 1½d. early this year, and were quoted at 22s. 6d. on the eve of the report, now stand at 25s.

White Star Line Affairs.—This week's official announcement that the half-yearly dividend on the £5,000,000 6½ per cent. cumulative preference shares, falling due on January 1, 1931, will not be paid, is unwelcome but not unexpected. Six months ago, the dividend was met under the guarantee of the Royal Mail Steam Packet Company, and the latter has been formally requested by the White Star to pay the dividend within the next month, under the terms of the guarantee. The affairs of the Royal Mail Company are now in process of reorganisation, under a committee, and it is not difficult to discern numerous reasons why the latter may be anxious to conserve the group's financial resources at the moment. If the White Star preference holders, who have no direct interest in Royal Mail affairs, were to take legal steps to enforce their claim, there is at least a possibility that the debenture holders of the Royal Mail Company (whose interest payments rank in front of the White Star guarantee), would endeavour to obtain the appointment of a receiver. The effect of such a step could only be to make confusion worse confounded, and seriously to embarrass those who are endeavouring to straighten out the tangle of the Royal Mail Company's affairs. More probably, the White Star Line preference shareholders will be asked to exercise patience until the position can be cleared up. It has been suggested that the P. and O. group might buy the Oriental interests of White Star at a price, and some other big shipping concern, such as Furness Withy, might take over the remaining interests. Unfortunately, the White Star Company does not yet fully own its principal assets, which consist of shares in the Oceanic Steam Navigation Company. Whether any other group or groups would be prepared to take over a liability of some millions of pounds, falling due in 1936, is doubtful. The existence of a body of "outside" White Star preference shareholders is naturally a handicap to the complete identification of the White Star's interests with the Royal Mail reorganisation. There would, however, be grave objection to any plan to exploit the non-payment of the dividend as a means for buying out the preference shareholders at a virtual "rubbish price," without their being made fully cognisant of the real contemporary earning position of the subsidiaries of the White Star Line. A meeting of the preference shareholders will be called during January, at which the voting trustees will make a statement. In the meantime, it has been announced that neither the Royal Mail Company nor Elder Dempster will pay preference dividends this month.

Consolidation of the Eastern American Railroads.—President Hoover's announcement of the agreement reached between the large railway groups serving the territory between New York and Chicago ushers in a further chapter of American railway history. No details are yet available, but it is known that for some weeks efforts have been made to arrive at an agreement by a committee, with General Atterbury, President of the Pennsylvania Railroad, as chairman, and including representatives of the other three large groups, the New York Central Lines, the Baltimore and Ohio, and the Nickel Plate system, built up by the Van Sweringens of Cleveland. This problem of over ten years' standing has proved a peculiarly thorny one in view of the diversity of interests of the different lines, and the more recent complications caused by the publication in December, 1929, of the Interstate Commerce Commission's plan for consolidating into nineteen systems all the railways of the United States. This plan replaced the Interstate Commerce Commission's tentative plan of 1921 and provided for five large systems in the area between the Atlantic Seaboard and Chicago. They were to be based on the Pennsylvania, practically as it stands to-day; the New York Central System, to which was to be added the

Virginian, a coal road serving Norfolk, Va.; the Baltimore and Ohio, to be rounded out with the Reading; and the Central of New Jersey, as well as the Buffalo, Rochester and Pittsburgh and the Chicago and Alton, both of which have recently come under Baltimore and Ohio control. The fourth system was to consist of the Chesapeake and Ohio, Erie, Pere Marquette and Nickel Plate railways, all of which are already owned by the Sweringen interests; to these was to be joined the Delaware, Lackawanna and Western, running from Jersey City to Buffalo. The main difficulties occurred with the fifth system, centred around the Lehigh Valley and the Wabash, coupled with the Norfolk and Western and the Seaboard Air Line. This unwieldy system was to stretch from Omaha to Miami, Fla., and New York, and would have been competitively weak. The Pennsylvania Railroad at present financially controls the first three of these lines, but was ordered early in December to divest itself of its stock ownership of the Lehigh Valley and Wabash as being illegal according to the Clayton Anti-Trust Law. It is probable that this Interstate Commerce Commission order has been an incentive to agreement between the four large Eastern lines, and it is to be presumed that the difficulty of allocation concerning the Lehigh Valley and the Wabash has been settled. The agreement itself is welcomed as it creates stability and enables programmes of betterment to be pushed ahead; but in the long run it will tend to create even stronger competition than in the past, and for geographical reasons economies are not likely to be attained commensurate with those obtained from the grouping of the British railways in 1923.

Building Society Interest Rates.—Mr Harold Bellman, managing director of the Abbey Road Building Society (the second largest society in the country), in a recent statement, touched on a number of questions of prime importance in the present building society outlook. He referred to the phenomenally rapid progress of the movement during the last few years, and declared that this could not be continued indefinitely. Sooner or later, he pointed out, a period of steady advance at what must be considered a normal level would probably be entered upon. This declaration is a significant indication of the way building society opinion is moving, for Mr. Bellman is one of the most able and energetic spokesmen of the "forward" section of building society opinion, Mr Bellman's belief that, in the main, building societies appear to be largely immune from the varying phases of the trade cycle, cannot entirely be borne out by available evidence. They have, of course, experienced something resembling a cycle of their own since the war, of which at least two phases can be traced up to the present. The chief cause underlying the first phase was the abnormal housing situation left by the war, plus a certain redistribution of British incomes, which caused a numerical increase in potential owner-occupiers of houses. There is good reason to believe that part of this

field of immediate demand has now been covered. In this second phase, the relatively high rates of interest offered by the societies have become increasingly attractive to lenders by reason of the fall in interest rates generally during the last twelve months—which, incidentally, is one of the phenomena of the present trade cycle. Opinion within the movement has been somewhat divided as to the best means of meeting this situation. Some authorities have suggested a lowering of building society interest rates, but to this course objections have been raised. Whether the lowering of rates to borrowers would tend to bring in a somewhat less desirable type of mortgagor is a moot point, but it might conceivably involve a sensible lowering of property values, which would not be a desirable development in view of the large sums already lent by the societies. Secondly, a reduction of, say, 1 per cent. in the rates offered to lenders, still leaves them at a sufficiently high level to bring in appreciable amounts of "short" money, liable to withdrawal on the termination of the present period of cheap money. The societies quite definitely do not desire to attract such funds, since their resources are employed in a species of investment of a "medium" or "long-term" character. Money placed with them is, it is true, repayable at short notice, but this facility is designed to appeal to the societies' true client—the small investor—and not to enable them to provide a temporary harbourage for the unemployed resources of larger financial interests. The Abbey Road Society some time ago adopted a policy of maintaining its interest rates, but placing a temporary limit on the amount of money which might be invested by any one person. The Society has now announced that, after July 1st next, its bonus of $\frac{1}{4}$ per cent. will not be paid in addition to the dividend of $4\frac{1}{2}$ per cent. per annum, the total rate thus being reduced from 5 to $4\frac{1}{2}$ per cent. The Halifax Building Society (the largest in the country) is reducing by $\frac{1}{4}$ per cent. the rate of interest paid on *new* investments.

Turner and Newall Profits.—The preliminary profit figures of this asbestos combine approximated to market expectations, which had been steadily revised downwards with the progress of the world trade slump. Trading profit for the year to September 30th last totalled £1,101,845, compared with £904,633 for 1929, while an additional sum of £120,000 was available, representing the balance on purchase account of Bell's United Asbestos, now in liquidation. Expenses (including those incurred in connection with the Rhodesian and General Asbestos merger) amounted to £272,082, against £99,835, leaving a net profit of £949,763. The ordinary share capital, increased from £2,232,848 to £3,096,505 on account of the merger, earned 17.5 per cent. (against 23.0 per cent.), and received $11\frac{1}{4}$ per cent. (against $17\frac{1}{2}$ per cent.).

Year to September 30th.	1928.	1929.	1930.

* Including amalgamation expenses.
† After directors' fees.

In view of the company's increased capital and the uncertainty of the trade outlook, the directors' decision to place a further £300,000 to reserve is commendable. The £1 ordinary shares declined steadily last year from a high level of 86s. 8d. for 1930 to 41s. 3d. on Tuesday.

The cut in dividend was thus fully discounted. The yield on the shares is £5 12s. 6d. per cent., allowing for a final dividend of $6\frac{1}{4}$ per cent.

British Cement Products.—The report of the British Cement Products and Finance Company for the year to November 16, 1930, reveals no recovery from the deplorable position in which the company was placed as the result of the collapse of the Horne group of cement companies. By taking credit for £16,400 income-tax recoverable and £29,118 reserve for income-tax not required, the company scrapes through the year with a net loss on profit and loss account of £2,974, bringing the total debit carried forward to £771,552. The balance sheet discloses investments of £91,091, which have a present value of £44,604, and shares in subsidiary companies costing £388,242 with a nominal market value of £171,068. There is a loan to Associated Anglo-American Corporation (in liquidation) of £214,605 secured by a deposit on Allied Cement Manufacturers shares. As the company's chief asset consists of 5,130,811 shares of 4s. in Allied Cement Manufacturers, Ltd., the reorganisation of the administration of that company is of prime importance. At the Extraordinary General Meeting of Allied Cement held on December 23rd, a resolution for the removal of all the directors, including the chairman, Mr O. J. S. Piper, was carried, and Mr H. Boot, Colonel Eastwood, General Sir P. Maybury and Sir R. Pretymann Newman, were elected in their stead, Mr Boot, who is managing director of Eastwoods, Ltd., becoming chairman and managing director. It was considered that Allied Cement could be put upon a profit-earning basis, if immediate finance were found to meet pressing liabilities. The new board has since declared that the company has no resources to pay its debenture interest due on January 1st. At the general meeting of the British Cement Products and Finance, which followed on December 31st, a lively discussion between the chairman, Mr A. J. Chapman, and disgruntled shareholders took place, and it was eventually decided to appoint a committee of investigation, consisting of three shareholders, to confer with the directors, and to defer passing the accounts until this committee had reported. There was a strong demand for the publication of Sir Harry Peat's report on the affairs of British Cement Products and Finance, but the chairman regarded the expense of circulating this bulky document among 3,000 shareholders as being entirely unjustifiable. The Press, however, would probably be more than willing to provide the company with an alternative method of publication, if no legal difficulties stood in the way.

United Serdang Rubber Report.—The heavy fall in the price of rubber, combined with suspension of tapping in May, and the subsequent selective tapping, caused the net profit to drop by £100,020 to £38,732. No allocation was made to the general reserve fund, but £20,000 was added to the special cultivation reserve fund, and after £25,000 had been transferred from the taxation reserve, the dividend of 4 per cent. caused a decrease of £389 in the amount carried forward, to £95,393.

	Year ended August 31.	1928.	1929.	1930.

The balance sheet shows a surplus of liquid assets over current liabilities of £337,369, which is £226,615 lower than in 1929. The chief changes were declines of £37,179 in cash to £21,431 and of £74,714 to £355,961 in gilt-edged investments. Creditors dropped by £24,996 to £110,970. During the year £35,837 was spent in developing properties and £37,599 on plant, machinery, etc. Stocks at

£137,270 were £15,748 lower than a year earlier. By selective tapping the rubber output has been reduced to two-thirds of normal, and the strictest economy will be enforced, without neglecting expenditure necessary for the proper upkeep of the estates. Several of the company's estates have been resurveyed, and the acreage accordingly adjusted. Important soil conservation has been effected as a result of an improvement in the supply of new coolies from Java. At their present price of 2s. 4½d. per 2s. share the ordinary shares yield £3 9s. 10d. per cent.

Steel Industries Meeting.—An informative, if depressing, survey of the position of the steel industry in Great Britain was given by Mr W. Benton Jones at the first annual meeting of the Steel Industries of Great Britain, Ltd. The company is a holding concern, which was formed in June, 1929, to purchase, from Austin Friars Trust, Ltd. (of unhappy memory), the capital of the United Steel Companies and the United Strip and Bar Mills. These two companies have now been amalgamated as the United Steel Companies, their reorganisation having involved a writing-down of assets. It is difficult to ascertain the rate at which United Steel is working in relation to its capacity owing to the variety of its products, but it is now estimated at 60 per cent., as compared with 70 per cent. during 1929-30. Though it is still earning profits, it has decided, in view of the uncertain outlook for the industry, not to pay any interim dividend. The holding company, consequently, has been obliged to pass its interim preference dividend. Mr Benton Jones declared at the meeting that in 1913 Great Britain's production of 7,660,000 tons represented 10.19 per cent. of the world's steel output. In 1925, with a production of 7,390,000 tons, its share was 8.32 per cent., but in 1929, although British production rose to 9,640,000 tons, the percentage fell to 8.06 per cent. The production of Western Europe was 25,670,000 tons (34.16 per cent. of world output) in 1913, and 34,990,000 tons (29.57 per cent.) in 1929. In view of the increased use of machinery and of steel in buildings, the chairman prophesied a further steady expansion in world demand for steel, though the Western European concerns, which had taken advantage of post-war conditions to pay off their prior charges, rebuild their factories, and equip them with the most efficient plant, enjoyed very substantial advantages as compared with many British companies.

Rio de Janeiro State Loan.—Advice has been received in London to the effect that the Minister of Finance of the State of Rio de Janeiro has forwarded, by post, funds for the payment of interest due on that State's 7 per cent. sterling loan of 1927. Payment was due on December 15th last, but owing to a change of Government subsequent upon the Brazilian Revolution, the new Minister of Finance found a lack of funds, and stated that he hoped to meet the obligation by the end of the month. This announcement has resulted in slight rises in various Brazilian stocks. The "default" was dealt with in the *Economist* of December 20th last.

New Tin Restriction Proposals.—A circular letter, dated December 24th, has been sent by the Tin Producers' Association to its members under the signature of Sir W. Peat, chairman of the Executive Committee, reporting that the average monthly reduction of output for the five months since June 30th was 2,927 tons if compared with the average production of the whole of 1929, or 3,097 tons if compared with the average of the last four months of 1929. This is tantamount to a curtailment of 20 per cent. Sir William Peat further announced that after obtaining the views of leading producers in every field it had been decided to reinforce the present system of voluntary restriction by arrangements more comprehensive, binding and durable. The new restriction plan covers the world and the Governments of the Federated Malay States, the Dutch East Indies and Bolivia are expected

to give legislative sanction for carrying it into effect. Each exporting country is to be limited to a certain quota as from January 1, 1931, the quotas being varied from time to time as may be required to correlate supply and demand and reduce the present accumulated stocks to normal proportions. The ratios of the various quotas will not, however, be varied, being based upon the "agreed" production of each country in 1929. The Malayan ratio, for example, will represent the proportion of the world production exported by the Malayan States in 1929, namely, 37.14 per cent. Similarly the ratios of Bolivia, the Dutch East Indies and Nigeria will represent their respective proportions, totalling 49.6 per cent. of the 1929 world production. The scheme, it is claimed, will embrace practically 90 per cent. of the world's output. The international quota agreement is to continue in force until the end of 1932, and an Advisory Committee, on which the producers, as well as the several Governments will be represented, is to be appointed to assist in making the somewhat complicated scheme work. The plan differs, ostensibly, from the ill-fated rubber restriction scheme in that its scope is not confined to British areas but involves the participation of the Governments of foreign exporting countries. The use, however, of the weapon of Governmental intervention to coerce producers who do not choose to follow the precise plan of the majority as regards restriction, is undesirable in itself, and is calculated to create another unfortunate precedent. There is nothing novel in the argument of the Anglo-Oriental Mining Corporation in their last bulletin that the safety of the majority of tin producing companies is otherwise imperilled. This argument has been used by many industries in depressed periods. In any case, is the present scheme certain to secure a balance between supply and demand? The Anglo-Oriental Mining Corporation estimates total world tin supplies for the eleven months to November, 1930, at 140,699 tons, as compared with an estimated world consumption of 129,033 tons. There is some doubt whether output can be restricted quickly enough to bridge the large gap between supply and demand, seeing that consumption is still likely to fall with the spread of the world trade depression. It is still more doubtful whether the price of tin can be stabilised in view of the uncertainties of the present scheme. From a level over £180 per ton at the beginning of the year, tin had fallen to nearly £110 last month. Since the announcement of the new restriction scheme it has touched £120 a ton, but subsequently reacted.

Nestlé's and the Unilever Interests.—In an article appearing last week under the title "The Unilever Galaxy," we included the Nestlé Company, and its associate, the "Hollandia" Anglo-Dutch Milk and Food Company, in a list of companies coming within the scope of the Unilever organisation. We are now informed by the general manager of the Nestlé and Anglo-Swiss Condensed Milk Company that neither company has any connection whatsoever with Unilever, Ltd., and ask our readers kindly to note this fact.

BARCLAYS BANK

LIMITED

HEAD OFFICE: 54, LOMBARD STREET, LONDON, E.C.3
And over 2,050 Branches in England and Wales.

DRAWING ACCOUNTS are opened upon the terms usually adopted by Bankers.
DEPOSITS AND SMALL SAVINGS of any amount are received and interest will be allowed when the Deposit amounts to £1.
Deposit Books are issued when required.
Fuller information will be given readily by any of the Branch Managers upon application.

EVERY DESCRIPTION OF BRITISH AND FOREIGN BANKING BUSINESS TRANSACTED.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Montreal, Cable Telephone and General Trust, New Modderfontein Gold Mining, Lake View and Star, Pontian (Malay) Rubber and E. W. Tarry. Presiding at the annual meeting of Lake View and Star, Mr J. A. Agnew referred to the action of the Commonwealth Government in granting a bounty on increased gold production, and said it was understood that the bounty was to take the form of the payment by the Government at the rate of £1 per fine ounce, for all gold produced annually, for a period of ten years, in excess of the average production for the years 1928, 1929 and 1930, which was estimated at 445,800 ounces. At the Pontian (Malay) Rubber Co. meeting Mr Philippe E. Gourju said that although last year it seemed that expenditure on the estate could not be reduced much further without incurring some danger of essential work being neglected, care and concentration on the part of the superintendent and the agents in the East had diminished the cost per lb. by nearly 2d. Discussing the instability of world market conditions, the chairman of the Bank of Montreal pointed out that for the twelve months ended March 31, 1929, Canada sold to Germany agricultural produce of a value of \$35,402,000; in the next year the value had fallen to \$14,841,000, and for the three months ended June 30, 1930, the total was \$2,182,000 only.

CAPITAL ISSUES.

The first borrower of the New Year is, appropriately, of unquestionably high status. The *Belfast Corporation* issue of 4½ per cent. redeemable stock is open, in the first place, to holders of 6½ per cent. mortgages, repayable on January 4th next. Cash subscriptions for the remainder will be opened on Monday, the whole of the purchase price of par being payable on application. Though the stock is priced on the high side (its yield being no more than 4½ per cent.), it includes attractive redemption rights, under which holders may apply for repayment at par in May and November of each year during the loan's currency, though the Corporation is not obliged to repay more than £20,000, in the aggregate, during each half year. This plan follows the lines first adopted by the Belfast Corporation in a conversion issue ten years ago.

Belfast Corporation.—Issue of £500,000 4½ per cent. redeemable stock, 1931, at £100 per cent., payable in full on application. The stock will be redeemed at par on January 4, 1931, unless previously cancelled by purchase or agreement. Holders of Belfast Corporation 6½ per cent. mortgages, repayable January 4, 1931, have been given the opportunity of reinvesting in this stock. The rateable value of the city is £1,858,974, and a rate of one penny will produce £7,000.

Particulars of the following have been issued "for information only," with a view to Stock Exchange introduction:—**Stirling County Council.** Particulars of an issue of £1,000,000 4½ per cent. redeemable stock, 1931-61. Trustees are authorised to invest in this stock. **City of Nottingham.** Particulars of an issue of £750,000 Nottingham Corporation 4½ per cent. redeemable stock, 1931-61. Trustees are authorised to invest in this stock.

[Other Stock Exchange information, including the latest dividend announcements, weekly traffic returns, profit and loss figures, and reports and notices, will be found on page 42 under the heading "Company News."]

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended December 10th: Venezuela, 35,930 barrels; Trinidad, 21,197 barrels; total, 57,127 barrels. Production for the week ended December 17th:—Venezuela, 34,873 barrels; Trinidad, 19,105 barrels; total, 53,978 barrels. Production for the week ended December 24th: Venezuela, 36,642 barrels; Trinidad, 18,552 barrels; total, 55,194 barrels.

THE MEXICAN EAGLE OIL COMPANY LIMITED.—Production for the week ended December 6, 1930, was 219,000 barrels. Production for the week ended December 13, 1930, was 216,000 barrels.

TAMPICO OIL, LTD.—The total production on the company's properties in Mexico during November was 20,985 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,574 barrels.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during November, 23,300 tons; oil purchased during November from other companies, 48,350 tons.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended December 6th was: Bolivar district, 88,412 metric tons; Maracaibo district, 14,286 metric tons; total, 102,698 metric tons. Production for the week ended December 13, 1930, was: Bolivar district, 90,970 metric tons; Maracaibo district, 15,789 metric tons; total, 106,759 metric tons. The Venezuelan Oil Concessions, Ltd., announces that its production for the week ended December 27, 1930, was: Bolivar district, 86,270 metric tons; Maracaibo district, 15,944 metric tons; total, 102,214 metric tons.

COMPANY MEETINGS &c.

BANK OF MONTREAL.

NO LOSS FROM DEPRECIATION.

VERY SATISFACTORY POSITION.

SIR CHARLES GORDON'S REVIEW FOR THE YEAR.

BUSINESS OUTLOOK.

Summing up conditions in our own country, we can, I think, justly congratulate ourselves upon the inherent vigour and soundness of our general economic structure. The setback we have received has been a direct reflection of disturbed conditions all over the world.

Memory of the stock market debacle will pass; commodity prices will, if they have not already done so, reach a point where production is curtailed to the level of consumption; the period is approaching when the comparison with figures of the previous year will be less unfavourable. When these factors are in evidence there will be bred a more optimistic outlook, spending will become freer, employment will increase, and there will be a return to better times, for in this virile country of Canada, with its abounding resources, there can be no permanent depression. Whether the pull will be short or long we cannot foretell, but we do know that Canada has been through many periods of depression before and upon each occasion has emerged successfully.

My own view is that when the turn comes, Canada will be found leading the procession in the return to prosperity. That view, I think you will agree, finds full justification from the manner in which this country has been weathering the storm and from the vigorous and practical remedial measures which we as a people have applied.

GENERAL MANAGER'S ADDRESS.

The chairman then called upon Mr W. A. Bog, as joint general manager, to read the address of the general managers. Mr Bog said:—

On behalf of Mr Dodds and myself, I have the honour to present to you the 113th annual balance sheet of the bank, together with our comments upon the various features which it contains.

As you know, the banks of the world at large are passing through one of the most difficult periods in history. Canada is singularly fortunate in her banking system. It has been able to withstand, without apparent strain, the heavy drop in the price of commodities and in the market value of securities which has taken place in this country as it has elsewhere. A reduction in bank figures is a natural sequence of this decrease in values.

You will note that the traditionally strong liquid position of your bank has been maintained. This was accomplished without curtailing the credit requirements of our customers.

Our total assets now aggregate \$826,900,000, against \$965,300,000 a year ago, a decrease of \$138,400,000, which may be considered a reasonable contraction in view of the conditions which have prevailed. Of this total, \$438,100,000 consists of quick assets, namely, cash, call loans, bank balances and securities of a readily realisable nature.

Profits are \$6,519,000, as compared with \$7,070,000 reported a year ago. This reflects the quieter state of business conditions, coupled with lower rates of interest received on funds necessarily employed elsewhere than in Canada. The net result may be considered satisfactory.

Our offices abroad have continued to prove of substantial advantage to our general operations and to the international business of the Dominion. Their importance has been particularly noticeable in connection with the growing interest abroad in the establishment in Canada of new industries and branches of existing industries.

SITUATION IN CANADA.

In Canada the collapse of stock speculation, which occurred just prior to our last annual meeting, has been coupled with a decline in commodity prices sufficiently widespread to affect nearly every form of business. Canada is fortunate in that its income is derived from a variety of important trades and occupations, most of which are based upon raw materials existing in abundance within our own borders.

While Canada is steadily growing in importance in respect of her manufactures, we depend largely upon the export of agricultural and

The 113th annual general meeting of the shareholders of the Bank of Montreal was held in the board room at the bank's headquarters in Montreal on Monday, December 1, 1930.

THE PRESIDENT'S ADDRESS.

Sir Charles Gordon, G.B.E., in addressing the shareholders, first expressed his deep regret at the death during the past year of two valued colleagues, Mr H. B. Mackenzie, general manager, and Mr William McMaster, a member of the board, and paid a fitting tribute to the valuable services rendered to the bank by these gentlemen.

Proceeding, he said that Mr Ross McMaster, whose business achievements were well known to every one of them, had been appointed to fill the vacancy on the board caused by the death of his father, and two seats on the directorate, following the enlargement of the board authorised at the last annual meeting, had been filled by the appointment of Mr Patrick Burns and Mr Chris. Spencer, residing in Calgary and Vancouver respectively, both outstanding in business enterprise in Western Canada.

After the death of Mr Mackenzie the directors had deemed it opportune to make the general management a joint office, and appointed thereto Mr W. A. Bog and Mr Jackson Dodds, who had long been upon the staff of the bank, had risen by merit and ability to the important positions they now occupied, and were possessed of sound and varied banking knowledge.

Sir Charles continued: The annual statement has already been published, and as the general managers will explain some of the details, I will only draw attention to the very strong position, which is reflected not only in cash but in Dominion of Canada and Provincial Government securities.

The year under review has been a most difficult one, not only for banks, but for practically all classes of business, and this has been reflected in our profits.

Following the custom of which I have had the opportunity of availing myself for the past three years, together with other directors of the bank I accompanied Mr Beatty, president of the Canadian Pacific Railway Company, on his annual visit to the West. In this way we are enabled to keep thoroughly familiar with all the ramifications of the bank in the Western Provinces and British Columbia.

It is the history of all new countries that they depend at first upon the utilisation of their most available resources, and later turn to manufacturing and similar pursuits. Canada at the present time is in an intermediate stage. We have been making use of resources most readily converted into money, but are now entering the second stage, that of manufacturing. In 1915 the gross value of Canada's agricultural products was \$1,118,694,000, and of her manufactured products, \$1,381,547,000. In 1928 the figures were: Gross value of agricultural products, \$1,730,304,000, and of manufactures \$3,769,850,000. These figures illustrate the trend of our economic development, and have an important bearing upon our future outlook.

IMPERIAL CONFERENCE.

On the Imperial Conference in London high hopes may have been built that the various portions of the British Commonwealth would be more closely knit economically by preferential tariffs. No important step to this end was taken, but the proceedings have awakened widespread interest. It is apparent that free trade within the Empire is not a practical possibility, but I feel strongly that much could be accomplished in furthering the exchange of trade between Canada and the United Kingdom by placing that trade upon a reciprocal basis, as is the case at present between Canada and some other portions of the Empire. There is an increasing recognition in Canada of the wisdom of trading with those who are willing to trade with us, and that principle would find a very practical expression under a system of reciprocal preferences with the United Kingdom, which, though started perhaps only in a small way, would undoubtedly lead to impressive results in regard to the future trade of both countries. These remarks apply also to an extension of the existing agreements with the other Dominions.

other products, and at present the realisable monetary value of these is at the lowest level reached for many years past.

What is very necessary to improve conditions in Canada is the political and financial stability of the world at large, principally of Europe, and anything Canada can do to this end will redound to our advantage.

CROP POLICY.

The serious situation which has developed in the wheat market has served to call into question the wisdom of placing such wide-spread reliance as in the past upon one type of crop. Wheat is a commodity of international character, and the bulk of our production of it must be exported. The price return is subject to wide fluctuations, and is affected by many conditions which can neither be foreseen nor controlled. Wheat will always be produced in large quantities in the Prairie Provinces, but the conviction is growing that more stability is afforded by a wider application of the principles of mixed farming, because this, as well as supplying many of his own needs, brings to the farmer a return every month in the year. Meanwhile, for the marketing of our export surplus of wheat, stable conditions in the world at large are most important.

It might be pertinent in this connection, as an example, to mention that for the twelve months ended March 31, 1929, Canada sold to Germany agricultural products of a value of \$35,402,000; in the next year the value had fallen to \$14,841,000, and for the three months ended June 30th of this year the total was \$2,182,000 only.

The return of prosperity will probably be slow, but there are grounds for believing that the bottom of the depression is near at hand. There is the possibility of a seasonal slowing down during the early winter months.

The Chairman then moved, seconded by Mr H. R. Drummond, that the report of the directors now read be adopted and printed for distribution among the shareholders.

The report was unanimously adopted.

The auditors and directors were duly elected, and a vote of thanks to the staff was unanimously carried.

The meeting then terminated.

At a subsequent meeting of the directors Sir Frederick Williams-Taylor was appointed a vice-president, stationed in London, England, with complete supervision of the British and European affairs of the bank.

E. W. TARRY AND COMPANY, LIMITED.

SIR J. FORTESCUE FLANNERY ON THE TRADE DEPRESSION.

The annual general meeting of E. W. Tarry and Company, Ltd., was held, on the 31st ultimo, at the Cannon Street Hotel, London, E.C.

Sir J. Fortescue Flannery, Bt., D.L. (the chairman), said that the depression in trade which seemed to have affected every civilised country had affected the principal industries of South Africa, and in some departments had affected them very seriously.

Over-trading and the granting of excessive credit had put the trading community in a most difficult position, and in view of the condition of the motor trade the directors, after earnest consideration, had decided to close this department, but it would be done gradually in order that the assets might be realised as favourably as possible and that the company should carry out their obligations as regards service to customers within the period of guarantee.

Having dealt with the accounts, the Chairman said that the directors had decided not to pay, for the present, the half-yearly dividend on the preference shares which would be due on January 1st. This decision was associated with the greatest regret, as it was the first time in the history of the company that the preference dividend had been postponed. The dividend payable on January 1st was against the profits of the year which commenced on July 1, 1930, and the directors felt that they must have sufficient information before them to show that the necessary profit had been earned before they authorised the payment. As soon as circumstances warranted, the arrears of dividend would be cleared off, and he trusted it might be soon. The directors still had the greatest faith in the stability of Tarrys, and it was only the prevailing circumstances which made them cautious, in view of the large sums due to the company.

They approached the future with considerable optimism, feeling that the temporary setback to South Africa's progression was nearing an end, and, while the recovery might not be rapid, it would be sure. In previous periods of depression South Africa had made a quick recovery, and he felt hopeful that, in the present worldwide setback, South Africa would lead the world in the race to normal conditions.

The report and accounts were unanimously adopted.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED.

(Incorporated in the Union of South Africa.)

REDUCTION IN COSTS.

UPPER LEADERS AND SOUTH REEF DEVELOPMENT.

The thirty-third ordinary general meeting of the shareholders of New Modderfontein Gold Mining Company, Limited, was held in Johannesburg on November 27, 1930.

Mr John Martin (the chairman) in the course of his speech said: Ladies and gentlemen,—The directors' report and audited accounts for the year ended June 30, 1930, show that the total profit earned was £2,229,846, which, with the balance of £302,061 unappropriated at the beginning of the year and a small amount of £757 in respect of unclaimed dividends, forfeited in accordance with the company's articles of association, gave a total of £2,532,664 to the credit of the appropriation account. As stated in the directors' report, this sum was disposed of as follows:—Dividends Nos. 47 and 48 of 70 per cent. and 67½ per cent. respectively absorbed £1,925,000; Government and provincial taxation amounted to £305,264; capital expenditure accounted for the net sum of £26,097; and a further amount of £24,325 was set aside towards meeting the outstanding liability in respect of miners' phthisis compensation. The unappropriated balance at June 30, 1930, was £251,978.

RECORD TONNAGE CRUSHED.

The improvements to the reduction plant enabled a larger quantity of ore to be treated, and the total tonnage crushed was increased by 98,000 tons, compared with the previous year, to the fresh record of 1,811,000 tons. The working costs per ton milled were reduced by 11d., but the yield and working revenue per ton milled decreased by 0.691 dwt. and 3s. 1d. respectively. On balance, therefore, the working profit per ton milled was 2s. 2d. lower and the total working profit of £2,188,177 was £64,256 less than the figure for the year before. The fact that working profits have been so well maintained, notwithstanding the progressive decline in the yield per ton milled and the increased development footage accomplished, has been due to the increase in the tonnage crushed and the very considerable reduction of working costs. The lowering of the grade will not have occasioned surprise as that tendency is inevitable in the circumstances of the mine, and was clearly forecast in previous annual reports and at previous annual meetings. It has been due chiefly to the mining of a greater proportion of ore from the Upper Leaders and South Reef, a proportion which during the year under review amounted to 27 per cent. of the total tonnage mined, compared with 12 per cent. for the previous 12 months.

Every effort continues to be made not only to maintain but to improve upon the already high standard of general efficiency at the mine. Further important economies have been effected in the use of drill steel and explosives in stoping and developing, and these are largely responsible for enabling the cost per fathom of ore broken, comparing the year under review with the previous year, to be reduced by 5.3 per cent. and, at the same time, the cost per foot developed to be reduced by 16.4 per cent.

DEVELOPMENT FOOTAGE RECORD.

The development footage accomplished during the period under review reached the record total of 91,333 ft., or 16,351 ft. more than in the previous year. The increase was again chiefly accounted for by the larger footages driven on the Upper Leaders and the South Reef, in conformity with the policy of accelerating development on these reefs in view of the practical completion of development on the Main Reef Leader.

Of 10,865 ft. sampled on the Main Reef Leader, 5,940 ft. disclosed payable reef averaging 597 in.-dwt. and the payable ore developed amounted to 404,700 tons averaging 10.5 dwt. over 57.6 in.

On the Upper Leaders N.A. 1, 2, and 4, 18,025 ft. were sampled, of which 9,865 ft. were classed as payable with an average value of 391 in.-dwt. The payable ore developed on the N.A. 1 and 2 Leaders was 439,500 tons, averaging 5.7 dwt. over 44.3 in.

Of 18,115 ft. sampled on the N.A. 7 Leader 6,615 ft. exposed payable reef of an average value of 337 in.-dwt., and of 11,585 ft. sampled on the South Reef 4,550 ft. gave payable values averaging 358 in.-dwt. The payable ore developed on these two reefs amounted to 322,000 tons, averaging 6.1 dwt. over 41.1 in. and to 128,000 tons averaging 5.5 dwt. over 42.1 in. respectively.

THE ORE RESERVES.

Shareholders have been informed on previous occasions that the Upper Leaders and the South Reef are of lower average value than the Main Reef Leader, and, in addition, the work done on them to date has indicated a lower proportion of payability. It is mainly due to these differences that the total payable ore developed on all reefs during the past financial year, at 1,294,200 tons of an average

value of 7.3 dwt., showed a decrease of 257,100 tons in quantity and of 0.9 dwt. in value, compared with the figures for the previous year. The ore reserves as recalculated at June 30 totalled 8,757,000 tons of an average value of 8.3 dwt. over an estimated average stoping width of 50.1 in. This included 1,325,100 tons of ore averaging 6.7 dwt. contained in shaft pillars, etc., which are not at present available for stoping. By comparison with the position 12 months earlier, the ore reserves show a decrease of 340,600 tons, the average value being 0.3 dwt. lower and the estimated average stoping width 0.1 in. less. These changes are chiefly due to the fact that the payable ore developed during the year was less, both in tonnage and in value, than that mined from the reserves during the period.

CURRENT YEAR'S OPERATIONS.

The results of operations during the first four months of the current financial year show that the rate of crushing averaged 161,500 tons per month, an increase of 10,600 tons on the monthly average for the preceding year. The yield decreased to 8.97 dwt. per ton milled, but working costs were further reduced to 16s. 0.9d. per ton milled, and the working profit totalled £714,017, or an average of £178,504 per month, which is about 2 per cent. less than the average for the previous 12 months.

The remaining life of the mine will be materially extended as a result of the exploitation of the large tonnages of ore from sources other than the Main Reef Leader which it will be possible to mine and mill at a profit. What those tonnages will ultimately amount to it is impossible at present for us or for anyone to say. That they will be large is undoubted, and the policy to be followed, of conducting a vigorous and extensive development programme and of judiciously conserving the rich Main Reef Leader ore reserve as far as practicable, is designed to ensure the fullest exploitation of the remaining mineral resources of the mine and the longest prolongation of profitable operations.

The report and accounts were unanimously adopted.

CABLE, TELEPHONE AND GENERAL TRUST, LIMITED.

CHANGE OF NAME APPROVED.

SIR ALEXANDER ROGER'S SPEECH.

An extraordinary general meeting of the members of The Cable, Telephone and General Trust, Ltd., was held, on Friday, December 19th last, at Incorporated Accountants' Hall, Victoria Embankment, London, W.C., to consider a resolution approving a change in the name of the company.

Sir Alexander Roger presided.

The secretary (Mr. L. D. Bennett) having read the notice convening the meeting.

The Chairman said: Gentlemen, you have been called together to-day to sanction a resolution authorising the change of name of your Trust to that of Telephone and General Trust, Ltd., the change being in the elimination of the word "Cable" from the present name.

Your directors hold the view that the title of your company, as far as possible, should indicate its principal business. Your company has, of course, wide powers of investment, and there is no suggestion that they should in any way be curtailed, but at the time of the inception of the Trust it was thought that a policy might be developed whereby investments would be made in cable manufacturing, electric power and telegraph companies, as well as in the telephone industry. In fact, however, your company has centred its activities upon telephone investment, both permanent and temporary, as it has been found that there is, in this sphere, a wide field of business and ample opportunity for development. I have already explained to you on previous occasions that our activities in the telephone world are being carried out in conjunction with large associated interests which have also concentrated upon telephone work throughout the world, thus forming international relationships of considerable importance and value.

After due consideration your directors have decided to recommend a change in the title of the Trust, and we believe it will meet with your approval and that of financial circles generally. I would add that the Board of Trade have intimated that their formal consent will be issued as soon as the resolution has been passed.

I move formally: "That the name of the company be changed from 'The Cable, Telephone and General Trust, Limited,' to 'Telephone and General Trust, Limited.' " I will ask Mr. Bennett to second the resolution.

Mr. H. S. Bennett, A.M.I.E.E., seconded the resolution, and it was carried unanimously.

A vote of thanks to the chairman and directors concluded the proceedings.

LAKE VIEW AND STAR, LIMITED.

MR JOHN A. AGNEW'S REVIEW OF THE INDUSTRY.

The twentieth ordinary general meeting of Lake View and Star, Ltd., was held, on the 31st ultimo, at River Plate House, London.

Mr John A. Agnew, chairman of the company, presided. The Secretary (Mr J. Comper) having read the notice convening the meeting.

The Chairman, in the course of his speech, said that the company had made a net profit for the year of £38,990, which amount had been carried to the appropriation account. After dealing with other items in the accounts and the more recent developments on the company's property, he continued:—

• Since the close of the year the first unit of the flotation plant was brought into operation, and it has been completely successful. For the last three months or so the results obtained in the flotation section have been excellent, and we can say without any shadow of doubt that this method of treating the sulpho-telluride ores of Kalgoorlie has been proved to be entirely satisfactory.

You have doubtless learned from the Press of the action of the Commonwealth Government in granting a bounty on increased gold production. A copy of the Act is not yet available on this side, but we have had cabled to us the principal features of it. The bounty is to take the form of the payment by the Government at the rate of £1 per fine ounce, for all gold produced annually, for a period of ten years, in excess of the average production for the years 1928, 1929, and 1930. This average is estimated at present at 445,800 oz. The annual amount distributable, based on such excess when ascertained, will be paid to the producers throughout the Commonwealth in direct proportion to their individual outputs.

It is satisfactory to note from the Press cables and those received from our own representatives in Western Australia that, notwithstanding the granting of this bounty, the producers are to continue to receive the benefit they now enjoy in respect of exchange premium.

The Government of the Commonwealth are to be congratulated on having shown in such an unmistakable manner their desire to assist the gold-mining industry, and it is to be hoped that in providing increased employment for workers and in the discovery of new and important fields, as well as in stimulation of interest in the older ones, they may be very amply rewarded.

AN APPEAL TO THE MINERS' LEADERS.

I want to take advantage of this opportunity of again addressing an appeal to those responsible for framing the policy of the mine workers in Kalgoorlie. In March, 1929, I endeavoured to indicate that we sought to encourage harmonious relations with our employees, and that we were not embarking on an enterprise which depended in any measure for success on any attempt to reduce the wages of our workmen; we then asked, as we do now, for a reasonably fair return for the wages paid and for some evidence on the part of the labour leaders of their desire to co-operate with us in our efforts.

So far as the workmen themselves are concerned, I think I may correctly say that we have no complaint to make. We spent a great deal of money in new equipment, especially in connection with the mine work, and in trying to improve the working conditions in the older sections of the mine, and as a result we found a gratifying increase in efficiency. Not all of this could be attributed to the altered conditions, for it was evident that the men themselves were desirous of rendering better service once it was appreciated that we were not out for any reduction in wages.

We find extreme difficulty, however, in getting the labour union officials and leaders of labour generally to appreciate that in some directions their attitude is calculated to defeat the object they profess to aim at—the welfare of the worker and the employment of the maximum number of men possible.

We have again to record our appreciation of the attitude of the Government of Western Australia towards the gold-mining industry of that State. Notwithstanding a financial situation almost without parallel, and with the most pressing need for increasing revenue wherever possible, we have the personal assurance of the Premier, Sir James Mitchell, that his Government recognises all that we are doing for the industry, and that they are determined to assist us to the utmost extent. (Cheers.) I know Sir James Mitchell intimately, and have no hesitation in advising you that we can accept his assurance as being intended to convey exactly what it states. I take this opportunity of thanking him on your behalf and of offering him in return a renewed expression of our desire to co-operate heartily with him and with his Government in our efforts to demonstrate that the Kalgoorlie Goldfields are capable of again playing an important part in assisting to bring prosperity to the State. (Hear, hear.)

The report was unanimously adopted.

PONTIAN (MALAY) RUBBER COMPANY, LIMITED.**MR P. E. GOURJU ON THE YEAR'S RESULTS.**

The annual general meeting of the Pontian (Malay) Rubber Company, Ltd., was held, on the 30th ultimo, at 7, Great Winchester Street, London, Mr Philippe E. Gourju (the chairman) presiding.

The Chairman said: The accounts now presented show a small working loss for the year, though in view of the low record of market prices you are probably satisfied that it is not larger.

Last year I pointed out that expenditure on the estate could not be reduced much further without incurring some danger of essential work being neglected. Nevertheless, care and concentration on the part of the superintendent and the agents in the East has diminished the cost per pound by nearly 3d.

The average selling price was a very low one, and would have been lower still, but for our having made forward sales which resulted in delivery of 31½ tons of rubber at a minimum price of 7½d. per pound.

This contract runs until the end of 1931, and your company will participate from January onwards in a further contract at a minimum price of 7½d. per pound. These contracts should ensure that, unless the price of rubber in London falls below 4d. per pound, the estate can be run without a loss.

The estimates for the current year are based on an estate cost of 4.72d. per pound, which is very low indeed for an area of the size of Pontian.

There has been considerable discussion, particularly in the Press, about the amalgamation of several companies, without proper information as to exactly what this means. It is no exaggeration to say that at the present moment all plantations managed by the best and most responsible firms are on very economical bases, and in this respect rubber planting compares most favourably with other industries.

As for the rubber market, we hope and believe that the worst is over, and that we can look forward with more confidence to a gradual improvement.

The report and accounts were unanimously adopted.

The appointment as a director of Lt.-Commander A. Y. Catto was confirmed, Mr Philip C. Turnbull was re-elected, and the auditors were reappointed.

A vote of thanks to the directors, managing agents and staff in the East terminated the proceedings.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Government Returns, &c.**NATIONAL ACCOUNTS.**

As is shown from the Treasury Return printed below, the total ordinary revenue for the eleven days ended December 31, 1930, amounted to £10,522,600, against ordinary expenditure of £14,767,300. After allocating £1,105,000 to the Sinking Fund, and having allowed for an increase in Exchequer Balances of £61,400, the week's operations, as shown below, increased the National Debt by £5,412,000 to £7,764,148,000†:—

(000's omitted.)

Bank of England Advances	+ 22,500	Treasury Bills	— 22,960
Public Department Advances	+ 3,500	Road Fund	— 520
National Savings Certificates	+ 2,450	National Savings Bonds	— 8
P.O. and Tel. Money	+ 28,900		— 23,488

† Adjusted figure.

A complete analysis of the National Debt at December 31st is shown below:—

INDIA COUNCIL REMITTANCES.

The total remittances from the Government of India to the Secretary of State for India in Council effected by purchases of sterling in India, from April 1st to December 20, 1930, were £5,395,000. During the same period £2,323,491 was transferred from the sterling reserves against corresponding contraction of currency in India to meet sales of sterling in India.

BULLION.

The following statistics of imports and exports of gold for six days ended December 24, 1930, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
Brazil	231	Poland	1,700
British W. Africa	42,098	Germany	53,500
British S. Africa	949,914	Netherlands	2,000
Australia	23,297	France	2,500,524
British Guiana	2,081	Switzerland	8,600
Other countries	1,714	Spain	22,000
		Kenya	1,360
		Other countries	850
Total declared value of imports	1,018,933	Total declared value of exports	2,590,534

The following statistics of imports and exports of gold for week ended January 1, 1931, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.		Exported from Great Britain and Northern Ireland.	
From—	£	To—	£
British S. Africa	534,390	Poland	3,400
British India	54,063	Germany	7,000
Straits Settlements	156,737	Netherlands	8,000
Other countries	154	France	379,500
		Switzerland	2,445,631
		Spain	8,937
		Australia	15,000
		Austria	16,390
		Morocco	2,000
		British India	5,034
Total declared value of imports	725,224	Total declared value of exports	2,890,952

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1930. ARRIVALS.		1930. WITHDRAWALS.	
Dec. 24	£	Dec. 24	£
27	Nil	27	199,383
28	Nil	28	11,000
29	20	29	356,809
30	Nil	30	7,000
31	Nil	31	276,266
1931. Jan. 1	Nil	1931. Jan. 1	2,000
		1931. Jan. 1	479,152
		1931. Jan. 1	4,000
Total	£20	Total	£1,342,608

Net withdrawals, £1,342,566.

GOLD.

Messrs. Samuel Montagu and Company write on December 31, 1930, as follows:—

The Bank of England gold reserve against notes amounted to £148,201,427 on the 24th instant (as compared with £150,580,757 on the previous Wednesday), and represents an increase of £2,241,343 since January 1st last. The bar gold which arrived from South Africa this week amounted to £534,390, all of which had been sold forward to France. In the open market yesterday about £40,000 of unrefined gold was available; this consisted mainly of a shipment of gold from India, made as a result of the recent low Indian exchange and the high prices ruling here for gold. This small amount was secured at the fixed price of 85s. 1½d. per fine ounce for despatch to France after refining. Movements of gold at the Bank of England since our last letter show a net efflux of £649,053. The only receipt was £20 in foreign gold coin, whilst withdrawals consisted of £9,000 in sovereigns taken for export and £640,073 in bar gold; the bulk of the latter was for export to France after refining.

SILVER.

The week under review comprised only three working days, during which the market showed further weakness. Buyers proved reluctant, and little resistance was offered to some reselling on China account, as a result of which prices fell ½d. on the 29th instant and another ½d. yesterday, bringing the quotations down to 14½d. for cash and 14¾d. for two months' delivery. America was a free seller in the afternoon of yesterday, reporting the market weak on rumours of the prospect of an increase in the duty on silver imported into India, a contingency which, however, must remain at present a matter of conjecture. To-day prices again eased, being fixed at 14½d. and 14¾d. for the respective deliveries, establishing a new low record on the last day of the year.

The following were the United Kingdom imports and exports of silver registered from midday on the 22nd instant to midday on the 29th instant:—

IMPORTS.		EXPORTS.	
	£		£
Mexico	137,946	British India	100,405
U.S.A.	36,602	Other countries	8,594
Canada	12,783		
Other countries	5,868		

Statistics for the month of December are appended:—

BAR SILVER per oz. std.		BAR GOLD per fine oz.	
Cash delivery. Two mos. delivery.		per fine oz.	
Highest price	16½d.	85s. 2d.	
Lowest price	14½d.	85s. 1½d.	
Average price	15.2005d.	15.1615d.	85s. 1.54d.

MISCELLANEOUS.

THE CHARTERED INSTITUTE OF SECRETARIES.—Mr Edward Wilshaw, of Cables and Wireless, Ltd., and Imperial and International Communications, Ltd., has been elected president of the Institute for the ensuing year. Mr F. R. E. Davis, O.B.E., of the Great Western Railway Company, and Mr F. Gordon Pulin, of the British Metal Corporation, Ltd., have been elected vice-presidents, and Mr W. G. Hislop, of Rand Mines, Ltd., has been elected treasurer for 1931. Mr W. H. Stenford has been reappointed to represent the Institute on Council of London Chamber of Commerce.

C. W. RANDALL AND COMPANY, LIMITED.—Profit for year ended December 15, 1930, £39,967, against £49,780; to income tax, £2,250, against £5,000; directors' fees, £500, compared with £455; depreciation, £252, against £223; brought in, £5,670, against

£4,638; available, £42,635, against £48,670; dividend on ordinary, 190 per cent. (same); participating dividend, 4 per cent. on preference, making 12 per cent. (same); forward, £14,635, against £5,670. In view of the large sums placed to reserve account in the last three years and the current trading conditions, the directors deem it prudent to carry forward a larger sum than appropriating any further amount for reserves on this occasion.

MUNICH (CITY OF).—The results for the financial year ending March 31, 1930, yielded a small surplus, the figures of revenue and expenditure being as follows:—

	Revenue.	Year ending March 31, 1930.
	RM.	£
Gross receipts of Municipal undertakings	122,480,101	6,003,926
Other revenues	117,772,876	5,773,179
	RM. 240,252,977	11,777,105
	RM.	£
Gross expenditure of municipal undertakings	113,593,682	5,568,317
Other expenditure	126,377,173	6,194,959
	RM. 239,970,855	11,763,276

(Conversions into sterling at the rate of RM. 20·40 to the £.)
At March 31, 1930, the debt of the town amounted to RM. 230,146,506·94 (£11,281,691), against which the town had assets valued at RM. 790,199,822·81 (£38,735,228). The budget for 1930 balanced at RM. 238,092,039 (£11,671,178).

TOWN INVESTMENTS, LIMITED.—The eighth annual report and accounts show a gross profit for the year to September 29, 1930, of £69,678 (last year, £86,398). Deducting expenses, including directors' fees and managing director's remuneration, £9,928 (last year, £14,818), mortgage and other interest and leasehold depreciation reserve, £11,723 (last year, £11,145), there remains £48,026. Adding the amount brought forward and deducting the interim ordinary dividend, a preference dividend to September 29, 1930, there remains a balance of £22,439. It is proposed to withdraw £4,000 from reserve, which, with the balance of profit, £22,439, makes £26,439 available, from which it is proposed to pay a final dividend of 10 per cent., making 20 per cent. for the year (last year same). The balance sheet shows a reserve of £100,000 and £55,270 to premiums on shares account.

Commercial Reports.

THE COAL TRADE.

Our Sheffield correspondent writes:—Practically no export business in South Yorkshire steams was done during the holiday period. Forward buying is at a standstill until minimum prices have been fixed. Comparatively little industrial fuel has been delivered for a fortnight. Works are now, however, taking reduced tonnages under contract. Best steams are quoted 16s. and 16s. 6d. f.o.b. Humber ports. The demand for house coal has subsided again. There is some delay in fixing contract prices for blast furnace coke. Some brands have been quoted at less than 11s. at ovens and consumption still tends to shrink.

Our Glasgow correspondent writes:—Inactive conditions have characterised the shipping branch of the Scottish coal market during the past week. In several instances high prices have been paid for odd lots to complete cargoes, but in the main the usual end-year rush for supplies has been absent, a circumstance all the more depressing because of the recent activity in the home market when conditions looked serious in the coalfields. Very little business has been arranged for January or more forward delivery, the outlook still being uncertain. Total shipments from Scotland for the year up to Saturday last amounted to 11,870,000 tons, a reduction of about 1,390,000 tons on those for 1929. Prices for the past day or two have been almost wholly nominal, and no indication of levels for further business will be available until the resumption at the pits early next week.

Our Cardiff correspondent writes:—Business on the Cardiff coal market this week has been completely disorganised by the coalfield dispute. The colliery owners, at their meeting with the workmen's representatives on Tuesday, disregarded the report of the National Industrial Board, while the workmen's representatives rejected a new offer of the employers of temporary terms involving a reduction in wages proportionate to the lowering of the weekly hours of work from 48 to 45. The result was a complete breakdown of the negotiations, and on Wednesday afternoon a stoppage of work on Thursday seemed inevitable. During the afternoon, however, representatives of the Mines Department travelled to Cardiff, and were successively in conference with the representatives of the owners and workmen. They were engaged in an effort to secure a continuance of work on temporary terms, but the result of the discussions was not known when this message was sent. Shipments have been inactive, and prices are stationary for practically all classes of coal. The lowest British tender for the Egyptian State Railways contract for 155,000 tons to be delivered during the first four months is that of 24s. 8½d. c.i.f., submitted by Gueret, Llewellyn & Morrett, Ltd., but an offer by the Westphalian Syndicate is ½d. per ton lower. Fears are entertained that in the event of a stoppage in the South Wales coalfield, the contract will be lost.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—Although Tuesday's weekly market was not officially cancelled, there was a very poor attendance, and practically no business was reported. Deliveries will be resumed next week against contracts, and it is confidently expected that a reduction will be made in Cleveland prices early in the New Year. Meantime, No. 1 remains at 66s.; No. 3, 63s. 6d.; No. 4 foundry, 62s. 6d.; and No. 4 forge, 62s. f.o.b. or f.o.t. There is no new business of importance so far in hematite, but some buying is looked for early next month, when work is fully resumed. Prompt lots of mixed numbers are obtainable at 70s. per ton, but for forward 70s. 6d. to 71s. is quoted by makers, according to period. Shipments of pig iron to the 30th Dec. total only 8,637 tons, against 12,301 tons for the whole of November. In the finished departments Dorman Long and Company, Ltd., secured two very welcome orders last week, one for 10,000 tons structural steel material for a large hotel to be built at Marble Arch, London, and the other for a bridge across the river Foyle at Londonderry, at a cost of £255,510, which will involve 5,500 tons structural steel. This firm have also secured to-day the order for the bridge across the Tees at Newport, near Middlesbrough, which will cost approximately £450,000, and work is to commence as soon as possible. Prices for the different finished materials are unchanged from last week. The ore market is idle. Best Bilbao rubio remains nominally 16s. 6d. for prompt, and 16s. 9d. to 17s. forward, and the rate of freight Bilbao-Middlesbrough for early tonnage is about 5s. 6d. Coke is offering at 17s. delivered works for ordinary blast-furnace qualities, but the demand is poor. One hematite furnace has been blown out at Normanby Works for relining, which reduces the number in blast in the district to 24.

Our Sheffield correspondent writes:—Resumption of industrial activity after holiday is proceeding very tardily, which indicates that firms have not much work on hand, and in this connection the position is a good deal worse than twelve months ago. The situation is featureless; and there is nothing tangible to test prospects for the near future. The paucity of overseas orders in most iron and steel products continues to be the main factor in the present depression,

and until a change for the better in this direction occurs, no substantial general improvement is probable. Some valuable orders for forgings for the new Cunarder are on hand and others are expected from the naval programme. Sheffield is likely to benefit from certain important engineering schemes in this country and in the Colonies. A marked falling off in trade with France is being experienced. Builders of commercial motors are taking Sheffield steel and tools freely, but demand from the touring car section has been poor for a long time. Prices of material are unchanged, but finished prices continue in a downward direction.

Our Glasgow correspondent writes as follows:—Business in the West of Scotland has been suspended for the better part of this week. At the steel works in the Lanarkshire area, and also in other districts, operations ceased at the end of last week, and will not be resumed till about the middle of next week, and in some instances not until January 12th. In the more favourably placed sections of the iron and steel industries works closed on Wednesday, the 31st, the re-start being made on January 7, 1931. Generally speaking, there has been very little business done during the week, though there has been a certain amount of activity in the lighter branches completing orders for delivery before the year end.

There are no special features to report in the condition of the tinplate market, which continues under holiday influences. The inquiry is poor, and little new business has been arranged. The market for galvanised sheets remains very depressed with quotations a shade lower at £11 5s. per ton, compared with £11 5s. to £11 12s. 6d. before the holidays. Welsh tinplate bars are unchanged, but foreign bars are quoted at £4 5s., compared with £4 a week ago. Shipments last week were exceptionally low, and stocks amounted to 190,981 boxes.

OTHER METALS.

TIN.—The standard market opened with a strong tone, due to reports of favourable progress regarding restriction measures, while supported by higher Eastern cables and a better general demand. Later, sellers predominated, and values reacted on realisations. Standard cash changed hands at £119 5s. to £116 15s.; three months, £121-£117 12s. 6d. to £118. In the East, sales were reported at £122 5s. to £123 10s. to £122 per ton, c.i.f. terms.

COPPER.—Market was fairly active, and opening tone firmer under reserved offers, but subsequently values eased off as sellers became more prominent, dealings being chiefly in forward positions. Standard cash sold at £47 13s. 9d. to £47 12s. 6d.; three months, £47 10s. to £46 7s. 6d. per ton.

LEAD dull and trend of prices in buyers' favour, offerings being in excess of requirements. Good soft foreign pig. January sold, £15 1s. 3d. to £14 10s. 3d.; February, £15 2s. 6d. to £14 17s. 6d.; March, £15 to £14 15s. per ton.

SPELTER was accorded fair support with slight price fluctuations, near positions being firmly held. December, sold at £13 15s.; January, £13 15s. to £13 11s. 3d.; February, £13 18s. 9d., £14 1s. 3d. and £13 18s. 9d.; March, £14 2s. 6d. to £13 18s. 9d. per ton.

ALUMINIUM steady. Home trade, also export, £85 per ton.

ANTIMONY firmer and sellers more reserved in face of improved inquiries. English regulus, £38 to £45. Chinese regulus, spot, £25 10s. to £26 10s.; January-February, buyers, £23 10s. Chinese crude, January-February, sold £14 10s. per ton, c.i.f. terms.

ANTIMONY OXIDE.—January-February, £24 10s. per ton c.i.f.

ANTIMONY ORE.—60 per cent., January-February, 3s.; 50 per cent. ditto, 2s. 6d. per unit c.i.f.

WOLFRAM dull of sale. Chinese, January-February, sellers, 14s. per unit c.i.f.

QUICKSILVER maintained. Spot, £21 15s. to £22 per bottle.

TIN PLATES quietly steady. I.C. coke, prompt and forward, 15s. 9d. per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, December 31st.
 Spot sales for the days 23rd, 24th and 29th, 30th and 31st are 13,000 bales, of which 6,480 bales are American, 750 Brazilian, 300 Argentine, 2,750 Peruvian, 1,500 Egyptian, 200 African, 600 East Indian, and 420 sundries. Imports for the period 23rd to 31st (inclusive) are 114,123 bales, of which 75,690 bales are American, 105 Brazil, 385 Argentine, 2,391 Peru, 14,902 Egyptian, 217 African, 6,372 East Indian, and 14,061 sundries. Quotations to-day are: American Middling, 5-34; Egyptian Sakel, 7-73; Egyptian Uppers, 6-14; Brazil Fair, 5-49; Peru G.F. Smooth, 5-79; West African Mid., 5-39; East African G.F., 6-39.

MANCHESTER, December 31st.

Trade developments of importance cannot be expected during the period between Christmas and New Year, and the market during the past week has been quiet and rather featureless. There has been practically no change in prices. The latest political news from India has been discouraging, but some business in piece-goods continues to be done for Karachi and Madras. Cables relating to the auction sales in Shanghai are rather better, but new business continues to be checked by the low price of silver. Some inquiry has come through in printing and bleaching cloths for Egypt, but very little has been done. Scattered sales in a variety of goods have been arranged for South America and the Continent. As is usual at this time of the year home trade buyers have adopted a waiting policy. A little more anxiety exists as to the outcome of the dispute on the more looms per weaver system. Quotations in American and Egyptian yarns have been fairly steady, but spinners have reported a limited demand and business has been confined to small lots.

THE WOOL TRADE.

Our Bradford correspondent writes:—The attention of the trade is now turned to the outlook for wool during the next twelve months, and particularly what will happen at the resumption of the selling season in Australia. The conviction is almost universal that the time is ripe for a steady influence to be exerted. During the past year raw material values have gone much lower than anyone seriously anticipated, and there is a good deal to be said for the efforts made in South Africa and in the United States to lift the

market price on to a more profitable basis. Supply and demand will, however, continue to exercise the paramount influence. Growers and sellers may or may not be financially strong enough to hold wool, and whatever reserves may be fixed will not induce users to pay the price if there is no prospect at all of the article being turned over at a reasonable profit. The consumption of wool in the Bradford district has been fairly creditably maintained during the past few months, and it is reasonable to expect selling to be resumed in Australia without any serious variation in values. There are still three weeks to elapse before the next series of London sales will commence, and even in that short length of time a big weight of wool can be absorbed. It is, of course, too early to anticipate that event definitely, but by then both home trade and Continental buyers should be ready for taking a substantial proportion of the offerings. The financial disturbance in the United States has had its effect upon the wool textile industry there, and it will take some time longer before there is a definite recovery on the Continent. It does not seem likely that the latter section will be able to force the pace very much. Since last writing there have been some rather sharp fluctuations in the Continental "futures" market, and though the operations have not been large, this does not indicate much confidence in a definite upward move just yet. Conditions among topmakers and spinners in Bradford do not call for much comment. Prices are steady, but there is no large turnover.

FOOD.

THE GRAIN MARKET.—Climatic conditions over the United Kingdom have been damp and mild, and a spell of drier weather would benefit growing crops. Winter cereals, however, are in fair condition except on low ground affected by recent heavy rains. Threshings were on a light scale, consequently only small supplies are reaching the Statute markets, but with heavy offerings of cheap imported wheat prices marked a further reduction. In the Liverpool option market a low record level was touched at 3s. 11½d. per cental paid for December delivery. Disturbing factors in the general situation were furnished by unsettled financial conditions in the United States and lower Argentine exchange rates, combined with large Southern Hemisphere yields. Argentina is harvesting a crop almost double that of last year, the official estimate being placed at 33,975,000 quarters, which is about in accordance with market expectations. Pressing offers from this direction constitute the outstanding feature at the moment, and it is evident that growers are prepared to cut their losses and market supplies, even at the extremely low prices current rather than hold stock over an indefinite period. This is emphasised by large freight bookings for January loadings, as there are still substantial stocks of maize and linseed to come forward, so that elevator room is urgently needed. Australia is also pressing offers for export, while an active resumption of chartering from the Black Sea ports for January loading dispels any sign of a curtailment in Russian shipments. All feeding stuffs were depressed, and values of maize further gave way on selling pressure and larger arrivals, down to 15s. 3d. being accepted for a Plate cargo early January loading. Barley and oats are neglected and featureless.

WHEAT.—Unsettled. No. 1 hard Manitoba, ex ship, 26s. 9d.-27s. 3d.; No. 1 Northern Manitoba, ex ship, 26s.-26s. 6d.; No. 2 ditto, 24s. 9d.-26s.; Barusso, 63 lbs., 22s. 6d.; Rosafe, 63½ lbs., 22s. 6d.; Australian, 26s. 3d.; choice white Karachi, 25s. 6d.; Russian, on sample, ex ship, 22s.-24s.; landed, 20s.-23s. per 496 lbs. English, new, 5s. 6d.-5s. 8d. per 112 lbs.

FLOUR.—Quiet. London straight run, 25s. per sack for country deliveries, and 24s. London area. Of imported, Manitoba patents, 24s.-25s. 6d.; Buffalo ditto, 23s. 6d.-25s. 6d.; Australian, 22s.-24s. 6d., ex store, per 280 lbs.; patents, January-February, 21s.-21s. 3d.; export ditto, 18s. 6d.-19s.; Australian, January, sold 18s. per 280 lbs. Argentine low grade, January-March, £5 10s. per ton.

MAIZE.—Steady. Plate, landed, 17s. 9d.; ex ship to arrive, 16s. 6d.; January-February, 16s. 6d.; February-March, 16s. 9d. per 480 lbs. Yellow maize meal, £6 f.o.r. London. Yellow African, ex ship, £5 10s. per ton.

BARLEY.—Dull. Californian, old, landed, 30s.-35s.; new, ex ship, 30s.-41s. as to sample; Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs. Black Sea, ex ship to arrive, 13s. 6d.; landed, 14s. 9d.; Danubian, ex ship to arrive, 13s. 6d.; landed, 14s. 9d.; Persian, landed, 13s. 6d. per 400 lbs. English, new malting, 6s. 3d.-12s.; feed, 4s. 6d.-5s. 9d. per 112 lbs.

OATS.—Quiet. Plate, landed, 12s.; ex ship, 10s. 3d.; Chilean, tawny, landed, 13s. 6d.; best whites, ex ship, 19s.; landed, 20s.-20s. 6d.; mixed Canadian feed, landed, 11s.; North Russian, landed, 13s.-14s. 6d. as to sample; South Russian, landed, 13s. 9d. per 320 lbs. English, new, 5s.-6s. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years, 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to Dec. 27.....	Cwts. 61,025	Cwts. 133,319	Cwts. 140,920	Cwts. 150,443

Dec. 28, 1929.....	133,319	141,466	20,376	9 6	8 8	7 0

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1929.	Dec. 31, 1929.	Jan. 2, 1930.	Dec. 17, 1930.	Dec. 22, 1930.	Dec. 31, 1930.
	1929.	1929.	1930.	1930.	1930.	1930.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	122	122	148½	54	50½	51½
Chicago (No. 2 Winter) —Cents per 60 lb.	116½	115½	130½	76½	76½	76½

The visible supply of wheat in Canada at 62,007,000 bushels shows an increase on the week of 1,313,000 bushels. Supplies a year ago stood at 74,704,000 bushels.

SUGAR.—A generally quiet demand continues on actual trade account, but no further change in prices resulted. At the very low rates ruling, the market is naturally very sensitive to developments in the plan to restrict production. Meantime, offers from producing countries are made with marked reserve and raw refining sugars rendered somewhat nominal. Terminal markets responded to higher American cables and reserve of sellers, while a fair amount of business was arranged. Of raw, March delivery sold 5s. 6½d.; May, 5s. 8½d. to 5s. 8½d.; August, 5s. 11½d. to 5s. 11½d.; December, quoted, 6s. 4d. Home-grown granulated, 18s. 3d. ex wharf London, and 18s. 6d. to 18s. 7½d. factory. White Mauritius, spot, London, 17s. 6d. to 18s. Cuban receipts last week cabled 43,222 tons, against 33,499 same time last year; exports, 31,510, against 41,630; stocks, 687,056, against 181,460. Messrs Willett estimate stocks on plantations and in course of transit at 767,000, against 168,535 last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending December 29th totalled 194,528 tons, against 212,119 last year.

COFFEE.—A steady market resulted by private treaty with small transactions arranged daily, at previous prices. Brazilian varieties meet a decidedly slow sale for shipment.

COCOA.—Spot sales proved of minor importance on about former terms. Forward positions generally quiet and somewhat unsettled at times. Accra F/F, January-March, London contract, quoted 25s. 9d. f.o.b.; G/F, December-February, to Continent, sold 28s. 3d.; and January-March, 27s. 9d. c.i.f. Terminal: May, sold 30s.; July, 29s. 6d., 30s. 3d. and 30s.; December, 33s. to 31s. 6d.

TEA.—Private contract market presented quiet features, and resumption of auctions is awaited.

RICE.—Business in most descriptions confined to a narrow compass, but shippers of Burma offer with reserve. Two Stars, January-February, quoted 8s.; Spanish oiled from 11s. 9d. to 12s. 9d., c.i.f. London.

BEANS AND PEAS.—Quotations for beans remained unchanged and trade at the moment is quite retail. Peas continue quiet. Japanese, afloat, 13s. c.i.f.

POTATOES.—A firmer tone prevailed in the market, although trade was only moderate.

SPICE.—Pepper met with generally quiet attention, but prices showed no material change. Lampong, spot, quoted 6½d.; Tellicherry, 9d.; Muntok, 10d. to 10½d., as to quality. Lampong, October-December, sellers, 6d.; January-March, sold 5½d. Muntok white, October-December, sellers, 9½d.; January-March, 9½d. Cloves idle and nominally unaltered. London stocks of black unaltered on the week at 449 tons against 1,324 same time last year, white being 21 down at 356 against 1,465 last year and 262 in 1928.

FRUIT (Dried).—Business, as usual at this period of the year, is virtually at a standstill, the market being under holiday influences, and the general position remains unaltered pending a resumption of trade operations in the New Year.

CANNED GOODS.—Fruit, meat and fish continued quiet, but an improved demand is anticipated in the near future, when stocks in traders' hands must be replenished. Condensed Milk and Powders: Market remained quiet. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 32s. 6d.; English ditto, 36s. Milkpowders, Dutch full cream, 26 per cent. butterfat, Roller process, 1-cwt. cases 67s. 6d.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 6,737 tons, as compared with 5,394 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.0 per cent. of the supplies, as against 82.7 per cent. a year ago, and imported mutton, mainly New Zealand, formed 79.9 per cent. of the total supply, as against 69.4 per cent. last year. The market in meat has been quiet, but prices showed a firmer tendency.

F. F. HYDE, Secretary.
 J. W. BLACKWOOD, Chief Accountant.

STANLEY FERGUSON,
 W. M. FULLERTON,
 JOHN GRAHAM,
 J. K. PATTEN,
 Directors.

We have examined the Accounts of the Bank and the above Balance Sheet, and in accordance with the Companies (Consolidation) Act, 1908, we report that:—

We have obtained all the information and explanations we have required. We have ascertained the correctness of the cash and bills on hand at the Head Office and in Dublin, and of the money at call and short notice, and have inspected the securities representing the investments of the Bank, and find them to be in order.

We have also examined the above Balance Sheet in detail with the Books at the Head Office, and with the certified returns from each Branch, and in our opinion it is properly drawn up, so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us, and as shown by the Books.

ULSTER BANK LIMITED
 Belfast, 11th December, 1930.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Since the holiday, markets have been weak and there has been a further decline in values practically all round. The official estimate of the yield of the new crop in Argentina was about in accord with expectations, the probable exportable surplus being put at 2,100,000 tons against shipments in 1930 of 1,200,000 tons. The balance of old crop was stated to be 186,000 tons—a much higher figure than generally understood. These factors, and considerable pressure to sell have forced down values to extraordinarily low levels, actual business in seed on passage to Hull or about to be shipped being recorded at £8 2s. 6d. and £8 5s., and January-February and February-March loading £8. A rather steadier tone has since developed and quotations are a shade higher. New Calcutta linseed to London, April shipment, has been done at £9 10s., and Baltic linseed on spot at Hull offers at £10 10s. Cottonseed is easier and neglected. Black Egyptian oil and forward to February offering at £5 12s. 6d. without finding buyers. In the oil section linseed oil has sharply declined in sympathy with seed, until raw oil on spot at Hull is quoted £18 15s., and January-April delivery £17. Demand is poor, but a fair trade is reported for May-August. Cotton oil is lower with crude Egyptian (ex Hull) offering at £19, and common edible at £22 spot. Oleicakes are in quiet demand and linseed cakes again cheaper. Copra met with quiet support, but prices ruled tolerably steady. Straits S.D., January, to Rotterdam, held for £14 17s. 6d.; Dutch E.I. ditto, buyers at £14 15s. and sellers £14 17s. 6d.; Ceylon, January, held for £16; sun-dried South Sea, nominally £14 2s. 6d. Palm kernels, January-February, to Hamburg, quoted £10 8s. 6d. c.i.f.

HIDE, LEATHER AND ALLIED TRADES.—The auctions for market hides and skins which were resumed at Manchester on Tuesday found the position in regard to values weaker, most weights in ox and heifers being 4d. per lb. cheaper than they were at the previous sale. Cows and calfskins maintained last figures. Imported hides have accounted for a very limited inquiry since the holidays, and

although prices are more or less unchanged, there seems to be no strength in the position. Taken on average, South American wet salted hides show a weaker tendency, Argentine ox having changed hands in small quantities on the basis of 6½d., with light ox making 5½d., and cows 5½d. Business has also been restricted in connection with dry River Plates, a few sales having been made in B.A. Americanos at 7d., Capes hides are unchanged in value, first and second dries having sold at 7½d. and 6½d., while dry salted 20/30 lbs. are quoted at 6½d. and 5½d. Both the sole and upper leather markets have been very quiet since the re-opening after the holidays, and the majority of producers and distributors of leather do not look for much in the way of fresh business until the annual stocktaking has been cleared out of the way. What business has transpired has been for small lots to carry on for the time being, but the prospects for trade during the early part of January appear to be fairly good.

RUBBER.—Steadier, but business partook of a holiday character. Sheet spot and January sold 4½d. to 4½d.; January-March, 4½d.; April-June, 4½d.; July-September, 4½d.; and October-December, 4½d. to 4½d. Deliveries from London wharves appear to be on a diminished scale, and an increase in stocks next Monday is expected. London stocks decreased 132 tons on the week. Landings, 977; deliveries, 1,109; stocks, 77,328, against 54,260 last year. Liverpool stocks 293 up; landings, 511; deliveries, 218; stocks, 40,593, against 19,059 last year.

HEMP.—The demand for Manila descriptions has been steady, but there was not much response from buyers. For K grade, January-March, sellers asked £22, with others in proportion. African sisal, No. 1 f.a.q., ulloat, quoted £18 10s. c.i.f. Receipts last week cabled 23,000 bales, against 28,000 same time last year, and 37,000 in 1928. Estimate for next week 21,000, and week after 23,000. Manila shipments last week: 4,000 to the U.K.; 6,000 Continent; 3,000, U.S.A.; 4,000, Japan; and 1,000 local consumption; stock, 110,000.

THE MONEY MARKET.

By the middle of this week, the end-year borrowings of the Bank had practically been repaid, as is shown by the contraction between December 31st and January 7th of discounts and advances from £50.0 to £14.4 millions. Government securities, which had been acquired in large quantities by the Bank in order to assist the market over the turn of the year, have since been allowed to run off, the net contraction during the week being one of £27.9 millions. As a result of these movements, Bankers'

Deposits, which on December 31st stood at the extremely high figure of £132.4 millions, have since relapsed to a more normal figure of £68.9 millions. Simultaneously a further £5.3 millions of notes returned from circulation during the week, with the result that, despite the continuance of the gold drain to France, the Bank's reserve is higher by £3.6 millions, and the Proportion raised from 22½ to 37½ per cent.

All these movements mean that the *status quo* has been practically restored after the disturbances of Christmas and the New Year. In particular, the repayment of the money lent by the Bank over the turn of the year has taken most of the surplus funds off the market, and last Wednesday, in particular, when an appreciable sum was repaid to the Bank by Stock Exchange borrowers—who always have to wait until the last moment before they go to the Bank—money was inclined to be tight, and at times a full 2 per cent. was paid for new money. Discount rates, which had weakened previously under the influence of the glut of money and the psychological effect of the reduction in the French Bank rate, again firmed up, and in the middle of the week 2½ per cent. was the ruling market rate upon three-months' bills.

	Dec. 18, 1930.	Dec. 23, 1930.	Jan. 1, 1931.	Jan. 8, 1931.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount / Call	1	1	1	1	1½ (May 1, '30)
Houses / Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2½	...

The harder tendency of discount rates is to be welcomed, for had the reduction in the French Bank rate been balanced by an equivalent fall in London discount rates, much of its advantage to London would have been lost. As it is, the French exchange responded tentatively for a day or two, but the rate subsequently relapsed, mainly in sympathy with the depreciation of sterling against the dollar. This last movement is ascribed to the withdrawal of American short money lodged here in the autumn, and it is believed that this influence will have ceased to operate by the end of the week. If so, sterling should recover, but in the meantime the dollar rate reached the point at which it would have almost been practicable to ship gold to New York, had a fast boat been available.

The French exchange never improved to the point where cancellations of arrangements with the refiners would have been profitable, and gold continues to go to Paris. Some of the wider implications of the French Bank rate reduction are examined upon another page, but it may be pointed out that the discount rate of the Banque de France does not directly and immediately control other money rates. In fact, the Banque de France has left its own rate on advances unchanged at 4½ per cent., and the only direct consequence of the rediscount rate reduction is that the French banks have lowered their rates on current accounts from 1½ to 1 per cent. Thus the French rediscount rate reduction will not necessarily have an appreciable or immediate effect upon the Paris exchange.

NEW YORK.

Call money has again eased, and has now returned to 1½ per cent., in contrast with the high rate of 4 per cent. charged over the turn of the year. Rates on bankers' acceptance have also been reduced by ½ per cent. Brokers' loans rose during last week by \$7,000,000, this being the first increase since last September. The St. Louis Reserve Bank's rediscount rate has been reduced from 3½ to 3 per cent. The Federal Reserve System, according to the latest returns, has made extensive open market purchases of bills and securities. As a result, member bank borrowings have fallen from \$250 to \$89 millions. Another \$2,500,000 of gold has been received from Canada, and \$500,000 gold from Cuba.

THE STOCK MARKETS.

The stock markets failed to maintain an early appearance of strength. Gilt-edged receded on the week's monetary developments, while sentiment in the industrial share market was coloured by uneasiness regarding the labour situation, though prices remained generally steady. A moderate revival of interest occurred in foreign bonds, particularly those of South America. Home rails were neglected. The publication of figures showing a significant drop in the 1930 profits of the leading banks provoked some selling of the shares. Rubber and tea shares were as dull as ever; but oil shares strengthened under American influences. In the mining share markets, particular attention was given to Kafirs, and tin shares were harder on the sustained recovery in the price of the metal.

THE COMMODITY MARKETS.

Uncertainty continues to prevail in the coal trade, but it is hoped that the renewed negotiations brought about in South Wales by Mr Graham will result in a resumption of work next Monday. It is hoped that the reduction in the price of Cleveland pig iron by 5s. per ton will stimulate demand and lessen Continental competition in this country. Although raw cotton prices have been steadier and the number of inquiries for Manchester goods has increased, business continues quiet. The wool trade remains steady. Jute shows no signs of an early improvement, and the turnover in yarns and cloth is on a small scale. The downward tendency in hide values has been arrested. Wheat prices show a slight rise on last week.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was quiet this week. Sterling held its own against most currencies except the dollar. New York went from 4.85½ to 4.85½, and Montreal was weaker at 4.87½ after 4.88. Paris, after touching 123.75, settled at 123.70, a loss on balance of three points. Brussels weakened rather sharply to 34.80, while Milan gained a point at 92.74. The peseta was again inclined to irregularity, and was weaker at 45.80. Amsterdam lost ½ at 12.06, after being higher, and Berlin was very weak and uncertain at 20.40. Switzerland lost ½ at 25.05 in spite of the winter season being at its height. Of the Scandinavian exchanges, Stockholm lost a point at 18.14, Oslo gained ½ at 18.16, and Copenhagen lost ½ at 18.16½. The South American currencies were again weak, although the Argentine peso rallied at one time on reports of the gold deposits abroad being used in aid of the exchange. In the end, Rio lost ½d. at 4½d., Buenos Aires ½d. at 35d., and Montevideo was ½d. worse at 34½d. In the Far East, the rupee was unchanged at 1s. 5½d. The yen was a little weaker at 2s. 0½d., but Batavia gained ½ at 12.06. In the forward market, dollars went from a premium to a discount of ½ cent. for both periods. Paris was quoted at par for both periods, and Brussels went from discounts of 2½ and 4½ centimes to premiums of ½ and 1 centime. Milan was less wanted at 17 and 48 centesimi discount, as was Madrid at rather lower premiums of 1 and 3 centimos. Amsterdam remained at a premium for both periods, one month's delivery being at ½ cent and three months at ¾ cent, against ½ cent for both periods last week. Berlin was little changed at 2½ and 5½ pfennigs discount. Silver established new low records during the week, but rallied slightly at the close. Still, there was a net fall of ½d. for both spot and forward leaving prices at 13½d. and 13½d. respectively in a quiet and unsupported market. The China silver exchanges fell sharply in sympathy. Hong Kong by 1½d. to 1s. 0½d. and Shanghai by 1½d. to 1s. 3½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 6, Bonverie Street, London, E.C.4.

A NATIONAL EMERGENCY.

THE customary ebullition of optimistic New Year prophecies is happily conspicuous this year by its absence. It is all to the good that responsible prophets are facing hard facts; and it is clearly better for us to be warned, as Sir Josiah Stamp warned the country a few days ago, that 1931 holds out little visible hope of major improvement, than to be lulled into false security by a chorus to the effect that the clouds will soon roll by. For, however meagre the expectations of 1931, it must be confessed that the first week of the New Year has brought with it new reasons for disappointment and misgiving. The disclosure that the total figure of unemployment rose by 235,000 in the week ended December 29th, reveals that the trade depression is still in full force, for the increase is abnormally large even for the last week of the calendar year, and it follows a less than normal decline in the weeks preceding Christmas. As if that were not bad enough, 130,000 South Wales miners celebrated New Year's Day by coming out on strike, while, in Lancashire, a lock-out in some sheds in the weaving section threatens to develop into a wide-spread stoppage.

There is little resemblance in the origin or in the circumstances of these two industrial disputes, the latest developments in which are discussed on a later page. In South Wales the miners are resisting a reduction of already low wages in a depressed and unprofitable industry in connection with a reduction of hours decreed by unfortunate legislation. In Lancashire the weavers are resisting the introduction of more efficient machinery and organisation, an attitude which is both blind and out of date. But the two episodes, together with other serious threats impending, serve to illustrate the gravity of the position which the country is facing. If, superimposed upon the general depression, we are to have a series of industrial disturbances arising from attempts at wage adjustment on the one hand, or the improvement of mechanical efficiency on the other, the outlook will become dark enough to satisfy the most incorrigible of pessimists. It is surely the most platitudinous of truisms to say that if Britain is to be ready to take her proper share in the next trade revival, she cannot afford to hamper her already difficult preparation by a renewal of the disastrous process of industrial belligerency which brought the country to the brink of ruin in 1926.

How such disturbances can be avoided becomes, therefore, a supreme question of the moment. We shall reach no answer to that question unless the whole nation can be brought to realise the gravity of the situation with which it is faced and to submit to the sacrifices which it demands. That situation was well summed up by Professor Henry Clay last week in the concluding passage of a broadcast address. The choice before the British people, as he sees it, is threefold. We may find fresh outlets for our products; or we may accept lower remuneration for our services; or we may reconcile ourselves to continuous large-scale unemployment. The third choice is impossible for any sane nation to make willingly. It would spell not only national failure, but mass demoralisation, and it would involve the continual carrying of a fiscal burden which would crib, cabin and confine the industrial efforts of the country. The second choice, in blunt phraseology, involves general wage reductions. This is unpalatable, and will always be so until human nature changes. There remains the first choice, the finding of new outlets, which is, of course, as attractive as it is elusive.

Let us pursue the elusive. How can new outlets be found? It cannot be done by political "stunts," by grandiose schemes of trade development, by a "forward" credit and currency policy, by a fiscal revolution or by any of the other short cuts so dear to the hearts of controversial partisans. The crux of the matter is that in spite of the prodigious fall in the prices of the raw materials of our industries, the prices of our finished products are too high to permit of expansive trade in competitive markets. Somehow or other British

costs of production must be brought down. That is the starting point from which all national effort must proceed. Wages are a preponderant part of production costs, and where wages are out of relation to productivity they must be reduced unless and until productivity can be increased. In short, Professor Clay's first two choices, in terms of existing conditions, are really one.

But the problem bristles with complications. Wages are one, but by no means the only item contributive to the too large gap between depressed raw material prices and disproportionately high final prices to the consumer. Wage earners, when asked to submit to some thinning of their weekly pay envelopes, have every right to ask whether all other items contributing to excessive production costs are being simultaneously searched and dealt with—such, for instance, as the degree of managerial and mechanical efficiency, the profits of intermediaries, transport and distributive charges and so on. Unless and until the wage earners are satisfied that not merely wages but all these other items are being effectively tackled—that, in fact, no one is to continue to take more out of the national pool than he puts in—it is mere human nature that they should continue to resist a readjustment which is essential. No less stubborn is the problem of a readjustment of wages as between various industries. It is impossible not to sympathise with the miner who objects to cuts in a wage of £2 a week when the dustman or the postman for work less skilled and less dangerous maintains his earnings at a higher level. The whole problem of relative remuneration in sheltered and unsheltered industries cries out for a national effort at solution.

Is there no way by which these complicated and interwoven problems can be practically and effectively approached? We believe that there is one way, but that way is not likely to be taken unless the leaders of our industrial life, on both sides of the pay counter, are brought to the full acknowledgment that a real national emergency exists. Given that realisation, we believe that a way towards solution might be found by the calling of a representative conference of trade union leaders and captains of industry with an impartial chairman of high standing and recognised integrity such, for example, as Lord Ullswater, the late Speaker of the House of Commons. To such a conference should be contributed in the first place the full knowledge of the facts derived from the research of impartial economists and investigators. We are convinced that given full recognition of the essential facts and of their gravity it would not be beyond the wit of the men at the top to devise comprehensive national policies for the co-operative pursuit of efficiency and the correlation of industrial earnings, and to educate the country up to their reluctant acceptance.

We put this proposal first because we believe that, in the main, industry's salvation must come from industry's own efforts, and that any help which the State can give is of secondary importance. Nevertheless, there is one great contribution which the Government can make, and that is one of leadership and example. We would have the Cabinet start the ball rolling in the right direction by making a cut in their own salaries and those of all public servants (including, of course, members of Parliament) from the very top downward in a system of fair graduation. Our reason for advocating this step is not that our statesmen are overpaid, but because the psychological effect of such a gesture would be incalculable. We would have them, secondly, appoint a small and powerfully manned retrenchment committee armed with power to review the whole range of public expenditure and with instructions to carry through their work with the expedition practised a decade ago by the Geddes Committee. A real national effort to put the industrial machine in gear again would enhance, not decrease, the already pressing urgency for drastic public economy; for every reduction in nominal incomes would reduce the yield of taxation.

In the next place, we would have the Government appoint another small committee of economists and business men to indicate what steps could helpfully be taken (they are being attempted in other countries, notably Germany and Italy) to reduce the yawning gap between wholesale and retail prices. This is a vital aspect of the problem, for unless nominal wage reductions are accompanied by a decline in the cost of living, it is difficult to combat the Trade Union argument that wage reductions merely aggravate the situation, by reducing purchasing power and thereby creating fresh unemployment. For our own part, we are confident that reductions in costs in a wide range of transport and distributive industries would be quickly reflected in retail prices. Yet, as we show in a subsequent article, the gap between the wholesale and retail price levels is so great, that the possibility of special measures demands the closest consideration.

Nor does this exhaust the possibility of State action. It has come to be accepted that the depression is mainly due to world causes beyond the control of any single Government. It is not, however, beyond the power of a single Government to initiate international efforts to remove international obstructions to the return to prosperity. We trust, therefore, that while not slackening in a campaign for national retrenchment and reorganisation at home, the Government will actively explore every possibility of economic agreement abroad, whether in the sphere of fiscal or monetary policy, and will take the initiative in seeking practical means for applying such remedies as the League's Gold Delegation may suggest for improving the working of the gold standard.

But when all is said and done, and quite apart from any help that may come from international action, it is a national effort that is required; and a national effort will only be forthcoming if the gravity of the facts is brought home to the country at large. This, we believe, would be done effectively if the Government would give a lead in the sense we have suggested, and if leading employers and trade unionists, fully seized of the facts and possible remedies, would show a similar courage in leadership towards those whom they respectively represent. This country has not been slow in the past to face a recognised emergency; but it is sometimes slow in recognising one. The first step in real recuperative effort is education, and leaders in every section of our national life must become the educators. We are not pessimists, but we believe that a real national emergency faces us to-day.

RESPONSIBILITY AT THE CENTRE.

From the past ten days' proceedings at the Federal Structure Sub-Committee of the Round Table Conference there has emerged not a complete picture of the essential framework of an All-India Federal Government—such a result was not conceivably to be expected—but evidence of a measure of broad agreement on principles, the importance of which is not to be minimised. It may be well to remind ourselves that the functions of the present Conference were not to attempt the task of drafting a detailed constitution, but to explore in general terms the salient issues and to ascertain for the guidance of the British Government, with whom the ultimate responsibility for legislation rests, how much common ground could be discovered. Towards that objective the Conference has made further substantial progress since the beginning of the year.

On Friday of last week Sir Tej Bahadur Sapru, speaking as a Hindu Liberal with five years' experience as Home Member of the Governor-General's Council, put forward unequivocally, yet with a full sense of the realities of the Indian problem, the Nationalist claims for effective responsibility at the Centre. He suggested that the present Executive Council should be replaced by a Ministry chosen from among the members of the Legislature, representing the majority in the House or the majority of groups in the House, and working as a joint Ministry on the principle of collective responsibility under the leadership of the Prime Minister. Subject to a clause in the constitution which could be devised acknowledging India's responsibility for its public debt,

and subject to the creation of a properly constituted Reserve Bank for the management of credit and currency, he proposed that the subjects to be transferred to this Executive should include Finance as well as Law and Order; and to promote stability in the Executive his suggestion was that a vote of no confidence by the Legislature, involving the resignation of the Ministry, should require a joint sitting of the two Houses and a two-thirds majority. At the same time, while emphasising that the only cure for mistrust was trust, and that responsibility must mean not only moral responsibility but positive acceptance of the thesis that the Executive must be answerable to the Legislature for its policy in regard to all subjects placed within the Legislature's control, Sir Tej Bahadur Sapru frankly admitted that there would have to be a period of transition. In that period he suggested that certain subjects, *e.g.*, the Army and foreign policy should be reserved as Crown subjects and should be administered by Ministers who might or might not be chosen from the Legislature, but who should be responsible to the Viceroy alone—although they would sit with the Cabinet and fall with it in adherence to the constitutional doctrine of collective Cabinet responsibility. The Viceroy, except in so far as the Crown subjects were concerned, and save that he should have vested powers to deal extra-constitutionally in emergency with serious threats to the tranquillity of India, should approach the position of a constitutional governor.

To regard these proposals as the last word on this crucial aspect of India's constitutional problem would be obviously premature; and we are not inclined to quarrel seriously with the doubts and questions expressed on Tuesday by Sir Samuel Hoare, whose attitude as a spokesman of the Conservative delegates to the Conference may fairly be criticised as somewhat negative, sceptical and unhelpful, but who was careful to make it clear—and we do not doubt his sincerity—that his standpoint was "non-committal," but not "non-possimus." Indeed, until we know how completely Hindu-Moslem differences can be composed, what is to be the nature of the franchise and electoral mechanism eventually decided upon, what is to be the precise composition and purview of the two Federal Houses, and whether the States will in the event be ready to delegate the administration of Federal subjects to a Cabinet on the lines of that proposed by Sir Tej Bahadur Sapru, doubts and misgivings cannot be wholly resolved. One cannot be wholly confident that government on lines analogous to systems which have functioned none too well in the western world, will work perfectly. It would be idle to pretend that the possibility of persistent non-co-operation after the constitutional change might not seriously endanger the stability of the new régime and place the Viceroy in a position of the greatest difficulty. Nor does acceptance by both sides of the necessity of some form of "dualism" during the transitional period render such an element in a constitution free from awkwardness.

Nevertheless, given the incontrovertible fact that there is no way out of the Indian impasse without risk of some kind, we have no doubt whatever that the vast majority of people in this country prefer that the risk should be taken in going forward to the utmost limit possible to meet Indian aspirations and claims, rather than in inviting an intolerable prospect of anarchy and repression by endeavouring to put back the clock. We welcome, therefore, the lead given by Lord Reading, on behalf of the Liberal Delegation, to the Conference on Monday. Speaking with the authority of an ex-Viceroy, Lord Reading was inclined to underline the necessity for the safeguards indicated as acceptable by Sir Tej Bahadur Sapru, and, in particular, he considered that the Viceroy should have power not only to protect minorities and to veto social discrimination in commercial legislation and taxation, but also to intervene should the financial policy of the Ministry threaten the stability of the Federal budget. But with these and other qualifications in detail, and subject always to the full participation of the States in the Federal Legislature, Lord Reading intimated that his party in Parliament definitely accepted the proposition which Sir Tej Bahadur Sapru, followed on the Moslem side by Sir Muhammad Shafi, had advanced—that there should be effective responsibility at the Centre.

What follows? The Round Table Conference is clearly now approaching its final phase of Plenary Sessions in which the work done in committee will receive formal confirmation. Mr MacDonald, belatedly, as we think, has yet to make his expected declaration of the Government's attitude. Fortified by the knowledge that the Liberal Party in Parliament is prepared to take the bold, but wise, step of co-operating in passing legislation enacting for India a new constitution in which the maximum practicable measure of responsibility, not only in the Provinces, but at the Centre, is conferred, the Prime Minister, we imagine, will feel warranted in going at least as far as Lord Reading in assenting to what opinion in this country has already learned to regard as the minimum demands of moderate-minded men among the ranks of political India. If India can be thus persuaded—and it is not more than the truth—that Great Britain has no selfish desire to cling to dominion in that great sub-continent, and that even in Conservative quarters (outside a relatively small circle of intransigent reactionary opinion) caution in accepting great innovations without the fullest scrutiny springs not from the wish to obstruct, still less from any hostility to India's legitimate aims, but from sincere recognition of the complexity of the great problems involved, then we do not despair that the details of the completed picture, which Sir Samuel Hoare much too prematurely at this juncture demanded, can be successfully filled in.

When the present Conference terminates, the work of constitution framing will be only at its beginning, and it is important that before the delegates return to India, where in any circumstances they will have to face hostile criticism from the irreconcilables in the ranks of Congress, some clear indication should be given of the future programme and time-table, and of the composition of the various bodies that will be required to thrash out the details of arrangements relating to defence, finance, franchise and political structure. What is wanted now is a clear and courageous declaration by the British Government of the objective which, at this stage of the negotiations, seems to them to be attainable. And to give no room for suspicion in India that this declaration, coming from a minority party in office, does not carry with it the authority of the Imperial Legislature as a whole or embody the will of the people of this country, we suggest that Parliament should be given an early opportunity of associating itself with and endorsing the Government's declared intentions.

BACK TO PRE-WAR PRICES.

As the result of further heavy declines in the prices of grain stuffs, of almost all textile materials, of all non-ferrous metals except tin, and of rubber and linseed oil, the downward movement of our index number of wholesale prices continued unchecked during December. We summarise below the relative movements of the complete index and each of its five component parts as compared with a month ago, a year ago, and with the level of each in August, 1929, the eve of the dramatic collapse which has been at once a symptom and cause of the present catastrophic slump in the commodity markets:—

	INCREASE (+) OR DECREASE (−) PER CENT. COMPARED WITH		
	Month ago.	Year ago.	August, 1929.
Cereals and meat	−4.4	−24.2	−30.9
Other foods	+1.1	−15.1	−17.6
Textiles	−6.7	−37.7	−44.0
Minerals	−1.3	−15.6	−19.0
Miscellaneous	−3.3	−15.7	−17.4
Complete index	−3.1	−22.2	−26.6

Just over two years ago, when we decided to revise the method of compiling our index number in view of the great changes which had occurred in the structure of the price level, it looked as though the comparative stability of most prices in 1927 rendered that year a stable base to which to relate the course of future price movements; and our new index number, calculated in detail from the beginning of 1924, was expressed as a percentage of the

average for 1927. In the following table we show the annual average index numbers for each of the past seven years and for the past thirteen months:—

1927 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	114.2	106.7	136.8	119.4	105.6	115.7
" 1925	114.1	101.0	124.0	111.8	108.7	112.0
" 1926	102.8	96.6	97.2	119.8	104.0	104.0
" 1927	100.0	100.0	100.0	100.0	100.0	100.0
" 1928	103.6	93.8	105.1	92.1	95.8	98.1
" 1929	96.9	85.8	92.2	95.6	90.5	92.4
" 1930	81.0	77.2	64.4	83.6	81.6	77.6
End Dec., 1929	92.3	83.6	82.6	92.4	89.2	88.3
" Jan., 1930	89.2	83.1	76.7	92.6	88.0	86.1
" Feb., 1930	85.4	83.0	74.7	90.5	87.0	84.2
" Mar., 1930	84.7	82.7	73.0	89.8	85.5	83.1
" Apr., 1930	84.9	80.8	72.9	85.6	83.2	81.5
" May, 1930	82.0	79.0	71.1	84.3	84.4	80.6
" June, 1930	82.2	77.8	66.5	82.8	84.1	78.8
" July, 1930	84.2	76.3	63.6	82.1	81.5	77.6
" Aug., 1930	82.5	75.2	61.7	81.5	79.7	76.1
" Sept., 1930	79.5	74.5	56.9	79.5	76.7	73.2
" Oct., 1930	76.8	73.1	55.8	79.1	77.7	72.4
" Nov., 1930	73.2	70.2	55.1	79.0	77.8	70.9
" Dec., 1930	70.0	71.0	51.4	78.0	75.2	68.7

It will be observed that, in comparison with the average for 1927, much the largest decline is registered by the textile group; the indices of the minerals and miscellaneous groups show less than the average rate of fall; while the figures for cereals and meat and "other foods" conform closely to the mean.

Much the same tendency is disclosed when the latest figures of our index number are contrasted with the average for 1924, as in the next table:—

1924 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1925	99.9	94.7	90.6	93.6	102.9	96.8
" 1926	90.0	90.6	71.1	100.3	98.4	89.9
" 1927	87.5	93.8	73.1	83.7	94.7	86.4
" 1928	90.7	87.9	76.8	77.1	90.7	84.8
" 1929	84.8	80.5	67.4	80.0	85.7	79.9
" 1930	70.9	72.3	47.1	70.0	77.3	67.0
End Dec., 1929	80.8	78.4	60.4	77.1	84.5	76.3
" Jan., 1930	74.1	77.6	53.3	75.2	80.9	71.8
" Feb., 1930	72.0	72.9	48.6	69.3	79.6	68.1
" Mar., 1930	69.6	69.9	41	66.5	72.6	63.3
" Dec., 1930	61.3	66.6	37	65.3	71.2	59.4

Textiles again head the decline since 1924, followed at a long interval by the cereals and meat group. As compared with six years ago, however, the variations as between the prices of different commodities are enormous. A complete list of the articles on whose prices our index number is based is given in the next table, which shows percentage changes as compared with December, 1929, and December, 1924:—

	Inc. (+) or Dec. (−) per cent. compared with		Inc. (+) or Dec. (−) per cent. compared with

The course of our index number, calculated as a percentage of the average for 1924, is shown graphically in the first of the accompanying charts, on which we have plotted on the same base the official index number of the cost of living. The average of the cost-of-living index in 1924 was 75 per cent. higher than in July, 1914, the date to which it is related by its compilers. When our own index number for 1924 is related, by proportionate conversion, to the same basic date as that of the cost-of-living index, a percentage increase of approximately 73 per cent. is shown; so that in 1924 it is fair to say that there was at least no great disparity between wholesale prices and the cost of living in relation to their pre-war equilibrium.

WHOLESALE PRICES AND LIVING COSTS.

The chart, however, shows very clearly that by the end of 1925 a considerable disequilibrium had developed and that this grew gradually wider until the autumn of 1929, when a further enormous widening of the gap between the two index numbers—with all its attendant economic difficulties—took place. The actual figures of the aggregate percentage fall of wholesale prices (our complete index number), the cost of living, wholesale food (a weighted average of the two food groups in our index number), and retail food as computed by the Ministry of Labour, are summarised below:—

MOVEMENTS RELATED TO AVERAGE OF 1924.

	Aggregate Per-centage fall to—	Wholesale Prices.	Cost of Living.	Wholesale Food.	Retail Food.
End 1925	7.7	...	...	7.5	...
" 1926	12.5	...	...	10.5	1.9
" 1927	14.5	4.0	12.5	4.9	...
" 1928	18.0	4.6	15.0	6.6	...
" 1929	23.7	5.1	20.0	7.6	...
" 1930	40.6	11.4*	36.5	17.2*	...

* End of November.

Since grain stuffs, whose prices have collapsed so dramatically since 1924, play a larger part in our index figure of wholesale food than they do in a working-class budget of expenditure, such as that on which the Ministry of Labour's index is based, caution requires to be exercised in drawing from the wholesale food index too positive inferences as to what should be the appropriate level of the retail index. With this qualification, however, the dimensions of the spread between wholesale and retail prices since 1924 are now of such magnitude that the task of reducing the latter has become of prime importance.

There remains to be considered the ratio between current prices and their pre-war level. In the following table we show our index number expressed as a percentage of the average for 1913:—

1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168.5	215.8	214.7	149.3	122.6	166.2
" 1925	168.4	204.2	194.6	139.8	126.2	160.9
" 1926	151.7	195.3	152.6	149.8	120.7	149.4
" 1927	147.6	202.2	157.0	125.1	116.1	143.7
" 1928	152.9	189.7	165.0	115.2	111.2	140.9
" 1929	143.0	173.5	144.7	119.6	105.0	132.8
" 1930	119.5	156.1	101.1	104.6	94.7	111.5
End Dec. 1929	136.2	169.1	129.6	115.6	103.5	126.9
Mar. 1930	125.0	167.2	114.6	112.3	99.2	119.4
June 1930	121.3	157.3	104.4	103.5	97.6	113.2
Sept. 1930	117.3	150.7	89.3	99.4	89.0	105.2
Dec. 1930	103.3	143.6	80.7	97.5	87.3	98.7

When "weighted" averages of the two groups of foodstuffs and the three groups of materials are worked out, the resulting figures for the end of last month (1913 = 100) are:—Food, 119.8; materials, 88.4. The tendency of the index figure for "other foods" to show an increase substantially greater than that of the other groups by comparison with 1913 has persisted since 1924. On the other hand, the figure for textiles, which six years ago was the second highest among the group figures and nearly equalled that for other foods, has now fallen to a point considerably below the mean.

THIRTY YEARS' PRICE CHANGES.

The changes which have taken place since 1927, the base year of our revised index number, have been so violent that the caveat is perhaps necessary that the margin of error involved in relating present prices to those of the last pre-war year is wider than it was three years ago. With this qualification there remains for all practical purposes the solid fact to be faced that wholesale prices as measured by our index number have now reverted roughly to the point at which they stood in 1913.

In compiling the figures for the foregoing chart it has been necessary to link statistically our present index number from January, 1924, onwards with its predecessors (an earlier revision took place in 1910). These limitations, however, do not affect the essential significance of the picture which the diagram presents. After the recovery of prices in 1923-24, following the collapse of 1920-21, the course of the curve during the past six years takes on the aspect of an almost uniform decline, broken only by the relative stability of 1927, to which reference has already been made. When the magnitude of the fall in the past two years is contrasted with the comparatively minor recession occasioned by the slump of 1906-08, a forcible reminder is given of the overwhelming dislocation of our economic mechanism which the recent history of prices has involved.

THE PARIS MONETARY CONVERSATIONS.

THE New Year has brought two important developments in the international monetary situation. On January 2nd the Banque de France reduced its rediscount rate from 2½ to 2 per cent., the lowest rate on record since 1898; and on the same day it became known that representatives of the British Treasury were present in Paris upon an informal visit. It was inevitable that the coincidence of these announcements should have inspired the thought that there was a direct connection between them. This, we believe, was not the case; for the reduction in the French bank rate appears to have been decided before it was known in Paris that British Treasury officials were about to cross the Channel. Nevertheless, though

the time-factor effectively disposes of any suggestion that these events were directly inter-related, their significance becomes clearer when they are regarded from a common angle.

The reduction in the French bank rate was unmistakably intended partly as a gesture in favour of world banking co-operation, and partly as an attempt to check the flow of gold to France. Thus the first reaction of London to the decision must inevitably be that of gratitude. It is not so easy, however, to see what the immediate and practical effect of the reduction will be. The French bank rate is a rediscount rate, like those of the American Reserve Banks, and for that reason comes at the bottom of the scale of money rates, whereas the London bank rate comes at the top. Hence the margin between 2 per cent. in Paris (and also in New York) and 3 per cent. in London is less than it appears superficially to be. Moreover, in France there is not that intimate connection between bank rate and other money rates which exists in London, where a money market is fully developed and where bill-brokers operate on the narrow "band" of 1 per cent. between bank rate at the top and the rate charged for their weekly fixtures at the bottom. Thus the French bank rate is a much less effective governor of, and guide to, other money rates than is that of the Bank of England.

Nevertheless, there is no doubt that the motive behind the recent French reduction was the hope that it would exercise its theoretical effect upon the exchanges, and so arrest the inflow of gold. In spite of the qualifications we have just pointed out, this hope may in the long run be justified. There is, however, another important aspect of the reduction, namely, that it is tantamount to an expression of confidence by the Banque de France in the soundness of the French banking system. If, as a result, the French public regain greater confidence in their banks, the latter in their turn may be able to release some of the money they have been calling from abroad in order to strengthen their cash resources, and so the inflow of gold may be arrested through the influence of the psychological factor, as well as by the more familiar way of widening the margins between home and foreign interest rates.

In parenthesis we would add that there is one aspect of France's gold importations which has perhaps received insufficient attention, and that is that in practice the Banque de France has for some time only been able to issue fresh currency if it could obtain fresh gold. Now the French note circulation at the end of last December was Frs. 75.3 milliards, and taking into account such factors as the pre-war circulation, the devaluation of the franc, the relative levels of pre-war and post-war prices and wages, and the post-war currency needs of Alsace-Lorraine, it is arguable that France really needs to-day a note circulation of 80 milliards. If this be the case, it follows that the gold acquisitions are a logical, though regrettable, consequence of the constitution of the Banque de France and the structure of the Paris money market.

At the same time, even on the basis of this argument, France now has nearly all the gold she can conceivably be said to need, while the external reactions of the flow of gold to France are too serious to be lightly regarded. The consequences, technical and psychological, which should ultimately result from the reduction in the French bank rate have already been discussed, and their limitations recognised. Hence, given the known desire of the Banque de France authorities to check the influx, it is pertinent to examine any other measures which seem practicable and calculated to further world interests, including those of France herself.

In considering possibilities, it should be remembered, firstly, that the Banque de France is precluded from carrying out open-market operations, for the law forbids it to buy bills and securities on its own behalf. Secondly, money paid into the Banque de France on account of the French Treasury and Caisse d'Amortisse-

ment remains immobilised and withdrawn from the monetary system of the country often for long periods at a time, owing partly to the system of national accounting and partly to the inability of the Banque de France to release an equivalent quantity of funds by buying bills in the open market. In short, the deposits of the Treasury and Caisse d'Amortissement are balanced not by earning assets, but by gold or notes.

In the next place, the habit of foreign investment in France is making only slow recovery since the War, and, indeed, is checked in certain definite ways. For example, practical difficulties appear to be placed in the way of obtaining quotations for foreign securities on the Coudisse; and possibly a more serious defect is the legal prohibition against the establishment of investment trust companies. The result is that while the French investor is still nervous of directly placing his capital abroad, he is unable to do so indirectly, and with greater safety to himself, through the medium of an investment trust.

Granted recognition of the desirability of giving greater elasticity to the mechanism of the Paris money market, and of encouraging the long-term loan of French capital in sound investments abroad, it should not be impossible for the Banque de France and the French Treasury to concert remedial measures. Whether by co-operation with the B.I.S., as suggested some months ago in these columns,* or by other means, the Banque de France might be enabled to get over the legal obstacles to open market operations; and modifications in French regulations governing the market in foreign securities should not be beyond the bounds of practicability.

Any progress in these matters must, however, be subject to one important qualification, namely, the attitude of French public opinion. It must be remembered that in France the view is not generally accepted that recent gold movements have any considerable responsibility for the fall of world prices. The tendency across the Channel is to attribute these gold movements to the fact that British prices are too high and not to French prices being too low. In the next place, after his post-war experience, the average Frenchman views with horror anything possessing the faintest tinge of inflation; hence the Banque de France must proceed carefully even in the matter of so innocuous a suggestion as that it should seek legal powers to operate in the open market. Again, the reactions of *l'affaire Oustric* must inevitably be now prejudicing public opinion against such proposals as relaxing Bourse regulations or authorising by law the formation of investment trusts. When to this are added the well-known difficulties, delays and uncertainties of passing new legislation through the French Chamber, it is clear that the Banque de France can only move slowly and cautiously.

These are some of the reasons why only limited results may be expected from the recent informal conversations. Nevertheless, the fact that they have taken place is at once important and useful. They have made clear to the world what has for some time been well known in inner financial circles, that it is the desire of the Banque de France authorities to play their part in world co-operation in monetary policy.

THE SUGAR PROBLEM.—I.

(BY A CORRESPONDENT.)

THE Brussels Conference of December 9th-16th, like its numerous predecessors, failed to reach final agreement; yet it marks the furthest stage so far attained in the attempts of sugar producers to come to some arrangement for the international control of production and export. The following table, compiled on the basis of the official statistics published by the International Institute of Agriculture, gives some idea of the relative importance of the groups represented at the conference and at the same time of the development of world production in the last five years.

	PRODUCTION. (Million Metric Tons.)				
	World.	Cuba.	U.S. Producers.	Java. Represented.	European Producers.
1925-26	25.2	5.0	2.7	2.3	4.2
1926-27	24.0	4.6	2.9	2.0	3.7
1927-28	25.7	4.1	3.4	2.4	4.1
1928-29	27.6	5.2	3.3	2.9	4.2
1929-30	27.4	4.7	3.6	2.9	4.3
Average 5 years	26.0	4.7	3.2	2.5	4.1

On September 30, 1930, sugar prices reached the lowest level ever recorded, with the quotation for Cuban raw sugars, c.i.f. New York, at 0.94 cent per lb. The decline in world consumption of sugar in 1929-30 had accentuated the nervousness of buyers, and on the eve of the Brussels Conference a still further disquieting feature appeared in the shape of unexpected increases in the European crop estimates. Thus there was a greater stimulus to joint action on the part of producers than had hitherto been experienced.

As a first result of the critical situation, American interests in Cuba were forced into more whole-hearted support of control than ever before, and for the first time a scheme emerged in which control in Cuba had really strong financial backing. The so-called Chadbourne Committee included representatives of the great American banking interests in Cuba, and with this financial backing, the lack of which had been the weakness of all previous Cuban attempts at control, Cuba eventually completed an agreement with the producers within the United States tariff wall, namely, the United States beet-sugar producers, Hawaii, the Philippines, Porto Rico, and Louisiana. Cuba agreed to limit its exports to the United States to 2.8 million tons in 1931—a sacrifice of about half a million tons on its average export to that country in recent years—increasing this quota in the following two years by an amount equivalent to the increase in United States consumption, and in 1934 and 1935 (the last two years of the agreement) sharing the increase in United States demand with the United States producers. The United States producers, on the other hand, agreed to limit their output to the 1929-30 level, with the above-mentioned proviso, regarding the years 1934 and 1935. As regards sugar to be marketed elsewhere than in the United States, Cuba then came forward with the offer, backed by Presidential decree, to control through a National Sugar Export Corporation 1½ million tons annually during the five-year period, to be purchased from the Cuban producers at \$4.00 a bag. The required funds were to be obtained by a bond issue of \$40 millions, and the interest and other charges to be refunded to the Government by an additional tax of 11 cents a bag for the next ten years.

Having in this way stabilised the position in their chief market, the United States—which has absorbed in recent years about three-quarters of Cuba's total output—having more effective financial backing than ever before, and having the 1½ million tons a year under their control for export to other lands than the United States as a powerful weapon in negotiations, the Cuban interests could cross the Atlantic with a greater degree of confidence than any of their predecessors. Java's attitude was, as on previous occasions, the relatively unknown factor. Her previous reluctance to join in any international agreement for restriction had been due to the

fact that owing to its very low cost of labour, combined with particularly favourable soil and climatic conditions and high development of research in field and factory, Java's costs are the lowest in the world, being generally estimated at about 8s. per cwt. for by far the greatest part of its output. Added to these advantages is proximity to the great markets of the East. On the other hand, the V.I.S.P. (United Java Sugar Producers) has recently been experiencing previously unheard-of difficulties in marketing its sugar; and the state of unrest in Eastern markets, combined with the growth of production in Japanese territories, has made conditions there less favourable, while in India the competition of European beet-sugar has recently been accentuated. The possibility, too, of the Cuban industry being in a considerably stronger position, and perhaps dumping part of its surplus in Far Eastern markets, was not to be disregarded.

At the preliminary meeting in Amsterdam the V.I.S.P. agreed to restrict its export by 20.7 per cent. in return for Cuba's promise to restrict production by 23.5 per cent. While Java's restriction is nominally one of export, it is, in fact, one of production, since it is difficult to store sugar in the island owing to climatic conditions and to lack of storage space. According to the agreement, Java's 1930-31 export would be limited to 2.2 million tons of the new crop plus 0.1 million of its stocks (i.e., one-fifth of the existing stocks). The Javans asked and obtained the right to increase their export by 100,000 tons annually, claiming that this was warranted by prospective increase in demand in the Far East. In the cases of both Cuba and Java the restricted production would be about 60 per cent. of the respective totals of available supplies.

Having thus agreed, the two great cane-sugar exporters went to Brussels with the request that the five European countries with a net export—Czechoslovakia, Poland, Germany, Hungary and Belgium—should limit their combined net export to 1.2 million tons, which amounts to 55 per cent. of the total available for export from these countries. The unexpected growth in the estimates of European production had brought the estimated total available for export in 1930-31 up to the level of 2.2 million tons, as compared with an actual net export of 1.4 million tons in 1929-30. Germany, with an estimated increase of 23 per cent. on last season's crop, became the protagonist for an agreed rise in the total European quota. This proved, however, impracticable, especially in view of the strenuous opposition of Java. The non-European producers had proposed that the 1.2 million tons European quota should be divided according to the 1929-30 export of the five countries concerned, Germany, under this arrangement, being entitled to 200,000 tons, but Germany now claimed a 450,000 tons quota for the first year of the agreement, to be reduced to 350,000 tons in the remaining four years. Her refusal to accept the 300,000 tons offered as a compromise led to the breakdown of the conference.

The following table may throw some light on the attitudes taken by the various European producers at the conference:—

	Czecho- slovakia.	Poland.	Ger- many.	Hun- gary.	Belgium.
Per cent. of combined export in 1929-30...	48	26	16	7	3
Per cent. of combined surplus available for export, 1930-31 ...	35	20	37	5	3
Per cent. of proposed quota to surplus available for export, 1930-31	78	74.5	25	77	48
Per cent. of allocated quota to surplus available for export, 1930-31	78	74.8	25*	80	43

* Not accepted by but reserved for Germany.

If the proportions of the different countries in the combined export of last season, which were taken as a basis by the conference, are compared with the respective proportions in the probable total amount available for export this season, the relatively unfavourable position in which Germany finds herself this year is at once obvious, and her resistance to the quota of 200,000 tons offered becomes more comprehensible. On the other hand, the German sugar producers are able to sell a relatively large pro-

portion of their production in the protected home market as compared with the other two great beet producers, Czechoslovakia and Poland. The German representatives were hampered by the circumstance that the renewal of their national agreement had not been negotiated, so that they had not the necessary mandate for entering into any contract.

Hungary and Poland made demands which were met in part by the sacrifice of 3,500 tons on the part of Belgium. The European quotas, as finally determined, were, consequently, as follows:—Czechoslovakia, 500,000 tons; Poland, 320,000 tons; Hungary, 87,500 tons; Belgium, 31,500 tons; the remaining 200,000 tons were reserved for Germany, should that country eventually agree to enter, and it was decided that Mr Chadbourne should continue negotiations with the Germans in the interval before the next meeting of the European group at Brussels on February 2nd.

The most important abstentions among exporters were the U.S.S.R. and some of the South American and Central American countries. While the peculiar circumstances of the U.S.S.R. make it unlikely that the export policy of the sugar industry there would in any case be brought into line with that of other countries, it is quite probable that, given the ratification of an agreement by all the groups represented at Brussels, the remaining Latin-American countries would fall into line. As things are, the chief result of the negotiations so far has been the agreement between the Cuban-American and Javan groups, which is subject, however, to ratification by the Javan industry; secondly, the agreement between these producers and the European group, excepting Germany, upon whose agreement the putting into practice of the Chadbourne plan now awaits.

DISTRESS RELIEF IN THE UNITED STATES.

(BY A CORRESPONDENT.)

THE general impression current in recent years that the United States is the one large industrial nation of the world where the problem of poverty, if it exists at all, is easily taken care of by the immense resources and great wealth of its more fortunate inhabitants has received a rude shock in the last few months. It is not an assumption which has ever been very general among the more thoughtful sections of American opinion. Even in 1927, when the "secret of American prosperity" was being revealed to Europe, social workers and others, to whom the reality of their daily experience told a different story, made no secret of their dissent. The President of the National Conference of Social Work in that year announced, for instance, that "twelve million people in the United States suffer at this moment from the calamity of destitution or its near approach." Three years later, after twelve months of a serious industrial depression and in the middle of a second winter of extensive unemployment, the reality of the destitution is unchallengeable.

Winter found the country quite ill-prepared to aid its unfortunate citizens in need of food and shelter but unable to provide it for themselves. It is not surprising, therefore, that social workers in the United States are meeting an unusually "hard winter" with feelings almost of despair. For in spite of the very considerable development which organised social work has attained in the United States—it has indeed been classed as the third biggest business in the country—it is not capable of shouldering the responsibility of caring for the wreckage of a major industrial depression. Yet it must bear the brunt of the burden, for of organised State insurance on the lines of the British or German unemployment laws there is nothing. While private insurance schemes are not entirely unknown, what forms exist are noteworthy rather for their singularity than for the significance of their contribution to relieving the national problem. In October, 1928, before the crash came, it was estimated that only some 3,700 wage earners out of a total of some thirty millions were covered by unemployment insurance, whether provided by trade unions or by

employers' schemes. Of the hundred or more national and international trade unions affiliated with the American Federation of Labour, only a dozen spent any of their funds in unemployment relief in 1929; and the total so spent was less than \$300,000. Various local unions give unemployment benefits, but in spite of interesting beginnings, as in the case of clothing workers, the amount they are able to spend is insufficient to make a significant contribution to the national need.

There are in many States almshouses and publicly-provided relief schemes for the destitute, based largely on the English Poor Laws with which the original colonists were familiar in England in the seventeenth and eighteenth centuries, but the amount of assistance they furnish to the unemployed is not great. When the resources of the worker himself or of his friends and relatives are no longer sufficient to provide for him, it is to private charity that he must turn for aid. There is all over the country an immense number of charitable organisations of one kind or another, the typical product of the private, sectarian or civic conscience. A number of these have national or, as in the case of the Salvation Army, world-wide affiliations, and there is an increasing tendency, due largely to the increasing study and adoption of social welfare work as a profession, for a greater integration and co-ordination of effort among them. This finds expression notably in the Community Chest idea (copied from Liverpool in the eighties of the last century), which has had a remarkable growth in the United States in the last twenty years. Some three to four hundred cities have now adopted this plan, which is nothing but a federation of all the existing charities in a given locality, who agree to adopt a common budget and to make a single annual appeal for funds to meet it. The work of raising the money required is entrusted to a specialist, and very elaborate propaganda machinery is usually set in motion to elicit subscriptions during the day, week or other period in which the "drive" is held. The adoption, however, of a common single appeal for funds has considerable regard for the convenience of the contributing public, and it does not as yet involve an elaborate machinery of central supervision or control of the charities themselves.

The widely varying agencies for meeting distress, scattered as they are among religious orders, private organisations, charity organisation societies, endowed foundations, family welfare organisations, municipal lodging houses, community centres and the like, admit of no ready classification, a fact which does not make it easy for the needy to know where to apply for help. It is equally difficult to give any estimate of the amount they spend. The total bill for all forms of social welfare work has been variously estimated at between one and five billion dollars annually, without counting the indirect costs arising from the general impairment of social welfare. Such figures, like those for the cost of wars, have very little meaning. The burden has certainly been steadily increasing in recent years. A careful study of the trend of expenditures on relief work in 36 large cities in the ten years between 1916 and 1925 showed a threefold increase. Correcting the figures to allow for price changes and increase of population, the index of expenditure for 1925 would be 171 as against 100 in 1916. It is interesting to note that at least as much was spent in 1925 as in either of the years of depression of 1921 or 1922.

The figures of expenditure for 1930 will certainly show a great increase over previous years. The traditional generosity of the American people has been severely strained to meet the demands made upon it by charitable organisations. Help is forthcoming not merely from the well-to-do but from many workers still in jobs, who are contributing a fixed share of their weekly wages. In some industries jobs are being shared (or "staggered"), those on the pay-roll working a short week to make a day's work for an unemployed man. Public money has in many places been voted for charitable purposes (New York City has voted a million dollars "for the relief of unemployment," an action said to be without precedent in its annals), and public buildings and other resources are being used to shelter and care for the destitute.

These measures have been bitterly described as more truly a "dole" than any form of the unemployment insurance which is so generally disliked in the United States. While many social workers see the ultimate adoption of some form of insurance on European lines as inevitable, the general opinion of the country has not yet moved so far. The American Federation of Labour, despite dissension within its ranks, will not support it, and it will take more than the present depression to make the conviction of its necessity sufficiently general for it to become a political issue. Congress, so far, has indeed done very little. Three Bills introduced by Senator Wagner of New York early last year to provide for the expenditure of more money for public works, for the introduction of a nation-wide system of employment exchanges, and for the collection and publication of reliable employment statistics had a poor success, only the last-named being passed. Senator Wagner is a Democrat and a known friend of the American Federation of Labour; and in the chagrin felt at the failure of his efforts it was freely said that Presidential opposition to them was largely to blame.

The President, largely it would seem for political reasons, has always taken a conservative view of the seriousness of the situation. At the outset he attempted to stimulate employment—not only on public works but in private industry also—as a matter of patriotic duty. More recently, in October last, he appointed a Cabinet Committee to co-ordinate the national efforts to deal with the unemployment situation, but although he is willing to ask for a further \$100,000,000 to \$150,000,000 for constructional and other public works, he is averse to spectacular raids on the Treasury for relief purposes. Many members of Congress are not content with his programme, and already a conflict has developed, not without considerable bitterness on both sides. Thus the crisis really finds the country without a national remedial policy or adequate relief machinery. And for too many the "bread line" and the "hlop house" symbolise the only barriers between starvation and death from exposure in the merciless American winter.

Notes of the Week.

Liberals and the Government.—Mr Ramsay Muir, chairman of the Liberal Party Organisation, has addressed a letter to the Press, explaining and defending the policy of Mr Lloyd George in preferring the maintenance of the present minority Labour Government in office to defeating them and risking the substitution of a Conservative administration. He is as emphatic as his leader in condemning the imptitude of the present Government, but in the choice between the Labour Party with their panacea of Socialism and the Conservative Party with their panacea of Protection, he declares for the former on the ground that they no longer believe in the possibility of applying their theories, while the latter, if returned to power, would definitely plunge the country into a fiscal revolution. Furthermore, he maintains that it is the duty of the Liberals to use their

present position to secure a measure of electoral reform which will help to give the electorate a wider choice than that which now exists between the two protagonists of opposing fallacies. This clear statement may serve to strengthen the feeble knees of some Liberal doubters; but it does not, and indeed could not, throw fresh light on the attitude which the Parliamentary Liberal Party will adopt when the Trades Disputes Act comes up for its second reading in the House of Commons on January 22nd. However great the agreement among Liberal members with the general line of Mr Muir's letter, the question remains how far individual Liberal members will allow such considerations to dictate acquiescence in legislation with which they radically disagree. The size of the Liberal contingent which Sir John Simon will lead into the opposition lobby on January 22nd is one of the crucial problems of the coming session.

The Industrial Disputes.—While the dispute in the South Wales coalfields has taken a rather more hopeful turn, and some progress seems to have been made in the search for a basis of agreement, the trouble in Lancashire cotton weaving over the introduction of more looms per weaver has taken on a more menacing complexion. At the end of last week a joint conference sat in Manchester, but failed to reach any agreement. The employers adopted a conciliatory attitude and met the objections of the workpeople on several points. The representatives of the Operative Weavers' Amalgamation offered to call their General Council together and recommend the giving of powers to the executive to continue negotiations and discussions on the question of the terms of payment and conditions of weaving under the system, but they attached a condition that the weavers now working on eight looms at Burnley and elsewhere should be taken off at the beginning of this week and such looms revert to the four looms to a weaver system. The employers could not agree to this proposal, though they offered to delay the new system for a fortnight to allow the Weavers' General Council to meet, but the operatives refused this concession. On Monday last the operatives went on strike at the sheds that have been carrying on the experimental eight-loom system since March, 1929. One firm decided to abandon temporarily the new system, and eight manufacturing concerns are now stopped. The Burnley Manufacturers' Association have decided to close all their mills on Monday next in support of the firms that are being attacked by the Weavers' Association. On Tuesday last there was an important development when, at a meeting in Manchester of the Central Committee of the Cotton Spinners' and Manufacturers' Association and representatives of the Master Cotton Spinners' Federation, it was decided to pledge the fullest support to those members whose mills had been put on strike, and recommended members of local associations to close their mills in their support when directed to do so. This is considered to be a threat to bring about a general lock-out throughout the industry. Throughout the trade much regret has been expressed at the strong resistance which is being made by the operatives against this new system of running six, eight or ten looms per weaver instead of the usual four looms per weaver. The experiment on this system has been going on since March, 1929, and the employers have proof of the saving in production costs. It is estimated that the charge for labour under a system of eight looms per weaver is from 7s. to 7s. 6d. per week per loom, as compared with 10s. to 10s. 6d. per week per loom under the four-loom system. This saving means a reduction in the price of cloth of about 8 per cent., and it is urged by manufacturers that the lower prices would mean the regaining of lost trade and the prevention of the further loss of trade. While the weavers' reluctance to countenance the introduction of labour-saving machinery is explicable by the long prevalence of unemployment and short time, it is none the less fundamentally short-sighted and anachronistic, and it is particularly deplorable that an effort to restore the competitive power of Lancashire should meet with resistance and cause a stoppage which can only injure all parties to the industry. Unfortunately, too, coal and

cotton are not the only industries where friction is threatened. In the boot and shoe industry critical discussions are proceeding, and in the linen industry there is some danger of an early dispute.

a)

The New Year in Germany.—The new year's greetings from the Government of the Reich to the President—which, in the absence, on leave, of the Chancellor and the Vice-Chancellor, were conveyed by the Minister for Defence, General Groener—were of particular interest this time. In this message the German Government has called attention to three problems with which it expects and intends to come to grips this year. All three problems are of first-class importance, and all are of international and not merely domestic concern. The first relates to the Young Plan, the second to Minorities, the third to Disarmament. After mentioning the considerations which had moved Germany, "in spite of serious misgivings," to accept the Young Plan last year, General Groener remarked that since then, owing to the change in the world economic situation, the Reich Government was faced with the serious question whether the German people were capable of bearing the burden imposed by the new Plan; and he declared that the Reich Government was conscious of the duty devolving upon it of seeing that the ethical and social foundations of life in Germany were not shaken. Passing to the liberation of the occupied territory, which he had already mentioned as one of the fruits of the acceptance of the Young Plan, he referred, first, to the present anomalous position of the Saar territory, and then to the much larger question of the treatment of German minorities beyond the frontiers of the Reich. The Reich Government, he said, regarded it as one of its most important tasks to look after German units of population beyond the frontiers (a comprehensive phrase which would cover Austria as well as Upper Silesia or the South Tyrol). Turning last to the problem of Disarmament, he pointed out that the solemn obligation to disarm had not yet been carried out by the other Powers who had undertaken it; that Germany could not but feel her security threatened; and that it would be the task of the German Government to stand out firmly for the adoption of the principle of equal security for all nations, without which, he maintained, no genuine pacification was possible. The Government's message was warmly endorsed by President Hindenburg in his reply, particularly on the first of the three heads. These authoritative declarations portend that the history of international affairs will be lively during the coming year, and that the German Government will play a protagonist's part. There can be little doubt that Dr. Brüning and his colleagues really mean all that General Groener has said. No programme short of this would give them a chance of holding their own on the home front against the Nazis. In raising the question of a revision of the Young Plan, or at least of a moratorium, they will be championing what is essentially a national interest of Germany (though, of course, it would be an international question if "the ethical and social foundations" of life in Germany were shaken in earnest). On the other hand, if she stands forward as the champion of genuine protection of minorities and genuine reduction of armaments, Germany will not find herself alone. In the international field of politics she may aspire to be recognised as the leader of a powerful and determined party which has these causes at heart.

Unrest in Central America.—The wave of unrest which produced half a dozen revolutions in South America between June and October last year has shown itself, at the turn of the year, in Central America. There has been a revolution, venting itself in a change of Presidents, in Panama. And in Nicaragua, which seemed to be settling down since the elections, which were held in 1928, with unwonted order and efficiency, under the auspices of a United States Electoral Commission, there are now reports of fresh fighting in the forests and mountains of the interior between United States Marines and Nicaraguan guerillas led by a lieutenant of General

Sandino—the guerilla leader who led the Marines a dance in 1926 and 1927. In Central America, as in South America, we may presume that political revolutions reflect, in the local manner, the economic distress incidental to the world-wide depression—a distress which must be particularly acute in countries whose economy depends on the world price of one or two staple raw products. In such a situation, the immediate scapegoat is the local President of the hour, while the ultimate object of resentment is apt to be the leading creditor country—i.e. the United States in the majority of Latin-American Republics nowadays. In Panama and Nicaragua, moreover, there are grievances against the United States of a political as well as an economic or financial character. It is natural that at least a minority of the Nicaraguans should not have forgiven the Americans for setting Nicaragua's house in order with a high hand; and between Panama and the United States there is the standing controversy over the new treaty, regulating the relations between the two countries, which was negotiated in 1927, but has been left unratified by the Panamanian Congress—for reasons which will be understood by anyone who has followed the history of similar British negotiations with Egypt and Iraq. However, these stirrings in Central America are hardly likely to cause the State Department at Washington much concern. It would be very different if the wave of unrest, in the course of its progress round the Latin-American world, were to move on from Central America into Mexico; but of this there is no sign at all at present.

Bank Dividend Policy.—The dividends declared each year by the "Big Five" banks had remained unchanged for so long that a general impression had arisen that they were immutable. Hence the decision of Lloyds Bank directors, announced last Tuesday, to reduce the year's dividend on the "A" shares from 16½ to 15 per cent. came as a general surprise. The following day the Midland, Barclays, and Westminster Banks all declared dividends at unchanged rates; and on Thursday came a similar announcement by the National Provincial; but, as shown in detail on page 78, bank profits for 1930 record in every case an appreciable decline below the levels of previous years, and though Lloyds Bank earnings in common with those of its confrères were still sufficient to cover the dividend at the old rate, we are not disposed to criticise the decision to make the dividend conform to this year's reduced profits. It is not a bad thing to emphasise the obvious fact that bank dividends are not immutable, and that banking is not a sheltered industry which is immune from the consequences of a major trade depression. Those who have followed the fortunes of the banking world during the past twelve months have already realised why it is that banking profits have fallen. Bad trade means that money is unemployed as well as labour, and that money rates become unremunerative equally with industry and commerce. Again, even though London deposit rates fall with Bank rate and other money rates, so that in this respect the banks' gains and losses are cancelled out, the banks still have to pay higher rates on their fixed deposits and also upon their deposits outside London, where they have to bid against other institutions, such as savings banks and building societies. Finally, bad trade entails increased provision for doubtful debts and similar contingencies. Thus the general shrinkage in bank earnings is easily explained, and though the fact that in past years bank dividends have uniformly been on a very conservative basis may be regarded as good reason for the maintenance of their rate this year by the other members of the "Big Five" group, the policy adopted by Lloyds Bank, in view of the uncertainty surrounding the prospects for 1931, is one with which its shareholders have no cause to quarrel.

Australian Exchange Developments.—The decision of the Bank of New South Wales to break away from the agreement between the Australian banks to "peg" the exchange on London is on the whole a healthy develop-

ment, even though its announcement came as a surprise. Hitherto the Australian banks, by an arrangement between themselves, have been quoting cable transfers on London at a buying rate of £108 10s. Australian, and at a selling rate of £109 Australian, per £100 English; while proportionate rates were quoted for demand and time drafts. It has for some time been clear that these rates were more favourable to Australia than was warranted by the fundamental value of her currency; and abundant proof of this has been forthcoming both from the fact that the Australian demand for sterling has had to be rationed at the cost of much individual hardship, and also from the growth of an unofficial or "black" market in sterling exchange, which had recently expanded to the point where it had absorbed an appreciable percentage of the total amount of business passing. Thus, obviously an anomalous, and in some respects an inequitable, situation had been allowed to develop, whose only justification was that it minimised the cost to the Australian Government of covering the service of the external debt. Early this week, the *Bank of New South Wales* announced that it was prepared to quote for cable transfers at a buying rate of £115, and a selling rate of £115 10s. This decision, coming from one of the leading Australian banks, at once shook the exchange "peg" out of its hole, and the remaining banks had immediately to come into line. Thus once more Australia has been brought face to face with realities, and while the new burden imposed upon the Government in respect of its debt charges is to be deplored, and while it is perfectly true that exchange depreciation is a symptom of, and not a cure for, serious economic trouble, there is nothing to be gained from a deliberate suppression of such a symptom, and it is all to the good that facts should be faced. Experience has repeatedly shown that it is almost impossible to prevent a "pegged" exchange rate from being circumvented by unofficial dealings, and indeed it has been suggested that one reason why the Australian "peg" fell out was that the Government were unable to make any effective response to appeals from the banks to stop the growth of outside exchange dealings. In any case, an exchange policy whose execution depends upon rationing demand, and which bears no relation to the economic position of those who are seeking to carry it out, always fails—and, it may be added, deserves to fail. Now that a more nearly "true" exchange rate has been established, the normal economic forces should come into play. Imports into Australia will be checked, as they ought to be; and Australian wheat and wool growers will obtain a new advantage in the world's markets. This should help to move Australia's wheat and wool, and their sale should eventually provide Australia with sufficient additional foreign exchange to permit of a modification of the present system of rigorous rationing, and in time to bring the exchange rate nearer again to parity.

Co-operative Trade.—The lower values in the staple foodstuffs are reflected (writes a correspondent) in the report of the directors of the Co-operative Wholesale Society for the thirteen weeks ended October 11th and issued for consideration at the delegate meetings in January. Sales were down by £1,496,206 to £20,275,989, a decrease of 6½ per cent. on the corresponding period of 1929. But the volume of business was substantially greater, and a review of the grocery turnover (which is practically two-thirds of the society's trade) illustrates the heavy drop in prices as compared with a year ago. There was an output of 996,240 sacks of flour, as compared with 944,577 sacks in the corresponding three months a year ago, but while the volume thus increased by 5 per cent. the value fell 10.6 per cent., a decline from £1,776,113 in 1929 to £1,586,386 in the quarter of 1930. In butter the sales fell 10 per cent., but the weight rose 13 per cent.; in bacon and hams the value decreased 13.6 per cent., but the weight increased by 12.1 per cent. In grain and oilseeds the sales of £530,086 were 19 per cent. less, but the supplies of 1,473,698 cwt. were 6.5 above those of the earlier period. Such tendencies have lowered the total of the C.W.S. sales from the monetary point of view while showing the continued

growth of the movement in supplying the six million members of the societies. Similarly the supplies from the various productive works were down by 8½ per cent. to £6,541,578. Decreases were recorded in most of the textile works, with the exception of the clothing and the corset factories. From the boot and shoe works 885,333 pairs were sent out, representing £467,745, which suggests that this is a section of industry where prices have not fallen in comparison with the other trades under co-operative direction. The export department had a turnover of £247,437, compared with £420,028 in the corresponding period of 1929. The general lowering of values was reflected in the operations of the C.W.S. Bank. Its deposits and withdrawals amounted to £174,911,475, an increase of 2½ per cent. There are now 8,733 branches of trade unions with current accounts at the C.W.S. Bank, which now holds 31,288 deposit accounts and does the banking business for the whole of the co-operative societies in the country with 25 exceptions. These societies are small, their aggregate membership being less than 10,000. The National Dairy Association of New Zealand is applying for membership of the C.W.S., and the directors announce the purchase of the Derwent Flour Mill Society, Ltd., and of the Co-operative Sundries Manufacturing Society, Ltd.—suggestive of the co-operative rationalisation that is taking place. Land has been purchased at Derby for the extension of the paint works and the boot factory in that town, and further land has been acquired at Manchester, Leicester and Desborough for the increase of sports facilities among the employees.

Cotton Trade Finance in 1930.—Mr Frederick W. Tattersall, of Manchester, has published his usual survey of financial developments in the cotton trade during 1930. The average dividend for 259 companies is given as 1.74 per cent., against 2.52 per cent. for the same companies in 1929. In 206 cases no dividend was declared, compared with 192 in 1929. An average dividend of 3.31 per cent., absorbing £156,226 on ordinary capital of £3,930,056, was paid by 67 original spinning companies (companies not recapitalised or reconstructed in 1919-20), owning 6,463,982 spindles. The average dividend in 1929 was 5.19 per cent. For 165 recapitalised or reconstructed spinning companies the average dividend was 1.34 per cent., against 1.80 per cent. in 1929, absorbing £275,117, the share capital being £28,679,972 and the spindleage 17,049,646. Particulars have been obtained of 180 companies, showing profits and losses. Profits amounting to £134,131 were made by 18 companies, and losses totalling £1,248,758 were reported by 162 companies. The latest balance sheets published in 1930 show that out of 245 companies 74 have credit balances of £1,482,731 and 171 companies have debit balances of £8,335,079. During the year 81 companies made calls on shareholders for unpaid capital involving £3,174,120. Bankruptcies total 27, against 29 in 1929. Twenty-four deeds of arrangement were made, the previous year's total being 25, and there were 14 compulsory liquidations. Additional creditors' voluntary liquidations numbered 108, and the Lancashire Cotton Corporation has taken over 36 of these companies. Receivers were appointed in connection with 39 companies, excluding cases of subsequent liquidation.

Dangerous Drug Traffic.—The prospect of an international agreement for the control of the traffic in cocaine and opium and their derivatives is rendered very much brighter by the outcome of the conference held in London last autumn by the nine manufacturing countries. It is reported that provisional figures for the quotas of cocaine to be manufactured by each of these countries were agreed upon and are likely to be accepted by the Advisory Committee of the League. Opium presented a more complicated problem, as a very wide variety of drugs is manufactured from it and its derivatives. Negotiations were concerned only with export, which reduced the participants in the discussion to Great Britain, Germany,

France and Switzerland, the only countries which conduct a legitimate export trade, and the quotas suggested left the British figure unduly low. Representatives of the manufacturers continued to confer unofficially, however, and it is said that they have succeeded in finding a satisfactory basis of distribution, so that the Advisory Committee of the League should be able to draw up a provisional convention to be submitted to the meeting of the Council in January. The report of the London Conference contains some alarming figures, supplied, in a spirit which must command all admiration, by the Turkish delegates. It appears that Turkey, which is not officially an exporting country at all, exports annually over 5,200 kg. of morphine and 8,650 kg. of heroin. As the legitimate requirements of the world have been estimated at 12,000 kg. of morphine and 5,800 kg. of heroin, it is sufficiently clear how important a part the co-operation of the Turkish authorities must play in the suppression of the illegitimate trade in narcotic drugs, and the voluntary submission of these appalling figures is the best evidence Turkey could have given of her eagerness to co-operate.

The Reichsbank and its Shareholders.—Our Berlin correspondent writes: The long-awaited share issue, which was promised to the shareholders of the Reichsbank at the general meeting of February 15th, has at last been announced. The Reichsbank has once more behaved very generously to its shareholders, and the terms surpass expectations. The ratio of profit distribution established by the Daves Committee in 1924 was very unfavourable to the Reich, from which the Bank holds its monopoly of note issue, and with the coming into force of the Young Plan this ratio was revised, somewhat to the detriment of the shareholders. The present preferential rights are intended as compensation for this. The holder of Reichsbank shares to the nominal value of Rm. 400 receives Rm. 100 new Reichsbank shares and £10 (nominal value) of Golddiskontbank shares, both gratis. This right may be exercised as from January 12, 1931, but the new shares carry full dividend rights for 1930. This proceeding will increase the Bank's capital from Rm. 122.8 millions to 153.5 millions, but the Bank already has in its possession the shares necessary to carry out its intention of reducing the capital to the round sum of Rm. 150 millions. The distribution of Golddiskontbank shares would have led to the introduction of these shares into the Stock Exchange and to the payment of a moderate dividend. The Golddiskontbank is, however, only to a limited extent a profit-making institution; it uses its funds for the financing of German exports, and its main object is to cheapen export credits. It is therefore only able to declare a 4 per cent. dividend for 1930, its first year of activity. This would mean, in present circumstances, that its shares would go far below par, but for Golddiskontbank shares to stand at a discount would reduce the compensation to the Reichsbank shareholders, and possibly also damage the prestige of its patron, the Reichsbank. The directors of the Reichsbank have therefore decided to avoid as far as possible distributing Golddiskontbank shares. They have proposed to their shareholders that they should renounce their right to take up Golddiskontbank shares and should accept instead a cash bonus of Rm. 224.40 in lieu of each such £10 share. In all probability all the shareholders of the Reichsbank will prefer this very advantageous cash bonus, in which case the Reichsbank will remain the sole shareholder of the Golddiskontbank, but will have to distribute Rm. 68 millions in cash to its own shareholders. In view of its great reserves and substantial holdings of liquid assets, there would be no difficulty about this. Reichsbank shares now stand at 230. After deduction of the value of the right to additional Reichsbank shares and of the cash bonus, this becomes about 130, so that for Rm. 130 it is possible to buy a Reichsbank share, which carries a dividend of Rm. 12 for 1930. There could be no better illustration of the immense fall of German Stock Exchange quotations. The Golddiskontbank, which will thus become purely a subsidiary of the Reichsbank, will have a paid-up capital of £10 millions and about £8 millions reserves. It is

How, one might well ask, is the manufacturer going to offset present conditions? By cutting out every single item which is wasteful in production, and then by making an unexpected economy in his selling costs. That is, spend only the minimum on advertising, but spend it so intelligently that it will sell as much as—or more than—it did before.

authorised to issue bonds to five times the value of its capital, but it will not be able to exercise this right until the international capital market has improved. As the private banks only grant short-term credits, the Golddiskontbank, which uses its funds chiefly for long-term export credits of one to six years' currency, will fill a definite gap in the German banking system.

Retail Prices in France.—Closer attention is now being given in Paris to the fact that, although wholesale prices are steadily coming down, both for imported commodities and native French products, the retail price index continues to rise, writes our Paris correspondent. The general figure for wholesale prices has fallen nine points (gold) since the end of July, whereas that for retail prices in Paris indicates a rise of nine points in the same period, and of rather more in some of the large provincial centres. "The rise in retail prices constitutes a growing danger," states M. Lucien Romier. M. Germain Martin, the new Finance Minister, has just publicly declared that "an effort to adjust prices is urgent," but that it must be carried out in an atmosphere of conciliation. At the same time, the fact that the French retail index, in spite of its rise during recent months, still remains appreciably below the corresponding figures for Great Britain, Germany, Sweden, Norway, Switzerland and some other countries suggests that present nervousness is baseless. That the French as a mass have little to complain of in regard to commodity prices is confirmed by the notable absence of visible signs of public discontent, in the way of demands for increased wages and so on. "It is inevitable that we shall see, in the more or less near future, a lowering of the cost of living in this country," says M. P. Dromel, in *La Situation Economique*, "but this, for political reasons, can only be brought about by indirect methods." No attempt has yet been made here to reduce wages scales, as in Belgium, Germany and Italy, and without this it is difficult to see how production costs can be effectively lowered. Industrialists,

moreover, have now had to assume the burden of the cost of the national insurance system, while retailers are still handicapped, so far as the majority of commodities are concerned, by the tax on turnover, which, owing to its repeated application to the same article, in many cases represents an increase of 10 per cent. in the price charged to the consumer.

Industrial Profits in Japan.—The earnings statements of industrial corporations, which are now appearing, illustrate the unquestionable severity of the depression, writes our Tokyo correspondent. Even the earnings figures of the larger companies for the past six months have generally made a decidedly poor showing. To take but a few examples, the past half-year's profits of the Japan Cotton Spinning show a reduction of 33.5 per cent., as compared with the preceding six months; those of the Japan Sugar Refinery, a decline of 30 per cent.; those of the Tokyo Electric Light, of 13 per cent.; while the Nippon Yusen Kaisha, the largest Japanese steamship company, made a loss of over 6 million yen. In many cases the customary rate of dividends was not maintained or the dividends were passed. The Tokyo Electric Light Company lowered its dividend to 4 per cent. from 5 per cent., maintenance at which rate was pledged just six months ago, when the reorganisation scheme was inaugurated. The following table gives the results for the last three half-years, as analysed by the Mitsui Gomei Kaisha:—

BANKING AND INDUSTRIAL NET PROFITS.

	No. of cos.	First half year, 1929.	Second half year, 1929.	First half year, 1930.
Banks	250	86,918,884	81,259,509	63,243,755
Industrial cos.	1,000	271,027,117	249,318,441	139,249,591
Total	1,250	357,946,001	330,577,950	202,493,346

The aggregate net profits, for the first half of this year, of 250 banks examined, amounted to 63,243,000 yen, against 86,918,000 yen a year ago, a heavy decline of 27.2 per cent. Net earnings of 1,000 industrial companies for the past half-year totalled 139,249,000 yen, representing a marked decrease of 131.7 million yen, or 48.3 per cent., as compared with those earned by the same concerns in the corresponding half of 1929. Sharp reductions occurred in almost all the industrial groups, even in the case of public utilities, whose profits during recent years had been steadily on the increase. The most noteworthy decline is shown by the textiles group and a number of cotton and woollen mills recorded large losses. Trust companies, trading firms and stores, shipping, rubber, kilns, and copper also report extremely unfavourable results. The only bright spots in the dismal picture are the rayon and the "miscellaneous" groups, which experienced a small but welcome increase.

Canada's Australian Trade.—Early in December a conference was held at Ottawa between Mr Parker Moloney, Minister for Markets in the Australian Government, and Mr Stevens, Canada's Minister of Trade and Commerce. The subject under discussion, writes our Ottawa correspondent, was a new commercial treaty to replace the existing trade treaty, which was concluded in 1925, but which has been subjected to considerable criticism in Canada and even more serious attacks in Australia. There the complaint is made about the lopsided character of an arrangement which last year enabled Canada to sell 19 million dollars' worth of goods and buy only 3½ million dollars' worth. Negotiations about the new treaty were begun in London during the Imperial Conference, and they have been continued here. Every facet of the trade relations between the two countries has been exhaustively examined and discussed, and apparently some of the chief difficulties in the way of a satisfactory adjustment have been smoothed away. It is understood that before Mr Parker Moloney and his experts left Ottawa for Toronto, on December 16th, a preliminary agreement had been reached about the basic principles of a new commercial treaty. It, however,

was announced that there would be no publication of its terms until they were submitted in legislative form simultaneously to both Parliaments. The Australians have been insistent that their products must be allowed more favourable terms of entry to Canada's market; and it is believed that the Canadian Government's method of providing this better ingress has been to offer an increase in the duties on certain imports from the United States, like dried fruit, hides and tallow, in the hopes that business now enjoyed by the United States might be diverted to Australia. One fundamental difficulty has been the butter question, as the Australian dairymen are anxious for the removal of the special dumping duty, which is a barrier to their exportation of butter into Canada, but the dairy interests in Canada have been maintaining persistent pressure at Ottawa to prevent any concessions in this line.

Shipping Freight Index Number.—Owing mainly to an improvement in demand for tonnage to load at Argentine ports, the tramp shipping freight market had a firmer tone in December, and our index number of whole-cargo charter rates rose by 2.8 per cent. :—

AVERAGE 1898-1913=100.

	Average, 1913.	Dec. 1929.	Oct. 1930.	Nov. 1930.	Dec. 1930.
European Waters	110.0	117.3	91.1	89.5	89.7
North America	113.1	95.5	85.6	85.0	86.9
South America	123.4	94.6	93.3	90.4	93.8
India	106.3	109.0	101.3	99.8	103.4
Far East and Pacific	117.4	93.4	85.2	81.0	85.2
Australia	127.9	91.7	113.9	107.7	109.5
Total	116.3	100.3	95.1	92.2	94.8

Apart from the increase in activity at the Plate, where grain shippers sold wheat freely and booked tonnage in substantial volume up to the end of February, the amount of business concluded did not expand materially; but in Eastern waters the supply of available tonnage was limited and a slightly broader inquiry resulted in quotations hardening a little. The North American market remained lifeless; and trade in European waters was dull, the coal trade outwards suffering from the labour troubles threatening in the British coalfields. The month's changes in the index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913 :—

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home trade	78.4	- 2.6	South America—outwards	76.5	- 6.9
Bay—homewards	110.1	+ 3.7	South America—homewards	111.1	+ 13.7
Bay—homewards	91.9	- 4.9	India—outwards	101.0	- 8.5
Mediterranean—outwards	85.9	+ 5.3	India—homewards	106.5	+ 16.3
Mediterranean—homewards	93.3	+ 2.0	Far East, &c.	85.2	+ 4.2
North America	86.9	+ 1.9	Australia	109.5	+ 1.8

Expressed as a percentage of the average for 1913, the total figure of our index number for December works out at 81.5, as compared with 79.3 in November and 86.2 a year ago. The average figure for 1930 is 8 per cent. below the mean for 1898-1913, and 20.9 per cent. lower than the 1913 average.

New Capital Issues in the United States.—Through the courtesy of the New York *Journal of Commerce* we are able to supplement our recently published statistics of British capital issues during the year 1930 with a comparative table for the United States :—

	1927.	1928.	1929.	1930.
Foreign—Government	786,830,000	764,943,000	178,816,161	688,323,568
Corporate	601,503,375	811,550,482	264,503,847	433,498,000
Domestic—Municipal	1,867,230,449	1,123,940,316	1,074,476,451	1,064,402,752
Railroad	791,202,000	688,488,843	528,559,420	986,791,670
Public utility	2,405,298,782	2,427,790,217	1,559,144,726	2,228,859,584
Industrial	2,013,430,220	2,311,350,808	2,578,364,651	1,082,603,506
Others	1,132,307,589	1,783,542,833	2,550,867,842	592,486,938
Totals	9,597,662,015	9,891,606,499	6,754,832,698	7,067,566,038

The increase in foreign borrowing is a notable feature of 1930, whereas the decline in the financing of industrial undertakings and "others" (mainly investment trusts and holding companies) reflects significantly the slump in trade and speculative enterprise.

Railway Safety.—The Report of the Automatic Train Control Committee (1927), issued early last month, is of direct personal interest to all who travel by train, for its object was to investigate methods of preventing drivers from over-running adverse signals, with the risk of dire results. The problem before the Committee was to examine and to report upon devices whereby a driver either receives a "neutral" warning in his cab that he is approaching a signal, or, alternatively, a direct intimation (coupled, if the signal is at danger, by an application of the brake) as to whether the signal is at danger or clear. Those who remember the details of several recent serious accidents where a driver apparently lost his bearings during foggy weather will realise that even the first of these alternatives would be of great value. The second would obviously provide complete control. The Committee, during the past two years, have personally examined practically every known form of this apparatus, from the standpoint of efficiency, reliability and cost, and ultimately have come to favour apparatus that has been in use on certain sections of the Great Western Railway for many years. This consists of a ramp set in the four-foot way at every "distant" signal. As the locomotive passes over this ramp, a plunger projecting below the locomotive is raised, and in the simplest form of the apparatus this operation gives the neutral or "location" warning described above. The Great Western Railway, however, have gone further, for under their system, when the signal is at clear, the ramp is electrically energised, with the result that a bell is rung in the cab, to signify "clear." On the other hand, when the signal is at danger, the ramp is electrically dead, and the result now is that a whistle blows in the cab and the engine brakes are applied. The Committee do not definitely lean towards this second variant, but point out that it can be superimposed upon the first at slight additional trouble and expense. They also hold that, on through runs, it is sufficient to equip distant signals in this way, for it is already ensured that where a distant signal is at "clear" all succeeding stop signals are also at "clear." Under certain circumstances, however, they state that it may be necessary to provide various forms of control at stop signals—for example, at starting signals at bay, loop line or junction platforms—but this must depend upon local circumstances. The report concludes with recommendations regarding indirect methods of increasing security. Thus, attention is called to the need of improving sighting facilities from the cab, and of increasing the illuminative and penetrative power of signal lamps. The Committee also recommend the extension on important traffic roads of certain devices—already in partial use—whereby, once a train has passed a particular signal, such signal must have returned to danger before the preceding signal can be lowered for a second train. This prevents a train from approaching a "doubtful" signal—as, according to one theory, happened at the Charfield disaster—and also ensures that there is at least one signal at danger between two consecutive trains. Finally the Committee make several proposals for tightening up the rules governing fog working. Thus, in sum, the Committee have discovered little that is new, but have rather discriminated critically between existing devices. Still, the report possesses the great value that it has cleared the ground. It is now for the railway companies to adopt the Committee's recommendations, in so far as is required by the density of traffic and other local circumstances.

New Life Assurance Business in 1930.—A further batch of announcements has been made public during the past week as to new life assurance business transacted in 1930, and the figures confirm the previous impression that there has been an all-round increase in the amount transacted. In seeking for explanations of this seeming paradox in a year of unexampled trade depression, a

number of factors must be given their due weight; and amongst them perhaps most important have been a reaction away from the Stock Exchange towards life assurance as providing a more certain form of saving and investment, and, secondly, the promulgation of a number of new schemes to attract the public.

Scottish Widows	2,899,759	3,490,000
Wesleyan and General	1,149,558	1,108,030
Total	£33,639,562	£35,096,423

The Clerical, Medical and General announces that new business has been completed for £1,914,000, being over £200,000 in excess of the corresponding 1929 figure. The increase is a substantial one, and has been contributed to in part no doubt by anticipations as to the bonus to be declared for the valuation period ended December 31, 1930. The total of the Commercial Union is also a satisfactory one, the 1930 figure being nearly £400,000 in excess of the 1929 figure, which, however, was itself slightly lower than the 1928 total. The Royal Exchange also has had the advantage of a bonus year, and this is reflected no doubt in the extremely satisfactory total of £2,501,000, being some 10 per cent. in excess of the 1929 figure. The company also announces that for the quinquennial period ended December 31, 1930, a reversionary bonus at the rate of £2 per cent. per annum has been declared on all with-profits policies. In many ways the Scottish Widows' result is the most interesting amongst the many that have been published to date. The total is not only the highest in the society's history, but represents an increase of over 20 per cent. on the previous year's figure. So striking an expansion in one year is indeed a satisfactory testimony to the new business organisation of this old and much respected society.

Scottish Automobile and General Insurance Co., Ltd.

—The first insurance report of the year always comes from Glasgow, and its figures usually form pleasing material for comment. The Scottish Automobile and General is a young office founded after the War for the purpose of transacting on non-tariff lines a motor insurance business. In that field it is extremely successful and has built up for strong position. The balance sheet at December shows that there is a general reserve of £45,000 and a paid-up capital of £56,250. During the h

the company has succeeded in almost exactly doubling its premium income, the figure for 1930 being £288,938, itself some £50,000 in excess of the 1929 total. The rate of underwriting profit, however, has not kept pace with this rapid development. Owing to an increase in the claims cost in 1930, which, however, has been substantially counter-balanced by a reduction in expenses, the underwriting profit for 1930 worked out at 1.4 per cent., compared with 3.7 per cent. in 1929. The total net trading surplus of the year, after bringing into account profits on investments and allowing for bad debts and income tax, amounts to £913, compared with £7,994. The interest income shows a large increase from £7,800 to £11,100, but the dividend, which has been maintained at the same rate, namely, 17½ per cent., costs £7,630 on this occasion, against £5,250 in 1929 owing to the capitalisation of a portion of the reserves. The company has finished the year with an increase in its net surplus assets of £4,383. It is interesting to mention that the acquisition of 25,000 ordinary shares of the Automotor Finance, Limited in 1929 has since been followed in 1930 by the acquisition of 28,000 preference shares of the same company.

A course of four lectures on "Prices and Production" will be given at the London School of Economics by Dr. F. A. Hayek (Director of the Austrian Institute for Economic Research (*Konjunktur*), Vienna), at 5 p.m. on January 27, 28, 29 and 30, 1931. At the first lecture the chair will be taken by Professor L. C. Robbins, M.A., B.Sc. The lectures, which will be delivered in English, are addressed to students of the University and to others interested in the subject. Admission is free, without ticket.

At the meeting of the Royal Statistical Society, on the 20th inst., Mr J. Brace will read a Paper entitled "An Analysis of Building Societies Statistics." The meeting will be held in the Hall of the Royal Society of Arts, John Street, Adelphi, W.C.2, at 5.15 p.m.

Bank Failures — Strength of Banking System —
Money — Trade — Railroad Rates.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 27.

RELIEF that a year of poor business is behind the country is mingled with some apprehension lest the coming twelve months bring little if any improvement; but prevailing sentiment is nevertheless moderately cheerful. Wish for a spring revival is probably fathoming the thought to some extent, but at least some improvement is confidently looked for, though no great disappointment will be felt if 1931 brings only modest corporation earnings. In short, if conditions grow no worse there will be little cause for complaint.

Another bank failure here was taken calmly, and it has served to clear the atmosphere somewhat. The second suspension was of a rather small bank, which, like the Bank of the United States, did only a local business among small depositors and was generally credited with poor management. No serious attention need be given to reports of Communist propaganda and "whispering attacks" to undermine confidence in banks. No soundly managed bank here is in any danger whatsoever.

of a series of small banks in the South, Middle West and It is unthence in the East continue. It is probable that his experts the year will mount to 1,000, a new high a preliminarthese failures are the inevitable result of basic princip expansion of banking. They are only anected with business depression. In 1928

and 1929 they had already become quite numerous in the South and West. Some dislocation of trade and inconvenience and loss to individuals are being caused, but more permanent good than harm is being done by the elimination of weak elements.

The financial community expects some exceptionally strong bank statements to be published as of January 1st. It has been a good many years since the banks were as liquid as at present—that is, the large city banks—partly because of small demand for credit and partly on account of measures taken to prepare for any emergency at the time of the recent failures. Bank earnings since the publication of the September 24th statements have not been very large, and some banks may have to cut into surplus for dividend payments. Borrowings from the Federal Reserve Bank will be the smallest for a good many years.

So far, the markets have felt no strong repercussion from this week's cut in the New York Federal Reserve Bank's discount rate to 2 per cent., the lowest charge ever in effect in the system. Shares were quite unaffected, and bonds, after a modest rally before Christmas, are quiet again. Most money rates also are unchanged, although the Federal Reserve Bank lowered its bill buying rate to 1½ per cent. Dealers at first announced reductions, but promptly rescinded them, and the situation now is that the Federal Reserve Bank is getting all the bills. Perhaps the Reserve wishes to increase its portfolio, but there is some expectation that the banks and dealers will come into the market after the turn of the year.

This week's Federal Reserve statement discloses a rise of \$117,000,000 in member bank borrowing and a jump in circulation of about the same amount, due to holiday trade demands. Reserve Bank holdings of Government securities dropped further, with completed liquidation of the Treasury overdraft, and bills increased slightly. Total Reserve credit outstanding rose further to \$1,356,000,000, a figure about \$260,000,000 below that of a year ago.

Under year-end influences call money is firmer, the rate having risen to 2½ per cent., but early next month the flow of funds from the interior is calculated to bring about very cheap money. If the discount rate cut is useful as a guide, presumably the Federal Reserve authorities will not attempt to take up the slack by allowing their holdings of bills or Government securities to run off.

Clearing House banks have promptly cut the rates which they allow for demand deposits by ½ per cent., bringing the rate to 1 per cent. for all depositors except mutual savings banks, which receive 1½ per cent. Time deposit rates are unchanged at 2 per cent. Eventually it is expected that a further reduction will be made in savings bank interest rates. Some pay 4 per cent., while others continue on the old 4½ per cent. basis. One of the difficulties which many of the small banks and even a few of the larger ones, notably the Bank of United States, which recently failed, have encountered grew out of the payment of excessive interest on deposits. The banks have found it extremely difficult to place their money where it will return enough to meet these rates, and consequently there has been a larger flow of bank money into second-grade bonds and other investment outlets involving a sacrifice of safety in order to obtain higher yield.

While other Federal Reserve Banks may follow the New York example of reducing discount rate, bankers here do not expect a world-wide reduction. On the contrary, they look for an eventual outward movement of gold to result from the widening of the spread between short-term money rates here and those in European centres. It now looks as though this country's net gain in gold during 1930 would amount to \$275,000,000. A good deal of gold was released from earmark at the Federal Reserve Bank earlier in the year, but the usual year-end earmarkings have cut down the earlier gain, so that the year may end with the total under earmark virtually unchanged at around \$135,000,000. The net

gain in gold through imports will compare with \$119,500,000 in 1929 and a net loss of nearly \$300,000,000 in 1928, when the tide to France was running so strongly. Increase in gold earmarkings at this time is due to window dressing by some of the European central banks.

Further recession in trade is noted as the year closes, but it has not on the whole run beyond expectations. The steel industry has fallen to around 30 per cent. of capacity, with the usual holiday shutdowns, but the trade continues hopeful of an early upturn. New orders are still on the upgrade. The railroads are still suffering from reduced traffic. Their November earning statements show a drop of between 25 and 30 per cent. compared with a year ago, which is about the average monthly decline for 1930. December earnings were probably fully as poor as those for November.

An interesting experiment is being undertaken by the railroads, led by the large western lines, to combat loss of passenger traffic to the motor buses. Passenger fares allowed by the Interstate Commission average about 3½ cents a mile, and numerous railroads have announced voluntary reductions to 2 cents a mile—a rate basis prevailing before the railroads were taken over by the Government during the war. Freight traffic tariffs have been whittled away for several years, and probably further cuts in that direction would not move much more goods.

New capital issues have been scarce and promise so to continue until a healthier bond market develops. A great volume of new financing is dammed up at the investment houses, and it will pop out at every opportunity, probably often enough to retard the development of a good market. Under present conditions only gilt-edged loans are readily absorbed. The Treasury will probably ask for tenders on a large bill issue shortly.

FRANCE.

Politics — Oustric Inquiry — Money — Industry.

(FROM OUR CORRESPONDENT.)

PARIS, January 7.

THE extraordinary parliamentary situation continues to absorb the attention of the whole political world. Speculation is becoming intensified every day as to what the first two or three weeks of the session may bring forth. The last elections, on the actual results, undoubtedly gave a small nominal majority to the Moderates over the whole of the rest of the Chamber, Socialists and Communists included. A French majority, however, is of a somewhat fluid character, and (of late years, in particular) depends largely on the vote of a fairly substantial mass of deputies belonging to the parties on each side, at the point of junction between Ministerialists and Opposition. For some time past the key position has been held by the Loucheur group of 51 deputies, known as the Radical Left. During the Tardieu Ministries a substantial majority of this group consistently supported the Government. When M. Loucheur was dropped from the Tardieu combination at the beginning of 1930, the minority voting with the Opposition became rather larger. M. Steeg's success in forming a Cabinet became possible only when he secured the support of a further portion of the group, and also succeeded in detaching a portion of the *Republicains de Gauche*, a neighbouring group of 64, in which a former Premier, M. Georges Leygues, was prominent. The present Cabinet of 30 members includes seven adherents to each of these groups, who thus constitute practically one-half of the entire Ministry. How fragile is the hold of the new Ministry on the *Republicains de Gauche* was seen from the fact that only five of their 64 members supported the vote of confidence which the new Government secured by a majority of seven votes, while six abstained. The split in the Radical Left group has certainly been intensified in favour of the new Cabinet, but only 24 of its 51 members voted for M. Steeg. The importance of these details lies in the fact that on the present very slender majority largely depends the fate of the disarmament negotiations.

M. Steeg's real weakness, however, lies in the fact that he is absolutely dependent for his majority on the Socialist Party—the party which represents the Second International. Now, the Socialist leader, M. Léon Blum, has already made it clear that, whatever may be the consequences, the 106 Socialist votes will not be available in future, any more than in the past, for the purpose of enabling the Government to secure the passing of the customary military and colonial credits included in the Budget. In this the Socialists will remain faithful to their oft-repeated slogan: "Not one sou or one man for national defence." M. Blum is confident that when the war credits come to be voted, M. Steeg will find a ready majority in the Nationalist and Moderate group sufficient to secure the national defence. Old parliamentary hands remind him that in 1896, when the Moderate Republicans in the Senate wanted to get rid of the *Bourgeois Cabinet*, they did not hesitate to refuse the credits demanded for the Madagascar expedition, and that any hopes based on the belief that the present Chamber will be found to possess a conveniently exchangeable majority of the kind suggested are almost certain to be proved vain within the next few weeks.

The more or less sensational developments in connection with the Oustric affair during the past few days confirm the belief that the inquiry insisted on by M. Daladier and other prominent Radicals, when they still formed part of the Opposition, is proving a boomerang that may prove fatal to the new Ministry. The Minister of Finance has furnished the commission with a list showing that out of 441 applications for the introduction of foreign issues to the Bourse, politicians intervened in 45 cases. A sub-committee appointed by the Inquiry Commission went this morning to the Ministry of Finance to examine the various dossiers in question. Dr. Basset, a member of the Chamber, has notified his intention to interpellate the Government on "its policy of hushing-up the Oustric scandal." Opposition journals are asserting that, judging by what has already come to light in this connection, the outcome of the inquiry may be the trial of several of the persons implicated before the Senate sitting as the High Court of Justice.

The lowering of the Bank of France discount rate on January 2nd from 2½ to 2 per cent. was the direct outcome of the similar step taken on Christmas Eve by the New York Federal Reserve Bank, the effect of which would have exposed this market to the risk of substantial entries of gold from New York, as well as from London. With the franc at a premium on both the dollar and the pound, further large inflows of capital to this country became a practical certainty. The harmful effect this would have on the situation here and elsewhere, as soon as the end of the year requirements were satisfied, was keenly realised by the French financial leaders, and last Friday's step automatically followed. The constant increase latterly of the French stock of gold has for some time past been giving rise to nervousness here. Nobody, however, appears prepared to put forward any valid remediable proposal, and it apparently may be taken for granted that the solution of the problem must be left to the natural working out of the factors involved. The wisdom of the reduction of the French rate was seen in the improvement in sterling which immediately followed, but it may be seriously questioned whether, in the first place, this improvement is likely to be maintained, in view of the general complexity of the situation, and secondly, whether some much more radical measure, taken in common by the world's great national banks of issue, is not urgently called for. The French note issue was increased by over 1,000 million francs last week, to the new high level of 76,436,000,000 francs, and the total of the bank's sight engagements reached for the first time over 100,000,000,000 francs. This was to some extent due to demands for notes for end of the year purposes, but there is reason to expect, in view of the large parcels of gold still awaiting shipment here, that this total is likely to be still further increased, rather than reduced.

Heavy industry is at last beginning to feel more directly the effects of the world-wide depression. Iron

and steel production figures for November, which are issued by the *Comité des Forges de France* this week, show a sharp drop in output under both headings, and it is expected that the index of production as a whole during December, which is due within the next few days, will reveal an appreciable decline in other directions also. The November output of pig iron totalled 782,000 tons, against 827,000 tons in October, 845,000 tons in November last year, and monthly averages of 808,000 and 832,000 tons during 1929 and 1928. The November output was still, however, well above the monthly average in 1913, which was 756,000 tons (including that of the Alsace-Lorraine plants, then in German hands). Crude steel production totalled 706,000 tons, against 797,000 tons in October, 789,000 tons in November, 1929, and monthly averages of 808,000 and 792,000 tons in 1929 and 1928, and of 581,000 tons in 1913. The November figures do not, of course, reflect the further cut of 10 per cent. (based on the October, 1929 totals, and bringing the total cut since then up to 30 per cent.), which was decided by the European Steel Cartel in December, and which is to become effective during the first quarter of this year. There are indications, however, that many plants, including the Denain et Anzin Company and the *Acieries du Nord et de l'Est*, have already begun to slow down their output. Realised profits by the French metallurgical concerns during the past year are fully equal to those of 1929, and in many cases larger, and dividends have been easily maintained. Under an agreement between French, German and Saar producers, the latter will sell exclusively to Germany during the first quarter of this year, which will give the French, through the absence of Saar competition here, an appreciable increase in their production quota. French producers complain bitterly of the handicap they have in the export market, owing to wholesale dumping by other countries, of the continued heavy taxation on their industry and of the paucity of the preferential tariff rates accorded in this country, as compared with those enjoyed by their Belgian competitors.

GERMANY.

Ruhr Wages — Communist Activities — Polish Timber Agreement — Ost- und Uebersee-Produkte A.G.

(FROM OUR CORRESPONDENT.)

BERLIN, January 6.

THE wages agreement in the Ruhr mines expired just before the elections, and was extended to the end of the year to avoid an aggravation of the political tension. An attempt to bring the parties to an agreement was made last week without success. They have till January 7th for further attempts at conciliation, but the Communists would not wait for the completion of these negotiations. Since the Berlin metal strike, last summer, they have been busy with an attempt to organise a union of their own in opposition to the Socialist union, but in spite of the discontent caused by the reduction in wages, and especially by the unfavourable outcome of the Berlin strike, they have so far not succeeded. The opportunity offered by the new conflict in the Ruhr therefore seemed very inviting.

It is already clear that the leaders of the Socialist and Christian unions are prepared to accept a moderate wage cut of, say, 4.5 per cent. The Communists, of course, maintain that this is a betrayal of the workers, and they ordered an immediate strike at the end of last week. In some districts this order was practically ignored, but in others it was extensively obeyed, and in some important mining towns more than half the workers were out on January 2nd and 3rd. The proportion of strikers over the whole coalfield averaged 12 per cent., but by January 5th it had fallen to 7 per cent. As a strike which once begins to crumble away is doomed, the Communist agitation may be considered settled. That is very important, since, if the Communists had succeeded in carrying with them a majority of the miners, the position of the Socialist

leaders, not only in the miners' union, but in all other unions, would have been severely shaken. As their decisive influence in the unions has hitherto been the most important bulwark of the Social Democrats against the Communists, this would have altered the very unstable balance of political power very much to the disadvantage of the constitutional parties. The Communist failure, on the other hand, will greatly strengthen the position of the Social Democrats, provided a new wage agreement or arbitration award not too unfavourable to the workers is reached.

It is, of course, by no means certain that the parties will agree or that the arbitrator will find himself in a position to give an award. If neither is achieved, there will be a strike, and, in addition to the exceedingly serious economic consequences of such a struggle, it will provide the Communists with a very favourable field for agitation. The Government are in a particularly difficult position, because they appeared at the time of the November price reductions to hold out hopes to the mineowners of a lowering of wages, while they aroused expectations among the miners that the wage cut would be compensated by a cut in prices, and this has only been brought about in a very imperfect degree.

The German-Polish timber agreement expired on December 31st. Its history and its fate are very significant of the development of economic relations between Germany and Poland. Soon after the beginning of the tariff war in 1925, it became apparent that each country was harming itself at least as much as its opponent. The export of timber to Germany is a very important item in the Polish balance of trade. Germany, therefore, tried to check the import of Polish hewn timber as far as possible, though Polish logs were too essential to the German saw-mills to be interfered with. It became, however, apparent that the timber-using industries in Germany could not do without this material, so Germany abandoned the idea of attacking her opponent in this particularly sensitive spot. First by administrative orders, and later by means of an agreement which gave Germany certain advantages in return, a large quota of Polish hewn timber was admitted into Germany. The agreement was only to run till December 31st, in the hope that by then the whole matter would be regulated by a trade treaty, but the treaty has not yet been ratified by either party. Meanwhile, the agreement might have been simply prolonged, but there was no motive on the German side, as there is no longer any question of timber shortage. The demand even for such qualities as were formerly obtained from Poland, reduced as it is by the depression, can now be abundantly met from home sources and from imports from other countries. Moreover, German forestry is asking for protection as prices have fallen 25 to 50 per cent. These economic considerations have undoubtedly

had a great deal to do with the failure to prolong the agreement, but the political atmosphere at the moment is highly unfavourable to an understanding. Conversely, the termination of the agreement introduces a fresh source of irritation into German-Polish relations.

The economic condition of Germany at the turn of the year illustrates the conclusion drawn by the Reichskreditgesellschaft as the result of investigation, that borrowing countries, owing to the heavy burden of debt, are more severely hit by the depression than countries with a surplus of capital. Industrial production, which has fallen about 33 per cent. below the 1929 maximum, began, as in other leading countries, towards the end of 1930 to slacken its rate of decline. According to the indices, the falling off in production has been less than in the United States and about the same as in those other European countries which are importers of capital, but greater than in Great Britain and other European lending countries. It is not apparent yet whether the lowest point has already been reached, but it seems more likely that the decline will come to an end during 1931 at the latest. It depends first and foremost on the capital movements of the New Year whether and in which countries the downward movement comes to an end, and how long the trough of the depression is to last.

An announcement by the DD Bank at last makes available fuller particulars of the constitution of the A.G. für Osthandel, which has meanwhile altered its name, to correspond with that of its English sister company, to "Ost- und Überseeerzeugnisse A.G." The Deutsche Bank had given up its 22 per cent. participation in the Osthandels A.G. to the Eastern and Overseas Products Company in exchange for shares in the English company, but this exchange was subsequently revoked, without loss to the English company. It is not yet known how great the loss was to the Osthandels A.G., as it is only a holding company and most of the losses will appear in the accounts of the subsidiaries. Nor is it known how great a volume of debt has been remitted by the Deutsche Bank, but it is assumed that the total losses of the Deutsche Bank on this transaction will amount to about 30 millions.

The balance sheet of the Ost- und Überseeerzeugnisse A.G. as at March 31, 1930, has only just appeared and shows a loss of 6.4 millions. After transferring to profit and loss a reserve of 3.55 millions there remains a deficit of 2.88 millions, on a share capital of 6 millions. The company had actually distributed dividends at the rate of 15 per cent. in the two preceding financial years. The prodigious losses, which even led to changes of personnel in the management of the Deutsche Bank, seem to be due to three principal causes: the fall in the price of the goods which formed the main object of the company's trade (especially Russian flax, Danubian barley, Soya beans, and Siberian butter and eggs); bad debts; and heavy expenses due especially to the extensive organisation of subsidiaries in innumerable countries. The company is now being gradually liquidated and it has succeeded in transferring some of its subsidiaries to other interests. The company counts on receiving a further eight million marks as the proceeds of liquidation.

AUSTRIA.

Budget — Prices — Unemployment Insurance —
Industry — Foreign Trade — Money — Stock Exchange.

(FROM OUR CORRESPONDENT.)

VIENNA, December 19.

THE first preoccupation of the new Parliament is the budget; and this shows no sign of the retrenchment which is so urgently needed. In this respect the estimates of the municipality of Vienna, which amount to nearly a quarter of the State budget, are no better. The municipality desires to increase its expenditure from 536 to 550 million schillings and its revenue from 490 to 502 millions; the deficit of 48 millions is to be covered out of

loan proceeds. The notorious municipal rates of the city are being maintained at their full height; they are to bring in 192 million schillings or 4.16 millions less than in 1930. This reduction is not due to alleviation of taxes but to a court decision that the city taxes on foodstuffs are unconstitutional.

This gigantic expenditure of the municipality of Vienna would not be possible out of revenue from local rates. The most important source is the city's share of the Federal taxes, which amounts to 137.7 million schillings, or 9.3 millions more than in 1930. This allocation is the cause of the dispute which is now being waged over the division of taxes among the provinces. In view of the constitution of Austria as a federal state, the individual provinces and also the municipalities receive a considerable share of the federal taxes. On the other hand, the extent to which they can levy local rates and taxes is limited, while the right which formerly existed in several countries of supplementing the State taxes has been practically done away with. Most of the direct taxes, as well as the tax on beer and the merchandise turnover tax, are federal taxes in which the provinces and the municipalities participate.

In the year 1929 Vienna received 138 million schillings, and all the other provinces and municipalities together only 137.5 millions. The per capita quota of Vienna in the general taxes amounts to 74 schillings against only 30 to 36 schillings for the other participants. This relation is now to be changed on the basis of a Bill before Parliament. Vienna's share is to be curtailed by 42.5 million schillings in favour of the other members of the federal state. This will, however, lead to little, if any, economy, as it means nothing more than a redistribution among the participants of the taxes which are being squeezed out of the public. There is scarcely any hope of a reduction of taxation in the immediate future. Revenue from taxes fell in September to 83.6 million schillings, against 92.6 millions in the preceding month. It is a striking symptom of the crisis that the proceeds of the consumption tax amounted in September to only 8.3 million schillings in comparison with 13.3 millions in the preceding month, and the regression still continues.

The revenue of the Federal railways is also shrinking, and for the first ten months of the year the decrease in the revenue of the federal railways amounts to 40.6 million schillings, so that the railways must be prepared for a substantial deficit. The income of the Post Office is also far short of the estimate.

Burdensome taxation is adduced as the chief obstacle in the way of systematic price reduction in the manner employed in Germany and Italy. It is observable, however, that the prices of many articles have fallen considerably, and very much more than is suggested by the published indices, as the official market prices are no longer typical. In order to make sales against cash, merchants are prepared to make big concessions in the matter of price, and special sales and bargain sales are the order of the day.

The contributions to National Insurance, which must be paid out of production costs, already amount to 500 million schillings in the current year. The serious and continually increasing unemployment means augmented claims for benefit. At present there are 238,000 unemployed in Austria in receipt of benefit, or about 33 per cent. more than in the corresponding month of last year. The Government itself is counting upon unemployment figures of 320,000 to 350,000 in the coming month. In principle the unemployment benefit is paid equally by the employers and the workers in the form of contributions, but the contributions can no longer keep pace with the increasing number of claims, and advances by the State amounted in the year 1930 alone to 50 million schillings, which is equal to all the advances made in the five preceding years together. As the State cannot advance more than 100 millions without endangering the budget, the contributions of the employers and workers must be increased further, which means a fresh burden to industry of 54 million schillings a year. Even with this strain upon all sources ends can be made to meet only if benefits are reduced, and upon this point lively disputes are taking place.

The position of industry has become worse; more and more factories are having to close down, while others are shortening hours. Output of crude iron in October was only 23.5 per cent. of capacity, crude steel 45.8 per cent., rolled goods 54.1. In comparison with the previous month this represents a decline of 30 to 45 per cent. In comparison with the corresponding period of last year there is a decline of at least 50 per cent. It is true that the number of orders unfilled has increased somewhat, and it is believed that the end of the year will see the close of the worst part of the crisis in the heavy industries. In the coal mines there is some animation of a seasonal character, and the same can be said of the textile industry. On the other hand, sales in the brewing industry, which was very busy until quite recently, have fallen off seriously. In view of the general shrinkage of purchasing power, retail business is exceedingly quiet, though the turnover of Christmas business is not altogether unsatisfactory.

The bankruptcy figures are again bad. As early as October the number of insolvencies had already reached the total for the whole of 1929, and as the proportion of old and prominent firms in insolvency has increased, the liabilities, too, are larger. Foreign trade is developing in much the same way as the foreign trade of most European countries. The balance is somewhat better, and the deficit is becoming smaller, but only at the cost of shrinkage in turnover. In October, imports sank to 219.9 millions, or 4.2 millions below the preceding month, while exports rose by 2.7 to 171.9 millions. In comparison with October, 1929, imports were 73 millions lower, and exports 31 millions lower, so that the October deficit of 48 millions was 42.6 millions or about 45 per cent. lower than that of October last year. For the first ten months the value of imports was 15 per cent. less, and of exports, 20 per cent. less than in the corresponding period of last year.

Now that the political troubles are over, financial affairs have again recovered from the very slight disturbance they suffered, and returned to normal. Savings deposits, which showed a decline in October, are again moving upward. The demand for money finds expression in the bigger call on the National Bank, whose bill portfolio amounted to 129 million schillings at the end of November, which is the highest level for the last half-year, and is nearly 30 per cent. higher than the level at the end of October. The call was met without greatly reducing holdings of foreign exchange. The stagnation in industry prevents excessive tension, so that even the decline in short-term foreign loans, which, for 1930, is estimated at 15 per cent., is not specially noticeable. The call from the Stock Exchange for monetary accommodation still remains negligible, but share prices in general are being maintained. It is characteristic of the stock market at present that, for instance, the announcement that the State Railway Company will begin to pay dividends again, and has at its disposal cash equal to the present market value, has had no influence upon the price of this share. There is some movement in regard to pre-war State loans, as speculators are playing upon the proceedings at the Paris pre-war debt conference. Up to the present, however, nothing definite is known in regard to the silver rentes, the non-guaranteed loans, and the preference shares of the railways, for the service of which the State has assumed responsibility.

NORWAY.

Tariff Agreement — Foreign Trade — Industry —
Bourse.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, December 24.

AT the invitation of the Norwegian Government a conference has recently been held in Oslo with the object of discussing the future customs policy between Belgium-Luxembourg, Holland and the three Scandinavian countries. The negotiations were concluded on December 22nd, and an agreement has been signed, according to which the Governments of the countries mentioned above

pledge themselves not to increase their customs tariffs without previous notice. An additional memorandum has also been drawn up and signed, the gist of which is a declaration from the signing Powers that they are willing to enter into further negotiations regarding this question, and that they are prepared to support the endeavours that may be made towards a free and unhampered exchange of commodities between the countries concerned. It will be seen that this programme corresponds very closely with the principles maintained by the League of Nations on this subject, and in his closing speech at the Conference, Mr Mowinckel, the Norwegian Premier, expressed the hope that the results of this Conference might be of practical importance, not only to the countries who had been represented, but also to other nations in Europe. He went on to say that, although the members of this new Customs Union belong to the small Powers of Europe, it should be remembered that their mercantile fleet ranked among the foremost of the world, a fact which ought to be taken into account when judging its importance.

The statistics of our foreign trade for November again reveal an unfavourable development, the import surplus having risen from 34.4 million kroner in November last year to 49.5 million kroner this year. The total value of imports during the first eleven months of the current year amounts to 996.2 million kroner, as against 985.7 million kroner for the same period last year, while the corresponding exports figures are 693.7 million kroner, against 634.1 million kroner. This means an aggravation of our adverse trade balance of about 70 million kroner, which is chiefly accounted for by the item "Ships bought from abroad."

The general business outlook has not altered much during recent weeks. Trade and industry are waging a bitter fight against depression and other kinds of difficulties, as the world-wide slump in trade becomes more and more evident. Apropos the increasing restrictions in output, which have been put into effect in a large number of Norwegian mills, the Norges Bank, in its November review, points out the importance of introducing effective reductions in production costs. An improvement can hardly be expected, the report goes on to say, during the first half of next year, even if world prices should take an upward tendency, just because our production costs have not yet been brought into the correct relation to the new level of prices.

The pressure of adverse conditions is felt not only by those engaged in trade and industry, but also by farmers and forest owners. After long and difficult negotiations, an agreement has at last been reached in the forest industry, according to which the tariffs agreed upon are to remain in force for two years.

Operations on the Bourse have been much influenced by the uncertain conditions in the United States, especially as regards Government and municipal bonds, of which considerable amounts have been offered in New York at rather low rates. Shares have not attracted much interest during the last week or two, but the rates generally have kept steady.

SOUTH AFRICA.

Agriculture — Future of Native Protectorates —
Parliament — Railway Rates.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, December 10.

DURING November the Cabinet agreed that the Land Bank should advance £1,150,000 to farmers to enable them to surmount their more pressing difficulties. The advances are to be regulated by provisions which should afford adequate security, and the Bank's business is very carefully managed, as a rule. There is no doubt that many farmers, even among the most reputable and hard-working, are having a hard time. In addition to price difficulties, which are international, the season will be a bad one over most of the Union. In many districts there has as yet been no satisfactory rain, and that means a serious shortage of crops, whatever may happen now.

Crops planted in mid-December can hardly ripen before the high-veld frosts.

General Hertzog, addressing the Free State Nationalist Party Congress, at Bloemfontein, on his return from the Imperial Congress, explained that the fall in prices was a world-wide phenomenon, and likely to be permanent. He said, *inter alia*, "... there is no better advice to be given to our farmers to-day than that they must produce at the lowest prices possible, and must be prepared to receive the lowest prices in the overseas markets. Farmers must, at any rate for a year or so, regulate both their productive and personal expenditure on these principles. ... Conditions will readjust themselves as far as the farmer is concerned, but will do so to his satisfaction only with the industrious co-operation of the farmer himself." The Prime Minister went on to speak of bonuses on marketing "and other charlatan devices." In other parts of his speech he referred to the value of the British market for South African exports, and trod rather heavily on Republican propaganda. The speech has been received with "modified rapture" in Nationalist circles.

In an interview with the representative of *Die Burger*—the leading Nationalist paper in the Union—General Hertzog made the suggestion, much more welcome to his followers, that the control of the native protectorates of Basutoland, Bechuanaland and Swaziland should be handed over to the Union as soon as possible. This question, should it ever become live and current, is bound to prove very difficult. There is no doubt that the natives themselves have a very real and deep-seated desire to remain citizens of the Empire in the present direct sense. There is possibly some exaggerated fear of the Union Government in the native mind, but any Africander—of Dutch or British descent, or both—is usually only too eager to enlarge on the fundamental differences between the views on native governments of Europeans in Europe and their cousins in Africa.

The opening of Parliament will probably be arranged so that the new Governor-General, the Earl of Clarendon, can be present. It is anticipated that the Minister of Justice will introduce a Bill to debar women (now voters) from sitting on juries—possibly with special provisions for exclusively female juries in certain cases, such as juvenile cases and trials of offences against women. Dr. Malan, as Minister of Education, will seek wide powers for the control of appointments to staffs and of other administrative matters in connection with university and technical education. This measure is already provoking a storm. It is understood that Parliament may turn its inquiring, if not its critical eye, on the Provincial Councils—the first step in the direction of curtailing their rights and regulating some of their more erratic tendencies. There are also the three Native Bills of the Prime Minister, and proposed amendments to the Liquor Law, which would terminate the nominally "dry" condition of the natives in the inland provinces. This latter measure is fairly frankly in the interests of the wine and brandy producers of the Western Cape, and has but little relation to the unfortunate results of the existing laws, which aim at enforcing total abstinence on the natives.

Mr Charles Malan, Minister of Railways, recently opened the new line to the manganese deposits at Postmasburg. In the course of his speech at the ceremony, he emphasised the dependence of agriculture and base metal mining on very low railway rates. He said that in the year ended March 31st last 9,500,000 tons of low-rated traffic yielded 463d. per ton mile, whilst 2,910,000 tons of high-rated traffic yielded 3.52d. per ton mile. He maintained that any variation of high rates which would be useful to users of the goods affected would necessitate crippling increases in other rates. This is the view of his officials, working within the boundaries set for them by parties and on principles not always concerned with railway administration as such. Critics maintain that railway policy and rates should be overhauled *ab initio*.

Letters to the Editor.

GOLD: PRICES: WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In a letter appearing in your last issue Sir Charles Harris refers very kindly to mine, which appeared in your issue of December 13th. My own letter was an attempt to put the case regarding wages regulation in such a way as to reconcile the two opposing views, on the one hand of those who say that wages are too high, and on the other hand of those who say that wages should not be the first or the only rewards of industry to suffer a reduction.

I am glad that Sir Charles Harris agrees with much of what I wrote. I have direct evidence that "the other side" also agrees with a great part of it. Unfortunately my letter, owing to the necessity of compression, was not sufficiently clear to prevent Sir Charles Harris from falling into a partial misunderstanding of my statement of the case. The personal explanation is of no consequence; but it is, I think, so important to establish, if possible, the reconciliation of view on this fundamental matter of "industrial government" that I venture to offer the following further comment.

I did not wish to suggest the "pegging of real wages till times are better." On the contrary, I agreed with Sir Charles Harris to the extent that some wages should be reduced at once. I was trying to say that, because of the unreasonable relation of basic wage levels in different industries to one another, the "economics" of the situation demanded that we should take the step of reducing the wages in those industries which had the highest wage-level. And I added, in support of the views of the opposing party, that the consequential results of a reduction in wages to which they took objection were indeed serious, but that they were incidental and not fundamental, and that they resolved themselves largely into a problem of hastening the consequential price adjustments.

To put the point briefly: The basic levels of wages in different industries should be brought into more economic relation to one another. We can achieve this either by increasing the lower wage rates towards the level of the higher, or by the reverse process of reducing the higher towards the level of the lower. We are precluded from adopting the first course, because that would only prejudice still further the export trade on which we depend. As we must, therefore, adopt the second course of reducing to some extent the higher rates, we must do all we possibly can to meet the objections of the opposing party in so far as their objections are justified. They are justified to the following extent:—

It is not established that any *real wages* are too high for the community to bear, if only industry were better regulated. Unless and until that is established, even if temporarily some *money-wages* are so high as to upset the appropriate economic equilibrium, how do we justify the reduction of those money-wages if that means a reduction in their real value? As to the fact of such reduction in real value there is no question. Although it can be admitted that a reduction of wages will mean, in due course, reductions in the prices of the articles affected, and, therefore, a partial restoration of the former real value of earnings of the labour concerned, nevertheless there can seldom, if ever, be a complete restoration of the former real value of earnings; partly because the wage-earner has some recurring expenses at a fixed money figure, e.g., rent. Moreover, at the very best, such degree of restoration of real earnings as may occur at all can only occur, under present conditions, after a long period of time. And yet, while the fixed-money expenses of the wage-earner, such as rent, serve to reduce, to all intents permanently, the real value of his income, the real value of the remuneration of every kind of capital is actually increased in so far as price reductions do occur as a result of the reductions in wages. It may be said that such increase in the real remuneration of capital is often no more than a set-off to a previous decrease; but that is by no means always or wholly true as regards that part of the remuneration of capital which is in effect interest on loans. And as to the amount of this increased real income of the "fixed-money men," Sir Charles Harris has himself shown elsewhere that it is considerable.

These are the awkward consequences which I referred to in my previous letter as incidental but serious. As regards the remuneration of capital, Sir Charles Harris refers to the necessity for the precise performance of the long-term contracts attaching to the loans of capital for industry. But is it within the terms of such contracts that the *real remuneration* of money lent at fixed rates should be increased whenever reductions occur in the general cost of living?

It is not without advantage to look at the position from another point of view. In so far as the present unemployment and industrial depression are not due to purely temporary causes but are chronic, the responsibility must lie with

the community as a whole. It cannot be laid solely to the charge of the wage-earners; and as present rates of wages have been determined by agreement between those who earn remuneration by working and those who invest capital for profit, we must be certain, before we demand reductions in agreed wages, that we are in fact compelled, in the interest of national industry, to confine the necessary sacrifice, however temporary, to those who earn remuneration by working. Are we certain that the sacrifice must be so confined? It may safely be said that the moral sense of the community leans in fact to the view that, if a temporary sacrifice is necessary, it would be better that it should be borne rather by those whose remuneration arises from the loan of capital, if only that alternative were practicable and equally effective.

It is here that it becomes important to envisage rates of wages in relation to the country's maximum potential "productivity," using that term in the fullest sense. There is, it may be hoped, common ground that maximum productivity cannot be achieved unless the basic levels of wages in different industries are brought into more appropriate relation one to another. The attitude of the community to those directly concerned should therefore, briefly, be somewhat as follows:—

The present position of industry reveals a disability which, although partly due perhaps to temporary causes, is to a considerable degree chronic. In so far as it is chronic, an important predisposing cause is the uneconomic relation of basic wage levels in different industries one to another. We cannot raise all wages to the level of the highest without serious prejudice to our export trade, and we must therefore perforce effect some reduction in the highest. We are confident that it will thereafter be possible to raise the lowest to such a level as further experience will show to be the appropriate "general basic level."

There remain the objections mentioned in the latter part of paragraph 5 above. Sir Charles Harris's answer that the accumulation of capital under conditions of industrial prosperity will produce the remedy automatically is, I suggest, inadequate. That remedy is not certain, nor is it sufficiently prompt. Does it not appear to be desirable that, besides a system of wage regulation, we should adopt generally a means of securing in practice a more equitable fulfilment of long-term money contracts? And if it is theoretically desirable, are we satisfied that it is quite impracticable?—Yours faithfully,

E. M. D.

Celerina,
December 29th.

BUILDING SOCIETY INTEREST RATES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I thank you for your most interesting note on building society rates in your issue of January 3rd? I would, however, like to add one word. The writer gently dissents from a view which I recently expressed with regard to building societies and the trade cycle. He writes: "Mr Bellman's belief that, in the main, building societies appear to be largely immune from the varying phases of the trade cycle cannot entirely be borne out by available evidence." Then almost immediately he refers, apparently as part of the "available evidence" which supports his contention, to "the fall in interest rates generally during the last twelve months—which, incidentally, is one of the phenomena of the present trade cycle."

To this I reply: First, there is an omission of an important qualifying sentence which appeared in my statement, namely, "This (the considerable immunity) is particularly true so far as the prejudicial effects are concerned." Secondly, is "the fall in interest rates generally during the last twelve months" one of the phenomena of the present trade cycle? If you are alluding to short-term interest rates you may be justified, in the main, in saying "Yes." But if, as you would seem to imply, you are also referring to long-term interest rates, the reply, I venture to suggest, should be somewhat less unequivocal. For were not the recent high interest rates (long-term) a heritage of the war and not part of the ordinary movements of the trade cycle? And is not the current downward tendency mainly due to the gradual return to "normal" conditions, though admittedly there may have been some slight acceleration as regards long-term interest rates resulting from the most recent phase of the trade cycle? And I would add that building societies are frequently, if not invariably, more largely concerned with long-term rather than short-term interest rates.—I am, Sir, your obedient servant,

Abbey Road Building Society,
Baker Street, N.W. 1.
January 5th.

HAROLD BELLMAN.

CHINA AND THE TRADE REVIVAL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The course of prices during the last eighteen months should give one example of the *regulated currency* which many economists are urging us to adopt. The fall in the value of silver has approximated to the fall in the commodity price level. So China with its silver currency has experienced what other countries would experience if they could regulate their currencies as monetary theorists desire.

The fabric of China's internal commerce should be entirely untouched by the slump. The Chinese merchant has not seen his stock values shrink day by day, the Chinese manufacturer has not watched the prices of his products diverge farther and farther from the purchasing price of his customers.

Quite unconnected with monetary theory is the important new prospect that is spread before China, the prospect of government and peace. The trade of the country has expanded steadily through an era of increasing banditry and warfare; how quickly can it expand if the troubles are settled?

China, perhaps alone in the world, can look forward to the New Year confident that her prosperity will increase. Can we believe that China's increasing prosperity will infect the world?

The temptation to say "No" besets every man who has traded with China and experienced the difficulties caused by the fall in exchange. But the fall in exchange has two merits: it calls immediate attention to the necessity of exchanging more produce in return for a smaller quantity of foreign manufactured goods, a necessity latent in every other country, and it has saved from ruin the Chinese merchant up-country. The merchant who lives, say, in Ningpo and buys goods in Shanghai and warehouses them and distributes them in southern Chékiang would have suffered serious capital losses if China had had a gold standard. His counterparts in other countries have suffered this loss.

It is the existence of trade machinery unimpaired by the slump that leads to the hope that prosperity may come swiftly to China and prove the nucleus of a revival in world trade.

—Yours, etc.,
74, Broadhurst Gardens, N.W. 6.
December 30, 1930.

GEOFFREY ELLINGER.

SPECULATIVE INVESTMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of November 8th there appeared a letter from Mr Harold C. Cowen, taking me to task in my book "Investment" and in other letters which have recently appeared in the *Economist* for enumerating a series of "requisite conditions for speculative investment" which were virtually incapable of materialising. To quote Mr Cowen:—

"It must indeed be a red-letter day when one perceives an ordinary share—preferably a market leader—of a 'strong and promising company, in a recently depressed but reviving' industry, offering high yields and earnings (8 per cent. to 10 per cent.) on market price, with 'strong finances' and 'good management,' in the 'second year of revival.' *Inter alia*, it is also important that short- and long-term factors should be simultaneously favourable."

I would venture to take this opportunity of suggesting to your correspondent that the red-letter day fulfilling my conditions has now arrived in one (but only in one) particular industry, namely, that of gold mining, particularly on the Rand. I suggest that shares in this industry will henceforth enjoy a minor boom. The *Investors' Chronicle* index for gold shares is now 79.8; let its future movements be the test.—Yours faithfully,

L. L. B. ANGAS.

Books and Publications.

THE DAWN OF THE MODERN AGE.

THE latest volume* in the series "Peuples et Civilisations," a world history to be completed in twenty volumes, covers the period from 1815 until just before the outbreaks of 1848, and therefore deals with the uneasy years succeeding the Napoleonic wars and the settlement of Europe at the Congress of Vienna. It was a period in which the mani-

* "L'Éveil des Nationalités et le Mouvement Libéral (1815-1848)." Par Georges Weil. Pp. 592. Paris. F. Alcan. 1930. 60 frs.

festations of social personality in the shape of a vigorous national movement in countries such as Belgium, Poland and Hungary, the struggle against governmental restrictions and tyranny in Great Britain, France, Spain, Sweden, Switzerland, and the combined action of these two forces in countries such as Germany, Italy and Croatia, went hand in hand with economic dislocation occasioned principally by the industrial development of Great Britain. Europe, itself troubled by these upheavals, was increasingly reacting on the rest of the world. Asia, Africa and Oceania began to feel the first effects of the westernising impulses which have had such a striking later development. America, on the contrary, began at this time a career of independence, which did not, however, mean economic isolation.

It is a story which has often been told, but it retains special significance for our own day in which the problems of nationalism, liberalism and industrial and commercial expansion, then first beginning to trouble humanity on a world-wide scale, have by no means yet been liquidated. Professor Weill has made a valiant effort to do justice to the very many topics which fall to be discussed in such a survey. Sketches, necessarily brief, are given of the main political and economic developments not only of all the European countries but also of the new world of North and South America. Cultural developments, in the various spheres of literature, religion, law, philosophy, art, architecture, music, science, technology, medicine and education, receive some mention and are related to the main themes of the book. If the relation cannot always be seen as clearly as might be desired, it is nevertheless very useful to have in one volume the materials for a composite picture of the many-sided developments which were enriching human life and building Western civilisation in the form we know it to-day.

The mere fact that the book was planned on such a scale made it inevitable that it should have the characteristics of a somewhat bald summary even if the fact that it is a unit in a world-history did not require that it should primarily be a condensed presentation of the views of the best authorities. Although it fulfils this purpose well, the lack of vivid colouring, of large generalisations or of any very original philosophic viewpoint will probably make it seem somewhat dull to the average reader. This would be unfortunate, for it is the product of a mature scholarship; comprehensive, cool, impartial and urbane.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Breaking Down the Tariff Walls. By Dr. Wilhelm Grotkopp. Translated by Erich Schadow. (London) Ernest Benn, Ltd., 151, Fleet Street. 6s. net.

The original of this very interesting book was reviewed at length in the *Economist* of March 1, 1930.

Economia Politica Contemporanea. Vol. I. and Vol. II. (Padova) Casa Editrice Dott. A. Milani.

A collection of papers on economic subjects by distinguished economists of all nationalities, each specially written for these anniversary volumes in honour of Professor Camillo Supino. The texts are in Italian, English, French or German.

The Nation's Housekeeping. By Sir E. Hilton Young. (London) British Broadcasting Corporation, Savoy Hill. 2d.

A pamphlet of useful statistics and explanations for the help of listeners who propose to follow the talks on finance which are at present being broadcast on Wednesday evenings.

The History of the Union Bank of Scotland. By Robert S. Rait. (Glasgow) John Smith and Son, Ltd., 57/61, St. Vincent Street. 15s. net.

A handsomely printed and illustrated volume.

Economic History of the American People. By Ernest Ludlow Bogart. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 16s. net.

A valuable textbook which is so written as to be of interest to the general reader as well as the student.

An Appraisal of American Business Forecasts. By Garfield V. Cox. Revised Edition. (London) Cambridge University Press, Fetter Lane. 4s. 6d. net.

The author reaches the conclusion that as a group these forecasts are more often right than wrong, but that there is no evidence that their accuracy is improving.

Die Bilanzen der deutschen Kreditbanken, 1924-1930. By Dr. Willi Seegardel. (Berlin) Wilhelm Christians Verlag, Unterwasserstrasse, 8.

A discussion, item by item, of seven years' development in the business of the German credit banks.

Auditing the One Pound Note. By James Murray. (Ballarat, Victoria) J. Ewins and Sons, Pty., Ltd., 111, Sturt Street. 2s.

An address on currency stabilisation, with particular reference to Australia.

The South and East African Year Book and Guide for 1931. Edited by the Union Castle Mail Steamship Company, Ltd. (London) Sampson, Low, Marston and Company, Ltd.

Contains very useful statistics and a remarkable amount of general information.

The Banker, January, 1931. (London) Financial Newspaper Proprietors, Ltd., 20 Bishopsgate. 2s. 6d.

Includes an editorial survey of the present economic position of Great Britain.

NATIONAL SAVINGS CERTIFICATES.

The presentation to His Majesty the King of a replica of the thousand millionth National Savings Certificate sold in Great Britain marks a very definite milestone in a movement which has had no parallel in this country. Possibly, it would be well not to enquire too closely into the origins of the movement during the war, when the State may have been less concerned with the inculcation of abstract thrift than with the most effective way of mobilising the small investor's funds for belligerent action. Again, when the war was over and the epoch-making decision was taken to extend the life of the National Savings Certificate (of which Lord Bradbury is credited with the paternity) from five to ten years, and to give the national movement a permanent character, expediency—in the shape of a vicious system of Treasury accounting—may have influenced the minds of the authorities, along with worthier motives. However that may be, the decision to identify the State with a "propagandist" savings organisation, and to offer the small investor something more than a bank deposit and less than a long-term security, has had results which, without qualification, must be regarded as beneficial to the community. In fifteen years, certificates of an initial gross value of £786,000,000 have been sold, and the amount still standing to the credit of certificate holders (including accrued interest) is about £500,000,000. A glance at the list of British Government securities will show that there are only two species of stock with a larger total outstanding to-day—Five per Cent. War Loan and Three-and-a-Half per Cent. Conversion Loan.

The success of the Certificate has, in fact, been due to two sets of influences. Firstly, it has been well handled by an organisation—the National Savings Movement—which has combined centralised and expert control with democratic voluntary service, and has founded nearly 30,000 "Savings Associations" in schools, places of employment, social organisations, etc., throughout the country. Those in control, further, have exploited the weapon of advertising, by means of leaflets, posters and the public Press, with a rare conjunction of "selling power" and good taste. Secondly, the Savings Certificate has proved to be a medium of investment suited to the needs not of one but of many sections of the community. It is a non-negotiable security, which can suffer no depreciation, since at every moment of its ten-year life it has a fixed value. It can be cashed at short notice at any time, but interest accrues upon it in such a way that its maximum yield is obtained only if it be held for a full ten years. Its denomination is conveniently low, and the poorest person can acquire it, without paying stamp duty or transfer fees, by easy payments of sixpence or even of one penny, through a voluntary Savings Association. The Savings Certificate has been taken as a model in Canada, Australia, India, Mexico and Russia (to some extent), while savings movements modelled on that of Great Britain have been set up in the Irish Free State, Northern Ireland and South Africa. That the Savings Certificate has had a decisive influence on the thrift movement is undoubted. What is its position from the viewpoint of general investment, with which these pages are more particularly concerned?

Since the war, the yield on long-term British Government securities purchased on the Stock Exchange has varied from 5½ per cent. (subject to income tax at 6s. in the £) in 1920, to under 4½ per cent. (subject to income tax at 4s. 6d.) at the present moment. During this time there have been three separate issues of Certificates, the first being available from the outset of the movement, early in 1916, to March 31, 1922, and giving a yield, if held to maturity, of £5 6s. 2d. per cent., free of tax; the

second, from April 1, 1922, to September 30, 1923, with a maximum yield of £4 19s. 6d. per cent., tax free; and the third, from October 1, 1923, onwards, yielding £4 2s. 9d. per cent., tax free. These yields have been calculated at compound interest, having regard to the dates at which interest has accrued. The interest on the three series of Certificates, at the end of each year of their life, is shown in the following table:—

* 3d. interest added at end of 1st year and every 4 months thereafter, and 1s. bonus at end of 10th year.

It is a familiar phenomenon, in the experience of savings organisations of every sort, that methods of investment which do not appeal to wealthy outside interests when money is dear, may be used as a temporary repository for floating resources when market rates are low. The building societies are experiencing this difficulty at the moment. The Savings Certificate, however, avoids the danger because, as reference to the table will show, its yield in the first few years of its life is, and has always been, low. From the point of view of a large investor, it is emphatically not a "short-term" holding. As an investment of medium life, however, its attractions are likely to increase with every fall in long-term general interest rates, and with every drop in the market yield of other gilt-edged securities. A few years ago, a Departmental Committee estimated that interests other than the small investor, properly so called, held about half the total Certificates then outstanding, but it has been found impossible to make any close statistical apportionment.

As reductions in the market yield of Government securities usually coincide with periods of cheap money,

Certificates Sold.	Date on which last Certificate of each 100 million was Sold.	No. of weeks to well 100 million Certificates.	Average Sales per Week.	Average Yield Obtainable* (Per cent. tax free).	Average Bank Rate during Same Period.

* On Certificates bought during each period, and held to maturity. † On Certificates bought March 31, 1922. ‡ On Certificates bought April 1, 1922, to September 30, 1923. § On Certificates bought October 1, 1923, onwards.

there may, in theory, be an indirect connection between money market movements and the sales of Savings Certificates to other than small investors. How far, in fact, do the figures show correlation between money rates and Certificates sales? By the courtesy of the National Savings Committee, we have been furnished with the dates at which every 100,000,000 of new Certificates were sold. On the basis of this information, we have compiled the table at the bottom of the preceding page.

Allowance must be made for numerous disturbing factors, such as the abnormally large sales of Certificates in the weeks preceding March 31, 1922, in order to "forestall" the change in the price and yield, of which over two months' notice was given. On the whole, there would appear to have been a tendency, after the war, for the average weekly sales to decline as Bank rate increased, though the effects of trade depression on small investors may also have been a contributory influence. The marked lowering of the yield on Certificates effected, in two steps, between April, 1922, and October, 1923, appears, thereafter, to have checked somewhat the demand for new Certificates. The table as it stands is not conclusive as regards the most recent period of all (from February, 1929, to December, 1930), since the latter includes both the "dear money year" 1929 and the "cheap money year" 1930. Fortunately, more detailed information is available. In the calendar year 1927, when Bank rate averaged £4 13s. per cent., the average weekly sales of Certificates were 858,000; in 1928, with a Bank rate of £4 10s., they were 1,004,000. In 1929, when Bank rate averaged £5 10s., some 1,002,000 Certificates were sold each week, and in 1930, with a Bank rate of £3 8s. 5d., some 1,123,000. The high money rate of 1929 thus synchronised with a check to an upward movement in sales rather than with a definite falling off, while in 1930, despite industrial depression, low money rates were accompanied by a fresh rise in the average weekly sales figures.

If allowance is made for the fact that the sales figures of recent years include re-investments by numerous holders of matured Certificates of earlier series, and that the propagandist work of the National Savings Organisation has been, if anything, even more vigorous than in earlier years, the conclusion is suggested that while there may be a certain movement of "outside" funds into Savings Certificates when money market rates are low, there is no evidence that the Certificate is being "exploited" to-day by wealthy interests on any considerable scale. Nor does it appear that the current interest yield on Certificates is unduly high, from the Treasury's point of view, having regard to the economic circumstances of the small investors for whom the Certificate is primarily designed. Doubtless, if a successful Five per Cent. War Loan Conversion operation were followed by a further decline in the market yield on other Government securities, this judgment might require fresh examination.

Recently, those responsible for the conduct of the National Savings Movement have been giving special attention to the question of "linking up" the Certificate with the facilities of the Post Office and the Trustee Savings Banks. We suggest that the time has come for them to go further, and to consider the provision of effective long-term as well as medium-term facilities for the small investor. At present, the latter suffers a decline in the rate of interest he receives, if he holds a Certificate for a month over as well as a month under the ten-year period. There is, however, no peculiar virtue in an arbitrary period of ten years. So far, the rights, offered to holders of matured Certificates, of exchange into longer period investments, such as Four and a-Half per cent. Conversion Loan or Four per cent. Savings Bonds, have failed to obtain any very widespread response. Some medium for educating the small investor in the more "permanent" forms of thrift is the logical outcome of the merited success of the Savings Certificate in the last fifteen years.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS

TICKET.
January 20.

ACCOUNT.
January 22.

THE markets started the week with a counterfeit presentment of increased activity, following the reduction of the Bank of France's rate last week-end. Domestic influences, however, proved unhelpful, and the better feeling quickly disappeared. A lengthy list of unfavourable external influences included the disappointing trend of sterling, a rumoured hitch in the Paris discussions between the British and French Treasuries, a heavy increase in the unemployment figures, and the fear that the labour troubles in South Wales and Lancashire were omens of coming friction over the readjustment of British industrial costs generally. Share prices, however, showed a gratifying stability, suggestive of sound technical conditions. For the present, however, it would seem that outside rather than inside factors must determine the course of business in London.

Gilt-edged stocks were strong on Monday under the lead of Old Consols, but the volume of trade was not up to expectation, and values subsequently eased on unsatisfactory news from the money market. Quotations were also affected by the reductions shown in the profits of the "Big Five" banks. Consol Fours suffered a sharp reaction, and Conversion Loans lost ground. India stocks were well maintained, the course of the Conference negotiations being favourably regarded, but Australians were heavy on the abrupt break in the exchange. Dealings in the new Liverpool Conversion 4½ per cent. Stock were done at 99½, underwriters being left with 68½ per cent. of the whole.

The foreign bond market, however, had a stronger tone. Though it was suspected that a special effort had been made to achieve the favourable San Paulo Coffee realisation results, the fact that these were somewhat ahead of schedule encouraged renewed demand for Brazilian issues generally. European stocks were steady, the Young bonds being in better demand. Among Far Eastern issues, Japanese loans were in request.

After a short-lived appearance of activity at the beginning of the week, home rails developed their customary lassitude. The New Year week's traffic figures were not good, though the fact that they followed an unexpectedly favourable series of Christmas-week figures was duly taken into consideration. In the foreign railway market dealers lowered quotations in expectation of the receipt of selling orders, but sentiment took a more favourable turn on Thursday, when B.A. Great Southern and Central Argentines made a fair recovery. Central Uruguay advanced sharply on a rumour of the Government's intended acquisition of the line. Canadian Pacifics were supported on the mid-week improvement in American rail values, and an encouraging revenue statement for the last part of December.

In the industrial markets, the carry-over revealed an open position of small proportions, an interesting feature being the disclosure of a bear account in British American Tobacco. There was a tendency to mark up international stocks, though the market did not find it easy to interpret the situation in New York. Among domestic shares, English Sewing Cotton obtained modest support on the maintenance of the interim dividend. Selective provincial buying of motor and road transport shares was specially marked in the case of Austins, Leylands, and Tillings. Electrical shares again attracted investment attention, Egham and Staines being particularly prominent in the supply group. Steel and engineering shares were steady, a reassuring view being taken of the outcome of the troubles in South Wales. Breweries showed no decided trend, but tobaccos were easier on the news that the Liverpool factory of the British American Tobacco Company was going on short-time following the imposition of increased Customs duties in China. In the stores group, Harrods failed to hold last week's rise. Rayon shares remained out of favour. Imperial Chemical made a slight recovery. Selling occurred of Dunlops on rumours of an impending reduction in tyre prices. The

Swedish Match capital announcement (discussed on page 80) was unfavourably received. The old shares were sold heavily to take up the new. Bank shares were easier, the extent of the reductions shown in profits last year coming as an unwelcome reminder of the ramifications of trade depression, while the reduction in the final distribution of Lloyds Bank was the more unsettling on account of its unexpected nature. Insurance shares were steady, with a few small gains, but business was of limited dimensions.

The rubber share market was uniformly dull, prices being easier, where changed, on the trend of the commodity. Price movements in tea shares remained adverse, though dealings were on the customary narrow basis. Oils, however, had a distinctly better tendency, Amsterdam turning a buyer of Royal Dutch and Shell, while news from America was mainly favourable. The increase of 2 cents a gallon in the price of petrol in Kansas City and of 5 cents in Detroit was regarded as an important bull point, and in some quarters the prophecy was expressed that oil, in view of the present comparatively satisfactory relation between supply and demand, would be the first of the world's important commodities to recover after the slump.

The mining share market enjoyed a fairly active week. Despite depressing influences from Paris, an upward tendency in Kaffirs persisted, and showed some signs of developing into a major movement. Northern Rhodesians were mainly dull, with few changes, but Rhodesian Anglo-American were a weak spot on the new capital proposals, which are criticised on page 82. Chartered were sold from Paris. Tin continued to improve on the Metal Exchange, and some of the shares were received back into partial favour. Panama advanced, but later lost the rise. Ashantis were a good feature, but Rio Tintos declined after a mid-week improvement.

NEW YORK.

The market was firm at the outset, sentiment being strengthened by the harder tone of some commodities, the increased strength of the bond market, and expectations of enhanced activity, in the next few weeks, in the automobile and steel industries. A reactionary tone developed, but the bears quickly became nervous and covered. Rails were strong, mainly on expectations of a fair seasonal gain in general trade during the early months of the year. Chemical issues, however, came under pressure on reports of price-cutting by some firms. Goodyear Tire were sold, before, but recovered on the declaration of an unchanged quarterly dividend. A new reduction in tyre prices is expected, but increased trade may take up any losses. Steel operations, which fell to 25 per cent. of capacity at the year-end, are now at 36 per cent. and are expected quickly to reach 40 per cent. The unfilled tonnage figures of the Steel Corporation, it is estimated, will show an increase of 200,000

tons for December. Oils were firm, the week's statistics revealing a fresh reduction in crude output and a decrease in refining activity, though stocks of petrol increased slightly. The first batch of investment trust reports shows heavy losses in some cases. Call money was easy all week at 1½ per cent.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

PARIS.

The earlier séances of the Bourse during the month of December showed no change in the general situation. The fall of the Tardieu Cabinet was not altogether unexpected, and had little effect on the market. During the second week, however, movements were irregular. The settlement of the 15th was effected with the carry-over rate at .5 per cent. Short selling induced the quotation of backwardation rates for certain securities. The improvement inaugurated at the opening of the second fortnight and brought about largely by bear covering, was of short duration, and the end-of-month settlement was devoid

INVESTMENT

by L. L. B. Angus.

(Author of "The Coming Collapse in Rubber, 1926.")

The publication of this book marks a new epoch in the science of investment for profit; no speculator, investor, trustee or stockbroker can afford to leave this work unread.

CONTENTS.

- The Business Cycle and its influence on the prices of all securities.
- How to detect the beginnings and endings of booms and slumps in single industries.
- Methods of forecasting the short-run market fluctuations which occur simultaneously every few months in the majority of ordinary shares.
- Rules for timing both buying and selling and for taking profits and losses.
- Investment policy to be followed by Trustees at different stages of the Business Cycle.
- Mistakes to avoid.

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."
Daily Telegraph: "The best book that has ever been written on investment with a view to capital appreciation."

Publishers: Macmillan & Co., St. Martin's Street, London, W.C.1. 187 pages. Numerous charts. PRICE 20/-

of interest. Money was quoted *au parquet* at ½ per cent. as at the end of September, and at 4½ per cent. in the *marché en Banque*. Transactions at the moment are of meagre dimensions.

BERLIN.

After the first week in December the Berlin Bourse suffered further declines. Prices fell after the middle of the month to a level far below even that which obtained during the September election crisis. The falls on foreign bourses, and especially the developments in the United States, exercised a great influence here, and the resulting offers of German shares by foreign holders were only absorbed with difficulty and at very low rates. The unfavourable influence of foreign stock exchanges was strengthened in Berlin by such domestic occurrences as the financial difficulties of the Prince of Pless and the announcement of a reduction in the dividend of the Gesfurel-Loewe, whose quotation fell from 114 to 86. The Reichsbank offer of a bonus in lieu of the right to Golddiskontbank shares stimulated the market a little, but had no general influence, for the unfavourable reports of general economic conditions checked enterprise. Moreover, the market received a disappointment in the fact that the banks did not make their usual end-of-year effort to secure a rise in their shares. Only on the closing day and the first days of January, following the discount rate reductions in New York and Paris, was there an absence of selling and a slight rise in quotations owing to bear covering, and, even so, rates, especially for electric, potash and stores, were far below the level of the beginning of December. It was noted that the investment purchases by the public, which usually take place at the beginning of the year, were largely concentrated on the *rente* market, which remains very firm. The policy of the German mortgage banks, which during the September crisis took up at almost unchanged rates most of the stock that was thrown on the market by panic selling, is now bearing fruit, as the public, sadly disillusioned with the share market, is turning more and more to *rentes*.

Official "Cash" Quotations in all cases.

INVESTMENT NOTES.

Bank Profits and Dividends.—The earnings announcements of the leading British banks for 1930 show that, for reasons discussed on page 59, profits have not maintained their customary stability in face of the prolonged depression. The declared earnings of the "Big Five" show a substantial decline as compared with last year, those of Barclays being lower by as much as 21.9 per cent., those of Lloyds by 16.2 per cent.; those of the Westminster and Midland Banks by 15.7 per cent. and 13 per cent. respectively, and those of the National

Provincial by 11.8 per cent. As will be seen from the following table, however, only one bank, Lloyds, has thought it advisable to reduce its dividend, the "A" shares receiving 15 per cent. against 16½ last year. This reduction is due to the page referred to above:—

	1928.	1929.	1930.
Barclays	Profits. £ 2,301,285 Div. % {A 10 BC 14}	Profits. £ 2,331,580 Div. % {A 10 BC 14}	Profits. £ 1,821,207 Div. % {A 10 BC 14}
Lloyds	Profits. £ 2,528,143 Div. % {A 16½ B 5}	Profits. £ 2,542,084 Div. % {A 16½ B 5}	Profits. £ 2,129,516 Div. % {A 15 B 5}
Midland	Profits. £ 2,656,554 Div. % {A 18 B 18}	Profits. £ 2,665,042 Div. % {A 18 B 18}	Profits. £ 2,318,689 Div. % {A 18 B 18}
Nat. Provincial	Profits. £ 2,108,664 Div. % {A 20* B 12½}	Profits. £ 2,189,704 Div. % {A 20* B 12½}	Profits. £ 1,930,854 Div. % {A 20* B 12½}
Westminster	Profits. £ 2,146,408 Div. % {A 12½* B 12½}	Profits. £ 2,160,384 Div. % {A 12½* B 12½}	Profits. £ 1,821,888 Div. % {A 12½* B 12½}

* On £20 shares and £1 shares respectively. † On £4 shares and £1 shares respectively.

Undoubtedly, the banks have been called upon to face one of the most difficult years in their recent experience. Shareholders, however, scarcely need reminding of the strength of the internal position of the larger institutions, due to their cautious dividend policy in the past:—

	Profits.	Dividend.	Reserve.	Premises.	Staff Funds.	Inc. or Dec. in carry-forward.
Barclays—1929	£ 2,331,580	£ 1,666,349	£ 500,000	£ 150,000	£ ...	+ 15,231
1930	1,821,207	1,614,276	...	200,000	...	+ 6,932

The share movements of the "Big Five" since the profit announcements were made are set out below:—

	1930.	1930.	1931.
	High.	Low.	Dec. 31.
Barclays £1	58/9	53/9	57/6
Lloyds £5 (£1 paid)	66/-	59/3	63/9
Midland £1	82/-	73/-	79/6
National Provincial £20 (£4 pd.)	14 ½	12 ½	14
Westminster £4 (£1 paid)	80/6	74/9	79/9

A decline of 5s. in the quotation of Lloyds £5 shares (£1 paid) followed the dividend reduction. The net profit of Martins Bank, Ltd., for 1930 amounted to £793,550, as compared with £836,239 for 1929. The dividend is unchanged at 16 per cent. for the year. Provision for contingencies amounts to £150,000. Carry-forward reduced from £132,132 to £110,076.

The Volume of Stock Exchange Bank Clearings.—In our issue of February 15, 1930 (page 367) we discussed the annual statement of the London Bankers' Clearing House with special reference to the question of the volume of clearings on Stock Exchange account days. The table then given may now be carried one stage further, on the basis of last year's returns:—

	1928.	1929.	1930.
Average clearings for Stock Exchange	£	£	£
Settling Days	184,473	184,944	174,821
Average for non-Settling Days	147,322	157,424	153,162
Increase on Settling Days:			
Amount	37,151	27,520	21,659
Per cent.	25.2	17.5	14.1

The above figures are obtained by deducting the total clearing on Settlement days from the total clearing for the year, and dividing the remainder by the number of non-settlement working days, counting Saturdays as half days. The total amount of bills, cheques, etc., paid at the clearing house during 1930, excluding the Stock Exchange settlement days, showed a decline of 2.7 per cent., as compared with the 1929 figure, while the decline for Stock Exchange settlement days was 5.7 per cent. The

fall for settlement days is therefore much greater than for non-settlement days, and accounts for nearly one-fifth of the fall in the Grand Total for the year. The fall in account day clearing is not necessarily proportional to the fall in the total clearings on all days in connection with Stock Exchange affairs—the fall in the former being probably considerably greater than in the latter. During 1930 a much larger proportion of business than in 1929 was in gilt-edged securities, in respect of which there is no greater volume of clearing on account days than on other days. Another factor in the same direction is that new issue applications and instalments (which do not specially affect account day clearings) have probably not fallen off to so great an extent as Stock Exchange share dealings which are ordinarily settled on account days. The clearing returns do not, of course, reflect the decline during 1930 in mid-account and contango operations, which were probably but a fraction of their 1929 total.

Nitrate Issue Difficulties.—The negotiations for a Chilean nitrate issue in New York are making heavy weather. No official statement has been made, and usually well-informed circles in London are being compelled to rely on occasional Press paragraphs. It is clear, however, that the proposed issue of £14 millions of debentures, which was to have inaugurated the process of concentrating the whole of the Chilean nitrate industry under a single company known as "Cosach," has struck a bad market. The amount is large in itself. Only part of it is to be used to build new oficinas and to increase working capital, the remainder going in hard cash to the Chilean Government over the next three years, as part of the guarantee to be given by the new company in consideration of the abandonment of the export tax on nitrate. The plan, of course, was worked out many months ago, and it is not the fault of those who made it that matters have gone so much against them. Quite apart, however, from the merits of the scheme, or the question whether the new company's capitalisation is not decidedly generous, the American market obviously will not look, at the moment, at a big bond issue to enhance the output capacity of an industry which is already suffering from the common *malaise* of over-production—an issue, further, only part of which is to be used for a directly productive purpose. If, as has been rumoured, the negotiations are to be transferred to London, and efforts are made to raise part of the total in this centre, the interests concerned on this side may conceivably ask for substantial alterations in the details of the scheme. The plan, as it stands, is a Guggenheim scheme, and transfers the future control of the industry to American hands. The recent evolution of the industry may have made this inevitable, but some British critics have regarded it as a heavy price to pay for the removal of the Chilean Government's export tax. The latter they regard, not without reason, as having a good deal of responsibility for the present state of the industry. In any case,

HARRIS, FORBES & COMPANY LTD

INDUSTRIAL FINANCING

there could scarcely be a less appropriate time than the present for the flotation of a merger whose avowed *raison d'être* is the economies of mass production. Much might, indeed, be said for the postponement of some of the more ambitious parts of the scheme until conditions are more favourable, though such a policy would involve substantial immediate concessions on the part of the Chilean Government.

Some Newspaper Company Reports.—The report has recently been published of Illustrated Newspapers, Ltd. The company owns the *Tatler*, the *Bystander*, the *Sphere*, the *Graphic*, the *Drapers' Record* and *Men's Wear*, holds a controlling interest in the Illustrated London News and Sketch, Ltd., and, jointly with Inveresk Paper, controls British National Newspapers, Ltd., which owns *Britannia* and *Eve*. The decline in advertising revenue has naturally affected the profits of these companies. The results for the past two years, after allowing for taxation, are shown in the following table:—

	Year ended November 30, 1929.	1930.
Illustrated Newspapers—		
Net profits before debenture interest	£179,958	£157,743
Net profits after debenture interest	£161,958	£136,359
Preference dividends	£100,800	£97,650
Per cent. earned on ordinary shares	7.7*	4.6*
Per cent. paid on ordinary shares	5	2½
Carried forward	£12,513	£24,097
Illustrated London News and Sketch—		
Net profits	£60,590	£53,964
Per cent. earned on ordinary shares	35.2	29.5
Per cent. paid on ordinary shares	37½	29.5

* Calculated before allowing for allocation to reserve for depreciation of investments of £25,000 in 1929 and £11,000 in 1930.

The yearly dividends of the *Illustrated London News and Sketch* are included in the accounts of Illustrated Newspapers, Ltd., in the calendar year following. The balance sheet of Illustrated Newspapers, Ltd., shows a liquid cash position, the surplus of "quick" assets over current liabilities amounting to £112,000. There is, however, a loan to British National Newspapers, "for development purposes," of £69,869. Holdings in associated companies, which include preference and ordinary shares of Inveresk Paper, stand at £52,000 and in subsidiary companies at £1,592,237. There is a reserve for depreciation of investments in associated companies of only £86,000, including the £11,000 appropriated out of last year's profits. The significant feature of the balance sheet is the item of "goodwill and copyrights," valued at £1,723,769, which is more than half the issued capital of £3,200,000, apart from the loan capital of £299,725. Investors are interested chiefly in the 7 per cent. preference shares and 6 per cent. debenture stock of Illustrated Newspapers. A report of a somewhat different character has been presented by Industrial Newspapers, Ltd., which was formed in 1926, with a capital of £431,375, to acquire a group of trade publications, including *The Iron and Coal Trades Review*, *The Foundry Trades Journal*, the *Coal Merchant and Shipper*, and *The Advertising World*. In this case profits have been more than maintained, but after providing for the preference dividends the balance remaining for the ordinary shares is negligible:—

	Year to September 30th, 1929.	1930.
Gross profits	£34,917	£35,172
Net profits	14,952	21,736
Preference dividends	22,040	21,578
Carried forward	3,291	3,449

The net profits of 1929 are shown after allowing for the compensation paid to the managing director in shares in respect of the cancellation of a service contract. Savings in overhead expenditure this year have chiefly accounted for the increase in net earnings.

Swedish Match Issue.—An important issue of shares and bonds has been announced by the Swedish Match Company. Shareholders are to be offered one new "B" share of Kr. 100 at 150 per cent. (equivalent to £8 5s. 6d.) in the proportion of one for every three

"A" or "B" shares held, the new shares ranking for dividends as from January 1, 1931. At the same time, Kr. 60,000,000 bonds will be offered for subscription in Sweden. The purpose of these issues is to provide for the expansion of the company and, in particular, to finance two transactions—the redemption of the 7 per cent. bond loan of 1921, totalling Kr. 20,000,000, and the taking up at 98 per cent. of \$37,500,000 6 per cent. German Government bonds. The latter represent the company's share of the \$125 millions loan to the German Government contracted for in connection with the match monopoly, the present payment being 50 per cent. of the final instalment of that loan. The directors have taken the opportunity of making an interim statement regarding the company's position. The business during the past year, they declare, has shown steady progress. The most important step in the consolidation of the company's position has been the ratification of the agreement regarding the German match monopoly, which became effective as from June 1, 1930. The prevailing trade depression has had slight influence on the match industry. The consumption of matches appears to have increased during 1930 at practically the same rate as during previous years. Although no official figures are yet available, the directors state that the profits for the year 1930 will be in excess of those for 1929, and that they will propose a final dividend of 10 per cent., making 15 per cent. for the year. The directors regard future prospects as very satisfactory, and are confident both that profits for 1931 will enable the company to pay 15 per cent. on the increased capital, and that this dividend rate will be maintained in subsequent years. The earnings and dividends for the three years ending December 31, 1929, were:—

	1927.	1928.	1929.
Net profits (thous. kr.)	136,482	43,804	54,242
Percentage earned*	20.2	18.1	20.1
Percentage paid	15	15	15

* On capital of Kr. 270,000,000.

The market, however, appears to be less certain than the directors and has taken the new issue as a "bear" point. The "B" shares, which closed last week at 13½, have fallen to 11½, at which price, allowing for the rights and the final dividend, the apparent yield on the basis of 15 per cent. dividends is over 8 per cent. Never before, since the "B" shares have been quoted in London, has such a high dividend yield been obtainable on Swedish Match shares. Before the 1930 slump the "B" shares were quoted on a 4 per cent. dividend yield basis. The new share issue involves approximately £7,400,000 of new money, at a time when shareholders are not over-anxious to put their hands in their pockets. Further, the payment of another instalment on the German Government loan calls attention to the fact that the Swedish Match group is heavily laden with foreign Government securities to which a certain degree of political risk must necessarily be attached. In view of the undoubtedly strong technical position of the group, however, and the ability with which its interests are administered, the market would appear to be influenced by immediate rather than long-term factors.

British Automatic Company.—Though this company has still barely recovered from its unfortunate relations with the Hatry group, the accounts for the year to September 30th last suggest that the position has been clarified since the election of the present board. Gross receipts total £83,975, against £68,688, apart from a bonus dividend of £77,000 declared by a subsidiary which was transferred to reserve account. General expenses, including interest on the £250,000 debenture stock raised during the year to acquire certain subsidiaries, amounted to £27,511, while £20,000 is set aside for depreciation and renewals, and £4,002 written off in respect of obsolete machines. These allocations to depreciation are intended to cover depreciation on the machines of subsidiary companies also. The sum of £30,000 is placed to contingency

reserve, and the balance of £2,462 is carried forward to the next account.

Year to September 30.	1928.	1929.	1930.
Gross receipts	76,035	68,688	83,975
Brought forward	7,382	7,476	...

Staff fund	...	10,000	...
Depreciation	20,553	19,965	24,002
Earned for dividend	40,091	20,907	32,462
Dividend paid	40,000	Nil	Nil
Rate %	10	Nil	Nil
Other allocations	...	1,280	30,000
Carried forward	7,476	27,103	2,462

* Including £11,333 for Debenture Interest.

The report states that when the present board took office in November, 1929, the company was faced with liabilities aggregating £182,476, which were eventually settled for £98,320. It was also found that gilt-edged and other first-class securities had been sold for £430,588, and that part of the proceeds had been utilised in the purchase of new machines, and approximately £300,000 invested in securities which now appear to be of little value. The issue of debenture stock mentioned above was necessitated by this depletion of the company's resources. Investments in subsidiary companies, at cost, are shown in the balance sheet at £369,909, but other investments, costing £306,462, have been written down to £1. All intangible assets have likewise been written off. Given good management, and a satisfactory trading position, there appears to be a reasonable hope that the company may eventually reach a moderate earnings basis.

Snia Viscosa's Position.—The President of the Snia Viscosa Company, Senator Borletti, has recently commented in the Italian Press on the heavy market depreciation which the shares of his company have suffered. It is unfortunate that the company's name should have been dragged into the Oustric case in Paris, seeing that there is no connection between M. Oustric and Snia Viscosa, for the finances of the company may now be regarded as coming under the supervision of the Courtaulds-Glanzstoff group. On the London Stock Exchange no importance has been attached to the speculations of M. Oustric, but the market quotation of Snia Viscosa has reflected the prevailing depression in the artificial silk industry, the present price of 6s. 3d. for the 120 lire shares comparing with 17s. 3d. a year ago. Senator Borletti has pointed out that a price of 30 lire for the 120 lire shares is equivalent to a capital depreciation of 750,000,000 lire (the capital of the company being 1,000,000,000 lire), and has declared that, as the company holds 240,000,000 lire in cash at the banks, such a price assumes that the fixed assets of the company (consisting of real property, plant and patents, which were valued in the last balance sheet at 600,000,000 lire) are entirely worthless. This he has described as absurd. Senator Borletti, however, should not overlook the existing 7½ per cent. sterling first mortgage debentures, of which £1,339,000 were outstanding on December 31, 1929. These bonds are quoted in the market at over par, and must be set against the cash assets which the company holds. Even so, the market valuation of the company at about 250,000,000 lire assumes that the fixed assets of the company are worth only about 138,000,000 lire. Allowing for the fact, which Senator Borletti has admitted, that no dividend will be forthcoming in respect of 1930 and that the balance-sheet valuation of 600,000,000 lire for the fixed assets and patents will again have to be written down to correspond with present-day values, it would appear that the market is not generous in its estimation of Snia Viscosa prospects. As to the future, Senator Borletti declares that costs are being gradually adjusted to the low selling prices realised and that the company is holding its own in world markets. Seeing that the company, however, has a working agreement with Courtaulds and with Vereinigte

Glanzstoff-Fabriken A.G., it should be able to withstand the world trade depression. The president's remarks will be read with interest by the company's shareholders.

British Controlled Oilfields.—In an "Investment Note" in the *Economist* of December 20th, dealing with the preliminary profit figures of British Controlled Oilfields, it was stated that the accounting period of the company had been altered to December 31st, and that the general meeting, which would take place this week, would be adjourned until April 30th, when the report and accounts covering a period of seventeen months would be presented. At the meeting the chairman made various important statements regarding the company's progress. He explained that production in the old El Mene field in the Buchivacoa concession in Venezuela had been well maintained and that a deep drilling test was being made which so far had given favourable results. That oil-bearing formations have been proved down to a depth of 4,700 feet is of great importance to the shareholders, who may have assumed that the El Mene field was rapidly declining. It is also possible that an extension of the El Mene pool may be proved to the west of the existing area. With regard to the Eastern section of the Buchivacoa concession, which is being explored on a royalty agreement by the Creole Company, the drilling obligations of the Creole Company have now been extended for ten years—a feature which the chairman regards as a distinct advantage to the company. The eastern half of the Central section of the Buchivacoa concession is now to be included within the Creole agreement. The chairman added that survey work was being continued in the Orinoco Delta but that exploratory work had been suspended in Ecuador. Production in Trinidad had shown a decrease but since July, 1930, better results had been obtained. The prices obtained for the Trinidad oil were based upon American Gulf prices, which had suffered a drastic reduction. The prices paid by the Caribbean Petroleum Company for the El Mene oil, being based on world prices, had also fallen considerably and for that reason the profits of the company had been adversely affected. The chairman's statement, however, should reassure shareholders in regard to the company's future.

United States Shipping Fusion.—While the negotiations for the straightening out of the Royal Mail position continue, and may ultimately involve a process of devolution of the interests of an unwieldy group, the drawing together of important shipping industries is making steady headway in other countries. In Germany, the two largest groups have already pooled their interests. From America, this week, comes the announcement of an amalgamation of the International Mercantile Marine Company and the Roosevelt Steamship Company. The former company's interests are, as its name implies, international. It controls the Panama-Pacific Line of the United States (which owns three passenger vessels of about 20,000 tons gross each); the Red Star Line of Antwerp (with five transatlantic liners, including one of 27,000); the Atlantic Transport Company (which owns five transatlantic liners),

and the Atlantic Transport Company of West Virginia (which has three large steamships). The company also holds a majority of the shares of Frederick Leyland and Company, which manages the Leyland Line, with its fleet of about forty steamers engaged in the trade between Europe and North America. It is understood that the amalgamation involves no change of flag on the part of the British subsidiaries of the International Mercantile Marine. Four directors of the Roosevelt Steamship Company are to join the International Mercantile board, but the latter's president, Mr. B. A. S. Franklin, will remain at the head of the combined organisation.

The Burbach Concern.—The Burbach Concern, the third largest German potash company, is embarking on a complete reorganisation. Until the end of 1928 this concern consisted of 20 "cost-book" share companies and four joint-stock companies. Two years ago these were amalgamated into the Burbach Kaliwerke A.G. of Magdeburg with a share capital of 125 millions. In order to secure the control of the concern to the directors, half the capital was allocated to the Burbach cost-book share company, but as this company had not the wherewithal to pay for the shares, it received from the Burbach Kaliwerke A.G. a credit of 106 millions. The majority of the Burbach cost-book company was, however, vested in the "chief executive of the Burbach Concern, Ltd.," and the majority of the shares of this limited company, whose capital only amounts to a few hundred marks, are held by the Burbach Kaliwerke A.G. This completed the ring by means of which the directors secured control without any great expenditure of their own capital. The whole proceeding called forth severe criticism two years ago, and was one of the instances which the Ministry of Justice had in mind in framing its proposals for the reform of joint-stock companies. Now a simplification of construction is to take place which will eliminate the cost-book Burbach altogether. The Burbach Kaliwerke A.G. is buying back from the 62.5 million shares, and is writing off in return its debt of 106 millions. Of these shares 55 millions are to be cancelled, so that the share capital of the Burbach Kaliwerke A.G. falls from 125 to 70 millions. The remaining 7½ millions are to be sold to the "chief executive." The transaction involves very complicated technical balance-sheet changes which cannot be gone into here. The purpose of these new proposals is not clear; probably it is desired to introduce the Burbach shares into the official Stock Exchange, where they have hitherto not been quoted, and their admission with the present structure of the company would probably not have been sanctioned. It is also supposed that plans for foreign borrowing in the near future are under consideration, and these would be very much more easily carried out if Burbach had previously been turned into Stock Exchange shares.

Kafir Shares Index.—In the *Economist* of November 22nd last (page 970) attention was directed to a new index of Kafir shares, based on quotations for sixteen Kafir mines which declared dividends in December, 1928, and had estimated lives of ten years or more. The average market capitalisation of these companies in 1928 (taken at the end of each month) was shown to be approximately £70,292,000, which figure, for the purpose of the "index," was represented by 100. The index for succeeding months is brought up to date below:—

End of	1929.	1930.	End of	1929.	1930.
January	95.7	87.7	July	88.8	81.4
February	91.5	82.7	August	87.5	77.5
March	86.9	88.7	September	83.8	76.5
April	86.5	81.8	October	81.6	75.1
May	86.7	84.4	November	81.6	75.1
June	89.8	80.2	December	81.7	76.6

The seasonal upward trend which usually follows the dividend declarations in June and December was some-

what obscured six months ago by adverse factors common to all markets. Similarly, last month, general market despondency offset the effects of a satisfactory list of dividends. Compared with six months ago, the dividends declared by sixteen companies comprised in the index have shown increases (as compared with the June figures) in seven instances, and only one decrease (excluding one of the companies—Village Deep—which has been absorbed). The total dividends for 1930, as compared with 1929, show seven increases and three decreases. A purchase of the shares comprised in the index, at the 1928 mean level, would have shown net yields of 9.61 per cent. in 1928, 9.52 per cent. in 1929 and 9.38 per cent. in 1930. The decrease in the last figure is more than accounted for by increased taxation, the amount distributed having actually increased. The corresponding yield at current market prices is 12.48 per cent., or 13.28 per cent. if allowance be made for five months' accumulated dividends.

Rhodesian Anglo-American Capital Requirements.

Our mining correspondent writes: The end of the financial requirements of the copper mines of Northern Rhodesia is not yet in sight. Late in 1929 this company made an issue of 150,000 10s. shares at £2 under guarantee of the Anglo-American Corporation of South Africa. The price being substantially above that ruling in the market at the time, the insiders were called upon to take the bulk of the issue. Subsequently, 281,600 shares were disposed of, also at £2. To enable the Rhodesian Anglo-American Corporation to take its part in the financing of the combined Bwana-Congo Border undertaking, it is proposed to create £2,000,000 debentures and to offer £1,500,000 to the members at par *pro rata* to their shareholdings. The debentures will be convertible into shares at varying prices, and will carry interest at the rate of no less than 7½ per cent. The debentures of the Congo Border Company, in which the bulk of the proceeds of the Rhodesian-Anglo issue is to be invested, carry 7 per cent. Altogether the proposal is one of the most extraordinary of its kind that has ever come under our notice. The shares fell on the announcement from 13s. to 10s.

Fanti Consolidated.—This financial undertaking, which is interested in Rhodesian mining as well as various financial, industrial and other concerns, last year experienced an appreciable setback. The profit amounted to £33,800, against £132,200 in 1929, and the shareholders are to receive only 6d. per share, in place of 1s. 6d. previously, of which 6d. was declared as interim. The balance above-mentioned has been struck irrespective of any allowance for depreciation. The latter is virtually provided by the appropriation of £50,000 from reserve, reducing that entry to £10,000. Investments figure at £598,900 in place of £665,500 at the end of 1929. It is stated that the market value of the shares and interests held exceeds the book value. Obviously, the prospects for the current year are difficult to gauge.

CAPITAL ISSUES.

It is difficult to discern, in the ashes of the new capital market, any trace of their wonted fires at the moment. Only three public issues were made this week. An issue was made by the Belfast Omnibus Company, the largest road transport company in Northern Ireland. The prior-lien debenture stock was covered as to assets 2½ times, and as to dividends about three times. The cover is not over-generous, but the yield—over 6½ per cent.—takes some account of this fact. *County Borough of Birkenhead* have made a conversion offer of £1,000,000 on 4½ per cent. Stock, 1931-61, at 99 per cent. *East Surrey Water Company* are selling by tender 5,200 ordinary "B" shares of £10 each.

County Borough of Birkenhead.—Issue of £1,000,000 4½ per cent. Stock, 1931-61, at 99 per cent. Offer of conversion to holders of £971,143 5 per cent. Stock, 1924-34.

Belfast Omnibus Company.—Issue of £100,000 6½ per cent. prior-lien debenture stock at £98 per cent. The stock will be repaid at 101 per cent. by means of a cumulative sinking fund of 2½ per cent. per annum, commencing in 1932. Any stock not previously redeemed to be paid off on October 31, 1952. The company was incorporated in 1927 to acquire and develop the road transport businesses round and about Belfast. The estimated earnings, after allowing for depreciation, would be sufficient to cover the interest on the present issue more than three times.

[Other Stock Exchange information, including the latest dividend announcements, reports and notices, profit and loss figures, and oil outputs, will be found on page 89 under the heading "Company News."]

COMPANY MEETINGS, &c.

TRANSVAAL AND DELAGOA BAY INVESTMENT COMPANY, LIMITED.

(INCORPORATED IN THE UNION OF SOUTH AFRICA.)

SUCCESSFUL RESULTS.

The ordinary annual general meeting of shareholders was held in Johannesburg, on Tuesday, December 2, 1930.

The Chairman (Mr S. C. Black), in the course of his remarks, said: I have pleasure in submitting for your adoption the report and accounts for the year ended August 31, 1930, which, I feel sure, cannot be considered other than satisfactory. No doubt you will agree when I tell you that, during a period of difficulty and depression, and notwithstanding increased taxation, our profits are actually slightly higher than last year.

Our realised net profit, after making provision for depreciation, Government and other taxes, amounts to £81,735 12s. 8d., as compared with £81,663 7s. 11d. last year.

We brought forward last year £110,847 18s. 1d., making together £192,583 10s. 9d.

Deducting the interim dividend of 1s. 6d. a share paid in June last—£20,812 10s.—and the sum of £10,000 placed to reserve fund—£30,812 10s.—we bring forward a balance of £161,771 0s. 9d. to the credit of profit and loss account.

We recommend the payment of a final dividend of 3s. 6d. per share which, with the interim dividend mentioned, brings the dividend for the financial year to 5s. per share, equal to 25 per cent. free of Union of South Africa ordinary income tax.

The present distribution will absorb £48,562 10s., and leave £113,208 10s. 9d. to be carried forward. This is £2,360 12s. 8d. more than last year, after increasing the reserve fund by £10,000, which now amounts to £170,000.

The financial position, it will be observed, is absolutely sound, cash and equivalent assets, less sundry creditors, amounting to £228,976 10s. 9d.

Our two collieries, the Transvaal and Delagoa Bay Collieries and the Douglas Colliery, Ltd., jointly produced 833,228 tons, which is 31,075 tons less than for 1929. Whilst the internal coal trade of South Africa has been fairly well maintained, overseas business has been difficult. The Douglas Colliery's cash and equivalent assets, at June 30, 1930, after making provision for the payment of a dividend of 17½ per cent. and a bonus of 5 per cent., amounted to £99,070 13s. 3d.

LOURENCO MARQUES.

At our last annual general meeting I acquainted you with the decision to erect a substantial building, comprising a cinema theatre, with surrounding shops and offices, on our "H" block, fronting the Avenidas da Republica and Aguiar. Tenders were invited in February last, and shortly afterwards the erection of the "Scala" (which is the name of the building) was started. We hope that the early days of 1931 will mark completion. That the "Scala" will be a credit to Lourenco Marques we feel sure, as it is an exceedingly attractive block architecturally, situated on the best business site in the town.

FARM PROPERTIES.

On our "Two Rivers Estate" in the Rustenburg district, Transvaal, we are continuing with our programme of fencing paddocks, extending water supplies, and erecting dams and troughs. Our herds of cattle are in excellent condition, and we propose to increase them largely as favourable opportunity offers.

THE SOUTH AFRICAN PHOSPHATES EXPLORATION SYNDICATE, LTD.

Reference is made in the report to the acquisition of an option over a large block of claims in the North-Eastern Transvaal, containing valuable lime phosphate deposits. The syndicate has opened up a deposit there containing large quantities of rock phosphate. It will, of course, take time and capital to bring it to the producing stage, but I feel confident of ultimate success.

The establishment of this industry would be of immense benefit to the country at large, and, I venture to hope, should have the active support of the Government and people.

It is of special interest to disclose to you the fact that within the past week the syndicate has, after prolonged negotiations, acquired by outright purchase the freehold of 808 additional claims contiguous to the option holding of 1,000 claims at Palabora, North-Eastern Transvaal. They contain apparently large quantities of calcium phosphate of high grade, and the position of the syndicate is thereby appreciably strengthened by this additional area to its already large claim holding, now nearly four square miles.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the three days ended January 3, 1931, amounted to £7,959,100, against ordinary expenditure of £12,587,100. After having allowed for an increase in Exchequer Balances of £51,300, the week's operations, as shown below, increased the National Debt by £4,679,000 to £7,768,827,000:—

GOLD AND SILVER PRICES.

UNITED TOBACCO COMPANIES (SOUTH) LIMITED.—Net profit for year ended September 30, 1930, was £620,773, as compared with £552,315 for preceding year. The dividend and bonus on the ordinary and deferred shares totalled 22½ per cent., free of South African normal income tax. This compares with a dividend of 20 per cent. for preceding year. The carry-forward is increased from £292,392 to £324,791. Cash has risen from £57,568 to £319,942. Debtors are higher at £207,241, compared with £163,363. Stocks are higher at £1,098,977, against £960,148.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of December are as follows: Production of oil, 37,280 tons; deliveries, 38,670 tons.

THE ATTOCK OIL COMPANY, LTD.—Production for December, 11,760 barrels.

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—A cablegram has been received from Burma reporting the production of crude oil by this company for the month of December, 1930, as 32,536 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended December 31st: Venezuela, 36,773 barrels; Trinidad, 19,157 barrels; total, 55,930 barrels. Production for December: Venezuela, 159,202 barrels; Trinidad, 86,318 barrels; total, 245,520 barrels. Deliveries for December: Venezuela, 166,267 barrels; Trinidad, 150,018 barrels; total, 316,285 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The production for the weeks ended December 20 and 27, 1930, was 211,000 barrels each week.

SERVICE PETROLEUM.—Cable received from Roumanian manager states that production from the company's oil wells at Gura Oenitzei, Moreni and Ceptura for the week ended January 4th was 1,666 tons (11,662 barrels).

Commercial Reports.

MARKET MOVEMENTS.

While it is hoped that the intervention of Mr. Graham may lead to a resumption of work in South Wales next Monday, uncertainty continues to hamper forward contracting, and demand both on home and export account declined further. The divergence between the price of British and Continental pig iron has been narrowed by a reduction of 5s. per ton in Cleveland quotations, and it is anticipated that this move, while lessening Continental competition, will stimulate demand in this country. Among non-ferrous metals, tin continued to advance as a result of the proposals to restrict supplies, while copper and zinc remained barely steady. The textile markets are still under the influence of the holidays, and the turnover is on a small scale. Raw cotton has been steadier, but there has been no improvement in the principal markets for Manchester goods, and the possibility of a lock-out in Burnley, arising out of the "more looms per weaver" system, has seriously aggravated the situation.

The wool and rayon trades remained quiet, and the depression in jute shows no signs of lifting. The food markets are generally quiet. While the large world surplus of wheat precludes a substantial recovery in prices, the tone of the principal markets has been slightly firmer. The improvement in the sugar trade, following upon recent attempts at regulating output and distribution, has been maintained. The market in coffee has been steady, but prices, especially for Brazilian varieties, are extremely low, and it appears that the Brazilian Government, in an attempt to reorganise the Coffee Institute, has set up a board of administration to consist of two representatives of the coffee planters and one representative of the Santos market in addition to the Secretary of State for Finance. Among miscellaneous commodities, vegetable oils and oilseeds show some improvement, and the downward tendency of hides appears to have been arrested. Rubber has not been an active market and prices are scarcely changed on the week.

THE COAL TRADE.

Our Sheffield correspondent writes:—Uncertainty as to the fixing of minimum prices under the new Act is holding up forward business, as producers are unwilling to quote. The tonnage of best steams going abroad continues restricted, but prices remain firm at 16s. to 16s. 6d. f.o.b. Humber ports. Gas companies are showing some eagerness to fix up their New Year contracts. House coal demand is fairly brisk, but retail depots have ample stocks. Business in blast-furnace coke is almost at a standstill. Good qualities South Yorkshire coke are quoted at 11s. to 11s. 6d., and Derbyshire brands at 10s. to 10s. 6d. Under the South Yorkshire sliding-scale arrangement the basic price of coke has been reduced from 13s. 6d. to 12s. 3d.

Our Glasgow correspondent writes:—Those collieries not closed under the working of the Coal Mines Act made a good restart this week after the holidays, but with output so much curtailed, and home demand at the moment fairly brisk, supplies available for new shipping business are very restricted. In any event, coal-masters are not disposed to commit themselves extensively until the price situation is more certain, although on the other hand any great advance will almost certainly divert business to foreign competitors. Shipment prices (f.o.b. district ports):—LANARKSHIRE: Ell best, 13s.; splint best, 16s. 6d.; splint second, 15s. 6d.; navigation, 17s.; navigation second, 15s.; Hartley, 16s.; steam, 13s. 6d.; trebles, 14s. to 14s. 6d.; doubles, 13s. 3d. to 13s. 6d.; singles, 13s. to 13s. 6d.; pearls, 12s. 9d. to 13s.; dross, 10s. 3d. FIRE:—Screened navigation, 16s. 6d. to 17s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s. 6d.; trebles, 14s. 6d. to 16s. 6d.;

Our Cardiff correspondent writes:—Business on the Cardiff coal market this week has been completely dislocated by the stoppage of work in the coalfield on Monday. Latterly, the weekly production has averaged between 850,000 and 900,000 tons, but it is estimated that less than 2,000 of the miners, apart from safety workers, have remained in employment, and therefore to meet their commitments the collieries and shippers have had to rely almost entirely on stocks standing at the docks and at the railway and colliery sidings. These, however, were so exceptionally heavy that the docks were fairly well occupied for the greater part of the week, but it is feared that they will be brought to a standstill next week unless in the meantime a settlement of the dispute is reached. The intervention of the Government on Tuesday has led to an improvement in the outlook, and in view of the assurances given by the owners to Mr. Graham, the President of the Board of Trade, at his conference with them in London, there is ground for the expectation that sufficient progress will be made in the new negotiations to justify an early resumption of work. The scarcity of supplies has led to substantial increases in coal prices for parcels available for prompt delivery, but the market has been unable to meet even local requirements, and cargoes are already being imported into the Bristol Channel from the other coalfields of the country.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The year has opened quietly in the iron and steel markets. Nevertheless, there was a fairly good attendance at the weekly meeting of the Exchange on January 6th. Most of the British works have closed for a longer holiday period than is usual, and the tonnage of orders which has accumulated during the break varies considerably at the different works. The home demand for all descriptions of steel is almost suspended, and this is attributed largely to difficulties created by the coal position, as neither buyers nor sellers care to commit themselves until the situation becomes clearer. Prices are practically unchanged from those ruling before the holidays, and little alteration is expected while the market remains in its present state of uncertainty. The demand for pig iron is poor and stocks are reported to have reached uncomfortable proportions in most districts. In the semi-finished steel department, although only a small amount of business has been transacted, the prices of both British and Continental material are firmly held, and some of the Continental works have withdrawn from the market. Business in finished steel is inactive. There has been a certain amount of inquiry from overseas; but, as in other departments of the market, traders are following a cautious policy.

Our Middlesbrough correspondent writes:—A reduction in the prices of Cleveland iron had been expected for some time and on Monday makers responded by announcing a concession of 5s. per ton all round for all new business for local and inland consumption and also for export. This does not apply to Scotland, as makers control their own selling in that market and have been accepting much less than the official figures here, for deliveries to Scotland for some time. The reduction was reflected in an increased business at the weekly market on Tuesday, which is expected to further develop, as it brings Cleveland into close proximity with Continental iron and preference will be given to the local product. The amended prices are: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t. In hematite, business has been suspended over the holidays, but a few new orders for early delivery have been placed within the last few days and further buying is looked for very shortly, as consumers are bare of stocks in many instances. Makers are still prepared to book mixed numbers for prompt at 70s. per ton, but for forward 70s. 6d. to 71s. is asked, according to the period required. These prices, however, are considered too high by buyers in view of the fall in Cleveland iron. Shipments of pig iron for December proved to be the lowest for four years, but there was a slight improvement on November in the finished departments. The details are:—

	December, 1930.	November, 1930.
Pig iron	8,803	12,301
Manufactured iron.....	4,967	4,369
Manufactured steel	32,234	30,748
	46,004	47,418

This month to the 6th the pig-iron clearances amount to only 2,725 tons, against 4,205 tons to December 6th. In the steel trade further business is reported this week. Dorman, Long and Company, Ltd., here have secured a contract for the widening of the Putney bridge over the Thames at a cost of about £337,000, and Head, Wrightson and Company, Ltd., of Thornaby, have booked an order for railway chairs for L.M.S. Railways of the value of £12,000. Dorman have also just booked 6,500 tons structural steel material for the new Shell-Mex building in London on the site of the old Hotel Cecil. Prices of the different finished materials are unchanged, but a reduction in steel under the rebate scheme is anticipated at the next meeting of the British Steel Makers' Association about a fortnight hence. There is no business passing in ore, and prospects in this direction are not encouraging, as consumers are well covered against current contracts and have large stocks in hand. Best

Bilbao rubio is nominally 16s. c.i.f. for prompt, and 16s. 6d. to 17s. forward. The rate of freight, Bilbao/Middlesbrough, for early tonnage is about 5s. Imports of all kinds of ore into Middlesbrough last month amounted to 68,205 tons, against 86,056 tons in November. Coko is offering very freely for this month at 17s. delivered works, and this price might be shaded a trifle. There is, however, very little demand. The number of furnaces in operation in the district is now 24.

Our Sheffield correspondent writes:—The outlook for Sheffield's better-class steels is improving, as consumers, at any rate at home, whose stocks are depleted, show a disposition to order on a more liberal scale than at any time last year. The depression in open-hearth steel, however, shows no present sign of lifting. Works have not yet commenced fully after the holiday stoppage, and large numbers of suspended men continue idle. The competition of foreign crude steel is becoming rather more intense. Firms producing finished steel products report that buying is not yet resumed, and their present bookings are poor in number and value. New lists of farm and garden tools which are now being issued indicate substantial price reductions on most lines.

Our Glasgow correspondent writes:—There has been only a partial resumption of work in the West of Scotland this week, a considerable number of establishments having prolonged the holiday till the beginning of next week. On the whole, the prospects in the iron and steel trades here are not bright, but there is a general belief that the steps which have been taken towards rationalisation will result in a gradual improvement throughout the current year in the Clyde shipbuilding yards and at the steel plants. During the holidays a number of orders have accumulated, but they do not involve a heavy tonnage, and it would seem that there will be a continuance of the intermittent working which has been in force for the past few months. There is little demand for semis, but British makers are looking for an early improvement in view of the curtailment of Continental production. Other branches continue quiet.

Our Cardiff correspondent writes:—Quiet conditions continue in the South Wales steel and tinplate markets. The quotations for tinplates have hardened slightly as the result of an increase in the price of tin, but so far the stoppage in the coalfield has not interfered with the working of the factories. It is feared, however, that the works' stocks of coal will not carry them beyond a week or two, and in the event of a prolongation of the dispute all the furnaces and mills will be brought to a standstill. Shipments last week were exceptionally small, and stocks increased to 211,736 boxes compared with 190,981 boxes the previous week.

OTHER METALS.

TIN.—The standard market opened with a firmer tone under active support and stimulating Eastern cables, but later dealings exhibited a good deal of irregularity, and values gave way under increased selling orders. Statistics for December, 1930, compared with the previous month:—Shipments from the Straits: 7,089 tons, against 8,549 tons; total supply, 12,901, against 11,388; total deliveries, 11,111, against 10,147; visible supply, 42,303, against 40,513; and carry-over 4,483, against 4,971 tons. Standard cash changed hands at £119, £118 5s., £121 15s. and £120 5s.; three months, £121 10s. to £119 15s., £123 2s. 6d. and £121 10s. Sales in the East were reported at £123 5s. to £127 7s. 6d. per ton c.i.f. terms.

COPPER also commenced firmly on lighter offerings and a fair demand, but subsequently reacted on sellers becoming prominent. Standard cash sold from £46 12s. 6d. to £45 10s.; three months, £46 8s. 9d., £45 12s. 6d. and £45 7s. 6d. per ton.

LEAD slightly irregular, closing weak on adverse American cables, with business on a moderate scale. Good soft foreign pig, January, sold £14 12s. 6d.; March, £14 12s. 6d. to £14 7s. 6d.; April, £14 15s. to £14 7s. 6d. per ton.

SPELTER steady, with fair general inquiries, but closed easy. January sold £13 6s. 3d. to £13 1s. 3d.; February, £13 11s. 3d. to £13 6s. 3d.; April, £13 17s. 6d. to £13 12s. 6d. per ton.

ALUMINIUM maintained. Home trade and export £85 per ton.

ANTIMONY firmer and sellers more reserved in face of improved inquiries. English regulus £38 to £45. Chinese regulus, spot, £26 10s.; ditto, January-February, £25; Chinese crude, January-February, buyers, £14 10s. per ton c.i.f.

ANTIMONY OXIDE, January-February, £25 10s. per ton c.i.f.

ANTIMONY ORE, 60 per cent., January-February, 3s. 2d.; 50 per cent. ditto, 2s. 9d. per unit c.i.f.

WOLFRAM steady. Chinese, January-February, sold 13s. 6d. per unit c.i.f.

QUICKSILVER quietly steady. Spot, £21 15s. to £22 per bottle.

TIN PLATES quiet. I.C. coke, prompt and forward, 15s. 9d. per box, f.o.b. Swansea.

TEXTILES.

THE COTTON TRADE.—Liverpool, January 7th. The markets during the week have been steady but very quiet, and prices show practically no change, being sustained by a little short covering. Spot sales for the week 2nd to 7th (inclusive) are 15,000 bales, of which 6,280 are American, 250 Brazilian, 800 Argentine, 5,400 Peru, 950 Egyptian, 700 African, 500 East Indian, 120 sundries. Imports for the same period are 55,897 bales, of which 39,592 are American, 4,050 Brazilian, 2,093 Peru, 7,652 Egyptian, 2,099 West Indian, and 411 sundries. Quotations to-day are: American Middling, 5-39; Egyptian Sakel, 7-80; Egyptian Uppers, 6-21; Brazil Fair, 5-54; Peru G.F. Smooth, 5-84; West African Mid., 5-44; East African G.F., 6-44.

Manchester, January 7th. Although inquiry in the market has been on a rather larger scale, there has not been any particular increase in the amount of business done. Spinners and manufacturers have given out numerous quotations, but sellers have complained of offers being on a very low basis. The labour dispute on the more looms per weaver question has caused an unsettled feeling to prevail. Cable and mail advices from India do not improve and cloth business has again been limited, most of the demand being in light fabrics for Madras and Karachi. The situation in Calcutta tends to become worse. The further decline in the price of silver has prevented any improvement in the turn-over for China. Small lots have been sold in bleaching descriptions for Egypt and limited quantities of finishing cloths have been put through for South America. There are no signs of relief, however, for makers as a body. American yarns have moved off slowly at irregular rates. Most of the orders have been in coarse counts. Bids in export bundles remain poor. Restricted operations have occurred in Egyptian yarns.

THE WOOL TRADE.—Our Bradford correspondent writes:—There is reason for anticipating that the increased purchasing power of the English pound in Australia will exercise a definite strengthening of wool values in Sydney, Melbourne, and other centres, without a corresponding advance in tops in Bradford. Top prices, however, are largely dependent on demand, and if a substantial speculative movement on the part of spinners were to develop, values would not be slow to respond. The raw material position is, however, the immediate consideration, and as the reduction in the rate of exchange is equivalent to a reduction of 1d. per lb. on wool landed here from Australia, it is to be expected that more active buying interest will be shown. The second half of the Australian selling season has

already opened firm at the December level. Japan and Germany are evidently prepared to buy freely, but France has been quiet, representatives of the industry there probably being disposed to wait until the opening of the next series of London sales. No real improvement has taken place in Bradford. Moderate quantities of tops are being sold, but no higher prices are realisable. Topmakers admit quite frankly that the firmness of wool has not benefited them yet. Their avowed policy is to refuse to sell except at prices which represent at least a fraction more than actual cost. The raising of the duty on goods imported into China is another serious blow to worsted manufacturers. It simply means that some spinners and manufacturers will lose business, unless they can make modifications in their own overhead charges. After the drastic reductions already made, it is impossible to see how this can be accomplished.

THE JUTE TRADE.—Dundee, January 7th. The turn of the year has so far promised little for the jute trade, and business continues dull. Buyers of jute yarns and cloth are purchasing only their immediate requirements, and the urgency with which these are requested to be delivered indicates that stocks have been allowed to dwindle to very small dimensions. No support is being given from the raw jute end of the industry, as the tendency of prices has been easy, though sellers are very unwilling to offer at lower prices. The imports into Calcutta are still not large considering the big crop which was forecasted, and holders appear to be able to feed the market there as required. Good First Marks are quoted at £19 10s. to £20, the latter price being that for Red Circle Ram, while Green Circle Ram Lightning is quoted at £17 15s. and Heart Ram assortment at £15 7s. 6d., January-February shipment. Daisee assortment rules at £14 15s. for full group, £15 for Mahabir and £15 5s. for Bun. Tossa assortment is offered at £16 5s. for full group, Mahabir threes at £16 and fours at £14 10s., January-February. Spinners are showing very little interest in view of the quietness of the yarn market. The value of common 8-lb. cops is 2s. and 8-lb. spools 2s. 1d., but buyers are not testing these rates. A few small sales are being made of the finer yarns at 3s. for second quality 8-lb. Rio warp, and 2s. 4d. for fourth. Twist is quoted at from 3 1/2d. to 4d. for 3-ply 8 lb., and sacking yarns are bought in small lots at from 2 1/2d. for 24 lb. weight and from 3 1/2d. for 8-lb. chains. Carpet yarns are more or less nominal in the absence of business. Quotations for jute cloth are steady at from 2 1/2d. to 3d. for 10 1/2 oz. 40-in. hessians and from 2d. for 8 oz. Linoleum hessians are almost stagnant. Manufacturers of heavy goods are desperately in need of business, but even at low prices buyers are unwilling to operate. The Calcutta goods market has been steady, but very quiet, at 17s. 6d. named for 10 oz. 40 in., and 13s. 9d. for 8 oz., January-March, and 17s. 9d. and 14s., respectively, April-June.

THE HEMP TRADE.—The market for Manila parcels has been flat, and buyers adopted an attitude of reserve. According to a cable, last week's receipts amounted to 17,000 bales, against 28,000 bales last year and 25,000 bales in 1929. Next week's receipts have been estimated at 25,000 bales and at 21,000 bales for the following week. Total shipments from Manila last week amounted to 25,000 bales, of which 6,000 have been consigned to the United Kingdom, 8,000 to the Continent, 5,000 to the United States, 5,000 to Japan, and 1,000 to other countries. Local consumption, at 1,000 bales, leaves stocks at 101,000 bales. Gradings amounted to 13,700 bales. Quotations: J 2, January-March, sellers, £22; K, £22 17s. 6d.; L 1, £20 15s.; L 2, £20 10s. Sales H grade, December-February, £21 10s. c.i.f.

FOOD.

THE GRAIN MARKET.—Wintry conditions have prevailed over the United Kingdom during the past week, but sowings are completed, and lower temperatures will tend to harden the young wheat plant, which is now well above ground in most localities. Native wheat continues in light supply, but little demand arises from millers, as prices are still above the parity of imported descriptions. Quiet trading continues in the floating and forward section, buyers being fairly well supplied by recent purchases, while liberal quantities of Russian are still available ex store and on passage. Despite some irregularity at times, the undertone remained steady in view of improved advices from exporting countries, and a better demand on Eastern account, while harvesting interruptions by rain in the Southern Hemisphere imparted a firming influence. Argentine sellers were therefore less inclined to press, though offers are freely made. Canadian grades obtain a fair share of business, but exports are much below the volume necessary to make any tangible inroad on heavy stocks, and the serious aspect in the Dominion has induced growers to seek Governmental assistance until market stability becomes restored. Australian descriptions meet with fair attention, especially on Eastern account, while freight bookings to Europe have been resumed owing to the favourable rate of exchange. A moderate business was reported in home-milled flour, and prices were reduced by 1s. per sack, but demand for imported makes remains dormant, except for Australian, which sold at attractive rates for January shipment. Of feeders, prices were reduced for spot and near parcels of maize, but trade marked no expansion. Barley and oats have been featureless, the latter tending easier on larger shipments and pressing offers of new crop.

WHEAT.—Slightly irregular. No. 1 hard Manitoba, ex ship 27s. 3d.-27s. 9d.; No. 1 Northern Manitoba, ex ship 26s. 6d.-27s.; No. 2 ditto, 25s. 3d.-26s. 6d.; Barusso, 63 lbs., 23s. 3d.; Rosafe, 63 1/2 lbs., 23s.; Australian, 26s.; Russian, on sample, ex ship, 19s.-24s.; landed, 20s. 6d.-22s. 9d. per 496 lbs. English new, 6s. 6d.-5s. 8d. per 112 lbs.

FLOUR.—Quiet. London straight run, 24s. per sack for country deliveries, and 23s. London area. Of imported, Manitoba patents, 24s.-25s. 6d.; Buffalo ditto, 22s. 6d.-24s. 6d.; Australian, 21s.-22s. ex store per 280 lbs.

N.C.T.S.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2, 1930.	Jan. 8, 1930.	Dec. 22, 1930.	Dec. 31, 1930.	Jan. 2, 1931.	Jan. 7, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	141½	50½	51½	56½	58½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	128½	76½	76½	79½	80½

The visible supply of wheat in Canada at 62,598,000 bushels shows an increase on the week of 591,000 bushels. Supplies a year ago stood at 75,567,000 bushels.

SUGAR.—General stability continues and chief feature is reserve of sellers in all directions, pending developments in the matter of better regulating production. Improvement in trade of late marked further extension to-day, quite liberal quantities being absorbed and prices responded. British refined goods advanced 3d., yellow pieces 6d., Anglo-Scottish granulated 3d., and Anglo-Dutch 4d. All raw refining sugars still held with marked reserve. Estimated Java shipments to all parts during last month totalled 181,000 tons, as compared with 196,000 shipped in December, 1929. Terminal market opened stronger, but assumed a quieter tone later, though business proved of fair dimensions. March delivery sold 6s. to 6s. 2½d.; May, 6s. 2½d. to 6s. 4½d.; August, 6s. 5½d. to 6s. 7½d.; December, 6s. 9½d. to 6s. 11½d. Crystallised West India ranges from 18s. 6d. to 22s. as to quality. Foreign 96 per cent., January, to the United Kingdom, quoted 6s. 3d. c.i.f. terms. Cuban receipts last week, 19,000 tons, against 13,060 same time last year; exports, 33,680, against 28,160; stocks, 668,800, against 166,140. Stocks on plantations and in course of transit, according to Messrs Willett, amount to 746,000 tons, against 155,690 last year. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending January 3rd totalled 191,589, against 223,106 last year.

COFFEE.—Quite a fair amount of business was arranged in spot parcels and general tone of market is very steady. All attractive qualities were readily taken, in which high-grown Costa Rica and Kenya figured largely. Brazilian for shipment remains slow of sale.

COCOA.—Spot market shows but little change in prices, but trade partakes of retail proportions. Forward positions dull and a decline set in for most descriptions. Accra F/F, January-March, London contract, quoted 25s. 6d. f.o.b.; G/F, December-January, to Continent, sold 28s. 3d.; December-February, 28s. to 27s. 9d.; and January-March, 28s. to 27s. 6d., c.i.f. Terminal idle. March sold 29s. 9d.

TEA.—At public sales during the week, quantity of Indian totalled 59,417 packages. With active and generally well-distributed competition, quite a good steady market prevailed with medium broken, perhaps, the strongest feature. Ceylon sales amounted to 29,886 packages. There was a fairly good demand, all good qualities bringing steady rates, but poor leaf and light liquoring teas closed generally easier, while showing certain irregularity. Java and Sumatra sales met with fair inquiry, and rates ruled mostly steady.

RICE.—New business is still rather difficult to arrange, but market keeps steady. Meantime, Burma shippers are very reserved and quotations forward rendered somewhat nominal. Two Stars, January-February, to London, 8s. 1½d.; Spanish oiled, 11s. 9d. to 12s. 6d., c.i.f., as to quality.

BEANS AND PEAS.—Trade in beans is slow. Butters, spot, London, 24s. to 26s., as to sample; January-February, steamer, 20s. 6d. c.i.f. The market in peas is steady on the part of sellers, but demand quiet. Japanese, spot, London, 14s. 3d.; afloat, 13s. 6d.; January-February, 14s. 3d. c.i.f.

POTATOES.—The market in potatoes has been quiet, but prices remained steady.

SPICE.—Pepper market again quiet and prices in forward positions tended against the seller. Lampung, October-December, quoted 5½d.; January-March, sellers, 5½d.; Muntok white, October-December, sold 9½d. to 9d., and January-March, 9½d. Cloves dull, unaltered. London stocks of black 6 tons lower on the week at 443, against 1,333 last year; white reduced 23 tons to 333, against 1,466.

FRUIT (Dried).—Currants: Market firm with improved inquiries Pyrgos, 30s. 6d.-31s.; Amalias, 31s.-32s.; Patras, 33s. 6d.-41s. Sultanias firm and in fair demand. Smyrna, 44s.-68s. Dates maintained. Evaporated Fruits: General position remained unaltered with moderate inquiries for peaches, apricots and plums. Californian peaches, 1930 crop re-cleaned, 42s. 6d.-56s.

CANNED GOODS.—Fruit: Increased orders are circulating for most descriptions and business is expected to develop on broader lines in the near future. Californian varieties are obtainable at attractive rates, while English and Australian move off steadily. Fish: Sardines steady with a fair demand for best quality. Salmon dull of sale. Meat: Trade restricted for beef and tongues, but price changes were unimportant. Condensed Milk: Market quiet and prices occasionally easier. Dutch condensed milk, full cream, sweetened, 5-cwt. casks, 31s. 6d.; English ditto, 35s. Honey: Market was well supplied and trade fails to expand. Jamaican white, 40s.-45s.; Californian, 40s. to 48s.

To the Shareholders of SVENSKA TÄNDSTICKS AKTIEBOLAGET (Swedish Match Company)

The Board of Directors of the Swedish Match Company have issued the following statement:—

The business of the Swedish Match Company has during the past year shown steady progress. The most important step in the consolidation of the Company's position during 1930 has been the ratification of the agreement regarding the German Match Monopoly, which became effective as from 1st June, 1930, and is operating in a satisfactory manner. The depression now prevailing in most other lines of business has had little influence on the match industry and the consumption of matches seems to have increased during 1930 at practically the same rate as during previous years. Although no final figures are as yet available, it has been established that the profits for the year 1930 will be in excess of those for the year 1929, and the Board will propose a final dividend of 10 per cent., payable after the Ordinary General Meeting in 1931, thus making a total dividend of 15 per cent. for 1930.

In May, 1931, the Company will take up at 93 per cent. \$37,500,000 6 per cent. German Government Bonds, being its share of the \$125,000,000 loan to the German Government contracted for in connection with the German Match Monopoly, and representing 50 per cent. of the final instalment of that loan. The Company has further called for redemption on 15th February, 1931, its outstanding 7 per cent. Bond Loan of 1921 totalling Kr.20,000,000.

To provide funds for these and other transactions in connection with the industrial expansion of the Company, the Board of Directors have decided at a meeting held to-day, subject to the approval of an Extraordinary General Meeting to be held on 13th January, 1931, to increase the share capital of the Swedish Match Company from Kr.270,000,000 to Kr.380,000,000 through issuing 900,000 new "B" shares of the par value of Kr.100 each at a price of Kr.150 per share. At the same time the Board have authorised an issue of Kr.60,000,000 Bonds, which will be offered for subscription in Sweden in the immediate future.

The Board of Directors consider that the future prospects of the Company are very satisfactory, and are confident that the profit for 1931 will be such as to enable the Company to pay on the increased capital the same dividend of 15 per cent. that has been paid in respect of previous years. They also have every reason to believe that for following years that dividend can be maintained.

The issue of the new "B" Shares will be made on the following terms:—

1. The new shares will carry No. 22 and subsequent coupons and will have equal rights with the old shares in the profit from 1st January, 1931.

2. Existing shareholders have preferential rights to subscribe at a price of 150 per cent. to the new "B" shares in the proportion of one new "B" share for each three old "A" and/or "B" shares held. In the event of the issue being over-subscribed the allotment will be according to the direction of the Board, this, however, without prejudice to the preferential rights of the existing shareholders to acquire one new "B" share for each three old "A" and/or "B" shares held.

3. Subscriptions will be received at the offices of the Skandinaviska Kreditaktiebolaget, Gustav Adolfs Torg 22-24, Stockholm, from 7th January to 3rd February, 1931, both days inclusive.

4. Subscriptions should be accompanied by payment of Kr.30 per new "B" share as a first instalment or of Kr.150 per new "B" share as payment in full, together with accrued interest at the rate of six per cent. per annum on the amount paid from and including 1st January, 1931, to date of payment.

If payment in full is not made on subscription the remaining instalment of Kr.120 per new "B" share, together with accrued interest at the rate of six per cent. per annum from and including 1st January, 1931, to date of payment, should be paid on or before 14th March, 1931.

5. Share Coupon No. 20 will entitle to subscription and the Swedish Match Company has decided that said coupon shall be used only for the purpose of this subscription. The final dividend for the year 1930 will be paid on Coupon No. 21.

6. From 7th January up to and including 14th January, 1931, receipts will be issued in respect of all subscriptions received, but after 14th January, 1931, Letters of Allotment will be issued in respect of partly paid subscriptions and Definitive Share Certificates will be issued in respect of fully paid subscriptions.

On and after 15th January, 1931, receipts in respect of partly paid subscriptions may be exchanged for Letters of Allotment and receipts in respect of fully paid subscriptions for Definitive Share Certificates. On surrender of Letters of Allotment accompanied by payment of the final instalment, Definitive Share Certificates will be delivered.

No payment can be received in respect of fractions of shares, but Fractional Rights Certificates will be issued which may be amalgamated with other Fractional Rights Certificates and/or coupons to aggregate complete shares.

7. Coupons No. 20 and Fractional Rights Certificates will become invalid after 3rd February, 1931.

8. The new "B" shares will be registered in the name of Administratie Maatschappij voor Algemeene Nijverheids Waarden, and will be endorsed in blank by that Company.

9. Swedish stamp on the new "B" shares will be paid by the Company.

10. Rights to subscribe for new "B" shares can also be claimed in Belgium, Germany, Great Britain, Holland, and Switzerland, and holders of shares wishing to claim their rights in any of these countries can obtain the necessary directions from Higginson and Co., Coupon Department, 32, St. Swithin's Lane, London, E.C.4.

THE BOARD OF DIRECTORS.

Stockholm, 5th January, 1931.

Holders of existing shares wishing to claim their rights in London and to pay in sterling should present Coupon No. 20 to Higginson and Co., Coupon Department, 32, St. Swithin's Lane, London, E.C.4, where listing forms can be obtained. Holders of the old type of certificate without coupons should present their certificates to Higginson and Co. for marking.

For the purpose of payment in sterling the subscription price has been fixed at £8 5s. 6d. per share, the first instalment being £1 13s. and the final instalment £6 12s. 6d. The accrued interest mentioned above will be calculated on the sterling price and will be payable in sterling.

Subscriptions will be received on any business day, excepting Saturdays, from 7th January to 3rd February, 1931, both days inclusive, between the hours of 11 and 2 o'clock. Coupons No. 20 and Fractional Rights Certificates will become invalid after 3rd February, 1931.

If the final instalment is not paid on or before 14th March, 1931, the allotment will be cancelled and the first instalment will be liable to forfeiture.

All documents to be surrendered or presented to Higginson and Co. in connection with this Offer must be left three clear business days for examination.

It is recommended that holders should claim and exercise their rights either in person or through the medium of a banker, as the relative documents will only be forwarded through the post at the risk of the owner.

Application will be made to the Committee of the Stock Exchange, London, for permission to deal in all documents resulting from this Offer.

HIGGINSON & CO.,

Fiscal Agents of Svenska Tändsticks Aktiebolaget.
LONDON, 5th January, 1931.

(Advt.)

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 9,562 tons, as compared with 8,894 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.7 per cent. of the supplies, as against 81.9 per cent. a year ago, and imported mutton, mainly New Zealand, formed 77.4 per cent. of the total supply, as against 74.5 per cent. last year. Prices of mutton and pork have been generally higher, while beef remained at last week's level.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Rather a better feeling has made itself manifest in the markets, and with the advent of buyers there is some recovery from the low levels touched at the opening of the year. Linseed is in fair demand on United Kingdom account, and £8 10s. has been conceded for Plate, January-February and February-March shipment, against £8 recorded a few days ago. Seed on spot is steady at £9 5s., and for January loading, £8 15s., and February-April, £8 12s. 6d. are now quoted. Shipment of the new Argentine crop is proceeding apace, the quantity afloat for Europe now exceeding 125,000 tons. Cottonseed has also commanded more attention, black Egyptian being in good demand, £5 17s. 6d. having been paid for seed on passage and £5 15s. for January and February loadings. Linseed oil, after having touched the low figure of £18 12s. 6d. on spot ex Hull has improved to £19 5s., with January-April delivery quoted £17 12s. 6d. Supplies now are good and consumers more actively interested. Cotton oil is quiet and neglected, crude Egyptian ex Hull offering at £19 and common edible at £22. Oleochemicals and meals are in fair demand and prices are about unchanged. Reserve on the part of sellers resulted in a further upward turn in copra, which tended to curtail operations. Straits S.D. January, to Rotterdam, held for £15 5s.; Dutch East Indies, January, £15 5s.; Ceylon, quoted £16 2s. 6d.; sundried South Sea, nominally £14 5s. Palm kernels, February-March, to Hamburg, £10 12s. 6d. c.i.f.

HIDE, LEATHER AND ALLIED TRADES.—Prices for most classes of hides were steady at the auctions held in Manchester this week, the only alteration in regard to ox and heifers being a reduction of 1d. per lb. on the two top weights in both clear and warbled. Despite the fact that, so far, there has been very little increase in the turnover in imported hides, the feeling seems to be gaining ground that signs of improvement cannot be much longer delayed. In the South American market, European countries, together with the United States, have participated in the purchasing of frigorifics, and Argentine ox have been sold on the basis of 6 1/2d. and light ox at 5 1/2d. Prices for dry South American hides are lower, sales of B.A. Americanos having been made at 6 1/2d., and of M.V. Americanos at 7 1/2d. The market for Capes is quiet, with a few parcels of first and second dries changing at round about 7 1/2d. and 6 1/2d. respectively, while drysalted in the same classes have realised 6d. and 5d. for 20-30 lbs. Australian hides evince rather more interest at the lower prices now being quoted. Tanners and merchants of sole leather are doing a fair turnover. In English and wet-salted the heavier weights in bends are being taken up in moderate quantities on repairing trade account, but so far only a limited inquiry has come to hand for this class of leather for the manufacturing side. Business in the upper leather section has been chiefly confined to small parcels of willow calf and black and brown glaze kid. Producers and distributors in both the sole and upper sections consider the market as being sound in spite of the small amount of interest being taken at the present time by shoe manufacturers. Prices, with very few exceptions, are firm, and any change is expected to be in an upward direction.

RUBBER.—There was no new feature to touch upon. Prices mark but little change and trade meantime pursues a quiet course. Standard sheet, spot and January, sold 4 1/2d.; February, 4 1/2d.; March, 4 1/2d.; April-June, 4 1/2d.; July-September, 4 1/2d.; October-December, 4 1/2d. To New York: estate sheet, February-March, sold 4 1/2d. c.i.f. London stocks increased 714 tons at 78,042, against 56,616 last week. Liverpool stocks, 923 tons higher, at 41,516, against 19,438 last year.

THE MONEY MARKET.

The week was characterised by several important monetary developments, including Thursday's heavy movements of funds, the decision of the Banque de France to accept standard gold, the further break in the Australian exchange, and the announcement that arrangements were being made to ship gold from Buenos Aires in support of the Argentine peso. This last point is discussed briefly on a subsequent page. Thursday's transfers arose from the fact that the final

call of 90 per cent. on last autumn's Treasury bond issue fell due, while the Government had also decided to redeem in cash on that day the outstanding portion of the 4 per cent. (tax compounded) War Loan. The problem set to the market by these two operations was whether on balance money would be absorbed by the Bank or released. As shown below, this problem had its immediate and its final aspects.

The total amount of the final Treasury bond call was known to be £94.5 millions, but the latest revenue returns showed that up to January 10th £85.6 millions of this sum had been paid up in advance under discount, so that, allowing for payments that were made early this week, possibly only £55.0 millions had to be found on Thursday. Against this, the outstanding portion of the 4 per cent. War Loan, which was paid off on Thursday, amounted to £75.0 millions, so that, apart from the unknown factor of "inside" holdings of War Loan and Treasury bonds, the market stood to gain from the Bank £20.0 millions more than it lost. This, however, was only the final aspect of the dual transfer. The immediate aspect was that whereas on Thursday the £55.0 millions due on the Treasury bond call had to be paid over on the spot, the £75.0 millions paid out by the Bank in redemption of the War Loan was not made immediately available to the market. When the Bank paid out this money, it did so by sending cheques to all the War Loan holders, scattered all over the country. The market rightly anticipated that it would take several days before all these cheques were presented at the Bank for payment, and in the meantime the market feared, with reason, that it would be short of funds.

Thus Wednesday witnessed a certain amount of preparatory borrowing at rates running up to 2½ per cent., and on Thursday, when it became apparent that money was short, 2½ per cent. had to be paid for renewals, while new money at times commanded as much as 3 per cent., and finally a small amount had to be borrowed from the Bank. The discount market, however, was inactive, with February bills quoted at 2½ per cent., March at 2½ per cent., and three months' bills at 2½ per cent. Longer maturities were quoted at 2½ and 2½ per cent. The stringency is purely temporary and will diminish as the War Loan cheques are presented.

	Dec. 23, 1930.	Jan. 1, 1931.	Jan. 8, 1931.	Jan. 15, 1931.	Previous Rate and Date Changed.

Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount (Call)	1	1	1	1	1½ (May 1, '30)
Houses (Notice)	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2½	...

On Wednesday it became known that the Banque de France was intending to accept, as from an early date, standard gold as well as fine gold against its purchases. As several details arising out of this change in its procedure remain to be settled, the new arrangements will not come into force at once, and it is generally understood that February 2nd is the date appointed for the change. The Banque de France will pay for standard gold on the basis of its fine gold content, and has agreed not to raise its minting charges. The effects of this concession, when it comes into force, will be that the franc exchange export gold point will be raised from Frs. 123.65 to Frs. 123.89, the premium on fine gold in London will disappear, and gold shipments to Paris will no longer be restricted by the capacity of the refiners to about £300,000 a day.

The remaining seventeen days of January are thus witnessing an interim phase, during which the old arrangement and old gold points operate under the shadow of the new. The first effect of the announcement was to drive the Paris exchange up to Frs. 123.84, or a rate which made it profitable to cancel Wednesday's and

Thursday's arrangements with the refiners. Subsequent cancellations are proceeding upon a day-to-day basis, for it is recognised that until the appointed date there is nothing to stop the exchange slipping back to under Frs. 123.70. The Cape gold due on January 20th and 27th has been brought forward upon French account, and these arrangements stand. In the meantime, so long as it is profitable to cancel arrangements with the refiners—and this can be done when the exchange is over Frs. 123.80—no appreciable amount of gold is leaving the Bank. Thus the first important result of the change is the cessation of the flow of gold to France.

The next point of interest is what will happen next month when the new arrangement comes into force. At first sight, it would be reasonable to expect a big movement of gold to France, amounting to several millions and sufficient to satisfy current French needs for good and all, followed by a final cessation of the outflow. City opinion, however, is disposed to take a more hopeful view. One reason for the extent of the aggregate outflow of gold to France during recent months was undoubtedly the obstacles arising from the disinclination of the Banque de France to accept standard gold. Thanks to the Banque de France's co-operation in agreeing to accept standard gold, there is now complete freedom of movement. This, it is held with some justice, may have so great a psychological effect that, now that anyone who wants gold can have it in unlimited quantities, there will be no desire to take it. On these grounds it is conceivable that no gold will be taken next month, and that the outflow is already at an end.

On Monday the Associated Australian Banks announced that their selling rate for cable transfers would be raised from £115 10s. to £118 7s. 6d. Australian for £100 London. This represents another advance since the break-away last week. The selling rate for New Zealand cable transfers has been fixed at £107 10s. New Zealand for £100 London. Thus New Zealand is breaking free from the depreciation of the Australian pound.

NEW YORK.

Credit conditions have been easy. At the end of last week the Chicago Reserve Bank reduced its rediscount rate from 3 to 2½ per cent., while on Tuesday the New York rate on bankers' acceptances was lowered by a further ½ per cent. Call money was also easy at 1½ per cent. Gold continues to arrive from Canada, \$11,000,000 being reported during the week. At the end of last week a further reduction of \$47 millions was announced in brokers' loans, the current figure being \$1,879 millions.

THE FOREIGN EXCHANGES.

The Foreign Exchange market was fairly active this week. Sterling maintained its recent recovery except against the dollar, where the rate moved against us by ¼ to 4.85½. Montreal recovered from 4.87½ to 4.86½. Paris went from 123.70 to 123.83 after touching 123.84, for reasons already discussed. Brussels declined sharply to 34.84 from 34.79½. The peseta was very irregular and went from 45.80 to 47.40. Amsterdam lost ½ at 12.06½. Berlin and Switzerland moved sharply in our favour to 20.42½ and 25.07½ respectively. Stockholm gained ¼ at 18.13½. Oslo lost ½ at 18.16½, and Copenhagen ½ at 18.16½. The South American currencies also reacted differently, Rio gaining ¾d. at 4½d., whilst Buenos Aires lost ½d. net at 34½d., and Montevideo 1½d. at 33½d. In the forward market, New York went from a discount to par for both periods. Paris from par was one centime discount for both periods. Milan was better at 14 and 42 centesimi discounts, as was Madrid at 1½ and 6 centimos premium. Amsterdam recovered to ¼ and ½ cent premium, and Berlin was rather better at 1½ and 5 pfennigs discount for the two periods. Silver established new low records during the week, but recovered a little at the close, cash at 13½d. and forward at 13½d. showing declines of ¾d. and ½d. respectively. The China silver exchanges fell in sympathy. Hongkong from 1s. 0½d. to 11½d. and Shanghai from 1s. 3½d. to 1s. 3½d.

GERMANY AND EUROPE.

THERE are times when the game of international politics looks like that nightmare game of croquet which Alice tried to play in Wonderland, with hedgehogs for balls and flamingos for mallets. Whenever the hedgehog was nicely curled up and placed in position, the devoted flamingo would refuse to straighten his neck for the stroke; and by the time the flamingo's neck had been straightened out, the long-suffering hedgehog had uncurled himself and crawled away. At the present moment, that scene from Wonderland provides an apt simile for the portentous difficulties which are being encountered by international statesmanship in its attempt to make the flamingos and the hedgehogs of Europe—the ex-Ally and the ex-Enemy Powers—co-operate in playing the game of European understanding and reconstruction.

As matters stand, those who have worked hardest in this country for peace during the last twelve years are inclined to be vexed with Germany. "Look," they say to their German friends, "how hard we have worked for the good cause, and in the teeth of what formidable obstacles. Sincere friends and admirers of France, we have had to contend with the French 'system of Europe' founded on the four European peace treaties—a rigid system championed by a great nation in a rigid frame of mind. And look how much has been accomplished. Thanks in some part to our persuasion, the French have accepted first the Dawes Plan and then the Young Plan. They have evacuated first the Ruhr and then the Rhineland (and this, five years in advance of the latest treaty date); they have entered into the Locarno Pact on a basis which places France and Germany on an equal footing; and they have agreed not only to the admission of Germany to membership in the League of Nations, but to her being given a permanent seat on the Council. For this you owe us (and France) some thanks. We admit freely great assistance from Dr. Stresemann on the German side. Take all the credit for him, if you like, if only you will stop committing the inexplicable folly of repudiating his 'policy of fulfilment' just when it has begun to bear fruit. The French evacuate the Rhineland and accept the Young Plan; and incontinently you hold anti-French demonstrations in the evacuated territory and return 'Nazi' members to the Reichstag in ten times their previous numbers. For heaven's sake, return to 'the policy of fulfilment'! Recurl yourself, impatient hedgehog that you are, into that neat and convenient Stresemannic ball!"

What do those Germans who are of like mind to these English peacemakers say in reply? Their reply is couched in ludicrously similar terms to those of the English indictment. "Have we not worked hard for the good cause too? Have we not been up against the rigid frame of mind of German Nationalism, ever seeking to repress into its own mould the ductile spirit of the German people—the spirit of a people that has been defeated, unnerved, disillusioned? Do you at all realise the stubbornness and the weariness of the daily battle which we had to wage, under Stresemann's leadership, against critics who were dinning into the ears of our countrymen a perpetual warning that 'the policy of fulfilment' was all in vain. 'We told you so,' the German Nationalists are calling to the German people; and we peacemakers are reduced to silence, for we can no longer say that the critics and the sceptics have failed to prove their case. It is you English peacemakers who have let us in for this, by your inexplicable weakness and complacency in the matter of armaments and minority rights at the critical moment when the Stresemann 'policy of fulfilment' had either to bear fruit or be discredited."

What is the explanation of this unhappy and dangerous misunderstanding between two groups of people in Germany and England who are like-minded and who are working for the same ends? The misunderstanding arises from a profound difference of psychological "tempo,"

which arises in turn from a certain difference in material circumstances. The Englishman is entirely in earnest in wanting to get the French "system of Europe" modified; but, after all, he is not the immediate victim of this system himself, so he can afford to take his time about changing it, and to let France take hers. For the German, on the other hand, who feels himself like an Atlas bearing up an intolerable weight, time is of the essence of the problem. He feels that the burden is going to crush him unless he is given substantial relief at once.

Now a dispassionate observer from China or Peru, after looking at our present European discontents, would probably pronounce that Germany was not so completely exhausted as Germans suppose, nor England so comfortably situated as she appears to be in German eyes. He would probably say that both countries, like all Europe and all the world, are suffering bitterly from the present world-wide economic depression, and that the difference between their actual situations is one of a small and scarcely discernible degree. On the other hand, it is proverbially true that, when the camel's back is at breaking point, it is the last straw that makes it snap; and for Germany, as she faces the unemployment problem this winter, "the last straw" appears to be this feeling that, in the field of international relations, she has been cheated; that the Stresemann "policy of fulfilment" has been pursued in vain; that the French "system of Europe" is not going to be modified in essentials after all—at any rate, not by pacific, constructive, League of Nations methods.

A sign of the times is an article which has just been published* by Dr. Mendelssohn Bartholdy, a German who is well known outside Germany, as well as at home, as one of the editors of the great series of German documents on the origins of the war, and as a statesmanlike and conciliatory publicist. Dr. Mendelssohn Bartholdy is no more a Nazi than he is a Communist. His passing strictures on the Nazis, in this very article, are severe almost to savagery. He represents the sensible, well-balanced, enlightened minds of Germany; and that is why it gives an English reader a shock when he heads his article "Shall Germany renounce her membership in the League of Nations?" and when he proceeds to argue out the pros and cons in cold blood, Dr. Mendelssohn Bartholdy does not shirk the cons. He points out that for Germany to withdraw from the League would not be a heroic gesture; that it would bring Germany no immediate relief; that it would probably be unpopular in the United States; that France and England would probably succeed in bribing Italy not to follow suit; and that it would mean the loss of Germany's economic opening in her former colonies, which are now mandated territories. Yet he sums up by exclaiming that, however many cons he may pile up as a student of politics, he cannot, after all, forget that he is a man; that he must follow not only his reason but his conscience; and that the man in him declares: "We must get out of Geneva!"

Now Dr. Mendelssohn Bartholdy sees quite clearly what this step would mean. "If Germany and Italy," he writes, "were shortly to withdraw from the League, and if America were to remain aloof from it, then the League could not be kept going. In the British Empire, the policy of turning a cold shoulder to the European Continent, which the Dominions have long wished for anyhow, would at once become an accomplished fact." And he declares, in terms, that the destruction of the League in this manner is the supreme pro which outweighs all the cons against withdrawal from the League from the German point of view.

Now there is one further thing that Dr. Mendelssohn Bartholdy does not say outright. He does not say that the destruction of the League, by a concerted withdrawal of Germany and Italy, would mean another great war in Europe within the next ten or twenty years. But palpably he knows it; and his knowledge of it can be

* "In Europäische Gespräche," Jahrgang viii, Heft 12.

read between the lines. That Germans like Dr. Mendelssohn Bartholdy should be in this mood now is a portent. Something must be done. But in what direction helpful policy is to be sought is not so easy to say. To attempt to arraign France for desiring to perpetuate in Europe a post-war balance of power whose price must be another hell of poison-gas and slaughter is neither politic nor fair; for in France to-day, if "security" (for reasons which Germany is none too well fitted by past history to question) is an obsession, grandiose visions of *Machtpolitik* have no hold whatever on mass opinion. Conceptions of a "system of Europe" which may engross the mentality of the Quai d'Orsay elicit little enthusiasm from the great body of *moyen* Frenchmen who live between the Pas de Calais and the Pyrenees. Equally we decline to believe that the great mass of "middling" German opinion has much sympathy with a policy whose objective is a new Triple Alliance of Germany, Italy and the U.S.S.R., dividing Europe once again into two armed camps. It is on the statesmen of the Powers, therefore, that responsibility of the gravest possible character rests. And the supreme task which lies before M. Briand and Herr Curtius this year is to persuade their countrymen—the one, that men are made more dangerous by hopelessness than by any other emotion; the other, that the worst way to secure the co-operation of friendly sympathisers is to try to force the pace, to surrender—as children do—to unreasoning despair, or (above all) to endeavour wrong-headedly to capitalise the cry of "Wolf, wolf."

A POLITICAL DILEMMA.

WHEN Parliament reassembles next week members will have to face the fact that the month's recess, so far from producing any signs of alleviation in the troubled state of the nation, has provided definite proof of the full continuance of the economic storm. Since the December adjournment the figure of total unemployment has risen by over a quarter of a million—a painful reminder, not merely of the persistence of the industrial malaise but also of the urgency of that thorny task of overhauling the whole system of unemployment insurance and relief, upon which a Royal Commission is belatedly deliberating. At the same time, the publication of nine months' figures of public revenue and expenditure has provided another reminder, equally painful, that the Budget of next April is being contemplated with growing anxiety, and that the duty of the House of Commons to force retrenchment upon the Government is becoming plainer and more pressing. In the weeks between now and Easter the most important business of the Commons should be the exercise of their function as guardians of the public purse, and circumstances demand that the estimates for the spending departments for 1931-32 should be subjected to something far more rigorous than the customary complacent scrutiny.

But before the House can settle down to constructive work of this kind it has to face, at the outset of the Lent term, a purely political dilemma of first-rate importance. For on Thursday next, two days after the reassembly, the Trade Disputes Bill will be presented for second reading. It may be presumed that the whole of the Conservative ranks will be marshalled against the Government; while there is some disposition to expect that a considerable section of the Liberals will join Sir John Simon in refusing to sanction the second reading of a Bill which they regard as definitely injurious to the national interest. In the hands of the remaining members of the Liberal Party may well lie the fate of the Government, for defeat on the second reading of a major measure would almost certainly be followed by the resignation of the Cabinet or an appeal to the country.

The dilemma is both serious and difficult. On the one hand, we believe that the destruction of the Government next week, before Parliament has had any opportunity to review the work of the Indian Conference and the policy

of the Government in relation to it, is highly undesirable; nor can we see any possible good at this juncture in a general election on a class issue, which could only serve to distract the nation's attention from what should be the absorbing task of co-operative reconstruction. Yet, in our view, the Bill, whose provisions were fully discussed in our issue of December 27th, is in one or two essential respects an unfortunate and even dangerous measure. If the Government take their stand firmly upon the present intentions of the Bill they will court a defeat, which nobody wishes to see them sustain at this particular moment. On the other hand, if the majority of the Liberals give reluctant acquiescence to the worst features of the measure they may be doing the country an ultimately greater disservice than by forcing an immediate political crisis.

There are, as far as we can see, only two satisfactory solutions, and they lie in the hands of the Prime Minister. The alternative methods of escape which are open to him are, firstly, to fulfil his early promise to regard the House of Commons as a Council of State and announce the Government's willingness to consider substantial amendments in the Committee stage of the Bill; and, secondly, to agree to postpone the later stages of the Bill pending examination by a Special Commission of the whole problem of Trade Union Law, and of such specific possibilities as those of defining the phrases "intimidation" and "sympathetic strikes" and "essential services," with due and proper regard, not only to trade union susceptibilities, but also to the safety of the State and the just rights of the individual citizen.

Of these two courses the second would be preferable, but is, perhaps, the less likely, for it is a method of procedure which the Government's trade union supporters might regard as impotent dalliance. But against the first course we can see no valid argument, and we appeal to Mr MacDonald to pursue it. He would lose no prestige, and would certainly be enabled to carry legislation removing the bad features of the 1927 Act, while avoiding the mistakes of the new Bill, if he promised to make every endeavour to meet the Opposition on the two vital points with which they are chiefly concerned. The first is that the non-striker should be safeguarded against intimidation far more effectively than the present Bill proposes, and the second that the "essential services" precluded from the right to strike should be so defined as to secure that the nation should never again be forcibly threatened with a cessation of its daily life.

Are the Prime Minister and his Cabinet really reluctant to concede these two demands of national safety and individual safeguard? We can hardly conceive that they are. If not, let them say so, and with minor give and take over lesser questions in the Committee stage, they may be certain of placing on the Statute Book a new charter of trade union privilege in no proper way inferior to that which existed before the 1927 Act. On these lines we hope and believe that common sense will prevail.

INDUSTRIAL PROFITS.

FROM our last quarterly analysis, published three months ago, of the accounts of British industrial joint-stock undertakings compiled in our weekly Profit and Loss summaries, it was evident that a phase of substantially diminished earnings had begun to be disclosed. Up to the end of the second quarter of last year the "time-lag" between the end of companies' financial working periods and the publication of the results was sufficient to delay the disclosure of the effects on profits produced by the major trade depression which set in towards the end of 1929. In the third quarter of 1930, however, a decline of over 6 per cent. was revealed; and the accounts of 509 companies tabulated in our columns during the three months ended December 31st show a contraction in net earnings, after payment of debenture interest, amounting to over 18 per cent.

NET PROFIT (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published In		Increase (+) or Decrease (-).	
		1929.	1930.		
First quarter.....	516	£ 60,888,497	£ 62,021,337	+ 1,132,840	+ 1.9
Second quarter.....	578	73,424,411	79,717,393	+ 6,292,982	+ 8.6
Third quarter.....	529	25,232,486	23,626,502	- 1,605,984	- 6.4
Fourth quarter.....	509	39,272,377	32,174,677	- 7,097,700	- 18.1
	1,932	198,817,771	197,539,909	- 1,277,862	- 0.6

From the next table, which gives quarterly fluctuations in net profits since the beginning of 1924, it will be seen that for the calendar year 1930 the decrease amounted to less than 1 per cent., the progressively heavy decline of the last two quarters being offset by the increases recorded in the quarters ended March and June. Since trade conditions began to deteriorate from the beginning of the fourth quarter of 1929 onwards, it may be noted that some nine months had to elapse before the influence of the trade recession began to be reflected in earnings statements. In this respect the experience of the slump which followed the collapse of the 1919-20 boom was somewhat similar. Preceded in April, 1920, by a turning point in our index number of wholesale prices, the deflationary collapse which led to the severe depression of 1921-22 began actually to affect companies' working results from mid-summer 1920 onwards. But it was not until the second quarter of 1921 that our analysis of industrial profits recorded a downward movement with a fall of 8 per cent. Six months later the maximum quarterly fall, 53 per cent., was registered; and on this analogy the full brunt of the present depression may be expected to be revealed in our next analysis three months hence, though, since the latest quarterly decrease of 18.1 per cent. compares with a decrease of 42.4 per cent. in the second "decline return" of 1921, it may be hoped that our next quarterly statement will show a decrease in profits considerably less severe than 53 per cent. :—

	1924.	1925.	1926.	1927.	1928.	1929.	1930.
First quarter.....	+ 8.7	+ 9.1	+ 7.6	- 4.0	+ 15.2	+ 1.5	+ 1.9
Second quarter.....	+ 3.0	+ 11.1	+ 8.3	+ 5.7	+ 1.3	- 0.7	+ 8.6
Third quarter.....	+ 2.3	+ 9.8	+ 2.8	+ 2.4	- 0.7	+ 3.0	+ 6.4
Fourth quarter.....	+ 13.3	+ 6.4	+ 3.8	+ 0.3	+ 3.1	+ 1.4	- 18.1
Year.....	+ 6.6	+ 8.7	+ 6.3	- 3.0	+ 7.2	+ 0.0	- 0.6

In the next table we show the results of the past quarter in greater detail. With the exception of breweries (whose earnings have so far been affected to a surprisingly small extent by trade depression and unemployment), iron, coal and steel companies and telegraphs—and the figure for this group is based on so few returns as to be scarcely representative—every group in our analysis shows a decline. Moreover, it so happened that the majority of the colliery companies, whose results showed a moderate improvement on the none too satisfactory returns of a year ago, closed their financial year on June 30th, since when coal earnings have certainly declined :—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

Most significant as an indicator of general conditions is the heavy fall of 18.2 per cent. shown above for the large miscellaneous group, whose figure three months ago registered a fall of only 4.6 per cent. A serious drop in the earnings of land mortgage undertakings is strikingly indicative of the diminished prosperity of overseas countries, such as Australia and the Argentine, whose national economy is largely dependent on the sale of primary products—a consideration which applies equally to the poor showing made by rubber and nitrate. In the shops and stores group the decrease in net profits is due mainly to the effect of the results of Waring and Gillow and of the South American shops controlled by Harrods, and is not necessarily a correct pointer to the earnings of retail distributors as a whole in this country. In the case of the investment trusts group, where a decline of only 5.4 per cent. is recorded, it would be natural to expect that the time-lag between the development of an industrial depression and a shrinkage in net earnings would be greater than in the case of undertakings trading directly on their own account.

In our next table we set out the distribution of profits during each of the past four quarters :—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1930.	£	£	%	£
First quarter.....	62,021,337	38,408,282	61.9	12,233,520
Second quarter.....	79,717,393	45,045,105	56.5	19,448,375
Third quarter.....	23,626,502	14,850,457	62.8	4,469,225
Fourth quarter.....	32,174,677	20,766,299	64.5	6,564,790
	197,539,909	119,050,143	60.2	43,115,910
			21.9	35,373,856

An unsatisfactory feature disclosed by the foregoing table is the appreciable decline in the percentage of total profits "left in the business" during the past quarter. A year ago the proportion reserved was 18 per cent., and in the fourth quarter of 1928, 23.2 per cent. The average for the year, 17.9 per cent., contrasts with 19.0 per cent. in 1929 and 22.3 per cent. two years ago. The next table shows in detail for each of the different groups how the aggregate distribution was divided :—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
Breweries.....	£ 4,498,486	£ 2,467,471	54.9	£ 805,781
Hotels, Restaurants, &c.....	639,508	333,432	52.1	184,407
Iron, Coal and Steel.....	1,770,703	730,785	41.3	305,074
Land, Mortgage, &c.....	1,191,15	770,715	64.2	565,706
Motor and Cycle.....	795,443	522,669	65.7	73,860
Nitrate.....	272,74	2,274	Nil	260,000
Oil.....	603,441	287,998	47.7	Nil
Rubber, &c.....	204,193	128,322	62.8	11,067
Shipping.....	1,594,09	1,432,33	89.9	161,760
Shops and Stores.....	1,182,977	624,252	52.8	383,515
Tea.....	268,531	189,830	70.7	28,656
Telegraphs, &c.....	43,371	10,955	25.3	8,629
Textiles.....	52,322	33,202	63.5	50,767
Tramways.....	110,029	65,528	59.6	5,432
Trust Companies.....	3,665,157	2,214,89	60.4	977,863
Miscellaneous.....	15,269,921	11,626,311	76.2	2,472,667
Total.....	32,174,677	20,766,299	64.5	6,564,790
			20.4	4,843,588

Conservative policy in the matter of distributing profits to shareholders is exemplified chiefly by the iron, coal and steel, oil, rubber, telegraphs and tramways groups, while at the other end of the scale come the land mortgage, nitrate and textile groups, which paid out in dividends more than their aggregate earnings. In the case

of the miscellaneous group, the reserved proportion of 7.7 per cent. compares with 9.5 per cent. a year ago and no less than 22.2 per cent. in the last quarter of 1928.

Turning to earnings on capital, we next give the ratio of net profits and of sums reserved to total ordinary and preference capital:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.	
1930.	£	£	%	%
First quarter	595,281,227	62,021,337	10.4	11.379,535
Second quarter	751,903,913	79,717,395	10.6	14,823,913
Third quarter	265,078,042	23,526,502	8.8	4,326,820
Fourth quarter	392,547,450	32,174,577	8.2	4,843,588
	2,007,816,632	197,539,903	9.8	35,373,856

At 8.2 per cent. the ratio of net profits to total capital compares with 10.3 per cent. at this time last year and 11.0 per cent. two years ago. The average for 1921, it may be recalled, was 10.3 per cent., and in 1922—the lowest of the post-war period—7 per cent.

Our next table summarises for each quarter since the beginning of 1927 the average rates of interest and dividend paid on debenture, preference and ordinary share capital:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1927.	1928.	1929.	1930.	1927.	1928.	1929.	1930.	1927.	1928.	1929.	1930.
1st quarter	4.80	4.78	4.89	4.89	5.1	5.3	5.4	5.8	10.4	11.3	10.9	10.0
2nd "	5.30	5.43	5.10	4.94	5.9	6.0	5.9	6.3	11.8	10.0	9.8	10.3
3rd "	4.98	4.90	4.88	5.36	5.2	5.4	6.0	5.0	10.2	10.7	10.3	8.3
4th "	5.19	5.04	5.29	5.19	4.9	4.9	4.7	4.5	10.1	10.3	10.6	8.4
Year	5.08	5.02	5.15	5.39	5.3	5.4	5.5	5.7	10.8	10.6	10.5	9.5

Examination of average rates or ordinary dividend paid by the various groups shows that, with the exception of breweries, hotels, tramways, trusts and (near the bottom of the dividend scale) the iron, coal and steel undertakings, reductions have been almost uniformly substantial:—

	Debenture Capital.	Rate of Int.	Preference Capital.	Rate of Div.	Ordinary Capital.	Rate of Div.	Rate of Div. year ago.
Breweries	£ 21,224,890	4.9	£ 13,904,812	5.8	£ 19,050,596	12.9	13.1
Hotels, Restaurants, &c.	2,545,317	4.9	3,244,803	5.7	3,870,479	8.8	6.9
Iron, Coal and Steel	10,712,521	5.1	13,148,600	5.3	26,519,168	2.8	1.8
Land, Mortgages, &c.	12,796,357	5.5	14,190,744	3.5	24,413,212	3.2	8.4
Motor and Cycle	211,000	6.3	1,706,133	4.3	4,398,640	11.9	14.1
Nitrates	8,751,293	6.1	8,000,000	3.5	1,322,750	...	0.5
Oil	395,834	7.0	Nil	...	8,530,355	3.4	7.5
Rubber, &c.	220,203	7.2	396,231	2.8	13,247,247	1.0	4.4
Shipping	10,313,160	4.9	7,681,960	5.4	9,781,888	7.6	10.6
Shops and Stores	1,844,740	6.2	5,220,311	7.2	6,808,196	9.2	12.1
Tees	224,737	5.0	510,200	5.6	1,313,542	14.5	21.8
Telegraphs, &c.	221,900	5.9	136,975	6.3	523,950	3.2	7.2
Textiles	1,640,452	6.4	1,857,104	2.7	1,980,745	1.7	4.2
Tramways	231,151	5.8	200,000	2.7	1,600,303	4.8	4.8
Trusts	18,824,552	4.6	22,855,674	4.3	27.3, 8,725	8.1	8.8
Miscellaneous	13,505,487	5.6	49,464,262	5.0	97,209,825	11.1	15.6
Total	101,466,494	5.2	144,597,829	4.5	247,949,621	8.4	10.6

While the average rate of ordinary dividend, 11.1 per cent. in the case of the large miscellaneous group, may afford some encouragement to the Chancellor of the Exchequer in estimating income assessable to tax in 1931-32, the fact that, as we have shown, the average rate of 8.4 per cent. for all companies together was achieved only at the price of making barely adequate provision for reserves is somewhat disquieting. It is possible that holding companies, whose numbers have greatly increased in the past decade, may have the advantage of being able to include in their receipts for 1930 the dividends earned in 1929 accruing to them from subsidiaries; but though this may retard the influence of the depression on many important profit and loss accounts, reference to the experience of 1921 suggests strongly that shareholders may have to face considerably less agreeable dividend declarations in coming months. From the

point of view of the stock market, the depressing effects of poor earnings statements this spring is a factor which obviously cannot be overlooked, though in the case of most sound companies prices of stocks already discount substantial reductions in the profits available for distribution to shareholders.

CO-ORDINATION OF TRANSPORT.

THE Royal Commission on Transport has enjoyed the rare satisfaction of seeing the main recommendations of its first two Reports embodied in an Act of Parliament before it had rounded off the full tale of its labours. In a sense, therefore, its final Report* appears as something of an anti-climax, for though it contains many sound and valuable suggestions, there is nothing in it which could form the basis of an immediate legislative enactment, having as its object the co-ordination of transport, though that was the end to which the Commission's inquiries were directed.

In pursuit of this object, however, the Commissioners found material for many suggestions which, in their view, if carried into effect, would "go far to make co-ordinated working more easy to accomplish in the future." They suggest, for example, that the division of territory brought about by the Railways Act, 1921, should be made complete by the elimination of overlapping areas, the discontinuance of joint lines, and the pooling of services which are at present run in competition, over lines near the boundaries of two companies' territory.

While recognising that the difficulties of the railways are, in the main, due to the general trade depression and road competition, the Report suggests that the companies have been led by long years of virtual monopoly to adopt a take-it-or-leave-it attitude, and that they could do much to secure increased passenger traffic by speeding-up services, especially on the shorter cross-country runs; by a general downward revision of fares in preference to their present policy of excursions hedged about by restrictions; and by making greater efforts to provide seats for all passengers. While commending the railways' activities in road transport, where these supplement their own services, the Commission is opposed to the development by the railway companies of road services which may compete with the railways, and advocates the expenditure of capital on the electrification of suburban lines instead. Apart from recommendations as to the use of larger wagons and of containers, the Report makes few suggestions for improving the transport of goods by rail.

On the question of road transport the Commission has already seen its main recommendations carried into effect. It now expresses itself strongly opposed to the construction of any new arterial roads, but advocates a generous use of by-passes, and the improvement of existing roads by widening, the elimination of blind corners, the abolition of tolls, the provision of footpaths and usable grass margins, and the improvement of bridges. These recommendations, we think, are on sound lines. It proposes to make pneumatic tyres compulsory on all road vehicles except locomotives, and to discourage the use of excessively heavy vehicles by a sharply graduated tax.

The passages in the Report which deal with the Road Fund are of particular interest. Raids are very properly condemned in the strongest terms, and the Commission also disapproves (less convincingly) of the proposal to capitalise a part of the Fund for immediate improvements. The difficulties of principle in determining upon whom the cost of the upkeep of the highways should fall are discussed at some length, and the conclusion is reached that motorists are paying about their fair share, but that ratepayers are paying too much. Owing to the fact that not only the proceeds of the petrol tax, but also one-third of the taxation paid on private cars and motor vehicles does not find its way into the Fund, motorists are taxed to the extent of two-thirds of the annual cost

* "Royal Commission on Transport. Final Report. The Co-ordination and Development of Transport." Cmd. 3751. H.M. Stationery Office. 4s. 6d. net.

of the highways, but, when the Exchequer has taken its heavy toll, two-thirds still remain for the ratepayer to pay. The Commission therefore recommends that the share of the ratepayer be reduced to one-third and that no proceeds of the licence and petrol duties be diverted from the Fund if such diversion would reduce the motorists' contribution to less than two-thirds.

The only recommendation in connection with road transport which directly bears on co-ordination is that which would require road hauliers to be licensed by the Area Traffic Commissioners, with a view to eliminating unfair competition in the transport of goods by carriers who do not conform to decent standards of wages and hours. The Commission claims that this measure, by putting the road transport service on an organised basis, would be a preliminary to general co-ordination.

Tramways are rightly regarded by the Commission as obsolete, and their gradual elimination is recommended. Not so canals, to many of which the Commission concedes a limited sphere of usefulness; it is in connection with them that the Report advocates the most definite measures of reorganisation, under a system of Public Trusts. The question of their competition with other forms of transport might, in the Commission's opinion, be referred to a Permanent Advisory Council on Transport.

This Council represents the most constructive suggestion the Commissioners make on the main subject of their Report. Baffled, as who would not be, by the complexity of the problem of co-ordination, they "confess that, for the present, we can see no positive solution," and, convinced that any attempt at coercion would be misguided and ineffective, they propose, instead, constant guidance and assistance by the Ministry of Transport. For this purpose, they recommend that a permanent advisory body should be set up, to keep in close touch with the Area Traffic Commissioners and to "study transport problems—both in the country generally and in particular areas—and to advise the Minister as to the action which he might usefully take to promote the co-ordination, improvement and development of transport generally," and they express the view that "by means of suggestion and persuasion the Advisory Council might be able to bring about a co-ordination of transport facilities which might not otherwise be possible."

Perhaps the view which the Commission takes as to the possibilities of "suggestion and persuasion" is optimistic, but the general idea of a permanent body whose function is to study and advise on transport problems is sound, and if such a body made the best use of its opportunities, its work might render it easier at some future time to devise and undertake a more positive and comprehensive scheme of co-ordination. As to what form such scheme might take, the Commissioners, after discussing various possibilities, discreetly decline to commit themselves.

THE YEAR'S OVERSEAS TRADE.

THE complete results for 1930 are now available, and it is possible to tell how bad the year's overseas trade figures are. On the face of it they are very bad indeed, for, as the first table shows, imports have fallen in comparison with 1929 by £176 millions, exports by £158.7 millions, and re-exports by £22.7 millions. The fact that 1929 was a fairly typical post-war year only adds to the disappointment of the 1930 results.

FOREIGN TRADE VALUES.

	1924.	1928.	1929.	1930.
Imports	£ mill. 1,277.4	£ mill. 1,195.6	£ mill. 1,220.8	£ mill. 1,044.8
British exports	801.0	723.6	729.3	570.6
Re-exports	140.0	120.3	109.7	87.0
Total exports	941.0	843.9	839.1	657.5
Excess of imports over total exports	336.4	351.7	381.7	387.3

Nor is the detailed analysis, given in the second table, much more reassuring. Here again, 1929 was a not

unrepresentative year, and here again there has been an extensive decline in practically every component of the trade returns. In some respects these detailed figures are more disappointing than the totals, for they reveal substantial declines in raw material imports and "finished" exports, and a lesser decline in "finished" imports. In this latter connection, the Statistical Tables (Cmd. 3737), recently issued by the Board of Trade, showed that in 1929 £157.3 millions out of the total of £305.5 millions retained imports classed as "wholly or mainly manufactured" represented articles requiring in various degrees further manufacture before they were ready for consumption; and to this extent, if the proportion in 1930 was similar, the relatively small decline in this category of our imports may be regarded as indicating that demand for "semi's" on the part of some of our "finishing" trades was fairly well maintained. The drop, however, of £134 millions in "wholly or mainly manufactured" exports is a feature whose gravity cannot be disguised.

	1924.		1929.		1930.	
	Retained Imports.	Exports.	Retained Imports.	Exports.	Retained Imports.	Exports.
Food, drink and tobacco	£ mill. 541.2	£ mill. 57.0	£ mill. 509.5	£ mill. 55.7	£ mill. 451.8	£ mill. 48.3
Raw materials and articles mainly unmanufactured	323.8	106.5	285.3	78.9	212.4	63.8
Articles wholly or mainly manufactured	265.0	618.9	305.5	573.8	283.3	439.8

In comparing the figures for the past two years, adequate allowance must of course be made for the fall in commodity prices. In round figures, the wholesale price-level of 1930 compares with that of 1929 in the ratio of 85:100; and this is a rough measure of the extent to which the contraction in the trade returns represents lower declared values and not lessened volume. A closer measurement, though one which cannot as yet be extended up to the end of 1930, is provided by the quarterly official calculations of changes in the volume of overseas trade. These are summarised briefly below:—

	1924.	1928.	1929.	1930.*
Imports	100.0	107.8	114.1	106.1
Exports	100.0	104.7	108.3	90.6

* To Sept. 30th only.

The foregoing figures showed that up to the end of the third quarter of last year, even after eliminating the effect of price changes, there had been a serious contraction, especially in our export trade; and since the figures for the first quarter were relatively good, a still less satisfactory story may be told when the volume results for the whole year can be averaged.

Meantime, some indication of the true position for the year is to be found in the two final tables, giving detailed imports and exports:—

SOME LEADING IMPORTS.
(Quantity '000's omitted.)

	1924.	1927.	1928.	1929.	1930.
Wheat	117,421 cwt.	110,436	103,577	111,769	105,007
Beef	13,611 cwt.	14,464	13,324	12,665	12,814
Sugar	35,995 cwt.	32,913	38,611	42,025	38,233
Raw cotton	15,777 cwt.	15,483	15,076	15,398	12,102
Sheep and lamb's wool	7,603 cwt.	8,220	7,793	8,139	7,834
Raw silk	5,241 lbs.	3,662	3,923	4,683	3,977
Flax, hemp and jute	339 tons	400	332	352	26
Iron ore	5,927 tons	5,235	4,495	5,757	4,35
Wood and timber, sawn, soft	5,137 loads	6,026	4,605	5,224	4,85
Rubber	1,457 cwt.	3,246	2,443	3,954	3,913
Crude petroleum	464,363 gals.	664,810	498,002	487,349	460,964
Wood pulp	1,228 tons	1,431	1,263	1,638	1,532
Hides, wet and dry	1,806 cwt.	1,532	1,503	1,174	1,300

The foregoing table records numerous substantial declines in imports of the principal raw materials. In fact, hides, rubber and wood-pulp are the only items in which a more or less serious recession did not occur. Faced with rapidly declining prices and diminished demand from consumers in many important markets, British manufacturers inevitably reduced their own needs during the year now closed; and the other, even more

depressing side of a gloomy picture is presented in the final table, which deals with their sales in foreign markets. Here locomotives are practically the solitary exception to an unending tale of contractions, in which the "heavy" industries and textiles generally play a rôle of unenviable distinction:—

SOME LEADING EXPORTS.
(Quantity '000's omitted.)

	1924.	1927.	1928.	1929.	1930.
Coal..... tons	61,651	51,149	50,952	60,267	54,879
Total iron and steel manu- factures..... tons	3,851	4,196	4,261	4,379	3,158
Total machinery..... tons	483	512	566	562	451
Cotton yarns..... lbs.	163,056	200,465	189,297	166,637	136,710
Cotton piece goods, sup. yds.	3,443,959	4,116,883	3,866,509	3,671,637	2,408,767
Wooden tops..... cents	411	429	344	327	288
Wooden tissues..... sup. yds.	164,740	130,514	128,339	108,185	79,642
Worsted tissues..... sup. yds.	59,843	39,580	42,111	47,281	34,711
Linen piece goods, sup. yds.	110,188	73,911	69,135	71,540	61,450
Boots and shoes, doz. pairs	998	990	1,079	1,096	997
Paper and cardboard, cwt.	4,757	4,317	4,539	5,047	4,259
Locomotives..... tons	24	27	41	40	51
Motor cars and chassis No.	15	36	33	42	30

The monthly course of export values in 1930 has been one of almost steadily progressive decline, and while the aggregate for the first half of the year was passable, the year's average has been pulled down by the deplorable results of the second half. There is, however, no economic advantage to be derived from tears over spilt milk. The important question is how soon an upward turn in the curve will come, and what we can do to accelerate recovery. It is clear that it has not come yet, for the December export figures, which we discuss in a later column, were the lowest of the year, while the January returns will be affected by current labour troubles. The foreign trade returns of other countries show that we are not alone in our exporting difficulties; but, at the same time, it is evident that if this country's economic position, the exchange value of its currency, and the material well-being of its population are to be permanently maintained, our competitive power in markets abroad must be enhanced. And this cannot be done without concerted effort and sacrifice on a scale not yet, we fear, by any means fully realised.

THE SUGAR PROBLEM.—II.

(BY A CORRESPONDENT.)

IN a previous article an account was given of the so-called Chadbourne Plan for sugar restriction, upon which agreement had been reached between the producers of the United States, Cuba, Java and the principal European exporting countries other than Germany. The day after that article went to press it was announced that Mr Chadbourne's negotiations with Germany had been successful. Germany is to have an export quota of 500,000 tons for the first year, 350,000 tons for the second year, and 300,000 tons for the remaining three years, making a total of 1,750,000 tons, compared with her demand of 1,850,000 tons. This removes the last obstacle to the implementation of the scheme, and it remains to discuss its prospects of success.

The essential purpose of the Plan is to make room for the absorption of the present unprecedentedly huge carry-over by restricting further production or export during the coming five years. Last year's disconcerting relapse in the recovery of consumption and the unexpectedly large European beet crop in the current season have added to the difficulties of dealing with the stock situation. The problem, therefore, may be resolved into two main questions: first, whether it is possible to restore confidence in the market in the next few months; secondly, whether there is a possibility of the parties to the agreement pursuing a steady and united policy during the five-year period.

As for the coming months, with the assurance of a firm policy on the part of the conference members, a reversal of the recent downward trend of prices is not unlikely. The ratification of the agreement in February should restore to buyers a reasonable degree of confidence

in the stability of the market, and there is a likelihood that invisible stocks will again be built up, absorbing a very considerable part of the present deadweight of "visibles," which is mainly responsible for the depression.

As regards the further success of the plan, world conditions of sugar production and consumption in the next five years are not wholly unfavourable. On the side of production there is good ground for supposing that a natural pause in the upward trend has been reached. Cuba itself, for internal reasons, has little motive to extend the area under cane even in the absence of restriction, while increased unit yields are equally improbable within such a period. In Java a natural halt seems to have been reached in the upward march of production, after the remarkable spurt of recent years (due to the spread of the high-yielding P.O.J. 2,878), as further increase of the area under cane is restricted by the Government in order to secure sufficient land for the production of food for the dense population. In Europe the beet lands have completed the process of recuperation from the war and its aftermath, while the encouragement of the beet-sugar industry by exaggerated protective tariffs has probably reached its limits. Such rise in price as might be expected from the putting into force of the scheme is not likely to stimulate new producers, and in any case the bringing of new cane areas into production is a comparatively lengthy process.

The strain on the plan is likely to come, not, indeed, from natural conditions of production, but from the mutual disagreements and distrusts of producers, both within the separate groups and between the groups. Meanwhile, in the face of a great common danger and the urgent need for action, unity is well within the bounds of probability in the coming months; the strain on loyalty will come as the danger recedes, with the restoration of an upward trend in prices. On the one hand are the usual difficulties of continued common action by groups of producers in very diverse circumstances, a difficulty that is peculiarly marked in the case of sugar, owing to the varying conditions of production and to the different parts it plays in the economy of the respective countries; on the other hand are the latent internal disagreements within the various groups. In the case of Europe, the initial struggles over quotas have already reflected some of these difficulties.

The internal position, however, of the two great cane-sugar exporters deserves further attention. In Cuba, restriction has never been a really popular idea, and under the Chadbourne Plan, as ratified by the Cuban Government, restriction depends on the consent of 65 per cent. of the producers. The mills, partly for economic reasons and partly, it would sometimes seem, for psychological reasons not entirely of economic origin, dislike limiting the amount of cane dealt with; the smaller mills, that is, those owned by native Cubans, which are already distinctly marginal producers, suffer most severely from the increase in costs as the scale of production is reduced. In the past, administrative difficulties in connection with the distribution of milling "contingents" have been very much in evidence. The scheme, too, means additions to the already high tax burdens. The colonos, or cane-farmers, dislike leaving their cane uncut, with consequent prolongation of exposure to the usual risks and steady diminution of sugar content; while the mills experience additional chemical difficulties in dealing with such cane when it is eventually cut. The agricultural labourers suffer hardship owing to the inevitable increase in unemployment which follows restriction. The Cuban Government itself has to steer a precarious course between increased control of the industry and the danger of adding fuel to the ever-latent unrest by increased unemployment and the awakening of anti-American elements of public opinion against a scheme engineered by American interests.

In Java the recent history of the V.I.S.P. shows, too, the danger of internal strain. Java producers have been reported to be still, on the whole, disinclined towards restrictive interference, having in the past, to some extent, tolerated the V.I.S.P. because of the strict limitation of its powers to co-operative selling of as much

of the available surplus as possible at the best possible price. The introduction of a new policy of restrictive control of exports may, therefore, imperil the measure of agreement hitherto existing amongst its members. The holding back of sugar by the V.I.S.P. means also additional risks and costs of warehousing and associated charges that may be unpopular with members, and, in addition, though the V.I.S.P. controls 90 per cent. of the output, the opportunity given by a waiting policy to the remaining 10 per cent. to skim the market when the chance arises is an additional strain on loyalty. Finally, there is the danger of friction with the exporting firms, on whose specialised knowledge of the complexities of Eastern markets the V.I.S.P. relies and who take much of the commercial risk at the present time. In the background lies the well-founded belief that the conditions of production of Javan sugar give the industry there a sounder basis than in any other country in the world and that, with its exceptionally low cost of production, it might even now weather the storm that would utterly destroy a more or less considerable proportion of producers in other countries.

Now, therefore, that the negotiations with Germany have been successful and the ratification of the Chadbourne Plan in February may be expected, the unfolding of a new chapter in the history of attempts at restrictive control will be awaited with interest, not unmixed with scepticism. The critical period for such an agreement among sugar producers will not be the coming months, for the prospects of success in the very near future are good, but the subsequent phase, when the results of initial success are beginning to be felt and the danger of an immediate collapse of the market is past.

SLAVERY IN LIBERIA.

A TRAGIC and moving story of the misery of a native people, told mainly in their own broken and pathetic words, is contained in the report of the International Commission of Enquiry (1930) into the alleged existence of slavery, of conditions analogous to slavery, and of forced labour in Liberia—a report just issued by the League of Nations Secretariat. It is a poignant document, and the indignant note already sent by the United States Government to Liberia will command universal approval. The subject is on the agenda of the League of Nations Council, which opens next week, and the United States has requested the Secretariat to circulate copies of its note to all the signatories of the League's Slavery Convention, which has been ratified by a large number of countries, including the United States. There had been suspicion for some time regarding the conditions of life in Liberia, and it was under pressure that the Liberian Government set up an international commission, whose chairman was appointed by the League Council, the other two members being the respective nominees of the Governments of the United States of America and Liberia. The chairman was an Englishman, Dr. Cuthbert Christy, and it is on the British Government's request that the question is placed on the Council's agenda.

"They have told us," said one of the chiefs in his evidence, "that if we talk our towns will be burned. I have thought about this much, and now I say, 'Then let it be history for our children that the towns of the people of — were destroyed this day because they told their troubles.' " This fear of reprisals runs all through the record. Without malice, with a desire to avoid any impression of disloyalty, in no mood of rebellion or vindictiveness, but (says the Commission) in despair and appeal, these uneducated natives related an accumulation of woes, many of which could be corroborated in their major details.

"The Sad Song of the Wedabo Women" quoted in the report is a native lament for the miseries inflicted on them and their menfolk:—

We were here when trouble came to our people;
For this trouble Jeh was imprisoned and fined,
For this reason Yancy came to our country—
He caught our husbands and our brothers,
Sail them to 'Nana Poo,

And there they die!
And there they die!
Tell us
Yancy. Why?
Yancy why?
Wedabo women have no husbands,
Yancy why?
Wedabo women have no brothers,
Yancy why?
Mothers, fathers, sons have died,
Waiting for the return.
Yancy why?

That is the native picture of the rounding up of villagers, in brutal conditions and under the direct responsibility of Yancy (afterwards Vice-President of the Republic) for export as labourers to the Spanish island of Fernando Po, to which they will not go willingly by reason of the reputation given to it by returned natives. But it is not the whole story of the oppression and cruelty inflicted upon the indigenous native races by the so-called "civilised" elements of the State, that is to say, the Americo-Liberians and others in the coastal area with a smattering of education. It is a sad development of an experiment in independent government by a race whose own emancipation from slavery is not many decades old. It is a long tale of virtual slavery, raiding, forced labour without pay, extortion, cruelty and corruption.

Slavery as such has no legal status, but inter-tribal domestic slavery exists, and pawning, which is legal, has essentially the same result as slavery. Pawning is simply putting wives and children in pawn for cash, and it is recognised by the Government as an old native custom. A pawned person remains captive until redeemed, and it may be for an indefinite period; if the pawner dies, there is no hope of redemption. Human beings are pawned for the payment of fines, and the Commission says there are instances of handing over pawns to a justice of the peace to pay the cost of court litigation. Pawned women are sometimes used as decoys for men, who are then seized, fined and made to work out their fines.

Some of the worst features of the report, however, are those relating to what is euphemistically described as the official recruitment of labour, for export, mainly to Fernando Po, and to forced labour conditions. With the aid of the frontier force soldiers, of armed messengers, and of certain Government officials, men have been rounded up consistently in the villages, ill-treated, herded together, imprisoned, and shipped to Fernando Po, hundreds at a time; chiefs repeatedly fined if the men are not at once forthcoming; women and old men captured to make young men surrender, and every form of intimidation exercised. Efforts made to complain at the capital, Monrovia, were futile, and those who tried were victimised on their return. Several hundred women marched to petition the Vice-President before that office was held by Yancy; they ranged hopelessly about the town, but without avail, and returned to their homes disheartened. Cases are given of men working in Fernando Po for two years for 30s., and for fourteen months for 34s. The Spanish vice-consul (a Liberian), when questioned about records of payment to native workers in Fernando Po, replied: "The Spanish Government does not bother with a lot of books." But there is ample enough evidence of the corruption of Liberian officials without the need of discussing Spanish responsibility on this point. Money is extorted from the chiefs on little or no excuse and money is demanded for the release of prisoners; the native workers are robbed of pay. Figures run from £300 to £1,248 from individual chiefs to officials exclusive of demands for cattle and rice. There is one item of £72 paid by a chief to Superintendent Yancy for a motor launch sent to arrest him for sending messages to Monrovia, and another total sum of £900 extorted in various ways from three chiefs on promises of settlement of a land dispute, which is still unsettled and remains a potential source of further extortion. It is no wonder that in these and other conditions many native towns were found deserted, or depopulated, with the number of women far in excess of the number of men.

The forced labour conditions, mainly on the roads, are as bad, if not worse. The chiefs, under the usual threats

of punishment and humiliation—which have only too frequently been carried out—have to provide the men, the food for them, and the tools for road construction. The men have to work, whether sick or well, under the ruthless soldiery, and they have been freely made use of by officials in their private rubber, coffee, cocoa, and rice enterprises. It is also asserted that the requisitions of foodstuffs have been diverted to private ends. "Every work they give us to do," says a native witness, "the whip is our pay." Whips, sticks and scars were exhibited to the Commission, which stigmatises the callous exploitation in no undecided terms. The words development and social progress are unknown; "servitude and slavery have taken their place." The terrible indictment is accompanied by a mass of evidence in the words of the natives and their chiefs, who, while speaking with gratitude of the Commission, foretell with hopeless resignation that they will be victimised and their villages burnt for having spoken.

The conclusions and recommendations of the Commission are drastic, and definitely associate Vice-President Yancy and other officials with recruitment conditions analogous to slave raiding and slave trading to their own advantage. Vice-President Yancy "being the chief beneficiary . . ." "Intimidation has apparently been and is the keyword of the Government's native policy." The Commission details the long list of abuses, cruelties, and depredations which must be abolished if the Republic is to survive, calls for complete re-organisation, and, what is most essential—"the first radical change"—for the removal of the five District Commissioners in the hinterland "as dishonest and corrupt officials, skilled only in devising means of intimidation for the purpose of extracting money from the natives and in creating opportunities for extracting more." The Commission suggests that they should be replaced by European or American commissioners, with strictly selected subordinates. This is really the crux of the matter. The rulers of Liberia have so far failed to reveal any capability of decent government. Outside control is necessary. The Liberian retort so far seems to have been that these facts relate to the past and that conditions are as bad elsewhere in Africa. It is scarcely possible to be convinced of the first assertion; the second may be true, and ought not to be lost sight of.

It is an ironical fact that when the League first took up the question of slavery several years ago, there was the customary accusation that it was looking for things that did not exist. Few, however, could have realised the appalling conditions which the International Commission has now made known, and the miserable natives are entitled to expect international protection. The United States Government evidently intend to take energetic action, and the Members of the League will surely do likewise.

Notes of the Week.

India's Federal Structure.—Final judgment on the fruits of the Round Table Conference must be deferred until next week, by which time the Prime Minister will have made his statement of the policy of the British Government, and, we earnestly trust, the cloudy waters of Hindu-Moslem controversy in the matter of communal electorates will have been clarified by some sort of tentative agreement at least. By Wednesday the differences appeared to have been narrowed down to such a small margin (the stumbling-block was inability to satisfy the claims of the Sikh minority in the Punjab), that it seems reasonable to hope that complete accommodation may be realised. Meantime, the draft report of the Federal Structure Sub-Committee—for all that many of its recommendations are provisional and many points of detail require closer definition—represents a solid body of agreed principles which are a notable testimony to the utility of the Round Table Conference. Broadly, the report follows the lines advocated by Sir Tej Bahadur Sapru and accepted with minor qualifications by Lord Reading, whose courageous and statesmanlike speech we welcomed

in these columns last week. In brief outline the report proceeds upon the basic assumption that there is to be responsible government, with certain transitional reservations, at the Centre. The Executive should consist of the Governor-General and a Cabinet of Ministers; defence and external relations are to be the responsibility of the Governor-General, who should have powers to act extra-constitutionally in specified cases of emergency and should not be dependent on the assent of the Legislature for supply in respect to reserved subjects. Ministers responsible for these subjects should be chosen at the Governor-General's unfettered discretion, but the rest of the Ministry should be formed on the same lines as a Cabinet at Westminster. In the sphere of finance, it is suggested that powers of intervention should be reserved to the Governor-General in regard to budgetary arrangements and borrowing, if in his opinion methods are being pursued seriously prejudicial to the credit of India abroad. The management of currency and exchange should be entrusted to a Reserve Bank and the sanction of the Governor-General should be required for the introduction of any bill to amend the Currency Act. With regard to the Legislature, it is proposed that there should be an Upper Chamber, to be described as the Senate, consisting of 100 to 150 members, partly nominated by the Indian States and partly elected by the provincial legislatures of British India by the single transferable vote. The Senate should be subject to dissolution, but a fixed proportion should retire and be replaced or re-elected at regular intervals. The Lower Chamber, it is proposed, should have 250 members, but there were differences of opinion in the sub-committee whether election should be direct or indirect. An equally important point in respect of which the report recommends "that the matter be further explored" is whether the representatives of the States in the Federal Legislature should or should not take part in the decision of matters "which, being outside the range of federal subjects, have no direct interest to the States." The sub-committee were in general agreement that the States could not help being interested in any question which involved the existence of the Ministry. We should have been glad, however, if complete agreement could have been reached that just as the Federal Executive is to have collective responsibility, so the Federal Legislature, representing both the States and the Provinces, should also function collectively without qualification. Next week must be left to provide answers to two crucial questions, whether the statement of British Government policy can strike a note that will satisfy both British and Indian opinion, and whether a way will be found to bridge the narrow gulf between the Hindu and Moslem positions. Whatever these answers may be, it can at all events be claimed that the Round Table Conference has been far more successful than most people dared to hope in creating the foundations on which the constitutional structure may be built.

The Industrial Disputes.—The week has seen deplorably slow and difficult progress towards settlement of the intractable coal dispute in South Wales. The negotiations at Cardiff on January 9th broke down over a difference between the owners and men on the terms of reference to the Conciliation Board, the latter wishing to confine arbitration to the wage alteration specifically conditioned by the hours reduction, and the former requiring the whole problem of wages to be raised. On Thursday a formula was reached in which arbitration more or less within the scope desired by the owners was conceded, but its acceptance on Saturday by the miners' delegates was still doubtful. Nor, up to Thursday afternoon, could much advance be recorded in the Lancashire weaving dispute, in spite of the intervention of officials of the Ministry of Labour. Burnley weaving sheds have been idle all the week, and as we go to press the crucial meetings are taking place from which must emerge either a settlement or the certainty that on Monday next the whole of the weaving section of the cotton industry will be brought to a standstill. Late on Thursday the Weavers' General Council decided to ballot its whole membership on the employers' proposals, but failing re-

sumption of work at Burnley it was not certain that this decision would suffice to avert a ruinous and unnecessary stoppage. The only bright spots in the week's story of the labour position is that an agreement has been reached in the wage discussions in the linen industry, and that owners and mixers in the Warwickshire district have patched up a temporary agreement to last for three months.

The Pope on Marriage.—The Papal Encyclical "Casti Connubii" is a portentous document. And those non-Catholics who sympathise most with the Pope's fundamental aim of maintaining, or restoring, the efficacy of the institution of marriage will the most regret the manner in which His Holiness has gone to work. When he denounces the subversive effect of certain current presentations of sex in popular fiction and on the films, he speaks for all men and women of wisdom and good will; and we can also follow him when he champions the rights of the child against the rights of the parents—even though it is, surely, somewhat extreme to lay down rigidly that, in every case of a conflict of interests, the interest of the child shall prevail. But what are we to say when he insists that the particular rules of marriage which happen to be canonised by the Roman Catholic Church are beyond criticism and beyond change? Surely this need not necessarily follow even from the thesis that the institution of marriage is a divine sacrament; for a divine, even more than a human, law may be expected to adapt itself with deep insight and wisdom to the infinitely various conditions of social life in different times and places. For His Holiness, however, the divineness of the sacrament simply consecrates the *status quo* of the Roman Catholic Canon Law; and from this position every kind of reactionary consequence follows: a veto on divorce, a veto on birth-control, a veto on equality between wife and husband. Birth-control is denounced as "an offence against the law of God and nature, and those who indulge in such are branded with the guilt of a grave sin." In diplomatic but unmistakable language, the pronouncement of the Lambeth Conference on this subject is castigated. In this, as in other matters, the Encyclical is characterised by a ruthless disregard for human considerations, while the economic problem is evaded by casting the burden of supporting unlimited families on to State-aid and private charity. Signor Mussolini may like this Encyclical; for it will perhaps help him in his own purpose of increasing the "man-power" of Italy. For ourselves, we are sorry that the Pope should have taken a line so little consonant with the realities of modern conscience and feeling and so unhelpful to the cause of co-operation between the Churches.

Tribal Control on the N.W. Frontier.—Last Sunday the Government of India announced that, with the concurrence of His Majesty's Government in the United Kingdom, it had appointed a committee to examine the existing system of tribal control and of defence against tribal risings on the North-West Frontier. The committee should be effective, for it is small, representative and authoritative. Its appointment is important in itself and also in relation to the work of the Round Table Conference; for it is obvious that the nearer we can approach to a solution of the tribal problem, the less difficulty there will be in getting rid of the present peculiar status of the North-West Frontier Province and in assimilating this territory, administratively and constitutionally, to the rest of British India. At the same time, a complete solution is perhaps too much to hope for, considering the inherent difficulty of the frontier problem and the number of times that the possible alternative policies have been debated during the three quarters of a century which have elapsed since the British Indian Government took over the responsibility for the defence of this frontier from the Sikh States, when it annexed these to its own dominions. The root difficulty in controlling these highlands is that we are not in control of the lowlands on both sides of them. Further south, in the Baluchi sector of the frontier, where we have been astride the mountains for more than

sixty years, the problem has been substantially solved. Down here the highlanders, hemmed in between Sind on the one side and Quetta on the other, have been successfully tamed. In the north, however, the Punjab and the North-West Frontier Province are balanced, on the other side of the mountains, not by other territories under British Indian administration, corresponding to Quetta, but by the independent State of Afghanistan; and the international boundary between Afghanistan and the Indian Empire runs through the heart of the tribal country in the fastnesses of the hills. In this difficult sector, there have been two alternative—and alternating—policies, with endless compromises between them. There is the policy of leaving a zone, between the international boundary and the limit of effectively administered territory, in which the tribesmen are allowed to police themselves through a tribal militia organised and subsidised by the British Indian Government; and there is the policy of pushing forward the limit of effective administration until it coincides with the Afghan frontier. The respective merits of these two policies largely depend on a factor which is outside our control, namely, the *régime* on the Afghan side of the line. Obviously the case for the more radical and thorough-going, but also more costly, of the two policies would be strengthened if there were a likelihood of an Afghan Government, modernised on the new Turkish model, bringing the tribal territories under effective administration, up to the international boundary, on its own side. Besides this political factor there are technical factors to be taken into account: the tribesman's proficiency in the use of the modern rifle; the unexpected ineffectiveness of the air arm in bringing him to order; and the equally unexpected effectiveness of motor-roads patrolled by armoured cars, which make it possible simultaneously to control him militarily and to initiate him into the arts of peace. At bottom, this tribal problem is economic; for if the tribesman is to be forbidden to earn his livelihood by raiding, he must be enabled to earn it in some alternative way that is not anti-social.

Sir Otto Niemeyer's New Task.—But recently returned from his mission to Australia, Sir Otto Niemeyer has received and accepted an invitation to perform a similar task on behalf of Brazil. According to an official statement the specific points upon which he is asked to give advice are: (1) The prompt reconstitution of the Bank of Brazil as an orthodox central bank on independent lines; (2) monetary reform and stabilisation of the exchange; (3) maintenance of Budget balance and the publication of periodical Budget figures; and (4) limitation of direct or indirect foreign borrowing by the Brazilian Federal Government, the States or the Bank of Brazil, in accordance with a scheme to be agreed. Despite the wide differences between Australia and Brazil, Sir Otto has clearly much the same problems to consider in Brazil as he was faced with on his Australian visit, though with the addition that he is directly invited to examine questions of the establishment of a central bank, and of monetary reform and exchange stabilisation. The announcement of his acceptance of the Brazilian Government's invitation was favourably received in the City, and, as we show on a later page, led to firmer quotations for Brazilian stocks. From a wider point of view, the fact that Brazil should have turned to the Bank of England for an economic adviser not only indicates that the new Government is anxious to set its financial house in order, but is a welcome testimony to the continuance of the goodwill that traditionally exists between Brazil and the United Kingdom.

Mr Keynes and Spending.—While Christmas shopping was at its height we deprecated the idea that deliberate retrenchment of personal expenditure, not dictated by narrowing of the means of the individual, was socially desirable in present economic conditions. Mr Keynes, in a recent broadcast address, has gone further, and has advocated a course which, in our view, might prove the worse of two evils. Every pound saved, according to Mr Keynes, is so much added to the burden of unemployment, and now is the time for everybody, and especially

for public authorities, to "spend magnificently." In so far as trade depression is psychological, this might be sound advice if enthusiastic spending in Great Britain were sufficient to revive industrial confidence throughout the world. If it were not, the consequences (some degree of credit inflation is presumably implied) would be a brief and glorious boom for the sheltered industries and a rise in the domestic price level which, through its effect on costs, would give their quietus to the export trades. Mr Keynes, in fact, advocates a policy which could only be carried out in a Utopian country which was prepared and able to forgo almost all international trade and retire into self-sufficiency behind (presumably) a tariff wall. We are not converted. On the contrary, we adhere to our conviction that salvation lies for this country not in visions of "managed insulation" but in the reduction of costs; that retrenchment in many sections of wages and, furthermore, in unproductive State expenditure is essential if this desideratum is to be realised; that continuance of saving, particularly by corporate concerns, is necessary, in a greater degree than at present, if capital is to be adequately cheap when trade recovers, and hence normal thrift is essential to continuance of employment; and that so far as it can be reconciled in these conditions "spending as usual," but not "spending magnificently," is sound policy.

Argentine Gold Policy.—On Wednesday it was announced that the Banco de la Nacion has been authorised to issue drafts against its conversion fund of 30,000,000 gold pesos now deposited abroad in its name, and to obtain in exchange for these drafts gold from the Conversion Office, which it can retain or ship abroad as may be required by the state of the foreign exchange market. This is equivalent to the creation of a revolving credit in specie, up to a limit of 30,000,000 gold pesos; in other words it provides a means whereby that amount of the gold held by the Conversion Office can be set free to support the exchange in case of need. Obviously this new instrument will be used with discretion, and so a rapid recovery of the peso cannot be expected. Still, the low level of 33½d. to which the peso had fallen from its par value of 47½d. represented, with Argentina's substantial gold reserves, an anomalous position which stood badly in need of correction. The financial and business world will be disposed to welcome a step which puts a partial end to conditions that have existed ever since gold shipments were suspended rather over a year ago.

December Overseas Trade.—The figures of overseas trade in the last month of 1930 are far from encouraging, as the following table shows:—

MONTH OF DECEMBER.
(000's omitted.)

	1930.	Inc. or Dec. on December, 1929.	Inc. or Dec. on December, 1928.
Imports.....	£ 82,630	-16,85	-11,81
British exports.....	36,418	-19,42	-21,935
Re-exports.....	5,214	-2,697	-3,819
Total exports.....	43,702	-22,665	-25,751
Excess of imports over total exports.....	45,928	+ 5,880	+13,951

Of the decrease of nearly £17 millions in imports, as compared with December, 1929, £11 millions were on account of raw materials, textiles being responsible for the greater part of the decline. The fall of £20 millions in British exports, as compared with the corresponding month in 1929, was caused largely by a decrease of £17 millions in manufactured goods. Textiles accounted for £7 millions of the decline, while manufactures of iron and steel, machinery, vehicles and chemicals together showed a fall of £5½ millions. The decrease of £2.6 millions in re-exports, as compared with December, 1929, occurred chiefly in the raw materials class, whose total fell by £1.6 millions. The figures for the complete year are discussed in a leading article in this issue.

British Iron and Steel Production.—Owing to the general slackness of demand, steel works were closed for a longer period than usual at Christmas time, so that steel production in December fell by nearly 100,000 tons to 337,200 tons, or little more than 50 per cent. of the output in December, 1929. Pig iron production was affected to quite the same extent, but eleven blast-furnaces were "damped down" and five blown out, reducing the number of active furnaces to 76, compared with 162 at the beginning of the year. The production of pig iron amounted to 349,800 tons, compared with 384,100 tons in November and 643,000 tons in December, 1929. The December outputs bring the total pig iron production for the year to 6,196,800 tons, and steel production to 7,298,500 tons—figures which are lower than any previous post-war years except 1921, 1922 and 1926. Imports of iron and steel in December amounted to 283,000 tons, and for the fourth month in succession exceeded exports—this time by the unprecedented total of 113,500 tons. Imports for the whole year thus reached 2,908,300 tons, exceeding those for last year by 86,000 tons; exports, on the other hand, amounted only to 3,157,900 tons, or 1,221,600 tons less than last year. It should, however, be remembered that ships are a large "invisible" iron and steel export. The following table shows the average monthly production of pig iron and steel, and the imports and exports of iron and steel in 1924 and 1929-30:—

	PRODUCTION. (In thousands of tons.)			
	Pig Iron.	Steel.	Imports.	Exports.
1924, monthly average ...	610.0	685.0	202.4	321.1
1929, " " " " " "	632.4	803.0	234.7	364.9
1930, " " " " " "	516.4	608.2	242.4	263.2
1930, 1st quarter.....	640.9	791.2	283.3	327.9
2nd " " " " " "	599.1	662.7	227.7	271.2
3rd " " " " " "	442.6	551.1	206.0	240.8
4th " " " " " "	383.0	427.8	252.4	212.6

In the first quarter of the year production compared not unfavourably with 1929, but in the second quarter of the year a decline set in which continued until the end of the year and still shows no signs of having been checked.

British Coal Exports.—In view of the present serious wage difficulties in the coal industry, it is of considerable interest to note the course of our export trade in that commodity during the past twelve months. In the following table we show the quantity and value per ton of our average monthly exports during the past three years and in 1925:—

	AVERAGE MONTHLY EXPORTS.	
	Thousand tons.	Value per ton f.o.b. s. d.
1925	4,235	19 10
1928	4,171	15 7
1929	5,022	16 2
1930	4,573	16 7

Average prices in 1930 showed a somewhat firmer tendency as compared with the two preceding years. The volume of shipments, however, fell to a level only slightly above that of 1925. The course of trade with our chief foreign markets is indicated in the following table:—

Destination.	Tonnage (000's omitted).				Value per ton f.o.b.			
	1925.	1928.	1929.	1930.	1925.	1928.	1929.	1930.
Scandinavia (a)	605	366	498	407	s. d.	s. d.	s. d.	s. d.
Germany	347	447	460	411	17 2	13 10	14 1	15 0
Holland	127	203	260	238	17 2	13 10	14 2	14 7
Belgium	207	188	315	247	16 8	12 11	13 7	13 10
France	855	755	1,087	1,081	19 9	15 5	15 11	16 7
Italy	568	552	591	597	20 4	16 0	16 11	17 3
S. America (b)	351	394	420	350	23 4	17 5	17 11	18 5
Spain	146	156	149	143	21 10	16 7	18 11	17 7
Egypt	164	182	189	151	21 10	16 2	16 6	17 0

(a) Norway, Sweden, Denmark. (b) Brazil, Chile, Uruguay, Argentina.

It will be noticed that in only one of the above markets, namely Italy, did our exports in 1930 increase. We appear to have lost most ground during the past twelve months in Scandinavia and in South America; and it is perhaps significant that the average price of shipments to the former market show a considerable increase. In the rest of Europe, our exports to France and Spain were fairly well maintained, but purchases by Germany, Holland and Belgium fell off considerably.

The Slump in Shipbuilding.—Full comment on the fortunes of the shipbuilding industry in 1930 may conveniently await the issue of Lloyd's Register returns for the completed year. Meanwhile, the figures for the fourth quarter of 1930, published this week, afford little ground for satisfaction. Launchings during the past three months amounted to 297,000 tons, a decrease of some 82,000 tons on the previous quarter; and tonnage commenced, even including the new giant Cunarder, totalled only 132,000 tons, or 29,000 tons less than in the three months ended September 30th. The volume of work in hand, 909,000 tons, fell by 208,000 tons, as compared with the position three months ago, and was 651,000 tons lower than the corresponding figure for December 31, 1929. When consideration is given to the fact that tankers under construction at the end of last month represented as much as 389,000 tons, in comparison with 398,000 tons a year ago, the tremendous contraction in the building of general passenger and cargo shipping in British yards becomes still more apparent; and a further disquieting feature is that the tonnage now under construction abroad, 1,417,000 tons, is only 35,000 less than at the end of September, so that the British proportion of the world total has fallen to 39 per cent., against 57 per cent. in 1913. In this industry, as opposed to most branches of British production, costs do not appear to be disproportionately high in relation to those of our competitors abroad, but if the influences of "economic nationalism" in shipbuilding are to be counteracted, and our old position regained, it is evident that a very special effort will be required.

American Banking Results.—Summaries of the December 31, 1930, accounts of several of the largest American banks have now appeared, and they make extremely interesting reading. The National City Bank records deposits of \$1,460.0 millions, against \$1,649.6 millions a year ago, while, on the other side of its accounts, cash and money due from other banks stand at \$391.2, against \$437.1 millions; loans, discounts and bankers' acceptances at \$1,015.4, against \$1,245.4, and investments at \$288.1, against \$284.1 millions. The bank's liability on acceptances and foreign bills is only \$237.0 millions, against \$292.2 millions a year ago. The deposits of the Guaranty Trust Company amount to \$1,341.6 millions, against \$1,224.6 millions at the end of 1929. Cash is \$394.8, against \$430.0 millions, and loans and bills purchased \$1,118.7, against \$1,105.4 millions. The bank's liability for acceptances and endorsements is only \$296.2 millions, against \$348.1 millions a year ago. In the case of the Chase National Bank, the accounts are not comparable with those of a year ago, owing to the intervening merger with the Equitable Trust Company. Deposits now amount to \$2,074.0 millions. Reviewing these results as a whole, it is possible to detect a certain similarity between British and American banking results. Bad trade and lower commodity prices have made substantial inroads into banks' acceptance business upon both sides of the Atlantic, while the National City Bank's results reveal a slight change-over in earning assets from loans and discounts to investments. It is unwise, however, to press the similarity too far, in view of the great differences in banking and money market conditions in London and New York.

A Canadian Banking View.—Sir Herbert Holt and Mr C. E. Neill, respectively president and vice-president of the Royal Bank of Canada, had much to say at the bank's annual meeting upon international monetary policy. Sir Herbert Holt was critical of the United States and France, holding that whereas the concentration in their hands of 60 per cent. of the world's monetary gold had placed the world price-level under their control, neither country had perfected its central banking machinery to the point where such control could be made effective. While on occasions blunt criticism of its kind

has its uses, it is doubtful if it is helpful towards a solution of the problem to begin by putting certain countries in the wrong. For this reason, we welcome Mr Neill's very elaborate and detailed analysis of the present monetary situation and of the causes that brought it into existence. In the main, Mr Neill follows Sir Henry Strakosch. Thus he agrees that a fall in the prices of all commodities is not evidence of over-production, but must be explained by "an under-supply of that in which prices are expressed, i.e., money"; and he follows up these words by some timely observations upon central banking policy. Thus he holds with Dr. Randolph Burgess, of the New York Reserve Bank, that it is the duty of central banks to go contrary to public opinion, relaxing credit when there is little demand for funds, and tightening credit when money is in keen request. On this premise, he argues that on the collapse of the stock market boom, the principal central banks of the world should have decided that a drastic contraction of currency and credit was not to be permitted, and that if they had done so a drastic fall in the price-level could not have occurred. Of course, up to a point this is exactly what the central banks were aiming at when they reduced their rediscount rates time and time again during the early part of last year; but Mr Neill is entitled to point out that they were hampered by the previous absence of a common monetary policy and by gold movements which had gravely increased the maldistribution of the world's monetary gold. The result, in his opinion, is that the United States is now in such a commanding position, with 40 per cent. of the world's gold supply, that the main responsibility for the world price-level rests with her. Reviewing the difficulties of bringing production costs into line with the current level of prices, Mr Neill says that the easiest way out would be a restoration of the 1922-28 price-level. Recognition of the Utopian character of this hope, however, is to be found in his alternative suggestions of a special conference between the financial leaders of Great Britain, the United States and France and of the formation of a British financial syndicate, of a character possessing the complete confidence of the New York and Paris markets, for the purpose of diverting capital from centres where there is a surplus to others where it is needed. He concludes somewhat unfortunately by belittling the effectiveness of the Bank for International Settlements and the Gold Delegation of the Financial Committee of the League of Nations as mediums for promoting an acceptable international gold policy, and by calling for the appointment of a new committee of the world's outstanding economists. Even allowing for political considerations, such a committee could do little more than cover ground already explored by the League's Gold Delegation, and there is no guarantee that it would not meet with much the same difficulties as have confronted the organisations Mr Neill is inclined to belittle. A better line of approach would be to try to convince the world that the League's Gold Delegation is influenced by purely scientific and not by political considerations.

The Bank of New South Wales.—Mr. Thomas Buckland, the President of the Bank of New South Wales, had some pertinent comments to make at the general meeting of the Bank held on November 28th last. Thus, while he urged that it was impossible for the banks to control the exchange—and in saying this he foreshadowed by implication the action of his own bank in breaking away last week from the "pegged" rate of exchange—he pointed out that each 1 per cent. fall in the exchange added £360,000 to the annual interest burden of Australia's external debt. Again, in order to illustrate the difficulties involved in the high level of Australian production costs at a time of rapidly falling prices, he said that early last autumn wool, which in three different districts cost from 9½d. to 11½d. per lb. to produce, averaged only a little over 8½d. per lb. on the sale floor. Earlier in his address, an extended report of which will be found in a later column, he discussed

the fortunes of the Bank of New South Wales itself. Its accounts may be briefly summarised as follows:—

	Sept. 30, 1929.	Sept. 30, 1930.
	£ mill.	£ mill.
Deposits	66.6	66.8
Bills payable	7.3	6.1
Cash	11.2	11.5
Investments	8.3	7.5
Bills receivable and remittances in transit	4.8	3.4
Discounts and advances	59.4	60.4
Profits to date	0.99	0.73
Dividend	10%	9½%

The contraction in bills payable and in bills receivable and remittances in transit is a natural reflection of the general trade depression and the fall of commodity prices. Deposits were well maintained, though Mr Buckland pointed out that their size varied from day to day. As regards the Bank's assets, he said that during 1929, in order to meet emergencies, they had strengthened their investments available at short date. In another passage in his speech he indicated that the Bank was doing all it could to help its customers in their difficulties, and that this explained the slight increase in discounts and advances in the face of contracting business. Finally, he said that in order to strengthen the Bank during so critical a period the directors had made substantial appropriations to contingencies, and also recommended the reduction of the dividend from 10 to 9 per cent. per annum as from the last quarter of the year.

State Purchase of German Wireless.—Our Berlin correspondent writes:—The Reichspost has informed the Transradio A.G. (transmarine wireless communications) that it proposes to make use, on January 1, 1932, of its right to purchase the company's plant. The Transradio, which is the only German wireless company, has a share capital of 16½ millions, of which 20 per cent. is held by Siemens A.E.G. and 30 per cent. by Telefunken. Smaller shares are held by the Radio Corporation of America and the D.D. Bank. The Transradio has hitherto had a 7 per cent. dividend guarantee from the Reich; the Reich has to take over the plant at its original cost, plus 40 per cent., which will cost it about 28 million. The actual value of the Transradio plant, the Nauen station, is, at most, a quarter of this, for the original equipment for long-wave transmission has long been out of date, and only the newly-constructed short-wave transmitters are kept in operation. The Deutsch-Atlantische Telegraphengesellschaft is strongly opposing the taking over of Transradio by the Reichspost. The Deutsch-Atlantische, since the loss of the German cables under the Treaty of Versailles, has been operating newly-laid German-American cables, and has been working towards a union of cable and wireless on the lines of the English and proposed American mergers. To this end it has been endeavouring to bring about a merger with Transradio. These negotiations have, so far, produced no result, as the Reichspost rejected the proposed terms. The Deutsch-Atlantische Telegraphengesellschaft is connected with the Commercial Cable Company to the extent that the Deutsch-Atlantische laid a cable from Emden to the Azores, which is there joined to the cable of the two American companies. The German cable was financed by an American loan. The Deutsch-Atlantische is now afraid that if wireless telegraphy is operated by the Reich its competition will be ruthless and impossible to meet. The Reichspost, on the other hand, offers an assurance that it will only compete by fair means. Against the principal argument, that the State is handicapped in international news service, as against private undertakings, the Reichspost insists that that is only true of cable communications, and not of wireless. The Deutsch-Atlantische, which belongs to the D.D. Bank group, has appealed to the Chancellor, who has reserved the decision to himself.

Social Insurance in France.—Our Paris correspondent writes:—The national insurance law, which came into force less than six months ago, is now generally admitted to have made a very bad start, and much is likely to be heard in the near future of further extensive amend-

ments. The provisions affecting agriculturists are proving so objectionable to both employees and employers that in most of the country districts the law remains a dead letter. Actuarially, the scheme is stated by experts to be badly in need of drastic revision, if the Budget is not to be seriously upset by the much larger expenditure on sickness and other charges than was originally anticipated. The enormous army of French friendly society adherents are chafing at the discovery that, although they were given to understand that the administration of the law would be largely in their hands, the clauses affecting them have been so drafted that almost at any moment—whenever a socialistically-inclined Government may think fit—they may be eliminated and replaced by some thousands of additional public officials, with all the red tape and inelasticity of practice that characterise the average professional bureaucrat. The remuneration of the doctors is another cause of strong dissatisfaction. The medical profession proved sufficiently well organised to impose their will on the Government during the revision of the law, and are giving no sign of dissatisfaction with their terms. One reason for this will be realised, perhaps, when it is mentioned that it is now seriously stated that insured patients in many districts are finding that, instead of having to pay doctors' fees on a scale 30 per cent. lower than those in vogue for private patients, they are being treated at the full normal rates. M. de Lasteyrie (M. Poincaré's Finance Minister) and a number of other deputies have put forward a proposal for immediate revision of the law, with a view to removing its major objections. They propose that old age pensions alone shall remain obligatory, and that the operation of the sickness, life insurance and maternity clauses shall become optional. It is urged that the entire cost of old age pensions and two-thirds of the cost of sickness insurance (the other third being met by the State) shall be at the charge of the employers, and that for the other forms of insurance, although each party would continue to pay their respective shares, employers and employed shall be made solely responsible for their respective parts, with no deduction of premiums from wages. In order to reduce cost and complexity of working, it is proposed that the old age pension funds shall be restored to the hands of the autonomous organisations created for the purpose in 1898, and of the friendly societies, and that these bodies shall also handle the "optional" forms of insurance. The communist municipal council at Strasburg has taken the bold step of relieving the whole of the corporation employees of their share of the insurance premiums and charging the whole cost to the ratepayers.

Russia and the World's Wheat Supply.—The unexpectedly large shipments of Black Sea grain last autumn, offered for sale by the Government of the U.S.S.R. without much regard for market conditions, caused in the wheat market a disturbance of prices disproportionate to the actual volume of this addition to the world's market supplies. At the same time, this re-emergence of Russia as a grain exporter on a large scale, with the possibility of still larger shipments in coming years, has attracted attention in the United States and Canada somewhat forcibly to the problem which increased production may present in view of the existing world glut of wheat. In this connection an article by Dr. Marbut, Chief of the Division of Soil Surveys of the U.S. Department of Agriculture, which appeared in the January number of *The Geographical Review* of New York, is of considerable interest. Russia possesses a potential advantage over the United States in having available a larger area of first-grade wheat land, and though the latter country has certain compensations, Dr. Marbut is of opinion that this vital fact of increasing Russian competition cannot be ignored in the consideration of future plans for wheat cultivation in America. As was pointed out in the recent Russian Supplement to the *Economist*, Russia is making a tremendous effort under the Five Year Plan as applied to agriculture to create and maintain an exportable surplus of wheat. The Plan, which involves the collectivisation of peasant

holdings and the establishment of large-scale mechanised State farms, is possible, in Dr. Marbut's view, largely because of the quality of Russia's soils and the amount of land at the Government's disposal. It is estimated that the acreage of suitable land available for these large-scale State grain farms is approximately 25,000,000 acres. If this area is used to advantage, and if the increased production foreshadowed under the new Soviet experimental materialises, Dr. Marbut anticipates that Russia's export of wheat in 1933 should amount to 200,000,000 bushels. On the somewhat low yield in 1929 of 12 bushels per acre of the Giant Farm (the largest of the existing State grain farms in Russia), the total area covered by these institutions as now planned should, when in full cultivation, produce 300,000,000 bushels—a figure which Dr. Marbut finds disturbingly large. The Five-Year Plan contemplates that the total acreage will be under cultivation by 1933, in which case, after allowing for all eventualities, Dr. Marbut feels justified in assuming that in that year Russia will be in a position to export more than the maximum amount of wheat exported in any year before the war.

Transvaal Gold Output.—The total output of gold of the mines of the Transvaal during December amounted to 908,492 ozs. of fine gold, as compared with 884,753 ozs. produced during November. In December, 1929, the output amounted to 851,134 ozs. of fine gold. The following table shows the monthly output since the beginning of 1924:—

Months of	1924.	1925.	1926.	1927.	1928.	1929.	1930.

UNITED STATES.

Money Market — Capital — Railroad Consolidations — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 3.

THE United States is beginning the new year without the delusions over quick recovery in business and security markets which did so much to retard readjustment a year ago. It is now expected that by spring a start toward improvement will have been made, and that on the whole 1931 will be a better year for business than 1930; but improvement is expected to be gradual and modest. Little sign of it has occurred in the past week.

With the holiday and year-end currency demands, bank and corporation window-dressing and other financial settlements out of the way, easy money is reasserting itself. Two Federal Reserve banks, Boston and Cleveland, have followed the New York lead with a reduction in discount rate. Bankers' bill rates have dropped ½ per cent. to the lowest level in history. Day money, after rising to 4 per cent. on the Stock Exchange at the year-end, the highest rate since last spring, is again quoted at 1½ per cent. there, and goes begging at 1 per cent. in the open market.

The extent to which the recent bank failures added to the usual December increase in currency circulation is reviewed by the Federal Reserve Bank of New York. In the week of December 13th alone a net amount of more than \$170 millions was drawn from the New York Federal Reserve Bank. Part of this cash was used to meet withdrawal of bank deposits and part was a preparation against contingencies. This currency demand was comparable in some respects to that of 1907, when the banks resorted to cashier's checks, the Federal Reserve system not having been formed. In contrast with that time of strain, the recent emergency was met with but a passing stir in the money markets.

The Federal Reserve system statement as of December 31st is distorted by the year-end operations. Although borrowing was invited by the cut in the New York discount rate, total discounts dropped nearly \$200 millions, while sales of bills by the banks in order to maintain their reserves added more than \$100 millions to the portfolio. At the same time the system bought nearly \$90 millions of Government securities, the bulk of these as well as of the bills being bought on the 15-day repurchase agreement plan. Total Reserve credit outstanding declined slightly on the week, and finished the year at \$1,351 millions, as against \$1,547 millions a year ago; the reserve ratio was 73.7 per cent. compared with 69.6 per cent. The statement shows that the deflation in currency circulation had become pronounced before the closing days of the year.

Meanwhile brokers' loans, after 13 consecutive weeks of decline which reduced the total by \$1,303 millions, increased \$6 millions in the week ended December 31st, and there has probably been some increase in miscellaneous public buying as an offset to the press of sales to establish losses for income tax purposes. The better tone in the share market, particularly among the railroad issues which have been stimulated by railroad merger developments, has been duplicated in the bond market. The fresh dose of easy money provided by the cut in the Federal Reserve Bank's discount rate is calculated to lift bonds further. If the advance be sustained, a considerable volume of new financing, dammed up by the poor market of recent months, will appear.

December financing declined sharply from November, which in turn was lower than the small totals of October and September, and was only about a third of that of a year ago. Virtually no financing for industrial and railroad corporations was done by security flotations last month and foreign financing was quite small.

New capital flotations in this country in 1930 are estimated at \$7,400,000,000, which figure compares with \$11,600,000,000 in the previous year and is the lowest since 1925. In general only high-grade bond issues were offered and met with success. Foreign financing, including Canadian issues, was slightly over \$1,000,000,000. Railroad issues were \$1,026,000,000, and public utility offerings were \$2,500,000,000.

A real beginning has finally been made towards consolidating the railroads of the country into a few large systems of approximately equal size and earning power. Conceiving railroad mergers as of first-rate importance as a means of avoiding receiverships for the weak roads, hard hit by the business slump and the development of new modes of competition, such as motor conveyance and oil and gas pipe-line extensions, and of promoting expenditure for additions and improvements, President Hoover some time ago used his influence to start negotiations for mergers in the East.

Although late in 1929 the Interstate Commerce Commission had published its plan for consolidation of the

180 Class 1 railroads and the numerous short lines into 21 grand systems (including the Canadian owned lines), the Commission had indicated its willingness to approve mergers which followed the general lines laid down but which failed to conform in every respect. That plan provided for five trunk line systems in so-called "eastern" territory, serving the States lying east of the Mississippi River and north of the Ohio, in the trans-Alleghany region, and those States between the Great Lakes and the Atlantic Ocean each of the Alleghanies, exclusive of the New England States. One of the systems suggested was, however, an agglomeration of weak roads, and no one gave it serious consideration.

Last week President Hoover announced that an agreement on a four-system trunk line consolidation had been reached among the interested roads, and this week a formal joint application was made to the Interstate Commerce Commission for approval of the plan. It is expected that the Commission will take the matter up immediately and that approval will come as soon as formal hearings can be held, but the matter can scarcely be disposed of for several months. Meanwhile a group of malcontents in the Senate, led by Senator Couzens, are hostile to the scheme and they probably will attempt legislation designed at least to delay matters. Their main grievance seems to be that the President himself took a hand in the matter.

The proposed alignment of railroads involves about one-fourth of the entire railway mileage of the country, the four systems averaging about 15,000 miles each. These roads, nearly sixty in number, last year earned about half the gross revenues of all roads and reported net railway operating income of \$650 millions, or about half the total. Practical difficulties in the way of consummation of the merger are not great, if official approval can be secured. Certain minor points have already been referred to boards of arbitration, of which President Hoover, contrary to earlier reports, will not be a member.

A comprehensive Eastern merger will make it easy to effect consolidations in other parts of the country. If opposition to the eastern plan becomes too formidable, it will probably mean that nothing further will be done along railroad merger lines for a good many years to come, but otherwise a general strengthening of the country's transportation system will result, with considerable aid to the business position.

A good deal of interest attends the opening of the national automobile show here. New models are generally shown, and price reductions are the rule. Some of the more optimistic people in the motor trade now predict sales of 4,000,000 vehicles for 1931, but others feel that as much as can be expected is about the 3,500,000 produced in 1930. Steel industry operations, which fell to a very low point at the year-end, may be expected to rise, as usual, in January. Building construction will, of course, be dull during the remainder of the winter, and the customary slackness in retail and wholesale trade will be felt over the next several weeks. In this period also corporation earning statements for 1930 will appear, and reading them will do little to bolster confidence. Despite all this, there is by no means the pessimism among business men and bankers which might be expected from the unfavourable revelations of statistics.

FRANCE.

Politics — Public Finance — Production — Prices.

(FROM OUR CORRESPONDENT.)

PARIS, January 14.

THE Chambers reassembled yesterday for the new session, which should terminate in June, but which will doubtless be prolonged, as usual, at least until the eve of the Fourteenth of July national holiday. The new session has opened in an atmosphere of nervousness and uncertainty—nervousness as to the effect the present extraordinarily confused relations between the various political parties may have on the general elections due next spring, and uncertainty as to the future of the

Ministry, in view of the damaging revelations of the Oustric inquiry. Everything points at present to the probability of a further series of Ministerial crises in the near future. The continued existence of a Cabinet which must depend on Socialist support in all matters on which its policy is opposed to that of the old Tardieu majority, and on the help of the latter in connection with national defence and other important questions, in regard to which the international Marxians have made it clear they will refuse their support, must necessarily be doubtful. The Steeg Cabinet has made it clear from the start that it aspires to exist rather as "the Right of the Left than as the Left of the Right," but its Press is already loudly appealing for the help of more of the members of the Centre Parties, which have so far refused to disown M. Tardieu. In any case, it cannot be long before the fate of the new Cabinet is put to the test. The Oustric inquiry is steadily involving more members of parties of the Left, and it is difficult to see, in view of the suggestions that are being made of the possibility of stifling the investigation, how it will be possible to avoid the two interpellations on the matter of which notice has been given from being pressed to a crucial vote.

The Government's immediate programme is heavy, and the increasing economic depression is rendering more urgent every day the speedy passage of the Budget, the plan for strengthening the national economic equipment, and the list of great colonial loans. The report of M. de Chappedelaine, rapporteur-general of the Chamber Finance Commission, which was distributed yesterday, shows that during its examination by the Commission the Budget Bill, as drafted by the Tardieu Government, has been slightly revised upwards on both the expenditure and the revenue sides. The comparative totals are as follows:—

	Original proposals.	As modified.
Estimated revenue	50,251,748,329f.	50,457,483,468f.
Estimated expenditure	50,145,286,389f.	50,351,574,180f.
Estimated surplus	106,461,940f.	105,909,288f.

The increased expenditure is chiefly due to the proposals that the war pension scale of 400 francs for widowed fathers of deceased claimants should be brought up to the 800-franc level of that for widowed mothers, and that seamen's old-age pensions, which are still below those of miners and others, should be slightly increased. It is proposed to obtain part of the additional money required by authorising the reopening of gambling clubs in Paris (which were suppressed as from March 31st next under the last Tardieu Budget, and from which 55,000,000 francs are expected to be derived), and by revising upwards the estimated revenue from Customs duties.

In view of the general slowing down of economic activity, the new Finance Minister, M. Germain Martin, has found it prudent to modify to some extent the scheme proposed by the Tardieu Government for the financing of the programme for the development of the national economic plant. This programme, it may be recalled, proposed an expenditure of 17,500,000,000 francs, spread over five years (towards which the Treasury was to have furnished 5,000,000,000 francs out of realised surpluses, while the balance was to have been found by local authorities and other directly interested bodies). One object of the Tardieu Government in launching this programme was to furnish help to industry and check unemployment during the anticipated leaner period of the immediate future. As a result of a searching examination of the financing programme, in association with M. Loucheur, Minister for National Economy and Labour, M. Palmade, Budget Minister, and the high officials of the Treasury, the Caisse d'Amortissement, and the Bank of France, the Finance Minister has decided that a more elastic financing system is advisable. In this he has been influenced by the fact that, although during the first eight months of the financial year revenue exceeded Budget estimates by slightly over 1,000,000,000 francs, total recoveries for December were, for the first time for over three years, slightly (30,000,000 francs) below the expected level. This, M. Martin admits, was the inevitable result of the fact that, since the current

Budget was adopted, taxation has been reduced by 2,000,000,000 francs. In the new Budget estimates the drop in revenue from the taxation reductions in question has been allowed for. Further, the mass of supplementary credits voted already, or inevitable before the end of March, will total approximately 1,800,000,000 francs, which will more than swallow up the realised "surplus." It has become advisable, therefore, to safeguard the Treasury's available resources, otherwise it may be necessary, to meet a possible deficit, to make an issue of Treasury bills—which, if the period of stringency is prolonged, might have to be transformed into more or less long-term bonds, and thus constitute a return to the objectionable policy of balancing the Budget by a loan. The Government therefore proposes to agree in principle that the State's share in the cost of the scheme shall remain at 5,000 millions, but to adopt an amendment put forward by M. Loucheur, which would render it possible, if necessary, for part of the money required from the Treasury to be raised by loan, or from the Caisse d'Amortissement, out of money become available as a consequence of debt extinction.

The index of production for November (1913 = 100), covering nine of the principal industries, is 135, as compared with 136 in October, 137 in September, 144 during the period December, 1929-May, 1930 (the highest level recorded in French industrial annals), and a mean of 139 in 1929 and of 127 in 1928. The French general index figure for production in November is returned by the Statistique Générale as 6 per cent. above the 1928 level, and 4 per cent. above that for 1929, as against United States, German and British figures showing declines respectively of 18, 19 and 12 per cent. below 1928 levels. Contrary to expectation, the detailed returns for November do not show a general decline. On the contrary, the figures for the motor-car and leather industries remain unchanged, while those for rubber goods show a rise of seven points and for extractive industries and textiles a rise of one point each. The continued improvement in the textile figure, which in August and September touched 20 per cent. below its 1913 level, or the lowest since the war, and recovered four points in October, is especially interesting. The textile industry, which for a few weeks in 1928 rose slightly above the pre-war level, is the only great French industry that has failed so far substantially to exceed its 1913 output. Engineering, metallurgy, building and paper fell back slightly during the month, but all, with the exception of metallurgy, are still well above their 1928 levels.

The wholesale price index at the end of December was 498 (July, 1914 = 100), against 504 for November and means of 623 in 1929 and 634 in 1928. The French figure for December corresponds to 101 gold, against Great Britain 112, Germany 120. The index for French products remained unchanged at 565, as in November, while that for imported commodities shows a further drop of 18 points to 377. In March, 1929, the figure for domestic products was 647 and that for imported goods 665, while in the following month that for imported commodities was 23 points lower than that for native products. Since then the ratio between the two categories has been steadily widening. The reasons generally adduced are the excessive incidence of French taxation, and, latterly, the advent of the national insurance system, which is popularly alleged to be largely responsible for maintaining many prices here at a higher level than they are abroad.

The index figures of retail prices continue to rise, but it is a question whether this is not due to defective methods of calculation rather than to any real increase. So far as Paris is concerned, this figure is based on the selling prices of 13 commodities only. This defect, which has often been pointed out here, is tacitly recognised to the extent that in its returns for the current month the Statistique Générale has dropped the ambiguous heading "Retail Prices" and replaced it with the safer one of "Index of the Prices of Thirteen Household Articles."

GERMANY.

Politics — Foreign Policy — Ruhr Wage Settlement — Unemployment Proposals — Chain Store Developments.

(FROM OUR CORRESPONDENT.)

BERLIN, January 13.

THE departure of the Foreign Minister to Geneva to represent Germany's interests, especially in the matter of the protection of the minority in Poland, is taken in the knowledge that his policy has the support at home of all thinking people. Recently feeling has been very forcibly expressed, especially by members of the Centre Party, against any alliance with the extreme Nationalists. The leader of the Centre fraction, Herr Kaas, informed the National Socialists, in a speech which attracted much attention, that it might be theoretically the soundest plan to let them govern, but that it could not be acted upon because they would govern in such a manner that nothing would be left of Germany when they had done. The very restrained and constructive New Year article by Dr. Brüning in the official correspondence of the Reich also rejected in unmistakable terms the National Socialist ideas on home and foreign policy.

The Brüning Government, based on the Catholic Middle classes, and the other Liberal elements, aided by the Social Democrats, and having the co-operation of the Prussian Government with its Socialist leadership and Catholic support, needs only one thing more for its firm establishment: a success in the field of foreign policy. If this is not forthcoming, if Germany receives no definite concession in the matter either of disarmament or of the minority in Poland, then there is bound to be a new crisis with consequences impossible to predict. Herr Curtius's position would become impossible, and if the Chancellor, who has so long postponed, for excellent reasons, the completion of his Cabinet, were forced to find a new minister for this important post, he would be involved in most difficult negotiations with each of the small parties which have hitherto supported the Government. It is doubtful whether, in such circumstances, Herr Brüning's authority would be sufficient to maintain his highly artificial and complicated majority. If Germany can obtain from the League effective protection for its minority in Poland, the way will be opened for negotiations as to the economic relations between the two countries, and the commercial treaty, will at long last be completed. As the treaty is to be presented for ratification to the Sejm, the German Cabinet has decided to bring it before the Reichstag.

The Government has been very active in the settlement of the Ruhr wages dispute. Proceedings had reached a deadlock, as the employers would in no circumstances accept a cut of less than 8 per cent., and the unions would not concede more than 4 per cent. The arbitrator would not take the responsibility of enforcing either of these proposals, and as, according to a Labour Court judgment of 1929, he cannot issue an award of his own as an impartial arbitrator, but must enforce the offer of one or other of the parties, a stoppage of work seemed unavoidable. Thereupon the Government obtained from the President a decree which, in principle, restored the *status quo ante* 1929. Though the arbitrator still cannot determine on his own authority the amount of the wage change, he can, with the consent of the Minister of Labour, call in two other impartial members and require the representatives of the disputants to withdraw, so that the award is given by the three impartial arbitrators acting together. The Ruhr dispute was brought to an end in this way by an award of a 6 per cent. reduction. The Communists tried to engineer a strike against this award and organised a special union, but, so far, it does not look as though they will have much success.

It has long been expected that a reduction of wages in the coal industry will bring about a further fall in iron prices. In preliminary discussions in the industry a reduction of 5-8 per cent. has been contemplated.

A proposal of Herr Dietrich, the Finance Minister, that, instead of unemployment benefit, the funds should be

January 17, 1931.]

THE ECONOMIST.

115

used for bounties on employment, in order to give work instead of mere maintenance to the unemployed, has attracted widespread attention. It is a specious idea which constantly recrudesces in all countries in which there is unemployment, but it has always become evident on trial that this system burdens the public funds even more than do benefits, and develops into a regular system of subsidies. For this reason public opinion is inclined to be suspicious of Herr Dietrich's proposals, which he apparently wishes to apply, first of all, in the coal and iron industries, but they cannot be judged until it is seen how they look when they are submitted in concrete form to the Cabinet.

Meanwhile another proposal for the solution of the unemployment problem, strongly advocated by various political groups, has been almost unanimously rejected by a conference of employers, workers and experts—the idea of forced labour. There was a widespread demand for the mobilisation of young unemployed persons for work on public construction, but the Government experts intimated that the expense, even if no wages were paid, would exceed the cost of unemployment benefit.

The largest German chain-store company, Rudolf Karstadt A.G., of Hamburg, is undergoing important changes which should offer an opportunity for a consolidation of part of the very large volume of short-term debt, which exceeds the capital of Rm. 100 millions. The manufacturing side of the company's activities, which was more highly developed than in other German retail store companies, is to be very much cut down. A small participation in a Solingen bleaching works has already been sold. The Berlin fur company, Heymann and Telsenburg, which has been carrying on with heavy losses, is now to be liquidated, and the confectionery firm, William Herz and M. I. Meyer A.G., which belongs to Karstadt, is to be wound up, whereas hitherto Rm. 7.8 millions of confectionery was made by the Karstadt subsidiaries. Still more important is the conversion into an independent company of the "E.P.A." single-price store in Hamburg, which is increasing its capital from Rm. 6 millions to Rm. 30 millions. At present all the shares in this, the largest German one-price store company, are held by Rudolf Karstadt A.G. Its proposed introduction on to the Stock Exchange is postponed until conditions are more favourable for new issues.

In contrast to most other single-price stores operating in Germany, the Karstadt concern conducts its business in buildings which are its own property. The "E.P.A." will now take over the buildings in which it carries on business, against an issue of Rm. 15 millions new shares. Of the remaining 9 millions only 25 per cent. will be paid up to begin with. The "E.P.A.," whose turnover is said to amount to nearly 100 millions, is now to finance itself and relieve the parent company of the burden, for the capital of the Karstadt, on which 12 per cent. dividends have so far been paid, is severely depressed in value by the burden of unfunded debt. In 1930 the quotation fell from 142 to 60, and it is little higher than that at present. The introduction of the shares on to the New York Stock Exchange, so enthusiastically acclaimed at the time, contributed to this, as foreign shares were the first to go when Americans began to sell. The return to Germany of Karstadt shares at a very unfavourable moment severely depressed their quotation, and the dark side of the sale of securities abroad is beginning to be apparent.

IRISH FREE STATE.

Agricultural Prices — Progress of Electrification — Unemployment Insurance — Currency Commission.

(FROM OUR CORRESPONDENT.)

DUBLIN, December 27.

THE continued depression in butter prices causes some anxiety. The emergency duty on the import of butter into the Free State is still in force, and an application for a permanent duty is being investigated by the Tariff

Commission, whose report is expected daily. Meanwhile the marketing of dairy produce forms the subject of a separate inquiry, the conclusions of which are awaited with interest. A recommendation in favour of some form of compulsory marketing through a central selling agency would not come as a surprise, but it is doubtful if the Government could go so far in the direction of regimenting farmers even in their own best interest. The slump in butter prices is largely compensated by the good prices of cattle and other livestock. The advantages of a diversification in agricultural production were never better illustrated than at the present time.

The success of the Shannon scheme, from the financial as well as from the purely technical standpoint, appears to be already assured. Dublin, Cork, Limerick and twenty-four other cities and towns have closed down their own generating stations and now derive their current from the Shannon, while electricity has been introduced for the first time into eighty-eight towns and villages. Over a hundred towns use electricity for public lighting purposes, and the growth of the domestic use of electricity is shown by the large sales of cooking and heating apparatus made by the Electricity Supply Board. The use of electric power for industrial purposes is also on the increase. Already it is employed in thirty creameries, in the Ford Works in Cork and in several other factories. The Dublin and Cork trams are also run from the Shannon. The development which, it was originally hoped, would take place in three years, has in fact taken place in fourteen months, and plans are already being made for extending the scheme.

Great interest is being displayed in the experiments with the Drumm battery, which, if it proves a success, may result in the electrification of the Free State Railways. The Minister for Industry and Commerce, moving a resolution granting a sum of £25,000 for the purpose of further experiments, stated that he had received a most enthusiastic report on the battery from Professor Allman, of London University. The only doubtful question remaining to be solved is the life of the battery. This can obviously be tested only by prolonged experiments, and it is proposed to build four rail coaches, each seating 160 passengers, which will be driven by the battery over a few miles of railway in the suburbs of Dublin. The success of these experiments would doubtless lead to the use of such coaches in other areas, and a very important additional demand for Shannon current would thus be provided.

The position of the Free State in respect of unemployment insurance is singularly fortunate compared with that of Great Britain. In recent years the contribution income has exceeded the amount paid out in benefits, and the Government has consequently decided to reduce the rates of weekly contributions payable by all parties—employers, employed and the State. This relief will reduce costs of production in manufacturing industry by £225,000 a year. The attitude of the Free State Government towards unemployment insurance has always conformed with the highest standards of financial orthodoxy. Except during a brief period of exceptional distress no unconvenanted benefit or "dole" has ever been granted, and the scheme has been maintained on a sound actuarial basis. The numbers registered as unemployed on November 3, 1930, were 18,472 males and 4,518 females, and the numbers being paid unemployment benefit at that date were 9,603 males and 2,036 females.

The accounts of the Currency Commission for the year 1929-30 can be briefly summarised as follows:—

	£
Notes outstanding March 31, 1929	6,557,998
Notes issued March 31, 1929-March 31, 1930.....	9,208,600
Total issues	15,766,598
Notes redeemed March 31, 1929-March 31, 1930.....	8,569,624
Notes outstanding March 31, 1930	7,196,974

The assets by which these notes are secured are as follows:—Cash (British legal tender), £7,907; British

Government securities (maturing within twelve months), £6,825,359; balances at Bank of England and other banks, £363,707. The Currency Commission is responsible also for the issue of the consolidated bank notes which are limited in amount to a maximum of £6,000,000.

POLAND.

The New Parliament — Budget and Loans — Tariff Revision — Bourse and Money Market — Trade.

(FROM OUR CORRESPONDENT.)

WARSAW, December 23.

Just before the opening of the new Parliament, on December 9th, the Cabinet was re-formed, with Colonel Slawek replacing Marshal Pilsudski as Premier, and with a further strengthening of the military forces in the Administration. Not only are the principal ministerial appointments and most of the under-secretaryships now held by army officers, but such important financial positions as the presidency of the National Economic Bank and the Comptroller of the Budget are occupied by generals. Political nominees are also in control at the Bank of Poland.

The opening of the legislatures was accomplished without incident, and the Sejm is now occupied with the Budget project for the fiscal year beginning April 1, 1931. The estimated revenues and expenditures are fixed at 2,890 and 2,886 million zlotys respectively, including 836 million zlotys for the Ministry of War. The anticipated revenues and expenditures by individual departments are substantially the same as for the present year. It is believed, however, that during the course of the next fiscal period the "axe" will be vigorously wielded in most of the Ministries, which are very much over-stuffed, so that the diminished revenue which is inevitable in the next fiscal period may be offset by economies and by foreign borrowing. The system of monthly Budgets is to be continued next year, but in a somewhat weakened form, and transfers of appropriations between Ministries are now to be legalised.

Parliament has also been asked to ratify the agreement signed on November 17th with the Swedish Match Company for the revision and extension until 1965 of the Match Monopoly lease against a loan of \$32,400,000 at 6½ per cent., to mature in 1965. As was indicated in the *Economist* of November 29th, the new loan includes the conversion of the unpaid balance of the \$6,000,000 loan secured several years ago, and provides for an increase in the retail price of matches of approximately 30 per cent. This item alone will amply repay the loan long before 1965. The Monopoly contract is also extended to cover boxes and other products accessory to matches, as well as providing for effective control over the sale of mechanical lighters. The conditions are hard, but the Government appears to be so urgently in need of loans that almost any terms offered had to be accepted.

As was also foreshadowed in these columns last month, the Schneider-Creusot concern of France has offered the State Railways (which were theoretically "commercialised" by a law published and made effective on December 2nd) a loan for the completion of the new railway line from Katowice (Upper Silesia) to the port of Gdynia. The offer is reported to be for a loan of one milliard francs on a yield basis of approximately 10 per cent., but the details are not known.

When the Budget and other fiscal measures are disposed of, the Sejm will, no doubt, be asked to enact a considerable amount of economic legislation which it has not been possible hitherto for the Government to entrust to Parliament, because of the hostility between the administrative and legislative branches.

The Polish tariff wall, already one of the highest in Europe, was raised still higher on the seventh of this month by the publication of duty increases on a large number of commodities. The increases in most cases are substantial, and especially so on leather shoes for

women and children (imported mainly from Czechoslovakia); on bricks, mouldings and tiles; articles for electro-technical purposes, such as insulators, globes and sockets; rosin, on which the duty has been raised from 5.20 to 20.00 zlotys per 100 kilogrammes, and potassium salts (raised from 1.50 to 6.00 zlotys); a large number of chemical products for industrial purposes; tanning extracts; bicycles and parts (increased from 206.00 to 450.00 zlotys per 100 kilogrammes); milling machinery; machine fittings, such as valves, cocks, injectors, separators, etc., on which the duty has been more than doubled; pulp, cellulose and various kinds of paper, and some textile products. While these increased duties are obviously for the most part aimed at Germany, it is stated that they are for the purpose of still further protecting domestic industries; although if these industries were not sufficiently protected by the duties in force before December 7th, it is hard to see how the latest increases will enable home manufacturers to solve their difficulties. A complete revision of the Polish customs tariff is now in preparation, and if the emergency increases which have been made during recent months afford a reliable indication of what the new tariff will be like, the Polish customs barrier will, indeed, be difficult to surmount. There is a great deal of shallow thinking in Poland on economic matters, and especially on the unqualified "benefits" of high protective tariffs.

The expectation that Bourse and money market conditions would improve following the success of the Government Party in the recent elections has not materialised. Bills protested at the Bank of Poland increased from 3.64 per cent. in October to 4.22 per cent. in November, despite great selectiveness in the acceptance of paper for rediscounting; and, for the protection of its declining reserves, the Bank has found it necessary to restrict credit by accepting for rediscount bills of a maximum of 75 days—except in the case of agricultural paper. The Bank is permitted by its statutes to rediscount 90-day bills. There is undoubtedly plenty of short-term money available at the banks, but only for lending against quick-maturing, prime paper. The Bourse has been very weak since the elections, with selling orders exceedingly difficult to execute. The shares of the Bank of Poland, for instance, which were 164 zlotys immediately after the elections, are now quoted around 153 zlotys, representing a yield of over 13 per cent., based on the 1929 dividend of 20 zlotys per share. The Bank is expected to pay a 15-zloty coupon for 1930, so that the yield is still over 10 per cent., considering that the present price includes the 1930 coupon. This is a considerably higher yield than is offered by the shares of any other European bank of issue.

Trade is also very unsatisfactory, with unemployment increasing rapidly now that the building season is over, and with a renewal of the depression in the textile industry after a brief pick-up in the autumn. Russian orders alone are saving the iron and steel industry of Upper Silesia from a considerable shut-down; while railway rolling-stock, farm equipment, machinery, chemical, leather and other manufacturing industries are operating on greatly reduced schedules.

CANADA.

Reception of Mr Bennett's Policy for the Prairie Provinces — Business Conditions — Australian Trade Treaty — Railway Earnings.

(FROM OUR CORRESPONDENT.)

OTTAWA, December 31.

MR BENNETT's speech outlining his programme for the relief of the Prairie Provinces, the gist of which was given in a Note of the Week in the *Economist* of January 3rd, has been very coldly received in the West, and on the following day the price of wheat declined 2 cents per bushel. The *Manitoba Free Press* gave its approval to the plan of guaranteeing bank advances to the wheat pools, but Premier Brownlee, of Alberta,

expressed the opinion that this scheme unduly favoured the members of the pools and that a guarantee of a minimum price of 70 cents per bushel would have been a more equitable solution. Practically all the leaders of the western agrarian organisations have expressed disappointment with what they regard as the indefiniteness and inadequacy of Mr Bennett's proposals, and frank scepticism is being expressed about the possibility of developing any substantial market in China for Canadian grain; the wheat pools have already made determined attempts to do so, but have been foiled by the confused political conditions and the depreciation of China's silver currency.

Mr Beatty has estimated the recession of Canadian business in 1929 as compared with 1930 at 16 per cent., and suggested that a comparison with more normal years, like 1925, would show Canada to be in a relatively fortunate economic position, but so far there is no convincing evidence of any definite upturn in business, and any such development seems to lie still some distance away. It is true that the Christmas sales of stores in the larger cities like Toronto and Ottawa were well up to the average, but the purchasing power of the rural communities remains deplorably low, and until it is revived there can be no permanent business improvement. It is estimated that probably 100,000 farming families in the prairie provinces, or about one sixth of the total, will require some sort of relief, possibly in many cases only seed grain, before spring arrives. The Bennett Ministry's plans for special public works for the relief of unemployment have done considerable good, but the problem remains very serious in many places, and, according to the Mayor of Vancouver, has reached a critical point in that city.

The weekly carloading figures show a further contraction of business; for the week ending December 20th they were 47,494 cars, as compared with 50,232 cars for the previous week and 54,079 cars for the corresponding week of 1929. In the industrial field the textile firms alone profess any satisfaction with their present situation, but it is noted that despite the stimulus which is supposed to have been given to the textile industries by the tariff changes of September, the latest records of the Bureau of Statistics show a further curtailment of employment in them. However, the shares of Penmans, Ltd., the largest woollen manufacturers in Canada, have moved up 20 points to 72 since September, and the Canadian Celanese Co. claims to be operating at full capacity and to have nearly completed a plant enlargement which will increase its operating capacity by 50 per cent.

The Massey-Harris and other farm implement companies are experiencing very difficult times, and the recent resignation of Mr Thomas Bradshaw, the President of the Massey-Harris Co., is said to be connected with its present troubles. The negotiations for another large merger of newsprint companies, which would bring practically all the Canadian plants, except those of the International Paper and Power Co., into a common organisation, are still proceeding, and it is reported that Price Bros., whose refusal to take part in the negotiations has been an obstacle to the consummation of the merger, are now ready to come in. Canadian pulp and paper interests are known to have been exercising vigorous pressure at Washington for an embargo upon imports of Russian pulpwood into the United States, as they believe these have aggravated the troubles of the Canadian industry.

It is announced at Ottawa that the negotiations for a new trade treaty with Australia, which have been in progress between Mr Parker Moloney, Minister of Markets in the Scullin Government, and Mr Stevens, Canada's Minister of Trade and Commerce, have been completed as far as it is possible to complete them until Mr Moloney has conferred with his colleagues, and that confident hopes of satisfactory results are entertained. Apparently, however, it has been discovered that while it was comparatively easy to arrive at an agreement on the general principles of the new treaty, the task of

working out the necessary tariff readjustments in a way which would not be unpalatable to various interests in each country, as, for example, the dairymen of Canada, has proved extraordinarily difficult. Canadian manufacturers are also discovering that a high protectionist policy which seeks to reduce imports to the lowest possible volume is a two-edged sword. For example, the duties on Canadian manufactured products like motors and rubber goods in retaliation for Canada's change in her butter duties are hitting certain Canadian industrial interests very hard, and New Zealand dairymen, shut out of the Canadian butter market, are now beginning to sell cheese in South Africa at prices which threaten to destroy a promising market for Canadian cheese.

The earnings of the Canadian Pacific Railway for November are considered satisfactory in the light of present conditions; the net profits for the month, placed at \$4,921,612, show a gain of \$371,963 over the figure for November, 1929, and this result has been achieved by a rigid curtailment of expenditure. It is probably because a similar policy of stern economy is not possible for a State-owned system like the Canadian National that its earnings are less satisfactory.

ARGENTINA.

Crop Conditions — Grain Prices — Railways — Public Finance.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, December 6.

CROP conditions in Argentina at the moment of writing promise an extraordinarily good yield of linseed, a normal wheat harvest, and, if the present satisfactory state of the growing maize prevails until March, there will also be a large corn crop. The rust reports, though not exaggerated as regards the area affected, have certainly over-estimated the amount of actual damage suffered by wheat. Many of the fields in the northern and central areas have shown signs of rust, but, nevertheless, on being harvested the grain turns out to be excellent. Indeed, the yield has run as high as 1,500 kilos to the hectare, and although the crop threatens to be less satisfactory down south, where harvesting has not yet begun, there will be at least 5,500,000 tons to 6,000,000 tons exportable surplus, estimating local consumption at 2,000,000 tons and the carry forward of old wheat at 1,000,000 tons.

Prices for all cereals are admittedly far below what are generally considered normal quotations, but a rising tendency may accompany the demand that has set in during the last week. Spot quotations, Buenos Aires delivery, are \$6.15 paper per 100 kilos for wheat, \$12.55 for linseed and \$4.25 for maize. Chartering during the past fortnight suddenly became brisk, and freight rates rose by something like 5s. per ton after a period of unusual inactivity. Enquiry in cereal circles shows that there is a large and increasing demand for both maize and wheat. As regards linseed, the reasonable certainty that Argentina will have over 2,300,000 tons of seed to sell has depressed prices considerably, the February quotation being \$11.65, with every likelihood of even lower figures before the end of the year. If it be true that world stocks of linseed oil are at present unusually high, Argentina may find it difficult, even at the current low prices, to dispose of her seed as rapidly as she would like.

There is reason to hope that the railways will benefit by the good crops in prospect. A well-meant but ill-directed effort to persuade them to reduce their freight rates as an aid to the farmer has, however, been made, under official auspices. The railways have, nevertheless, had no difficulty in making it perfectly plain to the Government that even a heavy reduction in freight, say 20 per cent., would do little to compensate the grower for current low prices, while the loss to the railways collectively would be severe. Stress was laid on the fact that the Anglo-Argentine railways are, in the first place,

essentially a national industry. Secondly, the bulk of their receipts go on upkeep, maintenance, and operation charges; all of which remain in Argentina, and all of which have risen of recent years, and will rise still further in accordance with the terms of the current legislation governing the administration of the railways. Over and above this, of course, there is the loss to capital incurred through the heavy depreciation of Argentine exchange, but even if this be left out of the question for the time being, it is as plain as a pikestaff that the actual grower would benefit next to nothing by lower freights, while the operation of the railways would be handicapped very seriously. Moreover, such an act would be the worst possible advertisement for Argentina at the present time, and might even seriously prejudice the terms upon which future financial assistance would be offered. For quotations of Argentine railway shares have a barometric value in New York, as well as in London. And although American interests in Argentine rails are believed to be comparatively slight, the relations between the official world of Argentina and the railway companies are known to be very closely followed by New York financiers, and even by Washington.

Meanwhile the official finances continue to be handled in a manner that has called for universal approbation. The balance of the local loan has been taken up from the bankers, some of whom varied the terms of their original offer and, instead of discounting six months Treasury bills at $5\frac{1}{2}$ per cent. per annum, bought Credito Interno Bonds, yielding 6 per cent. per annum, at an agreed price of 95.20, the current market quotation being 97. Some twenty millions face value was thus absorbed, and about the same amount in Treasury bills was discounted. The Government has issued a statement to the effect that since taking office it has paid up no less than \$126,000,000 paper of outstanding debts. It has also published its preliminary scheme for next year's budget. Receipts are estimated at \$650,000,000 paper, and the Minister of Finance insists that expenditure must not surpass this figure. The service of the public debt will take \$239,000,000 paper, and the balance will have to cover the requirements of the various Ministries, according to an equitable scheme of division which has yet to be decided upon. Public works will be carried out only when it is possible to dispose of the bonds authorised by Congress to cover the cost of same.

There is no indication of any intention to approach the question of exchange by other than normal means arising out of the state of trade. The Government will continue to export gold to meet external debt services, both on its own account and also on behalf of those provinces and municipalities having foreign obligations of this nature to meet. It is hoped that the increased shipments of cereals and other produce will also help to improve the quotation of the Argentine dollar, but beyond that nothing concrete can be said. Nevertheless, the most summary observation of Argentina's present financial position indicates the advisability of seeking an important foreign loan in the comparatively near future. Present international conditions are, however, such as to put this operation out of the question for the time being. Argentina feels that she must help herself, and set her house in order, before listening to the proposals which reach her from foreign markets. Nothing on this subject has been published, but it is known in financial circles that when concrete terms have been mentioned they were not such as this country could with dignity and prudence accept. Economy all round is the order of the day; which means diminished import totals and reduced business in many directions. The result is a plethora of money seeking profitable investment, also a healthy undertone, and a renewal of confidence in the future which warrants one in repeating that Argentina has passed the worst of a very bad time, and that though convalescence may be slow, it will, in the long run, leave her stronger and in every way better than she was before her change of course on September 6th.

Letters to the Editor.

GOLD: PRICES: WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—All the best controversies arise from misunderstandings. If E. M. D. thinks I misunderstood him to "wish to suggest the pegging of real wages till times are better," in so thinking he misunderstands me. That phrase was my own description of my proposal, and I questioned his calling its consequences a "burden of sacrifice," but where did I attempt to father the proposal on him? Further on, he writes: "It is not established that any real wages are too high for the community to bear, if only industry were better regulated. Unless and until that is established, even if temporarily some money wages are so high as to upset the appropriate economic equilibrium, how do we justify the reduction of those money wages if that means a reduction in their real value?" And he adds that such a reduction is certainly involved, because the price reductions following from the cut in wages will not completely restore their real value. I now realise that, by omitting to state the time-relations of my events, I have failed to make my proposal clear to him. I mean such a reduction of present money wages as will bring real wages back to where they were a year ago. He is thinking of how the reduction will affect future prices, and says quite truly that the cut (say 6 per cent.) in money wages made now would not produce at any early future date a (further) price fall of as much as 6 per cent. How, then, do I justify my proposal? By reference to the 6 per cent. price-fall that has already occurred, from causes other than wage-cuts. If wages are reduced only in respect of price-falls already declared, E. M. D.'s difficulty does not arise, and any further price-fall following on the wage reduction is left to be dealt with on its merits when it has declared itself. If by that time the upstroke of the trade cycle has arrived and prices show signs of early recovery, no further wage-reduction may be necessary.

As to the "better regulation of industry," we must remember that rationalisation means not merely the linking-up of the boards and capital of different firms and the writing-off of losses, but also a new orientation of effort in the works themselves, to cut out waste of every kind and take full advantage of all new machinery and methods for cost-reduction, old customs and traditions notwithstanding. To rationalisation in this latter sense, the chief opposition comes from labour itself (e.g., "more looms to a weaver") inspired partly by the fallacy that labour gains by forcing the employer to pay three men to do the work of two, and partly by its habit of demanding a price for the acceptance of even such a patent fact as that a fall of prices is equivalent to a rise of wages. To reiterate the vague assertion that industry could afford to pay even higher money wages than at present, if only employers had better brains, merely serves to divert attention from the demonstrated fact that personal remuneration has gained, all round, an unearned increment of 6 per cent. in the past year, and to impede action based on that fact by raising interminable discussions of indefinite possibilities. "It is not established" that (after lost capital has been written off) it is still in the employer's power, without the willing co-operation of labour, to reduce his costs by anything approaching 6 per cent. of their whole wages-content in the sense explained in my last letter. Does anyone suppose that our leading shipbuilders, iron-masters and others are so stupid as to close down their works, in whole or part, and write off their capital, without first trying by all means they can devise to carry on? Those who would teach them their business must condescend to particulars.

Five years ago it might have been an open question whether the "sacrifice necessary to restore economic equilibrium" should fall on employers or employees. It is no longer, nor is it pertinent to present conditions to speak of "confining the sacrifice" to the latter. The employers have borne the whole loss arising from the price-falls of recent years, while the employees, so far as they have continued in employment, have pocketed unearned increment without any acknowledgment; and when employers' losses have forced them to restrict employment abnormally, the employees have been supported by "public assistance." Only in the latter case has there been any question of "sacrifice," and then it has been the inevitable counterpart of the unearned increment of the lucky ones.

E. M. D. asks whether it is within the terms of long-term loan contracts for capital that the real remuneration of money

lent at fixed rates should be increased by price-falls. In a legal sense I imagine there is no doubt that the contract requires a periodical payment of so much sterling, and the lender takes the risk of the relation of sterling to goods, up or down, including the risk of such a revaluation of currency as has hit hard the subscribers to (e.g.) certain French war loans. If any provision were grafted on to the loan contract affecting the balance of probability of profit or loss by price movements, etc., I should expect it to affect other terms of the contract such as rate of interest, price of issue or conditions of redemption. Capital is a shy bird, of increasingly migratory habit, and any alteration such as E. M. D. desiderates would raise international questions and jeopardise London's position as the great financial centre, unless it were adopted universally.

He argues that as present rates of wages have been determined by agreement between the workers and "those who invest capital for profit," there is a moral presumption that if a temporary sacrifice is necessary, it should be borne rather by "those whose remuneration arises from the loan of capital," if practicable. But the entrepreneur, who alone has any hand in settling wages, has for years been making crippling sacrifices, which have largely gone into the workers' pockets. The fixed-interest man (debenture holder, etc.), who has profited with the workers, has no hand in settling wages. Perhaps E. M. D. will restate this particular argument in a form consistent with the vital distinction between these two classes of capital? Unwilling as he is to admit it, the best cure for exactions on the part of capital lies in the accumulation of it. That such accumulation will reduce the rate of remuneration of capital is as certain as any other operation of "supply and demand." If we have not the sense to permit the accumulation, it is idle to complain that the remedy is not prompt, unless we are prepared with a better plan.

The passage above quoted from E. M. D.'s second letter, about wages being not too high for "the community" to bear, and a later passage laying on "the community as a whole" the responsibility for chronic depression in industry, might be read as sympathising with the attitude of the miners who the other day, having been convinced that their own industry had been bled white, were ready to ask for a renewed Exchequer subsidy. If that were E. M. D.'s position, I should despair of reaching agreement with him, as it is fundamental in my view that each industry must bear its own wages and its own responsibilities. But if he means nothing of that kind, I think we afford one more proof that "the better is the enemy of the good." I plead for prompt action to set industry on its feet before it is too late—a first step, merely, but in the right direction. He opposes me because he contemplates ideal reforms which should some day be perfectly equitable to everybody. Let me restate my position in bare outline:—

(1) There is no time to reconstruct the fundamentals of our economic system on socialistic or other untried lines. Given those fundamentals, Mr. Keynes has summed up the position in a recent letter to the *Times*: "Nothing can cure unemployment which does not create in the minds of manufacturers and contractors the expectation of an improved margin of profit."

(2) The employer has borne the whole loss and in many cases has thrown in his last reserves of cash and credit; it is now the turn of the employee. The proposal is that, universally but temporarily, he should relinquish the 1930 portion of the gain which the price-fall, in ruining the employer, has incidentally made over to the employee.

(3) A general return to the real wage level of a year ago cannot be represented as serious hardship. If the new spirit of partnership in industry has any reality, such a return would be a quite reasonable application of the good precedent set by the railway men two years ago, and within the compass of good leadership.

(4) The alternative of starting by readjusting wage levels between the sheltered and unsheltered industries, however sound in theory, is impracticable. It can neither be secured by general agreement within the time available, nor enforced without agreement, because it raises every possible feeling of rivalry and jealousy between different trades.

(5) To demand, as a precedent condition of (2), that the fixed-money man should relinquish a corresponding part of his gain by the price-fall, whatever its equity, is impracticable as an immediate measure, because it involves repudiation of legal contracts, and the mobility of capital makes it an international question.

If E. M. D. would state plainly how far he accepts or rejects these facts and conclusions, we could estimate the chances of agreement as the result of this correspondence.

Cookham.

C. HARRIS.

A NATIONAL EMERGENCY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read the *Economist* for some years and admire the sound practical way in which it approaches every problem; but "A National Emergency" in your last issue falls below your standard. The decisions of the conferences and committees proposed could be enforced by no conceivable form of government, other than a dictatorship, against all the interests involved.

To borrow your old simile, we truly stand between the devil and the deep sea—or rather two seas, both equally deep. Unless we decide to plunge ourselves into the deep sea of Protection or that of Inflation, the devil of Unemployment is going to drive us in or swallow us up. By Protection or Inflation only can the necessary all-round reduction in real salaries and wages be made in this country. We may as well face the position now and do the best we can to minimise the evils which either remedy must bring.—I am, Sir, your obedient servant,

C. M. DAVIES.

The Brewery House, Harlow, Essex.
January 12th.

[We admire our correspondent's "courage in despair," but we decline to accept the inexorability of his dilemma. Even in the absence of the questionable blessing of a dictatorship, need "all the people be fooled all the time"? If sufficient educative publicity be devoted to demonstrating the facts (which, we gather, Mr. Davies does not dispute) that (1) a protected home market, at the inevitable cost of enhancing British costs in general, offers no basis for supporting our population, and (2) that though inflation, if wages and salaries were kept constant, might temporarily benefit the entrepreneur at the expense of the rentier and employee, it would not redress the balance as between "sheltered" and "unsheltered" earnings, and would be in any case a drug, with "dope's" inherent defects—does it necessarily follow that public opinion cannot be induced to recognise the vital need to reduce manufacturing costs by more direct methods without recourse to the "evils" of Mr. Davies's fallacious expedients?—Ed., *Econ.*]

Books and Publications.

BRITISH ECONOMIC HISTORY, 1820-1850.

FIVE years after the publication of the first volume of Professor Clapham's "Economic History of Modern Britain" the Cambridge University Press has had to put the type again to press for the second edition,* which everyone knew would sooner or later become inevitable. For although it cannot be described as a "popular" book, it was obviously destined to stand in the first rank, even if it had not been the only work on such a scale yet published. It provides, indeed, a new corpus of reference for the interpretation of British economic evolution at the dawn of the modern age, which the controversies it has aroused have done little to disturb. Their main result has been to throw into relief the different mental attitudes lying behind much recent work in this field. Professor Clapham has since taken the opportunity afforded by an inaugural lecture at Cambridge to explain his own views of the duty of an economic historian. He should, he said, regard himself as a "sort of osteologist, a collector and student of economic bones." Questions of social justice or political expediency are therefore foreign to his main task.

It is worth while emphasising this single-minded concentration on purely economic questions, since the main criticism which the book has received turns on this choice of viewpoint rather than on questions of fact. Thanks to Professor Clapham's work, there should in future be progressively fewer writers on the subject to whom his quiet classification of "historians who neglect quantities" will apply. His view is, indeed, a more conservative one than many writers have been willing to take, but it clearly requires no laboured justification. Amplification it does require if there is to be a general "philosophic" history of the period. There is little fear that this will not be forthcoming, although it is clear that we may not expect it at Professor Clapham's

* "An Economic History of Modern Britain. The Early Railway Age, 1820-50." By J. H. Clapham, Litt.D., F.B.A. Second Edition. Cambridge University Press, 1930. 25s. net.

hands; at any rate, as long as his next two volumes remain unpublished. These will be awaited with the most lively anticipation, but meanwhile it is satisfactory to have this reissue of the first volume. It has given the author an opportunity to revise and correct some dates and references and to take account of more recent work than his own. The changes made are slight on the whole and do not materially affect the broad picture already drawn.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

A Journey to China, or Things Which Are Seen. By A. J. Toynbee. (London) Constable and Company, Ltd., Orange Street. 15s. net.

It is seldom that profound erudition on that, to Occidentals, most baffling subject, China, is combined with such acuteness of observation and such charm of style. Professor Toynbee can write entertainingly about anything; when his subject is China the entertainment becomes also an education.

Coming of Age. Studies in South African Citizenship. (Cape Town) Maskew Miller, Ltd., 29, Adderley Street. (London) Simpkin Marshall, Ltd., Stationer's Hall Court. 10s. 6d.

An interesting collection of essays, by different writers, on South African political and economic problems.

The Prosperity of Australia. By Frederic C. Benham. Second Edition. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 12s. 6d.

An interesting discussion, packed with statistics, of the economic situations and policy of Australia.

In Quest of Justice. By Claud Mullins. With an Introductory letter by the Rt. Hon. Sir Leslie Scott, K.C. (London) John Murray, Albemarle Street. 12s. net.

A discussion, of great interest to the layman, of the inordinate cost of litigation.

Stephen J. Field. By Carl Brent Swisher. (Washington) The Brookings Institution. \$4.00.

A biography of an American Judge of the Supreme Court whose eventful life and striking personality make him an interesting biographical subject.

Railroad Valuation and Fair Return. By Shao-Tseng Wu. (London) Oxford University Press, Warwick Square. 12s. 6d. net.

A study of the problems of fair return for American railroads.

State and Local Taxation of Property. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. \$2.50.

A very detailed analysis of property taxation in the United States.

The Fiscal Problem in Missouri. (New York) National Industrial Conference Board, Inc., 247, Park Avenue. \$3.00.

A very elaborate analysis of the public finance of Missouri.

Die Einwirkungen der Reparationen auf die Weltwirtschaft. By Dr. Karl Weber. (Jena) Verlag von Gustav Fischer.

An analysis of the effect on world economics of the levying of reparations.

Socialisme libéral. By Carlo Roselli. Translated from the Italian by Stefan Priacel. (Paris) Librairie Valois, 7, Place du Panthéon. 15 frs.

An essay written while the author was exiled from Italy.

REICHSBANK

At the General Meeting of the shareholders on 15th February, 1930, it was decided to offer the shareholders a compensation for the alteration of the distribution of profits due to the amendment of Section 37 of the Bank Act by granting them an optional right of acquiring, gratis

for every four Reichsbank-shares of Rm. 100 each

1. One junior share certificate of the Reichsbank of Rm. 100 and
2. One share of the Golddiskontbank of £10,

both to be profit-sharing as from January 1, 1930.

In pursuance of this resolution we hereby invite the shareholders to avail themselves of this offer on the following terms:—

1. The right shall be exercised within the period from January 12 to April 17, 1931 inclusive, at the offices of the Zeichnungsabteilung des Kontors der Reichshauptbank für Wertpapiere,

Berlin, SW. 111, Hausvogteiplatz 14.

Moreover, all Reichsbank branches having facilities for payments will likewise act as agents and accept such applications within the period fixed above.

2. For exercising the above-mentioned right the share-certificates (mantles) of the Reichsbank have to be submitted; coupon-sheets need not be sent in.

Those persons are entitled to exercise such right whose names, at the time of their submitting the share-certificates, are registered as shareholders in the books of the Reichsbank, or those persons who, in accordance with the statutes of the Reichsbank, are entitled to have their names thus registered. The Reichsbank shall be authorised, but not compelled, to verify the legitimacy of the shareholders.

Together with the share-certificates (mantles) an application must be sent in written on a special form provided for the purpose and signed by the claimant; a statement containing the numbers of the shares in numerical order shall be attached in triplicate. Furthermore, the application shall indicate, on a special printed form, the person in whose name the junior share-certificate shall be made out. All necessary forms can be obtained at the offices mentioned above.

The share-certificates (mantles) sent in with a view to exercising the right of option will be returned as early as possible after being marked with a stamp denoting their having served for the exercise of said right. Simultaneously shall be delivered the new stock, i.e., the junior registered shares of the Reichsbank and the shares to bearer of the Deutsche Golddiskontbank. The allotment of the stock will be effected by the Reichsbank. The Bank will as far as possible comply with any wishes of shareholders in regard to the denominations of the junior Reichsbank-stock applied for, which will be issued in shares of Rm. 1,000 and Rm. 100, as well as in regard to Golddiskontbank-shares, which will be issued in shares of £50 and £10. In this connection, please note our cash-offer as explained in paragraph 5.

3. Holders submitting senior Reichsbank-stock, the nominal amount of which cannot be divided by 400, will receive for each senior Reichsbank-share of Rm. 100 face value delivered in excess of a nominal amount divisible by 400—

- (a) an interim-certificate (scrip) to bearer made out to a quarter of a junior Reichsbank-share of Rm. 100; and
- (b) an interim-certificate (scrip) to bearer made out to a quarter of a Golddiskontbank-share of £10.

The same applies to shareholders submitting less than Rm. 400 senior stock: they will receive for each Rm. 100 adequate scrip.

4. The interim-certificates issued and made out to a quarter of a junior Reichsbank-share of Rm. 100 and to a quarter of a Deutsche Golddiskontbank-share of £10 will be accepted for exchange for definitive share-certificates, from April 18 to May 1, 1931.

An exchange of such interim-certificates, however, cannot be effected unless one and the same applicant submits as many interim-certificates of each kind as are divisible by 4. Holders, therefore, may supplement the number of their interim-certificates by purchase or reduce the same by sale if they wish to receive non-fractional stock of the Reichsbank and of the Golddiskontbank respectively. The Reichsbank is prepared to buy and to sell such interim-certificates, charging the spot price for junior stock of the Reichsbank or for shares of the Deutsche Golddiskontbank, respectively.

Orders to sell the junior shares which are presented together with the application for the newly issued shares can only be executed after the right of exercising the option has been verified.

When submitting interim-certificates for exchange the name of the owner of the definitive share-certificates to be entered in the registers of the Reichsbank should be stated.

The forms required for the exchange transaction may be obtained at the offices mentioned above from the beginning of April, 1931.

5. To those entitled to acquire the stock of the Golddiskontbank, including dividend-warrants and the interim-certificates made out for shares of the Golddiskontbank, we are prepared (if required) to pay Rm. 224.40 in cash for each £10 share of the Deutsche Golddiskontbank in lieu of delivering the shares and/or the interim-certificates. This amount paid in cash shall be taken to likewise include the dividend, due for the financial year 1930, which presumably will not exceed 4 per cent. The persons entitled shall, when exercising their right of option, declare whether they wish to accept this offer or not. Their declaration concerning the exercise of the right of selection will be irrevocable. Our offer will lapse on April 17, 1931. The money will be paid when the stamped share-certificates (mantles) as well as the junior stock of the Reichsbank and the interim-certificates are handed over.

6. The junior Reichsbank-stock and the shares of the Deutsche Golddiskontbank will very shortly be listed on the Stock Exchange. Once the former have been duly listed, any obligation resulting from transactions carried out in these stocks may likewise be discharged by delivering senior Reichsbank-stock stamped in the manner above indicated.

7. The Bank will charge no commission to the applicant when exercising his right of option. All expenses arising from forwarding senior stock to the Reichsbank have to be borne by the party concerned; whereas all expenses arising from returning the said stock as well as from forwarding new share-certificates to the persons entitled will be defrayed by the Reichsbank.

Pursuant to Section 36 K.V.G. ("Kapitalverkehrsteuergesetz"), the allotment and delivery of the junior stock of the Reichsbank are exempt from the tax on Stock Exchange transactions, provided the applicants notify direct to the Reichsbank their intention of exercising their option or, provided on their applying through a banking institution as agent, their names are communicated to the Reichsbank. The tax on Stock Exchange transactions due by reason of the allotment and delivery of the shares of the Golddiskontbank will be borne by the Reichsbank.

Berlin, 18th December, 1930.

Reichsbank-Direktorium.
LUTHER DREYSE.

The Stock Exchange.

ELECTRICAL EQUIPMENT SHARES.

THROUGHOUT the Stock Exchange depression of the last two years, electrical securities have shown a rock-like stability. Although the *Investors' Chronicle* "General Business" share index declined by 36 per cent. between March, 1929, and the end of last year, the index for "gas and electricity" shares actually showed a slight rise during that period. In recent weeks, however stagnant markets may have been, a certain investment demand for electricity shares, both of "supply" and "equipment" companies, has always been forthcoming.

The market's instinct, in this respect, would appear to have a sound foundation. The industry has many years of rapid world development in prospect. Great Britain, after a somewhat slow start, is vigorously proceeding with a national electrification policy, which will provide orders for the electrical equipment trades for years to come. Despite all trade depression, the national output of electricity continues annually to expand. In 1928 authorised undertakings in Great Britain generated approximately 9,073 million units. In 1929 the total was 10,294 million and in 1930, 10,869 million units.

On a long view, the outlook for well-managed electrical manufacturing concerns holds undoubted promise, but competition in the industry is keen, and discrimination is as valuable a quality for the investor in this market as in any other. Few British companies sell the whole of their output at home, and the trade slump has recently fallen with severity on certain of Great Britain's best overseas customers for electrical goods—particularly on Australia. Broadly, past experience suggests that there may be a time lag of something like twelve months before the export side of the industry experiences the full effect of world trade recession on the volume of new orders. The latter were well maintained last year up to October, but a subsequent falling off has occurred, and 1931 may be a less favourable period than 1930. At present the most promising outlets for British electrical goods are in Europe, in Egypt (where certain large electrical schemes may shortly come to fruition), and possibly in Canada; while a revival in prosperity in China may be followed by the inception of considerably overdue measures of electrification.

As regards the home market, new electrification orders from industry will probably be below normal until the industrial outlook has clarified, but this tendency may be at least partially offset by the placing of valuable contracts from special quarters. The Central Electricity Board is understood to be contemplating something like £15,000,000 of new construction in connection with national electrification schemes. The industry may also benefit from the work of the Unemployment Grants' Committee. The financial importance of these developments is illustrated by the extent of the business placed or to be placed in connection with the standardisation of frequency on the north-east coast, the Cockfosters extension of the Underground Railways (of the total cost of which about £1,500,000 may be represented by electrical products), and by the electrification of the Southern Railway main line to Brighton (in connection with which orders to the electrical industry of about £500,000 have already been placed, and a further £500,000 to £1,000,000 are in prospect).

A further reason for discrimination on the investor's part arises from the structure of the industry itself. Like other branches of the engineering trades, it includes small specialised firms which, in many cases, have a conservative capitalisation and are doing an active business, together with much larger companies, which may have grown up around a single nucleus, or have resulted from the amalgamation of numerous independent concerns. The smaller concerns are of special interest, since some

of their specialised products have lately been in sustained demand in connection with large national electrification schemes. The recent results of four such companies are given below:—

§ Plus capital bonus of 66½ per cent. ** Plus capital bonus of 200 per cent.
(a) Tax free. (b) Privately held. (c) Not quoted in London.

Of the four companies shown, A. Reyrolle specialises mainly on switch gear, Allen West on industrial products (which have a wide market in France, Belgium and South Africa), Ferranti on transformers and radio apparatus, and Crompton, Parkinson on industrial motors, transformers, switchgear and lamps. All these companies have followed a conservative financial policy. All have a low capitalisation, despite recent increases, and all have so far maintained their trade in gratifying fashion throughout the general depression. In the two cases where the ordinary shares have a London quotation, the indicated yield is moderate, but the yield on earnings relatively high.

The results of three larger concerns are shown in the next table:—

* After agreement in November, 1928, with International General Electric, Inc. for purchase of controlling interest in British Thomson-Houston, Edison Swan Electric, and Ferguson Pallen.
† Reduced to £1,344,000 under reconstruction scheme.

The General Electric Company affords a notable example of successful "expansion from the centre," and now controls a long list of manufacturing and trading companies, together with certain supply concerns. Six months ago the chairman reviewed the company's immediate outlook in studiously restrained terms, but

it is understood that orders have recently been well maintained for switchgear and general accessories under national schemes, that radio business has been profitable, and that export contracts have been relatively satisfactory. As the table shows, the company's profits have increased consistently for some years past. The earnings yield of the ordinary shares, on last year's figures, is nearly 10 per cent. As a result of a refunding operation last September, the company has increased its working capital without adding to its annual charge for debenture interest, or finding it necessary to issue the additional ordinary capital forecast at the time of the much-discussed "British share" proposals.

The Associated Electrical and the English Electric Companies are composite concerns. The English Electric Company amalgamated numerous units immediately after the war, at a period of high values, and, after ceasing to pay ordinary dividends after 1924, was recently reconstructed. Its whole financial position has now been overhauled. A new chairman has been appointed, and a participation in the ordinary share capital has been taken by the American Westinghouse interests. The operation has thus resulted not merely in an accession of working capital, but also in a change of management, and, to some extent, of outlook. Much depends on the ability of the substantial interests now represented among the proprietors to increase the company's share of the world's electrical trade. Shareholders are concerned less with immediate results than with the probable effects over the next three or four years of the far-reaching measures now in hand.

The Associated Electrical group, similarly, has an international organisation and outlook, and is engaged in the process of welding together an organisation created by the Metropolitan Vickers-British Thomson Houston agreement of 1928. The General Electric interests of America have a substantial holding, and in the allocation of orders the effects of the American slump may not have been negligible. On the other hand, the work of concentration of the group's resources has been pushed forward with energy. The company, with its extensive geographical ramifications, is obviously destined to be a permanent power in the industry; but, in view of the recency of the change in its organisation and scope, it is difficult to say how far present figures afford an indication of future earning power.

It would be optimistic to assume that even the strongest British electrical equipment concerns could hope to emerge unscathed from a severe depression such as the whole world is now experiencing. At present, however, it is true to say that the omens are as favourable as those of any other industry, and better than most. Contemporary indications suggest that home trade may be less susceptible to recessionary influences than the export trade—a possibility which may have some bearing on the relative position of the more "international" companies, whose interests may, in addition, be bound up to some extent with the relations between certain large producers abroad. If, unfortunately, the depression should prove prolonged, shareholders in many cases have the reassurance that a considerable fall in earnings would be necessary to bring profits below last year's dividend levels.

AUSTRALIAN STOCKS.

LIQUIDATION in Australian Government stocks developed in greater volume this week, and at times it became almost impossible to deal, the market being unable to absorb the stock which was offered. Unprecedented low prices were established, as the table in the next column shows.

It is evident that the private holder of Australian stocks—we are excluding the institutional investors who have been conspicuous by their absence from the market—has become thoroughly disturbed by the fresh fall in the

† Ex dividend.

Australian pound and the alarmist talk of currency inflation among Australian politicians and labour leaders.

There have been two changes in the Australian exchange in the last few days, the initiative in both cases coming from the Bank of New South Wales. As a result the selling rate for telegraphic transfers on Australia has risen from £108 10s. to £118 7s. 6d. per £100 sterling. An attempt to "peg" the rate at an artificial figure was bound to encourage the activity of the so-called "black" market. Stockholders may reflect, however, that if the recent action of the Bank of New South Wales and the other associated Australian banks has been prompted by the desire to secure exchange for the Government "pool" in London, this itself is an earnest that interest payments on the Australian external debt will continue to be paid. It may be recalled that the arrangement which was concluded last year between the Federal Government and the Commonwealth Bank provided for a sterling exchange "pool" in London to be formed to the extent of £36,000,000 per annum, to provide for the interest payments of the Federal and State Governments and public authorities, the Federal Government undertaking to pay a like sum to the credit of the Commonwealth Bank in Australia. The further depreciation in the Australian pound makes the payment of interest on the external debt a heavier burden for the Federal Government, but on the other hand it stimulates the export trade, which ultimately must provide the exchange cover required for the Government "pool."

As regards the talk of inflation, some anxiety has been aroused by the by-election at Parkes, a Sydney metropolitan constituency, on January 31st, where the Labour candidate is a pronounced inflationist. Mr Scullin is opposed to inflation in the abstract, but is less inflexible as regards the releasing of a £20,000,000 credit for the relief of unemployment. A further complication is the suggestion that efforts are being made, in some quarters, to secure the re-appointment of Mr Theodore as Federal Treasurer. Mr Theodore is reported to have stated that the release of £20,000,000 credit for the relief of unemployment is not inflation, though he led the cheering for Mr Scullin when the latter, in his "policy speech" in the by-election, denounced the evils of inflation in strong terms. Clearly, if any measure of currency inflation were introduced the market would be inclined to regard it as the beginning of the end of Australian Government credit in London—though the interest on the sterling external debt is payable in British, not Australian pounds.

In these conditions, the market has welcomed the sound lead given by the Loan Council this week, in the direction of a comprehensive overhaul of the Australian situation. On Wednesday this body passed a resolution unanimously recommending that Mr Scullin be invited to call a conference of the Commonwealth State Premiers and Treasurers at an early date, with the object of laying down a three-year plan aiming at the adjustment, within that period, of public finance and general monetary conditions. Meanwhile, an expert committee, consisting of a representative of each Government, is to be appointed to investigate the position and to prepare information for consideration by the conference. If this plan can be carried to its logical conclusion, despite all extremist opposition, the outlook for Australian stockholders may take on a new and far more hopeful appearance.

NOTE.—Shares with a New York quotation, or with definite American market, are shown in calculating the yield on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment taken upon the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

than average falling-off in earnings. Companies, again, with a large stake in the export trade have probably experienced a worse recession in profits than those operating at home, the experience of the British American Tobacco (discussed in a later note) being a significant "pointer" in this respect. In certain trades, such as the tanker business, where the bottom has temporarily gone out of the market, even more severe declines in earnings are inevitable. As regards individual companies, however, much may depend on internal factors. Depression is an acid test of good management, particularly in retail trading. Certain companies, again, which have large hidden reserves may draw on them to meet a temporary contingency, but many boards will doubtless feel that a policy of conservation of resources is more appropriate until the duration of the depression can be more closely estimated. The worst results are likely to be shown by relatively new concerns, which had not time to find their feet before the depression started, and by companies with inside sources of weakness, such as over-generous capitalisation during the recent "boom" or large holdings of the shares of other companies which have depreciated heavily in the market. The further outlook depends on many factors, including the possibility of a halt in the falling tendency of commodity prices (which up to the present has shown few signs of immediate abatement), the possibility of a downward adjustment in the prices of manufactured articles, and the likelihood or otherwise that a reduction in costs can be effected without serious labour disputes.

The Cost of Stock Exchange Membership.—The hand of death has been busy during the past few weeks, writes a "House" correspondent, among the ranks of Stock Exchange members. One result has been a shrinkage in the price of Stock Exchange nominations. The cost of obtaining membership of the London Stock Exchange is now about a third of what it was a year or two ago, chiefly as the outcome of the fall in the price of nominations from the neighbourhood of £1,700 to £300. Nominations, indeed, have changed hands recently at £250 each, a price which offers a tempting opportunity to men at present acting as clerks, of realising their ambition to obtain membership for a moderate expenditure. A clerk, authorised or unauthorised, who has been in the Stock Exchange for a period of four years, is admitted to membership on payment of an entrance fee of 300 guineas. In addition, he must acquire a nomination, and buy at least one Stock Exchange share, which now costs £168. His total expenditure, at present, need thus be no more than £783. The nomination and the share may be regarded as capital assets, since in the ordinary way they will always be saleable. Any general revival of Stock Exchange activity, bringing an inevitable increase in the number of candidates for membership, would be followed by a rapid increase in the price of nominations. The price of Stock Exchange shares has dropped from 227 to a present price of 168, through the operation of the normal laws of supply and demand for an investment necessarily limited to a narrow circle, since the shares cannot be held by non-members of the "House." The nominal paid-up value of the shares is £36, and the dividend for the last completed year was £13 per share, so that at the present price the yield, on the last dividend, is 7½ per cent.—a return which has not been obtainable from Stock Exchange shares for many years past. It is the intention of the Stock Exchange to encourage, as much as possible, the candidature of clerks who have served four years in the Stock Exchange, on the ground that men coming in without previous experience of the business are more likely to undertake risks the rashness of which they do not fully appreciate. Stock Exchange business involves a large element of mutual dependence, and it is a distinct advantage to have, among new members, men who have more than a nodding acquaintanceship with concrete details, and are unlikely to rush blindly into speculations, which may endanger not merely their own interests, but also those of their fellow members.

Further Bank and Discount Company Profits.—The publication of further bank statements reveals in the smaller institutions the same tendency to reduced profits for 1930 which was marked in the case of the "Big Five." The District Bank reports net profit totalling £459,038, against £510,526, a decline of 10 per cent., but the dividend remains unchanged at 18½ per cent. on the "A" shares and 10 per cent. on the "B" shares. Pensions fund and bank property account again take £40,000 and £20,000 respectively, leaving £201,263 to go forward, against £189,225 brought in. Martin's Bank announces a drop from £836,240 to £793,551, or 5.1 per cent. Dividend is maintained at 16 per cent., and £150,000 is placed to contingency account, compared with £100,000 to premises account, and £50,000 to reserve. The carry forward shows a decrease of £22,056 at £110,076. The directors of the Manchester and County Bank announce a final dividend of 6s. per share, which makes 12s. per share, (against 13s. per share) for the year. The leading discount houses, on the other hand, report an all-round advance in profits. The Union Discount Company shows a gross profit of £1,025,398, compared with £977,122, while dividend is maintained at 20 per cent. Premises account and provident fund each take £15,000, against £10,000, while the carry forward item is increased from £269,292 to £299,656. The National Discount Company reveals gross profits totalling £691,539, against £667,046, the dividend on the "B" shares being maintained at 24 per cent. Reserve account is augmented to the extent of £110,000, against £25,000, while pensions fund receives £5,000 against £14,076, and carry forward is diminished by £35,654. Alexanders reports a gross profit of £474,422, against £412,397, the ordinary dividend again being 20 per cent. Reserve takes £31,250, against nothing, and pensions fund £5,000, while the carry forward is increased from £53,089 to £60,396. The results contained no surprises, and share quotations were hardly altered.

Courtaulds' Prospects.—Courtaulds' shares have recently suffered from somewhat widespread selling, their present quotation being 30s. 7½d., against 37s. at the beginning of this year and a high point for 1930 of 57s. 2d. The fall is almost entirely due to fears of a reduction in the final dividend. The carry-forward was reduced last year and the interim was cut to 3 per cent. It has been suggested in the market that the final dividend may be restricted to a similar amount. It may be assumed that actual working profits have been appreciably lower this year than last, but certain dividends received from subsidiaries may, on the other hand, relate to the comparatively good year, 1929. Last year the company's Continental investments were severely written down, and, in view of the conservative attitude of the board, it is not beyond possibility that a further writing down may be effected. On the other hand, it is improbable that the American Viscose asset will require to be reduced, and the company has a very substantial investment in Government securities. The actual trading position is stronger to-day than twelve months ago, since the company has a larger proportion of the total trade of the country—and possibly of the world. The effects of trade depression and price reductions have done much to eliminate unhealthy competition from weak concerns formed during the boom. Though the demand for artificial silk has shown a falling off, this has been less extensive than in certain other textiles. On the other hand, the margin between the price of real and artificial silk fabrics has been much reduced, to the relative advantage, naturally, of real silk. However, while artificial silk prices have been reduced, quality has been more than maintained, the standard yarn of to-day being greatly superior to that of two years ago. Altogether, while Courtaulds' shares, even at present prices, may not give a high yield for some little time to come, their prospects of affording, ultimately, a more handsome return are reasonably good.

British American Tobacco Outlook.—Shareholders in the British American Tobacco Company were unpleasantly surprised to learn, at last Monday's meeting, that the immediate outlook was considerably less satisfactory than they had imagined. According to the chairman's business has shown a considerable decline during the last six months. The company's operations are world-wide, and have suffered not only from political and other troubles in certain countries, but from reduced demand from consumers in general, one aspect of which has been a shifting of consumption from the dearer to the cheaper grades of cigarettes and tobacco. The company's interests in the East are of great importance, and have been sensibly affected by such factors as the fall in silver, the economic boycott in India and the unsettlement in China. The chairman made no secret of his belief that "the black spots very much exceeded the good spots," and that he found it impossible to estimate the level of earnings during the remainder of the company's year (which ends on September 30th next). A reduced final dividend would, in all probability, be inevitable. The announcement was unfavourably received in the market, the shares falling from 100s. at the end of last week to 88s. on Tuesday. The significance attached to the news was the greater as the B.A.T. was regarded as one of the strongest and best-managed of British companies, though one section of market opinion was not inclined to regard the development as presaging a necessarily proportionate falling off in the earnings of the Imperial Company, or of other tobacco concerns whose interests, unlike those of the B.A.T., lie mainly in the home market. At an extraordinary meeting which followed the general meeting, the B.A.T. shareholders agreed to the conversion of the company's issued shares into stock on the lines indicated in an Investment Note in the *Economist* of December 20, 1930 (page 1181).

Brazilian Stocks.—A general rise in Brazilian securities has followed the announcement that Sir Otto Niemeyer is to visit the republic in connection with the Central Reserve Bank. Some representative quotations are shown:—

	Dec. 31.	Jan. 7.	Jan. 14.	Rise since Dec. 31.	Rise %
Brazil 4½%, 1888 ...	48	52½	52½	4½	9.3
Brazil 5%, 1895 ...	52½	52½	55	2½	4.7
Brazil 4% Resen....	46½	48½	48	3½	7.5
Brazil 5%, 1903 ...	69½	70½	76	6½	9.3
Brazil 5%, 1908 ...	91½	92½	95½	6½	9.1
Brazil 4%, 1910 ...	39½	42½	44½	5	12.6
Brazil 4%, 1911 ...	52½	52½	58	5½	10.5
Brazil 5%, 1913 ...	48	50½	52	4	8.3
Brazil 5%, 1914 ...	65½	70½	73½	8	12.2
Brazil 6½%	64½	70½	73½	9	13.9

San Paulo Railway	140½	138½	144½	4	2.8
Brazil Traction.....	\$21½	\$23	\$24	2½	11.6

* Ex dividend.

The recent delay in the payment of the interest on the Rio State 7 per cent. loan (funds for which were subsequently remitted) may be reflected in the relatively small advance made by that stock. Brazilian railways have improved on the announcement that the Leopoldina Railway is to be compensated for losses sustained during the revolution. Satisfactory rises have also been shown in the case of stocks which have recently paid their half-yearly interest, especially the San Paulo 6 per cent. loan. On Thursday the market had a weaker tone.

The Affairs of R. E. Jones.—The acrimonious controversy which absorbed the attentions of directors and shareholders of this company during a large part of last year has not exercised a beneficial effect upon its financial position. It may be recalled that, following a prolonged dispute over the appointment of a managing director, and the issue of several circulars to shareholders, an extraordinary meeting was called for the purpose of removing certain directors from the board. High Court proceedings

failed to bring about any agreement as to the interpretation of the poll then taken, and, at a further extraordinary meeting, the motions for removal, which required a three-fourths majority, were lost by very small margins. The accounts for the year, which are now available, reveal a net trading profit of £7,459, against £16,206. Losses on branches closed down or disposed of, and other costs require £5,817, and with the debit balance of £184,271 brought in, there remains a debit balance of £182,629 to be carried forward to the next account. The legal proceedings cost shareholders £3,217. Three of the directors whose removal was demanded have now decided to resign—Sir Nicholas Grattan-Doyle and Sir T. E. Jones, who retire by rotation, are not offering themselves for re-election, while Mr A. J. Howell is willing to resign from the date of the annual meeting upon certain terms, which will be placed before shareholders and recommended for acceptance. These resignations will make possible the appointment of Mr R. A. R. Field as managing director of the company. The 72 per cent. of the shareholders who voted last year for the reconstruction of the board will, doubtless, welcome the prospect of a restoration of unanimity, however much the retiring directors may have stayed upon the order of their going.

Allied Cement Manufacturers Receivership.—In the *Economist* of January 3rd reference was made to the extraordinary general meeting of Allied Cement Manufacturers on December 23rd at which the chairman remarked that the company could be put upon a profit-earning basis if immediate finance were found to meet pressing liabilities. The new directors subsequently declared that the company had no resources to pay its debenture interest due on January 1st. Further, the company has guaranteed the dividends on £450,000 preference share capital of Dunstable Portland Cement. A circular issued by the latter company on January 6th stated that funds to meet the preference share dividends had not been provided. It would appear that the Dunstable Cement creditors were proceeding to take legal action to enforce their claim, for a receiver was appointed for Allied Cement Manufacturers on January 14th, on the application of debenture holders. It would be interesting to know what attitude was adopted by the banks in this matter, seeing that there was some reason to believe that the company, given a solution of its immediate financial difficulties, might ultimately have justified its place in the cement trade in this country. The 6½ per cent. debenture stock, which was as high as 70 last month, has fallen to 30. A possibly optimistic estimate is current in the market that the debenture holders will receive about 5s. 6d. in the pound.

Increasing Interest in South American Markets

THE Bank of London & South America welcomes and fosters the ever increasing interest in the fast growing markets of Latin-America. With Branches and Sub-Branches in South America, in London, Bradford and Manchester; in France, Belgium, Portugal and U.S.A.; with the concentrated experience of 67 years this Bank is singularly well equipped to provide up-to-date market information and to undertake Banking Business of every description. Status reports are supplied on request, and a Monthly Review of Market information is issued free on application.

BANK OF LONDON & SOUTH AMERICA LIMITED

6, 7 & 8, Tokenhouse Yard, London, E.C.2
MANCHESTER: 34 Charlotte Street. BRADFORD: 23 Houghgate.
Affiliated to Lloyds Bank Limited

Jute Industries Costs.—At the annual general meeting of Jute Industries, Mr J. Ernest Cox discussed, with some detail, the reasons for the loss of £36,498 suffered by the company last year. At the time of the last annual meeting, he declared, the company was working at full pressure. Unfortunately, some of the company's customers were unable to take delivery of their commitments. The mills, in fact, worked at an average of 75 per cent. capacity during the year. By cutting salaries the directors effected a saving of £34,000 (of which £11,500 was applicable to directors), thereby offsetting, to a certain extent, the effect of increased charges on idle machinery. Three mills have been closed in Dundee. During the last six years the cost of production has been reduced by 14 per cent., but as wages are regulated by the Board of Trade it has been impossible to bring about further reductions. Though wages were lowered by 4 per cent. in January, 1930, this left remuneration at the level of six years ago. The increase in present wages over those of 1914 is estimated at 120 per cent.

Sir Enoch Hill on Building Society Prospects.—Last Wednesday's address by Sir Enoch Hill to West of England building society officials is of special importance in view of recent discussions on the subject of interest rates. Sir Enoch Hill occupies a position of unusual authority, since he is Chairman of the National Association of Building Societies, and is President of the Halifax Building Society, which is much the largest institution in this country. Sir Enoch justly took pride in the achievements of the movement, which between 1918 and 1929 increased its total assets from £68 millions to over £312 millions, its amounts advanced to borrowers during a single year from £7 millions to £75 millions, and its membership (exclusive of depositors) from 625,000 to 1,894,000. He estimated the funds at the end of 1930 at not far short of £360 millions—an increase of about £48 millions during the year. The rapidity of recent development, he declared, had been the more significant since the acute stages of the housing famine had passed, and the figures reflected rather the changed vision of householders on the question of ownership. Sir Enoch gave impressive figures for his own society, which, founded 78 years ago in what was then a small Yorkshire town, is now the custodian of over £68 millions of the people's savings, and has 430,000 open accounts and 350 offices spread over Great Britain. Of its resources, some £15 millions are held in gilt-edged securities. Sir Enoch agreed with the views expressed in the *Economist* on January 3rd last (page 31), declaring that the large sums of money which had been deflected from industry during the present depression could not, and ought not to be, invested in building societies at rates of interest higher than could be obtained elsewhere with equal security. Whilst building societies must ultimately adapt themselves to permanent changes in the value of money, it was not desirable that frequent alterations should be made in temporary periods of abnormally low Bank rates. At the same time, he emphasised the desirability of a common basis for building society rates all over the country. He believed that any move for a reduction must take effect earlier in the South than in the North of England, since, for some years past, the demand for mortgage loans has been less insistent and rates have been lower in the latter than in the former area.

Perak River Hydro-Electric—Proposed Moratorium.

In a circular to shareholders, the directors of this Malayan undertaking draw attention to the critical situation in which the company finds itself as a result of the prevalent depression in the tin producing areas, and give particulars of a scheme of arrangement, failing the adoption of which, they declare, the company will undoubtedly pass into the receiver's hands. The scheme involves the creation of £400,000 5½ per cent. prior lien debenture stock, ranking in front of all other securities created by the company and redeemable on or before

August 1, 1931, of which not more than £200,000 will be issued immediately. As from January 31, 1931, to August 1, 1934, the net earnings of the company (which are closely defined in the statement) are to be applied first in payment of the interest and any arrears on the F.M.S. Government Loan, and next in payment of the fixed interest and any arrears on the 7 per cent. participating debenture stock. After August 1, 1934, such net earnings are to be applied first in payment of the interest on the F.M.S. Government Loan, secondly in payment rateably and *pari passu* of arrears of interest on that loan and current fixed interest on the 7 per cent. participating debenture stock, and thirdly in payment of any arrears of the fixed interest on that stock. Under the scheme, the F.M.S. Government agree that they will not require payment of their cumulative arrears until August 1, 1937, and the 7 per cent. participating debenture stockholders that they will not require payment of their fixed interest charges until August 1, 1937, except in so far in each case, as there are net earnings of the company available. The new issue of debenture stock will replace the capital utilised to make up the amount required for financial charges paid over and above the revenue available for that purpose during the year ended July 31, 1930, and will provide additional working capital. H.M. Treasury, who guaranteed the £1,250,000 5 per cent. guaranteed debenture stock, and the F.M.S. Government, who in January last lent the company the sum of £850,000, have acquiesced in the scheme, which has now to be submitted to the 5 per cent. guaranteed debenture holders and the 7 per cent. participating debenture holders.

Ashanti Goldfields.—The substantial expansion in earnings which characterised the two preceding periods was last year succeeded by a leap forward to over 120 per cent. upon the capital. This gratifying result arose from a combination of favourable factors. An increased tonnage of higher-grade ore was treated, with an improved ratio of extraction at a substantially reduced level of costs. In the latter connection, it may be noted that mines development represented only 5s. 6d. per ton, as against 7s. 11d. in 1928-29; depreciation showed a small increase, and Government royalty was naturally higher than before. The payment of a round 100 per cent.—a record on the present capital—still leaves a balance of £70,600. The whole of this, and a little more, is utilised in a special appropriation to reserve of £25,000, and a depreciation allowance of £10,000, in addition to the repetition of the transfers to exploring account, etc., made twelve months ago. The usual table is appended:—

	Year ended September 30.			
	1927.	1928.	1929.	1930.
	£	£	£	£
Net profit	141,437	163,440	203,584	320,560
Brought forward	111,799	83,236	59,176	63,260
Ordinary dividends:				
Amount paid	125,000	137,500	162,500	250,000
Earned per cent.	56.5	65.3	81.4	120.8
Paid per cent.	50	55	65	100†
To reserve	45,000	50,000	37,000*	78,000*
Carried forward	83,236	59,176	63,260	48,410*

* Including Pensions and Benevolent Fund.

† With capital bonus of 50 %.

At 607,600 tons the ore reserves display an expansion of 17,400 tons, the value—perhaps rather surprisingly—being ½ dwt. lower at 24.7 dwt. The tonnage, which does not include material at present classed as unpayable, represents about four years' supply for the mill. That the directors would declare a final dividend of 65 per cent., making 100 per cent., had been generally anticipated; but it had not been thought they would also declare a scrip bonus of 50 per cent. This will increase the capital to £375,000 (in 4s. shares). An interesting question arises as to what dividend rate the company will pay in future. Current earnings are equivalent to about 150 per cent., but

it is, of course, necessary to allow for special appropriations. A conservative calculation suggests the probability of 80 per cent. On this basis the shares appear attractive—provided developments continue their recent favourable trend.

Shell Union and the "Dubbs" Process.—An important step in the rationalisation of the American oil industry was taken last week when the Shell Union Oil Corporation and the Standard Oil Company of California combined in the purchase of the Universal Oil Products Company, which owns the Dubbs "cracking" process, for \$22,000,000. For a long period the American oil industry has been wasting time and money on costly and complicated litigation in connection with the various patents for the "cracking" of heavy oils or distillates. The Dubbs process was specially designed to "crack" fuel oil, and is in general use throughout the world. The various disputants in the "cracking" process litigation have now apparently agreed to drop their claims against one another, so that users of the Dubbs process will no longer be sued by rival process owners for infringement of patents. The Shell Union and the Standard Oil of California, which were the biggest licensees of the Dubbs process in America, have at the same time agreed to buy out the Universal Oil Products. In other words, they have agreed to compound future royalties by payment of a sum of \$22,000,000. The royalties paid by other licensees of the Dubbs process will in future accrue as revenue to the Shell Union and Standard Oil of California, and no doubt the transaction from a financial point of view will prove highly advantageous to these two companies. It is interesting to recall that a controlling interest in the Universal Oil Products had been held by the estate of the late J. Ogden Armour, the meat-packing magnate. Mrs. Armour, the widow, obtains approximately \$8,216,000 for her share in Universal Oil Products, while the son of the inventor, who was strangely christened by his eccentric father Carbon Petroleum Dubbs, secures about \$4,582,000.

Premier Diamond.—The report for the year ended October 31st, writes our mining correspondent, makes an even worse showing than had been anticipated. After deduction of £25,500 expended upon equipment, the net profit amounted to only £13,100, of which the Union Government took 60 per cent. Sundry revenue totalled £49,400, or just about enough to cover the interim dividend on the preferred shares. Taxation absorbs £8,200 and capital outlay £15,900, the carry-forward being reduced from £48,800 to £28,700. Naturally, in these circumstances, there is no dividend for the second half of the year; and in this connection the directors remark that "the depression in the diamond trade is still acute." The ground treated last year showed a further slight falling off both in quantity and value, while costs again rose. Development of the 610-ft. level in the central section of the mine was completed early in the year, and good progress has since been made towards the opening up of that level throughout the mine. The blue ground in sight is estimated to be 14,000,000 tons, or about three years' supply. The bulk of the Premier ordinary capital is owned by the De Beers Company, which also has a substantial holding of the preference shares. On this ground, and on inferences drawn from the experience of the Premier Company, there has been considerable liquidation of the De Beers issues. The latter are now at the lowest levels ever known.

Rand Selection.—In the case of this company, the expansion of the interest held in diamond concerns and the acquisition of interests in Northern Rhodesia, has proved anything but profitable. For the year ended September 30, 1929, a final dividend of 10 per cent., making 25 per cent. in all, was extracted, although the financial position was far from warranting such a distribution. In respect of the past year the shareholders receive nothing. The profits amount to £189,000

(against £274,000); the balance forward was £83,500, and the £375,000 standing to the credit of share premium account is transferred. Of the total of £647,500, taxation absorbs £29,800; the 10 per cent. dividend above mentioned £90,000; £325,000 is written off shares and interests, and £100,000 is placed to reserve, leaving £102,700 to carry over. The balance sheet shows a shortage of £137,800 in the "quick" assets. Shares and interests figure at £1,382,700, against £2,089,500, the bulk of the difference being due to writings off. It is fortunate that the company's Rand gold holdings have a satisfactory appearance.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Bank of New South Wales, Burma Corporation, Rio de Janeiro Flour Mills and Granaries, Fanti Consolidated Investment, Rhodesian Anglo-American, and Apex (Trinidad) Oilfields. At the meeting of the Burma Corporation, Mr P. E. Marmion said that the policy of demonetising silver continued unabated in those countries which already used the gold standard, and in January last Indo-China linked its currency to the French franc, thus adding one more to the number of countries which had deserted the white for the yellow metal. There could be no doubt that the severity of the fall in silver had contributed directly to the distress of a very large proportion of the world's population, and it seemed desirable that attention should be directed towards the restoration of silver to its traditional use in the monetary mechanism of the world. Presiding at the meeting of Rio de Janeiro Flour Mills, Mr A. G. Weigall told shareholders that the business done by the Rio Flour Mills during the last financial year had been maintained to within 10 per cent. in the markets in which they were then trading.

CAPITAL ISSUES.

The new issue market remained in a state of suspended animation. The week's new offer was only partially of a public character, some 55,000 of the 75,000 £10 shares issued by the *London and Clydesdale Trust* having already been privately placed. The issue followed normal investment trust lines, and was well backed. The amount required was heavily over-subscribed. *Tottenham and District Gas Company* on Friday offered by tender £150,000 5½ per cent. irredeemable preference stock at a minimum price of £104 per £100, yielding, at that price, £5 5s. 9d. per cent.

London and Clydesdale Trust.—Issue of 75,000 shares of £10 each at par. No part of the issue has been underwritten. The directors are aware of applications to be made in terms of the prospectus to the extent of 55,000 shares, which will be allotted in full. The shares will be converted when fully paid, as from August 1, 1931, into preference and ordinary stock in the proportions of 60 per cent. of the former and 40 per cent. of the latter, the preference stock to be entitled to a cumulative preferential dividend of 5 per cent. The company has been formed for the purpose of carrying on the business of an investment trust company.

Sheringham Gas and Water.—Issue by tender of £4,000 preference stock, Water Undertaking, entitled to a dividend of 6 per cent. until December 31, 1935, and thereafter of 5 per cent., minimum price £102 per £100, and £2,166 5 per cent. perpetual debenture stock, Gas Undertaking, minimum price £90 per £100 stock. Interest on the debenture stock was covered in 1929 over six times, and on the preference stock over three times.

East Surrey Water Company.—Issue by tender of about 5,200 ordinary (B) shares of £10 each or such number as may be necessary to produce, including premiums, the capital sum of £55,000. Minimum price of issue £12 10s. per share. The shares will be entitled to a dividend not exceeding £7 per cent. per annum.

Tottenham and District Gas Company.—Issue by tender of £150,000 5½ per cent. Irredeemable Preference Stock at minimum price £104 per £100 stock.

[Other Stock Exchange information, including the latest summary of balance sheets, reports and notices, dividend announcements, profit and loss figures, Transvaal gold output statistics, and oil outputs, will be found on page 143 under the heading "Company News."]

COMPANY MEETINGS, &c.

BANK OF NEW SOUTH WALES.

MR THOMAS BUCKLAND'S INTERESTING REVIEW OF CONDITIONS IN AUSTRALIA.

BOARD'S SOUND DIVIDEND POLICY.

At the ordinary general meeting of the Bank of New South Wales, held at the head office, Sydney, on Friday, November 28, 1930, the chairman, Mr Thomas Buckland, president of the bank, in moving the adoption of the report and balance sheet, said:—Ladies and Gentlemen,—Events have been marching at such a pace during the last year that your directors felt something more than an annual review was due to our shareholders and customers. They therefore decided to issue from time to time a circular setting forth in as simple language as possible such matters of financial and economic interest as called for immediate attention. Three issues have been made of this circular, copies of which are available to every shareholder and customer, and I take this opportunity of saying that, if anyone is not receiving such copies on issue, an application to the nearest branch of the bank or to the Secretary will put the matter right. The issue of these circulars will enable me to pass over much that I might otherwise desire to discuss in my address. I shall therefore limit myself to brief references to certain outstanding problems.

The seasonal conditions generally throughout Australia could hardly be better or more promising than they are at present. Everything points to a heavy crop of wheat, the wool clip has been well up to expectations, and the other sources of our wealth—sugar, fruit, butter, etc., will be productive of good yields. The season in the tropical portion of Australia has opened well and there has been a general rainfall in the northern half of the continent much above the average for the month of October. Meanwhile the southern portion of Australia is having a suitable season for the garnering of cereal and other crops.

In New Zealand the seasonal conditions are good, as is usual with that favoured Dominion, and full advantage has been taken of the opportunity afforded to increase output of primary products. As in the case of Australia the effect of the low prices obtaining for exports has been felt, but the position is recognised and steps are being taken to combat it.

In considering our balance sheet figures for the past year I would ask you to bear in mind two outstanding changes in the general situation: (1) the unexpected severity of the recent fall in the prices of primary products and (2) the difficulty of further Government borrowing overseas. Wool has fallen in value by 48

men are prolonging the misery and waste of unemployment. It is to be hoped that wiser counsels will prevail and that once the corner is turned employment and energy will revive at the bidding of lower costs and better prices.

Turning now to our shareholders' funds invested in the business of the bank the capital remains the same at the substantial sum of £7,500,000. Last year we appropriated the sum of £250,000 as an addition to the reserve fund, which now stands at £6,150,000, making a total of capital and reserve fund of £13,650,000. This is your contribution to the loanable funds which the bank turns over in the service of Australian industry. Let me remind you of the dominant facts of our present position: (1) that production is to-day being carried on in Australia at a loss, and (2) that we must rely upon our own resources to furnish loans. In view of these facts your directors feel that it is your wish that they should place in the forefront of their policy the maintenance of the reserves of the bank in such strength that they will be able to assist the bank's customers in their affairs until the present period of recession of trade and its readjustment have passed us by and we are once again on the fair road to prosperity.

With such substantial reserves and so large a capital, your directors have therefore decided that it is wiser on this occasion to make substantial appropriations to contingencies accounts. You will recognise that the bank can only prosper in the prosperity of its customers and that of the peoples in those countries where it carries on its operations. While we all hope that the prices of our exports have reached their lowest level, it is not possible as yet to be assured that this is so. Proper preparation for contingencies must be made while this is still practicable.

As a further step towards maintaining the resources of the bank in a condition ready for any emergency, so that it may lend a strong hand in the restoration of Australia and give assistance in other fields where it operates, your directors recommend the payment of the dividend for the last quarter of the year at the reduced rate of 9 per cent. per annum. In conjunction with the payments for the other quarters, this represents the moderate return of 5.36 per cent. on the total of capital and reserve fund. By these two proposals your directors will be able to maintain the reserves of the bank in a satisfactory position.

A matter of cardinal importance in considering the figures of the balance sheet and more particularly the figures of gross and net profit is that of the depreciation of the Australian pound. Your directors have not overlooked this, and in the recommendations referred to above the fact that the £ Australian is at a discount compared with sterling has been taken into consideration in the allocation of net profit. It is necessary to draw special attention to this, as nowhere have we noticed any recognition of it in the published accounts or reports of companies, firms, etc. The outside market for exchange which, although statements are frequently made to the contrary, is free of any control by the banks, is operating at present on a basis round about £110 Australian being equal to £100 sterling. Some authorities state that on the question of purchasing power parity the £ Australian is at a greater discount than this, being somewhere between £120 and £125 Australian for £100 sterling. At this juncture it is probably not necessary to go further than to accept the rate ruling in the outside market, and that is a depreciation of 10 per cent. To give you a simple illustration, this means that those in control of Australian finance should recognise that a profit of, say, £100,000 in pounds Australian would be worth £90,000 in sterling if the depreciation of the Australian currency is 10 per cent., and £80,000 sterling if that depreciation is 20 per cent., and the paper profit should be dealt with upon that basis.

Such a discrepancy between the Australian pound and the sterling money that has so long been a synonym for security and strength brings out again the element of fluctuation in business that has been all too evident of late. Australians are being urged to "stabilise" prices, wages and business generally. It would be a fine thing to "stabilise" business, but the business situation is what many millions of people make it by their individual actions. We in Australia are a very insignificant part of the world of business.

Some critics are varying the general cry for stability by accusing the banks of "pegging" the exchange rates at a point which is above the true value of the pound Australian in terms of currencies on a gold basis, such as sterling and the dollar. It is very flattering to hear people attribute to the banks power to control the exchanges. The true position, however, is far different. The rates quoted by the banks do not control the exchange market in Australia. There is a very large body of exchange operations carried on entirely outside the banks. The rates at which these are transacted are not necessarily the rates quoted by the banks, and operators in the open market are free to vary their rates from time to time. The rates quoted by the banks are those at which the banks are prepared to do business. In normal times they serve to

balance the buying and selling of drafts and transfers by the banks' customers, bank rates in buying and selling being separated only by a fine margin, out of which the bank must pay expenses and find its profit. The rationing of customers, by which of late banks have sought to restrain the purchase of sterling, has been due to a reluctance to raise the rate at which the Commonwealth Government buys the London money needed to pay the overseas interest and other national charges. In this they have responded to the lead of the Commonwealth Bank and have honoured the exchange agreement. It seems to be generally overlooked by those who ask for higher rates of exchange, that every additional one per cent. of discount to which the Australian pound sinks involves additional taxation in Australia amounting to £360,000 per annum. This is the added exchange cost to our Governments of providing interest in sterling on our external loans.

Simultaneously with the claim that exchange rates are too low one hears the suggestion that interest rates are too high. High rates of interest are not an advantage to banks. They are, in fact, a disadvantage in that they limit severely, especially in a time of falling prices, the bounds of profitable borrowing by customers. High rates of interest were, nevertheless, necessary at a certain phase of the trade-cycle as a means of damping the excessive zeal to borrow of folk who calculated on a continuous rise of prices and of capital values. When that function has been fulfilled it is usual, in the next phase of the cycle, after costs have fallen, to lend money for short terms at low interest as an incentive to the revival of enterprise. In almost all countries except Australia and New Zealand this phase of the present recession has arrived. Among the reasons for the anomalous position of credit in these Dominions are the unsound schemes of public finance advocated in some quarters and the persistence with which Governments are leaning upon the banks to finance policies and commitments already responsible for the severity of the local recession. Their insistent demands for credit have absorbed funds which should have been held in readiness to aid, at lower interest charges, the revival of enterprise when prices turn for the better and confidence returns. To make matters worse, the expenditure of those funds on relief works and on the payments of salaries and wages to establishments built up by boom time activities has supported standards of living and internal price-level which the earning power of the general tax-payer cannot long sustain. That expensive support retards the fall in costs imperatively necessary to bring back to our exporting and home industries the incentive of hope of profit.

I agree with the statement made recently by the chairman of a large English trust company when he said: "I do not see any possibility of a reduction in the rate of interest on investments. While Government and the municipalities continue their prodigious expenditure and are prepared to offer to the public obligations secured on taxes and yielding 5 per cent. interest (Australia 6 per cent.) those raising money for industrial ventures must needs pay a considerably higher rate."

As a necessary result of the procrastination of the legislatures to face the situation that confronts us the position is rapidly becoming worse. When I addressed you twelve months ago we could have avoided serious trouble by a reduction of between 10 per cent. and 20 per cent. in our costs and, possibly within a period of three to five years could have passed through the depression. By this time we would have been on the road to recovery. The retrogression since has required us to face a lengthened period of trouble and a more severe reduction in costs. Further delay will make the process of readjustment still more difficult. As an illustration of the impossible position in which the legislation existing in the Commonwealth places our producers I may give three instances out of many where we have obtained figures, based upon actual results, showing the costs of production as against the returns received therefrom. It must always be borne in mind that such figures vary in every district, but these three instances will serve to draw attention to the impossible position which has to be rectified. In three different districts in which we have branches we find that the cost of wool production ranges from 9½d. to 11½d. per lb. Wool from these districts at the date these calculations were made, about two months ago, was averaging little over 8½d. per lb. on the sale floor. It is easy to see that the reduction that will have to be made in costs in these instances amounts to some 30 per cent. The wheat farmer is in a similar position and the manufacturer of our secondary produce as well as our primary producers must be given relief until a point is reached at which he can export his surplus output at a profit in competition with his rivals overseas.

Australian treasurers have sought to meet their commitments by the imposition of fresh or increased taxes, but it would seem that the point has been reached at which increased rates of taxation will not produce more revenue. In view of the excessive costs of production many concerns and individuals will be unable to pay the taxes even though demand is made for them and pressure to collect such taxes will be of no avail but will tend to aggravate the situation. Australia is rapidly becoming, if it has not already

become, the most heavily taxed country in the world in order to support its unsound and uneconomic systems of regulating trade and industry and of developing the country in excess of economic possibilities. The burden is now becoming overwhelming, and unless it is reduced considerably at an early date will bring disaster upon the treasurers who have imposed it as well as upon those on whose shoulders it has been laid. To quote a Canadian writer of eminence, "Economic ignorance has bred legislative restraint; the labour vote helps to shut labour out of its inheritance."

The creation of a Central Reserve Bank for Australia has been before Parliament and the public of Australia for some time past. The Bill is at present in the Senate. It will serve no good purpose to create an institution intended to become a Central Reserve Bank for Australia unless it is established upon sound principle. Should an institution be created which does not comply with these principles, it will not be recognised as a Central Reserve Bank by other such institutions throughout the world, and will therefore be useless in that direction. On the other hand, it will be a menace to the Australian community so far as internal finance is concerned. It is now generally recognised that a Central Reserve Bank should be an institution discharging a public function but independent and therefore of private origin. It is advisable to require certain qualifications in the men elected by the shareholders to become directors, to have reasonable restrictions upon the shareholdings, voting power, payment of dividends, etc., but all authorities lay it down as a fundamental principle that the State should not have the power to appoint the board or to control the institution beyond this one concession, viz., that the State may have the right of appointment of a minority of directors including possibly the governor. If this course be taken, however, it must be required of the man appointed to fill this important position that he is a man of wide experience in and knowledge of banking in its practical as well as its theoretical aspects and especially of reserve banking.

In any event, it must be emphasised that neither Government nor the trading banks nor a Central Reserve Bank, however well constituted, can by monetary manipulation lift Australians out of their troubles. Only one fund can ultimately afford the means of a sound national living, viz., the volume of our actual services to one another. This fund, whatever the unit in which you reckon it, constitutes the national income. To emphasise the great significance of this common social fund out of which and from which alone we are all paid, let me quote Dr. Benham's warning written in 1928:—

"Australians may, for a time, meet some of their needs by selling property externally, but apart from this the sole source of all expenditure, both private and public, and of all saving, is the national income. Food, clothing, shelter, education, amusements, necessities, comforts, luxuries, everything which is 'consumed' (in the widest sense of the word) within Australia—all must come from this one source alone. From this, too, all the vast expenditure of Governments and local authorities must be met. From this 'saving' in the form of developmental work, new buildings, and other additions to assets, must be made. Thus the prosperity of a nation depends so very largely upon its national income that this must be the chief test." In applying this test faithfully and without bias we have all to admit that the only solution for our difficulties is to be found in some conjunction of harder work, longer hours, and more thrift.

It is with profound regret that I refer to the death on June 8th last of one of our directors, the late Dr. R. L. Faithfull, who during sixteen years of office rendered valuable service to the bank. To fill the vacancy caused by his death, the Right Honourable Sir Adrian Knox, P.C., K.C.M.G., was asked to join the directorate.

I also wish to place on record our appreciation of the services rendered to the bank by Messrs James Burns and J. M. Dunlop, who resigned their positions as directors during the year owing to lengthened absence abroad. Their respective places have been filled temporarily by the appointment of Sir Alexander MacCormick, K.C.M.G., M.D., and Mr T. H. Kelly.

In conclusion, I wish to express the directors' appreciation of the work of the staff throughout the year. In times such as these all officers in executive positions have to carry a heavy load which increases as it passes up through the various ranks, and a special tribute is therefore due to our senior executive officers for the care and devotion they are showing to the welfare and interests of the bank.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Boulevard Street, Fleet Street, London, E.C.4.

BURMA CORPORATION, LIMITED.

EFFECT OF FALL IN METAL PRICES.

STRONG ORE POSITION.

INCREASED EFFICIENCY AND ECONOMY.

The annual general meeting of the Burma Corporation, Ltd., was held at the registered office of the company in Strand Road, Rangoon, on December 19th.

Mr. P. E. Marmion (vice-chairman) presided in the unavoidable absence of the chairman (Sir Robert Horne) and, in moving the adoption of the report and accounts, said: Unfortunately, the working profit set out in the last and most important column shows only too plainly the effect of the great depression which has overhung the whole world for more than a year, and which is still casting a dark shadow over the producing industries of every land.

The tonnage of ore mined was 500,585, which is 37,000 tons in excess of the previous year. This large increase is due to the extraction of an additional 30,000 tons of copper ore.

The production of refined lead at 79,267 tons shows only a modest increase over the previous year. In the difficult conditions of trading, metal markets were extremely sensitive to any increase in production. For this reason the intention to increase our output of lead by milling a larger tonnage of a somewhat lower grade of ore was abandoned, and we were fortunate that the design of the newly-erected section of the mill was sufficiently flexible to enable it to be adapted at short notice to the treatment of copper ore.

The output of silver at 7,225,881 ozs. was approximately 100,000 ozs. less than the previous year, due to the lower silver ratio in the lead ore to which I have referred previously.

The production of zinc concentrates fell from 60,180 to 58,335 tons, due to the decline in the zinc content of the ore treated, which, however, was partly counterbalanced by an improvement in grade from 51½ to 52½ per cent.

The metallurgical efficiency of our mill again shows progress, recovery of lead having improved from 92 to 93 per cent., silver from 93½ to 95 per cent. and zinc from 57 to 64½ per cent.

The output of copper matte increased from 10,719 to 12,904 tons, with an improvement in its copper, lead and silver content which enhanced its value.

In the last quarter of the year our production of copper matte had increased to 4,239 tons, against 2,515 in the first quarter, and for the first quarter of the current year it has increased still further to 4,900 tons.

Production of antimonial lead and copper nickel speiss increased slightly, with an improvement in grade of the latter product.

Great attention throughout the period was paid to improving the grade of all mill products, even at some sacrifice in recovery, and the success of your staff in this direction assisted materially in obtaining great economies in subsequent operations which have resulted in a very considerable reduction in the unit cost of production, more especially since the close of the financial year.

The efficiency of the new third section of the mill after its adaptation to the treatment of copper ore has been entirely successful, the recovery of copper being over 95 per cent. in a concentrate assaying 15.6 per cent.

METAL PRICES.

The decline in metal prices has had a serious effect on revenue. The average price of lead was £20 19s. 6d., a decline of £1 14s. compared with the previous year, equivalent to a difference in revenue of about £135,000.

The drop in the price of silver reached the high figure of 4.9d. per standard ounce, which, with the reduction of about 100,000 ozs. in output, adversely affected revenue in comparison with the previous year by about £170,000.

Spelter had the very serious fall of nearly £3 per ton, equivalent with the lesser production to a difference in revenue of about £145,000.

The average price of copper remained unchanged, but unfortunately since the close of the year it has had a calamitous drop.

PROFIT AND LOSS ACCOUNT.

The total revenue from the sales of all products, including the value of metals on hand, was £3,099,000 or £524,000 less than the preceding year.

The operating expenditure was £1,991,844, equivalent to £3 19s. 6d. per ton treated, against £4 10s. the previous year. This represents a very appreciable reduction, and I am pleased to inform you that further material progress in the same direction has been made since the close of the financial year, with the result that our present cost of production is the lowest ever reached in the history of the corporation. The net profit resulting from the year's operations was £693,603, which is over £360,000 less than the previous year's figure, and is more than accounted for by the difference in revenue consequent upon the decline in metal prices, as previously pointed out.

A new item in the accounts is the charge of £39,600 for silver Excise duty. The imposition of this duty was followed immediately by a countervailing Excise on all silver produced in India, which is, in effect, a direct tax on this corporation, since it is the sole important producer within the Indian Empire. We made strong representations to the Government of India, but our representations thus far have been unavailing.

ORE RESERVES.

Details of the tonnages of ore in reserve are set out in the general manager's report. The total of 4,265,665 is 124,696 tons in excess of the previous year, while the grade is only slightly lower. From these figures you will appreciate that development work during the year has yielded satisfactory results, particularly when it is remembered that the figures do not include any estimate of tonnage from the large body of ore exposed on No. 2 level and subsequently located on No. 6 level in the Meintha section.

The total tonnage developed during the year was 625,281, of which 369,455 was in the Shan and 255,826 in the Chinaman section, which goes to confirm my remarks two years ago that, on account of the northerly pitch of the ore-bodies, the Shan would probably become the more important section in the future.

The Chairman next referred to the developments which had taken place during the year, dwelling particularly on the importance and significance of the discovery on No. 2 level of an orebody worked by the ancient Chinese. He added that this discovery did not exhaust the possibilities of further deposits in the southern portion of the lease, and that the prospects already revealed gave them great encouragement for the future.

POSITION AND OUTLOOK FOR METALS.

Continuing, he said: The world production of lead for 1929 was 1,725,000 tons, or approximately 25,000 tons in excess of my estimate last year, while consumption reached a total of 1,650,000 tons. It can, therefore, be said that production and consumption were reasonably balanced, and, so far as can be ascertained, the present statistical position of the metal remains sound.

The estimated production for 1930 is about 1,640,000 tons, and stocks of metal in the hands of producers are not greatly in excess of normal, showing that consumption has maintained a highly satisfactory level notwithstanding the general depression which has persisted throughout the period.

World production of spelter for 1929 was about 1,447,000 tons, or 7,000 tons in excess of the estimate made last year. Consumption was about 1,433,000, thus indicating a satisfactory balance up to the end of the year.

It is not possible to form any reliable estimate of the production for 1930 owing to the absence of figures from some important producing countries in Europe, but it is probably on a somewhat lower level than the previous year. Consumption, however, has declined materially, with the result that stocks have accumulated and the price of the metal has fallen to a figure which deprives the miner of any possibility of profit on the realisation of his concentrates.

No one denies that the present price of the metal is uneconomic; the only question is how long it can last without seriously affecting supplies of raw material, which ultimately must jeopardise production.

World production of copper for 1929 was 1,879,000 tons, or about 20,000 tons below the estimate of last year, while consumption is reported at almost a similar figure.

Production for 1930 is estimated at 1,576,000 tons, which shows a very material curtailment, but even at this figure the stock position is far from satisfactory and indicates a serious recession in consumption.

The price of the metal was maintained at the high level prevailing since May, 1929, long after it was evident that consumption was on the wane, with the result that buying was discouraged and stocks in the hands of producers became excessive and caused the precipitous decline in price to its present low level.

Notwithstanding the unfavourable stock position, there will be considerable resistance to any further recession in the price level, which already represents an uneconomic figure for much of the world's production.

SILVER.

World production of silver for 1929 at 261,265,718 was over 6,000,000 ozs. in excess of the previous year, of which the United States contributed 4,000,000.

Not only does this production represent the greatest ever recorded in any single year, but it is estimated that there became available from other sources, including debasement and demonetisation in European countries and sales by the Indian Government, a further 55,000,000 ozs., making the total available for absorption no less than 316,000,000 ozs., or approximately 1,000,000 less than for the previous year.

India and China maintained their traditional demand, and together absorbed almost 220,000,000 ozs., while about 44,000,000 ozs. were consumed in art and manufacture. Germany took 12,000,000 ozs., and about 25,000,000 ozs. were used for coinage by different countries. These figures indicate the distribution of the bulk of the supply.

It is difficult to forecast accurately the world's production of silver in the present circumstances, but probably from mining operations it will reach about 235,000,000 ozs. this year, in addition to which there will be the supplies from former silver currency which cannot be estimated.

The policy of demonetising silver continues unabated in those countries already using the gold standard, and in January last Indo-China linked its currency to the French franc, thus adding one more to the number of countries which have deserted the white for the yellow metal. Altogether 1930 has been a period of great distress for silver, causing its price to recede to a level never previously recorded in its long and proud history.

ECONOMIC DEPRESSION.

In common with all other producers, our revenue during the current half-year has been seriously impaired by the catastrophic fall in commodity price level. Compared with last year the average prices of the metals in which we are particularly interested show the following declines:—Lead, over £4 per ton; silver, over 4½d. per ounce; spelter, over £5 per ton; and copper, nearly £29 per ton. It is not difficult to calculate the effect of such heavy falls on our revenue, but fortunately we were not entirely unprepared and without means of taking prompt steps, at least, to soften the blow.

By expediting the completion of certain units of plant and raising the grade of ore it has been possible for us to adjust operations to an extent which has enabled reductions to be made in almost every item of expenditure, with the result that savings in the aggregate amount to a considerable sum. This will benefit shareholders by mitigating the full consequence of the fall.

The problem of ascertaining the causes of the debacle in price level and considering means of rectifying them to alleviate the world's distress at the earliest moment is engaging the attention of the greatest economists and bankers in every country.

There can be no doubt that the severity of the fall in silver has contributed directly to the distress of a very large proportion of the world's population, and it would seem desirable that attention should be directed towards the restoration of silver to its traditional use in the monetary mechanism of the world so that it may render more and not less help to gold in the increasingly difficult task it now performs alone.

BOARD'S DIVIDEND POLICY.

Having regard to the period of great stress through which the whole world is passing, the board will continue to take a liberal view regarding any dividends which our earnings may allow in the immediate future. In this connection it will interest you to know that since the inception of the company no less than 95 per cent. of the net available profits have been distributed as dividends, the aggregate figure of which appears in the report in your hand—namely, £5,719,953.

I hope I have made it clear that we have attained a high degree of efficiency and economy in all departments and continue to press forward to still higher attainments.

As a result of these efforts, and our satisfactory ore reserve position, we are entitled to expect to maintain to the full our present position among the great and cheapest producers in the world and, when the turn in world trade comes, to advance it.

In such abnormal conditions as those through which we are now passing, the producer, who has to sell his production in the open markets of the world, can, as a general rule, exercise little or no influence on the price he is called upon to accept; his main efforts must, therefore, be directed towards the attainment of the highest degree of efficiency and economy, and that, ladies and gentlemen, as I have just pointed out, has been, and is, our constant endeavour.

Again, there is a considerable range of expenditure to be incurred by the producer over which he has little or no voice or control. I refer to the costs of transportation by land and sea, and, in a lesser degree, to the cost of actual marketing. I cannot help being struck by the fact that in many countries, including Burma's latest rival in the rice trade, Italy, important reductions in the cost of railway transportation have been made in the interests of the export trade. Thus, I think, is a warning to the producers of the British Commonwealth of Nations. Public opinion must be mobilised if this great factor of producers' cost is not to lag behind that of our rivals in world trade in the process of its reduction to accord with the new level of commodity prices which may well emerge from the readjustment of world conditions now taking place.

Mr. Payne seconded the resolution, which was carried unanimously.

APEX (TRINIDAD) OILFIELDS, LIMITED.

EFFECTS OF LOWER PRICES.

The eleventh ordinary general meeting of Apex (Trinidad) Oilfields, Ltd., was held, on the 15th instant, at Winchester House, London.

Mr. Walter MacLachlan (chairman and one of the managing directors) said that, after providing £120,713 for amortisation of wells, there was a net profit of £205,596. The decrease of £107,612 as compared with the previous year was entirely due to the decrease in revenue resulting from the materially lower prices realised from the sale of the production. This experience, unfortunately, was common to all oil undertakings at the present time, owing to the world-wide overproduction and decrease in consumption, with the resultant continued fall in the price of oil. The balance-sheet, although it reflected the decreased profits and increased capital expenditure, continued to disclose a thoroughly sound and satisfactory position. The directors recommended a final dividend of 10 per cent., less British income tax at 2s. 5-064d. in the £. That made a total dividend for the year of 25 per cent., but the lower rate of income tax deducted made the return equal in fact to over 28 per cent. less full tax at 4s. 6d. in the £. The distributions to shareholders, including the dividend now proposed, amounted to £1,499,500.

OIL PRODUCTION AND DELIVERIES.

The production of oil for the year was 425,036 tons, as compared with 414,328 tons for the previous year—thus constituting a further high record—and was obtained from 122 wells. The production for the first three months of the current financial year had been 115,820 tons, and the average rate of production for 1929-30 was thus being more than maintained. The total production of the company's oilfield up to date had been approximately 2,250,000 tons. During the year 39,407 ft. were drilled, making a total footage of 245,840 ft. Twenty wells, including five that were deepened, were brought in during the year, of which none were failures. The development of the property was being attended with most satisfactory results, and continued in every way to confirm the directors' complete confidence in its future. The result of the amortisation plan which they had followed from practically the commencement of the company was that they now possessed a large number of wells which had been completely amortised several years ago, and from which very satisfactory results still continued to be obtained.

A considerable portion of the year's capital expenditure of £65,496 was in respect of the purchase and installation of a plant for dealing with the very large volume of gas which accompanied the production of oil from their wells. The new plant extracted from this gas a very volatile and high-grade petrol spirit, known as casing-head gasoline, which commanded a good price, and the company had entered into a contract for a term of years for the sale of their production of such spirit to the United British Refinery. The plant was now in successful operation and was exceeding their expectations as to its capacity, and the result should constitute a welcome addition to the revenue from the sale of their oil.

Referring to the fact that, in order to meet capital expenditure, it had been necessary to encroach, from time to time and to a considerable extent, upon profits which should have been available for distribution to shareholders, the Chairman said it was obvious that this could not continue indefinitely, and the board would have to consider to what extent and when this should be rectified by the provision of further capital.

PROSPECTS.

It was difficult to speak with any degree of certainty regarding the outlook for the current financial year. The continuance of overproduction and decrease in consumption, with the consequential low prices ruling for oil, constituted most serious factors in the oil industry. Attempts were being made to deal with these matters which already had met with a certain degree of success, particularly as regarded the progress which had been made in carrying into effect the policy of restriction in America. The directors felt sure that concerted action must eventually bring about a solution of these difficulties, but even those who were best qualified to do so hesitated to express any authoritative opinion as to how long they would have to wait before this could be arrived at.

The policy of this company as regarded production would be to maintain at least the rate of last year, and the satisfactory results which were attending their operations should readily enable them to carry out this programme. Trinidad Leaseholds had intimated that they were prepared to take delivery of this production. Every effort was being made to reduce still further the company's working costs, which already stood at a figure that reflected the greatest credit upon their Trinidad management, and the conservative policy, especially as regarded amortisation and depreciation, which they had consistently followed, placed them in all the better position to meet the existing situation, pending the renewal of more satisfactory conditions in the industry.

The report and accounts were adopted after some discussion.

RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LIMITED.

MR. A. G. WEIGALL ON TRADING CONDITIONS IN BRAZIL.

The Forty-fifth Ordinary General Meeting of the Rio de Janeiro Flour Mills and Granaries, Limited, was held, on the 13th instant, at River Plate House, London. Mr. A. G. Weigall presiding.

The Chairman, in moving the adoption of the report, said that there was a reduction in profits of £41,000, in spite of the transfer of £42,000 from reserves, and, while both the flour mill and London accounts were down, the cotton mill profit was higher than last year's. The board proposed to pay a final dividend of 1s. 6d. per share, less income-tax, which would leave £35,000 to be carried forward.

The reasons for the reduced profits were, briefly, the continued fall in the price of wheat, of which the company had necessarily to carry stocks for the working of their mills, keener competition, and the fact that trade was more a question of price and credit than ever before. Trading conditions had proved more difficult than ever, as the purchasing power throughout Brazil had been curtailed by the decrease in prices of commodities therein produced. The reports of the general manager were expectant of a recovery in the near future.

The business done by the Rio flour mills during the period under review had been maintained to within 10 per cent. in the markets in which they now traded. The biscuit and macaroni factories continued to act as large consumers of the flour manufactured by the company's mills and contributed to the profits of the year. The cotton mill, which had experienced some very lean years, was evidencing renewed activity as far as profits were concerned. The Bahia mill's contributions continued on a satisfactory scale. As to the future, there was little on which to base a forecast, but the Rio management had put them at their ease by the good remittances they had been able to make, and he thought this could be taken as a happy augury that confidence was not shaken. Conditions must improve, and as they did so none better than this company was in a position to take advantage of them.

Mr. S. C. Sheppard reviewed in detail the company's operations during the year, and seconded the resolution, which was unanimously adopted.

RHODESIAN ANGLO AMERICAN, LIMITED.

INCREASE OF CAPITAL APPROVED.

An extraordinary general meeting of Rhodesian Anglo American, Ltd., was held on the 15th instant, at Winchester House, London, to consider a resolution increasing the capital of the company to £6,500,000 by the creation of 3,000,000 new shares of 10s. each.

Sir Edmund Davis (deputy-chairman) said that of the present authorised capital of 10,000,000 shares, 7,563,811 were issued, and a further 1,199,996 shares were under option, leaving a balance of 1,236,193 shares available. The new 3,000,000 shares would, together with the above balance, provide sufficient shares to meet further options which it was proposed to grant to subscribers of the proposed issue of debentures by the company, and to leave a substantial number of free shares available for future issue, if the necessity should arise.

The merging of the mining interests of the Rhodesian Congo Border Concession, the Bwana M'Kubwa Copper Mining Company, and the N'Changa Copper Mines, would effect economies in overhead charges, and the fullest possible advantage would be taken of the availability for mining and treatment purposes of high grade ores on the combined properties to produce the maximum tonnages of copper which might be warranted by the state of the market for the time being. In the initial stage they might estimate that the production of copper would be in the neighbourhood of 75,000 to 80,000 long tons per annum.

So soon as the various formalities connected with such a large amalgamation scheme had been complied with, the Rhodesian Congo Border Concession would issue £4,500,000 of seven per cent. convertible debentures. Of that, £1,750,000 would be offered to the shareholders of the Bwana M'Kubwa Copper Mining Company. Shareholders in that company would be entitled to subscribe for one £25 debenture of the Rhodesian Congo Border Concession in respect of about every 182 Bwana shares, and each subscription for one debenture would carry the right for about twelve shares to call one Rhodesian Congo Border share at £8.

The Rhodesian Anglo American Company's debentures, £400,000, would be redeemable on December 31, 1945, at par, or on three months' notice, at £101. The subscribers of each £20 debenture would receive an option on ten shares of 10s. each at 12s. until July 31, 1932, and on twenty shares at 20s. per share until July 1, 1938, in the form of bearer certificates.

The resolution was carried.

FANTI CONSOLIDATED INVESTMENT COMPANY,
LIMITED.

EFFECTS OF WORLD-WIDE DEPRESSION.

The ordinary general meeting of the Fanti Consolidated Investment Company, Ltd., was held on the 14th instant, at the Cannon Street Hotel, London.

Sir Edmund Davis (the chairman) said: It is very disappointing for the directors to have to put before you this time a statement that compares unfavourably with those of recent years. The sharp setback in the profits disclosed in the accounts is to be regretted, but, in view of the world-wide depression, it is not surprising, most other finance companies having suffered alike.

Referring to profit and loss account, the balance at December 31, 1929, was £78,896. From this we deducted the final dividend of 4½d. per share and bonus of 7½d. per share for the year ended December 31, 1929, paid on January 18, 1930, £67,500, and the balance of the directors' and managing directors' percentage of profit for the year to December 31, 1929, leaving a balance of £5,321. To this has been added the balance of profit and loss account for the year ended December 31, 1930, £33,097, making a total for appropriation of £38,419. Out of this amount we recommend the payment of a dividend of 6d. per share (which is 6½ per cent.), less income-tax, for the year ended December 31, 1930, which will absorb £33,750, leaving £4,669 to be carried forward, subject to the directors' percentage of profit.

Taking the investments at December 31, 1930, at the value at which they stood in the books, and the cash and debtors, less creditors, they amount in total to £588,419, against £678,896 at December 31, 1929, a decrease of £90,477. Taking the investments at the market prices on December 31 last where there was a quotation, and the unquoted securities at cost or the written-down value, and our holding of African Manganese Debentures at par, and adding thereto cash and debtors, less creditors, at the same date, the total amounts to £706,200, which is equivalent to 10s. 5½d. per share on our issued capital of £540,000.

It is, of course, impossible to prophesy what conditions will be at December 31st next, and what opportunities may present themselves during the year for profitable transactions, but we may at least express the hope that we shall be in a position to submit to you a more favourable balance sheet, and that a substantial proportion of the amount provided this year for depreciation will be recovered to enable us to build up a reserve again.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended January 10, 1931, amounted to £19,130,400, against ordinary expenditure of £10,321,300. After allocating £727,100 to Sinking Fund and having allowed for an increase in Exchequer Balances of £218,100, the week's operations, as shown below, reduced the National Debt by £7,864,000 to £7,760,963,000:—

(000's omitted.)

National Savings Certificates	£ 300	Treasury Bills	£ 3,204
4% Treasury Bonds	4,600	Bank of England Advances	6,000
Road Fund	1,440	Public Department Advances	5,000
	6,340		14,204

A complete analysis of the National Debt at the end of the last quarter appeared in the *Economist* of January 3rd.

INDIA COUNCIL REMITTANCES.

The total remittances from the Government of India to the Secretary of State for India in Council effected by purchases of sterling in India, from April 1, 1930, to January 10, 1931, were £5,395,000. During the same period £3,263,491 was transferred from the sterling reserves against corresponding contraction of currency in India. Of this amount, £2,623,491 was to meet sales of sterling in India, while the balance was required for Home Treasury purposes.

GOLD STANDARD RESERVE.

Statement showing the form in which the balance of the Reserve was held on December 31, 1930:—

In India: £	£
Gold	401,106
In England:	
Cash at the Bank of England	4,728
Gold	2,152,334

12	10 Bars sold
13	10 Sols. for export
14	12 Bars sold
15 Sols. released	12 Sols. for export
	12 Sols. set aside
	14 Bars sold
	14 Sols. for export
	15 Sols. for export
	15 Bars sold
Total	328,000
	Net withdrawals, £1,147,551.

GOLD.

Messrs Samuel Montagu and Company write on January 14, as follows:—

The Bank of England gold reserve against notes amounted to £145,916,269 on the 7th instant, as compared with £147,625,622 on the previous Wednesday. The bar gold which arrived from South Africa this week amounted to £874,000, all of which had been sold forward to France. The most important news of the week concerns a matter of great interest to the gold market. It has been authoritatively reported that the Bank of France has decided to accept bar gold of standard quality as delivered by the Bank of England. Although the official announcement has not yet been made, it is expected that this will be forthcoming shortly and that the new arrangements will come into force about the beginning of next month. The news had the effect of moving the French exchange in favour of sterling, as a result of which there have already been some cancellations of arrangements previously made with refiners for the treatment of standard gold on behalf of French buyers. Movements of gold at the Bank of England during the week show a net efflux of £1,377,142. Receipts consisted of £300,000 in sovereigns "released" and £78,000 in sovereigns from Australia, and withdrawals totalled £1,755,142, of which £250,000 was in sovereigns "set aside," £37,000 in sovereigns taken for export, and £1,468,142 in bar gold; of the latter, about £1,350,000 was for export to France after refining.

NATIONAL PROVIDENT INSTITUTION
VALUATION 1930.BONUS RESULTS WILL BE
ANNOUNCED SHORTLY.

48 Gracechurch Street, London, E.C.3.

SILVER.

Although the market has shown more fluctuation, the trend has again been downward, a still lower level being touched during the past week. Following further weakness in the China exchanges, silver was offered freely, particularly from America, prices giving way until, on the 9th instant, yet another low record was created when 13½d. for cash and 13¾d. for two months' delivery were quoted. Sellers showed more hesitation at this level and buying orders from India found the market poorly supplied, prices reacting on the 10th instant to 13½d. and 13¾d., a rise of ½d. The demand from India caused a further slight improvement, yesterday's quotations being 14½d. and 13¾d., but to-day, with no inquiry from this quarter and heavy offerings from China, a relapse ensued, prices being fixed ½d. lower at 13½d. and 13¾d. for cash and two months' delivery respectively. As a result of the demand for silver for prompt shipment, the premium for cash silver was increased to ½d. on the 8th instant, then to ¾d. yesterday.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 5th instant to mid-day on the 12th instant:—

IMPORTS.	£	EXPORTS.	£
Persia	44,593	British India	30,549
U.S.A.	37,815	Other countries	4,793
Mexico	52,201		
Australia	10,000		
Canada	8,454		
Other countries	2,855		
	£155,918		£35,342

NOTICES.

We are glad to note the honour recently conferred upon Sir Alfred Lewis, director and chief general manager of the National Provincial Bank Limited, when he received the honorary degree of LL.D. at the University of Birmingham.

The Midland Bank announces the opening of a new office at 63 Prince of Wales Road, Norwich, and the transfer of the business of the Market Street, Manchester, branch to new premises at 8 High Street, Manchester. A new branch has also been opened at 42 Cranbrook Road, Ilford, Essex. The night safe banking service will be in operation at this branch. New sub-offices have also been opened at Cam (near Dursley, Gloucester), and at Culmstock (Devon).

Barclays Bank, Ltd., announce that after 41 years' service, Mr P. C. Galloway, joint manager with Mr F. J. Smith at City office, 170 Fenchurch Street, E.C.3, has expressed a desire to retire on pension as from December 31st last, and that the directors have accepted his resignation with regret. Consequent upon this retirement, Mr F. J. Smith has been appointed manager of the City office and Mr F. D. Stanwell deputy manager.

Barclays Bank announce the opening of a new branch at 4 and 5 Smithdown Place, Smithdown Road, Liverpool.

Lloyds Bank, Ltd., announce that sub-branches of the bank are now open at 1 Bridge Parade, Wensleydale Road, Hampton, and at 14 Musters Road, West Bridgford.

National Provincial Bank, Ltd., announce that Mr William Hadwick, an assistant general manager, has been appointed a joint general manager.

The Chartered Bank of India, Australia and China announce that a sub-branch of the bank has been opened at Sitiawan in the Federated Malay States.

The Ottoman Bank inform us that their new branch at Sultanabad, Persia, opened on January 1st, and that their new branch at Kirkuk, Iraq, opened on January 7th.

Mr H. R. W. Brown has been appointed joint assistant sub-manager of the National Discount Company, Ltd.

National Provincial Bank, Ltd., announce the following appointments: Mr John Dennington to be assistant general manager; Mr R. H. Cutting, D.S.O., M.C., to be secretary.

Company News.

REPORTS AND NOTICES.

The directors of United British Insurance Company, Limited, have appointed Mr. Norman Temple, the present secretary, to the position of manager and secretary to the company.

The Union Discount Company of London, Ltd., announce the appointment of Mr A. W. Trinder to be an assistant manager.

Messrs Morgan Grenfell and Company announce that Mr F. A. Ross has decided to retire from active business on account of ill-health.

On and after Monday, January 19, 1931, the registered offices of the Anglo-Oriental group of companies will be 55-61 Moorgate, London, E.C.2, and the London offices of the companies incorporated in the Federated Malay States will also be at that address. The transfer department for all the companies in the group is 49 Moorgate, London, E.C.2.

BANKS.

ANGLO-FRENCH BANKING CORPORATION.—The Anglo-French Banking Corporation announce that their net profits for the year 1930, after making full provision for bad and doubtful debts and for directors' fees and the remuneration of the management committee, have amounted to £72,450, which compares with £58,160 for 1929. The directors recommend the distribution of a dividend of 3 per cent. less tax, and the transfer of £10,000 to contingencies account and of £20,000 to reserve. The bank has just completed the second full year of its existence, and this is its maiden dividend.

GLYN, MILLS AND CO.—The balance sheet dated December 31, 1930, shows total assets £43,898,167, as compared with total assets £43,958,361 on December 31, 1929. Advances have risen from £14,844,651 to £15,593,356. Acceptances are lower at £2,552,638, against £2,699,728. Total investments amount to £6,638,253, against £8,430,000. British Government securities comprise £5,748,398 of total investments, against £7,821,315 at end of December, 1929. Bills discounted amount to £1,540,103, against £1,591,753. Money at call and notice is at £8,153,400, against £7,051,500. Cash, bank notes, &c., stands at £7,157,644, against £6,924,665. Deposits, &c., stand at £39,535,509, against £39,458,633.

ROYAL BANK OF CANADA.—In the annual statement at the end of the fiscal year, November 29, 1930, total assets are shown of \$889,917,191, as compared with \$1,001,442,741 a year ago. Cash on hand and in banks amounts to \$164,251,285, being equal to 21.17 per cent. of liabilities to the public. Other liquid assets, such as Government and municipal bonds, call loans, &c., bring the aggregate of liquid assets to \$379,120,433. This is equal to 48.87 per cent. of liabilities to the public. Deposits bearing interest are reported at \$543,843,554, and free deposits at \$151,745,505, against \$591,380,470 and \$180,707,298 last year. After providing for charges of management, &c., and making full provision for bad and doubtful debts profits of \$6,572,627 are shown. This compares with \$7,145,137 a year ago. Dividends and bonus to shareholders absorbed \$4,900,000, contributions to officers' pension fund, \$200,000; appropriation for bank premises, \$400,000; reserve for Dominion Government taxes, \$540,000, leaving \$4,106,778 to be carried forward, as against \$3,574,151, an increase of \$532,627.

INSURANCE.

THE STANDARD LIFE ASSURANCE COMPANY.—The new life assurances completed in the year ending November 15, 1930, aggregated over £3,275,000 gross, and after allowing for the amount re-assured with other offices the net amount exceeded £3,150,000. Both these amounts constitute new records for the company.

MISCELLANEOUS.

GREYHOUND RACING ASSOCIATION TRUST, LIMITED.—The directors announce that they have purchased on terms which, in the opinion of the board, are satisfactory, the property of the White City Stadium, London, on a ground lease of 73½ years, thus assuring security of tenure for the operating company.

IDRIS, LIMITED.—The report and accounts for the year ended October 31, 1930, shows a profit, after charging all depreciation, of £17,438 (last year, £17,776). Deducting debenture interest, £2,200, and adding £4,526 brought forward, there is a balance of £19,764 (last year, £19,526), from which are deducted dividends on: "A" preference shares, 6 per cent.; "B" preference shares, 7 per cent.; "A" ordinary shares, 10 per cent.; "B" ordinary shares, 10 per cent.; and founders' shares, 5 per cent.; leaving £4,764 to be carried forward (last year, £4,526).

JUTE INDUSTRIES, LIMITED.—The report for year ended September 30, 1930, shows a net loss of £36,499. The amount brought in was £7,745, thus leaving a debit of £28,754 to carry forward. Early in the year the directors took steps to bring down working costs. The total saving to the company as a result of this policy in a full year will amount to £34,000, of which £11,500 is applicable to the salaries of directors of the company and its subsidiaries. During the past six years manufacturing costs have been lowered by 14 per cent.

STERLING SECURITIES INVESTMENT.—It has been the custom of the Company in recent years to declare an Interim dividend on the Ordinary shares, payable on December 1st. On the present occasion, having regard to the advisability of conserving the cash resources, the Board considers it in the best interests of shareholders to defer consideration of the payment of a dividend on account of the Company's financial year to May 31, 1931, until the termination of the financial year.

THE SOUTH AMERICAN STORES (GATH AND CHAVES), LIMITED.—The trading result of the South American Stores (Gath and Chaves), Ltd., for the thirteen months ended August 31, 1930, shows a profit of £684,041. Deduct: Interest on debentures, £83,664; debenture redemption and premium thereon, £93,135; London office expenses, directors' and trustee's fees, £16,063; balance of interest account, £12,638; employees' help and relief fund, £7,816; leaving a balance of £470,725; from which is deducted: Realised loss on exchange, £114,283; net profit for the period, £356,440. The above profit of £470,725 for the thirteen months ended August 31, 1930, compares with £453,303 for the previous twelve months. Subject to final audit, the directors recommend the appropriation of the profits as follows:—To the preference shares (dividend at the rate of 14 per cent. per annum, less tax, for the period), £60,941; to the ordinary shares (dividend at the rate of 16 per cent. per annum, less tax, for the period), £248,911; to the deferred shares (dividend of 11d. per share, less tax), £46,688.

THE SUSSEX BRICK COMPANY, LIMITED.—The report shows that the profit for the year ended September 30th increased from

£43,174 to £48,638, and net profit, after providing for directors' fees, taxation and bank interest from £32,919 to £34,587. Allocations proposed are £1,500 to employees' welfare and bonus, £5,000 to depreciation reserve (bringing this reserve up to £14,000), final dividends of 4 per cent. on 8 per cent. Preference shares and of 15 per cent. on Deferred shares (making 22½ per cent. as before) and £9,855 carried forward against £8,505 brought in.

THE SWEDISH MATCH COMPANY.—Higginson and Company, fiscal agents of the company, announce that at the extraordinary general meeting held in Stockholm, the issue of 900,000 new "B" shares to shareholders on the basis of one new share for each three shares held, was confirmed. The subscription period closes on 3rd prox.

WATERLOW AND SONS.—Net profit for year ended September 30, 1930, was £162,395 (against £171,546). Dividends of 4 per cent. on preference, 6½ per cent. on preferred ordinary and interim of 2½ per cent. (same) on deferred ordinary paid. Directors recommend final payment on deferred ordinary of 9 per cent. tax free (against 10 per cent.), making 11½ per cent. (against 12½ per cent.); £30,000 (same) to reserve (raising this fund to £650,000); £47,251 forward (against £50,995).

Commercial Reports.

MARKET SUMMARY.

The issues in the South Wales mining dispute have now been narrowed down as a result of the negotiations conducted by Mr Graham and Mr Shinwell, and it would seem that a settlement may soon be reached. Stocks of coal in South Wales, which have been heavy before the stoppage, are now almost exhausted, and certain qualities are already being drawn from other districts where activity showed a slight expansion. The severity of the depression in the iron and steel industries is reflected by the low production of pig iron and steel during last month, coupled with large imports from the Continent. Although activity has not yet increased, the reduction in pig-iron prices has successfully countered Continental competition. It is hoped that the decision of the British Steel Makers' Association to increase the rebate on English steel will improve the position of makers in this country. Non-ferrous metals have been weaker, and there was a considerable decline in tin and zinc. The textile markets have not yet shown any improvement. No agreement was reached last week on the "more looms per weaver system" in the cotton industry. Since then the Ministry of Labour has intervened in the dispute, but unless agreement is reached by Saturday all the weaving mills will be closed next week. The threatened stoppage in the linen industry of Northern Ireland has fortunately been averted, agreement having been reached on the basis of a 10 per cent. cut in wages, as against a reduction of 20 per cent. proposed by the employers. The food markets continue quiet. Wheat has again shown a declining tendency. Sugar has been slightly firmer on the news that the German Sugar Industrialists' Association has accepted Mr Chadbourne's new proposal which allows Germany an export quota of 500,000 tons for 1930-31, 350,000 tons for 1931-32, and 300,000 tons for the subsequent three years. The improved outlook has, however, already been disturbed by the possibility of considerable Russian shipments. The market in coffee continued steady, and fine qualities have been well supported. Among miscellaneous commodities, oilseeds show some improvement, but hides were again weaker, although there was some improvement in the demand for leather. The rubber market continued dull and inactive, but prices show a slight advance on the week.

THE COAL TRADE.

Our Sheffield correspondent writes:—The disturbance in South Wales has bristled up somewhat sales of South Yorkshire hards, but forward export business is still being held up until the questions of quotas and subsidies are settled. In the circumstances, sellers are not willing to commit themselves forward. Demand for gas and house coal continues on a moderate scale. The blast-furnace coke position is no better, consumption being at a low ebb. Prices range from 10s. 6d. to 12s. at ovens. South Yorkshire steams are 10s. to 10s. 6d. f.o.b.

Our Glasgow correspondent writes:—The first effect of the working of the output quota system under the Coal Mines Act is now seen in a growing scarcity of supplies for prompt shipment. Home demand is good, notably for screened fuel, and with some

covering of orders on account of Welsh producers values all round have a hardening tendency. Inquiries from abroad are, however, only moderate, and mostly for early business, so that the outlook for a continuance of current prices on a return to normal elsewhere cannot be considered certain. Shipment prices (f.o.b. district ports): LANARKSHIRE.—Ell best, 15s. 6d.; splint best, 17s.; splint second, 16s. 6d.; navigation, 17s.; navigation second, 15s.; Hartley, 16s.; steam, 14s.; trebles, 14s. 6d.; doubles, 14s.; singles, 14s.; pearls, 13s.; dross, 10s. 3d. FIFE.—Screened navigation, 16s. 6d.—17s. 6d.; first-class steam, 13s. 6d.—14s.; third-class steam, 13s.; trebles, 14s.—16s. 6d.; doubles, 13s.; singles, 12s. 6d.; pearls, 12s. LOTHIAN.—Prime steam, 13s. 6d.; secondary steam, 13s. 6d.; trebles, 15s.; doubles, 13s. 9d.—14s.; singles, 12s. 6d.—13s.; pearls, 12s. 3d.—12s. 6d. Ayrshire.—Un-screened navigation, 16s.; jewel, 18s.; steam, 13s.; trebles, 14s. 6d.; doubles, 14s.; singles, 13s. 9d.; pearls, 12s. 6d.—13s.; dross, 11s.

Our Cardiff correspondent writes:—With nearly all the pits idle in the South Wales coalfield, business on the Cardiff coal market this week has been confined to the disposal of stocks. When the stoppage began these were exceptionally heavy, and some of the largest groups of collieries had many thousands of wagons loaded at the various sidings. These have now been reduced, and will probably be exhausted if the collieries remain idle for the whole of the present week. Coals from the Midlands are being imported in increasing quantities to meet the requirements principally of household consumers, while exporters in some cases are substituting Yorkshire and North Country coals in the fulfilment of their contracts. Prices are governed by individual positions, but for all qualities that are available they are above the minimum schedule figures of the Marketing Association. The iron and steel works continue to operate chiefly on their accumulated stocks, but these are being exhausted, and it is feared that a large number of the mills will cease working if the strike is prolonged. The president of the Board of Trade has again intervened in an effort to reconcile the conflicting claims of the employers and the workmen, but Mr Graham is finding his task extremely difficult owing to the persistence of the men's leaders in their opposition to any reduction in wages that would be more than proportionate to the reduction in hours, and to the reluctance of the owners to reopen the pits in the definite knowledge that to do so on the terms demanded by the workmen would involve them in large losses. Negotiations for a settlement, however, were still in progress on Wednesday evening.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—Business in Cleveland iron has improved as a result of the recent reduction in prices and there are prospects of a further expansion. Consumers who have been running very bare of stocks for some time are buying in increased quantities for early delivery, and have also placed contracts a few months ahead. There is now no inducement to buy Continental iron as the difference is so small, and it is expected that the ground lost recently will be gradually regained by local producers as current contracts for the foreign material are completed. Tuesday's weekly market exhibited a better tone and a fair amount of new business was reported for local and inland consumption, at the recently amended prices, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. In hematite consumers are holding back orders in anticipation of lower prices following the drop in Cleveland, but little encouragement is shown by makers in this direction seeing that the make on

the Tees is reduced to three furnaces. Ordinary mixed numbers are generally quoted at 70s. for early delivery and 70s. 6d. over a few months, but slight concessions would be granted for suitable business. In the manufactured departments no further new orders of importance are reported, but it is understood that some work is being kept back in anticipation of a reduction in prices at the meeting of the British Steel Makers' Association in London on Wednesday, January 14. Ore continues practically an idle market, and the nominal price for best rubio for early delivery is 16s. c.i.f., although it is stated that an odd prompt cargo has been sold at less, under special circumstances. The rate of freight Bilbao/Middlesbrough for early loading is about 5s. Coke is offering at 17s. delivered works for good furnace qualities, but there is only a poor demand, and this price might be shaded. There are now only 23 furnaces in blast in the district, one producing hematite having gone out at Consett works.

Our Sheffield correspondent writes:—The recovery of industrial activity after the stoppage makes slow progress, but there is some increase in the production of open-hearth steel. Prices of hard basic open-hearth billets have been reduced this month by 10s. per ton. The quotation for soft billets remains as before. Production of steel ingots and castings in the Sheffield area last year amounted to 968,200 tons, compared with 1,217,000 tons in 1929. The Lincolnshire steel works continue at the previous low standard of production. Business continues quiet for the time of the year in tools, cutlery and various products of steel. Special alloy steels command a fair amount of attention.

Our Glasgow correspondent writes:—Business in iron and steel remains somewhat quiet, not all plants having yet resumed operations after the New Year holidays. There is not a great amount of work on hand, but steelmakers, as well as manufacturing firms, report an increased number of inquiries, some of which involve a considerable tonnage. Trade in semis remains quiet but is showing an upward tendency. In the sheet trade, export demand for both black and galvanised is poor, and a number of mills are idle. The situation at the moment is practically the same as at the close of the year, but the amount of work on the market for which tenders are invited has given rise to a more hopeful feeling as regards the immediate future.

Our Cardiff correspondent writes:—Conditions in the iron and steel trades continue very depressed, and this week there has been a further decline in the prices of tinplates. Quotations have receded to 15s. 6s.—15s. 9d. per basis box, and some manufacturers are preferring to keep their mills idle than accept business at the prices offering. A general stoppage of the blast furnaces, steel works, and tinplate and sheet mills is threatened unless the stoppage in the coalfield is brought to an early termination. Local steel bars are unchanged at £5 per ton and foreign bars at £4 5s. per ton, but tin has again eased off, and this week's quotations have ruled between £113 12s. 6d. and £115 per ton. Shipments last week were again considerably below the average, and for the whole year they are down nearly 83,000 tons, or over 19 per cent., compared with those in 1929.

OTHER METALS.

TIN.—The market displayed weak features, with considerable irregularity at times. Occasional spells of buying led to some recovery, but subsequent selling pressure combined with lower Eastern cables resulted in a downward movement. Standard cash changed hands at £114 15s.—£113; three months, £116 15s.—£114 10s. Sales in the East were reported at £120 to £118 5s., £120 5s. and £118 per ton c.i.f. terms.

COPPER.—Market active and values responded, inquiries embracing all positions, though a further reduction in the Exporters' Association price and some selling pressure imparted slight irregularity. Standard cash sold at £44 11s. 3d.—£44 7s. 6d. and £44 12s. 6d.; and three months £44 5s. to £45 2s. 6d. and £44 8s. 9d. per ton.

LEAD.—In fairly good support but prices easier on realisations. Good soft foreign pig, January, sold £14 17s. 6d. to £14 1s. 3d.; February, £14 3s. 9d. to £14; March, £14 3s. 9d. to £14; April, £14 17s. 6d. to £14 1s. 3d. per ton.

SPELTER opened steady but later eased on selling pressure, offerings being moderately absorbed. January sold £13 5s. to £12 12s. 6d. and £12 13s. 9d.; February, £13 6s. 3d. to £12 13s. 9d.; March, £12 18s. 9d.; April, £13 12s. 6d. to £13; May, £13 10s. to £13 5s. per ton.

ALUMINIUM maintained. Home trade, also export, £85 per ton.

ANTIMONY fully steady and offers reservedly made in face of improved inquiries. English regulus, £38 to £45; Chinese regulus, spot £26 10s.; January-February, sellers £25; Chinese crude, January-February, £15 5s. per ton c.i.f. terms.

ANTIMONY OXIDE.—January-February, £25 10s. per ton c.i.f.

ANTIMONY ORE, 60 per cent. January-February, 3s. 2d.; 50 per cent. ditto, 2s. 9d. per unit c.i.f.

WOLFRAM steadier on reserved offerings. Chinese, January-February, sellers 13s. 6d. to 14s. per unit c.i.f.

QUICKSILVER firm. Spot £12 11s. 6d. net, or £22 5s., less 3 per cent., per bottle.

TIN PLATES steady with moderate sales. I.C. coke, prompt and forward, 15s. 9d. per box f.o.b. Swansea.

TEXTILES.

THE COTTON TRADE.—Liverpool, January 14th. Prices have moved within a very narrow compass during the week, and operations have been very small, hedge selling being mainly absorbed by the Farm Board. Consumption figures in U.S.A. for December are 406,000 bales, compared with 415,000 bales last month and 454,000 for December, 1929, the daily rate being 900 bales less than for November last. Spot sales for the week 8th to 14th (inclusive) are 25,000 bales, of which 14,790 bales are American, 850 Brazilian, 250 Argentine, 4,500 Peruvian, 1,650 Egyptian, 620 African, 1,160 East Indian, and 1,180 sundries. Imports for the same period are 46,296 bales, of which 23,673 are American, 508 Brazil, 876 Peruvian, 10,555 Egyptian, 2,030 African, 216 East Indian, and 8,438 sundries. Quotations to-day are: American middling, 5-32; Egyptian Sakel, 7-60; Egyptian uppers, 6-20; Brazil fair, 5-54; Peru G.F. smooth, 5-84; West African mid., 5-39; East African G.F., 6-44.

Manchester, January 14th. Trade in the market during the week has been overshadowed by the labour dispute, although many people have treated the situation with a good deal of complacency, there being belief that the threatened general lockout for next Monday will be averted. When negotiations have taken place between buyers and sellers the question of delivery has been an important factor. Our customers have not been disposed to concede a strike clause in contracts. News from India remains disappointing, and only scattered sales have occurred in piece-goods. Not more than a retail business has been done for China, chiefly in fancies. A little more inquiry has been about for Egypt and the Near East, and some printing cloths have been sold for South America. Certain buyers have displayed more interest in stock lots. There has been very little life in home trade fabrics. American yarns have moved off slowly, business being largely confined to odd lots for quick delivery. Restricted operations have also occurred in Egyptian spinnings.

THE WOOL TRADE.—Our Bradford correspondent writes: The first series of London sales for this year will commence next Tuesday, and according to present arrangements will continue till February 11. As there is an offering of 171,500 bales, including 54,850 bales of New Zealand, and generous offerings of New South Wales, Queensland and Victorian wools, it is quite likely that every section of buyers will have no difficulty whatever in satisfying all their requirements without forcing the pace in the slightest degree. The period which has elapsed since the December series has been extremely disappointing, notwithstanding the mild optimism with which the opening of the new year was greeted. Demand for tops, yarns and piece-goods has signally failed to give any encouragement to the raw material end. Any advantage which may be given in transferring wool from Australia to this country as a result of the higher exchange rates is lost immediately in the depressing effect upon prices for the raw material here, and there is every probability of a decline of 5 to 10 per cent. when the London sales open. That this decline will have already been discounted in the market value of tops will unfortunately not make the news any more palatable to the industry as a whole. Instead of definite recovery in prices which was expected to come by virtue of the reasonable level which had already been reached, the trade seems to be in for another period of disappointment. Manufacturing conditions are extremely disappointing. There is an increase of standing spindles and looms, neither dress goods manufacturers nor firms making men's wear goods being able to maintain their recent standard of employment. This is reacting upon spinners, and topmakers are suffering accordingly. In the absence of expanding consumption, there is no real confidence in extensive speculative buying of the raw material so far as importers and users in this district are concerned.

THE HEMP TRADE.—The market for Manila grades has been steady with buyers more in evidence. Sales include: K grade, January, £19 15s.; January-March, £19 10s.; February-April, £19 10s.; L.2, January-March, £18 10s.; M.1, January-March, £18 10s. African sisal, afloat, sellers £16 10s.; March-May,

buyers, £16 10s. c.i.f. According to a cable, last week's receipts amounted to 24,000 bales, against 24,000 last year and 22,000 in 1929. Next week's receipts have been estimated at 21,000 bales and at 26,000 for the following week. Manila shipments last week totalled 15,000 bales, of which 4,000 have been consigned to the United Kingdom, 5,000 to the Continent, 1,000 to the United States, 4,000 to Japan and 1,000 to other countries. Local consumption at 1,000 bales leaves stocks at 109,000.

THE JUTE TRADE.—Although operators have shown more interest in raw jute at the lower prices, the market continues quiet and European spinners operate sparingly. Quotations: Firsts, January-February, Continent, buyers £15; February-March, quoted £15 2s. 6d.; March-April, £15 5s.; April-May, £15 7s. 6d. Lightnings, January-February, £14 2s. 6d.; Hearts, £12 17s. 6d.; Daisee, £14; and Tossa, £15 c.i.f.

THE FLAX AND LINEN TRADES.—There is little activity in the flax market and prices are more or less unchanged. Business in linen yarns and cloth continues quiet. It appears that Ulster now has 92,000 fewer flax spindles than before the war, that five Belfast mills have stopped or closed down, and that the remainder are now operating at only about 50 per cent. of normal working hours. Fortunately the wages dispute in Northern Ireland was settled on Tuesday. Agreement has been reached on the basis of a 10 per cent. wage reduction as against a 20 per cent. cut proposed by the employers.

THE RAYON TRADE.—Although the demand for rayon piece-goods has shown some improvement, trade is still on a limited scale and orders are usually for small quantities. Business in the home trade is mainly confined to high-class fabrics and furnishing cloths. Overseas orders are few in number, and trade with India and China shows no signs of an early expansion. Some important sales to Canada have, however, been reported, and it appears that Argentina is taking a little more interest. The demand for acetate has been rather better than that for viscose, the production of which is still in excess of current requirements. Meanwhile it is interesting to note that the American Viscose Company have again reduced their yarn prices, 150 denier 40 filament now being quoted as a standard yarn at 75 cents per lb.

FOOD.

THE GRAIN MARKET.—The continued spell of wintry conditions experienced over the United Kingdom will prove beneficial in hardening the young wheat plant, and cereal crops generally present a healthy appearance. Official reports confirm the favourable condition of autumn sowings, but preliminary indications do not support expectations of an increased acreage under cultivation. Adverse climatic conditions have retarded threshings, so that only limited supplies of native wheat were forthcoming at the principal Statute markets. Trade, however, marked some improvement, and prices tend to harden in sympathy with the improvement in overseas varieties. On the import market, a good business resulted in Australian cargoes and parcels, exports being facilitated by a further weakening of exchange currency, and grain chartering from Commonwealth ports is now proceeding on active lines, as sellers were thus able to adjust prices on a competitive basis. The general tone of the market has remained steady under the influence of firm North American advices, but buyers are very reluctant to follow the upward trend. As a rule, millers were able to cover pressing requirements by purchases of Canadian and Russian on spot and near at hand at reasonable rates, and there appears no legitimate factor in the international situation to support a rise. The Argentine movement is not yet in full swing owing to the pressure to ship maize, but there is scarcely any doubt that this shipper will make a bold bid for European custom at the earliest opportunity, especially as weak exchange rates favours export sales. Meanwhile, Russian is still freely obtainable, and chartering continues steadily from the Black Sea ports. Of feeders, Plate maize declined sharply under selling pressure, and a declining rate of exchange, values touching a new low record level at 14s. 1½d. per quarter paid for passage parcels, with a steamer cargo at 15s., January-February shipment. Barley and oats dull and weaker.

WHEAT.—Steadier. No. 1 hard Manitoba, ex ship, 27s. 6d.-27s. 9d.; No. 1 Northern Manitoba, ex ship, 26s. 9d.-27s. 3d.; No. 2 ditto, 25s. 6d.-26s. 6d.; Barusso 63 lbs., 22s. 9d.; Rosafe, 63½ lbs., 22s. 6d.; Australian, 24s. 9d.; Russian on sample, ex ship, 19s.-23s. 6d.; landed, 20s. 6d.-22s. 6d. per 496 lbs. English, new, 5s. 6d.-5s. 8d. per 112 lbs.

FLOUR.—Quiet. London straight run, 24s. per sack for country deliveries, and 23s. London area. Of imported, Manitoba patents, 22s. 6d.-24s. 6d.; Buffalo, ditto, 22s. 6d.-24s. 6d.; Australian, 20s. 6d.-22s. 6d. ex store, per 280 lbs.

MAIZE.—Easier. Plate, landed, 16s. 9d.; ex ship, to arrive, 15s. 6d.; January-February, 15s. 9d.; February-March, 16s. per 480 lbs. Yellow maize meal, 25 15s. f.o.r. London. Yellow African, ex ship, 45 17s. 6d. per ton.

BARLEY.—Dull. Californian old, landed, 30s.-35s.; new, ex ship, 30s.-41s. as to sample; Chilian brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s. per 448 lbs.; Black Sea, landed, 14s. 9d.; ex ship, 14s. 3d.; Danubian, landed, 14s. 9d.; Persian, landed, 13s. 9d. per 400 lbs. English new malting, 6s. 3d.-12s. 6d.; feed, 5s.-5s. 9d. per 112 lbs.

OATS.—Easy. Plate, landed, 11s.; ex ship, 10s.; Chilian, tawny, landed, 13s. 6d.; best whites, ex ship, 18s. 6d.; landed, 19s. 6d.-20s. 6d.; Canadian feed, landed, 10s. 6d.; North Russian, landed, 12s. 6d.-13s. as to sample; South Russian, landed, 12s. 3d.-13s. per 320 lbs. English, new, 5s. 8d.-6s. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years, 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat	Cwts. 65,094	Cwts. 241,02	Cwts. 219,146	Cwts. 227,205
1 week to Jan. 10	2,352,444	4,888,248	5,089,680	4,541,135
19 weeks to Jan. 10				
Average price of English wheat per cwt.	s. d. 5 9	s. d. 9 7	s. d. 9 6	s. d. 9 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Jan. 3, 1931	Cwts. 62,350	Cwts. 174,631	Cwts. 25,735	s. d. 5 11	s. d. 8 3	s. d. 5 10

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2 1930	Jan. 15 1930	Dec. 31 1930	Jan. 2 1931	Jan. 7 1931	Jan. 14 1931
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	135½	51½	56½	58½	57½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	124	76½	79½	80½	82½

The visible supply of wheat in Canada at 62,830,000 bushels shows an increase on the week of 232,000 bushels. Supplies a year ago stood at 75,326,000 bushels.

SUGAR.—The market was again quiet and featureless. Only small sales transpired in spot parcels, prices for which remained unchanged. Apparently, trade buyers stocked themselves freely some little time back with sugar for December delivery. The Java Trust has disposed of 50,000 tons white and brown at an advance, 8½ and 7½ guilders respectively, ex go-down. Terminal market continued steady but at the same time very quiet. December delivery sold 6s. 5d. Foreign, 96 per cent. afloat, quoted 6s. 1½d. c.i.f. Cuban receipts last week, 15,225 tons against 17,410 in corresponding week last year, exports 16,998 against 35,317, stocks 661,868 against 147,805 same time last year. Total Java shipments last month, 183,070 tons against 196,000 in December, 1929, British India contributed 61,025 against 118,000, Japan, etc., 32,480 against 7,000, Hong-Kong/Canton 41,340 against 14,000,

The Royal Bank of Canada.

(Incorporated in Canada with Limited Liability.)

NOTE.—The Royal Bank of Canada (France) has been incorporated under the laws of France to conduct the business of the Bank in Paris, and the assets and liabilities of The Royal Bank of Canada (France) are included in the above General Statement.

H. S. HOLT, President. C. E. NEILL, Vice-President and Managing Director. M. W. WILSON, General Manager.

TO THE SHAREHOLDERS, THE ROYAL BANK OF CANADA: AUDITORS' CERTIFICATE.

We have examined the above statement of Liabilities and Assets at 29th November, 1930, with the books and accounts of The Royal Bank of Canada at Head Office and with the certified returns from the branches. We have verified the cash and securities at Head Office at the close of The Bank's fiscal year, and during the year we counted the cash and examined the securities at several of the important branches. We have obtained all the information and explanations that we have required, and in our opinion the transactions of the Bank, which have come under our notice, have been within the powers of the Bank. The above statement is in our opinion properly drawn up so as to disclose the true condition of the Bank as at 29th November, 1930, and it is as shown by the books of the Bank.

W. GARTH THOMSON, C.A., of Peat, Marwick, Mitchell & Co., Auditors. A. B. BRODIE, C.A., of Price, Waterhouse, & Co.

PROFIT AND LOSS ACCOUNT.	
Balance of Profit and Loss Account, 30th November, 1929	\$3,574,151.10
Profits for the year, after deducting charges of management, accrued interest on deposits, full provision for all bad and doubtful debts and rebate of interest on unmatured bills	6,572,627.19
	\$10,146,778.29
APPROPRIATED AS FOLLOWS:	
Dividend No. 170, 171, 172 and 173 at 12% per annum	4,209,000.00
Bonus of 2% to Shareholders	766,000.00
Contribution to Officers' Pension Fund	206,000.00

 WEST END BRANCH: Cockspur Street, S.W.1. J. A. Noonan, Manager.

toll upon the market's supplies of funds, but revenue now being collected is used partly to pay off Treasury bills, so that the money is rapidly returned to the market. For example, this week only £29,000,000 of new Treasury bills are being issued, against £40,000,000 of maturities; and next week issues will be £30,000,000, against £45,000,000 of maturities.

Early this week, the market discount rates rose to 2½ per cent. for three months' bills, as a result of the heavy gold shipments to France, discussed below. On Wednesday, when no gold shipments were made, the rate eased slightly to 2½ per cent., and the following day 2½ per cent. was quoted in earlier dealings, but subsequently, when news of a large shipment to France became known, a recovery to 2½ took place; and it was hoped that it might be possible to raise Friday's Treasury bill rate to what the market would consider to be a more reasonable level.

	Jan. 1, 1931.	Jan. 8, 1931.	Jan. 15, 1931.	Jan. 22, 1931.	Previous Rate and Date Changed.
Bank Rate	3%	3%	3%	3%	3½ (May 1, '30)
Banks' Deposit Rate	1	1	1	1	1½ (May 1, '30)
Discount of Call	1	1	1	1	1½ (May 1, '30)
Houses' Notice	1½	1½	1½	1½	1½ (May 1, '30)
Market rate (3 months' bills)	2½	2½	2½	2½	...

Contrary to expectation, the Banque de France found it possible to bring into force its decision to accept standard gold as from so early a date as January 16th. The immediate consequences of this change—which put an end both to the London premium upon fine gold and to the physical limitation of £300,000 a day upon gold withdrawals from the Bank of England—were that the Paris exchange rose to its former gold point of Frs. 123.89, and that heavy withdrawals of gold, amounting in the succeeding four days to £3,454,000, were made on Paris account from the Bank of England. On Wednesday of this week, the shipments suddenly ceased, but £402,257 was withdrawn the following day. In fact, sterling is still very weak against the franc, and it is known that the Cape gold due on January 27th has already been bought on French account, while it is believed that the £1,074,000 due on February 3rd will be bought largely for France. Furthermore, recurrent large gold withdrawals from the Bank at any rate during the next few weeks will not cause any surprise.

The other source of anxiety to the money market is the continued weakness of sterling against the dollar. It is becoming clear that the American financial difficulties are having the same effect on the international flow of money as those of France, in that American money, just like French money, is being called in from abroad. Much of this American money is being withdrawn through London from the Continent, and this explains not only the weakness of sterling against the dollar, but also the improvement, from London's point of view, in the German and Swiss exchanges. The trouble is that the low level of money rates in London and New York means that the export gold point is now ½ cent or so above \$1.85, and this week the exchange has been practically down to that level. It is known, however, that the American authorities are anxious that gold should not come to New York from London, and it is conceivable that banks would refrain from shipping gold, if the profit so obtained were only trivial, though it would be unwise to rely on official support being given to sterling.

Thus, though the past week has seen a fractional increase in market rates, it is questionable whether their present level adequately meets the real needs of the situation, which requires that London rates should be above those of Paris if the drain is to be checked. Meanwhile the week's gold movements have re-

duced the Bank of England's gold holdings by £2.3 millions to £142.9 millions. So far, this movement has been more than balanced by a return of a further £3.5 millions of notes from circulation, with the result that the Reserve is £1.2 million higher than in the previous week. Public deposits are practically unchanged, which suggests that the Treasury bill call, the War Loan redemption, tax collection, and Treasury bill repayments, all cancelled each other out. The increase of £2.6 millions in discounts and advances is easily explained by the small market borrowings of January 15th. The net result of these changes, and also of a reduction of £2.8 millions in Government securities—possibly representing Treasury bill repayments—is that market resources, as measured by bankers' deposits, have risen by £4.1 millions to the very adequate level of £68.8 millions.

In New York money remains very easy. About 1½ per cent. is still the prevailing call rate, and prime commercial paper is quoted at 2½ per cent. More significant still, a further reduction in the buying rate for bankers' acceptances has brought this rate to a new record low level, and in the open market bankers' acceptances are now quoted at 1½ per cent. for three months, and at 1½ per cent. for six months. The complete trade returns for 1930 have been published. Exports are \$3,841 millions against \$5,241 millions in 1929, and imports \$3,061 millions against \$4,399 millions in 1929. Gold movements during the year comprised imports of \$396 millions and exports of \$116 millions, or a net importation of \$280 millions. In the middle of the week some vague talk was heard of an impending reduction in the New York rediscount rate with the object of diverting short money into long-term loans, and so facilitating the issue of home and foreign bonds. Too much importance should not be attached to this at present.

Following the lead given by the Banque de France, the Swiss National Bank on Thursday announced that its rate was reduced to 2 per cent. This change, which may influence in turn the policy of the Netherlands Bank, is fresh evidence that the phase of general cheap money is by no means passing away. Coupled with the recent decision of the Swiss National Bank to admit for rediscount bills financing trade between two foreign countries, a 2 per cent. Bank rate in Switzerland should result in the Swiss franc moving further in favour of sterling.

The Foreign Exchange market was inactive this week, sterling being very weak at one time against the dollar. Several currencies were irregular, with the tendency in the main against us. The New York rate was ½ lower on balance after being at one time down to 4.85½, or below the estimated gold point. Montreal improved to 4.86½. Paris lost 6 points at 123.89. Brussels was better at 32.83½, and Milan gained a point at 92.73. Madrid was irregular but improved to 46.00 after touching 47.40. Amsterdam lost ½ at 12.06½. Berlin was erratic, and after touching 20.44½ gained a point on balance at 20.41½. Switzerland again weakened this week to 25.08½. Stockholm, after touching 18.12½, gained ½ on balance at 18.13½, and Copenhagen was better by the same margin at 18.16½. The South American exchanges displayed divergent tendencies. Rio lost ½ d., at 4½ d., Buenos Aires gained ½ d. at 34½ d., while Montevideo lost ½ d. at 32½ d. In the Far East the rupee and yen remained unchanged, but Batavia gained a point at 12.06. In the forward market dollars were firmer at ½ cent and ¾ cent premium. Paris went from one centime discount for both periods to 1½ and 3 centimes premium. Brussels and Milan were unchanged. Madrid was harder at 3 and 9 centimos premium, against 1½ and 6 centimos last week. The premium on forward Amsterdam advanced to ¾ cent and 1½ cents for one and three months respectively. Berlin was unchanged. Silver prices fluctuated a good deal, but were better at 14d. for cost and 13½ d. for forward. The Chinese silver exchanges improved in sympathy, Hong-kong gaining ½ d. at 11½ d. and Shanghai ½ d. at 1s. 3½ d.

THE CONFERENCE AND THE FUTURE.

HAVING reached the limits of agreement immediately attainable, the Round Table Conference has adjourned. We use the word "adjourned" deliberately and with emphasis, for though the progress which the Conference has made in clearing the ground and laying the foundations whereon to build a constitutional structure is greater by far than India's best friends in this country dared hope for three months ago, much patient work remains to be done; and it would be regrettable if the fact that the Conference had in the nature of things to be brought to a close should create an impression of discontinuity in negotiations so full of promise, but so dependent for their full fruition on steady pursuit of the objectives at which, it is now agreed, Great Britain and India in concert shall aim.

The declaration of policy with which Mr MacDonald, on behalf of His Majesty's Government, rounded off the proceedings of the final plenary session on Monday followed closely the lines already marked out by the agreed findings of the Conference's main sub-committees and assured, in advance, of the unqualified support of the Liberal Party's delegates and the tempered sympathy at least, though with some reservations, of the Conservatives. The Government, the Prime Minister announced, accepted the view that responsibility for the government of India should be placed upon Legislatures, central and provincial, "with such provisions as may be necessary to guarantee during a period of transition the observance of certain obligations and to meet other special circumstances; and also with such guarantees as are required by minorities to protect their political liberties and rights." The Governors' Provinces should be constituted on a basis of full responsibility; their Ministries should be taken from the Legislature and should be jointly responsible to it, subject to the over-riding authority of the central Government in subjects defined as of All-India concern; and there should be reserved to the Governor only the essential minimum of emergency powers. At the centre, on the basis (accepted by all parties) that the central Government should be a federation of All-India with a bi-cameral Legislature, the principle of the responsibility of the Executive to the Legislature should also be recognised. The subjects of defence and external affairs should be reserved at present to the Governor-General, in whom necessary powers must be vested to maintain in the last resort the tranquillity of the State and the constitutional rights of minorities; and the safeguards indicated by the Federal Structure Sub-Committee as desirable in the financial sphere should be incorporated in the constitution. It would, however, be "the primary concern of His Majesty's Government to see that the reserved powers are so framed and exercised as not to prejudice the advance of India through her new Constitution to full responsibility for her own government."

On this striking note one of the most remarkable assemblies of our time has closed. Though the Indian delegates had no very definite mandate from anybody, though the Government entered the Conference with no clear policy or even precise suggestions as to procedure, and though the Round Table was an attempt to deal in almost public meeting with a highly complex and in many respects technical subject matter covering a vast field, a striking corpus of negotiated agreement on fundamentals has crystallised in this declaration. We have set out its salient points at some length, because we believe they represent the broad principles of a policy which should satisfy every legitimate aspiration of India on the one hand, and from which, on the other hand, there can be no retreat. We do not seek to belittle, or to doubt the sincerity of the appreciable body of Conservative opinion in this country which views with some apprehension this vast experiment in self-government. For our own part we have frankly admitted to misgivings lest the introduction of western democracy's constitutional machinery "ready made" in a

sub-continent of 300 million people of widely different races, religions and stages of culture may raise grave problems. But, as we have said and would emphasise again, this is no question of Britain "surrendering to extremist pressure." The proceedings of the Round Table Conference have awakened people in this country to the dominating fact that, with whatever transitional safeguards you please, real responsibility in the Central Government, as in the Provinces, is demanded by all shades of "moderate" Indian opinion, without distinction of race, faith or caste, and is also supported by the rulers of the States. It is a demand which the great majority of British citizens both in this country and in the Commonwealth as a whole are disposed to recognise as just in principle. We have no interests, moral or material, in India which would warrantably lead us to contemplate, as an alternative to co-operating in the realisation of that demand, the intolerable prospect of repression and revolution which refusal of it would inevitably entail. With all respect to Mr Churchill, who has suggested that "It is not yet too late," the key to Indian government is still in our hands," we venture to assert that there can be no going back. This country has heard the case stated in the capital of the Empire by India's spokesmen, and the opinion of the country has conceded the essential principles for which they asked. The rest is for the lawyer or the expert. The Indian Empire is ended, the day of the Indian Federated Commonwealth has begun. It is useless for Mr Churchill to moan for the past.

On the other side of the picture, we join with every true friend of India in the earnest hope that the Congress leaders will have the patriotism, the courage and the wisdom to admit that, though they were not parties to the Conference, the Indian Delegation has returned—in terms of Congress politics—not defeated nor "bought over," but victorious, having obtained the free and willing verdict of this country in their favour. It would doubtless be easy by incendiary propaganda to whip up baseless suspicions of British good faith in the matter of the reserved subjects and emergency powers; but we find it difficult to believe that any Indian of intelligence could object, in a transitional period, to vesting in the titular head of the State powers analogous to those which a great western nation like Germany has entrusted, with generally admitted advantage, to its President. Moreover, apart from the fact that every violent manifestation of intransigence in India is bound to strengthen the reactionary minority of opinion in this country, and so hamper the establishment of the new constitution, we trust that Congress will take to heart the tremendous factor that, if the agreed principles laid down by the Round Table Conference represent, in the matter of safeguards, less than the maximum demands of Swaraj, they embody in another direction more than Congress itself dared hope for—the immediate realisation of an All-India embracing Provinces and States from the Himalayas to Cape Comorin.

It would be idle to ignore the fact that just as in this country there are those to whom the vision of such a State, freed from British tutelage, appears as a perilous mirage fraught with dangers of confusion and anarchy, so in India there are subversive elements at work whose plans would be ill-suited by the establishment of a Federal Legislature strengthened by the adhesion of the Princes. For this very reason, and because the formation of such a Federal structure will alone suffice to allay apprehensions in Conservative quarters in Great Britain, we trust that further negotiations will be vigorously pursued. Mr MacDonald, ably supported by Lord Sankey, has displayed at the Conference great qualities of tact and understanding. We hope that he will lose no time in strengthening the forces of moderation by defining with more precision the steps which he proposes to take to fill in the details of the structure which is to rise on the

Conference's ground plan. We are glad to note in his broadcast address on Tuesday the statement that "work is to be begun at once" on the findings and the unsolved questions of the Conference; and it would be natural and appropriate that the Prime Minister should desire to have an opportunity of conferring with Lord Willingdon before finally settling the machinery for further negotiation. But, as Mr Lloyd George wisely emphasised in his speech to the Indian delegates at a dinner on Tuesday, if the present opportunity for an agreed solution of the constitutional problem of India be lost, through "failure to keep step" in coming months, it will not readily recur.

The precise nature of the Federal structure, the definition of Federal subjects (with the associated question of the scope of authority not ceded by the Princes), the franchise, the details of the financial safeguards—all these are matters demanding an immense amount of careful thought and labour. If a solid, workable constitution is to emerge from the draftsmen's hands, it is of the highest importance that the necessary committees and expert bodies should get to work before the atmosphere of good will and mutual confidence engendered during the past two months has been dissipated by delays, and by the distance that separates Westminster from Delhi. The still unresolved communal problem is a difficulty? True, but it is a difficulty more likely to be settled in detailed drafting negotiations than by waiting for India to settle her differences *in vacuo*. The paramount consideration to-day is that every effort should be made by rapid action on the Government's part in getting consequential machinery at work without interruption, to convince India that we are determined to place no obstacle in the way of her attaining, with all the speed whereof she is capable, the constitution she demands, and that the realisation of the dignity of status to which she aspires depends solely on the use to which she puts the tremendous responsibility entrusted to her hands—not grudgingly, but freely of sincere goodwill.

THE CHOICE BEFORE EUROPE.

THE Council of the League of Nations is holding this week at Geneva one of the most important sessions in its history. Two main problems, on the solution of which the fate of Europe may hang, are being discussed by the Council and by two special League Commissions. The first is the problem of closer political and economic co-operation between the States of Europe on lines adumbrated by M. Briand; the second the ways and means of reaching international agreement on the restriction of armaments. A letter in this week's issue from a League correspondent indicates the great difficulties that lie in the way of progress with either project. The obstacles are many and various, but all and each of them owe their existence to one cause—fear. We cannot disarm, say some nations, because we have no security. What is the use, ask others, of this talk of political and economic co-operation, so long as European territories bristle with armed camps, the European sky is darkened by bombing aeroplanes, and while talk of war is on the lips of apprehensive citizens of many nations?

Yet the most profound truth of all is that security and confidence will come, and the psychology of fear be banished, when and only when the nations have found a way to co-operate through moral and economic as well as military disarmament. To say that we cannot agree to disarm or to co-operate until we have security, is just about as sensible as the attitude of the small boy who said that he could not bear to go to school until he got used to it. A plain choice lies before European nations to-day. They must either find some method of drawing closer together, instead of drawing further apart, in military, political and economic policy—or else they must think of the future, and plan for the future, in terms of preparation for the next great war. If anyone be inclined to regard these phrases as those of alarmist exaggeration, let him turn to the resolution passed at Geneva on Wednesday by the members of the Committee on European Federation, all of them Foreign Ministers in their

respective Governments. Hehe is the opening paragraph:—

As the result of our discussions and conversations during the last few days concerning the problems which our Governments have respectively to face, it has become plain that economic recovery is now being hindered by lack of confidence in the course of future events, due to widespread political anxiety. That anxiety has been increased by irresponsible talk in various quarters concerning the possibility of international war.

Those who are familiar with official phraseology will realise that in these words lies a very formidable and striking recognition of a dangerous situation, to meet which the Foreign Ministers announce their determination to "use the machinery of the League to prevent any resort to violence." Foreign Ministers customarily deal in soothing words. When, as here, they unite to give us a picture of a Europe talking of war, it is time for the world to listen with all its attention.

The warning of the Ministers, particularly in its bearing on the economic aspects of Europe's dangerous situation, was heavily underlined by M. Colijn, who gave it as his deliberate opinion that, nearly four years after the World Economic Conference had unanimously called for a halt in tariff rivalry, the present situation is worse than in 1927. Here are some points from M. Colijn's speech:—

Recent conferences had shown that, with one possible exception, the Governments did not find themselves able to enter into collective tariff negotiations.

The conference on the treatment of foreigners had been a failure.

In consequence, people in a good many countries had lost all faith in the economic work of the League.

The opposition to narrow economic nationalism was weakening.

Sooner or later Free Trade countries would no longer be able to resist the forces of Protection, and the removal of their moderating influence would leave the way open to a general tariff war.

The menace of a tariff war constituted a grave obstacle to a closer understanding between nations.

That is the deliberate diagnosis, not of a pessimist, a dreamer, or a distant observer, but of a man who, after being Prime Minister of Holland, has devoted enthusiastic energies to forwarding the successive practical attempts by the League to promote sanity in international economic policy. Unfortunately, it is difficult to quarrel seriously with his conclusions, and we are left to face the question whether there is any way out of this economic warfare, which, if it continues, must be a main factor in perpetuating the public psychology of fear and insecurity, and can only lead Europe ultimately into the paths of open and destructive conflict.

Is there any light anywhere? Is there any new sign or omen which suggests the possibility of a new avenue of approach by which national economic policies may be brought nearer to harmony? We think that there are some gleams of light on the dark horizon. One comes from an unlikely quarter, namely, the Balkans, which has grievously earned its reputation as the danger spot of Europe. At successive conferences at Athens, Warsaw, Bucharest and Sinaia the seeds have been sown of closer economic liaison between the States of Eastern Europe. Another gleam comes from just that quarter of Europe from which it might have been expected—from Scandinavia and the "Low Countries," which differ from other Continental States in that they are not in the least contemplating the possibility of fighting each other or anyone else, and, moreover—partly, no doubt, for that very reason—have always adhered to a low tariff policy and eschewed the temptations of narrow economic nationalism. Just before Christmas, Norway, Sweden, Denmark, Holland and Belgium signed an agreement at Oslo, undertaking to make no alteration in their Customs tariffs henceforward without giving due notice to their co-partners in the agreement. The text of this convention is not yet available in London, and fuller judgment must await its publication. But we do suggest here and now that this move has a peculiar significance which should not be overlooked by the British Government.

Europe, says M. Colijn, is "going from bad to worse" in the matter of tariff warfare. Here, on the other hand, is a group of five European countries, with

an aggregate commerce of over £1,150 millions, or 9 per cent. of the world's international trade, concerting between themselves measures for stabilising their tariffs on a level which is very low compared with the Continental average—treading in fact the very road on to which Britain has long been trying to lead the other nations. Does this not provide a conspicuous opportunity for Britain to throw the whole weight of the influence which she still wields as the greatest international trader and the protagonist of Free Trade, into the scale of fiscal sanity? Many difficulties may yet beset this new international agreement. But its initiation is promising and most timely at a moment when the rest of Europe is threatening to move the other way. We profoundly hope that our Government is alive to its importance, and is prepared to lend to it all the encouragement in its power. From the British point of view it should be an axiom of our policy to show the utmost willingness to co-operate with any nation or group of nations which sets out to check the mad race in the building of tariff walls; from the broader standpoint of general European interests, it is by that policy alone that we may most helpfully use our influence towards restoring that degree of economic understanding and common sense which must be a condition of Europe's success in the hard struggle to regain security, peace and prosperity.

BANKERS AND MONETARY POLICY.

It is natural that the bankers' speeches this year should be mainly concerned with the present world-wide trade depression. As to the causes of that depression and, in particular, how far monetary influences are responsible for it, and how far it is curable by monetary policy or by means at the disposal of central banks, the opinions of leaders of economic thought in all countries have differed widely. Indeed, since by common consent the responsibility cannot be ascribed entirely to any single factor, what tends naturally to distinguish one diagnosis from another is the relative weight attached to the various elements in a complex aggregate of causes. Hence readers of the addresses delivered this week by the chairmen of Barclays and the Midland banks need not be surprised that the views put forward by these two distinguished bankers were by no means wholly in agreement.

Mr Goodenough thinks that "monetary influences have played a much smaller part in bringing about the trade depression than is sometimes thought." He emphasises the lack of flexibility of wages and retail prices as an important factor in the domestic situation, and stresses in the international field the lack of balance between industrial and agricultural production, quoting figures to show that while the world's population has increased since 1913 by 10 per cent., production of food-stuffs has risen by 16 per cent., and that of raw materials by 40 per cent. This in itself does not prove over-production; for the world might well have been able to absorb such increases, especially if they had come about as a result of a rising demand from the more backward nations. But when it is considered, firstly, that a very large part of the increases has occurred in the last two or three years, and secondly, that they have been fostered by the various attempts to interfere with the national play of supply and demand—in fixing prices, fostering production at comparatively high costs behind tariff walls, maintaining prices by holding back supplies and thus accumulating redundant stocks—Mr Goodenough is right in regarding temporary "over-production" at least of primary products as a formidable influence at the moment in producing depression.

Nor does this list exhaust the factors which are not of a purely monetary nature, or at least not connected directly with central banking policy. Mr McKenna, in his very interesting analysis of the situation, gave as the three main causes of the economic troubles of the world first, the maldistribution of gold; secondly, the fact that the public has not yet recovered from the reaction from the American stock market collapse; and thirdly, the effects, still operative, of the long anterior period of deflation in Great

Britain. But though maldistribution of gold takes first place in this analysis, Mr McKenna emphasised the fact that an essential cause of that maldistribution was to be found in the inability or unwillingness of creditor countries to lend to debtor countries. Dealing with the complication in economic troubles resulting from the drift of gold to France and America—a complication which Mr Goodenough likewise recognises—Mr McKenna admitted freely that neither of these countries has any desire to increase its gold stock. Nevertheless, "a creditor country must either make new external loans or accept gold in payment of the final balance. . . . America has shown less readiness to lend abroad than in former years, and France as a source of capital has been almost entirely closed to the foreign borrower." Moreover, the influx of gold has not created in either country a demand for the goods of other countries or set on foot influences that would restore the balance of payments. Both countries have obstructed imports by tariffs and neither country has yet recognised fully that, given a consistent credit balance of trade, failing imports of goods, there must be export of capital.

Here politics play a prominent rôle. The preceding article discusses the feeling of general insecurity prevalent in Europe, which is, of course, a formidable obstruction to international financial operations; but apart from political considerations, the fact is that at the moment it is very difficult to know who is a good borrower. As a correspondent recently pointed out, Frenchmen have lost their pre-war savings in Russia; they have lost their home savings through the depreciation of the franc, they have lost on their U.S.A. investments of two years ago, the Young Loan has proved a bad bargain, and now their own stock market fall has driven them back to their traditional habits of hoarding. This "stocking" psychology accounts for the fact that a large increase of currency has occurred in France without any corresponding reactions on trade. We referred a fortnight ago to suggestions that have been made to encourage French foreign investments by setting up investment trusts or by quoting existing foreign securities on the Bourse; but banking circles in Paris are not in favour of the former, and the latter has been resisted through fear of affecting prejudicially the price of home securities. The Oustric affair and the noisy campaign conducted by M. Coty through his great popular organ, *L'Ami du Peuple*, are calculated to impede changes that will have the effect of facilitating France's foreign lending. The restoration of confidence, both political and economic, must precede any substantial change in this respect.

Similarly, in the United States, the aftermath of the collapse of the speculative boom in Wall Street has been what Mr McKenna termed "the psychology of fear," which has been so far an insuperable obstacle to enterprise taking advantage of cheap money provided by the banks; and an analogous "instance of the power of mass psychology to neutralise the efforts of monetary policy" was adduced by Mr McKenna in the growth since 1928 in the proportion of time deposits to total deposits in his own bank. Absence of confidence, he truly observed, led to savers continuing to withhold their funds from investment in commerce or industry, creating thus conditions of "under-consumption" which bankers were powerless to remedy.

Finally, there is a further cause contributory to the depression which these distinguished bankers might also have mentioned. In considering the fact that the inter-

national payments of France and the United States have not readjusted themselves as a result of gold movements, it is well to bear in mind that payments for which no goods or services are given in exchange are being made as a result of the debt settlements. As against a net annual outflow of £85 millions from Germany, the net excess of receipts over payments enjoyed by the United States amounts to £46½ millions, by France to £27 millions, and by Italy, Belgium, Yugoslavia and other creditor countries combined to £11½ millions, receipts and payments in the case of Great Britain approximately balancing.

When due weight is given to all the foregoing factors, we agree with Mr Goodenough that there is a danger lest the responsibility of central banks' monetary policy for the present depression be exaggerated. At the same time, reviewing the range and extent of the price decline since 1924, we find it difficult not to detect in the monetary policy of the leading countries a main cause of the downward drift. How much can be done in present circumstances by central banks to put matters right is another matter. Mr Goodenough replies "very little." He goes further, and is inclined to traverse critically the whole idea of central banking co-operation. He is afraid that there is danger of the gold standard becoming a matter of management and that the "substitution of co-operation for the automatic working of the standard might result in great difficulties." He fears that in emergencies central banks will consult their own and not the general interest; that the use of Bank rate leaves each people more free than if it is dependent upon "the theory of controlling prices through some arbitrary regulation of output or by the contraction and expansion of credit." International trade will never be healthy to the extent that "co-operation prevents the settlement of debt by natural means."

We find these misgivings of Mr Goodenough somewhat misplaced. As Sir Charles Addis remarked in his recent admirable address to the Institute of Bankers: "That central banks can and do exercise at any rate some influence on the course of prices cannot be gainsaid, and most people would agree that it is better that it should be used consciously and of set purpose rather than unconsciously and at haphazard." The problem of the proper exercise of that influence is by no means simple. Mr McKenna rightly pointed out that its complete solution is impossible for any single central bank; that the difficulties of monetary policy are essentially international and can be dealt with only by co-operation between central banks, and that the first essential must be a full recognition of the imperative need of "a steady general level of commodity prices." But though we may agree, for want of a better word, that "stabilisation" is the *desideratum*, many questions remain to be answered: For example at what level is it desired to stabilise prices, i.e., at the present, or a higher or lower level? Again, is there agreement among the nations that stability on any particular level is desirable, or are their interests believed by them to be conflicting? Moreover, as Mr McKenna truly observed, though central banks by keeping money plentiful and cheap can "preserve conditions favourable to recovery," they cannot control the use of money—its velocity of circulation and the direction of its employment whether for speculation, consumption or investment in capital goods.

But though "stabilisation" will in any case be difficult, we are by no means inclined to accept the view, that we should not endeavour to explore all possible steps in that direction. A further report from the League's Gold Delegation, whose publication is now awaited, may contribute something to our knowledge of what steps are considered practical and advantageous at the present juncture. We do not expect that the report will contain any revolutionary proposals, and, indeed, it is clear that until a much greater measure of co-operation between central banks has been achieved, and until there is greater unanimity of opinion as to both the effects and proper aims of monetary policy, the world is not yet in a position to control the monetary machine. But if we are to avoid the recurrence of the present economic *débâcle*, it is

urgently necessary that in coming years trade should not be handicapped, or the recovery of prices checked by disagreement as to the proper use of gold or by failure to allow adjustments to take place that will have the effect of correcting the balance of payments and ensuring the proper functioning of the gold standard. The first aim to-day of those responsible for monetary policy should be to secure timely agreement at least on desirable objectives.

BY-PRODUCTION IN INDUSTRY.

(BY A CORRESPONDENT.)

THE manufacturer who first turned his waste into a marketable product was the father of an industrial technique which has been responsible for the discovery of countless new products, for the growth of small undertakings into concerns with world-wide markets, and for tilting the profit-and-loss scale of many a company in the right direction. Elimination of waste is the key to prosperity. In a world in which profitable marketing rather than simple production is the governing factor, by-production may be vital to success. And since it is in periods of depression like the present that waste is most carefully overhauled, it is often in such periods that the greatest commercial discoveries are made.

Successful by-production means the discovery of some neglected opportunity in a business to turn space, power or material into cash. In the remunerative utilisation of raw material or in the application of a manufacturing principle or patent to an entirely new process, may lie the origin of a new industry. For example, at one time, the disposal of cotton-seed as waste was a great problem. To-day, the gross income from the cotton-seed industry is reckoned at over fifty million pounds a year; among the industries which depend on cotton-seed to a certain extent are the lard compound, the cattle-feed and the fertiliser industries; soap manufacturers also make use of cotton-seed; and a new product of cotton-seed hulls has been discovered recently in the form of a sugar called xylitol. Another new industry is expected to result from the experiments now being made with cornstalks. Millions of pounds of shavings and sawdust are ground into wood-flour which is used as a filler in a number of articles such as linoleum. Soap manufacturers are responsible for the establishment of the glycerine industry. Oils are extensively used in the manufacture of paint and varnishes; some of these oils are edible and thus the same raw material may serve both as a paint and a food ingredient. The portable electric storage battery resulted from Edison's being asked to find some means of preventing or decreasing the number of mining accidents. A man living in a part of Canada, where hard wood is the chief fuel, collects the ashes from wood-burning homes for miles around, and sells them to the gardening trade of the United States.

But though the discovery of a by-product may often be the making of a business or the saving of a failing firm, by-products may represent a most disturbing element in business; for what is one company's by-product is another company's main product. Moreover, since the material which now goes to make the by-product went formerly to waste, anything which it may realise may be considered pure gain; hence price is no object in selling. In marketing the by-product, the cost of production, overhead and other charges need not be considered and, to ensure sales, prices may be cut far below those possible to a company whose sole business is the manufacture of this particular article. For instance, the cornstalk production companies are going to prove a formidable competitor of the organised paper industry.

Nevertheless, with the growth of large-scale business, by-product or synthetic product development is nowadays almost inevitable. Thus we have nearly all the gramophone companies entering the wireless field; most car manufacturers now make a motor-boat engine, and many also manufacture aeroplane engines; while the Eastern Kodak Company's catalogue includes such items as cellulose, acetate, wood alcohol, lumber, wood preservatives, pitch, charcoal, acetate of lime for lacquers, etc. All these

chemical materials have sprung logically one by one from the film business. But Ford, perhaps, provides the most amazing example of the industrialisation of waste. The following facts and figures refer to the Detroit Ford factory but, with the new Dagenham factory outside London, many British firms may awake to find that a new source of competition has arisen in their midst. In America Ford uses a portion of his own by-products, but sells most of them to outside channels. He sells the gas he does not need to the city of Detroit. Chips, sawdust, shavings and other small particles of wood are turned into charcoal, and a variety of chemicals. The old pieces of glass left over after Ford car windows have been cut are converted into glass shelving, door push plates, etc. Large size coke being used in the Ford plants, the small pieces are sold for domestic use, while benzol, methyl and ethyl alcohol are made from garbage. Here are the amounts of Ford by-products turned out during 1928:—

Coal tar	(gallons)	13,552,394
Ammonium sulphate	(tons)	17,238
Motor benzol	(gallons)	13,661,595
Gas	(million cubic ft.)	16,845
Coke	(tons)	1,101,689
Charcoal briquets	(tons)	15,898
Hardwood pitch	(lbs.)	2,827,237
Wood alcohol	(gallons)	197,406
Calcium acetate	(tons)	853
Ethyl acetate	(gallons)	550,408
Portland cement	(barrels)	620,075
Slag	(tons)	283,210
Plate glass	(sq. feet)	14,155,507
Paper	(tons)	4,443
Pig iron	(gross tons)	304,191
Ingots	(gross tons)	321,476
Coal	(tons)	2,884,728

It is not to be supposed that the Dagenham factory, with its infinitely smaller car output, will equal these figures for its by-products; but the figures furnish a striking example of this new trend in industry, a trend that is developing rapidly until few large manufacturing undertakings exist which do not overlap the activities of another. The problems of competitive prices entailed by this element in industrial organisation are far-reaching and intricate.

THE BANK BALANCE SHEETS.

SUFFICIENT has been known for some time concerning the reactions of the trade depression upon the money market and the business of banking for the contents of this year's bank balance sheets to have been anticipated with a fair amount of accuracy. Bad trade and lack of confidence in the future, shared in various degrees by bankers and

industrialists alike, have forced the banks to write down in rigorous fashion their outstanding loans and deterred traders from seeking, and bankers from granting, fresh accommodation on the usual scale. Thus a substantial contraction in bank advances was expected; and, as the table at the foot of the page shows, the aggregate contraction that has actually occurred amounts to £62.0 millions, or 6.1 per cent. Lloyds Bank shows the largest proportionate fall with a drop of £16 millions.

Again, bad trade and depressed stock markets spell idle money as well as idle men and machinery; and notwithstanding the discouragement of low deposit rates, many individuals in times of uncertainty such as this prefer to leave their money "in the bank," rather than cast bread on the perilous waters of investment. Hence it was to be expected that deposits would be maintained at their level of last year, or even be increased, and here again anticipations are borne out by current results. Deposits in the aggregate have increased by £68.2 millions, or 3.6 per cent. The National Provincial accounts for £20½ millions out of this total.

The joint-stock banks' cash holdings also are changed only in a minor degree since a year ago. During 1930, the Bank of England's gold gains and losses practically cancelled out, and for this reason as well as because of the care taken by the Bank to maintain the nation's credit fund intact, no actual deflation occurred. Indeed, bankers' deposits in the Bank of England at the end of 1930 were £22.1 millions higher than at the end of 1929.

The ratio of cash to deposits has fallen owing to the increase of deposits, the ratio for the "Big Five" being 15.9 per cent., compared with 16.7 per cent. a year ago. The ratios, however, vary from 18 per cent. in the case of Barclays to 14.6 per cent. for the National Provincial. Similar differences in ratio have obtained in recent years.

As bank deposits are higher, and cash unchanged, while bank advances had fallen, it was arithmetically inevitable that the banks should have added during 1930 to their other principal earning assets, namely discounts and investments. And this again is just what has actually happened. Investments in the aggregate for all the banks included in the table have expanded by £42.5 millions, or 16.8 per cent., and discounts by £94.9 millions, or 44.3 per cent.

The fact that, *faute de mieux*, the banks have had to divert an abnormal proportion of their resources into discounts goes a long way to explain the contraction in bank earnings, both net and gross. Another, though allied consequence of the trade depression, and still more of the collapse of commodity prices, has been the reduction in the total value of commercial bills available in

* Includes "reduction of bank premises account."

† Includes call money.

the London discount market for the banks and other buyers. Eloquent testimony to this contraction is afforded by the columns in our table showing the banks' own acceptances, which have fallen since last year by £50.0 millions, or 29.5 per cent.

Thus the banks' need for bills coincided—again inevitably—with a shortage of commercial bills; and the banks, in common with others, had to fall back upon the only other way of employing their surplus resources, namely, upon Treasury bills. Here, too, they have been faced with a relative shortage, for the effect of the Government's conversion operations of last spring was to make a substantial reduction in the number of Treasury bills available. The inevitable result of this combination of an abnormal demand for bills and a shortage in their supply was that the price of bills rose, or, in other words, market discount rates fell. This explains to some extent the frequent reductions in Bank rate that were made early in the year, and still more the wide margins that have existed between Bank rate and market rates of discount. From the banks' standpoint, it meant that bills of exchange were a most unremunerative way of employing their funds. In fact, money which could otherwise have been normally lent to customers at rates of 4½ and 5 per cent., had to be invested in bills which yielded little more than 2 per cent.

It may be asked why, in these circumstances, the banks did not prefer investments to bills, for the table shows that the banks added far less to their investments than they did to their bill portfolios. The answer is simple. A bill of exchange matures at an early date, and is then paid at its nominal value. Investments, however, even if of a gilt-edged character, can only be realised by being sold on the Stock Exchange for what they may fetch. Even a break of only two points in their market price is sufficient to destroy any gain arising from the margin between stocks yielding 4½ per cent. and bills yielding 2½ per cent., and so it is easy to comprehend the banks' decided preference for bills.

The main lesson of this year's bank balance sheets and profit and loss accounts is that money is just as liable to unemployment, or rather to unremunerative employment, as are any of the elements of industry. The balance sheets, as well as the profit and loss accounts of the banks, illustrate the extent of this unemployment.

IVAR KREUGER.

(BY A CORRESPONDENT.)

AMONG business men who, on account of their achievements during the last ten difficult post-war years, have won international repute, few have attained the notoriety of the managing director of the Swedish Match Company and of Kreuger and Toll. Yet few have kept themselves so immune from the limelight of personal publicity. Ivar Kreuger was born in 1880 in a small Swedish country town, his father being the manager of a match factory which belonged to the family. Having at the early age of 20 passed his final examinations at the Royal Technical University in Stockholm, he went abroad to gain experience and to try his fortune. Starting with no capital at his disposal, in New York he worked for a real estate firm; in Illinois he was employed by a railway contractor; and in Mexico he worked on bridge-building. After that he went to Johannesburg, which was the scene of his initial venture as *entrepreneur*. A syndicate which was constructing an hotel was unable to complete its undertaking; Kreuger managed to secure the necessary backing, took over the enterprise and made a profit of several thousand pounds, which, characteristically, he spent on travelling through many countries and acquiring first-hand knowledge of markets and languages. As he remarked to a friend in later life: "The money was useful to gain experience while I had the time. I never doubted the possibility of getting more money. But time and opportunity come only once." When, at the age of 27, he returned to Sweden, he had been actively engaged in business under varying conditions, not only in the employ of others, but also on his own account; and he had seen that hard work, careful

calculation and sound sense are necessary requisites for success.

It was in 1907 that Ivar Kreuger, together with his friend Paul Toll, also an engineer, started a contracting firm in Stockholm for construction works, which four years later was transformed into a limited company, Kreuger and Toll. Thanks to the family interest in match production, Ivar Kreuger in 1913 became more actively occupied with that industry, and it was then that Kreuger and Toll acquired its first holdings of shares in a match-manufacturing company. Having seen the great possibilities that this industry offered, he became, in 1917, the driving force in bringing about the great amalgamation of Swedish match manufacturers, which was given the name "The Swedish Match Company." More than 90 per cent. of the production of Swedish matches being exported, management of the new company meant that Ivar Kreuger became confronted with the great problems of selling on the world markets. He was able to attach to himself a staff of highly qualified collaborators, with whose assistance the Swedish match industry was gradually transformed into a world industry, with subsidiary companies or other allied enterprises in all the most important countries. A great step forward was taken when, in connection with the acquisition of match monopoly concessions, loans were granted to governments against the security of the royalties payable for the concessions—a combination of financial and industrial enterprises which was attractive both to the states in need of money and to those who provided the funds, to whom it afforded special guarantees. Indeed, it was in this salient example of striking a new line in business policy that Ivar Kreuger showed pre-eminently his power of creating original ideas. As the originator of a system (fairly comparable with the League idea of international loans) where security for international borrowing in the disturbed aftermath of the war could be wedded with commercial advantage for the lender, he is entitled to credit for a real *idée géniale* springing from a mind determined to overcome difficulties, and fruitful of notions when lesser men are inclined to shrug shoulders over the insurmountable.

It is difficult to write of Ivar Kreuger except in relation to what he has done. This is not only because his life is his work, but also because Ivar Kreuger has wholeheartedly and single-mindedly devoted himself to his enterprises without any excursions into political or other side channels. Not that he has no other interests: he reads a great deal—novels, biography, political and geographical literature; and he is a frequent playgoer and a lover of music. In his outlook he is probably most akin to the Anglo-Saxon nations, but he takes a great interest in, and is very much charmed by, French culture. He finds the time to occupy himself with his books and his friends, because he has absolutely refused to take any part in ordinary society life. He regards himself as a business man who has too much responsible work to do to fritter away his time, and who is intent on keeping fit for his main tasks.

Through his work in many countries while he was still in the early twenties, Ivar Kreuger learnt to speak and write three or four foreign languages. In this he was helped by his remarkable memory, which is a great asset to a man with such world-wide interests. For example, he has shown himself capable of remembering the precise terms of a letter hastily read four years ago; and his power of recollecting the exact words of long-past conversations is extraordinary. He is a perfect master of his material: what is most striking in the workings of his mind as well as in the organisation he has built up is the astonishing simplicity by which it is characterised. No efforts seem to be wasted; but, on the other hand, no efforts are spared when it is a question of judging the value of a new investment or embarking upon a new financial scheme. Successful business certainly depends greatly on flair, but only he can be lucky in the long run who bases his judgment upon an intimate knowledge. It is significant that Ivar Kreuger began his career as a builder, and his most deep-rooted inclination is always to construct something durable. No example can be quoted of his acquiring control of an enterprise,

squeezing out from it what could be obtained and then leaving it to its fate. He has concentrated upon a relatively limited number of enterprises with which he is intimately concerned and to which he can devote his energy. His whole attitude towards business has been to keep in mind what will prove valuable in the long run; and he once said to a friend that he was always willing to make an immediate sacrifice if thereby he could gain some important advantage in years to come.

It has often been said in Sweden that while the country produces excellent technicians, it is difficult to find leaders with sufficient business capacity. Ivar Kreuger has shown himself to be a rare combination of technical knowledge and sense of financial realities. He would probably himself admit that the development of his enterprises has partly been due to unique opportunities. Few industries would be so well suited for the acquisition of government concessions and to be a basis for government loans as the match industry, and few countries would have been so acceptable from the political point of view as the ex-neutral country of Sweden; but it is to the credit of Ivar Kreuger that, with his collaborators, he has been able to take the fullest advantage of all the possibilities which the situation offered. It is also fair to say that though, naturally, as a business man, he has had to further the interests of his companies, he has not lost sight of the wider aspects of the vast financial operations undertaken under his leadership. The reconstruction of post-war Europe has been a matter of genuine concern to him; and he has been anxious throughout to ensure, so far as possible, that funds supplied in return for concessions should not be used by the borrowers for unproductive or internationally deleterious purposes.

Each year in the reports of the Swedish Match Company and Kreuger and Toll an account is given of the progress of the Kreuger concern and of the lines of policy adopted; but apart from these statements, it has been the habit of Ivar Kreuger to refrain from public appearance, a line of conduct motivated to some extent by personal shyness. Last year he made, however, an exception to his rule in twice addressing American audiences—on the problems of "transfers" of international debts and monetary policy. In his speech in Chicago he laid stress on the fact that to-day "the money policy of the great nations must be governed to a large extent by international considerations rather than by local ones, and any attempt by a large creditor country to treat its money policy as a purely local problem may lead to disastrous results for the country itself, and particularly for its export trade." But apart from these isolated public pronouncements, he remains a figure curiously withdrawn from the gaze of a world in which his financial activities are of more than a little international moment. Acutely interested in human affairs, he enjoys an even temper which has its physical counterpart in an excellent constitution. Among his friends he is known for his almost proverbial kindness, and as a business man he has gained his position and his wealth without leaving enemies behind him.

Notes of the Week.

A Government Defeat.—The Government met with an unexpected defeat in the House of Commons on Wednesday night, when an amendment on the Report stage of the School Attendance Bill was moved by a Labour member, Mr Scurr, and carried by a majority of 33. The purpose of the amendment was to secure expenditure out of public funds for non-provided schools, and the Minister of Education, though expressing willingness to legislate if any agreement could be reached between the various sectarian interests involved, stood by the sound principle that public money could not be voted unless control were vested in public boards. The passing of the amendment is inconvenient for the Government, for it delays the enforcement of the measure until a further Act has been passed empowering public money to be spent on the re-

conditioning and re-equipment of non-provided schools, and before any satisfactory agreement between the Government and the Churches can be reached, long and difficult negotiations are inevitable. Nevertheless, the defeat was not of major political importance, and did not affect the principle of the Bill; and the Prime Minister took the obvious course in not regarding the occurrence as a reason for resignation. Indeed, for the Government to resign over a matter of time-honoured sectarian controversy, at a moment when a vital session of the League Council is in progress, and when Parliament is about to debate the results of the Round Table Conference, would have been unthinkable. Nevertheless, in spite of Mr MacDonald's personal success at the Indian Conference, the menace to the Government's security is not lessening. A defeat, like that of Wednesday, weakens prestige in the House. The Liberal Party's decision to abstain from voting in the division on the Trade Disputes Bill (which Sir John Simon and some others will doubtless disregard) renders the Government's prospective majority on this major measure precarious. The Conservative Party are tabling a full vote of censure on unemployment policy; while Sir Oswald Mosley has determined to arraign the Cabinet on the same issue before the convened representatives of the Labour Party in the country. This concatenation of events creates a position in which a real threat to the Government's life might arise at short notice. We trust that it will not arise too soon, and that the Government will in particular show tractability over the Trade Disputes Bill, for in our view no useful purpose could be served, and serious consequences might in some directions result, from a general election at this particular juncture.

The Alternative Vote.—The text of the new Representation of the People Bill contains no unexpected provisions, and, if there is any surprise, it lies in the omission of clauses to clarify such dubious points in the present electoral law as, for instance, the definition of purposes on which election expenditure on behalf of a candidate may properly be incurred. The main provision is, of course, the substitution of the system of the alternative vote for the single direct vote in parliamentary elections, and the rules governing the conduct of the system are set out in a schedule. The institution of the new system involves the division of certain large constituencies, which at present return two members each. These are Blackburn, Bolton, Brighton, Derby, Norwich, Oldham, Preston, Southampton, Stockport, Sunderland, and Dundee. All the other clauses are of a nature expected in any electoral reform Bill framed by a Labour administration. Plural voting receives its almost final death blow, by the abolition of the "business premises qualification" for registration as an elector—this method of qualifying being maintained only in the City of London. University representation is to be abolished; maximum election expenses reduced by the reduction of a penny per head of voter; and the use of private motor cars on polling day restricted to the owner's personal use for conveying himself or resident members of his family to the booth, or to registration with the returning officer, who will apportion their use between the candidates "having regard to the needs of the several parties of the constituency." None of these changes are of first-rate importance, nor in themselves reprehensible. The arguments in favour of university representation have always been rather thin, and if there is need in the counsels of the nation for some of our outstanding leaders of academic life, there is, after all, a second chamber, where their presence would perhaps be more efficacious and suitable.

The League Council.—A serious note was struck by Mr Henderson at the opening of the League Council meeting at Geneva on Tuesday, January 20th. He began by reminding his colleagues of the repeated obligations to disarm which the States members of the League have taken upon themselves from their signature of the Covenant onwards. He insisted that no mere limitation of armaments, but only a reduction, would meet the

case. He spoke frankly of the anxiety which the failure, so far, to achieve reduction was causing. There was a widespread fear that the nations might be falling back from the League system of co-operation into the pre-war system of rival alliances for warlike ends. He declared that in his view no alliance could be made that was not subject to the Covenant, and that, on behalf of the British Government, he would say that he knew no alliance, and could know none, except that of the Covenant itself. This straightforward and timely declaration in the Council was followed up on Wednesday, in the Commission of Inquiry on European Union, by the passing of the arresting resolution quoted on a previous page, in which the Foreign Ministers pledged themselves "to use the machinery of the League to prevent any resort to violence." So far so good. The responsible engineers have assured the public that they do not propose to let the steam gather head again until it once more bursts the boiler. But the public knows enough about the mechanism of international affairs to realise that this assurance can only be fulfilled if the engine is equipped with safety-valves which will operate effectively. One safety-valve which remains to be fitted is that of economic co-operation. Another is a solution of the Minorities question, and the view taken by our League correspondent on a later page, that in the matter of Minorities the League is comparatively impotent, is extremely discouraging. In proportion as the League succeeds in securing tolerable conditions of life for subject minorities, by the League method of peaceful co-operation, in that measure will it succeed in its direct efforts to safeguard the world against a fresh explosion in the form of another world war.

The Crisis in Spain.—A few weeks ago we had to chronicle the failure of an ambitious but abortive attempt in Spain at a political revolution in the traditional grand manner. We prophesied at the time that this would not be the end of the stirring and strivings which were at work in the heart of the Spanish body politic; and this impression is confirmed by the news that is coming in. Last week Señor Cambo, the Catalan statesman, made an appeal for a genuine campaign on real issues, at the forthcoming General Election, instead of the traditional system by which the party leaders used to allocate the seats in advance in consultation with the Minister of the Interior of the day. Señor Cambo is a Catalan who has always played a part in Spanish politics and who does not regard the interests of Catalonia and Spain as irreconcilable. He naturally carries great weight with Spanish public opinion. This week it is announced that an "Institution for the service of the Republic" has been founded by a group of eminent Spanish intellectuals. Their manifesto combines a severe criticism of the present régime with the recommendation of a Fabian policy—a combination which is much more likely to succeed and to have a success which will be permanent and fruitful, than any project for revolution by violence. Two things seem clear. The first is that Spain is experiencing something like a *risorgimento* not merely in her political aspirations but in all spheres of her national life. The second is that the Monarchy appears, in Spanish eyes, as the symbol and the citadel of the corrupt and moribund past, from which the nation is now determined to break free. We believe that a movement of this kind is ultimately irresistible, and that the wisest and most patriotic course for those concerned is to bow to the inevitable with a good grace and in good time. For the moment, however, Spain is still under martial law and the Press censorship more severe than at any time during the Primo de Rivera régime. The peseta, which is a sound enough barometer of the political situation, continues to decline. The Government, apparently at cross-purposes with the Bank of Spain, can no longer hold out any hopes of stabilisation *de facto*, pending the passage of a bill by a *Cortes*, and has now resorted to draconian measures of control over export transactions bearing a family resemblance to those of the late dictator-

ship which were to be so incontinently reversed. There are indications that King Alfonso is still prepared to rule the country through the Army and damn the consequences. In an interview published in the *Morning Post* last Saturday he told the Madrid correspondent of that paper "with calm confidence" that he "still had lots of work to do and was not going to leave the country." This suggests that he is deaf to the warning that the great majority of experienced politicians of all parties have united with liberal and professional opinion in demanding not an ordinary *Cortes* but a *Cortes Constituyente*, which will give the nation its chance of declaring for Monarchy or Republic. Events are moving swiftly to a crisis.

Sir Arthur Salter's Mission to China.—On January 7th the President of the Chinese Republic, General Chiang Kai-shek, and the Minister of Finance, Mr T. V. Soong, telegraphed jointly, on the Chinese Government's behalf, to the League of Nations, asking that Sir Arthur Salter, the Director of the Economic and Financial Section of the Secretariat, and Mr Robert Haas, the Director of the Transit and Communications Section, should be permitted to accept an invitation to pay a brief visit to China—Sir Arthur Salter "to discuss questions relating to the effect on China's economic activities of the present world depression," Mr Haas "to discuss the problems of inland waterways and land reclamation." The Chinese Government's request was granted, and the necessary authorisations were given, by the Council of the League last Monday. It would, indeed, have been discourteous and impolitic to rebuff an overture on the Chinese Government's part which marks a further stage in the ebb of the tide of Chinese xenophobia—and this at a moment when the opportunity for economic reconstruction in China is perhaps more favourable than it has been at any time during the last twenty years. The tide of Chinese feeling definitely turned from xenophobia towards a desire for international co-operation at the close of 1927, when the final break occurred between the Nanking Government and the Bolsheviks; but three full years have had to pass before the internal situation in China has made it possible for the Chinese to profit effectively from foreign expert assistance. The spell of peace and unity which followed the entry of the Nationalist forces into Peking in the summer of 1928 was a passing gleam; but we may hope that the fair weather which set in recently with the co-operation between Mukden and Nanking and the elimination of the Shensi and Shansi war-lords, Fêng and Yen, will prove to be the settled weather that China so badly needs. Certainly the symptoms point that way. Chang Hsueh-liang and Chiang Kai-shek remain on the best of terms; and Chang is grappling in the north with the demobilisation of Fêng's and Yen's armies, while Chiang is taking energetic measures for finishing once for all with the plague of large-scale brigandage and terrorism by so-called Communist armies of marauders south of the Yangtse. In the near future, the indefatigable Finance Minister, Mr T. V. Soong, may have the chance, which has been denied him so far, of putting China's financial chaos into order; and it will make a great difference to his prospects of success if, at this moment, he has Sir Arthur Salter at his elbow. Of course, we must not expect any achievement so dramatic as the post-war financial reconstruction of Austria and Hungary, which will ever be associated with Sir Arthur's name. The Chinese problem is on a vastly greater scale; the Chinese Government is hardly in the mood for accepting stringent external controls; and the investing public of the world will be less ready to stake its money in China than in Central Europe. For these reasons we do not expect an early flotation, under Sir Arthur Salter's direction and under the League's auspices, of anything like a China Reconstruction Loan. At the same time, a quite moderate and undramatic improvement in the financial and economic condition of China would make some contribution towards overcoming the present depression in the world as a whole.

A South Wales Settlement.—After a fortnight's stoppage of work in the South Wales coalfield, it is some consolation to be able to record that the Miners' Delegate Conference decided last Saturday, by 169 votes to 72, that the terms of the provisional settlement agreed to between their representatives and the mineowners in London on the previous Thursday should be accepted. A resumption of work was thereby rendered possible on Monday. By the terms of the new agreement the miners have succeeded in safeguarding certain of the points on which they sought an assurance that reference to arbitration at the owners' instance would not be possible in the event of the Conciliation Board disagreeing. The ratio for the distribution of proceeds, the bonus turn and week-end overtime are not referable to the independent chairman. On the other hand, the miners have had to abandon the position which they endeavoured to hold that in the matter of wages any arbitration award should be restricted to the amount of reduction strictly proportionate to the reduction in working hours. The new agreement provides explicitly that both the minimum percentage addition to the basis wage as well as the subsistence wage can be referred to the independent chairman of the board. The fact that the agreement is to last for three years, subject to an annual revision of wage rates, and to special revision in the event of further statutory change in the hours of work, is of good augury for future peace in this coalfield; but over and above the fact that there may be difficulty in Scotland at the end of this month, the general problem of readjustment to meet conditions next July remains exceedingly grave.

Railwaymen's Wages.—The hearing by the National Wages Board of the railway companies' claims for alterations in wages and working conditions began last Tuesday with a statement of the companies' case by Mr Lazenby, who claimed that, in meeting the conditions brought about by bad trade, the railways were hampered by road competition on the one hand and by high labour costs and rigid conditions of service on the other. He pointed out that the basis of present wages and conditions was fixed in 1919-20, an exceptionally optimistic period, and that the wages bill had risen from £47 millions in 1913 to £114 millions in 1929. Whereas the cost of living was now 55 per cent. and general wages 70-75 per cent. above the pre-war level, railway salaries had on the average doubled, and wages in the conciliation grades risen by 120 per cent., though traffic in 1929 was less than in 1913. In 1929 the net receipts of the companies were £5½ millions below the standard revenue; in 1930 the deficiency would probably be £13.75 millions, and in 1931 £16½ millions. Mr Lazenby urged the need for an adequate return on capital, and estimated that the relief sought through the Board would save £9.5 millions, and other sources, not within the jurisdiction of the Board, would bring the total to £11 millions. Broadly, the companies asked for a reduction of 6s. a week with a reduction of the minimum to 38s. This would reduce average wages to 51s. 11d., and average earnings (allowing also for the effect of the proposed changes in conditions) to 57s. 2d., whereas pre-war wages and earnings, increased by 55 per cent. to allow for the cost of living, would amount respectively to 40s. 5d. and 44s. 11d. per week on an average for the conciliation grades. The remaining proposals involve the cancellation of the present agreements as to the guaranteed day and guaranteed week, overtime on a daily basis, the separate treatment of Sunday, and the penalty rate for night duty. The companies contend that conditions of service should allow of split shifts of varying lengths, and varying numbers to a week, subject to the limitation of a total 48-hour week. Mr F. W. Wood amplified Mr Lazenby's financial statement, and then Mr Marchbank began his reply for the N.U.R. Briefly, his arguments were that the present conditions do not have a restrictive effect on the handling of traffic, and that the railway companies' proposals afford no guarantee of adequate meal times, of intervals of more than a few minutes between shifts, or of the receipt of more than half an hour's pay on some days. If this is technically true it seems unlikely that an agreement could not be worded preventing abuse

The practical use of the water cart is to lay the dust which has been raised on the highway and to allow the traveller to see clearly where he is going. We believe that an interview with ourselves would allow a manufacturer treading the dusty road of commerce to see clearly the true values of practical advertising.

of the elasticity for which the companies are asking. On the question of wages, Mr Marchbank made the valid point that comparison with 1913 rates is not necessarily a convincing argument, since railwaymen were very badly paid before the war. He produced some impressive statistics in support of his contention that 38s. is an unreasonably low minimum, but when he attempted to show that the railways were far more prosperous than they admitted, he was on less strong ground. His attempt to read into the Report of the Royal Commission on Transport support for his contention that the railways have ceased to be injured by road competition was, to say the least of it, *disingenuous*, while his stress on the economies which could be realised by the abolition of private wagons (a point also laboured by the other two trade union representatives) was not a very helpful contribution. The impression given by the evidence so far was that the railway companies have a strong case for some reduction in wages, and greater elasticity of working conditions, but that certain of their proposals will have to be considerably modified in order to secure the support of public opinion.

Cotton Trade Lock-out.—Our Lancashire correspondent writes:—At the end of last week the Ministry of Labour intervened in the Lancashire weaving mills dispute, but, after joint discussions on Friday lasting ten hours, there was a breakdown, as the operatives declined to withdraw the strike at Burnley, and the employers refused to cancel the lockout notices. The lockout started on Monday last, and it is estimated that about 80 per cent. of the looms in Lancashire are standing idle, involving 200,000 operatives. The weaving firms belonging to the Master Spinners' Federation will close down next week, and another 20,000 workpeople will be affected. The position is of vital importance to spinners of yarn as there is now a much smaller consumption as a result of the stoppage. The Master Spinners' Federation has recommended members to restrict output to prevent any undue accumulation of yarn stocks. It is anticipated that, if there is no settle-

ment, nearly 90 per cent. of the whole of the industry, both spinning and weaving, will be idle at the end of the month. In the meantime, a ballot of the Operative Weavers' Amalgamation is now being taken on the question of power being given to the Executive Committee to negotiate a settlement. The result will not be known until the end of this week, but if it is favourable there is a probability of a joint conference with the employers on Monday next. The dispute is very complicated, and the leaders of the workpeople are demanding that, if the new system is universally adopted, their wages should be safeguarded by a "fall-back" or minimum wage per loom. The employers have stated that, if discussions are resumed, they are prepared to consider all matters relating to the problem, but it is not likely that the principle of a minimum wage will be granted. It has been suggested that the present crisis would never have arisen had the rank and file of the workpeople had confidence in their leaders, and given them power several weeks ago to reach an agreement with the employers. History, however, is repeating itself in that the cotton operatives of Lancashire have always opposed strongly any introduction of changes in working which involved a displacement of labour.

The Volume of Overseas Trade.—Last week we indicated that even when full allowance had been made for the decline in prices, our overseas trade in 1930 would still prove to have been seriously below the level of 1929. The figures now published in the *Board of Trade Journal*, showing the trade of 1930 recalculated at the average values of 1924, prove this statement to have been only too painfully true. The figures for the past seven years are shown below:—

TRADE ON BASIS OF 1924 VALUES.
(In £'s million.)

	Total Imports.	British Exports.	Re-exports.
1924	1,277.4	801.0	140.0
1925	1,318.9	795.1	137.4
1926	1,354.7	711.8	119.9
1927	1,391.2	819.4	126.1
1928	1,349.0	838.3	123.1
1929	1,415.6	867.6	118.7
1930	1,381.1	710.5	113.6

Imports were actually higher than in any of the past few years, except 1927 and 1929, while exports, after increasing steadily for three years, have in one year fallen below the 1926 level. Expressed as a percentage of the 1924 level, retained imports and exports of British produce and manufactures were as follows:—

	1924	100.	1928.	1929.	1930.
Retained imports:—					
Total.....	103	114.1	111.3		
Food, drink and tobacco	101.1	104.6	105.9		
Raw materials and articles mainly unmanufactured	101.3	112	101.2		
Articles wholly or mainly manufactured	129.6	135.1	135.7		
British exports:—					
Total.....	104.7	108.5	88.7		
Articles wholly or mainly manufactured	108	109.3	87.5		

Retained imports of raw materials fell very heavily in 1930 as compared with 1929. Unhappily the decline in exports of manufactures was considerably more severe even than this, and the only increase was in exports of vehicles. Retained imports of manufactures, on the other hand, which in 1929 were already over one-third higher than in 1924, showed a further slight expansion, which was most marked in the electrical, rubber, oils and fats, timber, paper and cotton groups. Retained imports of chemicals and vehicles declined during the year. It cannot be said that the volume statistics in any way mitigate the bad impression caused by the Board of Trade returns.

Discount Company Speeches.—The rise in profits shown by the Discount companies in contrast with the decline in the profits of the banks lent special interest to the speeches of the chairmen of the former at the annual shareholders' meetings held this week; and a feature of the addresses of Mr Colin Campbell, of Alexanders, of the Hon. Sydney Peel, of the National, and of Sir William Goschen, of the Union, was, as will be seen from the reports published on later pages of this issue, their explanations of the reason why Discount companies' profits are apt to move in inverse ratio to the state of trade. "Falling rates of money," said Mr Campbell, "with a declining Bank rate, always produce conditions favourable to the discount market, and if a rise in Government securities occurs at the same time, it adds to their good fortune." But, as the Hon. Sydney Peel reminded his shareholders, the reverse will occur when the trade tide turns: "When trade is getting bad, Discount houses do well; when trade is improving, and money, therefore, becoming tighter, Discount houses lose. In the long run the thing equalises itself out." Meanwhile shareholders in these old-established and skilfully managed institutions may count themselves happy in their choice of an investment to stand them in good stead in times of trouble. The Discount chairmen do not as a rule survey the economic world in general, after the fashion of the bank chairmen. But Mr Campbell joined this year in the common search for the main causes of the great depression. He defended the banks against charges of restrictive credit policy, and emphasised his view that lack of confidence is at the root of our troubles: "Until confidence is restored in the minds of those who direct industry, it is hopeless to look for any sustained recovery." In Mr Campbell's opinion the first step towards re-establishing confidence is for the politicians to show that a policy of economy in national expenditure "is a fact and not merely a theory."

A New Index.—In the Monthly Supplement accompanying this week's issue of the *Economist*, details will be found of a new index of electrical consumption, which we shall publish regularly in future by the courtesy of the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. We show below the annual figures of this index for the years 1925-28, and the quarterly figures for 1929-30 in comparison with the corresponding indices of production compiled by the Board of Trade and the London and Cambridge Economic Service:—

	PRODUCTION INDICES (1924 = 100).		
	New Electrical Index.	Board of Trade Index.	London and Cambridge Index.
1925	98.7	...	97.5
1926	89.6	...	75.3
1927	102.2	106.8	108.1
1928	101.9	105.5	102.5
1929—1st Quarter	101.5	110.5	108.3
2nd Quarter	103.1	112.0	111.0
3rd Quarter	101.8	110.6	108.2
4th Quarter	102.3	113.9	114.8
1930—1st Quarter	97.5	110.9	109.6
2nd Quarter	92.1	103.1	100.9
3rd Quarter	91.7	99.5	89.8
4th Quarter	91.1	...	...

In comparing the three foregoing indices it should be borne in mind that the electrical index contains a small constant factor represented by the load for lighting and heating, which, even after allowance has been made for seasonal trend, represents an increment not directly influenced by short-term fluctuations. Thus it would be natural to expect that the movements of the two other indices would be larger in dimensions. Moreover, for reasons explained in our Supplement, the electrical index does not reflect fully the real growth over long-term periods of industrial productive activity.

Foreign Trade—An International Comparison.—The table which is printed below giving the summary figures of the foreign trade of France, Germany, Great Britain and the United States in 1930, affords an opportunity for comparing the losses in international commodity exchanges suffered by four of the leading industrial countries in the world:—

	Imports.		Exports.	
	1930.	Decrease on 1929.	1930.	Decrease on 1929.
France (Million Francs)	52,344	-10.9	42,830	-14.6
Germany (Million Marks)	16,393	-22.7	12,035*	-10.7
Great Britain (Million £)	1,045	-14.4	658	-21.6
United States (Million \$)	3,061	-28.8	3,841	-26.7

* Excluding re-exports.

Although the export trade of each of the four countries was substantially reduced during the year, Germany and France suffered in this respect to a much smaller extent than Great Britain or America. Germany's exports, in particular, at 12,035,000,000 marks, showed a percentage fall, as compared with 1929, of less than half that recorded by this country or the United States. On the import side, Great Britain and France have maintained their purchases from abroad to a considerably greater extent than either Germany or America, although even in the case of the two former countries the reductions have been substantial. It will be noticed that two of our rivals have maintained an export surplus during the past year, while in the case of Germany, even if reparation deliveries in kind are excluded, this excess of sales over purchases has substantially increased during 1930.

New Life Assurance Business, 1930.—Further returns have been published during the past fortnight as to totals of new Life Assurance business transacted in the year 1930. The figures are as follows:—

	1929.	1930.
	£	£
Alliance Assurance	3,027,438	3,210,646
Gresham Life Assurance Society	2,240,369	2,285,000
Life Association of Scotland	1,133,540	1,376,289
Royal London Mutual	4,164,154	4,250,000
Standard	2,800,470	3,150,000
Sun Life	16,014,342	13,323,524
U.K. Provident	3,335,080	3,079,723
	32,715,393	30,675,182

The U.K. Provident and the Sun Life are the only offices amongst this batch which record a decline in new business for the year 1930; but in the case of the Sun Life, as we show below, the decline is wholly due to the cessation of single premium surtax saving policies.

Employment and the Cost of Living in December.—Apart from a slight improvement in the middle of the month due to Christmas trade, employment during December continued to decline, and at the end of the month the numbers unemployed were the highest recorded in the ten-year period for which comparable statistics are available. According to the *Ministry of Labour Gazette*, among the workpeople insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at December 22nd was 20.2, as compared with 19.1 per cent. at November 24th and 11.0 per cent. a year ago. It is estimated that the number of insured persons in work at December 22nd was approximately 9,397,600. This compares with 9,501,200 insured persons employed a month ago and 10,213,300 a year ago. The total number of persons registered as "wholly" unemployed at December 29th was 1,766,398. This was 106,531 more than at the end of November and 747,672 more than a year ago. Those temporarily without work amounted to 774,630 at the end of December, as compared with 521,305 a month ago and 415,542 at the end of December, 1929. Of those normally in casual employ-

ment, 102,099 were unemployed at December 29th, this number being 3,189 less than a month ago, but 26,136 more than a year ago. The Ministry of Labour announced this week that the number of persons on the registers of the employment exchanges on January 12th amounted to 2,636,168, which included 1,878,456 wholly unemployed, 650,264 temporarily stopped and 107,448 usually in casual employment. With regard to the cost of living during December, the index of the Ministry of Labour stood, on January 1st, at approximately 53 per cent. above the level of July, 1914, as compared with 55 per cent. at December 1, 1929, and 66 per cent. a year ago. For food alone the corresponding figures were 38, 41, and 57 per cent. respectively. The fall of 7.8 per cent. in the cost of living in 1930 compares with a decline of 22.2 per cent. in our index of wholesale prices during the same period.

Treaty Reinsurances, Limited.—Since this company's year ends on June 30th, the report, which is usually issued at this time, is generally regarded as affording some slight indication of the general course of underwriting profits in the preceding calendar year. To the extent that this may be so, the outlook for the forthcoming reports of the big companies is not encouraging, for after a comparatively poor year in 1928-29 the company has had a far worse experience in the year ended June 30, 1930, though the peculiar conditions under which reinsurance companies operate make it difficult to push the analogy too far. For instance, while the expenses of management are extremely low, commissions form a disproportionately heavy charge on the premiums. Thus, expenses in the year under review accounted for under 3 per cent. of the premiums, and 20 per cent. of this amount was accounted for by overseas taxes, while commissions absorbed as much as 32½ per cent. of the premium. At the same time the claims ratio is on a much higher level than can be supported by a company doing direct business, the figure for 1929-30 working out at 68.4 per cent. of the premiums. The outcome of the year is an underwriting loss amounting to as much as 8.2 per cent. of the premiums, compared with a loss in the preceding year of 4.8 per cent. of the premiums. The interest income has always been considerably greater than the cost of the dividend, and this has enabled the company to maintain the same rate of dividend as before, namely, 25 per cent. free of tax; and after taking account of this margin the net result of the year's operations has reduced the company's free resources by £58,636. In the preceding year there was a corresponding reduction of £26,910 following a series of years during each of which substantial sums were added to free resources. The situation has been met in part by a transfer of £50,000 from the General Reserve Fund, and as to the remainder by a reduction in the carry forward. Although the company ceased transacting marine insurance so long ago as 1926, it is rather odd to find that nearly £3,000 in claims was paid in the year to June 30, 1930, and still more so that a payment of commission of £63 was also made. The circumstance gives point to the characteristic time-lag in marine insurance between the receipts of premiums and the payment of claims. Fortunately the company is in a strong position to meet any period of temporary difficulty, for even after the transfer from General Reserve Fund there remains in that fund a sum of £100,000 against paid-up capital of only £30,000. In addition the company is supported by the backing of three of the large offices, namely, the Century, the Phoenix and the London and Scottish, each of which has a representative on the board, and the company's contracts are guaranteed by these offices.

Sun Life Assurance Society.—The same characteristic which has dominated the accounts of this society during each of the last five years has again made itself felt in the 1930 accounts, but this time in the reverse direction. The society was associated with the evolution of a scheme for saving on surtax payments by means of short-term single premium assurances, under which upwards of 90 per cent. of the single premium was advanced by way of loan on the policy at the outset. Early last year the

Treasury were moved to insert a clause in the Finance Act which had the effect of putting a stop to this loss of revenue. The particular form taken by the clause in the Act was the subject of negotiations between the Treasury and the Life Offices, and associated with it was an undertaking by the Insurance Companies to refrain from any action in the future which would constitute an evasion of the Act, in the letter or in the spirit. The consequences of this new legislation are apparent in the case of the Sun Life Society in two directions. In the first place surrenders have risen from £600,000 to £9,742,000, the difference presumably being represented almost wholly by surrenders of these particular policies; and this has been reflected in turn in a substantial reduction in the balance-sheet item of loans on policies from £18,000,000 to £11,000,000. The extent to which the society has been dependent in the past on this class of business is shown in the following table:—

Year.	Total New Business.	Single Premiums Received.
1924	£ 6,853,323	£ 254,662
1925	7,899,226	856,645
1926	8,979,070	1,716,283
1927	13,382,494	4,649,131
1928	15,274,880	5,016,980
1929	16,014,342	5,340,740
1930	13,323,534	2,976,006

Assuming that the single premiums amounted on the average to at least 80 per cent. of the corresponding sums assured, it is apparent that latterly more than 40 per cent. of the total business was accounted for by these single premium assurances. It will be noticed that a substantial sum was still received in 1930 in the form of single premiums, but this was no doubt in part received prior to the negotiations with the Treasury, and partly in connection with certain forms of single premium contracts which still remain perfectly legitimate. The 1930 total new business is naturally somewhat lower, but as the annual premium income is slightly larger, it is clear that the society has more than maintained its volume of ordinary new business. As a result of the repayment of so large a sum invested in policy loans, at a comparatively low rate of interest, the total net rate of interest earned on the Life Assurance Fund has risen from £4 13s. 9d. per cent. in 1929 to £5 0s. 10d. per cent. in 1930, and this in spite of the increase in the standard rate of income-tax. The report states that the directors have under consideration the question of sub-dividing the shares, a step which would no doubt enhance their marketability in the Stock Exchange. The share capital consists of 48,000 shares of £10 fully paid, quoted at £54, and the suggestion presumably is to split the £10 shares into £1 shares.

Overseas Correspondence.

LEAGUE OF NATIONS.

The Council Meeting — Disarmament — Briand Plan — Minorities.

(FROM A LEAGUE CORRESPONDENT.)

GENEVA, January 20.

It is clear that none of the twenty-two or twenty-three foreign ministers meeting in Geneva to consider M. Briand's idea of a European Union has his heart in the project, and M. Briand himself seems jaded. The truth is that the replies to the original French memorandum showed how little inclination there was to follow M. Briand, and how divergent were the views about the principles upon which his plan should be based. But the affair has been allowed to trail on, possibly out of deference to the distinguished French statesman, and, as a French critic cruelly observes, the European communion has the appearance of a gathering observing the rites of a religion in which it does not believe. About two days have been occupied in discussing whether Russia and Turkey should be invited to participate, and if so in what

way; it is still undecided. Apart from that, all that has happened is a proposal by M. Briand to pursue the problem of agricultural credits, already under study by the League, and an energetic trouncing of European economic nationalism by Mr. Colijn, President of the Second Conference for Concerted Economic Action, who was invited to address the meeting. Rarely can so many foreign ministers have been addressed with such candour on the utter failure of their governments to understand the elementary principles of economic co-operation, and on the danger to closer understanding if tariff passions are eventually let loose. Mr. Henderson promptly rubbed this in, but the Yugoslav Foreign Minister simply observed that the resolutions of the International Economic Conference of 1927 were not put into effect because they could not be. It is so far a sorry spectacle of the collective wisdom of most of the foreign ministers of Europe. There is little willingness to go ahead, and no courage to say "No."

Alongside the Commission is the ordinary session of the League of Nations Council, which in a very full and important agenda has two major European problems—minorities and disarmament. It is not yet certain how the Council will deal with these two questions, but there are several observations which may usefully be made. In the first place, it is certain that the German Foreign Minister will not return to his own country with that resounding triumph over Poland so aggressively demanded from him. There are few who are not convinced that Poland has committed excesses, but there has been little consideration given to the possible responsibility which rests upon German provocation, both official and unofficial. Germany has her obligations, too. Anyhow, on the minorities dispute between Poland and Germany, the Council is not going to award laurels to one State over the prostrate body of another. The Council attempts to conciliate differences, to ease the situation and to exercise a persuasive influence towards more reasonable conduct. In face of the astute Polish reply, the Council is not at all likely to attempt to appoint a commission of enquiry. It would probably not be accepted, and Poland's assertion that she has taken and will, where necessary, continue to take administrative and legal action makes such a step additionally unlikely. Poland will probably be asked to keep the Council informed of what is done to give redress where due, and that is about as much as can be done if the situation is not to be aggravated. It is a good deal, compared with pre-League days, and if it is not sternly minatory—as some demand—it is only because the League is not a punitive tribunal able to enforce rights or impose decisions. The minority problem will improve only with improved political relations, and when the minorities are not made the sport of international politics. It is futile to attempt to put the problem on a purely humane footing. It is largely a problem of irredentism, and as long as it remains so, it is not possible to expect contented and prosperous minorities.

This is a spreading sentiment in unexpected quarters of Europe and the spirit of it applies even more to the armaments problem. This morning's debate in the Council accentuated it. Mr. Henderson's insistence on obligations to disarm, and Dr. Curtius' observation that it is not admissible to base the security of some on the insecurity of others are fair enough. But protestations are not necessarily contributions to the work in hand, and Dr. Curtius, in his necessity to bear in mind the rather violent polemics now the vogue in Germany, altogether exaggerated the shortcomings of the draft disarmament convention, declared that it would have to be remodelled before the figures were filled in, demanded the principle of equality, and yet pressed once more for an early sunning of the General Conference. Even as it stands, the convention calls for a great deal of negotiation before the conference meets, and if Germany is to re-open the basis of it, so laboriously prepared, the conference will not be ready for 1932, let alone 1931. The time has come for a common effort, constructive and energetic, to make the utmost of this first opportunity, and not to cry incessantly for the moon.

The feeling is growing that for the time being Germany has had her say in the way of repeated claims and protests.

She has attained a great deal of sympathy. Now it is the moment to co-operate for action. That is the growing feeling of those who have nothing but hatred for alliances, hegemonies, and excessive armaments. It is a feeling of which Germany will have to take account if the sympathy is to be retained, and if it is not to be made difficult for other States to do what is required of them.

The Council has not yet fixed the date of the Conference, which will most probably begin early in 1932. M. Benes is suggested as President, and the Danish Foreign Minister (Dr. Munch) as Vice-President. There is difficulty over Dr. Benes, and the presidency may possibly be left over until the May session of the Council; it would be an unfortunate delay, as the President will have largely to handle the exchanges of views which must precede the Conference.

Amongst a number of other subjects, note should be made of the official invitation of the Chinese Government, accepted by the Council, to send Sir Arthur Salter, Director of the Financial and Economic Section of the Secretariat, and M. Haas, Director of the Transit Section, to China to advise on economic and transit questions. Dr. Rajchman, Director of the Health Section, is now in China in connection with the public health service scheme drawn up by him in consultation with the Government.

UNITED STATES.

Business — Money — Prices — Farm Board Problems — Sugar Agreement — Public Finance.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 10.

WILLINGNESS to look on the brighter side is a noticeable change in public sentiment which has come with the new year. Reason for the more cheerful feeling is rather nebulous. Reports have come of rehiring of labour here and there in the motor industry and on the railroads, but such increases in activity are largely a seasonal recovery from the extreme stagnation which marked the closing days of December. In the past week upwards of 100,000 men have been added to full- or part-time payrolls. On the other hand, unemployment over the country has undoubtedly increased and now amounts to between 4,000,000 and 5,000,000, according to President Hoover's own commission appointed to study the matter. Most observers are inclined to accept the larger total and feel that it may increase before the end of the winter.

Some encouragement is derived from the recovery in the bond market, although the advance in prices is in itself partly a reflection of returning confidence. Issuing houses are testing the demand for new capital loans, and two small railroad flotations this week were well received. A number of railroad and public utility loans are being prepared, and success for a large issue would probably greatly revive the new capital market. A good deal of foreign financing is being held in abeyance.

Extreme ease in short-term money continues. Banks are having difficulty in placing their available funds at as low as 1 per cent. on day-to-day loans. Meanwhile six regional Federal Reserve Banks have followed the lead of the New York institution in reducing discount rates. The others are expected to follow, leaving 3 per cent. as the top and 2 per cent. as the bottom rate. Although cheap money has had little effect in the past year, either in helping business or in lifting bond prices, some signs of stimulation to both are now visible.

The banks have published their statements for the close of the year. No striking changes occurred. Earnings are down from 20 to 25 per cent., on the basis of dollars earned per share of stock. Percentage earned on capital funds (capital, surplus and undivided profits) is down about 50 per cent., but there are some notable exceptions. At any rate, the majority of the banks covered their dividend requirements with a fair margin and added something to book value. Liquidity naturally increased greatly, the usual year-end window-dressing proclivities

having been stimulated by the recent bank failures. Aggregate deposits were not greatly changed from a year ago, though there was a large seasonal gain since September 24th, the date of the last report.

Gold is again beginning to come to this country. After a few days' interruption, while the discount on the Canadian dollar would have made shipments possible, more gold has been received from Canada. Since the inflow began last month about \$36,500,000 has arrived, which balances the efflux to the Dominion in the preceding eleven months. It is expected that the Japanese Government will resume shipments to the United States next month, as a protection for the yen. Pressure on the exchange has been increased with the fresh collapse in silver. There has also been a consignment of \$5,000,000 gold from the Argentine to cover debt service.

Both the steel trade and the motor industry are looking for mild improvement during the next month or two. Steel mills are working at over 40 per cent. of capacity, after the sharp drop of last month, but many of the recent orders have not meant actual specifications and work. The exhibit of new models at the national automobile show was fairly successful so far as attendance was concerned, but new buying is slow, and production is likely to be kept in pace with public demand, the lesson of overstocking the dealers having been learned.

Commodity price weakness continues to be the chief cause of anxiety. Farm Board purchases of wheat and cotton have kept those markets steady, but distrust of the whole farm stabilisation idea is growing. Congress will shortly be called upon for the remaining \$100,000,000 of the \$500,000,000 originally designed for the Board's use. This money has gone into the purchase of approximately 135,000,000 bushels of wheat and 1,300,000 bales of cotton, at prices averaging well above the present market.

The wheat market is being held at from 20 to 25 cents a bushel above the world price, the Farm Board counting heavily on enough consumption and sufficient reduction in next year's harvest to maintain this country on a domestic basis. Assuming that no grain is available for export next summer, it is conceivable that the higher prices can be maintained, but chairman Legge has asserted that a reduction of 22 per cent. in production of wheat is necessary; and winter wheat sowing dropped only 5 per cent. Meanwhile it is feared that, if other countries are convinced of the Farm Board's determination to keep this country out of the export market, their harvests will be increased to capture the markets.

The most striking feature of the whole farm relief programme and operations is the dense muddle into which the thing has fallen. Neither the Farm Board nor the Congressional supporters of the idea appear to have any but hazy notions of purpose or direction. Certainly the public is at sea, and is only certain that eventually it will have to pay the bill. Thoughtful people are fearful lest, in the event of a good business recovery by the end of this year, the wheat price control scheme will collapse and cause a fresh setback to trade. It is felt that country banks and farmers who are being carried along on the basis of artificially high wheat and cotton prices would do better to face the facts and readjust themselves to natural price levels now.

Satisfaction over the agreement on sugar output made by the Chadbourne Committee with the German beet sugar industry is tempered by the feeling that it did not go far enough. However, it is realised here that Germany is bound to raise as far as possible her excess of exports.

The next Treasury financing will probably be a bill issue of about \$50 millions for refunding. This money might be borrowed somewhat in advance of needs. It could be obtained at about 1½ per cent., which is also the rate of interest which the deposit banks pay on Treasury deposits. Authorisation by Congress of an addition of \$8,000 millions to the Liberty Loan borrowing power paves the way for the refunding operation which will begin on the March tax date, involving at least \$1,000 millions. An issue running about fifteen years, at 3 per cent., is being discussed.

FRANCE.

Politics — Capital Expenditure — Budget — Revenue.

(FROM OUR CORRESPONDENT.)

PARIS, January 21.

THE Chamber has now settled down steadily to work, and it is becoming clear that M. Steeg's astute idea of availing himself in turn of each of the two alternating majorities in the present House stands at least a good probability of proving practicable. M. Léon Blum, the Socialist leader, stated plainly a few days ago that his party, no matter what happens, will continue to refuse to vote credits for national defence purposes. In this he has behind him a vote of the Socialist Party's National Council, which has just called on its 107 representatives in the Chamber to vote in support of the Steeg Cabinet on all questions other than those concerning national defence. A handful of Socialist deputies, led by M. Paul Boncour, will doubtless ignore this embargo in regard to war credits, but this will make no difference to the result. Almost simultaneously, last Monday, M. Maginot, the ex-War Minister, stated categorically that in any case he will vote for the war credits proposed by the Steeg Cabinet and will also ask his friends to do so. "National defence," he insisted, "must not be at the mercy of party rivalries." Apart from these pronouncements, the domestic political situation remains distinctly obscure. The economic horizon is thick with clouds, and it is possible that the new Ministry's predecessors feel that their prospects at the 1932 elections may not be lessened by leaving the Cartellists to deal with a situation that is certainly much more difficult than that which existed when M. Tardieu was overthrown.

The Chamber's first experience of the return of the Cartel des Gauches to power was on Thursday last, when the House, by a majority of 272 to 257, decided to allow two Communist deputies—one of whom has been in prison for some months and the other a fugitive—to resume parliamentary service. M. Steeg again showed his keen tactical sense by refraining from making the question one of confidence, and leaving the voting entirely in the hands of the House. The nominal majority of 15 scarcely represents the situation, as the 64 deputies who abstained from voting included all the members of the Cabinet. On this occasion the 51 members of the Radical Left were split into three sections, nine voting for the motion, 20 against, and 19 abstaining. When the first real trial of strength between Ministry and Opposition will come still remains in doubt. The unknown factor in the situation lies in the development the Oustric affair will take, and on this not even the most venturesome dare hazard a forecast.

The application of the previous Government's plan for the improvement of the national economic plant has been begun, but it is already evident that the scheme is likely to be considerably reduced in importance, and to provide much less immediate benefit to industry than had been expected. When M. Tardieu, a few months ago, set forth a comprehensive plan, involving an expenditure of 17,500,000,000 francs, spread over five years, leading Opposition members, who have since received Ministerial posts, ridiculed the scheme as inadequate and insisted that at least double the amount mentioned was necessary. With the change of Government there has been an entire change of front, both in regard to the plan itself and the method of applying it. The Tardieu proposal that the plan should be worked out for application as a whole has been abandoned, and is to be replaced, apparently, by a long series of more or less improvised credits. The first section of these, which totalled 670,000,000 francs, was definitely voted a few days ago. It includes 120,000,000 francs (originally 80,000,000 francs) for additional water supply; 120,000,000 francs (originally 80,000,000 francs) for the electrification of further rural areas; 210,000,000 francs for additional school buildings (this represents an entirely new project); 175,000,000 francs for roads, and 80,000,000 francs for the organisation of an inquiry into agricultural produc-

tion. A second series of proposals is under consideration by the Finance Commission.

The discussion of the Budget began on Monday, and under such satisfactory circumstances that the "general discussion" of the measure, which usually occupies several sittings, was completed the same day, thus leaving the House free to take up the various departmental Budgets in turn. The discussion was prefaced by a striking statement from M. Palmade, Minister for the Budget, who warned the House that the "realised surplus" since the beginning of the financial year on April 1st, which amounted at the end of November to 1,200,000,000 francs, had by the latter date already been transformed, owing to the voting of Supplementary Credits to a total of 1,700,000,000 francs, into a deficit of 500,000,000 francs. This deficit, he estimated, would be increased, by the end of the financial year, to 1,500,000,000 francs, by other Supplementary Credits which have already been voted or which will be necessary by the end of March. The new Budget, the Minister announced, had been balanced as follows:—

		Frs.
Estimated revenue	...	50,252,000,000
" expenditure	...	50,145,000,000
Estimated surplus	...	107,000,000

M. Palmade pointed out the precarious nature of this surplus, however, by mentioning that it was already mortgaged to the extent of 60,000,000 francs in respect of a bond issue, which will most probably be needed to cover the deficit on the railways' common fund. It is known, further, that the Budget, as it left the Finance Commission, would inevitably have presented a deficit (owing to additional expenditure proposed by that body) had not the device been adopted of arbitrarily revising upwards by 250,000,000 francs, the estimated yield from Customs duties—and this in spite of the fact that 1,800,000,000 francs, representing part of the cost of the funded debt service, hitherto charged to the Budget, was transferred to the charge of the Caisse d'Amortissement.

M. de Chappedelaine, the Finance Commission's *rapporteur général*, characterises this transfer as one of the two outstanding characteristics of the 1931-32 Budget Bill. But for the adoption of this method, which had been necessitated by the fact that the Bill calls for 1,700,000,000 francs of additional expenditure, it would have been necessary either to vote increased taxation, or have recourse to a loan. The effect of calling on the Caisse d'Amortissement to shoulder debt service charges hitherto borne by the Budget will be that the Caisse's capacity for debt extinction, which has hitherto been about 6,000,000,000 francs a year, will be reduced to about 4,000,000,000 francs.

Incidentally, the Budget Estimates show that the credits for national defence comprised in the new Budget total 13,185,000,000 francs, or over 26 per cent. of the total expenditure. This total is about 700,000,000 francs larger than the amount provided under this heading for 1930-31. The increase is stated, paradoxically enough, to be chiefly due to the reduction of the term of compulsory military service to one year, which has rendered it necessary to pay much higher premiums to induce men to re-engage as professional soldiers. This need for increasing the number of professional soldiers, in turn, has been necessitated by the fact that owing to the drop in the birth rate, the annual contingent of conscripts, as from next year, will number only 140,000, or 110,000 below the previous normal strength. The credits originally demanded by the army, navy and air departments this year were, as usual, substantially higher than the amounts eventually accepted by the Tardieu Cabinet. It is significant that loud applause from practically every part of the Chamber followed the statement that the Finance Commission (in which the Left has a definite majority) had not felt justified, owing to the outburst of Hitlerism in Germany and Signor Mussolini's unfortunate speeches, in reducing the Government's draft estimates of military expenditure by more than "about 100,000,000 francs."

The revenue returns for December show a total yield of 3,629,959,000 francs, as compared with 3,842,433,000

francs in December, 1929, and 3,564,661,400 francs in December, 1928. Of this total 1,534,853,000 francs represented "taxation on consumption, properly so called," 1,164,137,000 francs "direct taxation on income" (income tax and imposts on securities), and 596,447,000 francs from "taxes on private fortunes and stamp duties" (registrations, stamp duties and tax on Bourse operations). The luxury taxes yielded only 25,867,000 francs, against 87,074,000 francs in December, 1929. The motor-car tax totalled 25,000,000 francs, against 19,000,000 a year ago. The general economic situation is reflected in the fact that the tax on turnover (which it should be remembered was reduced some months ago) produced 657,373,000 francs (representing business done in November), against 786,118,000 francs in December, 1929, or a drop of 16½ per cent. The yield from the tax on Bourse operations was only 10,725,000 francs (against 33,786,000 francs in December, 1929), and was no less than 49,533,000 francs below Budget estimates. Income tax produced 1,008,698,000 francs or 48,315,000 francs more than in December, 1930. For the first time for some years the yield for the month from indirect taxation and monopolies fell below Budget estimates, although the deficit was merely 38,651,000 francs. The total yield from these sources for the first nine months of the financial year, after allowing for this deficit, now shows a total excess of 1,009,297,750 francs over estimates.

GERMANY.

Foreign Trade — Relief to Eastern Provinces — New Price Reduction Measures — Foreign Exchange and Money Markets.

(FROM OUR CORRESPONDENT.)

BERLIN, January 20.

THE German foreign trade returns for 1930 show estimated exports of 12 milliard Reichsmarks and estimated imports of 10.4 milliards. Reparations in kind, but not exports of gold and silver, are included. The Bureau of Statistics considers the import figure about 200 millions too high, for technical statistical reasons, so that the surplus of exports amounted to about 1.8 milliard Reichsmarks and was thus sufficient to cover reparation payments. The balance of payments was not, however, completely met by it, as only a quarter of the debit balance of about one milliard for interest was offset by the credit balance on account of services. Germany therefore had to incur new indebtedness, most of which took the form of loans raised by the Reich.

The total of foreign trade as compared with 1929 showed a decline. Imports fell nearly 25 per cent. in value and over 10 per cent. in volume. The fall in prices affected them particularly severely owing to the large part played by raw materials. The difference between the rates of decline in volume and value of exports is much less marked: the value fell 11 per cent. and the volume of exports by 5 per cent. The following table shows the value figures for recent years:—

FOREIGN TRADE OF GERMANY.

	(In Million Reichsmarks.)		
	Imports.	Exports.	Balance.
	(Including Reparation in kind.)		
1927	13,801	10,954	- 2,847
1928	13,650	12,421	- 1,229
1929	13,435	13,482	+ 47
1930	10,200	12,030	+ 1,830

This development of the German trade balance is to be attributed mainly to the pressure of reparation requirements, which made necessary an active balance as soon as the inflow of foreign capital ceased. It would be a mistake, therefore, to infer that this favourable development implies a corresponding development in Germany's productive power. Still, it shows that the heavy borrowings of 1926 and 1927 were not unproductive, and that Germany will in the long run have no difficulty in procuring by means of export the necessary foreign means of payment to meet her debt obligations.

The Chancellor's journey to the East has had the effect of arousing in the Government a desire to increase the relief granted to those afflicted districts which transcends even the financial objections. In spite of the resistance which the Finance Minister at first showed, there is now unanimous agreement that all the Eastern Provinces should participate in relief measures, and that these should cover not only agriculture, but also trade and industry in the necessitous area. In order to provide the necessary funds, the special tax on industry which was introduced under the Dawes Plan to meet the service of the industrial bonds, and survived the Hague Agreement as an ordinary domestic tax, is to be taken out of the general revenue and used as a special tax for relief to the Eastern Provinces. Of its total yield of 230 millions in 1930, 50 millions were already earmarked for that purpose, so that the additional funds available will amount to 180 millions.

Some substitute for this 180 millions must, of course, be found for the Treasury, whether in the shape of fresh resources or of retrenchment. Herr Dietrich has expressly pledged himself to introduce no new taxes, and though the pledge was made before the Cabinet decision to extend this relief, he will presumably still feel bound by it. The German People's Party is pressing for economies, but these will be very difficult to realise, as the Budget seems to be framed on very economical lines, and any attempt to effect retrenchment would be fraught with great political dangers.

In order to promote as rapidly as possible their campaign for the reduction of prices, the Government have issued a new decree requiring that proprietary articles be sold at prices at least 10 per cent. below those of June 1, 1930. Failure to comply with this requirement will invalidate the contract between retailer and manufacturer for the maintenance of specified prices. These contracts, which retailers are obliged to sign in order to obtain supplies, and breach of which is subject to heavy penalty, ensure the maintenance of a wide margin between cost and selling price by eliminating price competition between retailers. If the Government were to declare them no longer legally binding the whole system of high manufacturers' and retailers' profits would be undermined, and it may be assumed that manufacturers will prefer to accept voluntarily a small sacrifice rather than make a much larger one under compulsion.

The German exchanges have been very weak lately, and by January 19th, after a steady fall, the dollar, the pound and the franc were all very near export point. The German exchange market is dominated by the Reichsbank, and high exchange rates in Berlin mean that the Reichsbank is only willing to sell foreign bills at a relatively high rate. The demand for bills has not been excessive; the Reichsbank had to supply 60 million Reichsmarks in the last week of December and 200 millions in the first two weeks of January. These sums include the 100 million Reichsmarks which were required for the transfer of the reparation payment on January 15th. Withdrawals of foreign short-term credits, for the most part loans in respect to which three months' notice of withdrawal had been given at the beginning of October, were mainly responsible for this development. A part, but only a small part, was also played by the flight of capital from Germany.

Far more important than the condition of the foreign exchange market is the closely associated state of affairs on the German money markets. The improved liquidity which always comes about in January and has already manifested itself on the principal foreign markets, has not appeared in Berlin. Market discount rate at 4½ is more than twice as high as in London, and first-class German borrowers have to pay over 6 per cent. for one-month money—nearly three times the rates obtaining abroad.

The reserve which other countries are showing towards Germany is mainly responsible for these high rates. The big German banks are still having to pay 4-5 per cent. for dollar and sterling credits in New York and London, a rate which is entirely out of harmony with conditions on

the foreign money markets. Foreign lenders require very high premiums on risk, in lending to Germany, which seem to us here to be entirely unjustified. The high money rates which Germany has to pay to foreign creditors prevent the fall of domestic rates and render a reduction in the Berlin discount rate impossible, at any rate for the present. The Reichsbank rate of 5 per cent., in comparison with the rates of neighbouring central banks, is a good indication of the effect upon Germany's position of the present political tension.

BELGIUM.

Coal — Metallurgy — Agriculture — Stock Markets — Capital Issues — Prices — Unemployment.

(FROM OUR CORRESPONDENT.)

LOUVAIN, January 10.

CONDITIONS in Belgium at the close of 1930 were in general far from satisfactory, though the depression is not as severe as elsewhere. The coal industry has recently begun to feel the crisis more severely, and many collieries curtailed their output by stopping a few days in December. The unsold coal stocks, which amounted at the beginning of December to 2,400,000 tons, exceeded by 500,000 tons the highest figure of stocks at the pit-head previously recorded. Until December the decrease in the output of coal was only slight, and the total output for 1930 will be hardly below the figure of last year. On the other hand, 1931 is certain to show a diminution. The output per man-day has remained relatively high; it was, for example, 575 kilos in November. In the metallurgical industry there are only 44 blast-furnaces in activity, against 58 a year ago. Cast iron and steel production has decreased by one third. In the industries producing finished metallurgical products the outlook is particularly bad. The constructional engineering enterprises, which have enjoyed till lately a favourable market, are now short of orders.

The striking fall in cereal prices has rendered the agricultural crisis more and more acute. Belgium has fortunately specialised on products which have fallen much less than the average, namely, vegetables, butter and eggs. Nevertheless, complaint has arisen from agricultural quarters, and an increase in the import duty on sugar from 60 centimes to 1 franc per kilogram has been obtained. Agriculturists will probably obtain the restoration of the pre-war import duty on oats, which represents 21 paper francs. These measures have met with vehement opposition from supporters of unconditional free trade.

Though no notable improvement occurred in the Belgian financial market, the bear movement has not extended. Banking stocks were particularly weak for a few months, and Société Générale de Belgique shares, which were quoted one time at the equivalent of 14,000 francs, fell to 6,600 francs. This unusual bear movement is due to a Press attack from abroad, which has not, however, affected the standing of the banks. The fundamental structure of the Belgian banks has not been touched by the stagnation of business, and their policy has always been discreet. Losses incurred by certain financial participations and investments in shares have only lessened the amount of reserves.

The "Algemeene Bankvereeniging Cy. Ltd.," which belongs to the Belgian Boerenbond (League of Agriculturists) concern, amalgamated at the end of December with the "Bank voor Oost-Vlaanderen," an important bank of the same group. A projected amalgamation with the "Algemeen Beleggingskantoor" (of Antwerp) has not been carried out.

In the Belgian stock market new issues of shares have practically come to a standstill, while new issues of bonds have been ventured only on a very small scale. The demand for industrial debentures in the domestic market has been so limited that enterprises have often been obliged to raise long-term money by issuing

securities in foreign markets. In the presence of a very easy home money market such a situation is abnormal.

A large volume of securities will be offered for public subscription in the course of 1931. The Belgian Railways Company, Ltd., is preparing a 600 million franc new issue of bonds in the inland market, and the Government will have to contract a loan of about the same amount to pay for public works. These loans will probably be issued in the form of 5 per cents. at or about par on the home market. The foreign conversion loan, which Belgium contracted in November to redeem the balance due of the 8 per cent. American 1921 loan, was offered for public subscription in 4½ per cents. at 95.75, but the result, though successful, proved that the yield was fixed a little too low.

As in many countries, the problem of the retail price level in connection with wholesale prices and cost of living has been hotly debated here in the Press. Here as everywhere there is great disappointment at the fact that nominal retail prices have not fallen in anything like the same proportion as wholesale prices. Industrialists, who would like to reduce wages, charge merchants and shopkeepers with exacting excess profits, or assert that the official index is erroneous. A legend has been circulated that in Great Britain the cost of living has decreased 25 per cent. since the beginning of the crisis. In fact, the price level has been quite normal in Belgium. The gold index of retail prices has only fallen from 131 to 124, as it was still rising towards parity with the world prices when the crisis appeared. The fall in wholesale prices had first to counterbalance this trend of the retail price index before it could bring about a decline. The results of many investigations suggest that the general stores and the big shops reduced their quotations much earlier than the other shops. Undoubtedly they will all be compelled to give way, so that the Belgian people may reasonably expect a moderate diminution in the cost of living in the course of the next few months. In any case, the prices of commodities remain very much lower in Belgium than in other countries. White bread, for instance, is sold at 1.80 franc a kilo (1½d. per lb. avoirdupois).

Unemployment has remained relatively moderate: there are 25,000 workmen totally and 60,000 partially unemployed. A large number of unemployed would involve a heavy burden on the State and local treasuries, as the rates of benefit are high. The father of six children under age receives 4s. 6d. per working day, though the insurance premium paid amounts only to 5d. per month. At present employers do not contribute. Apart from the underwriter, the state, the communes and the provinces contribute to the fund. Public expenditure in this direction is likely to increase seriously, though it is not anticipated that the unemployment relief system will disturb the Budget, since it did not do so during the crisis of 1920.

ARGENTINA.

Crop Forecast — Trade — Prices — Exchanges and Banking.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, December 27.

THE first official crop forecast has just been published by the Ministry of Agriculture, and the figures are shown below:—

(000's omitted.)

	Area Sown.	Area Harvested.	Production.
	Hectares.	Hectares.	Tons.
Wheat	8,614	7,972	7,386
Linsod	3,044	2,939	2,144
Oats	1,610	830	1,054
Barley	571	373	432
Rye	535	253	179
Bird seed	34	33	30

The exportable surplus of wheat as at December 19, based upon the above figures with a carry-over of 500,000

tons, and a deduction of 2,440,000 tons for consumption and seed, amounts to 5,443,000 tons. For linseed the exportable surplus is estimated at 2,100,000 tons, stocks in hand more or less counterbalancing the 230,000 tons at which local consumption of the seed is estimated. Prices are unfortunately abnormally low, with wheat at \$5.60 paper per 100 kilos., maize \$3.80, linseed \$10.30, and oats \$3. These are spot quotations, and, roughly speaking, the Futures market for February delivery is barely 10 cents better all round.

These quotations, taken in conjunction with the state of Argentine exchange, which, at the moment of writing, is 35½d. banks' cable drawing rate on London and \$137.80 on New York, are causing great uneasiness in business circles generally. For the present, trade is still hopeful of a recovery in exchange, if not in cereal prices. Nor does the idea seem credible that Argentina will be left with her wares on her hands. It is therefore reasonable to expect that railway traffics will show a marked improvement in 1931. At the same time, there is no denying that the situation is grave, and may easily become alarming if the Government take no steps to check the downward movement of the Argentine dollar. It is reported that early in January some official move will be made, and it is argued that therefore current rates, which do not represent any volume of business worth mentioning, are but speculative quotations and do not reflect the true position. This is, however, at best but an intelligent hypothesis, and the fall in freights for ocean shipment to 17s. for January loading, San Lorenzo to U.K./Cont., is a natural consequence of the lack of interest shown by charterers.

Import trade in general is gradually falling off, though as yet this fact is not noticeable in the retail movement, which has been decidedly active at the year-end. Moreover, bank deposits have risen by some 43 million dollars paper as compared with the October totals; discounts and advances show an increase of some 50 million dollars paper, while the cash in hand is less by 4 million dollars gold and 14 million dollars paper. In a word, the banking figures are beginning to reflect very plainly the usual symptoms of unchecked exchange depreciation. As yet prices for every-day commodities have not been affected, and therefore the general public in Argentina cannot be said to have realised the extreme gravity of the position. It is, however, reasonable to hope that the Government do so, and that they will not procrastinate unduly before deciding to apply the only effective remedy, namely, the opening of the Conversion Office and the export of gold to an amount sufficient to bring the dollar within sight of parity.

How great this would have to be depends not only on the shipment and sale of the crops, but also on the prospects of raising a long-term loan in foreign markets. The £5,000,000 loan due in London on December 31st was replaced by two fresh discounts, for six and twelve months respectively, at a rate which works out on the whole transaction at ½ per cent. below the rate charged at the end of 1929, when 5½ per cent. per annum plus a commission of ½ per cent. was paid. The Argentine official world is said to have been highly pleased at this mark of confidence in the new order of things, and doubtless there will now be some \$25,000,000 gold held in London, against which the Banco de la Nacion will be empowered to draw.

SWEDEN.

Extension of Depression — Foreign Trade — Money and Exchanges.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, January 12.

THE latest statistics of unemployment show very clearly that the depression has extended still further. The National Unemployment Commission reports that the number of unemployed seeking assistance during November rose by 70 per cent. to 25,000. There is normally a

seasonal increase at this time, but a year ago the corresponding figure was not quite 10,000. This unemployment is not, absolutely, at all alarming, and compared with unemployment in other countries is entirely insignificant. It is only as a measure of the continued intensification of the depression that it is a serious factor in the situation.

The production statistics for the same month confirm this impression. During recent years the index of production of *Svensk Finanstidning* for November has shown a marked increase over October. Thus in 1927 it went up from 110 to 120 (1923-24 = 100), in 1928 from 125 to 133, and in 1929 from 134 to 137, despite the beginning of the depression. This year it fell from 126 to 121. The extent of the decline varied very much as between different industries; it was conspicuous in the iron ore industry, as is seen in the restricted output forced upon the Grängesberg concern at the beginning of November, whereas in the pulp industry it was quite insignificant.

During the autumn imports fell more rapidly than exports, owing to a relative increase in exports of pulp and paper on the one hand and a new setback in grain on the other. The latter fact is the consequence of the State—so-called voluntary—agreement with the millers to mill Swedish wheat and rye in fixed proportions. The reduction of pulp shipments amounted to 11 per cent. against 23 per cent. in October. In other staple articles the decline in shipments progressed still further, for timber from 36 to 39 per cent. and for iron ore from 35 to 45 per cent. At the same time, the weakening in the "quality" industries was quite pronounced. For ball bearings the reduction of exports was increased from 19 per cent. in October to 28 per cent. in November, for motors from 16 per cent. to 15 per cent. and for separators from 22 per cent. to 27 per cent. For matches the figure went to 56 per cent. and for pig iron 53 per cent. Electrical machinery maintained its exceptional position with a 4 per cent. increase of exports. The 35 per cent. reduction in exports of telephones in October was converted into an increase of 2 per cent. for November, compared with 1929.

Naturally the effects of this development are reflected in the balance of payments. Broadly speaking, the effects of the intensified depression are in this direction remarkably slight. The reduction of the net bank claims abroad which has occurred by no means corresponds to the unfavourable change in the balance of trade. This is all the more striking since capital exports were greater in 1930 than in 1929. November, however, showed a decided change. As late as September net claims abroad increased by Kr. 33 millions, an increase which continued in October, though at a slower rate. Whereas November normally registers an improvement in the balance of payment there was this year a setback of about Kr. 15 millions. Despite this the net claims abroad exceeded those of a year ago. They amounted to Kr. 564 millions, against Kr. 562 millions in 1929.

The change of tendency in November became still more pronounced in December, and has clearly affected both the exchange and the money market. The reduced demand for capital and the surplus of money in the commercial banks have been accentuated by the maintenance of too high a discount rate during the greater part of the year. Since the much lower rates abroad yielded a very poor reward on investments there it was of much greater advantage to the commercial banks to sell their foreign holdings to the Riksbank than to rediscount at the relatively high home rate. The consequence was that short-dated claims abroad were rapidly transferred from the commercial banks to the Riksbank, while rediscounting sank to an abnormally low level, and the foreign exchanges were forced considerably below the normal rates.

Gradually the resources of the commercial banks were exhausted, and as at the same time the flow of exchange became an ebb in consequence of the effects of the depression on the balance of trade, a change in the money and exchange market was inevitable, and occurred in December. Under the pressure of tax payments at the beginning of the month, and of the special Christmas

and New Year requirements, the commercial banks were compelled to resume rediscounting to a rapidly growing extent. The normal exchange realisations, which usually reach a peak at this time, did not take place. The change of tendency was so strong that the commercial banks were compelled, just before the turn of the year, to reappear as buyers of exchange.

The consequence was clearly seen in a weakening of the Swedish krona. Normally in December the latter is steadily rising and the foreign exchanges reach their lowest point. Thus a year ago the dollar was down to 3.70½ (par = 3.73) just before the middle of December, and closed at 3.71½. Three years ago (1928 is unsuitable for comparison owing to the great labour disputes) it went down to 3.70½ and 3.70½ respectively. Last December, on the other hand, it rose slowly but steadily from 3.72½ at the beginning of the month to 3.73½ at the close.

Books and Publications.

BRITISH ECONOMICS IN A NUTSHELL.

WE must admit at once that the nut is of very substantial dimensions, but when the reader sees for himself the amount of solid matter concentrated in the 900 odd pages of this convenient-sized volume* he may agree that our title is not misplaced. Mr Hugh Butler, a former American Trade Commissioner in London, has prepared for the Department of Commerce an account of the economic structure and conditions of Great Britain which should be on the shelves of every reference library, if only for the sake of its unique collection of statistics.

Mr Butler describes the general development of British industry and goes in detail into such matters as unemployment insurance, labour conditions, power equipment and its cost, public trading, transport and foreign trade. There is a chapter on each of the principal industries, a whole section on finance, and a section on "The British Market" which gives very full information for persons abroad desirous of trading with Great Britain. A separate section is devoted to Northern Ireland.

Equipped as it is with maps, diagrams, bibliography and a very efficient index, this volume should be of great service, not only to American business men, for whom it is primarily intended, and to other traders abroad, but to business houses, research departments, and students of economics in this country.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Rationalization. By James A. Bowie. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 1s. net.

Reprint of a series of articles in the *Times Trade and Engineering Supplement*.

Free Trade. Compiled by Julia E. Johnsen. (New York) The H. W. Wilson Company, 953, University Avenue. 90 cents.

A collection of articles, extracts from reports, and manifestos on both sides of the question. There is a very good bibliography.

Fiscal Fraud and Folly. By J. M. Robertson. (London) British Periodicals, Ltd., 19 and 19a, Cursitor Street. 3s. 6d. Paper 1s.

A somewhat violent discussion of protectionist doctrine by a convinced free trader.

* "The United Kingdom." Compiled by H. Butler. (Washington, D.C.) Superintendent of Documents. \$1.75.

Tate's Money Manual. By William F. Spalding. (London) Effingham Wilson, 16, Copthall Avenue. 5s.

Users of Tate's Modern Cambist cannot dispense with this annual supplement, which contains important additions, alterations and amendments to the latest edition.

Share Transfer Audits. By Reginald A. Davies. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 3s. 6d. net.

A full and practical guide.

The Securities Clerk in a Branch Bank. By F. J. Lewcock. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 7s. 6d. net.

A very thorough account of the matters with which a securities clerk needs to be familiar.

The Cable and Wireless Communications of the World. By F. J. Brown. Second Edition. Revised. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 7s. 6d. net.

A descriptive account, with discussions of finance, the problems raised by the new method of construction, competition, and State versus private enterprise.

Die Einkommensverteilung im Lichte der Einkommensteuer statistik. By Dr. Angelos Angelopoulos. (Leipzig) Akademische Verlagsgesellschaft M.B.H., Schlossgasse, 9. Rm. 7.50.

A valuable study of the distribution of income in Germany.

Margarine as a Butter Substitute. By Katharine Snodgrass. (Stanford University, California) Food Research Institute. \$3.00.

The results of extensive research, embodied in over 300 pages with many tables and diagrams. According to the publisher, "emphasis falls not only upon the economic aspects but also on the technological, legal and nutritional." The consumer, unconscious of so many aspects to his food and laying the emphasis elsewhere, has reached very different conclusions from those of the author.

This Age of Plenty. By C. Marshall Hattersley. Second edition. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 3s. 6d. net.

A revised edition of a book largely based on the ideas of Major Douglas and Professor Soddy.

Sea Power. By Geoffrey Drage. (London) John Murray, Albemarle Street. 10s. 6d. net.

A collection of the author's letters and articles.

Studies in Industrial Relations. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 5s.

This first volume of the series covers the Siemens Works, the Lens Mining Company, the London Traffic Combine, the State Mines of the Saar Basin and the Bata factory.

Wirtschafts-Statistisches Jahrbuch. 1929-30. (Vienna) Verlag der Kammer für Arbeiter und Angestellte in Wien.

An Austrian yearbook which contains a very comprehensive collection of economic statistics.

Survey of the Direct and Indirect Means at the Disposal of Foreign Buyers to enable them in a Number of Countries to Ascertain the Quality of the Goods Acquired by them. (Geneva) Economic and Financial Section of the League of Nations. 5s. 6d.

SOUTH AMERICAN BONDS.

EVEN if the outside world had remained normal last year, the bond market in New York would have had its spate of troubles. It experienced a more or less continuous pressure to sell, emanating partly from banks struggling against adversity and partly from life insurance companies faced with urgent demands for loans from policyholders. On the top of these domestic trials the market felt the shock of political and economic upheavals in the leading South American republics. In these circumstances the prices of South American Government bonds fell to unprecedented levels, and only in a few cases has any substantial recovery yet been achieved. The bond market in London presented a firmer front—British capital being less involved than American in the weaker Latin-American republics—but the confidence of both British and American investors in foreign government bonds has undoubtedly been somewhat shaken.

When successive revolutions began to sweep through South America last year the cumulative effect on bondholders was naturally severe. The first revolutionary news came in August from Bolivia, where the administration of Dr. Siles was overthrown. The next *coup d'état* was staged in Peru, where two factions, one in the South and the other in the North, swept away the twelve-year dynasty of President Leguia, authority being finally yielded to the Southern group under the leadership of Colonel Cerro. Early in September came the downfall of President Irigoyen of Argentina. This was the most bloodless of all the South American revolutions, and ended in the assumption of supreme power by General Uriburu. Finally, rebellion broke out in the Brazilian State of Rio Grande do Sul. After some weeks of fighting between armed forces the then Brazilian Government capitulated, and Dr. Vargas took the presidential chair forcibly vacated by Dr. Washington Luiz. Chile, which enjoyed a bloodless revolution nearly seven years ago, was the only major republic which remained politically tranquil in 1930.

Despite the natural alarm of many bondholders at these developments, the degree of political risk attaching to South American bonds may, in fact, have been exaggerated. The root of South America's present troubles is economic, for the collapse in commodity prices has severely affected primary producers in every republic. Many countries are anxious to change their governments when trade falls upon evil times, and the nature of the constitutions of the South American republics, which are modelled on the American executive system, tends to render a speedy change impossible except by revolutionary methods. Although many South American republics during the last fifty years have defaulted at various times as regards payment of coupons or sinking fund service, none has ever threatened repudiation of debt. Even the Peruvian revolutionary leader, who thought fit to complain of the behaviour of certain American interests, made it clear that all the foreign engagements of the Leguia administration would be fulfilled. Similar reassurances came from Bolivia and Brazil. In the case of Argentina such reassurances were not even necessary. It is true that in Brazil's case delay occurred in the payment of a coupon, due on December 15th, on the 7 per cent. Rio State Sterling Loan of 1927, but this was explained by the fact that the retiring Treasurer of that State, in the hurry of departure, had omitted to make the necessary arrangements for payment. The coupon, however, was paid by the end of the month. Indeed, a friendly and diplomatic attitude towards foreign capital appears to be typical of the normal South American "revolution," and should

contribute, in due time, to the recovery of confidence in the bond market.

The following table shows the highest and lowest prices for 1930, and the present prices of representative South American bonds in New York and London:—

	Interest Rate and Final Date.	NEW YORK.				Yield.	
		1930 Prices.		Present Offered Price.*	Yield.		
		High.	Low.†		Flat.	Redem.	
Argentina	6% 1960	100	88	90½	6.62	6.76	
Buenos Aires City	6½% 1955	100½	87½	85	7.64	7.90	
Do., do., Prov.	6% 1961	91	62	66½	9.02	9.35

† The New York low prices were all established in December except in the case of Buenos Aires City 6½% and Brazil 6½%, which were October prices.
* Prices quoted "and interest" in New York.

The prices current in the New York bond market suggest, broadly, that a somewhat conservative view is taken as regards Bolivia and Peru, that expectations are more optimistic concerning Brazil, and that confidence is clearly being placed in the recovery of Argentina. The position of Bolivia reflects, in part, the country's dependence on its mining industry—particularly its tin mines, the output of which has been severely restricted. Further, Bolivia has borrowed heavily in recent years, chiefly for its railroads, which may remain relatively unproductive for some years. Thus the revenues of Bolivia are being strained to meet its financial obligations, and a moratorium has even been discussed in commercial circles.

Peru is also suffering from a severe economic crisis. The values of all its principal exports—copper, sugar, cotton and oil—have fallen sharply (with the possible exception of oil). Peru has also borrowed heavily in New York, and over 75 per cent. of its total debt is external. Colombia, similarly, is feeling the effects of increasing its external debt too rapidly. Several of its departments, particularly Antioquia, have borrowed freely in New York, and over 80 per cent. of the debt of the Republic itself is held abroad. Oil exports, again, have been a large factor in the recent development of Colombia, and would be greatly affected if, as has been suggested, a tariff were imposed in America on foreign oil.

The economic position of the "A.B.C." group, though less acute, is not without difficulty. In Chile, for example, the shutting down of nitrate oficinas, outside the Guggenheim group, and the restriction of output in the copper mines have brought about a serious economic depression. Exports, which amounted to 2,239,874,483 pesos (£57,304,165) in 1929 had fallen to 982,905,000 pesos (£24,597,222) in the nine months ended September, 1930. The Government added greatly to its external obligations in the period 1927-30, borrowing about £41,000,000 abroad. Brazil has had even more difficult economic problems to meet, arising out of the breakdown

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
February 3.

ACCOUNT.
February 5.

The Stock Exchange lost no further ground, and even gained a little, this week. Though the threat of further gold shipments to France remained with the market, the lull in actual withdrawals in the middle of the week had a beneficial effect on gilt-edged stocks. In the industrial markets a slight ray of sunshine came from much the same quarter which provided last week's storm, the increased dividend of the Imperial Tobacco Company being the more welcome because of its unexpected nature. In the mining markets the continued firmness of Kaifirs was a feature, the future significance of which caused a division of opinion. The markets as a whole may not yet have fully gauged the effect of current depression on earning power, and must, consequently, be liable to intermittent spells of liquidation whenever individual results fall below expectation. The undertone, however, is not unsatisfactory, few holders being anxious to change their investments until clearer evidence is forthcoming, either way.

Gilt-edged stocks were affected at the outset by the heavy gold exports, Conversion issues being particularly heavy. Later, however, more favourable developments caused a measurable recovery, in which 4 per cent. Consols and War Loan were prominent. India Loans came on offer despite the comparatively favourable atmosphere in which the Round Table Conference concluded. Australians were steadier after early selling, and the liquidation of New Zealand issues showed signs of having spent its force.

Business in foreign bonds was restricted. Germans obtained fair support and Brazilians improved on the partial confirmation of a reported £7,000,000 credit for the Bank of Brazil. Numerous questions affecting holders of South American stocks are discussed in a leading article on an earlier page. Among Europeans, a spurt in Turkish Unified, originating in Paris, was induced by rumours of a resumption of negotiations on the debt service.

The home railway market was neglected. Dealers obtained no guidance as to wage possibilities from the sittings of the National Wages Board, though the evidence as to costs and receipts given by the companies confirmed the conservative views as to forthcoming dividends expressed in these pages three weeks ago. Quotations continued slowly to sag, even Undergrounds being easier on a continued decline in traffic. Argentine rails were again sold on unfavourable traffic returns and fears regarding the interim dividends.

Last week's liquidation in industrial shares was not, happily, repeated, though business as a rule was meagre and mainly professional. Imperial Tobaccos rallied on the increased dividend announcement, which is discussed on page 179. The Turner and Newall report (analysed on page 180) was considered fairly satisfactory, but induced no recovery in the shares. Among motors, Ford, Austin and Thomas Tilling were again in favour, but a slump occurred in Leylands on pessimistic dividend rumours. Some investment demand was in evidence for electrical supply shares, with special activity again centred on Egham and Staines, on persistent absorption talk. Coal and steel shares were irregular, Babcock and Wilcox losing ground, while Stewarts and Lloyds deferred were firmer on the cessation of forced liquidation. Imperial Chemical recovered part of last week's losses. Little business was done in textiles, but the extension of labour troubles in Lancashire caused no widespread selling. Bank shares were firm and in moderate demand, while insurance shares showed few quotable changes.

The rubber share market was dull, Rubber Trusts continuing their downward trend. A comparatively small amount of liquidation depressed tea shares, Jokais suffering a further setback. Slightly better conditions

(Continued on page 178.)

of the "Coffee Defence" scheme towards the end of 1929 and a further collapse in coffee values last year. Exports, which amounted to £94,831,000 in 1929, fell to £57,137,000 for the ten months to October, 1930. Powerful banking houses in London and New York, however, came to the rescue in April last year, when the £20,000,000 San Paulo Seven per Cent. Coffee Realisation Loan was issued, which provided for the gradual liquidation of surplus coffee stocks. It was reported last week that the Brazilian Government had been granted a credit of £7,000,000 by a group of London bankers, headed by Rothschild and Sons, to tide over exchange difficulties. The Government has given proof of its earnest desire to restore the national finances and will shortly have the expert advice of Sir Otto Niemeyer on its financial problems, including the conversion of the Banco de Brazil into an effective central bank and the unification of the note issues.

Argentina, finally, is suffering from the collapse in the prices of wheat and other cereals, and of wool. Its export trade for the first six months of 1930 amounted (at par of exchange) to £69,501,869, as against £189,067,826 in the twelve months of 1929. The closing of the Conversion Office, following on the decline in export trade, aggravated the depreciation in the peso exchange. It is generally believed that the peso may be restored if the national gold reserves are allowed to perform their ostensible function. The new Government, indeed, expressed its intention to return to the gold standard and to convert the Banco de la Nacion into a central bank proper. Last week it was announced that arrangements had been made, under which up to 30,000,000 of gold pesos held by the Conversion Office would be set free to support the exchange in case of need. Other Argentine problems include the balancing of the budget and the consolidation of the huge floating debt, which amounts to \$565,000,000 (paper), pesos, as against an internal funded debt of \$1,156,407,000 (paper), and an external debt of \$1,111,676,000 (paper).

The following table gives a summary, in sterling at current rates of exchange, of the Federal internal and external debts of the South American republics mentioned in this article, together with a statement of the par value of the currency and the present rate of the sterling exchange:—

	Argentina. £	Brazil. £	Chile. £
Internal	149,687,565	57,686,785	10,956,831
External	96,667,391	148,828,066	63,269,518
Par of exchange \$ = 47.577d. milreis = 5.899d. \$40 = £strg.			
Present rate	34.25d.	4.5d.	39.96

	Peru. £	Bolivia. £	Colombia. £
Internal	7,176,026	1,477,743	2,975,266
External	21,883,760	12,887,077	13,760,069
Par of exchange.....	12.166 soles.	13.33 bolivi.	5 pesos
	per £.	anos per £.	per £
Present exchange...	16.30	13.45	5.03

The investor in foreign government funds should appreciate the risks he runs in dealing with debtor countries such as Argentina and Brazil, whose "invisible" balance of trade is unfavourable. In the normal course of affairs these debit balances on international account are made good by shipments of gold or by foreign loans. In an abnormal period of trade, when the value of the visible export trade has been lowered by the fall in commodity prices and when foreign loans have become difficult, it is not impossible, to arrange, such debtor countries may find difficulty in continuing interest payments on their external debt. Whether some of the South American republics will be able to emerge from their present economic crises without the help of foreign loans remains doubtful; but the investor has at any rate the assurance that the Governments in power are doing their best to meet their present difficulties, and have so far shown no tendency to flirt with unorthodox and dangerous financial expedients.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

ruled in the oil market, though public interest was conspicuously absent. The leading issues mainly held their ground, though the American trade figures showed the customary seasonal increase in stocks of petrol.

A noticeably better tone prevailed in certain sections of the mining share market, and, with the cessation of last week's liquidation from Paris, a little public buying developed. Increased interest was taken in Kaffirs, including Goldfields, Rand Mines and Central Mining, while among Far Eastern shares, Sub Nigel was a strong feature. A South African view of possible developments in the gold mining situation is given on page 182. Northern Rhodesians were dull for the most part, but Chartered enjoyed a recovery. Diamond shares had a firmer tone than for some weeks past, De Beers in particular gaining ground. Tin shares were firmer, though no further official news was available regarding the restriction position.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets have reached a stagnant condition, eloquent of exhaustion after a long decline. On Monday, for the first time for many years, less than 1,000,000 shares were dealt in at a full session. In recent weeks a steadily diminishing interest has been taken in successive rallies and declines. The whole market is tending to settle down to a period of featureless stability, pending a revival in trade conditions, whose date no one now attempts to forecast. This week the much discussed Wickersham report on prohibition failed appreciably to affect the market, owing to the wide variance of the individual views revealed, and the refusal of President Hoover to support a modification of the Eighteenth Amendment. Rails displayed some strength, but United States Steel were re-

actionary on an estimate that earnings in the December quarter were only about 40c. per share. Bethlehem Steel, Westinghouse Electric and Allied Chemical broke their 1930 low records, owing to dividend fears in each case. Trade indicators pointed to a fair seasonal recovery, steel production having risen to 45 per cent. of capacity, while car loadings showed a sharp increase last week. Moderately satisfactory wholesale buying of commodities for the spring is reported. Call money has been easy at 1½ per cent., with some talk of a possible further reduction in the New York Federal Reserve rediscount rate.

* 2-hour session.

AMSTERDAM.

Although the last fortnight of the old year proved very disappointing on the Amsterdam stock market, the New Year made an encouraging start. The better tendency was chiefly attributable to the improvement in the New York market and to the release of funds for fresh investment owing to distribution of dividends and redemptions. This alarmed bear operators, who promptly covered their short engagements, and a fairly sharp recovery set in. As a result, further forced liquidation on the part of the public was avoided, and the desire to pick up some stock at the prevailing low levels was soon apparent in a modest scale. The bond market also presented a firmer aspect, particularly as regards German issues. Bank shares profited by the better tendency, and partly in view

of the example set by the English "Big Five," a substantial reduction in bank dividends for 1930 is not expected. Leading industrials, like Philips and Margarine Unie, reached higher levels, although a reaction set in later. Artificial silks were firmer at first, in view of the closer co-operation achieved between the General Art Silk Union and the Breda Silk concern. Sugar shares were better. Opposition to the Chadbourne scheme in the V.I.S.P. does not appear to be as great as had first been announced. The V.I.S.P. sold no less than 120,750 tons of sugar last week at the previous prices, so that approximately 1,000,000 tons are left over. In conformity with the international agreement, 500,000 tons of this will be kept off the market, while Java itself will need fully 100,000 tons in the next few months, leaving only about 400,000 tons over for export by June. It is not surprising, therefore, that when the V.I.S.P. received an enquiry for 250,000 tons of sugar at the old price, the bid was not accepted, the company preferring to await developments. The buyers, in fact, then bid higher than the previous price, so that the V.I.S.P. succeeded in realising 8.25 guilders for about 50,000 tons. Tobaccos were firmer, on good prospects for the 1930-31 crop, due to beneficial weather. Rubbers were well maintained, with quieter trading. Shipping shares were neglected, but the undertone was firm. Among oils, Royal Dutch and Shell Union made some recovery, but relapsed later.

INVESTMENT NOTES.

B.A.T. and Imperial Tobacco Dividend.—Some discussion has been aroused by this week's declaration of an enhanced dividend by the Imperial Tobacco Company, eight days after the chairman of the British American Tobacco Company had painted a somewhat gloomy picture of the latter company's prospects, and forecast a reduced final dividend for the year ending September 30th. The figures of the British American Tobacco Company, to September 30, 1930, had shown that profits had been well maintained, and, as the company, following its usual practice, declared simultaneously (on December 16th) its final dividend for 1929-30 and an interim dividend (at the normal rate) for 1931, the chairman's remarks at the meeting came as a bolt from the blue. Their significance was regarded as enhanced by the company's admittedly high position in the estimation of British investors and by the proverbial reticence of the board in ordinary circumstances. The announcement naturally induced extensive selling of tobacco shares, as a result of which B.A.T. ordinary fell from 100s. to 88s. and Imperial Tobacco ordinary from 94s. 3d. to 88s. 9d. Liquidation spread to other share groups, many investors deeming it advisable to revise in a downward direction their estimates of industrial earnings generally. When, therefore, it was

announced, on Tuesday last, that the Imperial Tobacco Company was increasing its final dividend from 8½ per cent., tax free, to 9 per cent. tax free, and preliminary figures were given suggesting that profits had increased by over £400,000, a substantial rise in values ensued, Imperials rising to 93s. 9d. Though the two companies have separate boards of directors, the market was inclined to the view that the connection between them was sufficiently close to have warranted a warning, at the B.A.T. meeting, of the danger of placing too wide a construction on the chairman's remarks. That the Imperial Company does not look for any considerable contraction in its business in the near future is suggested by the decision to increase its dividend, at a time when the directors have before them, presumably, the approximate results of nearly three months' operations during the current financial year. Any contraction in turnover which the company may have suffered as a result of general trade depression may have been more than counterbalanced, so far, by the decline in raw tobacco prices. According to the Board of Trade returns, the average price of all tobacco imports into this country last year was 1s. 4d., against 1s. 6½d. in 1929. Imports for home consumption have, in fact, been well maintained, their total being 151,700,000 lbs. last year, against 147,800,000 in 1929. Though the B.A.T. chairman, last week, made no statement which ostensibly referred to any company but his own, it would be well, as a general rule, when close connections exist between companies of high status in any industry, that allowance should be made for the human tendency to argue from the particular to the general.

The National Shipbuilders' Issue.—This week's issue of £1,000,000 of 5 per cent. first mortgage debenture stock at 95 by the National Shipbuilders' Security, Ltd. (particulars of which are given on p. 184) is noteworthy as the first offer made under the auspices of the Bankers' Industrial Development Company. The latter was formed (as shown in the *Economist* of April 19, 1930, page 875) with the backing of the Bank of England and large banking interests in the City of London, to assist in the rationalisation of British industries. The present offer has various unique features. Though the debentures are essentially of an "industrial" character, their security resembles that of many Government loans, interest and sinking fund being secured on a species of "turnover tax." This takes the form of a levy of 1 per cent. of the contract price of vessels over 300 feet in length, built after November 1, 1930, by leading shipbuilders of the country, who last year were responsible for 93 per cent. of the tonnage launched in Great Britain and Ireland. The proceeds will be used to finance the purchase and dismantling of redundant shipyards, in order to enable efficient British yards to compete more favourably with foreign companies as the result (to quote the prospectus) of "concentration of building . . . increased output . . . and lower working costs." The method adopted has been,

INVESTMENT

by L. L. B. Angus.

(Author of "The Coming Collapse in Rubber, 1926.")

The publication of this book marks a new epoch in the science of investment for profit; no speculator, investor, trustee or stockbroker can afford to leave this work unread.

CONTENTS.

- The Business Cycle and its influence on the prices of all securities.
- How to detect the beginnings and endings of booms and slumps in single industries.
- Methods of forecasting the short-run market fluctuations which occur simultaneously every few months in the majority of ordinary shares.
- Rules for timing both buying and selling and for taking profits and losses.
- Investment policy to be followed by Trustees at different stages of the Business Cycle.
- Mistakes to avoid.

Financial News: "The most remarkable book on the technique of speculative investment published in England since the War."
Daily Telegraph: "The best book that has ever been written on investment with a view to capital appreciation."

in fact, to amortise the cost of eliminating obsolete plant by spreading the burden over the next 30 years. The method of apportioning liability as between different firms is in some respects rough and ready, and a levy based not on profits but on gross contract prices will, even under "rationalised" conditions, tend to fall with greater weight on the less than on the more efficient companies. From the investor's point of view, however, the procedure has the merit of simplicity. It succeeds, further, in creating an imposing "cover" for the stock, whose annual requirements are shown to have been met four and a half times by the average annual shipbuilding figures for the six years ended December 31st last. The profits of the issue will not, of course, be used for the acquisition of any new and directly productive assets in the way of shipbuilding plant. The offer, however, is welcome evidence of a determined effort by a great British industry to set its affairs in order, and of the willingness of the Bankers' Industrial Development Company to help those who are prepared first to help themselves. The stock gives a flat yield of £5 5s. 3d. per cent., and a redemption yield (at par on the latest date) of £5 6s. 7d. per cent. These figures are attractive in view of the influential backing of the issue, and may be taken as evidence of the desire of the Bankers' Industrial Development Company to ensure an outstanding success for its initial flotation.

The Outlook for Sugar Beet.—The appeal for further intervention in the sugar beet industry addressed by the Brigg Urban Council to the Government this week suggests that this trade is feeling the effects of the universal depression. It may be recalled that from 1924 until 1927 a State subsidy was granted on beet sugar of 19s. 6d. per cwt., reduced in 1928 to 13s. per cwt. Under the present arrangement this subsidy is to be halved for the next three years. At the same time, the beet sugar industry at home, in common with Imperial producers, has enjoyed a preference amounting to 3d. per lb. of refined sugar. Since 1924, however, the average price of refined granulated sugar in London has fallen from 46s. 4d. per cwt. to about 20s. per cwt., and a crisis has arisen between the Beet Sugar Factories Committee, representing the English refiners, and the Sugar Beet Committee of the National Farmers' Union, representing the growers, with regard to the contract price for the coming season's crop. Last week twelve of the eighteen refining factories made an offer of 37s. 6d. for 17½ per cent. beet, whereas the growers demanded a minimum of 46s. This week the Anglo-Dutch group, which operates factories at Cantley, Kellam, Ely, Ipswich and King's Lynn, states that it is impossible to offer the N.F.U. a price even approximating to that demanded, but affirms that it is prepared to operate its factories during 1931 not for the purpose of making profits or accumulating reserves, but in order to utilise the whole net proceeds of such manufacture in payment to farmers for beets delivered. The profits and dividends of the Anglo-Dutch group for the past three years are set out below:—

Name.	1928.				1929.				1930.

The English beet sugar industry has satisfactorily survived the earlier years of its infancy. Since 1924 production has advanced from 26,000 tons to 324,000 tons in 1929-30, when the greatest acreage was farmed. The situation at the moment is undoubtedly difficult, and there is a possibility that the growers and refiners may make a concerted request for further Government aid to tide them over the bad years. Ultimately, however, if

the British sugar beet industry is to exist and expand, it must do so on a self-supporting economic basis, setting good against bad times. During the latter the refineries may be compelled to accept low profits or no profits until the sugar market recovers its equilibrium.

Turner and Newall.—Apart from a few minor adjustments, the final accounts of this great asbestos combine add little to the preliminary profit statement, which was set out in the *Economist* for January 3, 1931. Trading profit totalled £1,101,845, compared with £904,633, and expenditure, including amalgamation costs, £272,082, against £99,835, the net profit of £829,768 showing an arithmetical increase of £24,970 on last year. The ordinary dividend was 11½ per cent. out of 15.4 per cent. earned, against 17½ per cent. out of 23 per cent. earned, the difference being due to the increase of the ordinary capital from £2,232,848 to £3,096,505 on account of the Rhodesian and General Asbestos merger. From the statement accompanying the accounts, it now appears that a final dividend of 15 per cent. was received by Turner and Newall from Rhodesian and General Asbestos on December 1, 1930, amounting to £157,210, which it was not possible to include in the Turner and Newall accounts. The sum of £120,000 which was brought into profit and loss as the "balance on purchase account of Bell's United Asbestos" was clearly a non-recurring item, and as such cannot legitimately be considered as augmenting the net profit for the year. Clearly, the immediate future of the company turns on the market prospects of raw asbestos. Asbestos prices, while comparing not unfavourably with those of 1924, are apparently well below the 1929 level, and the possibility of future competition cannot be overlooked. While the asbestos output of Soviet Russia is steadily increasing, it is as well to remember that her own constructional programme is providing a continually increasing drain on her resources, so that the amount of asbestos she can export during the next few years can only be a very small proportion of the world supply.

Metropolitan Trust.—The report of the Metropolitan Trust for the year to January 1, 1931, is another reminder that the old-established investment trust companies, which have had time to build up adequate reserves, are able to withstand even an abnormal cataclysm in security values without serious disturbance to their financial strength. The Metropolitan Trust, which belongs to the Robert Fleming group, was formed in 1899. Its revenues last year were more than maintained, and its investments at current market prices are still £415,000 in excess of the book value of £3,247,562. A year ago the market value of its investments was £725,000 in excess of book value of £3,205,479: in other words the company's investment portfolio depreciated last year by about 7½ per cent., which is a creditable record attributable to the fact that 48.2 per cent. of its holdings are in bonds and debentures, 24.1 per cent. in preference and guaranteed stocks, and only 27.7 per cent. in ordinary stocks. A classification by countries shows that 38.4 per cent. of the investments are located in Great Britain, 12.4 per cent. in the U.S.A. and 11.3 per cent. in the Argentine. The financial results for the past two years compare as follows:—

	Year to—		
	Jan. 1, 1929.	Jan. 1, 1930.	Jan. 1, 1931.
Net revenue (after tax)	£ 195,516	£ 200,793	£ 198,269
Deb. interest	50,000	50,000	50,000
Prof. dividends	28,125	28,125	28,125
Earned on ordinary	23.5%	24.5%	24.8%
Paid on ordinary	19½%	20%	20%
To reserve	Nil	75,000	Nil
Carry forward	72,670	20,338	43,607

The ordinary stock, which was as high as 407 last year, is quoted to-day at 380 to yield 5.26 per cent. The 4½ per cent. preference stock at 90, and the 4 per cent. debenture stock at 80, both return yields of 5 per cent.

Hudson's Bay.—The extraordinary meeting of the proprietors of the Hudson's Bay Company, which was called on January 17th to consider the report of the Investigation Committee (see *Economist*, January 3, 1931), promised to be a noisy and unruly affair. Fortunately, however, wiser counsels prevailed, and the meeting ended in a compromise. The deputy governor, Sir Frederick H. Richmond, dealt with the report of the Special Investigation Committee, of which Mr Alfred Shepherd, a director of a number of well-known insurance and trust companies, was chairman. He denied that the position of the company was financially unsound. He said that, even after taking into consideration the loss anticipated in the current year, the shares valued on a most conservative basis were represented by assets very much in excess of the present market quotation. This statement he justified by an analysis of the balance sheet. The company, he declared, was structurally, financially and fundamentally sound. As the governor, Mr Sale, did not agree with the recommendations of the Special Committee for the formation of a Canadian company to acquire and conduct the stores in Canada, Mr Sale was resigning, but the deputy governor took the opportunity of paying a tribute to the great work which he had done for the company. In the meantime the Special Committee had been negotiating with Mr Nordon, and the following compromise had been agreed to. Three new directors were to be appointed to the board in place of the governor and two other directors who would retire, and the persons to be appointed were to be selected by the board in consultation with the committee, Mr Nordon and certain other shareholders. In the event of disagreement the selection was to be decided by Sir Robert Horne as arbitrator. Mr Alfred Shepherd, the chairman of the Special Committee, then addressed the meeting. He pointed out that the reconstituted board would have to decide whether the recommendations of the committee would be carried out. Mr C. L. Nordon followed, and expressed the difficulties of his position. He had been supported by a very large number of proxies, but after the powerful advocacy of Sir Robert Horne, supported by Captain Cazalet (representing his father as the largest shareholder), he had agreed to accept the amendment put forward. He pointed out that the newcomers to the board would be in a minority of three to six, but he hoped that the board would see fit to carry out some of his suggestions. On the whole, the meeting was a triumph for the spirit of compromise, which, we think, reflects great credit on the City of London—and not a little on the moderation of Mr Nordon.

Ever Ready Trust.—Formed in 1928 by the Ever Ready Co. (Great Britain), Ltd., with the assistance of a company in the Horne group, this company was designed as an investment trust and finance concern. An appreciable part of its resources is invested in 500,000 £1 8 per cent. cumulative preference shares of Lissen, Ltd., valued at par. Other holdings, according to the last accounts, include "miscellaneous" investments of £24,846 and 128,845 5s. shares in the Ever Ready Company. The latter investment has a present market valuation of £114,350. The report states that the book-value of investments exceeded the market valuation on December 31st last by £48,548.

* Contingent on acceptance of capital proposals.

† 13½ months.

The return on the investments for the year amounted to just over 8 per cent. The annual report is accompanied

by a notice calling an extraordinary meeting, at which a resolution will be submitted to give the £100,000 of deferred shares the right to receive a dividend after the ordinary shares have received 5 per cent., both ranking *pari passu* for any further distribution. Another resolution provides that not more than 5 per cent. of the company's capital shall at any time be invested in any one security. The circular states that the Board considers the time is approaching when the company's holding of Lissen's shares may be advantageously disposed of. This would place the company "in possession of liquid funds." The proposal may be associated with the recent registration of Lissen, Ltd., as a public company with a capital of £1,000,000, which, presumably, is to be offered to the public. The liquidation, on satisfactory terms, of the Ever Ready Trust's holding would be welcomed by the latter company's shareholders, some of whom have evinced a certain curiosity as to the reasons which originally induced the company to lock up so large a part of its capital in a single non-liquid investment. It is anything but clear, however, why "such a change" (in the directors' words) "would render it equitable to modify the dividend rights of the shareholders." The directors have so far failed to disclose any sound reasons for such a step.

American Railway Consolidation.—A fortnight ago we published a brief outline of the situation, so far as it was then known, as regards the consolidation of the American railroads serving the territory between New York and Chicago. The plan, it was understood, aimed at consolidating the Eastern American railroads into four large groups, primarily based on the Pennsylvania, New York Central, Baltimore and Ohio, and Nickel Plate systems—the latter embracing the Erie, Pere Marquette, and the Chesapeake and Ohio. Later information shows that in reality the announcement made by President Hoover on December 30th last merely marked one further stage in the progress towards the solution of a very complex problem. Apparently, at the beginning of the year the presidents of the four large systems came to a "gentlemen's agreement" which was to form the basis for a written application to the Interstate Commerce Commission, but at that time nothing was committed to paper. That any such plan when presented formally to the Commission will meet with considerable opposition is clear from the declaration of Senator Couzens, chairman of the Senate Interstate Commerce Committee, a body intimately concerned, to the effect that the action of President Hoover is "most unethical." According to Senator Couzens, the question is primarily to be decided in the interests of the public by the independent Interstate Commerce Commission, whose members have already made public their own plan (which of course is subject to amendment), providing for a five-system railway grouping in this territory. Since the Commissioners are nominated by the President, they might find it diffi-

RAILWAY, PUBLIC UTILITY,
INVESTMENT TRUST AND
INDUSTRIAL FINANCING

cult to pass an adverse judgment on a plan which apparently was evolved at the instigation of the President himself and to which he has given his backing. Opposition to any such four-company plan has already been voiced by important interests in the Middle West, and the proposal is likely also to be attacked by stockholders of the smaller but very powerful Eastern railroads engaged primarily in the anthracite coal traffic, which seem to have been treated as pawns in the negotiations. The main outlines of the agreement would appear to be the addition of the Delaware, Lackawanna and Western to the New York Central; and the acquisition of the Lehigh Valley, the Chicago and Eastern Illinois, the Wheeling and Lake Erie, and the western half of the Virginian by the Chesapeake and Ohio-Nickel Plate system. To the Pennsylvania is to be allocated the Norfolk and Western, the Wabash, the eastern half of the Virginian, and certain running rights over the Lehigh Valley. The Baltimore and Ohio is to be allowed to consolidate its position by acquiring an entry into New York City over the Reading and the Central of New Jersey, and is to retain the Western Maryland and the Chicago and Alton, which it now controls, and to acquire the Ann Arbor and the Monon Line. Such a scheme surmounts many of the problems involved in the Interstate Commerce Commission's five-company plan, but until the official application is presented to the Commission there would seem no cause for any material rise in the securities of the companies concerned. Any progress towards consolidation is likely to be so slow as to afford little prospect of the relief to American unemployment by way of operations involving heavy capital expenditure.

The Tin Outlook.—The tin industry is now embarking upon a new venture. The industry is heavily loaded with high-cost producers, who increased and multiplied as a result of the 1927 boom, and whom schemes of voluntary restriction have done little to check. The price has fallen from £180 a year ago to a low level of £105, with a subsequent recovery to £117. Despite the slowing down of production, shown below, large stocks have accumulated as a result of slack consumption and excessive plant capacity:—

OUTPUT OF TIN BY COUNTRIES.
(Long tons of metallic tin.)

	1929.	1930.
Federated Malay States.....	67,040	62,062

Bolivia.....	43,033	37,051
Nigeria.....	10,412	8,692
Cornwall.....	2,750	2,100*
Total.....	174,061	160,355

* Estimated.

Consumption has apparently diminished from 168,020 tons to 145,100 tons. The total available stock, at 51,030 tons, is over 40 per cent. greater than at the end of 1929. The diminution in consumption last year was well distributed. The United States took 78,225 tons, or nearly 11,000 tons less than in the previous year. In Great Britain deliveries declined by some 2,000 tons, and there is known to have been a substantial fall in ex-smelter consumption, which does not enter into the statistics. Other deliveries were but little affected, but the chief changes again have been outside the scope of the statistical records. Despite the persistent optimism of the Producers' Association, the decline in prices has been continuous. Unsuccessful manipulation widened the range of fluctuations last year, when the year's average price, at £142, was lower than in any year since 1909. A new restriction is now proposed, which, unlike its predecessors, imposes no obligations upon individual producers. It allocates quotas (based on 1929 production) to the different Governments; it leaves the internal adjustment of output to be undertaken by official decree. It has apparently been decided to fix output for 1931 at 145,000 tons, a figure which will clearly allow of no depletion of stocks unless consumption revives. This aspect may conceivably have prompted the Senior Warden

of Mines (F.M.S.) to remark that "the quota might frequently be changed so as to avoid disturbing the industry." The negotiations have been marked by a mass of uninformative publicity. Last Monday's newspapers, for example, contained the Senior Warden's statement that agreement would be for one year. Side by side with this was printed an interview with Sir Philip Cunliffe Lister, chairman of the Tin Producers' Association, stating a minimum period of two years. Sir Philip proceeded to argue that the scheme provided for the gradual reduction of existing stocks. This argument, again, would be more impressive if it were not related to the Senior Warden's output figure of 145,000 tons. The market hitherto has been sceptical regarding the new scheme; the Eastern market, in particular, has sold forward in large quantities. Various features have combined to lend to the transaction a certain remoteness, among them being the lack of information regarding methods of enforcement; the absence of any estimate of the scheme's provisions as affecting individual companies; and general ignorance of concessions which may have been made in order to secure a full quota for Malaya's "overburden" of high-cost producers. Again, there is a feeling that the industry's troubles are due to a plethora of capacity rather than to the slump in consumption. Until unwanted producers are forced out, it is feared that potential production will be too great for any normal demand, and that, so long as this condition is unfulfilled, no restriction scheme can have a sound economic basis.

South African Gold Mining Possibilities.—Signs of a possible revival of activity have recently been observable, from time to time, in the "Kaffir" share market. According to advices from South Africa, the political atmosphere may be changing to the advantage of the industry. The Low Grade Ore Commission is attracting some attention. Commissions and other inquiries of this nature are far from novel in South Africa. On previous occasions, however, the terms of reference have specified "low-grade mines"—a phrase which confined the inquiries to mines in being, and consequently implied a consideration of the relation between working costs and revenue on individual properties. The present commissioners are instructed to investigate the problems connected with the working of low-grade ore (say, 4 or 5 dwts. per ton)—which covers existing mines and also untouched ore deposits. It appears, therefore, that the Government are now alive to the desirability of attracting capital for the development of such areas as those on the West Rand, as well as improving the profit-making capacity of the poorer existing mines. The Government Mining Engineer, in his lately published estimate of the future production of the Rand, presupposes the continuance of existing conditions and costs, and at the same time quotes an estimate that a fall of 2s. in working costs, or the securing of a steady and fully adequate labour force, would prevent any fall in output for ten years. As regards the former condition, some relief in the cost of stores seems not unlikely, and the Government may possibly recognise its obligations as a partner in the industry by contributing to the phthisis funds. Falls in wages are dependent on financial, political and social circumstances in the country as a whole, but generally the outlook for working costs is not unfavourable, in spite of increasing technical difficulties (of depth, etc.). The labour problem could be greatly mitigated by the admission of tropical natives, and with the experience in care and administration of the native labour force now possessed by the industry, serious difficulty might not arise if these natives were secured. The Government's decision on this point may, in the opinion of South African observers, be conceivably affected by the political consideration that the influence of Colonel F. H. P. Cresswell in the Cabinet is now less than formerly. If the present more favourable atmosphere were to result in definite action after the presentation of the Commission's report (which can hardly appear for some months), certain South African authorities believe that an opening might be created for the investment of new

capital in the industry, provided that investors were prepared to accept from mining holdings the yield and the security ordinarily offered by industrial stocks. Holders of these views declare that in its magnitude, its conditions, and its methods the Rand gold-mining industry has for years been more akin to a large manufacturing business than to the majority of mining industries. Though the days of spectacular profits may be over, investors, on this argument, may still look forward to a moderately lengthy period of security and sound average profits. There are in the Transvaal large tonnages of ore below the present pay limit, and also of ore which under present reduction processes is refractory. The Government is apparently considering whether a policy of facilitating the working of this ore might not pay the country better than the promotion of secondary industries. On this view the situation holds possibilities which, if realised, may enable the Rand again to falsify the more pessimistic prophecies as to its future.

Insurance Share Index.—The publication of our periodical Insurance Share Index provides an opportunity for surveying the course of the Insurance Share Market during 1930. The first three months of the year witnessed a substantial rise in prices, as is customary in a period during which anticipations are formed as to forthcoming dividends. As trade depression deepened this rise was lost during the second quarter of the year, and although the last half of the year saw some recovery, prices on December 31st were below their best for the year. Nevertheless, as our Index shows, there has been an appreciation during 1930 of approximately 4½ per cent. Incidentally it may be mentioned that this computation agrees very closely with that of the Actuaries' Investment Index which shows an appreciation in the Index of shares of 24 leading Insurance Companies from 87.0 on December 31, 1929, to 90.9 on December 31, 1930. The table which appears below exhibits the history of an investment in 1913 of £1,000 in the ordinary shares of each of 25 leading companies, and an index also of the total. A column has been added to show the values as at December 31, 1930. The figures are based on the mean of the highest and lowest prices in each year, except in the case of the last 4 columns which relate to the middle market prices on the dates specified. In all cases where an issue of bonus shares has been offered due allowance has been made by assuming that the rights are sold, and the proceeds utilised to purchase an additional holding in the original shares. The shares of only 6 companies out of 25

companies represented in the Index have failed to register an appreciation, namely:—Caledonian, Employers' Liability, Equity & Law, Gresham Fire, Life Association of Scotland and the London Assurance, while the shares of the Scottish Life show no change on the year. At the other end of the scale the two offices whose shares again

show an outstanding appreciation are the General Accident and the Legal and General, each with an appreciation of approximately 9 per cent.

Company Meetings of the Week.—On later pages of this paper will be found the reports of the following companies:—Barclays Bank, Midland Bank, Barclays Bank (Dominion, Colonial and Overseas), Hungarian Commercial Bank of Pest, Hudsons Bay Company, Alexanders Discount, National Discount, Union Discount of London, National Building Society, United Serdang (Sumatra) Rubber Plantations, Liebig's Extract of Meat, and Michael Naim and Greenwich. At the annual meeting of the National Building Society, the Chairman referred to the question of the future interest rate, declaring that the society saw no reason to reduce its customary rate of 5 per cent. to investors, since it had been able to obtain a satisfactory amount of mortgage business. Presiding at the annual meeting of United Serdang, Mr Eric Miller said that the company was planning to produce a crop of about two-thirds of the normal, but the proportion of producers who were following that lead was as yet inadequate to remedy the position. He estimated world production of rubber in 1930 at 810,000 tons, or about 40,000 tons less than in 1929, but world-absorption at about 700,000 tons showed a decline of 100,000 tons compared with 1929. The speeches of the chairmen of Barclays Bank and the Midland Bank are discussed on page 157, and a critical review of the Hudson's Bay speeches will be found on page 181.

CAPITAL ISSUES.

THE new issue market shows signs this week of a moderate revival. Three public issues have accounted for £4,500,000 (nominal) of new stock this week, the largest individual offer being that of the *London Power Company*. The latter derives its revenues from the sale of bulk electricity to ten constituent companies, all operating in London under an arrangement which provides that the price paid for the electricity shall be sufficient to cover the expenses and interest, etc., of the company. The stock was well secured, and, at 100½, offered an attractive yield of just under 5 per cent. As the company's 5 per cent. stock previously in issue stood in the market at a price equivalent, after the payment of stamp duties, etc., to approximately 104, the issue was quickly over-subscribed. The offer made by the *National Shipbuilders' Security, Limited*, was the first flotation under the auspices of the Bankers' Industrial Development Company, and is discussed in detail on page 179. The third issue, that of *Lewis's Investment Trust*, took the form of debenture stock giving a flat yield of £5 1s. 6d. per cent., the proceeds being required for the acquisition of a site and the erection of a new store in Leeds. The issue is unconditionally guaranteed by Lewis's, Ltd., of Liverpool, Manchester and Birmingham. The average annual profits for the last four years have been sufficient to cover the guarantee of interest and sinking fund more than 18 times. The real security for a stock of this nature, however, is the ability shown

Grace National Bank

Hanover Square, New York, U.S.A.

A thoroughly organized international bank, giving special attention to the requirements of European banking correspondents.

Special Representative

by the management of the shops concerned. In this respect, the record of Lewis's is sound, but the yield offered by the stock is not in itself over-attractive.

London Power Co.—Issue of £3,000,000 5 per cent. Redeemable Debenture Stock at £100½ per cent. The stock is constituted a charge on the undertaking and revenues of the company and will rank *pari passu* with the existing 5 per cent. redeemable debenture stock as regards principal and interest. The company is required to set up a sinking fund of 1 per cent. per annum for the redemption and cancellation of the stock, and it also reserves the right to redeem the whole or any part of the stock outstanding at par on or after October 1, 1952, on three months' notice. The proceeds of the present issue are required to provide for extensions in the company's business, in particular for the first section of the new selected station at Battersea.

National Shipbuilders' Security.—Issue of £1,000,000 5 per cent. First Mortgage Debenture Stock at £95 per cent. The stock will be redeemable by a cumulative sinking fund calculated to redeem the whole of the stock by 1961. Stock not previously redeemed will be repaid at par on August 1, 1961, but the company reserves the right to redeem on February 1, 1938, outstanding stock at 103 per cent. on three

months' notice. The company was incorporated in February, 1930, to assist the shipbuilding industry by the purchase and dismantling of redundant and obsolete shipyards. A levy on shipbuilders under a deed of covenant is estimated to yield approximately £293,190 per annum, covering interest and sinking fund on the present issue more than four and a half times.

Lewis's Investment Trust.—Issue of £500,000 5 per cent. Guaranteed First Mortgage Redeemable Debenture Stock at 98½ per cent., guaranteed as to principal and interest by Lewis's, Ltd., whose average profits for the past four years have exceeded £600,000. The stock will be redeemable by means of a cumulative sinking fund of ½ per cent. per annum, commencing in the year 1935, any stock not previously redeemed to be repaid on December 1, 1985. The Trust will reserve the right to repay the stock at par on December 1, 1965, on six months' notice. The Trust was incorporated on July 5, 1929, to acquire the issued deferred ordinary shares of Lewis's, Ltd., and to provide a financial instrument for the development under the same control of other businesses. Net profit of the company for the eight months to February 28, 1930, totalled £318,182, covering interest on the present issue over twelve times.

[Other Stock Exchange information, including the latest summary of balance sheets, profit and loss figures, weekly traffic returns, reports and notices, will be found on page 204 under the heading "Company News."]

COMPANY MEETINGS &c.

BARCLAYS BANK LIMITED.

REASONS FOR THE DECREASE IN PROFITS.

CAUSES OF TRADE DEPRESSION ANALYSED.

AFTERMATH OF AMERICAN BOOM.

MONETARY AND ECONOMIC CONDITIONS.

MR F. C. GOODENOUGH'S DEMAND FOR NATIONAL ECONOMY.

The thirty-sixth ordinary general meeting of the shareholders of Barclays Bank Limited was held, on the 20th instant, at the Cannon Street Hotel, London, E.C.

Mr Frederick Craufurd Goodenough (the chairman), who was received with cheers, said: My lords, ladies and gentlemen,—I will call upon the secretary to read the notice of meeting and the certificate of the auditors which appears at the foot of the balance sheet that has been submitted to you.

The Secretary (Mr W. N. Seeley) then read the formal notice convening the meeting and the report of Messrs Price, Waterhouse and Company and Messrs Kemp, Chatteris, Nichols, Sendell and Company.

The Chairman: My lords, ladies and gentlemen,—Is it your pleasure that the report and accounts of the bank for the year ended December 31 last should be taken as read? (Agreed.)

TRIBUTE TO THE LATE MR HENRY BIRKBECK.

Before I proceed to deal with the report and accounts for the past year and other matters of financial and economic interest I wish to refer to the great loss sustained by the bank through the death of Mr Henry Birkbeck, which took place in February last. Mr Birkbeck was an original director of the bank since 1896, and on his retirement from the board in 1928 he was appointed an advisory director, which position he continued to hold, besides being an active local director in the County of Norfolk, until the date of his death. He was a great banker and was possessed of a wonderful knowledge of human nature and human affairs. He was a man of outstanding character and was held in great respect by all who knew him.

The board have appointed the Right Hon. the Earl of Home, K.T., who lately was elected Governor of the British Linen Bank (of which institution we hold practically the whole of the capital), to be an advisory director of Barclays Bank Limited.

PROFIT AND LOSS ACCOUNT.

The net profit for the year ended December 31st last, after making full provision for bad and doubtful debts, amounted to the sum of £1,821,207 0s. 4d., which compares with the sum of £2,331,579 12s. 2d. for the preceding year, thus showing a large decrease, which is the result of the changes that have taken place in monetary and economic conditions during the year, to which I will refer again directly.

Out of the profits for the year the directors have set aside the sum of £200,000 to premises account. We are carrying out considerable alterations and additions to our head office premises in order to provide the further accommodation that is required owing to the growth of the business. These alterations and additions will cost approximately £300,000, to be spread over a period of about three years. The amount now allocated to premises account out of profits will be applied partly towards meeting the above-mentioned outlay and also to other expenditure on premises account.

After making this appropriation the directors recommend the payment of final dividends at the rate of 10 per cent. per annum on the "A" shares and 14 per cent. per annum on the "B" and "C" shares (less income tax), in addition to the interim dividends already paid at the same rates in August last. We are, therefore, recommending the payment of the same dividends for the full year as we paid a year ago. (Hear, hear.)

DIMINUTION IN BANKING TURNOVER.

The difficulties in which many industries, including agriculture, are finding themselves at the present time, the great falling-off in the export trade of the country, and the general decline in business have led to a substantial diminution in the banking turnover during the past year, and there has been a reduction in profits under that head. There has also been a large decrease in the amount

received for discount on bills and for interest on loans and overdrafts, as the result of lower rates for money throughout the year.

These details in regard to the profits will show to what extent bankers are adversely affected in times of industrial depression. The shareholders may feel satisfied that owing to the conservative policy which we have pursued in the past in regard to the distribution of dividends full provision has been made during the good years to meet future contingencies. It is, however, impossible as yet to foresee for how long the present period of depression may last, and it may continue for some time. There is still a considerable amount of activity in certain trades and businesses; extensions of electrical services and other works are being carried out, and also Government relief works, which are not of a directly remunerative character.

MONEY MARKET CONDITIONS.

The falling-off in industrial activity has led to a decrease in the advances to customers, to an increase in the credit balances with the banks, and to greater ease in the monetary position during the past year than has been experienced for a very considerable time. More or less similar conditions have prevailed in the other chief money markets of the world.

The Bank of England rate of discount has been reduced by successive stages from 5 per cent. at the beginning of the year to 3 per cent. on May 1st last, and there have been corresponding reductions in the rates for short-term money and for discounts, but the competition for sterling bills, the scarcity of bills owing to trade depression, and the smaller volume of Treasury bills have had the effect of increasing the usual margin between market rates and the official rate.

The balances in London have been increased as the result of the uncertain outlook regarding monetary and economic conditions in many parts of the world. Because of the pressure placed upon the London market by overseas borrowers whose credit facilities have been withdrawn by other centres, we have probably lent abroad more than the actual surplus for the year, which has been partly responsible for the fact that the principal foreign exchanges have been unfavourable to London almost throughout the year, but there is no reason to doubt that a rise in the Bank rate, together with some contraction in market resources, would rectify the position.

THE TRADE DEPRESSION.

The existing depression can be attributed to many causes, some of which are purely domestic and relate exclusively to this country, while others are of an international character.

On the domestic side, apart from questions of reorganisation, the more important factors seem to be the immobility of labour and the lack of flexibility in wages and in retail prices. A study of the industrial history of this country seems to show that there has always been an ebb and flow of industries of varying character, and that while some industries have declined others have been growing up to take their place. This has perhaps occurred to a greater extent in recent years than during any previous period, but while certain of the newer industries are making substantial progress they are not developing sufficiently rapidly to counteract the decline which is taking place in many of the more important older industries.

The difficulties experienced in the transfer of labour, not only from one part of the country to another but also from one industry to another, have certainly been contributory causes in retarding growth in the newer industries. The housing shortage, trade union restrictions, and unemployment insurance have all tended to make labour less mobile.

UNEMPLOYMENT INSURANCE.

The unemployment insurance scheme has played a great part in reducing many of the hardships during the difficult post-war years and has become a permanent feature in our industrial organiza-

Castbury
Maker
of Fine Chocolates.

tion, but it is clearly wrong that one result of unemployment insurance should be to restrict the free flow of labour and so to prolong unemployment. (Hear, hear.) The question of unemployment insurance is now being considered by a Royal Commission, and it may be hoped that, as a result of its investigations, action will be taken to remove undesirable features which have crept into the system and are partly responsible for the unemployment in this country during the past ten years.

During a period of falling prices the rigidity of wage rates, the difficulty of reducing overhead charges, and the undue delay in adjusting retail prices to a lower level all tend to accentuate depression, particularly in a country such as Great Britain, which is largely dependent on her overseas trade. In my view, the removal of these difficulties is vital, for it is a mistake to feel that any change in our currency and credit policy will produce prosperity. The Government can help in various ways. They can set an example of drastic economy—(hear, hear)—and they can deal with certain other matters which are hampering trade, such as the undesirable features of the unemployment insurance scheme which I have mentioned. The fact remains, however, that, to a very considerable extent, the solution of industrial problems lies with industry itself—with employers and employees. (Hear, hear.)

THE FALL IN WORLD PRICES.

Turning to the causes of an international character which have led to the present state of depression, there has been the heavy fall in prices of commodities, principally of primary products such as wheat, sugar, cocoa, and other articles of food, as well as of raw materials used in manufacture, including cotton, wool, copper, rubber and tin.

The Board of Trade index figure of wholesale prices in the United Kingdom fell between January, 1926, and December, 1929, by 12.4 per cent., and there has since been a further fall of 17.8 per cent. during the year 1930. The present index figure stands at 108.9 (1913 = 100), as compared with an average of 307.3 for the year 1920, in which year the highest point since the outbreak of the war was reached.

There have been various reasons for this decline. Probably the principal cause has been that, whereas the population of the world increased by about 10 per cent. between the years 1913 and 1928 inclusive, the production of foodstuffs rose during that period by approximately 16 per cent. and that of raw materials by 40 per cent. The fall in values, as you will understand, relates to wholesale prices only and principally to prices of primary products, and not to retail prices, which still remain at a relatively much higher level, owing to the lack of flexibility in wages in the "sheltered" industries, to highly developed social services and to heavy taxation.

SURPLUS PRODUCTION.

As regards the fall which has taken place in wholesale prices, there was a succession of good harvests, especially in the case of wheat in the years 1926 to 1928, and there was a surplus production very greatly in excess of world requirements. In order to prevent an undue fall in price and in the expectation that full years would be succeeded by lean years, certain Governments have assisted in carrying surplus stocks, and "pools" were formed with the same object. The good harvests continued, however, for longer than was expected, and the world is therefore now in the position of carrying, by means of credits, some very large surpluses. While the interest and charges on these credits are continuously mounting up, the value of the stock has been rapidly decreased, and this is leading to a very difficult position.

The delay in marketing these crops and the low prices realised as they are sold when opportunity offers have, in turn, prevented the growers from buying manufactured goods from those countries which produce them, in exchange for food supplies, so that the decline in the price of those raw materials, which are the basis of manufactures, has been accentuated. The fall in one commodity thus reacts upon others. There has also been over-production as the result of the imposition of tariffs by various countries, and there are other reasons for the decline in trade, such as the fall in the price of silver, speculation, and political unrest in many parts of the world.

I believe that monetary influences have played a much smaller part in bringing about the trade depression than is sometimes thought. In my opinion, far more important factors are to be found in the lack of balance which exists between industrial and agricultural production, and in the fact that interference with the freedom of trade has prevented prices playing their proper part in adjusting supply to demand. (Hear, hear.)

SAFEGUARDING AND PREFERENCES.

In speaking of freedom of trade, I am referring to freedom from such restrictions as result from the carrying of surplus stocks, such

as has taken place, and also to artificial restrictions of production of foodstuffs and raw materials. I do not refer, as you will understand, to the question of protective tariffs or preferences, as to which a great deal has been said lately, owing to the industrial depression, and in connection with the Imperial Conference.

The latter question is one of extreme difficulty and has many aspects. Neither this country nor any of the other self-governing units of the Empire can afford to lose the power to trade with other countries outside the Empire, which in the aggregate contain much larger populations at the present time than those existing within the Empire itself. On the other hand, there is a great deal to be gained through the fostering of trading relations and economic and social ties of many kinds within the Empire, with a view to the unification of interests and ideals, and, from the business point of view, much is to be gained by the building up of a larger home market for those items which the various parts of the Empire produce.

Much can be done in the case of manufactures by fusion of interests between the great manufacturing firms or companies. Improvements and extensions of Imperial transport, telegraph and postal communications are needed in order to provide the most efficient and extended services at the lowest possible cost. A great deal can also be done through banking extensions, together with Imperial facilities, as this bank is proving at the present time. Some fiscal preferences should also be possible without injury to ourselves, especially in view of the high tariffs which have been raised almost throughout the world, and of the need for giving some help to industry, pending the readjustment of economic conditions which are still in the melting-pot. (Hear, hear.)

STRONG FINANCIAL CENTRE ESSENTIAL FOR THE EMPIRE.

The great pressure upon the manufacturing centres of the world to reduce costs of production so as to meet external competition, accentuated by the payment of War debts and Reparations, has forced us since the War to safeguard certain industries, and so to save them from passing out of existence altogether. It seems to me that the time when the safeguarding of some industries can be discontinued has not yet arrived, and that in the continuance of this policy there may be opportunities for arranging mutual preferences with the Dominions. (Hear, hear.)

On the other hand, the Dominions will recognise that, as partners with Great Britain and her Colonies, there are unlimited possibilities for the future, and that the interests of each single section of the Empire have to be considered.

It is clear that, not only in the interests of Great Britain but also of the whole Empire, the power of London to earn a large surplus through her invisible receipts must be maintained, and it is certain that no other part of the Empire could, for economic reasons, achieve such a position as she holds. It is also clear that a strong financial centre is essential, for without it the Empire cannot attain full prosperity. The estimates of the invisible earnings of this country for the year 1930 are not yet available, but they will certainly show some reduction on the previous year. It would be a grave error to adopt any change of policy that might jeopardise that surplus whatever it may be.

These earnings form a reservoir from which fresh capital is poured out for the purpose of further development, and especially the development of the Empire. It has been due to extravagance and overspending at the home centre and the drying-up of the fertilising influences of fresh capital that many countries and empires in the past have declined.

Protection as a policy would, in my opinion, be entirely incompatible with the duties and responsibilities of a great creditor nation and international money market, and only such tariffs should be imposed as would not injure that position, but would help towards a solution of our unemployment problem on sound lines and the fostering of trade within the Empire. (Hear, hear.)

AMERICAN INFLUENCES.

I think that the underlying causes of the boom in America, which has produced a world-wide reaction on the general economic position, were her tariff wall and the accumulation and congestion of gold in that country, which gave her the power to expand credit to a degree far beyond that which could be utilised in a healthy and satisfactory manner. There were also the trading balances accumulated abroad at a time when America was not prepared to invest with confidence in foreign securities to the full extent of her enormous surplus wealth, with the result that a general atmosphere of "boom" developed in America and wild speculation followed, which has resulted in great loss.

These factors have, no doubt, been mainly responsible for the speculative boom which ended so disastrously, and the deprivation to the other countries of the gold which is needed by them is certainly reacting unfavourably upon the industrial and trading

position throughout the world, and has helped to accentuate the fall in world prices. It is also making it more difficult to operate the gold standard. It is that portion of the indebtedness of the world to America for which payment will not be accepted in goods or securities which is causing the flow of gold to that country, and it is the maldistribution of gold which is a contributory factor to the present trade depression.

BRITISH AND U.S. SYSTEMS.

The expansion of credit in America which actually took place was much less than could have been allowed were it not for the control exercised by the Federal Reserve authorities, and without which it might have gone much farther. Up to a point, therefore, the Federal Reserve system has thus proved to be effective, but the British system is certainly more effective, especially in boom periods, besides which it has become more than ever evident that bills form a better security for call loans than Stock Exchange securities. If a crisis of such magnitude as that in America had happened in this country through our having a less effective system than that which we possess, the consequences would have been far more serious than those even which have befallen America, we being, as we are, the world's principal centre for the settlement of international trade. (Hear, hear.)

In the circumstances, however, partly owing to the fact that the short-term money in the London market is largely secured by self-liquidating bills and short-term Government indebtedness, money has now gravitated to London because of the soundness of our system and the security which it affords. I think that the advantages which London offers in this way can perhaps be more greatly appreciated in difficult times than when times are good. When world conditions have again settled down to normal, it is certain that there will be an industrial and trade recovery, and the earning power of the banks will then also again become normal.

THE SETTLEMENT OF THE BALANCE OF INTERNATIONAL TRADE.

The difficulty at present is that neither France nor the United States will accept payment of the whole of their overseas trading surpluses in goods or investment securities. As a consequence, they have accumulated large floating balances and there is a tendency to convert them into gold. In America there has been an increase of the equivalent of £59,000,000 in the monetary gold stocks during the first 11 months of 1930, while the Bank of France has increased its stock of gold during the year by £91,000,000.

When we come to look at the total of the gold stocks held by the Central Banks and Governments of 45 principal countries of the world, they amounted at the end of October, 1930, to approximately £2,233,000,000, of which 38½ per cent. was held by the United States, 18 per cent. by France, and 7 per cent. by Great Britain, while the total held by the 42 other countries was about £800,000,000, a large proportion of this being required for supporting currencies according to their legal ratios. The surplus available in the hands of the debtor countries for the settlement of international debts is therefore small. But it should be sufficient if the world's stock of gold were more evenly distributed, because investment operations and the interchange of goods should be the basis of the settlement of debts, leaving only small balances to be settled in gold.

It should be borne in mind that in 1929 the favourable balance of trade (exclusive of gold movements) of the United States was estimated at £99,000,000 and that of Great Britain at £136,000,000. No official estimates are available in the case of France, but undoubtedly that country also had a substantial excess of income over expenditure on her international trading account. It is clear that, if, with the existing stocks of gold, the proportion of international debt which is settled in goods, services, and securities should decline appreciably, the gold standard would be imperilled. If this should happen much of the good that has been done towards improving the economic condition of the world within the last ten years would be lost.

CENTRAL BANKS AND GOLD STANDARD.

Before the war the gold standard worked more or less automatically, whereas to-day there is a danger of its becoming largely a matter of management. In existing circumstances, co-operation between the Central Banks is essential, but, in my opinion, the permanent substitution of co-operation for the automatic working of the gold standard might result in great difficulties. It is clear that in times of real emergency the natural tendency would be for Central Banks to safeguard their own immediate interests and those of the people they represent, and it would, therefore, be much safer to rely, as far as possible, upon the automatic action of the exchanges and of the laws of supply and demand, and upon the use of the Bank rate, which leaves greater freedom to each individual people, than to depend upon the theory of controlling prices through

some arbitrary regulation of output or by the contraction or expansion of credit, both of which need world co-operation.

There has, I think, been a considerable change of view in regard to these theories, and I have little doubt that it is safer to rely upon the flexibility which free markets would afford than to aim at a more or less rigid control of credit and of human activity and endeavour. It should be realised that if, through the operation of tariff restrictions, purchases from abroad are not made, then the countries refusing to buy will, in the long run, be equally unable to sell. (Hear, hear.) Until this important fact is more fully appreciated, international trade will never be healthy, and to the extent that co-operation prevents the settlement of debt by natural means it cannot be for the good of the world.

FRENCH GOLD POSITION.

The French gold position is of special interest at the present time, owing to the large increase in the stock of gold held by that country. The Bank of France has increased its stock of gold during the year by the equivalent of approximately £91,000,000 and now holds about £433,000,000. A large part of the gold offered in the open market in London has been secured by French buyers. The Bank of France has now made a reduction in its official rate of discount, which may enable London to stop the outflow of gold on French account. It should be noted that the French withdrawals of gold from this country are made on account of the French banks, and not on French Government account, which indicates that the demand originates with customers, and not in pursuance of Government policy.

France, with the aid of her Colonial Empire, is self-supporting to a much greater extent than this country, and owing to her economic position she has been able, since the war and pending the ultimate stabilisation of the franc which has now taken place, to maintain her currency at a relatively higher value for internal purposes as compared with its exchange value with other countries, and thus to encourage her exports. These, with the addition of her "invisible" receipts, including large amounts spent by visitors from abroad, as well as interest and shipping freights, have for many years exceeded her imports, and her favourable balance of trade has resulted in her having large credit balances abroad.

FRANCE'S FOREIGN INVESTMENT POLICY.

Before the war she invested a substantial amount of her surplus in foreign securities, in Russia and with other Continental Powers, and in the development of her Colonial Empire, whereas now there is less inducement in that direction, and she is, therefore, maintaining large balances in London and in other centres at her immediate disposal, in order that she may be in a position to draw gold, or to use them for any other purpose. Her recent acquisitions of gold may have been due to various causes—among others, to strengthen the general credit position during the recent difficulties of certain small banking institutions in France.

Besides this, an expansion of her note issue has been required to satisfy the demands of the public when they wish to hold notes of the Bank of France in their pockets, and also in order to meet the increase in everyday requirements as the result of the rise in retail prices in France, following on the stabilisation of the franc. Although the foreign investment policy of France can be clearly understood, having regard to the general uncertainty that prevails as to world conditions, it would tend greatly towards the restoration of commercial prosperity if France were to invest her surplus abroad in long-term loans, or, alternatively, to make it easier for her debtors to pay in goods.

WAR DEBTS.

The people of Great Britain realised in 1922 that there was a great difference between commercial debts and debts incurred between Governments as the result of the Great War. They also realised that the debtor countries of the world could not by any means discharge their war debts, as first arranged, without insolvency and economic chaos as the consequence, and by a voluntary act of unparalleled generosity Great Britain undertook not to exact from them more than she might have to pay to America. In this way she cancelled the sum of £2,550,000,000 of war debt due to her, which sum she has, therefore, definitely and directly lost; but this action on the part of Great Britain has enabled those countries and their peoples to continue their economic existence, and thereby Great Britain and, indeed, every exporting and trading country, is gaining the benefit now to some extent, and should gain a greater benefit in the future.

The same would happen in the case of America, if she should cancel the war debts due to her, which amount to nearly £2,400,000,000. The gain to her as a great exporting country, through having solvent customers for her goods, and through the increase of their purchasing power, would be immense. There

would also be a gain to other countries, including Great Britain, although, owing to the terms of our concession in regard to war debts, we should not directly benefit. Looking at the matter as a purely business proposition, there can be no doubt that it would pay, and I think that America and other countries in a similar position should seriously consider the way in which they would certainly gain by such an act. (Hear, hear.)

Although Germany is to some extent benefited by the fall in prices, owing to the fact that she is a manufacturing country and has to purchase raw materials abroad, yet the fall in prices has increased the real burden of her debt. She is, therefore, being forced, in order to make payment, to rationalise her industries to such a degree that she is destined to become an even greater competitor with all countries interested in industrial production. It would answer the world's purpose better if Germany could be relieved of her debt and become a larger importer of foreign manufactured goods, as well as an exporter of her own goods.

URGENT NEED FOR NATIONAL ECONOMY.

It cannot be denied that one of the principal contributory causes to the shrinkage in our export trade, both "visible" and "invisible," has been the lack of economy in our national expenditure. (Hear, hear.) The cost of the social services in Great Britain has risen rapidly in recent years, and whereas in 1911 the amount was approximately £63,000,000, in 1929 the total had increased to about £396,000,000. There is no doubt that our national expenditure is much too high, and that there is an urgent call for economy. (Hear, hear.)

By "economy" I not only mean a frugal and judicious expenditure of money on the part of the Government, but more than that: I mean a drastic reconsideration of all present expenditures, with a view to effecting saving wherever this can be achieved. Owing to the piling up of Government expenditure, which has been allowed to take place in recent years, it requires great strength and ability on the part of any Government to bring about a reduction, and, even so, this must take time to achieve.

A firm intention on the part of the Government resolutely to take the position in hand and deal with it adequately would, in my opinion, do more than anything else at the present time towards the restoration of confidence, and would help to bring about the revival in trade and industry necessary to restore the trading surplus which we formerly used to enjoy.

CAMPAIGN FOR ECONOMY.

The City of London is now taking a lead through the organising of a campaign for economy, and a meeting will be held in this hall on Tuesday next, the 27th instant, at 3 p.m., when many prominent speakers will address those present upon that subject. I think that such a campaign, which will bring home to people the necessity for a reduction not only in Government and local government expenditure but also in personal expenditure, cannot fail to have a great effect, and I hope that, following upon the lead given by the City of London, this important movement will extend throughout the country. (Cheers.)

I now beg to move:—"That the report of the directors produced, together with the annexed statement of the company's accounts as at December 31, 1930, duly audited, be received, approved, and adopted, and that a final dividend at the rate of 10 per cent. per annum on the 'A' shares and 14 per cent. per annum on the 'B' and 'C' shares, less income tax, be declared, payable on the 2nd proximo to the shareholders registered in the books of the company on December 31st last, making, with the interim dividend paid on August 1st last, 10 per cent. for the year on the 'A' shares and 14 per cent. for the year on the 'B' and 'C' shares." (Cheers.)

SIR HERBERT HAMBLING'S SPEECH.

Sir Herbert Hambling, Bt. (deputy chairman):—"My lords, ladies and gentlemen, it is not my intention to detain you for many minutes, but I am sure you would wish to join with me in congratulating the chairman on his most excellent and able address. (Hear, hear.) He has carefully explained the figures in the balance sheet, and, in particular, you will no doubt be gratified that your dividend is the same as last year—(hear, hear)—and you can now see the result of the very conservative policy your bank has consistently pursued, by not paying increased dividends or bonuses when profits would have justified this being done.

Dealing with general conditions, the address is both thoughtful and convincing, and it would repay a careful reading at your leisure.

WORST TRADING CONDITIONS FOR 55 YEARS.

There is no question that trading conditions in 1930 were extremely bad. I can safely say that they are the worst that I can

remember during the 55 years that I have been connected with banking. We must not, however, lose our sense of perspective and imagine that the present depression differs in its essentials from others previously experienced.

Sooner or later prices will touch bottom and begin to rise, and when this happens recovery may be speedy, for people who will only buy from hand to mouth on a falling market will buy for stock on a rising market. I cannot say when the turn will come, but come it will, and that possibly sooner than many people imagine.

Even so, we shall still be left with our own special problems, and among them none is more important than that of economy. The chairman has dealt with this subject at some length, and I would draw your particular attention to his statement that the cost of publicly administered social services has increased from £63,000,000 in 1911 to £396,000,000 in 1929.

Many of these services are, no doubt, excellent, but the question is—can we afford them? (Hear, hear.) Moreover, although every Government should show a sense of responsibility for the welfare of the people, yet it is very easy to go too far. It seems to me that there is a grave risk of people losing their sense of personal responsibility and initiative and of their relying on the Government to care for them in every emergency and every difficulty. (Hear, hear.)

BURDEN OF TAXATION.

The fact is that, with prices at their present level, the burden of taxation has become intolerable. (Hear, hear.) Adjustment is essential throughout the whole economic structure of the country; but the example must come from the top. Government expenditure must be adjusted to the new conditions. (Hear, hear.) This is the first step towards getting back to prosperity.

My last word to you is to suggest that the slogan for everybody should be "Economy." (Hear, hear.) I have now great pleasure in seconding the motion. (Cheers.)

SHAREHOLDERS' CONGRATULATIONS.

Mr Frederick Tomkinson said he wished to thank the chairman and his colleagues for the very able way in which the business of the bank had been managed during a period of unprecedented difficulty, and to join with Sir Herbert Hambling in what he had said with regard to the chairman's most excellent speech. (Hear, hear.) He considered that the directors had done extraordinarily well and that they deserved the congratulations of the whole body of shareholders. (Hear, hear.)

Mr E. T. Hargraves said he wished to have the privilege of thanking both Mr Goodenough and Sir Herbert Hambling for their remarks. With regard to the general position, his view was that this country had in the past got over greater difficulties than those which faced it to-day, and that it would get over its present difficulties. Certainly the country was not entirely on the down-grade, and, although it was of no use expecting help from the Government, there was something which shareholders could do for themselves; they ought all to be a band of missionaries on behalf of economy and of good trade.

MR HAROLD COX'S VIEWS.

Mr Harold Cox also thanked the chairman for his admirable speech, remarking that it was a great pleasure at the present time to come to a meeting and hear such good common sense. At a time of trade depression such as the present many people abused the bankers; they said that the bankers were robbing the country and that that was why there was unemployment. As a matter of fact, the bankers were making less money because of the unemployment. They were serving the country, and if the country was not in a position to pay them for that service their profits went down. Another popular outcry—and it came from some people who ought to know better—was the attack on gold, and he was particularly glad that Mr Goodenough had dealt with that question and had pointed out that the influence of gold was not so important as many people imagined. It was absolutely inaccurate to attribute to gold the decline in prices, for there was more gold in the world than there used to be, and yet prices had fallen.

Looking at different countries, they saw that America had about £900,000,000 of gold in the banks there as compared with £150,000,000 in the Bank of England, and yet America was suffering from unemployment practically as much as England was. Further, it would be found that the decline in prices varied from trade to trade, whereas if a shortage of gold was responsible it would be the same for all trades. Although in the last four or five years prices had fallen considerably the amount of gold in the world had risen appreciably. As a matter of fact, we based on a small amount of gold an immense amount of credit for doing the work of exchange, both national and international, and that work was only done according to the demand for it. He was very glad the chairman had referred

to the importance of this country's invisible earnings—that was to say, money which it received in the shape of dividends, etc., from abroad. Few people understood the matter. Lots of them looked at our Board of Trade returns and saw that we were importing more than we were exporting, but it did not occur to them to ask what the ultimate cause of that might be. One of the principal ultimate causes was that we had lent a lot of capital abroad, and, happily, many of the people to whom we had lent it were paying interest on it, and this came to us in the shape of what were known as invisible earnings.

BANKERS AND TRADE.

Sir Alfred Stephens said that in his opinion the results shown in the report submitted spoke exceedingly well for the chairman, directors, managers, and all the branch managers of the bank, because there were very many concerns in Great Britain to-day which were making no profits or which, indeed, were making a big loss. A good deal was said nowadays about banks helping trade. The fact was that banks were naturally anxious to help trade, because they lived entirely upon the trade of the country and the movement of money; but there was one thing they had to do, and that was to be exceedingly careful what they did with other people's money—that was money belonging to customers. There was no doubt that, once confidence was re-established in the stability of the country trade would get all the money it required.

The chairman in his speech had referred to the lack of flexibility in wages and to the fall in wholesale prices with the undue delay that there had been in the adjustment of retail prices. There was no doubt that there were many working men in the country to-day receiving wages that were too low for them to live comfortably on, while on the other hand there were others in sheltered industries receiving more than the country could afford.

The Chairman having thanked the several speakers for their kind remarks, the resolution was put to the meeting and carried unanimously.

Sir J. Fortescue Flannery, Bt., then moved: "That Colonel Hugh Gurney Barclay, M.V.O., Mr Robert Leatham Barclay, C.B.E., Sir William Carruthers, Mr Ernest Ralph Dodsworth, the Right Hon. Lord Melchett, Mr Roger Henry Parker, M.C., Mr John Hayes Simonds, Sir James Smith, and Sir Harold Edward Snagge, K.B.E., the retiring directors, be re-elected directors of the company."

Mr H. E. Seebohm seconded the motion, which was unanimously adopted.

REAPPOINTMENT OF AUDITORS.

The Right Hon. Lord Ebbisham, G.B.E., proposed that Messrs Price, Waterhouse, and Company and Messrs Kemp, Chatteris, Nichols, Sendell, and Company, chartered accountants, be re-appointed auditors to the company. In doing so he said he felt sure that the shareholders all realised and appreciated the invaluable work done by those two firms for Barclays Bank since their appointment many years ago. He wished to add a tribute of appreciation of the chairman's important and interesting address and to express the shareholders' sincere satisfaction with the accounts presented. They must all have been attracted by his reference to safeguarding and preferences, and if, at this time next year, the much-hoped-for improvement in the trade of the country had been realised it would be largely due to what steps were taken, and how speedily, in connection with those vastly important questions. They must also entirely agree with the chairman in his reference to war debts. There could be no doubt, as Mr Goodenough had said, that America and other countries in a similar position should seriously consider the way in which they would gain by the cancellation of those debts.

Mr E. T. Hargraves seconded the motion, and it was unanimously agreed to.

VOTES OF THANKS.

Sir Frederick W. Lewis, Bt., proposed: "That the cordial appreciation and thanks of the shareholders be given to the general managers and the whole of the staff for the manner in which they have carried out their duties during the past year." He was very grateful to the chairman for entrusting to him the pleasing task of proposing the resolution of thanks to the staff.

"Staff," he said, was a somewhat peculiar word to use in the sense in which it was used in that resolution, and yet, if one analysed it, it was an extraordinarily appropriate word. Before coming to that gathering it occurred to him to trace its meaning, and he found in the dictionary two peculiarly applicable definitions when applied to the staff of a huge organisation such as Barclays Bank. The first definition was "a body of highly-skilled officers." What more appropriate definition could there possibly be for the executive staff of that bank? The general managers and their assistants

were most highly skilled officers, and their skilful care of the bank's business and constructive helpfulness towards the bank's clients were never more apparent than in the difficult conditions with which the business world was at present faced. The second definition he came across was "a stick carried for support or defence; a prop." Now that most aptly described the administrative staff of the bank. Defence and support—a guide and stay, in other words, and a prop upon which the executive staff could rely for the proper carrying out of the manifold details of the bank's business.

The only method they had of recording their appreciation was the passing of the resolution he had the honour to propose at a representative meeting of the shareholders of the bank.

It was, of course, invidious to particularise. Those directors who, like himself, were not in constant and daily touch with the staff came more into contact with the general managers and the heads of departments. They recognised the energy and loyalty of the three general managers, Mr Fisher, Mr Mitchell, and Mr Stevenson. But those who were in daily touch came into contact with the rank and file—those who might be described as heroes of the commonplace, but on whom they were none the less dependent. A resolution of that kind was apt to be platitudinous; but that did not detract from the sincerity with which he moved it, and after it had been seconded by Mr Quintin Gurney and put to the meeting he was sure the appreciation of the shareholders would be shown in the acclamation with which it would be carried. (Cheers.)

Mr Quintin E. Gurney, in seconding the motion, said that, having regard to their keenness on the welfare of the bank, the staff deserved the heartiest thanks of the shareholders for the valuable services which they rendered. (Hear, hear.)

The vote was unanimously accorded.

MR FISHER'S ACKNOWLEDGMENT.

Mr Edwin Fisher (one of the general managers) said that on behalf of the staff he wished to thank both Sir Frederick Lewis and Mr Quintin Gurney for the way in which they had referred to the work done by the staff during the past year. The staff would greatly value the compliment which was paid to them by the shareholders in passing the resolution, and the appreciation thus expressed was not only very encouraging but was particularly appropriate in difficult times, which brought with them added responsibilities. The general management of the bank would certainly wish to associate themselves with everything that had been said on the present occasion as to the capable, excellent, and loyal way in which the staff had carried out their duties. (Cheers.)

Sir Alfred Stephens proposed a vote of thanks to the chairman for presiding; and Lord Ebbisham seconded the motion, which was passed unanimously.

The Chairman, in acknowledging the compliment, said he would like, on behalf of the whole board, to express their appreciation of the confidence of the shareholders.

The proceedings then terminated.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED.

SATISFACTORY TURNOVER.

SMALLER MARGIN OF PROFIT.

The sixty-sixth annual general meeting of Liebig's Extract of Meat Company, Ltd., was held, on the 22nd instant, at the Cannon Street Hotel, London, E.C.

Mr C. E. Gunther (chairman and managing director), having mentioned that the reserve, which now included the share premium account, stood at £1,650,000, said that, after the steady expansion recorded during the past four years, it was disappointing to have to register a fairly substantial reduction in the profit, but it could not well be expected that they should remain unaffected by the great fall in commodity values and the wave of depression which had inundated the whole world during the past year.

The decline in the value of practically all produce had been severe and progressive, and had affected the many articles on the satisfactory realisation of which the company relied in no small measure to reduce the manufactured costs of their primary products. The fall in market values arose from the world economic situation, and it would be idle to pretend that there were any possibilities of controlling them, or of knowing how long this state of affairs was going to last.

THE DIVIDEND.

In view of the uncertain outlook, it was wise to conserve the company's financial position, and the directors accordingly recommended that the final dividend be at the rate of 7s. per share, free of tax. The steady maintenance of regular dividends was, of

course, the ideal which they would all like to attain, but they had to recognise that their business was liable to ups and downs in common with other trading concerns, and that it had been largely due to conservative finance in the past that their good results had been made possible, and would, they hoped, again be possible in the future. It would be rash to attempt to forecast what the immediate future might hold forth, but the tendency should doubtless be towards a gradual stability of price levels. Meanwhile, the great volume of their trade and the knowledge that their products met with a ready demand at the hands of the public, encouraged them in the belief that, when the slump was spent, they would reap the benefit which a regained stability would bring in its train.

DIFFICULT CONDITIONS.

Having regard to all circumstances, including a mild winter and the generally reduced spending power of the populace in the countries in which the company traded, the turnover of their manufactures had been on a satisfactory basis in respect of volume, but, owing to a lower range of values for the by-products, the margin of profit had been a more meagre one. On the whole their marketing organisations had done well in difficult circumstances and had maintained a high level of enthusiasm and salesmanship in the face of adverse conditions. In addition to a reduced margin of profit, there had been a very considerable writing down in stocks of all categories in order to bring their value as at their closing date into line with the generally lower level of prices then ruling. It was impossible to say whether bottom had yet been reached, but, as many of the products of their factories overseas were now quoted below their 1914 parity, while every factor, including taxation, incidental to their cost had remained high, it would seem that the tendency towards a further fall must soon come to a halt.

ARGENTINA AND SOUTH AFRICA.

Referring to the change of Government in Argentina, the chairman said that the task of reconstituting the finances of the country on a sound basis and re-establishing the equilibrium of trade would be a formidable one, but he had no doubt that the high ideals of administration with which the members of the new Government were imbued would be instrumental in pulling the country out of the temporary difficulties into which the universal trade depression had helped to precipitate her. In Uruguay their farming company had again been able to record a fairly satisfactory year's working.

With regard to their enterprises in South Africa, Rhodesia had shown much the same results as in the previous year. The season as regarded rainfall and pasture was on the whole favourable, but the effects of the severe drought experienced in 1927 left the company with fewer grown stores of prime quality to market. South-West Africa had suffered for the second year in succession from a very severe drought, the effects of which had been far-reaching, and had caused serious losses to the farming community in that territory. They had received news that good rains fell towards the end of December, and it was hoped that conditions on their properties there would soon return to normal.

In conclusion, the chairman said that he proposed to visit the River Plate next month, and hoped during the course of his trip to pay a visit of inspection to the company's establishments at Colon and Asuncion, as well as to go over a number of their estancias, and to confer with their local representatives on all matters concerning their business there.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

UNITED SERDANG (SUMATRA) RUBBER PLANTATIONS, LIMITED.

POSITION OF THE RUBBER INDUSTRY.

The 23rd annual general meeting of the United Serdang (Sumatra) Rubber Plantations, Ltd., was held on Friday, January 16th, at Winchester House, E.C.

Mr H. Eric Miller (the Chairman) said that the year under review had been a difficult one and, taking everything into account, they were glad they were able to recommend the distribution of a dividend. The problem of reducing expenditure was complicated in Sumatra, because the bulk of their labour came from Java under contract, on first engagement for a period of three years, with annual renewals thereafter. The cost of bringing each coolie over was considerable, and the contract rightly imposed on the employer obligations which could not be ignored, even in times of difficulty. Since the close of the financial year, it had been possible to reduce the labour force by nearly 30 per cent., the reduction being to a large extent in married women who were remaining on the estates many of whom, it was anticipated, would be available again if required later on. The pay-roll would gradually be further reduced as contracts expired.

Dealing with the present position of rubber, the Chairman said that as a result of the cessation of tapping during the month of May, some 30,000 tons of rubber had been kept off the market. In view of the adverse trend of business conditions throughout the world, it had soon been realised that that curtailment in itself was not sufficient to stem the tide. It had been impossible to devise any scheme on a voluntary basis that could effectively meet the critical situation, and the Governments of the Straits Settlements and the Dutch East Indies had been unwilling to contemplate taking action for the benefit of the rubber industry. At the end of September, the Rubber Growers' Association had issued advice to rubber growers generally on the advisability of curtailing expenditure and losses by selective tapping. The United Serdang Company were aiming to produce a crop of about two-thirds of normal, a policy which had been adopted by a number of other companies. It was clear, however, that the proportion of producers who were following that lead was as yet inadequate to remedy the position.

He (Mr Eric Miller) estimated world production of rubber in 1930 at 810,000 tons, which was about 40,000 tons less than in 1929, but world absorption at about 700,000 tons for 1930 showed a decline of 100,000 tons against 1929. The U.S.A. had absorbed 90,000 less in 1930 than in 1929, and Australia about 10,000 tons less. With the possible exception of Australia, there was every inclination that the consumption of rubber, particularly in the running of tyres, had been at least as great in 1930 as in 1929, but the slump had definitely curtailed the sale of tyres for replacement purposes, and for the equipment of new motor vehicles. There were many unsafe tyres on the roads of this country too, and there was no doubt that the slump had been responsible for a world-wide postponement of necessary tyre replacement. Tyre prices had just been substantially reduced by many leading manufacturers and overdue purchases should thus be encouraged.

It was, nevertheless, within the power of rubber growers to help themselves very materially by producing economic crops well within their capacity, rather than striving to extract the maximum from their trees. Unfortunately, the native smallholder was incapable of taking a sensible course. The whole world was suffering to-day from over rapid expansion. Without Dutch co-operation, however, no comprehensive organised scheme could be made effective now to regulate supplies to the needs of the market, but there was every commercial reason why each producer on his own should adopt what was the obvious common sense policy. The position would ultimately right itself at the cost of much unnecessary hardship, but shareholders would doubtless share his regret that more enlightened counsels did not prevail. They had the satisfaction of knowing that rubber was more than ever essential to modern transport, the development of which it had helped to speed up in a truly wonderful way, and that saturation point was a very long way off.

The whole community should be grateful to the Royal Commission on transport for their valuable report, much of which was of particular interest to them. It was good to see the recommendation that no additional tramways should be constructed, and that those existing should be substituted by trackless trolley vehicles, or motor omnibuses. The Minister of Transport had just issued new regulations, the most important of which would ensure that, as soon as practicable, all motor vehicles should be equipped with pneumatic tyres. In addition, there was a regulation insisting that all the tyres of a motor vehicle or trailer should at all times be maintained in such condition as to be free from any defect which might in any way cause damage to the surface of the road or danger to persons. If that regulation was enforced as it should be, there was big business to be done by tyre manufacturers at once.

The report and accounts were unanimously adopted.

MIDLAND BANK LIMITED.

BUSINESS DEPRESSION AND ITS EFFECT.
CAUSES OF WORLD'S ECONOMIC TROUBLES.
EFFECT OF MASS PSYCHOLOGY ON TRADE.
FALLACY OF EXCESSIVE THRIFT.
MR McKENNA ON THE WORLD SITUATION.

The ordinary general meeting of shareholders of the Midland Bank Limited, was held at the Cannon Street Hotel, London, E.C.4, on Wednesday, January 21, 1931, for the purpose of receiving the report and balance sheet, declaring a dividend, electing directors, appointing auditors and transacting other ordinary business.

The Chairman (the Right Hon. R. McKenna) said: My Lords, Ladies and Gentlemen,

Among the outstanding economic developments of recent months none has given rise to so much comment as the absorption of gold by France and the United States. Neither of these countries has any desire to increase its gold stock; but it is easier to find the cause of the movement than to stop it. It is often asked why gold continues to flow in large volume into these two particular countries, which differ so widely in many important economic respects. Nations, like individuals, may be roughly divided into two classes, debtors and creditors. We may define a debtor country as one which is called upon to remit to other countries, on account of imports of goods and services and of interest charges, a larger sum year by year than it receives in respect of exports and other claims. It has a deficit on its balance of current international payments. A creditor country, on the other hand, is one which is entitled to receive year by year a larger sum than it is required to remit abroad. The difference between a debtor country's current receipts and payments can be covered in one or both of only two ways, if we ignore the final possibility of default: it can borrow externally, or it can export gold. Correspondingly, a creditor country must either make new external loans, or accept gold in payment of the final balance.

DEBTOR AND CREDITOR COUNTRIES.

In the past few years the debtor countries, which in general are producers of primary commodities, have found it more and more difficult to provide, by sales of their products and new borrowings abroad, sufficient external funds to meet their current obligations. On the one hand, the decline in prices has seriously reduced the proceeds of their exports; on the other, it has become increasingly difficult for them to raise new external loans. America has shown less readiness to lend abroad than in former years, and France as a source of capital has been almost entirely closed to the foreign borrower. The other principal creditor, Great Britain, while continuing to lend substantial sums abroad, has had too small a surplus to meet all the demands for accommodation. As a result of these conditions the United States and France have been compelled to accept large quantities of gold, while two at least of the debtor countries have been forced off the gold standard. During the past year alone the stock of monetary gold in the United States, which was already far in excess of requirements, has grown by about £60 millions, while the gold holding of the Bank of France has risen by well over £90 millions. These two countries together have thus absorbed in a single year, largely from the debtor countries, the equivalent of two years' total new gold supplies, or three years' supplies if we allow for the normal drain into industry and personal hoards.

Meanwhile the debtor countries, which, as I have said, are mainly producers of primary commodities, have been driven to throw their products on a falling market, intensifying the decline in prices. They have been compelled, moreover, to restrict their purchases of finished goods, so that the exports of manufacturing countries have been curtailed and the lending power of creditor nations impaired. Maldistribution of gold and falling prices, inability to borrow and unwillingness to lend, have thus gone hand in hand in a continuous process of action and reaction. The wholesale price level in this country has suffered the almost unprecedented fall of roughly twenty per cent. in a year, and we have no assurance in the latest statistics that the full extent of the downward movement has even yet been reached.

GOLD STANDARD UNDER POST-WAR CONDITIONS.

According to pre-war experience of the working of the gold standard, the flow of gold into the creditor countries should have caused an expansion of money supplies. The stimulating effect upon prices would in turn have enabled the debtor countries to dispose of their products to greater advantage, thus reducing their adverse

balance of payments and enhancing their credit as potential borrowers. By this means a more or less automatic adjustment might have been anticipated. The recent movement of gold has had no such effect. Statistics for the United States show no appreciable increase in money supplies, the natural effect of the import of gold having been offset by a reduction in the earning assets of the central banks. In France, it is true, the note issue has risen substantially, but much of the increase has probably been absorbed into bank reserves and a further and larger part into private hoards, so that no expansion at all commensurate with the inflow of gold has so far taken place in the volume of actively circulating money. As a consequence, the United States and France have offered almost as little resistance to the fall in wholesale prices as this country, which has received no accession to its gold stock. It is clear, therefore, that the gold standard has not been working as might have been anticipated from a study of pre-war practice, and the question naturally arises whether in the new conditions it is possible for central banks to prevent such a precipitous fall in the price level as that of the last eighteen months. This question is of the very essence of monetary policy, and the urgency of finding an early answer is pressing.

DIFFICULTIES OF PRICE LEVEL STABILISATION.

We know already from recent economic history in America something of the difficulties with which a central bank has to contend in an endeavour to maintain a stable price level, and we shall find a clear indication of their nature if we examine the course of business and banking in that country from 1921, which marked the depth of the post-war slump, to 1928, the year before the crest and collapse of the stock-market boom. The fact which strikes us at the outset is that the wholesale commodity price level in 1928 was unchanged in comparison with 1921, a relatively small rise in the earlier years having been cancelled out by the succeeding decline. Along with this stability of prices went a remarkable growth in the volume of business, accompanied by a large expansion of bank deposits. Indeed, it is evident that more money was created than trade actually needed, for much of the supply was, in fact, not used in ordinary business at all. The excess was employed in speculation or left with the banks as more or less permanently inactive deposits so far as trade was concerned. Time deposits were growing at a far higher rate than demand deposits, or actively circulating money. Bank holdings of investments and loans on securities were rising rapidly, while "all other loans," which are generally taken as a measure of bank accommodation to industry and trade, were almost stable.

The high degree of prosperity during the greater part of this period confirmed the desirability of steadiness in the price level as a basic condition of economic welfare, and controversy arose as to the supposed capacity of central banks to maintain this stability. On the one hand, it was asserted that the price level was subject to definite control by the central banks; on the other, it was alleged that central banks were quite powerless in this respect. As generally happens, the truth lies somewhere between the extremes, and it is worth while examining in the light of these facts the various elements in monetary and business conditions which restrict the powers of central banks.

PRICE LEVEL AND THE CENTRAL BANKS.

It is undeniable that one of the factors which govern the price level is under the control of the central bank, namely, the total quantity of money outstanding in the form of bank deposits and currency. It is equally true that the rates charged by the banks to borrowers, though not controlled by the central bank, tend in normal times to respond to its policy. Central bank purchases and sales of gold or securities, and changes in the bank rate, are the instruments by which policy is exercised, and in our own country a highly sensitive technique has been evolved for their operation. The belief that the central bank could make itself master of the price level arose from concentration on these two single factors, the quantity of money and the rates charged for loans.

There are two further monetary factors, however, over which no definite control can be exercised by the central bank, although it

would be too much to say that it has no influence on them. The first of these is the rate at which money circulates; the second the use to which money is put. It is a matter of common observation that the velocity of turnover is strongly affected by changes in public sentiment. If business prospects look bright and a confident feeling prevails, people spend freely; if the outlook is uncertain or definitely bad, spending is restricted. The rate of circulation of money depends, then, upon the actions of individuals, as prompted, not always rationally, by influences quite outside the direct control of the central bank. Business becomes better when people feel better about it. The expectation of profit is the natural stimulus to enterprise, and without such expectation new enterprise, which is the foundation of business expansion, will not come into action.

THE USES OF MONEY.

The question of the use of money is not less important than the rate of turnover, which, after all, is primarily an effect and only secondarily a cause of business depression. It has been seen that in America a relatively small part of the additional money provided by the central banks was used in trade and industry. Much more was employed in speculation, which was notoriously carried to an extreme. Indeed, near the end of the period the funds thus absorbed became so great that the money used in trade, properly speaking, appears to have actually declined, though an increase was still shown in the total volume. Some speculation in commodities, securities or other capital values goes on at all times and fulfils a legitimate and useful function, but in this case it rose to wholly abnormal heights and reached a point at which the Federal Reserve banks, given the existing banking structure, had no power of effective resistance. It is clear that the policy of a central bank in relation to the total quantity of money may be wholly nullified by violent changes in the amount devoted to speculation.

The importance of the use of money has frequently escaped attention, particularly in discussions and attempted applications of what is commonly known as the quantity theory of money. The equation which this theory, in its simplest form, adduces is in reality a truism, for it says in effect that the amounts spent by individuals and combinations of individuals in buying goods and services equal in the aggregate the sums paid for those goods and services. Unfortunately, the unduly simplified statement of the equation has led people to suppose that the price level is governed by the volume of trade transacted, the quantity of money outstanding, and the rate at which money circulates, whereas the truly relevant quantity factor is not the money outstanding, but the amount currently used in buying goods and services.

EFFECTS OF AMERICAN STOCK MARKET COLLAPSE.

The events of the succeeding period of American history emphasise again the importance of factors outside the direct, effective control of central banks. Between 1928 and 1930 the volume of money in America has been approximately stable. Yet the maintenance of total money supplies, even though supplemented by a vast release of funds from speculative activity, has failed to prevent a precipitous fall in prices, accompanied by disastrous trade depression. Briefly, we may say that from 1921 to 1928 the growing supplies of money were largely diverted into speculation; between 1928 and 1930 the existing supplies of money were immobilised to a great extent and the rate of turnover drastically reduced, as a result of the psychology of fear which developed from the stock market collapse. American monetary policy failed to maintain prosperity, first, because it could not control the use of money, and subsequently, and as a consequence, because it could not persuade the public to use the money it provided.

THE LESSON OF BRITISH EXPERIENCE.

The British experience of recent years, though widely different from the American, demonstrates almost as clearly the importance of these uncontrolled elements in the monetary situation. America has enjoyed a period of unexampled prosperity and suffered a succeeding slump; in this country we have had continuous depression, which has been no more than deepened under the pressure of world forces; yet much the same conclusions can be drawn from monetary developments in the two countries. It is true that we have not experienced in this country any riot of speculation. We have, however, witnessed a prolonged tendency for money to accumulate as time deposits with the banks, a process which has been greatly accentuated in the last year. To take the figures of our own bank as an example, we find that, whereas in 1929 time deposits averaged 48.8 per cent. of the whole, in 1930 the figure rose to 49.4 per cent., and towards the end of the year was over 50 per cent. Thus, although the total supply of money has shown no shrinkage between 1929 and 1930, yet the quantity of actively circulating money has probably decreased materially, the volume

of business has declined, and the price level has fallen heavily. A larger part of the total volume of money has been left idle by its owners, a fact which furnishes a striking instance of the power of mass psychology to neutralise the efforts of monetary policy.

There is still, however, another aspect of this matter. Even though money accumulates as time deposits and becomes idle, so far as the public are concerned, yet the banks make use of it, and the way in which they do so is shown by the movements in their earning assets. The American statistics have already been given, but here again we may refer for illustration to the figures of our own bank, where we find that, although deposits have increased over the past year, advances have fallen. The decline in advances has occurred, not because of any change in the policy of the bank, but solely because less accommodation has been demanded. For the first time for many years the legitimate demand for accommodation has been below what we have been prepared to grant. The result is that we have been driven to employ more of our resources in buying Government securities and bills. The discounting of bills might conceivably have been a form of business accommodation, but trade bills have not in fact been in exceptional supply. Almost the whole of the increase in our bill portfolio over the past year is accounted for by a much larger holding of Treasury Bills, which on December 31 had reached the total of £36½ millions, a figure not previously approached at the end of any year.

EXCESSIVE THRIFT NOT AN UNQUALIFIED BLESSING.

All these facts, taken from both sides of the Atlantic, lead to the conclusion that the most skilful plans of monetary authorities may, under some conditions, be defeated by developments in public psychology. So far the failure to use money has been attributed to a widespread feeling of depression. The non-use of money, however, need not always arise from this cause alone; it may be at times the consequence of excessive saving. It has long been the custom to give an unqualified blessing to thrift, mainly on the grounds of personal discipline and the due recognition of responsibilities. Whatever blessings thrift may confer, however, on the individual, there are times when, judged by the interests of general economic welfare, it may be carried to excess. To realise the truth of this statement it is only necessary to consider the two extreme suppositions in which, first, everyone saves all his income beyond the amount necessary to keep body and soul together, and, next, nothing is saved, but the whole of all money expended is devoted to consumption. In the first case it is obvious that the greater part of industry would rapidly run down and cease operations for lack of customers for its output, while, in the second plant and machinery and public and private equipment would ultimately break down for want of proper maintenance and renewal. Somewhere between these two extremes lies the point of maximum advantage, which may be roughly defined as the amount of saving necessary to meet all demands for capital which can be profitably employed. The subject is worth mentioning because there are indications that in the United States the expenditure of the American people on consumption is less than is required to keep the existing business organisation going, and below what their earnings would justify.

INFLUENCE OF PUBLIC PSYCHOLOGY.

Returning now to the influence of mass psychology, it is an important fact in the present situation that for the time being business derives no stimulus from low commodity prices, because of the fear that they may fall yet further. Producers are still reluctant to meet anything more than immediate demands; industrialists and traders endeavour to curtail more drastically rather than augment their stocks; consumers buy only as pressing needs dictate; and savers continue to withhold their funds from investment, preferring to leave their money on deposit at the banks. In a very real sense the crisis is one of under-consumption, having its roots in a continuous downward movement of the price level. Until sufficient confidence has returned to stimulate buying, stocks of goods are not likely to dwindle, nor production to increase. And a marked revival of confidence is unlikely until prices show a tendency to harden. We shall see an end to the growth of unemployment and business losses when the recent trend of prices is arrested and reversed.

MAIN CAUSES OF ECONOMIC TROUBLES.

Summarising the situation in all its aspects, I would ascribe the economic troubles of the world to three main causes, all of which, unfortunately, are in operation at the same time. First, we are suffering from maldistribution of gold due to the relative inability or unwillingness of creditor countries to lend to debtor countries. Secondly, the public has not yet recovered from the reaction from the American stock market collapse. And, thirdly, we are still feeling the effects of the long period of deflation in this country.

In this situation it may be asked: From what direction can recovery be expected? Low money rates, which provide an inducement to the long-term investment of accumulated bank deposits, will naturally help to stimulate industrial activity. The United States and France would seem to be realising more clearly the necessity of lending abroad on a large and continuous scale if international equilibrium is to be restored and maintained. Further, the policy of deflation, in the sense of periodic reductions of money supplies, has probably been abandoned in this country. It is earnestly to be hoped that under the combined influence of these factors the state of public sentiment will gradually improve.

If monetary policy can do little in present circumstances to stimulate recovery by positive action, it can at any rate preserve conditions favourable to recovery by keeping money plentiful and cheap. The question arises whether catastrophes as bad as the present one might not be altogether avoided. True, a central bank in a creditor country cannot directly regulate the volume of external lending, but it can stimulate it by keeping internal money rates low; and, though a central bank has no direct influence over public psychology, we must remember that a depressed state of mind is initially a resultant of bad trade before becoming a cause of its continuance. There remain for consideration possible ways and means by which the central bank may be able to regulate the use of money.

THE POWERS OF CENTRAL BANKS.

It has long been recognised that, in this country at any rate, the central bank can go far towards checking a speculative boom, particularly in its early stages, by the use of the official discount rate, supported when necessary by open market policy. In America the bank rate instrument is more difficult to use, for the whole structure of markets and rates is different in nearly every important particular from our own. The American banking system, moreover, is by no means so cohesive as the British. With many thousands of banks, less than two-thirds of which, measured by resources, are in direct touch with the central banks, it is clear that any given policy is far more difficult to execute in America than here. Further, the American authorities are called upon to cope with a popular interest in the stock market of exceptional magnitude. It is not surprising, therefore, that American bank rate policy proved ineffective to check the recent boom. The problem is one for that country to solve, and I refer to it now only because the United States fills so vast a place in international trade and finance that every important movement there has repercussions which are felt throughout the world.

NEED FOR CO-OPERATION BETWEEN CENTRAL BANKS.

The difficulties of monetary policy with which we are now faced are, then, not wholly international, nor, on the other hand, can they be overcome entirely by individual central banks. Obviously the problem of the use of the world's gold supplies is international in character, and can be dealt with only by co-operation among central banks. There is already evidence of a general willingness to co-operate, but no indication yet of continuous common action based upon an agreed policy. The first essential must be a full recognition of the imperative need of a steady general level of commodity prices. Trade cannot prosper while the world's monetary units are subject to such wide variations in purchasing power as we have witnessed in recent years. When this fact has been realised, and the common policy of central banks has been translated into action, we may anticipate much more rapid progress in the field of monetary policy and a nearer approach to the time when we can regard our monetary system as fully abreast of our productive organisation.

PROGRESS OF THE BANK.

I turn now from more general considerations to the figures of our own bank, which bear, as I have already mentioned in respect of one or two items, the marks of protracted business depression. Our net profit for the past year has naturally been seriously affected by these conditions, the total being £350,000 below that of 1929. While money has earned low returns, overhead charges are comparatively inelastic and do not fluctuate with the earning powers of our assets or the outgoings on account of deposits. Last year, for example, our costs for personnel alone amounted to almost £5 millions, to which has to be added a further large sum for rents, rates, taxes and other charges. We have to cope with relatively rigid costs under conditions of widely fluctuating gross earnings.

Our reduced profit, however, still leaves us in such a position that we can safely recommend the payment of a final dividend at the same rate as that which has prevailed for more than a quarter of a century. As a result of the increase in capital, announced a year ago, the sum required for dividends is somewhat larger than for 1929. We have appropriated £250,000 to bank premises

redemption fund and £100,000 to officers' pension fund, leaving to be carried forward a sum approximately the same as a year ago.

I need not detain you long with regard to the items in our balance sheet not already touched upon. The new issue of shares added rather more than £800,000 to both the paid-up capital and reserve fund. Approximately 661,000 shares were taken up by existing holders, and in addition the customary opportunity of acquiring shares was presented to the staff of our own bank and its affiliations, a total of 154,000 being issued on this account. Our shareholders now number over 76,000, and their total funds shown in the balance sheet, if we add together capital, reserve and undivided profits carried forward, amount to nearly £30 millions.

STRIKING RISE IN DEPOSITS.

Perhaps the most striking feature of the balance sheet is the rise in deposits to the unprecedented total of £399½ millions, an increase on a year ago of £20 millions, which has more than neutralised the fall in the preceding year. The cash ratio stands at 11.8 per cent., which compares with an average of 11.1 per cent. for the whole year. The higher ratio at December 31st is not due to anything in the nature of window-dressing, but to the accidental requirements of customers, which may turn out to be more or less than we can foresee. I may perhaps add, on this point, that we do not make a practice of calling in large sums from short-term borrowers week by week in order to strengthen the ratio shown in our monthly average statements. In fact, the average of our cash holding on the weekly making-up days is only slightly above the daily average throughout the year, and the difference is accounted for mainly by the outflow of currency over the week-end for wage payments.

If any additional evidence were required of the world trade depression, it could be seen in the fall in our contingent liabilities in respect of acceptances and confirmed credits and engagements. The decline in these figures represents a material reduction in our earnings, which can be made good only as conditions of world trade improve.

I have already drawn your attention to the fall in advances, the roughly compensating rise in investments, and the very large increase in bills discounted. The total amount of money at call and short notice is practically the same as a year ago, but that part of it which is in the form of fortnightly stock exchange loans shows a considerable reduction. These facts give some indication, not only of the severity with which the general depression in trade has impressed itself upon the stock market, but also of the difficulty experienced by the banks in employing their funds at profitable rates. When trade and industry recover we shall be in an exceptionally liquid position, which will enable us to assist them with the necessary increased credits.

PREMISES.

The premises item is almost unchanged from a year ago, the figure of nearly £9 millions having been arrived at after taking account of the £250,000 allocated from the past year's profits to bank premises redemption fund. This appropriation is considerably lower than in several previous years, but our expenditure on premises was by no means so heavy in 1930, and we are fully satisfied that the figure placed upon them considerably understates their value, either as banking offices or as marketable assets. The total of £9 millions represents about 900 freehold properties and 500 leaseholds. The value of each leasehold property is written down yearly by an amount, which is charged against earnings before striking net profits and sufficient to extinguish the cost at the expiry of the lease.

The freeholds have cost us in all approximately £12,800,000, but many of these properties were acquired at their book values from the various banks taken over in the course of our history, and had already been written down substantially out of profits before coming into our possession. In addition, we have set aside out of our own profits no less than £7,600,000 for writing down the cost of freehold properties, so that a net figure of £5,200,000 is included in the premises item, and this sum is below the actual site values of the premises, counting nothing for the buildings. You will doubtless agree that these facts give ample evidence of the cautious policy pursued in dealing with this part of our assets.

The item "Other properties and work in progress" represents the cost of further sites acquired with a view to the extension and improvement of our services, together with money spent in developing properties not yet taken over for banking business. As a matter of domestic history I may mention that during the past year the central management of the bank has moved into the new building in Poultry, where the whole of our head office organisation is now concentrated. The full occupation of the premises has enabled us to offer a new and valuable service to the public in the form of safe deposit facilities, and we hope to extend this arrangement to a wider circle of clients in the fairly near future.

INVESTMENTS IN AFFILIATED COMPANIES.

Investments in affiliated companies make up a total in the balance sheet about £160,000 more than a year ago, the increase arising from additions to their paid-up capital and published reserves and undivided profits. The balance sheets of the Belfast Banking Company, the Clydesdale Bank and the North of Scotland Bank, as well as of our Executor and Trustee Company, are most encouraging, and clearly indicate the advantages to be derived from close co-ordination in policy and management between institutions operating in different parts of the kingdom or in somewhat different spheres of activity. I should like once again to express our congratulations to the directorate, management and staff of each of our affiliated banks on the continued prosperity and stability of their undertakings.

At a later stage I shall be calling upon one of my colleagues to move the customary resolution of appreciation of the services of our own management and staff. Although, therefore, I may be anticipating what will then be said, I cannot allow the occasion to pass without myself expressing, however inadequately, our sense of indebtedness to them for their continued loyalty and efficiency. The results achieved in the past year are convincing proof, if any were still needed, of the high quality and character of our personnel. Finally, I am sure you would wish me to say a very special word to our managing director. Mr Hyde has borne the immense burden of his office with the genius and devotion that we have learned through long association to appreciate and admire. He has been most ably assisted by our joint general managers, who share with him the responsibility of managing a business of unequalled complexity and magnitude. I would tender to him and to them on your behalf a sincere expression of our confidence and respect.

The report was adopted, other ordinary business was transacted, and the proceedings terminated with a vote of thanks to the chairman.

HUNGARIAN COMMERCIAL BANK OF PEST.

The balance sheet for the year 1930—as approved by the board of directors in their meeting of January 17th—shows, including the amount brought forward from 1929, a net profit of P. 5,938,510.63, against P. 6,009,140.95 last year. Following an old practice, profits realised on several transactions already carried out have not been accounted for in this balance sheet.

The board of directors will submit a resolution to the eighty-ninth ordinary general meeting of the shareholders, to be held on February 4th, to allocate from the net profit, as last year, an amount of P. 3,500,000 for the payment of a dividend of P. 7 per share, and to add P. 1,000,000 to the ordinary reserve fund. The benevolent funds of the staff are to receive P. 60,000. The unallocated balance of the profit and loss account to be carried forward to 1931 will be, on the other hand, P. 463,605.95, against P. 226,021.74 last year.

This result has been achieved without taking recourse to the silent reserves of the bank.

The earnings on the Hungarian business of the bank were smaller than in the previous year. This is the consequence of the general economic conditions, and is more especially due to the fact that loans commanded during the year ever decreasing rates, and the margin between the rates of interest allowed on deposits and obtained for loans also permanently narrowed down. A compensation for the fall-off in the inland business was provided by the further development of the foreign business of the bank involving long- and short-term loans and other transactions.

The figures of the balance sheet for 1930 compare with the year 1929 as follows:—

Savings deposits declined from P. 137,687,909 to P. 133,968,748 during the year, whereas deposits in current accounts rose from P. 107,505,635 to P. 117,379,446. The two together show an increase of P. 6,154,600. The item other creditors, consisting only of reimbursement credits opened abroad on behalf of the clients of the bank, declined to P. 6,329,823 from P. 10,657,409 in 1929.

The turnover of mortgage and communal bonds increased considerably. The total amount of bonds in circulation rose from P. 22,932,663 in 1929 by P. 26,872,112 to P. 49,804,776.

Deposits with banks and bankers declined from P. 37,617,979 to P. 27,627,656, whereas cash in hand increased from P. 9,874,343 to P. 12,973,375, and bills discounted from P. 104,008,842 to P. 119,759,678. The increase of these three items aggregates P. 8,859,000.

The securities owned by the bank were valued very conservatively. The decline in the prices of the securities, which in several cases has been very heavy, was fully considered.

The turnover, as shown on one side of the general ledger, rose from P. 12,401,585,000 to P. 13,212,846,000 in 1930. Out of the items included herein the turnover of the foreign exchange department shows an increase from P. 4,239,843,000 to P. 5,225,634,000.

MICHAEL NAIRN AND GREENWICH, LIMITED.

DIVIDEND MAINTAINED IN DIFFICULT YEAR.

The ninth annual general meeting of Michael Nairn and Greenwich, Ltd., was held, on the 20th instant, at Winchester House, Old Broad Street, London.

Sir Michael Nairn, Bart. (the chairman), in moving the adoption of the report and accounts, said: At our last annual meeting I referred to the fact that the year 1929 had been a difficult one, and I am sorry to say that the same description applies in an even greater degree to 1930.

Our principal associated company—Michael Nairn and Company, Ltd.—experienced fairly normal conditions during the first half of their financial year, but during the second half the usual demand for their productions was not maintained, and there was a serious falling off in the export trade. It is not possible for any industrial company with widespread interests to remain immune from the consequences of the present unprecedented depression, as the economic uncertainty which prevails throughout the world results not only in decreased sales, but in violent fluctuations in commodity prices, which naturally affect manufacturing profits.

In the linoleum industry it is necessary to carry large stocks of raw materials, and our associated companies, on account of the fall in prices, have found it necessary to write down the value of these stocks before their balance sheets were prepared.

Last year I referred to the new Australian company, a subsidiary of Michael Nairn and Company, Ltd., and I expressed the hope that when trade revived the Australian company would, no doubt, share in the returning prosperity. Unfortunately, the financial crisis in the Commonwealth has not only resulted in the severe restriction of imports into Australia, but has had the most prejudicial effect on domestic industries, and the operations of the Australian company show a loss on last year's trading. This loss has been duly provided for by Michael Nairn and Company, Ltd., out of their profits for the year. Australia is a country of vast resources, and when the Australian people put their house in order I have not the slightest doubt that ultimately our Australian company will prove to be a sound and profitable investment. I have referred to these matters as being of some interest to our shareholders, but, as I have stated at previous annual meetings, we are simply a holding company concerned almost entirely with the dividends paid into our coffers by the associated companies.

YEAR'S INCOME AND DISTRIBUTION.

From the accounts now in your hands you will observe that our income for the year, represented by dividends from investments, &c., amounts to the sum of £219,223 3s., as compared with £234,602 14s. 4d. last year, which shows a decrease of £15,379 11s. 4d. The board recommend a final dividend of 7½ per cent., making 12½ per cent., less income tax, for the year, leaving to be carried forward the sum of £58,609 4s. 9d., as compared with £56,037 2s. 4d. last year. As I have pointed out on previous occasions, there is no need for this company to build up reserves of its own, as our associated companies provide for their own reserves.

I feel sure that you share the satisfaction of the Board that, in spite of the adverse trade conditions to which I have already referred, we are able to maintain our dividend in a year which, from the industrial point of view, has been the most trying within living memory.

It is not for me to forecast the future. The immediate outlook is not encouraging. The growth of unproductive national expenditure and the increased burden of taxation are fettering industrial development in every direction and crushing individual effort and enterprise. The compelling need of the moment is rigid economy in all our Government and municipal spending departments so that taxation may be reduced and the drag removed from the wheels of industry.

In conclusion, I would like to add that it is entirely due to the prudent and expert management of the directors and staffs of the various companies with which we are connected that it is possible to present to you this satisfactory balance sheet. We are passing through a trying period, and it is in times like the present that these companies reap the reward of their conservative policy in the careful husbanding of their resources during the years of greater prosperity. I can say with confidence that the various works are being maintained in the highest state of efficiency. Research is continually going on, the plant and equipment are of the most modern character and no effort is being spared in any department to retain the vanguard position held by these companies in the linoleum and floorcloth industry. You may rest assured that all the necessary experience of manufacture and administration, combined with a competent selling organisation, are in readiness to take the fullest advantage of a revival in trade, which I trust may not be long delayed.

The resolution was carried unanimously.

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS).

DIVIDEND AGAIN INCREASED.

STEADY PROGRESS OF BARCLAYS BANK (CANADA.)

The fifth ordinary general meeting of Barclays Bank (Dominion, Colonial and Overseas), was held, on the 20th instant, at Cannon Street Hotel, London, E.C.

Mr Frederick Craufurd Goodenough, the chairman, presided. Mr H. R. Bradfield, assistant general manager, having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said: Mr Walter Osborne Stevenson, the foreign general manager of Barclays Bank, Limited, has been elected to a seat on the board, and this meeting will be asked to confirm his election in accordance with the articles of association.

In view of the rapid development of Northern Rhodesia, the board have considered it desirable to enlarge the Rhodesian committee, and I am pleased to inform you that Sir Francis James Newton, K.C.M.G., C.V.O., lately the High Commissioner in London for Southern Rhodesia, has accepted the appointment of chairman of that committee and has taken up his residence in Salisbury.

BALANCE SHEET ITEMS.

If you will refer to the balance sheet and profit and loss account for the year ended September 30, 1930, you will observe that the total figures at that date exceeded £74,000,000, and that the current, deposit and other accounts amounted to £62,690,264, which is an increase on the previous year of £1,647,002.

Cash in hand and at bankers and gold bullion amounted to £11,844,752. Bills discounted were £14,081,479, being £1,516,560 more than the previous year. Investments were £12,970,040, being an increase of £3,769,263 in consequence of surplus moneys being invested in short-dated Government securities. Advances to customers at £25,090,490 showed a decrease of £3,599,609, largely owing to a considerable reduction in the value of most of the commodities which the bank finances.

BANK PREMISES.

The "bank premises account" now stands at £2,086,808 and shows a reduction on balance of £26,629. The net reduction, after allowing for purchases, has been due to the sale of our premises in King William Street, formerly the head office of the Anglo-Egyptian Bank, Limited, to Barclays Bank, Limited, our parent company, who will use them for the purposes of a branch bank. The rebuilding of our Gracechurch Street premises has furnished us with all the room that we require in that quarter.

Satisfactory progress is being made with the rebuilding of our premises in Adderley Street, Cape Town, in accordance with the designs of Sir Herbert Baker, A.R.A., F.R.I.B.A., to which I made reference a year ago. Our policy with regard to buildings, under the present conditions, is being restricted as far as possible, but it will be appreciated that the development of the bank's business, particularly in Northern Rhodesia and East Africa, necessarily entails capital expenditure on premises.

PROFIT AND DIVIDENDS.

The net profit for the year ended September 30, 1930, after making full provision for bad and doubtful debts, amounted to the sum of £465,070, which is £51,523 less than the profit for the preceding year. When it is remembered that the territories served by this bank are largely occupied in the production of foodstuffs and raw materials, a reduction in the earnings of the bank during the past year comes as a natural consequence, having regard to the fall in commodity prices to which reference has already been made. The liquid funds of the bank employed in bills and money at short notice have also earned materially lower rates.

An interim dividend on the "A" and "B" shares at the rate of 4½ per cent. per annum was paid in July last, and it is proposed to pay a final dividend on these shares at the rate of 5 per cent. per annum, making 4½ per cent. for the year, against 4½ per cent. for the previous year. The reserve fund has been further increased by £100,000, bringing it to £1,650,000, which compares with £1,000,000 at which it stood at the time of the amalgamation some five years ago. The carry-forward has also been increased from £137,981 to £164,730.

BARCLAYS BANK (CANADA).

I am pleased to inform you that Barclays Bank (Canada), in which, as you are aware, this bank holds a substantial interest, has made steady progress. I had the opportunity, during the Holiday period last autumn, of visiting Canada, and I was assured on all hands that the advent of Barclays Bank in Canada was warmly

welcomed and was regarded as a new and important link between that Dominion and this country. A similar appreciation was also expressed in New York, where I was able to pay a brief visit. A branch of Barclays Bank (Canada) has just been opened in Toronto.

We look forward to a considerable development of the trade between Canada and the West Indies, and our branches already established in the West Indies, together with those which are now being opened in Canada, will form a valuable financial link for this purpose.

The shareholders will be interested to hear that Mr H. L. M. Tritton, a director of this bank, has visited our East African territory at the request of the board, and is now on his homeward journey. Mr W. O. Stevenson paid a visit to South Africa during the year, at the request of the board, and Mr Charles H. Hewett, formerly general manager of the Colonial Bank and now a local director, is at present in the West Indies seeing our branches there. By these visits the board is kept in constant personal touch with the business and with the management and staff abroad.

CONGRATULATIONS TO THE GENERAL MANAGER.

I am sure the shareholders would wish to join with me in congratulating our general manager, Sir John Caulcutt, upon the honour of knighthood recently conferred upon him in recognition of the valuable public service which he has rendered and is rendering as deputy-chairman of the Export Credits Guarantee Advisory Committee. Sir John Caulcutt has also been appointed chairman, for the current year, of the committee of the British Overseas Banks Association.

I am pleased also to have this opportunity of informing the shareholders that the staff of the bank continue to give them excellent service. I have been impressed by the loyal manner in which the staff have fully recognised that, under existing conditions, it is necessary to curtail expenditure as far as possible.

TRIBUTE TO THE LOCAL BOARDS AND MANAGERS.

I can also assure the shareholders that, in these difficult times, the business controlled by the bank's local boards and managers has been handled with judgment and ability, so that the interests of the bank have been safeguarded, whilst nothing has been done to restrict legitimate commercial activity.

A summary of conditions in the various areas in which the bank is established will be circulated for the information of shareholders, together with a copy of the report of proceedings at this meeting.

There will be circulated also a copy of my address to the shareholders of Barclays Bank, Ltd., at the annual meeting which has taken place to-day.

Sir Herbert Hambling, Bart. (deputy-chairman), seconded the resolution.

Mr H. Hamel Smith referred to the importance of the cocoa industry to them as a bank, and suggested that some organisation should be created to further the interests of that industry.

The Chairman thanked Mr Hamel Smith for his remarks, which he said, would receive the attention of the board, and the resolution was carried unanimously.

The retiring directors (the Right Hon. Earl Buxton, G.C.M.G., Sir John Caulcutt, Mr Herbert Leslie Melville Tritton, and Mr Walter Osborne Stevenson) were re-elected; and Messrs Deloitte, Plender, Griffiths and Company, Price, Waterhouse and Company, Peat, Marwick, Mitchell and Company, and Cooper Brothers and Company were reappointed auditors.

VOTE OF THANKS TO OFFICERS AND STAFF.

Mr C. F. Wood proposed a hearty vote of thanks to the general manager, the assistant general managers, and also to the officers and staff at home and abroad for the admirable and efficient way in which they had carried out their duties during the past very difficult year. In doing so he said that he would like especially to pay a tribute to those members of the staff overseas, who were necessarily placed in the forefront of the battle lines of the bank as it extended. The bank had 455 offices overseas and was constantly extending, and he particularly wished to mention the staff abroad who were in control in the vast territory which the bank served. It was due to their organising ability, thoroughness and zeal that the directors were able to report such satisfactory results. (Cheers.)

Mr R. A. Foà seconded the vote, which was carried with acclamation.

Sir John Caulcutt (general manager), in acknowledging the vote, said that during a year of falling prices considerable discretion had been required on the part of the senior officers and the staff generally. They had shown the greatest loyalty and zeal in a period of difficult business conditions, and all would be encouraged by the appreciative remarks made by Mr Wood and so cordially received by the shareholders.

A hearty vote of thanks having been accorded to the chairman and directors, the proceedings terminated.

HUDSON'S BAY COMPANY.

RECONSTITUTION OF THE BOARD.

AMENDED PROPOSAL APPROVED.

An extraordinary general court of the governor and Company of Adventurers of England trading into Hudson's Bay was held, on the 16th instant, in London (1) to receive and consider the report of the special committee appointed in July last and, if approved, instruct the governor and committee to take steps to carry the recommendations of the committee into effect, and (2) to comply with a requisition made by certain proprietors for the convening of an extraordinary general court to consider certain resolutions contained in the notice of requisition.

Mr Charles V. Sale (the governor), at the outset, said that, as he was somewhat at variance with the special committee on their recommendations, he proposed to ask Sir Frederick Richmond to take the chair and conduct the proceedings.

Sir Frederick H. Richmond (deputy governor) then took the chair, remarking that the fact that the governor had tendered his resignation and was not in agreement with one of the recommendations of the special committee was sufficient explanation for his doing so. Proceeding, he described the circumstances in which the special committee was appointed, and said that it consisted of Mr Alfred Shepherd, Mr W. Sandford Poole, Mr H. M. Trouncer, and Mr George Watson, and that the aggregate number of shares held by those gentlemen or by the companies which they represented was 44,310 ordinary shares and 4,000 preference shares. It was hardly necessary for him to state that the names and qualifications of those gentlemen were such as to create the greatest possible confidence in the report they had prepared. The special committee was originally formed to investigate personal charges made against certain of the directors, but had been willing to go much further, and, as far as possible, investigate the present position of the company's affairs.

VALUE OF COMPANY'S ASSETS.

Before putting the resolution which he would submit he felt it to be his duty to reassure shareholders on certain points as to which they might have gained a wrong impression. He had reason to believe that some of them had formed the opinion that the company was in serious difficulties, and that their investment was in jeopardy. He would beg of them to get out of their minds any idea that the position of the company was financially unsound, and that it was advisable for them to sell their shares and cut their loss. Indeed, the reverse was the case, as even when valued on a most conservative basis, and after taking into consideration the loss that was anticipated on the current year's trading, the ordinary shares were represented by assets very much in excess of the present market quotation.

A brief analysis of the assets of the company as set out in the last balance sheet showed that the proprietors possessed assets to the net value of say £11,000,000. They had in addition an immense reserve in the 2,400,000 acres of land which they still held, and the outstanding instalments on lands already sold amounting to £2,200,000. Assuming this land to be worth only £1 per acre—and in the fullness of time it undoubtedly should be worth much more, as it included all the town sites—they arrived at a total of £4,600,000, and this large sum did not appear on the balance sheet as of any value. This gave a gross value of over £15,000,000, from which had to be deducted £2,000,000 preference capital, leaving a balance which, after full provision for current losses caused by the present trade depression, conclusively proved that the price at which the company's shares were quoted on the Stock Exchange to-day had no relation whatever to their actual value. (Hear, hear.) The directors estimated that the losses incurred during the current year would amount to approximately £600,000, the great bulk of which was attributable to the fur trade.

FINANCIALLY AND FUNDAMENTALLY SOUND.

The company, which had no debentures or mortgages, was a great company, with a great history behind it and in his view a great future in front of it. It was structurally, financially, and fundamentally sound but, like every other business enterprise, was suffering from what was probably the greatest business crisis the world had ever known. He thought they could congratulate themselves on the fact that their business was in Canada, and although in common with the rest of the world she was suffering from the present intense depression and fall in commodity prices, more particularly wheat, Canada was so rich in natural resources and her population so virile and enterprising that in his view she would be one of the very first countries in the world to recover. Whenever that time arrived the company was in a wonderful position to take the fullest advantage of it.

THE AMENDED PROPOSAL.

Having paid a warm tribute to the work Mr Sale had done for the company, the chairman said that the special committee, who had been having discussions with Mr Nordon and other proprietors, asked the board on Wednesday last to meet them with a view to coming to an agreement, which would be in the best interests of the company and obviate the necessity for a protracted discussion, which was bound to be harmful to the company. He was happy to say it had been agreed that an amendment to the first resolution should be proposed by a member of the committee, the effect of which would be that three new directors should be appointed to the board in place of the governor and two other directors who would retire, the persons so to be appointed to be selected by the board in consultation with the committee and certain proprietors and, in the event of disagreement as to the persons to be appointed, the question would be decided by the Right Hon. Sir Robert Horne, P.C., G.B.E., K.C., M.P., who had a substantial interest in the company. He might mention that Mr Sale did not approve of that amendment. The newly constituted board would consider the recommendations of the special committee and would submit their report upon them to the proprietors at a general court to be held before the end of July.

The chairman formally moved the resolution adopting the report of the special committee.

Mr Vivian H. Smith seconded the motion.

ATTITUDE OF SPECIAL COMMITTEE.

Mr Alfred Shepherd, chairman of the special committee, moved the amendment outlined by the chairman in his concluding remarks. In doing so he said that the committee believed as strongly as ever that the recommendations they had made should be put into effect at the earliest possible moment, but they appreciated that it was probably of even greater importance to the welfare of the company as a whole that the trouble and agitation which had been going on for many months should be brought to an end, and they were, therefore, willing to accept the modifications embodied in the amended resolution in the hope that by this means a road might be found down which the whole body of shareholders would be prepared to march as a united body.

Mr W. Sandford Poole seconded the amendment.

The Right Hon. Sir Robert Horne, G.B.E., K.C., M.P., said that there was one thing which stood out more than anything else—as big and obvious as the dome of St. Paul's—if they were to go on squabbling and have attacks upon the administration, either in the Press or in private circulars, then their way to disaster had become plain. Their duty, accordingly, was that they should get rid of differences, and the time to do it was now.

With a view to composing the differences, he, along with the committee and Mr Nordon, had spent many hours arriving at the amended resolution which had been put before them to-day, and he asked shareholders in their own interests to support it. Mr Nordon had suggested that by the proxies which he had received more votes had been cast in his favour than in favour of the committee, but he (the speaker) had the actual figures, and, so far from that being the case, the directors were in the strong position that they could have come to this meeting to-day and the recommendations of the committee could undoubtedly have been carried by a very considerable majority.

He had pressed the board, in the interests of the company and for the purpose of bringing about peace and harmony, to give way and to make concessions by which the governor and two others of the board should resign, and their places be occupied by people selected as had been described. He thought that the board deserved consideration for the generosity with which they had met that suggestion, and Mr Nordon also had shown a desire to benefit the company and had been of great help in designing the amended resolution.

Sir Robert Kindersley said that in his opinion the aspersions which had been cast upon Mr Sale were entirely unjustified. He knew the work which Mr Sale had done on behalf of the company.

The amendment was carried by an overwhelming majority, there being very few in a crowded meeting voting against it.

The resolution as amended was then put to the meeting and was carried.

On the proposition of Mr Shepherd the meeting expressed its approval of the suggestion that out-of-pocket expenses incurred by Mr Nordon should be paid by the company in the same way as those of the special committee.

Mr Sale said that he would like it to be known that he was interested with his family in the company to the extent of 20,000 ordinary shares and 2,000 preference shares. The last shares which he had bought were in the early part of 1929, and he had not parted with a single one since then, but had taken up his full proportion of the new issue.

The proceedings then terminated.

NATIONAL DISCOUNT COMPANY, LIMITED.

SOUND POSITION DISCLOSED.

THE HON. SIDNEY PEEL'S SPEECH.

The ordinary annual meeting of the National Discount Company, Ltd., was held at Cannon Street Hotel, E.C., on Wednesday, January 21st, Colonel the Hon. Sidney Peel, C.B., D.S.O., (chairman of the company), presiding.

The Secretary (Mr Charles H. Gough), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, before we come to the business of the day, you would, I am sure, like me to pause for a moment to allude to the loss which we have sustained during the past year by the death of Mr P. H. Wade. Mr Wade had devoted his life to the service of the company; he joined it in 1885; he became manager in 1904, and held that post until 1925. Since his retirement from that office he had continued to serve on the board. No one has played a greater part in building up the high position which this company has attained. He was very well known in the City as a remarkable and forceful personality. I think you would wish me to convey to his family a message of deepest sympathy from all who are connected with the company. (Hear, hear.)

We also regret to announce the death of Mr. B. T. Petley, a highly valued colleague. Mr Petley had already retired from the board owing to ill-health. His untimely death was a great loss to us.

A LIFE OF PROGRESS.

This year, gentlemen, your company attains the ripe age of 75 years, to be exact, on May 21st next.

Joint stock companies, like men, require a great deal of attention to keep them in good condition at all ages. At times there is a good deal of infant mortality among the younger fry, but, contrary to human analogy, age sometimes brings greater security of tenure, greater activity and a greater pace of growth. I hope this is true of the National Discount Company; I see no reason why it should not continue to be so as long as the City of London, in which we move and have our being, maintains its world-wide position, which it can only do if based upon a prosperous nation.

As to the increased pace, I will give you one illustration. We began operations in 1856. By 1886 we had discounted £1,000,000,000 of bills, £2,000,000,000 by 1909, £3,000,000,000 by 1923, and £4,000,000,000 by 1930. This year, too, our reserve fund reaches the sum of £1,000,000, equal to our paid-up capital.

So much for anniversaries, let us come to the results of the year 1930.

Our gross profits for the year are £691,538, £24,492 higher than last year. We propose to maintain the dividend and bonus at the figure to which they were increased last year, to put £5,000 to pensions fund, and to carry £110,000 to reserve fund, making it up to £1,000,000, as I have already stated.

This will involve drawing upon the carry-forward to the extent of £35,655, which it can well afford. I do not think you will require me to expatiate on the advantages of strong reserves.

THE BILL DISCOUNTING BUSINESS.

Some people may ask how it is that discount houses are showing improved results, when banks are showing smaller profits, and when general trade is notoriously in a bad way. The explanation is not very difficult. Over an extended period of time, the profits of the bill discounting business are bound to follow the general trend of prosperity or the reverse, but in any particular year the rise or fall in profits does not coincide with the general rule.

Everybody knows that when trade is declining, funds are released and accumulate in the short money market. The rate which has to be paid on deposits, therefore, declines.

In so far, therefore, as securities bearing a fixed rate of interest are carried on deposit money, it is obvious that there is a larger margin of profit; such securities have also a tendency to appreciate in value, and, if you are skilful enough, or lucky enough, you may make a profit by getting out of them at the right time. This, however, is very difficult to do. As a matter of fact, however, funds so employed by companies like ours, consist largely of their own capital and reserves, and the deposit money used for carrying securities is proportionately very small indeed. We must look elsewhere for the principal source of profit.

CONDITIONS DURING 1930.

When money, owing to the falling off of trade, becomes easy, the discount rate falls, but the rate which is to be paid on deposits falls too, and, therefore bills already discounted show a greater margin of profit than they did when first discounted. This is the condition which prevailed during the first half of 1930. The year began with the Bank of England rate at 5 per cent.; four changes of $\frac{1}{2}$ per cent. each time brought it down to 3 per cent. on May 1st, where it has remained ever since.

Over the whole year, the difference between deposit rate and discount rate was no more than 1s. 6d. per cent.; but the bills already in hand on January 1st, those discounted in January at an average rate for that month of £4 1s. 2d., and those discounted in February at an average rate of £3 16s., showed an increased profit during the remainder of their currency, as the deposit rate fell with the Bank rate.

On the other hand, the time will inevitably arrive when the Bank rate and deposit rate will rise, and bills in hand will then prove as unprofitable as they were profitable during the falling period. In other words, when trade is getting bad, Discount Houses do well, when trade is improving, and money therefore becoming tighter, Discount Houses lose. In the long run the thing equalises itself out.

I see no reason to modify the conclusion, that what suits Discounting Houses best is a long period of stable rates for money and discount.

Thus our interests and those of general trade coincide, whatever differences there may be for short periods.

THE BALANCE SHEET.

One word as to our balance sheet, which I think you will agree, discloses a sound position at the end of the year. The only items to which I need call your attention are the increase in investments of about £1,000,000, a natural development under present conditions, a decrease in our loans, and a slight diminution in the amount of bills in hand. These changes are closely inter-connected.

In conclusion, we have had, I repeat, a good year, but in times like these, more than average skill is required to steer a successful course. Last year I described 1929 as a tumultuous year. I should probably be described as a pessimist, which I am not, if I attempted to produce for you a suitable epithet for 1930 from the general point of view.

What 1931 will bring forth it is difficult to forecast, but, seeing with what skill Mr Goldsmith and his colleagues have managed our affairs during the last two difficult years, I think we can look forward, if not with optimism, at any rate with reasoned serenity, so far as our company is concerned.

I have pleasure in moving: "That the Report and Accounts now read, be received, adopted, and entered on the Minutes."

Sir Sigismund F. Mendl, K.B.E., seconded the resolution, and it was carried unanimously.

NATIONAL BUILDING SOCIETY.

SOCIETY'S STRONG POSITION.

The annual general meeting of the National Building Society was held, on the 16th instant, at the Cannon Street Hotel, London, E.C., the chairman, Mr George Elkington, J.P., F.R.I.B.A., presiding.

The Chairman, in moving the adoption of the report and accounts, congratulated the members upon the continued and unqualified success in every direction which had been obtained in the past year's working, and on the strong position of the society, which now had over 62,000 members.

FUTURE INTEREST RATE.

Dealing with the question of the future interest rate, the chairman said that recently a few large societies had either given official notice of a definite reduction or foreshadowed a possible reduction at early dates in the 5 per cent. interest they had been paying. In some cases the reduction was apparently to apply to all shares, past and future, in others to new shares only, while yet in other cases the reduction was limited to certain classes of existing shares in excess of certain amounts. But there was also a considerable expression of opinion by responsible officials and representatives of other societies that, so far as their societies were concerned, any such reduction appeared unnecessary and was not contemplated.

NO NEED FOR PESSIMISM.

He thought there was no need to be pessimistic; the movement as a whole was in a very strong position, and he had noted a very definite desire on the part of its leaders to act with due caution and in co-operation, and while proceeding, as the particular requirements of their individual societies might compel, not to overlook the interests of the movement as a whole. So far as their own society was concerned, the board was fully alive both to the general situation and to the possible repercussion of the action of other societies on such situation. Their opinion was that they saw no reason at present to depart from their current 5 per cent. to investors, for they, like so many other societies, had found themselves able to obtain a sufficient amount of satisfactory mortgage business.

The report and accounts were unanimously adopted.

ALEXANDERS DISCOUNT COMPANY, LIMITED.

RECORD GROSS PROFITS.

INCREASED CAPITAL USEFULLY EMPLOYED.

MR COLIN F. CAMPBELL ON CONDITIONS IN THE MONEY MARKET.

The sixty-third ordinary general meeting of shareholders of Alexanders Discount Company, Ltd., was held, on the 21st instant, at the office of the company, 24, Lombard Street, London, E.C., Mr Colin Frederick Campbell, the chairman of the Company, presiding.

The Secretary (Mr A. K. Bruce) having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and gentlemen, I assume you will take the report as read, as usual.

When we met in June for the purpose of increasing the capital of the Company, I gave you the impression that the business of the Company was proceeding normally, and I am glad to be able to say that this forecast has been proved to be on the conservative side.

This is indeed evident from the statement of the accounts in your hands.

I have always refrained, when addressing you at these annual meetings, from speaking at any length on the general situation in the country, and have confined myself to our own affairs, and I do not propose to depart from this to any great extent to-day, but it seems necessary on this occasion to say something, in face of the successful year enjoyed by this Company while world-wide depression exists on every side.

We are compelled, in fact, to take notice of this marked contrast and to appreciate its cause. Falling rates of money, with a declining Bank rate, always produce conditions favourable to the discount market, and if a rise in Government securities occurs at the same time, it adds to their good fortune.

ROOT OF THE INDUSTRIAL DEPRESSION.

When we come to consider, however, what has caused cheaper money and a substantial rise in Government securities in 1930, we begin to get at the root of the grave industrial depression that now exists in this country.

We hear frequently in political and other circles that the policy of the Banks has been far too restrictive, and that greater credit facilities should be placed at the disposal of traders. I would ask you to dismiss this theory as being incorrect, and I go further and ask you to believe that, owing to the pressure exerted in high quarters during the early post-war period to provide facilities generously to meet the requirements of increased trade which was in prospect, there is no doubt that in many directions bankers did respond to the utmost of their ability. Unfortunately, owing to heavy taxation and the short-lived period of high prices, traders did not enjoy conditions of prosperity sufficiently long to enable them to provide reserve funds adequate for meeting the losses which fell upon them when the collapse came in 1921.

Looking back, we can see that it would have been better had bankers adopted a more restrictive attitude towards the proposals for great capital outlay during the period of excessive high prices. Undoubtedly, it was during this time that the seed of much of the subsequent trouble was sown.

WANT OF CONFIDENCE—NEED FOR NATIONAL ECONOMY.

To-day there is plenty of credit available, but there is a lack of borrowers. Want of confidence is the main cause of our present troubles and because there is no confidence there are no borrowers, and, in consequence, rates for money have fallen away and Government securities, as being the best means of employing money, have been pushed up in value.

I am fully aware that other reasons can be given for the present depression, all of which are contributory causes, but until confidence is restored in the minds of those who direct industry it is hopeless to look for any sustained recovery, and the first step towards establishing confidence is for our politicians to demonstrate that a policy of economy in our national expenditure is a fact and not merely a theory. (Hear, hear.)

THE MONEY MARKET.

Turning now to the money market, with which we are specially concerned, the average rate for money was £2 10s. 2d., against £5 4s. 4d. in 1929, and for bills £2 12s. 7d., against £4 13s. 4d. The year commenced with an official discount rate of 5 per cent., but this did not last long, as it was reduced first to 4½ per cent., then to 4 per cent., then to 3½ per cent., and, finally, on May 1st,

to 3 per cent., at which it remained throughout the year, and this is the rate to-day.

The discount rate ruled a good deal below the official rate during the year, so that the margin between money and bills was only 2s. 5d., against 11s. in 1929, a smaller profit than had been experienced for some time, and it does not appear as if any great change in this situation is likely to take place in the near future. The Clearing Banks hold considerable balances, owing to the fall in demand for trade purposes, and, although it might be expected that money both from New York and Paris would have been largely transferred to London, due to the still lower rates current at those centres, so far actually, as we have seen, there is no evidence of such a movement having taken place to any material extent.

STERLING ACCEPTANCES AND FOREIGN COMPETITION.

It has been stated that one result of the cheap rates at which bills can be discounted in London has been that foreign exporters have availed themselves of sterling acceptances on London for financing their merchandise in competition with British goods, and that British bankers and Financial Houses have been too ready to extend their credit for this purpose.

Alexanders are large buyers of bills throughout the year, and while, of course, a vast volume of trade is always financed by means of sterling bills on London, our experience does not confirm the suggestion that there has been any particular increase of such bills in this market.

The statement of accounts in your hands reflects the changes brought about by the increase in the capital.

That issue was a great success and the shareholders secured for themselves a pleasing bonus on the shares allotted to them.

THE RESERVE FUND.

In consequence of the transfers made to the Reserve Fund from the premium on the issue and from the profits of the year, this fund now stands at a million sterling, which is the same amount as the paid-up capital and which constitutes a very substantial protection to the shareholders.

As you will have seen from the report, we have placed £5,000 to the clerks' widows and pension fund, and I am very pleased to tell you that an exceedingly generous gift of £7,000 has been made by certain members of the Alexander family to the Staff Pension Fund, in recognition of the long, close and happy connection between the staff and that family. (Cheers.) The Company has in the past made several allocations to this Fund, and I am happy to say that it is now actuarially in a thoroughly satisfactory condition. (Hear, hear.)

Our holding of short-dated Government securities is substantially higher than a year ago. You may remember that I told you last year that we had decreased our holding of securities in 1929 because of the rising rates for money, and because of the uncertainty of the outlook in regard to rates. We reversed this policy in 1930 because, in view of the condition of trade, we saw no prospect of a continuation of high rates prevailing during the year. I am glad to say this forecast was correct and our increased holdings of securities have proved profitable for us.

Our bill case is also larger than a year ago, being about £20,000,000, against £17,000,000 in 1929. We have substantially increased our holding of Treasury bills, as Bank and Commercial paper have been very limited in quantity.

LARGE INCREASE IN BILLS AND SECURITIES.

If the Bills and Securities are taken together, we arrive at a total of £24,500,000 against about £20,000,000 a year ago.

This bears out the statement I made to you in June that, with the steady growth of the business, we were of opinion that the Company could usefully employ the increased capital then proposed. That we have been able to do so is some tangible evidence of the useful service we are rendering as part of the machinery of the London Money Market.

The gross profits have amounted to £474,421 compared with £412,397 in 1929, which constitutes a record, as the previous highest profits were in 1922 when they were £429,000. The amount carried forward to this year is £60,396 against £53,087 brought into the account a year ago, being an increase of £7,309.

Once again I would like to bear testimony to the very successful way in which Mr Newcomb and those working with him have piloted the company throughout another year. (Hear, hear.)

THE RESOLUTION.

I now beg to propose: "That the report and accounts be received, adopted and entered on the minutes, and that dividends for the half-year ended December 31st last be declared at the rate of 6 per cent. per annum on the £200,000 preference capital, and at the rate of 15 per cent. per annum on the £800,000 ordinary capital, both less income tax, and a bonus of 1s. per share on the ordinary shares, free of tax, payable on and after the 22nd instant, and that the balance of £60,396 6s. 10d. be carried forward to next account."

I will ask Sir Austin Harris to second that, and then, if anybody has any questions to ask before I put it to the meeting I shall be pleased to do my best to answer them.

Sir Austin E. Harris, K.B.E.: I have great pleasure in seconding that resolution.

The Chairman: Those in favour of the resolution please signify the same by holding up their hands. On the contrary; that is carried unanimously.

RE-ELECTION OF DIRECTORS.

The next resolution is for the re-election of the retiring directors. There are two in accordance with the articles, and I have great pleasure in proposing the re-election of Sir Austin E. Harris, K.B.E., and Mr. Eric Gore Browne, D.S.O., who retire by rotation. I ask Mr George Alexander to second that.

Mr George C. Alexander: I have much pleasure in seconding that.

The Chairman: Those in favour; on the contrary; carried unanimously. Now I will ask some shareholder please to move the reappointment and the fixing of the remuneration of the auditors for the ensuing year.

Mr Antony Macnaughtn: I have much pleasure in proposing: "That Messrs. Price, Waterhouse and Company be reappointed auditors of the company for the ensuing year at a remuneration of 306 guineas."

The Chairman: Will someone second that?

Sir Philip J. G. Henriques, K.B.E.: I shall be pleased to second that.

The Chairman: That has been proposed and seconded. Those in favour; on the contrary; carried unanimously.

Mr Herbert G. Alexander then proposed that the fees of the directors be increased from £3,000 to £4,000 per annum, free of income tax.

Mr George R. Pember seconded the proposal.

Major Charles J. Alexander, whilst not dissenting, submitted that the preference shareholders should receive some compensation for the voting rights they gave up when the business was converted into a public company in 1911.

Mr Herbert G. Alexander's proposal was generally agreed to.

A vote of thanks to the Chairman having been proposed and seconded, the proceedings came to an end.

UNION DISCOUNT COMPANY OF LONDON, LIMITED.

"A GOOD YEAR."

SIR WILLIAM GOSCHEN ON MONETARY CONDITIONS.

The seventy-third ordinary general meeting of the shareholders of the Union Discount Company of London, Ltd., was held at the Cannon Street Hotel, London, E.C., on Thursday, January 22nd, the Hon. Sir William H. Goschen, K.B.E., presiding.

The secretary, Mr C. W. Holliday, having read the notice convening the meeting and the auditors' report,

The Chairman said:—Ladies and gentlemen: I presume that you will take the report and accounts as read.

The year 1930 started with a 5 per cent. Bank Rate. By May 1st it had fallen by four successive drops of ½ per cent. to 3 per cent., at which figure it has remained ever since.

BANK RATE CHANGES.

In theory, discount companies should recover what they lose on each rise in Bank Rate (as they must always be large holders of stocks of bills bought at lower rates) with each fall in the Bank Rate. When the Bank Rate falls come very quickly, as they did from 6½ per cent. in October, 1929, to 3 per cent. in May, 1930, this progression is too fast for the losses which were made on the much more slow rises, say from 4½ per cent. in April, 1927, to 6½ per cent. in September, 1929, to be fully recovered.

When rates move upward, and the discount market finds it has bought too cheaply, it has to take its loss at once, as the higher cost

of carrying its bill stock takes effect immediately the Bank Rate rises.

If the prices of other commodities were equally responsive to changes in values and as quickly adjusted themselves, as in the case of bills held, many of the obstacles that are now paralysing trade and creating unemployment would be avoided.

One of the few bright spots in the revenue returns of the present fiscal year will be the enormous saving that has taken place in the financing of Treasury bills.

The unprecedented stagnation in world trade has offered unique opportunity for reducing the cost of the interest service on other forms of Government debt, and it is most regrettable that no advantage has yet been taken of these favourable monetary conditions, nor are there any signs of anything being done to induce the investing public to co-operate and make a major conversion scheme the outstanding success it ought to be.

BALANCE SHEET ITEMS.

I will now proceed to examine the accounts in detail. Our capital and reserve remains at £3,000,000 as in 1929. Our loans, deposits and other liabilities, and provision for contingencies at December 31, 1930, were £47,521,062 18s. 4d., which compares with £45,591,127 15s. 8d. at December 31, 1929. The bills rediscounted were £15,527,440 14s. 3d., against £12,310,529 0s. 3d. in December, 1929. The rebate in bills discounted was £678,183 17s. 0d., a larger figure than that of £634,033 12s. 8d. of the previous year. This is due partly to our larger portfolio, and partly to the longer life of the bills in hand.

On the other side of the balance sheet, the cash in hand stands at £1,350,870 13s. 2d., comparing with £1,328,876 16s. 9d. Our holding of British Government, India Government and other securities is £8,601,575 13s. 8d., against £7,629,621 6s. 7d. Loans on securities at call and short dates and other accounts were £516,521 15s. 0d., a considerably larger figure than that of the previous year, viz.: £208,767 14s. 6d.

The bills discounted figures were £56,595,142 7s. 3d., against £52,574,107 10s. 3d. This constitutes a record figure for the company. Debtors happen to be small, viz.: £22,389 7s. 2d. against £111,109 0s. 2d. We show freehold and leasehold premises at £75,000, which figure reflects the writing down this year by £15,000, as shown in the appropriation account.

ALLOCATION OF PROFITS.

Coming to the profit and loss account, the items of directors' fees and current expenses, taken together, are £79,037 11s. 2d., a slight decrease from £82,903 18s. 7d. in 1929. The rebate of £678,183 17s. I have already referred to in the balance sheet.

You will notice that we have, for the sake of clearness, this year introduced into the accounts an appropriation account, which we credit with the balance carried from profit to loss. This balance shows at £268,176 12s., and to that has to be added the balance of undivided profit from the previous year, which was £269,291 19s. 8d., which gives a total of £537,468 11s. 8d., the allocation of which is as follows:—

	£	s.	d.
To premises account	15,000	0	0
Trustees of provident fund	15,000	0	0
Interim dividend paid in July	72,656	5	0
Proposed dividend for the final half-year at the rate of 15 per cent., less income tax	72,656	5	0
Bonus of 2s. 6d. per share free of income tax	62,500	0	0
Balance to be carried forward to next year	299,656	1	8
	£537,468	11	8

This carry-forward compares favourably with that of £269,291 19s. 8d. of last year.

DIFFICULT CONDITIONS.

The past year has been a most difficult year for all those connected with the credit business, following, as it did, an uncertain year in 1929. The decline in the price of so many commodities carried under credits, such as wool, cotton, coffee, grain, metals, furs, rubber, &c., led to a serious position on the Continent. It affected the genuine trader who found himself faced with a loss in his stocks purchased for his ordinary business at higher prices and it affected still more adversely those houses who from time to time thought that the bottom had been reached and bought speculatively with a view to a rise.

This unfortunate form of speculation in some cases led to further disasters, because in several big failures there was found to be falsification of balance sheets, the last despairing effort to tide over difficulties.

Broadly speaking, the position has led to the necessity of the closest scrutiny in taking bills, and it reflects the greatest credit on all concerned that, in the difficult circumstances that I have outlined, so few errors in judgment are made.

One of the outstanding features of the year has been a general lack of confidence in business circles. This is not to be wondered at, even by taking the most cursory examination into the state of most parts of the world: those vast countries of India, Russia and China have been largely closed from a British market point of view, and there are grave situations to be faced in Australia, the Argentine and Brazil.

Confidence in our own country can hardly be described as great, as we have our unemployment troubles, fears of extravagant legislation, and general dislocation of trade. This situation has led to there being a larger supply of money available for short investment, but we naturally should much prefer to see this surplus disappear, and a healthier state of trade re-established. In spite of all these adverse circumstances, the past year has been a good one for the company—in fact, nearly all the figures, as you will have observed, are the highest in the history of the company.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

Government Returns, &c.

NATIONAL ACCOUNTS.

As is shown from the Treasury Return printed below, the total ordinary revenue for the week ended January 17, 1931, amounted to £26,188,200, against ordinary expenditure of £9,253,500. After allocating £620,000 to Sinking Fund and having allowed for a reduction in Exchequer Balances of £87,500, the week's operations, as shown below, reduced the National Debt by £16,402,000 to £7,744,561,000:—

(000's omitted.)	
National Savings Certificates	+ 600
4% Treasury Bonds	+ 69,500
4% War Loan paid off	+ 70,610
Board Fund	+ 3,500
	+ 74,000
Treasury Bills	- 9,142
Public Department Advances	- 10,250
4% War Loan paid off	- 70,610
I.O. & Telegraph Money	- 400
	- 90,402

A complete analysis of the National Debt at the end of the last quarter appeared in the *Economist* of January 3rd.

Messrs Samuel Montagu and Company write on January 21, 1931, as follows :—

GOLD.

Messrs Samuel Montagu and Company write on January 21, 1931, as follows :—

The Bank of England gold reserve against notes amounted to £144,542,595 on the 14th instant (as compared with £145,916,269 on the previous Wednesday), and represents a decrease of £3,083,027 since December 31, 1930. The shipment of bar gold which arrived from South Africa this week amounted to £649,554, nearly all of which had been sold forward to France. About £60,000 was available in the open market yesterday, and at the fixed price of 84s. 11½d. per fine ounce £25,000 was taken for India and the Home and Continental trade, £35,000 being secured for France. The arrangements under which the Bank of France accepts standard gold as delivered by the Bank of England became operative sooner than was expected. Withdrawals for despatch direct to France, commencing on the 16th instant, have been substantial, the daily amount being no longer limited to the capacity of refiners. It is understood that henceforth the Bank of France is prepared to accept gold bars of 900-1,000 quality and over. Movements of gold at the Bank of England during the week show a net efflux of £2,325,937. Receipts consisted of £1,000,000 in sovereigns understood to be from South America, and £250,000 in sovereigns "released." Withdrawals totalled £3,575,937, of which £20,833

was in sovereigns "set aside," £54,000 in sovereigns taken for export, and £3,501,104 in bar gold; of the latter, about £3,300,000 was for France.

SILVER.

The market has been unsettled and the week under review has seen continued fluctuation in prices. America was again inclined to sell, but China has been more disposed to support the market by purchases to cover near bear commitments. The Indian Bazaars have given further support with orders for silver for near shipment. Demand has been mostly for silver for prompt delivery, either for shipment or to cover bear contracts falling due, and the effect has been to increase the premium on cash delivery, which now stands at ½d. The position as regards delivery adds to the uncertainty of the market.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 12th instant to mid-day on the 19th instant:—

IMPORTS.		EXPORTS.	
	£		£
U.S.A.	71,811	British India	294,101

REPORTS AND NOTICES.

BANKS.

ANGLO-FRENCH BANKING CORPORATION.—The balance sheet dated December 31, 1930, shows an expansion of assets from £1,097,545 at end of 1929 to £6,931,291 at end of 1930 to the present total of £9,088,476. Cash in hand and at clearing banks is at £52,051 against £51,526. Money at call has grown from £725,000 to £1,080,000. British Treasury Bills and other bills stand at £517,976. British Government and Corporation securities stand in balance sheet at £1,074,836. Acceptances are higher at £3,522,097 against £2,950,206. Loans, advances, &c., have expanded from £693,401 to £1,296,830. Reserve account is at £30,000 against £10,000. Deposits, &c., have risen from £2,718,895 to £3,811,880. Profits higher at £72,450 against £65,846 in 1929. A first dividend is paid of 3 per cent., less tax. The carry-forward is £2,578. Meeting, River Plate House, Finsbury Circus, January 26th, at 2.15 p.m.

BANQUE NATIONALE DE CREDIT.—There have been persistent rumours in the City to the effect that the Banque Nationale de Crédit, one of the French "big five," was about to amalgamate with another powerful French bank. We are officially informed that there is no truth whatever in such rumours. The only change of note is that at a meeting held on January 14th the following gentlemen were elected to the board: M. Alexandre Dreuix, M. Louis Marlio, M. René Verneim, M. le Baron Petiet, M. Jean de Grailly.

BARING BROTHERS AND CO., LIMITED.—A comparison with last year's figures shows that the capital of the company has been increased and the total of deposits diminished. At the extraordinary general meeting called to authorise the increase of capital, it was explained that part of the moneys hitherto provided by the directors and intimate associates on deposit account would be converted into ordinary and non-cumulative preference shares. After providing for current expenses, bad debts, &c., and dividends for the year on the preference and ordinary shares, the balance to be carried forward is £19,283, as compared with £18,440 a year ago. Acceptances show a reduction for the year. The cash in hand and at call and short notice stands at £6,323,962, while bills receivable are lower at £7,000,415. Investments stand at over £3,700,000, as compared with £1,421,000 a year ago, and of the present total £2,641,767 is in British Government securities.

ERLANGERS, LIMITED.—The balance sheet dated December 31, 1930, shows total assets £10,091,946 as compared with £9,199,556 at end of 1929. The directors have paid the fixed cumulative dividend of 6 per cent. per annum on the £600,000 preference capital—absorbing £36,000—and recommend payment of the non-cumulative dividend on the £950,000 of ordinary at the rate of 5 per cent. per annum, which will absorb £47,500, and of the non-cumulative dividend on the £50,000 management shares at the rate of 20 per cent. per annum. £10,000, leaving an increased balance to be carried forward. Deposits appear in the balance sheet at £4,043,389, against £3,056,885 at December, 1929, while acceptances are £94,113 lower at £4,123,557. Cash items stand at £2,309,361, an increase of £542,444. Investments are £72,947 higher at £1,709,961. Advances and other accounts at £1,449,600, an increase of £481,310.

WILLIAMS DEACON'S BANK, LIMITED.—The directors of Williams Deacon's Bank, Ltd., have declared a dividend for the half-year at the rate of 12½ per cent. per annum (less tax) upon the "A" shares and at the rate of 12½ per cent. per annum (less tax) upon the "B" shares. The net profits for the year to December 31, 1930, amount to £278,627; the balance brought forward from last year was £31,225; the full year's dividend absorbs £234,375; the directors have added to contingencies account £50,000; carrying forward a balance of £25,477. The dividend warrants will be payable on and after February 3, 1931.

Commercial Reports.

MARKET SUMMARY.

The dispute in South Wales which extended over fifteen working days, has been settled on the terms reached in London last week, and work was resumed on Monday. The general situation in the other districts has slightly improved, but there is still hardly any forward contracting, and most orders are for early delivery. Activity in the iron and steel industries continues on a low level. The reduction in Cleveland pig-iron prices has stimulated demand, but the increase in the rebates on steel announced last week by the British Steel Makers' Association is not considered to be substantial enough to result in a definite expansion in business. Among non-ferrous metals, tin has been firmer following a rumour that the adoption of the compulsory restriction scheme by the Federated Malay States is almost certain. Copper has been somewhat steadier, but little interest was shown in zinc, and lead weakened further. The textile markets remain quiet. The lock-out in the weaving section of the cotton trade, which began last Monday, completely disorganised the market, and the firmer tendency of the raw material remained without effect. The London wool sales opened this week with a drop of 15 to 20 per cent. in values, but as there are no signs of an early improvement in the demand for finished goods, manufacturers did not show much eagerness to buy. As a result of the depression in the jute industry, it is thought probable that production in Indian mills will be reduced further. The food markets have been dull, and no early recovery is expected in wheat and other cereals. Among miscellaneous commodities, vegetable oils and oilseeds have been weaker, and hides declined further in value, the rubber market experienced a dull and inactive week, and prices are slightly easier.

THE COAL TRADE.

Our Sheffield correspondent writes:—The question of subsidies being still in abeyance, forward export contracts are not being sought. The price has firmed up somewhat of late, and quotations are 16s. 6d. to 17s. f.o.b. Humber ports. The industrial and household sales are poor. The coke position has worsened since the recent damping down of several blast-furnaces.

Our Glasgow correspondent writes:—A rather peculiar position obtains in the Scottish coal market. Prices for prompt shipment are firm, notwithstanding a scarcity of business. Orders, however, are mostly for early delivery, and with outputs restricted under the working of the quota system, home demand fairly brisk, and some business diverted to Scotland as a result of the recent Welsh stoppage, supplies fall short of requirements. The scarcity of large coal, notably screened qualities, is most pronounced, as, although washed nuts move readily, the position here varies in the different districts. Very little forward business is being arranged. Shipment prices (f.o.b. district ports):—LANARKSHIRE:—Ell best, 15s. 6d.; splint best, 17s.; splint second, 16s.-16s. 6d.; navigation, 17s.; navigation second, 15s.; Hartley, 16s.; steam, 14s.; trebles, 14s. 6d.; doubles, 13s. 9d.; singles, 13s. 3d.-13s. 6d.; pearls, 12s. 9d.-13s.; dross, 10s. 3d. FIRE:—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 13s. 6d.-14s.; third-class steam, 13s.; trebles, 14s.-16s.; doubles, 13s.; singles, 12s. 6d.-12s. 9d.; pearls, 12s.-12s. 3d. LOTHIAN:—Prime steam, 13s. 6d.; secondary steam, 13s. 6d.; trebles, 14s. 6d.; doubles, 13s. 6d.-13s. 9d.; singles, 12s. 6d.; pearls, 12s. 3d. Ayrshire:—Unscreened navigation, 16s.; jewel, 18s.; steam, 14s.; trebles, 14s. 6d.; doubles, 13s. 9d.; singles, 13s. 6d.; pearls, 12s. 6d.; dross, 12s. 3d.

Our Cardiff correspondent writes:—After a stoppage extending over fifteen working days, operations were resumed at the South Wales collieries on Monday, under the terms of agreement reached in London last week, as the result of the mediation of Mr. William Graham, President of the Board of Trade, and Mr. E. Shinwell, the Secretary for Mines. This agreement provides for a 7½-hour shift for six days of the week and for the continuance of the wage conditions prescribed by the Conciliation Board Agreement which expired on November 30th last. The parties have agreed to the re-establishment of a Conciliation Board with an independent chairman, and the settlement of all differences has been delegated to this Board, the decisions of the Independent Chairman on any issues remitted to him to be binding on both sides. One useful result of the stoppage has been the almost complete exhaustion of the huge stocks which had accumulated at the collieries and on the various railway and dock sidings during the recent depression, and the industry is now better supplied with empty wagons than it has been at any other period during the past four years. Repairing work delayed the production of coal at some pits in the earlier part of the week, but it is anticipated that in the course of a few days working conditions underground will again become normal. Among the inquiries in the market this week has been one from the Egyptian State Railways for 300,000 tons, another from the French marine for 100,000 tons of large coal, and a third from the Spanish Norte Railways for about 35,000 tons. Prices are nominally at the minimum schedule of the Marketing Association, but there has been no abnormal pressure of demand.

IRON AND STEEL.

Our Middlesbrough correspondent writes:—A steady business is being transacted in Cleveland iron on home account, and a favourable outlook is taken of the future. Prices are now at a level that will not allow of any further reduction under present working conditions and consumers are buying with more confidence. The importation of Continental iron and the use of Midland brands will now be practically eliminated, which will mean more trade for local furnaces. Scotch consumers can still secure imported iron at very low prices, but Cleveland makers are prepared to make special concessions to secure as much of the trade as possible, and it is expected that deliveries to Scotland will shortly expand, although Scotch foundries are not overburdened with work at the present time. The export trade is dull as Continental iron controls most neutral markets in the matter of prices. At the weekly meeting on Tuesday a fair business was transacted, prices being: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; No. 4 forge, 57s. f.o.b. or f.o.t. In hematite there is a fair business passing, but mostly for early delivery. Consumers hesitate to place orders for forward delivery as they expect lower prices to rule. Makers quote ordinary mixed numbers at 70s. for early delivery and 70s. 6d. forward, but would accept a little less for substantial business. The ore market continues almost idle. Best Bilbao rubio is nominally 16s. c.i.f., and the current freight Bilbao Middlesbrough is about 5s. For steel materials for home consumption under the rebate scheme the extent of the reductions announced last week were disappointing as larger concessions had been looked for. Prices for plates and sections were left unchanged, but the rebate was increased by 5s., making the total rebate now 15s. Joists were advanced 5s., but the rebate increased 10s., bringing the total rebate up to 22s. 6d. Export prices were not altered. Prices under the rebate arrangement are now: Plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other quotations for home are: Heavy steel rails, £8 10s.; iron crown bars, £10 15s.; 24-gauge galvanised corrugated sheets, £11 5s.; 24-gauge black sheets, £8 10s. The coke market is weak, supply being in excess of demand. Producers generally quote

17s. delivered works for early delivery, but this price can be shaded for reasonable quantities. The number of furnaces in blast in the district is unchanged at 23.

Our Sheffield correspondent writes:—The recovery of the local industries after the holidays is disappointingly slow. So far as the most important branches of the steel trade are concerned, including tools, cutlery, plate and finished goods generally, there is less doing than in December before the stoppage. An improvement in the international situation would mend matters immediately, but a change of this kind is not yet in sight. The home market is suffering from reduced buying on the part of the public, due to a considerable extent to the paucity of orders from the overseas markets. Australia is buying on the restricted scale of the last few months. Orders from Canada, New Zealand, South America and India are all down compared to a year ago. The output of the open-hearth steel branch is maintained at previous levels and there is no further loss of ground. Buying of raw materials is still restricted to hand-to-mouth quantities; there is little or no forward buying.

Our Glasgow correspondent writes:—Things remain very quiet at the iron and steel works in the Glasgow and Lanarkshire areas, and most of the plants are running at far below output capacity. So far, the increased rebate on ship-plates, sections and joists to purchasers of British material only has not resulted in any greatly increased demand. There is a steady business being done in materials for locomotive builders and structural engineers, the majority of whom in this district are fairly well employed. There is no improvement in the demand for bar iron. Tube makers have been finding business slow since the beginning of the year. The moderate demand for both black and galvanised sheets from home buyers is maintained and during the present week export merchants have been showing more interest and there have been a number of good inquiries on the market.

Our Cardiff correspondent writes:—On the Swansea Metal Exchange on Tuesday it was reported that inquiries from the principal buying countries were a little more active and that for prompt shipment prices were firmer. The mills are being operated only up to approximately 55 per cent. of capacity, and small parcels from stocks are reported to have been sold at as low as 15s. 3d. per basis box. Both Welsh and foreign tinplate bars are unchanged, quotations being £5 and £4 5s. per ton respectively. Tin, however, has hardened slightly. There has been no improvement in the condition of the galvanised sheet market where prices are ruling at £11 5s. per ton. There was a slight increase last week in the shipments of tinplates, but stocks further slightly increased to 221,098 boxes.

Truth

"Truth lies at the bottom of a well," said a philosopher, but this

OTHER METALS.

TIN.—Market opened firmer on reserved offerings and higher Eastern advices, but subsequently became irregular and easier, with dealings on a fair scale. Standard cash changed hands at £117 5s. to £115 12s. 6d.; and three months, £119-£116, and £117. Sales in the East were reported at £120 5s. to £117 15s. and £120 7s. 6d. per ton c.i.f.

COPPER.—Commenced with a firm tone on a fair demand and reserved offerings, but later an easier tone set in on selling pressure. Standard cash sold at £45 7s. 6d. to £44 16s. 3d.; and three months, £45 12s. 6d. to £44 17s. 6d. per ton.

LEAD.—Market dull and rates barely steady, offerings being in excess of requirements. Good soft foreign pig, January, sold £13 15s. to £13 12s. 6d.; February, £13 15s.; March, £13 17s. 6d.; April, £13 13s. 9d. to £13 16s. 3d. and £13 15s. per ton.

SPELTER. in poor support and tone easy. January sold £12 10s. to £12 12s. 6d.; February, £12 10s. to £12 11s. 3d. and £12 10s.; April, £12 18s. 9d. to £12 16s. 3d.; May, £13 per ton.

ANTIMONY.—Market quiet, but tone steady on limited offers from China. English regulus, £38 to £45. Chinese regulus, spot, £26 10s.; January-February, £25 5s.; Chinese crude, January-February, £15 10s., buyers, per ton c.i.f.

ANTIMONY OXIDE.—January-February, £25 10s. per ton c.i.f.

ANTIMONY.—Ore, 60 per cent., January-February, 3s. 2d.; 50 per cent. ditto, 2s. 9d. per unit c.i.f.

WOLFRAM. quiet, but generally steady. Chinese, January-February, sellers, 13s. per unit c.i.f.

ALUMINIUM. maintained. Home trade, also export, £85 per ton.

QUICKSILVER. steady. Spot, £21 11s. 6d. to £22 5s. per bottle.

TIN PLATES. easier, with sales of moderate extent. I.C. coke, prompt and forward, 15s. 6d. per box f.o.b. Swansea.

TEXTILES.

THE COTTON TRADE.—Liverpool: January 21st.—Spot sales for the week 15th to 21st (inclusive) are 20,000 bales, of which 11,200 bales are American, 900 Brazilian, 250 Argentine, 4,000 Peruvian, 1,650 Egyptian, 350 African, 1,350 East Indian, and 300 sundries. Imports for the same period are 50,362 bales, of which 40,305 are American, 5,998 Brazilian, 1,895 Peruvian, 432 African, 1,851 East Indian, and 61 sundries. Quotations to-day are: American midling, 5-49; Egyptian Sakel, 8-33; Egyptian uppers, 6-44; Brazil fair, 5-66; Peru G.F. smooth, 5-96; West African mid., 5-51; East African G.F., 6-56.

Manchester, January 21st.—Business in the market has been vitally affected by the lock-out in the weaving section. It has been very difficult to arrange fresh contracts as much uncertainty prevails with regard to deliveries. In certain directions there has been rather more demand for stock lots. Cables from India remain disappointing, although according to the mail just to hand, stocks of cloth are being reduced in Bombay. Small quantities of light whites have been sold for Calcutta, and some white shirtings have been booked for Karachi. Clearances in Shanghai are rather larger, which is not unusual just before the New Year celebrations, but fresh business remains at a low ebb. Restricted quantities of bleaching cloths have been sold for Egypt and the Near East, but the general demand for South America and the Continent remains poor. A fair amount of inquiry has come through in home trade fabrics. The yarn market has been depressed by the decreased consumption as a result of the stoppage of looms. More spinning mills are being compelled to close down. Some exceptional sales have occurred in Egyptian yarns for export purposes, the buying being stimulated by the stiffening of Sakel cotton.

THE WOOL TRADE.—Our Bradford correspondent writes:—The London sales commenced on Tuesday with a most unfortunate collapse in values. This is largely due to the increase in the Australian and South American exchange rates. Everybody was prepared for a decline of 10 per cent., but though it was known that this would no more than cover the fall in tops in Bradford since December last, it is questionable whether anyone expected seeing prices 15 to 20 per cent. down. This has upset importers, and seriously queered the pitch for users. At the same time, it is to the credit of owners, particularly the Australian companies, that they were prepared to accept the best prices bid. There were plenty of home and Continental buyers interested in the movement of

values, and prepared to take any wool which seemed at all likely to be turned to good account, and it is very gratifying indeed that so much wool actually passed the hammer. Though values are now so much lower, a fairly definite lead has been given, and it is not too much to expect a steady absorption of the catalogues. Yorkshire buyers have operated fairly freely in both merinos and crossbreds, and the chief weakness of the Continental operations has been the lack of French buying. So far as users of wool are concerned, there is not at the moment much disposition to operate on speculative lines. At the same time, an expansion of requirements in the shape of demand for tops, yarns and piece goods is urgently needed. There is no important development in any consuming centre in Yorkshire, except that prices for tops, yarns, and everything else, are lower.

THE JUTE TRADE.—Dundee, January 21st.—The jute trade continues to pass through dismal times, and business since the year opened has been even quieter if anything. Some hope is entertained of the Indian jute mills further extending their curtailment of production programme, and rumours of this are responsible for a firmer tendency in prices of Calcutta goods. A meeting is to be held on February 15th to consider whether the present arrangement, covering a 54-hour week, and a stoppage of one week per month, will be carried on after March 31st next, which is the date of expiry of the agreement. It is understood that proposals for more drastic restriction of output, probably to alternate week working, will be put forward at that meeting. The further curtailment by the Indian Jute Mills seems to be the only solution to a very vexed problem. Stocks of jute goods throughout the world are very large, and even their present output is not being absorbed, owing to the depression surrounding those industries in which jute goods are used. The existence of these huge stocks, if allowed to remain, will prove to be a deterring factor by hindering improvement in the jute trade when the turn in the tide of depression does come. Sellers of raw jute are reluctant to reduce their prices further, so that little change is noticeable, despite the fact that buying is on a very small scale. Good First Marks are obtainable at from £18 10s., and good Lightnings from £16, while Hearts are from £14 10s. to £15, the latter price being for Ram, January-February. Daisies, twos, threes, is usually quoted at £14 15s., but one or two sellers might take £14 10s., with threes at £14 5s., and fours at £13 5s., while Tossa twos, threes is rated at £16, threes at £15 15s., and fours at £14 5s., January-February. Business in jute yarns is confined to small lots, and buyers have succeeded in breaking 2s. 0d. for common 8 lb. cops, and 2s. 1d. for 8 lb. spools, purchasing at 1d. less in each case. Twist is from 3½d. for 3-ply 8 lb., and sacking yarns from 2½d. for 24 lb. web and 3½d. for 8 lb. chains. Rove is easier for 48 lb., and business has been done at as low as £22, but £17 is the lowest quoted for 200 lb. Fine yarns are more or less nominal, but sellers would accept lower prices, owing to trouble which has arisen over the raising of tariffs in Brazil. That country has raised the duties on jute yarns to a prohibitive level, being advanced from £7 to £9 per ton to from £46 to £61 per ton, according to quality. Carpet yarns are slow. Very few orders of any consequence are being placed for jute cloth, and as a rule buyers are only taking the smallest quantities to meet their immediate needs. Prices rule from 2½d. for 10½ oz. 40 in. hessians, and from 1½d. for 8 oz. Linoleum hessians and heavy goods are idle. Prices of Calcutta goods have advanced 6d. for hessians during the period under review. For 10 oz. 40 in. 18s. is quoted for January-March shipment, and 14s. 6d. for 8 oz.

THE HEMP TRADE.—The market for Manila qualities has been quiet, but prices denoted no material change. K grade, February-March and February-April, sold at £19 2s. 6d. c.i.f. African Sisal, No. 1, f.a.q., February-April, was quoted at £16 5s. c.i.f. According to a cable, last week's receipts amounted to 17,000 bales, against 28,000 last year, and 32,000 in 1929. Next week's receipts have been estimated at 26,000 bales, and at 23,000 for the following week. Manila shipments last week totalled 10,000 bales, of which 2,000 have been consigned to the United Kingdom, 1,000 to the Continent, 3,000 to the United States, 3,000 to Japan, and 1,000 to other countries, leaving stocks at 116,000 bales.

FOOD.

THE GRAIN MARKETS.—Mild and open weather of late over the United Kingdom has stimulated growth of cereal crops, which are fairly well forward, though it is doubtful if the total acreage under cultivation is as large compared with last year. Offerings of native wheat came to a dull market, there being almost an absence of milling demand, and rates exhibit weakness. There was no fresh development of note in the position of imported descriptions, general course of trade being dull, with prices showing minor fluctuations, but tendency proved in buyer's favour. The chief feature was a good movement from Australia, exports being facilitated by the favourable course of exchange, and active chartering continues on European account for all positions up to April loading. Further business also transpired to Eastern destinations, though the full purchasing power of Oriental countries is somewhat curtailed by the low price of silver. India, however, continues to book freely, doubtless in view of unfavourable prospects for new crops owing to lack of sufficient rain, and unless conditions improve, it is likely that further purchases may be necessary, instead of a surplus being available for export. Unsettled climatic conditions are retarding the wheat movement in Argentina, consequently shipments, so far as are comparatively small, but ample supplies of Russian available impart a depressing influence, despite efforts on the part of North America to hold up the market. Although substantial supplies will be needed by European consumers up to next domestic harvests, it is feared that considerable difficulty may be experienced in maintaining values when Argentine supplies are moving in volume. The market for feeding stuffs continues weak, and prices were

REPORT OF THE AUDITORS TO THE MEMBERS OF THE MIDLAND BANK LIMITED

In accordance with the provisions of Sub-section 1 of Section 134 of the Companies Act, 1929, we report as follows:—
We have examined the above Balance Sheet in detail with the Books at Head Office and with the certified Returns from the Branches. We have satisfied ourselves as to the correctness of the Coin, Bank Notes and Balances with the Bank of England, Balances with, and Cheques in course of Collection on other Banks in Great Britain and Ireland and Bills Discounted, and have verified the correctness of the Money at Call and Short Notice. We have also verified the Securities representing the Investments of the Bank, and having obtained all the information and explanations we have required, we are of opinion that such Balance Sheet given to us and as shown by the books of the Company.

LONDON, 10th January, 1931

NORTH OF SCOTLAND BANK LIMITED

MIDLAND BANK EXECUTOR & TRUSTEE CO. LTD.

marked down, chiefly due to selling pressure of maize. Large arrivals and shipments from Argentina, combined with heavy old crop reserves, also the favourable progress of new crop sowings caused buyers to operate cautiously, while adversely affecting barley and oats.

WHEAT.—Dull and tone weak. No. 1 hard Manitoba, ex-ship, 27s.-27s. 6d.; No. 1 Northern Manitoba, ex-ship, 26s. 3d.-26s. 9d. No. 2 ditto, 25s. 3d.-26s. 3d.; No. 3, 24s. 6d.; Barusso, 63 lbs. 21s. 9d.; Rosafé, 63½ lbs., 21s. 6d.; Australian, 24s. 6d.; Russian on sample, landed, 20s.-22s. 6d. per 496 lbs. English, new, 4s. 8d.-5s. 6d. per 112 lbs.

FLOUR.—Quiet. London straight run, 24s. per sack for country deliveries, and 23s. London area. Of imported, Manitoba patents, 22s.-24s. 6s.; Buffalo ditto, 22s.-24s. 6d.; Australian, 20s.-21s. 6d., ex-store. On c.i.f. terms, Manitoba top patents, January-February, 20s. 3d.-20s. 6d.; export ditto, 18s.-18s. 6d.; Australian, 16s. 6d.-17s. per 280 lbs. Argentine low grade, January-March, £5 3s. 9d. per ton.

MAIZE.—Again easier. Plate landed, 16s.; ex-ship to arrive, 14s. 9d.; February-March, 15s.; March-April, 15s. 3d. per 480 lbs. Yellow maize meal, £5 5s. f.o.r. London, per ton.

BARLEY.—Dull. Californian old, landed, 30s.-35s.; new, ex-ship, 30s.-41s., as to sample; Chilean brewing, landed, 30s.-35s.; Chevalier, 38s.-44s.; Australian, 32s.-42s.; Smyrna, 30s.-32s., per 448 lbs. Black Sea, landed, 14s. 6d.; ex-ship, 13s. 3d.; Danubian, landed, 14s. 6d.; Persian, landed, 13s. 6d. per 400 lbs. English, new, 6s. 3d.-12s. 6d.; feed, 5s.-5s. 9d. per 112 lbs.

OATS.—Quiet. Plate landed, 11s.; ex-ship, 9s. 9d.; Chilean, tawny, landed, 13s. 6d.; whites, ex-ship, 18s. 6d.; landed, 19s. 3d.-20s. 6d.; mixed Canadian feed, landed, 10s. 6d.; North Russian, landed, 12s. 6d.-13s., as to sample; South Russian, landed, 12s. 3d.-13s. per 320 lbs. English, new, 5s. 8d.-6s. per 112 lbs.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years, 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.

No man lights his pipe with greater expectancy or smokes it with greater satisfaction than the one who regularly fills it with **PLAYER'S**

N.C.T.S.

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1926 to 1929:—

Weeks ended.	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Jan. 10, 1931	Cwts. 65,094	Cwts. 176,252	Cwts. 27,505	s. d. 5 9	s. d. 8 1	s. d. 5 8
Jan. 15, 1927	340,941	458,723	88,970	11 11	10 11	8 3
Jan. 14, 1928	227,205	314,858	74,856	9 11	11 4	9 5
Jan. 19, 1929	233,871	419,853	86,108	9 6	10 3	9 3
Jan. 18, 1930	317,925	374,958	55,235	9 7	8 6	6 11

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks with comparative figures for 1929:—

NEAREST FUTURE.	Jan. 2 1930.	Jan. 22 1930.	Jan. 2 1931.	Jan. 7 1931.	Jan. 14 1931.	Jan. 21 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	135½	56½	58½	57½	56½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	124½	79½	80½	82½	80½

The visible supply of wheat in Canada at 62,425,000 bushels shows a decrease on the week of 405,000 bushels. Supplies a year ago stood at 75,575,000 bushels.

SUGAR.—Nothing occurred to relieve the market of the monotony existing for some little time past. Trade demand is rigidly confined to pressing requirements, but no change was made in quotations of British refined or home-grown granulated. Business in raw refining sugars is very quiet, but prices remain steady. Terminal section opened weaker, but improved slightly though business was confined to a narrow compass. March delivery quoted 5s. 11½d.; May, 6s. 1½d.; August sold 6s. 4½d.; December quoted 6s. 9d.; 150 tons Surinam, 96 per cent. centrifugal, January to London, sold 6s. c.i.f. Cuban receipts last week 21,816 tons, against 16,500 last year; exports 7,829, against 33,340; stocks 764,710, against 130,570. Centrals at work total 73, against 125 last year and 154 in 1929. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending January 17th totalled 209,053, against 236,029 last year.

COFFEE.—Home-trade buyers still operate with some freedom and such qualities realise full prices. Export inquiry counts for little. Ample quantities from Costa Rica and Kenya now coming to hand.

COCOA.—Small spot sales were made at late rates. Forward positions quiet. Accra F.F. January-March, London contract, sold 22s. 6d. to 22s. 9d. f.o.b.; G/F, January-March, to Continent, 25s. c.i.f. Terminal, December delivery, sold 28s. 3d. to 28s. 4½d. to 28s.

TEA.—Indian sales during the week amounted to 63,553 packages. Good competition was experienced and a steady to firm market resulted for most descriptions. Medium, however, still inclined to show irregularity when thin in liquoring. Ceylon auctions embraced some 26,185 packages. These came to a much quieter market than experienced for some time past, and apart from marked irregularity, prices for most kinds were decidedly against the seller. Perhaps a few finest invoices made good prices, but this was the exception rather than the rule. Low medium broken proved a very weak feature at ¼d. to a full 1d. per lb. lower. Even a falling-off in quality was not solely due to this. Java and Sumatra sales quiet and lower prices registered for grades above 9½d. per lb., but qualities below this price sold firmly.

RICE.—Steady on the part of sellers, but buyers respond slowly.

BEANS AND PEAS.—Beans remain dull. Madagascar butters, spot London, 21s. to 24s. as to sample; afloat, 20s.; January-February, 19s. 6d. c.i.f. Rangoon haricots, spot, 9s. 6d.; December-January, 7s.; new crop, February, 7s. 9d. c.i.f. The market in peas is quiet but steady. Japanese spot, 14s. 9d.; afloat 14s. to 14s. 3d.; January-February, 14s. 9d. c.i.f. Dutch marrowfats, 17s. f.o.b.

POTATOES.—Although the market in potatoes has been dull, supplies were firmly held for steady rates.

SPICE.—Pepper in moderate request and prices for the chief part upheld. Lampung, January-March, quoted 5½d.; March-May, 5½d.; Muntok, January-March, 8½d.; March-May, 9½d. Cloves: Zanzibar, spot 1s. London stocks of black increased 24 tons on the week to 460 against 1,191 same time last year; white stocks 12 tons higher at 390, against 1,473 last year and 269 in 1929.

FRUIT (Dried).—Currants quiet but steadily held. Pyrgos, 30s. 6d.-31s.; Amalias, 31s.-32s.; Australian, 28s.-37s. Sultanas steady. Smyrna, 44s.-68s. Raisins cleared. Dates slow. Figs in limited supply. Evaporated fruits: General position unchanged and trade moves on quiet lines. Californian peaches, 1930 crop reclaimed, 42s. 6d.-56s.; South African, 29s.-35s. Californian plums, 31s.-52s.

CANNED GOODS.—Fruit: There is no improvement in demand for Californian varieties on spot, but forward parcels of pears are firmly held and peaches tend dearer, but apricots are offering at attractive prices. Liberal quantities of Australian are available, and English sells steadily. Fish: Sardines in moderate demand, but market steady. Portuguese, quarter clubs, 3s. 6d. Salmon firm. Alaska red tails, spot, 54s.-56s. Meat: Demand continues quiet for beef and tongues, which are obtainable at low rates. Condensed milk: Market quiet and prices occasionally the turn easier. Dutch condensed milk, full cream, sweetened,

AUDITORS' REPORT TO THE MEMBERS OF BARCLAYS BANK LIMITED.

We have compared the above Balance Sheet with the balances on the Books at the Head Office, and with the detailed Returns from the Branches. We have verified the Cash with the Bank of England, the Cash and Bills at the Head Office, the Investments of the Bank and the Securities held against Money at Call and Short Notice. We have obtained all the information and explanations we have required, and we are of the opinion that the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the Books and Returns of the Bank.

5-cwt. casks, 30s. 6d. Dutch full cream milkpowders, 5-cwt. casks, 26 per cent. butter fat, Honey: Market dull, and rates weak on liberal offerings.

MEAT.—According to the Smithfield Market official report, supplies of meat during last week amounted to 9,997 tons, as compared with 9,076 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.7 per cent. of the supplies, as against 79.1 per cent. a year ago, and imported mutton, mainly New Zealand, formed 74.5 per cent. of the total supply, as against 74.2 per cent. last year. Beef prices show a decline on the week, but mutton and pork have been maintained.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets are anything but active, and generally lack confidence. Linseed oil offers more freely for near delivery, crushers being more inclined to meet the market and the intensified competition of Continental oil. Values have accordingly further declined to £16 10s. per ton on spot, ex Hull: £16 5s. January delivery; £16 February-April; and £16 5s. May-August. Demand is only fair. Cotton oil is quiet, and lower, crude Egyptian, ex Hull, offering at £17 10s.; and common edible at £20. Oilcakes are a fair trade, and linseed cakes firmer. In the oilseed section, linseed is weak and inactive. Plate on spot at Hull having relapsed to £8 17s. 6d.; and shipment, January-March, to £8 2s. 6d. Shipments at Argentine ports continue substantial, and the quantity about for Europe has increased to 167,300 tons (including 7,200 tons Indian), against 129,700 tons a year ago. Cottonseed is steady but inactive. Offers are few, and buyers not interested. Current value of black Egyptian for January loading is £5 17s. 6d., with February and March a fraction less. Reserve on the part of sellers has again characterised the market in copra, and while fair inquiries circulated, prices hardened further. Straits, S.D., January, to Rotterdam, quoted £15 12s. 6d.; February, £15 12s. 6d.; Dutch E.L., February, £15 11s. 3d.; Ceylon, £16 10s.; sun-dried South Sea, £14 17s. 6d. Palm Kernels, February, March, to Hamburg, quoted £11 5s. c.i.f.

HIDE, LEATHER AND ALLIED TRADES.—Hides from domestic cattle were cheaper at the auctions held in Manchester on Tuesday, prices for ox and heifers in certain instances being from 4d. to 3d. per lb. lower than the previous week. No further improvement has taken place in connection with imported hides, and prices for most descriptions are round about the level of the previous week. A fair amount of trade has been done in South American wet salted, with Argentine ox selling at 6½d., second and light ox at 5½d., and Montevideo ox at 6½d. Both America and Europe have been buyers, the trade of this country confining their purchases chiefly to light and second ox. Prices for most descriptions of dry River Plates are as last quoted, with sales of B.A. Americanos taking place at 6½d., and Inservibles at 4d. The market for African hides has inclined to be quiet. Small business has transpired in Capes at 7d. and 6d. for first and second dries, with dry salted 20 30 lbs. selling at 5½d. and 4½d. Fair sales have been made of Australians at the slight reductions prevailing. Tanners and merchants of sole leather have experienced a fair inquiry, although here and there the turnover has not been quite up to the average of last week. However, some satisfactory business has been put through for bonds on account of the repairing trade requirements. Upper leathers continue to meet with a fair inquiry, and demand for the most part is still for box and willow calf, and black and brown glacé kid. Shoe manufacturers have experienced a slight improvement in the number of orders coming to hand, but, considering the time of the year, business in regard to spring footwear continues to be confined to small quantities.

RUBBER.—Business in rubber has again been quiet, and prices are a shade easier on the week. Standard sheet, spot and February, sold 4½d.; March, 4½d.; April-June, 4½d.; July-September, 4½d.; October-December, 4½d.; and January-March, 1932, at 4½d. To New York, standard estate sheet, February-March sold 4½d. c.i.f. London stocks increased 500 tons on the week; landings, 1,527; deliveries, 1,027; stocks, 79,261 tons, against 59,670 last year. Liverpool stocks rose by 456 tons; landings, 731; deliveries, 275; stocks, 42,270, against 19,515 last year.

THE MONEY MARKET.

A DEFINITE change came over the money market a week ago, for the continued outflow of gold to France and the weakness of sterling, not only against the franc but against the dollar, led to official intervention in the market. At the end of last week it became known that in order to establish an adequate margin between London rates and those current in Paris and New York the Bank of England desired that the three months' market rate in London should rise substantially above 2½ per cent. —the level at which it then stood. To bring about this

increase, the Bank sold bills steadily in the open market at $2\frac{1}{8}$ per cent. during the early part of this week, and, as the Bank return for both departments shows, disposed of no less than £9.2 millions of its holding of Government Securities and £3.1 millions of its Other Securities, or a total of £12.3 millions. In order to support this policy, the clearing banks refrained from buying bills, while to ease the monetary stringency caused by the Bank's action (which led to a reduction of £13.6 millions in Bankers' Deposits), the clearing banks did not make-up this week on their usual scale.

So far, this application of the "hidden hand" has met with a fair degree of success. The desired discount rate of $2\frac{1}{8}$ per cent. was at once established, while money became distinctly usable, $2\frac{1}{8}$ per cent. being quoted on Wednesday afternoon. Better still, the new level of discount rates proved high enough to be attractive to Paris and New York houses, and purchases of bills on account of both centres are known to have been made in the London market. So far as can be told, Paris purchases have been limited, but even so the franc exchange rose on Wednesday to Frs. 123.92 $\frac{1}{2}$, and on that afternoon hopes were entertained in London of a further rapid improvement to Frs. 124. Sterling unfortunately weakened on Thursday, but even so the rate remained above the gold point. New York is believed to have made fairly heavy purchases of Treasury bills, and the exchange in that direction also has improved to the point where sterling may be said to be for the moment "out of danger." It is significant, however, that when, on Thursday, the pressure of the "hidden hand" was slightly relaxed, market rate at once slipped back to $2\frac{3}{8}$ per cent.

	Jan. 8, 1931.	Jan. 15, 1931.	Jan. 22, 1931.	Jan. 29, 1931.	Previous Rate and Date Changed.
Bank Rate	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$\frac{3}{8}$	$3\frac{1}{4}$ (May 1, '30)
Banks' Deposit Rate	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$ (May 1, '30)
Discount (Call)	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$ (May 1, '30)
Houses' Notice	$1\frac{1}{8}$	$1\frac{1}{8}$	$1\frac{1}{8}$	$1\frac{1}{8}$	$1\frac{1}{8}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$	$2\frac{3}{8}$	...

The weakness in the Bank's open-market policy of driving up discount rates by selling bills is that its operations are limited by the amount of bills available. Now, there has for a long time been a notorious scarcity of commercial bills, and at this season of the year the number of outstanding Treasury bills is being steadily reduced each week, as revenue continues to be paid into the Exchequer. This imposes definite limits upon the effectiveness and duration of the Bank's intervention, and hence it is not surprising that the money market is already beginning to discuss the likelihood of an early rise in Bank rate, and even to say that if a 4 per cent. Bank rate has to come, it had better come at once, instead of following upon a protracted period of uncertainty. This point of view can readily be understood, but it is still a little early to say that the application of the "hidden hand" has proved ineffective. It is something that the Bank's intervention has for the moment checked the depreciation of sterling against the dollar, and there is no doubt that the relative level of short money rates now current in London and New York is such as to divert to the latter centre demands for funds which normally would be addressed to London. The French position is admittedly less certain, and for that reason more serious. Still, as a normal rule, once Christmas is passed, money begins to be set free by the French Treasury, and there is no reason to fear that this year will prove an exception, especially as certain debt redemptions are due next month. Hence there is ground for hoping that the pressure for francs may ease, and even that the relief will come before the Bank of England's open market policy has exhausted its possibilities. It should be recognised, however, that if these hopes are not fulfilled, and if gold continues to flow to France at its recent rate, the Bank may have to raise its rate.

Meanwhile, foreign Bank rates are still falling. On Thursday of last week, the National Bank of Switzerland

reduced its rediscount rate from $2\frac{1}{2}$ to 2 per cent., and its rate for advances on securities from $3\frac{1}{4}$ to 3 per cent. Immediately afterwards, the Netherlands Bank reduced its rate from 3 to $2\frac{1}{2}$ per cent., but notwithstanding the fall, there is still a margin of $\frac{1}{4}$ per cent. between the official and the market discount rate.

The December averages of the nine English clearing banks, reproduced below, bear as usual clear evidence of the effects of the preparations for the end of the year.

	December, 1929.	September, 1930.	October, 1930.	November, 1930.	December, 1930.
Capital and reserves	130.7	132.1	132.1	132.1	132.2
Acceptances	169.6	117.8	115.4	116.5	117.4
Deposits (including undivided profits, &c.)	1,773.3	1,764.1	1,791.2	1,800.8	1,839.1
Total liabilities	2,073.6	2,014.0	2,039.7	2,049.2	2,088.7
Coin, notes, balance at bank, and cheques in course of collection	266.3	232.6	239.3	237.8	262.0
Money at call	139.0	132.9	141.9	135.1	140.6
Investments	260.4	261.3	263.3	291.0	295.7
Discounts	223.7	283.8	296.0	309.5	319.7
Loans and advances	972.7	925.4	922.3	918.7	912.2
Cover for accept., premiums, &c.	208.5	158.0	156.9	157.1	158.5
Total assets	2,073.6	2,014.0	2,039.7	2,049.2	2,088.7

The main feature is the big increase in deposits, but it must be remembered that this week Mr Beckett stated that in the case of the Westminster Bank the increase at the end of the year was fortuitous. The expansion in the banks' cash holdings, entirely for balance sheet purposes, has left little margin for any additions to earning assets. Nevertheless discounts are higher by £10.2 millions, but this partly results from a contraction of £6.5 millions in advances.

Money in New York is easy, with call rate at $1\frac{1}{8}$ per cent. The New York Federal Reserve Bank has reduced its buying rate for bankers' acceptances to $1\frac{1}{8}$ per cent. for those of not more than 45 days' maturity. Previous rates had been $1\frac{3}{8}$ per cent. for acceptances of not more than 15 days' maturity, and $1\frac{1}{2}$ per cent. for longer dates. It is now computed that bank suspensions during 1930 numbered 1,326 with aggregate liabilities of \$904,000,000. A gold shipment of \$4,290,000 from Buenos Aires has just been arranged.

The foreign exchange market was more active this week, rates moving in many cases in favour of sterling in response to the firmness of the London discount market. Unfortunately there was a slight falling away at the close. New York went from 4.85 $\frac{1}{2}$ to 4.85 $\frac{1}{4}$ after touching at one time 4.83 $\frac{3}{4}$. Montreal improved by $\frac{1}{4}$ to 4.86. Paris improved by Wednesday to 123.93, but reacted to 123.91 the following morning. Brussels lost $\frac{1}{4}$ at 34.83. Milan was again weaker at 92.75. Madrid depreciated sharply to 47.20 from 46.00. Amsterdam, after touching 12.08, closed at 12.07 $\frac{1}{2}$, against 12.06 $\frac{1}{2}$ last week. Berlin also moved considerably in our favour to 20.43 $\frac{1}{2}$. The Swiss exchange moved from 25.08 $\frac{1}{2}$ to 25.10 $\frac{1}{2}$ on the Bank rate reduction. Stockholm improved from 18.15 $\frac{1}{2}$ to 18.14 $\frac{1}{2}$, but Oslo weakened to 18.16 $\frac{1}{2}$, while Copenhagen gained $\frac{1}{4}$ at 18.16. The South American exchanges all weakened, Rio losing $\frac{1}{2}$ d. at 4 $\frac{1}{2}$ d., Buenos Aires $\frac{1}{4}$ d. at 34 $\frac{1}{2}$ d. and Montevideo $\frac{1}{4}$ d. at 32 $\frac{1}{2}$ d. In the Far East the rupee was firm at 1s. 5 $\frac{3}{4}$ d., and the yen fractionally weaker at 2s. 0 $\frac{1}{2}$ d. In the forward market, dollars were at enhanced premium quotations of $\frac{3}{8}$ cent and $\frac{3}{4}$ cent. Paris remained at $\frac{1}{4}$ centimes premium for one month, but lost $\frac{1}{4}$ at $2\frac{1}{2}$ centimes premium for three months. Brussels was more wanted at $\frac{1}{4}$ and 2 centimes premium, against $\frac{1}{4}$ and $\frac{1}{2}$ centimes last week. Madrid was unchanged for one month, but better at 13 centimos premium for three. Amsterdam improved slightly to $\frac{1}{4}$ and $\frac{1}{2}$ cents premium, but Berlin was rather weaker at one and $\frac{3}{4}$ pfennigs discount. Silver was rather steadier. The spot price fell by $\frac{1}{4}$ d. to 13 $\frac{1}{2}$ d., but forward quotations rose by $\frac{1}{4}$ d. to 13 $\frac{1}{2}$ d. on some Indian buying and China bear covering. The China silver exchanges improved in sympathy, Hong Kong by $\frac{1}{4}$ d. to 1s. 0d. and Shanghai by $\frac{1}{4}$ d. to 1s. 3 $\frac{1}{4}$ d.

THE GOVERNMENT'S REPRIEVE.

THE expected happened at Westminster on Wednesday night. Owing to the abstention of most of the Liberal members, the second reading of the Trade Disputes Bill passed the House of Commons by a majority of 27. Thus the Government is reprieved from the execution which at one time appeared to be impending. The Government "victory"—which, in fact, represents no more than a success for Mr Lloyd George's tactics in delaying a general election—is in no sense a victory for the Bill. Indeed, the three days of debate have shown unmistakably that although the Cabinet's life has been saved, the Bill must be transformed. If ever there was a hope in the mind of the Government that this measure would pass the House without radical amendment, it must have faded away at the very outset of the debates.

On the first day the Attorney-General devoted the whole of his ingenuity to the argument that the Bill was entirely inoffensive, since, in framing it, he had merely followed the lines of the legislation passed in 1871, 1875 and 1906 by Mr Gladstone, Mr Disraeli and Sir Henry Campbell-Bannerman. But the effect of this disarming eloquence was speedily and effectively shattered by the critical analysis of Mr Norman Birkett, who made it clearly understood that the amendments in Committee demanded by the Liberals who would acquiesce in the second reading, were many and substantial, including an unequivocal prohibition of general strikes, the provision of quicker procedure for testing the legality of a "doubtful strike," the exclusion of Civil Servants from political activity, and the retention of the system of "contracting in" for the Trade Unions' political levy. By the time Mr Birkett sat down it had become obvious that emasculation was the fate awaiting the Bill.

On the second day of debate, in one of his most brilliantly incisive Parliamentary performances, Sir John Simon riddled the Bill with destructive criticism, and announced his preference for "humane slaughter" on the second reading division as against Mr Birkett's "death by a thousand cuts" in the Committee stage. The greater part of Sir John's speech was directed to testing the Bill by the question whether, under its provisions, the general strike of 1926 would have been legal or illegal. In Sir John's view it would have been legal, and he pressed the Government for its own interpretation—without success, until the closing hours of Wednesday's debate, when the Solicitor-General gave his considered opinion that it would have been illegal. To those Trade Unionists who still endeavour to persuade themselves that the general strike of 1926 was a legitimate industrial action and not an attempt by a section to coerce the whole community, this opinion may be a grave disappointment; to the Opposition it carried little conviction—the less because the Attorney-General refrained from supporting it, and Mr J. H. Thomas, in winding up the debate, took a line which cannot easily be reconciled with it.

Thus in spite of the fact that Sir John Simon has elicited from the Government Front Bench the view that, even if the Bill passes as it stands, a repetition of the events of 1926 would be illegal and would be so declared by the Courts, it is impossible to be satisfied on the point. Is it possible for the country to feel assured that the Courts would agree with Sir Stafford Cripps and hold Sir John Simon to be wrong? Nevertheless, the Solicitor-General's statement of opinion is of first-rate importance, for, unless it is explicitly disavowed by the Government, it must be held to be a statement of the Government's intention that Clause 1 should make a general strike like that of 1926 illegal. If that is the intention, then the Government cannot logically resist the amendment of the Clause in a way that makes that intention clear and ensures its proper interpretation. If that is done, the first fundamental objection to the Bill will be removed, albeit to the disgruntlement of some of the Government's trade union supporters. This really is the central issue. In the last resort the community must arm itself against any attempt of a section to coerce it. If it be admitted that to some extent sympathetic strike action is per-

missible, and that to deny its legitimacy altogether would be regarded as an intolerable interference with the rights of the workers, then it becomes a matter of definition—whether in terms of the presumed primary purpose of the strike, the scale of its operations, the close or remote economic connection of the strikers with the original dispute, or by means of the classification of industries—to determine where the line is to be drawn.

There is room for endless discussion on these matters. All that can be said positively is that in the public view the events of 1926 fall outside the boundaries of what should be permissible. Many people would give their reasons for this view in varying terms, and the lawyers seem to have some difficulty in framing words to give a clear-cut division in a region where, as the Solicitor-General truly pointed out, the landmarks are very ill-defined. But in practice what the public demands is that in the event of widespread industrial stoppages occurring, the services essential to the reasonably normal continuance of its daily life will not cease to operate. This entails the withholding from servants of the State of the right to strike and the limitation of that right in key industries in regard not only to so-called "political," but also industrial disputes. What such limitation should be is a matter for careful consideration. In Canada the Lemieux Act imposed in essential services a sort of League of Nations scheme of delay, pending inquiry. The Liberal Yellow Book, recognising that you cannot limit the right to strike without some *quid pro quo*, suggested, as did Mr Birkett also in the debate, a right of arbitration coupled with long-term service agreements and various other advantages in definite key industries. If these points are safeguarded, the limits of sympathetic strike action in other industries become of much less importance. It may be that in Committee it will be found that the only satisfactory plan is to approach the question from this angle, and not by means of a single definition of legality.

The concentration of attention on the "General Strike" clause had the result that comparatively little was said in the debate regarding the "intimidation" clause. As we indicated when the Bill was printed, this clause opens the door too wide to improper practices. On the other hand, the Act of 1927 was drafted in such sweeping terms as to render almost any picketing activity liable to a criminal prosecution. The clause is one on which agreement may be reached in Committee, for the gulf between the Government and Opposition views is probably not so wide as to be unbridgeable. The debate, however, made it quite clear that there is little hope of the Government getting the reinstatement in its old form of the political levy.

In these circumstances, it might be argued that, if the whole Trade Union demand from which this measure sprang is not to be satisfied, Parliamentary time will be largely wasted in its further discussion. Nevertheless, if the Government is prepared to get to grips with the real issues, good may result. In spite of the Government's majority, it is clear that the Bill will emerge from Committee in a very different form from the one in which it is sent upstairs. The Government is committed to the task of modifying the sweeping restrictions of the Act of 1927, but manifestly the country will not let the trade unions get away with anything that resembles an approbation of 1926. No sane man wishes to put the clock back in the matter of the trade unions' privileges in the industrial sphere. But now that the Government has forced upon Parliament a reconsideration of the law, the country requires to be assured that no section shall be empowered to coerce the State, and that in times of serious crisis the daily life of the community shall go on. The Government will be well advised to recognise that, as in the international sphere, so in the industrial, the trend of national opinion—including opinion friendly to labour—is strongly in the direction of limitation and regularisation, and not of giving freedom to declare predatory and unlimited warfare against the community.

THE LEAGUE AND UPPER SILESIA.

THE action taken by the Council of the League of Nations in the matter of the Germano-Polish dispute over minorities in Upper Silesia has produced for the moment a welcome *détente* in the somewhat strained relations of the Continent of Europe. As our League correspondent points out, in a letter on a subsequent page, the Council's firm and skilful diplomacy has succeeded unexpectedly in satisfying the Germans without humiliating the Poles. It has found that the substance of the German complaint is justified, and it has indicated what has to be done to put things right. At the same time, it has left it to the Polish Government, in the first instance, to take the necessary steps without supervision from outside.

The presentation of the case was made with moderation on both sides; and MM. Zaleski and Curtius thus co-operated to create the most favourable atmosphere possible for the Council's work. The rest of the credit belongs to the Council's chairman, Mr Henderson, and to its rapporteur, Mr Yoshizawa (Japan). As the representative of a country which is happily free from minority problems itself and which has no direct concern in the political aspect of the Upper Silesian problem as one of the factors which may determine the grouping of Powers in Europe, Mr Yoshizawa was less severely handicapped than any other Council Member of equal importance; and his report, which was presented last Saturday, and was adopted by the Council unanimously on the same day, has certainly justified the Council's judgment in asking him to undertake this delicate job.

No doubt Mr Yoshizawa was assisted by the circumstance that in Upper Silesia the rights of the local minorities and the duties of the ruling Governments are determined, not by minority treaties drawn up in general terms, but by the Germano-Polish Convention relative to Upper Silesia which was signed on May 15, 1922, and was ratified on June 3rd of the same year. This Convention has a number of strong points. First, it applies equally to both portions of Upper Silesia: the portion where a German minority has come under Polish rule, and the portion where a Polish minority has remained under German rule. Thus, in so far as either Government violates the Convention on its side, it is directly undermining the position of its own "lost sheep" on the other side of the frontier. In the second place, the Upper Silesia Convention was not imposed on the parties by the Principal Allied Powers, but was agreed between them in long and laborious negotiations, freely conducted between them, on an equal footing, under the auspices of a president who had been appointed by the League Council.

Now the League Council had insisted in 1921 upon the conclusion of the Convention as the necessary condition for making the partition of Upper Silesia workable. Moreover, after the Convention had been concluded, the Council placed its stipulations, so far as those related to the protection of minorities, under its own guarantee, on the terms on which it had guaranteed the general minorities treaty which had been concluded between Poland and the Principal Allied Powers on June 28, 1919. It will be seen that, on the one hand, the existence of the Convention gave Mr Yoshizawa valuable guidance and authority for making his report; and that, on the other hand, for this very reason, his report on this occasion was a test case. If the Council had failed to deal effectively with the minorities problem in a case coming under the Upper Silesia Convention, they would have stood convicted of incompetence to deal with the problem at all. If the Council had stultified itself in this way at this critical moment in the post-war history of international relations in Europe, there is no need to point out how serious the consequences might have been.

Mr Yoshizawa reported that there had been violations of Articles 75 and 83 of the Upper Silesia Convention in numerous cases. He accepted the German Government's view that, in connection with the local conduct, in Polish Upper Silesia, of the recent Polish General Election, the Polish local authorities were directly, and the Polish

Government indirectly, responsible for the acts of violence from which the German minority had suffered. He passed special strictures on the behaviour of a local organisation of Polish ex-service men and on the relations which had subsisted between this organisation and the local Polish officials, and he recommended the Polish Government to see to it that such relations were brought to an end. With regard to the specific irregularities in the local conduct of the elections—some of which were admitted by the Polish Government itself—Mr Yoshizawa advised the Council that it had not to take any immediate action for the moment, because these matters were being brought before the Polish courts by an organisation representing the German minority. He noted, however, that this German organisation had reserved the right to appeal to the Council at a later session, if the decisions of the Polish courts were unsatisfactory. In regard to the misbehaviour of the local Polish officials, he noted that disciplinary and reparatory measures were being taken by the Polish Government; and he recommended the Council to call upon the Polish Government to supply the Council, before its session in May, with a complete and detailed report setting forth the results of the Government's inquiries in the different cases, as well as the punishments inflicted and the compensation awarded for damage to persons and property.

The unanimous adoption of Mr Yoshizawa's report by the Council implies that it had been accepted in advance by the two parties directly concerned. As the background of the report, we must picture a series of strenuous negotiations in which Herr Curtius and Monsieur Zaleski were brought together by the efforts of their Japanese colleague—assisted, no doubt, by other members of the Council and particularly by the chairman, Mr Arthur Henderson. What estimate are we to place upon the results of these labours? Sceptics will point out that the next steps are all left to the Polish Government and to the Polish courts; and they will prognosticate that, when the Council has dispersed and when public attention has been diverted to other things, the Poles will dispose of the business by the simple method of doing nothing—trusting to escape further castigation at the hands of the Council through the mighty power of *vis inertiae*.

As far as it is possible to form an opinion at this stage, we are inclined to think that, on both points, such scepticism is mistaken. Of course, if there were in existence at this moment a Permanent Minorities Commission of the League, with a constitution and functions corresponding to those of the Permanent Mandates Commission or of the Permanent Disarmament Commission which is provided for in the Draft Disarmament Convention, then no doubt the task of putting things right in Upper Silesia would be very greatly facilitated. The necessity for the establishment of such a commission is the recurring moral of every "incident" that arises over minorities, the present incident included. We would go so far as to say that the minorities problem will never be handled successfully until such a commission has been brought into being. But, unfortunately, it is not in existence here and now to take a hand in the solution of the problem before us; and the appointment of a committee of inquiry and control *ad hoc* would be a very different matter. Governments are ready to take it as being all in the day's work when they come under the flail of permanent international bodies who are there at all times to deal with all governments without discrimination. An *ad hoc* committee would carry with it an odium and a humiliation which it would not be practical politics to seek to impose upon the Polish Government in this instance.

As for the view that the course actually adopted has put the game in the Polish Government's hands, we fancy that this view does not take sufficient account of the force of publicity and public opinion. For it is evident from Monsieur Zaleski's manner and policy on this occasion at Geneva that he is alive to the seriousness of the affair from the Polish standpoint. He certainly realises that Poland cannot ignore or evade the Council's recommendations with impunity. He is aware of the potency in international affairs of the imponderable force

of public opinion; and we believe that there are enough people in Poland who share his understanding of the situation to bring "the wild men" to heel.

There are two other symptoms which are also of good augury. First, Monsieur Briand did not intervene, on the Council, to prevent action from being taken. There is a school of thought in France whose motto is "my ally, right or wrong"—on the short-sighted calculation that the best security for France lies in a combination of military force and that this combination depends on the members of the French alliance supporting one another, on all points, through thick and thin. Monsieur Briand's policy on this occasion indicates, we hope, that this school is not in the ascendant to-day. Finally, we note with pleasure that the Council's action has been fairly well received in Germany, even though, as our Berlin correspondent writes, Herr Curtius' return was not greeted "with elation." Herr Brüning's Government has emerged rather stronger, if anything, than before on the home front. The Upper Silesian incident has not been such a good card for the Nazis as they had hoped. This is a point on which not only Germany but Europe may congratulate herself.

THE GOLD REPORT.

COMMENTING last week on the divergent views held by eminent British bankers as to the proper objectives and potentialities of monetary policy as a remedy for some, at least, of the world's economic ills, we expressed (without much conviction) the hope that the League's Gold Delegation might contribute something towards clearer understanding of what is advantageous and practical in this sphere. The text of the Delegation's Second Interim Report is now available, and will repay careful study; but though it contains many points of interest and makes several valuable suggestions, the Report is too technical to make much impression on general lay opinion, too qualified in its statements and hedged about with reservations to provide much guidance for Treasuries or central banks.

In fairness to the Delegation let it be said that though in this stage of their enquiry they were addressing themselves to the question of the distribution of monetary gold, their terms of reference were formulated before the present collapse of prices and world-wide trade depression set in; and they were not asked to report whether the gold distribution of 1928 and the slump of 1929-31 were a case of cause and effect. If, therefore, the fact that the Delegation do not deal directly either with the immediate economic depression, or with the recent gold movements on which popular interest has centred, necessarily gives the Report a slightly "far away," academic flavour, this is not strictly the Delegation's fault. Nor would it be reasonable, in a matter wherein experts—to say nothing of finance ministers—quarrel *à l'outrance*, to expect the Delegation to produce a comprehensive

"Central Bankers' Code" embodying agreed conclusions on every issue in a complex problem. At the same time, it would be idle to pretend that any clear indications of policy emerge from the present Report. Not only does it bear many signs of compromise and of obscurity due to reluctance to tread on sensitive toes; worse than that, it dwells so much on details of technique, is couched in language which so often seems to suggest that the working of the gold standard is an end in itself, that it gives the impression that the Delegation found it impossible to reach even tentative agreement on the essential question—what objectives of monetary policy should be.

It is difficult adequately to summarise a closely-written document of sixteen large quarto pages, but a bald outline of the Report's main arguments may help to make our meaning clearer. The Delegation begin by noting, as a rider to their First Interim Report published last year, that since 1928 prices of commodities have tumbled, and, were they to settle down near to-day's level, there would be less need than they previously thought for apprehension lest insufficiency of supplies of new monetary gold should exercise a long-period influence towards depressing prices. They then turn to the consideration of the manner in which the monetary stocks are now divided between various centres. Here they observe that "by no policy can a distribution of gold appropriate to real needs be assured when political conditions are unstable, or when the demand for gold is largely affected either by an endeavour on the part of any country to maintain a level of prices out of tune with that in the rest of the world or by sudden and violent changes in economic policy." The present distribution of gold is largely the logical result of post-war political and economic conditions—disruption of normal trade relations, changes within the general price-structure, budgetary deficits, lack of confidence, unwillingness of some countries to liberate gold, unwillingness of others to lend abroad, "inappropriate fiscal measures," and other non-monetary causes. In any case, "the past cannot be undone."

After these preliminary observations, the Report proceeds to examine "certain principles inherent in the gold standard." The pre-war operation of that standard was not automatic; the control over credit exercised by central banks acted as a supplementary influence on prices and hence on the balance of commodity imports and exports and the balance of foreign lending and borrowing. "But the general result of the system as it was actually applied was to allow gold, by its direct influence and its indirect influence through the bank rate, to act as a corrective to any disturbance in the international equilibrium."

Since the war a number of changes have occurred. In almost all countries monetary gold (no longer in circulation) has been concentrated in central banks, whose statutory obligation is now in most cases to convert their notes into (a) gold or (b) foreign gold exchange, generally

located in London or New York; and in most cases, whether foreign gold exchange is allowed to constitute a part of the gold reserves or not, a fixed percentage system of total reserves is imposed by law. The concentration of monetary gold, coupled with the development of open-market operations in such centres as London and New York, has increased the power of central banks; but in some cases their potential influence has been restricted by the reserve percentage system, by the practice of depositing foreign assets reserves with commercial banks, and by the growth of the independence and power of commercial banks as a result of the recent increase in the volume of liquid funds not invested on long term. Moreover, not only has reduction in transport charges narrowed the gold points and made national monetary systems "more sensitive to international disequilibrium," but invisible items in the trade balance, owing to the growth of international indebtedness, larger short-term borrowings, heavier tourist traffic, etc., have acquired proportionately greater weight, while the visible trade balance has been rendered more inelastic, less susceptible of correction by gold movements, owing to tariff barriers, rigidity of wages, and similar causes.

Hence the task, which the Delegation evidently regard as crucial, of ensuring that the gold standard produces its proper, normal "reactions" has become more complicated: "post-war conditions have increased the occasions when the exercise of conscious direction is necessary," and "adequate powers" should be given to central banks. From this postulate derive the following recommendations:—

- (1) Existing legal stipulations concerning fixed reserve percentages should be modified.
- (2) Gold coin should not be put back in circulation, thus diminishing central banks' *masses de manœuvre*.
- (3) Gold movements arising from disequilibria of non-temporary character should be allowed to make their effects felt; but a gold influx or efflux caused by "temporary disequilibria" may appropriately be neutralised by central banking policy.
- (4) Central banks in countries employing the gold exchange standard should avoid stimulating gold imports and restricting gold exports by restricting purchases of foreign exchange when its exchange rate is near gold import point and selling only gold exchange when the exchange is moving towards gold export point.
- (5) Foreign reserve assets of central banks should be kept as a general rule with other central banks, or at all events the central bank in whose money market such reserves are held should be acquainted with their magnitude.
- (6) Borrowing States should raise loans only for productive purposes, not to postpone necessary fundamental adjustments of values; lending States should maintain an "even flow" of capital; the international capital market should be stabilised by as many countries as possible admitting international securities to quotation on their local bourses.
- (7) Central banks, in their task of preventing disequilibria and restoring equilibrium if balance has been lost, should be assisted by inter-bank co-operation, e.g., in the mutual provision of short-term credits.
- (8) Central banks' control should be further strengthened by the development of the bill market and the "adoption or perfection" of the technique of open-market operations; and the liquid funds of the State and of semi-public institutions should be concentrated with central banks.

With many of these conclusions and recommendations there will be general agreement; in particular it is of value that the Delegation should have emphasised the obligation of creditor countries to maintain a steady flow of foreign lending—a point pressed cogently by Mr J. M. Keynes in his speech at the National Mutual Insurance meeting this week. Nevertheless, the foregoing summary brings out, only too clearly, the lacunæ and obvious weaknesses in the Report. The Delegation have not dealt seriously either with the results achieved so far by central banking co-operation or (save for the single suggestion (7) quoted above) with methods available. Much more, too, might have been said with reference to (8) "the adoption or perfection" of open-market operations. If the recommendation is intended to apply primarily to Paris, well and good; but we should have liked to have the Delegation's considered views on the merits and results of the open-market policy actually carried out since the war in other centres, e.g., New York. Moreover, apart from the question whether open-market operations have always been well advised, there is an unresolved contradiction (*vide* (3) above) between the Delegation's insistence on gold being allowed to "produce its effects" and their desire to have temporary losses of balance "smoothed out." In effect, central

banks are left, with no guidance, to exercise "horse sense" in deciding whether or not a disequilibrium is temporary or fundamental, and in relation to what tests or standards credit is to be manipulated.

But criticism of the whole burden of the Report may fairly go deeper. We do not complain that the Delegation have not produced a fool-proof new technique for the gold standard; nor do we quarrel with the emphasis which they lay on the non-monetary factors which have combined to create maldistribution of gold and which, as Mr Szarvasy pointed out in his admirable address at the meeting of the Anglo-French Banking Corporation on Monday, have been important contributory causes of the prevailing crisis. We also agree with the Delegation that the restoration of political confidence is a vital element in future betterment; and we endorse their implicit warning that central banks have no magic power to cure every trouble, or to obviate the need for each and every painful readjustment as economic conditions change. Our complaint is that the Report buries the hard fact that other things being as they have been, the monetary policy of the nations has not prevented an economic catastrophe in the collapse of prices, trade, and employment. No one seriously imagines that it could have done so. But has the gold standard been as helpful as it might have been? If not, and if its delinquencies are due to abnormal or non-monetary circumstances, the urgent problem is to deal with these matters. Given fairer weather, say the Delegation, in effect, the gold standard—with certain modifications to meet new conditions—should be its old self again. The trouble is that it is raining hard, and the whole world wants to know where to find an umbrella.

Nor can the Delegation escape so lightly as it has sought to do from the Seylla of 1931 prices and the Charybdis of the prices of, say, 1928. If prices remain as at present, we have appalling readjustments to face, whose scope must eventually extend far beyond the tough, yet relatively simple, problem of wages, to embrace every contractual relationship—national and international—entered into in terms of money possessing a purchasing power half that which we may be asked to accept as a *fait accompli*. Alternatively, if prices were to revert to a level 25 or 30 per cent. above the present, the problem of the insufficiency of new gold would re-emerge, and the gravity of its existing maldistribution ("the past cannot be undone") increase immeasurably. The whole process of economic readjustments—in wages, budgets, and production of goods—is hampered by the absence of any certainty whether those responsible in the various leading countries for monetary policy will, or will not, agree to aim at conscious stabilisation of prices, and, if so, what level will be their objective.

The Delegation has done great service in raising and in probing into problems of monetary policy far more complex and intangible than the question of the supply and demand for gold, which formed the main theme of its first report. In a number of instances it has raised matters for discussion, rather than reached finality, and much water will flow under the bridges before there is general agreement on aims and methods. At the same time, it is no mean achievement to have secured unanimity even on the points we have summarised above. If this report is the means of securing a similar unanimity in national banking circles on the majority of the points mentioned, it will mark a real advance.

THE SLUMP IN SHIPBUILDING.

THE issue last week of £1,000,000 of debenture stock by National Shipbuilders' Security, Limited, for the purpose of financing the purchasing and dismantling of redundant British shipyards, lends a particular interest to the industry's position as revealed by the latest returns published by *Lloyd's Register* of output and work in hand. The *Register's* annual summary, issued on Wednesday, of the past year's total output naturally does not disclose the full effects of the depression which, so far as this country is concerned, became progressively worse during the twelve months; but it is significant

that, as compared with 1929, tonnage launched from British yards in 1930 showed a decrease of 44,000 tons, whereas launchings abroad rose by 140,000 tons. In the following table tonnage output in Great Britain and foreign countries during the past two years is compared with the average figures for 1909-13, and 1922-25 and 1926-28:

TONNAGE OUTPUT.							
Period.	Tons launched. (000's omitted.)			British Per- centage.	Output as Percentage of 1909-13.		
	U.K.	Abroad.	World.		British.	Foreign.	World.
Average, 1909-13	1,522	967	2,489	61	100	100	100
" 1922-25	1,050	1,087	2,137	49	69	112	86
" 1926-28	1,104	1,116	2,220	49.5	72.5	115	89
1929	1,523	1,270	2,793	54.5	100	131	108
1930	1,478	1,411	2,889	51	97	146	116

A striking feature which the foregoing figures bring out is the steady increase of foreign shipbuilding since the war in comparison with the average for 1909-13. So far as Great Britain is concerned, the effects of the trade recession and the decline in shipping freights, which began in the autumn of 1929, were at first masked to a great extent by the large contracts for the tanker tonnage which were placed with shipbuilders between August, 1929, and the end of that year. Indeed, it was not until June, 1930, that the amount of tanker tonnage under construction in British yards as a result of these contracts attained its maximum, viz.:—634,000 tons. Work in hand on vessels other than tankers reached a turning point in September, 1929, at 1,221,000 tons; fell by the end of 1929 to 1,163,000 tons; and at the end of 1930 amounted to no more than 520,000 tons, or the lowest point recorded at the end of any quarter since the war. Tankers building in foreign countries at the end of 1930 amounted to 518,000 tons, a record figure, but the corresponding figure for Great Britain had fallen to 389,000 tons and, in view of the recent slump in freights for bulk oil, a further rapid decline in this class of work must be anticipated.

As the tanker orders were worked off, and neither the conditions in the charter-freight market nor the situation of the regular liner service was such as to encourage fresh contracts for general passenger and cargo tonnage, the history of 1930 for British shipbuilders became one of consistent failure of tonnage commenced to keep pace with tonnage launched; and at the end of the year work in hand totalled only 909,000 tons, as compared with 1,560,000 tons a year ago. But, as the following table demonstrates, the depression has not by any means fallen with equal severity on the yards of all our competitors abroad:—

	THOUSAND TONS.			Work Commenced in 1930.			
	Work in Hand, December 31.			1st qr.	2nd qr.	3rd qr.	4th qr.
	1928.	1929.	1930.				
United Kingdom...	1,243	1,560	909	427	230	161	132
Germany	382	253	218	55	64	14	69
Italy	93	78	180	83	14	66	16
France	162	157	174	23	21	27	Nil
Holland	192	232	160	15	24	44	25
Denmark	85	105	108	33	41	26	39
Japan	119	184	86	34	18	34	18
Sweden	99	98	145	37	47	36	39
U.S.A.	48	179	232	74	58	40	75
Total abroad	1,375	1,551	1,417	430	350	320	289

Among foreign countries, Germany, Holland and Japan were alone in having less work in hand at the end of 1930 than they had at the end of 1929, and, except in the case of Japan, the percentage decline in tonnage under construction was not nearly commensurate with the setback in Great Britain. Thus at the end of December only 39 per cent. of the total tonnage under construction in the world was building in the United Kingdom, a percentage which compares with 50 per cent. a year ago, and 57 per cent. on the average of the last twelve months before the war.

At the end of 1930 the percentage of unemployment

SKANDINAVISKA KREDITAKTIEBOLAGET

Bankers to world-renowned
Swedish industrial and
financial concerns

among insured workers in the shipbuilding industry amounted to 45.1 per cent., as compared with 23.3 per cent. in December, 1929. These figures are eloquent testimony to the serious situation in which the industry finds itself. Even in 1929 only 55 per cent. of the available berths in British yards were ever in use; to-day the proportion occupied barely exceeds 25 per cent.; and the returns of idle tonnage (with which we deal in a Note of the Week), published by the Chamber of Shipping, point to such a vast surplus of carrying space in present circumstances that palpably trade recovery must go some considerable way before shipowners are likely to have sufficient confidence to place orders for more than the minimum of replacements necessary to keep fleets at bare level of efficiency. Even allowing for the large proportion of the total represented by tankers, the output of 5.7 million tons of new shipping during the past two years has created, in a phase of world-wide trade depression, a tonnage glut of almost unexampled severity; and even though British shipbuilders' current quotations for contracts compare not unfavourably, all things considered, with those obtainable from foreign yards, attempts to increase the British proportion of world construction during the next two inevitably difficult years are bound to be hampered by the strong forces of "economic nationalism" which in shipbuilding, as in other directions, have been a feature of the past decade. Backed by subsidies and other discriminatory devices, these forces have tended to provide our competitors with orders from their own nationals which, in the easier, irrecoverable days of Britain's pre-war shipbuilding supremacy, would have been enjoyed by the yards of the Clyde, Belfast and the Tyne.

AGRICULTURAL MARKETING.

(BY A CORRESPONDENT.)

THE new Agricultural Marketing Bill, introduced by Dr. Addison shortly before Christmas and summarised in the *Economist* of December 27, proposes for the solution of the difficulties confronting British agriculture an extension of the principle of co-operative marketing backed by loans of Government funds. This projected incursion of the State into agricultural affairs parallels closely the Agricultural Marketing Act adopted by the United States of America when the Federal Farm Board was created in June, 1929. Thus it is interesting to note that almost at the same time that Dr. Addison presented his Bill, the Chairman of the Federal Farm Board submitted his first annual report to the Speaker of the House of Representatives at Washington. In it he gives a brief account of the work done to develop national and regional co-operative associations integrating hundreds of little associations in such branches of agriculture as the grain trade, wool and mohair, cotton, beans, livestock, dairy products, fruits and vegetables, pecan nuts, tobacco and sugar beet. He makes it clear that the machinery of co-operation is being mobilised as rapidly as possible.

This side of the work may ultimately prove to be of much greater importance than the other branch of it devoted to attempts at price stabilisation; but meantime

these efforts, which have received far more publicity owing to the Board's activities in the wheat and cotton markets, have already created formidable difficulties. By the purchase of some 60,000,000 bushels of wheat through the Grain Stabilisation Corporation, beginning in October, 1929, the Board is saddled with a surplus which promises to be very difficult to liquidate, especially since the wheat was bought at prices ranging from \$1.13 to \$1.25 a bushel. Within a twelvemonth of the purchase, prices had already fallen to 80 cents a bushel and under, and it is difficult to see when they will rise sufficiently to float this large stranded surplus off the rocks. The Board's cotton purchases have proved equally unfortunate; and, taken together, these attempts show in no uncertain light the kind of difficulties which the co-operatives themselves will ultimately be called upon to face, if they are to vindicate their claim that they can not only secure for their members substantial economies in marketing at the expense of the existing commercial organisations, but that they can, by a unified selling policy, so influence the market price as to secure a more favourable return than could otherwise be obtained.

The economic principle lying behind all such schemes can never have been in much doubt, but apparently nothing save the expenditure of several millions of public money could bring it out sufficiently clearly for there to be some chance of its general acceptance. That price control in the absence of control over the volume of supply is fundamentally impossible is no very novel lesson, yet it is the chief result which has emerged from the stabilisation efforts of the Board.

The time chosen for the experiment could hardly have been more difficult. The stock market crash and the resultant industrial and commercial dislocation were disturbing factors in a situation already sufficiently uncertain. At a time when drastic remedies and sudden stimulants were being prescribed and adopted in order to restore confidence, the Board might be excused some rashness. It refers to the fact that it "has resisted great pressure" during these difficult days, and although a final judgment on the action it then took would be premature, sufficient time has now elapsed for a good deal of the fog to have cleared and for the difficulties of stabilisation to stand revealed.

Surveying the scene in the aftermath of the economic upheaval which it has witnessed and found itself powerless to control, the Board summarises its own experience as follows. In the first place, the rôle of stabilisation is envisaged rather as one of "limiting fluctuations and cushioning the shocks from severe fluctuations" than of fixing or levelling prices at fanciful figures. Four types of stabilisation are recognised by the Board:—

- (1) The normal action of co-operative associations over a period of years.
- (2) *Ad hoc* stabilisation measures by co-operative associations undertaken in an emergency, with or without government funds.
- (3) Major stabilisation measures by national stabilisation corporations such as those undertaken for wheat and cotton at the Board's instigation.
- (4) Production control, removing the fear of surpluses at their source.

The first of these possibilities is clearly regarded as valuable by the Board mainly in so far as it is able to bring the fourth into play. On the second group, which has also had support from the Board, the following comment is made: "There is, in the opinion of the Board, a limited field for such operations, but the experience of the last year has reinforced earlier experience in showing that such measures cannot wisely be undertaken lightly, for many involve not only excessive risk of public funds, but grave danger of serious disaster to co-operatives themselves."

Stabilisation operations on a major scale—the third of the Board's classes and the most spectacular, are analysed in more detail. It is observed in the first place, in connection with the Board's experience with wheat, that in order to exert any material effect on the market

it is inevitable that a large quantity of the commodity must be taken. When once this large quantity is accumulated it exerts a depressing effect on prices which cannot be dispelled by the most emphatic announcements that it will not be thrown on the market without good warning. Furthermore, since cash purchases would inflict grave hardship on the option market, they must be backed up by the purchase of futures. But incursion into the futures market is subject to the grave drawback that once begun, "there is no good place to stop, even within the limits of a single crop marketing period." In fact, as the Board laconically observes, "stabilisation corporation activities, as usually conceived, mean principally buying, not selling." If the corporation threatens to sell, howls go up from everyone who considers his market damaged by its action. If it does not sell, its competition for storage facilities is likely to be equally resented; while carrying charges, accumulating at the rate of about 1½ cents a bushel a month, add heavily to the cost, and therefore greatly increase the difficulty of ultimately disposing of the stock without loss.

In the face of these difficulties the Board exhibits some heroism in concluding that "there is a field for stabilisation measures," although it qualifies its conclusion by adding "just how large, the Board is not in a position to determine." It is quite clear, however, that the Board regards stabilisation machinery as subordinate to the supreme task of production control which has now for some time figured in the forefront of its educational programme. When supply exceeds demand, it is useless to regard falling prices as an unwarranted injury to the growers' interests resulting from the machinations of enemies variously supposed to lurk in the grain pits, in Wall Street or in Russia. How to secure acreage reduction, especially in the large single-crop areas of the United States, presents a difficult task; yet the Farm Board, foreseeing a decline in the prices of wheat and presumably of other staples during the next five or six years, regards it as absolutely indispensable.

Given adequate tariff protection, it is theoretically possible that the United States could move towards a state of agricultural self-sufficiency in which "adequate" price levels for domestic agricultural produce were secured by a strict co-operative control of production. This control would be exerted at the expense not merely of the sub-marginal lands (which would probably be eliminated if economic forces were allowed free play), but of every producer alike. Probably this is one of the features of the scheme which its enemies have in mind when they denounce it as "European and Russian in conception." If the postulated increase in prices were obtained by this method, the export surplus would no doubt have largely to go.

In these projected monopoly conditions no machinery for the protection of the general public, such as the "consumers' committees" of Dr. Addison's Bill, is provided by the American scheme. In fact, co-operative societies have enjoyed in recent years an increasing immunity from the application of the American anti-trust laws, although these laws could probably still be invoked to prevent any large-scale victimisation. As the aim of Congress in establishing the Federal Farm Board was expressly declared to be "to place agriculture on a basis of economic equality with other industries," the American public must be prepared for some readjustments in favour of the farmers if the scheme is to be anything but a mockery.

It is not often that a country is afforded the chance of benefiting by the results of an experiment on which another country has lavished a hundred millions sterling; and the first "account rendered" of the Federal Farm Board may well give pause to Dr. Addison's supporters. For, even apart from the fact that Great Britain's economic position of dependence on export trade renders it impossible for her to follow the United States in tariff palliatives, the first fruits of American experience of State intervention in agriculture suggest that it would be unwise to pin sanguine hopes of salvation for the British farmer on the principle of supporting by public funds "marketing" policies aimed at higher prices.

ELBOW ROOM.

STANDING Room Only, or Race Suicide? The study of population is one of the most interesting, because obviously the most human branches of economics. But it is also of great practical importance from many points of view; the future state of a country's population, when it can be forecast, may have a sensible influence on its domestic policy in financial and economic matters. The pressure, or the anticipated pressure of population in certain countries, and the slow growth of population in others with large empty spaces, can be elements of international friction, and are certainly factors which influence the progress of moral and material disarmament.

We are taught that the birth-rate reacts to economic circumstances. In times of prosperity more people will marry, and they will be more fertile than in times of adversity. If conditions are unfavourable enough the growth of population will be checked not only by economic difficulty, but by plague, famine and violent death. But the unfortunate thing is that population can only adjust itself with a time lag of, say, twenty years, during which interval conditions may undergo a radical change. The babies born in a five-year period of prosperity may result in an increased population of working age in a period of depression twenty years later, and conversely a failure to produce a number of children sufficient to maintain the working population after the same lapse of time may mean a pronounced scarcity of labour.

In the nature of the case, the growth or decline of population has not been and cannot be intelligently controlled with regard to the future needs of the community. It is quite evident, however, that in all civilised countries a control, horrifying to some and comforting to others, is being exercised in ever greater degree over individual fertility. If, then, the community cannot adjust its population to communal needs two decades later, it is becoming more and more possible to frame present policies designed to have continuing effect with some regard to the size of the future population. Moreover, the growing prevalence of conscious deliberate control, not solely or even mainly actuated by the economic conditions of the moment, makes it somewhat less hazardous than it has hitherto been to forecast the future movement of populations.

Conscious control has now reached dimensions which, according to Dr. Ernst Kahn, entitle it to the name of "The International Birth Strike."* He, at any rate, is so far convinced that the present trend is likely to persist that, while explicitly pointing out and emphasising the unforeseen factors which may confound any prophet, he ventures to estimate the future population of Germany in 1975. His short study of two hundred odd pages contains a good deal of matter about other countries, and, in bare outline, a picture of the economy of the future as it will appear if his forecast is approximately correct. He also discusses summarily the steps which could be taken to combat the present trend, without concealing his opinion that any measures which have been suggested would be difficult of execution, and probably wrecked by the new "rationalism."

The most immediately interesting portion of his book is, however, his presentation of the figures affecting Germany. The present population of Germany is about 65 millions, and the loss of population resulting from war and territorial amputations has already been made good. State this fact to any well-informed person and ask him to hazard a guess at the probable future population of Germany in 1975; it is extremely unlikely that he will pitch his guess at a lower figure than 80 million. Dr. Kahn's figure is just under 50 millions. The apparent opposition between the present growth of the population and this estimate of the remoter future is explained by the existing age structure. To-day, the marriage market is booming, for whereas before the war there were roughly 9½ million people at any time aged between twenty and thirty, there are 12½ millions in this year of

grace. Those who enter into matrimony to-day were born between 1900 and 1910, during which decade two million German children a year came into the world, and the rate of infant mortality sank steeply. Before the war the annual marriage rate was about 8 per cent; that rose in 1920, for reasons easily imagined, to 14.5 per cent., and in 1928 and 1929 it remained as high as 9.3 per cent. In five years' time, however, German marriages will begin to be dependent on the Germans still surviving who were born between 1915 and 1929, when there were only 17.4 million births, as compared with 29.4 in the preceding fifteen years. Other things being equal, the marriage figure is destined to fall to 5.6 per cent. on the average from 1940 to 1954.

But worse—or better—is to follow. Fertility has diminished in such a degree that less than two children (including illegitimate) are being born per marriage, where the number necessary merely to maintain the *status quo* is calculated to be almost exactly three. In 1901 the number of children born per marriage was 4.4; and Dr. Kahn shows how this decreased fertility, which can be ascribed only to conscious birth control, has spread from the metropolis to the large town, and thence to the small town, until it has finally reached the rural districts. In Upper Silesia, where as recently as 1918 there were 5.54 children per marriage, there are at present only 3.01; again, in 1901 the Berlin marriage produced 1.9 children less than the average German marriage; and while both sank in the subsequent thirty years, the fall was so much more rapid in the Reich as a whole that the difference now amounts to only 1.02.

With the most explicit warning as to the hazardous nature of the most careful statistical estimate, Dr. Kahn proceeds to a consideration of the future course of the German population figures, based on the following suppositions, which are individually explained and defended:—

- (1) That the number of marriages contracted annually will fall from the present figure of 587,000 to an average of 242,000 in the five years 1970-74;
- (2) That the number of children per marriage will further sink to 1.50 in 1950-54 and remain constant round that figure;
- (3) That the expectation of life will gradually be prolonged, infant mortality sinking from 10 per cent. to 8 per cent. in twenty-five years, and the rate of adult mortality improving by 20 per cent. in forty-five years; and finally,
- (4) That emigration and immigration will cancel out.

The result is to produce the following figure of total population in the years stated:—

	Thousands.		Thousands.
1935 ...	65,190	1960 ...	59,110
1940 ...	65,420	1965 ...	56,450
1945 ...	63,800	1970 ...	52,930
1950 ...	62,940	1975 ...	49,610
1955 ...	61,380		

But these figures, without consideration of the age structure which they imply, tell only half the story. It is estimated that in 1930 the population of working age (15 to 65 years) numbered 45.46 millions; the corresponding figure in 1975, on Dr. Kahn's premises, will be 32.14 millions.

Space does not permit mention of the many stimulating and suggestive comments which this book contains on

the political and economic reactions of a declining population. But attention may be specially directed to the figure given respecting France. A mortality figure of 18 per cent. for France looks high compared with 12.6 per cent. for Germany; it is entirely due to the difference in age structure of the two populations, and the French figure only shows what Germany has to expect. The average duration of life is longer and the rate of infant mortality much lower in France than in Germany.

If these facts are realised, and if it can be accepted that the present trend of population is likely to continue (unfortunately we shall have to wait long for a confirmation), are we not entitled to hope that one of the apprehensions which encourage armaments will lose a great deal of its present strength?

In conclusion, mention may be made of the highly interesting and curious statistics given of the Jewish population in Germany. Official figures for Prussia, which may be taken as representative enough of Germany as a whole, show that whereas in 1876-80 there was a surplus of births over deaths amounting to 13.9 per cent. for all Prussia and 14.1 per cent. for the Jewish population, in 1928, in face of a Prussian surplus of 7.1 per cent., there is a Jewish deficit of 3.4 per cent. There are at present about 537,000 Jews in Germany; Dr. Kahn estimates that by 1970 the number may well have sunk to 265,000, of whom 39 per cent. will be over 65 years of age. Here is comfort for the Hitlerites as well—but not pure Nordic comfort, for every fourth German Jew who marries unites himself or herself with a Gentile.

Notes of the Week.

National Economy.—The full weight of informed opinion in the City of London, and, we believe, in the country at large, is behind the campaign for retrenchment of national expenditure which was launched at the Cannon Street Hotel on Tuesday. This initial demonstration, over which Mr E. C. Grenfell, M.P. for the City, presided, was the occasion of one of the rare public appearances of Lord Grey of Fallodon, and was also addressed by Sir Robert Horne, a former Conservative Chancellor of the Exchequer, and by Sir Ernest Benn. The proceedings were non-party in tone, and Lord Grey pilloried all parties for their competition in spending public money. His Lordship's main points were that high taxation is crippling the competitive power of our export trades; that, if extravagance continues, there is real danger of a shortage of capital to finance the industrial requirements of a trade revival; and that we are drawing on capital (especially through the Death Duties) to meet annual expenditure. "How," he asked, "can we hold our own in a competitive export trade when the revival comes, if we are to bear the exceedingly heavy handicap of the burden of our taxation?" Sir Robert Horne equally emphasised the weight of taxation, traced the growth of the Social Services, declared that great and demoralising waste was going on under the unemployment insurance scheme, and called for a cessation of fresh expenditure even on "the most excellent objects." Sir Ernest Benn took up the story and declared that "there is nothing worse that can happen to money than for it to get into the public purse." The main objects of this campaign are those which we have frequently urged in these columns. We agree that the tax burden is inordinately heavy, that public money is being spent in ways that hamper trade and enterprise, and that there is most urgent need for a drastic rooting out of unwise, unnecessary and unproductive expenditure. At the same time, it is apparent that there is confusion of thought in some quarters as to the meaning of economy. As a prelude to the Cannon Street demonstration, Lord Grey and Mr Runciman addressed a letter to the *Times* following very much the same line as the speeches of the former and of Sir Robert

Horne, to which we have just referred. In Wednesday's *Times* they are taken to task by Sir Austen Chamberlain, because, while they call for economy, their fellow-Liberals have tabled a resolution, to be brought forward in next week's debate on unemployment, recommending that the Government should embark upon certain big public works of a constructive nature. In reality there is not necessarily any inconsistency between the two attitudes. The essence of economy is not merely to refrain from spending, but to spend wisely and to secure that the nation gets full value for money spent. We have never wholly shared "the Treasury view" set out in a memorandum commenting on Mr Lloyd George's unemployment plans and amounting to a general disapproval of public works as a means of combating unemployment in times of depression. On the contrary, we hold that, when remunerative schemes of public importance are likely to be carried out within a few years, steps should be taken to hurry them on when times are bad. For, provided that work is necessary and reproductive, it is better to pay for work than to hand out doles. In fact, we agree with Mr. Snowden's attitude, namely that, in deciding whether the State should finance public works, he is prepared to consider every scheme strictly on its merits. That really is the test the public should demand to be applied to the whole range of State expenditure, and we hope that this new economy campaign will so far succeed in mobilising public opinion that at the next general election candidates of all parties will become aware of a general demand that waste and extravagance should be cut out and the national purse managed, not with a blind and intransigent parsimony, but with a determination to see that national value is received for every pound extracted from the taxpayer's pocket.

The Position at Westminster.—The House of Commons has been seen at its best this week—and at its worst. The almost general willingness to face the Indian situation in a statesmanlike attitude, and the very high level of speeches in the debates on the Trade Disputes Bill revealed the House to the country clothed in much of its old prestige as the representative Council of the nation, and so far bereft of pure partisanship as to allow Mr Baldwin to disown Mr Churchill and Sir John Simon to indulge in a tilt against Mr Lloyd George. But at the same time it cannot be denied that the position at Westminster has assumed an unreality which is somewhat distressing at a moment when the difficulties besetting that country, and calling for Parliament's best essays in collective action, are so formidably and so distressingly real. It may have been necessary, from the Party point of view, for the Cabinet to produce a Bill to amend the Trade Disputes Bill of 1927; but it is hardly encouraging that, when so many pressing economic problems are knocking at the door, so much of our legislators' time should be absorbed by discussions on the right to strike. The Government's second-reading victory on the Trade Disputes Bill is unreal, in the sense that everybody knows that the Bill will not eventually pass in anything like its present form. Unreal, too, is the position regarding the next week's outstanding item on the menu of the House of Commons. The Conservatives are to move a vote of censure on the Government for not curing unemployment—a task which, during four years of office, they themselves declared to be beyond the power of any Government; while the Liberals will draw a red herring across the track by tabling an amendment demanding measures of public relief works, whose nominal acceptance by the Government, if forthcoming, will be rather of the lip-service variety. In a position of real and unusually severe national difficulty there is no assurance anywhere, with the happy exception of Indian policy, that political manoeuvre is yielding place to a search for concerted policy to do even that little which Parliaments can do to remedy present discontents.

Mr Gandhi's Open Mind.—The debate on the Indian Conference staged in the House of Commons on Monday night not only succeeded in keeping discussion on a high plane worthy of Parliament's best traditions; it revealed

an essential fact of good augury for the future treatment of India's vast constitutional problem. If we may except the isolated intervention of Mr Churchill, whose familiar views on Anglo-Indian relations were explicitly repudiated by Mr Baldwin and other leading speakers on the Conservative benches, the debate revealed no fundamental dissent in any quarter from the broad principles upon which the Round Table Conference agreed, and which His Majesty's Government, by their declaration, endorsed. The varying degrees of confidence displayed as to the successful completion of the picture which the Conference had outlined were really a reflection not of any party alignment, but of personal temperament. There was unanimous agreement that the task of filling in details must go forward on the lines marked out. How far that task will be furthered or impeded by the decision to release Mr Gandhi and the other Congress leaders from internment remains to be seen. It is a decision on whose merits opinions may legitimately differ. Given this fresh rope, the intransigents may work mischief; on the other hand, if it be admitted, as we think it must, that it is of great importance that Congress should be induced to come into the picture on agreed terms of peace, then the fact must be faced that you cannot effectively bring persuasion to bear on men in gaol, nor can you hope to counteract by liberal policy the influence of extremists, so long as the extremists, popularly regarded, are in the position of martyrs. Mr Gandhi has declared that he emerges from prison with "an absolutely open mind, unfettered by enmity and unbiassed by argument." So far, his attitude has not been particularly helpful, but we must hope for the best. Opinion in this country will be inclined to agree that the Government of India was in the best position to decide policy in this amnesty question; but if it was well worth running considerable risks in this direction, the responsibility which rests on Mr Gandhi and the Congress leaders not to block the progress of peaceful negotiations has now become greater than ever.

The New Government in France.—As a result of two changes of government, in two months, which have practically cancelled one another out, the political situation in France is really back where it was before Monsieur Tardieu fell in December. On Thursday, January 22nd, the ministry which had been constructed so laboriously and held together so precariously by Monsieur Steeg was brought to the ground by an indiscretion of the Minister of Agriculture, Monsieur Boret. The Minister, apparently without securing the agreement of his colleagues or even taking them into his confidence, had publicly announced his intention of raising the price of wheat from 166 frs. 75 centimes to 175 frs. a quintal, as a measure of relief for French agricultural producers. He was openly criticised by the Under-Secretary for National Economy; and a parliamentary question from a member of Monsieur Franklin Bouillon's group, Monsieur Guyat, did the rest. The question referred to "the persistent and public split in the Cabinet on the question of the price of wheat, which favours speculation harmful to farmers and consumers." Monsieur Steeg made it a question of confidence; and his Government was defeated by 293 votes to 283. On the 24th, the President of the Republic, Monsieur Doumergue, telegraphed an invitation to form a government to Monsieur Briand at Geneva. Monsieur Briand—who has other fish to fry—declined; and thereupon Monsieur Doumergue invited Monsieur Laval, the Minister of Labour in Monsieur Tardieu's late Government, who had already tried and failed to form a Government before Monsieur Steeg. The problem confronting Monsieur Laval last week was the same as ever: could the middle groups be induced to combine in a centre coalition? And, as before, the issue turned on whether Monsieur Herriot's Party, the Socialist-Radicals, would maintain their refusal to co-operate with Monsieur Marin's Party, the Republican Democratic Union. Although Monsieur Laval is reported to have offered the Socialist-Radicals no less than five portfolios, they refused to be tempted. The result is that the new Ministry, which Monsieur Laval has succeeded, this time, in forming, in the small hours of this Tuesday morning, is very much to the Right. It is

true that Monsieur Briand remains Minister for Foreign Affairs, and this is so much to the good. On the other hand, Monsieur Tardieu reappears as Minister of Agriculture—the key ministry at the moment, next to the Premiership itself—and Monsieur Maginot is Minister of War. No doubt the Socialist-Radicals are looking ahead towards the next general election, which is now hardly more than a year distant; and their refusal to compromise themselves with the parties of the Right in the interim indicates that they have great ambitions. How long Monsieur Laval's Ministry may last under these conditions there is no telling; but the events of the last two months show fairly plainly that, though ministries may come and go, there will be no substantial change so long as the present Chamber, with its present balance of Party power, remains in being.

Prohibition: Enforcement or Revision?—It will be remembered that President Hoover, soon after his accession to office, appointed a National Commission on Law Observance and Enforcement, *à propos* the illicit liquor traffic. The report of this Commission on the Enforcement of the Prohibition Laws of the United States, was transmitted to Congress by the President, under a covering communication of his own, on January 20th. The report consists of a joint statement of facts and conditions, followed by eleven separate recommendations from the eleven commissioners. One commissioner advocates the immediate repeal of the Eighteenth Amendment to the Constitution of the United States, six advocate not repeal but revision, three are in favour of a further trial of the law as it stands, or as it might be made to stand with certain provisions for more effective execution. At the other extremity of the line, one commissioner "is not convinced that the present system will not be the best attainable." This gamut of notes probably echoes fairly faithfully the voice of the American people. Nobody thinks the present working of the law satisfactory, yet almost everybody shrinks from taking the plunge of repealing it outright. This, of course, is not much guidance for the chief executive officer of the Federal Government; and in Mr Hoover's covering communication there is a perceptible tone of embarrassment and perplexity. After pointing out that the Commission, by a large majority, does not favour a repeal of the Eighteenth Amendment as a method of cure for the inherent abuses of the liquor traffic, the President has been careful to add that he does see serious objections to, and, therefore, must not be understood as recommending, the Commission's proposed revision of the Amendment, which is suggested by them for possible consideration at some future time if continued effort at enforcement shall not prove successful. As the next Presidential election approaches, it will be curious to see the effect on American party politics of the interplay between the prohibition issue and the prosperity question.

More Bankers' Speeches.—The country has seldom been in greater need of enlightenment from its leaders on economic and financial matters, and has awaited the bank chairmen's annual pronouncements with more than usual interest. On the whole, it has not been disappointed, for although there has been some diversity of diagnosis and advice, the speeches have ranged over a very wide field and gone to the roots of current problems. Among the chairmen-speakers this week was the new chairman of the Westminster Bank, the Hon. Rupert Beckett, whose maiden effort was characterised by an incisive review of Britain's special difficulties. Mr Beckett, whose speech was illustrated by interesting graphs (reproduced in our company meeting columns), showing the curves of price movements, insisted that the cause of Britain's troubles was the rigid maintenance of high production costs; and his call for a national effort to solve the problem lacked nothing either in courage or in the ability to face realities: "It is not sectional sacrifices but a co-operative effort of the whole nation that is required; and the best that one can hope of 1931 is that this fact will be fully appreciated by the country and will

result in the first place in bringing together the leaders of our industrial life, employers and employees, in a spirit of goodwill, with the common determination to produce an economic reorganisation and readjustment, which shall be both fair to all parties and effective in operation." This need for co-operation was also stressed by Sir Harry Goschen, of the National Provincial Bank, who, in addition, agreed with Mr Beckett in condemning output restriction schemes and in demanding public economy. Not unnaturally, bankers have this year been chary of prophecy, but Sir Harry proclaimed his belief that any further serious depreciation in commodity prices is unlikely, and struck in conclusion a note of tempered optimism. At the meeting of the District Bank, Sir Christopher Needham vied with Mr Beckett in emphasising the importance of narrowing the gap between wholesale and retail prices, proclaimed that taxation was "unduly" high, and agreed with recent criticism to the effect that Britain's economic system is too inelastic and unadaptable. He, too, agrees that a national effort in co-operative sacrifice is necessary. Mr G. P. Dewhurst, chairman of Williams Deacon's, whose speech was mainly concerned with the troubles of Lancashire, made a striking demand for a new "Geddes" Committee to review national expenditure: "The effect of the world-wide slump in commodity values had fallen on this country, where industry is already taxed to its limit, with exceptional severity, and if the Geddes Committee fulfilled a useful function in the period immediately following the war, such a body, armed with plenary powers, was a vital necessity now to insist on drastic economy in the conduct of national and municipal affairs." Mr A. A. Paton, of Martins Bank, took the view that the situation calls for "action, definite, drastic and immediate," if England's industrial competitive power is to be restored; and he, too, complained of "enormous" taxation. At the meeting of the Provincial Bank of Ireland, Mr R. D. Trotter was able to give a satisfactory account of the situation in the Irish Free State. For closer study of the text of these speeches readers may turn to later pages in this issue.

Agricultural Credits.—The disequilibrium between the prices of primary products and manufactured goods, which has been a feature of the present economic depression and has brought with it all the difficulties caused by the impoverishment of farmers throughout the world, has naturally brought the question of the better organisation of agricultural credits to the forefront. On a later page our Berlin correspondent refers to a somewhat curious scheme now being canvassed in Germany with this end in view. Of more general interest is the Report, issued last week by the Financial Committee of the League of Nations, dealing with the possibility of concerted measures being taken in this direction. The Financial Committee observes that so far as the agricultural countries of Central and Eastern Europe are concerned, the obstacles which have been impeding the influx of capital for agricultural development are largely of a political nature and cannot be removed by technical financial measures only. On the other hand, it suggests that improvements of the present available machinery could be devised. It suggests the creation of a special international institute which would borrow on its own credit in the international markets and would lend (mainly in the form of long-term credits based on first mortgages backed by a cumulative series of guarantees, including those of the governments of the borrowing countries concerned) the money so obtained, using national or local mortgage institutes as intermediaries. It is recognised by the committee that the creation and working of such an international institute raises complicated questions, and the Report, which the Council of the League has adopted, proposes to set up a special delegation to elaborate a concrete plan for consideration by the Financial Committee at its next session. The developments thus foreshadowed appear to us to be of a helpful nature. It is true that simple alleviation of the onerous rates of interest now paid in many countries by farmers for accommodation secured on their personal credit would

not *ipso facto* do anything to restore lost equilibrium between agricultural prices and those of manufactured articles. Further, though augmentation of the flow of foreign capital into agricultural loans might have the advantage of lowering the general rate of interest in agricultural countries, this advantage would be neutralised if the result were to be expansion of agricultural production beyond the immediate absorbing capacity of the world's markets. But a reduction of excessive burdens on the peasantry would not only have a stimulating psychological effect, but would make it more possible for producers to improve their methods, vary their output and assist trade by catering for new demands. Subject to the qualification that nothing would be gained by accentuating the overproduction of certain staple products, we welcome the Financial Committee's Report. If they can produce a technically sound scheme, and, particularly, if it contains provisions calculated to stimulate some transformation of agricultural production, e.g., from wheat to dairy produce, they will have done a very useful work.

Australian Developments.—News from Australia indicates that events have again moved quickly in both the economic and the political sphere. At the end of last week the Arbitration Court declared that to meet the existing national emergency there should be a general cut of 10 per cent. in all industries named in the basic wage case submitted to them. This decision affects certain of the railway and a large number of other trades. The Commonwealth statistician is reported to have described this cut as the first stage in a reduction of £30,000,000 a year in the nation's wage bill, and to have intimated that a further big cut may be expected so soon as the latest cost-of-living figures are available. The Court's decision is of importance in that it represents the first definite step towards the restoration of Australian economic life to a parity with world conditions, and the fact that during this week the official exchange rate has risen to £130 Australian per £100 sterling shows how urgent is the need for such adjustment. Mr Scullin has reinforced the good effects of the wage award by a declaration that he is opposed to the financing of public works by the issue of fresh notes, but his somewhat ambiguous statement that the right way to finance public works is by the proper use of bank credits was not quite so reassuring. His reinstatement of Mr Theodore to the post of Commonwealth Treasurer is also a questionable move. It will be recalled that Mr Theodore resigned some months ago as the result of allegations contained in the report of the Royal Commission on the Mangana Mines transaction. His plea that the matter should be tested in the courts has so far not been met, and from one point of view Mr Scullin can fairly claim that the Government should not be deprived of Mr Theodore's undoubted abilities for an indefinite period by the dilatoriness of the Queensland courts. On the other hand, the merits of the allegations have not yet been determined, and the fact that Mr Theodore's reinstatement has led to the immediate resignation of the two members of the Cabinet, Mr Fenton and Mr Lyons, who were foremost in the stand for sound finance while Mr Scullin was in London, arouses grave fears lest Mr Scullin should have paid too heavy a price for Mr Theodore. To round off the story of this week's developments, Mr Gullett has issued a statement embodying the Nationalist Party's proposals. These include an immediate cut of £5,000,000 a year in Federal expenditure, an operation which, in his opinion, would facilitate the flotation of an internal loan of £10,000,000 to provide for rural relief and urgent public works; and the funding in London of £40,000,000 of the existing floating debt, and also of £10,000,000 of Australia's annual overseas interest for five years. The present political situation makes this programme of somewhat academic interest, and it would be premature to discuss how far the City of London would be ready to respond. Still the recent decisions of the Arbitration Court would undoubtedly make London more willing to co-operate in this operation, especially if reductions in national expenditure were not offset by fresh Government borrowing.

The Cotton Trade Lockout.—A deplorable position of affairs has arisen in connection with the labour dispute in the cotton industry. The lockout in the weaving branch involves about 200,000 operatives in that section, and indirectly affects another 200,000 workpeople in the spinning branch, yet the representatives of the operatives have no power to negotiate a settlement with the employers. Last week there was a ballot of the members of the Operative Weavers' Amalgamation on the question of giving the executive committee power to negotiate with the employers on the "more looms per weaver" system. The result showed, however, that 90,770 members were against negotiating powers being given and only 44,990 were in favour, leaving a majority against of 45,780. In view of this complete and insensate deadlock, officials of the Ministry of Labour had interviews at the beginning of this week with the trade union officials and the leading employers, and on Tuesday it was announced that the Prime Minister had extended invitations to representatives of the several organisations concerned to meet him in London on Thursday with the Minister of Labour. Before proceeding to London, Mr John Grey, the chairman of the Manufacturers' Association, said that their position was unchanged, but the invitation contained the germ of an opportunity to settle. He stated: "We are as desirous as anyone that this dispute should be brought to an end as speedily as possible, but we consider that we are contending for a very big principle, the right to introduce changes in order to effect economies when it can be proved that such changes will accomplish these results, and to insist that no body, however powerful they may think themselves to be, have the right to veto such changes because they may not just like them. That is the fundamental principle at issue, and it is that principle that has brought about the solidarity in the employers' ranks that is such a marked feature of this dispute." The failure to bring the dispute to a close, writes our Manchester correspondent, is having an increasing effect upon Lancashire trade. Gradually more weaving concerns are closing down, and owing to the smaller consumption of yarn the owners of spinning mills are being compelled to stop production. A development which has caused some interest has been the decision of the directors of the Lancashire Cotton Corporation, Ltd., to join in the lockout and notices are being given to stop their weaving sheds. It is understood that this decision will affect about 20,000 looms and nearly 5,000 operatives.

Cotton Yarn Prices Control.—"For many months," writes our Manchester correspondent, "a special sub-committee of the Federation of Master Cotton Spinners' Associations has been considering a scheme for the stabilisation of yarn prices and the regulation of production by fixing marginal rates for the sale of yarns and by organising a system of 'spindle hours run' designed to prevent over-production. In Manchester, last Tuesday, a mass meeting of the employers concerned decided to take a ballot on the proposals, and the voting papers have to be returned not later than February 11th. Before the scheme can become operative compulsory powers will have to be obtained. Under the scheme yarn would not be sold 'below the average cost of production of efficient and reasonably financed mills on full-time working.' The marginal rates include an economic allowance for depreciation and maintenance, and it is calculated that the scheme would encourage amalgamations or other financial arrangements between the units. There would be no organised short-time working, production being automatically regulated in accordance with demand by a pool of spindle hours run. No limitation of productive capacity would be fixed, and every registered millowner would be at liberty to run his spindles as suited his purpose, subject to the maintenance of the minimum marginal rates over the cost of clean cotton. There is much difference of opinion in Lancashire trade circles as to the success of this movement, and the result of the ballot will be awaited with interest. An important factor, however, is that the membership of the

Master Spinners' Federation is not so large as a few years ago. For instance, the mills under the control of the Lancashire Cotton Corporation, Ltd., are not in the Masters' Federation. A scheme of this kind, therefore, would require the support of the Cotton Corporation if it is to be successful. On the other hand, the proposals are being criticised on the grounds that action of this kind would mean an advance in prices, and it is urged that if Lancashire is to regain her lost trade something will have to be done to lower prices in order to make them competitive against other countries." With such criticism we are in complete agreement. The aims and conceptions behind this scheme appear to us to be fundamentally wrong; and it is fortunate that the obvious difficulty of ever agreeing on a definition of the "efficient and reasonably financed mill" renders it unlikely that this ill-conceived foundling will survive.

Laid-up Shipping.—Striking evidence of the extent to which the world depression of trade has resulted in unemployment of shipping tonnage is afforded by the latest quarterly return issued this week by the Chamber of Shipping. Taking only the principal ports of the United Kingdom, idle tonnage at the beginning of January amounted to 1,331,147 net tons, as compared with 885,418 net tons at the beginning of October last and 352,659 net tons a year ago. In addition, at minor ports not previously included in the Chamber's returns, there were 262,100 net tons laid up on January 1, 1931, as compared with 116,285 net tons on October 1, 1930, and 12,770 net tons at the beginning of last year. On the basis of the latest available information, the Chamber has compiled an estimate in terms of gross tons showing the total volume of unemployed tonnage in the principal maritime countries of the world. The figures are as follows:—

Country.	Gross tons.	Country.	Gross tons.
U.S.A. :—		Sweden	125,684
Privately owned	891,165	Denmark	100,000
U.S. Shipping Board	1,417,646	Italy	476,843
Great Britain & Ireland	2,549,198	Greece	47,260
Japan	296,237	Germany	444,209
France	199,584	Spain	102,906
Norway	533,333	Australia	119,507
Holland	325,380		
		Total	7,628,952

The total tonnage owned in the foregoing list of countries last June amounted to 58.4 million gross tons, so that the percentage of unemployment was over 13 per cent. at the beginning of January. This calculation, of course, takes no account of the fact that under present conditions a considerable proportion of the carrying space of vessels in active service, i.e., on regular liner routes, is unoccupied.

British Production in 1930.—The London and Cambridge Economic Service has published its index of the physical volume of production for the last quarter of 1930. A sharp seasonal increase in that quarter is usual and as the rise recorded for October-December, 1930, is sub-normal, it appears that the "absolute" downward trend in industrial activity has continued during the last three months of the past year:—

	1924 = 100.		
	1928.	1929.	1930.
First quarter	105.7	108.3	109.6
Second quarter	103.7	111.0	100.9
Third quarter	95.4	108.2	90.7
Fourth quarter	105.2	114.8	93.5
Average	102.5	110.6	98.7

The latest averages for the food, chemicals and non-ferrous metals groups show a slight rise, but the advance in the complete index is ascribed mainly to the seasonal increase in the output of coal and textiles. The figure for paper production, which is usually higher in the last quarter of the year, shows a decline, the outstanding feature being the low level of activity reached in the heavy industries. The indices for pig iron and steel have dropped from 107.5 and 115.4 in the corresponding period of 1929 to 62.9 and 64.0 respectively. The figure

for shipbuilding at 66.2 compares with 113.6 in the last quarter of 1929. The average for the whole year is 1.3 per cent. below the level of 1924, and it shows a decline of more than 10 per cent. as compared with 1929. The only groups which show a level of activity above that attained in 1924 are non-ferrous metals, food and paper. Present information indicates that little improvement may be expected during the current quarter.

Wages in 1930.—According to the preliminary figures given in the *Ministry of Labour Gazette*, the net reduction in rates of wages during 1930 was less than in any year since 1926. The statistics, which do not cover agricultural labourers, government employees, shop assistants, clerks, and some unorganised workers, show an aggregate net increase of £57,800 in the weekly full-time rates of wages of 760,000 workpeople and a net decrease of about £115,800 in those of 1,100,000 workpeople. The most important increases were in the wages of railway employees, owing to the termination of the 2½ per cent. cut, and in shipbuilding wages. Textiles and building accounted for nearly 80 per cent. of the workpeople whose wages were reduced. In most branches of industry the general level of wages remained unchanged throughout the year. The following table shows the estimated changes each year since the war:—

CHANGES IN WAGES, 1919-1930.
(000's omitted.)

Year.	Approximate Number of Individuals affected by		Estimated Net Weekly Amount of Change in Rates of Wages.		Estimated Net Weekly Increase (+) or Decrease (—)
	Net Increases.	Net Decreases.	Increases.	Decreases.	
1919.....	6,240	0.1	2,547	0.06	+ 2,547
1920.....	7,867	0.5	4,793	0.18	+ 4,793
1921.....	78	7,244	14	6,074.5	— 6,061
1922.....	74	7,633	11	4,221.5	— 4,210
1923.....	1,202	5,079	169	486.00	— 317
1924.....	3,019	441	616	62.10	+ 554
1925.....	873	851	159.00	—	+ 78
1926.....	420	740	133	83.70	+ 49
1927.....	282	1,855	31	388.50	— 358
1928.....	217	1,615	22	163.80	— 142
1929.....	142	917	13	91.70	— 79
1930.....	760	1,998	58	115.80	— 58

Since large groups of workpeople are excluded from the statistics, this table can only be taken as a very rough indication of the changes from year to year, but it serves to bring out clearly enough the extreme rigidity in the British wage-structure since 1924, notwithstanding the sweeping decline which has occurred in wholesale prices.

Canadian Crops.—According to the final estimate of the Dominion Bureau of Statistics, the total wheat crop of Canada in 1930 is estimated at 397,872,000 bushels, showing an increase of 2,000,000 bushels on the provisional estimate in November. The aggregate value of all field crops is estimated at \$631,593,000, as compared with \$948,981,000 in 1929, and \$1,125,000,000 in 1928. The total area under field crops last year is estimated at 62,214,000 acres, an increase of 1,000,000 acres on 1929. The average yield of wheat per acre is 16 bushels, compared with 12.1 in 1929 and 18.6 for the five years' average. The total production of oats was 423,148,000 bushels, against 282,838,000 in 1929, with average yields per acre respectively of 31.9 and 22.7 bushels. The total crop of barley was 135,160,000 bushels, compared with 102,813,000, with average yields respectively of 24.3 and 17.3 bushels per acre. The total yield of rye was 22,018,000 bushels, compared with 13,160,000 in 1929, with average yields respectively of 15.2 and 13.3 bushels. Other field crops show generally somewhat larger yields than in the preceding year, although values received by producers are considerably less. The total yield of potatoes was 48,241 cwt., as compared with 39,930 cwt. in 1929; of sugar beets 471,000 tons, as compared with 364,000 tons in 1929; of flax seed 4,399,000 bushels, against 2,060,000 bushels. For wheat the average price received was 44 cents a bushel, compared with 105 in 1929, and 101 for the five years' average; for oats 24 cents a bushel, compared

with 59 in 1929, and 49 for the five years' average; for barley 20 cents a bushel, compared with 59 for 1929, and 57 for the five years' average; for rye 20 cents a bushel, compared with 84 in 1929 and 80 for the five years' average. The total value of the wheat crop is estimated at \$174,792,000 compared with \$319,715,000 in 1929, and \$435,739,000 dollars for the five years' average; and the comparative values of other grain crops show relative declines. The repercussions of this tremendous deflation of purchasing power in the hands of the Canadian farmers could not fail to be far-reaching. In his letters our Ottawa correspondent has written of the Secessionist movement in the Western provinces. While this movement need not be taken very seriously, it is clear that Mr Bennett, in consenting to stand behind the banks and the Governments of the Prairie Provinces, has involved his administration in a problem of tremendous difficulty—enhanced by the fact that, so far, reduction of acreage has lagged so remarkably behind the fall in prices.

A Canadian Cable Merger?—Our Ottawa correspondent writes:—An ambitious project is afoot in connection with the telegraphic and cable services of Canada. It had its origin in proposals recently submitted by Sir Basil Blackett, the chairman of Imperial and International Communications, Ltd., to the Bennett Ministry and other interested parties. Sir Basil suggested the formation of a Canadian External Communications Company in whose creation his own company, the Canadian Pacific, and the Canadian National Telegraph companies (the two last are subsidiaries of the railways of the same name) and the Canadian Marconi Company would participate. To this new corporation there would be turned over the two transatlantic cables—one of them the old "Imperial" cable and the other the formerly German-owned cable *via* the Azores, now owned by the I.I.C.—and these cables would be brought by mechanical and other improvements to a pitch of efficiency under which they could offer a service as good as that of the competing American cable companies. Heretofore they have secured comparatively little traffic because the Canadian Pacific Telegraph Company has had a working arrangement with the Postal Telegraph Company, which is a subsidiary of the American-owned International Telegraph and Telephone Company, and the Canadian National Telegraph Company has had a similar arrangement with the Western Union Company. It is understood that the C.P.R. authorities are very sympathetic to the project, but the position of the Canadian National executive is more difficult as the lines which they operate in the United States are vitally dependent upon the service of the Western Union Company. The Bennett Ministry, however, proved decidedly receptive to Sir Basil's proposals, and they are now giving consideration to them, and also to an enlargement of the scheme in the shape of a plan for a merger in a new fifty million dollar corporation of the Canadian Pacific and Canadian National Telegraph Companies. Obviously, such a merger would offer the prospect of great economies; it would mean lower rates as the result of smaller operating costs, and the eight existing telegraph zones would probably be reduced to three, with a flat rate for the whole of Eastern Canada. On the other hand, there are considerable difficulties in the way of the consummation of the scheme; the supporters of public ownership would be averse to conferring any monopoly of telegraphic services upon the C.P.R., and the C.P.R. would be equally hostile to any plan of rigid governmental control. A solution, however, might be achieved through some such corporate structure as characterises the Imperial and International Communications, Ltd., and the Railway Commission could be allowed to retain its present powers over telegraph rates.

National Mutual Life Assurance Society.—The well-known investment policy of this society has undergone a severe test in the past two years, for during this period ordinary shares have experienced a shrinkage in value of upwards of 36 per cent., British preference shares a shrinkage of 9 per cent., and British debentures of 2 per cent. Moreover the values of many foreign Government

securities and those of certain of the Dominions have shown important depreciation in the same period. In these circumstances it was only to be expected that the National Mutual would show substantial capital losses. The actual amounts of the losses suffered were £317,000 in 1929 and £179,000 in 1930, equal to 6 per cent. and 3½ per cent. respectively of the mean fund. Judged by comparison with the results of investment trust companies or by comparison with the various published indices of security prices, the percentages of loss are low. Their occurrence has naturally led to a large reduction in the carry-forward, but the society can legitimately point to the fact that notwithstanding these losses, and in spite of a centenary bonus in 1929 costing £162,000, it has maintained its previous high rate of annual reversionary bonus and enters upon 1931 with a carry-forward in excess of £200,000. Gross new business shows a small increase despite the new single premium surtax legislation, but owing to a larger amount of reassurances placed with other offices the net business was £813,403, compared with £862,675. The gross rate of interest has jumped from £5 15s. 11d. to £5 19s. 10d., but the increase in the standard rate of tax has prevented a corresponding rise in the net rate, which has remained practically stationary at £4 18s. 10d. Expenses were almost the same in amount, but the stoppage of the supply of single premiums has raised their ratio to the premium income from 13.1 per cent. to 14.7 per cent. The annual report is accompanied by the actuary's report on the annual valuation, the results of which are as follows:—

	1929.	1930.
Losses on investments	— 317,420	— 179,733
Trading profits earned during the year	149,403	141,487
Brought forward from previous year	877,524	386,019
	£709,507	£347,773

Allocations:—

To Ordinary annual bonus to policyholders	129,270	133,992
" Centenary bonus to policyholders	162,421	...
" Pension fund	18,417	5,476
" Valuation expenses and staff profit-sharing	2,880	3,000
" Special centenary expenses	10,500	...
" Carried forward to next year	386,019	205,305
	£709,507	£347,773

In his speech at the annual meeting the chairman, Mr J. M. Keynes, in referring to the increase in 1930 of £220,000 in British Government securities and the decrease of £254,000 in ordinary shares, stated that these changes were in pursuance of the board's policy of extreme caution. He also stated that ordinary share investments had been further reduced since the date of the balance sheet and made the interesting announcement that holdings of European Government bonds were now of "very small dimensions" and that the society had not held for some time any securities of the Australian Government or States. It is obvious, therefore, that even if the stock market depression persists, the society's area of risk has been greatly circumscribed and that it has nothing to fear from the default of debtor countries.

LEAGUE OF NATIONS.

Minorities — European Union — Disarmament Conference.

(FROM A LEAGUE CORRESPONDENT.)

GENEVA, January 26.

LAST week saw considerable improvement in the situation at Geneva. Though little progress was made in the preliminaries to be settled about the General Disarmament Conference, the Council's handling of the Germano-Polish minority dispute was probably the most effective

and vital piece of work which it has so far done. No subject has come before it in such an atmosphere of passionate controversy, and the consequences of bitter prolongation threatened to be serious for the prestige of the League and for the peaceful development of Europe. By its decision the Council succeeded in satisfying Germany in a way which secured Poland's assent. It was an altogether unanticipated success which redounds greatly to the credit of the whole Council. Its members had made it clear that they took a serious view of the situation, and this undoubtedly influenced both the German and Polish Foreign Ministers, who addressed the Council with candour, but with moderation. Due credit must be given to Dr. Curtius and Mr. Zaleski for the statesmanlike way they approached their exceedingly difficult duties. Poland recognised that the game was against her, and it is only just to say that Mr. Zaleski faced an embarrassing situation with courage and wisdom. His deft admission of culpability and his acceptance without demur of the strongest political declaration yet made by the Council earned him sympathy. No other course would have succeeded in obtaining it, but he is left with difficult things to accomplish on his return to Poland.

The fact remains that minorities cannot be happy and contented so long as they are made the sport of irredentist claims. Germany, equally with Poland, has her responsibilities, and unless she fulfils them and refrains from using the minorities to forward her political ambitions it will be difficult, if not impossible, for Poland fully to carry out the letter and spirit of the Council's report. One hopeful sign in this connection is that the German minority organisation in Upper Silesia took in certain important respects a more moderate and positive attitude than the German Government, and it was the principles contained in the conclusions of the German minority petition that Mr. Zaleski definitely accepted. Mr. Henderson, who presided over the Council with exceptional success, reminded both the majority and the minority in Upper Silesia of their respective obligations and hoped the results of the Council would mark the beginning of a new effort to give permanent and successful form to the system which the Minorities treaties were intended to set up. The skilful and firm diplomacy of the Council should not only reassure the minorities of Upper Silesia, but give new faith and confidence in the League to the millions of minorities in different parts of Europe. Germany should certainly be more inclined towards a different view of the value of the League as a centre of discussion and conciliation. The mere fact of public debate deflated passions which otherwise would have run on indefinitely with little hope of redress.

The Committee on European Union has agreed that, for the time being, economic problems have overshadowed the political aspect of the issue before it, and the first general resolution decides to study the world economic crisis and to invite the Governments of Russia, Turkey and Iceland to participate in this study. The Italian, German, and, to some extent, British desire to have Russia and Turkey participating in the work of the Committee in a more general way has been set aside, or at any rate postponed. Grain-exporting countries of Central and Eastern Europe and the grain-importing countries are called upon to meet at any early date in order to find means of disposing of the grain surplus at present available, their conclusions to be put into effect without further reference to the Committee. A committee is also to consider and report on the problem of the export of future harvest surpluses, and the Committee looks also to the Wheat Conference in Rome next March to make suggestions on this subject with the collaboration of overseas countries. The Financial Committee of the League is asked to develop its study of agricultural credits, and to submit to the League of Nations Council in May a complete scheme which, if approved, can be put into effect forthwith; and a committee has been appointed to keep in touch with the Financial Committee's work.

The Committee calls upon all its members to do everything in their power to see that the Commercial Con-

vention of 1930 is put speedily into force, and expresses the hope that the bi-lateral tariff negotiations will be actively pursued. The Secretariat is asked to acquaint the Committee at its next meeting in May with the first results of the work undertaken by the Economic and Financial Organisation and the International Labour Office as a result of the Assembly resolution on the unemployment position in Europe and its consequences. For the rest, a committee is formed to examine the situation, organisation and procedure of the Committee of Inquiry, and the other questions which have been put forward in the memoranda from various Governments. While there is a certain danger of confusion and overlapping in the programme which has been outlined, it does nevertheless show a promising sign of a determination to get to grips with the real problems facing Europe to-day.

As anticipated, the Council fixed the date of the first General Disarmament Conference for February, 1932, with Geneva as the place of the meeting, on the understanding that the Secretary-General is able to report in May that the town is in a position to offer all the requisite facilities. It instructed the Secretary-General, in consultation with the Rapporteur, to undertake between now and May the initial work for the technical preparation of the Conference, but it has postponed the appointment of the President of the Conference to one of its later meetings. The Italians and Germans declined to accept the proposal that M. Benes should be President on the ground that he is too closely associated with a definite view of the problem. There has been some discussion on the possibility of an American President, but the United States Government is understood to be not very favourably disposed for the curiously limited reason that they are not much concerned with other than naval armaments. There have been indications of a desire to see Mr Henderson as President, and there would certainly be advantages in having someone with his authority who has consistently emphasised the necessity, not of limitation only but of substantial reduction of armaments. At the meeting of the Council where the final resolution was taken, Dr. Curtius again made reservations on the draft convention, and this drew from M. Briand the reasonable reply that it is impossible to ignore the extent of the agreement reached in the draft convention after five years' effort. As for the date of the Conference, the wisdom of not pressing it too hastily is becoming more and more apparent. Not only has much to be done, but time will be given for growing pressure towards the most substantial results possible.

It is not possible to do justice to the large number of other subjects dealt with by the Council. In the prolonged struggle to get some sanity into the conditions along the Polish-Lithuanian administrative line, the Council postponed the subject with the expectation that the two countries will continue negotiations and reach some agreement to obviate existing difficulties. The Council appointed a committee of eight, under the chairmanship of Mr Henderson, to study the question of administrative and financial assistance for Liberia, so that she may be helped to correct the terrible state of affairs disclosed by the International Commission's Report on slavery conditions. The Financial Committee presented the second interim report of the Gold Delegation, which is to be communicated to all States. The Council decided to appoint a delegation to draw up concrete proposals on the basis of the Financial Committee's report on improvements which could be introduced in the machinery to be used for agricultural credits; and it was resolved to summon the third session of the Consultative Economic Committee before next summer.

The report of the Commission of Inquiry into Opium Smoking in the Far East was presented to the Council, which decided to summon a conference on the subject at Bangkok early this year. It invited the Opium Advisory Committee to study the possibility of summoning a conference for the limitation and control of poppy cultivation. The draft convention prepared by the Opium Advisory Committee on the limitation of drug manufacture was submitted to the Council and was forwarded to Govern-

ments in preparation for the Conference which is to meet next May. The Mandates Commission seems to have been puzzled about the instructions received from the Council to study the general conditions for the termination of a mandate, and the Council has now asked the Commission to confine its investigation to the question whether a country under mandate has become capable of conducting its affairs alone, without examining the question of its admission to the League. The British Government reaffirmed its intention of recommending the admission of Iraq to the League in 1932, and undertook to prepare a special report for the Commission before June next on the situation in Iraq. Whether Iraq is or is not admitted to the League is a question not for the Mandates Commission but for the Assembly.

UNITED STATES.

Bankers' Speeches — Money — Improved Bond Market — Motor Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 17.

VIEWS expressed by leading bankers at annual shareholders' meetings, on economic subjects and the business outlook, have stirred up a good deal of discussion throughout the country. Principal attention was given to the observations of Mr Albert H. Wiggin, chairman of the board of governors of the Chase National Bank, Mr Paul M. Warburg, chairman of the Manhattan Company, and Mr Charles E. Mitchell, chairman of the National City Bank. All three were in accord in predicting nothing better than a slow recovery in trade, and they avoided setting any dates at which a turn might be expected. Mr Mitchell hopes that "a new state of mind will be developed, more sane and constructive than that which ruled in the boom period." Mr Wiggin feels that the country is on the way to recovery, the permanency of which will depend upon "the progress we make in correcting the causes which have brought about and prolonged the depression." He lists these causes as tariffs, commodity market valorisation schemes, slowness of "finished" wholesale and retail prices to follow the decline in raw materials, and political difficulties, especially in Russia and the Far East.

Mr Warburg also lays much blame for the depression on tariff barriers, valorisation schemes and cartels, fantastic overbuilding, overproducing and overbuying, which finally resulted in "production overwhelming manipulation." Mr Warburg expresses his "entire disbelief in the thesis that a shortage of gold should be considered as the sole or principal disturber of general price stability." He contrasts the high money rates and high prices of a year ago with the present ease in money and declining prices, and points out that the same amount of gold, then and now, was available to the world's central banks. He indulges in plain speaking in pointing out the fallacies of nostrums proposed in this country and Canada for ending the business depression, such as providing extra work on a large scale. Finally, Mr Warburg makes a plea for co-operation between central banks and the independence of the Federal Reserve system from political control, and warns us that we should beware of high prices. He would end our "splendid isolation" and have greater co-operation with Europe. Our tariff policy and our attitude towards inter-allied and reparation payments should be guided by the consideration that our prosperity is linked with that of the rest of the world.

Mr Wiggin is even more outspoken. He has no sympathy with price-fixing palliatives or with the forced fixing of wage scales at levels on which labour cannot find employment. He feels that this country must either reduce tariffs or adjust itself to greatly reduced exports. Moreover, noting that cancellation or reduction of the inter-allied debts has been increasingly discussed throughout the world, he says: "Without commenting on the many arguments on both sides of the controversy and aside from the question of the justice of cancellation, I

am firmly convinced it would be good business for our Government to initiate a reduction in these debts at this time." But although Mr Wiggin's proposals on debt reduction have brought forth a good deal of discussion, nothing is likely to come of it at this time. Many agree with him, particularly in Wall Street, but the country as a whole probably is not very friendly to the idea. In particular it is thought that this country should not take the lead.

Further ease in short-term money rates, without appreciable effect in stirring up trade activity, is taking place. Day-to-day money can be placed in only small amounts at as low as 1 per cent., although the official Stock Exchange renewal rate is pegged at 1½ per cent. Time funds are now offered at 2½ per cent. for six months, the lowest figure recorded in nearly 40 years. Few takers are found, inasmuch as there is little prospect of having to pay an average of that much for day-to-day money in the next few months.

Money ease is still more the result of slack demand than of gold imports, which have been insignificant lately, or of Federal Reserve Bank operations. The discount rate cuts have helped to depress the interest rates charged by banks to their customers, to lower bill rates and to stimulate the bond market because of the psychological effect on confidence. Member banks, however, have reduced their borrowings, the decline this week amounting to \$49 millions. At the same time the Reserve system has taken up much of the slack in the money market created by the usual January reduction in currency circulation and inflow of money from the interior. Holdings of Government bonds, bankers' bills and other bank credit, apart from discounts, dropped \$88 millions. Total reduction in credit brings that item down to within \$89 millions of the billion dollar mark, which is the normal for times of moderate or slack business.

A good deal of encouragement is derived from the moderate success which the week's heavy new capital offerings have had. Approximately \$250 millions of industrial, public utility and municipal financing has been offered. Much of it has been for the purpose of funding bank loans, but the fact that the public has the money and is willing to invest it in corporation bonds at low yields is calculated to encourage prosecution of expansion and improvement projects long held in abeyance. After temporary hesitation the market for old bonds has resumed its advance, and a good deal of financing is expected in the next few weeks. A good deal of foreign borrowing is under consideration, but political disturbances will hamper that sort of operation.

The motor industry is taking heart at the good reception given their new models at the national shows, and this year is expected to bring a modest gain in sales. Steel mills have increased operations to about 40 per cent. of capacity and prices are firmer, but there is nothing like a sharp revival. Wholesale and retail prices are still inclined to weaken, and it is realised that a good deal of downward revision remains to be done in the retail field. Little attention is paid here in responsible quarters to stories of a British Government credit or bond offering here. Bickering in Congress over drought relief appropriations continues, and the prospect of an extra session, which no one really seems to desire, looms large.

FRANCE.

New Cabinet — Reconstruction of Devastated Areas — Foreign Trade — Coal Production.

(FROM OUR CORRESPONDENT.)

PARIS, January 28.

THE overthrow of the Steeg Ministry last Thursday caused no surprise in political circles, where its downfall before the end of the current month had been regarded as a foregone conclusion since the day it assumed power just before Christmas. The basic fact of the present Chamber is that it comprises an undoubted anti-Cartellist majority, which has existed since the 1928 elections, but that this

NATIONAL BANK OF GREECE Established 1841

Capital paid up and Reserves Drs. 1,205,000,000.

majority depends almost entirely on the loyalty of a portion of the Radical Left (the Loucheur group) of 51 members, and parts of certain other and smaller sections, which cannot always be relied upon. This has been successively proved by the unfortunate outcome of M. Chautemps' attempt, early last year, to form a Cartellist Cabinet, and by the recent effort of M. Steeg. All this enormously aided M. Pierre Laval's second attempt to create a stable Ministry based on "a large concentration of the centre parties," including the Radicals. M. Laval had the advantage of coming forward at a moment when the vast majority of the Senate—which overthrew the Tardieu Cabinet (as is now admitted) under the conviction that the only means of securing a stable majority in the Lower House was for the Radical Socialists to resume Ministerial co-operation with the Parties on their Right—were convinced that their experiment had failed. Unfortunately, the same elements of the Radical Socialist Party who insisted, at the tail end of their Angers Congress in 1928, on the withdrawal of M. Herriot and his three colleagues from the last Poincaré Ministry, again rendered impossible the cessation of party warfare by a general burial of the hatchet. M. Laval went so far as to offer the Radicals five important Ministerial portfolios, as well as some of the under-secretaryships. Gambetta's now almost forgotten slogan, "Clericalism—that is the enemy," is still the vital issue of the day with the Radical provincial militants. Under the pressure of the local party leaders in the constituencies, the Radical executives were compelled to regard the inclusion of the Marin Nationalists in the proposed new Ministry as an insuperable obstacle to their association with it, and all hopes of the widely desired Ministry of all the Centre Parties vanished. One strong reason for the Radical attitude was their conviction that any co-operation with what is regarded as "the reactionary Marin Party" may result in their losing a further substantial number of seats at next year's general elections.

The new Ministry has been well received both by the general public and by the financial and business world. It is generally regarded as largely a reconstitution of the Tardieu Cabinet, with a general reshuffling of portfolios. M. Briand, as was inevitable, remains at the Quai d'Orsay, after declining (on the ground of the burden of his work for European union) to undertake the task of forming a Cabinet. The new Premier, following M. Tardieu's example, has taken control of the Ministry for the Interior, and thus to some extent placated Radical bitterness. M. Tardieu is at the Ministry for Agriculture, which is at present one of the more important posts. The new combination is particularly strong in financial experts. M. Flandin, who displayed sound qualities as a former Minister for Commerce, has taken charge of the Ministry of Finance, and M. Pietri, one of the younger financial authorities of the Chamber, is Minister for the Budget. M. Charles Dumont (Marine), a former Finance Minister, and M. Charles de Chappedelaine (Merchant Shipping) have had long experience as *rapporteurs* for the Budget. M. Paul Reynaud, M. Tardieu's Finance

Minister, is at the Colonial Office. Altogether, the Cabinet is regarded as well balanced, and likely to attain at least a fair measure of success.

M. Laval, who began political life as a Unified Socialist, like M. Briand, has the good opinion of both Houses, and especially of the Senate, in which he sits. The general party situation indicates an appreciable *détente*, and the presence of M. Mario Roustan (Education), a Radical senator (as well as M. J. L. Dumesnil, until recently a member of the same party), cannot but help this tendency to appeasement. Parliamentary business will remain at a standstill until the Ministry meets the Chamber on Friday, but it is generally considered that the new Cabinet will meet with a cordial reception and that it will be found possible to get the Budget through by the end of March, notwithstanding the expected renewal of strong Radical opposition. There are indications that, thanks to recent events, M. Laval will command an appreciably larger majority than M. Tardieu did.

The report on the Budget for the Liberated Regions shows that to the end of the current financial year there will have been paid to sufferers from war losses in the devastated regions a total of 79,800,000,000 francs, of which 34,875,508,000 francs represents cash payments, and the balance of 44,924,492,000 francs "payments in other forms" (namely, in kind or in long-term bond issues). As there will remain to be paid a further 6,000,000,000 francs or thereabouts, of which 2,800,000,000 francs will be in the form of cash, the total indemnities will eventually total about 86,000,000,000 francs. The number of decisions already rendered by the liquidation commissions and the various courts totals 6,100. The total number of buildings destroyed was 641,000, of which all have been rebuilt except 3,900, which still remain to be reconstructed. So far, the destroyed buildings have been replaced by about 813,000. Out of a total of 7,515,460 acres of land rendered useless, all but 6,500 acres have been reconditioned.

The foreign trade returns for December indicate total imports to a value of 4,330,435,000 francs, as compared with 5,010,257,000 francs in November, and 5,010,247,000 francs in December, 1929. Exports totalled 3,226,934,000 francs, against 3,440,404,000 francs in November, and 4,478,942,000 francs in December, 1929. The figures for the twelve months just closed are as follows:—

Imports.	1929.	1930.	Difference in
	Francs.	Francs.	1930.
Foodstuffs	13,167,422,000	11,814,250,000	- 1,353,172,000
Raw materials ...	35,125,030,000	29,299,328,000	- 5,825,702,000
Manufactured goods	9,928,170,000	11,230,791,000	+ 1,302,621,000
Totals	58,220,622,000	52,344,369,000	- 5,876,253,000
Exports.			
Foodstuffs	6,077,916,000	5,881,368,000	- 196,548,000
Raw materials ...	12,568,172,000	9,990,600,000	- 2,577,572,000
Manufactured goods	31,493,063,000	26,957,684,000	- 4,535,379,000
Totals	50,139,151,000	42,829,652,000	- 7,309,499,000

The effect of the drop in world prices during the year may be gauged from the fact that imports were about 2 per cent. larger in tonnage, although 10 per cent. lower in value. Exports fell off 14 per cent. in value, but only 8 per cent. in tonnage. Purchases of raw materials were 3 per cent. larger in bulk, but nearly 17 per cent. less in value. Exports of manufactured goods had a tonnage 10 per cent. larger, but were 14½ per cent. less in value.

Coal production figures for December show a total output of 4,458,467 tons in the 25 working days, against 4,377,044 tons in November (23 days). This brings the total output for the year to 55,026,000 tons, as compared with 54,924,000 tons in 1929, 52,848,000 tons in 1928 and 52,875,000 tons in 1927. These figures do not include the tonnage from the mines in the Saar area, which average well over a million tons per month. The average daily output from the French mines in December was 178,339 tons (with a labour force of 300,714 units), against 190,306 tons in November (300,355 units) and 186,070 tons (301,425 units) in December, 1929. The

pits within the pre-war French frontiers furnished during December 22,108 tons per day more than in 1913, but 7,806 tons less than in 1929. Production figures for January are expected to show a still further decline from the fact that the Northern pits (now that hopes of profiting from a British strike are ended) have now found it necessary to cut down working time by one day per week. Coke production by the colliery plants in December totalled 423,804 tons, against 416,798 tons in November, and 424,410 tons in December, 1929. The total output of metallurgical coke during the year was 5,054,812 tons, against 4,781,169 tons in 1929. Total coal and coke imports in 1930 were 30,665,672 tons, with a value of 4,488,000,000 francs, against 30,418,283 tons (4,288,483,000 francs) in 1929, and 22,867,000 tons (583,997,000 francs) in 1913. Imports of coal in December totalled 2,044,000 tons (against 1,932,000 in November, of which 1,111,973 tons came from Great Britain (against 1,073,822 in November), 350,000 tons from Germany, 275,000 tons from Belgium-Luxemburg, and 189,000 tons from Holland. Last week's entries of foreign coal at Rouen totalled 105,000 tons, against 77,000 tons. Similar increases are reported from the other ports.

GERMANY.

Politics — Agricultural Relief — Financial Plight of Berlin — Copper Subsidy.

BERLIN, January 27.

(FROM OUR CORRESPONDENT.)

DR. CURTIUS' return from Geneva was not received with rejoicing. The German public, however, realises that if the outcome of the proceedings of the League Council was not a triumph for Germany, the attitude of the Council to the German-Polish question has refuted the idea that decisions at Geneva depend entirely on the opportunism of the victor powers, without any reference to the justice of a given claim.

It is of the greatest importance that an end has been put to Germany's complete despair of the possibility of international co-operation. Just as events in German home politics steady or disturb the course of foreign politics, so, at present, foreign politics determine the possibility of resistance to the destructive forces at home. If reason is to become a political force at home, it must prove its value by protecting Germany against foreign injustice, and no Government which practises *Realpolitik* can maintain itself in Germany if this *Realpolitik* does not protect the German people from patent fresh injustice.

It is to be presumed that Herr Curtius' position has been strengthened by his attitude at Geneva and its results. His own party, the German People's Party, has been so bound to the Government by it that it will probably form part of Herr Brüning's certain following for the rest of the session. It is certain also that the Social Democrats will not refuse their support to the Cabinet. The speeches of the Chancellor and his closest political friends, especially Dr. Kaas, the President of the Centre Party, have been directed against the National Socialists with increasing energy during recent weeks. The National Socialists themselves have declared that they do not want any share in the Government during the life of the present Reichstag. There has recently been no lack of persons who would like to bridge the gap between the Centre and the Radicals of the Right, but these intermediaries have almost all abandoned their activities, and the Brüning Cabinet now has more clearly than ever the character of an anti-Hitler Cabinet, with a consequent greater certainty of support from the Left.

Parliamentary difficulties may, however, arise from the agrarian problem. The agricultural organisations are again asking for heavy increases in the duties on foodstuffs, and even the Food Minister, Dr. Schiele, though he has lost influence with a large circle of agriculturists for being too moderate, appears to have identified himself with proposals which are hardly reconcilable with the interests

of consumers or with the necessities of German commercial policy. Nor has any agreement been reached on the question of subsidies and credits for the Eastern Provinces.

The differences of opinion within the Cabinet which seemed to have been settled last week, have now broken out again. Measures of the scope envisaged by Herr Treviranus and even by Dr. Schiele would be so costly that the Finance Minister has not yet given his final consent. The plan at present under consideration was drawn up by Dr. Silverberg, and is sufficiently extensive to meet the wishes of the agriculturists. It would be financed by a continuance of the industrial tax from 1932 to 1936, the proceeds to form a fund for the granting of mortgages at reduced rates. The fund would not belong to the State, but to industry, and representatives of industry would have the ultimate decision as to what was to be done with the sums paid as interest and amortisation.

Political objections have been raised to this scheme, according to which industry, as such, would become the creditor of agriculture. Chief among these is the difficulty of seeing how, in the absence of an improvement in economic conditions, the Treasury can do without the proceeds of the industry tax. Moreover, the Silverberg proposal anticipates the raising of a loan by the fund to supplement its resources, and it is very doubtful whether this would be possible. The dispute is not, however, confined to the question of finance. The Government had intended that relief in future, as in the past, should only be extended to those farmers who appeared likely, after searching investigation, to be really helped by the credits and to be able to repay them on the easy terms prescribed. The agricultural organisations, however, object to such strict selection, and demand a much more comprehensive distribution of assistance. The Silverberg plan does retain the principle of inquiry into credit-worthiness, but leaves the decision so entirely in the hands of the farmers' representatives that it would be impossible to rely on the strictness of the selection. Although there are a great many progressive farmers in Germany who are anxious to help themselves, the spirit of the associations is one of distributing relief and appealing to the State whenever the coffers are empty.

Dr. Brüning's principal desire is to get the 1931 Budget through Parliament. Greatly as the farmers' demands are hampering the conduct of business at the moment, they do, on the other hand, afford him an opportunity of winning the support of the various agrarian groups by partial concessions and by making the fate of their demands dependent on that of the Budget.

Of all German towns Berlin is in the most disquieting financial position. The total debt of the city, at Rm. 1,600 millions, is not immoderately high, as the resources of the city were recently estimated at Rm. 2,600 millions, but nearly Rm. 500 millions, almost one-third of the debt, consists of short-term obligations, and in the present extraordinarily difficult state of the German capital market renewal is difficult. The issue of a long-term loan is almost impossible on the home market and quite impossible abroad, as is evident from the New York and London quotations of existing Berlin loans. In the first half of 1931 about Rm. 150 millions of the city's short-term debt falls due for payment, and the city has decided to meet its payments, at least in part, by the sale of city property, though that also is difficult at this time of general depression. Public utility shares are to be sold first, and negotiations are at present going on for the sale of the city's shares in the Berlin gasworks. The entire holding amounts to over Rm. 100 millions, and it is intended to sell about half. The Prussian State, or rather its electricity holding company, the Preussische Elektrizitäts A.G., already possesses numerous gasworks in Central Germany, and its credit stands high, as last year it founded, in conjunction with certain Swiss bankers, a finance company in Basle, the Continentale Elektrizitätsunion. The sale of Berlin gasworks shares to Prussia would be the simplest way of providing State assistance for the financially burdened capital.

The Government decided last year to discontinue all subsidies to particular industries. An exception to this decision is Mansfeld, the only copper-producing company in Germany, though the total output from the copper mines of this company, amounting to about 23,000 tons, covers only 10 per cent. of the country's requirements. Its cost of production is extraordinarily high, as the yield of copper is small and the mines have to be worked at a great depth. So far it has been impossible to reduce costs below 15 cents a pound, so that with the current world price little over 10 cents the company is working at a heavy loss. In consequence the company wanted to close down in the spring of 1930, but this would have thrown 12,000 people out of work in a district where there is no alternative employment. The Government therefore determined to subsidise the company, on social-political grounds, in the interest of the workers. The Reich and the Prussian State are to pay Rm. 6.8 millions a year for the next two years, and the company is pledged in return to maintain production and to meet further losses, estimated at about 2½ million marks a year, out of its own resources. There was strong opposition to this decision, but the Government carried it on the grounds that there was no possibility of finding other employment for the Mansfeld workers, and that the loss of revenue and the cost of unemployment benefit would far outweigh the subsidy.

ITALY.

New Bank Governor — Stock Exchange — Company Embarrassments — Bank Return.

(FROM OUR CORRESPONDENT.)

TURIN, January 15.

THE Board of Directors of the Bank of Italy, which exercises functions rather of supervision on behalf of the shareholders than of direct management, has appointed Signor Vincenzo Azzolini as successor to Signor Stringher, the late Governor. The appointment was agreed to by the Government, as is required by law and the rules of the bank. Many other names were rumoured, including those of prominent politicians; but the Government and the representatives of shareholders' interests evidently felt that the bank ought to be kept away from even the suspicion of meddling with politics. Signor Azzolini, like Signor Stringher, comes from the ranks of Treasury officials. Born in 1883, he took part in the Paris negotiations which led, in 1906, to the conversion of Consols from 4 to 3.50 per cent; in 1927 he was appointed Director General at the Treasury, and soon afterwards Director General of the Bank of Italy, when Signor Stringher was created Governor.

The best wishes of the economic and financial community greet the new Governor at his accession, especially as it comes at such a difficult time. Last year was a thoroughly bad year for all those concerned in finance. There is no direct connection between the big campaign for the reduction of prices initiated with the reduction of public employees' salaries on November 20th and the state of the bourses. Nobody asked for a fall in the securities quotations. But the bourses were, as it appears, in an irritable and gloomy temper, and a new slump took place. The following are the indices of variable-dividend shares, as worked out by the Milan Council of Economy:—

	DECEMBER, 1925 = 100.					
	Dec. 29, 1928.	Dec. 24, 1929.	May 3, 1930.	Oct. 31, 1930.	Nov. 29, 1930.	Jan. 3, 1931.
Banks	110.5	98.2	102.4	95.3	92.8	92.4
Navigation and trans- ports	80.4	80.2	84.0	73.8	68.7	66.4
Textiles	42.6	24.3	28.4	21.8	20.1	19.0
Minerals, metallurgical and engineering	97.0	76.1	80.0	66.9	63.1	60.8
Electrical	103.3	99.2	100.5	89.1	82.7	77.6
Land and real estate ...	80.5	71.1	68.4	61.5	51.2	48.0
Food and miscellaneous	96.7	98.0	104.5	86.1	80.5	73.1
General index	88.3	81.2	84.2	74.2	69.4	66.4

After a short-lived spurt in the spring, quotations went from bad to worse, until in some groups of stocks the unlucky shareholders have been left with a thin slice of their former assets. Banks, the electrical industry and food have sustained best the brunt of the depression. The slump in individual cases was much more marked than the indices suggest. For instance, Cotonificio Veneziano's index was, on January 3rd, at 3.54; Snia Viscosa at 8.58; Officine Meccaniche at 5.09; Aedes (real estate) at 10.16; and Fondi Rustici at 13.25 per cent. of their 1925 basis. Bonifiche Ferraresi, after being, on August 29th, down to 2.63, were dropped altogether from the index, as past any hope of recovery; and the Roman Immobiliare Co. was substituted.

The feature of the slump was the fall of old-established concerns, which were considered as a safe port for thrifty and prudent investors. Only less astonishing than the fall in Bonifiche Ferraresi, of which I have written in previous letters, is that of Fondi Rustici. This is a company formed in 1905 to buy a vast extent of agricultural land, which after the 1893 crisis had been left by mortgaged owners to the Bank of Italy. The purchase consideration was so low that, with careful management, the company ought to have had a very successful career. Successful it was, indeed, for a time; until, after the inflation, the demon of selling good old developed estates and embarking in new speculative ventures took hold of the board of directors. A merger with a company formed to redeem the ancient Pontine marshes and some dubious transactions between directors precipitated the situation. With great patience, under the leadership of men of experience, reconstruction should ultimately prove possible.

The same may be said of another big affair which is attracting the attention of thousands of capitalists and families of very modest means in Northern Italy. The Italiana Gas Co. was a small Turin concern started in 1856, with an original capital of 3,500,000 lire, which in 1907 had been as yet only increased to 4 million lire. In 1918 the capital was increased to 10 millions, in 1924 to 80, in 1925 to 130 and 146, and in 1928 to 260 million lire. The old gas-producing concern was transformed into a holding company. How many companies were affiliated with the Italiana Gas Co. is not easy to know; certainly not less than 32. The net of interlocking capitals and of huge debts became so entangled, that a winding-up was necessary. At a stormy meeting of the shareholders a new board of directors was appointed, charged with the disagreeable duty of reconstruction. The new chairman of the board is Senator Frassati, an ex-Ambassador to Berlin, an energetic man, who has kept aloof from politics since 1923. Shareholders trust that he is the man best capable of rescuing from the wreck as much as can be saved; but in the meantime shares, which rose during the speculative frenzy as high as 800, are changing hands at 45 lire.

The technical situation was made worse by the announcement on the morning of December 30th that Signor Giani, a widely-known broker in Milan, was not to be found at his usual desk in the Bourse and had sent a letter purporting to show that he was unable to meet his engagements. As these amounted to about forty million lire, the monthly settlement appeared difficult. It soon became apparent, however, that somebody would have to intervene; and Signor Mazzotti-Biancinelli, perhaps the best known speculative Italian financier, came forward with an offer, as principal of the defaulting broker, to pay Giani's debts by instalments distributed over the next two years. The interesting fact was that Signori Mazzotti and Giani, universally considered as professional bears, should have come to grief over bull transactions. Obviously the difficulty of digesting so big a figure as 40 million lire makes bourses uneasy; and everybody is asking whether we are at the bottom of forced liquidation and low prices, or not.

As yet liquidation of bad businesses and distressed concerns has not affected that bulwark of financial sanity, the Bank of Italy. The public was somewhat disturbed that gold and gold securities fell below the 10,000 million

mark for the first time after the stabilisation on November 20th. On December 20th total reserves were at 9,590.7 million lire, against 10,260.1 on September 30th; a serious loss of 669.4 million, probably caused by big imports of wheat in recent months. As, however, the notes issued decreased also, between the same dates, from 16,171.7 to 15,608.5, while discounts and advances, as shown below, are normal, the monetary situation seems sound.

DISCOUNTS AND ADVANCES.

	(Million lire.)	1928.	1929.	1930.
March 31st.....	3,911.7	5,299.1	4,489.5	
June 30th.....	4,948.2	6,132.5	4,730.4	
September 30th	4,509.4	5,571.9	4,247.6	
December 31st.....	5,655.9	6,233.9	4,789.0*	

* December 20th.

What the proportion of frozen credits, if any, to the total may be, it is impossible to say, but certainly as long as there is no inflation in the discount and advances figures of the Bank of Italy, the core of the economic situation is sound, and, no matter how long the depression drags on, no essential organ is out of gear.

HOLLAND.

Money — Trade — Savings — Public Debt — Capital Issues.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, January 10.

THE great liquidity of the money market in Amsterdam is clearly illustrated by the average prolongation rates, as below:—

	1929.	1930.
1st quarter	4.7726	2.8036
2nd quarter	5.6652	2.5368
3rd quarter	4.9508	1.7803
4th quarter	4.2091	1.6073

These low rates have naturally been detrimental to the interests of the banks, and the profits of the credit establishments for the past financial year are being estimated at a much lower figure, as a result of which the shares of the principal banks have declined considerably.

The plentiful supply of money and the low rates of interest and discount are caused partly by the insignificance of the requirements of new capital by Dutch enterprises, while at the same time there is a constant flow of foreign capital towards our market. Despite the high money rates in Germany, there is very little attraction in investing money there, because of the precarious political situation, and the result is that foreign capital seeks refuge in the Netherlands.

Another factor contributing to the extraordinary liquidity of the money market is the lack of activity on the Amsterdam stock market. All kinds of rumours continue to find a ready welcome there, while too little attention is evidently paid to undeniable facts, such as are to be found in the official statistics. One fact, for instance, is that the State revenue in November exceeded the annual estimate by several hundred thousand guilders, notwithstanding that the estimate was issued at a time when the crisis of 1930 could not possibly have been foreseen. To offset the argument that the proceeds of direct taxation cover a period some time past, it may be pointed out that the import duties in the first eleven months of 1930 amounted to 62,341,711 guilders, or over a hundred thousand guilders more than in the corresponding period of 1929. From these facts it can be concluded that both our trade and our industry are being remarkably well maintained. The radio statistics, for instance, show that wireless goods to a value of 58,646,000 guilders were exported from the Netherlands in the first eleven months of 1930. Owing to the prevailing lower prices of the articles themselves, the value is of course lower than during the corresponding period of 1929, when

HUNGARY.

Public Finance — Commercial Treaties — Foreign Trade — Banking and Dividends — Stocks and Prices.

(FROM OUR CORRESPONDENT.)

BUDAPEST, January 17.

THE economic prospects of the New Year are not bright. In order to secure the equilibrium of the Budget, Parliament has voted additional taxes affecting salaried employers' and directors' fees. Also the postal and telephone rates were increased. It is expected that the additional taxes and dues will bring into the Treasury about 30 million pengő. At the same time an Economy Act was passed providing for curtailing the expenditure by 45 million pengő. It is of paramount importance that the projected economies should be carried into effect because owing to the economic depression the Treasury's receipts are considerably smaller than in previous years. According to the Finance Minister's report, the estimated deficit for the first five months of the present financial year (July-November, 1930) is 59.9 million pengő. Expenditure in July-November, 1930, as estimated by the Treasury, amounted to 409.0 million pengő, as against 416.9 million pengő in the same period of 1929. Revenue in July-November, 1930, totalled 349.1 million pengő, as against 388.2 in the corresponding months of 1929. The Budget for 1931-32 is in preparation, and it is of imperative necessity that expenditure should be further reduced, as the receipts of the Treasury are not likely to increase in 1931.

Negotiations for the renewal of the Commercial Tariff Treaty with Austria are going on, and it is to be expected that an agreement will be reached before June 1, 1931, when the present Treaty will cease to operate. In all probability negotiations with Germany for the conclusion of a New Tariff Treaty will begin in February in Budapest, following the preliminary parleys between the Hungarian Prime Minister and Dr. Curtius, the German Foreign Minister, when Count Bethlen visited Berlin last November. On the other hand, there is no sign of any resumption of negotiations with Czechoslovakia. That country denounced the existing Commercial Treaty on December 15, 1930, and has so far not made a satisfactory offer for the basis of new negotiations. Consequently there is practically a Customs war between the two countries, which was brought about by the prohibitive duties on the import of flour into Czechoslovakia. It seems that the Customs war will last several months, and this state of affairs will certainly not improve the already unsatisfactory political situation.

Foreign trade returns for the first eleven months show an active balance of 75.3 million pengő, as against a deficit of 58.6 million pengő in the same period of 1929. This bears witness to a remarkable economic adaptation, because it shows that in times of international financial strain Hungary is able to pay for her imports in merchandise exports. The value of foreign trade in consequence of the fall in prices shows a decrease both in exports and imports, but it should be added that the quantity of exports, especially that of live stock, has considerably risen in 1930. The detailed figures are as follows:—

(In million pengő.)

First eleven months:	Imports.	Exports.	Balance.
1929	978.2	919.6	-58.6
1930	766.6	841.9	+75.3

There is little doubt that the December figures will not materially alter the balance of foreign trade, so that Hungary will produce her first active balance since the War.

The money market is easy. Foreign short-term loans are abundantly offered at very low terms, but in view of the depressed economic conditions there is no new demand for them. None the less, banks profit considerably by the low cost of foreign funds, which are lent to their customers. Reliable estimates put the amount of foreign short-term loans placed with Hungarian banks approximately 600-650 million pengő (£20-£25 millions).

the figure was 74,764,000 guilders, but compared with 19,392,000 guilders in the first eleven months of 1928 the value has been trebled, while in terms of quantity the increase has been still greater.

It is also remarkable that the Post Office Savings Bank deposits rose in 1930 to a still greater extent than in the preceding year. At the end of November deposits totalled 363.8 million guilders, as compared with an aggregate of 342.5 millions on the same date in 1929 and 332.1 millions in 1928. The increase is all the more remarkable in view of the fact that the earnings of the agricultural population have certainly been on a much lower scale.

A further reduction in the Consolidated National Debt is shown last year, from 2,461.7 million guilders at the end of 1929 to 2,388.3 millions at the close of 1930. On the other hand, the Consolidated Debt of the Dutch East Indies rose from 974.6 millions at the end of 1929 to 1,072.1 millions at the end of 1930, as the result of the issue of the Indian loan.

In contrast with the year 1929, in which the economic crisis first began to make itself felt, 1930 brought more activity in our market for new capital issues. An analysis of the issues shows, however, a number of important changes. Issues of shares, which in 1929 represented 63 per cent. of the total amounts issued, accounted for only 5 per cent. of the actual amounts taken from our issues market in 1930, the remainder representing issues of bonds and debentures. The search after less speculative investments is also reflected in the proportion of issues for private enterprises as compared with issues for account of public bodies. If the so-called Ecclesiastical Loans be included under the latter heading, it will be seen that of the 601,599,000 guilders issued in 1930, 369,635,000 were for public bodies but only 231,964,000 for private enterprises. The first therefore accounted for 62 per cent. of the total and the latter only 38 per cent. In 1929 the position was exactly the reverse, 375,820,000 being taken from the capital market by private enterprises while only 102,494,000 was for account of public undertakings, that is to say, 78½ per cent. and 21½ per cent. of the total respectively. The very considerable increase in the issues for public bodies in 1930, involving over 267 million guilders more than in 1929, is accordingly solely responsible for the rise of 123 million guilders in the total of issues in 1930 as compared with the preceding year.

The most striking change is this increase in the issues for countries, provinces and municipalities and the very considerable decrease in industrial issues. The latter dropped from 242 million guilders in 1929 to 75 millions in 1930; moreover, only 11 millions of this latter amount were accounted for by share issues, against 224 millions in 1929. The issues of shares in gas, electricity and water undertakings decreased from 21 millions in 1929 to 4 millions in 1930.

Divided into domestic and foreign issues on the Dutch market during the last four years, the figures are:—

	1927.	(In thousands of guilders.)	1928.	1929.	1930.
Domestic ...	162,363	356,272	333,837	352,298	
Foreign	369,256	317,524	144,477	249,361	

The foreign issues included:—

	1928.	1929.	1930.
For Germany	140,309	35,249	142,274
„ Belgium	31,888	22,746	39,197
„ North America...	33,833	18,100	24,218
„ South America...	26,559	13,997	15,071

According to the official statistics, the value of imports into Holland in November, 1930, was 181 million guilders, against 238 millions in November, 1929, and 198 millions in October, 1930. The value of exports also fell considerably, amounting to 126 million guilders in November, 1930, against 166 millions in November, 1929, and 151 millions in October, 1930.

The National Bank has published its balance sheet for 1930, and according to its diminished profits has reduced its dividend from 13 to 12 per cent. The decrease of the profits of the National Bank is due to the lower discount rate throughout the year (on the average 2 per cent. lower than in 1930) and also to the decreased bills portfolio owing to the slump.

Banking balance sheets and dividends are awaited with great interest. One of the foremost financial institutions, the Commercial Bank of Pest, has just published its balance sheet and declared the same dividend as last year of 7 pengő. The total net profits for 1930 amounted to 5,938,510 pengő, as against 6,009,140 in 1929, which is a fine showing considering the bad economic conditions of the past year. The amount allocated for the distribution of dividend is 3,500,000, the reserve fund will be increased by 1,000,000 and 463,605 pengő will be carried forward to the new year. The balance sheet of the Commercial Bank was received with great satisfaction, and it is expected that some of the other banks and savings banks will be able to maintain last year's dividend.

The Stock Exchange is very dull. Quotations touched new low levels. The uncertainty of dividends of industrial stocks is chiefly responsible for the heavy declines. The warning of President Weiss, of the Commercial Bank, that all undertakings should benefit their shareholders according to their earnings and should not demoralise the already depressed market by adjusting dividends to lower quotations is very timely, and it would be to the interest of the credit of the country if directors would act upon his sound advice. During the past year considerable blocks of Hungarian securities placed abroad, mainly in the United States, have found their way back to Hungary and have contributed in no small degree to depress the market. Reliable estimates put the amount of repurchased securities at approximately 70 million pengő (£2,500,000).

The wholesale index at the end of November was 92, against 107 on December 31, 1929. The index of agricultural commodities is 80, that of industrials 120, as against 97 and 132 at the end of 1929. The discrepancy between industrial and agricultural prices has thus been further widened to the detriment of the rural population, whose standard of living is adversely affected by the high prices of textiles, coal, machinery, fertilisers and building material.

Letters to the Editor.

GOLD: PRICES: WAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In his letter appearing in your issue of January 10th, E. M. D. asks the following questions: "Does it not appear to be desirable that, besides a system of wage regulation we should adopt generally a means of securing in practice a more equitable fulfilment of long-term money contracts? And if it is theoretically desirable, are we satisfied that it is quite impracticable?"

It seems to be generally agreed that the principal peculiar disadvantage under which the trade of this country suffers is the rigidity of the structure of its industry and its inability to adapt itself readily to any change in world economic conditions. The causes of this inelasticity are variously attributed to high taxation, the conservative character of the people, an excessive wage level, and the capital structure of a great many companies engaged in basic industries.

With the first two of these causes I do not propose to trouble you. That the wage level is on an average excessive is indicated by the course of the unemployment figures and is, I think, common ground. Your correspondent E. M. D. prefers to call this an "uneconomic relation of basic wage levels in different industries to one another," but admits that such uneconomic relations can only be adjusted in a downward direction at present. This does not, however, solve the dilemma of industry which is faced with the alternative of continuing with an uneconomic wage level with its cumulative burden of unemployment or of endeavouring to secure a reduction in the wage level at the risk of industrial upheavals

of which the cost is incalculable. The rigidity of money wages has been achieved not by a long-term contract but by the perfection of trade union organisation. The sanction of force is for practical purposes apt to be more effective than the sanction of law. The fixed amounts due to discharge the claims of holders of prior charge securities are secured by contract and within the limits of that contract are absolutely rigid. Relatively the burden imposed on industry by too onerous prior charges is less than the burden imposed by too high wages, but the cases are not essentially dissimilar.

I would submit that the moral sense of the community and of the trade unions themselves tends to the view that any necessary sacrifice should be borne in just proportions by wages, salaries and fixed interest capital, after the equity shareholder has made all the sacrifice which is his just liability. The problem of how to induce the fixed interest man to contribute his quota to a general sacrifice bristles with as many difficulties as that of how to induce the wage earner to contribute his. Any suggestion tending to undermine confidence in the strict fulfilment of contracts would have consequences as incalculable as those of an industrial upheaval.

If we are to get away from rigidity, we should cease to burden industry with either wage agreements or interest agreements which, though economic at the time they are made, may rapidly cease to be so and which contain within themselves no provision for the easy and rapid adjustment of the rates of wages or the rate of interest to new economic conditions. If a wage scale to vary with a recognised index is advocated as a means of bringing about necessary readjustments quickly and with the minimum of dislocation, the "fixed interest" investor should be induced to lend his money on a security on which the rate of interest also varied with a recognised index, preferably the same index as that by which wage rates were regulated. Such a system, while allowing variations in money income, would tend to keep real income more stable and would have the advantage of increasing the probability of the capital of the safety-first investor remaining intact.—Yours faithfully,

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Equality. By R. H. Tawney. (London) George Allen and Unwin, Ltd., 40, Museum Street. 7s. 6d. net.

This book is based on a series of lectures delivered in 1929 under the auspices of the Halley Stewart Trust. The author discusses the meaning of equality, the various aspects of class distinctions, their past history and possible future diminution.

The Development of Local Government. By W. A. Robson. (London) George Allen and Unwin, Ltd., 40, Museum Street. 12s. 6d. net.

An interesting account of the most important questions relating to local government, including the municipal structure, the functions of local authorities, public health administration, etc.

OFFICIAL PUBLICATIONS RECEIVED.

The Stock Exchange.

THE PRICE OF NEW CAPITAL.

For many years past we have analysed the results of new capital applications in London, with special reference to the price at which borrowers have satisfied their requirements. The volume of new capital borrowed last year was sub-normal, as a result of industrial depression and Stock Exchange inactivity. Industrial concerns, new and old, whose capital applications had reached a high total in 1927 and 1928, but had tended substantially to fall off in 1929, remained largely outside the market in 1930. Among other borrowers, home municipalities were fairly prominent in the earlier months, but there was no widespread tendency to accelerate the carrying out of large public works, and the flow of new corporation issues was reduced to a mere trickle in the latter part of the year. The issue of foreign bonds was restricted by world-wide economic depression, a secondary effect of which was the occurrence of numerous revolutions, which, in turn, accentuated the political risk attaching to foreign securities in the eyes of the investor. Even British Dominion flotations which have long enjoyed a specially advantageous position in London by reason of their trustee status, were discouraged by the publicity given to the difficulties of Australia. The British Government, whose credit position was sensibly improved by the rise in the price of gilt-edged stocks after cheap money had been established, did not effect any very considerable amount of new borrowing after a somewhat high-priced operation early in the year.

The world-wide depression, in short, left its imprint on the capital market last year, as on other branches of national activity. If the average annual issues in London for the years 1925-27 be taken as 100, the figures for succeeding years are: 1928, 135; 1929, 105; and 1930, 98. Omitting all borrowings by the British Government, the figures show the following annual movements: 1925-27 (average), 100; 1928, 122; 1929, 95; and 1930, 86.

A second feature of the year's story was a significant decline in the flotation of new "equity" capital. The investor, intimidated by the widespread decline in Stock Exchange quotations for existing shares, insisted on more stringent requirements in the matter of security. As the following table shows, no less than 85 per cent. of the year's public offerings took the form of bonds or prior charge securities:—

PUBLIC ISSUES OF NEW CAPITAL IN LONDON.

Class.	1913.	1927.	1928.	1929.	1930.
Debentures, bonds, &c.	139,920,400	228,958,000	212,817,900	137,670,300	227,658,500
Preference stocks and shares	22,955,600	36,836,600	45,062,600	31,543,400	15,548,800
Ordinary stocks and shares	33,661,300	89,371,400	111,177,600	116,017,600	24,593,300
Total	196,537,300	355,166,000	369,058,100	285,231,300	267,800,600

If the total issues are divided as between Government and municipal borrowers and industrial borrowers, it appears that whereas in 1929 governments and municipal authorities, at home and overseas, raised £108 millions of new capital in London, and general industry (including transport), £177 millions, the former increased their total in 1930 to £181 millions, while the "industrial" aggregate, at £87 millions, was less than one-half of its dimensions in 1929.

The increase in "public" borrowings, however, is not to be attributed to lower rates for long-term capital resulting from cheap money in the short-term market, for, indeed, the following table, which contrasts the average interest yields offered by three groups of Government borrowers in 1929 and 1930 shows that no such

fall has taken place. All rates are shown subject to British income tax, and profit on redemption is allowed for when necessary:—

12½% to 13½% ...	...	...	...	...	...	1,760	...	1,760	...
Total	152,437	67,000	58,040	26,366	49,081	3,650	21,330	97,016	128,451
Average yield %	4.77	5.00	4.67	4.97	5.57	7.21	7.14	5.07	5.43

* Includes all borrowing at over 6%. † This total of £52,437,000 includes £26,299,000 by Colonial Governments, at an average yield of 4.15%, and £26,138,000 by Foreign Governments, at an average yield of 5.31%. The British Government was not in the market.

The figures for British Government loans exclude net receipts of £7,600,000 from sales during 1930 of National Savings Certificates, the yield on which varies according to their "life" before encashment. Leaving these non-marketable securities out of account, the British Government borrowed at a somewhat lower rate last year than in 1929, when the figure was swollen by the issue of a 5 per cent. Conversion Loan in a period of tight market conditions. The decline in the average rate paid by foreign borrowers outside the British Empire was negligible, while that paid by Dominion and Colonial Governments actually rose by over ½ per cent. This higher yield was, however, due in the main to the fact that the Indian Government borrowed on three occasions on a short-term basis. The Indian Government's total borrowing in London in 1930 was £24,870,000, giving an average yield of 6.19 per cent. to the investor. The average yield on other colonial government borrowings in 1930 was 4.93 per cent., which was a slightly lower yield than the average for 1929.

The average rates offered by municipal borrowers and by railways are shown below:—

	Amount borrowed in Years			Average Yield.		
	1928.	1929.	1930.	1928.	1929.	1930.
British municipalities, &c.	14,871,000	8,316,000	11,657,600	4.75	4.96	4.98
Colonial municipalities, &c.	7,236,100	3,859,917	3,001,500	5.25	5.19	5.09
Foreign municipalities, &c.	4,332,000	472,500	NH	6.61	6.90	...
British railways	2,080,900	1,920,000	13,164,500	5.21	5.36	5.12
Colonial railways	NH	NH	2,512,500	...	...	5.95
Foreign railways	3,070,000	2,835,000	7,615,000	6.34	5.30	5.66

British municipalities borrowed on a much larger scale in 1930 than in 1929, offering a practically identical average yield. For the first five months of the year they paid just over 5 per cent., but as the year advanced cheaper money rates enabled them to borrow at about 4½ per cent. Five debenture issues on behalf of British railways were made at a lower yield than in 1929. Foreign railways, however, paid a higher rate of interest on their borrowings in 1930 than in 1929.

The average rates offered by industrial borrowers are shown in the next table:—

Average yields%	5.5	6.18	6.08	6.05	5.97

* Including all capital yielding over 6 per cent.

The average yield on industrial debentures has been very slowly, but quite regularly, declining over the last few years. Last year the average was approximately ½ per cent. more than before the war. The figures, however, do not show that capital was markedly cheaper in 1930 than in 1929, the difference between the average rates in the two years being only 0.08 per cent. Some 68½ per cent. of the total borrowings were effected at a price of under 6 per cent., against 59 per cent. in 1929 and 46½ per cent. in 1928.

The popularity of the preference share, in this country, has been waning for some years past. Though underlying conditions last year favoured fixed interest as distinct from equity stocks, preference shares formed a very small proportion of the whole, their total representing less than 6 per cent. of the aggregate emissions. The average rates offered in recent years are shown in the next table:—

PREFERENCE STOCKS AND SHARES.					
	1913	1920	1921	1922	1923
5-74	5-74	5-74	5-74	5-74	5-74
8-09	8-09	8-09	8-09	8-09	8-09
8-39	8-39	8-39	8-39	8-39	8-39
7-17	7-17	7-17	7-17	7-17	7-17

The average rate paid in 1930 was less than in any other year during the last decade, but this result was mainly due to the fact that two borrowers (the Southern Railway and the "Shell" Company, who jointly accounted for over half the preference total) were of admittedly high credit reputation. The average offered in these two cases was 5.1 per cent. and 5.6 per cent. respectively, while the yield on the remaining preference issues was as high as 6.6 per cent.

The results emerging from this investigation are shown in a long-term context in a final table, where "short-term" and "long-term" money rates are compared for each year since 1920:—

	Average Bank Rate.	Average 3 Months' Bill Rate.	Average Rate Paid by all Government Borrowers.	Average Rate on New Issues of Industrial Debentures.
1913	4.77	4.37	4.77	5.5
1920	6.82	6.40	6.05	7.92
1921	6.12	5.21	6.49	8.09
1922	3.79	2.65	5.65	6.72
1923	3.49	2.70	5.34	6.4
1924	4.00	3.54	5.95	6.61
1925	4.55	4.10	4.82	6.43
1926	5.00	4.52	6.01	6.48
1927	4.65	4.24	5.09	6.18
1928	4.50	4.15	5.09	6.10
1929	5.50	5.27	5.07	6.10
1930	3.42	2.61	5.43	5.96

Thus, there was no fall in the price of new long-term capital last year comparable with the decline in money-market rates. Even when allowance has been made for

the effect of high-yielding short-period borrowing by India on last year's "Government" figure, it may confidently be stated that the steady decline in the average yield on new Government securities, during the first half of the post-war decade, which was abruptly checked five years ago, has not yet been resumed. On the other hand, borrowers on industrial debentures have, on the whole, benefited from a steady reduction in the rate of interest on their new issues, which has been largely independent of fluctuations in short-term money rates. These figures in themselves do not tell the whole story regarding the "net" rate on long-term investment as determined by demand and supply, for the figures of 1930, like those of other years, include a "risk" premium, which has unquestionably increased during the present slump, both as regards overseas Governments, whether of the Empire or of foreign countries, and industrial undertakings. But even if this influence is in part responsible for maintaining rates, there is certainly no sign in these tables of any superfluity of savings seeking a permanent home—in spite of a not very active demand. In short, the fall in long-term interest rates has still to come.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
February 3.	February 5.

THE week's gains and losses were, with few exceptions, of minor importance, and reflected no change in underlying market conditions. A very few operators endeavoured to put some shares better, early in the week, on the possibility that the Government (which cannot by any stretch of imagination be described as popular on the Stock Exchange) would come to grief over the Trade Disputes Bill. The result of Wednesday's decision, however, had been correctly forecast by the majority of dealers, and only a limited reaction in prices occurred. Gilt-edged benefited from the improved foreign exchange position, following the levering-up of money market rates, though the effect was a halt in the downward tendency of values, rather than any definite improvement. Speculative activity was again concentrated almost chiefly on one group—South African gold mines—which continued to make headway despite incipient profit-taking.

Gilt-edged stocks were less stable than in previous weeks, but their downward movement was arrested when the appreciation of the franc exchange above the gold point, following the authorities' efforts to strengthen bill rates, removed immediate apprehensions of more drastic action. War Loan, however, was easier and Funding Loan was sold. Some holders of India stocks interpreted the release of the Congress leaders as a "bear" point, but though prices were marked down, no large volume of selling occurred. Australians were moderately steady, despite the fresh drop in the exchange rate.

Foreign bonds attracted little interest. Brazilians however, reflected the weakness of the milreis, though a few buying orders in mid-week caused a partial recovery. Far Eastern stocks remained firm, while among European issues Germans were in better demand, and Austrian Sevens were bought from Vienna.

Scattered selling gave a weak appearance to home railway stocks. The week's traffic figures were discouraging, but a heavier blow was the Metropolitan final dividend, on Thursday, which brought the year's distribution to 3½ per cent., against 4 per cent. for 1929. In view of the company's increased gross receipts, the decision was a complete surprise, and caused a break of 4 points in Metropolitan ordinary. Little business was done in foreign rails, a modest recovery in Argentine stocks at the beginning of the week collapsing on the publication of a further batch of bad traffic figures. American rails (whose position is dealt with in a note on page 244) opened firm, but lost ground in mid-week.

The recovery in industrial shares, initiated last week, proved short-lived. The market was

(Continued on page 240.)

Dudley H. Mills, Vice-President-Secretary.	Edward E. Anderson, Treasurer.	Thomas G. Schaedle, Asst. Treasurer.

DISCOUNT CORPORATION OF NEW YORK
TELEPHONE: John 4-0010.
OFFICES: FIFTY-EIGHT PINE STREET
FORWARD RATES AND SPECIAL OFFERINGS ON REQUEST.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

Notes.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yield on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 236.)

less affected by definitely unfavourable news than by a general atmosphere of aimlessness and lethargy. The reduction in the Watney Combe interim dividend from 8 per cent. to 7 per cent. checked investment buying of brewery shares. Dealings in tobacco shares were fewer than for weeks past. Electrical issues remained steady. In the motor group, Fords were easier on profit-taking and Leylands suffered a further decline. Iron and steel shares were featureless with the exception of Babcock and Wilcox, which were bought from the provinces, on the placing of a large boiler order by the London Power Company. Little interest was taken in textiles, though J. and P. Coats hardened slightly. Following the Royal Mail circular (discussed on page 242) Royal Mail ordinary fell 2½ to a nominal 7½, but other shipping securities were unaffected. The twelve months' receipts of the Imperial Communications Company (analysed on page 243) were disappointing, and Cables and Wireless stocks were sold on fears that the preference dividend had not been fully covered. Insurance shares were steady and banks remained firm, though dealings were of small dimensions.

The rubber share market was easy on the decline in the price of the commodity to the 4d. level. A "bear" movement forced down the price of Rubber Trusts still further, though covering produced a slight rally on Wednesday. A better tendency in tea shares proved short-lived, the appearance of a few small sellers causing prices to give way. Amalgamated Teas remained dull, and Jhanyies declined sharply on a modest amount of selling. Though Paris was a tentative buyer of its favourite oil shares, domestic business showed slight expansion. The market leaders, however, held their ground.

In the mining share market, Kadirs continued to monopolise attention. The outlook is discussed in a Note on page 242. Union Corporation and Randfontein were among the leaders, and East Geduld rose sharply later in the week on a satisfactory development cable, Geduld following suit. Rhodesians were almost featureless, "Chartered" being sold rather heavily from Paris, while among the Northern issues changes were mostly against holders. Tin shares were irregular, and Tintos weak. Australians were an active market, and, among West Africans, Ashanti received further attention.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Markets opened undecided, and in mid-week became reactionary. The change in sentiment was due to various factors. Bond offerings, it is believed, have been overdone. Fears over the proposal to pay cash on Veterans' Compensation Certificates have also affected the market. Despite Mr Mellon's assertion that the payment would involve the Government in a borrowing operation of \$3,500 million, the measure is recognised as having strong political forces behind it. The seasonal recovery in trade has been exaggerated in some quarters. Steel production is showing a relatively slow upward movement, which does not speak well for first quarter's earnings. Car loadings showed only a moderate increase last week. The various railroad figures for last year, which have been appearing this week, do not come up to the most optimistic expectations in every case, and the recovery in share values has been arrested. The week's reaction has been particularly noteworthy in Liberty Bonds, some of the selling coming from financial quarters which would regard the passing of the Veterans' legislation as a prelude to increased taxation.

INVESTMENT NOTES.

Stockbrokers and Their Liability.—Stockbrokers have been feeling a natural anxiety this week at the result of the action of Davidson v. Schwab and others. Apart from raising troublesome questions about the agency position of the half-commission man—a very difficult and unsatisfactory matter—the action turned on whether a firm of stockbrokers gave negligent advice and were liable for the client's loss of capital. Lady Theodora Davidson won her case, and as the first Press reports were so much abbreviated as to give an incorrect impression of the facts and the jury's finding, members of the Stock Exchange seemed to be faced with the possibility that all unsuccessful advice given to a client was advice negligently given and carried with it a liability for subsequent depreciation. If this view were correct a large part of the capital losses of the last eighteen months would be transferable from the shoulders of investors to the backs of their brokers, the broadest of which would be likely to crack under the strain. Insurance, by an old oft-quoted definition, is a means whereby losses are made to fall rather lightly on many than heavily on a few, and it seemed to some stockbrokers on Tuesday that the Stock Exchange was working on precisely the opposite plan. Fortunately, when the verbatim report of Mr Justice Horridge's summing-up was published it threw a very different light on the case, making it clear that the advice given by the half-commission man did not consist in saying, "I recommend you to buy such and such a share," but went very much further. Being approached by Lady Theodora Davidson for help in her investment business he not merely held himself out as an expert but said it was essential for her to fill up a card with the list of her holdings, undertaking to watch them for her and advise her in such a way as to produce

capital appreciation and a higher yield. Such an offer as this is very far removed from the ordinary advice of a broker, and would appear to impose on the man who makes it a higher standard of caution than the ordinary; but so far from working to a higher standard the gentleman apparently sold sound Corporation stock and invested the proceeds in speculative shares. He even went so far as to carry over because there was not enough money in the account to pay for the shares outright, and admittedly did not explain to his client the significance of what he was doing. In view of such facts it is not surprising that the jury found there had been negligence, and where negligence is proved no one supposes that the stockbroker, any more than any other agent or professional adviser, is free of liability for the results of his conduct. The surgeon who negligently advises an operation, the nurse who negligently forgets a hot-water bottle, the solicitor who negligently advises on a point of law, the accountant who negligently passes a fraudulent balance sheet, the insurance broker who negligently leaves a client uninsured—all are liable for the consequences, because they have fallen short of the skill which they hold themselves out to possess. The only happy exception is the barrister, who brings the sins of other professional men home to them. He, be he never so negligent, is immune. The mere stockbroker must not expect such peaceful security as is enjoyed by the more learned gentlemen who cross-examine him.

Australian Finance.—The market in Australian Government stocks has found difficulty in interpreting the surprising and somewhat conflicting news which has been cabled from that continent. On balance it has closed higher but not without giving the benefit of many doubts to Mr Scullin. Why has Mr Scullin secured the re-appointment as Federal Treasurer of Mr Theodore, who has not yet cleared his name from the Mungana scandals, and so alienated his supporters in the Cabinet who upheld the fight for economy and reform in his absence? The political situation created by Mr Theodore's return is discussed at length in a "Note of the Week" on page 224. Meanwhile, the market has been partially reassured by the news of the decision of the Federal Arbitration Court ordering a reduction of 10 per cent. in the wages of members of all trade unions coming within its jurisdiction, with the exception of the Union of Wool Shearers, who are paid for piece-work. The decision was taken on the ground that "the sudden and violent change in the economic conditions of the Commonwealth

31st December, 1930.

made the maintenance of the existing standard wages impossible." The reduction is to take effect for twelve months from February 1st, and may be extended, if necessary, for a further period. It applies to all trade union workers, whether they are in receipt of the basic wage or a higher remuneration. The basic wage varies in the different States, but the average is £4 3s. a week, the lowest rate being about £3 12s. 6d. a week in Queensland. The Federal Court, however, has no power under the constitution to enforce its decisions. Hence it cannot be assumed that an immediate reduction of 10 per cent. in the Australian wage level will necessarily result from this decision. The further depreciation in the Australian pound, which is now quoted at £130 per £100 sterling in London, emphasises the serious problem which Australia has to face—that of finding sufficient exchange cover to pay for its imports and meet its external debt obligations. Its primary exports are still selling at low prices—wool prices at this week's auctions in London were 15 per cent. to 20 per cent. below those of the previous auctions. Whether a substantial debit in Australia's international balance of payments may necessitate the raising of a loan in London is discussed in our earlier "Note." The market has no confidence whatever in the success of Mr Theodore's reported plan to "control" the exchange. Measures of this nature have been tried already in many countries, and have invariably and ignominiously failed.

Transfer of American Securities.—Some misapprehension was caused by a notice posted in the Stock Exchange on Tuesday to the effect that, as from January 26th, "American" shares in the names of limited liability companies, corporations, societies or institutions, would constitute a bad delivery. In some quarters this was taken as a move directed against "nominee" companies established by banks, etc., to hold securities on behalf of customers, and as being calculated to further the interests of the Stock Exchange firms which specialise in the business of holding clients' shares in their names. The Stock Exchange Committee were, in fact, criticised for their alleged "parochial" spirit. Actually, it has been the practice, for a considerable time, for American share certificates carrying endorsements by the registered holders to change hands more or less on the lines of bearer shares, in order to prevent the delay of sending shares to the United States for registration, which would obviously restrict their negotiability. The Committee's decision, however, was based on a literal interpretation of Rule 135 (2), which states that "a member shall not be required to accept delivery of American shares or registered bonds in names requiring legal or other documents to be attached in order to effect transfer." The difficulty as between legality and expediency, however, was recognised as demanding further consideration, and on Thursday it was announced that the Committee had rescinded their earlier ruling and decided that American shares, under the conditions previously mentioned, would be bad delivery after March 6th unless each certificate were stamped with the signed guarantee of the limited company, etc., in whose name the shares were registered, certifying that the necessary papers had been filed with the Registrar and/or transfer agent, to ensure delivery. This ruling overcomes many of the disadvantages incidental to the literal application of Rule 135 (2) and allows a reasonable interval of time for the making of the necessary arrangements.

Royal Mail Position.—A circular has been issued this week announcing that meetings of the 4½ per cent. and 5 per cent. debenture stockholders of the Royal Mail Company and of the preference shareholders of the White Star Line will be held on February 12th next, when the company will ask for a moratorium until June 30, 1931. This procedure has been adopted under Section 153 of the Companies' Act of 1929, under which creditors' schemes may be made binding by the court on a three-fourths majority. The group is clearly being ably advised from the legal point of view, since if the debenture or share-

holders concerned had been left to press their claims in the ordinary way, an application to the court by holders of a relatively small fraction of the capital concerned might have upset the whole edifice which the reconstruction committee are endeavouring laboriously to rebuild. The debenture and shareholders are not asked to submit to any modification of their rights beyond, firstly, a postponement of their interest and dividend claims for five months, and, secondly, the raising of not more than £250,000 of debentures, which will rank *pari passu* with the 4½ per cent. Royal Mail debenture stock, and in front of the 5 per cent. debenture stock and the White Star preference guarantee. By the end of June it is hoped to submit a plan to deal with the position. This should not be taken to mean that a complete scheme for the reorganisation of the Royal Mail group will be ready in anything like that time. Having regard to the complex nature of that problem and its manifold difficulties, it would be asking too much of human ingenuity to produce an exhaustive scheme in so short a period, particularly as the present depressed condition of the shipping industry throughout the world has an intimate bearing on the reconstruction question. More probably, the plan to be submitted before the end of June will deal merely with the position of the debenture stockholders and the White Star preference shareholders, in order to leave the hands of the reorganisation committee free for its main task. All things considered, the policy adopted by the Royal Mail Company is reasonable, and the stockholders and shareholders concerned, having heard the explanations to be given at the meetings, may be disposed to fall in with it.

A "Kaffir" Revival.—In a recent article on "Kaffir" shares (see the *Economist* of December 18th last) it was stated that improved technical positions on both the Johannesburg and Paris markets had at least partially cleared the way for a revival of activity in these shares. The inference was drawn that the year-end dividends would provide the necessary impetus for a general improvement in share values. The dividends were, in fact, fully up to expectation and the market has responded. An all-round revival of interest has occurred, with trading on a larger scale than for many months past. Appreciable price improvements have been recorded, accompanied by a fresh crop of "rumours" which invariably characterise an active market. The December quarterly reports have now been published, and a number of ore reserve re-estimates have been made known. As these, with few exceptions, have been satisfactory, prices have continued to improve. The following list includes various companies whose shares have shown significant appreciation during the seven weeks prior to January 28th:—

Company.	Percentage Rise in Share Values.	Company.	Percentage Rise in Share Values.
Randfontein	26	*Modder East	16
East Rand Pty.	25	*Brakpan	14
†Witpoort	25	*Sub Nigel	14
*Robinson Deep B. ...	22	*Simmer & Jack ...	13
*Cons. Main Reef	18	*Witwatersrand Gold	13
†Daggafontein	18	†East Geduld	12
West Rand Cons.	18		

* Dividend payers.

† Properties under development.

The table suggests that the greatest percentage gains have been recorded, not so much by the established dividend-payers, whose intrinsic merits can be fairly reasonably assessed, but rather by the mines with problematical potentialities, such as Randfontein and East and West Rands; also, as a class, by the three companies now in process of developing their properties—Daggafontein, East Geduld and Witpoort. These are the "dark horses" of the "Kaffir" market, and naturally the most sensitive to market sentiment. Next, as a class, come dividend-payers with a somewhat fluctuating dividend history, including Robinson Deep "B," and Simmer and Jack, which re-entered the fold of dividend-payers last month. Consolidated Main Reef's last dividend also reflected the recent improvement in conditions at that mine. Lastly come the "heavy guns," including Brakpan and Sub Nigel, whose actual capital appreciation has been the most substantial. The former's rise

is difficult to account for in the face of indifferent recent development results and a further reduction in the ore reserve tonnage and value. The rise in Sub Nigel, however, has reflected higher profits and an increased dividend, with the possibility of continued satisfactory results, based upon good mine developments, increased ore reserves and the forthcoming enlargement of the treatment plant. The upward trend in "Kaffir" values has been accompanied this week by professional profit-taking, which has been accentuated by the approaching end of the account. A firm tone, however, still prevails. Various "Kaffir" shares will be marked ex-dividend next week.

Imperial and International Communications Receipts.

—A statement has been issued by the Imperial and International Communications, Ltd., the operating subsidiary of Cables and Wireless, Ltd., showing that the estimated traffic receipts for the twelve months ending December 31, 1930, amounted to £5,365,561, as compared with £6,146,452 in the previous year, a decline of 12.7 per cent. The average daily takings work out as follows:—

	1929.	1930.	Decline.
	£	£	%
January	21,000	19,200	8.6
February	20,900	19,100	8.6
March	21,500	19,000	11.6
April	20,600	19,000	7.8
May	19,300	17,300	10.4
June	19,300	18,000	6.7
July	19,100	16,200	15.2
August	18,900	16,500	12.2
September	19,400	16,300	16.0
October	19,100	16,500	13.6
November	19,700	16,100	18.3
December	21,600	17,400	19.5

It will be seen that up to the end of December the decline in traffic receipts showed no sign of abating. In the report of Imperial and International Communications, issued last July, the 1930 traffics were forecast at £5,405,084. Apparently this estimate made allowance for deduction of various taxes payable to Governments abroad, while the traffic figures quoted above make no such allowances. Comparison is, therefore, impossible. If it is fair to apply the percentage decline last year in the traffic receipts of Imperial and International Communications, Ltd., to the estimated 1930 income of the parent company, and allow for a 10 per cent. saving in general expenses, it will be found that the 5½ per cent. dividends on the £22,964,611 preference share capital of Cables and Wireless, requiring £1,263,054, fall short of being earned by about £140,000. The next table shows the extreme market quotations for Cables and Wireless stocks last year, and to-day's prices:—

	1930.			
	High.	Low.	Present Price.	
5½ per cent. preference	100	62	66½	
7½ per cent. A ordinary	77	18½	19	
B ordinary	39½	8½	10	

At the present market price the 5½ per cent. preference stock allows a yield of over 8½ per cent. In the view of the market the preference stock holders may rest assured that their dividends will be paid.

The Tea Position.—During the last few weeks negotiations have been in progress for a continuance during 1931, with modifications, of the tea restriction scheme in force last year. The attitude of those concerned suggests that while concurrence in such a policy is more than probable, the modifications in the original scheme will be substantial. In the first place, no effort will be made to control production by "native" growers in the Dutch East Indies. At present this represents about one-fourth of the total output of Java. It was found last year that the refusal of European growers to handle this tea merely transferred the business to Chinese and other local interests without succeeding in keeping the tea—much of which was of low quality—off the market. This year, the

Dutch companies will be free to deal with native "Kampong" leaf as they think best. Native production, in other words, is proving as uncontrollable in the tea as in the rubber industry. Secondly, the "restriction ratios" in the various tea-growing areas, British and Dutch, will be modified, so that while in the Dutch areas a "flat" percentage of restriction will apply, in the British areas restriction will be least in the case of high-priced teas. In all cases an allowance will be made, on a sliding scale, for newly planted areas coming into partial production this year. The net result is expected to be a measurable increase in the total tea output in coming months. So far, the expectation that lower output of tea would result in improved quality has not been borne out to any striking extent. Some growers who subscribe to the contemporary doctrine that restriction is necessary to prevent a price slump are anxious, nevertheless, lest its prolongation, after 1931, should damage the permanent interests of the industry. So far, despite the recent dullness of tea shares on the Stock Exchange, the industry has had some cause for congratulation. Tea prices, on the average, remain approximately 60 per cent. above the 1913 level. During 1930, they even rose slightly—a result which contrasts forcibly with the experience of producers in many other primary industries. Last year, for example, coffee prices declined by 26 per cent., cocoa by 21 per cent., rubber by 47 per cent., cotton by 45 per cent., wool by 33 per cent., and wheat by 56 per cent.

City of London Brewery Company.—Though this company still retains a certain amount of property, its main interest is now that of an investment trust company. The accounts for the year to December 31st last reveal an increase in gross profit of £4,046, and in net profit of £21,710. It has been decided that a capital bonus of one deferred share in ten shall be paid

* Not issued. † On deferred shares. § Plus capital bonus of 50 per cent.

The report states that "the general outlook as to future dividend receipts is not encouraging," but shareholders will be able to derive comfort from the considerable figures standing to the credit of reserve and dividend equalisation funds (£155,500 and £80,000 respectively). Moreover, the market value of such of the company's investments as are quoted in London, and the estimated value of the remainder, exceed in the aggregate the amount shown in the balance sheet. Of these investments approximately 15 per cent. are in the form of debentures and bonds, 34 per cent. in the form of preference and preferred ordinary stocks, while 51 per cent. are ordinary and deferred ordinary stocks. Over 80 per cent. of the total holding of 350 investments are located in Great Britain or the Dominions and Colonies. That the market takes an optimistic view of the company's prospects is shown by the fact that the 5s. deferred shares, which have not yet received a dividend, are quoted at 11s. 3d.

American Railroads.—A remarkable and unheralded recovery has occurred since the end of the year in the American railroad market. Up to December, 1930, it had become a matter of general comment that railroad bonds were returning lower yields than the bonds of public utility and industrial companies, while railroad common stocks were returning higher dividend yields than the common stocks of other companies. This paradoxical situation was accentuated by the organised "bear" attacks which had been made upon railroad equities, and has now been largely corrected by a run to "cover" on the part of the "bears" after publicity had been given to the real earnings position of the leading railroads. The Dow Jones index of 20 representative railroad common shares which stood at 91.65 on December 16th—the lowest point of the year—had risen to 109.49 by January 26th, a

* Unascertainable.

The "bear" attack on railroad equities, which had brought about drastic liquidation, had been based upon the idea that the decline in railroad earnings was due less to the general business depression than to a permanent and increasing loss of railroad traffic to competitive means of transport. Oil and gas pipe lines, air and motor transport, and inland waterways were cited as villains in the piece. This varying competition was grossly exaggerated. Oil and gas pipe lines and inland waterways presented no new menace. The threat of motor competition was certainly no more serious than in 1929, when 23,121,000 automobiles with a capacity 24 times the passenger mileage of the railroads took away from the railroads only 2 per cent. of their passenger traffic, while 3,380,000 motor trucks did not even prevent a 3 per cent. increase in the amount of goods tonnage carried on the railroads. At the beginning of last year the railroads may certainly have shown a bigger drop in net earnings than was warranted by the general decline in trade, but this must be attributed to their desire to meet President Hoover's call to maintain labour forces on a normal basis. The actual loadings of revenue freight on the railroads in 1930 ranged from a 7 per cent. decline in the first quarter, as compared with the corresponding quarter of 1929, to a 16½ per cent. decline in mid-summer, a 21 per cent. decline in late September, and a 15.7 per cent. decline in the final week of the year. Although the prices of railroad common stocks have recovered somewhat sharply it must not be supposed that the outside public has come into the market. It is generally anticipated that for the first quarter of this year car loadings will compare unfavourably with those of the first quarter of 1930, which were only about 7 per cent. below those of 1929. Until an actual increase is shown in the 1931 car loadings the market in railroad equities may remain largely in the hands of the "professionals."

Chinese Customs Revenue.—The figures of the maritime customs revenue for 1930 have been published by the Chinese Ministry of Finance and are of special interest to investors in the loans secured on the Chinese Maritime Customs. The total for 1930 amounted to Haikwan taels 180,570,000, which compares with the totals of the previous three years as follows:—

	Haikwan Taels.	Sterling Equivalent.
1927	69,770,352 at 2s. 9½d.	9,829,625
1928	85,968,000 at 2s. 11½d.	12,028,000
1929	152,760,000 at 2s. 7½d.	20,248,600
1930	180,570,000 at 1s. 7.7265d.	14,841,725

The large increase in the 1929 revenue was due to the higher tariff imposed in February, 1929. It may be recalled that by the trade treaty of December, 1928, the Chinese claim to tariff autonomy had been accepted and an increase in the customs duties, which were formerly 5 per cent. to 12 per cent. *ad valorem*, was immediately authorised and came into effect on February 1, 1929. It will be observed that the sterling equivalent of the total customs in 1930 was 26.7 per cent. below the figure for 1929, although the amount in Haikwan taels was 21.5 per cent. higher. This follows as a result of the stabilisation of the Haikwan tael for customs revenue purposes on a gold basis at a rate of 19.7265d. All the foreign loans secured directly or indirectly on the customs revenues have been met in full, but the cost of their service calculated on a silver basis increased from 65,336,000 Shanghai taels in 1929 to 91,474,000 Shanghai taels in 1930. The further depreciation in silver threatens to have serious effects on the finances of the Chinese Government, apart from the disastrous reactions upon Chinese trade. In this connection the proposal may be mentioned of a large international silver loan which has been put forward by the chairman of the American Smelting and Refining Company, with the object of restoring the normal value of silver and improving the purchasing power of the East. It is proposed that Great Britain, France and Japan should be asked to take part. But opinion in China appears to be sceptical, and the Chinese Finance Minister has denounced the proposal as detrimental to China and only intended to help the American silver mines which had been hit by the slump in the price of silver.

Failures in 1930.—The bankruptcy figures for 1930, compiled by Mr Richard E. Seyd, show aggregate failures of 7,483, an increase of 456. The total includes 4,549 bankruptcies and 2,934 deeds of arrangement. The largest number of failures (6,102) occurred among the retail trades and the working classes, followed by financial, wholesale and manufacturing trades with 902, while there were 479 cases of insolvency among the professional classes. Grocers and provision merchants head the list with 540, followed by farmers, builders and drapers with 432,416 and 413 respectively. Among the professional classes (which included "private individuals, 177"), the highest total was shown by "actors, artists and cinemas, etc.," and the lowest total by "clerks in Holy Orders." Failures among private persons have lately shown steady decreases, the figures being 1928, 224; 1929, 199; and 1930, 177. These figures include returns from Scotland and the Irish Free State. During the year 1,591 companies were voluntarily wound up—121 in Scotland, 10 in Northern Ireland and 24 in the Irish Free State.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Westminster Bank, National Provincial Bank, District Bank, Williams Deacon's Bank, Martins Bank, Anglo-French Banking Corporation, Provincial Bank of Ireland, The National Bank, Canadian Bank of Commerce, National Mutual Life Assurance Society, Sun Life Assurance Society, and Metropolitan Trust. Presiding at the annual meeting of the Provincial Bank of Ireland, Mr R. O. Trotter said that 1930 had been a year of steady progress for the Irish Free State. The prices of milk, butter, eggs and poultry at the fairs had been lower than for the last quarter of the previous year, but there had been a general improvement in the prices of the cattle trade. The total exports from the Free State had reached the high figure of £18 millions. Presiding at the annual meeting of the National Mutual Life Assurance, Mr J. M. Keynes said that it was a striking testimony to the society's strength that, in spite of a period of two years of unprecedented difficulties, they had started the year 1931 with a carry-forward of over £200,000, after writing off all depreciation and declaring not only the

usual annual bonus, but also the special centenary bonus of £162,000. The bank chairmen's speeches are dealt with in a special article on an earlier page.

Durban Navir. Colls.	Dec.	600 tons	Witbank Colliery ...	Dec.	69,912 tons
Indian Copper ...	Dec.	800 tons			
Messina (Transvaal) ...	Dec.	800 tons			

MOUNT LYELL.—During quarter to December 31st there were smelted North Lyell ore (direct to smelters), 2,496 tons concentrates, 11,290 tons. Converters produced 2,254 tons of blister copper, containing copper, 2,236 tons; silver, 39,052 ozs.; gold, 913 ozs. The mill treated 63,762 tons of ore and produced 12,361 tons of concentrates. Furnace ran 48 days, Cathode copper produced, 2,282 tons.

NORTH BROKEN HILL.—December production: 23,191 tons of crude ore treated, assaying 15.5 per cent. lead, 9.5 ozs. silver per ton, and 13.3 per cent. zinc, producing 4,680 tons lead concentrates, assaying 73.5 per cent. lead, 42 ozs. silver per ton and 5.2 per cent. zinc.

PONDEROSA.—Production for December: 588 metric tons, estimated at 21½ per cent. copper.

SAN FINX.—December: Extracted 3,420 tons, mill crushed 3,098 tons, yield 14 tons tin concentrates, 15 tons wolfram. Estimated value, £2,520.

TETICHE.—December: Ore treated, 9,306 tons; zinc concentrates produced 2,415 tons, assaying 46.75 per cent. Lead concentrates produced 970 tons, assaying 75.47 per cent. lead, 56 ozs. silver.

WORKING PROFIT, TRANSVAAL.—The total estimated working profit of the gold mines of the Transvaal for the month of December, 1930, amounted to Witwatersrand, £1,099,320; outside districts, £25,648; total, £1,124,968. The estimated working profit in November, 1930, was: Witwatersrand, £1,082,572; outside districts, £22,525; total, £1,105,097.

OIL OUTPUTS.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended January 10, 1931, was 208,000 barrels. Production for the week ended January 17, 1931, was 212,000 barrels.

STRAVA ROMANA (BRITISH), LTD.—The production of the Stesua Romana Company, Bucharest, for the month of December, 1930, was 91,260 tons, making a total for the year of 840,261 tons, as compared with the total production for the year 1929 of 833,734 tons.

TRINIDAD CENTRAL OILFIELDS, LTD.—Production for December quarter: Light oil, 7,672 barrels; heavy oil, 27,433 barrels.

COMPANY MEETINGS &c.

WESTMINSTER BANK LIMITED.

ADVERSE FACTORS OF THE PAST YEAR.

EFFECTS UPON BANK'S EARNING POWERS.

SHRINKING IN ADVANCES DUE TO BAD TRADE.

ECONOMIC PROBLEMS—PECULIAR DISABILITIES OF GREAT BRITAIN.

THE HON. RUPERT E. BECKETT'S INTERESTING SURVEY.

The annual general meeting of the Westminster Bank, Ltd., was held on January 28, 1931, at the head office, 41 Lothbury, London, E.C.2. The Hon. Rupert E. Beckett (the chairman) presided.

The notice convening the meeting and the auditors' report having been read by the secretary (Mr F. Mytton), the directors' report, the balance sheet, and profit and loss account were taken as read.

The Chairman (who was received with cheers) said:—My lords, ladies, and gentlemen,—I am sure it will be in accordance with the wishes of all present to-day if my first remarks are to express the regret we all feel at the retirement from the chairmanship of Mr R. Hugh Tennant on December 31st last. Mr Tennant was deputy chairman of this bank from 1918 to 1927, when he succeeded the late Mr Leaf as chairman. After a service of close upon four years in that capacity he decided to take some measure of relief from the onerous duties involved. His qualifications for the post were manifold; he had an intimate knowledge of the producing and manufacturing side of business, based on first-hand experience, and in addition he possessed a capacity for, and grasp of, the financial side of affairs that made him a bank chairman well equipped, and worthy in every sense. I am glad to tell you that Mr Tennant will retain his seat on the board, so that his outstanding abilities will not be lost to us.

Your directors did me the honour of electing me to the chairmanship, and Sir Malcolm Hogg, who has been a director of the bank since 1922, was appointed a deputy-chairman to serve with Sir Montagu Turner.

Since we met here a year ago, several changes have occurred in the personnel of your board. We sustained a heavy loss by the death of Lord Melchett, which took place during the closing week of last year. Lord Melchett was no ordinary man. He combined Parliamentary activities with industrial and commercial interests on the largest scale, and his grasp of economics and his practical experience enabled him to envisage the true relationship of capital and organised labour in a more lucid manner than almost any other man of his time. It is a matter of deep regret to your board of directors that such a distinguished colleague has been taken from them.

CHANGES ON THE BOARD.

We suffered a further loss, only last week, by the death of Mr C. J. Cater Scott, at the advanced age of 82. He had been a director of the London and County Bank and then of the Westminster Bank since 1903. Many will remember the prominent part he took in the reorganisation of the docks of the Thames, resulting in the formation of the Port of London Authority.

I have to announce also the retirement from the board on December 31st last, owing to failing health, of Mr N. Harrington Eckersley, who gave sterling service to this bank and its constituents over a period of 38 years.

In July last, your board elected two new directors; they are Lord Glenapp and Mr Roger Wright.

Lord Glenapp's activities, as is generally known, are mainly connected with shipping, he being a joint deputy-chairman and managing director of the P. & O. and British India Steam Navigation Companies.

Mr Roger Wright since he entered business life has been interested in South American railways, insurance, and trust companies. He is a director of the Buenos Aires and Pacific Railway, London and Scottish Insurance Corporation and Omnium Investment Company.

Your board are pleased to have secured the services of these gentlemen and regard them as a strengthening acquisition to your directorate.

THE CHIEF GENERAL MANAGERSHIP.

I then have to record the retirement on September 30th last from the position of chief general manager of our co-director, Mr John Rae. Mr Rae, after commencing his banking career with the National Bank of Scotland, joined Parrs Bank nearly forty years ago. Save for the period of four years from 1918 to 1920, when he was treasurer of the Bank of Scotland, Mr Rae has spent the rest of his banking life with the Westminster and its constituents.

His career was one of devotion to the interests of this bank, and he filled every position assigned to him, including that of chief general manager, with conspicuous ability and success. I am glad to say Mr Rae retains his seat on the board, and his wise counsel is regularly available.

To succeed to the post of chief general manager, on October 1st last the directors appointed Mr Charles Lidbury, who is present at the general meeting to-day for the first time in

neighbourhood of £50,000. I should not have stressed these figures so much did they not bear some implication. It is (to put the matter in a nutshell) that banks are no more immune from the vicissitudes of bad trade than any other members of the trading community. Consequently, so long as this heavy cloud of industrial depression overhangs the country, it must be a matter for your directors' earnest consideration whether they will be justified in maintaining the dividend at the present rate.

OUR ASSOCIATED INSTITUTIONS.

The figures appearing in the balance sheet in respect of our subsidiaries, Ulster Bank Limited and Westminster Foreign Bank Limited, show little change. Their progress is well maintained and their activities continue to contribute satisfactorily to the earnings and prestige of the parent institution.

INDUSTRIAL SURVEY.

This brief review of the recent experience of our own institution has given some slight reflection of the difficulties besetting the world of economics and business, and I will now ask you to turn with me to this wider sphere, that we may consider the situation in which we find our country to-day.

There is no denying the fact that 1930 has been the most difficult year since 1921. Ten years ago we were in the depths of a great depression, as we are to-day. But the two depressions differ fundamentally both in origin and in character. The former represented a collapse of a bubble of inflated activity which had been stimulated by world-hunger for goods of all kinds after a long period of world war. The present depression, which began eighteen months ago, represents a very sharp decline from the improved level of activity even then existing, hard-won by years of endeavour, but barely satisfying as a base-line for further advancement towards the recovery of real well-being. But instead of advancement from that base, we have suffered severe recession, and our disappointment is only slightly relieved by the contemplation of other great countries struggling with equally formidable difficulties.

The chief manifestations of the depression are plain for all to see. The total figure of unemployed rose during 1930 from 1½ millions to over 2½ millions. Wholesale prices fell by over 20 per cent. and are back in the neighbourhood of the 1913 level, while the cost of living index is 53 per cent. above the 1914 line; the widening of the gap between wholesale and retail prices is, as I shall emphasise later, at the root of our difficulties. The value of our overseas exports fell by 21½ per cent.; average values of industrial shares quoted on the Stock Exchange declined by a further 17 per cent., after a fall of 25 per cent. in 1929, and ended the year no higher than in 1922. Some of these figures need qualification. The unemployment total has, by general admission, been swollen by the effects of recent legislation, as well as by growing industrial *malaise*; the decline in the value figures of our exports is partly attributable to the fall in the price level. But when all allowances are made, the cumulative proof of a serious and progressive slowing-down of national productivity is overwhelming. The Board of Trade's official index of British industrial production indicates that the level of activity in the July-September quarter of 1930 was 10 per cent. lower than the comparable figure for 1929. All available evidence combines to show that the reduction gathered force in the last quarter of the year, and the figures for the ends of the two years cannot fail to reveal a still more unsatisfactory position.

Before we enter upon any deeper diagnosis, let us glance briefly at the recent experiences of a few of our outstanding industries.

COAL.

Judged by the test of output, the coal-mining industry suffered a less pronounced set-back than did many others, the total tonnage of saleable coal raised in 1930 having been approximately 244 million tons, or only 5½ per cent. less than in the previous year. Exports of coal, at nearly 55 million tons, were 9 per cent. lower. From other aspects, 1930 was another extremely difficult year for both owners and miners. The industry continued to bear a very heavy burden of unemployment, coal miners out of work in December numbering 211,000, compared with 157,000 at the end of 1929. In many districts, the industry was carried on unprofitably, and this fact lent especial difficulty to the adjustment of working conditions to the reduction of hours from 8 to 7½ per day decreed by the Coal Mines Act. Moreover, even after these immediate difficulties have been composed, the industry is still faced with the task of accommodating itself to the further reduction of daily hours of work to seven, which is due to take place next July.

IRON AND STEEL.

The iron and steel industry, as a producer of capital goods, is inevitably a severe sufferer from every world depression in trade. The total British production of pig-iron fell in 1930 by 18 per cent.,

from 7,579,200 tons to 6,196,800 tons, while the decline in production of steel ingots and castings was from 9,655,200 tons to 7,298,500 tons, or 24 per cent. The latter fall was greatest in the last quarter of the year, during which steel production fell more than 40 per cent. below the level recorded for the corresponding quarter of 1929. To view the facts in their proper perspective, however, it should be noted that the steel industries of the other principal producing countries have suffered even more severely. Towards the end of the year, American steel producers were working at 37½ per cent. of capacity, while the British were working at approximately 45 per cent. Severe declines were recorded in every European steel-producing centre, and the difficulties encountered led to the virtual breakdown of the European Steel Cartel. The past year has seen little advance in this country in the process of rationalisation, towards which important steps had been taken in the preceding years.

SHIPPING AND SHIPBUILDING.

As an index of the trade and commerce of the world, shipping holds the first place. Overseas traffic has fallen to a low ebb, and this was most apparent in the movements of grain. The total shipments of United States and Canadian wheat, maize, barley, and oats, fell from 44,000,000 quarters in 1929 to 38,000,000 quarters last year, whilst in the case of the Argentine the fall was from 54,000,000 to 32,000,000. The increase of about 10,000,000 quarters in shipments from Russia did not go far to make up the heavy deficiencies from elsewhere. The exports of coal from this country fell simultaneously, and cargo vessels found it extremely difficult to obtain employment. The shrinkage in the volume of shipments in bulk cargoes was reflected in the liner traffic, and probably at no time within recent memory have the gross earnings of British shipping been so low as they were last year. The index figures of the Chamber of Shipping show that in the year 1930 freights were some 18 per cent. below, while costs of operating ships were on the whole not less than 50 per cent. above, the pre-war levels. The freight index number for May last, at 73.12 (1913=100) was, in fact, the lowest figure ever recorded. The supply of tonnage is very much above world requirements, and the amount laid up idle exceeds all previous records. There has been much discussion of artificial means of disposing of surplus ships. The problem is difficult and is complicated by the fact that at the present time old vessels, and very new vessels of the modern type, are proving themselves to be the most economical; the "middle-aged" vessels have neither the advantage of the low capital cost of the pre-war type nor the efficiency of the latest designs of hulls and engines.

A year ago about one in every four of the workers in the shipbuilding industry was unemployed. To-day, 45 per cent. of the labour force is idle. Here again heavy unemployment has been the experience also of the corresponding industries of other countries. During 1930, only 950,000 tons of new ships of all classes were commenced in British yards, as compared with 1,488,000 tons launched. The vessels under construction at the end of the year totalled 908,902 tons gross, as against 1,560,254 tons at the close of 1929. Until signs appear that substantial trade revival is near at hand, there can be little inducement to shipowners to give out orders for new tonnage, except for urgently needed replacements.

In this industry, a step towards effective reorganisation was the formation of National Shipbuilders Security, Ltd., one of whose objects is to close down redundant or uneconomic yards, and important progress in this direction has already been made.

ENGINEERING.

This is another industry which is particularly dependent upon world trade conditions, for normally about one-third of its total production is sold in overseas markets, and in some branches, such as textile machinery and locomotives, the export proportion is usually even higher. Builders of marine engines have naturally been hard-hit by the depression in shipbuilding, while the fall in grain prices and the intensity of the depression in the great grain-producing countries have severely restricted the demand for agricultural machinery. Two branches of engineering which have suffered less severely are the manufacture of motor-cars and of electrical machinery. The production of motor-cars and commercial vehicles in 1930 is estimated at 236,500, as against 238,800 in the previous year, while comparatively busy conditions have been maintained for makers of electrical machinery, thanks to the progressive work of intensive electrification both in Great Britain and abroad.

COTTON.

The year 1930 must be described as the worst experienced by this industry during the long depression which has persisted since 1920, and both the American and the Egyptian sections have suffered serious losses.

During the first quarter of the year, trade was moderately maintained, although on considerably reduced figures as compared with the corresponding period of 1929. The position then became seriously and adversely affected by the increase of Indian import duties, followed by the boycott of foreign cotton goods, which immediately brought about a great curtailment of Lancashire trade in its most important market. This curtailment continues, and prosperity cannot return to the industry until the Indian market becomes more normal.

In the next important outlet, China, the recurrence of civil war and the falls in the value of silver have reduced trade with that country to a state of stagnation.

In addition, the collapse of agricultural and commodity values generally throughout the world has very greatly reduced the purchasing powers of the peoples in all the outlets for cotton goods; buyers' confidence has been destroyed, and trade has been of a hand-to-mouth description. The position has been worsened by the variations and falls in raw cotton values, more especially over the last six months of the year. Owing to these causes, producers in all sections of the industry—which in normal times must depend upon overseas trade to absorb 80 per cent. of its production—have experienced great difficulty in keeping machinery working and in marketing even the much curtailed output.

The effect of these adverse conditions is clearly to be seen in the shipments of yarns and piece-goods over the year, as compared with those in the two preceding years. The figures appear at the foot of this column.

Business generally was at very unsatisfactory prices, and the year witnessed the closing-down of numerous spinning mills and weaving sheds—many permanently. The industry has shown a record increase in unemployment figures. The position is that generally speaking no section can work profitably at the present time, unless under special conditions.

The outlook for the present year is not bright, as although it is unlikely that world commodity values will fall to anything like the same extent as in 1930, any considerable rise is not at present within sight. The prospects of the cotton trade must depend upon how far production costs can be lessened, and it is sad to reflect that the attempt made materially to reduce these costs by the introduction of the "more-looms-per-weaver" system has resulted in industrial strife. This in itself is more than sufficient further to depress the outlook for the year we have just entered upon.

WOOL.

This industry too has suffered from depression, though less severely perhaps than cotton. The outstanding feature was an almost progressive decline in value of the raw material, amounting in the year to over 30 per cent. Prices at all stages of the industry are quite uneconomic for the producer. The obvious cheapness, however, has failed to attract large-scale buying, as normally it would, owing in part to the world's reduced purchasing power, and in part to the availability of cheaper foreign goods. Our export trade continued to dwindle, and statistics show that we are somewhat worse off in this respect than our Continental competitors.

AGRICULTURE.

The agricultural year has again been a difficult one, a dry spring having been followed by a wet summer and autumn. A good hay crop was obtained, but wheat growers, after a favourable start to the season, suffered disappointment. Harvesting took place in stormy weather, which wrought severe damage, and much of the crop was eventually gathered in a damp and soft condition. This circumstance, coupled with the heavy fall in prices, spelt hard times for the British wheat grower. English wheat quotations actually fell by over 35 per cent. during 1930. The aggregate yield of potatoes was fairly well maintained, but disease was more prevalent than in the previous year. On the other hand, conditions were much more favourable for livestock, and the outlook is brighter for this section of the industry than for most others.

THE DISTRIBUTION OF UNEMPLOYMENT.

To this brief review of our chief industries, figures relating to the distribution of unemployment make an interesting rider. The blackest spots are as follows, the figures in each case being the totals of wholly and temporarily unemployed on December 22nd last:—Textile trades, 501,000; building and public works, 247,000; mining of all kinds, 235,000; engineering, 182,000; distributive trades, 174,000; transport and communications, 170,000; shipbuilding, 92,000. These industries alone account for over 1½ millions.

Cotton Exports.	1930.	1929.	1928.
Yarns, lbs.	136,710,100	166,637,300	169,206,900
Piece-goods, sq. yds. ...	2,406,766,700	3,671,588,500	3,866,498,700

THE ECONOMIC POSITION.

It is not necessary to proceed further with this survey to realise that, just as there is no country which has been able to avoid the track of the economic storm, so there is no British industry into which the effects of the depression have not penetrated. The history of the years 1924 to 1928—that is, of the period prior to the general depression—shows quite clearly that, while other countries were rising to a reasonable level of activity and the United States to a period of unexampled prosperity, this country for one reason or another was lagging behind her competitors. It may be assumed from this fact that in those years there were at work special causes hampering Britain in her efforts to return to normality. It is unfortunately clear that those special disabilities continue to operate. Therefore, while the depression, its causes, and its lessons, must be surveyed in the world-wide sense, it is incumbent upon us to examine also the peculiar shortcomings of our own economic system and to search for the appropriate remedies.

PRIMARY CAUSES OF DEPRESSION.

As regards the international influences affecting all countries, current diagnoses by economic and financial observers are many and various. But upon several primary causes there is fairly general agreement. Production is outrunning consumption, not only in basic commodities but also in manufactured goods. Well-meaning efforts directed towards the artificial restriction of output and the maintenance of prices of many commodities have met with failure, which has caused disorganisation, panic selling, and further price collapse. The catastrophic decline in the price of silver has impoverished the teeming millions of eastern countries, whose prosperity had already been reduced by political upheavals. There is in process a change in the nature of the demand for commodities, which tends to swing from necessities to luxuries, and to this change industrialists have not yet adjusted their plans. Finally, side by side with the recent rapid increase in the output of raw materials, there has developed an improved technical knowledge which enables a volume of manufactured goods to be produced, greater than ever before, from a given quantity of material. Of these causes which act as a deterrent to trade the world over, some will pass away gradually through the automatic working of economic laws.

Yet another cause is held by many to be largely responsible for the world's present ills—the maldistribution of gold—and it has been suggested that the Central Banks of Europe can by concerted action go far to effect a cure. Certainly, the accumulations of gold both in America and more particularly in France, largely augmented as they have been during the past year, have exercised a disturbing influence on the London money market and in the exchange position. In this connection, I welcome the formation of the Bank for International Settlements, and if its activities can bring about a more equitable distribution of the world's gold, thereby achieving a greater measure of stability both in prices and in international exchange, it will have rendered signal service to world commerce.

A "BARTER" CRISIS.

At the same time, I cannot help thinking that the effect of these gold accumulations on the general trade situation has perhaps been overstressed. We are passing through, not so much a gold crisis, nor yet a credit crisis, but what I may term a "barter" crisis. The majority of the population of the world are producers of the primary commodities—foodstuffs, minerals, animal products such as wool, and vegetable products such as cotton and rubber. In almost all of these, Nature has yielded a series of bumper harvests and gatherings, with the natural consequences of a plethora of supplies and constantly falling prices. Now, international trade is fundamentally an interchange of raw materials and manufactured products. It follows, then, that the quantity of the latter which the primary producing countries are able to take from the manufacturing countries will depend upon the relative cheapness or dearth of the two classes of goods. Between the raw material and the finished product, there are numerous preparatory and finishing processes, at each stage of which production costs of all kinds have to be added. When a violent fall occurs (as it now has) in the value of the raw material, because these intermediate costs cannot be reduced simultaneously, their weight becomes disproportionate, and the price of the finished product is thrown completely out of harmony with that of its basic constituent. The primary producer is thus unable to take in exchange for his commodity as large a quantity of manufactured goods as that to which he has been accustomed—to the impoverishment of himself and the manufacturer alike. This disequilibrium is a feature of all abrupt price movements, but its seriousness for the British industrialist is aggravated at the present time by the already swollen expenses which he has to meet, and much of which it is not in his power to alleviate. For a number of reasons, our manufacturing costs are

substantially higher than those of our competitors. If we are to sell our goods to the primary producers of the world, it is of urgent necessity to explore every possible avenue of economy and to put into immediate operation every means this search may reveal of reducing our costs.

OUR NATIONAL DEBT.

If it is true, as I am suggesting, that Britain is suffering from peculiar disabilities, there is nothing surprising about that fact. For one thing, we are the oldest of the great industrial nations, and inevitably it is more difficult for us than for some of our competitors to accomplish a rapid overhaul of policy, method and machinery. In the second place, we have upon our shoulders as a legacy of the Great War a more formidable fiscal and economic burden than any other country, for we have deliberately eschewed every path of escape from that burden which other nations have found it expedient to follow. We as a nation have observed the strictest financial rectitude *vis-à-vis* the rest of the world. And so to-day we find ourselves faced with a National Debt of £7,000 millions, mainly contracted in a period of high war prices, while the wholesale price level itself has now fallen back to the 1913 line. A dozen years after the war, 20 per cent. of our whole national income is still passing through the hands of the tax-gatherer, and the effects of this drain become more serious in times of depression like the present. Moreover, our tax system, by its inroads upon capital, serves in several ways to exacerbate the position. Nearly a half of our annual budget represents deferred payment for the war and is therefore more or less fixed; the remainder—more than a half—instead of being strictly and rigidly curtailed in view of this fact, has shown a ceaseless tendency to rapid expansion, under successive Governments. For years, the demand that the country should begin to cut its coat according to its cloth has fallen upon deaf ears; but to-day, when the general and sharp fall in prices has proportionately increased the real burden of taxation, the need for national economy must be brought home to the whole people. We have surely reached a time when any new expenditure should be judged not by its intrinsic desirability, but by the question whether the country can afford it.

We are paying heavily for the war, too, through the prevalence in many groups of society of the conscious or unconscious belief that somewhere or other there is a bottomless purse, an inexhaustible national fund from which arbitrarily high standards of life can be maintained whatever the course of economic events. We shall not have begun to prepare ourselves to participate in eventual trade recovery until this fallacy has been rooted out of the public mind—until the plain truth is everywhere recognised that anyone who takes more out of the national pool of wealth than he contributes to it is retarding the country's slow and painful march to better times.

There is yet another way in which we may be said to be still paying for the war. We are paying through the persistence of a new nationalist spirit, which in many countries has been translated into narrow economic action and has led to the establishment there, behind high tariff walls, of industries which without those high tariffs could not hope to compete even in their home market with the established and more experienced British industries.

BRITISH PRODUCTION COSTS.

The crux of the whole matter is that British production costs are too high to admit of the possibility of present expansion in trade in competitive markets, whether at home or abroad. Somehow or other costs have got to be reduced to a level which facilitates effective competition, and this brings me back to one of the gravest features of the situation, namely, the wide and increasing disparity between wholesale commodity prices and the cost of living. Appended to the text of this address you will find two graphs. In the first of these, the most important point brought out is that the gap between the levels of wage rates and of wholesale prices has been doubled since 1924, and that the widening process continues. The second presents the problem of wages and prices from a new angle. The worker measures the value of his wages against the retail price level; to the manufacturer the standard for judging the burden of wage costs as an item in production costs is the wholesale price level. Here, too, we find the gap widening. How is it to be narrowed?

If we can find the answer to this question, we shall have struck a blow at the deepest roots of our present trouble. For unless retail prices and the cost of living can be reduced, there is grave danger that every attempt at readjustment of nominal wages will meet with resistance, and that the country will be plunged into a series of formidable industrial disputes which would provide an incalculable aggravation of the handicaps under which we are already suffering. Wage reductions alone, especially in the transport and distributive industries, would lead to some reduction in retail prices, but workers are quite naturally suspicious that such reduction of prices would probably be disproportionate to their own sacrifices.

There is a strong case, therefore, for a sweeping investigation of all the causes contributing to the maintenance of the big gap between wholesale and retail prices, and also of the possibility of removing all obstacles which stand in the way of their closer relationship. Until this matter is taken in hand the necessary correlation of earnings with productivity cannot be expected to proceed smoothly.

QUESTION OF WAGES.

In the same connection there are two other main difficulties. Wages, although usually the predominant item, are by no means the only one on the sheet of production costs, and workers will submit to sacrifices willingly only when convinced that they are to be common among all parties concerned. It can hardly be denied that in many industries a lack of the required degree of managerial efficiency, a reluctance to jettison obsolete methods and machinery, and a parochiality which obstructs the formation of larger and more efficient units of production, are contributing substantially to-day towards keeping manufacturing costs at a swollen figure. The process of recovery is retarded by the worker who resists the introduction of labour-saving machinery or methods, and equally by the employer whose own industry is not as efficient and up to date as its counterpart in other countries and who fails to pursue resolutely every method for making it so.

Nothing, therefore, could be less helpful than merely to say that wages must come down, without considering the essential conditions involved and realising that every section, from the shareholder, through the management, down to the unskilled worker, must be brought under the application of the principle of adjusting earnings to their proper economic relationship with to-day's value of the services performed.

The meaning of this is quite plain. It is not sectional sacrifices but a co-operative effort of the whole nation that is required; and the test that one can hope of 1931 is that this fact will be fully appreciated by the country and will result, in the first place, in bringing together the leaders of our industrial life, employers and employees, in a common determination to produce an economic reorganisation and readjustment which shall be both fair to all parties and effective in operation. By this means alone can we hope to restore prosperity to Britain, and to maintain our position in the van of industrial progress.

The Chairman then moved the adoption of the report and accounts, and Sir Montagu Turner seconded the resolution.

BANK CHAIRMEN AND NATIONAL CONDITIONS.

Mr E. T. Hargraves observed that while he felt fully satisfied that the chairman in his speech had set before the shareholders what he considered to be the actual position of national conditions, yet he could not entirely agree with him in what he considered had been the gloomy outlook set before the shareholders that day. Generally he thought that bank chairmen, so far as they had yet spoken, had rather overdone the "cold water douche." He considered that the experts in finance had rather neglected considerations of the psychological effect which their speeches had upon the community.

He had no desire to see a reduced dividend, but he felt that the logical conclusion from the chairman's observations that day should have been a reduction. The chairman had been frank enough to say that they might have to receive a lower dividend for the current year. He himself did not think that would happen, and he sincerely hoped that the directors would not have to take that course. He urged upon bank chairmen generally to keep a cheerful countenance and not to forget that if they talked matters down there was always considerable difficulty in talking them up again. *Possunt quia posse videntur*—"You can, because you think you can."

He himself was an optimist; he believed that things at the foundation were quite right, and did not think that this country was going down. All that was needed was co-operation. As to the Westminster Bank, it had an excellent staff and had splendid avenues for making money. Generally, there were ample opportunities in this country for increasing its wealth, and he felt that a considerable amount of the losses incurred in recent years could be recovered. But they would not do that by jeremiads. The task would be accomplished by hard work.

The resolution was then carried unanimously.

RE-ELECTION OF DIRECTORS.

The retiring directors were re-elected, and Sir Malcolm Hogg (deputy chairman) responded on their behalf. Messrs. Turquand, Youngs and Company, Messrs. Kemp, Chatteris, Nichols, Sendell and Company, Messrs. Price, Waterhouse and Company, and Messrs. Stead, Taylor and Stead were reappointed auditors for the year 1931.

Mr Hargraves proposed a vote of thanks to the directors for the able manner in which they had conducted the affairs of the bank.

To a vote of thanks to the staff for their admirable work during the past year, proposed by Sir Montagu Turner and seconded by Mr F. Tomkinson, Mr Charles Lidbury (chief general manager)

responded. The privilege fell to him for the first time, he said, of responding, on behalf of the whole staff, to this resolution of thanks, and on their behalf he begged to thank the shareholders very sincerely for the generous terms in which it had been proposed, and for the kind and encouraging remarks of Sir Montagu Turner, confirmed, as they had been in so appreciative a manner, by this representative gathering of the shareholders of the bank.

As they knew, Mr John Rae occupied a unique position in the affections of every member of the staff, and he, Mr Lidbury, was happy in the knowledge that the spirit of service, good will, and sympathy which Mr Rae engendered had helped him considerably in assuming the onerous post which Mr Rae had occupied with such grace and distinction and for so long a time.

He would, moreover, like to place on record his personal appreciation of the loyal and helpful co-operation which he had at all times received from his colleagues in the general management, as well as the other administrative officials at the head office, all of whom had, with himself, received whole-hearted and unstinted support from the branch managers and the staff generally. On behalf of the whole staff he again thanked the shareholders for their cordial reception of this resolution.

Other formal votes were carried, and the proceedings terminated.

THE FOLLOWING ARE THE GRAPHS REFERRED TO BY THE CHAIRMAN IN THE COURSE OF HIS SPEECH.

Graph No. 1

Relation of WHOLESALE PRICES, COST OF LIVING, and WAGE RATES.

Graph No. 2

Relation of REAL WAGES and REAL WAGE COSTS.

ANGLO-FRENCH BANKING CORPORATION, LIMITED FURTHER PROGRESS—MAIDEN DIVIDEND.

The ordinary annual general meeting of the Anglo-French Banking Corporation, Ltd., was held, on the 26th instant, at River Plate House, Finsbury Circus, London, Mr F. A. Szarvasy (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—I am happy to say that, in spite of the adverse conditions which prevailed during the current year throughout the world, our bank has made further appreciable progress.

It is the more gratifying, as interest rates fell sharply during the year, and have for some considerable time ruled at an unremunerative level. As compared with last year, this made a very substantial difference in the return on our capital, and moreover, the margins obtainable on our clients' deposits have been materially reduced.

You must remember that we are still in the development stage of our activities, which are world-wide, and which consequently require a considerable time to bring to fruition. If, therefore, we are able to show a profit in excess of last year, and pay our maiden dividend, I think you will agree that we have cause for satisfaction.

SATISFACTORY LIQUID POSITION.

You will observe that the resources at our disposal to meet our deposits reveal a highly satisfactory degree of liquidity, by which in banking parlance is meant the extent to which a bank holds assets that are immediately realisable, and the proportion of such assets to its liabilities would indicate the degree of liquidity. Fifty to sixty per cent. is normally looked upon as a satisfactory ratio; we have over 70 per cent. in cash and funds in the money market, British Treasury Bills, London Bank Bills and British Government and Corporation Securities, and 84 per cent. if we add balances with banks abroad, sundry bills and other securities.

Turning to the profit and loss account, I am glad that it has been possible to fulfil the expectations which I voiced at last year's meeting, and to recommend a maiden dividend of 3 per cent.

I should like to refer to an aspect of the ruling economic depression which seems to me of particular importance. We are fatally weighed down by our National Debt, which is evidence that we have not yet paid for the war. Payment for the war means that either the capitalist has to pay by a direct levy on his assets or, as nearly all European nations have done, by depreciation of the national currency through inflation, followed by stabilisation on a gold basis, which also is confiscation, only put in another way.

By this process France has reduced its National Debt by four-fifths, Germany has wiped out its internal debt completely, and other countries have acted similarly, but to varying degrees.

The alternative is that all classes of the population should accept a lower standard of living, effect rigorous savings, and submit to these savings—or part of them—being taken from them by the State through the medium of taxation, and that the proceeds of taxation should be devoted to the reduction of the war debt.

BURDEN OF NATIONAL DEBT.

How have we in this country put this theory into practice? We subscribed for the major part of our War Loans at a time when, due to various forms of inflation, internal control of prices, the pegging of exchanges, &c., the real purchasing power of the £ sterling as expressed in gold was hardly more than 15s., but holders of these loans are now drawing interest on their original investment when the equivalent purchasing power of the same £ in goods and services is appreciably greater than it was at the time they made payment. Thus, our debt constitutes a much heavier burden now than ten years ago.

Capital during the same period had to submit to penal taxation; unfortunately, however, the proceeds of income tax, super-tax and death duties have not been applied in sufficient measure to the reduction of the National Debt, but are being expended on social services which the nation can ill afford.

The last fourteen years were spent in a fruitless struggle, as evidenced by the continuous strikes which prevailed, between the capitalist and the working classes, to determine which of the two, and to what extent either or both, should bear the burden of a reduced standard of living. The fight goes on and is still undecided, but as a result, taxation is transferred as a burden on industry, and wages are not on a gold basis, though commodities are.

This has produced a state of affairs in which our industries are no longer able to maintain world competition, our exports are rapidly falling, and the vitality of the nation is being undermined.

It would be too optimistic to expect that any comprehensive conversion of the National Debt can be effected until the intrinsic credit situation of the country justifies such a transaction.

I cannot see any very early revival, as faith can only be put in the operation of economic laws, remembering that they operate slowly but very surely.

The report and accounts were unanimously adopted.

NATIONAL PROVINCIAL BANK LIMITED.

RETROSPECT OF A DIFFICULT YEAR.
POSITION OF GREAT BASIC INDUSTRIES.
GENERAL FALL IN COMMODITY PRICES.
"ENGLAND NOT DOWN AND OUT."
CHANGE IN FISCAL POLICY NEEDED.
SIR HARRY GOSCHEN'S VIEWS.

The annual general meeting of the National Provincial Bank Limited was held, on the 29th instant, in the Great Hall, Cannon Street Hotel, London, E.C.

Sir Harry Goschen, Bt., K.B.E. (the chairman), presided.

Sir Alfred Lewis, K.B.E. (chief general manager), read the notice convening the meeting and the report of the auditors.

The Chairman, who was received with applause, said: Ladies and gentlemen, I am sorry to have to commence my address to you to-day on a somewhat sombre note, but the report which you have in your hands will have shown you what ravages death has made during the past year in our directorate, and I cannot pass over the absence of old colleagues and friends who have worked with us for so many years, without a few words as to the services they have rendered the Bank.

DEATHS OF DIRECTORS.

Colonel Sir Claude Laurie was, at the time of his death, our senior director, having been elected to the board in 1886. He had served his country with honour and distinction both in the field and at home, and brought the same devoted attention to his duties at the bank as characterised his military career; his constant presence at the bank will be missed by all his colleagues.

In the person of Francis Le Marchant, we lose a colleague whose memory will always be held in affectionate regard. He, too, was one of our most senior directors, having joined the board in 1887, and the absence of his charming and courteous personality and mature judgment will be long felt, not only by his colleagues, but by the whole bank. He was a type of the old English man of business, who can ill be spared in these troublesome times.

I also much regret to tell you that in the last week of the past year our old friend and colleague, Mr Lindsay Smith, passed away. His resignation was referred to in a previous report, and we regret that he was only able to enjoy the leisure he well deserved for so short a time.

LOSS OF LOCAL DIRECTORS.

We also have to deplore the loss of five of our local directors. Mr Robert Fenton Miles was an extraordinary director of the bank and a local director for Bristol and district, where the bank has had the advantage of his ripe experience for very many years.

In Yorkshire, Mr James Bairstow, a local director for Bradford and district, died in June last. Mr Bairstow was a well-known and respected personality in the Bradford area, and his wide knowledge of the textile trade had been of great benefit to the bank over a long period.

Sheffield and its trade have suffered, together with the bank, a loss in the death of Mr H. H. Bedford who was a local director of the bank in that district.

In the West of England, Mr John Dingley, a local director at Launceston, formerly a partner in Dingley and Company, who were merged in this bank in 1922, and at Newark, Mr J. O. Wardley, a local director, who had served the bank there throughout his business life, both died last year, to the regret of all who knew them.

ELECTION OF SIR PERCIVAL PERRY.

During the year your directors have appointed Sir Percival Lea Dewhurst Perry to a seat on the board, and we cordially welcome him as one of our number. His wide experience of affairs will prove of good service to the bank. His name will, as usual, be submitted to you later on for re-election.

As announced in the report, we have appointed Mr A. Kingsford Wilson, lately Master Cutler of Sheffield, and the head of the trade commission just returned from South America, to a seat on our Sheffield local board, where his wide experience of the trade of the district at home and abroad will be of great value.

We regret that, owing to ill-health, Mr A. McClelland has felt it necessary to resign his appointment as a general manager at a comparatively early age—after 41 years of devoted service. His absence is regretted by all who came in contact with him.

NEW BRANCHES.

We have continued our policy of opening branches wherever suitable opportunities for remunerative business present themselves, and our total number of offices, including 56 opened during the past year, now amounts to 1,363, an increase of 432 during the past ten years.

Notwithstanding the precautions taken in regard to the register of shareholders, and the transfer of shares, which had hitherto proved adequate, we have this year instituted an additional safeguard in the form of an external examination of all operations in this department, and certificates relating to such independent examination are furnished periodically to the directors.

CHANGES IN THE BALANCE SHEET.

The figures of our balance sheet, to which I now draw your attention, show considerable changes in many respects from those submitted to you last year, but while they present satisfactory features in regard to the deposits and the liquid position of the bank, they effect in no uncertain manner the trade depression and contraction of business which generally pervades the country.

There is no change in the capital or reserves, but the current, deposit and other accounts, which now stand at over £292,000,000, constitute a record for the bank. This figure is an increase of about £20,000,000 over our last figures, some portion of which, at all events, I hope is a sign of an increased appreciation by the public of the efficiency of the services we offer. The contraction in trade is answerable for the reduced figures of our liabilities for acceptances, &c.

CASH ITEMS.

On the other side of the accounts, the three items representing our cash, which total £63,031,611, show an increase over 1929 figures, corresponding to our larger deposits, and our bills, with a total of £51,061,089, exceed the figures in our last accounts by almost £23,000,000, nearly all of which, unfortunately, is represented by our increased holding of Treasury Bills. I say unfortunately, for while these two items of cash and bills alone form a total of £114,000,000 of liquid assets, and represent practically 39 per cent. of our deposits, they bear some indication of the contraction in the demand from our customers for discount of their commercial bills and for temporary advances for the conduct of their business. It certainly disposes of the idea that we are not able to provide for all the reasonable requirements of our customers, and is ample evidence that should a welcome revival in trade take place, the bank is in an eminently satisfactory position to render adequate assistance. The small increase of £2,500,000 in the figure representing our investments is entirely accounted for by our larger holding of Government securities, now standing at £32,859,000 as compared with £30,163,000 in our last accounts.

There is no material change to report in our investments in associated and subsidiary companies. The decreased figures of our advances to customers, which disclose a fall of over seven millions from the 1929 total, is an important sign of the unfortunate state of our trade at the present time.

The increase, amounting to about £590,000, in our premises account, represents the expenditure on our Princes Street office and on the new branches, to which I have already referred.

PROFIT AND DIVIDEND.

Turning to the profit and loss account on the next page, you will see that the net profit is £1,930,854, against £2,189,704 in the previous statement, showing a decrease of £258,850 as compared with the 1929 accounts, another indication of the slackness of trade and the unremunerative rates and narrow margins available during the past twelve months. Adding the carry forward of £849,254 from the previous year, we have a total of £2,780,109 available for distribution.

The amount of £853,147 has already been utilised for the payment of the interim dividend in July last. Of the remainder, we have allotted £100,000 to our pension fund, £100,000 to bank premises account and £200,000 to contingencies account, and after providing

for a final dividend of 9 per cent., making 18 per cent. for the year, we carry forward to the new account the balance of £673,814 10s. 5d., or £175,440 less than we brought in at the beginning of the year.

BENEFIT OF CONSERVATIVE POLICY.

You will doubtless remember that I have on previous occasions said, in answer to shareholders' criticisms of the large sum we were carrying forward rather than distributing in additional dividend, that we looked on this item as a compensating account, which might well be useful in future years for assisting us in maintaining the dividend at a constant level, and now in these lean times we are reaping the benefit of our conservative policy in more prosperous days.

It is interesting to note that the total amount passed through the bankers' clearings during 1930 shows a diminution of 3 per cent. In the year under review, the average Bank of England rate was only £3 8s. 5d. as compared with £5 10s. in the previous year, and the market rate for three months' bills did not average more than £2 12s. 3d. as compared with £5 5s. 4d. in 1929, all evidence of the general contraction in trade as well as an indication of the difficulty of utilising the bank's resources in a profitable manner.

SUBSIDIARY BANKS.

We append as usual the balance sheets of our affiliated banks, Messrs Coutts and Company and Messrs Grindlay and Company, Ltd. Again the figures speak for themselves (and show satisfactory progress), and we congratulate Messrs Grindlay and Company that they have been able to maintain their position during the difficult times in India.

It is a pleasure again to bear testimony to the care, zeal and ability of our chief general manager, the general managers, and, indeed, of the entire management and staff of the bank, which have brought our institution safely through these anxious and critical times, so that, despite all the troubles of the past year, we are able to pay the same dividend as before and present to you such a sound and liquid statement of the bank's position.

THE PAST YEAR.

A retrospect of the past year must, I regret to say, present a sorry picture. Fortunately, we have been spared any important industrial disputes or prolonged stoppages of work to aggravate the situation, but the world-wide wave of trade depression has continued to make its inroads on trade and industry, and this country, with its meagre defences against foreign competition, has felt the full effect of the storm.

As is only natural, the great basic industries which afford the largest amount of employment to our people have been the greatest sufferers, and the large increase in the unemployment figures provides eloquent evidence of the difficulties with which they have been confronted.

The Board of Trade figures of our exports and imports afford little consolation. In the year 1930, our exports and re-exports amounted to £657,533,000 against £839,051,000 in 1929, while our imports also show a reduction, the figures being £1,044,840,000 and £1,220,765,000 respectively.

AGRICULTURE.

Agriculture is in a parlous state. The price of wheat, which just after the harvest was quoted at 32s. to 35s., has now fallen to 24s. or 25s. a quarter, against a production cost under existing conditions in this country of 45s. to 50s. No doubt this excessive fall in value has been accentuated by the special circumstances attaching to the large quantities of grain which have been forced by Russia on the markets of the world, without any regard to its economic value or the cost of the production, low though that may be, owing to the conditions under which it is produced. Whether these sales were actuated by political reasons or whether they were dictated by the necessity for that country to obtain balances in Europe is not of great importance, but it is to be hoped that measures will be adopted, and these at an early date, to counteract this policy which might in time not only affect our whole agricultural population, but seriously impair the prosperity of the agricultural industry of all countries. When, however, we consider that other countries such as Canada, America, Argentina and Australia are all probably able to produce and sell wheat in this country at under 35s. a quarter, with a good margin of profit, it is clear that unless some assistance is afforded to arable farmers disaster stares them in the face.

As in previous years, sugar beet probably has afforded some relief, but we must, I think, realise that unless our arable farmers, and particularly those growing wheat, are afforded some assistance, further large tracts of land will be laid down to grass, and the arable section of this industry, which employs the greatest number of men for its cultivation, will be so seriously reduced that we must expect further unemployment in this direction.

TEXTILES.

In other directions, the trading conditions of the country, particularly in textiles (both cotton and wool sections) and in the iron and steel industries, continue to be a source of deep concern.

There is no relaxation in the severity of the competition from the Continent, and even where there is up-to-date plant and also the most efficient organisation, British makers frequently have to allow business, both in the home and overseas markets, to pass to foreign competitors who are more favourably situated as regards wages and other conditions, or to conduct it themselves at a loss. With wages at 25 per cent. or 50 per cent. lower on the Continent and longer hours of employment, together with other advantages arising from lower costs of production and taxation, British makers are sorely tried in their efforts to secure the trade which, under other conditions, was previously obtained for this country.

COMPETITION OF INDIA AND JAPAN.

The emergence of India and Japan as manufacturers during recent years has continued to be a serious factor, particularly in the inferior grades, but great efforts are being made in this country to reduce the price of our goods, and, I believe, with some success, by the installation of new machinery and by the reorganisation of the manufacturing and marketing ends. Unfortunately, the workers are showing disinclination to co-operate in some of the measures necessary if the fullest advantage is to be taken of modern machinery, the introduction of which unfortunately must imply, for a time at any rate, a reduction in the labour employed. It is, however, reasonable to expect that if the cost of production can be lowered, such an increase of trade will be secured in the textile industry as will enable manufacturers to reinstate, at all events, most of the labour which they may have to dispense with during the transition period.

An illuminating deduction may be drawn from the following comparison. At the end of 1913, the year before the War, the price of Midl. American cotton stood at 7-14 pence per lb., and at the same date the price of 39-inch shirtings of the weight of 2½ lbs. per piece was quoted at 9s. 2½d., but while on December 30, 1930, the price of cotton had fallen to 5-39 pence, the price of the finished article had risen to 10s. 2d. per piece. It will be seen from these figures that while in 1913 the manufacturing costs of this piece of cloth were apparently 4s. 2d., these charges had risen in 1930 to 6s. 5d.

Although he remarks I have just made refer chiefly to the cotton section of the textile trade, they apply with equal force to the wool section of that industry, and the following figures of exports of both sections tell their own tale.

Our exports of all cotton goods during 1930 show the large decrease of £47,875,910, while the exports of woollen and worsted goods have also experienced a drop in value of £15,926,813 as compared with the previous year.

IRON AND STEEL STATISTICS.

I am sorry to say that the statistics of the iron and steel trade, which disclose a falling off in exports of £16,732,749, can give us no satisfaction, and the further fact that the 3,000,000 tons of steel which we annually import from abroad might well, under other fiscal arrangements, be produced at home, must give us serious food for thought.

Not only would this increased production provide employment for an additional 120,000 men now without work, but it would enable our factories to run at something nearer their full capacity, and so bring down their cost of production, thus enabling them to compete under more favourable conditions in the markets of the world, with, in addition, far-reaching benefits for our railways, coal and other industries. It must be very galling to the large number of men out of work in this trade and living on unemployment relief to see the very materials which they themselves could make being imported into this country.

There are, I am glad to say, some iron and steel concerns which, as a result of reorganisation and drastic reduction of overhead and management expenses, have improved their position during the past year and are, at all events, probably now working without actual loss. Amalgamation of similar businesses, with the consequent allocation of each branch of manufacture to the particular section of the combination most capable of carrying it out effectively, has contributed both to efficiency and economy of production. To my mind, we must, however, be careful that the large combinations brought into being and still contemplated by the policy of rationalisation do not assume too gigantic dimensions without some assurance that the necessary brains are available for controlling such enormous organisations.

INDUSTRIES THAT SHOW IMPROVEMENT.

I am glad that all our industries do not show such depressing results. The returns from the shipbuilding industry, which show

a diminished output of only 35,000 tons as compared with 1929 (which was a good year as far as production was concerned), are not so unsatisfactory as might have been expected, but profits, wherever existent, must have been on the low side. Of the world tonnage under construction at the end of 1930, however, totalling 2,326,086 tons, Great Britain's share is only 908,000 tons, as compared with 1,560,000 tons at the end of 1929, or 39.1 per cent., as compared with a pre-war average of 57.2 per cent. A feature of the trade is the striking advance of the internal combustion engines, which appears to be rapidly taking the place of steam; indeed, the value of our exports of motor vessels has risen to £9,313,679 in 1930, as compared with £2,529,108 in 1929.

THE MOTOR TRADE.

The motor trade is an outstanding example of what British industry can do when given a fair chance; of how safeguarding duties have not only fostered increased output and large-scale production, but have enabled manufacturers to market their goods at greatly reduced prices.

Some of our subsidiary trades are not doing so badly, and the cinema industry still continues to prosper. The industry has, fortunately, provided an outlet for a considerable amount of constructional material, and both in the equipment and upkeep of its innumerable properties throughout the country, it has found considerable employment for a large number of people. The importance of such service should not be overlooked when considering an industry which is primarily established for the recreation of the people.

WORLD CONDITIONS.

In reviewing the state of trade in our country, we must not leave out of consideration the wider question of the conditions of industry and affairs throughout the world. The general fall in commodity prices which became acute in the autumn of 1929, simultaneously with the great depression in America, gathered momentum in the early months of 1930. Indeed, it was only in the latter months of the past year that the rapidity of the downward movement was somewhat arrested. In no previous period has the fall been so continuous or so acute, but we may hope, now that the downward movement has largely spent its force and prices have fallen to a lower level than prevailed in pre-war days, that any further general depreciation of a serious nature is unlikely.

Much consideration has been given to the cause of this continuous fall in world prices and many theories have been enunciated without, however, providing any efficient remedy for the disease. At one time the concentration of the greater part of the world stock of gold in one or two hands was held to be responsible for this fall in prices, as well as most of the other evils that have befallen us, but there are indications that greater importance is being attached, and in my opinion correctly so, to other causes.

ATTITUDE OF AMERICA.

It cannot be denied that had America seen fit, in the early years following the close of the war, to utilise the large accumulation of wealth she had acquired in making loans to the many countries who were eager and ready to borrow money from her, the long period of recuperation might have been materially abbreviated, but one must also remember that up to 1914 America had been a debtor, and not a creditor nation; her people were unaccustomed to, and, in fact, looked with suspicion on, the making of loans to foreign countries; indeed, they had required their own savings as well as loans from this country for the development of their vast territory and resources. It would have been perhaps an over-entprising experiment to embark on an extensive policy of loans to foreign countries at a time when those who might have been responsible for such a policy were unable to give intending investors full assurance of the solvency, present and future, of the prospective borrowers.

At any rate, I do not think we can say that the large accumulation of gold in the United States has had the effect of bringing about a restriction of credit in this country; in fact, the charge has been made against the banks that if credit had not been granted with so lavish a hand a few years ago, much trouble would have been saved. It is, however, easy to be wise after the event.

It seems to me that the fall in the value of commodities to their present prices from the high level obtaining in 1929 is really the natural sequence of production having overtaken consumption after post-war conditions had exhausted their influence.

POST-WAR SITUATION.

Consider the situation at the close of war. The whole of Europe was bare of stocks both of raw material and finished goods. Factories had been engaged on war work and the entire population had cut down their requirements to a bare minimum. With the

coming of peace, manufacturers in all countries hastened to transfer their energies to the fulfilment of the urgent requirements of their own people, as well as of their customers in other countries, resulting in an insistent demand for more machinery. New plants were installed with greatly increased capacity, and there arose from all sides the keenest competition and scramble to obtain raw material for supplying the needs of existent and new factories throughout the world. In view of such urgent and increasing demands, it is only natural that the prices of all primary products were driven up to excessive figures, cotton, for instance, rising in 1920 from a pre-war price in 1913 of 7.14 to 28.15 pence per lb.; wool tops (64's merinos) from 32 to 170 pence per lb., and twofold 24's worsted yarns spun from such tops from 2s. 11d. to 16s. 6d. per lb.; while pig iron, which was quoted in 1913 at 49s. 10d., reached a price of 200s. in 1920, and hides rose from 1s. 7d. to 4s. 3d.

As was only natural, as these urgent demands were satisfied, prices began to fall away, and already in 1921 and 1922 considerable reductions had taken place.

PLIGHT OF MANUFACTURERS.

It may well be that many people held the opinion that the conditions obtaining in those years were likely to be of permanent duration, and made their arrangements accordingly, but as the exceptional demands of the immediate post-war days were satisfied, the world began to realise that it was poorer than it believed, and having learnt from their wartime experience they could do without much they had previously regarded as essential, enquiries from all sides began to fall away, and manufacturers found themselves with large extensions of plant, which had entailed heavy capital expenditure, standing idle.

During the same period, however, large outlays had been effected in the primary markets to cope with the urgent demand that had arisen. New cotton fields were planted in many parts of the world, new rubber plantations opened up, every source of raw material developed with feverish activity, and, as these came into production, primary markets were faced with supplies far in excess of the requirements of manufacturers. As a result producers were obliged to realise their produce at ever declining prices. Serious losses were experienced and their power of purchasing manufactured goods was greatly impaired.

FOREIGN MARKETS.

The decline in the purchasing power of the foreign markets is evidenced by the latest figures relating to the total exports from the countries mentioned:—

		1929.	1930.
		£	£
		000's	000's
Canada	9 months	177,000	136,000
South Africa	10 "	65,332	59,440
India	11 "	228,600	180,210
Brazil	10 "	80,483	57,137
Australia	10 "	103,601	80,094
New Zealand	11 "	51,012	41,971
Argentina	11 "	177,354	113,439
		(at parity)	

From the foregoing it will be seen how greatly dependent on each other are the various sections of industrial life throughout the world.

RAW MATERIAL PRICES.

I feel that to-day we should regard with suspicion any scheme evolved for holding raw materials off the market or for the maintenance of prices at levels which bear no relation to the position established by the world-wide fall in values of primary products. The attempt to bolster up prices against consumers by artificial means cannot but be foredoomed to failure in the long run.

It is quite possible that the velocity in the fall in value of many articles has been accelerated by the collapse of such possibly well-meaning schemes; the only result has been that the natural laws of supply and demand have defeated these aims, and markets have been unable to absorb the accumulation of stocks which have suddenly become available, so that, in the end, all that has been achieved has been an aggravation of our difficulties.

Prices of most raw materials have now reached the pre-war level, and in many cases can be bought at lower figures, so I think there is reason to expect that, with the contracted production which is almost sure to result from such a fall in values, any further serious depreciation is unlikely.

TWO GREAT GATHERINGS.

Politics now, unfortunately, play such an important part in all our industrial and trade questions, that it is difficult to eliminate their influence from the problems which confront us. I cannot

refrain from referring briefly to the two great gatherings that have taken place during the past twelve months for the consideration of inter-Imperial relations and interests.

The great Imperial Conference of our Dominions and self-governing Colonies, on the results of which many of us had built high hopes for the improvement and extension of our mutual commercial relations by means of reciprocal and preferential trade agreements, came to an end without a definite arrangement being reached, for reasons into which I will not enter here. Fortunately, the door has not been definitely closed, and I, for one, hope that when discussions are renewed this year at Ottawa, a basis may be found for a more satisfactory exchange of the commodities we respectively need and produce to our mutual advantage.

INDIAN CONFERENCE.

The Indian Conference has just closed, and although no settlement has so far been possible on the great questions under discussion, it is to be hoped a good foundation has been laid upon which ultimately an agreement may be reached satisfactory to all parties with regard to the future government of India. There have been valuable exchanges of views resulting undoubtedly in better understanding among the great parties represented at the Conference. May we hope that when the delegates return to India their influence will be used, and will prove effective in restoring tranquillity and in bringing to an end the unrest in that country, which has been no less harmful to the peoples themselves than to the great organisations which have so largely contributed to the prosperity and well-being of that country.

It is unfortunate that the opening days of the year have been overshadowed by the anxiety engendered by the two important trade disputes. Fortunately, a prolonged stoppage in the South Wales coalfield has been avoided by the agreement reached between the miners and owners, but the failure of negotiations in the Lancashire cotton dispute will entail, I fear, much suffering, much dislocation of business, and will bring heavy losses to employers and employed, and, indeed, to the whole community.

GREAT POSSIBILITIES IN THE POSITION.

Although it would be rash indeed to speak of the prospects of the present year with confidence, one cannot help feeling that there are great possibilities in the present position. As I have pointed out, the prices of many of the primary products we need are down to pre-war level and even below it, and many of the staple foodstuffs such as flour, sugar, cocoa, etc., show heavy declines in value. It remains to be seen now whether retail prices will respond as they should, and whether the cost of living will reflect the decline in wholesale prices.

If, however, we are to take advantage of this more favourable position, certain essentials must, to my mind, be complied with. Difficult as it may be in view of our past experience, we must banish from our minds that feeling of depression which is all too prevalent at the present time. England is not yet down and out, and we must have no patience with those who, like people who enjoy bad health, luxuriate in depression and revel in gloomy forebodings. The country has met crises and depressions before with courage and endurance, and though, perhaps, the present times are the most trying we have ever experienced, it is characteristic of the British people that, at the moment of greatest strain and difficulty, they rise to the occasion. Our industries, however, must be given a fair and equal chance to compete with other nations. It is unfortunate that our fiscal policy is subject to party discussions and politics, but we must take things as they are, and now that it has been widely recognised that universal free trade is an unattainable ideal, I feel bound to say that my personal opinion is that some measure of protection should and must be extended to our trade, and that at an early date.

NEED FOR ECONOMY.

Another essential, to my mind, is the exercise of the strictest economy in all Government and municipal expenditure. We simply cannot afford at the present moment costly and unremunerative schemes of social legislation, however worthy in themselves, and every effort must be made to reduce the crushing burden of taxation which harasses our industry, impairs our spending, depletes our resources, and saps our energies and enterprise. Finally, and most important of all, there must be co-operation between employers and employed whereby costs of production may be reduced. A reduction in wages is a hard road to travel—the road to success always is—but I feel some move in this direction is inevitable. I quite agree that operatives have a right to expect that there should be the utmost efficiency in machinery and in administration, as well as in organisation and in marketing, but when it comes to the point whether the undertaking must be closed down and abandoned (for no one's purse is long enough to carry on a business

indefinitely at a loss) or, as the only alternative, that expenses must be reduced, I cannot believe that labour will refuse to shoulder its share of the burden. It is not only a hope but definitely a certainty that increased business would in time bring its recompense to all concerned.

THE PRINCE'S JOURNEY.

The keen interest that is being taken in all measures for the restoration of the trade of the country in the highest quarters, and especially the efforts of His Royal Highness the Prince of Wales to extend our trade by his journey to South America to open the great exhibition at Buenos Aires, should inspire us to renewed efforts to increase and improve the commerce of our country.

I believe, ladies and gentlemen, if we follow the lead thus given us, and if the suggestions I have ventured to make were translated, as they well might be, into facts, there is no reason why we should not again regard the future with hope and confidence. (Applause.)

I now beg to move: "That the report and accounts, as presented, be received and adopted."

Mr Colin Frederick Campbell (deputy chairman) seconded the motion, and the chairman having replied to shareholders' questions, it was carried unanimously.

RE-ELECTION OF DIRECTORS.

Mr Colin F. Campbell then proposed the re-election of Sir Harry Goschen, Bart., K.B.E., Mr Ronald Malcolm, Sir George John Marjoribanks, K.C.V.O., Mr John Roberts and Sir Percival Lea Dewhurst Perry, K.B.E., as directors.

Mr M. O. FitzGerald seconded the motion, which was unanimously adopted.

On the proposition of Mr A. Kingsford Wilson, seconded by Mr H. Carron Serimgeour, Sir Nicholas Edwin Waterhouse, K.B.E. (of Messrs Price, Waterhouse and Company), and Sir William Henry Peat, K.B.E. (of Messrs Peat, Marwick, Mitchell and Company), were re-appointed auditors for the current year.

Mr H. J. Mulrenan moved a vote of thanks to the directors, general managers, branch managers and other officers of the bank for their efficient management and services.

Mr John Cadogan seconded the vote, which was cordially passed and a brief acknowledgment was made by Sir Alfred Lewis.

A vote of thanks to Sir Harry Goschen for his able conduct in the chair, proposed by Mr John Hedges and seconded by Mr Cecil Braithwaite, concluded the proceedings.

DISCOVERY.

Over 400 years ago, Balboa crossed the Isthmus of Panama from the Atlantic Coast and discovered the Pacific Ocean.

To-day, the Isthmus is traversed by the Canal, while other vital arteries of modern commerce are provided elsewhere by the great railway systems which link the two Oceans.

The great and growing trading development of the New World is also largely dependent upon complete international banking facilities, and these are afforded by

MARTINS BANK LIMITED.

HUNDREDTH MEETING.
DIVIDEND MAINTAINED IN A DIFFICULT YEAR.
INDUSTRY'S CRITICAL POSITION.
TAXATION BURDEN TOO HEAVY.
MR A. A. PATON'S OUTSPOKEN REVIEW.

The one hundredth annual meeting of shareholders of Martins Bank Ltd., was held, on Tuesday, January 27th, at the Exchange Hotel, Liverpool.

Mr Alex. Allan Paton, C.B., the chairman, presided over a large attendance.

The Chairman, in proposing the adoption of the report and accounts for the past year, said: With your permission, we will take the report and accounts, which are in your hands, as read.

This is the hundredth annual general meeting of shareholders, and I think we may look back with pride on the progress made since the first meeting on September 5, 1832. We shall not actually complete our hundred years of corporate life until May 16th, the date in 1831 on which the Bank of Liverpool opened its doors in Brunswick Street.

We owe much to our forefathers who guided the destinies of the new bank with wisdom and established it on such a sure foundation that it was able to weather several severe financial crises which occurred during the last century. As our centenary year approached we had hoped, as possibly some of you have done, that we should be able to mark the occasion by a bonus distribution in some form or another. That hope has had to be abandoned during the past year, and we feel that while you may experience some disappointment you will commend us in using the same prudence as our predecessors in an endeavour to hand on the bank to those who succeed us in the condition of stability in which we received it, rather than that we should make a concession now which might have to be paid for later on.

MOST ANXIOUS POST-WAR YEAR.

The past year has been the most anxious of all the post-war years. Bad trade and falling prices have brought a corresponding decline in customers' requirements, and the total turnover of the bank has been much reduced. It has also been impossible for some time to buy bills at remunerative rates, or to employ our day-to-day money profitably, and we cannot yet fully measure the duration and extent of the depression we are experiencing. Added to this, expenses have remained at a high level, although we use every effort to keep them within a proper ratio.

It is not surprising, in view of such difficulties, that our profits at £793,550 show a decrease of £42,690 as compared with last year's results. We are paying the usual dividend, but have decided in view of the state of trade to set aside £150,000 as provision for contingencies instead of making any allocations to the reserve fund and to premises account. This leaves £110,076 to be carried forward.

Deposits, at £78,562,603, are £4,057,890 less than a year ago, while advances are also down by £4,800,693, reflecting the falling off in trade. A reduction of £1,564,844 in acceptances tells the same story.

Deposits being lower, cash in hand is less at £8,870,438, but shows a ratio of 11.29 per cent. to liabilities to the public. Taking cash in hand, money at call and short notice, balances with other British banks, and cheques in course of collection, we get a ratio to liabilities of 23.82 per cent., a very liquid position.

Treasury bills are £1,345,000 more, while British bills of exchange are £1,141,776 less, yet another indication of diminished trade.

Investments are up by £869,280, our holding of British Government stocks having been increased. There is a small increase in other assets, the principal item in which is, as I mentioned last year, our holding of Yorkshire Penny Bank shares, a remunerative investment.

Bank premises are more by £375,770, mainly caused by the expenditure on our new head office (which we hope to occupy before the end of the year), and on our new London office in Lombard Street. But I would remind you that in the new head office there will be considerable rentable space, which we expect to return an income commensurate with the outlay. The London office was completed and our staff transferred from the temporary premises in Abchurch Lane last November, giving us very suitable accommodation for our London business.

I now turn to a review of the principal industries in which the bank's customers are interested.

COTTON TRADE.

In common with other industries, the cotton trade has experienced a year of trials and difficulties involving serious and heavy losses. Throughout the world the trade has been under a cloud of depression; on the Continent much machinery is unemployed; even in France organised production is under consideration, while in Japan, although wages have been reduced by 20 per cent. during the year, mills are on short time.

The further contraction of world buying power has caused over-production and diminished consumption, with the inevitable disastrous decline in prices. The effect has probably been most acute in Lancashire which has been to a large extent dependent upon selling cotton goods in bulk to countries where the population at all times comparatively poor, is now quite unable to make normal purchases. Her capacity to market her goods has been further weakened by the boycotting of foreign cloths and by increased import duties in India; by continued civil war and a steadily falling exchange in China; by tariff increases in Egypt, Canada and Australia, and in the last-named country by a financial crisis; finally, too, by the aftermath of speculation in America, and political unrest and erratic exchanges in South American countries.

Coincident with the fall in the value of raw material during the year, the average price of yarns, both American and Egyptian, has fallen no less than 30 per cent., while during the same period cotton cloths have lost one-quarter of their value, involving serious loss to a trade which, of necessity, must carry a considerable amount of stock.

CUTTING PRICES DISASTROUS.

In the hope of an improvement in conditions, many firms have struggled along, adopting a policy of cutting prices, a policy necessary to enable them to find ready money, but one that can only bring disaster in its wake. This, of course, militates against the survival of the fittest, as in the process concerns in themselves financially sound gradually sink to a condition of difficulty and insolvency.

Cotton manufacturers have experienced, financially, the worst twelve months for many years. During the year more mills than ever have closed down; a few where the proprietors have decided to cut their losses and save what they can from the wreck, but the majority from force of circumstances, with nothing to be saved.

In the spinning section of the trade, with few exceptions, losses have been incurred, even though in many cases depreciation has not been provided.

The fine spinning trade has followed the American section and under unparalleled conditions has experienced serious losses.

With regard to amalgamations, nearly 10,000,000 spindles and 25,000 looms now are, or soon will be, under the control of the Lancashire Cotton Corporation, which was formed towards the end of 1929. Such a combine should, in itself, result in great economies, but its activities are viewed in different lights by the trade, and its first report, due early this year, is anticipated with considerable interest. Towards the end of December the Combined Egyptian Mills (embracing some 3,100,000 spindles) issued its first report covering a period of 17 months and showing a heavy loss.

FINE SPINNING LOSSES AVOIDABLE.

As we possess such a large proportion of the world spindleage in the fine spinning section, it would appear that such losses could be avoided, the world being dependent upon us for a considerable proportion of its requirements of these finer yarns. To avoid price-cutting, an attempt was made in July to form an Egyptian Spinning Convention whose functions would be to allocate productive quotas, &c., and to fix margins for selling prices. Unfortunately the proposals were not acceptable to the whole of the trade and the scheme was not adopted.

In the American section, also, there is a movement in favour of a scheme for price control.

For many years this country has annually exported £10,000,000 worth of general textile machinery. America, Germany and Japan are now producing looms and other machinery which compete with

our own. Every country is intent on producing as far as possible its own cotton requirements, and with up-to-date machinery available and a steady improvement in the abilities of the workers more and finer goods are being made. If Lancashire is to hold her export cloth trade, manufacturers must be able to put it on the neutral markets at competitive prices. This can only be effected by reduction of costs. Our manufacturers, however, cannot escape the increased taxation imposed upon them, nor have they the advantage of the cheaper labour, the long hours, and the lower standard of living of the foreign worker.

CLOSING DOWN OF REDUNDANT MILLS.

The closing down of redundant mills (either by liquidation or by voluntary arrangement) is likely to continue. Further amalgamations will take place, but it matters little whether the excessive competition for business is between combines or individuals if orders are accepted at less than cost; in addition, schemes of arrangement will tend to increase the number of weak sellers and prevent the concerns which still show a measure of liquidity from securing a profit.

At the same time we must hope that the limit of depression has been reached. Prices are at a very low level, beyond which it would seem that they cannot drop much further.

Although circumstances indicate that we should be well advised to realise that a certain proportion of our trade has disappeared, this country still conducts a very considerable proportion of the world's cotton trade in spite of foreign competition, and it should be the aim and object of all concerned to use their utmost endeavours that this should be at a profit.

COAL INDUSTRY.

The outlook in the coal trade is anything but promising, and it is in the highest degree unfortunate that the industry should again have been subjected to Parliamentary interference through the Coal Mines Act.

At the same time, nobody would object to a reduction of working hours if production were increased to a compensating extent. The collieries, many of which are already working at a loss, cannot as an economic proposition bear any further addition to their costs. Equally the home consumer, for example the maker of iron or steel, will practically be excluded from the world market if he has to pay more for his coal.

IRON AND STEEL TRADE.

The iron and steel trade is at the present moment in the depths of depression, and foreign material is being imported into the country at prices far below those at which it can be produced here.

As compared with British wages in the steel industry, the following figures may be quoted:—

Wages in France	are 50% of those paid at British works.
Wages in Belgium	are 47% of those paid at British works.
Wages in Czechoslovakia	are 42% of those paid at British works.

To meet world competition, large reductions in wages have been made voluntarily in Germany.

These figures are heavily against us, but in addition, longer weekly hours are worked in other countries than here, whilst we have as already mentioned much heavier overhead charges in the shape of taxation than they have.

SHIPPING.

The freight market has been very poor, and it is estimated that there is not far short of 1,600,000 tons of British shipping lying idle. Many new steamers have been laid up on completion, as profitable employment could not be found for them.

The shipbuilding industry is faced with depleted order books for both mercantile and naval work.

GRAIN TRADE.

The price of wheat has declined almost continuously and is now, practically speaking, down to the low level of 1894. For a still lower record, I am informed that we must go back to the year 1855. To illustrate the fall in value, it may be mentioned that Russian wheat is quoted 31s. to 32s. a quarter lower than North American wheat of equal quality at the beginning of the year.

Conditions have not favoured merchants, but trading has not been wholly unprofitable since it was known that world supplies were in excess of demand and traders were careful not to carry large stocks. Practically no failures occurred as all buyers and holders hedged their purchases, an illustration of the value of the Liverpool futures market.

Outstanding events were the reappearance of Russia as an important exporter and the reversal of the Canadian pool's selling policy. The pool has announced that it will in future make all

offers to established merchants instead of trying to sell direct to millers, as formerly.

Maize has suffered a severe fall, and as there are no option markets here for feeding grain, importers must have made heavy losses.

Prospects for the wheat trade in 1931 point to continued large supplies and low prices in the early months. In later months the market will be governed by the new crops of North America and Europe.

WOOLLEN TRADE.

The wool textile industry has passed through another disappointing year, in which the cumulative effect of the long period of depression and falling prices has been severely felt. Apart from occasional temporary upward movements, prices have steadily declined during the past three years, and have now reached a level that has seldom been experienced in the history of the trade. The persistent fall in values has involved the trade in disastrous losses, and has brought about a conspicuous lack of confidence, with curtailed production and a consequent increase in unemployment, which, towards the close of the year, reached a figure equivalent to 25 per cent. of the total operatives engaged in the industry.

The volume of home trade has been affected by the reduced spending power of the people, owing to the unsatisfactory state of our leading industries, and intensive foreign competition has again been experienced. Commencing in April, and continuing through May and early June, there was a strike of wool textile operatives, which caused a partial stoppage of the mills in the West Riding. The employers insisted on a reduction of wages as recommended by Lord Macmillan, who was appointed by the Government to furnish a report. After a strike which lasted eight weeks, work was resumed at wage reductions which in the main were based on the Macmillan award. Notwithstanding wage reductions and other economies, our costs are still high as compared with our Continental competitors.

OVERSEAS MARKETS.

The unfavourable conditions which have prevailed in almost every part of the world have seriously affected the export trade, upon which the wool textile industry depends so largely for its success, and some of the most important markets have been partially or completely closed to us. The disturbances in the Far East, together with the fall in the price of silver, have seriously affected our trade with China and India, which in normal times provide valuable outlets for wool products. Political unrest, economic difficulties, and tariff increases have also caused a diminution of foreign business with other countries, and exports to the United States of America, South America, Australia and elsewhere, have declined substantially.

With wool values at such a low level, it is unlikely that there will be any further substantial fall in prices, and it is hoped that the present low values will contribute to the expansion of demand for wool products as the year advances. A revival of demand is, however, largely dependent on improvement in other industries and more settled conditions abroad.

ENGINEERING TRADE.

The machine tool trade has been affected by the general depression in the engineering industry which has increased as the year advanced. Competition from the Continent has been exceedingly keen, but makers of machine tools in this country have probably received their full share of new business owing to their excellent reputation for design, workmanship and performance.

AGRICULTURE.

Those farmers who have been chiefly engaged in stock-rearing and sheep-producing have had a fairly successful year. Arable farmers, on the other hand, have found difficulty in carrying on, and many farms in the Midlands and the South are being put down to grass.

Dairy farmers have experienced difficult conditions and are in need of improved methods of marketing.

An Agricultural Marketing Bill has been introduced into Parliament, but for the most part it is merely permissive. It is a very experimental measure, the success of which is largely dependent on the initiative shown by farmers themselves.

TO SPEND OR TO SAVE?

It has been interesting during the past year to note the varying reasons given by economists for the present depressed condition of trade. Within the last few days we have all been advised to spend more as a means to recovery. While this might reasonably be expected to stimulate our internal trade temporarily, I cannot see that the orgy of spending during the past ten years has helped to maintain our export trade on which we so vitally depend. Walter Bagehot took the view that "wealth which creates wealth

is augmented mainly by our not enjoying our incomes," and further says: "The principal way in which capital increases in England is by abstinence from enjoyment."

Again, we have been assured that the sterilisation of gold is the cause of reduced credits with the consequent decrease of purchasing power. The importance of the gold factor cannot be denied. I think there is no doubt that the concentration of gold in two large financial centres and its being kept passive there, instead of being used as a basis for currency or credit issues, tends to reduce the price of primary products and must have its effect on the international flow of exports.

The economist who stated recently that, if pressed, he could name eighteen other causes was not altogether exaggerating the case. In a multiplicity of counsellors there is much perplexity.

EARNED SURPLUSES DISAPPEARING.

Figures of the Board of Trade returns disclose that during the past year our export trade has rapidly declined.

In addition, our earned surpluses represented by the capital of our industries, which have been so great in the past, are declining, and our so-called capitalists may in consequence soon disappear. And it should not be forgotten that any man who has an earned surplus invested in a savings certificate, a post office bank account, or is a shareholder in any one of our industries, is a capitalist.

I said last year that if the wisdom of modifying the restrictions imposed upon production could be realised, bringing it into a proper relation to the world's purchasing power, the result would be of tremendous benefit. I can only reiterate that. We all feel that these restrictions, together with the enormous taxation to which we are subjected, have placed a burden on the shoulders of industry too heavy to be longer borne.

DRASTIC ACTION REQUIRED.

I see that one of the Government's industrial advisers is reported as saying that there is too much gloom and self-depreciation, and that confidence and common sense will get the country through. Valuable as these qualities are, I think the picture I have been obliged to present to you shows that the situation requires more than that: it calls for action, definite, drastic and immediate, for, in the words of the late Sir Cecil Spring Rice, in speaking of England: "If she fails in commerce, she must gradually be extinguished politically, and then the rich inheritance can be divided."

Before moving the adoption of the report, I would like to express the thanks of the board to the executive and staff for their loyal service and devotion to the interests of the bank. I am sure you will wish to associate yourselves with us in this expression of appreciation. Difficult times such as we are passing through call for the greatest effort, and this we have received in unstinted measure from all connected with the bank.

The Chairman concluded by moving the adoption of the report of the directors.

Lord Colwyn, P.C., one of the deputy-chairmen, seconded, and the motion was carried unanimously.

Mr Hugh Lewis proposed that the retiring directors, viz., Mr Charles Booth, Mr Richard D. Holt, Mr Edward B. Orme and Col. Sir James P. Reynolds, Bart., be re-elected.

Mr W. S. Crichton seconded the motion, which was agreed to.

Mr G. Audley proposed the reappointment of the auditors, and Mr J. E. Gordon, having seconded, the resolution was adopted.

RELATIVELY GOOD RESULTS.

Sir Harold Mackintosh, proposing the thanks of the meeting to the directors, committee of management, the general manager and other officers of the bank for their services during the past year, said that, relatively and comparatively speaking, the results of the year were the best the directors had ever shown, because, although there was a slight decrease in the profits, when they considered the difficulties that had to be encountered and considered also the results of the other big banks, they could be satisfied they had been well and truly served. He paid a tribute to the outstanding loyalty of the officers of the bank, and of the general manager said they were getting to value him more and more each year. (Applause.)

The motion was seconded by Mr S. Mason Hutchinson, and heartily carried.

The general manager (Mr A. F. Shawyer), in response, said the bank was fortunate in having a loyal and efficient staff in these difficult times.

At an extraordinary meeting which followed, a resolution, proposed by the chairman and seconded by Lord Ebbisham, was passed adopting new articles of association.

The meeting concluded with a very cordial vote of thanks to the chairman, proposed by Mr A. B. Leather.

THE NATIONAL BANK, LIMITED.

RESULTS NOT DISCOURAGING.

The annual general meeting of the National Bank, Ltd., was held on Thursday, January 29th, at 13 Old Broad Street, London, E.C. Mr J. B. Meers, C.B. (the chairman), said: Ladies and gentlemen, the half year under review has not been without its anxieties. The accounts, however, which we have the pleasure of submitting to you are not of a discouraging nature; indeed, in view of ruling conditions, I think you will regard them as satisfactory. Notes in circulation show a decrease of £176,355. This is due to the gradual redemption of our old note issue in Ireland. Deposit and current accounts show a decrease of £1,108,000. This is due largely to the lower rates of interest offered for deposits and the consequent investment by many of our customers in gilt-edged securities.

Summarising the totals, it will be observed that our aggregate means stand at £40,711,284, whilst our liquid assets give the proportion of 57.6 per cent., as against our liabilities to the public payable on demand.

Turning to the profit and loss account, after paying a dividend at the rate of 14 per cent. per annum, less tax, we transfer £10,000 to reserve fund, and £10,000 in reduction of bank premises. We also place £10,000 to contingencies account, and we carry forward £31,023.

WAR DEBTS SETTLEMENT.

In view of the prominence given to the subject during the past months, it seems hardly necessary for me to draw attention to the world-wide chaos that has been caused by the slump in commodity prices and the attendant effect on trade generally. I feel, however, I must say that I always considered that the War Debts settlement would prove to be, at least, a contributory cause to this regrettable state of affairs. On several occasions at our meetings I have drawn attention to this point of view.

Three years ago I said: "The settlement of the debts, incurred by reason of the Great War, still continues to evoke discussion in all countries, and anything like a fair solution of the whole problem involved thereby should, when the future is borne in mind, prove of all-round benefit. A study of the existing situation cannot fail to suggest to the impartial mind that the position needs revision."

Further, in January, 1927, when referring to the effects of the "unavoidable deflationary period after the Great War," I said, "the value adjustments attendant on same—i.e., the deflationary period—have not yet reached rock bottom in any country, and cannot do so, I hold, until an equitable solution of the War Debt problem has been evolved." I am very glad to see that this important question has now been referred to by the president of the largest bank in the United States, as well as some of our own prominent bankers. I sincerely trust the whole matter will be reconsidered in the interests of all the nations, creditor as well as debtor, concerned. Although the time may not yet be ripe for a complete cancellation of all these debts, mainly owing, I must say, to political difficulties, still I welcome the indications of the growing opinion amongst financial experts in the United States that the time for an all-round moratorium has arrived.

It is needless to say that economy in public expenditure is of vital necessity. The fact that taxation in this country is so high is a most disquieting feature; there is a limit to the productiveness of this form of revenue, and the indications are that this point has been reached. Very many of us have, I fear, been living on capital for some years.

PROGRESS OF IRISH FREE STATE.

In contradiction to the position just narrated, it is satisfactory to be able to point to the healthy condition of the Irish Free State and the steady progress it continues to make, even in face of world-wide depression. It is practically free from War Debt settlements and, though mainly agricultural, is not exempt from the slump in commodity prices. Still, as I have said, it is forging ahead—its National Debt is small, and its three national loans stand in the market at very substantial premiums. Further, income and other taxes are low, when compared with other countries. The majority of the loans have been wisely used for productive purposes, as exemplified by the Shannon scheme, which can provide for the complete electrification of the country, and which will shortly furnish a good return on the capital invested. This will undoubtedly make for further prosperity.

The latest external trade statistics afford much satisfaction. Exports are on the increase and imports show a substantial reduction, the significance of which is emphasised when account is taken of the reduced prices prevailing. The morale of the people is high and their standard of living well maintained, thus bearing testimony to a high degree of economic self-sufficiency.

The Free State Government deserve warm approbation, both from their people and the well-wishers of the country, who are many.

The report and accounts were unanimously adopted.

DISTRICT BANK, LIMITED.

BANK'S STRONG LIQUID POSITION.

CONDITIONS IN THE COTTON TRADE.

DECREASE IN EXPORT TRADE AND ITS CAUSES.

SIR CHRISTOPHER T. NEEDHAM'S INTERESTING REVIEW.

The annual meeting of the shareholders was held at the head office, Spring Gardens, Manchester, on the 23rd instant, the Chairman, Sir Christopher T. Needham, presiding.

The chairman, in moving the adoption of the report and balance sheet, said:—

Ladies and gentlemen, I assume that you will take the report of the directors and accounts as read.

Before dealing with the accounts, I wish to refer to the retirement from the board of Mr McGowan. He was a director of the Bank of Whitehaven, and when we absorbed that bank in 1916 he joined our board. Owing to advancing years he does not seek re-election. He has been especially interested in the Bank's affairs in the Whitehaven district, and I wish on behalf of the board to thank him for his valuable services.

TRADE CONDITIONS IN 1930.

A review of the trade situation a year ago showed that 1929 had been a better year than 1928, and although towards the end of 1929 there could be found signs of the falling away of prices and a slackening of trade, there was a definite carry-over of activity into the first quarter of last year. The year 1930 was characterised by the enormous and growing figures of the unemployment returns and by a rapid fall of prices of commodities which, owing to its steepness, may be described as catastrophic. The average of wholesale prices had fallen 8.1 per cent. during 1929; it dropped another 21.3 per cent. in 1930, and by the end of December last the *Economist* complete index figure is actually 1.3 per cent. below the pre-war level of 1913.

The Board of Trade estimates of production, taking 100 as the basis of comparison for the year 1924, when the last census of production was made, were 110.9 per cent., 103.1 per cent., and 99.5 per cent. for March, June, and September quarters respectively. The estimate for the December quarter is not yet available, but it is unfortunately clear from all available data that there was a further diminution of volume of production.

Compared with 1929, our exports diminished by £158,796,376; our imports also diminished by £175,925,106; and including bullion the net adverse visible balance was £392,337,000, an increase of £26,361,000. In view of lower freight rates and the reduction of other "invisible exports" it is certain that the national income for overseas transactions for 1930 will be much less than that of 1929, estimated at £151,000,000, and our capacity for lending abroad will be diminished. In the past our export trade has been greatly assisted by our ability to lend abroad freely, and the lessening of this power is to our disadvantage.

THE COTTON TRADE.

The cotton textile trade during 1930 was depressed throughout the world, and Lancashire had a difficult and unsatisfactory year. In common with other primary commodities the price of raw cotton fell persistently during the year, with the inevitable result that, apart from other reasons, yarns and piece-goods were bought sparingly. In January, American cotton was priced round 9½d. per pound, and by the middle of December it had fallen to round 5½d. per pound. It is estimated that the United States Government holds indirectly over three million bales of cotton, and this large holding makes for uncertainty. Similarly, there was a serious fall in Egyptian cotton from about 14½d. per pound to below 8d. per pound, and in Egypt, too, stocks of cotton are known to be held by the Government.

Lancashire exports its products to all parts of the world, and quickly reacts to adverse conditions in overseas markets. In India political unrest and the increase in tariffs were serious factors against our trade, and India, in common with other countries, suffered from a heavy fall in the value of her products, resulting in reduced buying power. Lancashire has had for long years so many links with India that everyone must hope that the outcome of the Round Table Conference will be to the mutual advantage of both countries. Trade with China has been much hampered through the unsettled condition of the country and the collapse in the price of silver. There has been continued serious competition from other countries exporting cotton goods.

Spinners using American and similar cotton worked about 60 per cent. of capacity, whilst those using Egyptian cotton ran about 65 per cent. to 70 per cent. The weaving trade was irregularly occupied with production of not above 60 per cent. of capacity. The result of last year's export trade showed a drop from £135,449,000 in 1929 to £87,600,000 in 1930, which, even allowing for the fall in prices, is a very heavy one.

REPORT OF GOVERNMENT'S COMMITTEE.

The Government's Committee of Inquiry, which reported last July, emphasised the importance of adopting means of reducing costs of production if we are to recover the lost export trade in cotton goods. They recommended, *inter alia*, the formation of larger units in the spinning and manufacturing sections, and stated: "We are assured that, for any comprehensive and satisfactory rationalisation scheme having for its object the reduction of production costs and improved marketing, the necessary finance will be forthcoming." The publication of the report was followed by discussions between Government representatives and representatives of the various sections of the trade. The Joint Committee of Cotton Trade Organisations has continued its useful work as the natural organ for discussion of general problems of the trade, and its activities and its policy won the warm approval of the Committee of Inquiry. There has indeed been no lack of investigation into the organisation of the cotton trade during the last two years, and a great deal of valuable information is now available, and although there have been no actual developments since the publication of the report, a good deal of discussion is taking place in the various sections of the industry with the object of improving its organisation so that it may be placed on a competitive basis, the urgency of which is imperative.

Changes of methods of production are bound to come, and in this connection it is disappointing to note the difficulty of introducing the system of more looms to the weaver. The present stoppage, coming on top of the depression, is disastrous. In addition to the losses to those directly and indirectly affected, there is the grave danger of trade being diverted to other countries, a diversion which may become permanent.

Last year the Joint Committee created a Trade Development Committee to investigate the possibilities of increasing and extending the demand for cotton goods. The first step in its organised propaganda is represented by the British Cotton Textile Exhibition, which is to be held in London next month.

The British Cotton Industry Research Association has continued to make considerable progress, and they are now equipped with a comprehensive range of cotton machinery which will allow of large-scale trials for the corroboration and testing of laboratory research results in what is the finest research organisation of its kind in the world. In these days of strenuous competition the industry can only keep abreast of the times if it takes advantage of every improvement and saving which scientific research can suggest.

IRON AND STEEL.

The experience of the iron and steel industry during 1930 was one of great disappointment. The production during 1929 had been on an increased scale, but the story of 1930 is one of contraction, the production of pig iron being down by 1,382,700 tons, and that of steel by 2,356,200 tons. The decision of the International Steel Cartel in December, 1929, to curtail production was a sign that the production in 1930 was not expected to reach the level attained in 1929, but it is doubtful whether anyone foresaw the length to which the depression would go. The depression was not confined to Great Britain, and it is estimated that against our diminished production of 22 per cent. there was also a decrease of about 20 per cent. throughout the world. Imports to this country were increased by about 86,000 tons of steel, but the exports diminished much more largely, to the extent of 1,221,600 tons.

Prices of steel were maintained with slight variations, and the Board of Trade price index, which stood at the beginning of last year at 15 per cent. above pre-war, declined by only six points through the year. On the other hand, the decline in prices in other producing countries, starting in May last year, was very marked, the worst point being reached in November, when some of the

Continental prices were lower than they have been at any period during the last thirty years.

One of the biggest consumers of iron and steel is the shipbuilding industry. The tonnage commenced in the third quarter of 1930 amounted only to 160,714 tons, compared with 426,570 tons in the first quarter of the year, and the fact that the number of ships laid up in British ports at the present time is more than double the total of January last does not indicate an early revival in shipbuilding. The decline in the export trade of iron and steel was particularly severe to India, Australia, and the Far East.

CONSUMPTION REDUCED TO A MINIMUM.

There is no doubt that during the last few months consumption throughout the world has been reduced to a minimum and stocks drawn upon wherever possible. It is felt in the trade that there must be a large potential demand, which can only become effective when there are definite signs of improvement in price levels. There have been important economies in the cost of production effected in the past year, and further amalgamations of important works have been announced. Consideration is being given to methods of organisation and equipment of plant with a view to minimising production costs and putting the industry on a thoroughly competitive basis.

The engineering industry in the early part of last year was fairly active, but during later months there was reduced activity. The electrical engineering trade enjoyed greater activity than the mechanical trades. Locomotive builders, in face of severe competition, were moderately occupied. They increased their exports by 11,000 tons.

The coal trade during last year was not good, and exports show a considerable falling off. It is not yet clear what will be the effect of the legislation which has recently come into force.

GENERAL TRADE REVIEW.

When we come to take a comprehensive view of the trade situation as a whole we find that the falling off in our trade in 1930 indicated by the enormous increase in unemployment has its counterpart in other countries. The other big industrial countries, Germany and the United States, have their millions of unemployed workers, while the big agricultural countries, too, cannot find profitable markets for their products. The depression is world-wide, and its reactions are international: the difficulties of one country accentuate, if they do not actually produce, the difficulties of another. But we should not be content to accept the simple explanation that the bad trading results of last year in Great Britain are wholly due to world depression, the factors governing which are outside our control. For this country, the great slump of 1930 comes on top of other bad years, during which unemployment figures have been gradually rising, and an endeavour should be made to find out what are the adverse causes which are within our control.

To begin with, we have to face the unpleasant fact that our share of world trade was declining before 1930. The British percentage of world export trade as stated in the Board of Trade Fiscal Blue-book, published last month, was 12.94 per cent. in 1924 and 10.86 per cent. in 1929, a reduction of over 16 per cent. We are dependent so largely upon our export trade that this shrinkage is serious. The real trouble lies in the fact that the prices of our finished articles have been too high to allow for expansion of our export trade in competitive markets. What handicaps are there which prevent us from maintaining our proportion of world trade which had actually increased in volume during the years from 1924 to 1929? Critics tell us that in comparison with other countries we are too inelastic. They suggest that traditional conservatism makes us averse to breaking away from old and accepted methods which served admirably in the past but are now unsuitable to changed world conditions, and that we lack adaptability and are too slow in making adjustments. In other words, we are still working too much on pre-war lines under post-war conditions.

OBSTACLES TO REORGANISATION.

It is easier to diagnose the complaint than to prescribe remedies. The need for reorganisation and change is generally admitted, but the obstacles to them are very real ones. Reconditioning of works and equipment need not only brains and money but goodwill, courage, and the spirit of confidence. We find industry hampered by restrictions affecting employers on the one hand and workpeople on the other; both partners in industry are thus inclined to be more self-protective than adaptive.

The weight of taxation, already unduly heavy, has become more burdensome with the rapid fall in prices. Economy is often spoken about but is very little practised, and national and municipal expenditure continues to rise.

Unemployment insurance, the principle of which is now firmly established in this country, has mitigated much hardship, but misuses

of the scheme which were never contemplated at its inception have grown up. The time was ripe for an inquiry into the working of the system, and the Royal Commission now sitting has a responsible task in drafting proposals for putting it on a more satisfactory basis. Unemployment insurance as well as the housing shortage has helped to make labour static, a serious drawback when adaptability and mobility are needed.

There is, too, the great disparity between retail prices and wholesale prices which constitutes a problem of the first importance. In 1924 the disparity between these prices was not much greater than in pre-war days. But gradually the gap has widened, and, by the end of 1930, retail prices stood at 89 and wholesale prices at 59 (year 1924 = 100). If this gap could be reduced and a fairly close relationship established, an immense help would be given toward diminishing general costs of production of finished goods.

It is not possible here to pursue these questions further, but it is clear that the gravity of the situation is such as to call for a national determination to amend it, if we are not to submit in a fatalistic spirit to a continuance of excessive unemployment. Sustained effort and co-operation will be called for to make the necessary adjustments to bring us to that point of efficiency so as to be ready to share fully in the world trade revival which is bound to come.

MONETARY CONDITIONS.

In contrast with the fluctuations of the Bank of England discount rate between 4½ per cent. and 6½ per cent. during 1929, the changes last year were all downward from 5 per cent. by three stages to 3 per cent. on May 1, where it remains. The Bank of England stock of gold increased by £1,665,538, the total at the year end being £147,625,622. Sterling was almost all the time at a discount with the chief currencies, so that it was not easy for the bank to maintain its gold. Amongst the various senders of gold were Australia and Argentina, both countries whose conditions have forced them off the gold standard. The outflow of gold was chiefly to France, whose stock from all sources was increased by fully £90,000,000, the total at the end of the year being about £420,000,000, roughly three times the amount held by the Bank of England. There is another concentration of gold in America estimated at about £850,000,000.

The effect on the stability of prices of these vast sums—i.e., about three-fifths of the monetary supply of the world—being locked up in these two countries is the subject of much controversy. In some quarters it is held that the maldistribution of gold is the cause of the collapse of prices. There can be no doubt, in my opinion, that its effect on prices has been very serious, but it is not the sole cause of the collapse. This problem is one which is being considered by the Macmillan Committee, whose findings and constructive proposals we await with considerable interest.

The interim report of the finance committee of the Council of the League of Nations issued recently urges strongly the need for economy in the use of gold, and suggests methods by which this may be attained through international agreements. During the year the Bank for International Settlements was set up. Its main function is to act as trustee for creditor nations in the matter of German Reparations, but it is to be hoped that this organisation will also become an effective instrument of international co-operation in economising the use of gold, since the importance and urgency of international action cannot be too strongly insisted upon in this matter.

THE BALANCE SHEET.

I turn now to consideration of the report and balance sheet which have been circulated.

In times of such acute commercial depression and anxiety it is satisfactory to place before you a balance sheet which discloses so liquid a position. Thus, with but little change in liability to depositors, total liquid assets exceed the corresponding figures for 1929 by nearly £4,000,000, and amount to no less than 67.9 per cent. of our liabilities to customers on current, deposit and other accounts, of which cash and money at call and short notice represent 23.3 per cent., showing little change as compared with last year.

Bills of exchange, which stand at £6,798,984, the greater portion of which consists of Treasury bills, and British Government and other securities have each increased by approximately £1,700,000. The increase in these items represents the sums released by the repayment of advances not required owing to diminished trade needs.

Our investments stand at £16,022,965, a figure which is, in fact, materially below their market value; we never write up our investments.

"Other investments," amounting to £97,600, appears as a separate item amongst the assets. This item includes shares in the Yorkshire Penny Bank, Ltd., and also a share in the Bankers' Industrial Development Company, Ltd. The District Bank has taken an interest in this new company, which was organised by the Bank of

CAPITAL and INTEREST

are both lost if your investments fail.

This loss may be avoided by investing in "Globe" Life Assurance, a gilt-edged security not liable to depreciation.

A copy of our new comprehensive prospectus, featuring many attractive schemes, will be sent post free on your request.

THE LIVERPOOL & LONDON & GLOBE

INSURANCE COMPANY, LTD.

Head Office:
1, Dale Street, Liverpool.

London:
Chief Office: 1, Cornhill, E.C.3.

England to assist rationalisation, the capital being subscribed chiefly by the joint-stock banks and financial houses.

The general trade situation is clearly reflected in the reduction in advances by £3,750,000 to £20,577,120.

The liquidity of the resources of the bank affords ample indication of our ability to meet readily the needs which will arise on the revival of trade.

Liabilities of customers for acceptances, confirmed credits, and other obligations show a reduction on the year of £1,300,000, which reflects mainly the smaller imports of raw materials.

Difficulties of the past trading period are clearly reflected in reduced bank earnings for 1930. The contraction of business is also revealed in the clearing-house returns for the last twelve months. The Manchester clearing transactions declined from £648,000,000 to £532,000,000, a fall of 17.9 per cent.

Easier money conditions and lack of demand for money in trade circles, together with the conversion by the Government in the early part of the year of floating debt into a long-term issue, resulted in a heavy fall in the marginal return obtainable upon bills and short money.

VALUE OF PROPERTIES.

Our property stands at £760,297 15s. 7d. after debiting the expenditure of the year and crediting the sum of £20,000 allocated from our profits. As has been stated on previous occasions, the actual value of our properties is much in excess of the balance-sheet figure. Criticism has been directed to the banks on the subject of the extensive opening of new offices at a time when the trade of the country can scarcely be said to require more bank offices. So far as this bank is concerned, apart from necessary work of reconstruction, we are confining ourselves to the opening of new offices in those districts in which building development suggests the need for banking facilities.

From the profit and loss account you will see that after payment of all expenses and after making ample provision for bad and doubtful debts, net profit for last year is shown as £459,039, which is a reduction of £51,487 as compared with 1929.

As you are well aware, banks have suffered losses owing to the difficulties of the cotton trade.

I may say that we have made full provision for our actual and anticipated losses.

After appropriations for directors' fees, pensions, bank property, and dividend, we are carrying forward £201,263, as compared with £189,225 in 1929.

GROWING ACTIVITIES OF TRUSTEE DEPARTMENT.

I am pleased to report that a wider public knowledge of the facilities afforded by the bank in the capacity of executor, administrator, or trustee is reflected in the growing activities of our trustee department. This year a branch office of the department has been opened at the West End office of the bank, 46 Old Bond Street, London. I trust that shareholders and customers of the bank and others will not hesitate to avail themselves of the great advantages which may be derived by appointing the bank in any of the capacities I have mentioned.

The Chairman then moved the adoption of the report and balance sheet. This was seconded and carried.

Messrs T. D. Barlow, W. R. Easterby and A. A. G. Tulloch, retiring directors, were re-elected. Messrs Halliday, Pearson and Company were reappointed auditors.

The meeting closed with the usual votes of thanks.

THE CANADIAN BANK OF COMMERCE.

SUCCESSFUL YEAR—INCREASED PROFITS.

EXCEPTIONALLY STRONG CASH POSITION.

The sixty-fourth annual meeting of The Canadian Bank of Commerce was held in Toronto on Tuesday, January 13, 1931.

GENERAL MANAGER'S ADDRESS.

Mr S. H. Logan, the general manager, in the course of his address, said:—

In the face of the prolonged and trying period through which general business has been passing, it is very gratifying to be able to place before you one of the strongest statements the bank has ever issued.

Our profit and loss account shows that we made \$5,378,000, which is \$312,000 in excess of the preceding year. It should, however, be pointed out that the proceeds of the shares of the new stock issue of 1929, which added \$10,000,000 to the shareholders' funds, were earning assets for only a part of that year, whereas they were fully employed in 1930.

Interest-bearing deposits show a shrinkage of \$23,000,000 and non-interest bearing a decline of \$19,000,000.

Our cash position is exceptionally strong. It will be noted that gold, silver and Dominion notes at \$74,500,000 were only about \$2,000,000 less than in 1929, when our liabilities to the public were considerably larger. Total cash assets aggregated \$126,000,000, representing over 20 per cent. of our total liabilities to the public.

Our call loans in Canada declined by \$6,000,000 and call loans outside Canada by \$25,000,000.

Our total quick assets of \$345,000,000 amount to 55 per cent. of our liabilities to the public and 50 per cent. of all liabilities, a highly satisfactory liquid situation.

Current loans and discounts in Canada at \$268,000,000 compare with \$342,000,000 on November 30, 1929, and those outside Canada, \$25,000,000, compare with over \$27,000,000 in the preceding year.

When we met a year ago no one expected such a difficult year as has been experienced. We felt that we were due for a setback, but frankly, the liquidation and depreciation in the values of stocks, bonds and commodities, and the decrease in business activity throughout the world, have been much more severe than was anticipated.

There is a general impression that we must be at, or near, the bottom of this depression, but when the turn comes it is apt to come without advance notice, and progress on the upturn may be comparatively slow.

THE PRESIDENT'S SPEECH.

Sir John Aird, president, in the course of his address, said:—

No one needs to be told that the world is in the throes of a business depression. There is nothing strange or new about this condition, for there is no record of prosperity lasting longer than six years. Fortunately, we have been spared a financial crisis such as attended former major depressions.

The present economic troubles appeared on the surface in the summer of 1929, but the causes are of earlier origin.

Among the most hopeful signs pointing the way to world economic recovery is a series of conferences now in progress by financial and business leaders who have for their object the removal, or at least the easing, of some of the burdens that weigh down world business.

The time required to bring it about will be determined largely by our resourcefulness and ingenuity. It is necessary that we work harder, reduce production costs so as to establish an intimate relationship between producers' and consumers' prices, particularly as affecting the farmer, and generally display the same high courage that in the past helped us to overcome depression. Let us throw off our fears and turn our minds resolutely to clearing the way to prosperity in a country that is one of the most fertile in opportunity for progress.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY. RESULTS OF A DIFFICULT YEAR.

PROBLEM OF CREDIT OF DEBTOR NATIONS.

The 101st annual general meeting of the National Mutual Life Assurance Society was held, on the 28th instant, at the Society's House, 39 King Street, Cheapside, London.

Mr J. M. Keynes, C.B. (Chairman of the Society), in moving the adoption of the report and accounts, said:—The new life assurance business which we obtained in 1930 was the greatest in the history of the society, and the number of new policies written was substantially greater than last year. But as the result of our having re-assured a little more than before, in pursuance of our policy of carefully limiting our risk on any one life, the net business shows a slight reduction. Our expenses remained at almost exactly the same figure as in each of the previous two years, though their proportion to premium income was somewhat increased by the decrease of single premium business (from £63,000 to £18,000) as a result of the new legislation—business, however, which we have never welcomed and which has never played an important part in our activities. Our rates of bonus on the various classes of policies have been maintained at the same high level as in the previous year.

Our total trading profits for the year, exclusive of appreciation or depreciation on investments, have amounted to £141,487.

The gross rate of interest earned has—as I forecast in my speech of last year—again increased substantially—from 15s. 11d. per cent. to 15s. 10d. per cent.—and is now no less than 10s. per cent. higher than it was three years ago. The gain on the year has, however, been required to offset the increase in the rate of income tax. There may be yet a further increase in the gross rate of interest during the current year, partly as a result of our having written down our securities to a lower figure. But looking further ahead, I should be disposed to predict, with great confidence, the beginning of a substantial downward movement.

INVESTMENT POLICY.
