4 cents per lb. on Wednesday. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £13 8s. 9d. to £13 10s. per ton, compares with £13 7s. 6d. on the corresponding day last week.

SPELTER.—Spelter suffered a setback in New York, where quotations were reduced from 3.30 cents per lb. to 3.25 cents per lb. The London market has been active at the beginning of the week, but later the demand was checked by the reserve of sellers. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," at £13 8s. 9d. to £13 11s. 3d. per ton, compares with £13 2s. 6d. to £13 11s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £95 per ton, and at £215-£220 per ton respectively, have been maintained at last week's level. Antimony again sold at from £25 to £26, but quicksilver was again cheaper at £19 to £19 15s. per bottle, against £19 2s. 6d. to £19 17s. 6d. a week ago.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Cotton seems to have advanced unwillingly. There has been absolutely no bullish enthusiasm here at all events. It has been steady trade buying, coupled with the covering of a few shorts which has put prices up. It is hardly to be wondered at that speculators hesitate to touch this market, as to do so would be to take a gamble on the rate of exchange. In America, of course, there has been a good deal of speculation and the measures taken by the Government to try and improve matters certainly seem to have had considerable effect. It looks as if the Government there think commodities a better investment than gold. A striking feature has been the fact that cotton in the South has advanced a good deal more than the contract markets, thus making it almost impossible to import cotton into this market except at a loss. Manchester continues to do a very good business and again many large orders have been booked. The Chinese boycott of Japanese goods, coupled, of course, with the recent rise in the price of silver, is helping us very much. The U.S. Department of Agriculture issued its report of ginnings to October 17th on Monday last, the figures being 9,498,000 bales, against 9,255,000 bales last year. Imports for the week 22nd to 28th (inclusive) are 29,208 bales, of which 9,740 are American, 2,623 Argentine, 6,782 Peruvian, 3,530 Egyptian, 6,026 East Indian, and 507 sundries.

Manchester.—The improved conditions in the Lancashire cotton industry have been maintained. Operations in yarn and cloth have not been so spectacular as recently, but on the whole business has been more general than a few weeks ago. The turnover is still being checked by the firmer attitude of sellers and by the fact that producers now want longer delivery dates. Cloth manufacturers are consolidating their position. Numerous contracts have again been arranged for China chiefly in standard goods and fancies. There has been a slight improvement in the turnover for India, but many cloths remain neglected. A useful trade has been done for Africa, the Continent and Egypt. There is still a tendency for production to increase in the weaving centres. Yarn quotations have been firm and a healthy business has been done in coarse and medium American numbers. Production is gradually increasing and is now estimated to be between 75 and 80 per cent. of full capacity. Business in Egyptian yarns has been rather irregular, but most mills are improving their position. On Monday the United States Government announced record ginning figures of American cotton. In two weeks the amount ginned totalled to over 4,000,000 bales, bringing the total amount to date to 9,498,000 bales, as compared with 5,408,000 bales a fortnight previously. There is every indication that the official final crop estimate of 16½ million bales will be realised.

THE WOOL TRADE.—Bradford.—Almost complete satisfaction has been expressed in the wool trade with the result of the Parliamentary election, writes our correspondent. Some of the spinners and manufacturers do not seem to expect that the whole of the lost export business will ever be recovered, but it can be taken for granted that strenuous efforts will be made in that direction. The weakness of the situation as it affects the raw material is that though there has been a big increase in employment and the running of machinery in the West Riding of Yorkshire since the suspension of the gold standard, the orders placed represent simply a transference of business from Continental spinners and manufacturers to our own. In other words, there has not been any increase in the aggregate consumption of wool. Meanwhile wool is proving to be a very saleable commodity, its market value now being

higher than at the close of the last series of London sales. The position in Bradford is sound. Since last week a further big volume of business has been done in tops, particularly merinos and carded crossbreds. Prices are higher and quotations for all qualities have been advanced as a protective measure. So much business has been done by topmakers, spinners and manufacturers that the present machinery activity is assured for the next few months, and for that length of time at least no depreciation in values is expected for wool or tops.

THE JUTE TRADE.—Dundee.—A marked improvement can be recorded in the jute industry generally. Through an advance in prices of raw material, buyers have been influenced to purchase on broader lines and now spinners and manufacturers are fairly comfortably placed with orders. Many of the Dundee mills and factories are working full time and more and more workers are being absorbed from the lists of unemployed. The home trade consumers have mostly been responsible for the improvement, and when export trade is resumed it is expected conditions will be even better and that spinners and manufacturers will be in a position to insist upon the payment of higher terms, which are now required to meet the extra cost of production following the advance in raw jute values. During the past five weeks the fibre has risen in value to the extent of £5 10s. per ton, but yarns and cloth have not yet been raised to a comparative level. Prices are all very firm, however, and they look like tending dearer. The strength of raw jute is accountable to the smallness of imports of the fibre into up-country markets. Good First Marks are quoted at from £23 10s. and crack Lightnings at £21 10s. for short group to £22 5s. wanted for Green Ram, while Daisee assortment has been sold at up to £20 10s. for full group and £21 for single marks and fours at £19 2s. 6d. to £19 5s., with Tossa assortment at £21 10s. to £22, and fours sold at £19 10s. to £20, November-December. Spinners here have purchased large quantities during the past fortnight, freely paying the higher prices. A quiet steady business is passing in jute yarns. Occasionally rollers have been found to accept 2s. 2d. for common 8-lb. cops and 2s. 3d. for 8-lb. spools, but the very lowest now is 2s. 2½d. and 2s. 3½d. respectively, with most sellers naming 2s. 3d. for cops. Twist has been largely sold at 3½d. for 3-ply 8-lb., and most spinners now require 4½d., while a feature of the market has been the strength of sacking yarns, which are now up to 2½d. wanted for 24-lb. weight and 3½d. for 8-lb. chains. Rove has been dealt in at the former rates of £21 to £21 10s. for 48-lb. and £19 to £19 10s. for 200 lb. The finer yarns are very firm at 3s. 0d. for second quality 8-lb. Rio warp, 2s. 9d. for third and 2s. 5d. for fourth. Carpet qualities are quiet at from 3½d. for 14-lb. warp. Inquiries for jute cloth are numerous, but buyers are still hesitating to place orders. They have already secured a fair quantity of material and are undecided about the future. Manufacturers, however, are very firm in their ideas, at from 3½d. for 10½-oz. 40-in. hessians and from 2½d. for 8-oz. Linoleum hessians are being bought only for home trade account, and American users are still keeping more or less out of the market. Sacking and tarpauling are finding a moderate outlet, but bagging is quiet. The Calcutta goods market has occasionally shown strength, and prices have been advanced to 20s. for 10½-oz. 40-in. and 16s. 3d. for 8-oz., November-December, and 20s. 3d. and 16s. 5d. for January-March. On spot here 20s. has been paid for 10-oz and 16s. 6d. for 8-oz.

THE GRAIN MARKETS.

WHEAT.—During the past week wheat prices in terms of gold continued to advance sharply. The upward movement has again extended to all cereals. The statement made last week that the advance has been occasioned by a general improvement in confidence rather than by the factors which usually determine the course of wheat prices, appears therefore to have been justified. It is, however, been pointed out that the international situation of wheat itself was slightly better. The factors making for such an improvement have since gained force. Most important among them is the continued absence of chartering from Russia, the small volume of offers from that country, which suggests that the export surplus has been over-estimated. Meanwhile buying has been concentrated on the American markets, which has helped drive up prices. To this must be added that the crops of Australia and Argentina have been estimated at a figure considerably below that of the last crop. Business has been active during the past week, and this country and the Continent appear to have bought considerable quantities. Quotations in London, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 31s. 3d. per 496 lbs., as ex ship, 29s. 9d., against 28s. 3d.; No. 3 Northern Manitoba, Atlantic, ex ship, 28s. 3d., against 27s.; Russian, on sample, 24s. 6d. to 28s., against 23s. to 27s.; Australian, ex ship, 29s., against 27s. to 28s. a week ago.

WHEAT FLOUR.—Trading in flour has been active and prices in terms of gold advanced in sympathy with wheat values. Home milled qualities could, however, be obtained at last week's price. North American shipments, at 236,000 sacks, show an increase of 42,000 sacks as compared with the previous week. Of this total 121,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 21s. 1d. London, 20s., against 20s. Manitoba patents, ex store, 28s. to 29s. against 24s. 6d. to 28s.; and Australian, ex store, 19s. to 21s. against 19s. a week ago.

BARLEY.—The market in barley has been firm, owing to continuance of a strong demand which was met by comparatively few offers. On Wednesday, "December" futures were quoted 36½ cents per bushel in Winnipeg, against 34½ cents a week

and 31 cents a fortnight earlier. Quotations in London Wednesday: "English feeding," f.o.b., per 448 lbs., 22s. to 24s., as compared with 24s.; Russian, landed, 20s. 9d. per 400 lbs., against 19s. 9d. a week ago.

OATS.—The supply of oats at the principal markets continues to be rather limited and as the strong demand has not subsided, prices advanced further. "December" futures, which a week ago stood at 23½ cents per bushel in Chicago, sold at 24½ cents per bushel on Wednesday this week. Quotations in London, Wednesday: "River Plate," landed, 19s. per 320 lbs., as compared with 18s. 6d. last week; "River Plate," ex ship, 17s. to 17s. 3d., against 17s. 3d. to 17s. 6d.; "Chilean White," landed, 27s. 6d., against 26s. 6d. a week ago.

MAIZE.—There was a slight reaction in maize prices early this week, but prices quickly advanced above last week's level following a renewed buying movement. The huge export surplus of Argentina is being rapidly absorbed, and, according to an estimate of Mr George Broomhall, the total supply available for shipment does not now exceed 9½ to 12½ million quarters. Quotations in London, Wednesday: "Plate," landed, 19s. 3d. per 480 lbs., as compared with 18s. last week; "Plate," ex ship, 18s., as against 16s. 9d.; "Plate," November-December, 18s. 3d., as against 17s. Yellow maize meal, ex wharf, was quoted at £5 15s. per ton, against £5 10s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to October 24	Owts. 38,451	Owts. 132,210	Owts. 264,302	Owts. 300,645
8 weeks to October 24	547,862	1,163,129	2,492,879	2,476,109
Average price of English wheat per cwt.	s. d. 6 1	s. d. 7 0	s. d. 9 7	s. d. 9 9

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Oct. 17, 1931	Owts. 99,688	Owts. 509,409	Owts. 65,763	s. d. 5 9	s. d. 9 6	s. d. 6 4
Oct. 24, 1931	98,451	429,907	66,381	6 1	9 0	6 5
Oct. 22, 1927	273,953	554,673	95,793	10 7	14 1	9 4
Oct. 27, 1928	300,645	723,084	84,458	9 9	10 10	8 10
Oct. 26, 1929	264,302	688,459	70,629	9 7	10 2	7 9
Oct. 25, 1930	132,210	528,955	55,159	7 0	10 0	6 1

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Oct. 29, 1930.	Jan. 2, 1931.	Oct. 14, 1931.	Oct. 21, 1931.	Oct. 28, 1931.
Winnipeg (No. 1 Manitoba)	148½	72½	56½	55½	59½	62½
Chicago (No. 2 Winter)	130½	79½	79½	50	53	57½

The visible supply of wheat in Canada, at 48,135,000 bushels, shows an increase on the week of 2,418,000 bushels. Supplies a year ago stood at 69,107,000 bushels.

OTHER FOODS.

SUGAR.—The principal event of the week is the announcement made by the International Sugar Council to the effect that Peru will adhere to the International Sugar Agreement of May 9, 1931. The export quotas for Peru have been fixed at 360,000 long tons for the current year, and 373,750 long tons for each of the four succeeding years of the agreement. The stagnation in the raw-sugar markets has given way to a slight expansion in buying, which caused prices to harden a little in America. Nevertheless, the supply of sugar available in Cuba for the United States is believed to exceed requirements, which has a depressing effect on markets. "December" futures in New York were quoted at 1.29 cents per lb. on Wednesday, against 1.27 cents per lb. a week ago. The market in this country has been dull, and sterling prices were barely maintained, but quotations for "British refined" remained unchanged. Wednesday's sales of "raws" include "December delivery" at 6s. 4½d. to 6s. 4½d. per cwt., against 6s. 5d., and "March," 1932, at 6s. 7d. to 6s. 7½d., against 6s. 7d. to 6s. 7½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
London	Tons. —	Tons. 148	Tons. 990	Tons. 1,541	Tons. 8,667	Tons. 25,168
Liverpool	2,715	—	12,916	15,585	22,538	67,940
Total	2,715	148	13,906	17,126	31,205	93,108
Last week	6,103	18,720	15,828	17,393	42,396	110,086

COFFEE.—Buyers of coffee showed little interest at Wednesday's auctions, but prices were maintained, and outstanding qualities realised steady rates. Last week's movements of coffee in London

were as follows: Brazilian, landed, 969; delivered for home consumption, 52 bags; exported, 65; stocks, 2,891 bags, against 1,500 bags last year. Central American, landed, 2,240 packages; delivered for home consumption, 3,103; exported, 2,104; stocks, 73,767 packages, against 47,463 a year ago. Other kinds, landed, 696 packages; delivered for home consumption, 2,843; exported, 1,765; stocks, 50,048 packages, against 61,518 a year ago.

COCOA.—The sharp setback suffered by cocoa a week ago has been followed by a slight reaction, and on Wednesday quotations in New York and London were slightly higher. "December" futures were quoted at 4.47 cents per lb. in New York on Wednesday, against 4.44 cents per lb. a week ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, November-January, at 22s. 3d. per cwt. f.o.b. London contract, shows a rise of 3d. Last week's movements of cocoa in London were as follows: Landed, 137 bags; delivered for home consumption, 7,164 bags; exported, 382 bags; stocks, 162,409 bags, as against 173,609 last year.

TEA.—The quantities catalogued for this week's auction comprised 52,174 packages of Indian, 12,916 packages of Ceylon, and 9,000 packages of Java and Sumatra tea. The Indian auctions last Monday opened with strong support for most grades, and prices advanced sharply. This firm tendency was maintained at the Ceylon auctions on Tuesday and again at Wednesday's Indian sales. No doubt this improvement has partly been caused by the smaller quantities of both Indian and Ceylon tea offered for auction. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyassa-land.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.

Oct. 22, "	1 0-91	0 9-99	1 6-15	0 8-87	0 7-41	0 6-73	1 1-26	1 1-26	1 1-26	1 1-26	1 1-26	1 1-26	1 1-26

RICE.—The market in rice has been a little steadier, but there has been no advance in prices. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 27 tons; delivered, 128 tons; stocks, 1,253 tons, as against 2,858 tons last year.

POTATOES.—Supplies of potatoes at the principal markets have been abundant. Business was active and quotations have been maintained at last week's level. At the Borough Market, "Best King Edward" sold at from 8s. to 8s. 6d. per cwt., as compared with 8s. to 8s. 6d. per cwt. a week ago.

SPICES.—Spices have been neglected and prices again sagged. Wednesday's quotation for "Black Singapore" pepper, at 6d. per lb., shows a fall of ½d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 13 tons; stocks, 402 tons, against 568 tons last year. White, landed, 31 tons; delivered, 49 tons; stocks, 424 tons, against 156 tons a year ago.

MEAT.—In view of the heavy supplies of meat available at the Smithfield market, Wednesday's prices of beef, mutton and pork were all lower than a week ago. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 4s. 4d. to 5s. per 8 lbs., against 4s. 10d. to 5s. 2d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 4d. to 3s. 10d., as against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,926 tons, as compared with 9,598 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.1 per cent. of the supplies, as against 82.5 per cent. a year ago; and imported mutton, mainly New Zealand, formed 73.0 per cent. of the total supply, as against 77.7 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets generally have a firmer tone and notwithstanding attention being directed to the General Election a fair volume of business has been recorded. A feature has been the activity in Plate linseed, both old and new crops being in good demand at advanced figures up to 29 7s. 6d. being paid for old on passage or for shipment, while a good trade has been done in new crop at £8 12s. 6d. January-February, £8 15s. March, and £8 17s. 6d. April-May. Current value of old is around £9 12s. 6d. and of new, January-February, £8 17s. 6d. The balance awaiting shipment in South America has been reduced to 55,000 tons against 221,000 tons actually shipped in the remainder of 1930. In addition, however, India is expected to send 183,000 tons against only 12,000 tons. Moreover, there is a substantial quantity afloat for Europe, viz., 155,000 tons against 97,300 tons a year ago. Reports on the growing seed in Argentina are still favourable. Egyptian cottonseed has been in active demand and has advanced to £6 15s. for black for shipment to January. Trade in vegetable oils is only moderate. Consumers of linseed oil appear to be well supplied. Prices, however, are steady, raw oil on spot ex Hull mill quoting £17, and for delivery to December £16 10s. Cotton oil is neglected and somewhat easier. Oilcakes are in satisfactory demand and prices are steady.

HIDE, LEATHER AND ALLIED TRADES.—Demand for hides and skins from home-slaughtered cattle remains good, but tanners are

COMMERCIAL TIMES—WEEKLY PRICES CURRENT.

The prices in the following list are revised with the assistance of an eminent firm in each department.

not prepared to pay higher prices for supplies. At the auction held in Manchester this week all cattle hides changed hands at last figures, while calfskins were cheaper in the heavy weights and slightly dearer in the lighter averages. A fair amount of business has been done in imported hides, and generally speaking the level of quotations is unchanged to a slightly easier tendency for some sorts. In the South American frigorifico market Argentine ox have changed hands at the equivalent of 5 1/2 d. Some satisfactory sales have been made of dry River Plates, B. A. Americanos having realised 5 1/2 d., and Inservibles 3 1/2 d. In Africans sales have been made of unbathed Adis Abebas at 5 1/2 d., while 5 1/2 d. has been paid for Mombasas. Capes, however, have been a very quiet market, and although 6d. and 5d., and 7d. and 6d., is asked for first and second dry salted and drys, these figures are still considered too high. The market for Australians has become firmer, with a fair amount of business being done. Turnover in regard to sole leather, while continuing steady, is not quite so brisk as that of last week. Of course, a satisfactory amount of business is being done all the time in bonds, but the demand on shoe manufacturing account for dry hide varieties has been rather less. On the other hand inquiry has come to hand for English and wetsalted descriptions, and of these some good sales have been made. Offal, also, has inclined to be less active, although a fair amount of trade has been done in pinned shoulders and bellies. Producers and distributors of upper stock continue to maintain a satisfactory turnover, quite respectable size parcels going out all the time. Black and coloured glacé kid—particularly the latter—is frequently inquired for, in addition to which there is a steady consumptive demand for box and willow calf. Patent leather is also receiving more attention, while of late there has been a better inquiry for supplies of reptile skins and the more fancy types of upper leather. Viewing the position as a whole the market for all descriptions of leather is firm, and on those lines of imported goods where the exchange is against this country prices have a tendency to advance.

RUBBER.—The slight spurt in buying which took place last week, particularly from America, has subsided, and prices once more fell

back to a lower level. The decline has been accelerated by rumours that the Dutch Government was against any scheme of controlling the industry. Wednesday's official closing price for standard ribbed smoked sheet in London, at 2 1/2 d. per lb., shows a fall of 1/4 d. as compared with the corresponding day last week. In forward positions, business has been done at 2 1/2 d. to 3d. for December, against 3 1/4 d. to 3 1/2 d.; and at 3d. to 3 1/4 d. for January-March, 1932, as against 3 1/4 d. to 3 1/2 d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,022 tons, delivered 1,295 tons, stocks at the end of last week, at 134,262 tons, show an increase of 282 tons, as compared with the preceding week.

THE MONEY MARKET.

A WEEK ago it appeared that money was likely to become easier this week, as a result of Funding Loan and other dividend payments. This view was clearly taken by the market on Friday, October 30th, for Treasury bill applications on that day amounted to £66.3 millions, and although £45.0 millions of bills were on offer, the average tender rate was £5 5s. 1.42d. per cent., against £5 7s. 8.07d. the previous week. On Saturday, money

Correspondents to the Italian Treasury.

hardened slightly on the news of the Bank's gold shipments, and owing to the end-of-the-month turnover of funds; but, even so, conditions were very comfortable. Monday and Tuesday, however, came as a disappointment to the market. Owing to the fact that Bank Holiday fell on August 3rd, there were no Treasury bill maturities on either day, and, as the Government interest payments had not had time to filter through to the market, money was inclined to be difficult, with rates running up to 5 per cent. Further stiffening factors were the weakness of sterling, the unsettling effects of the Bank's heavy gold shipments, and finally sales of January bills by the Bank at 5½ per cent.

The discount market has been very idle, but rates have hardened in sympathy with the money position and other unfavourable factors already enumerated. Hot Treasury bills which, last week, were quoted at barely 5½ per cent., have since hardened to 5¾ per cent., while the market rate on three-months' bank bills has similarly risen from 5½-¾ per cent. to 5¾-¾ per cent. One consequence of this is that Treasury bills applied for last week at the average tender rate of 5½ per cent. have, so far, involved their holders in a loss, but as the Bank's sales imply, it is in every way a good thing that discount rates should have hardened, and the market can set this week's losses against the very satisfactory turn that was obtainable on hot Treasury bills in previous weeks. Further comfort may be derived from the knowledge that this week's Treasury bills are a useful maturity, and so are desirable to hold.

The Bank return reflects the Bank's repayment of £20,000,000 out of the £50,000,000 credits it raised three months ago in Paris and New York, and also its sale of practically £15,000,000 of its gold in order to cover this transaction. Reference to the causes and significance of these operations will be found upon a later page. In so far as the Bank's own position is concerned, its gold stocks have fallen by £15.0 millions, and as the note circulation has expanded (seasonally) by £2.8 millions, the reserve is £17.8 millions lower. In the Banking Department the main movement is a contraction of £12.4 millions in Other Deposits. This clearly relates to the past repayment of the Paris and New York loans to the Bank. Public Deposits rose by £7.6 millions as a result of the absence of Treasury bill repayments early in the week. Government securities held in both departments are £4.0 millions higher on the week, and Other Securities are £1.3 millions higher. The expansion in these items seems surprising in view of the Bank's sales of bills, but it must be remembered that many items in the Bank return have been affected by the partial repayment of the Bank's foreign credits. With Discounts and Advances practically unchanged, Bankers' Deposits have fallen by £2.5 millions, but still stand at the comfortable level of £60.9 millions.

The contraction in the Banking Department's reserve by £17.8 millions has reduced the proportion from 41.9 to 31.4 per cent., while the combined effect of the Bank's gold losses and the reduction in "other deposits" is to lower the Bank's reserve ratio of gold to outside liabilities from 27.9 to 25.4 per cent. Judged by the experience of former post-war years, these figures are fully adequate, and, in fact, leave an ample margin for the usual Christmas expansion of the note issue. It must be remembered, too, that as regards Christmas currency requirements

the experience of previous years is hardly a reliable guide to-day. To mention one obvious, if somewhat tragic point, Christmas shopping by many households will be tempered by the unusual magnitude of the New Year income tax demands.

Some question has been raised as to the status of German renewal bills drawn after December 1st, on the ground that if these have the usual maturity of three months they will fall due for payment after the date at present fixed for the termination of the "stillhalte" agreements. It may be said at once that there is already a disinclination in the discount market to take up German bills maturing after February 29th, but the London Accepting Houses have decided that even after December 1st German renewal bills are not to be drawn for dates after February 29th. The practical effect of this is that, unless the "stillhalte" agreement is prolonged, German renewal bills will only be drawn for the normal period of three months up to the end of November.

Latest Wall Street reports display a far more confident tone. The Federal Reserve system's return for the week ended October 26th recorded a net contraction of \$24.0 millions in the note circulation, while simultaneously gold shipments have slackened, and the quantity of gold earmarked on foreign account has declined by \$26.8 millions, thus showing that as earmarked gold is exported, fresh earmarkings are not taking place. These two developments are regarded as evidence of a revival of confidence in the American banking system, and as showing that the creation of the new Credit Corporation has had a good effect. The rise in wheat prices and the better world outlook from the grower's point of view has also improved the general tone. Call money remains at 2½ per cent., while open market discount rates are also unchanged at 3½-¾ per cent. for 90-day bankers' acceptances.

The foreign exchange market was quiet, and fluctuations were fewer and within narrow limits. The general tendency was against sterling, but with some recovery towards the close. The New York rates moved against us from 3.88 to 3.75, after touching 3.68. Montreal improved from 4.33 to 4.17, and Paris gained nearly three points at 95½. Brussels was better by a point at 28½. Milan hardened to 72½, and Madrid also gained a point at 42½. Amsterdam went from 9.60 to 9.30, and Berlin improved to 15.75. Switzerland was better at 19.20. The Scandinavian exchanges all moved against us, Stockholm from 17.50 to 17.25, Oslo from 17.90 to 17.70, and Copenhagen from 17.75 to 17.50. The South American quotations were largely nominal, Rio being quoted at 4d., Buenos Aires at 36½d., and Monte Video at 28d. The Far Eastern exchanges were very firm, the rupee gaining ¾d. at 1s. 6½d., and the yen 1½d. at 2s. 7½d. Batavia was quoted at 9.30. In the forward market dollars and Dutch florins were both round about par for both periods. Paris remained at ½ franc and ¾ franc premiums. Three months' Brussels was also unchanged at ¾ franc premium, but one month's Brussels, however, moved from par to ¼ franc premium. Milan was again rather nominal at 25 centesimi and 75 centesimi discount. The discount on forward Madrid widened by ½ to ¾ peseta, but that for three months' delivery was unchanged at 1½ pesetas. Switzerland was at ¾ franc premium for both deliveries. The silver market was more active, with sharp rises as a result of the weakness in sterling and demand from India, cash advancing by 1½d. to 18½d. after 19½d. and forward by 1½d. to 18½d. after 19½d. The China silver exchanges rose in sympathy, Shanghai improving by 1½d. to 1s. 4½d. and Hong Kong by 2d. to 1s. 9½d.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

THE GOVERNMENT'S TASK.

THE electoral strife at an end—the battle decisively won and even more decisively lost—the next question for the observer was how soon the smoke of battle would blow away sufficiently to give a clear glimpse of the future. The National Government wooing the suffrages of the citizens last week won an unprecedented victory. But a large question remained to be answered. Could, or could not, the Party which, on the terms of the "national" appeal, had won nearly five-sixths of the seats in the House of Commons, do the big thing and recognise that the victory was for the nation and not for the party? The first indications were distinctly encouraging. Mr Baldwin himself, as leader of the predominant party, made a great beginning. On the morrow of the poll he said to the country: "This is no party victory." The attitude of the most responsible organ of the Conservative Press was notable for its consistent and studious moderation. Even the high-protectionist Parliamentary group, presided over by Sir Henry Page Croft, met and decided to refrain from immediate agitation for tariffs. Sir Austen Chamberlain, who, with filial piety, asked his constituents to "make tariffs triumph," offered, to his supreme credit, to relinquish claim to office.

The favourable impression thus created happily outlived the mischief of rumour—partly exaggerated, partly malicious—set going by the delay in announcing the personnel of the new Administration. Whether the desire for a brief and well-earned rest was Mr MacDonald's sole motive in retiring on Tuesday from London to Lossiemouth, or whether—like other Premiers before him—he found it easier to assess from a distance the merits of conflicting claims, the fact remains that the new Cabinet, whose composition is announced as we go Press, strengthens the belief that unity of purpose has prevailed over party considerations.

Mr MacDonald has chosen a strong team, fairly representative of the various groups of political opinion supporting the Government. Mr Baldwin, as Lord President of the Council, will be available for "general purposes," as will the late Chancellor of the Exchequer, succeeded in that office by Mr Neville Chamberlain. And if the new Chancellor's avowed fiscal convictions suggest that Protection may have weighty support in the Cabinet, the appointment of Sir Walter Runciman to the Board of Trade is an assurance of balanced judgment, backed by wide business experience, in that important Department. The presence in the Cabinet of Sir Herbert Samuel at the Home Office and Sir Donald Maclean at the Ministry of Education is a further earnest that the mandate for which the "National" candidates asked will not be interpreted as a mandate for tariffs, and while other important offices, such as the Secretaryship for India (Sir Samuel Hoare), the Ministry of Labour (Sir H. Betterton) and the Ministry of Health (Sir E. Hulton Young) have naturally and rightly been allotted to Conservatives, Liberalism in the Administration is reinforced by the inclusion of Sir John Simon as Secretary for Foreign Affairs, and Sir A. Sinclair as Secretary for Scotland, while Lord Sankey as Lord Chancellor and Mr Thomas at the Dominions Office complete—with the Prime Minister and Mr Snowden—a quartette of leaders of the late Labour Government.

A promising National Government thus formed, it is to be hoped that issues of party controversy will not be raised in Parliament to distract attention from the essential issues. For the problems before the Government are not those of traditional domestic partisanship—they are less political than economic—and they are overwhelmingly international in texture. At home, the need first and foremost is to make sure that effective administrative action is taken to put Mr Snowden's "budget-balancing" proposals into effect. There can be no difference of opinion about that. Next there is the problem of the pound. Is there any conceivable ground for immediate party controversy here? For the time being there is sufficient common agreement that our aim must be to maintain a maximum stability of the

internal price level. Sudden decisions as to the re-stabilisation of the pound, and the means to be adopted for its accomplishment, are not called for. They must await the development of the international situation. Then there is the question of the balance of payments. In this matter the leaders of all parties in the new Coalition have pledged themselves to that careful examination which is so obviously necessary before any action is taken. What is the balance? How is it moving? The data, especially in respect of estimates of "invisible" items, are notoriously inadequate. Long and careful investigation is essential. All these questions are of national economic expediency, and call for cool deliberation by the Cabinet, freed from the distractions of party controversy in Parliament.

It would ill serve the national interests if Parliament were to be used as a "sound box" to magnify the voices, already audible in some sections of the Press, advocating hasty, narrow policies. "Dumping has started. It must be stopped. Only tariffs can stop it." So shout the partisans, eager to use to the full anything that may be exploited for party advantage. We do not pause to emphasise the exaggerated nature of current clamour about "dumping," nor even to debate the meaning of the phrase. If it be interpreted (incorrectly but popularly) as a rush of imports to evade a possible tariff duty, then the depreciation of the pound itself will keep it within proportions, even if the supposition be valid (which we question) that either British importers or foreign merchants could finance, or undertake the exchange and other risks involved in, the accumulation in this country of huge unsold stocks. But the point we wish to make is that the domestic implications of so-called "dumping" are of meagre importance as compared with its international significance. "Dumping," in so far as it exists or is threatened, is an international danger signal. Cabinet after Cabinet, all round Europe, is seeking desperately to "correct the balance" by restricting imports and encouraging exports by all means in its power. The spectacle of Europe is one of a group of countries all straining their efforts to sell, in order to meet foreign obligations, yet preventing other nations from attaining the same object by selling to them. Along that path lies ultimately the cessation of international trade and the bankruptcy of the world—not excluding Britain, the greatest of the world's international traders. That great, urgent, world problem, beside which considerations of domestic controversy are utterly trivial, is the big thing that confronts the Government of Britain to-day. Emergency tariffs here, without consideration or scientific examination, could not fail gravely to exacerbate the situation.

Superimposed upon the great economic difficulties of Europe are international political problems of the most exacting order—reparations, disarmament, the future of India, co-operation with the Empire. In political, as well as in the economic sphere, careful and complete preparation and examination of all essentials must precede action. It is true that a precious month has been wasted by the election, and that problems which were pressing a month ago brook still less delay now. This does not mean that there is any justification for panic measures. It means rather that there is ever-increasing need for effective team-work in consultation and the framing of policies that meet national requirements rather than fulfil party aspirations. The Cabinet will need the fullest possible leisure to study the tasks before it. We hope, therefore, that the Speech which His Majesty will read on Tuesday next will be a brief recital of the national and international emergency, and that Parliament will speedily adjourn until, in the New Year, it can be presented with the considered and unanimous proposals of its National Ministers, framed after a full and uninterupted survey of facts.

THE INDIAN MINORITIES.

WHILE all minds in Great Britain have been pre-occupied with the General Election, the Indian Round Table Conference has been going ahead with the technical side of its task. On Saturday, October 31st, the Draft Third Report of the Federal Structure Sub-Committee was circulated to members of the Conference, and its contents were made public at the beginning of this week. The Sub-Committee reaffirm the conviction that "it is in a federation of provinces and States that the solution of the problem of India's constitutional future is to be found," and they proceed to work out a scheme in detail, down to an oath of allegiance.

The first impression made by this rather formidably technical document is this: Supposing one were a historian living a century hence, with this document as the only "original sources" for the history of India during this week, how completely ignorant one would be of the real events and the real forces which are rudely thrusting themselves upon our attention at this hour because we have the good (or bad) fortune to be contemporaries. The constitutional technicalities may be important enough in their due time and place; but the very reason why they continue to be elaborated so smoothly and so voluminously is just because they are not of first-rate importance here and now. The important thing at the moment is not the drafting of constitutional clauses but the transfer of power. The British Raj represents the greatest and most effective concentration of power that has ever been achieved in India since the beginning of Indian history. This power is now on the point of being relinquished by its present British holders—but relinquished to whom and in what proportions? This apple of discord which is to be thrown into the Indian arena is of so great a price, and the penalty of failure to seize it will be so heavy, that the prospect is stirring India to the depths and is letting loose mighty forces, some of which have been dormant for more than a hundred years. This is the reality which the constitution-making activities at St. James's have almost ceased to veil. All concerned—Hindus and non-Hindus, British Indians and Princes—are manœuvring for position in order to scramble for the apple when it falls.

In this bewildering surge of political movement, we may pick out three prominent waves: the coalition of the non-Hindu minorities in London; the anti-European terrorism in Bengal; and the Hindu-Muslim strife on the Panjab-Kashmir border.

In London last week the event of real importance was the lining up, behind the Muslims, of all the non-Hindu minorities: Depressed Classes, Indian Christians, Anglo-Indians and Europeans. These five communities have now drawn up a joint statement of their claims for submission to the Prime Minister as Chairman of the Minorities Committee; and this is the problem with which Mr MacDonald is now wrestling. The essential claim is that those communities and interests which at present enjoy representation in any legislature through nomination or election shall have, under the new Constitution, adequate representation in such legislature through separate electorates which shall be continued until relinquished by the community concerned. The conditions and procedure by which a change from separate to joint electorate might be brought about are closely and jealously defined. The minorities further claim certain general guarantees against discrimination of all kinds in their disfavour, as well as guarantees for their adequate representation in the Provincial and Federal Cabinets and in the public services. The Muslims have already signified their intention to veto all further steps towards constitution-making until their claims for such safeguards are satisfied; and their position, strong before, will be materially strengthened now that all the other minorities have formed up behind them.

In saying "all the other minorities" we beg the question of the Sikhs, who are conspicuous by their absence from this minoritarian condition. But the Sikhs, for present purposes, are to be reckoned among the Hindus. In fact, they have made themselves the spear-head of the Hindu phalanx in the Panjab. They are

determined to be masters of the Panjab once again in a self-governing India, as they were for a century and a half between the death of the Mogul Aurangzib and the British conquest of the Sikh principalities in the middle of the nineteenth century. Evidently they cannot recapture this position of local dominance unaided; but they believe themselves to have a fair prospect of success if Sikh valour is supported by Hindu numbers, since Sikhs and Hindus together constitute little less than half of the total population of the Panjab.

If it comes to that, the Panjabi Sikhs and Hindus have a practical precedent in Kashmir, next door, where at this moment an almost solidly Muslim population is being ruled by a Sikh dynasty through the instrumentality of a small Hindu minority. Hence the very serious situation on the Panjab-Kashmir border with which the Government of India is now faced. The Kashmir Government has not been exemplary; and the reports of ill-treatment inflicted upon the Kashmir Muslims by their non-Muslim rulers have lost nothing in the telling. Within the last few days Muslim feeling in the adjoining districts of the British-administered province of the Panjab has been worked up to a point at which it has boiled over into action. Bands of Muslim Red Shirts are crossing the border and coming into conflict with the Kashmir Government's police and troops; and the Kashmir Government, feeling that the situation has got beyond it, has called upon the Government of India to send in British forces to restore order. The Government of India has complied, and had to comply, for it could not allow the law and order of an Indian State to be overthrown by an invasion of British Indian subjects from a territory for which the Government of India is directly responsible. Very rightly, the dispatch of British troops is being followed up by an official inquiry into the situation in Kashmir which has made the Government of India's intervention necessary. All the same, it is an unhappy situation. For supposing that there is an armed collision between British troops and Panjabi Muslim Red Shirts in Kashmir, what effect is this likely to have upon the negotiations in London between the Prime Minister and the All-India Muslim representatives?

Evidently the Muslims are manœuvring already for an effective control of the entire Indus Basin from Kashmir and the North-West Frontier Province through the Punjab to Sind inclusive. They may also reasonably look forward to making themselves masters of Eastern Bengal, where they have an overwhelming majority. In addition, they have a fair chance of dominating a corridor between Eastern Bengal and the Panjab—a corridor which contains all the historic centres of the Muslim Raj in India, though numerically the Muslim element here is in a minority. With these great territories in their hands, the Muslims would hold a large Hindu population in pawn, as pledges for the safety of the scattered Muslim minority in other parts of India. In the worst event, they could retreat into their north-western and north-eastern citadels, pending reinforcement from the solid core of the Islamic world, which lies just on the other side of the Sulayman Mountains.

That is how the Indian Muslims see the future, supposing that the British Empire in India were to go the way of the Manchu Empire in China. They do not seem to be afraid of the future. At any rate, they are not clinging at all apprehensively to the skirts of the British Raj. They welcome the transference of power from British to Indian hands by the constitutional process, on the condition that they are assured, at this stage, of those minority guarantees which they have now demanded, jointly with the other minorities, from the Prime Minister. Supposing that the constitutional process of transference breaks down and there is a scramble for the British legacy, in that event also the Indian Muslims seem to be confident of holding their own against the Hindus in spite of the disparity of numbers.

And what are the Hindus thinking? Some Hindus in Bengal are thinking that the moment has come for getting rid of the British Raj quickly by fair means or foul. This is presumably the meaning of the campaign

of terrorism which was signalled by two (happily unsuccessful) outrages last week: an attack on Mr Durno, the District Magistrate of Dacca, on the 28th, and another attack on the 29th on Mr Villiers, the President of the European Association, in Calcutta. On the 29th the Viceroy signed an ordinance still further sharpening the Bengal Criminal Law Act. In fact, in Bengal as in the Panjab, the capacity of the British Raj to stand against violence is now on trial.

And what is in the mind of the Hindu leaders in London? Suspicion that the British are seeking to elude or delay the fulfilment of their promise to grant self-government to India? Belief that the minorities and the princes are being made to serve as stalking-horses for some such British policy? Such notions are as hard to entertain seriously as they are hard to disprove positively. A more serious consideration in Hindu minds is the fear that, if the communal principle is embodied in the Indian Constitution now, it will remain embedded in it in perpetuity—thereby preventing the growth of an all-Indian national consciousness. Thus suspicion and partisanship and reason all contribute towards confirming the Hindus in their determination to insist on rejecting the communal principle, though the heavens may fall.

And supposing the heavens did fall, what would be likely to come out of the ensuing chaos? A homogeneous Indian national State, blended into unity in the fiery furnace of suffering? Or a second China, in which Muslims and Hindus, princes and tribes, castes and sects, would be fighting one another, up and down the length of a continent, in an ever indecisive battle? The second alternative seems the more probable when we remember what has happened to the Ottoman Empire. A century and a half ago the Ottoman Empire was the counterpart of the Indian Empire as it is to-day. May the peoples of India be saved from suffering what the peoples of the Near East have suffered during the last hundred and fifty years.

THE LEAGUE AND HUNGARY.

LAST September the Hungarian Government requested the League of Nations to examine the financial situation of the country by means of an expert inquiry. This request was referred by the Council to the Financial Committee, which first sent a delegation to Budapest to make a preliminary investigation, and later held a special session, under the chairmanship of M. Suvich, at Budapest on October 16th. The report of the Committee, which has now been published, is a model of conciseness and lucidity; but its authors, although presenting an admirably clear picture of the problem, unfortunately fail to give a wholly convincing explanation of how it is to be solved.

The Committee begin by observing that though the local financial problem in Hungary does not present so many grave features as in 1923, when the country—still suffering from the revolution and its aftermath of currency inflation—first addressed itself to the League, world conditions, to-day, make it much more difficult to deal with. The first difficulty which has to be considered is Hungary's budgetary position. The development of the past six years (the accounting period is July 1st-June 30th) is summarised below:—

(In millions of pengö.)

	Closed Accounts				Provisional Results 1930-31	Budget as Voted 1931-32	Budget as Revised 1931-32
	1926-27	1927-28	1928-29	1929-30			
Expenditure	806.5	891.1	974.4	974.0	946.5	878.3	922.9
Receipts	954.8	987.1	983.9	975.5	829.6	878.8	918.0
Balance	+148.3	+96.0	+9.5	+1.5	-116.9	+0.5	-4.9

In 1930-31 the fall in receipts resulting from trade depression began to assume formidable dimensions, and though the budget voted in June, 1931, was nominally balanced, new credits, amounting to 77 million pengö, had to be opened either to make good under-estimates or to provide for new expenditure not foreseen in the original budget. On the other hand, it became evident that the estimate of receipts was unduly optimistic, and that there might be a short-fall of 100 million pengö, leaving a prospective deficit of over 175 millions. The Hungarian Parliament in August empowered the Government to take all measures necessary to balance the budget, and certain fresh taxes, together with additional economies, were imposed. On the basis, however, of the yield of revenue in July-September, the Committee are of opinion that it would not be prudent to rely on total revenue in 1931-32 exceeding 800 million pengö.

In addition, moreover, to the budget of the Administration, there is the budget of the State enterprises (post and telegraphs and railways) which should include both trading accounts and capital expenditure. The development of this budget is shown below:—

(In millions of pengö.)

	Closed Accounts				Approximate Results 1930-31	Revised Estimates 1931-32
	1926-27	1927-28	1928-29	1929-30		
Surplus on the budgets of the State enterprises	+24.1	+16.7	+13.1	+0.3	-23.3	+4.6
Capital expenditure	56.1	65.5	35.8	93.1	39.6	6.2
Balance	-32.0	-48.8	-22.7	-83.8	-62.9	-1.6

A reduction of 11 million pengö in salaries and pensions and an increase in railway tariffs became operative near the beginning of the current financial year, but though the Committee do not express a definite opinion, it seems questionable whether the balance given in the revised

1931-32 estimates will, in fact, be realised. In the meantime, the cash balance at the Treasury on September 30th amounted to only 66 million pengő (since reduced by 9 millions), and the Treasury has substantial internal payments, amounting to over 200 million pengő, to meet in respect of commitments on roads and other capital outlay. Thus, making due allowance for the fact that some arrears of taxes, etc., which amount nominally to about 235 million pengő, may be collected, the Committee find that the Treasury is likely to be in cash difficulties this month in the event of further budgetary deficits.

In a declaration which it made to the Committee, the Hungarian Government has announced that, so far as the State budget is concerned, it proposes to fix maximum expenditure for 1931-32 at 890 million pengő, and for 1932-33 at 830 millions; and, in addition, it will secure equilibrium in the budget of the State undertakings by necessary increases of tariffs, by curtailment of capital outlay, and by transferring to private hands certain of its undertakings such as gold mines, steel works, etc. Expenditure by local authorities will be effectively controlled, and the programme of budgetary reform will be concerted in detail with a representative of the Financial Committee resident in Budapest. These proposals are described by the Committee as being "eminently desirable." But the Committee suggest that the maximum expenditure envisaged for 1931-32 may prove to be 90 millions in excess of probable receipts and may require further retrenchment.

So much for the budgetary position, which appears to be of technically manageable proportions, always provided that the drastic retrenchment considered by the Committee (and substantially admitted by the Government) to be necessary, meets with no insuperable political obstacles. Nor is the internal debt of the State, which amounts to 136 million pengő of funded and 89 million pengő of floating debt, disquietingly large. Much more difficult, however, is the problem presented by Hungary's foreign indebtedness, statistics of which we reprint from the Committee's report on the opposite page, together with an analysis of Hungary's balance of payments, which forms the background against which the problem of her foreign indebtedness must be considered. It will be seen that Hungary's total foreign indebtedness amounts to 4,094 million pengő, of which 1,629 millions represents State obligations, 517 millions debts of public bodies, and 1,948 millions the banking and commercial indebtedness. Of this total, 2,604 million pengő are long-term debts and 1,490 millions medium and short-term obligations, of which it is estimated that at least 1,000 million pengő fall due for repayment in the course of the next twelve months. Some part of this is covered by "standstill" arrangements which, however, run only for three months at a time.

The Committee agree that the foreign indebtedness of the State, which is to-day only 260 million pengő more than its total after the issue of the Reconstruction Loan of 1924, cannot be considered as excessive, but they criticise the Government for not having exercised more effectively powers of control over the borrowing of public bodies in Hungary, and they observe that the foreign debt of the whole community "has been increased in the past six years at a rate which, in our opinion, the real need of the country did not warrant." However this may be, the immediate question is that of repayment; and it is in this matter that the report is least satisfactory. The Committee note that by September 30, 1931, in spite of loans from the B.I.S. and certain central banks, the reserves of the National Bank in gold and foreign exchange had fallen to 112 million pengő, as compared with 230 million pengő at the end of 1930, notwithstanding the fact that since July all foreign exchange transactions have been centralised by decree at the National Bank. Bank rate stood at 5½ per cent. until June 16th, after which it was raised by progressive stages to 9 per cent. on July 24th. On September 11th it was reduced to 8 per cent., a step which the Committee criticise. The implication of the report in this direction is that more drastic internal deflation would be desirable. The considerations which lead to this conclusion have their origin in the situation of the country's balance of payments.

Subject to the qualification that the interest charge on the medium and short-term debt is an approximation, the Committee calculate that Hungary's total annual charge for interest and amortisation is not far short of 300 million pengő, of which two-thirds relates to long-term and one-third to short-term debt, the State's liability being 82 million pengő for long term and 18 million pengő for short term. Now, though the adverse balance of merchandise trade, which reached a maximum of 370 million pengő in 1928, was actually converted into a surplus of 61.5 million pengő in 1930, the position thus achieved was both precarious and insufficient to meet the invisible debit items. Moreover, though imports in the nine months ending September, 1931, were reduced to 426 million pengő, or an annual rate of 568 millions, the depression of trade, and particularly the fall in the price of cereals, resulted in exports falling in the same period to 398 million pengő, or an annual rate of 530.6 millions. Having regard to this immediate position, the Committee admit that "standstill" arrangements must be extended to cover short-term debts now excluded from their scope, and should be prolonged for a period of not less than six months. But for the future Hungary is simply told that by hook or crook she must achieve an adequate active balance of payments, since the process of paying debts by more borrowing is rightly condemned. That is to say, presumably, since debt charges require 300 million pengő, and other invisibles roughly cancel out, Hungary, unless she can increase her exports, must reduce her imports to 230 million pengő a year (or one-fifth of their 1927-29 volume). Since such drastic restriction of imports would mean, other things being equal, a serious internal rise of prices, contraction of credit, as stated above, is a necessary concomitant of restrictionist policy.

But can exports be conceivably maintained even at their 1930 level? The Committee agree that there are difficulties in the way, since over half Hungary's normal exports go to Germany, Austria and Czechoslovakia, all of which countries have instituted rigid systems of exchange control designed to restrict imports. Moreover, for most of her exports Hungary's practicable radius of marketing is severely restricted by her geographical position. The Committee take note of these arguments, but only to reject them. "All the evidence of recent years and recent months in other countries," they say, "has gone to show how much greater than is commonly believed is the adaptability of trade—how rapidly in normal circumstances a passive trade balance may be converted into an active, and vice versa." They add that "former lending States must . . . inevitably find that their balance of trade, previously rendered active by their lending, will now become passive, or, at least, less active than it was." But, apart from the fact that Hungary's neighbouring "debtor" countries are all being driven by the weight of their foreign indebtedness to seek an active balance by curtailing imports, the indications at present are that the world's "creditor" countries are by no means disposed to accept the inevitability of a more passive balance in their own case at the cost of aggravating their own domestic problem of unemployment.

In short, we find ourselves unable to understand what result, except the annihilation of international trade and the consequent inability of debtors to meet their obligations, can be expected to follow from the regime which the League's financial doctors have prescribed in the case of Hungary. Indeed, in their concluding paragraph, the Committee appear to have had a lingering doubt as to the efficacy of their prescription. "We wish," they say, "to emphasise again that the Hungarian problem is not isolated; it is part of a very much wider issue. Hungary cannot hope to contribute greatly alone to constructive measures designed to ameliorate world economic conditions." This is patent truth; and however desirable it was to encourage Hungary to defend her credit by resolute insistence on a balanced budget, we regret that the Committee should have allowed it to appear from their report that the problem of liquidating international indebtedness can be furthered by any and every country pursuing with sufficient vigour the self-contradictory aim of exports without imports.

RUSSIA'S TRADE BILLS.

(BY A CORRESPONDENT.)

RUMOURS about the Soviet Government's inability to meet engagements maturing in the near future have been circulating in the European Press for some time and came to a head with a recent article in *Germania*, stating that Russia was about to ask for a moratorium or long extensions of her acceptances. This provoked counter statements by the Russian and German Governments and, what is perhaps equally important, elicited fresh figures of Russian trade with Germany and bills maturing in the next fifteen months.

For a general view of Russia's balance of payments, invisibles may be ignored. Statements made from Russian sources, valuing Russia's invisible exports at a high figure, may be regarded with some scepticism; and against receipts from these sources the Soviet Government must have fairly important outgoings on freights, insurances, and the diplomatic services and trade delegations abroad. Any favourable difference in the balance of invisibles is likely to be of small importance in relation to the value of visible exports and imports in any year.

On the other hand, peculiar importance, in evaluating Russia's balance of payments, must be attached to credit. Russia's imports in any year are paid for—to some extent—over the next two or three years. The credits obtained by the Soviet Government abroad have grown in volume and in length year by year. If it is possible to make a reasonable estimate of this credit structure, it will be possible to offer an opinion of some value about the position of Russia's balance of payments in the near future. For it is not unreasonable, on the other side, to reckon exports as cash. It is true that some cases are known, on the Continent, where Russia has sold on short credit. But, on the other hand, Russian producers, notably the Co-operatives, have been able to obtain advances on goods from foreign buyers before the goods are even ready for export. Russia's actual balance may therefore be rather more favourable to her than an estimate which assumes, as the following figures do, that all exports produce cash.

Russia's imports in the last seven years have averaged just over 800 million roubles a year, rising from 720 million roubles in 1924-25 to over 1,000 millions in 1929-30. During the nine months ending June, 1931, imports amounted to 755 millions. The leading suppliers have been Germany and the U.S.A., who have each furnished about one-quarter, or more, of Russia's annual imports for some years past. Germany in 1926, with the assistance of German Government guarantees, sold goods to Russia, on credit, for 360 million reichsmarks, say 180 million roubles. The credits were long—half at two years, half at four years. (The last of these credits, despite rumours to the contrary, was paid off this year.) These credits partly replaced and partly increased credits that had been granted to Russia already by German industry. They have been continued year by year at the same total amount, or a little more, though the terms of credit have been shortened, it is said, to two years for most supplies, and up to three years for a few. This continued until early 1931, when new orders were accepted from Russia for an amount far in excess of previous years and on longer terms. So far, however, as concerns goods that have been delivered to Russia up to June 30, 1931, Russia may be assumed to have obtained, on the average, two years' clean credit for 200 million roubles (400 million reichsmarks) per annum since 1926 or even earlier.

An equal annual amount has been imported from the U.S.A., but in so far as these imports were raw materials (cotton, etc.) the credits Russia could obtain would be short. For tractors, on the other hand, the usual terms of payment are said to have been 25 per cent. cash and 25 per cent. in each of three succeeding years. Some manufacturers may have obtained larger cash payments with consequent smaller instalments. Other goods—e.g., electrical supplies, which have been purchased in U.S.A. for very large sums—have been sold on very long credit

with instalments running up to five years, and equivalent probably to over two years' clear credit. But there is no central institution for sales to Russia in the U.S.A., and the variety of credit terms reflects the variety of opinions that business men may form about Russia. It is quite likely that a certain amount of sales have been made on, say, 50 per cent. cash, and the rest at not more than nine months' credit. On the whole, however, Russia's purchases of food and raw materials in the U.S.A. have diminished year by year and purchases of machinery, on long credit, have increased.

Russian purchases in the United Kingdom have varied in amount appreciably. In 1930, including re-exports, they exceeded £15 millions. The re-exports (roughly £9 millions) were rubber, wool and other Colonial produce, and were sold partly for cash and partly on short credit. The domestic produce was sold either by the Co-operative Wholesale Societies (say £2 millions) or by firms using the British Government's guarantee. The former probably gave long credit—say two years. The remaining £4 millions or more would be mostly on credit of 12 to 18 months. In 1929 the figures were smaller and the British Government's credit period shorter—not more, it is understood, than twelve months. For some years before that, British exports to Russia ran to only a few millions a year. But long credits were given by some private firms. Thus as early as 1925 textile machinery was sold on five years' credit, and important transactions on very long terms took place even earlier. At the present time orders are being placed on two years' credit for important amounts, but they could hardly come into consideration in any picture of the near future.

This covers about three-quarters of Russia's imports. The remainder comes from a number of countries and commands various terms of credit. Austria (the Government and the Municipality of Vienna) has for some years past exported to Russia about £2 millions annually on long credit—two years and even up to four years. Considerable orders have been placed in the Polish metallurgical industry on appreciably long credit. Certain supplies have been shipped from Czechoslovakia on credit running up to two years. Recently the Italian Government has made two successive agreements covering supplies up to £6 millions in all, over about two years, with credits going up to three years. From time to time French firms are said to have sold machinery, motor cars, etc., on important credit terms. Norway has been selling herrings, aluminium, etc., on credits of twelve months or more.

To form an estimate of Russia's present balance of payments it is necessary first to summarise all the facts indicated above in some formula. Any such formula distorts and unduly simplifies a situation that has changed each year. The results, however, are interesting. If we assume a formula 2—1—2, i.e., that, on all Russian imports, payment is made two-fifths in cash, one-fifth after one year, and two-fifths after two years, we obtain (on the other assumptions made above) the following rough estimate of Russia's annual balance of payments:—

	Imports.	Maturities.	Cash from Exports.	Balance.
1924-25	720	288	575	+287
1925-26	756	446	677	+231
1926-27	714	726	770	+44
1927-28	945	822	778	-44
1928-29	836	810	878	+68
1929-30	1,069	972	1,002	+30
1930-31—June	755	713	663	-50
July-October	...	137	...	...
1931-32	...	560	...	...
1932-33	...	302	...	...

It is certain that Russia had no such favourable balances in 1924-25 and 1925-26, as this table would suggest. These figures result largely from the omission of the instalments payable in and after 1924 on goods bought before that year. Also, as Russia's credit has been improving year by year, the imports of 1924-25 would be paid for during those years to a greater degree than the table suggests. It is possible, however, and even probable, that about this time Russia accumulated important holdings of valuta which would be useful in meeting temporary deficits in the balance of payments which are highly likely to arise from time to time.

Any probable formula must leave the early years in doubt. It must, however, be considered that the Soviets have been getting a good deal of credit going beyond two years, and the following formula may come as near to the facts, viz., one-fifth cash, two-fifths after one year, one-fifth after two years, one-fifth after three years. This gives:—

	Imports.	Maturities.	Cash from Exports.	Balance.
1924-25	730	144	575	+431
1925-26	756	440	677	+237
1926-27	714	590	770	+180
1927-28	945	769	778	+9
1928-29	836	838	878	+40
1929-30	1,069	876	1,002	+126
1930-31—June	755	738	663	-75
July-October, 1931	...	197	...	...
1931-32	...	682	...	...
1932-33	...	365	...	...
1933-34	...	151	...	...

These tables probably indicate as closely as any summary of the available information can, the general position of Russia's balance of payments up to June 30, 1931, though both may over-estimate the amount of credit that Russia has obtained. If this is the case, then Russia's outstandings at the end of June, 1931, would be well under 1,000 million roubles. Since Russian exports in the nine months ending June, 1931, realised 660 million roubles, and the maturities are spread over two years or more, the balancing of receipts and payments in the near future should not present more than the usual difficulties—unless the fall in the pound is already upsetting the balance, or some new factor enters into the calculation.

The fall in the pound must have benefited Russia on all her sterling maturities. The sterling bills due to British exporters and outstanding this summer amount probably to about £5 or £6 millions. To this must be added, however, the bills drawn in sterling by exporters in other countries. It is known that such bills have been guaranteed by the German Government, and, it is believed, for a large amount. It is thought, too, that many of the acceptances given by Russia for purchases in Austria and Central Europe, in Finland and the Baltic States, and even in Poland and France, have been expressed in sterling. The total amount now outstanding in all countries, including the United Kingdom, is probably of the order of £15 millions or more.

Against the effect on future sterling payments must be set, in the first place, the effect on future sterling receipts. So far as the immediate future is concerned these receipts must arise from deliveries under contracts already made and not yet exhausted. It is doubtful, however, whether these unexpired contracts cover any important sum. It seems to be the case that all the main deliveries have already been effected. From the point of view of the Soviet export institutions Great Britain's departure from gold took place at the most convenient time. The loss on winding-up old contracts will be small.

The only other way in which the depreciation of the pound may have seriously affected Russia's balance of payments is by reducing in value the sterling balances which Russia held here on September 21st. Rumour has been busy with this suggestion. It is known, of course, that Russia had certain balances which she was bound to maintain here for certain purposes. It is not thought that they were large—say, more than £2 millions at most. Any other balances were free, and the unknown quantity in the equation is the size of these free balances on September 21st last. Whether in recent months they have at any time been large is open to question. It would certainly seem more convenient for Russia to hold them in Germany, where interest rates were high, and large maturities are frequent, or in the U.S.A. where, also, important sums keep falling due for payment, and the currency seemed above any suspicion of weakness. But, whatever free Russian balances may have been here in the summer, it seems unlikely that they would not have been withdrawn in August and September when all the world was selling sterling. Moscow's handling of her foreign exchange position over many years gives no ground for any other assumption.

BANKING

The effect of the fall in the value of sterling seems more likely to have been beneficial than detrimental to Russia's external finances, so far as the near future is concerned. The conclusion that this financial position should not present any unusual difficulty in the next few months is not upset by the movements of the pound. What may happen later depends on other factors.

THE NATIONAL POWER SCHEME.

(BY A CORRESPONDENT.)

It will be recollected that the purpose of the Central Electricity Board is to co-ordinate the production of electricity in Great Britain in a number of selected highly efficient generating stations, to interlink those generating stations by main transmission lines, operating at 132,000 volts, to establish subsidiary lines at 33,000 volts, to serve important points of distribution, to standardise the frequency of generation at A.C. 50 cycles, and to effect, through this work of co-ordination, a reduction in the costs of electricity, with the widest possible dissemination of such economies, translated into the prices charged by authorised distributors.

One can distinguish, perhaps, three phases in the work of the Board. First, the "wayleave and construction" phase, when the main and secondary transmission systems were being erected in the ten areas into which Great Britain has been divided for the purpose of the scheme. Second, the "standardisation of frequency" phase, when generating plant and consumers' apparatus in non-standard areas were being converted. Third, the determination of agreements regarding tariffs between the Board and authorised undertakers supplied from the national transmission system.

If we take the first phase we find that by the end of 1930 nine schemes, covering 76.7 per cent. of the area of Great Britain, 98.2 per cent. of the population, and 99.5 per cent. of the output of authorised undertakers, had been endorsed by the Electricity Commission, that eight schemes had already been adopted by the Board, while the ninth, namely, that referring to South Scotland, was finally adopted, after much negotiation, on July 31, 1931. The last remaining area, the North of Scotland, was still being surveyed by the Electricity Commission, and it had not yet been received by the Board.

The principal difficulty confronting the programme of construction was the necessity to obtain wayleaves, very often against the most determined opposition, but, by the end of September, 1931, remarkable progress had been made both in primary and in secondary lines. During those nine months wayleaves covering 832 miles of primary lines operating at 132,000 volts and 304 miles of secondary lines operating at lower voltages, or the total of 1,136 miles had been obtained. In a number of areas, notably Central Scotland, North-East England, Mid-East England, Central England, East England and, to all intents and purposes, North-West England, negotiations were almost complete. In South-East England, which presented special difficulties owing to the enormous congestion of population round London and the great number of housing estates which have come into existence and are being developed, more than 80 per cent. of all wayleaves required had been obtained. Progress in

South-West England is so rapid that, by the early spring of 1932, it may be expected that here also negotiations would be completed.

At the end of September, 1931, 1,730 miles of transmission lines had been erected, with a corresponding number of sub-stations, an increase of 913 miles since December 31st. Primary lines accounted for 1,363 miles, and secondary for 367. Examination of Table I shows that a number of areas were approaching completion in addition to Central Scotland, notably North-East England and Mid-East England. It was estimated that at the end of December, 1931, a total of 2,100 miles would be erected, an increase of 1,200 miles during the year, while 3,246 miles of wayleaves would be negotiated, representing an increase of 1,500 miles, and it was estimated that, by the end of 1932 or the beginning of 1933, the construction period would come to an end.

TABLE I.

PROGRESS MADE IN THE CONSTRUCTION OF THE "GRID" IN THE FIRST THREE QUARTERS OF 1931.

Scheme Area.	Approx. Total Miles-ages of Routes.	Miles of Way-leaves obtained.		Total Towers erected (miles) at Sept 30, 1931.	Lines in Operation at Aug. 31, 1931.	
		At Dec. 31, 1930.	At Sept. 30, 1931.		Route Miles.	Circuit Miles.
(i) Primary Lines.

East England.....	138.1	14.3	137.1	40.4	...	...
South-East England.....	520.5	301.9	442.3	307.7	149.1	159.3
South-West England.....	647.0	14.0	299.8	13.7	...	...
Totals.....	2,568.7	1,391.2	2,222.7	1,363.5	465.8	539.7
(ii) Secondary Lines.						
Central Scotland	19.7	...	18.1	0.4	...	...
North-East England.....	89.6	30.2	84.8	36.7	...	...
North-West England.....	263.8	129.0	177.8	100.6	72.9	135.6
Mid-East England.....	201.1	97.6	191.5	117.9	39.9	39.9
Central England.....	18.0	17.8	17.9	17.9	15.7	31.3
East England.....	24.0	...	7.5	...	...	...
South-East England.....	209.9	71.9	145.4	80.2	67.4	109.8
South-West England.....	110.0	8.5	15.2	13.2	8.6	17.2
Totals.....	925.1	355.0	659.2	366.9	204.5	333.8
Grand totals	3,593.8	1,746.2	2,881.9	1,730.4	670.3	873.5

The second and parallel phase in the Board's activities covers the standardisation of frequency. The areas affected are the West of Scotland, North-East England and Central England. In the West of Scotland at the end of September, 1931, more than half of the expenditure required in connection with standardisation had been sanctioned by the Board; in North-East England about 40 per cent., in Central England about 33 per cent., and in other areas between 30 per cent. and 40 per cent., the total expenditure sanctioned amounting to slightly more than £7,000,000, the half of this figure being represented by North-East England alone. It has been estimated that this work will be completed in about two years' time. The total expenditure incurred by the Board, inclusive of standardisation of frequency, can be

given as about £28,000,000, the statistics covering construction programmes alone, without reference to standardisation being given in Table II. It will be seen, in this table, that South-East England alone represents 36 per cent., and is easily the most important area, followed at some considerable distance by North-West England, Central England, Mid-East England and South-West England.

The third phase, namely, negotiations with authorised undertakers, has not yet reached the stage where one can select any area other than Central Scotland for special attention. In Central Scotland, as already stated, a grid tariff has been introduced, but negotiations with authorised distributors are not yet completed. In all other areas, without exception, agreements, largely of a provisional nature, have been made with isolated undertakers without any tariff being yet introduced for an entire area. It may be possible to arrange such a tariff for South-East England during 1932. On the whole, the progress made by the Central Electricity Board in 1931 has been definitely ahead of programme, and it has been attended by few technical difficulties.

A DIARY OF THE CRISIS.

Friday, October 30th.

Bank of England announces repayment of £20 millions of the £50 millions credit granted to it in equal parts by the Bank of France and the Federal Reserve Bank on August 1st, and due to expire on October 31st, the remaining credit of £30 millions being extended for a further period of three months.

Herr von Hoesch, German Ambassador in Paris, visits Berlin. Failure announced of the Hollandsche Credit Bank of Dusseldorf, and the Comptoir d'Escompte de Tournes.

Sterling lower, closing dollar rate 3.861. European stock markets: London, quiet; Paris, Amsterdam, dull, weak tendency.

Wall Street, final rally after early reaction. Gold exports \$13 millions; gold "unmarked" \$3 millions. Federation Bank and Trust Company closes doors.

Saturday, October 31st.

German "standstill" committee of bankers, meets under chairmanship of Dr. Brüning.

Sterling weaker, closing dollar rate 3.83. European stock markets: London, quiet; Amsterdam, firm. Wall Street irregular. Gold exports \$363,400; gold imports \$1 million from Canada; gold "unmarked" \$27 millions.

Monday, November 2nd.

M. Laval arrives in Paris. Announced that League's proposal for a year's armament truce has been accepted by 35 States.

Federal Reserve Bank agrees to renewal of Reichsbank credit.

Sterling weak, closing dollar rate 3.743. European stock markets: London, Paris closed; Amsterdam, quiet but firm.

Wall Street firm opening, later irregular. Gold imports \$3 millions from Canada and India; gold "unmarked" \$1 million.

Tuesday, November 3rd.

British Government announces adhesion League's proposed armament truce.

Herr von Hoesch has interview with M. Laval.

TABLE II.

TOTAL VALUE OF CONTRACTS ENTERED INTO BY SCHEME AREAS IN GREAT BRITAIN AS AT AUGUST 31, 1931.

Contracts entered into.	Central Scotland.	South-East England.	Central England.	North-West England and North Wales.	Mid-East England.	North-East England.	South-West England and South Wales.	East England.	Totals.
Principal main transmission lines	£ 664,996	£ 1,990,601	£ 990,216	£ 1,018,417	£ 801,383	£ 601,635	£ 1,165,323	£ 303,883	£ 7,536,454
Lower voltage transmission lines	6,105	2,231,698	52,274	414,333	394,017	177,490	61,092	...	3,337,009
Principal transforming stations	994,203	1,837,079	1,224,573	1,367,579	874,396	425,350	838,097	139,858	7,701,135
Lower voltage transforming stations	...	1,082,951	17,206	198,887	222,968	14,011	26,253	6,007	1,568,283
Other works	89,106	226,245	123,868	65,250	61,518	27,210	827	15,300	609,324
Totals.....	1,754,410	7,368,574	2,408,137	3,064,466	2,354,282	1,245,696	2,091,592	465,048	20,752,205

Central and South-Eastern European central banking representatives meet at Prague, under chairmanship of Dr. Popisil, to discuss existing exchange regulations.

Reichsbank end-of-month statement shows note cover 26.9 per cent.

Further fall sterling, closing dollar rate 3.723.

European stock markets: London, quiet, gilt-edged weak; Paris, firm; Amsterdam, weak tendency.

Wall Street closed. Announced that U.S. Treasury deficit July-October totals \$661 millions.

Wednesday, November 4th.

Publication of M. Briand's reply to Japanese Government's note of October 26.

Louis Guérin et Fils, of Lyons, Banque Charpenay, of Grenoble, and Banque Ramel Tardif, of Saint Etienne, suspend payment.

Japanese Bank rate raised from 5.84 to 6.57 per cent.

Sterling stronger, closing dollar rate 3.754.

European stock markets: London, quiet, but firm; Paris, active; Amsterdam, stronger tendency.

Wall Street, firm close follows weak opening. Gold exports \$3 millions; gold imports \$9 millions, mainly from Japan; gold "unmarked" \$4 millions.

Thursday, November 5th.

Reports of severe fighting between Chinese and Japanese in Manchuria.

Composition new British Cabinet announced, twenty-one members.

Sterling steady. Closing dollar rate, 3.75.

European stock markets: London, Paris, Amsterdam, all firm. Limited business.

Wall Street steady. Gold exports nil. Earmarked 81.3 million.

Notes of the Week.

The Bank of England's Credits.—Last Friday an official announcement was made by the Bank of England in the following terms:—

"With reference to the credits for the approximate equivalent in each case of £25,000,000 granted to the Bank of England from August 1st last by the Bank of France and the Federal Reserve Bank of New York in francs and dollars respectively, which credits expire on October 31st, those banks have, at the request of the Bank of England, agreed to extend for a further period of three months the approximate equivalent in each case of £15,000,000.

"In part provision of the balance, the repayment of which was proposed by the Bank of England, the sale of £15,000,000 in gold has been arranged."

The decision of the Bank of England to employ gold from its reserve to the extent of £15 millions in repaying the portion of the credit not renewed (the implication being that the balance of £5 millions was repaid in *devisen*) appears to have led to some misunderstanding abroad.

In the first place, the suggestion made by some London newspapers that the resulting fall in the reserve might necessitate a further expansion of the fiduciary issue in order to meet Christmas currency demands has apparently been interpreted abroad as an ominous indication of forthcoming inflation. The still more far-fetched inference seems also to have been drawn that the Bank's willingness to part with gold reflects a decision on the part of the authorities never again to return to the gold standard.

Such deductions are quite unwarrantable. The obvious and correct interpretation of the Bank's decision is that it desired to avoid the exchange loss and the disturbance to the market in sterling which would have been occasioned by the acquisition of such a large sum of dollars and francs. Moreover, the reserve stands at £37 millions, and even allowing for the normal increase in the active circulation during the Christmas season, there is no warrant for jumping to the conclusion that sanction to any further increase in the fiduciary issue need be or will be requested.

The Pound Sterling.—At the end of last week the pound developed a distinctly weaker tendency and, though there has been a recovery from the lowest point touched on Tuesday, and the dollar, as we go to press, is steady round 3.76, this rate represents an appreciable decline from the level ruling on the morrow of the General Election. Though the pound's failure to reflect the general feeling of greater confidence engendered by the National Government's victory may have been a surprise to public opinion, the explanation is to be found in a number of causes which are neither obscure nor in themselves surprising. In the first place, the comparative

stability enjoyed by sterling during October was the result of influences of a temporary nature. Though foreign balances continued to be withdrawn from London, their effect was offset (possibly more than offset) by repatriation of British funds from abroad and by a wave of mistrust on the Continent in the American banking position which led to heavy sales of dollars. In the second place, apart from the possible effect of misunderstanding abroad (referred to in the preceding note) in relation to the Bank of England's use of gold to repay part of its Franco-American credits, the end of the election brought into play a considerable volume of postponed demands for foreign currencies in exchange for sterling. Both foreign merchants who had acquired sterling balances here and British importers who desired to cover forward commitments had apparently held up their sales of sterling during the course of the election in the hope that a politically favourable result would create a good market for their transactions. Execution of these postponed commercial dealings was quite sufficient to account for the fall in the pound which took place last week. Finally, however heavily we may discount the exaggerated stories of a flood of tariff-dodging imports (a question to which we refer in a leading article), it remains a fair presumption that, excluding capital movements, our balance of payments on revenue account may for the time being remain unfavourable to a considerable extent. It should be borne in mind that, though currency depreciation cannot fail automatically to correct the balance of payments, there is bound to be a certain time-lag before this result is actually achieved. Imports have to be paid for long before payment for exports is received, and the increased activity, of which signs are already apparent, in our manufacturing industries, is calculated to involve an immediately greater demand for imported raw materials whose financing must temporarily place a strain on sterling exchange. November, in any case, normally witnesses large payments on account of maturing cotton bills. It would certainly be premature to attempt to forecast at this moment the rate of sterling exchange at which any disequilibrium in our balance of payments will be corrected.

The German Crisis.—With the return of M. Laval to Europe, and the opening of Franco-German conversations, a new phase in the reparations-debts crisis has begun. On Tuesday afternoon, M. Laval gave an interview to Herr von Hoesch, the German Ambassador at Paris, who paid a visit at the end of last week to Berlin, and returned charged not, as ill-informed rumour had it, to lay definite proposals before M. Laval, but to open discussions of a general exploratory nature with the French Premier. The official *communiqué* issued in Paris at the end of the conversations was brief and reticent. M. Laval, it stated, "informed the Ambassador of the conversations which he had had with President Hoover with regard to the substitution of the normal regime of the Young Plan for the present moratorium resulting from President Hoover's proposal last June." In the absence of a fuller official statement, rumour has been busy with suggestions as to what transpired in the Laval-Hoesch interview. On rumour's veracity and implications it would be premature to speculate or comment. To judge, however, by the interpretations variously placed on the *communiqué* by the Press of Paris and Berlin, there is a danger of public opinion being led to concentrate exclusively in France on "political," and in Germany on commercial debts. It is an issue on which, until the statesmen have defined their attitudes, we prefer to reserve comment. This much, however, may be said. The financial census of Germany's foreign commercial indebtedness, carried out in accordance with the German Government's decree of July 27th, has disclosed the fact that Germany's short-term obligations of all kinds amounted to no less than £600 millions (gold) or £200 millions (gold) more than the estimate provisionally arrived at by the Basle Committee last August. (How far, if at all, the estimate of Germany's counter-claims abroad on short-term account requires similarly to be raised, is unknown.) Since the immediate repayment by Germany at the end of February of anything approaching £400 millions (gold) would be a patent impossibility, the higher

figure of short-term indebtedness now disclosed does not alter the character of the problem involved. But, on the assumption that during the "standstill" agreement perhaps \$50 millions (gold) have been liquidated by Germany, the magnitude of the short-term commercial indebtedness still outstanding emphasises forcibly the gravity of the repercussions which would be felt in the world's entire banking system should there be failure to reach an agreement as to ways and means after the end of February. It would appear that the "standstill" committee of the German Economic Advisory Council have in mind, as the only obvious method of dealing with the situation, the replacement of existing short-term credits by notes redeemable over a period of years. The difficulty, however, is that any refunding scheme must depend ultimately for its success on the willingness of the public in creditor countries to absorb the bonds created by Germany; and this in turn would be conditioned by the outlook with regard to reparations and the wider political problems. In brief, a solution of the critical problem that has to be faced before the end of the "standstill" period is contingent on agreement as to the future of inter-governmental debts, whose payment, it may be recalled, was suspended under the Hoover Plan (followed by the London Conference, in which France participated, and which took the responsibility of recommending the bankers to concert a "standstill" scheme) for the express purpose of obviating German default in respect of commercial indebtedness. But in any consideration of the "political" debts problem, the fact has to be faced, quite apart from all the many debatable issues of legal and moral "priority," that a complete breakdown of Germany's commercial credit would not only be a grave embarrassment to the world's banking system, but would be such a disastrous shock to Germany's economic life that all questions of her external obligations would become academic.

The Armaments Truce.—When Signor Grandi made his proposal at Geneva for a suspension of competition in armaments pending the outcome of the World Disarmament Conference, it looked for the moment as though French opposition had killed the plan. As it turns out, the somewhat blurred and attenuated version of Signor Grandi's proposal, as it was passed by the Assembly, has been making considerable headway. By the middle of this week replies had been received from nearly forty out of sixty-four States which are to take part in the Disarmament Conference, including Britain, France, the United States, the U.S.S.R., Italy, Japan and Germany. As for the replies already received, the Russian criticises the vagueness of the plan without rejecting it, while all the other Great Powers, and the great majority of the smaller countries that have replied up to date, have accepted the plan with certain reservations. The most obvious and most frequent reservation has been that neighbouring States shall do likewise, and this proviso has already been met to a large extent by the very frequency of the favourable responses. The British, French, Japanese and American Governments have all also reserved, with more or less precision, their right to maintain existing standards of efficiency and to proceed with the execution of existing programmes. The Germans have agreed on the understanding that the effect of the armaments truce—that is, the temporary stabilisation of armaments at their existing levels—is not to prejudice the programme of the Disarmament Conference. Indeed, Dr. Brüning, in his letter of acceptance (addressed to the Secretary-General of the League) takes occasion to reassert the German thesis that the task of the Conference "is not to stabilise the present level of armaments" but "is, above all, to bring about an effective reduction of armaments on the part of the highly armed countries, which must proceed from the fundamental idea of equality of status and the equal right of all the signatory Powers to national security." Both the German and the French reservations are characteristic and probably inevitable. Nevertheless, the fact that both Governments have managed to accept Signor Grandi's proposal in some form ought to make things rather easier during the critical Franco-German conversations that have been initiated.

The Week in Manchuria.—As November 16th—the date of the League Council's reassembly—approaches, the Japanese do not seem to be putting themselves in much better posture, so far, for meeting the other nations represented on the Council or associated with it for the occasion. The Japanese Government has not taken up the Chinese Government's suggestion (recorded in the *Economist* last week) that all treaty questions between the two Governments should be dealt with by judicial settlement or arbitration. This was surely a fair and conciliatory response, on the Chinese side, to the quite reasonable Japanese demand that the treaty situation in Manchuria should be cleared up. The Japanese have retorted by declaring that there is no question of the interpretation of Sino-Japanese treaties, but only of their infraction on the Chinese side. In other words, Japan again takes up the position that Japan's treaty rights in Manchuria are to be interpreted and secured to Japan's satisfaction in Sino-Japanese negotiations *à deux*, which are to take place while the Japanese forces still remain in their present positions. Meanwhile, the Japanese Government—or, perhaps, more accurately, the Japanese Army—has been taking steps which threaten not only to extend very materially the range of Japanese operations outside the Japanese Zone, but also to embroil Japan with Russia. On October 28th it was announced in Tokyo that a repair gang, escorted by a detachment of troops, was being sent out north-westward to repair certain bridges which had been blown up, in a local Chinese civil war, on the Taonan Railway. This is a Chinese-owned line, which is one of the feeders of the Japanese South Manchurian Railway and which has been financed to a large extent with Japanese capital, but which runs right up to Tsitsihar, an important point on the Chinese Eastern Railway which is under joint Chinese and Russian control. At the same time, it was announced that the Japanese Foreign Minister, Baron Shideharas, had addressed a note to Moscow, protesting against reported concentrations of Russian troops on the Manchurian Border and also against reported military assistance, from the Russian side, to General Ma, the local Chinese commander in the Tsitsihar district. Karakhan, the Deputy-Commissar for Foreign Affairs of the U.S.S.R., has replied with a denial of these rumours; and since then the situation has been eased by discussions between the Japanese and Russian Consuls-General at Harbin. On November 2nd, however, it was reported that the Japanese repair gang had been fired at by General Ma's troops at the Nonni bridge. The still heavier fighting which appears to have occurred on the following day at this strategic point makes it clear that the Manchurian terrain is filled with perilously explosive material. Meantime, two further diplomatic notes have been made public: a note of October 30th from M. Briand to M. Yoshizawa, and a Japanese reply to a Chinese note of October 27th in which the Japanese Government was asked to appoint representatives to settle the details of evacuation "in accordance with the resolution adopted by the League Council on October 24th." The Japanese have replied that no resolution was adopted (as is legally correct, owing to the sole dissentient Japanese vote). They call upon the Chinese once more to negotiate forthwith on the Japanese terms. M. Briand, in a masterly exposition, shows that four out of the five Japanese points have actually been embodied in texts to which all parties have agreed. On point 5—"the respect for the treaty rights of Japan in Manchuria"—he submits that Mr. Sze's letter of the 24th (summarised in the *Economist* last week) gives the pledges required on the Chinese side; and he therefore adjures Japan to withdraw her troops in accordance with the Council's resolution of September 30th, to which (unlike the resolution of the 24th) the Japanese delegate adhered. The issue as it is now brought to a point, could not possibly be made more clear.

The Colonial Office and Cyprus.—The Colonial Office has substantially added to the difficulties of an already sufficiently difficult situation in Cyprus by sending to the Governor of the island the telegram which was published in the Press on October 30th. The message bears the sig-

nature of the Secretary of State according to common form, but a consideration of the date suggests that Mr Thomas cannot have had much time to think about Cyprus at the moment, and the document is to be regarded as essentially a departmental product. A Zionist onlooker at the troubles of the Colonial Office in a territory next door to Palestine would assuredly pronounce that the document bears the genuine departmental stamp which Zionists discerned in the notorious Palestine White Paper which emanated from this same department some twelve months ago. At that time the *Economist* was disinclined to follow Jewish opinion in reading into that White Paper the degree of wrongheadedness and tactlessness which it appeared to exhibit in the sight of its critics. Unfortunately, the tone and temper of the present document are so unmistakably what they ought not to be that the Cyprus telegram goes some way to justify the criticisms of the Palestine White Paper in retrospect. The vice of the present Colonial Office telegram is that it studiously ignores all the material facts in the situation, and is quite barren of any suggestion for constructive action. It takes the tone of a governess towards a naughty child, and a very old-fashioned governess at that. It expresses "grave concern" at violent measures being taken by "British subjects," without mentioning that the Cypriots were made British subjects seventeen years ago without being asked, and that their new status has never enabled them to obtain an effective hearing in London during the years since the armistice when the Cypriots have repeatedly attempted to further their cause by the constitutional and pacific method of deputations. "It is obvious that the liberties given under the present constitution have been abused by disloyal political leaders"—as though we had a moral claim upon the loyalty of people whom we have annexed against their will, and as though there were any evidence that these leaders do not fairly represent their constituents. "Accordingly, in the general interests of the people of Cyprus, His Majesty's Government will have to review the whole question of the constitutional future of the island." In other words, the Cypriots are to be cured of their desire for self-determination by having their present modicum of self-government cut down. This means governing Cyprus by sheer physical force—a consummation which will not, we believe, commend itself to British public opinion. The country which is wrestling with the formidable task of giving self-government to India is not likely to take the Colonial Office view about the question of Cyprus, where the situation is so much more simple and the solution more obvious.

The Liberal Leadership.—Mr Lloyd George's retirement from the leadership of the Liberal Parliamentary Party is the inevitable sequel to his action in ranging himself against the National Government. In a letter to Sir Herbert Samuel, which was read to a meeting of Liberal Members of Parliament on Wednesday, Mr Lloyd George expressed himself as being "completely at variance with the disastrous course into which the Party has recently been guided," and stated that he was "not a candidate for any office in the group." Sir Herbert Samuel, who has acted as Liberal leader during Mr Lloyd George's illness, was elected in his stead and will lead a group of some thirty members, while the new Liberal Nationals, boasting roughly the same numerical strength, have naturally elected as chairman their founder, Sir John Simon. In Mr Lloyd George's letter to Sir Herbert Samuel there is a passage which gives food for speculation as to future Party possibilities:—

I am hoping that by the New Year my health will be fully restored. I am looking forward then to the pleasure of co-operating with all those who have at heart the advancement of those ideas to which so many millions rallied hopefully in 1929.

For the moment these causes have been overwhelmed by the calamitous folly of October, and any attempt to revive them will be met for some time by impatience and ridicule. That phase will soon pass and all true progressives can then resume the task out of which they were so regretfully manœuvred.

How, in the quietude of Churt and Carnarvon, will Mr Lloyd George develop his obvious desire for welding together a strong progressive party? Is it in his mind

that before long Liberals of all sections, disillusioned with the working of a Coalition, will re-unite? Or is his orientation definitely towards the Left? For the answer we must wait till February, when, given restoration of full health and vigour, Mr Lloyd George may yet write new chapters in British political history.

Another Socialist Reverse.—The view had been expressed that since the municipal elections followed so close upon the General Election the slack voter would abstain, thereby paving the way for widespread Socialist gains. The results of the local polls, held on Monday, November 2nd, show that this view was incorrect, and the localities have in fact vigorously endorsed the verdict given by the nation last week in favour of careful finance. At the last municipal elections, three years ago, Socialists gained 71 seats in London and 111 in the provinces. On Monday the tide was reversed with a vengeance, Labour suffering a net loss of 201 seats on the councils of eighty of the principal provincial cities and boroughs and of no less than 203 seats in London alone. This convincing swing-over was accompanied, as in the parliamentary elections, by very striking increases in the size of anti-Socialist majorities, and the country's verdict with regard to the conduct of its local affairs seems to have been hardly less striking than its verdict on the national administration. Out of the 28 London Councils only three remain under a Socialist majority, such former strongholds of Labour as Shoreditch, Woolwich, Battersea and Stepney having gone over to the anti-Socialist parties. The ratepayers have indeed spoken with the same voice as the taxpayers.

The League and Import Restrictions.—The Report of the Economic Committee of the League of Nations on the Thirty-sixth Session contains some timely, if somewhat mild, comments on the safeguarding measures to which many countries have been driven by the crisis. The Report observes that not only those countries which find the external value of their currencies falling, but even those countries whose currencies seem to be threatened are endeavouring by restriction of imports and by control of foreign exchange dealings to secure a "favourable" balance of payments. These restrictive measures in their turn force other countries to defensive action, largely for the protection of employment against the competition of imports. The Economic Committee point out that these measures not only make commercial relations precarious and unstable, but that, if generally introduced, they may—"will" would have been a more accurate word—have the effect of paralysing international trade. The Committee go on, however, to say:—"It must doubtless be admitted that the measures in question are regarded by the countries taking them at the moment imperatively necessary; they are steps taken for the public safety, justified by exceptional circumstances; they appear to these countries as being the only means of preventing a financial or economic collapse." The Report, accordingly, proceeds to suggest provisions which would limit the worst effects of restriction of exchange dealings. As might be expected, these provisions do not amount to very much. The recommendations are, in the main, that foreign countries affected should be consulted, and that the restrictions should not be continued longer than necessary. While it is satisfactory that responsible League opinion should express itself as definitely opposed in principle to the current restrictive policy, it is disappointing that the Economic Committee has not more openly and explicitly faced the fact, with which we deal in a leading article on Hungary, that, in a world in which there is no buying there can be no selling, so that a universal policy of maintaining a "favourable" trade balance would be prevented from effecting the complete destruction of commerce only by the fact that it would be impossible of realisation. Meantime, a meeting of representatives of central banks of Central and South-Eastern European countries, convened at Prague this week under the auspices of the B.I.S., has been engaged in discussing means whereby the impedi-

ment to international trade caused by exchange restrictions can be minimised. We go to press before the results of the conference are known, but it is difficult to entertain great hopes that much will come of the meeting. It is possible that methods may be devised for making some of the restrictions less vexatious in detail, and if some system could be evolved to facilitate the "marrying" of demands for foreign currency in the respective countries, the situation might be somewhat alleviated. But minor modifications and improvements cannot eradicate the root difficulty that rationing exchange in order to restrict imports has for its logical conclusion the annihilation of international commerce and general impoverishment.

The Future of Iraq.—This week, at Geneva, the Permanent Mandates Commission of the League of Nations is considering the annual report on the administration of Iraq, which is being presented by the British High Commissioner, Sir Francis Humphrys, as the accredited representative of the Mandatory Power. In addition to this recurrent task, the Mandates Commission this time is considering the question of the termination of the mandate in the only legal way in which a mandate can be terminated: that is, by the admission of the mandated territory to membership in the League as "a fully self-governing state." Since this is the first occasion on which a request for such admission has been in prospect, and since the Mandates Commission's views will, no doubt, carry great weight with the Council and the Assembly, this week's deliberations will be of great interest, not only to Iraq herself and to Great Britain, but to the League in general and to all its members. The present situation has arisen out of the Anglo-Iraq Treaty which was signed on June 30, 1930. In this instrument, which was the last of a series, Great Britain undertook to support Iraq's candidature for admission to membership in the League in 1932, and to give this support unconditionally. The unconditionality of the pledge was probably essential for the maintenance—or restoration—of confidence, in Iraq, in regard to Great Britain's goodwill and good faith. At the same time, it involved the omission from the treaty of any provision for the protection of minorities in Iraq; and this omission has given rise to considerable heart-searchings in diverse quarters—first and foremost among these minorities themselves, but also in the British Parliament and Press, as well as in the minds of the League Council and of the Permanent Mandates Commission. It is already evident that the will and power of the Government of Iraq to protect the non-Arab minorities under its jurisdiction will be taken as "the acid test" of Iraq's fitness for admission to membership in the League. There are good precedents for this; since, from the outset, it has been the practice that States seeking admission to membership (as opposed to original members of the League) should satisfy the Council in regard to the treatment of minorities within their frontiers, unless such minorities are non-existent or negligible, and unless such States are already bound by existing treaties or undertakings in which the treatment of minorities is covered. Finland, Albania, Lithuania, Latvia and Estonia have all given satisfaction to the Council on this point within less than two years, at the longest, after their admission. There is no reason why the Council should be less strict in dealing with Iraq, and no reason, from the British standpoint, for us to make difficulties about this. Indeed, such action on the Council's part might extricate us from the unpleasant position (in which the treaty of June, 1930, threatens to place us) of having to put British military forces at the Iraq Government's disposal for executing a policy towards minorities which we might not approve.

Common Sense on East Africa.—This week the report of the Joint Select Committee of Parliament on closer union in East Africa has been published as a parliamentary paper*. This document represents the last stage of

a discussion which has been going on ever since a provision for possible administrative union with adjoining British Colonies or Protectorates was inserted in the British Mandate for Tanganyika. The problem has been investigated on the spot by the Ormsby-Gore Commission in 1924 and the Hilton Young Commission in 1928, and by Sir Samuel Wilson on a special mission in 1929. All these labours have been reviewed by the Joint Select Committee, whose report is now published; and the Committee's recommendations are conservative in the good sense and not in the bad. While they leave the door open for economic co-operation, within the limits that are at present practicable, between the several territories under British administration or control in East Africa, they do close the door—and this presumably for a long time to come—upon a very dangerous political vision. This vision was the prospect of a united East Africa enjoying dominion status as "a White Man's Country." Those who dreamed this dream cherished the hope that, if East Africa were once united, the white settlers in the highlands of Kenya Colony would leave the lump. The result would have been a latter-day reproduction of "the South" of the United States as it was before the American Civil War. Indeed, it would have been far worse; for, even if the white settlers were to succeed in occupying the highlands in Tanganyika as well as in Kenya, they would remain an infinitesimal minority in the total population of British East Africa; and to hand the Government of this great region over to this dominant caste would have been equivalent to handing India over to a Brahman raj. This possibility, which has never (we believe) come within the range of practical politics, has been finally ruled out by the combined effect of common sense at Westminster and financial stringency in East Africa. On grounds of cost and of native opposition and of economic immaturity, the Joint Select Committee find that "this is not the time for taking any far-reaching step in the direction of formal union." They suggest that economic co-operation should be secured by the amalgamation of certain technical services and by the development of the annual conference of East African Governors. In regard to white settlement in the highlands, they pronounce that "its success cannot yet be considered as definitely established." With regard to the relations between the white and black races, they comment very sensibly on the doctrines of "paramountcy" and "trusteeship." "The doctrine of paramountcy means no more than that the interests of the overwhelming majority of the indigenous population should not be subordinated to those of a minority belonging to another race, however important in itself." As for the doctrine of trusteeship, "the control of His Majesty's Government must remain unimpaired." And the arbitral authority for dealing with divergencies of racial interest "exists in the Secretary of State and the Governor acting under his instructions." With regard to the special problem of administration in Kenya Colony, the Committee declare against a geographical division between the highlands and the rest of the country and make a constructive suggestion for the appointment of a chief native Commissioner with wide powers. It is to be hoped that the Committee's recommendations will give peace and quiet to East Africa for some time to come.

Stern Measures in Spain.—Whatever may be the deeper strength of Catholic resentment at the anti-clerical measures passed by the Cortes, on the surface calm prevails in Spain and the end of the Constitutional debate is in sight. Last week the new code with regard to matrimony was taken. Divorce is to be permissible by mutual agreement of the parties, or at the request of either, just cause being shown. Illegitimate children are to have normal rights of citizenship. This week the powers of the President of the Republic have been defined, and a referendum procedure has been sanctioned, to apply to a revision of all legislation except "the constitutional laws," the status of the autonomous regions, and Spain's obligations to the League of Nations. No doubt the general tranquillity is chiefly due to the very stringent provisions of the Law for the Defence of the

Republic, which was passed on October 20th, less than a week after the change of Government. Señor Azaña is taking advantage of this state of "constitutional dictatorship," not unlike that which obtains in Germany, to make sweeping reforms, which, however much they were needed, would not have stood the ghost of a chance of being carried through in normal circumstances. A few days ago he sprang a surprise by issuing an ordinance that the Civil Service was to be reduced at once by 50 per cent., with the exception of certain key departments. Failing the requisite number of voluntary resignations, functionaries will be compelled to retire, but will receive compensation to the extent of 80 centimos for every peseta that they were earning. When he called upon the Cortes to give its approval, it behaved like a lamb, and even proceeded to sanction into the bargain a measure declaring to be incompatible the holding of various official and semi-official jobs by the same person. There is, as may be imagined, consternation at the grinding of this efficiency mill, for from time immemorial your urban Spaniard has been a pluralist in respect of employment. But Señor Azaña is not going to have any of the old reproaches levelled against the Spanish Civil Service. Instead of working in the mornings only in many cases—with barely enough work to go round—they are to have a regulation working week of thirty-nine hours and will have to show regular attendance. The new Prime Minister enjoys enormous prestige because of the way he has bent the Army to the Republican will. And Spaniards, for all their individualism, have always a tacit admiration for good government. All the same, the foreigner may be excused for thinking that he is riding for a fall. Sensing his growing unpopularity, perhaps, he has now capitulated to the Socialists in the Cabinet, who have behind them the strongest organised force in the country. That was the outcome of an important Cabinet meeting at the week-end, when it was decided to go ahead as quickly as possible with the reform of the Bank of Spain, on the lines of State control, and with the agrarian laws which provide, in some cases, for expropriation and, under trade union direction, will amount to a revolutionary change in methods of land-holding and cultivation. Leviathan is swallowing up traditional idiosyncrasies at an alarming rate. But we must certainly hail Señor Azaña as a man of character. He has given explicit promise that he will uphold Señor Alcalá Zamora's sympathetic policy in his dealings with Catalonia.

An Empire Currency Scheme.—A joint committee of the Federation of British Industries and the Empire Economic Union has issued a report on Empire Monetary and Financial Policy. As is inevitable from the composition of the committee, much of the report is concerned with an attack upon Free Trade, which is not wholly relevant to the subject. Another large portion of the report is simply a reproduction of views expressed by the Macmillan Committee, which are already familiar ground. Towards its end, however, the report contains the germ of an idea which merits further exploration, and that is the co-ordination of Empire monetary policy. After making every allowance for the traditions, needs and customs of the various members of the Empire, and also for their geographical situation and political independence, there is, *prima facie*, a case for asking why exchange fluctuations should occur inside the Empire on just the same scale as in the world at large. But this is not to say that there is an easy or obvious remedy, for every member of the Empire is legitimately jealous of its right to manage its banking and currency affairs, and there are obvious difficulties in the way of instituting a common Empire currency. Again, one cannot envisage lightly the Committee's tentative proposal for the foundation of a "Central Bank of Empire." Its relations with the Bank of England, for one thing, would be a matter of extreme delicacy, in view of the Bank of England's existing world position, and in some ways it might be less impracticable to develop the Bank of England into the "Bank of the British Empire." Still, useful lessons

can possibly be learned both from the manner in which the currency system of certain members of the Empire are already linked to sterling, and still more from the relations between the twelve American Federal Reserve Banks and the Federal Reserve Board at Washington and from the operations of the American Gold Settlements Fund. The crux really lies in the Dominions. There is no need for the Dominions to abandon their present monetary denominations, but such matters as Canada's financial relations with New York would clearly have to be faced. India, too, is a special problem bristling with a thousand difficulties, and so is the silver question, on which the Committee expresses views in favour of bimetalism. Still, it is tempting to envisage the creation of an Imperial exchange pool to be drawn upon or fed, at a fixed exchange rate, by the various members of the Empire according to the fluctuation of their trade, each member being left to adjust its monetary policy to the size of the exchange standing to their credit in the pool. It is also tempting to suggest that the creation of a common Empire monetary system upon these lines, carrying with it the avoidance of inter-Imperial exchange fluctuations and the stabilisation of Empire currency as against gold and foreign gold currencies at an equitable level, would be a more than adequate substitute for tariffs and Imperial preference. But the proposal is still in an embryo stage and the existence of many difficulties must be fully recognised.

Cotton Trade Improvement.—Our Manchester correspondent writes:—Confirmation of the relatively big improvement in the English cotton industry is contained in the figures regarding unemployment, and, according to the latest statistics issued this week by the Cotton Trade Statistical Bureau, the cotton industry has accounted for the greater part in the reduction of the British unemployment total. Between September 21st and October 19th (the latest statistics available), the net fall in the unemployment total for the whole country was 74,000, and the cotton trade accounted for 48,000 of that total. Commenting upon the situation, the Bureau states it is still impossible to assess either the size or the probable duration of Lancashire's present recovery. "Though the larger volume of orders placed during the last three or four weeks has already affected production and unemployment, it has not yet become visible in the export trade, and even the October export figures may not reflect the increased volume of trade. As sterling has been relatively steady during the past few weeks at a level favourable to British producers, the rise in exports is likely to be appreciable before the end of the year." For the eighth week in succession production of spinning mills in the cotton industry has continued to increase. According to official statistics compiled by the Master Spinners' Federation for 150 mills, the production figure for the week ended October 24th was 74 per cent. of normal capacity. This figure compares with 63 per cent. on October 3rd and 50 per cent. on September 5th. Sales in relation to actual production have each week exceeded the production figure, as also have deliveries of yarn. Since the statistics were made up more machinery has been restarted. It is estimated that between twenty and thirty spinning mills have restarted work during the past month. With regard to the manufacturing section, production has also increased. As a result of the big business done during the past six weeks a number of spinners and manufacturers have found it necessary to resort to overtime working. In the doubling section of the trade in Yorkshire many of the mills are working in excess of the 48-hour week, and the operatives' leaders have visited the area to deal with the matter. In Lancashire, also, some firms are working longer hours, and the trade union leaders are bringing all pressure to bear to make the employers keep to the 48-hour agreement.

International Wheat Prices.—A month ago the downward trend of wheat prices suddenly gave way to a movement in the opposite direction. The quotation of No. 2 "Winter" in Chicago rose from 46½ cents per bushel

* 1931: (184). H.M. Stationery Office. 1s. 6d. net.

("December" futures) on October 7th to 53 cents within a fortnight, and on November 3rd the price reached 62½ cents. This corresponds to a rise of nearly 35 per cent., but it should be remembered that the present price of the cereal is still about 50 per cent. lower than at the beginning of 1930. The catastrophic fall in prices last year was, of course, the consequence of the huge crop, which turned out to be considerably in excess of requirements. According to Mr G. Broomhall, the visible supply of wheat and flour at the end of the last season, at 463 million bushels, showed an increase of 50 million bushels as compared with the corresponding date in 1930. In addition, the Federal Farm Board had accumulated a large quantity of wheat, amounting to over 200 million bushels at the end of July. Excluding Russia, this year's world production of wheat had some time ago been estimated at a figure considerably below that of last year, as a result, mainly, of the failure of the Canadian crop. Further, it had been known that Australia, Argentina and the United States had drastically reduced the acreage destined for the 1932 crop. Yet these favourable factors in the wheat situation failed to influence prices, which continued to decline after a short-lived upward movement in June. It, therefore, appears that the wheat market's recent trend has been largely governed by opinion with regard to Russia's export surplus. Reports from that country had shown that the acreage had been further increased, and it was believed that this year's production would exceed last year's bumper crop. This belief was apparently confirmed by Russian exports during August and September, which were far in excess of those of the previous year. At the beginning of October, however, exports from Russia declined rapidly, and it became clear that her export surplus was smaller than a year ago. The International Institute of Agriculture has estimated that Russian exports during the current season will not exceed 73½ million bushels, against 110 million bushels a year ago. As soon as these facts were realised a buying movement began in North American markets, giving rise to a sharp advance in values. If, however, the Institute's forecast of a reduction during the present cereal year of 180 million bushels in this carry-over proves to be correct, the surplus in prospect next July is still sufficiently above normal to suggest that present speculation may easily be overdone.

American Railroad Award.—Our New York correspondent writes:—Much disappointment was felt over the freight rate decision given by the Interstate Commerce Commission. No one had expected that the full request for a blanket rise of 15 per cent. would be granted, and the amount finally awarded, which on some commodities would mean an increase of 10 per cent., but which excepted agricultural commodities, and on the whole was calculated to increase revenues by only \$100 millions instead of the \$400 millions hoped for, would have been satisfactory had no qualifications been attached. The Commission proposed that all such increased revenues be pooled and allowances given to railroads which fail to cover bond interest charges. Railroad executives have not yet decided to accept this condition, and have asked if it might not be modified to make this distribution take the form of loans, repayable to the fund and eventually to the roads which made the contributions. As it now stands, the roads collecting most of the additional revenue merely turn it over to other lines which, owing to the nature of the rate increases, would not earn more. The roads most in need of help are the lines carrying farm products, while the eastern coal and industrial roads will have the bulk of the rate increases. What the roads need, of course, is more traffic and a better spread between expenses and revenues. Even loans to needy lines would merely delay the day of reckoning. Those who oppose the Commission's counter-offer feel that it is impracticable and of doubtful legality, but the roads probably might, with modification, be inclined to accept it as some slight aid to the general situation. The nature of the decision admittedly puts the railroads into an awkward position, for if they reject the chance of higher rates thus offered their position in wage negotiations will be weakened. Labour will probably then say that the roads have

thrown out of the window some \$100 millions of additional revenue. Meanwhile it is reported that President Hoover has another scheme in mind, involving assistance through Government funds provided through some organisation similar to the War Finance Corporation. Whether a way can be found to accept the Interstate Commerce Commission's conditions on the higher wage award or not, the railroads intend to seek wage cuts. No formal action will be taken until the rate question is settled, but work is going forward on the line of agreement. Most of the union trainmen on one Southern road have already agreed to accept a 10 per cent. reduction, and the outlook is fairly good for early agreement. If so, it will be possible to put lower wages into effect during the winter.

Banca Commerciale Italiana.—The directors of this bank announce that they are transferring the whole of the bank's industrial holdings to the Società Finanziaria Industriale Italiana, which is a holding company whose capital has been subscribed by a group of Italian industrial undertakings. This course of action will add appreciably to the liquidity of the bank, and, in fact, it is calculated that the bank's liquid resources, in the form of cash, loans, bills and Government stocks, will easily exceed 100 per cent. of its short-term liabilities of all descriptions. The formation of a special company for this purpose—the finance of which is incidentally assured for a long period by independent means—enables these assets to be disposed of by the bank without throwing them on the stock markets. It is further announced that an increase in the capital of the Consorzio Mobiliare Finanziario, which controls a substantial block of Banca Commerciale Italiana shares, is taking place for the purpose of taking over additional shares from a syndicate which is to be dissolved. The new capital is being provided from independent sources. As a matter of sound banking practice, these changes are to be welcomed, for recent experience in many countries has illustrated the danger of a bank immobilising its resources in industrial investments, and other leading Italian banks found it advisable to take similar action over a year ago. In this particular case, the change possesses two meanings. Firstly it is possibly the final step in the reorganisation of the affairs of the Banca Commerciale Italiana after a period of several vicissitudes. It may also be permissible to link it up with the gradual but steady consolidation of Italian economic and industrial life which has been one of the main principles of the Fascist Government.

Overseas Correspondence.

UNITED STATES.

M. Laval's Visit — Reparations — Debts — Gold Standard — Money — Industry — Prices — Copper Restrictions.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 28.

WELL informed bankers and others in Wall Street do not share the feeling of dissatisfaction mentioned in foreign dispatches and evinced in some speculative circles here over the failure of President Hoover and M. Laval to outline a definite programme on debts, gold and political dispositions. On the contrary, a good deal of satisfaction is felt over the outcome. Most people here who favour any debt revision think that all should be done within the provisions of the Young Plan, and that a mistake was made last summer when President Hoover took the initiative without due consideration of the French position.

One accomplishment of the conference, it is believed, is that this Government is assured of the willingness of France to consider suspension of reparations and reduction of the ultimate amounts to be collected. The delays last summer had done something to promote the opposite impression. At the same time, France now understands

that this country will look abroad for the initiative, recognising the French right in the matter and the desirability, from the American point of view at least, for requests for moratoria or reductions in reparations to be made by Germany. Perhaps not the least of the new developments is the tacit admission by the Administration that reparations and inter-allied debts are inseparably mixed. It may be assumed that, in the event of a reparations reduction, strong support will be given by the Administration and favourable consideration in Congress to corresponding cuts in inter-allied debts.

While the effect on Europe of an out and out declaration of the firm intention of this country to remain on the gold standard might have been good, it is felt here that the wording agreed upon for that part of the discussion was the only one possible. No one here ever has had the slightest doubt that the United States would maintain the gold standard, and to protest that intention might have raised such doubts. Interpretation of the reference to gold to mean that a deal has been made on Federal Reserve Bank policy is erroneous. Bank of France officials and Federal Reserve Bank authorities doubtless came to an understanding of one another's policies, and while a higher New York discount rate is in prospect, the intimation that political influence has been brought to bear on the Reserve Board is much resented.

On the political side, it is not believed that France was asked to make a cut in armaments as a concession for debt reduction or for any other reason. However, it is understood here that considerable reduction in military expenditures are in prospect for France on her own initiative.

Credit supplied by the Federal Reserve banks continues to rise, making up for some of the gold exports, but day money is plentiful at the new rates of 2½ per cent. on the Stock Exchange and 2 per cent. in the outside market. This week commercial paper and time money rates have slightly stiffened. Weakness in United States Government bonds suggests apprehension of a higher discount rate, but no fresh rise has yet taken place in the bill market. The Treasury is now borrowing regularly \$50 to \$60 millions weekly in discount bills, and the rates paid are rising. Virtually \$1,000 millions in Treasury certificates and notes mature on the December 15th tax date, and previous plans to refund with a long-term issue may have to be changed.

Concern over the gold exports grows less, although the movement is still considerable. For the month the exports plus earmarkings total approximately \$500 millions, which added to the exports and earmarkings for September bring the total loss for the two months to \$805 millions. Deducting imports, the net reduction in gold stocks for the period is \$715 millions. However, this means that the country has given up little more than the \$400 millions gained in the eight months ended August 31, 1931, plus the \$300 millions added in 1930.

A better feeling in retail trade continues, but it is finding little reflection as yet in the basic industries. The steel industry seems to have increased its operating rate from 28 to 29 per cent. of capacity, and railroad car loadings have turned a trifle better, helped somewhat by the firmer tone in agricultural commodity prices. Steel prices have been a little shaky. The United States Steel Corporation, while maintaining the common dividend at the \$1 a share quarterly rate established last summer, showed a poor earning statement. Earnings progressively declined in July, August and September, and the third quarter ended with an operating deficit. Approximately 88 cents a share was shown for the preferred stock, with the allocation of over \$7 millions profit from the sale of properties. For the nine months, including \$14.3 millions of this special profit, only \$4.81 was earned on the preferred. It is reported that the sale of a public utility property in Gary, Ind., early in the year yielded about \$20 millions, of which \$15 millions now has been definitely shown in the earning statements. Presumably some more special income will be shown for the remaining quarter. Also the wage cuts went into effect at the beginning of this month, but even so, the Corporation will scarcely show earnings on common shares this year.

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital and Reserve Funds, £3,600,000.

Head Office: 38, St. Andrew Square, Edinburgh

OVER 200 BRANCHES IN SCOTLAND

LONDON OFFICE: 38, Threadneedle St., E.C.2

Every description of Banking Business transacted.

The General Motors Corporation also failed to cover its common share dividend in the third quarter, and industrial earnings generally are running 20 to 25 per cent. under the third quarter of last year, and are only about half those of the second quarter of this year. Railroad net income for September, as shown by the majority of roads reporting, was 43 per cent. under the same month of last year.

There is some disappointment at the continued lack of important trade recovery. Perhaps too much was expected from the operation of the newly-formed National Credit Corporation, the organisation suggested by President Hoover to thaw out bank credit. This institution began business last week, and while here and there it met with opposition from banks asked to subscribe to its debentures, the means whereby it is to raise capital to be lent to banks on collateral of good quality but ineligible under the law for discounting at the Federal Reserve Banks, it has generally had a favourable reception.

Bank failures in September, according to the Federal Reserve Board's calculation, amounted to 298, but there were seven reopenings. From the first of the year to the end of last month failures totalled 1,294 and reopenings were 202, against a net closing record of 1,345 for the whole of 1930. Although failures in October also have been heavy, no really important institution has been affected, and the feeling of uneasiness is growing steadily less. The country has obviously been overbanked, and many of the small banks have been poorly managed, but the position is in a fair way towards stabilisation without much danger of anything like panic. On the whole the banks are extremely strong and liquid to an unprecedented degree.

Some stiffening in commodities, particularly in wheat, cotton and copper, has come this month, but in September the Bureau of Labour statistics wholesale price index fell about 1½ per cent. The indices are shown in the following table:—

	Sept., 1930.	Aug., 1931.	Sept., 1931.
All commodities	84.2	70.2	69.1
Farm products	85.3	63.5	60.5
Foods	89.2	73.7	72.9
Hides and leather products	99.1	88.5	84.8
Textile products	75.5	64.2	62.9
Fuel and lighting materials	76.4	62.3	63.3
Metals and metal products	91.8	87.1	87.2
Building materials	86.4	75.4	74.9
Chemicals and drugs	86.6	75.5	74.8
House furnishing goods	95.4	87.5	84.7
Miscellaneous	69.7	58.5	58.4
Raw materials	82.1	64.1	62.7
Semi-manufactured articles	76.5	68.3	66.3
Finished products	86.8	74.6	74.0
Non-agricultural commodities ...	84.0	72.1	71.7
All commodities less farm products and foods	82.8	72.3	72.0

While the prospect of tariffs in Great Britain is not particularly pleasing to a section of the financial community, the net effect of the elections was favourable in Wall Street. Much as the financial community liked and respected as individuals the members of the Labour Cabinet, there always had been much uneasiness over their equipment for handling economic and financial matters. It is safe to say that confidence in the British position has been strengthened by the election results.

Conferences, so far informal, are under way among the British and Belgian interests and the Americans and Canadians looking toward a world-wide agreement on output restriction. Under this influence copper shares and the price of copper have stiffened slightly. Talk here of a tariff on copper is growing, particularly in the West, and there is no doubt that threat is being used for all it is worth as a means of securing large concessions from the Belgian Katanga interests. On their arrival here they indicated their willingness to reduce their present rate of 65 per cent. operations to 40 per cent., but that would merely put them on a level with the current rate for American producers. Some copper men here feel that the industry should drop to at least 25 per cent. of capacity if any progress is to be made in reducing surplus stocks.

FRANCE.

Coming Session — M. Laval's Return — Coal Production — Unemployment — Family Allowances.

(FROM OUR CORRESPONDENT.)

PARIS, November 4.

It was definitely decided yesterday that the Chambers, which have been in recess since July 3rd, shall be convoked forthwith for the resumption of their work on Thursday next. The session, which will be the last before the General Elections, will be exceptionally short, and will in all probability, after a fortnight's recess for Christmas and the New Year, come to a close at the end of January, in order to leave deputies free to spend February and March in their constituencies, in preparation for the elections, which have been provisionally fixed for April 17th and 24th. Over 100 notices of interpellation of the Government on all kinds of subjects have already been sent in, including several on the Government's foreign policy, which are certain to provoke a full-dress debate of the first importance, in view of M. Laval's recent visits to Berlin and Washington.

The first important subject to be taken up will be the Government's proposals for putting in hand the further series of public works with a view to meeting the expected increase of unemployment throughout the country during the winter months. These are expected to give rise to a prolonged debate, as an important section of the Chamber, although in agreement with the Government as to the proposals in general, is by no means satisfied with the project of meeting the cost by raising a loan. An interesting feature of the session will be the discussion of proposed modifications of the methods of procedure in the Lower House. The Rules Committee, with a view to reinforcing the stability of the Budget, propose that in future any deputy when proposing an increase or decrease of credits shall accompany his motion with proposals involving corresponding increases or decreases of revenue. The effect such a stipulation would have in checking purely demagogic expenditure needs no comment. It is expected that the complete text of the Budget Bill will be in the hands of the Finance Commission within a week of the reassembly of the Chamber, and that the Commission will have completed its work on it by January 1st. Another outstanding feature of the coming session, it is hoped, will be the discussion of the Government's proposals for rescuing the railways from the serious financial difficulties which they are experiencing owing to the imposition of enormously increased taxation burdens without powers to apply correspondingly increased traffic rates.

M. Laval's visit to Washington has had a favourable effect on French opinion as a whole, now that the meaning has been grasped of the formal statement issued for international consumption. It is universally recognised that M. Laval, like Mr Hoover, is the prisoner of his parliamentary majority, and, to an even greater extent than the American President, of the public opinion of his country. The attention of the nation is now focused

on the outcome of the conversations formally begun in Paris yesterday between the French and the German Governments. The precise nature of the conversations has so far not been divulged. All that is known here is that last night, after his long interview with M. Laval, M. Briand and the Finance Minister, M. Flandin, Dr. von Hoesch cabled a long report to his Government. Germany's need is great, and no doubt is entertained here as to the fact that the price asked by this country for her help is already being anxiously discussed by the German political and financial leaders. Reports from Berlin assert that the German Government has directed its efforts primarily towards finding means for "unfreezing" the foreign banking credits. As French commitments of this kind in Germany are only in the neighbourhood of 5 per cent. of the total, as compared with an estimated 60 per cent. on the part of American banks and 35 per cent. in the case of British banks, M. Laval and his colleagues have little to gain by assuming a leading rôle in the furthering of the German programme. It is readily recognised here, however, that whatever risk France assumed in the matter would be more than compensated for by the direct benefit that would accrue therefrom to Great Britain and the United States, and consequently to the whole financial and economic world. Behind the question of the frozen credits, however, lies the much more important one of the future of German reparation payments and European debt payments to America.

September coal production returns, which have been made public this week, indicate that the total output of the French collieries during the month was 4,154,314 tons (in 26 working days), as compared with 4,011,491 tons in the previous month, 4,603,000 tons in September, 1930, and monthly averages of 4,584,000 tons in 1930, 4,577,000 tons in 1929 and 4,369,000 tons in 1928. To this must be added the output from the Saar area, which is returned as 880,000 tons in September, as compared with an average of 1,103,000 tons in 1930. The total labour employed in the French mines in September was 279,138 units, against 177,054 in September last year, the average daily output having dropped meanwhile from 177,054 tons to 160,460 tons. Demands for industrial coal continue small, whereas absorption of domestic supplies, householders having this year refrained largely from the usual practice of stocking their cellars during the summer months, has been exceptionally active. The new quota system for British and other coal exports (based on maximum entries of 20 per cent. less than the mean of the previous three years) came into more or less definite effect only with October, as a very large elasticity was deliberately accorded to importers in August and September, when the new maximum tonnages for foreign coals theoretically came into operation. French importers are now demanding that the various quotas shall be fixed on bases of the actual needs of consumption for the several categories of fuel. French pithead stocks are asserted to have now been brought down to 125,000 tons. Complaints of delivery delay of native fuel are asserted by the French coalowners to be due to inadequate transport facilities.

The unemployment returns for October 24th, the last week reported on, suggest a substantial deterioration of the general situation. The total number in receipt of relief is returned as 51,564, against 44,117 in the previous week, and is appreciably larger than the highest yet recorded since the present crisis began. During the week 1,175 foreign workers were admitted (563 for industry and 612 for agriculture), and 1,414 left the country.

Interesting decisions modifying the rates of family allowances have been put into operation by the employers' organisations identified with this system in the Roubaix district textile, metallurgical and building industries. Speaking generally, the allowances have been lowered in so far as families with only one or two children are concerned, and appreciably increased in regard to wage-earners with three or more. The rates paid by the Consortium de l'Industrie Textile de Roubaix-Turcoing, for instance, have been modified as follows: For one child, 1 franc per working day (instead of 2 francs 50c.); two children, 4 francs 50c. (instead of 6 francs); three children,

10 francs (9 francs 60c.); four, 15 francs (12 francs); five, 20 francs (15 francs); six, 25 francs (18 francs); seven, 30 francs (21 francs). The Roubaix building trade employers' organisation will henceforward pay 190 francs a month in extra wages to families comprising four children and 270 francs a month to those with five. One of the Lille textile associations is now paying (in addition to standard wages) 300 francs a month to families with three children, 380 francs when there are four and 470 francs (say, £4 15s. a month) when there are seven. These super-wages, it may be recalled, are entirely voluntary on the part of the employers, and are paid direct to the mothers, who also receive maternity benefits at each confinement, nursing allowances and many other advantages.

GERMANY.

Laval-Hoover Conversations — German Foreign Debt — Economic Advisory Council — Grain Market.

(FROM OUR CORRESPONDENT.)

BERLIN, November 3.

No detailed official account of the content of the conversations between Mr Hoover and M. Laval is yet available, but it is clear that for the next few months America is leaving it to the French to clear up the questions in dispute in Europe, and that in settling the reparations problem M. Laval may even count on the Americans helping towards the solution by a remission of the debts of the European reparations creditors. This means that Germany, even if, in accordance with Franco-American wishes, she invokes Clause 119 of the Young Plan and proposes the convocation of the special advisory committee, is practically referred to France alone.

Germany does not grudge France the prestige that may accrue to her from this accord of a free hand by America. Everything depends upon whether France recognises that it is impossible to lead Europe without inviting Europe, and that the very minimum requirement for that is agreement on the most pressing tasks of the moment—agreement and not a new dictatorship. Germany cannot, of course, repay the total of her debts upon the expiry of the "standstill" agreement next February, nor can she resume the payment of reparations next July when the Hoover year expires. Yet it is equally impossible for her to take upon herself any new political obligations as no statesman could, in present conditions, represent such a policy at home.

France seems to attach great importance to the retention of the forms of the Young Plan in the new reparations settlement. From the point of view of domestic politics, this is a severe burden on Germany, and in any case the instruments which the Young Plan created are not suitable for the evolution of a settlement in present conditions. It is neither desirable that Germany should declare a reparations moratorium "on her own responsibility," nor could much be hoped from the reference of the political decision once more to a committee of "independent experts" who are not competent to make it. If the decision is to be reached at all without the responsible participation of the other Governments, it must be sought in a direct discussion between the Governments of France and Germany.

The report on German foreign indebtedness, provided for by an emergency decree of July 27th, gives short-term debt as 12 milliards and long-term debt as 11.5 milliards as at July 28th. All debts for less than twelve months are counted as short-term. The Basle Report placed short-term debt as at the end of July at 8 milliards and long-term at 9 milliards, but these were expressly offered only as estimates. In both sets of statistics the figures are gross, and consist of debit items against which no German assets have been offset. The Basle Report under-estimated particularly the direct private indebtedness of German firms and individuals abroad, placing them at 1½ milliards, whereas they must have amounted to some 5 milliards as at the end of July. If the figure of 8 milliards given in the Basle Report for German repayments during the first seven months of the year be

accepted, Germany has repaid about 4 milliards in ten months, and including the sales of securities by foreigners almost 5 milliards, a truly vast sum which fully explains the peculiar severity of the German crisis.

The new Economic Advisory Council was opened by the President of the Reich, on October 29th, with an important speech. Herr von Hindenburg rightly designated the convocation of this committee "a special and extraordinary measure." He outlined the tasks of the new body as follows:—"I hope that the result of this co-operation of economic experts with the Reich Government will be an adjustment of economic and social difficulties and an improvement in the distressing economic condition of Germany. If this difficult task is to be accomplished, every one of you will have to regard himself as responsible only to the nation and to his conscience, every one of you will have to rid himself of thoughts of group interest and personal advantage." It will, indeed, be by no means easy for many members of the Council not to regard themselves as representatives of group interests, as they were appointed to the Council frankly on account of their prominent position in important economic organisations. Finally, it is one of the tasks of the Council to keep the Government in touch with particular sections of public opinion, and it would hardly serve this purpose if the trade union representatives, for example, were personally to accede to decisions which their unions would then bitterly resist. The President, however, was assuming, and with justification, that precisely because of the way in which the members have been chosen there is far from being any danger of too great a relaxation of the connection between individual members and the sections of the population which they represent, and that the danger is incomparably greater in the opposite direction, that the hands of representatives may be tied by too close association with group interests. It now remains to be seen whether the Council will be able to play its unusual part as a hybrid between a committee of experts and a political body. It has begun by constituting itself into a number of committees, to concern themselves respectively with prices, wages, the rate of interest and the provision of employment, and yet another committee has been formed to prepare a new standstill agreement. It has already collected material and opinions to be used in the forthcoming introductory conversations between Herr von Hoesch and the French Prime Minister.

According to recent investigations by the German Institute for Agricultural Market Research, Germany will have to buy 550,000 tons of wheat and 300,000 tons of rye on the world market in the crop year 1931-32, even if the 6 per cent. reduction in consumption on account of the economic crisis, which the Institute is assuming, takes place, and this is a somewhat doubtful assumption in view of the inelasticity of the demand for bread. The import of rye might perhaps be avoided if cheap barley could be imported, as that would free for bread-making purposes rye which would otherwise be needed for fodder. The present duty on fodder barley is 180 rm. per metric ton, about equal to the present home price, so that import is only possible in the case of special qualities. The rise in German grain prices is due not only to the poor German harvest, but to the rise in world market prices. If the grain duties are not modified, this increase will make it very difficult to bring about the reduction in wages at which the Government is aiming.

AUSTRIA.

Credit-Anstalt — Exchange Restrictions — Railways — Stock Exchange — Unemployment — Prices.

(FROM OUR CORRESPONDENT.)

VIENNA, November 2.

THE Credit-Anstalt affair has extended during the past week in several disagreeable ways. The attacks in Parliament against the former board have become extraordinarily sharp, and the Minister of Justice has made the former directors answerable for, at least, deficient supervision. He has pointed out bluntly that the bank is insolvent, and is only keeping its head above water with the support of

the State. Such statements, which would perhaps have been appropriate a few months ago, while the position in regard to the subsidiary enterprises and to the Successor States was not yet so critical, are much too late now. They are likely merely to destroy the little confidence which is still reposed in the Credit-Anstalt. The general manager, Dr. Spitzmüller, has also addressed an appeal to the public, in which he has requested patience, so that the desperate position of the institute may not be aggravated and undesirable reactions for the credit of the State may be avoided. Violent disputes also appear to have taken place on the board, and the sudden departure of Herr van Hengel, who has also written a letter to the Government, is assumed to be associated with this internal crisis in the Credit-Anstalt.

The investigations into the Credit-Anstalt have been resumed. It is generally known that Baron Rothschild has already made the largest sacrifices for the Credit-Anstalt and will have to continue to do so, though his confidence in the board has been badly shaken. It is also said in financial circles that he is thinking of selling several of the valuable assets in the industrial field which lie in the Successor States, and, in particular, in Czechoslovakia.

The second question which is engaging the interest of the public relates to the further development of foreign currency control. The period for the reporting of holdings of foreign values has terminated, but so far the National Bank has not published the amount of the sums notified. It is believed that it has requisitioned a considerable sum, and also that, through sales which have been made to avoid the obligation to declare holdings, large sums of foreign means of payment have found their way into the possession of the National Bank. The National Bank does not wish, however, to announce the amount notified so long as it is not certain what sums it will have to liberate to meet the requirements of the banks and of certain industries which get their raw materials from abroad. The allotment of foreign currency is consequently still very small, and amounts to no more than 3 and 4 per cent. of demands.

The one momentary advantage of the check to imports is that a number of Austrian industries have a large number of orders on hand. In the textile, metal, motor car, tyre, clothing and luxury industries purchases are all of home manufacture. In addition, consumers are trying more than ever to use home products, so that it is probable that a recovery will take place in other industries and particularly in the coal industry. In order to reduce the responsibility of the National Bank in the allotment of foreign means of payment, about 36 committees are to be formed of the most important branches of trade and industry for the distribution among their individual members of the foreign means of payment placed at their disposal.

The difficult position of the Federal Railways has again given rise to a rumour that they are to be leased. There is also talk of their being electrified, though it is impossible to see where the necessary means would come from. The fact remains that a confidential representative of the League of Nations, a Swiss, Dr. Herold, is shortly to arrive in Vienna and collaborate on the Federal Railways. His task will not be easy, for in the present state of affairs it is practically out of the question to obtain a subsidy from the State, nor would it be easy for the banks to allow the Federal Railways fresh credits. The recent increases of railway rates has led to a further diminution of traffic.

The general reduction in purchasing power is appalling. The reopening of the Stock Exchange has shown that the majority of shares have shrunk to a fraction of their former value, while even at the prevailing levels large batches cannot be disposed of. Moreover, most of the accounts are saddled with very large sums outstanding. In former times, when a buyer paid up 50 per cent. on the purchase of shares he believed that he was very well covered, whereas now this margin has disappeared completely. The general index, which was still at 81.4 per cent. on September 15th of last year, had fallen to 50.5 per cent. by September 15th of the present year. Then the Stock Exchange was closed for several weeks, and when it opened again the prices ruling were still lower. The index

can hardly be calculated at present, as Hungarian securities may not be quoted at all and Czechoslovakian securities are being traded in very slight volume. In any case, a considerably lower figure than that for September 15th would undoubtedly result.

Unemployment remains at about the same level, the figure for the whole of Austria still being approximately 206,000. This figure reflects the reduction of imports, but exports will also decline. The index of the cost of living has gone up from 107 in the middle of September to 108 at the middle of October. Wholesale prices for foodstuffs and groceries have stiffened throughout. For example, wheat, rye, barley, oats, maize, rice, sugar and wine are considerably dearer than they were last year. There was a decline in the prices of potatoes and veal. The movement in savings deposits has been very unsteady during the past few weeks. In August there was still an increase, but withdrawals began in September, and in October they continued. If there is political peace in the country and no further economic disturbances occur there may be a return of savings to the banks, especially as it is practically impossible to acquire foreign currency and but few people have the courage to buy stocks and shares. The principal thing in Austria appears to be that confidence in the State finances and also in the banks is returning. It is hoped, however, that the release of the 60 million credit by the Bank of International Settlements will be arranged without delay.

HUNGARY.

League Report — Budget Deficit — Foreign Debt Service Difficulties.

(FROM OUR CORRESPONDENT.)

BUDAPEST, November 2.

THE report of the Financial Committee of the League on the financial position of the country has been widely commented upon by the local Press, and it appears that some of its findings are misunderstood by the public. It seems that in spite of the official warnings it was hoped that the results of the League inquiry would lead to a foreign loan as in 1923, when the League first undertook the reconstruction of Hungarian finances. The revelations of the League report about the precarious budgetary situation are eagerly discussed by the Press and by politicians, without much understanding however, for the fundamental thesis of the report, that "the fiscal solution of difficulties arising from over-borrowing cannot be sought in further borrowing," is almost totally ignored. It is true that the total foreign indebtedness of the country was somewhat under-estimated; it was thought to be about 3,600 million pengő instead of 4,094 million pengő as stated by the report, and the annual service was supposed to be 240-250 million pengő instead of nearly 300 million pengő, as revealed by the League experts. On the basis of the present price level Hungary cannot transfer in foreign currencies either 240 or 300 million pengő. The unquestionable fact is that the country is "over-borrowed," and its future financial policy must be based on a reduction of expenditure to the level of its own resources instead of hoping for further foreign funds. The League Financial Committee might have rendered a real service to Hungary if it had stated in unmistakable terms that Hungary cannot borrow from abroad in the next few years except for purposes of funding its already existing debts. The greatest problem with which the country is faced is that of eradicating the habit of borrowing abroad, which has dominated Hungary, as well as other Central European debtor nations, from 1924 until the present.

Parliament reassembles this week to discuss the report of the League, and there is little doubt that bitter remarks will be directed against the financial administration of Count Bethlen, who resigned in August, 1931, after more than ten years of uninterrupted tenure of the office of Prime Minister. While it is impossible to exempt from blame the financial administration of the late

Government, especially those responsible for the direction of the Treasury in the last two years, it would be unfair to put all the blame on Count Bethlen alone for the excessive foreign borrowing and the resulting heavy increase of public expenditure, because all sections of the Press, as well as all political parties, have always urged the late Government to borrow abroad to its utmost capacity and to carry out investments which were often unproductive. The plea that investments were effected to avoid the introduction of the dole system may palliate but does not excuse the faults of those responsible for this unsound borrowing, and, what is worse, for the concealment of the real situation of the Treasury, the timely revelation of which would undoubtedly have prompted Count Bethlen to act before it became too late. It is indeed difficult to exonerate from responsibility the officials of the Treasury, who, so it is rumoured by the Press, did not fully inform the late Prime Minister of the true position of the national finances. A painful illustration of the budgetary situation which was not revealed until last week was a statement of Dr. Walko in the Committee of Thirty-three that the total expenditure for the current financial year was 985 million instead of the 878 million pengő as voted by Parliament for 1931-32. According to Dr. Walko, the economies already effected brought down expenditure to 922.8 million pengő. Further curtailments are inevitable, as the total revenue which can be expected in the current financial year will be less rather than more than 800 million pengő.

The deficit of the first three months of the present financial year for the Budget proper amounted to 83.6 million pengő. Expenditure totalled 255.5 million pengő, and revenue yielded only 171.9 million pengő. It is imperative that expenditure should be reduced to 800 million per annum, a figure which was suggested by the *Economist* in August and which is recommended by the Financial Committee of the League as the maximum figure for the year. It will be a tremendous task to restore budgetary equilibrium, but it must be achieved, no matter what sacrifices it involves, for the only alternative to a further deficit would be inflation, and this the Government is anxious to avoid by all means in its power. It is for Parliament to achieve the necessary cruel legislation needed to bring down expenditure to 800 millions per annum. Politicians and Press are untiring in pointing out that the late Government has increased expenditure from 500 millions in 1924 to nearly 1,000 millions now and they are loud in demanding that it be reduced again to 500 millions. If it were ever to prove practical to reduce the heavy expenditure on salaries, etc., from 419.8 millions as is provided for in the revised estimates of the current year, to 334.1 million pengő, which was the actual expenditure in 1926-27, a much-needed saving of 85.7 million pengő, the very people who are demanding that budgetary expenditure be halved would be the most violent opponents of such a measure, both in Parliament and in the Press.

The weekly statements of the National Bank reveal that its gold and exchange holding, which oscillates between 110-115 million pengő, just suffices to cover the note circulation, which oscillates between 340-500 million pengő, and, as has been stated in previous despatches, there is no margin with which to meet the service of Hungary's foreign debts, which according to the League report amount to nearly 300 million pengő per annum. As it was pointed out in the *Economist* last week (page 808), on the basis of a total export of 500 million pengő Hungary cannot hope to produce a sufficiently large merchandise trade surplus to pay her foreign debt service. In spite of the fact that the Government did not ask for a transfer moratorium and that the Financial Committee of the League did not recommend such a step it is impossible to carry on interest and sinking fund payments any longer without seriously jeopardising the basic financial structure of the country.

In view of the precarious situation of the National Bank and the meagre prospects of producing a sufficiently large export surplus to pay all interest in full, it would be a great error to interpret the recommendation of the

League Committee that "every effort should be made to meet the service of the foreign debt," as the Hungarian Press seems to have done, as equivalent to continuing interest payment in foreign exchange until the last ounce of gold is lost by the National Bank. Nothing would be more disastrous to Hungarians, as well as their foreign creditors, than to risk the stability of the currency, which has been more or less maintained so far, in order to postpone the transfer moratorium by a few weeks or months. At best, Hungary can maintain interest payments in foreign currencies on the State debts amounting to 54.4 million pengő per annum which would cover the interest but not the amortisation service of the League Loan of 1924 and the Caisse Commune Rentes (pre-war), the service of which was scaled down by the Innsbrück Agreement to 1.3 per cent. from the original 4 and 4½ per cent. There is little doubt that similar scaling down schemes will be needed for the post-war loans bearing 7 and 8 per cent. interest, because on the basis of the present price level Hungary cannot hope to transfer more than 100-150 million pengő per annum instead of nearly 300 millions, which is the amount of her annual obligation at the interest rates ruling at present.

ITALY.

Prime Minister's Speeches — Maintenance of Gold Standard — Social Policy — Stock Exchanges.

(FROM OUR CORRESPONDENT.)

TURIN, November 2.

THE speeches of the Prime Minister at the gatherings of Fascist representative bodies at Naples in commemoration of the congress held in the same city a few days before the march on Rome, let fall a few hints on economic policy. He laid great emphasis on the decision of the Government to maintain the lira at its present level of stabilisation, and the last balance sheet of the Bank of Italy furnishes a timely commentary on it. From September 20th to October 20th gold bills and securities reserves declined 652.2 millions from 3,326.5 to 2,674.3 million lire. This reduction is not disproportionate to the importance of the cause, and the fact that during the same interval discounts and advances increased by 642 millions is clear evidence that the market was in need of accommodation for payments for imports or for reimbursement of temporary foreign advances. The Bank of Italy was able, notwithstanding these heavy calls of trade, to decrease in the meantime its note circulation by 319.7 millions and to increase the gold bullion reserves by 77.9 millions. Comments in the newspapers insist on the increase of this gold bullion reserve, whose proportion to the notes issued has risen from 37.28 to 38.65 per cent. during the same period, which seems to indicate a general tendency to leave the gold exchange system in favour of the gold standard proper.

Signor Mussolini also made a significant reference to social policy. Fascism, he said, must go towards the people, maintaining itself equally remote from Bolshevism and from Liberalism. "We have nothing to fear from foreign plutocracies. . . . If obstacles should be laid in the way of this direct communion of the regime with the people we shall break them down." What is the exact meaning of these utterances only time will show. Perhaps the first result was the decision of the Central Corporative Committee on October 30th that no further general wage reductions should be enforced. Italy set a year ago the example of a 12 per cent. reduction of wages and salaries; further inroads in the workers' budgets are neither necessary nor desirable. Only in special cases can reductions be tolerated, when it can be proved that they are not required to bolster up weak concerns, or to assure continuity of work, and if other elements of the cost of production are to be simultaneously reduced. As to agricultural wages, the committee recommended also the general adoption of the system of partnership, which establishes labourers on the land. It may be observed on this point that Italy is withstanding the shock of the world crisis better than other countries, mainly owing to the

great number of landowners. Over five million men till their own land; several other millions are already on a partnership system (*mezzadria*, etc.). This system, which Sismondi exalted in 1801 against Arthur Young, is still to-day the backbone of our agricultural life. Big landowners, and farmers on a large scale, especially in Lombardy, Emilia and the South of Italy, are having very hard times. Small landowners and partners are not affluent, and they are obliged to stop saving for the time being; but they are able to carry on until times improve. In the rice-fields of Novara and Vercelli, a district of large landowners, the crisis is playing special havoc with prices of rice as low as 450 lire per ton against a cost of production very cautiously estimated at 700 lire. A National Rice Institute was recently created to fix prices and conditions of sale. Producers and traders are free to negotiate; but the rice cannot be delivered unless the contract is registered by the Institute. Prices had already risen on the announcement that something was in sight; so that the Institute was able to fix the price at 700 lire. Italian rice is of higher quality than Asiatic rice, and is mainly exported for seed use. It is uncertain whether this attempt to regulate rice prices will be more successful than other attempts for wheat, coffee, rubber and other commodities. Much will depend on the prudence of the Board.

Suppression of forward dealings has brought the bourses to a standstill, and the usual closure from October 31st to November 4th will not be resented by operators. The following are quotations for a few of the more active shares:—

	October 31, 1930.	March 28, 1931.	August 28, 1931.	October 30, 1931.
Bank of Italy	1,746	1,696	1,541	1,365
Banca Commerciale...	1,415	1,302	1,301	1,301
Meridional Railways	1,004	890	771	655
Navigazione Generale	499	374	263	238
Chatillon	253	239	237	235
Montecatini	206	202	149	124
Fiat	255	238	186	129
Edison	694	678	536	456
Risanamento	1,069	1,051	857	790
Eridania	389	370	258	234
Fondi rustici	93	32	10	10

With the exception of the Fondi Rustici, these shares are specimens of the best type of concern enjoying a good reputation. The slump has not been spectacular when compared with American movements, but, though gradual, it has been almost continuous. The worst feature is the quietness of markets, which makes small offers fall on the void.

HOLLAND.

Deficit — Municipal Finances — British Election and Tariffs — Gold Influx — Demand for Protection.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 4.

THE developments of the last few days have not been very cheerful. In the first place, there was the announcement of the Minister of Finance that the State finances had become much more unfavourable since the budget was compiled. Reliable new estimates are not available, but the Minister estimates that there is a deficiency of at least 20 million guilders on the revenue as estimated in the budget. In consequence the votes for the principal services will be reduced by five million guilders, while the petrol tax, at first fixed at three Dutch cents a litre, will be raised to 4½ cents, yielding an additional five million guilders. A considerable deficit still remains, however, and the Government hopes to save this by means of economies to be brought into operation in the course of the year, for which purpose a commission is to be appointed.

The second disappointment was provided by the report that the municipality of Rotterdam was in financial difficulties and unable to raise funds for its cash requirements. The authorities in several smaller places find themselves in a similar predicament. The banks decline to advance additional cash or to prolong current credits; this attitude was taken also by banks well supplied with

available funds, which wanted to hold themselves prepared for eventualities. The root of the trouble is not so much the attitude of the banks as the financial policies followed by certain municipal councils, which drives the banks to exercise great caution.

This caution on the part of the banks is also being prompted by higher authorities. An indication of this is the attitude of the Netherlands Bank, which will only discount municipal bills up to 10 per cent. of the ordinary revenue of the municipality in question, and it may safely be assumed that this policy has been adopted in consultation with the Government. By means of the Act providing for reduced grants to municipal and local authorities, the Government has in fact given a very distinct hint that local expenditure has to be retrenched, and even prescribes the methods by which expenditure can be reduced. In places where the financing of cash requirements is meeting with difficulties, it is expected that the Government will be called upon for credit. Rotterdam has already made a successful application, so that the municipality has been enabled to continue to meet its obligations. In the meantime a Bill has been introduced into Parliament providing regulations for support to be granted by the Government to local authorities unable to finance their cash requirements; the Government will not grant any credits to municipal authorities unless sufficient assurances are given that a more rational financial policy will be followed in future.

The results of the English elections were at first regarded optimistically, and the Amsterdam Stock Exchange assumed a firm tendency, but this was soon reversed when, on second thoughts, it was realised that high tariff walls are now possible in England, to the detriment of Dutch exports. Commercial intercourse is being hampered more and more by all kinds of artificial factors, even by restrictions on the import of certain goods in some countries. Holland, however, thanks to the most strenuous efforts, has not yet given up the revenue character of her Customs tariff. Changes in monetary relationships and developments in international commerce again threaten to give rise to new difficulties. It is not doubted that Netherlands industry will persist in the struggle, and every possible measure will be adopted to reduce the cost of production in this country in order to meet foreign competition as far as possible. The abnormal circumstances, however, are threatening our domestic market to such an extent that the Government considers it imperative to take measures to safeguard the vital interests of the country. Undoubtedly, the exceptional obstacles placed in the way of commercial intercourse by foreign countries will not be of a permanent nature, and, therefore, safeguarding schemes need only to be of a temporary character. Accordingly, a Bill has been introduced into Parliament empowering the Government to keep the import of certain goods within normal bounds by means of quotas fixed by Order-in-Council. The quotas are to be on an equivalent basis for all countries, and are to be fixed at a certain ratio to the average imports in the years 1928, 1929 and 1930. The safeguarding measures proposed in these abnormal circumstances are not in contravention of the terms of any of the treaties concluded by the Netherlands, and the most-favoured-nation clause will be strictly adhered to. The Minister is to have a committee of experts at his disposal for advisory purposes.

The influx of gold still continues, and the bank note circulation of the Netherlands Bank is covered by gold alone to the extent of 80.6 per cent. Some of the gold imported still remains in the hands of the private banks, however, and the Netherlands Bank has now requested deposits for the purpose of compiling the total amount of gold in the Netherlands. It is presumed that about 15 to 20 million guilders worth of gold is in private hands at the moment.

Reports from Dutch industrial circles become more and more unfavourable, and the appeals to the Government increase all the time. Now the Federation of Dutch boot and shoe manufacturers has submitted a petition to the Government drawing attention to the great difficulties being encountered by the Dutch boot and shoe industry

and stressing the urgent necessity of immediate measures for restricting the import of foreign footwear. In the first eight months of this year over 8½ million pairs of boots and shoes were imported into Holland, against which the exports were only 350,000 pairs, which means that the Dutch manufacturers are solely dependent upon the home market, while this outlet is largely taken away from them through the abnormal import of foreign boots and shoes. Great dissatisfaction is being felt both among the manufacturers and among the employees through the attitude of the Government, who, according to the petition, are leaving the boot and shoe industry, threatened with ruin, to its fate. The Federation urgently demands from the Government that the import of foreign boots and shoes be reduced to reasonable limits without further delay, in order to enable the Dutch industry to continue to exist.

NORWAY.

Agricultural Difficulties — Municipal Elections — Foreign Exchanges.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, November 2.

THAT the future course of the krone is a problem which concerns not only those directly connected with trade and industry but also a far greater part of the population of Norway, was strikingly evidenced at a conference which took place last week between a deputation of farmers on one side, and the Premier and the Governor of the Norges Bank on the other side. The difficulties experienced by the farmers are of course not of recent date only; the problem has been more or less in the foreground during the last four or five years, ever since the sudden rise of the krone to par. With the continual fall of the prices of all kinds of agricultural products, however, in addition to the present high rate of interest which the farmers have to pay on debt whose face value is still in inflated paper kroner, the position of a great many small and average farmers has become precarious. It was in order to put before the authorities the present hard position of these farmers that the deputation was sent, and in answer to the question, what steps could be taken by the Government to relieve the difficulties, the Premier said that the Government were already fully aware of the position, and that they would take such measures as were deemed expedient with a view to the common interests of all parties concerned. A similar answer was given by the Governor of the Norges Bank, to whom the deputation addressed a demand for a speedy reduction of the Bank rate, as well as the establishment of a krone value corresponding to the present economic capacity of the country.

Judging by the results of the local elections in the country communities last week, it is not only in England that public sentiment seems to be strongly against Socialist and Labour rule, although the tendency here is not so marked as in England. Besides, the elections in the town communities will not take place till December, so it is not possible to tell what the ultimate outcome will be, though the result of the English elections may perhaps be taken as an omen.

Contrary to all expectation, the overwhelming triumph of the British Government did not lead to an appreciation of the pound, although the tendency immediately before the result was known was rather strongly against the krone, the quotation being 17.90 on October 28th. On the 31st, however, the quotation was 17.80 to the pound, but as only small amounts were in the market, transactions took place at somewhat above the latter figure. All the other currencies, with a few exceptions, moved against us. With regard to our export industry, the result of the English elections will of course not be without consequences, the seriousness of which cannot yet be measured. Great Britain's trade balance in relation to Norway has usually been in her favour, and it is to be hoped that the active and mutually advantageous trade relations between the two countries will not be too seriously impaired.

SWEDEN.

Fall in the Krone — Trade Balance and Exchange — Ore Exports.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, November 3.

LAST week has given a discouraging indication of the real position which our country has reached after the decision to introduce a free paper currency. During the period of very nearly four weeks the Swedish crown kept surprisingly stable at the level at which it found itself practically immediately after the suspension of the gold standard, i.e., at approximately 87 per cent. of the old par value. Small fluctuations have occurred throughout the period, but not of such extent as to give reason to anticipate any new material depreciation as being imminent. Towards the middle of last week, however, a particularly marked fall in the rate of exchange for Swedish crowns set in quite suddenly, which in the course of a few days forced the international value of our currency down to 81 per cent. of the old parity.

Manifestly no serious change occurred in the economic position of Sweden to explain such a swift and heavy depreciation of our currency. The fall reflects to some extent the usual demand for currencies which makes itself felt before the end of the month. Significantly enough, the downward movement slackened off at the end of the month, which does not mean, however, that any recovery could be noted. On the other hand, the fall in the rate of exchange has continued during the present week—to 80 per cent. to-day. The depreciation is probably to be attributed in the first place to removals of capital from Sweden, which, in the present sensitive position of affairs, has had quite a different effect to what it would have under normal conditions. The internationalisation of our big concerns has, of course, during recent years made such capital transactions quite an ordinary thing, and normally they have no appreciable influence on the quotation for our currency. After the catastrophic drain upon our currency resources, and especially those of the State Bank, since the summer, the effect must necessarily be quite different. Whilst in normal cases the State Bank would have the situation in hand, it can at present do nothing but resign itself to watching developments. Its only remaining means of exercising force, the rate of discount, would manifestly not affect the transactions in question here, and demands for currencies not particularly remarkable even for normal conditions may in such a state of affairs influence the quotation for the Swedish crown in a very regrettable manner. In other words, what has occurred emphasises the factor of uncertainty, which the paper currency has introduced into the economic life.

In somewhat glaring contrast to the impression made by these experiences are the particulars which have now been published relative to production in the most important industries during September. After the substantial curtailment of output during the summer months, September brought the pleasant surprise that a considerable increase of production had set in. From 117 in June (1923 = 100) the index of production of the *Svensk Finanstidning* had in August fallen as low as 103. So considerable a recovery took place in September that the index figure then rose to 114. In some degree this rise is an expression of the normal seasonal autumn upward swing which usually commences in September. Deeper investigation, however, suggests that the increase in production may be due to the over-draught cutting down of output during the summer on account of the pessimistic atmosphere then prevalent. In point of fact there is a parallel here to the development in June, when a very marked increase in production took place after the pronounced reduction brought about by the pessimism of May. The fluctuations in the index figure emphasise, in other words, the uncertainty in the position of affairs.

In September practically all the more important trades showed increased employment. Most noticeable was the

increase in production as regards the crushing of iron ore and also the iron and steel industry, while the saw mills continued to be a notable exception.

A figure which unquestionably emphasises the effects of the depression in Sweden is the figure showing the shipments of ore by the Grängesberg Company during October. These stood at the exceptionally low quantity of 74,000 tons, or little more than 15 per cent. of the quantity for October last year. For the past ten months of the year the shipments have only been 3.12 million tons, a figure which even falls below the corresponding figure for the big strike year 1928. This means a cutting down, as compared with January-October, 1930, of 56 per cent., and as compared with the boom year 1927 of 63 per cent. It may be that this is not representative of Swedish export industry as a whole, but shipments of ore play a big part in our balance of trade.

FINLAND.

Gold Standard Suspended — Bank Rate — Money Market — Bank Situation — Foreign Trade.

(FROM OUR CORRESPONDENT.)

HELSINGFORS, October 30.

THE abandonment of the gold standard by England created great difficulties in Finland, for England is the largest buyer of Finnish goods. The situation was aggravated when the Scandinavian countries followed the example of Great Britain a week later. As these countries, to a great extent, export the same kind of goods as Finland, competition in the British market became too difficult. As a result confidence in Finland's ability to maintain the gold value of the mark was shaken, and the foreign balances of the Bank of Finland were rapidly reduced. When it became evident that there was to be no effective international action for averting the threatened danger to the world's finances, the Bank of Finland was obliged to suspend the gold standard. This was done on October 12th, and was confirmed by the Diet on October 24th. Sterling, which had steadied itself at its new level, has subsequently been quoted almost at parity.

Even before the suspension of the gold standard there was considerable nervousness, which, when this important step was taken, showed itself in the withdrawal of deposits and a general anxiety to buy. Such an inclination to panic is natural, as the public still remembers its mournful experiences of inflation during and after the war, but in a few days the atmosphere grew calmer.

In order to emphasise the fact that this was not a case of inflation, the Bank of Finland raised its rate to 9 per cent. on October 12th. Before a fortnight had passed the position had so far improved that the Bank rate was lowered to 8 per cent. on October 24th.

The considerable efflux of foreign currency, with consequent borrowing or withdrawal of deposits from the joint-stock banks, was clearly reflected in the changes in their position and in that of the Bank of Finland, though it should be noted that the usual seasonal development proceeds in the same direction. Deposits in the joint-stock banks were reduced in September by 166.0 million marks, compared with 154.1 millions last year, while, on the contrary, credits, which had fallen off in September, 1930, rose by 104.8 million marks. Simultaneously the position of the joint-stock banks abroad grew worse by 83.9 million marks. In spite of a simultaneous reduction in their cash, the banks were forced to resort to the help of the central bank on a large scale.

The credits of the Bank of Finland grew in September by 111.3 million marks, of which 67.6 millions referred to rediscounted bills. As the reserve of foreign currency was reduced by 129.1 million marks, the note reserve of the Bank of Finland naturally declined. This tendency continued in the beginning of October. The reserve of foreign currency fell off during the first week by 96.3

millions and during the second week by another 25.1 millions to 340.9 million marks, though there had been a small increase during the last few days. By October 23rd the supply of foreign currency had risen again by 43.0 million marks to 383.9 millions. The other figures illustrating the position of the Bank of Finland display a similar development. Rediscounted bills increased in the first half of October by 214.1 million marks, but fell off again during the third week by 44.0 millions to 335.9 millions. However, the total credits of the Bank had not yet shown any falling off by October 23rd, and amounted to 1,133.7 million marks in comparison with only 767.4 millions at the end of August. On the other hand, the note reserve rose slightly during the third week in October after its severe drop in the previous weeks. It may therefore be said that, although the past weeks have proved a great strain on the Bank of Finland and the joint stock banks, the position during the last week has displayed a decided improvement. Moreover, the reduction in the foreign balances of the banks is counteracted by a corresponding falling off in the foreign indebtedness of the business world.

It is probable that imports will be reduced further, so that the already favourable balance of trade will improve still more. As imports, which used to be heavy, have fallen to less than half their value in 1928 and 1929, while exports have not fallen off to anything like the same degree, the surplus of exports this year has grown to higher sums than ever before. For January-September the surplus of exports amounted to no less than 676.7 million marks, compared with 292.1 millions last year and an appreciable surplus of imports in the preceding years.

GREECE.

New Exchange Restrictions — Service of Public Debt — Revenue — Financial Situation — British Elections — Bank Rate.

(FROM OUR CORRESPONDENT.)

ATHENS, October 30.

ON October 8th a new forced law concerning "the protection of the national currency" was published in the Government Gazette, completing the first forced law of September 28th. By virtue of these two enactments the Bank of Greece acquired an absolute control of money movements to and from the country, and a virtual monopoly of all transactions involving the import and export of capital. The aim of these measures is to protect the foreign exchange reserve of the bank of issue and improve, if possible, the balance of trade. Foreign exchange is, therefore, granted by the Bank for indispensable and immediate economic needs only. As, however, imports are normally twice as large as exports, trade, already severely handicapped by a contraction of the note circulation, a restriction of bank credits and a rise of interest rates, superimposed on the adverse effects of the world crisis, is bound to be further injured by these measures.

While thus taking steps to discourage the outflow of capital and to strengthen the exchange position of the central bank, the authorities, on the other hand, declared that all State obligations in respect of debts in gold currencies will be met in full in gold. Sterling loans, however, made after the war and not specifically contracted in gold or in other currencies representing gold, will be paid in sterling. This decision, strictly in accord with the letter of the respective contracts and the precedent set by other States and the United Kingdom itself, is undoubtedly above criticism. The view expressed by a London broker that the service of all the loans, without discrimination, should be paid either in gold or in sterling is considered groundless, and the arguments invoked in support of this thesis untenable. If during the war, it is retorted, the service of the loans was made to British bondholders in sterling and not in gold, this was due to the fact that Britain, as well as the other countries in whose currencies the loans were issued, and indeed nearly every country of the world, was off the gold standard.

Complete returns are now available of public revenue and expenditure for the financial year 1930-31. This time again the Budget closes with a surplus estimated at approximately 325 million drachmas. While these returns are gratifying, a decline in revenue must be anticipated this year in view of the present economic conditions of the world and their reaction on every country. In addition, the restrictive measures rendered necessary for the protection of the currency since the abandonment of the gold standard by Britain will no doubt contribute also to a decrease of revenue, by a decline in import duties and of income tax on business profits. Indeed, whereas the Budget for the current year was estimated at least to balance, revenue receipts for September show a falling off compared with the same month of last year. Consequently, with a determination to maintain the equilibrium of the Budget, the Government decided to revise the estimates of expenditure, in order to cut down and, if necessary, postpone all expenses not absolutely indispensable. Receipts for the first eight months of this year from the revenues assigned for the service of the external public debt show an increase of 100 million drachmas over those of the same period of last year.

The financial situation in Greece is in suspense, waiting for signs of improvement on the international horizon. Great hopes are placed on the results of the French Premier's visit to America and the election in Britain. The first reports, announcing an overwhelming majority for Mr MacDonald's National Government, gratified everybody. Accordingly, the Bank of Greece lowered yesterday its rediscount rate from 12 to 11 per cent. A further reduction may take place at a not distant date, and there may possibly be a relaxation of exchange restrictions. The Athens Stock Exchange, which has been closed ever since the outbreak of the British crisis, is expected to open soon. The material, and still more the psychological, effect of these developments is calculated to stimulate business activity by inspiring confidence and reviving hope.

SOUTH AFRICA.

Gold Standard — Low-Grade Mines — Unemployment.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, October 7.

THE abandonment of the gold standard by Great Britain has naturally caused very great interest (not to mention some alarm) in the principal gold-producing country of the world. For a few days business in South Africa was in a state of disturbance previously witnessed by few even of its oldest citizens. There was a good deal of panic selling of shares (especially Randfonteins and Daggafonteins) for a day or two, although this was partly caused by an extensive but very weak bull position in the two stocks mentioned. There was some difficulty with exchanges, but this has now been rectified, not only by the quotation by the banks of proper rates, but by the establishment of direct exchange between South Africa and most of her trade connections.

The balance of the argument is now as to whether or not South Africa should remain on the gold standard. The Minister of Finance and his more influential colleagues in the Cabinet are very strongly in favour of so doing, and have announced categorically and officially that South Africa will not follow sterling or otherwise depart in any way from the standard. There can be little doubt that this is in the interests of the country as a whole, and further that it is the logical course for a country which is not only perfectly solvent, but whose position is strong in relation to its size and by comparison with the business world as a whole. At the same time, it can easily be understood that exporting producers of agricultural and pastoral products and of base metals fear a further fall in the gold prices of their goods. Very strong pressure from the two sources mentioned is being brought to bear on the Cabinet, which has, however, shown no sign of yielding so far. There is some doubt, nevertheless, as to the final decision.

The Chamber of Mines has submitted evidence to the Low Grade Ore Commission, placing the industry in a somewhat new light in relation to the general economy of South Africa. The industry is directly responsible for some two-ninths of the national income of the country, and this figure has previously been accepted by the public as a reasonable measure of its importance. It is perhaps not unjust to say that the position has hitherto been allowed to go by default. In two statements submitted to the Commission the Chamber has pointed out that, but for the mines, an important proportion of other production in the country would have no market in the existing stage of the development of South Africa. Doubtless other markets could be developed, but it is more than optimistic to think that these could yield to the European his present and fiercely defended standard of living. Much of the production has, in fact, been called into being by the mines, and without them would probably terminate—or be continued under disastrously different circumstances. Readers of the *Economist*, accustomed to the economic circumstances of more advanced countries, will have some difficulty in assessing the importance of an area so relatively small as the Witwatersrand in a territory the size of the Union. The purport of the Chamber's statements was that only slightly less than half of the whole population and economy of the country is at present dependent on the gold mines. The statements were not seriously questioned, nor was their import diminished in principle by the cross-examination by members of the Commission. In a further statement, to which the two already mentioned were really anterior, it was estimated that a reduction of two shillings per ton in working costs would increase the life of the industry by 50 per cent., whilst a reduction of four shillings per ton would more than double the present estimated life.

South Africa, although better situated than many other parts of the world, has her unemployment problems. These are at present somewhat more pressing than usual owing to the very depressed conditions in the country areas. The mines are better supplied with native labour than at any previous stage of their history, and still there are thousands of natives who are in dire need of work. This aspect of the matter is almost entirely obscured from the ill-informed or unthinking South African, owing to the fact that detribalised natives are still a not very important fraction of the native population. Natives who are still members of their tribes are entitled by custom—almost by right—to a share of the tribal resources. It is thus unusual for the tribal native to be destitute. Under pressure of circumstances in rural areas, abnormal numbers of both black and white seek work in the towns. Last week there was a municipal conference in Pretoria, called by the Government, to discuss the problem. Unfortunately we are still far from seeing the problem as a whole—most South Africans see the problem of European unemployment more or less distinctly, with a hazy and entirely separate vision of native unemployment much further away. The greatest single—and practicable—step to strengthen the economic position of the Union would be the raising of both the industrial and rural culture and earning power of the native. In the meantime, the conference above referred to invited the Government to consider the appointment of a Commission to investigate the question of creating an unemployment fund. This section of their recommendations cannot fail to cause some misgivings in the minds of those who have studied the records of unemployment funds elsewhere.

Appearances definitely indicate that some action will shortly be taken in regard to Provincial Government. The present system has broken down financially and has fallen short, in other respects, of the hopes of twenty years ago. Natal is strongly in favour of the retention of the Council of that Province, and the Government has promised not to coerce its citizens into any fresh scheme. The possession, by one surviving council, of powers differently applied in the rest of the Union would, however, be likely to lead to complications. The whole problem has been before the Cabinet, and will most likely be prominently before the electors when next they are consulted. Far-reaching changes in the Constitution may easily arise.

JAPAN.

Gold Shipments — Banking and Industrial Profits — Foreign Trade — Crop Reports.

(FROM OUR CORRESPONDENT.)

Tokyo, October 10.

THE raising by the Bank of Japan of its official minimum rate from 5.11 per cent. to 5.84 per cent.* was an endeavour to check the outflow of funds and "safeguard the gold standard"; for, since the latter part of last month, there has been heavy buying of dollar bills and securities in apprehension of a possible reimposition of the gold embargo, and Japan has been forced to ship some 70 million yen of gold. Those who became panic-stricken by the British gold suspension are mainly responsible for this heavy export of Japanese capital. The underlying financial facts in Japan, however, are not so unfavourable as to point to the probability of a suspension of gold payments, and the rise in Bank rate should do much to restrict further purchases of foreign securities and relieve the strain on the exchange. With the shipments of gold the money market in its turn is beginning to feel the pinch, and an early advance in deposit rates is predicted, though the clearing banks are not yet decided on the matter.

According to the Mitsui Bomei Kaisha's half-yearly analysis of profits of Japanese joint-stock banks and industrial joint-stock undertakings, the aggregate net profits of 250 banks for the first half of this year totalled 72,017,000 yen, a decline of 418,000 yen upon the second half of 1930. The decreased bank earnings are obviously attributable to smaller demands for credit and lower money rates ruling during the period. On the other hand, net profits of 1,000 industrial companies amounted to 148,615,000 yen, a marked increase of 25,523,000 yen, as against those earned by the same concerns in the preceding half-year. The increase is mainly accounted for by the textiles group, which turned a net deficit of 7.3 million yen into a net profit of 23.6 millions. While flour mills, tanneries, kilns, drugs and chemicals and trading companies and stores disclosed increased earnings, iron and steel, shipbuilding, machinery and tools, shipping and rubber recorded huge losses, and copper, mining, stock and produce exchanges, and warehouses made an extremely adverse showing. Though the aggregate earnings rose, the ratio of net profit to capital is still on the very low level of 4.8 per cent., as against 4 per cent. in the preceding half-year. There were 239 industrial companies of the total that reported deficits for the past half-year, the aggregate loss amounting to 40,060,000 yen, while in the second half of 1930 there were 297 companies having a combined deficit of 60,983,000 yen.

The Chinese floods, the military collision in Manchuria, and other unfavourable external developments have affected our trade adversely. The September returns show that, as compared with the corresponding month of last year, imports increased by 1,750,000 yen, while exports decreased by 29,967,000 yen, the excess of exports over imports amounting to only 6,625,000 yen, as against 88,342,000 yen. The increase in imports is solely accounted for by raw cotton, which rose by 12.2 million yen, while the contraction in exports is accountable by such staples as raw silk, cotton piece-goods, wheat flour, sugar, and tinned and bottled provisions. The total value figures for the first nine months of the year reveal that imports and exports fell by 283,346,000 yen and 218,594,000 yen respectively, the apparent adverse balance being 64,752,000 yen lower at 76,428,000 yen, the smallest for many years.

The Department of Agriculture and Forestry's forecasts of the rice crop for the country at September 20th, issued on October 1st, placed the year's crop at 57,965,000 koku, or a decrease of 8,908,000 koku (- 13.3 per cent.) upon last year's actual yield, and 2,920,000 koku (- 4.8 per cent.) below the five years' average. The Korean crop prospects are also reported to be unsatisfactory, and are put at 16,351,000 koku, a decrease of 2,829,000 koku, or 14.7 per cent. upon the actual yield of 1930. The wheat crop, however, has been good this year. The yield of

* Bank rate was again raised on November 4 to 6.57 per cent.

wheat (excluding that of Hokkaido) totalled 19,987,000 koku, an increase of 1,035,000 koku (+ 5½ per cent.), as against last year, and is 503,000 koku (+ 2½ per cent.) above the quinquennial average.

According to a report of the same Department, the output of spring cocoon totalled 52,667,000 kamme, a decline of 3,435,000 kamme (- 6.1 per cent.) against last year, and its value was estimated at 154,831,000 yen, disclosing a heavy decrease of 55,537,000 yen (- 26.4 per cent.). The estimated crop of summer and autumn cocoon was put at 40,225,000 kamme, a decline of 10,134,000 kamme (- 21 per cent.) upon the actual output of a year ago. The combined cocoon output for the year amounted to 92,893,000 kamme, as compared with 106,463,000 kamme for last year.

The downward movement in commodity prices was again accelerated during last month. The wholesale index number of the Bank of Japan for September registered a drop of 1½ per cent. on the month, and is now 12.7 per cent. lower than a year ago. The fall is most pronounced in the cereals and textiles groups.

ARGENTINA.

Protective Policy — Export Trade — Exchange Control

(FROM OUR CORRESPONDENT.)

Buenos Aires, October 16.

Two recent decrees, issued by the Provisional Government during the past fortnight, have reacted sharply upon Argentine commercial and financial conditions. The purchase and sale of foreign exchange is now subject to strict official control, and import dues have been further increased by an all-round 10 per cent., such increase being over and above the higher sums now payable as duty owing to the recent extensive upward movement in the official tariff of values. To this may be added yet a third circumstance that will add to, rather than lessen, the difficulties under which local trade is labouring at the present time, namely the tax of 3 per cent. upon all commercial transactions above a certain minimum.

It has been clear for some time past that the Protectionist Party in Argentina was gaining ground in political circles. Ostensibly the new taxation is imposed solely for the purpose of filling the depleted Treasury, but it is also claimed to be temporarily helpful to local industry, and, furthermore, to serve as an effective check upon luxury imports. This is, at any rate, the official view; it entirely overlooks the fact that, however self-supporting Argentina may become in course of time, at the present moment both production and the general standard of living are, to a large extent, dependent upon the use of foreign-made articles. Everything points to the cost of living going up, and there is a very real danger that, if this policy is continued when the new Government is elected, on November 8th, the countryside, as a whole, will feel justified in insisting upon higher wages, while in the towns that possibility may become a certainty. In a word, Argentina is fast following along the lines that experience has proved to be so heavy a handicap upon Brazilian business in general. It is, of course, insisted that the increased charges are temporary, but, unfortunately, past experience shows that indirect taxation, once imposed, is rarely, if ever, removed. Coming, as they do, on top of an exchange depreciation of 40 per cent., these increased Customs charges have, for the time being, most effectively throttled import trade in general, and Argentina's purchases from America and France in particular.

Meanwhile, among Argentine producers, the upward movement of prices for all cereals is cause for considerable satisfaction. The bulk of Argentina's wheat and linseed has already been shipped, and the figures for the first nine months of the year show 12,762,527 tons of agricultural products, as against 6,752,661 tons for the corresponding period last year. Altogether, excluding specie, Argentina's shipments amounted to no less than 13,908,000 tons, as against 8,078,000 tons for the first nine months of 1930. Even this tremendous difference in quantity still leaves the values in favour of last year, inasmuch as for 1931 the total is put at \$474,482,544 gold, while for the first nine months of 1930 it was \$482,586,784 gold. Wheat has been

slightly over \$7.00 paper per 100 kilos for spot shipment, but is now a little lower at \$6.85, while maize is \$4.20, linseed \$11.50, and oats \$6.70.

Strict control of exchange has only been in force a week. It is primarily designed to prevent exporters from selling their foreign currency, whatever form it may take, outside the Argentine Republic; and, in order to attain this desideratum, thereby providing banks and other entities with the cover they need in connection with their regular drawings, no produce can be exported without a certificate emanating from a special committee that acts in direct conjunction with the Banco de La Nacion and is known as the Exchange Control Committee. Through the hands of this committee all business must be passed, would-be remitters having to show good cause for the demands they make upon the banks for drafts in foreign currencies, while exporters are not allowed to ship unless they have documentary evidence officially controlled and proving that exchange has been taken here to cover the outgoing merchandise. Watertight though the scheme appears to be, there are many in Buenos Aires to-day who feel that with the local rate at 32½d., and the London rate somewhere round about 30d., means will be found to circumvent the authorities.

There are, moreover, many dangers in the pursuance of what is at best but an empiric policy. First and foremost must be reckoned the general elections to be held on November 8th. Assuming that they are peacefully carried to a conclusion in accordance with the constitution, and that the party in power continues the strict economy and administrative revision that the Provisional Government certainly has to its credit, all will go well, and Argentine prospects, both locally and internationally, should improve almost immediately. There is the probability, however, that European firms, previously doing profitable trade with this Republic, will find their market cut off, and Argentina seems to have completely forgotten that one of the worst evils of protection is its quality of infection. If she abandons the liberal trading conditions that have been traditional here almost since the foundation of the Republic, it is quite possible that she will find difficulty in placing her raw material and her foodstuffs in markets where previously they were taken freely. All these considerations are, furthermore, subject to the course of world conditions. If Europe and America are able to increase their power of consumption, Argentina will certainly be one of the places where that recovery will first be noticed. Argentina has saved money during the past year, and much of it she has been in a position to re-invest locally; her floating debt is more or less what it was a year ago, and no new loans have been contracted. Therefore, if the normal business rhythm of the Republic is restored by good crops and reasonable prices, improvement all round will follow.

Politically and financially, however, the immediate situation is marked by considerable delicacy. Down to the moment of writing, that condition of affairs has been universally recognised. One can but hope that the same common sense will prevail during the November elections, and, whatever party may prove to be the national choice, it is essential for it to remember that Argentina's future is wholly bound up with her commercial prosperity, and that such prosperity can never be a one-sided affair. If this is realised, and the hindrances to trade that at present exist are speedily removed, the benefit will be mutual and immediate.

Books and Publications.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.] (It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Trade Depression and the Way Out. By R. G. Hawtrey. (London) Longmans, Green and Company, 39, Paternoster Row. 2s. 6d. net.

An admirably lucid and suggestive collection of essays on the problems of the gold standard, highly relevant to the present crisis.

Holding Companies. By Sir Gilbert Garnsey. Second Edition. (London) Gee and Company (Publishers), Limited, 8, Kirby Street, 15s. net.

This interesting treatise has now been brought up to date by the inclusion and discussion of those provisions of the Companies Act which affect holding companies. Other welcome additions are a chapter on direction and management and a detailed index.

The Balance of Births and Deaths: Vol. II. Eastern and Southern Europe. By Robert R. Kuczynski. (Washington) The Brookings Institution, 26, Jackson Place. \$2.00.

This work, based largely on official statistics, reveals the fact that during the last generation reproduction has been decreasing in every section of Central Europe, Russia alone being an exception to the general rule.

The Approach to Economics. By H. M. Scott. With a Foreword by Sir Josiah Stamp. (London) Christophers, 22, Berners Street. 4s. 6d. net.

A most helpful little text book which Sir Josiah Stamp thinks "might well be read on the sly by many business men and others in high places, with advantage to the community."

Value and Income. By Arthur E. Monroe. (London) Oxford University Press, Warwick Square. 15s. net.

A theoretical work for advanced students on the complex subject of prices in relation to the earnings of productive factors.

World Depression to World Prosperity. By A. G. McGregor. (London) P. S. King and Son, Orchard House, Westminster. 5s. net.

An engineer's remedy for the present world slump.

Modern India. Edited by Sir John Cumming. (London) Oxford University Press, Warwick Square. 8s. 6d.

A collection of essays on present-day India by such well-known persons as Sir Harcourt Butler, Sir Philip Hartog, the Lord Meston, and others.

The Geography of London River. By Lt. Rodwell Jones. (London) Methuen and Company, Limited, 36, Essex Street. 21s. net.

An interesting account of the influence of the physical characteristics of the Thames estuary on the development of the Port of London, from the end of the eighteenth century to the present day.

The Clinchfield Railroad. By William Way. (London) Oxford University Press, Warwick Square. 22s. 6d. net.

An interesting and well-illustrated account of the development of a trade route across the Blue Ridge Mountains.

A Study of the Diversification of Insurance Company Investments. (New York) J. G. White and Co., 37, Wall Street.

An analysis of the investment holdings of leading companies in New York State.

The Law of Banking. In two volumes. By H. L. Hart. Fourth Edition. (London) Stevens and Sons, Limited, 119 and 120, Chancery Lane. 3 guineas net.

An invaluable book of reference on all questions arising from banking and Stock Exchange transactions.

OFFICIAL PUBLICATIONS.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C.2.

Department of Overseas Trade: Economic Conditions in the Canary Islands. August, 1931. 1s. 9d. net.

Colonial Reports: No. 1545. *Nyasaland*, 1930. 2s. net; No. 1546. *Bermuda*, 1930. 9d. net.

Just Published.

THE COURSE OF THE COMING BOOM IN SECURITIES.

by L. L. B. ANGAS

This remarkable publication, appearing the day following the collapse in sterling, and forecasting the stock market movements which have since occurred, will prove invaluable to investors as a guide in the forthcoming months.

Mr. L. L. B. Angas's forecasts of stock market movements have, in the past, shown an uncanny accuracy, as witness his publications "The Coming Rise in Gold Shares" and "The Coming Collapse in Rubber." This latest publication can be equally recommended.

Publishers: St. Clements' Press, Portugal St., W.C.2.
Telephone: Holborn 7600.

NOTE—*Shares with a New York quotation, or with definite American interest, are distinguished by italics.*

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets showed signs of at least a temporary recovery, the motive power of which was provided by a rise in wheat prices and reports of a moderate, if belated, autumn business revival. The wheat price movement, though traceable to sound market factors such as the prospect of increased European imports and re-purchasing by Russia, was accompanied by much speculative talk. Numerous mail order businesses reported an appreciable quickening of demand from the interior, but the movement was obviously in its early stages, and it was generally agreed that prophecy as to its extent and duration was futile. Much interest was shown in the efforts made by the New York Central Railroad to secure a voluntary 10 per cent. reduction in wages. It was generally believed that if the New York Central's efforts were successful, similar steps would be taken by many other major railroads. The heads of the Brotherhoods of railway workers met in Washington to consider the matter, but no report has yet been made by the railroad concerned. A moderate demand in the stock market centred largely on industrials, and was helped by the declaration by General Motors of a dividend for the third quarter at the regular rate of 75 cents. Though this payment was not fully earned, the decision was interpreted as a gesture of confidence in automobile industry prospects. The copper negotiations were reported to be making slow but steady progress, but no details were available of the lines of ultimate agreement. Freight car loadings in the week ended October 24th were 770,000, as compared with 959,000 in the corresponding week of 1930. The New York Times business index at the same date stood at 66.2 against 67.2 in the preceding week. Price movements on Thursday were a trifle irregular, with no striking alteration in sentiment, but markets enjoyed a firmer tone towards the close.

CANADA.

In the last half of September the Canadian markets turned sharply downward in sympathy with New York. So serious was the collapse that some of the more important stocks were "pegged" at minimum prices, and remained in that condition. A further blow came as a result of the failure of Macdougall and Cowans and Green-shields and Company—two of the largest brokerage houses in the country. These firms had been attracted by the cheapness of money in the United States, and could not meet their calls on American funds after the decline of the Canadian dollar. A preliminary statement of the liquidator of Macdougall and Cowans shows a nominal surplus of assets of \$2,700,000, dependent, however, upon the collection of some \$5,000,000 of book debts listed as "doubtful." The Greenshields' firm's affairs are somewhat better. Secured creditors of the two firms are at liberty to liquidate their securities when they choose, but a delicate problem arises, since many of the stocks "pegged" in Canada are selling in New York at a much lower level than in Montreal or Toronto. The bond market outlook is obscure. It is reported that a rise in the Canadian dollar to 95 cents (U.S.) would be the signal for heavy liquidations of Canadian bonds by embarrassed American banks at present unwilling to take the loss involved. There has been a good rise in the sounder gold stocks, but the mining market otherwise remains weak. The Bureau of Statistics "Investors" Index of Industrial Common stocks, which stood at 79.5 on Septem-

ber 17th, fell to 68.1 by October 8th, and recovered to 72.0 by October 15th.

PARIS.

A three-day rest had a beneficial effect on sentiment, and on Tuesday moderate gains were recorded all round. The weakness of sterling was an adverse factor, but more favourable news from New York and the advance in wheat prices acted as a spur to activity. Bank shares encountered a fair demand, and Royal Dutch were firmer. The end-of-month settlement passed off without any trouble, money being plentiful, and the subsequent recovery in sterling encouraged a further advance in share values. Thursday's opening witnessed a continuation of the previous satisfactory tone, but profit-taking ensued before the end of the session.

AMSTERDAM.

The Amsterdam Bourse opened cheerfully, though business was still restricted. Tobacco shares were in moderate demand, following the news that Sumatra tobacco was to be admitted into America. Unilever and Philips Lamps also scored appreciable advances. Rubber shares were better, and Amsterdam Trading improved. On Tuesday a reaction occurred, induced to a great extent by the weakness of sterling, but when the pound rose on Wednesday previous losses were made good. Royal Dutch continued firm, the passing of the interim dividend having been previously discounted.

OTHER CENTRES.

A number of foreign centres were closed at the beginning of the week, and subsequent business was on a reduced scale. Brussels opened firm and continued to advance. Copenhagen, however, was reactionary, and Vienna made little headway. Sentiment in Berlin was adversely affected by French insistence that reparations should take precedence of commercial debt obligations, and unofficial "quotations" were lower in every case. Dye Trust was done at 94.50 (against 97 a week ago), Siemens at 118 (against 117.50), A. E. G. at 33.50, against 36), and Reichsbank at 92.50 (against 97).

INVESTMENT NOTES.

The Markets and the Pound.—The fall in the sterling exchange rate this week had a surprisingly adverse effect on the market in British Government funds. It appeared, at one time, that the market was returning to the condition which immediately succeeded the departure from the gold standard, when prices moved down with every fall in the sterling exchange, and vice versa. Allowance should be made, however, for the fact that the prices of British funds had been raised in company with sterling,

before the General Election, and some speculative commitments were doubtless closed this week. By Thursday prices had already shown a recovering tendency. It would be well for investors to realise that as long as there is no fear of inflation—so long, that is, as the Budget remains balanced and the credit of the Government holds good—there is no reason why British Government funds should be marked up and down on day-to-day fluctuations in the sterling exchanges. As both principal and interest are paid in sterling, the ratio between capital and income—in other words, the yield—should depend upon the general level of interest rates. The following table shows the fluctuations in various British Government stocks this week:—

Name.	Friday, Oct. 30.	Tuesday, Nov. 3.	Thursday, Nov. 5.	Fall since Oct. 30.
Consols 2½%	57	56	56½	½
Consols 4%	87	86	85½	1½
Conversion Loan 3½% ..	77	75	75½	1½
Do., 4½%, 1940-44	97	96	96½	½
Do., 5%, 1944-64	102	100	100½	1½
Funding Loan 4%	87	87	86½	½
Victory Bonds 4%	94	93	93	1
War Loan 5%, 1929-47 ..	97½x	96x	97½x	½
Local Loans 3%	63½	62½	62½	½

As regards the industrial share markets, although a further reaction has occurred on profit-taking, the undertone remains good and there is a disposition on the part of some investors to purchase British industrial stocks for long-term holding. To what extent this is a speculative movement based on the prospect of a high protective system, or an investment movement based on the conviction that a turn in British trade has come as a result of the departure from the gold standard, it is difficult to say.

The Settlement in "Majorities."—The Stock Exchange Settlement in "Majorities" will take place (as stated in last week's *Economist*, page 824) on Tuesday next, November 10th. The price at which it will be carried through is 493, so that a buyer of £1

worth of Majorities at 150 will receive £343. Little doubt is now entertained (writes a "House" correspondent) as to the smooth running of the Settlement. Though no open trouble may be disclosed, it remains true to say that little regret would be caused if dealings in Majorities were discontinued in future. Last month's general election has shown that unexpected risks can lurk in political speculations, which cannot allow adequately for anything in the nature of a landslide. Stock Exchange men are accustomed to run hazards, and they are tolerably familiar with risky speculations. It is generally agreed, however, that the transactions in "Majorities" are beyond the bounds of reasonable speculation, and are liable to be fraught with real danger to a good many people who cannot afford such losses as have arisen in the present instance. It is, known, for example, that many clerks in the Stock Exchange, and in Mining Lane and other City offices, have been selling bears of modest amounts—ten shillings, five shillings, and even less—hoping to pick up two or three pounds in winnings. They now find themselves liable for losses ranging from £50 to £150. This is the kind of gambling against which the Stock Exchange Committee have always set a resolute face in the past.

Iron and Steel Prospects.—The rise in iron and steel shares has been an outstanding feature of the market during the last few weeks. In many cases values are within sight of the peak point of 1930. It will be seen from the following table, which gives quotations (a) before the departure from the gold standard, (b) at the middle of October, (c) after the election of the National Government, and (d) at the present time, that prices advanced steadily up to the election, and then reacted in some cases:—

Name of Security.	Amount of Share Fully Paid.	Year 1930.		Prior, Year 1931.				
		Highest Price.	Lowest Price.	Sept. 18th.	Oct. 15th.	Oct. 29th.	Nov. 4th.

The rise may be attributed primarily to hopes of increased steel company earnings, by reason of the enhanced competitive power of British producers in foreign markets, since our abandonment of the gold standard. Spain and Sweden, two important sources of the raw material, are also on a non-gold basis, *de facto* or *de jure*. The better tone reported from the export centres would, indeed, appear actually to reflect increased orders, particularly in the case of pig iron, foreign imports of which have been drastically curtailed. On the other hand, a part of the increased activity is probably due to buying against a future rise in prices, while any marked improvement in the market for steel goods must inevitably depend on a revival in shipbuilding and structural work, which is not at present in evidence. The effect of a possible import duty on iron and steel can scarcely be estimated at this stage. A tariff here would certainly provoke higher Continental duties—a matter of some moment, since, in 1930, 48 per cent. of our pig iron exports went to Germany, France and Belgium. In the long run, any further rise in iron and steel share prices would be justified only on the basis of improved world trade.

Lord Kysant's Appeal Fails.—Last Wednesday the Court of Criminal Appeal dismissed Lord Kysant's appeal against his conviction at the Old Bailey, last July, on a charge relating to a debenture prospectus of the Royal Mail Steam Packet Company. No new point of law would seem to have been brought out in the summing up of Mr Justice Avory, who delivered the judgment of the court. Everyone knows that a prospectus can be false in a material particular by omission as well as by specific statement. The prospectus of the Royal Mail debenture issue conveyed a false impression by placing before intending investors, as material on which they could exercise their judgment, figures which apparently disclosed the existing condition, but in fact concealed it. "The implication in the prospectus," said Mr Justice Avory, "that a prudent investor could safely invest in the debentures arose particularly from the statement that dividends had been regularly paid over a number of years, although times had been bad, a statement which was misleading when it was omitted that they were paid, not out of current earnings, but from funds earned in the abnormal war period." "There was ample evidence," the judge added, "on which the jury could find that Lord Kysant knew of its falsity, knowing as he did of the means by which the dividends had been paid." As it could not be disputed that the prospectus was published with intent to induce persons to lend money to the company, he concluded that there was ample evidence to support the verdict of the jury. The trouble, indeed, with most prospectuses which cause the investor to lose his money is not a fraudulent statement or omission about past earnings but an unfounded cheerfulness about the prospects of the future. The Kysant case, however, merely emphasises the fact that a prospectus must stand or fall by the general impression it conveys about past earnings. Nevertheless, if the case induces increased circumspection and a stern sense of responsibility on the part of those responsible for the drafting of prospectuses, its results will be highly beneficial. Many of the promoters of the more speculative issues of the 1928-29 boom must needs have scrutinised the reports of the trial with the painful reflection that a slight turn of fate might well have found them playing a central role in the drama.

Sir Arthur Wheeler Convicted.—It is curious that both Lord Kysant and Sir Arthur Wheeler have been sentenced to twelve months' imprisonment in the second division for very dissimilar crimes. Sir Arthur Wheeler was convicted last week of fraudulently converting to his own use sums of money which had been entrusted to him by his clients. The judge, referring to Sir Arthur Wheeler's comparison of his business with the sinking ship on which it would have been cowardice to haul down the flag, remarked: "You have to consider whether it is honest for a captain who knows his ship is sinking to invite passengers on board." The troubles of Sir Arthur Wheeler began with the Hatry crash and the Wall Street slump in the autumn of 1929, followed by other failures in the City of London. The temptation to use other people's money to bolster up a weak or shattered financial position was the temptation to which Clarence Hatry and his associates succumbed on a larger scale. Sir Arthur Wheeler failed to complete the transfer of stocks purchased or sold on behalf of clients. The firm of Sir Arthur Wheeler and Company carried on a stock and share broking business—the turnover of which at one time exceeded £10 millions per annum, and during the two or three years before its downfall was never less than £6 millions—while the jobbing business, which involved the purchase of securities from clients outright, was carried on through the Midland Industrial Joint Trust. The moral of the Wheeler case would appear to be one which the Stock Exchange Committee should take to heart. The business was obviously one of which a large number of provincial investors made use. It fulfilled a useful service so long as it was properly conducted. Its huge clientele was built up through extensive circularising and advertisement. It is difficult to see any permanently valid objection to the granting

of reasonable advertising facilities to members of the Stock Exchange, as a means towards the attraction of a good deal of business to the "House" which is now done by outsiders, who may in some cases be perfectly honest men, but are under no central control or supervision.

Textile Machinery Merger.—A circular sent to shareholders of Howard and Bullough states that a provisional agreement has been entered into with the newly-incorporated holding company, Textile Machinery Makers, and that five other important firms are considering a similar agreement. Provision is made for the transfer of the whole of the textile machinery business to the new organisation in return for a block of shares. The bulk of the present investments of Howard and Bullough will be retained. The capital of Textile Machinery Makers will be £1,788,000 non-cumulative 6 per cent. preference shares, with, perhaps, a small addition, and £1,615,000 ordinary shares. Howard and Bullough will receive 327,000 preference and 550,000 ordinary shares of £1, credited as fully paid. This proportion of shares will entitle Howard and Bullough to 34 per cent. of the profits earned by the merger, after payment of the fixed preference dividend. The name is to be changed to Howard and Bullough (Securities), Limited.

Wallpaper Manufacturers.—This strongly-organised concern continues to earn satisfactory profits. It owns fifteen mills, of which four are in the London area, and in addition has important interests in the "Walpamur" Company and Canadian Wallpaper Manufacturers. In a preliminary statement the directors announced that profits for the year to August 31st last totalled £592,636, comparable, apparently, with £672,916 for the previous twelve months. A dividend of 5 per cent. on the ordinary shares is recommended, making 10 per cent. for the year, and a final dividend of 6 per cent. on the deferred shares, making 10 per cent., against 15 per cent. in 1930. The sum of £75,000 is written off goodwill, and £10,000 is allocated to staff funds. At the annual meeting last year, before the depression had reached its climax, the chairman pointed out that the company's export trade had suffered most, the previous year's shipments to customers being in many cases still in stock unsold. Shareholders, therefore, are unlikely, despite their reduced dividend, to be dissatisfied with the present figures, since the trade depression has been intensified, competition in the industry has become more keen, and demand has been consistently lower since the chairman's statement was made. At 32s. 6d. the £1 deferred shares yield £6 8s. per cent., allowing for the final dividend.

United Dairies' Meeting.—At last week's meeting of United Dairies, the chairman, Mr H. Maggs, showed conclusively that the conspicuously successful results of the combine were the fruits, in the main, of energetic development and continuous internal "rationalisation." The volume of sales expanded last year to an impressive extent—the quantity of milk dealt with increased by over 8,000,000 gallons, butter by nearly 3,500,000 lbs., and eggs by over 15,000,000. As a result, however, of reduced prices, turnover was practically the same as in 1929-30. No fresh issue of capital has been made since 1926, and during that period investments in subsidiaries have been written down by £379,849. The insurance fund has been increased by £47,000, while internal reserves for property depreciation have been considerably increased. Rapid progress has been made in the rationalisation of the retail distributing depots. Twenty-one old depots have been enlarged, and seventeen new depots built and equipped. Progress has been made in enlarging and modernising the company's creameries and factories at a total cost of over £500,000. In all factories improvements have been carried out in the method of refrigeration. Special encouragement is given to roundsmen to "push" the sales of the company's products. Altogether, a fair share of the

credit for the results of a flourishing business should, obviously, be given to those responsible for its senior staff work.

British Celanese Meeting.—The chairman's speech at last week's shareholders' meeting showed that Dr. Henry Dreyfus was as enthusiastic as ever regarding the future of the industry and of his own company, but produced nothing which could in any way be regarded as "news" to shareholders. Dr. Dreyfus expressed himself an advocate of a "flexible" tariff, which, he claimed, should be based not on the invoice price of the goods imported, but on the value of similar goods manufactured and sold in this country—an ingenious suggestion, under which the higher the price charged by British manufacturers, the greater the protection they would enjoy. The American Celanese Company, Dr. Dreyfus disclosed, did a considerably better trade in the first half of this year than of last. The Canadian company's experience was also satisfactory, "considering the conditions." For the rest, the chairman explained the general decline in selling prices by reference to intense home and foreign competition, and the part played by British Celanese in the movement to the directors' resolve to "liquidate the company's stocks as far as possible" in order to increase its cash resources. Dr. Dreyfus declared that "a large and progressive number of orders" had been received, substantially in excess of those the company had had at any previous time, but did not define the "clear indications" which led the board to believe that business would continue at a steadily increasing rate. The recent improvement is, of course, gratifying, though it is insufficient to occupy anything like the whole of the company's plant. In the industry as a whole, however, it has been a very recent phenomenon, and, from the point of view of shareholders, everything turns upon its probable duration. In earlier notes on this company we have taken occasion to point out that while Dr. Dreyfus's record on the technical side is beyond challenge, as has been amply attested by the quality of the products put out by British Celanese under his guidance, his record on the marketing side has been much less convincing. In view of the imperative need of the company to secure and maintain a very large volume of output if its enormous capacity is to operate at maximum advantage, shareholders would have welcomed much more detailed information from the chairman as to the extent of possible competition, as well as the actual amount of recent orders, in terms of plant capacity. In our note last week (page 826) we calculated the proportionate results shown by British Celanese for 1929-30 (which were originally expressed for a period of sixteen months) on a twelve months' basis. By a typing error the item "trading profits, transfer fees and interest," as recalculated, was given as £1,376,134, instead of £1,976,134. We would ask our readers to note this correction.

John I. Thornycroft and Company.—This company suffered a sharp setback in the year to July 31st last. Activity in shipbuilding and marine engineering was practically at a standstill, and the motor transport

Inc. or dec. in carry-forward	+ 6,700	- 2,624	- 7,151

During the year debtors were reduced by £127,335 to £138,914, and creditors were substantially reduced. Cash account was reduced by £43,049 to £33,754. Investments in, and loans to, subsidiaries increased by £89,514 to £278,937, of which £207,571 was represented by shares. The £1 ordinary shares, which touched 79s. in 1929, now stand at 18s. 9d.

Atlas Electric and General Trust.—During the year ended March 31st last a gross income of £283,630 was recorded, a decline of £11,667. A reduction of £7,920 in debenture interest was almost offset by increases in directors' fees. A new item, loss on exchange, £4,051, appears in the accounts. The net profit, however, was well maintained at £223,660, a fall of £10,159. The ordinary dividend was reduced to 3 per cent:—

	Year ended March 31,		
	1929.	1930.	1931.

The main items of interest in the balance sheet include an increase of £106,351 to £3,854,687 in investments in subsidiary companies. Over 90 per cent. of the company's investments (other than in subsidiaries) are quoted, and it is estimated that these, at present, show a depreciation of 12½ per cent. on their balance-sheet figure of £6,282,436, covered by capital reserve. The ordinary shares, at 15s. 7½d., yield £3 18s. 9d. per cent.

New Capital Issues in October.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in October, and in recent years:—

	(000's omitted)			
	United Kingdom.	British Possessions.	Foreign Countries.	Total.
Monthly Average.	£	£	£	£

For the first time for many years, issues for public capital showed a negative total last month, mainly as a result of the excess of encashments over new sales of National Savings Certificates. During the month only four new issues were made, the largest being that of the London Express Newspaper, offering shareholders £500,000 in £1 7 per cent. cumulative preference shares at par, and Savory and Moore, which issued £185,000 in 7½ per cent. debenture stock at 99½ for public subscription.

Royal Dutch-Shell Dividends.—The market was not unprepared for the shock of the passing of interim dividends by the Shell Transport and Trading and Royal Dutch companies. The postponement of the preference dividends of the Mexican and Canadian Eagle companies, to which reference was made last week, and the passing of the interim dividend by the Venezuelan Oil Concessions had paved the way for the Royal Dutch-Shell announcement. The "Shell" directors' statement was to the effect that on account of the unsettled conditions ruling in the industry they were unable to make an estimate of the year's working sufficiently reliable to justify them in declaring an interim dividend for the year. That some dividend for the year may be paid may be inferred from their remark that a decision would be taken on receipt of the year's results of the different companies in which the group was interested. It may be mentioned that the loss of Shell Union dividends for the entire year, dividing the group's holding of shares in Shell Union as to 60 per cent. to the Royal Dutch and 40 per cent. to the Shell Transport, is equivalent to the loss of a 3½ per cent. dividend on the Royal Dutch ordinary capital and a 4 per cent. dividend on the Shell Transport ordinary capital. To what extent the dividends of the main operating subsidiaries are likely to be affected it is impossible to say, but it would be surprising if the Royal Dutch paid a higher dividend than 10 per cent. and the Shell Transport 10½ per cent. tax free for the year 1931. The directors of the Shell Transport did their best to lessen the shock of their announcement by a reassuring statement about the group's financial position. Their associated companies have at their disposal in liquid cash—in addition to their world-wide stocks of oil, which are entirely unpledged—no less than £20 millions in sterling and \$50 millions in U.S.A. currency. The Shell Union alone had nearly \$36 millions in cash at the end of the September quarter. As often happens after unpleasant announcements, the shares of the Royal Dutch and Shell Transport were marked down at first and then recovered sharply afterwards. This may be attributed in part to bear covering (there was a bear account in Shell Transport held over from the days of "account" dealings), in part to the reassuring statement of the directors, and in part to the recovery in oil shares in America. This has followed on the recent rise in the prices of Mid-Continent and Texas crude oils. A more hopeful view is apparently taken in America of the restriction movement. The allowable rate per well in East Texas has been reduced to 150 barrels, and the militant Governor of Texas State has announced that restriction on new drillings will be enforced by martial law if necessary. The price of Mid-Continent crude oil in Tulsa has risen to 85 cents, as against a low level this year of approximately 20 cents. Too much importance must not be attached to this advance in crude

Name.....

Address.....

oil prices. The big American oil companies are desirous of eliminating competition in the retail sale of gasoline by making the price of raw material dearer to the independent refiners. The statistical position in the industry has slightly improved, but stocks of crude oil are still excessive, international competition in marketing remains severe, and world consumption of oil has received a setback. Nevertheless the position of the Royal Dutch-Shell group relative to the rest of the industry has certainly not deteriorated. They have effected important economies and have maintained assets and facilities up to date, at the same time making the usual allowance for depreciation in their books. They have also a large quantity of production which is at present shut in and can be opened at short notice to meet any new situation without further capital expenditure. Any talk of a new issue by the Royal Dutch-Shell group may, therefore, be dismissed.

The Copper Position.—Never in the history of copper has the outlook been so uncertain, writes a trade correspondent. Although the price of the metal in New York stands at the lowest level seen for a century and a half, there is no certainty that an even lower quotation will not be recorded. According to the official American figures, the combined total of deliveries for North and South America in October was only 62,000 short tons, and the reserves of blister and refined copper at October 31st were close on 660,000 short tons. This colossal total has been the subject of recent discussions in New York, where an attempt has been made to devise ways and means of cutting down world production, but it looks very much as if the task were proving beyond the powers of the assembled delegates—in spite of the fact that the present price of 7 cents is well below cost of production for many properties. The most recent reports from New York suggest that hopes of an agreement still exist, and in view of the seriousness of the situation it would be strange indeed if the discussions were abandoned without exploration of every possible avenue of agreement. With the consumption of the red metal down to the lowest point for years past and the stocks at a huge figure, it is unlikely that much improvement in values will occur immediately, whatever the final result of the curtailment discussions. In any conclusions reached it is essential that the crying need for increased use of copper should be borne in mind. To this end every facility should be afforded to consumers, and the short-sighted policy of refusing to sell to merchants abandoned. During the past twelve months the system of limited quotas for Europe has undoubtedly mitigated against sales, and it is difficult to see how much progress towards improving consumption can be achieved unless this restriction is abandoned. Another essential is the provision of consignment stocks, for although Europe has more copper in warehouse than for a long time past, the removal some years ago of the consigned stock concession has checked buying and hampered the trade. Rumours have been current that the Copper Exporters Inc. might break up. Failure to revise existing sales methods might well make such a development inevitable in the last resort.

New Jagersfontein.—The difficulty of the period through which the diamond industry has been—and still is—passing is strikingly exemplified by the experience of this undertaking. Sales last year realised only £104,700, or less than one-half the amount required to cover the mining expenses; and the net outcome of operations was a deficit of £153,200, comparing with a surplus of £253,400 in the twelve months ended March 31, 1930. After deduction of a small allowance for taxation, the surplus now carried forward is £46,900. The last dividend was 10 per cent. interim on account of 1929-30. Chiefly through a further investment of £125,000 (making a total of £250,000) in the Diamond Corporation, the modest cash surplus shown twelve months ago has been converted into a deficit of £129,000. A bank overdraft now appears. Retrenchment having failed to meet the

position, production has been suspended altogether. The bulk of the capital is held by De Beers, which made no payment on its preference shares for the first half of the current year.

COMPANY MEETINGS, &c.

UNITED DAIRIES, LIMITED.

LARGE EXPANSION IN SALES.

The sixteenth ordinary general meeting of United Dairies, Limited, was held, on the 30th ultimo, at the Connaught Rooms, Great Queen Street, London, Mr Joseph H. Maggs (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—As regards the trade of the company, it must be remembered that the year under consideration was one of heavily falling prices, so that a sterling turnover of practically the same amount as last year represents a largely increased volume of sales. The quantity of milk dealt with increased by over three million gallons, butter by nearly 3½ million pounds, and eggs by over 15 millions, while for the twelve months to October 17th last our sales of English eggs increased by more than 13 millions. I might also mention the fact that our ice-cream manufacturing business, which we established some few years ago, is steadily expanding. This business—the Premier Ice Cream Company, Limited—specialises in the manufacture of ice cream of the highest grade, and it is a matter of satisfaction to the board to note the unfailing commendation our products have received from American and other overseas visitors.

In regard to the retail shops, eleven new shops have been erected to meet the growing requirements of the outer suburbs, and forty-three of the existing shops have been enlarged and modernised on our standard lines.

HINT TO THE COLONIES.

Our engineering and utensil companies (the Dairy Supply Company, Limited, A. G. Enock and Company, Limited, and Perfect Dairy Machines, Limited) show satisfactory expansion, despite the known depression in the engineering trade generally. Our works at Park Royal have been greatly enlarged during the last year, and now cover upwards of 10 acres in area. They are equipped for the manufacture of practically all machinery and utensils required by the modern milk trade, a very different position, I can assure you, from that existing even five years ago. During the year we have built and installed in our depots an entirely new design of high-speed compressor for refrigeration, which has proved remarkably efficient; we have built for ourselves new soaker type bottle-washers, and even the automatic refrigerator cabinets for our shops are now all made in our own works. Our unique experience on the practical side of dairying is, of course, of immense value in designing machinery for the use of the dairy trade, as the experience so gained is placed at the disposal of the trade in general through our engineering companies. It is a significant fact that, whereas in our first milk bottling depot practically every item of the plant had to be imported from America, to-day the only item in our plants for which we have to go abroad is glass-enamelled tanks. I venture to hope that in future our Colonial friends, on whose dairy products United Dairies spend millions a year, will reciprocate by placing more of their orders for dairy machinery in this country with our company.

COMPANY'S POLICY TO BUY BRITISH AND SELL BRITISH.

Whatever measure our new Government may find necessary to take to restore the balance of trade should be helpful to the manufacturing side of our business. The effect of the departure from the gold standard was momentarily to stimulate our trade in condensed milk both home and export. The Continent, however, have since had to modify their prices somewhat, so that, without some form of restriction, our markets are still likely to be flooded with the dumped surplus of skimmed condensed milk from abroad. As regards imported full-cream milk from America, we should certainly be in a better position to compete on price. We have not raised the prices of our branded case goods, Diploma, Regal, Coronet and Moonraker, and if people would only insist on buying "British" they would find at least equal value and assist the exchange position. I take this opportunity once more to affirm that every drop of milk we sell is produced in this country. Our policy is definitely to buy British and sell British goods.

The burdens directly laid upon us by the new taxes, apart from income tax, are about £10,000 for increased petrol duty and over £5,000 for Employment Insurance. In respect of the latter item, a similar sum has, of course, to be paid by our employees. Whilst the increased allowance for wear and tear is a slight step in the right direction, these allowances are still totally inadequate in these days. It is not generally realised that no deduction whatever is allowed by the Revenue Authorities for depreciation of buildings or leaseholds, and the necessary sums we provide for these involve the payment of income tax at a much higher rate than 5s. in the £ on real profits. Now that income tax has reached such confiscatory heights, it is quite time that the whole question of depreciation allowances should be reconsidered and traders more fairly dealt with.

The resolution was carried unanimously.

CENTRAL ARGENTINE RAILWAY, LIMITED.

BORROWING POWERS INCREASED.

An extraordinary general meeting of Central Argentine Railway, Limited, was held on the 5th instant at River Plate House, London, E.C., for the purpose of submitting resolutions increasing the borrowing powers of the company to an amount equal to the allotted share capital, and empowering the board to issue, when deemed desirable, the 310,000 unissued shares of £10 each, so as to rank *pari passu* with any 6 per cent. cumulative convertible preference stock or shares which might be in existence at the time of the issue.

Mr. H. A. Vernet, who presided, first referred with deep regret to the death of Lord Forres, remarking that his loss was a real sorrow to the directors, for his great business capacity, together with his personal qualities, had secured him a high place in the regard and affection of them all. He had brought an acute mind and a sound, independent judgment to the solution of each problem as it had arisen, and on his visits to the Argentine he had always been inventing something new to help the railway.

Having mentioned that his colleagues had done him the honour of selecting him to succeed Lord Forres as chairman, Mr Vernet said he would like to draw attention to the marked advance which had taken place in cereal prices during recent weeks, and to state that they had received a telegram from the general manager, dated November 2nd, as follows:—"Favourable agricultural outlook continues, maize, wheat and linseed in the company's zones being in excellent condition and free from damage by locusts or rust."

Dealing with the resolutions, he said it was neither intended, nor was it necessary, to borrow the whole amount represented by the proposed increase in the borrowing powers of the company. No such amount was required to be raised at present; indeed, until times improved new issues of capital were not practicable. It was, however, deemed desirable that the directors should have adequate powers, and they therefore asked the proprietors to authorise the whole amount at this time in order to avoid the necessity and expense of their having to come to the proprietors again in the future, and in order to be prepared for all contingencies. With reference to the unissued capital, in that case also there was no intention on the part of the board to issue such shares at present. The resolution simply sought powers which might be utilisable to advantage when times changed for the better.

The resolutions were unanimously adopted.

BUENOS AIRES AND PACIFIC RAILWAY, LIMITED.

PROBLEM OF THE EXCHANGE.

The ordinary general meeting was held, on the 30th ultimo, at Winchester House, London, E.C.

Viscount St. Davids (the chairman) said that last year he had warned them quite frankly that if exchange stood where it was then this company could not earn any dividend on its ordinary stock; exchange was then at 38½, and he had told the shareholders to watch exchange. That had proved a dreary job, for, with slight temporary reactions, all through the year, exchange had got worse and worse. For the year 1929-30 the average had been 44½, while for year 1930-31 the average had been 37½, which had given them a very bad year. Unless there was a very marked recovery in the current year, of which almost four months had gone, the position as regarded exchange would be markedly worse. Last year, as he had said, it was 37½; at that date, September 19th, when Great Britain went off the gold standard, exchange had stood at 29, and at that figure he could say quite frankly that they could hardly earn their fixed charges. From 29d. there had been a slight recovery to 33d., at which the exchange now stood, but he was bound to point out that with the pound standing at 15s. 10½d., where it did yesterday, the Argentine exchange should not have stood at 33d., but at 36½d. Therefore the Argentine exchange, compared with the American dollar, had fallen still further, and really, in gold value, stood to-day at 26½d., as against its par value of 47½d.

The position was one of terrible difficulty for them. But there was even worse behind that. With the rate of exchange where it was they were earning very little, but up to a few days ago whatever that little was they could get it. Now exchange was being controlled by the Government and was rationed. They could not send money out of the Argentine, all they could get was their proportion of whatever the Government allowed.

Shareholders would ask whether there was no bright spot. The bright spot was that, after all, the thing was temporary. Exchange had broken down all over the world, and nobody knew whether they were at the bottom of it anywhere; but, after all, the world must keep on trading; this country must buy things from the Argentine, and the Argentine must buy things from this country. We must keep buying as a nation, and we must keep selling, and sooner or later exchange would be put right again; the whole world

would have to put it right. When that day came, which he hoped would be soon, they could remember that the Argentine was a great country, with a great and industrious population and a rich soil. There were plenty of countries which had a rich soil—a little patch of rich valley here and there—but the Argentine was the only country he knew where the soil for hundreds and hundreds of miles was the richest of the rich. In addition, the Argentine had an excellent climate and great natural advantages, and when the world did come back to normal the Argentine would be one of the first countries to recover.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended October 31, 1931, amounted to £16,503,600 against ordinary expenditure of £14,193,100. After allocating £220,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £85,754, the operations for the week, as shown below, increased the National Debt by £7,995,000 to £7,720,339,000:—

Total.....	508	Total.....	14,999,076

Net withdrawals, £14,998,568.

Messrs Samuel Montagu and Company write on November 4, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £135,677,482 on the 28th ult., as compared with £135,674,369 on the previous Wednesday. The movements of gold as announced by the Bank of England on the 31st ult. showed a sale of about £15,000,000 of bar gold. On the 30th ultimo £300,000 of bar gold was offered for sale by tender and about £100,000 was secured for the Continent at the price of 107s. 3d. per fine ounce. The balance was disposed of privately. Quotations during the week:—

Average.....	108s. 6.5d.	15s. 7.9d.

SILVER.

During the week under review the market showed a very firm tendency and prices advanced rapidly, rising from 17 1/2d. for both deliveries on the 29th ultimo to 19 1/2d. for cash and 19 1/2d. for two months' delivery yesterday. This level, however, attracted selling, but with buyers holding back, there was a reaction to-day of 1/2d., the quotations for the respective deliveries receding to 18 1/2d. and 18 1/2d. The weakness of sterling again tended to restrain sellers, America offering only on a small scale, so that moderate buying, mostly for India, had a marked effect on the poorly-supplied market. China bears have been disposed to cover, but a few sales have also been made on China account. A satisfactory feature has been some demand from India for silver for prompt shipment, and this, following recent large shipments to the Far East, has caused cash silver to be quoted at a premium, the spot quotation yesterday being fixed at 1/2d. over that for two months' delivery.

REPORTS AND NOTICES.

Mr James Alexander Tassie has been elected a director of the Bengal Doars Railway Company, Ltd., to fill the vacancy on the board consequent on the death of the late Mr Robert Miller.

BANKS.

THE AUSTRALIAN BANK OF COMMERCE, LIMITED.—All transfers of shares should be lodged not later than November 14, 1931, so that they may be registered before the company amalgamates with the Bank of New South Wales. Shareholders in the Australian Bank of Commerce, Ltd., will be entitled to shares in the Bank of New South Wales according to the number of shares they hold in the Australian Bank of Commerce, Ltd., on November 16, 1931.

MISCELLANEOUS.

UNITED DRAPERY STORES, LTD.—According to an interim report dated September 15, 1931, the approximate accounts of the subsidiary companies for the half-year ended July 31st last are now in the hands of the board. Although three of the Companies show increases in turnover, the aggregate turnover for the six months is £573,144 compared with £597,759 for the corresponding period of last year, a decrease of £24,615, equal to 4.12 per cent. of turnover. The aggregate net profits for the same period are £45,975 compared with £54,846 last year, a decrease of £8,871. The slight fall in turnover which is reflected in the net profits is accounted for by lower selling prices, which necessitate larger quantitative sales to maintain the same financial turnover. Having regard to existing trade conditions, your board are of the opinion that these results must be considered satisfactory, but they feel that in view of the uncertainty of the outlook, financial resources should be conserved. Accordingly, it is not their intention to call for interim dividend declarations from the subsidiaries, or to make any interim dividend declaration by this company.

Commercial Reports.

MARKET SUMMARY.

This week, international commodity markets presented a situation of sharp contrasts. The outstanding event has been the continued advance in cereal prices. The upward movement has been considerably accelerated by a wave of speculation in North America which was by no means confined to market operators. Sugar, coffee and cocoa have also been dearer in New York, while, among textile raw materials, cotton has gained further in strength. On the other hand, the non-ferrous metal markets remained extremely depressed, and tin, spelter and lead lost further ground. Rubber, which had made a better showing a fortnight ago, continued to sag in the absence of buying. Sterling quotations of commodities which lend themselves to international arbitration have, of course, moved in sympathy with international prices, but some of the other materials remained unchanged. Thus, cereals, raw sugar, coffee, cocoa and textile raw materials moved upwards, while non-ferrous metals and rubber remained barely steady. Of particular interest was the decline in meat prices at the Smithfield Market this week. This is, of course, ascribed to the increasing supplies shipped to this country in view of the fact that meat growing has recently become more profitable than cereal cultivation. According to reports from various industrial centres, the recent improvement in the textile industries is still gaining strength. On the other hand, business in iron and steel has been a little quieter. The depression in the coal trade has shown signs of lifting in some of the districts, but, according to our Cardiff correspondent, little improvement has taken place in the situation in South Wales.

THE COAL TRADE.

SHEFFIELD.—There has been a further, if slight, increase of activity in South Yorkshire coal. The textile industries are taking increased quantities of small boiler fuel. Export demand is not much better, but all available supplies of best steams are being taken, the price being firm at 18s. 6d. f.o.b. The house-coal trade has improved. The prospects for blast-furnace coals are better, with the price a little firmer, namely, from 10s. 6d. per ton at ovens upward.

GLASGOW.—There has been a lull in the shipping side of the Scottish coal trade during the past week. The instability of

sterling continues to give difficulty in the negotiation of business, but probably the main reason for the falling off in business, apart from the fact that in a good many instances foreign importers have covered their requirements for the time being, is the keener competition from Poland, where it appears the collieries have been granted still further concessions on railway rates with a view to enabling them to maintain their export trade. It is also understood that by means of various domestic arrangements the collieries have been able to make a further reduction in their costs as a set-off to their exchange disadvantages in competition with the British collieries. Prices for most qualities of Scottish coal are fairly well maintained, but the tone of the market generally is not quite so strong as it was a week or so ago, and in one or two instances shippers are quoting a shade under the collieries rates. Current prices for the shipping trade are approximately as follows (f.o.b. district ports):—**LANARKSHIRE.**—Ell, best, 14s. 6d.; splint, best, 15s.-15s. 6d.; splint, second, 14s. 3d.; navigation, 15s.; navigation, second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 9d.; trebles, 15s.; doubles, 13s.; singles, 10s.; pearls, 9s.-9s. 3d.; dross, 9s. **FIFE.**—Screened navigation, 17s.; first-class steam, 13s. 6d.; third-class steam, 12s. 6d.; trebles, 16s. 6d.-18s. 6d.; doubles, 13s. 6d.-14s. 6d.; singles, 10s.; pearls, 9s. 6d. **LOTHIANS.**—Prime steam, 12s. 6d.; secondary steam, 12s.; trebles, 15s. 6d.-16s.; doubles, 13s. 6d.; singles, 10s.; pearls, 9s. 6d. **AYRSHIRE.**—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 15s.; doubles, 14s.; singles, 10s.; pearls, 9s. 3d.; dross, 9s. 7d.

CARDIFF.—The position of the Cardiff coal market this week has been unchanged. Some of the drier qualities have been fairly active, but for other grades the demand has been exceptionally slack, some of the leading collieries reporting that they have not received a single order. The reports in the general newspapers that the depreciation of the sterling has been followed by a considerable revival in the industry, writes our correspondent, are almost entirely baseless. During October shipments were actually 95,000 tons less than in September, and shipments this week are proceeding at a slower rate than last week. Delays are also being experienced in the renewing of contracts over next year. One or two have been placed during the past few days, including one for the supply of 120,000 tons of smalls for the Portuguese State Railways; the French Midi Railways have also placed a contract for 50,000 tons of large coals; but the volume of contract business arranged so far is considerably below the average at this period of the year. Prices have been stationary for most grades at the minimum scheduled figures. It is anticipated that the award of the arbitrator in the arbitration over the prices of small coals will be communicated to the executive committee of the Marketing Association on Friday. The following are the current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7d.; best small steams, 13s. 6d. to 13s. 9d.; anthracite, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; best large, 38s. to 38s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s.; foundry coke, 32s. 6d. to 36s.; patent fuel, 18s. 6d. to 19s. 6d.; pitwood, ex ship, 23s. 6d. to 24s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—Since the Election an increased business has been done in Cleveland foundry iron with local and inland consumers and also users in Scotland. Indications point to further steady expansion of trade, and consumers are not only purchasing a month or two ahead, but are making contracts extending into the early months of next year fearing that prices may be advanced. At Tuesday's market more interest was shown in business, and a fair number of sales were reported at the official prices that have ruled since the middle of January, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. Hematite is quite a firm market. Makers have good orders in their books for this year, and making further sales of moderate quantities almost daily. A satisfactory feature is that more interest is now being taken in forward supplies, and although consumers find it difficult to reconcile their ideas of prices with the higher figures now asked by makers, a fair forward business has been done and further quantities of importance are under negotiation. For this year's delivery ordinary mixed numbers remain at 65s. per ton, but 6d. to 1s. more is asked for forward. In the steel trade a number of orders are coming to hand and other important business is under negotiation. Prices under the rebate scheme are unchanged, as also for other of the main products. In the shipbuilding trade, William Gray and Company, Ltd., of West Hartlepool, have just booked a third cargo steamer for J. & C. Harrison, London. Like the two previous ones, this vessel will be of about 9,000 tons deadweight, and will be engaged at the Builders Central Marine Engine Works, West Hartlepool. Messrs Grays have now six steamers on order of about the same size. There is still no buying of ore. Best Rubio is nominally 17s. 3d. c.i.f. Tees, and the current freight Bilbao/Middlesbrough is estimated at 6s. 3d. Coke is firm in price at 17s. delivered works for ordinary blast-furnace qualities for this year's delivery, but there is only a moderate demand. No addition to the number of blast-furnaces in operation in the district has yet been made, and they remain at eighteen.

SHEFFIELD.—The position of heavy and special steels is very mixed, and in some departments there is less activity than previously. A considerable tonnage of raw and semi-materials was bought at the time the country went off the gold standard, but the spurt has not continued, and some manufacturers are disappointed at the absence of any substantial expansion of demand for finished goods. Nevertheless, confidence in a revival prevails, and sellers of pig iron, billets, scrap, &c., are not willing to contract beyond the end of

the year. Makers of foundry and forge pig speak of an advance of 2s. 6d. in January. Steel scrap has gained further strength on the week. Owing to the depreciated sterling, business deflected from the Continent is coming to this district, and the position of the currencies is likely to discourage large importations of foreign goods to anticipate the imposition of tariffs. Considerable stocks of foreign tools, cutlery and special steels are held in this country. The cutlery and silver-plate branches are booking a good many belated Christmas season orders. Shop-keepers, anticipating increased buying by the public in connection with Christmas, are ordering more freely than a year ago.

GLASGOW.—In the West of Scotland reports regarding many branches of the iron and steel industry are more encouraging this week. In several divisions of Lanarkshire there has been a decided increase in the amount of employment available at the steel plants, although they are all still working far below capacity. At the Clyde shipyards there have been further contracts placed within the week amounting to a quite considerable tonnage. Some of the tube makers are also finding a better demand, but the improvement in this trade is not quite general. The position at the sheet rolling mills shows a further improvement, and one of the plants in Glasgow district has sufficient work on books to ensure regular employment till practically the end of the year. Sheet galvanizers have also booked large tonnages for export. While all works are not equally well placed, the position on the whole is definitely better. Demand for scrap, which has been a poor market for some time, is considerable, and prices, though low, show some advance.

CARDIFF.—On the Swansea Metal Exchange on Tuesday it was reported that the tinplate market showed no signs of material improvement. The demand has been inactive, and prices are a little easier than they were a week ago. The position in the galvanised sheet trade is also unsatisfactory. Quotations for tinplates have ruled between 13s. 9d. and 14s. 3d. per basis box; galvanised sheets at £9 7s. 6d. per ton; and steel sheet and tinplate bars at £5 per ton.

OTHER METALS.

TIN.—The world's "visible" supply of tin at the end of October at 50,092 shows a reduction of 316 tons on the month. The improvement in the statistical situation has been reflected in the market for tin, which has remained steady throughout the week. In New York the metal was quoted at 22.15 cents per lb. on Wednesday, against 22.87 cents per lb. a week ago, and 22.50 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £128 to £128 5s. per ton, compares with £127 2s. 6d. to £127 7s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 29,761 tons, show an increase of 137 tons on the week.

COPPER.—Nothing is known so far of the deliberations of the conference of copper producers in New York. Meanwhile, world production of this metal has again increased during September. The daily average of that month has been estimated by the Metallgesellschaft A.G. at 3,675 metric tons, against 3,593 metric tons in August. As consumption has shown no expansion, stocks of rough and refined copper at the end of September at 597,000 metric tons, show a further increase of 25,000 metric tons. Markets have been dull during the week, and prices have been barely maintained. "Domestic" spot has again been quoted officially at 7 cents in New York, against 7 cents a month ago. Wednesday's official closing price for "standard cash" in London in terms of sterling, at £35 13s. 9d. to £35 16s. 3d., compares with £36 to £36 1s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 21,938 tons, show a decrease of 118 tons, while stocks of rough copper, at 897 tons, are 176 tons smaller.

LEAD.—The demand for lead has been quiet. World production during September has been estimated by the Metallgesellschaft A.G. at a daily average of 3,369 metric tons, against 3,552 metric tons in August. In the absence of buyers, the New York quotation has been reduced from 4 cents per lb. to 3.85 cents per lb. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £13 10s. to £13 11s. 3d. per ton, compares with £13 8s. 9d. to £13 10s. on the corresponding day last week.

DEPOSITS, &c. (30th June, 1931) - £342,450,383

EVERY DESCRIPTION OF BRITISH AND FOREIGN BANKING BUSINESS TRANSACTED.

SPELTER.—The market in spelter has again been depressed, and producers in the United States found it impossible to maintain prices at the recently reduced level. The quotation was therefore reduced from 3.25 cents per lb. to 3.15 cents per lb., against 3.57 cents a month ago. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," at £13 3s. 9d. to £13 13s. 9d. per ton, compares with £13 8s. 9d. to £13 11s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals aluminium remained unchanged at £95 per ton, but the quotation for nickel was raised from £215-£220 per ton to £225-£230 per ton. Antimony at £25 10s.-£26 was also slightly dearer, but quicksilver at £18 10s. per bottle, against £19-£19 15s. per bottle, was again cheaper.

TEXTILES.

THE COTTON TRADE.—Liverpool.—A good trade demand has been experienced, though it has not been nearly as good as that of a few weeks ago. More mills and looms have, however, been restarted after months, if not years, of enforced idleness. As to cotton itself, the overwhelming supply is likely to prevent any runaway market. In the south of the United States the price remains remarkably steady, which may be ascribed, not merely to the official support, but also to the fact that small people with a few hundred dollars in the bank have been withdrawing their savings in view of the numerous bank failures, and investing them in cotton. There is no doubt, however, that demand is broadening. Trading in the future market here is rendered very difficult by the constantly varying rate of the sterling/dollar exchange. Imports for the week, October 29th to November 4th (inclusive) are 58,547 bales, of which 42,120 bales are American, 2,577 Argentine, 2,445 Brazil, 3,845 Peru, 5,593 Egyptian, 901 African, 305 East Indian, and 761 sundries.

Manchester.—The market has continued to present an active appearance and business in yarn and cloth has been on an encouraging scale. Many sellers have been unable to arrange sales owing to delivery and price difficulties. Prices continue to move against buyers. There has been a steady demand in piece-goods for numerous outlets, and as a result of order lists being extended, makers are holding out for more remunerative rates. China has not sent very cheerful news and there is no doubt that the Manchurian trouble is having some effect upon trade in Shanghai. India has provided a larger inquiry and freer buying has taken place in light bleaching cloths, fancies and prints. Grey and white shirtings have also been in request. The smaller outlets, such as Java, Singapore, West Africa, Egypt and the Continent, have given steady support. There has been more activity for the home trade and the Dominions. Spinners of American and Egyptian yarns have been firm in quotation. The current output is being sold.

THE WOOL TRADE.—Bradford.—During the past week there has been a further upward movement in values accompanied by extensive operations by home trade buyers. Those seem to be largely responsible for setting the pace in Australia and South Africa, with the result that merino wool is now worth pence per lb. more than could be realised for it only two months ago. Big quantities of fine wool are going into consumption. This is encouraging importing topmakers to place big orders in Australia at higher limits than have hitherto been afforded. There is also a definite move in the sale of the South African clips. Nearly six weeks have been lost by the Union Government refusing to come off the gold standard, for without any compensation this meant serious loss to the growers. It appears, however, that the ten per cent. bounty on exports from the Cape, and the five per cent. import duty, are bringing about the desired result, and the clip may now be expected to move steadily. The Bradford market is quite firm, quotations for merino qualities of tops being against the buyer. Further big sales have taken place, and contracts are going out very satisfactorily. Spinners are also able to realise better prices for yarn, this being accompanied by a steady flow of new business. Unemployment is decreasing, and among both woolen and worsted manufacturers more machinery is running. Substantial orders have been placed for dress goods—Bradford's principal worsted fabric—and whilst the bulk will be delivered to home merchants, there will also be some decent consignments for abroad.

THE GRAIN MARKETS.

WHEAT.—The upward movement in the price of cereals has continued with increased rapidity during the past week. Wednesday's quotations for wheat in Chicago show a rise of nearly 40 per cent. within the short period of four weeks. This upward turn in prices has been mainly occasioned by the wheat situation in Russia. During August and September that country shipped more wheat than a year ago, which gave the impression that this season's export surplus would be even larger than that of a year ago. The sudden halt in Russian shipments marked the turning point in the wheat markets, and as Australia and Argentina have now almost sold their export surplus, buying was concentrated on the North American markets. Prices began to move upwards, at first slowly, but later the movement gained an increased stimulus by extensive speculation of outsiders. Under these circumstances the large stocks which had been accumulated in this country have proved to be a good investment. Quotations in London, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 26s. 9d. per 496 lbs., as compared with 31s. 3d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 34s. 3d., against 29s. 9d.; No. 3 Northern Manitoba, Atlantic, ex ship, 33s. 3d., against 28s. 3d.; Russian, on sample, 28s. 6d. to 31s., against 24s. 6d. to 28s.; Australian, ex ship, 32s. 9d., against 29s. a week ago.

WHEAT FLOUR.—Business in flour has been active at rising prices North American shipments, at 248,000 sacks, show an increase of 12,000 sacks as compared with the previous week. Of this total, 104,000 sacks have been consigned to Europe. The price of home-milled flour which had remained almost unchanged until last week has now been brought into line with international prices. Quotations in London, Wednesday: Straight run, delivered country, 26s. 6d. per sack of 280 lbs., as compared with 21s. last week; delivered London, 25s. 6d., against 20s. Manitoba patents, ex store, 27s. to 30s., against 26s. to 28s.; and Australian, ex store, 22s. to 23s., against 19s. to 20s. a week ago.

BARLEY.—The market in feeding barley has been firm and prices advanced further. On Wednesday, "December" futures were quoted at 43½ cents per bushel in Winnipeg, against 38½ cents per bushel a week ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 25s. to 26s., as compared with 22s. to 24s.; Russian, landed, 24s. 9d. per 400 lbs., against 20s. 9d. a week ago.

OATS.—A better demand has sprung up for oats this week and prices quickly recovered from the setback of last week. On Wednesday substantially higher prices had to be paid. "December" futures, which, a week ago, stood at 24½ cents per bushel in Chicago, sold at 26½ cents per bushel on Wednesday this week. Quotations in London, Wednesday: "River Plate," landed, 19s. 9d. per 320 lbs., as compared with 18s. last week; "River Plate," ex ship, 18s. 9d., against 17s. to 17s. 3d.; "Chilean White," landed, 28s. 6d., against 27s. 6d. a week ago.

MAIZE.—Despite the heavy shipments still forthcoming from Argentina at the rate of about one million quarters a week, prices have jumped up several points this week and there are as yet no signs of a falling off in demand. Wednesday's quotation in Chicago for "December" futures at 44½ cents shows a rise of 4½ cents per bushel on the week. Quotations in London, Wednesday: "Plate," landed, 22s. 3d. per 480 lbs., as compared with 19s. 3d. last week; "Plate," ex ship, 18s., as against 18s.; "Plate," November-December, 21s., as against 18s. 3d. Yellow maize meal, ex wharf, was quoted at £6 10s. per ton, against £5 15s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Nov. 5, 1930.	Jan. 2, 1931.	Oct. 21, 1931.	Oct. 28, 1931.	Nov. 4, 1931.
Winnipeg (No. 1 Manitoba) — Cents per 60 lb.	148½	66½	56½	59½	62½	70½
Chicago (No. 2 Winter) — Cents per 60 lb.	130½	72½	79½	53	57½	64½

The visible supply of wheat in Canada, at 48,135,000 bushels, shows an increase on the week of 2,418,000 bushels. Supplies a year ago stood at 69,107,000 bushels.

OTHER FOODS.

SUGAR.—There has been a slight improvement in the raw sugar markets this week, brought about by an increase in buying by American refiners. In this country, too, sterling prices of raw sugar advanced, but "British refined" was reduced from 6d. to 1s. in order to stimulate buying. "December" futures in New York were quoted at 1.32 cents per lb. on Wednesday, against 1.29 cents per lb. a week ago. Wednesday's sales of "raws" include "March delivery" at 6s. 8½d. to 6s. 8½d. per cwt., against 6s. 7d. to 6s. 7½d., and "May," 1932, at 6s. 9½d., against 6s. 9½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	60	3,361	1,066	1,238	7,661	27,291
Liverpool ...	11,548	15,866	12,981	15,154	21,105	68,642
Total tons ...	11,608	19,217	14,047	16,392	28,766	95,933
Last week ...	2,715	148	13,906	17,126	31,205	93,108

COFFEE.—This week's auctions of coffee met with a better demand, and higher prices were realised for Costa Rica and African qualities. Last week's movements of coffee in London were as follows: Brazilian, landed, 252; delivered for home consumption, 156 bags; exported, 346; stocks, 2,641 bags, against 1,595 bags last year. Central American, landed, 3,119 packages; delivered for home consumption, 2,172; exported, 4,210; stocks, 70,504 packages, against 44,869 a year ago. Other kinds, landed, 3,064 packages; delivered for home consumption, 2,648; exported, 2,649; stocks, 53,815 packages, against 62,417 a year ago.

COCOA.—The past week has witnessed a sharp advance in cocoa prices, both in New York and London, and turnover has been on a considerable scale. "December" futures were quoted at 4.95 cents per lb. in New York on Wednesday, against 4.47 cents per lb. a week ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, November-January, at 25s. per cwt. f.o.b. London contract, shows a rise of 2s. 9d. Last week's movements of cocoa in London were as follows: Landed, 335 bags; delivered for home consumption, 9,774 bags; exported, 733 bags; stocks, 152,237 bags, as against 172,756 last year.

TEA.—The quantities catalogued for this week's auction comprised 55,792 packages of Indian, 15,382 packages of Ceylon, and 8,911 packages of Java and Sumatra tea. The Indian auctions opened quietly on Monday, but subsequently the tendency became firmer. Keen competition was experienced on Tuesday, when Ceylon teas were auctioned, but on Wednesday's Indian auctions prices declined, and common and medium teas suffered a setback. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	AVERAGE PRICE PER LB.						Total.
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyassa-land.	
Oct. 30, 1930	s. d. 1 3-11	s. d. 1 2-13	s. d. 1 8-17	s. d. 0 11-30	s. d. 0 11-60	s. d. 9-97	1 3-57

Oct. 29	1 1-16	0 10-95	1 6-75	0 8-66	0 8-14	Nil	1 1-36

RICE.—The market in rice has been quiet, but prices were again maintained. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 151 tons; delivered, 80 tons; stocks, 1,324 tons, as against 2,709 tons last year.

POTATOES.—The potatoes offered for sale at the principal markets found ready buyers at unchanged prices. At the Borough Market, "Best King Edward" sold at from 8s. to 8s. 6d. per cwt., as compared with 8s. to 8s. 6d. per cwt. a week ago.

SPICES.—Business in spices has been a little more active, and prices were steadier. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a rise of ½d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 2 tons; delivered, 35 tons; stocks, 369 tons, against 494 tons last year. White, landed, 31 tons; delivered, 124 tons; stocks, 331 tons, against 146 tons a year ago.

MEAT.—Prices of meat at the Smithfield market have suffered a sharp decline during the past week. This is, of course, mainly ascribed to the heavier supplies now available. Meat prices generally have not so far declined in price as much as other foodstuffs, and countries like Argentina are therefore increasing the production of meat. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 3s. 8d. to 4s. 4d. per 8 lbs., against 4s. 4d. to 4s. 10d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. to 3s. 6d., as against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 10,284 tons, as compared with 9,039 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.5 per cent. of the supplies, as against 79.9 per cent. a year ago; and imported mutton, mainly New Zealand, formed 75.6 per cent. of the total supply, as against 72.7 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Markets generally are firm and still subject to exchange troubles. Linseed is not offered by Plate shippers owing to the difficulty they have in buying £'s sterling to finance shipments, consequently business is confined to seed afloat, of which there is a substantial supply, the quantity on passage to Europe having risen to 160,800 tons, or 5,700 tons more than last week. Old crop Plate for shipment is now about exhausted, but 180,000 tons is expected to be available from India for shipment to the end of the year. New crop Plate had been in active demand at rising prices. The reports of the crop in Argentina continue satisfactory and an exportable surplus of 2,400,000 tons is confidently anticipated. Current value of Plate on spot and afloat is around £10, and new crop for December shipment £9 17s. 6d., and January-February, £9 5s. Calcutta to London, October-November, is quoted £11 15s. Cottonseed is in good demand and dearer, Egyptian (black) having advanced to £7 in all positions to January. Linseed oil is in fair request and firmer in sympathy with seed, present value on spot being £17 10s., and for delivery to the end of the year £17 5s. ex Hull mill. Cotton oil is dull and neglected, crude Egyptian ex Hull quoting £22 and common edible £25. Oilcakes are in improving demand and steady.

HIDE, LEATHER AND ALLIED TRADES.—

depleted and rates of $4\frac{1}{2}$ to 5 or $5\frac{1}{2}$ per cent. for new money were the rule. Renewals, which last week were arranged outside the clearing banks at $4\frac{1}{2}$ per cent., have since hardened to $4\frac{3}{4}$ per cent., and there is no doubt that the 6 per cent. Bank rate is more effective than it was a week or two ago.

The market recognised this on Friday of last week when Treasury bill applications were cut down from £60.3 to £55.3 millions. As the number of bills on offer was increased from £40 to £45 millions the average tender rate rose sharply from £5 5s. 1.42d. to £5 10s. 8.47d. per cent. Hot Treasuries were immediately quoted at $5\frac{1}{8}$ per cent., and they have remained there all the week. The result is that the market is now once more able to obtain its turn on hot Treasury bills. Three months' Bank bills are quoted at $5\frac{3}{8}$ to $5\frac{1}{2}$ per cent., according to their character, but business has been very restricted owing to lack of confidence in the international outlook. The clearing banks are still buying such short bills as are available, and at the week-end $4\frac{3}{4}$ per cent. was paid for the favourite end-of-December maturity. Still, apart from Treasury bills, the discount market has been very idle.

The Bank return records few important changes. In the Issue Department the note circulation has contracted by £1.7 millions, and with the gold stocks practically unchanged, an additional £1.6 millions is available for the Banking Department's reserve. There has been a turn-over of £3.7 millions from "other" to Government securities in the Issue Department. In the Banking Department Government securities have contracted by £2.8 millions. Discounts and advances have expanded by £0.9 millions, while other securities have fallen by £2.7 millions, or a net decrease of £4.6 millions in the Bank's earning assets. Among liabilities, public deposits are £0.7 millions lower, other deposits £1.9 millions lower, and bankers' deposits £0.5 millions lower. The proportion of the Banking Department's reserve to liabilities stands at 33.6 per cent., and the reserve ratio of the Bank's gold to note and deposits at 25.7 per cent. Both these figures are high enough to leave some margin for the anticipated expansion in the note circulation.

	Oct. 22, 1931.	Oct. 29, 1931.	Nov. 5, 1931.	Nov. 12, 1931.	Previous Rate and Date Changed.
Bank Rate	6%	6%	6%	6%	$4\frac{1}{2}$ (Sept. 21, '31)
Banks' Deposit Rate...	4	4	4	4	$2\frac{1}{2}$ (Sept. 21, '31)
Discount of Call	4	4	4	4	$2\frac{1}{2}$ (Sept. 21, '31)
Houses' Notice ...	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$2\frac{1}{2}$ (Sept. 21, '31)
Market rate (3 months' bills)	$5\frac{1}{2}$ - $5\frac{3}{4}$	$5\frac{3}{8}$ - $5\frac{1}{2}$	$5\frac{3}{8}$ - $5\frac{1}{2}$	$5\frac{3}{8}$ - $5\frac{1}{2}$	...

No further developments have taken place with regard to the position of German renewal bills drawn after November 26th, and if of three months' usance maturing after February 29th, the date when the "stillhalte" agreement terminates. It is known that discussions are taking place in London and other centres, and various reports have been heard in the market, to which little credence should as yet be attached. It is generally recognised that the whole question of the "stillhalte" agreement is bound up with that of reparations, and for that reason it is not surprising that on Thursday morning London discount rates eased temporarily on an unconfirmed report that France and Germany had reached an agreement upon the method of procedure on the reparations question. It would be of great convenience to the discount market if the future of the "stillhalte" agreement and certain doubts as to its proper interpretation could be settled before November 26th, and in the meantime this uncertainty is restricting business.

The October statements of the nine English clearing banks show that the decline in deposits has been checked. To some extent the October increase may be seasonal, for a similar expansion occurred last year. At the same time, it is some evidence of a return of confidence, and of a cessation of the net outflow of funds from this country.

	October, 1930.	July, 1931.	August, 1931.	September, 1931.	October, 1931.
Capital and reserves.....	132.1	132.1	132.1	132.1	132.1

Total assets	2,039.7	1,995.6	1,953.3	1,926.1	1,931.1

The expansion in deposits is reflected mainly in increases in cash and call money among the banks' assets, and discounts, investments and advances are all practically unchanged. Acceptances have fallen back to their August level, and it looks as if the September figure was abnormal. Taking the returns as a whole, they do not suggest that the British banks are being called upon to finance much fresh business, especially when the rise in sterling commodity prices is taken into account.

Money on Wall Street is definitely easier, for while call money remains at $2\frac{1}{2}$ per cent., discount rates on bankers' acceptances have been cut, so that 90-day bills in the open market are this week quoted at $3\frac{1}{4}$ - $3\frac{1}{2}$ per cent., against $3\frac{1}{2}$ - $4\frac{1}{2}$ per cent. a week ago. These declines in part reflect the general improvement in tone, inspired largely by the rise in wheat prices. At the same time there is outstanding \$1,000,000,000 of Government short-term paper maturing in early December. Hence a period of easier money would be of assistance from the Government point of view. The Treasury estimates that money in circulation increased from \$5,246 to \$5,539 millions during October, but it is argued that part of this increase is seasonal. The corresponding figure for October last year was \$4,492 millions. Gold continues to arrive from Japan, the receipt of \$15 millions being reported at San Francisco last week, raising Japan's total shipments to \$90 millions for the preceding month.

The foreign exchange market remained quiet during the past week, the tendency of rates being generally favourable to sterling. New York, after rising to 3.80 on November 11th, closed at 3.78, against 3.75 a week ago. Montreal was quoted 4.19, a rise of 2 cents on the week. Paris was more favourable to sterling, closing at 96 $\frac{1}{2}$, and Brussels moved in our favour from 26 $\frac{3}{4}$ to 27 $\frac{1}{4}$. Italian lire and Dutch guilders were also on offer at 93.00 and 9.40 respectively. Switzerland cheapened against sterling to 19.30, as did Berlin to 16.00. The Scandinavian exchanges were all better from our point of view, Stockholm being quoted at 17.80, Oslo at 17.85 and Copenhagen at 17.70. Business in the South American exchanges was very restricted owing to local regulations, and turnover was on the small side. Buenos Aires moved to 39 $\frac{1}{2}$ d. from 36 $\frac{1}{2}$ d. a week ago, reflecting a considerable improvement, but one which resulted solely from the lack of a free market. Rio remained around 4d., and Monte Video was 28 $\frac{1}{2}$ d. Rupees continued in demand, rising to 1s. 6 $\frac{3}{4}$ d. Japan fluctuated uncertainly with the rumours about the abandonment of the gold standard, and closed at 2s. 7 $\frac{1}{2}$ d. In the forward market dollars were in better demand at premiums of $\frac{1}{4}$ cent for one month and $\frac{1}{2}$ cent for three months. Dutch florins moved to premiums of 1 and 3 cents, and Paris was quoted $\frac{1}{4}$ franc premium and $\frac{3}{8}$ franc premium for the respective periods. Brussels forwards continued at last week's levels. Forward Milan was at a discount of $\frac{1}{4}$ lire for one month and $\frac{1}{2}$ lire for three, and forward pesetas were at discounts of $\frac{1}{4}$ peseta and 1 peseta, but continued a nominal market. Forward Switzerland was at premium of $\frac{1}{8}$ franc and $\frac{1}{4}$ franc. Berlin forwards remain unquoted. Silver was a firm market, rising to 21 $\frac{3}{4}$ d. on November 10th for spot, but closed under the best at 20 $\frac{3}{4}$ d. for spot and 20 $\frac{3}{4}$ d. for forward. The silver exchanges moved sympathetically to 1s. 6 $\frac{1}{2}$ d. for Hong Kong and 1s. 11 $\frac{1}{2}$ d. for Shanghai.

MR MACDONALD'S LEAD.

MR MACDONALD and his new National Government have made a definitely promising start. A week ago, when the names of the Cabinet were announced, we found the omens to be favourable, in that the Prime Minister had succeeded in achieving, among the body of his immediate colleagues, a very fair balance of the forces which joined together in the victorious appeal to the country. The omens were not misleading. The announcement of the personnel of the Government outside the Cabinet confirms earlier impressions; a strong team has been gathered, and extremists of any shape or description have been rigidly excluded. Moreover, in his first post-election speech, at the Lord Mayor's banquet on Monday, Mr MacDonald emphasised that both the Government's victory and its tasks were of a national and not of a party nature. The King's Speech at the opening of Parliament on Tuesday conformed completely with the Premier's election manifesto, and, as the new Government sets out on its adventurous voyage, one receives the impression of a determination among the officers of the ship to hold together and to obey, in the spirit and in the letter, the terms of the agreement under which the country engaged their services.

But, happily, reason for satisfaction with the Government's initial essays does not stop there. The speech which the Prime Minister delivered at the Guildhall was remarkable, not merely for its strict adherence to the national, as distinct from the party, angle, but even more for its firm grip of the essential fact that British policies must not be conceived inside a watertight chamber of domestic ambitions, but must be studiously elaborated in relation to a full review of the difficulties of the international situation. Mr MacDonald's speech was, indeed, an admirable and comprehensive survey of world problems and also of the way in which these problems touch the economic life of Britain, and, of necessity, condition future British policies. "The economics of Europe must be straightened out and rationalised before any nation in Europe can find foundations for stable economic and industrial conditions." Again: "See how everything hangs together and runs into vicious circles. Examination of the monetary crisis leads inevitably back to the economic chaos in Europe. Why? This chaos has been attacked by committee after committee set up by the League of Nations, also by certain Governments, but everyone has sooner or later come up against the prohibitive tariffs, reparations and war debts." Mr MacDonald asseverated his Government's determination to play its part in the process of "disentangling" this knotted skein, and he laid especial emphasis upon the view that the time has come for negotiation of permanent settlements, and that the time has passed for temporising makeshifts. Nor is Mr MacDonald under any illusion as to the outstanding lesson of what is going on around us. "We have been witnessing," he said, "the complete breakdown of the doctrine of national economic self-sufficiency, and have been giving to the historians and economists of all time material for many a study in the inefficiency and insufficiency of that doctrine." In those phrases we find not merely the kernel of the truth but also convincing assurance that the leader of the new Government is not the man to be stampeded by those who press him to adopt hastily and unthinkingly for England the very policies which he has so eloquently condemned as a primary cause of Europe's discontents.

Indeed, it was a keynote, not only of the Guildhall speech, but also of the Prime Minister's statement in the House of Commons in the debate on the Address, that the Government must be given time for concentrated study, and must not be expected to wave the wand of healing magic. This attitude was illustrated in Mr MacDonald's reference to the Government's policy in regard to the future stabilisation of the pound. While admitting that the stabilisation of sterling is an important desideratum of world economic confidence, and expressing

the desire to achieve stability at the earliest practicable date, he made it quite clear that the time and level and method of stabilisation must depend to no inconsiderable extent upon international factors. It is, in fact, legitimate to read into both the speeches which Mr MacDonald has made this week this meaning: that the task of the present Government and Parliament does not lie in the field of domestic legislation, but in the sphere of international negotiation for the betterment of world trade conditions which must be a prelude to the revival of prosperity here. No nation can be prosperous in a sick world, and until European statesmen co-operate to remove their common maladies no Government can restore happy conditions to any member of the Euporean family, even if it dwell upon a sea-girt isle.

The upshot of the first week of the new Cabinet's life would appear to be this: that the expectations entertained in some foreign centres that the sweeping Conservative majorities achieved in the General Election would be followed by headlong protective measures will not be realised. It is true that the intransigent Protectionists are neither silent nor inactive, and that their claims for tariffs at once have been sponsored in the House of Commons very forcefully by Mr Churchill. It appears also that the new President of the Board of Trade, Mr Walter Runciman, will next week ask the House of Commons for powers to impose duties on imports which may prove to be entering this country in "abnormal" quantities. If it were to be the case that our markets were for one reason or another being submerged by an unprecedented flow of foreign goods, so great that the temporary flood might imperil the stability of the pound and our capacity to obtain essential imports, there is no school of fiscal thought which would resist the claim for some measure of action against the temporary menace; and, therefore, since one section of thought in this country believes that those conditions might arise, we do not cavil at the Government taking such powers of action into their hands. But for the moment it is sufficient to note that the Government has no intention of being driven by sectional clamour into a quick and haphazard revolution of the traditional fiscal system of the country.

In the House of Commons, as at the Guildhall, Mr MacDonald laid stress upon the inter-connection of Continental and British trade problems, and when urged by Sir Henry Page Croft and Mr Hannon, those indefatigable twin protagonists of high Protection, to "think of Britain first," Mr MacDonald, in an eloquent phrase, replied that "the storm clouds" were coming from the Continent at the moment and intensifying all our problems. And again, when further pressed on the same lines, Mr MacDonald answered "You cannot possibly deal with the financial and industrial position of this country without considering it in relation to the weaknesses abroad. . . . Negotiations must be put in hand at once, and the Government will take up most of its time immediately upon that." We believe that the Prime Minister's unwearied insistence upon the international key to the solution of British problems has made a profound effect upon business communities in this country, and we believe also that the Government's determination to present a united front to the world is shared by a large body among the Conservative rank and file. That is enough for the moment, and it is unprofitable to prophesy the course of those influences which will be at work in the Conservative Party and Press between now and the next session of Parliament, which is to begin in February.

The task of getting the Governments together to restore sanity to an economically mad world is a task for Titans. As if that were not enough, the question of the future Government of India, in itself one of the most complicated questions ever presented to statesmen, claims immediate and vital decisions. In addition, the problems of internal industrial and trade efficiency, which, to borrow a phrase from the Prime Minister, are of "colossal magnitude," are knocking urgently at the door, and the list of

first-class pre-occupations is enlarged by the crisis in Manchuria, with all that it means for the future of the League and of world peace and disarmament, and the problem of closer co-operation between the various countries that form the British Commonwealth of Nations. Insatiable, indeed, would be the Government that asked for a more stupendous programme of constructive, preparatory and diplomatic work to occupy fully the energies of the strongest and wisest team of statesmen. There is no room, and there is no time, for our political leaders to turn their eyes aside for one moment to considerations of party or parochial importance, and it is the most comforting reflection of the week that this fact is realised to the full by Mr Ramsay MacDonald.

THE LEAGUE OF NATIONS AND JAPAN.

ON Monday, the Council of the League of Nations is to re-assemble in order to take action in regard to the conflict between China and Japan. When the Council went into recess three weeks ago, it was hoped that, when it met again, it would have a less difficult and less disagreeable task. It was hoped that this time its first business would be not to take action itself, but to register and approve an act of the Japanese Government which would have made action by the League unnecessary.

The last act of the Council before it dispersed was to put on record a draft resolution calling upon the Japanese Government to withdraw its forces, before November 16th, to within the limits of the Japanese zone, in consideration of arrangements for the safety of Japanese persons and property in Manchuria outside these limits—arrangements in which the League offered to co-operate with the Chinese authorities. When these essential preliminary conditions had been fulfilled, the Council looked forward to negotiations between Japan and China—to be assisted by the Council's own good offices—for a settlement of the questions in dispute. This resolution lacked legal validity only because the issue has been raised by China, up to this point, under Article 11 of the Covenant; and under this article—which is the mildest weapon in the League's armoury—the votes required to achieve legal unanimity include those of the parties to the case. Thus Japan's sole dissentient vote was sufficient to deprive the Council's draft resolution of its juridical effect—though not of its moral value.

Its moral value is illustrated by two facts. In the first place, as M. Briand pointed out in his note of October 30th, addressed to the Japanese Government, to which we referred last week, the major part of the draft resolution has already been endorsed by Japan herself in previous resolutions or statements to which the Japanese representative on the Council has made himself a party. In the second place, the United States Ambassador in Tokyo has informed the Japanese Government that the United States Government associates itself with the Council's draft resolution. In view of all these circumstances, it was reasonable to hope that the Japanese, in spite of having voted against the Council's draft resolution at Geneva, would nevertheless comply with its terms in Manchuria before the date set by the Council arrived.

In that event the Council would have been able to pass on, this coming Monday, from the first to the second stage of the proceedings. It would have achieved its primary and elementary duty of banishing the threat of war and of preventing the settlement of an international controversy through the application of military force by the stronger of the two parties. The Council could then have turned its energies, from the beginning of next week onwards, to the posterior task of helping the two disputants to clear up the underlying issues. Unfortunately, the events of the last three weeks—and particularly the events of this last week of all—have confronted the Council with a very different situation from that which it had hoped to find awaiting it.

The Council still finds itself faced with its primary problem, and this in an aggravated form. It has still to

secure the withdrawal of the Japanese forces from those Manchurian territories under Chinese administration, outside the Japanese zone, which the Japanese army has occupied by *force majeure*. The delay which the Council has accorded to Japan has been used—through no fault of the Council's—by the Japanese; not to improve the situation, but to make it worse. So far from withdrawing, the Japanese have greatly increased the area of their military operations; and this "forward policy"—deliberately carried on after the Council's draft resolution had been made public—has resulted in the most serious fighting between Chinese and Japanese forces that has yet taken place since the beginning of the present Manchurian crisis.

This fighting has arisen out of the dispatch of a Japanese repair gang, under the escort of a Japanese military force, to repair the bridge over the Nonni River, which carries the Chinese-owned and Chinese-operated railway from Supingkai to Tsitsihar. Supingkai is a point on the Japanese-owned South Manchurian Railway. Tsitsihar is the capital of the Chinese province of Heilungkiang, and it lies on the further side of the Chinese Eastern Railway, which is under joint Chinese and Russian ownership and management. The Nonni Bridge is less than fifty miles from Tsitsihar itself and considerably nearer to Anganki, where the Supingkai—Tsitsihar Railway and the Chinese Eastern Railway intersect. The Nonni Bridge is thus not only right outside (in fact, some two or three hundred miles outside) the Japanese zone in Manchuria. It is on the edge of a zone in which the Russians have a special interest, comparable in origin and character to the Japanese interest in the south.

According to the Japanese account, the Japanese expeditionary force to the Nonni Bridge began by sending parlementaires to the local Chinese military commander, General Ma, who agreed to withdraw his troops ten kilometres. His orders, however, to this effect, were apparently communicated only by telephone and messenger, and not in writing, to the Chinese officer commanding the front line. Thereafter, when the repair gang and its escort arrived at the bridge, the Chinese front line opened fire; and stubborn fighting began, which resulted, on Friday, November 6th, in the ejection of the Chinese from their positions. The Japanese are now repairing the bridge, and they have not rescinded their original declaration that they intend to retire as soon as the repairs are completed; but for this, as for other occupations of Chinese territory beyond the Japanese zone, the Japanese have committed themselves to no time limit. Meanwhile, it remains uncertain whether the local Chinese forces will deliver a counter-attack. On the other hand, it has unhappily become certain that, when the Council meets again on Monday, it will find its demand for a Japanese withdrawal still further from fulfilment than it was three weeks ago.

On November 6th, M. Briand again reminded the Chinese and Japanese Governments of their undertakings not to aggravate the situation. But what action will the Council take the day after to-morrow? In every respect the situation has been going from bad to worse. At Mukden, the puppet Chinese Government set up by the Japanese military authorities is reported to have proclaimed its independence. At Tientsin, a Chinese mob has attacked the Japanese Concession and has been driven back by machine-gun fire. In Japan, the League Secretariat, as well as certain League missions in China, have been most unwarrantably accused of displaying an anti-Japanese bias. And it has been announced semi-officially at Tokyo that, whatever the League Council may say or do, the Japanese forces will not be withdrawn until China has complied with the Japanese "Five Points" to Japan's satisfaction.

It looks as if not only a conflict of wills but a trial of strength between Japan and the League Council were now almost inevitable. What is the next step? It is open to China to transfer the issue, which she has hitherto raised under Article 11 of the Covenant, to Article 15. The difference in procedure would be two-fold. Under Article 15, unlike Article 11, the unanimity required to give validity to a decision of the Council is exclusive of the votes of the parties to the dispute. In the second

place, Article 15, unlike Article 11, has a sanction in the shape of Article 16, which opens as follows:—

"Should any Member of the League resort to war in disregard of its covenants under Articles 12, 13 or 15, it shall *ipso facto* be deemed to have committed an act of war against all other Members of the League, which hereby undertake immediately to subject it to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the covenant-breaking State, and the prevention of all financial, commercial or personal intercourse between the nationals of the covenant-breaking State and the nationals of any other State, whether a member of the League or not."

This paragraph bristles with difficulties. Supposing that the case is now transferred from Article 11 to Article 15, and the Council decides that Japan has disregarded her covenant under this Article, whose responsibility is it to decide whether Japan has "resorted to war"? Does the decision lie with the Council, or with the several Governments of the States Members of the League at their own discretion? Since 1920, the interpretation of this article has been engaging the attention of the Assembly and the Council and the Secretariat; but hitherto no interpretation or amendment of the Article has attained legal validity, so that we have to make the best that we can of the Article as it stands. But it is evident that, next week, the Council, and the States Members, including Great Britain, may be called upon to consider what the Article means, how it is to be applied, and whether or not it is right and wise to apply it in the present instance.

Two points are clear. The first is that Japan is more vulnerable to economic sanctions than any other Great Power in the world except, perhaps, Great Britain. In the second place, if the League fails in Manchuria now, the cause of disarmament and security in Europe will have been lost before the World Disarmament Conference meets in Geneva next February. If Japan overrides the League Council now by sheer force of arms, France and her Continental European military allies will justly infer that, in the world as it is, superiority of armaments is the only effective means of security; and neither Covenants nor Protocols nor Kellogg Pacts will have any value in their eyes any longer. In fact, the value of all instruments of co-operative security will fall to zero, and armaments will remain the only reality. The stakes on the Council table, this coming week, are terribly high.

THE FUTURE OF THE OPPOSITION.

ON TUESDAY last a joint meeting of the General Council of the Trades Union Congress and the Executive Committee of the Labour Party was held to consider the results of the General Election and to make plans for the future. The official report of the decisions reached promises "an energetic effort to extend the influence of the organised Labour movement and to promote the closest and most continuous co-operation between its political and industrial sides," to be embodied in "joint propaganda in the country." This *communiqué*, however, couched in vague, not to say traditional, terms, affords no indication that either the political or the industrial side of the Labour movement has yet got to grips with the real problem which calls for a decision, namely, the future orientation of the Parliamentary Party's policy. Much will turn on that question, and though policy tends to be gradually evolved rather than determined by sudden resolutions, the attitude of Labour leaders with regard to the future seems likely to be conditioned largely by their reading of the past.

In reviewing the outcome of the General Election, Tuesday's meeting placed on record its disapprobation of the "panic methods" employed by supporters of the National Government; but though appeals to various emotions, including that of fear, cannot be dismissed as wholly negligible factors in determining the results of the polls, their influence is unlikely to be exaggerated by the clearest-thinking elements in the Labour movement, who are prepared to face the facts and to draw from them the correct deductions. The facts are that though seven million of the electorate voted Labour, this number included not only a considerable sprinkling of middle-class "radicals" (in the American sense), but a proportion of Liberals who could not find it within their conscience to

vote for a Conservative, even though the "National" label was affixed to his candidature, or who decided that, regardless of all other considerations, their vote should be cast in favour of Free Trade. There is no shadow of doubt that a very large block of predominantly working-class votes which the Labour Party gained in 1929 was lost in 1931, and this swing over was most marked, not in Labour's politically "backward" areas—the counties—but in industrial constituencies where Labour's previous progress had been, arithmetically, at least, most striking.

In searching for explanations of last month's crushing blow to their onward march, the Labour Party Executive, if they are honest with themselves, can hardly deny that two factors, much more potent than "scare" propaganda about the collapse of the pound or the insolvency of Savings Banks, emerge from the electoral results. In the first place, the vast majority of the electors had no desire to give the Government of this country a mandate to put into effect a Socialist policy whose consequences would be, in the economic sense, of a revolutionary character. In the second place, the electors recognised that the Labour Party in its manifesto had now more patently than ever put forward a programme which meant either a revolutionary break with the existing economic order—or nothing. By no means in the mind for revolutionary Socialist experiments, the country had seen the late Labour Government endeavouring not very successfully for two years to reconcile its professed Socialistic theory with the practice of administering the country on "capitalist" lines, and it had pronounced the results to be, as they were, ineffective in times of comparative ease and lacking courage in moments of crisis.

Under these circumstances the Labour Party has two alternatives. On the one hand it can endeavour to convert the vague millennial promises of "Labour and the Nation" into a class-conscious revolutionary Socialist programme which is really meant for immediate application. This course, no doubt, may be urged by the Left Wing elements, but it would be highly repugnant to the Party's present leadership and would drive into exile the majority of the Party's middle-class members, who have contributed not a little to the Party's influence and prestige. Moreover, unless the "capitalist" system gets itself into such an intolerable mess that political reactions, to-day unpredictable, are the consequence of its breakdown, it would mean a Conservative-Nationalist majority in Parliament for many years, perhaps a generation, to come. The wiser members of the Labour Party's Executive are unlikely to forget one lesson of the recent election, which is that, quite apart from lack of enthusiasm for constructive Socialism, a party appeal based on predominantly working-class support is more apt than any other to be the victim of a propaganda stampede to which the more highly educated and reflective portion of the electorate (to give the middle-class its due) is less vulnerable.

The alternative would be to relegate the millennium to an upper shelf and to endeavour to concentrate on a programme for immediate application on "progressive" lines. This in turn would mean shedding the Left Wing and, as Mr Lloyd George suggested, widening the Party's area of recruitment; for "progress" on purely working-class lines would be apt, in terms of a party programme, to mean an undue concentration on the maintenance of nominal wages and crude, unconstructive eleemosynary measures. As such it would never achieve a wide enough

appeal to be effective. Will a reorientation on lines of moderate progress, calculated to attract the very large body of Left Centre opinion in this country, be the Labour Party's future? The answer depends to some extent on the course of events in Parliament; but it depends also to an even greater extent on the attitude of the Trades Union Congress. Traditionally the Parliamentary Labour Party's *provenance* has been the trade unions who, for all the Party's more recent recruits from Liberalism, have continued to be its solid core of support, both financially and electorally. Sudden or complete severance of the political side of the Labour movement from the industrial is scarcely a probability, but it remains to be seen how far, on mature reflection over the results of the General Election, the Trades Union Congress may deem it to their own interests to concentrate more on industrial negotiations, leaving greater liberty of action to the Parliamentary Party. Nor is it necessarily to be assumed that if the Labour movement as a whole sees that it has come to the parting of the ways—revolutionary Socialism or gradual progress on realist lines—the verdict of the T.U.C. would necessarily be cast in favour of the former course.

OCTOBER TRADE.

THE trade returns for October are of interest as covering the first month since this country went off the gold standard. It was not, of course, to be expected that the October figures would show in any very marked degree the "corrective" effects of the depreciation of sterling. On the one hand, export orders placed in this country during the past six weeks will in most cases not appear for some months in the trade returns, while, as regards imports, not only have many uncompleted contracts still to run, but the long-run influence of the pound's depreciation in checking purchases from abroad might be expected to be neutralised for some time by larger imports of raw materials required on account of enhanced manufacturing activity. For these reasons, the October returns shed little light on our foreign trade situation under the new conditions created by our departure from gold, and in the main reflect conditions that obtained prior to that event.

Our trade, like that of our chief competitors, presents a very gloomy picture—with our imports reduced in value by one-third and our exports by nearly one-half since 1929. These figures, indeed, even more than those of unemployment or of production, are the measure of the slump that has overwhelmed the commercial world, and is responsible for the financial crisis. It is true that there is an expansion of exports, as compared with September, but both in their case and in that of imports, seasonal fluctuations have to be taken into account. In the first table we show in summary form the value figures for the month of October and for the first ten months of this year, as compared with those of 1930 and 1929:—

MONTH OF OCTOBER.
(000's omitted.)

	1931.	Increase or Decrease as compared with			
		October, 1930.		October, 1929.	
Imports	£ 80,685	£ -10,172	% -11.2	£ -29,553	% -36.8
British exports	32,832	-14,089	-30.0	-31,757	-49.2
Re-exports	5,276	-1,933	-26.8	-3,852	-42.2
Total exports	38,109	-16,022	-29.6	-35,609	-48.3
Excess of imports over total exports	42,576	+ 5,850	+ 15.9	+ 6,056	+ 16.6

FIRST TEN MONTHS.
(000's omitted.)

	1931.	Increase or Decrease as compared with first ten months of			
		1930.		1929.	
Imports	£ 701,976	£ -173,844	% -24.8	£ -305,221	% -43.5
British exports	325,223	-162,814	-33.3	-282,778	-48.1
Re-exports	53,532	-21,356	-28.5	-40,035	-42.8
Total exports	378,755	-184,170	-32.7	-322,813	-46.1
Excess of imports over total exports	323,221	+ 10,326	+ 3.3	+ 17,592	+ 5.7

The percentage decline in British exports in October, as compared with a year ago, was almost exactly the same as the figure recorded in a similar comparison for September. On the other hand, the percentage drop in imports amounts to only 11.2 per cent., as compared with 13.1 per cent. in September, and the excess of imports over exports has risen somewhat. It should, however, be borne in mind that imports and, to a lesser extent, exports, normally increase between September and October. The extent of the expansion in recent years has been as follows:—

INCREASE BETWEEN SEPTEMBER AND OCTOBER.
Average 1927-29

	£	1930
Imports	10.2	12.3
Exports	5.9	4.2

The extent to which this seasonal increase has taken place in the present year and the main categories in which it has occurred is brought out clearly in the following table:—

	Oct., 1930.	Sept., 1931.	Oct., 1931.
Imports :	£'000.	£'000.	£'000.
Food, drink and tobacco	44,101	33,631	40,815
Raw materials and articles mainly unmanufactured	18,107	11,219	11,907
Articles wholly or mainly manufactured	27,715	22,618	27,249
Total	90,857	68,318	80,685
British Exports :			
Food, drink and tobacco	4,381	2,744	3,371
Raw materials and articles mainly unmanufactured	5,346	3,733	4,306
Articles wholly or mainly manufactured	35,916	22,223	23,958
Total	46,922	29,846	32,832
Re-exports :			
Food, drink and tobacco	2,091	1,312	1,872
Raw materials and articles mainly unmanufactured	3,077	1,040	1,859
Articles wholly or mainly manufactured	1,966	1,372	1,529
Total	7,209	3,761	5,277

It will be seen that total imports increased in October by £12.4 millions, or a rate of increase some £200,000 greater than a year ago. Imports of articles "wholly or mainly manufactured"—a category which includes many commodities which are raw materials for our own finishing industries—increased by £4.3 millions, against a corresponding increase of £3.1 millions between September and October, 1930, but, even so, their value was less than a year ago. Exports increased by £3 millions, or rather less than the amount of expansion recorded at this time last year; but, as has been said, the export bounty resulting from the depreciation of the pound could not be immediately reflected in actual shipments.

Owing to the great changes which have occurred in the level of prices, comparisons of values are apt to be misleading. It is therefore worth examining some of the leading figures of available quantities. In the first of the following tables we compare exports in September and October, 1930, and 1931:—

SOME LEADING EXPORTS.
(Quantity: 333's omitted.)

	1930.		1931.	
	Sept.	Oct.	Sept.	Oct.
Coal	4,633	4,797	3,584	3,951
Iron and steel	200	264	139	159
Machinery	30	44	25	27
Cotton yarn	9,108	11,685	9,006	12,818
Cotton piece-goods	142,717	150,340	128,460	143,060
Worsted yarns	2,581	3,048	3,191	3,279
Woolen tissues	9,594	8,711	6,798	6,670
Worsted " "				

These figures confirm the evidence of the returns of values that the slight improvement in British exports last month was rather less than the normal seasonal movement. The most satisfactory feature is the substantial increase in the shipments of cotton yarn and piece goods, in whose case the October improvement was much more marked this year than last.

Turning to our purchases from abroad, we show below, first of all, the retained imports of the main items of food-stuffs:—

FOOD, DRINK AND TOBACCO.

Item.	Unit.	October.		
		Average, 1927-29.	1930.	1931.
Grain and flour	Thous. cwts.	17,541	19,757	25,710
Beef	"	1,076	1,059	1,038
Mutton and lamb	"	397	307	543
Bacon	"	688	830	939
Butter	"	384	503	623
Cheese	"	231	217	275
Potatoes	Thous. cwts.	99	272	1,833
Tea	Million lbs.	56.7	54.2	51.4
Sugar	Thous. cwts.	3,051	2,983	2,196
Tobacco	Million lbs.	33.6	43.0	24.7

Imports of grain and flour last month were unusually heavy, as also were those of mutton and lamb, bacon, butter and potatoes—the cause in the last-named case being the comparative failure of the English crop.

In the next table we give a representative list of raw materials:—

RAW MATERIALS.

Item.	Unit.	October.		
		Average, 1927-29.	1930.	1931.
Iron ore	Thous. tons	461	279	135
Sawn hard wood	Thous. cub. ft.	2,664	3,028	1,957
Cotton, raw	Thous. centals	1,061	998	557
Sheep's and lambs' wool	"	32	12	59
Silk, raw, knubs, noils	Thous. lbs.	378	324	289
Petroleum, crude	Million gallons	55.4	44.4	24.5
Pulp wood	Thous. tons	129	111	142
Rubber, crude	Thous. centals	157	203	129
Cotton seed	Thous. tons	33.4	37.4	29.4
Flax or linseed	"	22.9	21.3	28.6

Here the only increases recorded are the quantities of pulp wood and flax imported; other items, as compared with a year ago, show a general decline.

Next in order we come to a group of articles which may roughly be defined as semi-manufactured goods:—

SEMI-FINISHED GOODS.

Item.	Unit.	October.		
		Average, 1927-29.	1930.	1931.
Pig iron and ferro-alloys	Thous. tons	21.8	31.3	30.5
Steel, blooms, billets, bars	"	60.2	48.9	62.7
Steel, sheet bars and tin-plate bars	"	51.2	56.0	68.6
Cotton yarn	Thous. lbs.	1,188	1,130	1,245
Woolen and worsted yarn	"	1,635	1,986	2,130
Petroleum, refined	Million gallons	106	157	171
Leather	Thous. cwts.	67.4	73.6	74.1

As compared with a year ago, the only increases of much note are in semi-finished steel, which is a raw material for many vitally important "finishing" branches of British heavy industry.

Finally, we come to finished articles:—

FINISHED ARTICLES.

Item.	Unit.	October.		
		Average, 1927-29.	1930.	1931.
Clocks, complete	Thous.	365	446	515
Watches, complete	"	550	745	593
Machinery	Thous. tons	8.3	8.9	10.2
Cotton piece-goods	Thous. sq. yds.	6,886	7,656	9,476
Woolen tissues	"	3,304	3,852	5,621
Worsted tissues	"	440	403	519
Carpets	"	573	773	1,025
Boots and shoes	Thous. doz. prs.	22.2	19.5	24.4

In this list October certainly showed a number of appreciable increases over the corresponding month of previous years, but before the conclusion is reached that these have been "abnormal" or "dumped" imports, much further analysis is required of the sources of the imports, and of their character. The really striking and alarming fact that emerges from the figures is not the increase in the excess of imports (indeed, the increase here is slight), but the enormous contraction in our export trade. It is this aspect of the trade situation, far more than any other, that demands the concentrated attention of the Government and their advisers, who will doubtless realise the grave danger of taking any steps which will further enhance the difficulties of export trade, or hinder its revival.

EXCHANGE RESTRICTIONS IN S. AMERICA.

(BY A CORRESPONDENT.)

THE Republics of the South American Continent being, without exception, producers of primary products, have inevitably met with difficulties at least as serious as those confronting other countries by reason of the universal economic crisis arising from the collapse of commodity prices. So precipitous has been the fall in values of Latin-American products that they are down, in many cases, to as much as 40 per cent. below pre-war level. The difficulty thus created has been aggravated by an increase in external debt commitments entered into at a time when the collapse in the markets for primary products was not foreseen. During 1926-30, South-American public long-term loans abroad on behalf of Governments, Departments, Municipalities, etc., amounted to no less than the equivalent of 300 million pounds (gold), of which 253 millions were floated in the three years 1926-28. If there be included the service of previously-existing loans, the principal South-American countries now have to find an annual amount to meet the service of their public long-term external debts of the equivalent of something like 50 million pounds sterling at par of exchange. They can provide for such indebtedness only by shipments of goods or gold, and, with the enormous fall in value of their exports, they have been compelled to part with the greater proportion of their surplus gold holdings.

The situation in South America is, in fact, that the income of the Continent has, through the slump in prices, been reduced to a level quite out of alignment with external obligations. Faced with this situation, the South-American Republics have been driven, like the debtor countries of Europe, to aim at contraction of imports. In many cases they have instituted higher Customs duties and import prohibitions; and, more recently, they have imposed restrictions on exchange dealing. Temporarily these measures have improved the Republics' balance of payments. So great, in fact, has been the diminution of imports into the leading Republics that, notwithstanding the lower value of exports, due to the fall in prices, export surpluses are again emerging in the foreign trade returns. For instance, during the first nine months of 1931, Argentina had a visible "favourable" balance of trade of 59,000,000 pesos (gold), as compared with an adverse balance of 85,000,000 pesos (gold) in the same period of 1930, while, during January-June last, Chile re-established an export surplus of 42,000,000 pesos, against an excess of imports of 21,000,000 pesos in the first half of 1930. But the whole policy of import contraction is operating most seriously in restraint of trade.

The exchange restrictions, in particular, render uncertain the possibility of sterling remittances being secured by exporters of British goods in respect of merchandise sold in the local currencies of the various South-American markets. Under these conditions, the banks are disinclined to undertake the purchase of bills, and the sole alternative is for such drafts to be sent for collection. Merchants and traders, however, are seldom prepared to shoulder the risks inherent in this procedure, so that the whole tendency is to hamper, if not actually to stop, shipments of goods to South America.

The nature of the restrictions and the method of their application vary widely in the different countries. In Chile, the chief object of the restrictions has been to prevent depreciation in the exchange value of the currency and to defend the central banking organisation, which has functioned with marked success since its inauguration in 1926. The relative Law took effect as from August 1, 1931, and under its provisions a body has been set up styled the "Comission de Control de Operaciones de Cambio." This Commission has full powers to restrict or prohibit the sale and purchase of gold coin and bullion, excepting that actually necessary to commerce, industry, banking and other economic activities of the country or of private parties. The Commission may prohibit (a) any foreign exchange operations not corresponding to regular and legitimate trade movement, and (b) any operation considered to be speculative in character. The Banco Central de Chile is the sole party free to pur-

chase exchange and to whom exchange may be freely sold. Other banking houses may buy and sell foreign exchange, subject, however, to the authority of the Control Committee. On the same authority, the Banco Central may demand that foreign currency be resold to it. In addition, the following operations may not be made without the authority of the Control Board: (a) the making of contracts in foreign currency in Chile or requiring the fulfilment of contracts in such currency made outside the Republic and subsequent to July 30, 1931; (b) exporting gold coin or bullion, with the exception of articles of personal use and the exports effected by the Banco Central; and (c) the carrying out of Stock Exchange operations, payment of which is to be effected in foreign exchange, or by buying or selling of gold coin. The Control Committee may also supervise exports of produce and goods, and authorise such exportation, or otherwise, if not satisfied that their net value has been or will be remitted to the country in cash or goods. This provision does not apply to the export of nitrate, iodine, copper or iron, or by-products thereof. These are the main features of the restrictions, which, as already stated, are being strictly enforced.

Exchange control was established in Argentina on October 13, 1931, and the principal provisions of the new regulations are as follows:—Foreign exchange drawings are limited to the equivalent of 5,000 pesos daily per client; drawings for over 5,000 pesos and all operations in futures must be authorised by the Control Commission; there are no restrictions at present on the payment of overseas documentary bills or availments, when due, under letters of credit already established; there are no restrictions on purchases of foreign exchange, except that the price will be fixed by the Control Commission periodically and selling prices based thereon with the usual margins; drafts and letters drawn abroad in pesos are prohibited. In practice, the restrictions are found to be fairly elastic; satisfactory remittances are usually obtainable, and it is confidently anticipated that the control of exchange may be removed in the near future.

Regulations governing the purchase and sale of foreign exchange in Brazil have been in force for a considerable period; indeed, they have been made increasingly comprehensive by the promulgation of successive Decrees throughout the régime of the present Provisional Government, which took office in November last year. Broadly, it may be said that the effect of the restrictions has been to place absolute control of exchange dealings and rates in the hands of the Banco do Brasil. Brazil has made considerable endeavours to maintain without interruption the service of her external debt, and, as in the case of Chile, it has been only by reason of *force majeure*, imposed by continued adverse economic circumstances, that she has been compelled to elaborate a third Funding Scheme to provide for postponement of interest and amortisation payments. At the same time, as has been indicated, every possible means has been utilised to prevent undue depreciation in the exchange, and, so severe have the restrictions latterly become, that the market in Brazilian exchange has temporarily been rendered quite inactive, with no quotations available. Moreover, a commercial moratorium is effective in Brazil in respect of all foreign bills falling due between October 9 and December 31, 1931; maturities may be extended for 60 days. Against these commitments, however, drawees are to deposit funds in currency with local banks at a fixed rate equivalent to a gold value of 4 pence per milreis.

In the case of Colombia, the present exchange restrictions are due to recent developments in the international money markets, which have frozen the sources of foreign credits, and necessitated measures for the protection of the gold reserves of the central bank. A summary of the principal provisions of the Decree controlling exchange, issued under date September 25, 1931, is as follows:—(a) The free gold market is temporarily suspended and gold exports prohibited, except in the case of the Banco de la República—the central bank—which retains powers for the purchase, sale and export of gold and for the negotiation of foreign exchange; (b) In defence of national interests, a Committee is appointed to assume temporary control of international exchanges and the

transfer of funds abroad; (c) This Committee will have full powers to restrict or prohibit the purchase and sale of gold coin or bullion and of all foreign currencies or drafts, except in the case of transactions effected by the Banco de la República. The Committee may permit all transactions which, in its opinion, are necessary to commerce and industry; (d) The Committee may prohibit (1) all exchange transactions not warranted by normal economic and financial activities, and (2) all transactions considered as speculative; (e) The Committee may authorise the purchase of foreign exchange by banks other than the Banco de la República, but, under such authorisation, the latter institution may require the purchasing banks to resell such exchange to it; (f) The Banco de la República is free to sell foreign exchange to the public, and other banks may do so when authorised by the Committee. The redemption of notes by the Banco de la República is to be effected under authorisation of the Committee in sight drafts on New York at an exchange rate within gold points. The purchase of bullion by the Banco de la República is to be effected at the same exchange rate fixed for the purchase of dollar drafts. A further Decree published simultaneously established prohibition of all imports of luxury articles and provided for substantial increases in import duties on foodstuffs.

The various exchange restrictions outlined above have in every case been due directly or indirectly to the expansion of loan commitments at a time of falling prices, plus a falling off of export values due to the fall of prices. The lower value of all primary products has increased enormously the burden of debts and rendered them hopelessly disproportionate to the wealth produced on the basis of the new low level of values. In brief, the case of South America is one more illustration of the serious excess of interest obligations of a non-commercial character existing throughout the world; and it is clear that some form of international co-operation must be evolved to deal with Latin-American indebtedness just as much as with that of Central Europe.

PROBLEMS OF DISTRIBUTION.

DURING recent years the business world, once concerned almost exclusively with the problems arising from production as such, has become increasingly preoccupied with distribution. Many convergent forces are responsible for the change. The increase in the world's wealth and the consequent development of new desires on the part of consumers whose simpler wants have been satisfied, the growth of new industries in vigorous competition for the consumer's patronage and purchasing power, the unforeseen and tremendous increase in man's power over nature resulting from the advance and application of scientific knowledge to industrial problems, the development of productive capacity until in too many industries plant and equipment became a drug on the market even before the world slump—these, and a multitude of other factors, have combined to make the problem of distributing the goods and services actually produced or producible by the world's fields and mines and factories far more intricate, more difficult and more important than at any previous period in the world's history. It was, accordingly, a sign of the times that, last summer, the Washington meeting of the International Chamber of Commerce should have been presented with a report on the distribution problem*—a document which merits study with a view to an appreciation of trends likely to be in evidence when the immediate world financial crisis has been surmounted.

The final function in the distribution of many essential commodities to consumers is retailing. The importance of the retailer's function has only recently been realised. His is the task of "making merchandise available to consumers at the time, place, and in the form required by them." He serves as a "purchasing and supply agent for his community"; and his immediate contact with con-

* "Distribution in the United States and Europe." Report of the Europe-U.S.A. Committee of the International Chamber of Commerce, International Management Institute, 2, Boulevard du Theatre, Geneva, Switzerland.

sumers, if efficient, should accurately and quickly reflect their quantitative and qualitative needs back to the other agencies of distribution and production. Yet retailing is to-day, as in the past, very largely an unorganised and, indeed, an unskilled occupation. The mere number of retail outlets is enormous. In the United States there are over 1,600,000 stores. For Europe as a whole figures are lacking; but in Great Britain there are some 700,000 retail outlets; in Germany some 800,000; in France a similar number; while other countries for which statistics exist show similar totals roughly proportionate to their populations.

In the United States, as well as in Europe, by far the overwhelming proportion of all retail outlets are operated by small, independent retailers. In the United States they number about 1,300,000, and their shops account for the \$25,000 millions of sales, or from 50 to 60 per cent. of the total retail turnover. In the European countries for which statistics or estimates are available the independent retailer likewise accounts for the great bulk of all retail outlets. On the other hand, both American and European experience shows that the typical independent retail establishment is small, unprofitable and short-lived. The lishment is small, unprofitable and short-lived. The statistics, where any exist, confirm observation and bear out common knowledge. Thus, in the United States it is estimated that some 75 per cent. of such stores have annual sales volumes of less than \$25,000 each, and make less than 20 per cent. of the total independent retail sales. The annual turnover of between 45 and 50 per cent. is under \$10,000 each, and the turnover of between 25 and 30 per cent. is under \$5,000. In the light of these facts, it is not surprising that many retail establishments are exceedingly short-lived. Thus, one American enquiry shows that, out of a given number of independent retailers in the business at a given time, no fewer than 50 per cent. of the drug stores, 85 per cent. of the grocery stores, 62 per cent. of the hardware stores, and 74 per cent. of the shoe stores had gone out of business or into bankruptcy at the end of five years. Another enquiry showed that some 70 per cent. of failures in all lines of retailing were due to lack of capital or incompetence; the force of competition accounted for under 4 per cent.

Where comparable figures are available for Europe a similar situation appears. The recent Enquête Ausschuss exhibited precisely similar tendencies in Germany, while in France a pre-war enquiry showed that only one-seventh of the retailers in Nîmes had survived the whole of the two decades ending in 1913; and in Holland an investigation published in 1929 into the figures for grocery shops in five towns showed that in four of the towns the total result of private trading was a definite loss, and in the fifth town, though a small net profit was achieved on balance, 12 out of 29 shops made a loss. In view of these facts, it is not surprising that the report observes that "there is a heavy expense carried by the distributive agencies and by society as a whole through the existence of so many unprofitable and unstable small retail outlets. . . . The uneconomic and retailers whose shop passes drearily from bankruptcy to bankruptcy is a luxury for which the consumer has to pay." On the other hand, in so far as the demise of unnumbered retailers is the result of progressive forces competing in the distributive field, the process, though painful, is healthy and perhaps encouraging.

The multitude of agencies competing with the independent and unorganised retailers divide themselves fairly accurately into half-a-dozen groups. In the United States the largest of these is the chain-store group, some 10,000 companies owning 150,000 to 200,000 stores, selling annually from \$8,000,000,000 to \$10,000,000,000 worth of goods, and accounting for 18-20 per cent. of total retail sales. Department stores, both chain and independent, form the next largest category, and account for 8,000 to 12,000 stores, \$7,000,000,000 to \$8,000,000,000 of sales, or 14 to 16 per cent. of the total. Mail-order houses (including their retail outlets) number from 1,000 to 1,200 companies, and sell \$1,500-2,500 millions worth of goods, or 3-5 per cent. of the total. Company or industrial stores, house-to-house selling, and canvassing and peddling are each responsible for some \$1,200 to \$1,500 millions of sales, or about 3 per cent. each of the total. In Europe comprehensive statistics are not avail-

Westminster Bank Leaflets

For the benefit of that large section of the public which finds itself bewildered by business language, the Westminster Bank issues from time to time simply worded explanations of various ways in which it is able and glad to be of use to its customers. Amongst its publications are the following: **Points before Travelling**, notes on the Protection of Travellers from Loss. **Thirty-nine Advantages of an Account with the Bank**. **The Saving Habit**, an outline of the Home Safe system. **Safeguards for Travellers**, a warning against carrying foreign notes. **Securities**, their Custody and Supervision. **Wills, Trusts, and Settlements**, the Bank as an Executor. Copies may be had on asking at almost any branch, or by addressing a postcard to the Secretary, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

able, but in general it appears to be true that department stores are responsible for a substantially smaller fraction of total retail sales (say, 5 to 7 per cent., against 14 to 16 per cent. in the U.S.A.); while chain stores, with which in Europe must be included the co-operatives, also usually account for a smaller proportion of all retail sales than in the United States. To this general statement Great Britain is an exception. In Britain, taking chains and co-operatives together, some 3,500 groups controlling 45,000 retail outlets and accounting for 21 to 23 per cent. of the total retail trade occupy very much the same position as do chain stores alone in the United States.

For both department stores and chains and co-operatives satisfactory information about the European tendencies is very hard to obtain. Broadly speaking, however, both these types of retailing exhibit a striking growth in recent years. Thus a group of representative British department stores with a sales index of 100 in 1913 and 242.3 in 1920 showed sales in 1927, in spite of a heavy fall in prices, of about 350. Both in Europe and in the U.S.A. there has been an increasing tendency to amalgamations and mergers in this field, and large and far-flung chains are one of the most characteristic features of the modern department store movement. As regards chain stores, the position in the United States is adequately reflected by the estimated percentage of total retail sales effected through chain stores. In 1923 chain stores accounted for 6 per cent. of the total, in 1926 for 8 per cent.; in 1927 for 12 per cent.; and in 1929 for 18 per cent. While in Europe the development of the chain store movement is more spotty, the countries of the outer agricultural circle being as a rule extremely backward in this respect, the chain store movement in Britain, Germany and France has made great strides in recent years, and in these countries chain stores account for an important proportion of all retail sales, particularly in the grocery, foodstuffs, and dairy trades, where some of the largest chains are to be found.

The great growth in chain and department stores in the U.S.A. and in Western Europe is only one sign of current change. Amongst others may be mentioned the growth in direct retailing by manufacturers which has made tremendous strides in recent years; the absorption of the wholesaler's function at various other stages in the distributive process and the consequent weakening of the position of wholesalers; the vast growth of advertising both in America and Europe; the increasing sales of packeted and standardised goods which diminishes the sales effort required and *pro tanto* cheapens distributive costs; the gradual education of the consumer, particularly in America, resulting from national advertising of branded goods and, to a greater extent, from the spread and development of domestic science training in the schools and through other organisations; and the growth of market

intelligence and market research services. No less remarkable is the increasingly detailed study, particularly in America, of marketing costs with a view to eliminating needless expense and cutting out unprofitable orders. Studies made in the United States show that minima exist in orders, shipments and accounts and maxima in trading areas and stocks which, though varying as between groups of commodities and between commodity lines within specific groups, nevertheless cannot be disregarded without loss. In this field, both in Europe and in America, there is wide scope for further study. Similar study is needed in connection with the outstanding tendency towards ever larger vertical organisations, whether of manufacturers pushing out towards retail outlets and the consumer, or of retailers stretching back to factories and sources of supply. The distributive world is to-day in flux as never before. What all the existing tendencies show to be the most essential requirements are "the allocation and evaluation of the potentialities of each local market for the consumption of goods by commodity lines; the efficiency of retail outlets in supplying them; and the economic adjustment of all other distribution and production planning and activities to the efficient retailing of goods, in accordance with the effective demand which can be developed in each local market." To these ends what is needed above all is objective factual and statistical information, in the collection and collation of which government statistical organisations must play an indispensable part.

THE AUSTRALIAN POSITION.

(BY AN AUSTRALIAN CORRESPONDENT.)

THOUGH it was difficult to convince some Australian Governments that the economic crisis demanded a major adjustment of Government and private finance, the events of the last four months have made a great change in the local situation. They demonstrate the capacity of a people with a complex economic and political structure to adjust conditions to a new and rather desperate situation. Unfortunately, the trend of world prices and the disturbances to the international money markets have robbed Australia of the immediate benefits that would normally have followed from the strenuous efforts she has made to deal effectively with her acute internal problem.

There was a certain elation of spirit when it was realised that the grand move made at the May-June Conference to reduce the Budget deficits to manageable amounts was likely to succeed. The sacrifices imposed on all sections of the people by the proposals then agreed to were heavy. Adjustable expenditure was to be cut by at least 20 per cent., new taxation to the extent of about £10,000,000 was to be extracted from an already highly taxed people, and the internal interest burden was to be reduced by 22½ per cent. on a debt amounting to £556,000,000. On the whole, this programme has been implemented. In some States, notably Victoria, South Australia and Western Australia, adjustable expenditure has been cut by about 30 per cent. This expenditure includes everything but interest and sinking fund on the debt and the cost of unemployment relief. Before the crisis these fixed charges amounted to approximately £60,000,000 in a total expenditure of £190,000,000. Owing mainly to the heavy cost of unemployment relief and the exchange on the external interest charges, this fixed expenditure has increased to £87,000,000 at a time when depression has cut severely into revenue of all kinds. The task of attaining budget equilibrium was, therefore, very difficult, and in spite of the changes made in expenditure, taxation and internal interest charges there is still a deficit of £16,000,000 over all the budgets. The conversion loan was a remarkable success, only 3 per cent. not being turned into the new loan at reduced interest rates. Apart from the direct saving of interest of about £6,000,000, there will be an almost complete freedom from internal conversions during the next seven years.

In this achievement, however, there is one important lapse. The Government of New South Wales has not taken up its responsibilities under the plan cheerfully,

and its results to date hardly come up to the requirements of the plan. Still less do they meet the fundamental needs of New South Wales. For instance, the expenditure for "Administration and General" has been reduced by only 10 per cent., compared with not less than 23 per cent. for nearly all the other Governments. Mr Lang claims that his tax of 1s. in the pound for unemployment relief should be counted as a saving. It is certainly much higher than in other States, but so is the expenditure on unemployment relief, even on a *per capita* basis for the unemployed. By keeping up the basic wage in Government occupations, the Ministry doubtless hopes to check the insistent demand for a revision of the State basic wage. But New South Wales is taking a grave responsibility in standing out of a common effort to reform the national finances, and yet under constant pressure, going just far enough in retrenchment to secure advances from the banks for current expenditure. It is quite clear that whatever may be said of the other budgets, the budget of New South Wales is definitely out of balance, and will not be adequately adjusted even if a rapid trade recovery takes place. The other budgets would, on the whole, be balanced in three years if trade conditions improved only moderately.

But reform in public finance is not the whole story of Australia's effort. The first really important official announcement upon the gravity of the crisis came from the Commonwealth Arbitration Court last February, when it reduced the real wage by 10 per cent. The continued fall in retail prices has brought down the Commonwealth basic wage by nearly 25 per cent. since the crisis began. It would be of interest to know whether any other country can point to such a wage adjustment undertaken with practically no industrial strife. There have also been revisions in the State basic wages in all States except New South Wales. For instance, in South Australia the basic rate has fallen from 14s. 3d. to 10s. 6d. per day. New South Wales stands out, and the basic rate there remains at £4 2s. 6d. per week plus child endowment. Unfortunately New South Wales is the greatest industrial State, and high wages there and restrictive working conditions are a heavy burden on all other States. Apart from South Australia, which has been seriously depressed by several very bad harvests and the low prices of wheat, unemployment is higher in New South Wales than elsewhere. In the June quarter of 1931 the percentage of members of trade unions returned as unemployed for the Commonwealth as a whole was 27.6 per cent., for Victoria 26.5 per cent., and for New South Wales 30.7 per cent. It is only a matter of time when the wage rate must fall in that State; but, meanwhile, Mr Lang's obstinacy is very embarrassing to the other States, and especially to Labour Governments. The general decline in wages has now been accompanied by a fall in private interest on existing contracts. Legislation has been passed in all States providing for a revision of interest on mortgages and other fixed interest obligations of a maximum of 22½ per cent. unless the mortgagee can show cause why the rate should not fall. Trustees were empowered to convert their holdings of Government bonds into the new loans, bank rates have been reduced, and the Treasury bill rate for Government short-term borrowing through the Loan Council now stands at 4 per cent. This interest adjustment may contain a great many unorthodox measures, but it is the logical and, indeed, the only course that Australia or any other debtor country can pursue in the face of the present depression.

In another direction Australia has attempted to meet her obligations by drastic action. Despite the great increase in the volume of exports, the sterling value of merchandise exported for 1930-31 amounted to only £75,000,000, compared with £140,000,000 before the crisis. Imports have been reduced from £140,000,000 per annum to £60,000,000, and at present monthly rates of importation will be less than £50,000,000 for the current year. The exchange rate, the high tariff, and the general decline in spending power are responsible for this drastic adjustment. But prices of exports have been falling all the time, and every move made to relieve both the internal and external position has been more than countered by this continued drop in prices. To meet overseas obliga-

tions more than £40,000,000 in gold have been shipped, and the internal reserves now amount to only £10,000,000. The floating debt abroad has been reduced from £18,000,000 to £5,000,000, but gold reserves cannot any longer be drawn upon, and there may not be sufficient surplus in the trade balance to meet debt obligations overseas unless international prices recover. The concession on account of the war debt, amounting to £5,500,000, is a great relief, but there will be even more need for it next year than this. It amounts to about 15 per cent. of the total overseas obligations, and, under ordinary circumstances, would be sufficient relief.

There is little doubt that opinion in Australia is slowly realising the enormous difficulties created by the continued fall in commodity prices. The suspension of the gold standard by Great Britain will give some relief, but the amount depends upon the subsequent level of gold prices and the level of the sterling exchange. In view of Britain's own difficulties, direct relief from London is hardly a reasonable expectation. Failing this, or some recovery in overseas prices, Australia will be placed in a very serious position. It is not more serious, perhaps, than that of many other debtor countries, but there will be a great change of opinion in Australia towards her international obligations, if, after the effort she has made, her credits in London are not sufficient to enable her to meet her interest charges. It is well that this view should be appreciated abroad. Here is a debtor that has now made a really serious effort, though she has made it late, and had, in the past, committed many errors of policy. She is going on with this effort; and the tariff, the wage-fixing system, and other causes of high costs are being reviewed. Owing to conditions over which she has no control, the prices of her products have fallen so much that, despite an increase in the volume of production, she may be unable to meet her interest charges to overseas creditors. How can a nation retain its respect for a monetary system that places it in such a position, and brands it with a stigma that will take a generation to remove? Australia has a good export season before her, she has behind her the achievement of an adjustment more equitable and severe than that of any other country, yet the outlook at the moment is still obscure. A rise of gold prices may bring alleviation. If not, it will be realised that Australia, "controlled deflation" against an international price movement that keeps her whole economy on shifting sands.

Notes of the Week.

Thirteen Years After.—Anniversary of the Armistice succeeds to anniversary; the vivid horror of the War slowly recedes into the realm of history, where Marlborough, Alexander and Napoleon are at one, and the motives, noble and ignoble, which strewed with corpses the fields of Sedan and Colenso fade into obscurity. How far the growing generation shares with its elders, in the Silence of November 11th, a sense of overmastering sorrow and shame, we do not know. But this we believe: it may be that youth to-day—and it is youth which matters—sees as little coherent sense in the emotions which led nine million Europeans to their death as it sees in the *realpolitik* which infused the statesmen of Europe with the blind urge that led to that mass butchery; yet even the young, unscathed by the holocaust, recognise, however dimly, that a great debt, still unpaid, is owing to the dead. We need have scant regard to the unreal pretence that men, on any side, enlisted consciously for "a war to end war." The initial impulse, be it in London, Paris or Berlin, was cruder, more compact of unreflective mass patriotism than that. But as the years of blood and agony dragged on, obscuring for the combatants whatever vestige there once was of intelligible motive for their immolation, the resolve "Never Again" did emerge as the one predominant expression of an international *volonté generale*.

Those who died in their millions may have had few illusions. Let us hope so; for the survivors have seen a peace of folly and injustice, an aftermath in which jealousies and hatreds have had full room for recrudescence. One act alone of statesmanship has been worthy of the fallen—the creation of the League. An innovation, cutting clear across the world's traditional "nationalisms," the League may have functioned, so far, imperfectly and with less than ideal justice or efficacy. Yet, tentative and experimental though its efforts at influence and authority may have been, it remains the one single earnest of the world's resolve that those who died should not have died wholly in vain. Dearly bought with needless bloodshed, the League stands as the world's sole achievement in the direction of peace and justice between nations. If it be denied the whole-hearted support on which its powers and prestige depend, it will be a creation as sterile as the untimely death of those who fell in 1914-18, cursing the folly which destroyed them. But, whatever be its shortcomings yet to be made good, the League holds within itself the seeds of goodwill and co-operation which might have saved, had they been mobilised in time, the loss of all the poor shattered flesh, all the ardour and decent kindness that perished, half a generation ago. The mean, ignoble spirits who now urge us to retire into a selfish nationalism, to denounce our membership of the League, and abandon all efforts to establish a seat of jurisdiction and authority higher than the nationalistic individualism which gave the Europe of to-day its graveyards, its hysteria, its impoverishment and its remorse, pay poor tribute of remembrance to all the brave, lovable humanity uncomplainingly crucified in the War's purposeless, insensate Calvary.

An Eastern Locarno?—English minds instinctively recoil from any suggestion that Great Britain should guarantee the terms of the peace settlement in Eastern Europe, as she has already guaranteed them in the West by subscribing to the pacts of Locarno. This English aversion arises from two considerations. On the one hand, there is a strong and widespread feeling among us that Eastern Europe is not our business, and that we have no call to undertake new responsibilities in this particularly dangerous field when we already have our hands so full of commitments in other parts of the world. In the second place, we are apt to judge, when we look into the East European settlement, that its terms are inequitable and that they ought not to be perpetuated, even if they could be. This attitude is expressed in the characteristic English way in a letter from a correspondent which we print in another column. We draw attention to the question here because it is possible that, in the near future, it may become a very live issue on which the people and the Government of this country may have to make up their minds. This issue may be formulated as follows. A universal sense of insecurity is the evil which is paralysing the economic and financial life of the world; these paralysing fears are political as well as economic; they are predominantly political in France, whose consequent financial policy is the crux of the present international situation; these French political fears turn partly upon the insecurity of the East European peace settlement; and anything that can be done by other parties to remove these French fears will, therefore, contribute to producing in France that change of mind which it is of vital importance to produce in the general interest of the world. We may, therefore, have to ask ourselves: is the danger of being involved in East European commitments really greater for England than the danger of being involved, here and now, in the world-wide economic and financial breakdown which the present universal sense of insecurity threatens to bring about? Much would depend on the basis on which an Eastern "Locarno" settlement reposed. For example, could we, perhaps, become a party to an arrangement providing for (i) no alteration of treaty-terms by force; (ii) an effective procedure for implementing Article 19 of the League Covenant, which contemplates treaty-revision; (iii) an understanding that, when revision comes up for consideration, the obvious economic and social remedies (e.g., effective lowering of Customs barriers and effective

protection of minorities) should be given a trial before territorial changes are placed on the agenda? It is, at any rate, expedient that British public opinion should begin to think about the Eastern frontier question as one of Europe's burning issues, rather than simply react to a phobia which is one of the psychological contributory causes of the present predicament of the world in general and of Great Britain in particular.

The Round Table Conference.—During the past week the progress of the Indian Round Table Conference has waited upon the development of the minorities problem; and the Minorities Committee of the Conference did not meet till Friday morning, when the *Economist* was already in the press. At this moment, therefore, we have only to record two things—the decision of the Working Committee of the Indian Congress to give Mr Gandhi a free hand on the question of the date of his return to India, and the despatch of a letter to Mr MacDonald by twenty-eight delegates to the Round Table Conference who are of the Liberal camp. The Congress decision at Bombay was taken last Sunday, and the letter from the 28 Conference delegates in London reached the Prime Minister at Lissiemouth on the same day. The gist of the letter was a protest against the suggestion that provincial autonomy might "be introduced as a first step in the political reconstruction of India, leaving federation and responsibility at the centre to follow later." The signatories "realise the importance of the Minorities Question, of which no satisfactory solution has yet been found." At the same time, they express their "clear opinion that it must not be allowed to block the way of a full and comprehensive scheme of responsible government, which alone can provide an adequate settlement of a pressing problem." This letter is an important document, not only for its substance but for its signatures. Its promoters have obtained Mr Gandhi's support, and his name heads the list—which also includes the names of the Pandit Malaviya, Sir Tej Bahadur Sapru, Mr Sastri, Mr Jayakar and Dr. Moonji. This letter, together with the joint statement put forward by all the minorities except the Sikhs, present, between them, the crux of the problem before the Conference, which is now evidently entering upon its critical stage.

The Punjab-Kashmir Border.—The Government of India's intervention in the disturbances on the Punjab-Kashmir border, which we recorded in an article last week, has brought about a distinct improvement in the situation. At the Maharajah of Kashmir's own request, British troops took over the border districts of Jammu and Kashmir States from the Maharajah's troops on November 3rd and 4th. Their arrival has been received with relief by the Muslim element, which constitutes an overwhelming majority of the local population; and the Muslim agitation on this side of the line has subsided for the time being, pending the inquiry into the causes of the trouble, which the Government of India has set on foot. Meanwhile, the British Indian authorities have had to deal with the jathas (bands) of Muslim enthusiasts from British Indian territory in the Punjab who have been crossing, or attempting to cross, the boundary into Kashmir and Jammu in order to come to the rescue of their co-religionists there who have been suffering misrule at the hands of a Sikh dynasty employing Hindu administrators and soldiers to govern an overwhelmingly Muslim population. The Punjabi Muslim method of righting Kashmiri Muslim wrongs is evidently a form of "direct action" that is bound to do more harm than good; and it is also an intolerable affront to law and order, as well as a serious embarrassment to the relations between British India and the Indian States. On November 4th the Punjab Government published an ordinance making the passage of jathas from Punjabi into Kashmir territory illegal; and when this ordinance came into force on November 7th, more than a thousand persons were arrested at the border by the British authorities, interned in wire-netting enclosures, condemned by the magistrate

to two months' imprisonment each, taken back to the interior of the Punjab in lorries, and subsequently released on an undertaking not to do the same thing again. All this has been done without violence; and if there had been the same good sense and good will on the part of the Kashmiri authorities, the end of this local trouble would be in sight. Unfortunately, there are between four and five thousand members of Punjabi jathas interned in Kashmir under deplorable conditions; and the Kashmiri Hindu troops made matters worse on November 7th by firing on a jatha which was already in retreat from Kashmiri territory, and killing a boy. The victim's funeral at Sialkot naturally gave occasion for a demonstration, and the incident has evoked protests at Delhi from the leaders of the Indian Muslim community. The plain truth is that misgovernment, on lines of communal prejudice, in Kashmir has given India an addition to her present troubles which she cannot afford. The Government of India's inquiry into the Kashmir Government's record ought to be swift and searching and the remedy ought to be drastic.

French Socialist-Radical Congress.—On November 6th the Socialist-Radical Party Congress elected Monsieur Herriot to the presidency of their executive committee in succession to Monsieur Deladier. This means that Monsieur Herriot will lead the party in the general election campaign next spring; and, if the party's hopes are realised, M. Herriot and Mr. MacDonald may once again find themselves representing their respective countries at the international council-table, where they met before in 1924. Seven years ago the collaboration between these two statesmen produced the draft Geneva Protocol for the Pacific Settlement of International Disputes. The Protocol was stillborn, but the problem which it was designed to solve is more urgent to-day than ever. Accordingly, it is significant that the French Socialist-Radical Party devoted the latter part of its time, during last week's congress, to a discussion of disarmament policy with an eye to the forthcoming World Disarmament Conference, which is to meet in February, and will not have progressed far with its labours before the French general election has taken place. The upshot of this discussion shows that the policy of the party has not changed. It sincerely desires disarmament, but shares the general feeling of the French nation that armaments can only be reduced appreciably in exchange for the effective provision of alternative means of security. On this principle the Socialist-Radical Congress has adopted a resolution in favour of two alternative plans corresponding to two different situations. Supposing that the alternative means of security remain no more effective than they are at present, the party advocates a progressive, simultaneous, controlled and proportionate reduction of armaments by a cutting down of national defence budgets to the extent of 15 or 20 per cent. for a trial period of five years. On the other hand, the party contemplates going further if there are improvements in the procedure for the settlement of international disputes and in the provision of sanctions against aggressors. The organisation of a permanent system of international control is given a prominent place. It may be remembered that a Permanent Armaments Commission already figures in the draft convention which the Preparatory Commission for the Disarmament Conference has prepared, and that this was a British suggestion. The present Socialist-Radical resolution suggests possibilities of fruitful Franco-British co-operation, on this vital matter of disarmament, in the coming year.

Elections in Yugoslavia and Argentina.—In these times, elections in any country are of some general interest; for our present *malaise* is world-wide, and an election is apt to throw light on the local form and degree of the distemper. From this point of view, the elections which took place in Yugoslavia and Argentina last Sunday are deserving of notice. The Yugoslav election seems to have been conducted on the Fascist system carried to extremes

and thereby reduced to absurdity. The electors could vote for the maintenance of the present dictatorial regime but they could not vote for anything else, with the result that very few of them took the trouble to vote at all; and if this election was designed to ensure the Yugoslav dictatorship and dynasty against the fate which has overtaken their counterparts in Spain, it has assuredly produced just the contrary of the effect that was intended. It has shown how utterly divorced the present regime in Yugoslavia is from popular support; and the moral hardly needed pointing by demonstrations of University students at Belgrade. As for Argentina, the superficial issue of the election has been that between personal and constitutional government; but, in Latin America, personal government is an endemic political malady into which a community is apt to relapse in bad times; and the alarums and excursions of the present Argentinian election, like the revolution which overthrew the personal government of President Irogoyen some fourteen months ago, and like the Irogoyen regime itself, are to be interpreted as symptoms of economic stress. On this occasion, the electoral campaign has been accompanied by a certain amount of unrest—including the mutiny of a regiment up country—and this led the Provisional Government to expel from the country certain leaders of the "Personalist" Radical Party who had returned from abroad to organise their followers. Among those who were thus "invited to leave" was a former President, Dr. Alvear, and a former Argentinian Ambassador to the United States, Dr. Pueyrredon. In consequence, the "Personalist" Radicals have abstained from taking part in the election—leaving the field to the Conservative "National Democratic Party" and to the Democratic Socialist Alliance. The electioneering has been keen and the polling heavy, while the number of places to be filled has been very large. For this has been an omnibus election for a National President and Vice-President, 30 National Senators and 158 National Deputies, as well as 13 Governors of provinces, 9 vice-governors, 177 provincial senators and 367 provincial deputies.

The B.I.S. Board Meeting.—The monthly board meeting of the Bank for International Settlements, last Monday, reached, as was to be feared, little more than conclusions of a negative character. From the Prague Conference on exchange restrictions there was but a lean harvest whose garnering could be recorded. The Conference had approved the conclusion of bilateral agreements as to allocations of foreign exchange, provided that such agreements confined the rôle of central banks to that of a clearing house, and did not import political aims into the direction of trade or interfere with existing commercial treaties; but this amiable decision scarcely touched the crux of the matter, which is that the "rationing" of foreign exchange for the purpose of restricting imports is a process (no matter how cogently *force majeure* may be pleaded) whose logical end is the destruction of international trade. This noted, the B.I.S. board was equally unable to take any notable forward step in monetary policy pending such time as decisions in regard to the German crisis are taken by the statesmen, on whose policy depends the maintenance of confidence in the whole world's banking structure. Under the shadow of that major threat to the financial stability of nations, the needs of Austria inevitably had to be relegated to a category of less extreme urgency; and the hoped-for Austrian credit of 60 million schillings, the granting of which received, in form, the blessing of the Banque de France three weeks ago, was deferred pending development in Vienna. ("Never urgent," it seems, must be added by Austria to the *mot*: "Always hopeless, but never serious.") In this decision, however, as we suggest below, lack of resources rather than of goodwill was presumably the determining factor.

B.I.S. Balance Sheet.—The balance sheet of the B.I.S. for October 31st reveals a further decline from 1,273.6 to 1,093.3 millions of Swiss francs in the bank's total resources. This is primarily due to a decrease of Frs. 237.5 millions in central banks' deposits on their own account,

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS).

offset, in a limited degree, by an increase of Frs. 73.4 millions in central bank deposits "for account of others." The liquidity of the B.I.S. has suffered to a still greater extent, for central banks have turned a further Frs. 61.3 millions of their balances over from "time" to "sight" accounts, while "sight" deposits on account of "others" have also increased by Frs. 14.3 millions. Thus, notwithstanding the unofficial appeals made at Basle a month ago, that every effort should be made not to deplete further the resources of the B.I.S., central banks have withdrawn still more of these funds in order to strengthen their own cash position. This depletion in one sense only confirms previous evidence of the breakdown of the gold exchange standard; but, at the same time, it places the B.I.S. in a difficult position. To meet these withdrawals, the B.I.S. has had to reduce its bill portfolio and to draw heavily upon its own time funds. Furthermore, it has felt bound to increase its own liquidity in order to balance its customers' transfer of funds from time to sight accounts; and, as a result, its own sight funds are higher by Frs. 41.8 millions. The practical consequence is that the power of the B.I.S. to grant further credits on its own account to central banks in need of assistance are now severely circumscribed. At the same time it would be wrong to argue that the B.I.S. is no longer able to function effectively. Even in its present state, there is much essential advisory and co-ordinating work which it alone can do.

Sterling and Gold Prices.—During the past fortnight the *Economist* index number, based on the wholesale sterling price of fifty-eight commodities, has risen by approximately 1.7 per cent. The latest figures of our index are shown below in comparison with those for September 18th, when the pound was still at its gold parity:—

	"ECONOMIST" INDEX. (1927 = 100.)		
	Sept. 18, 1931.	Oct. 28, 1931.	Nov. 11, 1931.
Cereals and meat	64.5	70.2	71.9
Other foods.....	62.2	66.9	66.6
Textiles.....	43.7	52.5	54.0
Minerals.....	67.4	73.7	75.4
Miscellaneous	65.8	65.8	66.4
Complete index	60.4	65.5	66.6

Expressed as a percentage of the average for 1913, our index number now stands at 91.7, as compared with 83.1 on September 18th, while the current figure, converted to a percentage of the average for 1924, works out at 57.6. In the next table we show the recent course of our index number expressed as a percentage of the September 18th level, adding for purposes of comparison, on the same base, our new index of sterling "primary" prices, our index of "gold" prices (these, too, it may be recalled, are largely of primary products) and the four index

numbers of foreign "gold" countries published by our contemporary, *The Financial Times* :—

September 18th = 100.

Date.	Economist Indices.			Irving Fisher U.S.A.	Statistique Générale France.	Milan Chamber of Commerce Italy.	Statistische Reichsanstalt Germany
	Complete Index (sterling)	Primary Products (sterling)	Gold Prices.				
Sept. 30th ...	107.8	...	94.7	98.7	96.9	98.8	98.9
Oct. 14th ...	108.3	...	95.7	98.9	96.9	99.7	98.0
Oct. 28th ...	108.4	114.4	101.4	99.3	95.6	99.9	98.7
Nov. 11th ...	110.3	119.3	103.5	...	...	...	...

As is natural, our sterling index of primary products has reflected much more markedly than our complete sterling index the effect of the depreciation of the pound. With regard to gold prices, it will be seen that during the past fortnight there has been a further rise of approximately 2 per cent., making the aggregate upward movement since the end of September quite considerable. The increase, however, is confined almost entirely to grainstuffs and wool, the world prices of such key commodities as sugar, tin, lead, rubber, petroleum and pig iron all being lower than they were on September 18th, while cotton and coffee have done no more than recover the ground which they lost immediately after the British suspension of gold payments.

Grain Prices.—The rise in the world price of grainstuffs, to which reference is made in the preceding note, had extended by the beginning of this week to all the five chief cereals; and though, as will be seen from the following table, a reaction occurred on Tuesday, prices show a general and substantial advance over the low level at which they stood at the end of last September :—

(NEAREST "FUTURE," CENTS PER BUSHEL.)

Date.	Wheat, No 2 Winter Chicago.	Maize, Chicago.	Oats, Chicago.	Rye, Chicago.	Barley, Winnipeg.
End Sept., 1929.....	128½	98½	52½	109½	73
End Sept., 1930.....	75	85½	36½	45½	29
End Sept., 1931.....	44½	36½	20	36½	29½
Nov. 9.....	66½	47	28	56½	43½
Nov. 10.....	63½	44½	26½	52	43½
Nov. 12.....	61½	42½	26½	49½	42½

The foregoing summary illustrates the extent of the lost ground which has to be made good before the level even of September, 1930, is restored (with the exception of rye, in whose case the European crop is estimated at about 150 million bushels less than that of 1931); but the recovery has already been of sufficient magnitude to ease appreciably the difficulties of agricultural communities, provided it can be maintained. The key to the situation is, of course, the production and consumption of wheat, to whose trend we referred in a Note on page 855 of the *Economist* last week. In amplification of that Note we give below a table summarising estimates of world production, exportable supplies, imports and stocks :—

(Million bushels.)

Season.	Production (excl. China).			Exportable Supplies		World Imports.	"Carry-over" at end of Season.	Price No. 2 Winter, Chicago (Cents per bush.)		
	World (excl. Russia).	Russia	Exporting Countries (a)	World (excl. Russia).	Russia			Lowest.	Highest.	Average.
1926-27	3,395	915	2,311	1,084	1,030	40	819	251	130½	153
1927-28	3,623	786	2,429	1,194	1,110	Nil	801	309	123½	168½
1928-29	3,936	794	2,712	1,224	1,420	Nil	886	536	98	143
1929-30	3,450	702	2,102	1,348	1,123	7	662	468	87½	136½
1930-31	3,712	1,084	2,517	1,195	1,242	108	804	546	50½	96½
1931-32(b)	3,540	...	2,300	1,240	1,165	75	880	360	...	...

(a) Canada, United States, Argentina, Australia, India, Bulgaria, Hungary, Rumania, Yugoslavia, Morocco and Tunis.
(b) Provisional estimates.

If the estimates for 1931-32 shown above are realised, there should be a sensible alleviation of the critical conditions of glut which have embarrassed farmers throughout the world, notwithstanding efforts such as those of the Canadian pools and the Federal Farm Board to hold stocks off the market during recent years. Making due allowance for the considerable estimated reduction of acreage sown

in Argentina and Australia, the "carry-over" figure of 360 million bushels, forecast for July 31st next, is not unmanageable. Nevertheless, visible supplies are still sufficiently voluminous in the case of wheat, as they are in the case of other commodities, such as rubber, metals and so forth, to suggest that any further early advance in price will probably be of only moderate dimensions.

South Africa and Gold.—A few weeks ago it appeared certain that South Africa would at all costs adhere to the gold standard, partly because she was naturally unwilling to take any action which might assist towards the general abandonment of the gold standard, and so to a decreased demand for the gold which is her major staple product, and partly because she has vivid memories of the post-war difficulties which finally involved her in the serious Rand labour troubles of 1922. Latterly, however, the pressure of events has brought her very near to the suspension of the gold standard. The depreciation of sterling, which was her chief link with foreign currencies, has forced her to try and establish a foreign exchange market of her own. Worse still, it has adversely affected her export trade and has exposed her industries to the pressure of competition from countries that have abandoned gold. A secondary, though more serious, consequence of these developments has been that there has arisen a marked loss of confidence in South Africa's financial stability, leading to a definite flight of capital. South Africa has, therefore, been forced to resort to emergency measures, some of which are of a make-shift character. Thus the banks are only providing foreign exchange for genuine trade purposes and are even refusing to negotiate clean bills. Even when foreign exchange is provided, the customer's demands are being severely rationed, and as a result of this a "black" or unofficial foreign exchange market is springing up in South Africa, while many exporters are refusing to repatriate the proceeds of their sales. In response to political pressure from industrial and agricultural interests the Government last month tried to neutralise the effects on South African trade of the depreciation of sterling and other currencies by imposing a primage duty of 5 per cent. on imports, and granting a 10 per cent. bounty on exports; but the interests concerned remain unsatisfied; and, meanwhile, the sequence of events is rapidly depleting South Africa's foreign exchange reserves. It is believed that up to the end of October the Reserve Bank had to sell over £13,000,000 of foreign exchange, and has also drawn heavily against credits opened in London against the recent Cape gold shipments which it has withheld from sale. More definite evidence of the difficulties of the situation is given by the revelation of South Africa's abortive efforts to raise a loan of £10,000,000 in Paris. In view of the trend of political feeling, coupled with her financial straits, it would not be surprising if South Africa had to abandon the gold standard at an early date.

The International Chamber and Silver.—A Committee of Experts appointed by the International Chamber of Commerce, and consisting of Mr E. L. Franklin, senior partner of Samuel Montagu and Company, Mr E. D. Van Walree, an Amsterdam banker, and Mr Marshal W. Tuthill, of Tuthill and Company, New York, has issued a very sane report on the silver question regarded from the international standpoint. The Committee recognises that any proposals in the direction of bi-metallicism or of the remonetisation of silver stand no chance of early application in practice, and that in the meantime there is ground for hope that the silver problem will have solved itself in a general adjustment of commodity prices. The Committee therefore concentrates upon measures which are immediately practicable and which neither depend upon nor conflict with any fundamental change in the monetary use of silver which may be agreed upon in the remote future. Firstly, the Committee recommends the Chamber to investigate the possibility of bringing the North American producers and refiners into a sales agreement with the Government of India. The report reviews this proposal and its mon-

obvious difficulties in some detail, but concludes that the latter are not insuperable, and that there is no reason why this proposal should not be tried immediately. Secondly, if it is true that a scarcity of gold is to be apprehended, it would not be impossible to alleviate this scarcity to a certain extent by the use of silver—a possible method of procedure being to issue notes of low denomination against silver backing. Thirdly, the Chamber might urge Governments to restore their subsidiary silver coinage to its pre-war fineness; and, fourthly, research should be undertaken by the silver interests for the purpose of devising new uses and expanding present uses of silver in the field of industry and the arts. The Committee notes that there would be a considerable increase in the industrial demand for silver were a satisfactory process discovered which would eliminate the tendency of silver to tarnish. This completes the Committee's recommendations. It will be seen that they are very properly confined within immediately practicable limits.

American Cotton Crop.—Our Manchester correspondent writes :—At the beginning of this week the United States Department of Agriculture published further statistics relating to the cotton crop for this season. The forecast of the yield was increased to 16,903,000 bales, the estimate of a month ago being 16,284,000 bales. The report was better than expected, and in trading circles there was considerable comment on the big yield per acre of 197.8 lb. It is now practically certain that the cotton crop in the United States for this season will be the second largest on record, and, as the carry-over from last season was 9,000,000 bales, prospective supplies for the current twelve months amount to the large total of 26,000,000 bales. The world consumption last season was rather less than 11,000,000 bales. It is anticipated that spinners' requirements will tend to increase, but the consumption for this year is likely to be less than 13,000,000 bales. So users have the advantage of two years' supply. The officials at Washington have also announced that, up to the end of October, 12,130,000 bales of cotton had been ginned, against 9,498,000 bales a fortnight earlier and 10,864,000 bales same time last year. It is stated that, except in scattered localities, weather conditions during the past month were practically ideal for picking, the temperatures being above average and rainfall light. These crop statistics were undoubtedly bearish, but the effect upon prices was practically nil. Operators have now discounted the big supplies and the loss or gain of 250,000 bales cannot make any difference in the general situation. Future values are more dependent upon indications of a bigger consumption and an improvement in world affairs.

Iron and Steel Production in October.—For the first time for six months the production figures for iron and steel just issued by the National Federation of Iron and Steel Manufacturers show an improvement. The number of blast furnaces in operation increased by four during the month to 86, the output of pig iron rose from 248,000 tons in September to 284,200 tons in October (an increase, allowing for the extra working day, of 10 per cent.), and of steel from 400,500 tons to 457,000 tons. Production is, however, still very much lower than it was twelve months ago, pig iron being 82 per cent. and steel 11 per cent. below the corresponding months last year. Imports of iron and steel in October amounted to 275,700 tons, an increase of 55,400 tons over September and also an increase of 11,200 tons compared with October, 1930. This is also the highest figure since December, 1930 (283,000 tons). Exports of iron and steel increased by 19,600 tons to 158,800 tons. While the depreciation of sterling reduces the price of British steel in foreign markets, where these countries have not themselves abandoned the gold standard, it does nothing to increase their purchasing power, and for any sustained and substantial revival the steel industry must await improved world conditions. Such improvement as has already taken place is, in the main, in those sections of

the trade manufacturing for more immediate consumption, such as the wire rope, light steel sheets and galvanised sheets, bright drawn bars, and so on. The heavier sections of the industry, such as those employed on shipbuilding and structural material, are not likely to experience much improvement until the great amount of idle tonnage is reduced and until sufficient confidence returns to justify extensions of plant, factories and other buildings.

Commercial Cars at Olympia.—Economic transport plays such a vital part in industrial distribution that the development of the commercial motor industry has a special significance. Market conditions governing the production of commercial vehicles are totally different from those applicable to the passenger branch of the industry; the part which public caprice plays in the private car trade is altogether absent from the commercial market; and distribution is fairly evenly divided over all twelve months of the year. The steadiness of the demand for new commercial vehicles is itself well maintained, as is indicated by the following table, which shows that new registrations of commercial vehicles have remained constant during the last three years, whereas the private car market has suffered severely :—

NEW REGISTRATIONS IN GREAT BRITAIN.

First Nine Months.	Private Cars.	Goods Vehicles.
1929.....	132,828	39,821
1930.....	120,967	38,676
1931.....	106,652	38,729

Constancy under such conditions as have prevailed during the last two years might well be considered marked progress. The Show held this week, writes a correspondent, has revealed the extent to which the adaptation of the heavy oil engine to motor transport has been proceeding beneath the surface. At the 1929 Show only two oil-driven models were exhibited, one a Swiss and one a German make. In the 1931 Show more than a dozen makers are offering oil engines as alternative to petrol in their established chassis, and there is hardly a British producer of the heavy-load lorry who has not developed an oil engine or who does not offer oil engines on the chassis he builds. One of the most interesting developments in this direction is the new Armstrong-Saurer combination. The Swiss Saurer Company is a pioneer of the oil engine, and has delivered 1,400 oil-consuming engines in all parts of the world; Armstrong-Whitworth have arranged to manufacture the Saurer engine in England; and, last summer, there was registered Armstrong-Saurer Commercial Vehicles, Limited, an Armstrong-Whitworth subsidiary in which Saurer have a minority holding in return for their patents. The faith placed in the oil development may be judged from the action of the other pioneer of oil engines, Mercedes-Benz, who have altogether abandoned the petrol engine for commercial vehicles. However, the prospects of this company in England have been somewhat damped by the exchange position, which has necessitated a 15 per cent. increase in prices. A foremost British manufacturer of the oil engine is L. Gardner and Sons, Limited, of Lancashire, who have over 200 oil engines in daily service, sixty of them on buses. Leyland, Thornycroft, A.E.C., Blackstone, Crossley, Fowler, Guy, Dennis and Richard Garrett are among the other British manufacturers who have developed oil engines. The advantages of the oil engine include a fuel consumption of about a third compared with that of a petrol engine; and with the cost of oil about a quarter of that of petrol, fuel costs are reduced to about 15 or 20 per cent. Furthermore, heavy oil is non-inflammable, an important advantage, including cheaper insurance rates. The obstacles in the way of development have been the greater weight and size of oil engines and the difficulties of servicing; the two former have been overcome, and oil and petrol engines are now interchangeable on models with a load above 6 tons. Further progress in this direction lies in the reduction of the present oil engine to a size and weight compatible with smaller classes of truck, and, finally, with the private car. The next step will be the 4-ton oil-driven truck, which Armstrong-Saurer are to announce early next year. The problem of servicing is more difficult; the petrol engine to-day is practically fool-

proof, and the driver has become, consequently, carefree in regard to the maintenance of his engine, but oil units are more or less an unknown quantity and will require expert attention. The initial extra cost of the oil engine averages £225, a figure which is soon recovered by the cheaper running, but £1,275 is about the lowest price at which an oil-engined chassis can to-day be obtained.

Shipping Freights.—Our index number of whole-cargo shipping freights rose in October by 9.4 per cent., the current figure, as will be seen from the following table, is now approximately at the same level as a year ago:—

AVERAGE 1898-1913=100.

	Average, 1913.	Oct. 1930.	Aug., 1931.	Sept. 1931.	Oct., 1931.
European Waters	110.0	91.1	80.6	82.5	90.8
North America	113.1	85.6	82.3	83.1	91.5
South America	123.4	93.3	88.3	86.3	89.6
India	106.3	101.3	88.4	86.1	97.6
Far East and Pacific	117.4	85.2	87.3	85.2	94.0
Australia	127.9	113.9	92.6	97.9	106.8
Total	116.3	95.1	86.6	86.9	95.0

Actual expansion of business during the past month was not great, though there was a somewhat more active inquiry for outward coal tonnage, particularly for European discharge, and, among the homeward markets, Argentine and Australian grain shippers chartered a fair number of vessels. Russian grain chartering was much reduced. Indeed, the rise in the index number must be regarded as a reflection primarily of the depreciation of sterling, since most of the freights which form the basis for the index are quoted in British currency, while the portion of vessels' running expenses which relates to foreign port dues and bunkers bought abroad has obviously been increased by the fall in the pound. Detailed movements of each section of the index are shown below:—

AVERAGE 1898-1913=100.

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home Trade	82.9	+ 7.2	South America—out-	67.3	...
Bay—outwards	110.1	+ 11.0	wards		
Bay—homewards	96.8	+ 12.9	South America		
Mediterranean—out-			homewards	111.8	+ 6.5
wards	80.7	+ 3.6	India—outwards	86.3	+ 4.2
Mediterranean—			India—homewards	109.0	+ 18.8
homewards	91.3	+ 7.6	Far East, &c.	94.0	+ 8.8
North America	91.5	+ 8.4	Australia	106.8	+ 8.9

Expressed as a percentage of the average for 1913, the total figure of our index number for October works out at 81.7, compared with 74.7 in September and 81.7 a year ago.

Italian Banking Reorganisation.—Further details of the changes affecting the Banca Commerciale Italiana, referred to in last week's *Economist*, have been forwarded by our Turin correspondent and will be found on a later page. For many years Italian banks have been faced, in their ordinary discount business, with the competition of the Central Bank, which in Italy, as in France, deals direct with the public, while, on the other hand, the Italian banks have had to follow the German precedent of granting long-term credits to industry, as there was no other way in which Italian industry could obtain the finance necessary for its development. Another unfavourable development, not unknown in the past history of Italian banking, was found in the sporadic attempts by industrial groups to obtain control over important banks by purchasing their shares in the open market in order to force such banks to grant them accommodation beyond the limits of sound banking practice. It was to frustrate such an attempt upon the Banca Commerciale Italiana that, eleven years ago, the "Consorzio Mobiliare Finanziario" was created, as a kind of trust company, to buy and hold a large quantity of the bank's shares and so to protect it from future assaults of this character. Until recently the Consorzio worked in alliance with a syndicate

of large shareholders of the bank, and it is to enable the Consorzio to take over the syndicate's shares that its capital is now being increased from lire 210 to lire 630 millions. Simultaneously an attempt is being made to free the Banca Commerciale Italiana from its incubus of frozen assets accumulated through no fault of its own during the stabilisation crisis of 1926 and the world crisis of the past two years. It is for this purpose that the Società Finanziaria Italiana has recently been created. This has a share capital of lire 300 millions, but as this will be insufficient to finance the absorption of the bank's frozen assets, a new semi-public body, similar to the Shipping Credit Institute, and the Credit Institutes for Public Utilities and Public Works, has been created, which will issue debentures to the public and use the proceeds to take over the frozen assets of the bank. The new institution, which is entitled L'Istituto Mobiliare Italiano, is to have a share capital of 500 million lire, with power to issue debentures up to ten times the amount of its capital. Where the object to be attained by a particular series of debentures is of exceptional interest, they may be guaranteed by the State. The Institute is to act as an investment trust, and in that capacity may issue shares representative of special groups of industrial shares. The object of this scheme is to overcome the reluctance of the average investor to buy industrial shares and debentures. The creation of an intermediary is the obvious solution to this difficulty, especially as savings banks, superannuation and pension funds are expected to absorb a large part of the new debentures. If in any given year the profits, after putting 20 per cent to reserve, are insufficient to distribute a 5 per cent. dividend, the Exchequer will make up the difference and be reimbursed out of the profits of subsequent years.

Sweden and the Gold Standard.—The quarterly report of the statistical department of Skandinaviska Kreditaktiebolaget contains a concise account of the circumstances which led up to the suspension of the gold standard by Sweden. Until the second half of 1930 Sweden appeared to be feeling the effects of the crisis less severely than other countries. From then onwards the export industries began to suffer, but home industry was fairly well maintained, and the purchasing power of the public remained at a sufficiently high level to enable imports to be continued on a very slightly diminished scale. This tendency was accentuated by an increasing influx of foreign capital, which continued even into the present year, and also by the fact that the Swedish price level was higher than the level of world prices. In consequence, whereas until recently Sweden had a favourable balance of payments averaging 150 million kronor a year, this surplus diminished to 100 millions in 1930, and may, according to Skandinaviska Kreditaktiebolaget, be replaced by a debit balance of between 100 and 200 million kronor this year. At the same time, the general distrust of banks, engendered by the international crisis, reacted severely on Sweden, and a steady withdrawal of foreign capital began early in the summer. This was intensified when Great Britain's abandonment of the gold standard led to a widespread anticipation that Sweden, whose biggest export market is Great Britain, would follow suit, and during the six days from September 21st-26th the Riksbank's stock of gold and foreign currency fell by about 70 million kronor. It was at that point that the Government decided to prohibit the export of gold and to exempt the Riksbank from its obligation to convert its notes into gold as from September 28th to the end of November. The Skandinaviska Kreditaktiebolaget stresses the fact that the Swedish economic situation is far sounder than at the time of the post-war crisis. The budget generally shows a surplus, and borrowing is so strictly confined to productive purposes that the revenue from State commercial undertakings, after deduction of that part of it which is deemed to fall under the head of taxation, exceeds the interest on the national debt, 85 per cent. of which is held internally. Moreover, the foreign investments of Sweden are believed to exceed her holdings of foreign capital. Doubt is, however, expressed in the article referred to whether the Swedish public will approve of an early re-

turn to the gold standard. The defects of the gold standard are clearly realised in Sweden, and at present an experiment is being made by the Riksbank on the lines of a "managed" currency, based on index numbers especially adapted for the purpose. The Kreditaktiebolaget is of the opinion that unless an international inquiry be held forthwith into the possibilities of perfecting the gold standard system, it may sooner or later be abandoned on a still wider scale.

Overseas Correspondence.

IRISH FREE STATE.

Public Finance — Electricity Supply — Tariffs —
Balance of Payments.

(FROM OUR CORRESPONDENT.)

November 7.

THE Irish Free State has escaped the worst consequences of the economic blizzard, but it has nevertheless not been totally unaffected by the abnormal conditions of the last few years. Owing to the shrinkage in the income tax on external investments and to a large decrease in the excise duty on beer, the budget estimate for the present financial year has not been realised, and a deficit of £900,000 is likely to be incurred. The Government proposes to make good half this deficit by means of further measures of economy, the details of which are still undisclosed, and to bridge the remainder by increases of taxation. The standard rate of income tax has been raised from 3s. to 3s. 6d. in the pound, and the duty on petrol has been raised by fourpence per gallon. These increases have been received by the public in a spirit of resignation.

In the same week in which income tax and the duty on petrol was raised the Electricity Supply Board decided to increase the rates charged for electric current by to amounts varying from ten to twenty-five per cent. The Board is bound by statute to fix charges so as to produce a revenue sufficient to cover all outgoings and to repay part of the capital cost of the Shannon scheme in the year 1933-4. No doubt, if the Board is held to its statutory obligations, the present increase of rates is necessary, but the opinion is widely held that the financial provisions of the scheme are ultra-conservative, and that the provisions for the repayment of capital expenditure are needlessly severe. Both in the matter of balancing the budget in the face of the world economic crisis and in that of paying for the construction of the Shannon scheme, the Government shows a regard for posterity that does not tend to endear them to the present generation. But it is the present generation, and not posterity, that will vote at next year's election.

One result of the return of the National Government in Great Britain is that everybody in the Free State anticipates the imposition of a tariff. In so far as Great Britain adopts a protective policy for food, the Free State is in a position to derive considerable advantage from Imperial preferential rates on dairy products. The more immediate reaction of a British tariff, however, is the possibility of large-scale dumping in the Free State of goods excluded from Great Britain. In order to deal with this emergency, there has been passed an Act giving to the Government, for a period of nine months, power to impose duties on articles which in their opinion are or may become the subject of such dumping. Duties so imposed must be ratified by the Dail within ten days, and may be referred to the Tariff Commission for a report as to whether they should be continued, varied or terminated. This emergency measure need cause no alarm to British manufacturers, as it is aimed solely at foreigners who find themselves unable to dispose of their stocks in the British markets.

The Tariff Commission has recommended, and the Dail has imposed, an import duty on oats of 2s. 6d. per hundredweight. This is the second agricultural import

duty in the Free State, the first being the duty on butter introduced last year. In view of the fact that the Free State normally produces an export of oats, it is difficult to understand how this duty will benefit farmers. It is probably justified on the ground that the "dumping" of quite small quantities of foreign oats in recent years has caused an undue fluctuation of the price of oats in the home market. The duty on oatmeal has been raised from 2s. 6d. to 6s. per hundredweight. In the case of both duties there is an Imperial preference of 33½ per cent.

The following table is an official estimate of the external balance of payments of the Free State in the year 1930:—

	(£000's.)	
	Exports.	Imports.
Merchandise	45,731	56,740
Bullion and coin	179	104
Invisible items	18,111	11,760
Total	64,021	68,604

The net balance of payments appears to be unfavourable according to this estimate. There is reason to believe, however, that some of the passive items has been over-valued, and that a number of items on the active side of the account have been omitted or under-valued. The best opinion in Dublin banking circles is that the net balance of payments is neutral, if not favourable.

FRANCE.

Budget — Public Works — Foreign Loans — Industry —
Railways — Prices — Unemployment — Bankruptcies.

(FROM OUR CORRESPONDENT.)

PARIS, November 11.

THE Chambers will re-assemble to-morrow for the last session in the life of the present legislature, which will be followed by the general elections for the Lower House towards the end of April. The Government programme includes three measures of outstanding importance, namely, (1) the Budget Bill, which this year will cover only the nine months from April 1st to the end of the year; (2) the project for putting into operation a further portion of the great programme of public works; and (3) the measure for re-organising the finance of the railways. Of these measures, only one, the public works project, is so far ready for consideration. The draft of the Budget Bill is to be distributed to-morrow, and is expected to occupy the Finance Commission of the Chamber until January 1st. The plan for refinancing the railways is still very far from definite form, and has to undergo recasting by the Government.

The new public works project has already been sent to the Finance Commission for consideration, and was yesterday the subject of an important sitting of the Commission, to which detailed explanations of the measure were given by the three Ministers most directly concerned, the Ministers for Finance (M. Flandin), the Budget (M. Pietri), and National Economics (M. Gignoux). M. Lamoureux, the Commission's "Reporter," explained that, for the purpose of financing the 3,000,000,000 francs of expenditure provided for by the scheme, the Government reserved the right to choose between four different methods—mobilisation of the annuities arising from reparation payments in kind, advances by the Caisse de Dépôts et Consignations (to which the savings bank and other surpluses are entrusted), advances from the Treasury, and a public bond issue. No provision has been made for financing the 1,500,000,000 francs of expenditure to be borne by the local and semi-public organisations. "The Government," the rapporteur declared, "demands on this point an absolutely free hand, and, in the circumstances, it would be difficult to refuse this." M. Flandin, referring to the proposed mobilisation of the annuities due to the State from industrials who have entered into contracts for the supply of materials under the system of reparations payments in kind, explained that this would take the form of a discounting of the maturing annuities by the Caisse de Dépôts. Finally, in the last resort, the Treasury would have the right, if necessary, to make an

issue of 30-year bonds, but for the moment the Government did not foreshadow such a direct resort to the public savings, though it desired to have the power to adopt that method. M. Flandin added that he has not given up the application of a policy of rente conversion should circumstances permit.

The Finance Minister and the Budget Minister were somewhat persistently heckled as to the accuracy of reports that advances from the Treasury had been made to certain foreign governments. M. Mandel was especially anxious to know what governments have benefited from such loans. M. Pietri indicated that among them were the Yugoslavian and Hungarian Governments. M. Flandin, in reply to questions, warmly defended the policy of the Government in making advances recently to certain great Paris banks which were in difficulties, and insisted that the Treasury in so doing had in no way exceeded its rights.

Industrial production index figures for September, which were issued last night by the Statistique Générale, indicate a drop of three points in the general figure for the nine great industries covered. This is returned as 118 (1913 = 100), against 137 for September, 1930, and means of 140 for 1930, 139 for 1929, and 127 for 1928. The smallest declines on the month are of one point each in extractive industries and building, the figure for the former being 105 (against means of 123, 123 and 117 in 1930, 1929 and 1928), and for the latter 120 (against 137, 122 and 97). The point lost by the building industry in September was recovered in October. Falls of two points are indicated in metallurgy (101), leather (102), paper (107) and textiles (63), which latter industry remains, as during the previous three years, the only one below pre-war levels. Mechanical industries stand at 132 for September, or three points lower on the month, against means of 157 for both 1930 and 1929. Rubber trades stood at 893, or five points down on the month, and also five points below the mean for 1930. The motor-car industry shows an exceptionally heavy drop of 17 points of 514, as compared with 600 for September, 1930, and means of 640 in 1930 and 657 in 1929.

Revised production figures for iron and steel in September show that the total output of pig iron was 654,000 tons, against 680,000 tons in August, 800,000 tons in September, 1930, and means of 841,000 tons, 864,000 tons and 832,000 tons in 1930, 1929 and 1928. Crude steel output in September was 656,000 tons, against 644,000 tons in August, 764,000 tons in September last year, and means of 783,000, 808,000 and 792,000 tons in 1930, 1929 and 1928 respectively. Coal production was 4,384,000 tons in October, against 4,154,000 tons in September and 4,603,000 in September, 1930.

Railway receipts in September (main lines) averaged 297,000,000 francs a day, against 289,000,000 francs in August, and 318,000,000 francs in September, 1930. The average number of trucks loaded daily was 54,220, against 51,720 in August and 60,220 in September, 1930. Merchant shipping in September totalled 4,856,000 tons of entries, against 5,251,000 tons in August and 4,607,000 tons in September, 1930, while outward bound shipping totalled 3,074,000 tons, against 5,704,000 tons in August and 4,869,000 tons in September, 1930.

The indices of wholesale and retail prices for October show a sharp drop on the month under both headings. The general figure for wholesale prices (1914 = 100) is 423 against 437 in September, 455 in August and 519 in October, 1930. The figure for wholesale prices of French products in October is 484, or 20 points lower on the month (against 581 in October, 1930), while that for imported goods is 314, or two points lower on the month, against 525 in October last year. The general figure for foodstuffs is 460, against 482 in September and 525 in October, 1930, and that for raw materials as 392, against 398 in September and 515 in October last year. The general (unweighted) figure representing retail prices in Paris of thirteen articles of common household necessity (July 1914 = 100) in October is 571, against 588 in the previous month and 637 in October, 1930. The cost of living for a Paris working-class family of four persons during the third quarter of the year, including food, heat-

ing, lighting, rent and clothing, is represented by an index figure of 565 (base, 1914 = 100), as compared with one of 581 throughout last year, 556 in 1929 and 519 in 1928.

Unemployment has substantially increased with the approach of winter, and there is some nervousness as to the figures that may be reached in the near future. The number in receipt of benefit at the end of October is returned as 56,121, as against 38,524 at the end of September, 36,000 in August, 988 in September, 1930, and means of 2,433 in 1930 and 909 in 1929. The number of applicants who failed to find jobs in September was 56,802, while 7,200 vacant jobs had to be left unfilled. The reports of some of the large stores for the financial year ending with last July or thereabouts show a substantial drop in profits. The number of bankruptcies and judicial liquidations during October rose to 1,005, as against 675 in September and means of 521,508 and 474 in 1930, 1929 and 1928 respectively.

GERMANY.

Chancellor's Speech — Home Politics — Osthilfe — Proposed Reduction of Interest Rates — Handelsgesellschaft Share Transaction.

(FROM OUR CORRESPONDENT.)

BERLIN, November 10.

At the meeting of the executive committee of the Centre Party last week, Dr. Brüning made an important pronouncement. He said: "I should like to make it quite clear that I have no intention of dispensing with Parliament for any length of time. Even the October crisis, which I anticipated, has had its advantages, for opportunity has been afforded for the airing of certain opinions, and the Government are in a much stronger position for the conduct of foreign politics than if they had postponed until November or December the decisions which they took in October. All we want is time, in case of necessity—and only in case of necessity—for it is impossible to carry out quickly these fresh tasks which are arising every day, while Parliament is sitting. No other object underlies this policy."

This makes clear the nature and purpose of the régime of emergency decrees: not a dictatorship in opposition to Parliament, but action by a parliamentary Government which has claimed extended powers on grounds of expediency but which continues nevertheless to recognise its responsibility to Parliament. The Chancellor's policy is certainly not free from mistakes, but the way in which he has repeatedly repudiated all attempts to abandon the path of democracy, and has prevented the connection with Parliament from being destroyed, bespeaks the true statesman.

The Chancellor has also thought it necessary to prepare the German public for the difficulties in store: "The year 1932 will be financially the worst, so far as the normal expenditure of the Reich, the States and the communities is concerned, for in that year the tax revenue will be based on the actual income of the crisis year 1931, so that even without reparations we shall not be able to avoid difficult and trying measures in every direction. I am telling you this now, quite openly, and I am saying it even at the moment when reparations discussions with other countries are in full swing. But in all these sacrifices it is important that the people should feel that perfect justice is being done, that the burdens and sacrifices are being fairly shared."

At the same conference, the President of the Centre Party, Dr. Kaas, spoke on home policy. Discussion has been going on for weeks as to whether Dr. Brüning and the Centre were now more inclined towards a coalition with the National Socialists than during last session, when the Centre Party announced at a critical moment that they would support no Government of the Right, whatever its complexion. Dr. Kaas has now declared: "I do not know that anything has occurred meanwhile which is calculated to alter or to diminish the grounds for that

decision." The position is thus stated unequivocally. The Centre will not open to Herr Hitler the "legal" path to power during the coming months, and without the Centre this path is inaccessible. Herr Hitler knows, however, as well as Dr. Brüning, that any attempt at illegal force is foredoomed to failure. Some organs of the Press are suggesting that Dr. Kaas' declaration is not to be regarded as the law of the Medes and Persians, and they are, of course, right. The Centre always attaches great importance to keeping its freedom of action, but just for that reason this announcement is of the greatest importance: Herr Kaas has established his party on as firm a foundation as its position and traditions allow, and the resentment expressed in the National Socialist Press shows that he has thereby disappointed the hopes of the Hitler Party.

The relief of the Eastern farmers, which was originally one of the principal points in the programme of the Brüning Cabinet, and is still a matter of great importance in domestic politics, has been endangered by the financial difficulties of the Government and by the collapse of the credit market. Hitherto this relief has consisted principally in the granting of cheap long-term credits to farmers in order to liquidate the short-term debts which they owed at high rates of interest. The funds available to the Reich for this purpose are now exceedingly limited and money cannot even be had from loans. Relief, must, therefore, be adapted to these limited means, and it is not yet clear how that is to be done. Important political changes have, however, already occurred. The Prussian Government, which inclines to the Left, has, so far, made great sacrifices for agrarian relief, although the burden of this relief has to be borne by the city populations who constitute the mass of the supporters of the parties of the Left. In doing this Prussia was aiming at a redistribution of the land of East Prussia, reducing the importance of large estates and combining the distribution of relief credits with the settlement of small and medium-sized holdings. The idea was to be sparing with credits to large holders, to acquire cheaply the land of those large holders who were heavily in debt, and to establish small or medium-sized farms on it. These plans were already encountering strong opposition from the agricultural sections of the population, who wished to maintain the existing distribution of land, and as the economic situation grows worse, the heavy expenses of settlement become harder to meet. At present relief, according to the ideas of the Prussian Government, is even more impossible to continue than relief on the old plan. Prussia grew, in consequence, thoroughly tired of participating in the "Osthilfe," which she has hitherto conducted jointly with the Reich, while Dr. Brüning was glad to be able to meet the Right Wing of his Coalition by getting rid of the influence of Prussia, which the Right has always regarded with suspicion. An agreement was, therefore, reached between the Chancellor and the Prussian Prime Minister that the "Osthilfe" should in future be the business of the Reich alone, and the President has made this agreement binding by two emergency decrees.

Serious anxiety is widely felt in economic circles in consequence of the Government's intention to submit to the Economic Advisory Council a plan for the compulsory reduction of interest rates. The proposal is associated with the "Osthilfe" problem, as a reduction of agricultural interest rates is first to be considered. It is felt that help must be given to agriculture by this means, since State assistance has to be so severely curtailed. A compulsory reduction of the rates paid by agricultural debtors would inevitably lead to a general legal reduction of all interest rates, and not even the Reichsbank discount rate would remain unaffected. Some supporters of compulsory reduction would even like to begin with the Reichsbank rate. If the rates paid by debtors are to be lowered, the credit rates of the banks will, of course, have here to be reduced; if mortgage interest is reduced, the interest on mortgage bonds will likewise have to come down. When this plan became known, the quotations for mortgage bonds in the transactions between banks which are at the moment acting as a partial substitute for the closed Stock Exchanges, fell sharply. The spread between 7 and 8 per

cent. mortgage bonds has also become very small, as it is anticipated that the difference will be wiped out by such legislation. The result of this uncertainty as to the future course of interest rates also seems to be involving Germany in an exchange loss, as German holders of rentes are trying to sell them and purchase foreign loans instead, on the sound assumption that the interest in German foreign loans will not be touched.

The proposals, however, are meeting with strong resistance. The mortgage banks have made a public announcement in which the following passage occurs: "The mortgage banks are convinced that in present conditions everything must be done to reduce the rate of interest. Nevertheless the mortgage banks, which have to take into consideration the present and future interests of credit on real property, can only issue a solemn warning against a possible interference with existing obligations by means of compulsory conversions. Such interference would have as its consequence a fresh destruction of confidence and of legal security, whose devastating effects cannot be estimated." The Reichsbank is also opposed to any compulsory intervention in the capital of credit market. It may be hoped that Dr. Brüning recognises the enormous danger of such interference and will speedily put an end to the uneasiness which has arisen.

Last Saturday it was officially announced that "in connection with the development of friendly relations between the Berliner Handelsgesellschaft and the banking house of MM. Warburg and Company, of Hamburg, a foreign group with the co-operation of MM. Warburg has acquired a parcel of Handelsgesellschaft shares." This brief communication leaves open more questions than it answers. It does not reveal the size of the parcel of shares which has been sold abroad, nor what group has acquired them, nor wherein the development of friendly relations between the Handelsgesellschaft and Warburg consists. For the last few weeks Handelsgesellschaft shares have been sold at rising prices, and it was clear that purchases were being steadily made, while other bank shares were weak. The proprietors of Handelsgesellschaft have held a parcel of shares since Stinnes' time, which were bought from Stinnes when he had to give up his attempt to get control of the Handelsgesellschaft. The Handelsgesellschaft, unlike other banks, appears, however, to have taken little, if any, action in support of its own shares. The shares which are now passing into foreign ownership may perhaps amount to between five and seven millions nominal value. The selling price is said to be over 90, while the unofficial quotation recently was down to 65. The purchases undoubtedly include the particular American friends of Warburg, but there appear also to be English and Dutch banks in the group. For the Handelsgesellschaft this means not only a much-desired relief, but an extraordinary triumph of prestige, at a time when the only desire abroad is to get rid of German shares, not to acquire them.

AUSTRIA.

Railway Deficit — Credit Difficulties — Possible Exchange and Anti-Profitteering Laws.

(FROM OUR CORRESPONDENT.)

VIENNA, November 9.

The Swiss adviser to the Federal Railways, Dr. Herold, has arrived in Vienna. He has had lengthy conferences with the Government and with the Federal Railways, and has pointed out the seriousness of the situation. It is true that this is nothing new, for the Government and the new general manager have already stated that the deficit of the Federal Railways threatens to assume staggering dimensions. The loss in cash for the year 1931 amounts to 42 million schillings, but the effective deficit amounts to 76 millions. After a reduction by the Ministry of Finance of 30 million schillings in the budget of the Federal Railways, the general manager still estimates it at 73 millions for 1932. At the same time it is reported that the increase in

* Later news from Berlin is to the effect that the proposal has been negatived by the Government.

rates is not bringing much increase in revenue. At the discussions, in which Dr. Herold took part, it was also decided to close down certain local lines which are not paying, and to make further reductions in staff.

Both the Federal Railways and the Government must persist rigorously in their economies, as it is becoming clearer and clearer that revenue from taxes and imports is declining. Though the rumours which are circulating are very extravagant, it cannot be denied that the seizures for arrears of taxes are becoming more numerous every day on account of the heavy indebtedness of the farmers. They have reached a formidable extent, and, at the same time, there is a growing resistance to the seizures, which often deprive the peasants of their last head of cattle. In view of this privation, the courts are proceeding considerably, and the collection of outstanding mortgages is also not now being carried out at so rapid a rate.

The mortgage institutes are not disposed to grant fresh credits. The credits they are giving very seldom exceed 10,000 schillings, and the interest demanded on first mortgages is 12 per cent. Private lenders are more accommodating, but when they lend rather large sums they demand that both capital and interest service be in terms of gold schillings. It also appears that the Central Savings Bank of the Municipality of Vienna no longer accords credits so freely. It granted large advances on the houses of the municipal housing scheme. It has also placed short-term loans at the disposal of a number of cities and towns, because it was hoped that these cities and towns would shortly be able to contract loans on long terms. An attempt is now being made to bring out a new type of mortgage, so that the Central Savings Bank may recover its resources and the public may furnish the necessary cash through the purchase of these mortgages. The other savings banks are resisting this course and pointing out that, even now, it is not easy to keep up the quotations of their issues. There is also the difficulty that before its crisis the Credit-Anstalt took over the mortgage department of the Bodeneredit-Anstalt and issued mortgages, which were offered to the public at 95 per cent. At present they can hardly be sold at 70 and 75 per cent. In anticipation of these mortgage loans from the Credit-Anstalt many people have had houses built and are now unable to get the loans from the Credit-Anstalt, and are finding difficulty in raising the means elsewhere.

Rumours have repeatedly arisen during the past week, and have been reflected in the tense financial and economic situation. It was said that the Ministerial Council and also the National Bank were contemplating the imposition of further restrictions in regard to foreign exchange. The surrender of foreign means of payment has not brought in the amount anticipated, which is comprehensible, because foreign means of payment deposited abroad have shrunk, and those people who have foreign values in most cases have large commitments abroad which they must take into their calculations. There was, therefore, talk of a law to enforce the reporting of foreign securities in the possession of Austrians and to enable the National Bank to acquire them after a certain fixed date. Energetic protests against this measure were made immediately, and it was pointed out that the public had suffered the greatest losses on the purely Austrian shares, so that, through the foreign currency decree and the possible enforced surrender of foreign shares, they would be deprived of their last assets. There was also a rumour that private gold and silver holdings would be requisitioned, and the immediate result was a drop in the price of gold traded in privately. There had been a rise from 4,700 to 6,300 schillings, because gold was being hoarded largely, and, in view of the foreign values decree, neither gold nor silver can be brought into the country for private use. Fear that gold thus requisitioned might be paid for at a lower price caused a fall. Further recourse to war-time methods is represented by a Bill now before Parliament by the Government which is directed against profiteering, and designed to provide the lower administrative authorities with extensive rights. In trade and industry it is feared that unnecessary vexations will result and will be all the more keenly felt, as prices are gradually rising as a consequence of the restriction of imports. Agriculture is

still enjoying special protection. Efforts are being made through legal channels to influence supply and price. The help which agriculture is thus afforded is certainly not undeserved, but trade and industry also appear to be in need of support, and, as they have not yet been granted subsidies, they are disposed to attribute the preferential treatment accorded to the farmers to the political influence of agriculture.

HUNGARY.

Political and Financial Uncertainty — Agriculture — Short-Term Loans and Banking.

(FROM OUR CORRESPONDENT.)

BUDAPEST, November 9.

COUNT KAROLYI, who valiantly assumed office amid the financial chaos of last August, and who, after presenting his Cabinet to Parliament, has governed by Decrees, will face a none too friendly House of Deputies this week, when the general discussion on the League Report begins. It is, however, not the Opposition which Count Károlyi has to fear, since they number scarcely 50 members, as against 200 supporters of the Government. The question is whether the Government's supporters will indulge in political intrigues which might break up the majority into several rival groups, as the local Press seems to believe.

The precarious situation of the Treasury and the National Bank and the economic distress of the country call for a stable and strong Government with a ruthless Finance Minister, who will lose no more time in balancing the budget and declaring a transfer moratorium on Hungary's foreign debts. The uncertainty which prevails at present is highly detrimental to the country. The politicians and the Press are speculating as to the intentions of the Government, and, as everybody knows that the present level of budgetary expenditure cannot be maintained in view of the falling revenue returns and the practically empty Treasury, further cuts in salaries and pensions are feared.

Agriculture is in a very bad state. Owing to the bad harvest, the available grain export surplus is much smaller than it was in 1929 and in 1930. It is estimated by reliable experts that the total wheat surplus available for export at present is not more than 3 million quintals. Although wheat and other cereal prices rose here in recent weeks in sympathy with the rise in the price level on the world markets, prices are still too low even to cover the cost of production. The wheat bounty will be discontinued, as the Treasury cannot bear the huge burden involved. Cattle prices have declined in Austria, Czechoslovakia and Italy, and their adverse effects will be plainly demonstrated by the falling off in the value of exports. Insolvencies are on the increase again on farms as well as among traders.

Commercial relations, which have never been satisfactory among the Succession States since the introduction of protective tariffs after the breaking up of the Austro-Hungarian monarchy, are at present worse than ever before. Although almost permanent negotiations are going on between Austria, Czechoslovakia and Hungary, the foreign exchange restrictions involving merchandise import restrictions have completely upset normal trade relations in Central Europe. The Prague Conference of the central banks, recently held under the auspices of the B.I.S., did not remove the difficulties.

Negotiations for a standstill agreement for all short-term loans are being conducted now by Baron Károlyi, a former Finance Minister, after the failure of several private bankers to attain a common agreement with the creditors. It must be realised by the foreign creditors that practically all the short-term loans placed in Hungary are "frozen," partly because they have been used instead of long-term loans for other than strictly commercial purposes, and partly because they constitute the working capital of the country, the withdrawal of which would upset the whole economic system. Some of the short-term creditors are apprehensive of discrimination by the

Hungarian authorities in favour of the long-term creditors by continuing payment of interest and sinking fund on long-term loans when short-term debtors are not allowed to transfer either interest or principal to their creditors. There is little doubt that such discrimination cannot continue, and the solution in all probability will be a general transfer suspension on all foreign debts, interest and principal, with the possible exemption of the interest service of the State Debt, which amounts to about 50 million pengő out of the total of nearly 800 million pengő which would be required for interest and sinking fund on all foreign debts at the rates ruling at present.

The commercial banks did not pay much attention to the League Report, which urged the publication of monthly balance sheets. Considering that no half-yearly balance sheets were issued, except by one big bank, it is highly desirable that the commercial banks should publish their quarterly balance sheets as for September 30th without further delay, since the public is surely entitled to know by the middle of November what has happened to the banks since the end of last year. Though the Bourse is still closed, private dealings in stocks are tolerated by the authorities, and quotations, in some cases, such as coal-mining shares, are higher than those ruling in July, when the Bourse was ordered to suspend dealings.

HOLLAND.

Improved Tone — Public Finance — Economies — Tariff — Gold Movements.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 11.

THERE has been some change in the general situation during the week past, in particular through the important advance in prices on the Rotterdam grain market and the firm sentiment on the Amsterdam Stock Exchange, as a result of which numerous securities advanced considerably. In consequence, there has been a general tendency to view the situation from a more optimistic standpoint, especially as the large number of German securities traded in at Amsterdam also registered considerable advances, in view, no doubt, of the Franco-German conversations and the possibility of a revision of the reparations debts.

Nevertheless, there were also several factors which indicated that the recovery was much more the result of technical market influences than of a genuine improvement in the general economic situation. Indeed, the further sharp drop in the sterling rate of exchange at Amsterdam proved that the necessary confidence and the so greatly desired stability of sterling have not yet been attained. To Dutch trade and industry, in particular, this is of vital importance, as England is Holland's best customer, and only third among the countries from which she imports, as the following table shows:—

	Imports.		Exports.	
	(Thousand guilders)			
	1930.	1931.	1930.	1931.
Germany	601,197	473,520	290,023	200,903
Belgium	199,627	149,808	138,416	128,350
England	178,378	119,412	294,490	248,442
America	163,544	113,738	38,920	24,063
France	85,549	59,633	101,360	90,380
Dutch E. Indies	71,116	56,609	112,135	72,296

The budget debates in the Second Chamber also provided distinct reminders of the existence of a serious crisis in the Netherlands. In particular, the troubles which the State and the municipalities are encountering in making their budgets balance are of a very serious nature, and are the cause of the present difficulties in securing sufficient short-term credits. In a memorandum in connection with the State budget, the Minister of Finance cited several figures relative to the probable development of the floating debt of the Netherlands, which once more emphasise how precarious the financial position of this country has become. To provide for the finances of the Dutch East Indies the State will have to raise in 1932 over 300

million guilders (last year 117 millions) as floating debt, without any prospect of being able to redeem it for the time being. The Dutch East Indies have a considerable deficit on the ordinary budget, both for 1931 and for 1932, and already now 141 millions of the 300 millions above referred to have been taken up. In addition, cash now has to be provided for the municipalities and local authorities, and it is evident that the Government may have to act as banker for some local authorities for a considerable time to come, and in that capacity will have to raise the funds itself. For the time being it is impossible to give even a rough idea of the amount involved. On top of this, there is the floating debt of the State itself, which will arise chiefly on account of capital outlays for 1932, and any deficit on the ordinary services of the 1932 budget. At the moment it is impossible to estimate the total figure with any pretence of accuracy, but it is not considered likely to be below 250 million guilders.

In view of this precarious situation of the State finances, it is no wonder that rumours have been circulated that there was to be a compulsory State loan, on the lines of those raised during the war. These rumours, however, were emphatically contradicted by the authorities.

The Government have recently introduced into Parliament two Bills which show how seriously they are taking in hand the stability of the guilder. This has become so urgently necessary now that it is certain that the State will have to call upon the money market next year for subscriptions to large amounts of Treasury bonds. This will only be possible, without endangering the guilder, if confidence is felt that the Government has left no stone unturned in its endeavours to reduce official expenditure and the general standard of living. Both Bills aim at assisting the local authorities in this respect. The first Bill is to empower the Government to reduce the grants to local authorities by 3 per cent. of the amount paid this year for wages and salaries, to be in force for three years, the period of the reduction in State salaries. This involves a saving of 1,400,000 guilders to the State, but that is of secondary importance; the principal thing is that the State thereby compels the local authorities to adopt a more rational financial policy. The same object is aimed at in the other Bill, which regulates the provision, to local authorities unable to finance their requirements of ready cash, of an advance from the Exchequer or a guarantee covering an advance by a third party, provided the local authority undertakes to abide by the conditions upon which the Minister is prepared to grant this assistance. Those conditions will, naturally, refer to measures for economy. By means of these conditions the Government is easily enabled to dictate the reduction of extravagant municipal expenditure. It is, in fact, considered absurd that in these times the local authorities continue to pay higher salaries and wages than, for instance, the State.

Nevertheless, it hardly seems likely that the conversion of the 6 per cent. State loan 1922 (300 million guilders) which is proposed for the spring of 1932 will be made possible by these measures. This alone would cost the State 2½ million guilders more for interest in 1932 than was allowed for in the budget. In connection with the proposed all-round increase in the import duties from 8 to 10 per cent., the Government announce that the measure is of a purely fiscal nature and that they are not in favour of a further increase to 12 per cent. in the general tariff. The increased duties are to apply to all goods imported from January 1, 1932, onwards, whether they were invoiced before that date or not.

The flow of gold to the Netherlands still continues. On November 2nd the stock of gold of the Netherlands Bank amounted to no less than 856 million guilders, as compared with 385 millions a year ago. At the same time the circulation of bank notes surpassed the 1,000,000,000 guilder mark for the first time, amounting to 1,092,000,000 guilders. In addition to the gold stock, the Netherlands Bank still retains a holding of foreign bills to a total of over 89 million guilders, but these are undoubtedly sterling bills, which for the present are to be regarded as frozen bill assets, in view of the depreciation of sterling.

ITALY.

Banking Changes — A New Body.

(FROM OUR CORRESPONDENT.)

TURIN, November 9.

THE great event of the week was the Banca Commerciale Italiana arrangement, which was officially announced on Tuesday night. Italian banking traditions partake at the same time of the French and German systems. As in France, the bank of issue is not only the bankers' bank, but deals directly with the public, and is, therefore, a direct competitor of ordinary banks. This is largely explained by the fact that the banks of issue were founded in the 'fifties, when ordinary banking was very little developed. When, afterwards, commercial banks arose they thus found themselves deprived of a part of the ordinary discount business, in which their deposits would have found their most obvious outlet. On the other hand, there do not exist, except for loans on land and houses, special organisations for making permanent advances to industry. Great industries, such as textiles, iron and steel, navigation and electricity, could not be created had they not found in the banks a permanent aid. Credit to industry is, according to the German model, fatally tied up for a more or less long period of time. In the past, banks have come to grief because they have overstepped the limits of prudence in apportioning deposits between short discounts and advances and long investments. Sometimes these limits were exceeded because the bank was in the power of the industries which were its customers. The most famous instance was the Banca Italiana di Sconto, which failed in 1921 because it became the prey of the Ansaldo group.

In 1918 an attempt was made on the part of certain industrial groups to get control of the Banca Commerciale and of the Credito Italiano; and the struggle between the Perrone-Ansaldo group and a group of friends of the B.C.I. (the Gruppo Marsaglia) ended in the victory of the latter. In March, 1920, the assault on the B.C.I. was repeated on a bigger scale. The Perrone-Ansaldo group, in the endeavour to get hold of a majority of the capital shares of the B.C.I., pushed the price of the shares in a few days from 1,255 to 2,450 lire. For the second time the attempt failed. Then the "Consorzio Mobiliare Finanziario" was created, which bought all shares sold by the discomfited Perrone-Ansaldo group and subsequently worked in alliance with a financial syndicate of supporters and large shareholders of the B.C.I., so as to secure the bank against future attempts by industrial and commercial customers to capture the bank and its deposits. During the period from 1920 to 1931 this syndicate acquired, so it appears, a large amount of B.C.I. shares.

The present arrangement aims, firstly, at consolidating this long-drawn-out development. The "Consorzio Mobiliare Finanziario" is to increase its capital from 210 to 630 million lire; the fresh capital, the subscription of which is already guaranteed from sources outside the bank, being devoted to buying the "syndicate" B.C.I. shares. Thus, the majority of the capital shares of the B.C.I. will become the definite property of the Consorzio; and the shareholders of the Consorzio (directors of the bank, financiers, stockbrokers and other supporters of the B.C.I.) will constitute in their turn a syndicate which shall keep in safe hands the shares of the Consorzio and guarantee the B.C.I. against any possible inroad. In 1930 a similar arrangement was arrived at for the Credito Italiano.

Now comes the second part of the arrangement. War and inflation influenced the B.C.I., as all other banks. Probably the frozen credits and investments might have been disposed of if the stabilisation of the lira at a level about 25 per cent. lower than the average level current from 1921 to 1926 and the subsequent deflation policy of the Bank of Italy—the notes issued were reduced from 17,992.2 at the end of 1927 to 14,441 at the end of October, 1931—had not made customers of the B.C.I. desirous of further aid. The world crisis, coming on the top of the deflation crisis, made it well-nigh impossible to float industrial shares on the internal markets and closed the American market to issues of debentures. It is to the

credit of the B.C.I. managers that they were able to avoid increasing their discounts and advances during these trying years. Discounts were 4,149.5 million lire at the end of 1924, as against 4,075.8 at June 30, 1931, and loans against collateral were 688.5 and 683.8 million respectively. Investments and "partnerships" rose, however, during the same period from 571.9 to 1,382.7 million, and sums due by correspondents from 1,670.8 to 3,268.2 million lire. It is no wonder that in these assets there should be some measure of frozen investments. Under an energetic guidance these assets may in the end prove to be good; but it will take some years of organisation and abstinence from dividends to come through the ordeal.

Provision has to be made in the meantime for frozen credits and assets at present unsaleable. The amount of these non-banking assets can only be guessed. On the basis of the difference between the present and the 1924 figures of the above-quoted items, we may reach a figure of roughly 2,000 million lire, mainly holdings in and debts by iron and steel, chemical, naval and shipping industries. Whatever the total sum, the entire block will be sold to a new body, called the Società Finanziaria Italiana, with a share capital of 300 million lire. The sale will be made at a price involving no loss for the B.C.I. Shareholders of the new Società are to bear the whole risk of the operation. It is hoped that no loss will ultimately be incurred, inasmuch as the new body will have plenty of time to liquidate. Of course, the new Società Finanziaria will not be able to pay for the whole of the frozen assets purchased, which amount to some 2,000 millions, out of its own 300 millions capital. A new semi-public body, on the pattern of the existent Credit Institutes for Public Utilities and Public Works, or the Shipping Credit Institute, is to be created, which will issue debentures on a large scale. The arrangement thus aims at transforming banking assets not quickly disposed of to a public which is not to-day in the mood for purchasing large amounts of industrial shares into debentures issued by a semi-public body, which should be bought more easily by the saving public. Everybody recognises the difficulty of selling debentures directly to a saving public, which in Italy, as in other countries, is very shy of "new" securities, albeit buying voraciously "old" securities like Treasury bonds, railway debentures, mortgage, land and houses bonds, etc. The new debentures now under consideration, as those of other semi-public credit institutes, will find an outlet in savings banks and other superannuation and pension funds, which have a regular source of revenue from new savings and premiums, and can easily, by disposing of old securities, absorb large quantities of them.

The general conclusions which may be drawn from these far-reaching events are manifold. In the first place, no recourse will be had to the printing of notes, and the stability of the lira will not be impaired. Secondly, the Banca Commerciale will recover its full freedom of movement and, freed from the incumbrances of the past, reassert its hardly and ably won supremacy in the field of commercial banking. Thirdly, these recent events make imperative the study of a re-arrangement of the various inter-related banking agencies. They consist at present of (1) several thousand small and medium-sized private, popular, savings and rural banks with a limited field of action. A country where agriculturists and small industrialists and traders number millions cannot well do without these small banks, provided they are well managed. A supervision such as that exercised by the Bank of Italy is all that is needed. (2) A small group of commercial banks, at the head of which are the Banca Commerciale Italiana and the Credito Italiano. (3) A small group of powerful semi-public banks and savings banks, such as the Bank of Naples, the Bank of Sicily, the Lombard Savings Bank, the Turin Savings Bank, etc. (4) A few public institutions for the granting of credit to public utilities, public works, naval concerns, including the new Institute for Industries. (5) The Institute of Liquidation, a creation of the Bank of Italy, whose business is the winding up of 1,500 millions of old and new frozen assets from 1921 to 1930. (6) A few investment trusts, the outstanding instance of which is the Meridional Railways Company. (7) A big State bank, the Cassa Depositi e Prestiti, which centralises the deposits, about 14,000

million lire, of the postal savings banks. (8) The Bank of Italy.

Between these various banking types some sort of division of labour already exists. The short commercial credit in the usual English sense should be the appanage of groups 1 and 2; the long-term credit to industries, trade and agriculture is in principle the privilege of groups 3, 4 and 5, which also, together with the Cassa Depositi e Prestiti, finance public bodies. If these lines of division were more strictly observed, if new investment trusts, run independently of the banks, were created, and if, finally, the Bank of Italy, renouncing its old ordinary banking functions, were to remain only a central bankers' bank, our banking system would work very well. The Banca Commerciale arrangements, as well as those for the Credito Italiano last year, make for progress on these lines, but such a development cannot be completed if a market is not created for fixed-interest bonds and debentures. At present, such a market exists only for State securities, land and houses mortgage bonds, some old railways and local public bonds. The industrial bond market is practically non-existent, and industrial bonds are perforce kept in the coffers of some of the above-mentioned banking groups (2 to 6, with some occasional transfer from group 2 to the others). Of course, such a development cannot be perfected at a time of crisis, but a cautious beginning could be made, taking advantage of the keen public demand for fixed-interest, well-secured bonds. The Lombard Savings Bank mortgage bonds are negotiated, even in these days of dear money, at a yield of about 5 per cent., and other similar industrial mortgage bonds could be equally good sellers, if only purchasers were sure of the possibility of re-selling them in case of necessity.

POLAND.

Parliament — Unemployment Relief — Budget — Export Subsidies — Bank of Poland — Foreign Trade.

(FROM OUR CORRESPONDENT.)

WARSAW, November 7.

THE Budgetary session of the Sejm began at the beginning of October, with no specific programme other than to approve the estimates for the Budget year beginning April 1, 1932, and to vote new taxes with the object of increasing revenue during the present fiscal year and for aiding the unemployed. It has been decided in the latter connection to try to collect tax arrears from farmers—otherwise uncollectable—in the form of produce for direct distribution to the needy this winter. Such a scheme, however, will, no doubt, meet with considerable difficulties at the source. Other measures voted or proposed for the purposes indicated are supplementary taxes on certain classes of income, on railway and cinema tickets, higher postal rates, etc. With the Opposition "gagged" and intimidated, the Government party has complete control over the legislatures; so much so, in fact, that the Opposition groups talk of abandoning the Sejm entirely.

The number of registered unemployed (agricultural workers, comprising the bulk of the population of Poland, are not included) now exceeds 250,000, and will, no doubt, increase steadily during the winter. Distress among the unemployed is very acute, and, while the public authorities are doing all that can reasonably be expected of them with the limited means at their command, the problem will probably become one of increasing intensity as the winter progresses, and may have unpleasant political repercussions.

The preliminary Budget for 1932-33 submitted to the Sejm estimates income at 2,375 million zlotys, and expenditure at 2,452 millions. The present year's Budget, as originally voted, estimated income at 2,865 million zlotys and expenditure at 2,851 millions. It is unusual for the estimates to show a deficit, and the deficit in those now before the Sejm is, no doubt, due to the anticipation by the Government that it will be more than met by the extension after June 30, 1932, of the moratorium on war and relief debts. Poland benefits in this connection to the

extent of more than 100 million zlotys per annum. The actual deficit for the first half of the present fiscal year is shown to be about 120 million zlotys, with the possibility that the payment of substantial sums already due has been deferred. An encouraging feature, however, is that the monthly deficits are now diminishing, owing to the very severe contraction which is taking place in expenditure. It is very improbable, however, that Budget revenue this year will exceed 2,000 million zlotys, and the Minister of Finance appears to be unwarrantably optimistic in anticipating next year's income at 2,375 millions.

A considerable drag on the national economy is the large amount now being spent on the subsidising of exports. An authoritative German periodical recently stated that direct export subsidies this year would cost Poland 200 million zlotys (140 millions for export bounties and 60 millions in railway freight subsidies), and that indirect subsidies in the form of high domestic prices to off-set unprofitable export business means that Poland's export trade this year will be subsidised to a total of some 500 million zlotys. The German authority referred to, consequently, charges Poland with "dumping" on a scale comparable with Soviet Russia; but the Poles readily answer the charge by claiming that, like Soviet Russia, they must export in order to obtain foreign exchange for debt charges and necessary imports, and that they are in precisely the same position as Germany and other countries in this respect. It is largely for this reason that, no matter how greatly British coal competition in export markets is intensified in consequence of the depreciation of the pound, Polish coal exports will not be allowed to diminish. If ultimately British competition cannot be met in any other way, Poland herself will, no doubt, go off the gold standard. She may, in fact, be forced off because of the determination to maintain coal, timber, farm produce and other exports, the returns on which have been greatly diminished because of the abandonment of the gold standard by Great Britain, Sweden, Denmark, Finland, etc.

The Bank of Poland during the past month has added a few million zlotys to its actual gold reserve through the sale of foreign *devisen*. There continues to be a steady net loss of gold cover, but the actual gold reserve against outstanding currency exceeds 40 per cent., and it is clearly the determination of the authorities to gather in as much metal as possible. For a long time the Bank of Poland has had to meet an insistent demand for dollar banknotes, of which there is believed to be a considerable hoard in this country, but this demand has recently been sharply checked by lowering the selling price of dollar notes. They were even quoted at a discount of about 5 per cent. for a few days in the middle of October, and this "scare" brought back to the banks a considerable flow of dollars which in the preceding weeks had been sold to the public at a good premium over the cable transfer rate. Poland is one of the very few remaining countries in Europe which have not yet found it necessary to impose official restrictions of any kind on the purchase and sale of foreign exchange.

The following figures show the great contraction which has taken place in Poland's foreign trade:—

(Thousands of Zlotys.)			
January 1st to September 30th.	Imports.	Exports.	Balance.
1929	2,398,823	2,043,002	-355,821
1930	1,721,007	1,846,216	+125,209
1931	1,155,134	1,446,297	+291,163

With a large part of imports representing the necessary raw materials of industry (cotton, wool, ores, copper, etc.) it will be better realised what a drastic decline has taken place in imports of manufactured goods that are not vitally necessary. The further curtailment in the value of Polish exports (coal, agricultural products, textile goods, timber, etc.) which will inevitably result from currency depreciation in other countries, and the additional import restrictions of other European countries still nominally on the gold standard, clearly indicate that Poland will have to restrict her imports still further this winter. If the world's statesmen were deliberately intent upon the complete abolition of foreign trade, they could hardly be succeeding better.

SPAIN.

British Elections — Reduction in Civil Service —
Proposed Presidency — Bank Legislation — State
Mercury Mines.

(FROM OUR CORRESPONDENT.)

MADRID, November 6.

The results of the elections in England were followed with keen interest in Spain, not only for their significance locally, but for their possible effect on Spanish politics. The Socialists make light of such an eventuality, but the fact remains that election results in England have put heart into the Conservatives over here, and, should they be able to sink their minor differences and reach a semblance of cohesion, a political swing to the right is deemed quite possible in the near future.

Señor Azaña, the new Prime Minister and Minister for War, threw another bombshell in the form of a decree which called for an all-round reduction of the number of civil servants by 50 per cent. The procedure was to have been similar to that which reduced the numbers of army officers, but so great was the outcry caused by the announcement that the other members of the Government induced the Prime Minister to withdraw the decree, for the time being at least. Señor Azaña, who was quite unknown before the advent of the Republic, has made his personality felt, and, however unpopular some of the measures taken by him may be, he inspires considerable respect all round. The statement that he was prepared to apply to disgruntled civil servants the full vigour of the recent law of the Defence of the Republic was known to be no idle threat, and only the imminence of a crisis within the Cabinet forced him to withdraw the unpopular decree. Thus the strong man of the Government, who had previously effected a wholesale reduction of army officers, a thing the Dictator, Primo de Rivera, had been unable to accomplish, was frustrated in his attempt to apply the same principle to governmental bureaucracy.

The Government made a formal visit *en bloc* to Señor Alcalá Zamora with the object of offering him the Presidency of the Spanish Republic, although the ex-Prime Minister is notoriously opposed to certain clauses of the new Constitution, especially to Article 34, which deals with the religious question. Señor Alcalá Zamora has asked for time so that he may consult his political friends, but it is thought that his reply will be in the affirmative and that his acceptance of the honour will tend to smooth over some of the difficulties which threaten in connection with Article 34. The period of office of the President of the Republic will be six years, and his functions similar to those of the President of the French Republic.

A project for a law modifying the privileges and organisation of the Bank of Spain has met with considerable opposition on the part of the board and the shareholders of that institution. The Minister of Finance, in presenting the project, stated that he considered it unjust that the profits of the national banking institution should increase in inverse ratio to the degree of prosperity of the country. He proposes to establish a closer State control by means of three directors nominated by the Government and a permanent inspection department consisting of a maximum of ten inspectors taken from the Ministry of Finance. The expenses of the latter department are to be paid by the Bank of Spain. The conditions governing the intervention of the bank in the exchange market to support the peseta are also to be modified in the sense that the bank and the Treasury will henceforth share both profits and losses. Up to the present any losses incurred in this connection have been borne mainly by the Treasury. The committee governing exchange operations will, if the project becomes law, be constituted as follows:—The Governor of the Bank of Spain as chairman, a director of the same bank in representation of the shareholders, a representative of private banking interests, a member named by the Congress and one nominated by the Cabinet on the recommendation of the Minister of Finance. The law will give the Minister of Finance authority to modify the official discount rate of the bank during a period of

instability of foreign exchanges or when he considers such a measure necessary to protect the economic interests of the country. Participation by the State in the profits of the Bank of Spain derived from any increase in the note circulation is provided for by a sliding scale of taxes based on the relation of the bank's reserves (gold and silver) to the note circulation and to the minimum legal reserve. Provision is also made for the eventuality of the gold standard being introduced into Spain, in which case the gold reserves of the Bank of Spain will be revalued, and any excess value of such gold over 3,444.44 pesetas a kilo appropriated by the State. At an extraordinary meeting of the shareholders of the Bank of Spain, held on November 1st, the board were specially empowered to take any measure they might deem convenient for the protection of the interests threatened by the new law.

The Government is considering a suggestion which has been made with a view to covering a part of the budgetary deficit, that is, by selling or mortgaging the State-owned mercury mines of Almaden. As, however, one of the clauses of the newly-voted constitution states that any national property may be socialised at any time with or without indemnity, it is doubtful whether a buyer or mortgagor could be found for that valuable property. A further suggestion was made to the effect that the stock of mercury in Almaden, estimated at 100,000 bottles, should be deposited abroad, instead of gold, against a loan of £1,000,000.

The time limit for the stamping of bank notes by the Bank of Spain has been extended until December 10th next. On and after November 15th the bank will issue stamped notes only. These have been no radical improvement in the position of the Stock Exchange during the past month, and on balance quotations are still lower in spite of official intervention.

CANADA.

Gold Export Restrictions — St. Lawrence Waterway —
The Dumping Duties — The Railway Problem —
Business Conditions.

(FROM OUR CORRESPONDENT.)

Ottawa, October 21.

EVER since the Canadian dollar followed the pound downward in New York the Bennett Ministry has been struggling with the financial problems created by the new situation. Both the Finance Department and the banks found themselves faced with continual demands for gold from interests which had obligations to liquidate in New York. If the claimants did not respond to an appeal to their patriotism, their requests were politely refused, but the position was unsatisfactory, as there was no legal authority for refusing gold. The Bennett Government has now cured this situation by an Order-in-Council which prohibits the export of gold from Canada, except under a licence issued by the Minister of Finance. It is provided that such a licence will only be granted to a Canadian chartered bank, and anyone without a licence who attempts to export or carry out of Canada gold coin, gold bullion or fine gold bars, will be liable, upon summary conviction, to penalties of not more than 100 thousand dollars fine or three years' imprisonment. The Order-in-Council states that the Canadian Government and certain Provinces and municipalities have incurred obligations payable in gold outside Canada, particularly in the United States; and that the Minister of Finance is of the opinion that Canada should take reasonable precautions to ensure the discharge of such obligations in accordance with the terms of contracts, and make provision for Canadian trade to be maintained with a credit structure based on notes of the Dominion, backed by the security of the gold holdings stipulated by statute.

In passing the Order-in-Council, the Government invokes the authority conferred upon it last session to take any steps deemed necessary for the maintenance of peace, order and good government, and unless amended or rescinded, the Order will remain in force until March 1,

1932. It is understood that the total obligations of the Canadian Government and private corporations, which mature in New York before March 1st, are in excess of 190 million dollars, and at the present rate of exchange a burdensome premium of about 20 million dollars would be involved in meeting them. The Government is aiming, as far as possible, at conserving the gold resources of the country and intends to reinforce them by buying the whole gold output of Canadian mines, which now amounts to roughly one million dollars per week. But it is obvious that all Canadian obligations in New York cannot be paid in gold and it is highly desirable that the exchange situation should be righted as soon as possible.

The announcement recently made to the effect that the Canadian and American Governments were ready to negotiate a treaty for the early construction of the St. Lawrence Waterway has produced a suspicion that a deal has been made whereby Canada, in return for her co-operation in the immediate construction of a waterway, will be accommodated with a substantial gold credit in New York. Partly for political reasons and partly for the purpose of helping the unemployed, the Hoover Administration is more anxious than ever to proceed with the waterway and, if forecasts are correct, has made a decidedly generous offer to assume the cost of constructing the international section. But the news of the negotiations has been very coldly received in Quebec and protests have been forthcoming both from Premier Taschereau, the *Montreal Gazette* and other quarters. The general attitude of the Canadian people is that they are awaiting the disclosure of the terms of the treaty before giving their benediction to it.

The Bennett Administration is also encountering vigorous and varied opposition to its new dumping duties. Not only has Mr Mackenzie King subjected them to a critical analysis, and the Liberal papers of the country added their protests, but an equally hostile attitude has been taken by Conservative papers such as the *Ottawa Journal* and the *Calgary Herald*. The *Ottawa Journal* argues that the new regulations constitute a misapplication of the dumping duties and that they are an unfair blow at Great Britain, inasmuch as they are a bad example to other nations and promise to impair whatever value the depreciation of the pound might have had as a stimulus to Britain's export trade. The *Calgary Herald* cites data to prove how the British market for Canadian products has been expanding in recent months and thinks that the dumping duties are a poor form of requital. The *Manitoba Free Press* observes that the new duties amount to an assertion that, come what may, British goods will not be allowed to enter Canada to compete with home-made articles. It declares that Canada is in the throes of the exclusionist mania which has afflicted so many of Britain's customers and has been the prime factor in the depreciation of the pound.

The Minister of Railways has announced that the Government contemplates the appointment at an early date of a Royal Commission, which shall be entrusted with the investigation of the railway situation, with correlated problems connected with the highways and waterways, and to make recommendations which will effect economies in Canada's transportation Bill. Semi-official forecasts also indicate that the Government is considering the abandonment of most of the services now conducted by the State-owned Mercantile Marine. It is examining tenders made by private shipping companies for services to South America, New Zealand and Australia, but it is reported that the subsidies which they at present demand are in the aggregate not less than the annual deficit of the governmental marine. If, however, the shipping companies pare down their subsidy demands, their offer might be accepted. But in any event there is no intention of interfering with the passenger service now conducted by the State-owned "Lady" boats to the West Indies, as Canada is obliged by the terms of her trade agreement with the British West Indies and the Colonies to maintain it until 1938.

There are some remnants of the grain harvest to be cleaned up in Alberta, as threshing operations have been

delayed by rain, but throughout the rest of the Dominion the crops have been safely gathered. On the whole the crops of Eastern Canada are fairly satisfactory, with at least an average yield in most lines, and the fruit crops have been exceptionally good. In the West all the pessimistic forecasts have been fulfilled; but, fortunately, there has been an abundance of moisture in recent months, and the fodder situation there has been greatly ameliorated.

There is, however, no sign of any real improvement in business, and wholesale houses report that merchants are just buying from hand to mouth and placing very small orders. Retailers, too, state that, in spite of the stimulation of low-priced sales, their volume of business is substantially lower than it was a year ago. Really cold weather has not yet arrived to give a stimulus to the sale of furs and warm winter clothing. However, the car-loading figure for the week ending October 10th, placed at 58,158 cars, shows for the second week in succession an increase (2,125 cars) over its predecessor, but it is still 13,093 cars below the figure for the corresponding week of 1930. Unemployment remains a very serious problem in all the larger centres, but the public works programme which the Government and municipalities are undertaking is getting under way, and single unemployed men are being drafted out to construction camps in Northern Ontario.

During the past fortnight the financial world has been somewhat disturbed by the failure of a series of brokerage houses, including MacDougalls and Cowans and Green-shields, both of Montreal. Their failure is attributed to the calling of funds by American tender; but, although the liabilities are heavy, the aggregate loss to clients will probably not be severe.

The trade returns for September, as shown below, are again disappointing:—

	September, 1931.	September, 1930.
Exports	\$ 48,991,385	\$ 81,046,227
Imports	45,372,057	87,900,201

The principal item of export was wheat (14,335,637 bushels), but it was little more than half the 27,817,058 bushels exported in September, 1930.

For the first half of the fiscal year (*i.e.*, to September 30th) the comparative trade figures are as follows:—

	1931.	1930.
Exports	\$ 295,516,898	\$ 433,451,938
Imports	318,214,678	514,848,067

The federal revenues also continue to show a disconcerting shrinkage. Collections for the Department of Revenue for the month of September totalled \$18,413,732, a decrease of \$2,633,547 as compared with September, 1930; while an increase of \$2,744,000 in excise taxes was more than offset by declines of \$3,801,782 in customs duties and \$155,099 in excise duties.

Letters to the Editor.

THE LEAGUE AND HUNGARY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I should not normally think it the function of any particular member of the League of Nations' financial committee to take upon himself the duty of commenting on views expressed by the committee as a whole, but as I happen to be the only English member of the committee who was able to attend the recent discussions in Budapest, I do not think I can let the last paragraph of your article on "The League and Hungary" pass without a mild protest. I do not know why you attribute to the committee the view "that the problem of liquidating international indebtedness can be furthered by any and every country pursuing with sufficient vigour the self-contradictory aim of exports without imports." If you look again at what the committee's report actually said, you will not find anything to suggest that my colleagues hold any such views. The duty of the committee was to consider not economic generalities but an individual practical problem, though the committee were fully conscious (and, indeed, say

as much) that that problem can only receive a complete solution in connection with much wider world issues to which Hungary itself can contribute little. What Hungary and those who advise her have, as it seems to me, to consider is not a world policy of general application but precisely what is that little which Hungary herself can contribute. In so doing, it is impossible to overlook the fact that a substantial part of Hungary's normal imports, which her exports must balance, takes the economic form of foreign debt service. If Hungary is to hope for such conditions as will maintain and increase the export surplus which the last two or three months of Hungary's balance of trade have shown, she must at least see that her merchandise imports are not excessive, as they undoubtedly were when in the years 1927 to 1929 they were artificially increased by entirely excessive foreign borrowing.—Yours faithfully,

OTTO NIEMEYER.

8 Addison Crescent, W.14.

November 11, 1931.

[We regret that Sir Otto should consider that the *Economist* did the Hungarian Report less than justice. In our comment we made it clear that the financial committee expressly stated that the difficulties of Hungary were only part of a larger problem; but we adhere to our opinion that the Report failed adequately to recognise that contraction of trade is a process which must tend of itself to aggravate the difficulty of paying external debts.—ED. *Econ.*]

AN EASTERN LOCARNO.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The official Memorandum on Disarmament issued by the French Government this summer makes it clear that our late allies and the national States set up at the Peace Conference are prepared to reduce their armaments only upon certain conditions. They will probably ask us next February to guarantee to them the present frontiers for a further period of years. They require some treaty of mutual assistance similar to the Geneva Protocol which we rejected seven years ago. They want an "Eastern Locarno," and, realising our great desire for some measure of general disarmament, they hope that we may be persuaded to meet their wishes.

At Locarno we were satisfied that Germany's western frontier was equitable enough to warrant our undertaking to defend it against aggression by either party, even at the risk of war. Wisely or unwisely, we took this risk in the interests of European security. If Germany's eastern frontier similarly satisfies the ethnical, cultural, geographic, economic and political requirements in a reasonable measure there is no particular reason why we should not guarantee it in return for genuine disarmament on the part of the nations concerned.

What, then, are the essential facts about this frontier? A cursory glance at the map is disconcerting. The impression conveyed by the political frontiers is that of a wedge or stake driven into Eastern Germany so as to sever East Prussia from the Reich, and to chip off altogether the City of Danzig. The Corridor has been described as a gaping wound in the body of the Reich; it is, perhaps, not surprising that the political and economic health of Germany remains so unsatisfactory while the foreign body of this Polish peninsula remains *in situ*!

Apart from the Corridor, the German-Polish frontier is astonishing. Its tortuosity and its capacity for defiance of all natural boundaries are phenomenal. Its length is about 1,650 miles. The province of Silesia alone has a frontier of 730 miles. German Upper Silesia projects as a narrow tongue of land between Poland and Czechoslovakia. All new frontiers inevitably cause some inconvenience and dislocation of trade and traffic, but the achievement of this frontier surely constitutes a record. In Upper Silesia it has cut across 68 railway lines, 144 main roads and 722 traffic roads. On 60 miles of busy frontier, 61 customs stations have been erected.

The ethnographical picture is scarcely less strange: 40 per cent. of all Polish subjects to-day are not Poles, but comprise more or less disaffected minorities. So far from being inhabited by a population "indisputably Polish," the Corridor as a whole, including the City of Danzig, according to the German census of 1910, had a population in which Germans outnumbered all other races by about 30 per cent. The Kachoubes, who inhabit the northern part of the Corridor, are neither Poles nor Germans; they were handed over to Poland without a plebiscite being taken. In Upper Silesia a plebiscite was indeed taken; an absolute majority of votes were cast in favour of Germany; as in *Alice in Wonderland*, the richer parts of Upper Silesia were thereupon given to Poland, who had, in fact, anticipated this decision by a *coup d'état*! As a result of this partition of Upper Silesia without regard to its economic integrity, Germany lost all the iron ore, 85 per cent. of the zinc and lead, and 80 per cent. of

the coal. Incidentally, over four million individuals were removed from the German State by this award.

The origin of the Corridor was the promise to provide for Poland "free and secure access to the sea." Poland has never been a seafaring nation. Her industries are less highly developed than those of Czechoslovakia. Yet, Czechoslovakia's access to the sea consists of special areas put at her disposal at the port of Hamburg, to which her commerce is conveyed by ships sailing down the Elbe under their own national flag. It is at least arguable whether Czechoslovakia's free access to the sea, based as it is upon reciprocal goodwill and the absence of provocation, is not more "secure" than that of Poland, reliant upon the strategic base of Gdynia and the renewal of the military alliance with France. Free navigation of the rivers and the establishment of "free ports" at Stettin, Danzig and Königsberg would have satisfied all Poland's legitimate economic needs. Her relations with Germany might then have developed along lines altogether advantageous to herself. As it is, the hatred felt by the German nationalists for Poland and everything Polish constitutes a real source of danger to the very existence of the Polish State.

Although under legal obligation to utilise the port of Danzig to its fullest capacity, Poland now aims at transferring the Free City's more remunerative business to her own new port of Gdynia. From being a commercial port, Danzig has now become chiefly a carrier port for the cheaper Polish exports. The Free City faces the prospect of a lingering death by throttling.

East Prussia has lost its trade with Russia, and also its natural markets in Posen and West Prussia. Isolated from the rest of Germany, and thrown back upon its own inadequate resources, the whole province is more or less in a state of bankruptcy.

Pomerania has similarly suffered as a result of the territorial mutilation.

Such are the essential material facts. The political reaction to them on the part of those nations which desire to preserve the *status quo* is illuminating. France has contributed to the situation the new railway between Polish Upper Silesia and Gdynia; economically, it will ruin the German interests in Silesia; strategically, it will serve to join up Poland's western frontier; politically, it has crystallised the *status quo*. Poland, however, regards the Corridor as a makeshift. To fling back the German nation behind the Oder, and to swallow up East Prussia, are her final aims. In the meantime, she pursues two policies—degermanisation and colonisation—both within and without her boundaries. Bribery, intimidation, wholesale confiscations and intensive methods of penetration, are all exploited to the full. Time is on the side of Poland. A bankrupt and hopeless people cannot stand up against the unscrupulous coloniser. Since 1919, already 800,000 Germans have been forced to leave Posen and West Prussia. From East Prussia 165,000 inhabitants have emigrated.

To Germany the sentimental associations of the German East are very sacred. From the days of the Teutonic Order to the time of the Confederation under Prussia, the Eastern Provinces have been regarded as bulwarks of German civilisation. From them came Kant and Schopenhauer. The present situation is intolerable.

One does not need to be endowed with an abnormally vivid imagination in order to foresee that for us to guarantee Germany's eastern frontier would be an act of sheer criminal lunacy. Until the Vistula Corridor is altogether eliminated, an "Eastern Locarno" is unthinkable. Great Britain has not the remotest interest in the preservation of the sources of future war. If Poland must have a seaport of her own and a Polish territory leading to it, one might suggest that Memel would be quite suitable for this purpose, and that at the same time some equitable settlement might be made with Lithuania.—Yours faithfully,

R. G. WALMSLEY.

ECONOMICS FOR ALL.*

MR WITHERS has, indeed, meddled with everybody's business. He begins by exhorting the typist who buys a cup of tea for twopence in a teashop to understand and to admire the marvellous co-operation of thousands of brains and hands all the world over which alone enables her to have the tea there in the cup just when and where she

* "Everybody's Business." By Hartley Withers. Cape. 10s. 6d.

wants it; and he ends by delivering practical advice to a supposed benevolent despot as to the right way to set about getting us out of the present economic mess. In the course of this extensive journey Mr Withers touches nearly every part of the subject-matter of economics. He discusses the relation between work and reward: he attempts to evaluate the activities of bankers, financiers, speculators, middlemen, and, in fact, all those classes of whom hard things are commonly said; he argues the case for and against Free Trade; he unravels the mysteries of "the gold muddle"; and he traces the growth of taxation in this country of recent years, bidding us pause to consider whether grave damage may not be inflicted by it upon our industry.

Throughout, Mr Withers writes with that gift for reducing complicated abstractions to simple concrete images which has made his name so justly famous among the unhappily small number of those who can make economic truths intelligible. In this respect his chapters on the gold question are particularly masterly. Mr Withers has explained with remarkable lucidity just what Central Banks do, what they are widely blamed for having lately done wrong, and what, in his judgment, are the factors which explain their not having always succeeded in doing right. In particular, he stresses the extent to which the banker (even the American or French banker) is powerless either to compel people to borrow when they do not want to do so, or to ensure that credit once created goes into industry and not into Stock Exchange gambling.

It is not necessary to accept all Mr Withers's conclusions. Many will lament his departure from the path of strict Free Trade. And very many of those whom he is most anxious to convince will feel that his defence of the capitalist system frequently proves too much. One cannot simultaneously believe both that the rich are no happier for their riches, and also that, without the prospect of great wealth, they would not find the job, for which this wealth is the reward, worth doing—unless indeed, they are deluded beyond all imagining. But we must respect Mr Withers's plea (even though its reiteration may at times be irritating) that toleration and good temper are the prime necessities of all social progress. Mr Withers wishes his benevolent despot to introduce moderate protection, to remove anomalies in the administration of unemployment insurance, to promote public works (if necessary out of a national loan for the purpose) on a large scale and to stabilise, if not to reduce, direct taxation; but his last word is a reminder that "nothing will bring us contentment unless we make it for ourselves."

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The International Gold Problem. (London) Oxford University Press, Warwick Square. 12s. 6d. net.

A record of material collected and discussions held by a study group of the Royal Institute of International Affairs. It includes an introductory survey of the international functions of gold by Sir Josiah Stamp, and papers, some of them followed by discussions, on "Gold Production," by Joseph Kitchen; "How to Economise Gold," by Sir Otto Niemeyer; "Some Problems of International Banking Policy," by Dr. M. Palyi; "Central Bank Reserves," by C. H. Kisch; "For What Objects do Central Banks Hold Gold?" by the Hon. R. H. Brand; and "The International Consequences of the Present Distribution of Gold Holdings," by M. Charles Rist.

The Cuban Situation and the Treaty Relations. By Philip G. Wright. (Washington) The Brookings Institute. \$2.50.

An account of the growth and present collapse of the Cuban sugar industry, with special reference to American treaty relations and tariff policy.

Japan. By Harold G. Moulton. With the collaboration of Juniche Ko. (Washington) The Brookings Institute. \$4.00.

A most interesting account of Japan's economic development, including with a judicial consideration, based on a mass of statistical material, of her future prospects and potentialities.

The Gold Standard. By R. G. Hawtrey. Second edition. (London) Longmans, Green & Company, 39, Paternoster Row. 3s. 6d. net.

A revised edition of the short exposition of the "Theory of Currency and Credit," published in 1927.

This Tariff Question. By Collin Brooks. (London) Edward Arnold and Company, 41 and 43, Maddox Street. 7s. 6d. net.

An attempt to supply the urgent need for an impartial account for the layman of the facts upon which the tariff question depends and the arguments on both sides.

The A B C of Foreign Exchanges. By George Clare and Norman Crump. (London) Macmillan and Company, St. Martin's Street. 4s. 6d. net.

The ninth edition of this standard text-book brings the history of the principal foreign exchanges up to date, and includes a chapter on the German crisis up to the end of July, 1931.

The Land of Ireland. By D. Coghlan. (Dublin) Veritas Company, Ltd., 7 and 8, Lower Abbey Street. 10s.

An interesting study from the earliest times to the present day of the occupancy, laws and customs of the land in Ireland.

The Imperial Gazetteer of India. Vol. XXVI. Atlas. Revised edition. (London) Oxford University Press, Warwick Square. 17s. 6d. net.

This compact atlas contains sixty-six plates showing general maps of India, indicating economic as well as geographical and meteorological features, maps of the Provinces and plans of several of the more important towns.

Am Tage nach dem Zusammenbruch. By Dr. Heinrich Rittershausen. (Berlin) Verlag von Georg Stilke, Dorotheenstrasse, 65.

A discussion of the causes of the present crisis in Germany.

L'Organisation Scientifique du Travail Agricole en Europe. (Rome) Bestetti and Tumminelli S.A., Via Michelangelo Caetani, 32.

An account, published by the International Institute of Agriculture, of scientific management as applied in European agriculture.

Economic Conditions in Denmark after 1922. By Jørgen Pedersen. (Copenhagen) Institute of Economics and History.

A concise and useful memorandum.

Income Tax and the Business Men. By K. Adlard Coles. (London) Crosby, Lockwood and Son, Stationers' Hall Court, Ludgate Hill. 2s. 6d.

A guide to income-tax assessments and reliefs, incorporating the provisions of the 1931 Emergency Budget.

Building and Loan Associations in New Jersey. By Howard S. Piquet. With a foreword by Howard R. Heydon. (London) Oxford University Press, Warwick Square. 16s. net.

An interesting theoretical account of building finance in the United States.

International Labour Review, October, 1931. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d. net.

This issue contains an article on "Woman Labour in India."

World Peace and Armaments. By A. J. Jacobs. (London) Hutchinson and Company (Publishers), Limited, 34, Paternoster Row. 5s. net.

A re-statement of a thesis originally put forward by the author in 1917 in an essay entitled "Neutrality versus Justice."

International Review of Agriculture, September, 1931. (Rome) Bestetti and Tumminelli, 32, Via Michelangelo Caetani.

Lo Zolfo. By Cesare Vannutelli. (Milan) "L'Industria Lombarda." Via Meravigli, 9.

A study of conditions in the world sulphur markets.

Merseyside Employments for Boys and Girls. (Liverpool) (Liverpool Education Committee).

This little booklet gives an interesting account of the various commercial activities open to young people in the Mersey district.

The Canada Year Book, 1931. (Ottawa) Dominion Bureau of Statistics.

This year book gives statistical information on all aspects of the Dominion's economic life.

The Stock Exchange.

THE RESPONSIBILITIES OF DIRECTORS.

It may be hoped that the Kysant *cause célèbre*, in addition to encouraging more careful prospectus drafting, will provoke much healthy searching of heart among the Duke of Plaza-Toro's descendants, the army of guinea-pig directors. Among the more disquieting facts dragged into the limelight by the trial was the effective subjection of the interests of a shipping combine controlling an aggregate share and debenture capital of £90,000,000 and a tonnage of no less than 3,000,000 to the will of one individual. The Royal Mail Steam Packet Company had six directors, but only one voice. Lord Kysant, an able and successful shipowner at the outset, attempted to administer an ultra-large and topheavy combine in magnificent isolation, failed disastrously in a task which would have overtaxed the wisest of men, and fell (as his cross-examination at the Old Bailey showed quite clearly) with the firm conviction that he was less a wrongdoer than a victim of circumstances.

The real issue, in short, which the Kysant conviction raises for investors is not the amount of non-disclosure likely to bring the author of a prospectus within the Larceny Act, but the extent of potential abuses of a system which permits of a virtually complete divorce between ownership and control of capital. The Companies' Acts, which made limited liability available for the asking, were founded on the assumption that proprietors would enforce their will through the machinery of a representative democracy. The rise of great industrial units has brought the validity of this conception seriously into question. To-day, for example, Imperial Chemical Industries has 125,000 shareholders, Imperial Tobacco 95,000, Courtaulds 58,000, and Dunlop Rubber 53,000. In most large-scale public companies about two-thirds of the total voting proprietors hold less than 200 shares each. The responsibility of directors has thus increased more than in proportion to the size of the average company, since shareholders, as a body, have become progressively less cohesive and coherent as their numbers have expanded.

Having regard to the decisive position of directors in the industrial system, it is remarkable how little is known by the outside world of their identity, remuneration, duties or qualifications for office. Most investors have heard of a few dominating or picturesque personalities like Mr Sam Courtauld, Sir Harry McGowan and Sir Hugo Hirst, but how many shareholders could name, off-hand,

the remaining directors of Courtaulds, Imperial Chemical Industries, or the General Electric Company? It may be of interest, therefore, to set out various relevant facts in this connection, as has been done, in the table at the foot of this page, in the case of fifteen large and representative concerns, whose shares are among the most active on the Stock Exchange.

The first impression given by the figures is the large size of many boards, which appears to bear little direct relation to the amount of paid-up capital. Lloyds Bank, with under £16,000,000 of paid-up capital, has thirty-four directors, while the Great Western Railway, with £147,000,000 of capital, has a board of twenty-five. Imperial Tobacco, with £50,000,000 of capital, has thirty-four directors, and Imperial Chemical Industries, with 50 per cent. more capital, less than half as many. Clearly, some forms of business may require more detailed control "at the top" than others, or may be scattered over a greater number of "key" trading points, but other factors would appear to enter into the matter. It would seem that, in some cases, the size of boards has been determined by past history rather than present expediency, so that amalgamations tend to have more directors per £1,000,000 of capital than "unitary" companies. Secondly, some companies allot fewer administrative duties than do other companies to their boards, as such, and leave more responsibility with particular individuals, or with the "Permanent Civil Service" of managers and departmental heads.

Broadly, the larger boards may be presumed to be much more "routine" bodies than the smaller boards. *Prima facie*, a directorial board of ten is an executive body and a board of over thirty a debating body. In the first case, directorial division of labour may lead, as regards specialised branches of business, to government by individuals, and in the second case to government by sub-committees. Economic factors may decide which of the two is the more advantageous, but it is difficult to discover convincing evidence, in our table, that such considerations have been decisive in every case.

A second feature revealed by the table is the astonishing diversity between the remuneration of directors in different companies. The average varies from £104 per director in Unilever and £250 in Marks and Spencer to £2,224 in Courtaulds and £3,370 in Imperial Chemical.

Company.	Number of Directors.	Total Directors' Fees (last balance sheet).*	Average Remuneration per Director.*	Profits, last complete year (before Debenture Interest).	Directors' Fees as per cent. of Profits.	Directors' Qualification.	Minimum Amount of Capital represented by Directors' Qualification Shares.	Total issued, Ordinary Preference and Debenture Capital.	Proportion of Total Capital represented by minimum Directors' Holdings.

* Apart from managing directors' remuneration.

† Chargeable to subsidiary companies.

The average for the whole fifteen companies is £1,020 per annum. These figures do not tell the whole story, since under the Companies Act of 1929 annual accounts are not required to show the amounts paid to managing directors, or to directors in salaried employment, other than their receipts by way of directors' fees. On the whole, however, the presumption is, or ought to be, that more time, trouble and skill is expected from, say, a director of Courtaulds than his opposite number in J. and P. Coats, and that the duties of a member of the board of Harrods are six times as onerous as those of a director of Marks and Spencer.

When directors' fees are compared with profits, the most striking conclusion which emerges is not so much the "spread" of the figures (as shown, for example, by the fact that directors' fees last year represented a percentage of total profits nearly nine times as high in the case of Lloyds Bank as in that of the Great Western Railway) as the low ratio of total fees to total profits in the great majority of cases. Though the profit figures cover a period of industrial depression, when earnings were below normal, only in three cases were directors' fees, as revealed in published accounts, equal to more than 1½ per cent. of net earnings. In six instances the ratio was less than ½ of 1 per cent. The inclusion of managing directors' fees and "salaried remuneration" would probably raise the percentages, though not very considerably. Instances are on record of directors receiving a fixed portion of profits. The case of Lord Kysant, who was entitled to a percentage of total turnover when the Royal Mail Company paid an ordinary dividend of 5 per cent. or over, was a somewhat extreme example. These arrangements, however, are less numerous than is generally supposed. Directors are certainly entitled to claim that if (to take the average figures for the fifteen concerns in our table) they are prepared to produce £1 of profits for approximately 1½d. of remuneration, to shoulder innumerable legal and administrative worries, and to place specialised knowledge at a company's service on such terms, they have a case to make against the charge of "profiteering in fees."

It is true that shareholders, on the whole, obtain the services of good directors fairly cheaply. A single year's fluctuation in the profits of a successful company may be many times as large as its total directors' fees. A bad director, conversely, may bring losses on a company greatly exceeding his ostensible "cost," and the fact that in the past, when things have gone wrong, so many shareholders have been placated by a mere reduction of directors' fees, is melancholy evidence of imperfect appreciation of this truth. Unfortunately, the remaining figures in our table suggest that the legal stake of some boards of directors in their company's capital may be even less than their stake in earning power. Certain directors may be the articles of association of many of the largest concerns would appear to lay down a *minimum* qualification which is negligible in proportion to the millions of paid-up capital in issue. Only in two of the fifteen examples shown are minimum directors' holdings equal to more than ¼ of 1 per cent. of the total paid-up share and debenture capital. The proportion for the whole fifteen companies is no more than 0.17 per cent., and the nominal value of directors' qualification shares, at par, is no more than three years' fees.

Our analyses go far to suggest that a relatively small minority of directors, with a special personal interest and a heavy financial stake in their companies, may attain the position of dictators without undue difficulty under the present dispensation, partly because their ultimate constituents are an unorganised army of small shareholders, and partly because their fellow-directors are "part-time" men, with many other interests, between whom and the companies concerned the effective *nexus* is an annual fee rather than a real community of interest. The "part-time" system, doubtless, has some advantages. A director may bring to the board room a wealth of knowledge of other industries, a ripe experience of men and money and a broad vision untrammelled by the multiplex details of a single business. It may be contended, indeed, that directors are most effective when they confine themselves to the broadest decisions of

policy, leaving actual "direction" of affairs to an expert and adequately remunerated permanent staff. Money and brains, again, are united in any given individual only by coincidence, and insistence on large shareholding qualifications might deprive some companies of the services of men of first-rate ability. A director who opens his mouth only to agree with everyone else may be worth thousands of pounds a year as a personal link with an important source of supply or demand.

Instances might be multiplied to show that a pluralist director is not necessarily a parasite. Nevertheless, the figures given in this analysis suggest that the doctrine of directorial detachment from the fortunes of individual companies may have been carried to somewhat extreme lengths in many cases. We have purposely chosen, for our purpose, the returns of profitable British concerns, whose credit deservedly stands high, and whose position is beyond criticism. With how much greater force would our conclusion apply to the host of weaker concerns in this country! "Where your treasure is, there will your heart be also" remains as profound a truth to-day as nineteen hundred years ago. It can scarcely be questioned that British industry would benefit considerably if more directors had a larger financial stake in the companies of whose interests they were the nominal trustees. It avails little to bring to book individual offenders against the law, or to urge that shareholders, as such, should insist on stricter control. The real problem involves not only the creation of a "public opinion" in favour of fewer and better directors, but the provision of legal and economic machinery for making that opinion effective.

AMERICAN RAILROAD CONSOLIDATION.

AMERICAN investors and speculators have been so largely preoccupied with the probable consequences of the refusal by the Interstate Commerce Commission of the application of the American railways to increase freight rates by 15 per cent., that an even more important development has passed largely unnoticed. As on October 1st last, the four large Eastern railway groups officially approached the Interstate Commerce Commission with regard to consolidation. There is, in fact, a close connection between the two events. Trade depression and resultant loss of traffic have been a potent force in bringing about the present agreement between the New York Central, the Baltimore and Ohio, the Pennsylvania and the Nickel Plate groups.

Present conditions might have been very different if effect had been given to the recommendations as to consolidation made in the Transportation Act of 1920. The credit of the stronger lines would then, in times like the present, have been available to sustain the weaker companies and preserve their credit, as in Great Britain under the amalgamations brought about by the Railways Act of 1921. In default of any large-scale scheme of amalgamation, the Interstate Commerce Commission, by its recent decision, itself granted certain rate increases, conditional on the formation of a common fund to assist the credit of the weaker lines.

The present consolidation plan, as presented by the four big Eastern groups, follows the main outline of the proposals previously explained in the *Economist*. The main essentials may be briefly summarised. The plan, as formulated by the Commission on December 9, 1929, provided for five large groups between New York and Chicago. By the beginning of 1931, however, the unwieldy Wabash-Seaboard Air Line system had fallen out of the picture completely. The remaining four large systems were practically in agreement as to the general outline of their scheme, as was shown by their communication to the Interstate Commerce Commission of January 2, 1931.

During the last ten months many of the minor difficulties have been eliminated and the "Four-System Plan" is now practically complete. The Plan, as it stands, leaves the position of the purely New England systems, such as the Boston and Maine, undisturbed, though the Boston and Albany, being part of the New

York Central system, retains its parentage. The four systems will be composed as follows:—

The *New York Central System* will absorb the Pittsburgh and Lake Erie, the Delaware, Lackawanna and Western, the New York, Ontario and Western, and many small lines of local importance.

The *Pennsylvania System* will include the Long Island, the Norfolk and Western, the Wabash, the Detroit, Toledo and Ironton, and many lines of lesser importance.

The *Baltimore and Ohio System* will be rounded out by the Reading, the Central of New Jersey, the Western Maryland, together with the Chicago and Alton, and the Buffalo, Rochester and Pittsburgh (which it already controls), and many smaller lines.

The *Chesapeake and Ohio—Nickel Plate Group* will include the Erie, the Pere Marquette, the New York Chicago and St. Louis (all of which are now within the group), the Lehigh Valley, the Wheeling and Lake Erie, the Bessemer and Lake Erie, certain important lines in the Pittsburgh industrial area, and various minor lines of local importance.

The most important feature of the whole scheme is the running powers granted extensively to each of the four groups. Thus, the Pennsylvania is to have important running powers over the Lehigh Valley, the New York Central over sections of the Reading, and the Pere Marquette, and the Baltimore and Ohio over the New York Central in Ohio. Another interesting development is the proposal that the Delaware and Hudson should be jointly owned by all four systems. This is a curious commentary on the criticism so frequently levelled at the joint ownership of lines in Great Britain.

If the proposed plan goes through in its present form, approximately 66 per cent. of all coal handled by rail will originate from mines served by one or more of these systems. On the basis of the 1929 figures, the tonnage of bituminous coal transport may be put as follows:—

	Tons.
New York Central	(nearly) 30,000,000
Pennsylvania.....	(nearly) 121,000,000
Baltimore and Ohio.....	(about) 60,000,000
Chesapeake and Ohio—Nickel Plate	(nearly) 98,000,000
Total.....	(approx.) 309,000,000

The consummation of the present plans will obviously be of the greatest possible significance, both to railroad investors and traders in the Eastern States.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
November 17.	November 19.

THE "House" was divided between distrust of the international situation and anxiety to do justice to trade prospects at home. The improvement in the gold price of some commodities helped a number of the more speculative issues, but the tone as a whole was irregular. The Committee's announcement regarding the repeal of the "cash dealings" rule (discussed on page 922) was not reflected in any increase of business. The Government's reserved attitude to the tariff question gave speculators in industrial shares little to go for. Later in the week, anxiety regarding Germany's debt position and the European situation as a whole increased perceptibly.

Gilt-edged stocks were out of favour, the early weakness of sterling preventing any wide extension of demand. War Loan Fives came on offer, and quotations of other leading issues slowly declined. India loans opened firm, but subsequently fell away in sympathy with British Government stocks. Australians were a strong feature on the more encouraging Commonwealth revenue statement for October and the improved wool clearances.

Argentine loans again led the advance in foreign bonds, broken later by profit taking on reports of rust in the wheat belts. German bonds were a poor market, though a rally occurred in mid-week, following the post-

ing in the "House" of a notice alleging an agreement between Germany and France. Potash bonds developed weakness with the completion of the sinking fund operations. Japanese bonds slowly fell back on the continued deadlock in Manchuria, though little stock was pressed on the market.

Foreign rails were not particularly active, though some interest was taken in the prior charges, especially of the Argentine lines. Home rails continued to attract intermittent attention, but the publication of a further disappointing batch of traffic returns left the market in two minds. The London passenger group was firmer, the memorandum of the Metropolitan Railway (discussed in a Note on page 922) and the Prime Minister's speech leaving a net impression that the Transport Bill would ultimately become law.

The steady tone of the Industrial market on Monday was not wholly maintained. Wall Street opened strongly, but fell away in mid-week, and the Continental bourses followed much the same course. International Nickel was active on the initial firmness of copper, but enthusiasm was checked by a disappointing third quarter's earnings statement. Among shipping shares, Royal Mail came unexpectedly into demand, the idea being widely held that the report of the "Voting Trustees" would inaugurate radical changes in the affairs of the group. Lautaro were sold on the uncertainty regarding the future of Cosach (referred to on page 925). Siemens were steady, in the electrical equipment list, on the maintenance of the interim dividend. Dennis, among motors, were unaffected by the cut in dividend, which had been anticipated. Tate and Lyle were a good feature on the expectation of a satisfactory report. J. Lyons were firm, the interim dividend being fully maintained.

Oil shares had an improved appearance at the outset, but business remained restricted, occasional liquidation of the leaders coming from the Continent. Rubber shares were a little harder with the commodity, following a decline in United Kingdom stocks, but indications of a practical outcome of the "restriction" conversations appeared as far off as ever. Anglo-Dutch and Malayalam hardened, and Kuala Lumpur advanced on the issue of a fairly satisfactory report. Tea quotations made slightly more headway, the market having an appreciably better undertone.

Mining shares tended to become increasingly active on Monday, under the stimulus of improving metal prices. Business, however, subsequently fell away. Apart from a discriminating inquiry for Kafirs, demand was irregular and half-hearted. "Chartered" continued to decline, among Rhodesians, and Rhokana led a recessionary tendency among the Northern issues. Tin shares fell back with the metal in mid-week, and copper shares reacted on pessimistic reports of the fate of the American conference and the possible break-up of Copper Exporters, Incorporated.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The stock market showed signs of increasing optimism at the end of last week, 2,000,000 share transactions being recorded on Saturday, November 7th—the highest total for a short session for many weeks. The underlying cause of the improvement in values was the firmness of commodity prices, particularly of wheat and silver. This affected not only industrial shares, but a number of foreign bonds, including Argentines, which showed a particularly sharp advance. Hopes of a 10 per cent. reduction in railroad wages continued to run high, and railroad issues further recovered on Monday when the Investment Bankers' Association Convention issued a statement declaring that wage cuts were an economic necessity if the soundness of carrier securities was to be maintained. Estimates were current in the market that the net operating income of the national railways would be increased by \$250 millions annually if a wage reduction was synchronised with the increased rates recommended by the Interstate Commerce Commission. The undertone of the markets, however, became easier as the week progressed. Liquidation was not extensive, but prices declined all round. Rumours were persistent as to the break-up of the International Copper Conference. The rise in commodity prices, simultaneously, suffered a check. The resignation of the President of the New York Central Railroad was regarded as a bear point. The earnings figures of that system turned out to be much lower than was expected, and other third-quarter statements made a disappointing showing. On Thursday markets generally displayed an increasingly weak tendency. Trade reports had a slightly more optimistic tenor, but evidence of concrete improvement was hard to discern. Freight car loadings for the week ended October 31st, at 740,460, were 4 per cent. lower than in the preceding week, while the *New York Times* business index for the same period was 65.4 against 66.2. The U.S. Steel Corporation's unfilled orders declined during October by 25,401 tons to 3,119,432 tons, but the reduction was rather less than had been expected. Automobile output last month showed its customary seasonal contraction, and at 86,328 units was 72,614 units below the figure for October, 1930. The figures of General Motors, however, made a better comparison, October sales to dealers totalling 25,975, against 28,253 a year earlier.

* 2-hour session.

PARIS.

The Paris Bourse opened the week with a fairly firm tone, but unsettled conditions supervened, following the unloading of stock by tired bulls, and the continuation of indifferent news regarding affairs in Central Europe and in the Far East. Bank of France showed some improvement, while Royal Dutch and De Beers also advanced. Further profit-taking ensued on the eve of Armistice Day, which was a public holiday. Some international counters gained ground, but "Kaffir" shares were liquidated. Movements in the speculative issues on Thursday were mostly against holders.

AMSTERDAM.

Considerable activity marked the opening of the Amsterdam Bourse, prices rising steadily all round. Philips' Lamps were active and rubber shares in demand. A reaction set in towards the close on Monday, but on the following day the upward trend was resumed, with Philips' Lamps buoyant on rumours of an agreement with Telefunken, in Germany. Royal Dutch were marked up and sugar shares were firm, but unfavourable news from New York subsequently produced an easier tone everywhere.

OTHER CENTRES.

The minor European Bourses made a mixed showing, the general trend being irregular. Brussels made progress before being attacked by profit-taking, but recovered again in mid-week. Copenhagen opened firmly, but became irregular, and Stockholm turned reactionary in the later sessions. Unofficial quotations in Berlin reflected a slightly less depressed attitude regarding the outcome of the debt negotiations. Dye Trust was done at 95.75 (against 94.50 a week ago), Siemens at 118.75 (against 118), A.E.G. at 34.25 (against 33.50), and Reichsbank at 91.50 (against 92.50).

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

Stock Exchange Restrictions.—On Monday last the Stock Exchange Committee for General Purposes announced that, as and from November 16th, dealings for the Account would again be permitted, but that the ban on option business and the carrying-over of bargains from one account to another would remain. The decision to relax the "cash dealings" rule, which had been in force from September 26th, was not unexpected, and was generally welcomed for reasons we have fully discussed in recent issues. Though the partial nature of the concession provoked no considerable hostile criticism among members, who were inclined to regard the Committee's action as a half-way house to the complete restoration of normal facilities, it would appear that the Glasgow Stock Exchange Committee regarded the decision as unduly timorous. This latter body decided, on Tuesday, not to fall into line with other provincial Stock Exchanges (which had followed London both as regards the "cash rule" and its partial abolition), but to resume continuation and option business in the ordinary way next Monday. The Glasgow Committee's announcement appears to have been based partly on the feeling that the London ruling did not prevent continuation business, but merely made it inconvenient and dear for the client (who was quite at liberty to instruct his broker to sell for an old account and simultaneously buy back for a new account), and partly the feeling that the continued prohibition of option dealing was damaging to the market. However this may be, the incident had an unexpected sequel on Thursday, when the Glasgow Stock Exchange Committee announced that it had rescinded its previous decision to allow the transaction of continuation and option business "at the special request of the Treasury." This let the cat out of the bag in unexpected fashion. It had previously been believed that though the London Committee might have received a hint from high quarters, its actual decision to impose the original ban on Account Dealing was taken on its own initiative. The Treasury's attitude was much criticised in the market, which has seen nothing in the behaviour of prices during the last few weeks to suggest the necessity for any form of restriction on purely market grounds. It is difficult, in any case, to see why it should appear perfectly safe, to Whitehall, to allow a man to be a bull or a bear for a fortnight, but not for a month.

Metropolitan Railway and the Transport Bill.—Though we have endorsed the principles of the London Passenger Transport Bill, we have consistently declared that the Metropolitan Railway has a grievance in that the whole of its equity, including country estates in "Metroland" and a block of flats over Baker Street Station, is to be taken over by a board appointed to manage passenger transport in the London area. The directors of the Metropolitan Railway have now issued a circular of protest to their stockholders. It is to be regretted that the directors have given political bias to their memorandum by declaring that the Bill is a Socialist measure tending towards a policy of confiscation of property. They are on firm ground, however, when they point out that the Metropolitan Railway is quite distinct from the Tube and Underground undertakings, since it projects into the

country for considerable distances beyond the London Passenger Transport Area set up under the Bill, and carries a considerable mineral and goods traffic, amounting in 1930 to no less than 3,000,000 tons, in addition to parcels and mails. Further, they are justified in the criticism (which the *Economist* has already made) that "although the Bill casts the duty upon the Transport Board of so conducting their undertaking and of fixing such fares and charges as to secure that their revenues shall be sufficient to defray all charges required by the Bill to be defrayed out of revenue, including the interest payable on the senior stocks and interest on the "C" stock at a standard rate, yet economic forces may prevent the carrying of these intentions into effect, and future results must depend upon the wisdom and skill with which the vast combined undertaking created under the Bill is managed and the economies which can be effected by reason of the amalgamation." The directors of the Metropolitan appreciate that the co-ordination of London passenger transport is a sound object of policy, but they suggest that the arrangements for co-ordination which are found suitable and sufficient in the case of the suburban passenger traffic of the main line traffic companies are equally suitable and sufficient for the Metropolitan. They consider, therefore, that the inclusion of the Metropolitan Railway in the arrangements with the other main line companies, preserving its separate identity, would be the best solution. Before the dissolution of the last Parliament the London Passenger Transport Bill had been remitted to a committee of the whole House, having previously been considered by a joint committee of both Houses, which by a majority of one vote had decided that the Bill should proceed in its present form. Proceedings on the Bill may be resumed in the new Parliament at the stage at which they were discontinued, on the passing of a motion to that effect. In the House of Commons this week the Prime Minister declared that the Bill was still under consideration with the promoters and those chiefly concerned. Though it was, he admitted, "not exactly a Government measure," he was anxious to secure its passage, either in its present or an amended form, without the sacrifice of any of its essential provisions. It would appear unlikely, however, that Parliamentary time will be given to the Bill before next year.

Commercial Motor Shares.—Reference is made in a Note of the Week on page 903 to important engineering developments at this week's Commercial Motor Show at Olympia. Share prices have advanced, in many cases, since the middle of September. Though the abandonment of the gold standard had no immediate effect on the industry, which relies on advance orders and sales to a large extent, the prospect of increased exports has stimulated market dealings. In the table below details are given of profits, dividends and prices for various companies which have a prime or important subsidiary interest in the manufacture of commercial vehicles. It will be noticed that the older companies have suffered rather severely from the depression, while the figures for Ford and Morris (which, together with the Chevrolet company, absorb a large proportion of the market for the lighter class of lorry) are complicated by the companies' other interests. Dennis Brothers have just announced a dividend of 175 per cent., compared with 283½ per cent. for 1929-30.

Name of Company.	Net Profit, 1929.	Ord. Div.	Net Profit, 1930.	Ord. Div.	Price, Sept. 19, 1931.	Price, Nov. 10, 1931.	Present Yield.

† Year to July 31, 1930.

‡ Year to July 31, 1931.

§ Calculated on basis of 1930-31 dividend of 175 per cent.

The serious effect on commercial vehicle sales of the world-wide depression was emphasised by Sir John Thornycroft on Wednesday. Sir John declared, however, that his company now had models equipped with entirely new designs of six-cylinder engines, embodying all the improvements which could be made with present knowledge; while the six-wheeled vehicles which they had produced for service in undeveloped countries continued to give excellent results. Profit figures, in general, can hardly be said to give an accurate picture of current prospects. Available statistics of commercial vehicle sales for the year to September 30th last suggest that the decline will barely exceed 1½ per cent., compared with a probable decline in the sales of hackney vehicles of something over 10 per cent. In a year of industrial depression such results cannot be regarded as unsatisfactory. There is no reason why British vehicles should not improve their export position if and when international trade revives.

Industrial Profits.—During the month of October, the accounts of 170 companies were received, and, as will be seen from the table below, the percentage decline in net profits constituted a new "record" since our monthly statistics began last April. The number of reports received, and the percentage declines shown, month by month, have been as follows:—

Reports Published in	No. of Companies.	Variation in Net Profits (1931 compared with 1930).
April	217	— 10.49
May	211	— 22.3
June	192	— 21.93
July	185	— 39.46
August	55	— 19.59
September	74	— 44.02
October	170	— 58.26

We next set out the figures for various industrial groups, according to reports received during the last month.

INDUSTRIAL PROFITS—MONTH OF OCTOBER, 1931.

Group.	No. of Companies.	Net Profit (after Payment of Debenture Interest). Reports received during October, 1931.	Increase or Decrease.
Breweries	10	1929-30. £ 279,184 1930-31. £ 200,314	— 28.25
Canals and Docks	1	27,536	— 185.86
Financial Land and Investment	12	617,600	— 68.84
Hotels, restaurants, &c.	12	119,234	— 46.14
Iron, coal and steel	11	898,821	— 74.05
Motor and cycle	3	287,872	— 6.89
Rubber	43	287,819	— 109.84
Shipping	5	122,211	— 502.82
Tea	6	116,391	— 40.60
Telegraphs, &c.	1	Dr. 4,408	— 157.71
Textiles	1	432,560	— 10.96
Tramways	2	24,180	— 32.44
Trusts	1	1,056,908	— 32.24
Other companies	18	3,013,611	— 58.26
Total	51	7,385,509	— 58.26

Nearly all important groups contributed their quota to the general decline, shipping and textiles making a particularly poor showing. Motors, on the other hand, with a decline of only 6.99 per cent., were a relatively good feature. Lampport and Holt, which suffered a loss of £544,342, was mainly responsible for the shipping decline, while British Celanese, with a debit balance of £274,626 instead of a profit of £385,901, accounted in the miscellaneous group, recorded a noteworthy gain of nearly £30,000 in profits.

Independent Investment Company.—This company (whose directors are Messrs. O. T. Falk, J. M. Keynes and I. Macpherson) has issued a statement declaring that, although the income for the half-year to September 30th last amounted to £14,095, against £16,462 for the corresponding period of 1930, and covered the preference dividend requirements approximately twice over, it has been decided not to pay an interim dividend on the ordinary stock. An explanation of the decision may doubtless be

found in a further statement to the effect that a valuation of the investments at September 30th showed that, after deducting the preference dividend, the break-up value of the net assets was £248,642 below the value of the paid-up capital of £420,000. Though there is much in the directors' contention that it would be dangerous to accept such an estimate as a sound valuation of the assets, in view of the wide and unreliable nature of quotations for many securities in New York and elsewhere, the extent of actual depreciation is serious. The company was formed in 1924 to take advantage, from the investment point of view, of short-term changes in the monetary and trade cycle. That the depreciation in its assets is no less—if it is not actually greater—than that shown by other recently formed investment trusts, run on more orthodox lines, does not necessarily show that the company's original conception was unsound. It does, however, suggest that the practical difficulties in the way of its application have been much greater than the directors realised. The broad lines of the company's recent policy may be inferred from the following table, which shows how the distribution of investments has changed over the last year and a-half:—

DISTRIBUTION OF INVESTMENTS.

	March 31, 1930.	Sept. 30, 1931.
British	40.0	19.3
American	48.8	71.9
Foreign	11.2	8.8
Total	100.0	100.0
Bonds and debentures	10.7	9.5
Preference	34.5	60.6
Ordinary	54.8	29.9
Total	100.0	100.0

Clearly, the company has a heavy stake in the restoration of American prosperity. Many of its American investments have been acquired on a falling market, and consist, to an appreciable extent, of preference and preferred

stocks. Presumably, as American trade revives and Wall Street becomes more active, the company will make a partial change-over into equity securities. It may then recoup some of its book losses, though whether this process will go sufficiently far to enable it to recover more than a part of its capital, within a moderate period, is another question. So far, it has succeeded in maintaining its income reasonably well, but at a heavy cost on the capital side.

Textile Machinery Merger Details.—The introduction of a measure of rationalisation into the manufacture of textile machinery was brought a step nearer this week, when the shareholders of Howard and Bullough agreed at specially convened meetings to a merger scheme on the lines referred to in last week's *Economist*. Four of the seven companies concerned—Asa Lees and Company, J. Hetherington and Sons, Platt Brothers, and Howard and Bullough—have now accepted. Brooks and Doxey, and Dobson and Barlow are expected to accept, but Tweedales and Smalley have turned down the scheme. Each company will sell its works to "Textile Machinery Makers, Limited," which in turn will re-sell the assets which it buys, without a profit, to subsidiary companies bearing similar names to those of the constituent companies, in order that the considerable goodwill attaching thereto may not be lost. Present information gives the capital of the new merger company as 1,835,000 6 per cent. non-cumulative preferred shares of £1 and 1,615,000 ordinary shares of £1. Of these, Brooks and Doxey will receive 73,800 ordinary shares and 53,000 preference, Howard and Bullough 550,000 ordinary and 327,000 preference, J. Hetherington and Son 92,000 ordinary and 67,000 preference, and Platt Brothers 610,000 ordinary and 981,000 preference. Platt Brothers will thus own about 53 per cent. of the preference capital and 38 per cent. of the ordinary capital, while Howard and Bullough, the next most important partner, will take 18 per cent. of the preference and 34 per cent. of the ordinary shares of the new company. Platt Brothers will keep their two collieries, cash, £1,000,000 of investments, £600,000 of book debts and some other property, while Sir George Bullough made it clear, at this week's meetings, that Howard and Bullough would retain its considerable reserve funds, investments and cash assets. All the contracting companies appear confident that the merger, by pooling research activities, technique, and organisation abroad, will effect considerable savings and quickly reach a profit-earning basis.

Thomas Tilling's Capital Issue.—In order to meet liabilities which have been incurred during the current year, Thomas Tilling are making an issue of two new shares at 30s. per share for every three held. This will increase the ordinary capital by 527,350 shares to a total of £1,318,375. In March this year, the company acquired the National Omnibus and Transport Company. This operation involved a payment of approximately £440,000, which the directors declared could be financed out of the existing resources of the company. In April the company acquired a controlling interest in United Counties Omnibus and Road Transport Company (which had an issued capital of £150,000), on the basis of 38s. 6d. for each ordinary share, 26s. 3d. for each 6 per cent. participating preference share, and 23s. for each 7 per cent. preference share. The directors of Thomas Tilling now declare that the purchase of these interests and expenditure in the renewal of omnibus fleets, motor coaches, etc., have involved an outlay since January 1st last in excess of £1,250,000, which has been provided out of the general resources of the business and by loans from bankers. The proceeds of the present issue will amount to £791,025, which, together with the gilt-edged investments still held by the company, will be sufficient to repay the bank loan and leave a surplus for further development. With regard to the dividend prospect, last year the company paid 25 per cent. on its old capital, which has subsequently been

increased by a bonus of 50 per cent. The directors state that, so far as can be ascertained from the preliminary accounts for the expired portion of the current year, the profits up to date are satisfactory, and, subject to any unforeseen contingency, it is anticipated that the dividend for the year will be at the rate of 20 per cent. An interim dividend of 10 per cent. has already been paid. The shares reacted sharply in the market on this announcement. Having been $3\frac{3}{4}$ they are now quoted at $2\frac{1}{2}$ ex rights and dividend, and the new shares at 18s. $7\frac{1}{2}$ d. premium.

Horden Collieries.—Though this company is among the strongest in the trade, both as regards production and finance, it has suffered recently from decreased industrial demand at home and unsettled conditions abroad, particularly in Europe. Its output has also been affected by the operation of the restrictive clauses of the Coal Mines Bill of 1930. The Shotton Colliery was idle throughout the year to September 30th last. The total profit from coal, coke and by-products dropped by £84,960 to £69,086. Other income totalled £82,418, against £87,816, and, after a reduction in the depreciation allowance and in directors' fees, the net profit was £69,411 lower at £71,257. The dividend was reduced from $7\frac{1}{2}$ per cent. to 5 per cent.

	Year ended September 30,		
	1929.	1930.	1931.
	£	£	£
Net profit	129,241	140,668	71,257
Dividend:			
Amount	112,500	112,500	75,000
Earned	8.62%	9.38%	4.75%
Paid	7½%	7½%	5%
General reserve	...	5,000	...
Inc. or dec. in carry-forward	+16,741	+23,168	-3,743

The company's collieries have been written down during the year by a net figure of £39,088, and now stand at £1,688,774. Debtors declined by £46,807. Investments dropped by £22,301 and stocks by £11,920, while creditors rose by £79,031. The £1 shares yield £4 13s. per cent. at their present price of 22s. 6d.

Aurochs Investment Company: A Strange Position.—An unusual state of affairs is shown by the balance sheet of the Aurochs Investment Company, Limited, as at June 1st last. This company, which was registered in March, 1920, has an authorised and issued capital of £2,100,000 in ordinary stock, together with £300,000 of 5 per cent. debenture stock, issued privately in 1926 at 75. The chief item on the assets side of the balance sheet is £2,000,000, representing the consideration for the assignment of a charter party, discharged by the issue of fully-paid shares. For some years past the balance sheet has contained a note stating that as the charter party has been cancelled, the assignment is of no value. The assets also include an investment item of £374,813, which is shown by the auditors' report to be made up of £239,212 book value of investments and £135,601 realised losses on investments. The balance sheet states that depreciation has substantially increased since June 1, 1930, and present values are largely unascertainable, while the auditors rightly protest against the merging of investment depreciation with the investment total. Apart from "assets" representing merely past losses, such as £75,000 discount on debentures and £37,453 debit to revenue account, the only other assets are £225 owed by a debtor and £2 in cash. Thus it would appear that, against a total share and debenture capital of £2,400,000 and other loan and interest obligations totalling £87,494, the company's only valuable assets are £239,212 book value of investments, whose real value the directors are unable to ascertain, and a small loan to an outside debtor. What is the nature of the company's business, or what its present *raison d'être*, one cannot readily perceive. It would appear that the original issue of shares was made over to the assignors of the charter party, which has subsequently been proved to be valueless. The original value

placed upon this asset would seem to have been surprisingly high, even at the 1920 scale of values. In 1926 the company made an issue of 99,593 £1 shares at par (subsequently converted into stock), in which Stock Exchange dealings were allowed. The capital apparently now has a fairly wide ownership, the Somerset House register, dated August 9th last, showing approximately 75 holders of £1,000 or more of stock. Eighteen holdings exceed £10,000, the largest being in the name of Bishopsgate Nominees, Limited (£453,500), while the chairman, Mr. Martin Coles Harman, is shown as holding £200,100, and Mr. S. T. Harman £150,000. The ordinary stock was last quoted on October 1, 1929, at 25½, and the debenture stock on October 2, 1929, at 55.

Cosach's Position in Chile.—Six weeks ago (see the *Economist*, October 3rd, page 626) we dealt with a protest made by the English and French shareholders of the Lautaro Nitrate Company against the alleged unfavourable terms of their company's merger agreement with "Cosach" (Compania de Salitre de Chile). The latter unfortunate company is now called on to meet a formidable attack from quite a different quarter. The original agreement between Cosach and the Chilean Government was criticised by some people as being over-favourable to Chile. Depression intervened, however, before the combine's financial arrangements could be carried through. Important modifications were made as the price of American and British financial assistance, and were duly embodied in a Decree Number 4,945, enacted under the régime of the Chilean "dictator" Ibanez, whose régime was subsequently brought to a violent end. In August the Chilean Chamber passed a resolution calling for a revision of the Cosach Law, and this month a sub-committee, appointed by the special official committee which is investigating the events of the Ibanez dictatorship, has issued a report frankly recommending the dissolution of the combine. The tone of the report suggests that the sub-committee has regarded Cosach developments as an effective stick with which to beat the ex-President. Some of the grounds for its advice, the statement that Decree 4,945 was unconstitutional. Others are technical, including the statement that the capital was increased by 423 million pesos beyond the 3,000 million pesos sanctioned by law. Others, again, are concerned less with the possibility of exploiting Chile's nitrate resources by the most economic methods—a thorny question on which Cosach, at least, was prepared to put its own views into practice—than with the necessity for securing maximum employment and national revenue in Chile itself. The sub-committee appears to suggest that concentration of the present reduced output on the labour-saving Guggenheim plants should be discontinued, and that "all Shank's plants should again light their fires"—without reference to conditions of demand for Chilean nitrate in world markets. The sub-committee desires that the greatest possible number of workmen should find employment on the nitrate pampas, that the northern provinces of Tarapaca and Antofagasta should again take large quantities of agricultural and manufactured products from Southern Chile, and that the national steamers should earn a considerable revenue once more. How far the committee's recommendations will be acted upon is uncertain. The acting President of Chile, Senor Trucco, is reported to have declared that careful consideration of the position by technical experts must precede any action, while the President-elect, Senor Montero, is said to have gone further and declared that although the combine's legal position was irregular, no practical question of its disintegration could arise. Many considerations would appear to support this latter view. As Cosach has entered into contractual relations with its bond and shareholders, for good consideration subscribed in good faith on the basis of the company's agreement with the Chilean Government, the annulment of the combine's concessions would involve the repudiation by the present Government of the

financial engagements of its predecessors—a principle which international financial opinion has always regarded as vicious. It would be regrettable if Chile's credit, which has always ranked high among South American States, were to be impaired, for many years to come, by hasty action by the present régime. In any case, the Guggenheims' influence in the economic life of Chile has been so great, in recent years, that open antagonism with so powerful a North American interest might have disastrous internal consequences for Chile. It may be hoped, therefore, that counsels of moderation will prevail and a *modus vivendi* will be secured by mutual concessions.

Sinai Mining.—The directors of this manganese concern, whose properties are situated in Egypt, propose to return 10s. upon each of the 50,000 preference and 25,000 ordinary £1 shares. Of the amount 5s. per share is to be satisfied in cash and 5s. in redeemable debenture stock carrying no interest. Apparently the object is to avoid the expense of more than one application to the Court. The company has a lengthy dividend record to its credit. It may be recalled that at the recent meeting of the Cam and Motor Gold Mining Company the announcement was made that a return of capital was under consideration—apparently out of the proceeds of the gold premium, Rhodesia having followed Great Britain's example in changing the basis of her currency. Early this year yet another Rhodesian gold concern—the Rezende—having accumulated funds in excess of requirements, repaid its members 2s. 6d. per share. It is a moot point whether mining companies might not more generally follow this practice; indeed, whether all distributions should not be regarded as return of capital until the outlay on plant and development has been refunded. A mine is a wasting asset, but shareholders seldom establish a fund for amortisation of capital.

Witbank Colliery.—In this year's report, writes our mining correspondent, this Transvaal undertaking makes a new departure by presenting a profit and loss account. There are, however, only two entries on the credit and three on the debit side. The former show that the net working revenue was supplemented by £91 interest, etc.; the latter, that administration absorbed £3,250 and debenture interest £9,010. The surplus now stands at £53,960 against £51,670. Capital outlay and taxation call for somewhat increased amounts; the dividends total 10 per cent. in place of 7½ per cent. for the year ended August 30, 1930, and 5 per cent. in respect of the four preceding periods. The slightly reduced amount of £80,740 now carried forward is represented by cash or cash assets. At 760,670 tons the coal despatched from the mines showed a decrease of 73,000 tons, but the working costs fell off in a more than corresponding degree. The directors report that developments continue to expose coal of standard quality and thickness.

COMPANY MEETINGS, &c.

LONDON MARITIME INVESTMENT COMPANY, LIMITED.

SHIPPING TRADE DEPRESSION.

BOARD'S SOUND FINANCIAL POLICY.

The thirty-fourth annual general meeting of the London Maritime Investment Company, Limited, was held, on the 11th instant, at Winchester House, Old Broad Street, London, E.C.

Sir F. Vernon Thomson, K.B.E. (chairman and managing director), presided.

The Secretary (Mr O. A. Hall) having read the notice convening the meeting and the report of the auditors.

The Chairman said: Gentlemen,—The directors' report, with statement of accounts, for the year ended September 30, 1931, having been circulated to the stockholders 10 days prior to the annual meeting, they will, I hope, as usual be taken as read. The accounts, read in conjunction with the directors' report, set out clearly the position of the company.

This company, as will be seen by a glance at the summary of its investments shown in the balance sheet, is largely interested in shipping, and shipowning has, of course, always been an adventurous trade. The directors' report for last year stated that the shipping industry was then experiencing the most acute trade depression in the history of modern shipowning. In these circumstances it is not surprising that our revenue in respect of that year is almost £8,000 less than for its predecessor.

The net profit of the year was £42,877, to which must be added the balance of £6,000 odd brought forward, making an available sum of £48,877. Of this the dividend upon the company's £500,000 five per cent. cumulative preference stock and the interim dividend of 2 per cent. upon the £500,000 ordinary stock absorb £26,812 10s., leaving an available balance of £22,064.

LIQU

—made it a very bad year for all Argentine railways, and from July 1st to the end of October the exchange position was getting steadily worse, so that it looked as if the current year—merely on account of exchange and nothing else—must be much worse than the past year. I am glad to say that since the beginning of November exchange has taken a sudden and dramatic turn. It was down to 29d., but I am glad to say that I have heard to-day that it is 39d., which is rather above the average price that prevailed during the whole of last year. If the exchange position continues to improve, the future will have for us a very much more cheerful aspect—but I would only tell you, as I have told you before, that the one thing you have to do in connection with Argentine railways is to watch exchange.

The resolution was carried unanimously.

JOHN I. THORNYCROFT AND COMPANY, LIMITED.

COMPANY'S VARIED ACTIVITIES.

The thirtieth annual general meeting of John I. Thornycroft and Company, Limited, was held, on the 11th instant, at Winchester House, Old Broad Street, London, Sir John E. Thornycroft, K.B.E., M.I.C.E. (managing director), presiding.

The Chairman, after referring in detail to the results of the year, said that he reported last year they were then engaged upon the British experimental Destroyer "Acheron," fitted with special high-pressure machinery, and that the two destroyers building for the Canadian Navy had been launched. During the present calendar year these vessels had been completed and delivered. The Admiralty had expressed themselves as more than satisfied with the results, and they had heard from Canada that the "Saguenay" and the "Skeena" were regarded as most satisfactory vessels in every way. The board felt confident that they would serve to maintain the company's reputation as leading designers and builders of vessels of the destroyer class. While referring to the ship-building side of the business, he went on to say at the last meeting that the depressed state of the industry was well known, and that he was afraid, in spite of what was being done to close down some of the redundant shipyards, it would be very difficult to obtain orders with a reasonable margin of profit. Following his remarks, conditions rapidly became worse, and there were many yards in the country which had no work at all. The company did succeed, in the face of the keenest competition, in securing the order for two destroyers for the British Navy.

Having referred to other activities of the company—repair work, motor boats and marine motors, motor vehicles, six-wheeled vehicles—he mentioned the important economies which had been made throughout the whole of the organisation. Finally, he said that the necessity of keeping down costs of production to enable the company to compete successfully in foreign markets was fully appreciated by the board, and, he hoped, labour would be willing to co-operate to reduce the cost of manufacture in this country, so that the company be placed in a more favourable position to contend with competition from the Continent, where production costs in shipbuilding and many other classes of work were very much less, mainly owing to freedom from restrictions in the way in which the work was carried out and heavy taxation for social and other purposes.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended November 7, 1931, amounted to £11,836,200 against ordinary expenditure of 24,489,300. After allocating £325,000 to Sinking Fund and saving allowed for a decrease in Exchequer Balances of £184,100, he operations for the week, as shown below, increased the National debt by £12,794,000 to £7,733,133,000:—

(000's omitted.)

Treasury Bills	+13,366	Public Dept. Advances.....	— 4,250
Irish Loans Abroad.....	+ 4,437	Nat. Savings Certificates.....	— 150
Indies.....	+ 11	Nat. Debt Commissioners.....	— 293
		Road Fund	— 350
	+ 17,814		— 5,020

A complete analysis of the National Debt at September 30, 1931, was printed in the *Economist* of October 3.

NOTICES.

The Midland Bank announces the opening of a new branch at 418 Ewell Road, Tolworth, near Surbiton, Surrey. Night safe banking facilities are available at this branch. A new branch has also been opened at Chequer's Corner, Dagenham, Essex, and a new office at St. Andrew's Dock Extension, Hull. Night safe banking facilities will be available at Dagenham.

Mr Floyd Gilbert Blair has been elected a vice-president of the National City Bank of New York. In his new work Mr Blair will function in connection with the office of the chairman, Mr Charles E. Mitchell, where he will act as a special liaison officer. Prior to his association with the National City Bank of New York, Mr Blair in 1927 acted as legal adviser to the World War Foreign Debt Commission and also to the Secretary of the Treasury on foreign financial matters. Mr Blair has been decorated by the Governments of Czechoslovakia, Italy and Belgium.

DOMINION-SCOTTISH INVESTMENTS LIMITED.—The directors of the Dominion-Scottish Investments Limited have declared a dividend on the 5 per cent. cumulative redeemable preference stock (par value £50,000) of the company at the rate of 5 per cent. per annum for the quarter ending October 31, 1931, payable on November 1, 1931, to shareholders of record at the close on October 20, 1931.

JOHNSON AND PHILLIPS, LIMITED.—The directors regret that they have reluctantly decided not to declare an interim dividend this year. During the past six months the continued depression, which has been world-wide, has affected this business in common with others. The result has been a suspension of the normal business, and since the last annual meeting, of many of the more important contracts in hand, and other necessary business has been seriously restricted, particularly in Australia and India. Notwithstanding these adverse influences a reasonable net profit has been earned during the year, and the work in progress is satisfactory in the circumstances. In connection with the above decision the directors have in mind the financial requirements of the company in connection with its current contracts, and the possibility of a further period of difficult trading before conditions again approach the normal. Although the outlook is more promising than it appeared a few months ago, it is clear that there is not likely to be a sudden revival in industry, but rather a slow and dignified recovery. In all these circumstances the directors are satisfied that the right policy for them to adopt is to preserve the liquid assets of the company and to decide upon the recommendation to be made to shareholders as to the dividend.

THE MILLON AND ASKAM HEMATITE IRON COMPANY, LTD.—The Millon and Askam Hematite Iron Company, Ltd., have acquired the control of all the interests of the North Lonsdale Iron and Steel Company, Ltd. The company have paid no cash, having arranged to give in exchange for the shares in the North Lonsdale Iron and Steel Company, Ltd., preference and ordinary shares in the Millon and Askam Hematite Iron Company, Ltd. The exchange has been effected on the basis of giving for one-sixth of the North Lonsdale shares an equal number of 7 per cent. cumulative and participating preference shares in the Millon Company and for the remaining five-sixths of North Lonsdale shares, ordinary shares in the proportion of three Millon shares for four North Lonsdale shares. The interest on the preference shares so issued will only commence on the date of the allotment of these shares. Whilst the directors consider the above arrangement to be very fair to the North Lonsdale shareholders, they are also satisfied that the amalgamation of the interests of the two companies is a source of increased strength to this company. The benefits to be derived from the amalgamation will consist (inter alia) of: (1) The centralisation of control, including buying and selling and the elimination of unnecessary competition; (2) economies resulting from amalgamation of interests; (3) a further outlet for ore from the company's Florence and Alquie mines; (4) the combination of shareholdings in the Ullecoats Mining Company, Ltd.

Commercial Reports.

MARKET SUMMARY.

Movements in the principal international commodity markets have been irregular during the past week. Business in cereals has again been active. The outstanding event has been the reaction in wheat and maize prices. On the other hand, barley, rye and oats have been maintained. New York quotations for coffee, cotton and rubber show a slight advance on last week, but cocoa and sugar have been cheaper. Among non-ferrous metals, copper has been flat owing to the failure of the international conference of copper producers. Tin, lead and spelter, however, have experienced a better demand at rising prices. Sterling quotations of commodities which lend themselves to international arbitrage have moved in sympathy with international values. Among cereals, wheat and maize have been cheaper. Rubber, lead, spelter and tin have been quoted at higher levels. The demand for tea has been less keen than a week ago, and the feature has been the renewed decline in the price of foreign beef and mutton. According to various reports from industrial centres, the improvement in the coal trade has not yet gone far, but iron and steel manufacturers are experiencing an increase in the demand for their products. Among the textile industries, the recent improvement in the demand for Manchester and Bradford goods has been maintained, and jute mills are steadily increasing production.

THE COAL TRADE.

GLASGOW.—Shipments are now beginning to fall away again after the spurt of the previous month or two, when trade was stimulated by the fall in the £. The collieries have lost some of the advantages resulting from the devaluated pound because of the advance in their prices. The licensing policy of some of the Continental countries is also a drawback to business, and Polish competition has become keener again as a result of steps taken by the Polish Government to assist export trade. Washed trebles and doubles remain the firm spots of the market, which is steady on the whole, although the smaller sizes of nuts have an easier tendency. Current prices for the shipping trade are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Rill, best, 14s. 6d.; splint, best, 15s. 15s. 6d.; splint, second, 14s. 3d.; navigation, 15s.; navigation, second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 9d.; trebles, 16s.; doubles, 13s. 13s. 6d.; singles, 9s. 6d.; pearls, 9s.; dross, 9s. FIFE.—Screened navigation, 17s.; first-class steam, 13s. 6d.; third-class steam, 12s. 6d.; trebles, 16s. 6d. 18s. 6d.; doubles, 13s. 6d. 14s. 6d.; singles, 10s.; pearls, 9s. 6d. LOTHIAN.—Prime steam, 12s. 6d.; secondary steam, 12s.; trebles, 16s.; doubles, 13s. 6d.; singles, 10s.; pearls, 9s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 15s.; doubles, 14s.; singles, 10s.; pearls, 9s. 3d.; dross, 9s. 7d.

SHEFFIELD.—There has been a steady export demand for best steam coals, with the price firm at 18s. 6d. f.o.b. Increased tonnages of small boiler fuel are being taken by the textile industries. The demand for house coal is rather below normal for the time of year. Best ordinary house is quoted at 21s. 6d. to 22s. 6d. at pits. Blast-furnace coke is moving more freely and there is less price cutting. The general position of the industry is a little better but, has not yet improved very much by the suspension of the gold standard.

CARDIFF.—Business has been very inactive this week on the Cardiff coal market, and shipments have been below recent weekly averages. Last week, according to the official returns of the Great Western Railway Company, the total foreign and coastwise exports (cargo and bunkers) were only 361,620 tons, compared with 438,180 tons the previous week, and 478,070 tons in the corresponding week last year. There were one or two new contract inquiries on the market for supplies over next year, but it is reported that the Midi Railway order for 50,000 tons, which was believed to have been placed with a Cardiff firm for South Wales coals, has gone to Germany. Quotations are nominally unchanged, and for all except one or two of the grades of washed coals they have ruled on the basis of the minimum schedule. The following are the current

approximate quotations:—Best Admiralties, 19s. 6d. per ton; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; French nuts, 40s. to 48s. 6d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 18s. 6d. to 19s. 6d.; pitwood, ex ship, 23s. 9d. to 24s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron is firm and a steady business is being transacted, although the tonnage put through during the past week has not been so large as during the previous one. The present easing may be accounted for by the fact that consumers have now practically covered their requirements for this year. The feeling is general that there is not likely to be any reduction in the official prices and the fear of an advance might cause a further buying movement at any time. Prices at the weekly market on Tuesday remained unchanged, viz., No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t. A fair business was reported at the meeting, including a few parcels for abroad, which is a very gratifying experience. The hematite trade shows improvement. Sales are now taking up the small current production and causing an important reduction in the heavy stocks held at different works. Moderate orders continue to be placed for this year's delivery on the basis of 65s. for ordinary mixed numbers, but makers are asking premiums for delivery commencing January which is causing hesitation on the part of consumers. In the steel trade the position is better in most departments and work is more regular. No very large contracts have recently been reported, but manufacturers are anticipating important new business. Prices for steel under the rebate scheme are unchanged, viz., plates, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other products are: Heavy steel rails, £8 10s.; iron crown bars, £10; 24-gauge black sheets, £8 5s.; and 24-gauge galvanised corrugated sheets, £9 10s., all for home use. In the ore trade there is still little new buying owing to heavy stocks held by consumers and large arrears of old contracts still on their books. Dealers, in view of the uncertainties of exchange and freights, have not been naming very close prices recently, but to-day best rubio is nominally 17s. c.i.f. for early delivery, and the estimated freight Bilbao/Middlesbrough is 5s. 3d. Coke is offering at 17s. delivered works for ordinary blast-furnace qualities for this year, but 17s. 6d. is asked for delivery over the first few months of next year. The number of blast furnaces in operation in the district is so far unchanged at 18.

SHEFFIELD.—Firms engaged in the basic industries report quietude. There was a good deal of buying of materials a month ago to cover requirements in anticipation of a revival in finished materials. This has not materialised yet to any substantial extent, but makers are hopeful. The steadiness of prices, especially of some of the more important essential materials which have to be imported, is the subject of comment. Several alloying metals for steel are up 20 per cent., and copper and nickel cost much more than a month ago. The disadvantages incidental to the reduced sterling are not yet being felt to any considerable extent. The hardware, cutlery and plate trades report more export business and there is a considerable sprinkling of busy works in Sheffield's lighter industries. Special large contracts for scissors and knives are a feature. It is believed that uncertainty regarding the tariff policy of the Government is holding back a revival of trade. Purchasers of hardware goods and special steels from the Continent are falling off, but there are considerable stocks of foreign goods in the country.

GLASGOW.—The outlook in the West of Scotland is brighter in most branches of the iron and steel trades this week. Although steelmakers are not yet benefiting to any great extent from the greater activity at the Clyde shipyards, they are better employed, and in view of the amount of new and repair work now on hand at the shipbuilders, they anticipate a considerably increased demand at an early date. Engineering firms and machinery makers are fairly well placed with orders at present and in most of the manufacturing trades business is decidedly better than for some little time past. There is a steady demand for both black and galvanised sheets for export and the demand from home consumers is also satisfactory. Some branches of the tube trade are still poorly employed, and the demand for wrought iron is also poor.

CARDIFF.—On the Swansea metal Exchange on Tuesday business in the tinplate trade was reported to be more active, and shipments totalled 157,193 boxes, compared with 117,201 boxes in the previous week, and 102,324 boxes in the corresponding week last year. Stocks were consequently reduced, and at the end of last week were about 22,000 boxes less than at the same period in 1930. Merchant prices are reported to have touched 13s. 9d. per basis box, but makers are quoting between 14s. and 14s. 3d. f.o.b. works port. Galvanised sheets are steady at £9 7s. 6d. per ton. Welsh bars are unchanged at £5 per ton, but foreign bars, supplies of which have increased considerably during the past few weeks, have been obtainable at between £4 10s. and £4 15s. delivered.

OTHER METALS.

TIN.—The past week has witnessed greater activity in the metal markets, and prices were generally firmer. Tin was bought freely at the beginning of the week in New York and London at advancing prices. On Wednesday, however, the demand began to fall off, an sellers predominated. A slight reaction in quotations followed. In New York the metal was quoted at 23½ cents per lb. on Wednesday, against 22-15 cents per lb. a week ago, and 23½

month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £132 to £132 5s. per ton, compares with £128 to £128 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 30,703 tons, show an increase of 942 tons on the week.

COPPER.—It appears that the international conference of copper producers, held in New York, was unable to evolve an agreed scheme of regulating the output of the metal. The New York copper market was again dull, and the slight improvement of last week was not maintained. In London, prices advanced a little on increased buying, but after the news of the breakdown of the conference the metal relapsed. On Wednesday "Domestic" spot has been quoted officially at 7 cents per lb. in New York, against 7 cents a week ago and 7 cents a month ago. Wednesday's official closing price for "standard cash" in London in terms of sterling, at £36 17s. 6d. to £37, compares with £35 13s. 9d. to £35 16s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 31,608 tons, show a decrease of 330 tons, while stocks of rough copper, at 947 tons, are 50 tons smaller.

LEAD.—A spurt in buying drove up the price of this metal in London and New York, and the quotation which had been reduced from 4 cents per lb. to 3-85 cents per lb. a fortnight ago, was advanced to 4-05 cents per lb. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £14 6s. 3d. to £14 17s. 6d. per ton, compares with £13 10s. to £13 11s. 3d. on the corresponding day last week.

SPELTER.—According to the Metallgesellschaft A.G., the average daily smelter output of spelter during September, at 2,455 metric tons, shows a reduction of only one ton on the month. In common with other metals, prices advanced at the beginning of the week in New York and London. The quotation in New York, which a fortnight ago had been reduced from 3-25 cents per lb. to 3-15 cents per lb., was advanced this week to 3-25 cents per lb. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," at £13 10s. 3d. to £14 5s. per ton, compares with £13 3s. 9d. to £13 13s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals aluminium remained unchanged at £95 per ton, while the quotation for nickel was reduced from £225-£230 per ton to £220-£225 per ton. Antimony advanced sharply from £25 10s. to £27-£27 10s., but quicksilver was cheaper at £17 10s. per bottle against £18 10s. a week ago.

TEXTILES.

THE COTTON TRADE.—Manchester.—The tone of the market during the past week has continued firm. A considerable inquiry has again been experienced and in certain quarters producers have secured very fair orders, but there have been indications of rather less activity than a week or two ago. Spinners and manufacturers are now much stiffer in quotation and for certain goods longer delivery terms are wanted so that more difficulties are encountered in arranging terms of fresh contracts. A satisfactory feature, however, is that the larger output of the machinery is being well absorbed. Inquiry in piece-goods for India has tended to broaden and in small lots the turnover has been rather better. White and shirtings have attracted increased attention for Karachi and Bombay, and quite a useful business has been done in light whites. Rather more demand has been experienced for Calcutta with isolated transactions in dhooties, mulls and jaconets. Fair operations have again taken place for China in standard makes and fancies, and trade in many quarters has been helped by the further rise in the price of silver. Some reports from Egypt have been rather less encouraging, but in heavy goods some moderate lines have been booked for African outlets. Only occasional sales have been mentioned for South America, but printed and dyed fabrics continue to move off fairly well for the Continent. There have been signs of rather less demand in home trade goods. American and Egyptian yarns for home use have been stiff in quotation and there is still a tendency for spinners to improve their margins. The sales have been quite equal to the bigger production. A steady business has again been done in yarns suitable for China.

THE WOOL TRADE.—Bradford.—Interest still centres largely on overseas markets, writes our correspondent, and cables from Australia indicate advancing prices for all descriptions of raw material. There has been no lessened call for wool during the week, and values tend in sellers' favour. It is felt that while the home trade has certainly benefited very materially since the abandonment of the gold standard, the increased activity in the West Riding has led to a diminished consumption at all manufacturing centres on the Continent, hence in the aggregate there is no real improvement in trade. It appears that in the aggregate there is an increase of 25 per cent. in the running of machinery compared with anything

obtaining before September 21st. Wool values continue to harden slightly in overseas markets, and we note some improvement in the offering and purchase of larger quantities of wool in South Africa.

THE JUTE TRADE.—Dundee.—The jute industry continues to show improvement, and spinners and manufacturers are steadily increasing their production. Orders for fair quantities of both yarns and cloth are being placed at gradually hardening prices. The raw jute market has been ruling on strong lines, and in the past few days an increase of 30s. per ton is recorded. The Indian Jute Mills have sold considerable quantities of goods, which led to the purchase of the fibre in large volume. Owing to the short crop this season, imports into up-country markets have continued very light, which goes to strengthen the hands of sellers and creating great reserve on their part. The turn in the tide of depression has now definitely come, and, with the great advance in values of raw jute, spinners and manufacturers are steadily working themselves into a position to command higher rates for their productions. Daisee assortment has been sold at up to £22 10s. for the full L.J.A. group, and £22 10s. for short group and single marks, with three's quoted now at £22 5s., and four's at from £21 5s., November-December. Tossa assortment was raised to £23 10s., and three's have been sold at up to £23 for full group, and £23 10s. for single marks, while four's rule from £22 5s., same shipment. White jute is not of much interest here, and the bulk of the business done has been in Daisee and Tossa. Good First Marks are quoted at £25 10s., and Lightnings from £23 10s. to £25, according to quality. Green Circle Ram is offered at £25, while Hearts rule from £22 10s., November-December. Spinners have sold large quantities of hessian yarns at up to 2s. 4d. for common 8 lb. cops, and 2s. 6d. for 8 lb. spools, and further small business has been concluded at 2s. 4½d. for cops, and 2s. 5½d. for spools. The lowest prices now quoted are 2s. 5d. for cops, and 2s. 6d. for spools, and spinners have every confidence of making these rates in the very near future. Twist is firm at from 4½d. to 4½d. for 3-ply 8 lb., and sacking yarns, especially wets, continue strong. For 24 lb. wet the usual price is 2½d. to 3d., and 8 lb. chains, which have not been so freely sold, are quoted at from 3½d. to 3½d. Rove is dearer at from £22 for 48 lb. and £19 10s. for 200 lb., while the finer yarns, being in some little demand, have been increased to 3s. 2d. for second quality 8 lb. Rio warp, 2s. 9d. for third, and 2s. 7d. for fourth. Carpet yarns are wanted, and are firm at from 3½d. for 14 lb. warp. Inquiries for jute cloth are numerous, and quite a fair business is resulting, buyers paying steadily advancing prices. The rate for 10½ oz. 40 in. hessians has been increased to 3½d., and for 8 oz. 24d. packed, and the light weight hessians have been in most request. Linoleum hessians are quiet, but tending dearer in sympathy with the general improvement. Heavy goods have experienced quite a moderate trade, and prices of these are also higher. The Calcutta goods market has been active and values have advanced to 21s. 10½d. for 10 oz. 40 in., and 17s. 6d. for 8 oz., November-December, and to 22s. 1d. and 17s. 9d. for January-March.

THE GRAIN MARKETS.

WHEAT.—At the beginning of this week international wheat prices stood at a level nearly 40 per cent. higher than at the beginning of October. Since then there has been the inevitable reaction which usually follows a sharp rise in prices. Prices are still declining, but so far only a few points of the recent gains have been lost. In the absence of large exports from Russia and decreases in the acreage sown in Australia, Argentina and the United States, the wheat situation is improved, and it is improbable that prices will fall back to the low level at which they stood until a few weeks ago. Estimates of this year's crops are now available, and it seems certain that requirements will exceed the production. The deficiency will have to be made up by inroads into stocks, and the "carry-over" at the end of the current season is expected to show a considerable decrease on that of July 31, 1930. The crops of Argentina and Australia are now about to be harvested, and, so far, reports of their condition have been favourable. Quotations in London, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 35s. 9d. per 496 lbs., as compared with 36s. 9d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 33s. 3d., against 34s. 3d.; No. 3 Northern Manitoba, Atlantic, ex ship, 31s. 9d., against 33s. 3d.; Russian, on sample, 30s. to 32s., against 28s. 6d. to 31s.; Australian, ex ship, 32s. 6d. to 33s. 6d., against 32s. 9d. a week ago.

WHEAT FLOUR.—Trading in flour has again been active during the past week and shipments from North America have again been heavy. North American shipments, at 262,009 sacks, shows an increase of 14,000 sacks as compared with the previous week. Of this total, 100,000 sacks have been consigned to Europe. In this country there has been a strong demand for home-milled flour at higher prices. Quotations in London, Wednesday: Straight run, delivered country, 27s. per sack of 280 lbs., as compared with 26s. 6d. last

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

week; delivered London, 26s., against 25s. 6d. Manitoba patents, ex store, 28s. to 30s., against 27s. to 30s.; and Australian, ex store, 22s. to 23s., against 22s. to 23s. a week ago.

BARLEY.—The market in barley has been steady, but prices began to decline early in the week in view of larger supplies of feeding qualities. On Tuesday, "December" futures were quoted at 43½ cents per bushel in Winnipeg, against 43½ cents per bushel a week ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 48 lbs., 25s. to 26s., as compared with 25s. to 26s.; Russian, landed, 24s. 6d. per 400 lbs., against 24s. 9d. a week ago.

OATS.—The market in oats has been firm in view of the scarcity of supplies. "December" futures, which, week ago, stood at 26½ cents per bushel in Chicago, sold at 26½ cents per bushel on Tuesday this week. Quotations in London, Wednesday: "River Plate," landed, 19s. 6d. per 320 lbs., as compared with 19s. 9d. last week; "River Plate," ex ship, 18s. 6d., against 18s. 9d.; "Chilean White," landed, 28s. 6d., against 28s. 6d. a week ago.

MAIZE.—Quotations for maize continued to advance until the end of last week; but the enormous quantities arriving from Argentina (last week's arrivals amounted to 1,500,000 quarters), have recently been slightly in excess of demand and since Monday values have been declining steadily. Tuesday's quotation in Chicago for "December" futures at 44½ cents shows a rise of 4½ cents per bushel on the week. Quotations in London, Wednesday: "Plate," landed, 19s. 9d. per 480 lbs., as compared with 22s. 3d. last week; "Plate," ex ship, 18s. 6d., as against 18s.; "Plate," November-December, 18s. 6d., as against 21s. Yellow maize meal, ex wharf, was quoted at £6 per ton, against £6 10s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to November 7	79,191	124,248	216,554	288,752
10 weeks to November 7	734,490	1,449,432	2,940,972	3,039,571
Average price of English wheat per cwt.	s. d. 6 7	s. d. 6 10	s. d. 9 5	s. d. 9 11

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1927 to 1930:—

Weeks ended	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
Oct. 31, 1931.....	Owts. 107,437	Owts. 449,156	Owts. 63,157	s. d. 6 5	s. d. 9 1	s. d. 6 6

OTHER FOODS.

SUGAR.—The second estimate of the European beet sugar crop of 1931-32, at 8,370,000 tons, shows an increase of 849,000 on the first estimate. The small increase in the estimate left markets unaffected. During the past week there has been little change in the raw sugar markets, and the slight improvement attained a week ago has been maintained. "British" refined sugar remained unchanged in price. "December" futures in New York were quoted at 1.31 cents per lb. on Wednesday, against 1.32 cents per lb. a week ago. Wednesday's sales of "raws" include "March delivery" at 6s. 8½d. per cwt., against 6s. 8½d. to 6s. 8½d., and "May," 1932, at 6s. 10½d. to 6s. 10½d., against 6s. 9½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.

Total tons

Last week

COFFEE.—Costa Rica and African varieties experienced a good demand at Tuesday's auctions, and other sorts remained generally steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 190; delivered for home consumption, 271 bags; exported, 86; stocks, 2,474 bags, against 1,473 bags last year. Central American, landed, 1,133 packages; delivered for home consumption, 2,412; exported, 2,390; stocks, 66,835 packages, against 43,141 a year ago. Other kinds, landed, 3,461 packages; delivered for home consumption, 2,518; exported, 852; stocks, 53,906 packages, against 59,813 a year ago.

COCOA.—The sharp rise in cocoa prices a week ago has been followed by a slight reaction, but "December" futures were quoted at 4.90 cents per lb. in New York on Wednesday, against 4.95 cents per lb. a week ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, now crop, November-January, at 24s. 9d. per cwt. f.o.b. London contract, shows a fall of 3d. Last week's movements of cocoa in London were as follows: Landed, 1,879 bags; delivered for home consumption, 5,486 bags; exported, 615 bags; stocks, 148,015 bags, as against 168,451 last year.

TEA.—The quantities catalogued for this week's auction comprised 54,331 packages of Indian, 15,978 packages of Ceylon, and 9,912 packages of Java and Sumatra tea. Monday's Indian auctions opened with a strong demand for medium and fine teas. Keen competition was maintained at Tuesday's sales of Ceylon tea, but on Wednesday the market was easier. Outstanding qualities were maintained, but medium and common grades were cheaper. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.								
Week ending	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyassa-land.	Total.	
Nov. 6, 1930	s. d. 1 2 6	s. d. 2 0 0	s. d. 1 7 10	s. d. 0 11 46	s. d. 11 6 8	s. d. 0 8 22	s. d. 1 3 24	
Oct. 15, 1931	1 7 3	0 11 28	1 6 57	0 8 73	0 7 44	0 6 67	1 1 95

RICE.—The market in rice has been steady and prices were maintained at last week's level. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 355 tons; delivered, 70 tons; stocks, 1,584 tons, as against 2,643 tons last year.

POTATOES.—Although supplies of potatoes at the principal markets were adequate to meet requirements, prices advanced a shade. At the Borough Market "Best King Edward" sold at from 8s. 6d. to 9s. per cwt., as compared with 8s. to 8s. 6d. per cwt. a week ago.

SPICES.—The market in spices was steady, but business was quiet. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 5 tons; delivered, 8 tons; stocks, 366 tons, against 465 tons last year. White, landed, 166 tons; delivered, 76 tons; stocks, 420 tons, against 158 tons a year ago.

MEAT.—Although supplies have not been as heavy as a week ago, prices did not recover from the low level to which they fell a week ago. English beef and mutton were a little dearer, but Argentine beef and New Zealand mutton declined further. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 3s. 8d. to 4s. 2d. per 8 lbs., against 3s. 8d. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 10d. to 3s. 4d. as against 3s. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,391 tons, as compared with 9,304 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.2 per cent. of the supplies, as against 79.9 per cent. a year ago; and imported mutton, mainly New Zealand, formed 75 per cent. of the total supply, as against 73.6 per cent. last year.

Kingdom) in the nine months were 51,139 tons, valued at £1,457,427, and oilcakes and meals 66,779 tons, of a value of £431,828. It will thus be seen that very nearly the whole of the production of oils and cakes, plus certain imports, is absorbed by the home industries devoted to paint and varnish, linoleum, soap and margarine manufacture, and by agriculture.

HIDE, LEATHER AND ALLIED TRADES.—In the presence of a fairly good demand prices for hides and skins from home-slaughtered cattle remain firm in price, with a tendency towards higher figures. At the auctions held in Manchester this week, the lighter weights in clear ox and heifers were in some instances from 1d. to 1½d. per lb. dearer, while warbled classes were unchanged. Cows remained steady, but the market was slightly firmer for calfskins. Sheepskins are realising rather better prices. Business is difficult in the imported hide market on account of the fluctuation in prices owing to the variation in exchange in some of the producing countries. For instance, very few sales have been made this week of South American hides owing to the appreciation of the Argentine peso, and tanners for the most part are waiting until quotations become more stabilised. This, perhaps, has accounted for the rather increased attention paid to other descriptions of hides, as more interest has been shown in Africans. In the latter direction sales have been made of Mombasas at from 5½d. to 6½d., while Nigerians have realised from 6½d. to 7½d. Business has also been done in Capes, 7d. and 6d. having been paid for first and second dries, and 6½d. and 5½d. for dry-salted 20-39 lbs. Prices for Australians are firmer, with a moderate amount of business passing. A slight improvement has been noticed in the inquiry for sole leather and, all things considered, the turnover has been better than that of the previous week. Medium weight dry hide bends have accounted for a considerable portion of the business done, in addition to which there has been a steady call for the lighter weights. In English and wet-salted descriptions the best inquiry is for mediums and heavies, and in these some fair sales have been made. Pinned bellies have also received more attention, but other descriptions of offal are only being taken up in limited quantities. Producers and distributors of upper leathers continue to receive a fair number of inquiries, the bulk of which are for willow and box calf and glaze kid. A slight improvement has been experienced in the sale of patent, but fancy upper stock is not a good market and the tendency

is for orders in this direction to become smaller. The markets for both sole and upper leather remain firm, and hopes are entertained of a further improvement in turnover in the near future.

RUBBER.—There has been a slight improvement in the market for rubber and prices advanced a little in New York and London in the expectation that the Dutch Government might after all consider the adoption of a scheme of restriction. Wednesday's official closing price for standard ribbed smoked sheet in London, at 2½d. per lb., shows a rise of ¼d. as compared with the corresponding day last week. In forward positions, business has been done at 3½d. for January–March, against 2½d. to 3d.; and at 3½d. for April–June, 1932, as against 3½d. to 3¾d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 934 tons; delivered, 1,841 tons; stocks at the end of last week, at 132,607 tons, show a decrease of 907 tons as compared with the preceding week.

SATURDAY, NOVEMBER 21, 1931.

No. 4,604.

INCREASED ANNUITY RATES

The following are examples of the Rates of Annuity that will be allowed in respect of each £100 of Purchase Money:

Age Attained	Males.			Females.		
	£	s.	d.	£	s.	d.
60	9	8	2	8	4	8
65	10	18	9	9	8	10
70	13	1	11	11	4	2
75	16	5	6	13	17	4

The rates quoted are for Annuities payable by half-yearly instalments, the first payment being made six months after the date of purchase, and the final payment at the half-yearly due date preceding the death of the Annuitant.

the War Loan dividend due on December 1st. This, of course, represents a steady drain upon market resources. A second, though allied, factor is the discrepancy between Treasury bill payments and maturities. No bills mature on Mondays of this month, and in consequence money tends to be scarce early in the week. Finally, it is suggested that the clearing banks are now making-up on their normal scale, and that this is depriving the market of some temporary relief that it has recently obtained. There is no reason to suppose that the banks ever deliberately refrained from calling, and what probably happened in previous weeks was that they found that they had sufficient cash at their disposal without having to call. If so, their resumption of calling is only additional proof that money is becoming less plentiful.

Be that as it may, money was none too easy over the week-end, though both new loans and renewals were obtainable outside the clearing banks at $4\frac{1}{2}$ per cent. On Monday and Tuesday greater difficulty supervened, with new money only available at 5 and $5\frac{1}{2}$ per cent. and 5 per cent. charged for renewals. Wednesday was a curious day, for though in certain directions the position was easier, the total amount of funds available proved insufficient for market needs, and in the end resort had to be made to the Bank, which also gave assistance through special purchases of January bills at $5\frac{1}{2}$ per cent. The general trend of rates was 5 and $5\frac{1}{2}$ per cent. for new money, and these rates are low enough to suggest that the pressure was not excessive. This is confirmed by the Bank return, which records an expansion of only £0.4 millions in Discounts and Advances. On Thursday money was again scarce, with rates running up to $5\frac{1}{2}$ per cent., but resort to the Bank was avoided.

	Oct. 29, 1931.	Nov. 5, 1931.	Nov. 12, 1931.	Nov. 19, 1931.	Previous Rate and Date Changed.
Bank Rate	%	%	%	%	% (Sept. 21, '31)

Houses { Notice ...	4½	4½	4½	4½	2½ (Sept. 21, '31)
Market rate (3 months' bills)	5½-½	5½-½	5½-½	5½-½	...

The Discount Market has again been very quiet. Last week, although £45 millions of Treasury bills were offered against £40 millions the week before, applications fell away from £59.2 to £55.3 millions. The market had apparently accurately judged the position, for in spite of the falling off in applications, the average tender rate only hardened from £5 10s. 0.35d. to £5 10s. 8.47d., or by $\frac{1}{2}$ per cent. Hot Treasuries were dealt in at $5\frac{1}{2}$ per cent. early in the week, a rate which left a turn of only $\frac{1}{2}$ per cent., but hardened on Thursday to $5\frac{1}{2}$ per cent. German renewals are still quoted at $5\frac{1}{2}$ per cent., and the somewhat vague statement issued in London early in the week has had no effect on the rate. It may be remarked that even though Germany intends not to discriminate between various maturities next year, her intentions might be defeated by force of circumstances. Other three-months' bank bills were quoted at $5\frac{1}{2}$ per cent. until Wednesday, when monetary stringency drove the rate up to $5\frac{1}{2}$ per cent. and to $5\frac{1}{2}$ per cent. the following day.

Last week it was announced that the Bank Committee had recommended the re-election of Mr Norman as Governor and Sir Ernest Harvey as Deputy-Governor for the new year. The City will be glad to know that Mr Norman's recovery in health is sufficient to justify him in undertaking another year of office. The Bank return reveals surprisingly little evidence of the prevailing monetary stringency. The note circulation has actually decreased by £2.6 millions, a movement which should have made for greater ease. Again, Bankers' Deposits, though lower by £0.8 million on the week, still stand at the relatively comfortable figure of £59.7 millions. The increase of £2.1 millions in Public Deposits to £21.2 millions is more significant, as it points to the withdrawal of funds from the market in preparation for the War Loan dividend.

In view of the difficulties South Africa is experiencing in maintaining the gold standard, brief reference to which was made in last week's *Economist*, some interest attaches to recent fluctuations in the South African exchange. As regards sterling, the rate between London and Pretoria has remained very steady during November. The mean rate on November 1st was £79 15s. South African per £100 sterling, and the rate has since risen, with minor fluctuations, to £80 10s. During this period, however, sterling has depreciated against the dollar, from \$3.830, or 78.7 per cent. of gold parity, to \$3.770, or 77.5 per cent. of gold parity. The consequence is that while on November 1st there was a margin of only 1.05 per cent. between the depreciation of sterling on Pretoria and New York respectively, on November 19th the margin was 3 per cent., and this margin measures the depreciation of the South African pound below its parity with the dollar. As the cost of shipping gold from South Africa to New York is only 1.15 per cent., it is clear that the South African exchange on New York now stands below the gold point, and this is additional evidence of South Africa's difficulties.

Further evidence of a return of confidence in American finances is available in the form of a slight reduction in money rates. Call money has remained steady at $2\frac{1}{2}$ per cent., but open market discount rates on 90-day bankers' acceptances have been lowered from $3\frac{1}{2}$ -3 per cent. to $3\frac{1}{2}$ -2½ per cent., and the total reduction during the past fortnight is one of $\frac{1}{2}$ -¾ per cent. Commercial paper remains at $3\frac{1}{2}$ -4 per cent., but this rate does not compare unfavourably with a $3\frac{1}{2}$ per cent. rediscount rate. Gold shipments have come practically to an end, and the leading gold exchanges are now in most cases favourable to the dollar. Comparing October 14th with November 18th, the Paris rate (parity 3.918 cents) has recovered from 3.93½ to 3.91½ cents; the Amsterdam rate (parity 40.26 cents) from 40.59 to 40.11 cents; the Brussels rate (parity 13.90 cents) from 14.05 to 13.89 cents; and the Swiss rate (parity 19.30 cents) from 19.61 to 19.44 cents.

The Foreign Exchange market was quiet and the turnover was small this week. Fluctuations were within narrow limits, and sterling held its own fairly well against most of the principal currencies, although it closed rather below the best. The New York rate went fractionally against us to 3.77, but Montreal weakened from 4.19 to 4.21. Paris was ½ weaker at 96½, as was Milan at 73½. Brussels was unchanged at 27½. Madrid was weak at 44½, against 43½ last week. Amsterdam moved against us from 9.40 to 9.39, as did Berlin from 16.00 to 15½. Switzerland was not appreciably changed at 19½. All the Scandinavian currencies moved sharply in our favour, it is suggested as a result of withdrawal of funds. Stockholm declined from 17.80, Oslo from 17.85, and Copenhagen from 17.70, all to the same quotation of 18.25. The South American exchanges remained largely nominal as a result of restrictions, Rio declining by ½d. to 3½d., Buenos Aires by 2d. to 37½d., and Montevideo by ½d. to 28d. In the Far East the rupee was very steady at 1s. 6½d., but the yen was inclined to weakness on the rumours, later denied, of an intended departure from the gold standard, and declined by ½d. to 2s. 7½d. In the forward market dollars were at ½ cent and 1½ cent premium for one and three months respectively. Paris remained at ½ franc premium for one month but rose by ½ to ¾ franc premium for three. Brussels remained at last week's levels. Milan was weaker at ¾ lira and 1½ lire discount. Madrid was unaltered for one month, but weakened to ½ peseta discount for three. Amsterdam remained at 1 and 3 cents premium. No quotation was again recorded for Berlin. Switzerland was unchanged at ½ franc and 1 franc premium. Silver prices fluctuated mildly as a result of speculation in New York, prices touching 21½d. for cash and 21½d. for forward at one time, but subsequently there was a sharp fall as a result of realisation and the absence of support to 18½d. and 17½d. respectively. The China silver exchanges fell sharply in sympathy, Hong Kong from 1s. 6½d. to 1s. 4d. and Shanghai from 1s. 11½d. to 1s. 9½d.

“ABNORMAL” IMPORTS.

WHATEVER the future may hold, there can be no doubt that the week which is now ending marks a new and critical chapter in the economic history of Britain. In the country which has stood out in the eyes of the whole world as the citadel of Free Trade, the House of Commons, by an overwhelming majority, has accorded powers to the President of the Board of Trade to impose at his own discretion (though subject, it is true, to subsequent Parliamentary sanction) duties up to the maximum height of 100 per cent. on the vast range of imported commodities classified in the official trade returns as “Articles wholly or mainly manufactured.”

How has this come about, and what does it mean? It is an accepted commonplace, dinned a thousand times into the ears of the world, that the National Government, formed in August, was brought into being for the purpose of saving the pound. It proved to be too late to save the gold standard; but in the domestic sphere two main purposes were still emphasised. The first was to balance the Budget; the second to correct any adverse tendency that might appear in the nation's balance of payments. Measures for achieving the first objective were passed by Parliament before the first National Cabinet thought it necessary to hold the General Election. The appeal to the country which followed was primarily a request for an entirely free hand to concert measures to contribute to a solution of the world crisis and to safeguard Britain's trade position. But when the election returned a House of Commons containing a clear majority of those who favoured Protectionist measures, it became a foregone conclusion that the pressure for some definite action on the part of the Board of Trade would quickly become irresistible. Again, it was inevitable that other circumstances should play into the hands of those who called for immediate fiscal action. Long before the election was over the probability of a Conservative majority in the House of Commons was foreseen all round the world, and it can be no matter for surprise that both British merchants and their foreign suppliers began then a process of building up stocks and forestalling possible duties—a process which was accelerated after the election results were known and was likely to continue so long as fears of a coming tariff were kept alive by Protectionist clamour in the House. It was, therefore, anything but unexpected that the political situation would make it essential for the Cabinet to arm itself with powers to stop what, in the opinion of many, might become a really formidable flood of (so-called) “dumped” or “abnormal” imports. This the Cabinet has done, and a short Bill has been rushed through all its stages in Parliament in the space of three days.

It does not follow, however, because a thing was politically inevitable, that it is either welcome or desirable. In point of fact, the Bill which Mr Runciman introduced into the House of Commons on Tuesday is as open to severe objection as any legislation proposed to the House of Commons within living memory. Four years ago a World Economic Conference assembled at Geneva with the hope of stemming the tide of economic nationalism which threatened to strangle international commerce. Among its unanimous findings were declarations against Customs prohibitions, and against sudden changes in Customs duties without due notice. Whatever may be said on the grounds of national necessity, the fact is that these essential canons of international economic wisdom have been violated by Mr Runciman's Bill. Where the Board of Trade or the Cabinet deem it desirable to check an “abnormal” stream of imports, they may clap on a prohibitive duty; and they may do it suddenly without any warning. Moreover, the procedure followed is calculated to afford the maximum of uncertainty, both for British manufacturers and for foreign traders, for

no man can prophesy for how long an “anti-dumping” duty will remain in force or into what it may eventually evolve. From the domestic point of view, also, the procedure is a constitutional revolution. It has been one of the fundamental safeguards of British democratic freedom that taxation, direct or indirect, should be decreed by the people's representatives and by them alone. From many points of view, therefore, the method adopted by the Cabinet is deplorable in the extreme.

It may seem superfluous, having granted the irresistible political pressure, to question whether this measure is necessary in the economic sense, the more so since we have admitted above that heavy forestalling of threatened duties is a practical possibility. Nevertheless, neither the raging propaganda of the Protectionists nor the moderate and reasoned speech of Mr Runciman carry any conviction that a state of affairs has actually arisen, or is immediately threatened, in which the emergency measures now granted to the Cabinet need to be used. Imports of the so-called manufactured class have been on the increase, and may increase more; but two considerations must be borne in mind. In the first place, this classification of imports consists, as to a great deal more than half its contents, of articles which are not in the proper sense finished manufactures, but are, in fact, the raw materials of British industries, and to some extent the recent increase noted by Mr Runciman may have been due to the impetus given to certain manufactures in this country by the trading advantage conferred by the depreciation of the pound. In any case, as Mr Runciman himself admitted, it is impossible to draw any serious deduction from the import figures of ten days, with which so much play has been made. Moreover, apart from the consideration that a currency no longer “anchored” to gold automatically provides its own corrective for an adverse balance of payments, is it not a fair question to ask how it comes about that the pound sterling maintains a remarkable steadiness if it is really true that our markets are being swamped by imports to the grave detriment of our trade balance? The only satisfactory feature in the whole position is Mr Runciman's clear appreciation of the extreme delicacy required in the use of the weapon which has been put into his hands; and we may be thankful that at this vital juncture we have at the Board of Trade a man who is fortified by sound economic knowledge and thorough training in practical business, and who is not in the least likely to be stampeded into reckless or indiscriminate use of his new prohibitive powers. Nor can Mr Runciman be unaware of the formidable danger of violent retaliation which would act as a boomerang upon British exporters; and were he even momentarily oblivious of that danger, striking warning has been given in the shape of the action taken by the French Government in raising their Customs schedules upon certain British exports.

This action is not a reply to Mr Runciman's Bill, but is ostensibly calculated to balance the effect of the depreciation of the pound, and different rates are to be imposed on the imports into France from Scandinavian countries which have departed from the gold standard, calculated, presumably, according to the degree of depreciation. Whether this action is in accordance with most-favoured-nation treatment or not we need not here discuss, for though France—like other countries which have enjoyed the benefit of the British market—has in fact consistently granted us most-favoured-nation treatment in practice, she is one of the few countries in the world with whom we have had no most-favoured-nation treaty for the last fifty years. But it is not irrelevant to point out in passing that France's action is in very sharp contrast to our own behaviour when the boot was on the other leg. If, when the franc was falling, we had adopted the principle now applied by France we

which the Japanese were not prepared to accept on their side. One condition seems to have been that the Japanese should withdraw simultaneously on their part; another seems to have been that the Japanese should not allow the use of the Taonan-Anganchi Railway to a local Chinese war-lord who is in opposition to the *ci-devant* Mukden Government, which General Ma represents—or did represent until Wednesday last.) Whatever may prove to be the truth about these points, they are points of secondary importance, and the two points of primary importance are clear beyond question. The first of these points is that Japan, after flouting the League's authority during the interval given by the Council for a Japanese withdrawal, has flouted it, still more flagrantly, for the second time at a moment when the Manchurian question is again actually under discussion in the Council Chamber. Japan's defiance of the League is now open and indefensible—indeed, undefended by the Japanese themselves, who now declare their intentions to the Council without troubling to argue the legitimacy of their acts. The second point of primary importance is that this last military offensive, which has carried the Japanese front line in Manchuria from the Nonni Bridge to Tsitsihar, has completed (as we have shown above) the process of bringing the whole of Manchuria into Japan's power.

Thus Japan, who is professing to be acting in this way in order to safeguard her treaty rights in Manchuria, stands convicted of having violated treaty obligations of her own which affect not only Manchuria but the whole world. She has violated the Covenant of the League of Nations; she has violated the Kellogg Pact, in which she pledged herself not to resort to war as an instrument of national policy; she has violated the Nine-Power Washington treaty, in which she pledged herself to respect not only the territorial but the administrative integrity of China. At the same time, she refuses to have her treaties with China concerning Manchuria either discussed by the Council with a view to conciliation or submitted to the permanent International Court for interpretation. She will not even agree that, as a first step towards finding an issue out of the present deadlock, the Council should review those particular provisions in the treaties which relate to the security of Japanese persons and property in Manchuria, with a view to finding ways and means for the protection of these interests which would enable the Japanese forces to withdraw without exposing them to danger. The Japanese are still insisting upon the terms upon which they insisted a month ago. They will not withdraw their troops until their five points—including the fifth point requiring respect for treaties concerning Manchuria—have been settled to their satisfaction; and they insist on settling these five points with the Chinese *à deux*, without the mediation of the League Council or any other third party. In other words, they insist upon taking advantage of the military stranglehold which they have acquired over Manchuria by main force in order to compel the Chinese not only to re-endorse these Manchurian treaties (which were extracted from the Chinese, in 1915, by *force majeure*), but also to assent to any interpretation of the treaties which the Japanese may choose to impose.

This is not negotiation but dictation, and the Chinese, at the Council meeting this week, are showing themselves as firm in refusing to fall in with it as the Japanese are firm in insisting upon it. The Chinese insist now, as they have insisted all along, that, before the withdrawal of the Japanese troops, they will negotiate about nothing except the protection of Japanese persons and property in Chinese territory outside the Japanese zone. On this the Chinese are willing to negotiate here and now. On all other questions involved in the Manchurian treaties, they are willing to have negotiation and conciliation and arbitration when the Japanese forces have been withdrawn but not before. After re-affirming the Chinese position, in this sense, on Wednesday evening, Mr Sze intimated that China would take the first opportunity of transferring the procedure from the field of Article 11 of the Covenant to that of Article 15. As we reminded readers of the *Economist* last week, Article 15 differs

from Article 11 in two important respects. In the first place, the votes of the disputants do not have to be taken into account for the purposes of securing juridical unanimity. In the second place, if the Council (excluding the parties to the dispute) takes a unanimous decision and one of the parties then resorts to war in defiance of it, then, in this case, Article 16 comes into play; and under Article 16 all States Members of the League are bound to subject the Covenant-breaking State to an economic boycott.

After mentioning Article 15, Mr Sze put the direct question: "What is the Council going to do about it?" This question is perhaps the most searching, and the most momentous, that has been addressed to the League since its birth. At the moment when we go to press it remains unanswered, though, by the time when this issue appears, the answer may have been given for weal or woe. It is clear now that the League must either assert itself forthwith in some immediately effective way or must contemplate the collapse of all that it has built up during twelve years.

The forces of defeatism are formidable. During the last few days the Japanese have been encouraged in their intransigence by a number of conservatively-inclined organs of the French and British Press—as if the conservation of French and British interests in the world were likely to be promoted by a fresh victory of militarism over international law and order. There is also some uncertainty about the distance which the United States would be prepared to accompany the League along the road of coercion. On Wednesday, Mr Stimson issued a *communiqué* at Washington in which he declared that the American Government "has consistently urged, and is continuing to urge, that only peaceful means shall be used in the settlement of the dispute"; but it is not clear whether or not he includes, among peaceful means, either the withdrawal of ambassadors from Tokyo or the stronger step of an economic boycott. No doubt one cannot "bell the cat" without a risk of scratches. But if it is a choice—as it certainly is a choice—between risking scratches now and courting destruction in another world war hereafter, who can doubt which is the right course for the Council of the League and the Government of the United States to follow?

THE STATUTE OF WESTMINSTER.

The Statute of Westminster, now before the British Parliament, after having been passed by the Parliaments of South Africa, Australia, Canada and New Zealand earlier in the year, gives legal expression to a relationship between the several self-governing States members of the British Commonwealth which had already become established in practice before the Imperial Conference of 1926. In the course of that Conference, the spirit of this relationship, as it was then and is to-day, was expressed with inimitable conciseness and lucidity in the Balfour Report. It was recognised, at the same time, that the existing practice and the spirit by which it was inspired were not completely supported by the existing legal situation, and that this situation needed to be cleared up and revised. Accordingly, a Conference on Dominion Legislation and Merchant Shipping Legislation sat in London in the autumn of 1929, under the chairmanship of Lord Sankey; and the report of this Conference was adopted, subject to certain elucidations, by the Imperial Conference of 1930. The proposals relating to merchant shipping were cast in the form of a draft agreement. Those relating to the general question of autonomy in legislation were cast in the form of clauses and recitals in a statute to be called "the Statute of Westminster."

In detail, the Imperial Conference of 1930 recommended that the statute proposed to be passed by the Parliament at Westminster should contain the provisions scheduled; that December 1, 1931, should be the date as from which the proposed statute should become operative; that, with a view to the realisation of this arrangement, resolutions passed by both houses of the Dominion Parliaments should be forwarded to the United Kingdom in the summer of

1931 with a view to the enactment by the Parliament of the United Kingdom of legislation on the lines set out in the schedule; and that the statute should contain such further provisions as to its application to any particular Dominion as might be requested by that Dominion.

The essential provisions of the statute are that the Parliament of a Dominion should have full power to make laws having extra-territorial operation; that the Colonial Laws Validity Act, 1865, should not apply to any law made after the commencement of this Act by the Parliament of a Dominion; and that no law made after the commencement of this Act by the Parliament of a Dominion should be void or inoperative on the ground of its being repugnant to the laws of England (with the corollary that the powers of the Parliament of a Dominion should include the power to repeal or amend any Act of Parliament of the United Kingdom in so far as the same might be part of the law of the Dominion).

Up to this point, it is more or less plain sailing. Such difficulties and delicacies as "the Statute of Westminster" may involve all arise from the historical connections between the relations of the Dominions to the United Kingdom, on the one hand, and certain features in the internal constitutions of the Dominions, on the other. A majority of the Dominions have either a federal element in their political structure or a minority element in their population or some combination of both these features. Hence, in their internal economies, there are delicate questions of "State rights" versus the paramountcy of the Central Government and minority rights versus the ascendancy of the majority element in the populations. The consequent problems, which have often proved so difficult to solve in countries which have stood wholly by themselves, have hitherto been met in the Dominions to a large extent by the expedient of defining the relations between provincial and central Governments or between minorities and majorities in this or that Dominion in Acts of the Parliament at Westminster which it has not been in the power of the Dominion Parliaments to alter. This expedient has had great advantages in its day. It has made it possible, without evoking serious internal troubles, to grant full self-government in other respects to Dominions which might have found it difficult, in their political adolescence, to deal with these formidable problems had they had them within their own competence. However, the retention of the Westminster Parliament's prerogatives in these "reserved" matters was obviously transitory; and the time was bound to come, as it has now come, when minority rights and provincial rights would have to be secured in the Dominions by internal arrangements without the intervention of the senior State-member of the Commonwealth.

In the cases of South Africa and Australia and Canada, this problem of reconciling the safeguarding of fundamental constitutional guarantees with the full transfer of legislative powers has apparently been solved without great difficulty. On the other hand, during

the last few days the question has been raised whether the passage of "the Statute of Westminster" as it stands might not confer on the Dail the right to repeal, in the Irish Free State, the existing legislation which embodies certain civil and religious safeguards contained in the Anglo-Irish Agreement of 1922. We have little doubt, however, that this last remaining question will be settled to the satisfaction of all parties.

ROAD TRANSPORT POLICY.

(BY A CORRESPONDENT.)

ONE of the most progressive Departments under the late Labour Government was the Ministry of Transport, and the road traffic industry will eagerly await some sign as to how far the policy of active reorganisation initiated by the late Minister will be continued under the present regime. The first question is, of course, the future of the London Passenger Transport Bill, which has met with the same ill-luck as the 1929 Bill, in that the Government introducing it just failed to remain in office long enough to carry it through. It will be regrettable if the London traffic problem is to continue to be made the sport of party politics, as there is general agreement on the main issue, that a unified control of London traffic is essential, and there should be no insoluble difficulty in reaching similar agreement with regard to the constitution of the controlling authority and the extent to which it should be subject to official supervision.

The future policy of the Area Traffic Commissioners set up last April by the Road Traffic Act is of even greater importance to the transport industry as a whole. A stabilisation of the omnibus and motor-coach industry has already virtually been achieved, and, generally speaking, no licences are now being granted for new services. There had been a rapid development of services during the eight months between the passing of the Road Traffic Act and the appointment of the Area Traffic Commissioners. Many of the services begun during those months have failed to obtain licences, and the proprietors, with surplus vehicles on their hands, have been unable to obtain permission to explore fresh fields of activity. In consequence, there has been a slump in new registrations of public passenger vehicles, sales for the six months following the appointment of the commissioners numbering only 4,149, compared with 5,226 for the corresponding period of the previous year. The demand is more and more for double-decker buses, as operators are anxious to increase their seat-mileage with a limited number of vehicles.

A new development has occurred in the North-Western area, where the railway companies have attempted to negotiate with the Commissioners along the lines of an undertaking to electrify particular lines in exchange for a reduction in road competition. Bargains of this kind are open to criticism, for they rest on the hypothesis that road transport is an interloper to be suppressed where possible, and only permitted where there is no alternative means of public transport. If the omnibus interests are to be

expected to proceed with the rationalisation of their industry and its proper co-ordination with other agents of transport, they must be given security of tenure. Rationalisation should logically, in most cases, be preceded by the purchase of smaller operators with vested interests in particular areas by the big concerns, which are now for the most part affiliated with the Tilling group; but, without security of tenure, such purchases are unlikely to take place. One of the most important recommendations of the Royal Commission on Transport was that the Area Traffic Commissioners should be instructed to work towards "controlled monopolies of transport," presumably by using their power to grant or withhold licences for services with a view to bringing about amalgamations. The logical goal of such a policy would have been a number of public corporations constituted on the lines laid down in the London Passenger Transport Bill, and owning and operating all the omnibus and tramway services in the country. Such a development would, obviously, be a big step towards the nationalisation of transport, and it is hardly probable that the present Government will give it their approval. A somewhat milder interpretation of the duties of the Area Traffic Commissioners seems likely to be the result of the change of Government, and a slowing down of the rather feverish pace at which unification was being brought about.

The most important of the remaining independent omnibus proprietors are the Lancashire United Transport Company, the West Riding Automobile Company, the Red and White Services of the South Wales border district and Barton Bros. of Nottingham. The last concern has formed an association with other independent operators in the Midlands. There are still a small number of undertakings affiliated with the Tilling group in which the railways have not yet taken an interest, notably the Potteries Electric Traction Company, the Caledonian Omnibus Company, and the South Wales Motor Transport Company, while the Tilling group has yet to take an interest in the Southern Vectis Omnibus Company, which is controlled by the Southern Railway, but which is associated with the Tilling concerns in the B.E.F. (British Electrical Federation) for the purchase of supplies on favourable terms. The Bristol Tramways, Manx Motor Services, Scottish Motor Traction Company and the Highland Transport Company are also railway-controlled concerns into which the Tilling group will probably shortly be admitted.

The final Report of the Royal Commission on Transport was inclined to be a little half-hearted in its recommendations for the control of the haulage industry. Although recommending licensing by the Traffic Commissioners, it did not go nearly so far as the memorandum submitted by the Long Distance Road Haulage Committee of Inquiry, which represented about forty of the largest and best organised firms in the industry. These firms were apparently willing to exchange the last shred of their independence for an assured status *vis-à-vis* the railways and protection from the cut rates and long hours of the smaller haulage contractors. It will be surprising if, under the present Government, any further changes in the organisation of the haulage industry are enforced by law.

The Road Traffic Act imposed strict regulations with regard to maximum speeds and hours of work for the motor transport industry, which, unlike previous speed restrictions, it was intended to have generally enforced. It was widely felt by the authorities responsible for seeing that the law was obeyed, that the present was not a suitable time for adding to the duties of the police force, on the one hand, while insisting on the need for economy, on the other, and the Ministry of Transport has not received universal co-operation in enforcing the Act. In practice many of the new speed limits for motor vehicles are still habitually broken, and, although the Traffic Commissioners will doubtless study time-tables with a view to stopping this, it will be no easy matter, as, under modern conditions of traffic congestion, the maintenance of even very moderate speeds over long distances involves frequent temptations to break the law. The regulations concerning hours of work are even harder to enforce, particularly for goods vehicles. A tightening up will be difficult without involving a good deal of fresh expenditure, and, in view of the need for stringent economy, it seems questionable whether such expenditure will be authorised.

THE DIRECTION OF OVERSEAS TRADE.

WITH the publication of the October Trade Returns it becomes possible to analyse geographically our trade during the first three quarters of this year. Imports declined by 21 per cent., from £785,193,510 in the corresponding period of 1930 to £621,352,640, but the percentage decline was only 14½ per cent. in European imports, whereas imports from other foreign countries fell by 28½ and Empire imports by 22 per cent. During the third quarter of the year taken by itself the total decline was lower, and imports from British countries fell much more than foreign imports.

Our first table shows trade with European countries and their dependencies:—

* Including dependencies.

On the import side a few small increases are noticeable, including imports from Russia (mainly wheat), Poland, Hungary and Czechoslovakia. In the September quarter, however, Russian imports were down, while imports from several countries, including Germany and Italy, were higher than in the third quarter of 1930. The heaviest declines were in imports from Sweden, France, Austria, Holland and Switzerland. Exports to the more important countries showed declines ranging from 25 per cent. in the case of France to 40 per cent. in exports to Austria, but during the third quarter our exports to some of the countries of South-Eastern Europe and to several French possessions exceeded those of the corresponding quarter last year.

Trade with foreign countries outside Europe is shown in the next table:—

BANKING ORDERS ON

SWEDEN

SKANDINAVISKA KREDITAKTIEBOLAGET

Imports from the United States, Chile and Brazil are more than one-third lower than in the first three quarters of last year, and in the September quarter imports from Chile declined by nearly 47 per cent. Imports from Argentina, which were not quite 11 per cent. down over the whole period, actually showed an increase on the third quarter alone. The declines in exports to these four countries were very heavy, and amounted in the cases of Chile and Brazil to over half the 1930 volume. In the September quarter the decline in our exports to Chile and the Argentine was accelerated.

Imports from and exports to the countries of the Empire are shown below:—

TRADE WITH BRITISH COUNTRIES.
JANUARY TO SEPTEMBER
(000's omitted.)

	Imports from				Exports to			
	1913.	1929.	1930.	1931.	1913.	1929.	1930.	1931.
Irish Free State	£ ...	£ 31,788	£ 31,219	£ 26,029	£ ...	£ 26,526	£ 26,186	£ 22,650
West Africa	3,871	6,911	7,020	3,902	4,611	8,796	8,175	4,648
South Africa	9,026	17,902	14,729	9,804	16,506	24,468	20,170	16,358
India and Ceylon	39,614	55,032	47,501	33,790	54,984	63,566	46,415	26,766
Straits Settlements	12,332	10,290	7,570	4,104	4,356	9,502	6,022	3,579
Malay States	2,891	2,503	1,865	880	968	2,350	2,475	1,250
Australia	27,239	43,178	35,098	32,265	25,730	39,843	26,385	11,038
New Zealand	18,928	41,272	38,363	31,454	18,110	26,544	21,700	16,275
Canada	21,879	34,085	28,047	22,003	15,531	14,038	8,528	...
West Indies	1,766	4,372	3,962	3,385	1,556	3,396	3,427	2,772
Other possessions	5,495	21,510	17,212	13,239	9,798	20,331	19,425	15,398
Total	143,031	270,842	232,586	180,866	144,774	240,853	194,419	129,262

Imports show very uneven rates of decline; those from Australia fell only 8 per cent.; those from the Irish Free State and New Zealand fell about 17 and 18 per cent. respectively; those from Canada and India by about 22 and 34 per cent. respectively. In the September quarter the decline in Indian and Australian imports was still greater, while imports from the Free State, New Zealand and Canada were not quite so far below the 1930 level. Exports show more severe declines, though the comparative prosperity which has been maintained in the Irish Free State is reflected in the fact that the decline of 13½ per cent. in our exports to her is very much below the average. Exports to Australia, on the other hand, were no less than 58 per cent. below the 1930 level.

The last table shows re-exports of imported merchandise:—

* Including dependencies.

Here the figures are as depressing as ever, and with the somewhat surprising exceptions of Japan and China the decline is universal.

The effects of the world crisis are reflected with appalling clarity, not only in the general downward tendency of these figures—and comparison with 1929 illustrates still more strikingly the all-round contraction—but in the way in which that downward tendency is distributed. Those countries which have recently been suffering to an exceptional extent have all been obliged to curtail their imports, and in consequence our exports to Germany, Austria, Hungary, Australia, Chile and Brazil

have already shown particularly heavy falls, though the effects of this autumn's policy of restriction by means of exchange control have yet to be seen. Of these same countries, those which have a sufficiently extensive repertoire of exports have strained every nerve to increase their sales abroad, and our imports from Germany, Australia, Hungary and Czechoslovakia in consequence have either increased or declined very much less than the average. A policy of exceptionally organised economic nationalism has produced similar results in the foreign trade of Russia and Italy. The effects of the depression in the United States and Sweden are clearly reflected in the heavy declines in our trade with those countries, and it is noteworthy that while our imports from France and her dependencies show a decline of no less than 22 per cent. on last year's level, compared with an average decline of 14½ per cent. for Europe as a whole, the decline of nearly 25 per cent. in our exports to France, though unpleasantly severe, is considerably less than the fall in our exports to most of the other principal countries.

"BUY BRITISH."

No FOREIGNER, and few Britons, have the gift of prophesy—how the British public will react to any given circumstances or any particular appeal. Napoleon and Kaiser Wilhelm II. signally failed; but have British statesmen always succeeded? Let the late Joseph Chamberlain, and Messrs Baldwin and Lloyd George reply. And, therefore, although three weeks ago the nation rose in its millions to answer what it held to be a national appeal, we venture no prophecy as to the response that will be given to the demand that is being made upon it this week and next to "Buy British." Assailed by the ubiquitous poster, attacked by every artifice of advertisement, coaxed by the personal appeal of Royalty, will the British masses stand solid and unmoved, will they rush to impose a voluntary trade barrier against foreign imports, or will the result of all this huge expenditure of money by the Empire Marketing Board and of vocal energy by our politicians evoke just a medium response? Who can tell?

On the face of it the appeal would seem compelling. John Citizen is told that the balance of payments is awry. There are two ways to correct that: we may export more, or we may import less. The ordinary citizen may well argue to himself that though he cannot increase exports, he can at least help to restrict imports by buying British goods in place of the foreign goods he used to purchase. He may go further, and say that it is better that the balance should be corrected by voluntary effort than by State action, if that action is to take the form of a tariff calculated to raise prices and costs of production. He may even agree with a writer in the *Times*, who likens the "Buy British" campaign to the appeal for voluntary enlistment which, during the Great War, preceded the introduction of conscription. He may properly applaud the campaign in so far as it acquaints an unknowing public of the existence of efficient British goods offered at economic prices, or is intended to be an incentive to British manufacturers to make increased efforts. He may welcome the opportunity to "do his bit" to help the country in a crisis.

So far so good. But as soon as we look below the surface economic doubts begin to arise. If a check on certain ranges of foreign imports is necessary, the Cabinet, which alone has access to the full facts, is the only body which can prescribe how and where the check should be applied. It cannot be done scientifically by Mrs Smith and Mrs Robinson on their Saturday afternoon rounds of marketing. It is fantastic to suppose that the man and woman in the street can judge whether, by substituting a British for a foreign article in their shopping baskets, they are helping British employment or, on the other hand, tending rather to displace an export worker than to create work for a producer for the home market. Blind, patriotic instinct is hardly likely to work to the best advantage in relation to a delicate and intricate economic problem. It might even produce ludicrous results. Much has been said of the flood of imports of foreign butter and bacon. Supposing the housewives in their millions suddenly demanded Devonshire butter and Wiltshire bacon. Not a tenth of their requirements could be met. In spite of the fantastic fallacies propounded by the new Lord Mayor of London on Wednesday, it remains a fact that neither the pound nor the balance of payments would be in any way assisted if there were to be a switch-over in consumption from Danish to New Zealand cheese. If the flow of trade must be artificially regulated, it can only be done by conscious and expert action by the competent authorities who know the facts and can decide upon the objective to be aimed at.

We are inclined, therefore, to think that even as a temporary and emergency measure the merits of the "Buy British" campaign are very dubious. If we take a longer view and regard it as an attempt at the permanent inculcation of economic nationalism in an island which depends for its very existence upon overseas trade, it is wholly objectionable. It may lead to friction and retaliation abroad. It will stimulate the absurd delusion which seems to be spreading rapidly around the world that you can cease buying from your neighbour without ceasing to sell to him. It is an insidious and haphazard essay in trade restriction, even less "scientific"—save the mark—than Government prohibition of imports. For ourselves, we regret that for once in a way the Prince of Wales, whose past services to British trade have been great, has been the victim of bad advice in allowing himself to be persuaded to sponsor a campaign whose merits are dubious, whose aims are controversial and whose nature is political rather than economic. "Buy British" is a slogan which should be addressed principally to purchasers in countries abroad. The proper claim—the only economic justification for selling anything to anybody—should be that in buying British goods the purchaser gets the best possible value obtainable for the money. Without attempting here to apportion responsibility, we may say that our troubles of recent years have largely been due to the fact that our goods have been too dear. If we can now remedy this state of affairs, the present campaign will coincide with a revival of prosperity; if not, no amount of diversion from foreign to British buying will save us from economic decline.

Notes of the Week.

The Government and Agriculture.—The conferment of powers upon the Board of Trade to shelter industrialists from a possibly increasing flow of imports has served to redouble pressure upon the Government to give State help to the farmer. So far, the Minister of Agriculture has made no promises, but it is commonly believed that the Government are about to take some step, and current rumour is that that step will be in the direction of establishing a quota system for British wheat. This system, it will be remembered, was, in one form or another, advocated by Dr Addison when he was Minister of Agriculture in the Labour Government, and has since been adopted by Mr Baldwin as an article of Conservative policy. Rumour has it that the wheat grower is to be promised that all flour milled in this country is to contain 15 per cent. of home-grown wheat, and that for

the wheat which he supplies the farmer will be guaranteed a fixed price, which, if it accords with the frequent demands of farmers, will be 50 or 55 shillings per quarter. The price of English wheat is now about 28 shillings per quarter. Who is to pay the difference? The Government, in the form of a subsidy, or the consumer, in the increased price of the loaf? If the former, then a burden of probably more than £6 millions a year will be added to Budget expenditure. To work the quota system a tax on flour imports would probably be necessary as a compensation to the millers, for, unless the country is to see the economic extravagance of Norfolk wheat being railled to Liverpool or Glasgow in order to enable each individual mill to comply with the quota provisions, arrangements must be made for quota certificates to be transferable by purchase, and the cost of such purchase would fall to be borne by mills grinding overseas wheat in competition with mills abroad. If so, the price of the loaf would rise anyhow—a formidable prospect, when, as the Prime Minister stated at the Guildhall, the maintenance of the internal price level is all important. Moreover, if direct or indirect protection for agriculture begins with wheat, it can hardly stop there. The pressure to extend State help to other cereal crops would be irresistible, and since the whole cereal output of Britain represents only one-tenth of the total agricultural production of this country, 90 per cent. of our agricultural interests would soon be up in arms demanding to know why they are left unsheltered while State assistance is offered to the favoured one-tenth. The immediate difficulties inherent in the establishment of the quota system are so formidable, and the vista of consequent economic changes so disquieting, that we sincerely hope the Government will refrain from any sudden decision to place even one foot upon a very slippery slope.

Mr Thomas's Tour.—The Secretary of State for the Dominions is to undertake the rôle of *commis voyageur* of Imperial trade and is to make a tour of the Dominions, preparing the ground for the Imperial Conference, which the Government hopes, will be held next year. Mr J. H. Thomas does not suffer from inferiority complexes, and he appears to be full of confidence as to the fruits of his coming negotiations with the overseas Premiers. Whether or not his optimism is well placed remains to be seen, and in any case it depends largely on what he hopes to achieve. There is undeniably much good work to be done in the development of inter-Imperial trade on natural lines of mutual interest. But if, as we fear, Mr Thomas, sped on his crusade with the plaudits of the parliamentary majority of Protectionists, is going to negotiate on the basis of tariffs and preference, he has a formidable task before him if he hopes to further the advantage of the country. The last Imperial Conference showed that the readiness of the Dominions to see Great Britain impose far-reaching duties on imported foreign foodstuffs and raw materials, and to embark on a perilous experiment of vast diversion of trade from its natural channels, varied in inverse ratio to their willingness to give British manufacturers any real preference against their own. Mr Thomas will have to persuade Mr Scullin to renounce his determination to encourage Australia's "secondary industries" in competition with those of Great Britain and to persuade Mr Bennett to allow British and Canadian manufacturers to compete in the Canadian market on equal terms. For, if he fails in these directions, he will be hard put to it to convince British public opinion that the erection of a tariff barrier between Great Britain and foreign countries, with preferences on imports from the Empire, would be compensated by the maintenance of existing Dominion duties against British goods and the still further increase simply of their tariff walls against imports from the United States and other foreign countries. There is, however, one point on which Mr Thomas might usefully negotiate. If it is the intention of the British Government, in defiance of their mandate from the electorate, to impose a system of high protection on this highly populated island, dependent as it is for very existence on its export trade, then the Secretary

of State would do well to discuss with the Dominions the possibility of their accepting, duty free, wholesale imports "on hoof" of the population of this country no longer able to find a livelihood here.

Mr Snowden's Peerage.—The list of Dissolution Honours issued on Monday has the quality of extreme brevity. Knighthoods are conferred on Mr Gillett, who was Parliamentary Secretary to the Ministry of Transport in the Emergency Administration that preceded the General Election, and on Mr Watson, who was Solicitor-General in the late Labour Government. Sir Robert Newman and Sir Martin Conway receive baronies "for public and political service," to which no exception can be taken. The feature, however, of this highly selective conferment of honours, in welcome contrast to the prodigal shower which was common form not so long ago, is the elevation of Mr Snowden to the rank of Viscount. This is an honour which the late Chancellor's many friends will rightly prefer to regard as a guerdon which rewards long and valiant service in the cause of progress rather than as a symbol of a regrettably embittered breach with the political party which he helped to build, and to whose leadership he greatly contributed. The country will be glad to think that, both as Lord Privy Seal and as a distinguished recruit to the Upper House, Viscount Snowden will be available to contribute to the Government's deliberations—notably in the vital issue of fiscal policy—his great qualities of realism and sanity.

The German Crisis.—Another week has passed in the protracted negotiations between the authorities in Berlin and Paris as to the procedure to be followed in approaching the question of the future of Germany's external liabilities. It seems probable, however, as we go to press, that, before these lines are read, Germany will have invited the B.I.S. to appoint an advisory Committee as contemplated in the Young Plan. Meantime the German press has published a summary of the disposal of the foreign exchange holdings of the Reichsbank during the last nine weeks, from which it appears that the Reichsbank received a total of 1,297 million reichsmarks in foreign exchange between September 1st and November 7th, while withdrawals during the same period amounted to 1,761 millions. The difference of 464 millions was thus met out of its holdings. Less than half the withdrawals, namely, 784 million reichsmarks, were used to pay for imports, a further 35 millions being absorbed by insurance, freight duties, postal cheque transfers, etc. No less than 942 million reichsmarks went in meeting capital obligations; 690 millions for repayment of credits, 187 millions for interest and amortisation of long-term debts, 57 millions for sundry items, and finally 8 millions for the purchase of silver. This shows that without the credit repayments the Reichsbank in these nine weeks would not have shown these losses, but would even have strengthened its foreign exchange reserve. In all, over one milliard reichsmarks of credits have been repaid since the end of July. From the release of the mark balances under the Stillhalte agreement, there arose demands for foreign exchange amounting to over 350 million reichsmarks. In addition there was the effect of withdrawals of seasonal credits and credits against securities not covered by the "standstill" agreement, and also the exemption from the agreement in respect of German concerns' affiliates abroad. The biggest part, however, seems to have been played by the involuntary reduction owing to a variety of causes in the volume of reimbursement (e.g., acceptance) credits. It is observed significantly that there are now some 500 million reichsmarks of unused "credit lines" outstanding.

South-Eastern Europe.—News from Budapest, and more especially Vienna, conveyed this week in our correspondents' dispatches, printed on a latter page, is by no means encouraging. Disclosures with regard to the position of the Credit-Anstalt in relation to the National

Bank of Austria and the guarantee of the Austrian Government emphasises the formidable character of Austria's immediate financial problem. In another direction the situation of both these countries is likely to be aggravated by the decision of the Yugoslav Government to suspend all dealings in Austrian and Hungarian exchange and to prevent all withdrawals from Yugoslavia of Austrian and Hungarian balances which are now immobilised there. This step has apparently been taken by way of retaliation against the rigid measures of exchange control which Austria and Hungary are being forced as debtor countries to take in the hope of preserving the stability of their currencies. Thus one more twist is given to the vicious circle.

Signor Grandi at Washington.—It was a happy coincidence that, last Monday, when Signor Grandi arrived in New York on his official visit to President Hoover, the Secretariat of the League of Nations was able to announce, at Geneva, a favourable response to the disarmament truce proposal, which Signor Grandi himself put forward at the twelfth session of the League Assembly this autumn. It will be remembered that the substance of Signor Grandi's proposal was embodied in a resolution of the Assembly which was circulated to the Governments of all States which are to take part in the forthcoming World Disarmament Conference. The replies have now been received; and the President of the League Council has circulated a letter on the results. In this letter it is announced that all the Governments have declared their willingness to accept the truce; that the reciprocity, which some of the Governments stipulated as a condition of their acceptance, has in fact been achieved; and that the many interpretations and observations included in the replies appear to be in keeping with the spirit and letter of the Assembly's resolution. The President accordingly suggests that, unless objections are filed forthwith, the Armaments truce should be regarded as having been accepted as for one year, running from November 1, 1931, by the Governments which are to participate in the Conference. In terms of war-material and man-power it would no doubt be difficult to measure the effect which this general acceptance of the disarmament truce for twelve months is likely to have. It can, however, be said with confidence that its psychological effect will be considerable. Indeed, its influence upon the atmosphere of the Conference may well prove to be one of those imponderable factors that turn the balance between success and failure. Thus Signor Grandi has landed in America on a day on which an important result of his statesmanship has come to maturity. It is believed that his original *démarche* at Geneva in September was made with Mr Stimson's knowledge and approval; and the two statesmen will now be able to take heart from this success in addressing themselves, in consultation, to the harder tasks that lie before them in common with the other statesmen of the world. We may recall that, following Signor Mussolini's speech of June, 1928, the constructive and conciliatory international policy which was enunciated by the Duce on that occasion has been pursued steadily by the Italian Government ever since. This is indeed one of the few bright gleams in a clouded international sky.

The League and Iraq.—Last week, the Permanent Mandates Commission completed and adopted its report on the fitness of Iraq to pass from the status of a mandated territory (which it occupies in the eyes of the League) to the status of sovereign independence—a change which a mandated territory has to achieve by the process of admission to membership in the League. The Commission, of course, in spite of the high prestige and authority which it enjoys, thanks to the individual distinction of its members and the wisdom of their joint work in the past, is juridically no more than an advisory body to the Council; and on one celebrated occasion it was rapped over the knuckles for alleged excess of zeal by the representatives of certain Mandatory Powers on whose conduct the Commission had been required to make animadversions in the course of its duties. Since then, the

Permanent Mandates Commission has always proceeded with extreme caution; and in the present instance it appears to have gone no further than to report that the several well-known difficulties in the way of the complete emancipation of 'Iraq have not, on examination, appeared to warrant the Commission in advising against the granting of 'Iraq's claim. In other words, the responsibility for the ultimate decision remains with the Council and with the Mandatory Power, between them. Nevertheless, it will, no doubt, be a primary consideration in the Council's mind, when the decision comes to be made, that the Permanent Mandates Commission has found no insurmountable obstacle either in the problem of minorities in 'Iraq or in the question of economic equality for all States members of the League, or in the provisions for the temporary retention of British troops in 'Iraq and the permanent maintenance of a British air route across the country—provisions which are contained in the Anglo-'Iraqi treaty of alliance. A number of states which were not original members of the League have already signed treaties, or given undertakings to the Council, for the protection of their local minorities as a condition of their admission to membership; and these precedents will, no doubt, be applied in 'Iraq's case. Another condition on which the League has always insisted is that states admitted to membership should have clearly defined and recognised frontiers. In the case of 'Iraq, the last step necessary for fulfilling this condition has been put in train by a joint request from the British and French Governments that the Council will place on the agenda of its meeting this week, as a matter of urgency, the question of the delimitation of the frontier between 'Iraq and Syria—a question which is one of the minor unsettled points left outstanding from the Peace Conference. Altogether, the prospects for 'Iraq, when her claim for admission actually comes before the Council next year, seem much more favourable to-day than they seemed a few months ago.

The Iron Hand in Cyprus.—At the end of last week it was announced that the legal formalities had been taken for abolishing the Legislative Council in Cyprus and for vesting the power to make laws in the Governor-in-Council. This action was foreshadowed in the Colonial Office despatch on which we commented a fortnight ago. It is a piece of punitive action without any redeeming element of constructiveness in it. It opens up the prospect of Cyprus being governed for an indefinite time to come on the old Hapsburg method of administrative decree enforced by bayonets; and the history of the Hapsburg Monarchy and of all other empires that have come to grief tells us what is the penalty of such confessions of political bankruptcy. Within the last year or two, the adjoining British Colony of Malta and the Mandated Territory of Palestine have already lapsed into this wholly unsatisfactory state of affairs. Cyprus is now added to the list. The problems of Malta and Palestine are both fraught with difficulties for which the Colonial Office is not to blame. The problem of Cyprus is relatively simple; for here the task of the Colonial Office has not been complicated by anything corresponding to either the Balfour Declaration in Palestine or the quarrel between Lord Strickland and the Roman ecclesiastical authorities in Malta. Why, then, is the Cyprus Legislative Council now being abolished—apparently *ad infinitum*—without the substitution of any other parliamentary organ in its place? The Colonial Office despatch, in its nursery-governess language, intimates that this is the appropriate punishment for a naughty child. It is perhaps more pertinent to recall that last April, for the first time during the half-century of the Cyprus Legislative Council's existence, a Government Bill was thrown out by a non-official majority. The history of the composition of the Cyprus Legislative Council is interesting. As originally constituted in 1882, it had six official members, three elected Turkish members, and nine elected Greeks. In 1925 the number of the official members was raised to nine and that of the Greeks to twelve, the Turks being left with three representatives as before. This change gave the Greeks, as compared with the Turks,

a representation in proportion to the relative strengths of the Greek and Turkish population in the island; but in essence it left the balance of power on the Council unchanged. For with the Governor's casting vote in reserve, nine official votes and three Turkish votes add up to one more than twelve Greek votes. In plain terms, the composition of the Cyprus Legislative Council has always been so arranged that, with the aid of the Governor's casting vote, the officials and the Turks could always put the Greeks in a minority of one. It was assumed that the representatives of the Turkish minority would always "vote English"; and so they did from 1882 to 1931. Last April, however, a portent occurred. One Turkish member failed to do what was expected of him. He voted with his Greek colleagues on the merits of a financial question in which the "communal" issue was not involved. And so, for the first time in Cyprus, a Government Bill, to which the Government attached importance, was rejected. After having existed for fifty years, the Cyprus Legislative Council had shown a sign of life. And how does the Colonial Office respond? Does it welcome this tardy fruit of British political education? On the contrary, it abolishes the adolescent Legislative Council six months later.

The Pound Sterling.—The country has been treated in the past ten days to several authoritative views on monetary policy, including both those of Mr Baldwin, as the spokesman of the Government, and those of two eminent bankers, Sir Arthur Maxwell and Mr Beaumont Pease. Sir Arthur Maxwell, in his presidential address to the Institute of Bankers, admitted that the time was not yet ripe to make a final decision on the restoration of the gold standard, and made it clear that in his opinion a period of *de facto* stabilisation must intervene. During this period, whose length he was careful not to specify, not only must Government finance be rehabilitated and our costs brought into line with those of our competitors, but such international questions as war debts, reparations, and obstacles to the free play of trade must be dealt with. Evidently Sir Arthur can see no firm ground for the permanent stabilisation or revaluation of sterling so long as our own and the world's affairs are so sadly out of joint. Mr Beaumont Pease, in a speech to the Newark Chamber of Commerce two days later took much the same view—that undue haste was inadvisable. He was in no doubt that the suspension of the gold standard afflicted British industry with many grave problems and uncertainties, and he also deplored our inability to maintain the pound at its gold level. Yet he, too, felt that it was not possible to determine in the near future the real economic value at which the pound should be stabilised. Reading between the lines of both speeches it is clear that both these distinguished bankers recognise that in no circumstances must the pound be stabilised at so early a date or at so high a level as to run the risk of a second slip. Mr Baldwin, in his speech in the House on November 13th, was equally at pains to hint at the need for adequate delay; for his reference to the prior need for several balanced Budgets and his insistence upon England's interest in the outcome of the Franco-German reparations negotiations can only be interpreted by assuming that the Government realise that the successful stabilisation of sterling is contingent upon a favourable outcome to developments at home and abroad. In short, the world now understands that while we mean to put our house in order we are not going to be so hurried in our task as to run the risk of not making a sound and lasting job of it.

Lancashire and "Anti-Dumping" Powers.—Our Manchester correspondent writes:—At the General Election the National Government received very full support from people engaged in the Lancashire cotton industry and strong Free Traders took the risk of the Government deciding to bring about a change in the fiscal policy of the country. This week there has been some uneasiness in certain quarters in view of the proposals relating to the prevention of dumping put forward by the President

of the Board of Trade. During the last year or two there has been a good deal of talk in Lancashire about the increasing imports of cotton fabrics, but the imports remain comparatively small in relation to our export trade. It is significant, however, that Mr. Runciman, in his speech in the House of Commons, referred to coloured cottons along with other manufactured goods as likely to be affected by the Orders-in-Council. It may be pointed out that so far this year the imports of coloured cotton goods have been over 12,000,000 square yards, against rather more than 5,000,000 square yards in the same period of 1930. It is believed, however, that a substantial part of the coloured goods which come into this country are cloths which have been woven in Lancashire, but sent to the Continent to be dyed. In view of the big export trade in cotton goods, despite the depression of the last few years, Lancashire spinners and manufacturers are somewhat concerned as to whether the policy of the Government will not ultimately result in a rise in the cost of living and if such a development takes place Lancashire producers will be in a worse position in competing in the markets of the world.

Cotton Trade Hours and Wages.—Joint conferences continue to take place between representatives of the Master Cotton Spinners' Federation, the Cardroom Operatives' Amalgamation and the Operative Spinners' Amalgamation with regard to production costs in the cotton industry. Very little official information, writes our Manchester correspondent, has so far been available as to the progress made at these discussions. It is understood that the conferences are covering a wide range of subjects, but it is feared that difficulty will be experienced in coming to any agreement as to action being taken. On the part of the employers it is held that no vital effect upon production costs can be secured without some modification of the existing agreement relating to hours and wages. On the other hand, the leaders of the workpeople hold the view that economies can be brought about by some reorganisation of the industry as a whole, chiefly in the way of eliminating the profits of middlemen and the promotion of larger units. According to unofficial reports, it has been stated, on behalf of the employers, that the operatives should be willing to work longer hours for the same wages as at present, but of course a proposal of this kind has received strong opposition from the trade union officials. In trade circles the opinion prevails that these conferences will not achieve much success, and if the negotiations break down it remains to be seen whether the Master Spinners' Federation will be prepared to make a definite claim for longer hours or lower wages. The industrial position, of course, has been considerably affected by the trade improvement since the suspension of the gold standard, and it is not likely that the employers would be so united on labour demands as would have been the case a couple of months ago.

The Reaction in Silver.—The sharp fall in the price of silver early this week came as no surprise to the market, for a rise since early September from 26 cents to 37½ cents per ounce in the New York price, equivalent to 45 per cent., was obviously excessive. There are certain definite causes, however, for this rise, which has brought the price of silver back to more reasonable levels. Among them are the strained situation in Manchuria and the adherence of India to sterling. The former factor has had the usual effect of increasing the Chinese demand for silver, though on this occasion what has happened has been not so much the fresh Chinese buying as a check to former selling. The adherence of India to sterling has meant that a gold premium exists in India as in London, and consequently there has been a certain disposition to sell gold hoards in exchange for silver. A third factor may be the increase in the price of Chinese export commodities. Apart from these definite changes in the demand for silver, the only other explanation lies in speculative operations in the New York metal exchange, and it is not surprising that this is already proving far too insecure a foundation for so marked a price

increase. There is as yet no sign of even the moderate recommendations of the International Chamber of Commerce's Committee being followed, and, as the report of that body pointed out, any more drastic proposals in the direction of bimetalism or the remonetisation of silver are to-day not practical politics. It must be remembered that silver is mined mainly as a by-product, and so its output bears little relation to its current price. All this means that, if anything, the recent recovery in silver prices has gone too far, and this week's recession is proof of this fact.

The Reduced Unemployment Register.—While the gradual decline in the numbers of the registered unemployed during the past six weeks has been a welcome event at a time of year when there is a seasonal tendency for the figures to increase, the latest return must evidently be read in the light of the recent "comb-out" among claimants to unemployed benefit:—

Date.	Persons normally in regular employment.		Persons normally in casual employment.	Total.
	Wholly unemployed.	Temporarily stopped.		
Oct. 26, 1931 :—				
Men.....	1,582,194	349,407	113,252	2,044,853
Boys.....	60,271	10,146	217	70,634
Women.....	438,612	116,423	2,115	557,150
Girls.....	46,866	6,577	12	53,455
Total.....	2,127,943	482,553	115,596	2,726,092
Nov. 2, 1931 :—				
Men.....	1,597,858	339,704	111,772	2,049,334
Boys.....	60,352	9,975	182	70,509
Women.....	425,220	111,556	1,956	538,732
Girls.....	46,269	6,086	14	52,369
Total.....	2,129,699	467,321	113,924	2,710,944
Nov. 9, 1931 :—

Boys.....	59,542	9,904	182	69,628
Women.....	398,368	103,791	1,990	504,149
Girls.....	44,830	5,782	16	50,628
Total.....	2,113,350	460,829	109,745	2,683,924

Though the total unemployment figure shows a decline of 27,000 on the previous week, and the number wholly unemployed a decline of over 16,000, the number of men under both these headings increased. While unemployment among boys and girls showed some decline, the fall in the total figure is accounted for as to over 34,000, and that in the figure of wholly unemployed as to nearly 27,000, by women. Most of these were presumably married women whose claims to unemployment benefit have just been disallowed, so that their removal from the register is indicative, not of trade improvement, but of an administrative reform.

Employment and Cost of Living During October.

October witnessed some improvement in the general employment situation, for, according to the *Ministry of Labour Gazette*, the percentage unemployed among insured workers in Great Britain and Northern Ireland had fallen to 21.9 on October 26th, as compared with 22.6 per cent. on September 21st and 18.5 per cent. on

October 27, 1930. It is estimated that on October 26th there were approximately 9,436,000 insured persons in employment in Great Britain—an increase of 110,000 as compared with a month ago, but 145,000 less than a year ago. There was, however, no improvement in the number of persons wholly unemployed, which rose from 2,044,482 at the end of September to 2,127,943 on October 26th, and compares with 1,551,095 last year. Those temporarily unemployed, however, decreased during the month by 172,202 to 482,553, which was 99,061 less than a year ago. Unemployment among those usually in casual employment amounted to 115,596 on October 26th, showing increases of 3,218 and 10,804 respectively as compared with last month and October, 1930. With regard to the cost of living, there was a slight seasonal rise last month, the index number of the Ministry of Labour at October 31st registering 46 per cent. above the level of July, 1914, as compared with 45 per cent. at the end of September and 57 per cent. a year ago. For food alone the corresponding figures were 30, 28 and 44 per cent. respectively.

The Scandinavian Exchanges.—Although, for a few days in late September, sterling stood at the same discount against the Scandinavian currencies as it did against those of other countries, Sweden, Norway and Denmark were prompt to follow England in the suspension of the gold standard; and since that date their currencies have been gradually creeping up to parity with sterling. This point has now been reached, for, on Wednesday, rates on all three centres were quoted at Kr. 18½, against parity of Kr. 18.159. Simultaneously it has been found necessary in Copenhagen to impose restrictions upon dealings in foreign exchange. The Danish Government has just passed a Bill empowering, *inter alia*, the Minister of Finance to require exporters to repatriate the proceeds of their sales, and regulating the transfer abroad of Danish cheques, currency and securities. Certificates for foreign shares can now only be issued with the consent of the National Bank, unless they are bought for resale to foreign countries, in which case the amount of the sale will be lodged in a special account at the National Bank to be drawn upon with the Bank's consent. The National Bank has simultaneously been authorised to suspend its obligation to buy gold or to redeem its notes in gold until the end of February. In Sweden, the steady fall in the kronor, culminating in its return to parity with sterling, has given rise to serious misgivings, and developments are being closely watched in official circles. It is argued by the Government Press, however, that no exceptional measures which would necessitate the summoning of the Riksdag are intended.

Royal Bank of Scotland.—As the following summary of the last balance sheet shows, the accounts of this bank for the latest year are the first to give full effect to the absorption in 1930 of Williams Deacon's Bank by means of an exchange of shares. This operation also explains the increase in the Royal Banks' net profits from £505,000 in 1928-9 to £611,000 in 1930-31.

	1929.	October 12,	1931.
	£ thou.	£ thou.	£ thou.
Capital	2,500	3,362	3,780
Reserve	2,910	3,581	3,781
Deposits	46,235	50,387	49,416
Notes	2,758	2,773	2,781
Acceptances	1,178	781	933
Cash	5,173	5,454	5,125
Call money	6,770	7,002	6,848
Investments:—			
(a) General	12,282	16,180	16,411
(b) Williams Deacon's	...	2,084	3,094
Discounts	6,214	6,346	5,034
Advances	23,834	23,663	22,816
Net profits	505	534	611
Dividend	17%	17%	17%

In view of the many difficulties with which banks in common with others are having to contend, little surprise need be felt at the fact that the expansion in profits is hardly commensurate with the growth in capital. Shareholders have the satisfaction of knowing not only that their

dividend is maintained, but also that the directors, by virtue of their decision, are fully satisfied as to the ability of the bank to withstand the present stress of circumstances, though, as the report shows, this year's surplus is being used to strengthen inner reserves. The balance sheet reveals comparatively few changes of any significance. There is a welcome improvement in acceptances, but to meet other changes in the bank's assets and liabilities, a heavy reduction has been made in the bank's bill portfolio. There has been a slight shrinkage in deposits during the past twelve months, but, even so, they are appreciably higher than they were two years ago.

French Wines and Tariffs.—The present French policy in tariff matters is well exemplified by the manner in which the problem of wine imports is being handled just now, writes our Paris correspondent. Some three months ago the Government provided itself with a fresh weapon, for use in the then pending negotiations with Italy and Spain, in regard to modifications of the existing commercial agreements with those countries, by suddenly applying the quota system to wine imports of every description. As all the importing countries had already exceeded their quotas for the current year, the promulgation of the decree was equivalent to a total and immediate prohibition of further entries of wine until the end of 1931. The direct effect, in view of the intolerable confusion into which wine exporters in other countries were thrown, was a considerable speeding up in the negotiations for the new commercial treaties. On November 10th a decree was published bringing into effect appreciable modifications of the Franco-Spanish convention of 1922, which gave important advantages to both countries concerned. Spain received the right to send into France a fixed annual quota of 1,800,000 hectolitres of wine, which will henceforward enter under the minimum tariff of 84 francs per hectolitre, as well as other important concessions. In return France has received correspondingly valuable concessions in regard to many of her peculiarly national industrial products, Spanish import duties on which have been brought down to minimum tariff rates, while in other cases (motor cars, bicycles, artificial silks, photographic appliances, sparkling wines, etc.), the Spanish duties have been appreciably reduced, and in other instances (including pharmaceutical products) exactly reciprocal rates by each country have been fixed. Under a new agreement signed between France and Italy this week end, wines equivalent to the existing Italian quota will enter France under the old 55 francs minimum tariff rate, while larger quantities, up to a new maximum quota will pay a duty of 84 francs. The new quota will come into force immediately. For the moment details of the advantages obtained by France under the new agreement are unknown, but it is understood these are important. Another victim of French suspension of foreign wine entries is Hungary, whose Government is directly suffering from the loss of this outlet for tokay, which is, for all practical purposes, a Hungarian Government monopoly. In this case tokay will doubtless constitute an important pawn in the political as well as in the commercial negotiations between the two countries.

UNITED STATES.

Price Rise — Politics — Public Finance — Debt Revision
Railroad Rates — Industry — Money

(FROM OUR CORRESPONDENT.)

NEW YORK, November 7.

A MORE cheerful feeling is spreading throughout the country, based on the considerable rise in farm commodity prices in the past few weeks rather than on any change in the fundamental position. Wheat prices are nearly double their early autumn minimum, and while so far the recovery means nothing more than paper improvement to most wheat growers the markets are

beginning to anticipate the favourable effects. In the hope of securing higher prices the farmers stored nearly half the current wheat crop, and the pressure on them by their creditors to move it into cash, thaw out bank credit and pay bills will be heavy. An influx of cash into the farm country would work wonders, but it remains to be seen how genuine the recovery proves to be.

Well-known wheat speculators are active in the market, and there is some scepticism as to whether they have merely shown good judgment or have been mainly responsible for the rise. Perhaps too much publicity and unconcealed rejoicing among Administration officials have accompanied the better market. Other farm products also have risen, and, in consequence, Dun's index of wholesale prices for October shows a gain of 2.9 per cent. This is the first rise of consequence since September, 1929. The attitude toward cotton, however, is less optimistic. The Farm Board is exerting itself to promote a holding movement in the South, with bank aid, and one view is that this will merely postpone the day of reckoning.

Election results, while confirming the drift away from the party in power, are of no great significance. The Democrats have made some gains in Congress, but the balance of power remains in the hands of the small group of independent Republicans from the central agricultural States. It is still true that strictly party measures will find the going hard when Congress meets in December, and even Democratic success in organising the House of Representatives would probably not add greatly to the embarrassment of the Government. The chief concern of the Government will be to balance its Budget, and disputes over a taxation and expenditure programme, which are bound to involve the European debt and reparations problem, are unlikely to follow party lines very closely.

In the first four months of the fiscal year the Treasury deficit rose to \$661,120,000, and these large figures settle all doubts as to the Government's ability to make both ends meet without increased taxation, even if it were so inclined, as it appeared to be a few months ago. It cannot be predicted, of course, just what form the taxation will take, but it is likely to be spread over fields now exempt as well as to involve an increase of existing rates.

Repercussions of the Hoover-Laval conference are still felt, and opinion favouring a downward revision in debts has gained ground. In Wall Street the prevailing view, which finds an echo through the interior, was succinctly set forth this week by Mr Thomas W. Lamont, of J. P. Morgan and Company, in an article in a current periodical. Reviewing the recent book on reparations written by Dr. Hjalmar Schacht, Mr Lamont envisaged four main points requisite for a return to prosperity. These points were: (1) a rapprochement between France and Germany; (2) reduction in reparations; (3) reduction in inter-Allied debts; and (4) reduction in tariffs. Doubtless the first three will be easier of accomplishment than the fourth, but even that is not hopeless, and this country's high tariff now lacks the strong support of full employment and high wages.

The matter of acceptance by the railroads of the freight rate increases, made conditional upon formation of a pool of the added revenues, is still in abeyance. Meanwhile discussions among the railroads and the trainmen's unions on wage reductions are progressing. Some roads are acting independently with the employees on their own lines, and the labour union leaders have invited the railroad executives to a general conference, hoping to gain shorter working hours and a spreading of the available work among more men in return for lower wage scales. The roads wish, above all, to reduce the total wage bill, but the two points of view are not irreconcilable, especially with the growing recognition by labour that wages and commodity prices are connected and that a cut is inevitable.

There are slight stirrings in trade. The steel industry has moved up about 80 per cent. of capacity operations, though pig-iron output in October fell, on a daily basis

average, lower than in September, and was the lowest since September, 1921. Railroad traffic is improving slowly. Thanks to the harmony now achieved among the South-Western States enforcing proration of oil, mid-continent prices have risen 15 cents a barrel, and that section of the country is feeling better. As yet there has not been enough meeting of minds to warrant the holding of a general conference among the American, British and Belgian copper interests. The proposal made by some interests to establish a common selling arrangement in lieu of adequate reduction in output is unlikely to be carried out, although some modification may be made in the practices of Copper Exporters, Inc.

Company earnings for the third quarter were further reduced from the low level of the second quarter. A compilation by the National City Bank of industrial and mercantile company profits shows a reduction from the second quarter of 35 per cent., and a drop of 49 per cent. from the same quarter of last year. In the nine months the decline was 47 per cent. Non-ferrous mining companies fared the worst, with steel and iron makers next. Machinery, motors, railway and electrical equipment were close behind. On the basis of net worth, industrial companies earned in the nine months at the rate of a little less than 5 per cent. on capital and surplus, compared with 9.5 per cent. a year ago. Railroad net operating income for the first nine months was at the annual rate of return on property investment of 2.08 per cent., against 3.44 per cent. last year. In September the rate of return was only 1.76 per cent. Gross earnings of electric light and power were only 1 per cent. lower in the first eight months.

In its current review the New York Reserve Bank points out that in October the country sustained a net loss of \$439 millions in gold, a record for any country, and that since the movement began in September the outflow is equal to the inflow since the beginning of 1930. It points out that the Reserve system still has reserves in excess of the amount which it is legally required to hold of more than \$1,000 millions, and that, "in addition, there is about \$1,000 millions of gold certificates in circulation in this country, a considerable part of which could if desired be replaced with other forms of currency." There was a further gain in Federal Reserve credit in use last week, and a decline in member bank loans and investments. However, the critical point in bank failures is past, and confidence in the position among the timid and the ignorant is much greater. Nothing more than a much needed weeding out process is now going on, with sporadic failures of small institutions.

FRANCE.

Budget — Supplementary Estimates — Wine Harvest — Other Crop Forecasts.

(FROM OUR CORRESPONDENT.)

PARIS, November 18.

As promised, the Finance and Budget Ministers presented the members of the Chamber on Thursday, when Parliament re-assembled, with the text of the Finance Bill for the nine months' national financial "year" which the coming Budget will cover. The total estimates are presented as follows:

	Francs.
Revenue	41,037,290,741
Expenditure	40,935,018,566
Surplus	102,272,175

The preamble of the Bill sets forth that the Budget for 1930-31, according to present estimates, will, in all probability, show a deficit of at least 2,500,000,000 francs, "due to supplementary credits voted in the course of the year which so far total, in round figures, 3,300,000,000 francs." The current Budget, for the year ending March 31st next, is expected to show a yield from direct taxation of 300,000,000 francs less than was expected, while the revenue from indirect taxes and State monopolies, down to the end of September, was 312,000,000 francs more than Budget estimates, owing to an increase of 900,000,000 francs in the yield from

Customs, consequent on the raising of certain duties. "Unfortunately, supplementary credits have already absorbed nearly the whole of the surplus registered. Additional credits already voted by Parliament total 130,000,000 francs. During the recess supplementary credits totalling 141,000,000 francs were opened by Conseil d'Etat decrees, while the Chamber has had laid before it proposals for a further 83,000,000 francs of new expenditure." In the circumstances the Budget Minister, while congratulating the Chamber that the general situation may be regarded as satisfactory, in view of the economic crisis, insists that a "vigilant and tenacious" effort will be required to maintain a balanced Budget.

The Budget Minister, M. Pietri, in his introduction to the Bill, sets forth that the more important items of this supplementary expenditure comprised 630,000,000 francs for national defences, about 400,000,000 francs for victims of floods and other public calamities, about 700,000,000 francs representing readjustment of credits for various categories of war victims (including 360,000,000 francs of extra allowances to former soldiers), 290,000,000 francs representing taxation relief, 150,000,000 francs for non-reimbursable advances to departments and communes for assistance to the needy, 210,000,000 francs for electrification and other works in the rural districts, 80,000,000 francs for roads, and 190,000,000 francs due to slowing down of Rente extinction by the Caisse d'Amortissement (due to funds at the disposal of the Caisse having been drawn on to assist in balancing the Budget).

Analysis of the proposed expenditure for 1932 shows that much of the supplementary expenditure voted latterly and involving future years will tend materially to increase the burden on the coming and future Budgets also. The following list, showing increases of expenditure to be provided for under the 1932 Budget, indicates that some of these items are substantial:—

	Million Francs.
National insurance funds	300
Former soldiers' mutual aid organisations	75
Pensions for maritime conscripts	38
Public health department	28
Former soldiers' pensions	400
Consumptive and permanent invalids	83
Free medical assistance	13
Main roads (routes nationales)	200
Services of advances and loans for rural roads, water supply, &c.	55
Naval programme	150
Subsidies for merchant shipping	164
Interest, &c., service for loans to meet deficit on railways common fund	60
Twelve months' military service law	180
Grants for encouraging various crops	103
Increased pay for the teaching body	40

Some of these increases for the current year are admittedly due to hasty legislation in connection with which the ultimate expenditure was under-estimated. The Minister declares that, for the coming year's Budget, the establishment of a balance will solely depend on the wisdom of Parliament, as the Government is determined to reject all demands for fresh expenditure which is not strictly obligatory; which may be interpreted as meaning that, pending elections notwithstanding, purely demagogic expenditure will be ruthlessly opposed.

Ostensibly for the purpose of checking "dumping" from countries whose currency has depreciated, the Government last Sunday promulgated a decree applying forthwith a surtax of 15 per cent. on goods entering the country from Great Britain, Australia, Denmark and Sweden, 10 per cent. on products from the Argentine and Uruguay, 8 per cent. in respect of similar goods from Norway, and 7 per cent. on those from British India and the Native States. The preliminary list of products to be exempt from surtax comprises wheat in the grain, bait for mackerel and cod, oleaginous nuts, etc., and tea. Other lists are to follow.

Estimates of this year's wine harvest, issued on the authority of M. Douarche, director of the International Wine Office, suggest that the 1931 vintage has been of

substantially larger volume than has hitherto been expected. Basing his estimates on the figures returned for the Hérault, the Aude, the Gard, and the Pyrénées Orientales departments, whose yield normally represents one-half of the total for the whole country, M. Douarche estimates that the total production will amount to 55,000,000 hectolitres, as compared with 42,000,000 hectolitres in 1930, 63,000,000 in 1929 and 58,000,000 in 1928. The figures for the current year correspond to those for an "average good crop," which experience shows has a much greater economic value than a reduced crop, such as that of 1930 (which nevertheless helped towards reducing existing stocks), or than a "bumper" harvest, like that of 1929, which brought disappointment to the whole of this great French industry.

Provisional figures, representing the results of the 1931 cereal crops, which are issued by the Ministry for Agriculture, are as follows:—

	1930. Quintals.	1931. Quintals.
Wheat	62,900,000	72,382,550
Mixed wheat and rye	866,710	865,540
Rye	7,431,170	7,877,740
Barley	9,870,630	11,932,580
Oats	43,944,030	49,963,840

The average weight this year is returned as 75.30 kilos. per hectolitre, as compared with 72 kilos. in 1920.

GERMANY.

Reparations Question — Public Opinion — Interest Rates — Unemployment — Trade Balance — Commercial Treaties — Exchange Regulation — Reichsbank Reserves.

(FROM OUR CORRESPONDENT.)

BERLIN, November 17.

THE cardinal political and economic question of the moment in Germany is the outcome of the Franco-German conversations. These conversations alone, it is true, cannot settle the inextricably interwoven problems of reparations and short-term credits, in spite of the free hand given France by the United States, but they are the first, and by far the most important step towards the solution of these problems. Public opinion in Germany is wholeheartedly in accord with the Prime Minister's Guildhall speech, in which he called for a final settlement of the international debt problem, but such a settlement naturally presupposes the possibility of reducing political debts to a level which will be permanently tolerable. The figures which it is now considered possible permanently to maintain are very much lower than even the debtors thought at the time of the Young negotiations.

Mr MacDonald was perfectly right in stressing the fact that mere provisional settlements cannot create the confidence which is necessary for world recovery. The urgent need for a solution of the reparations question has recently been further emphasised by the fact that the Americans are patently not prepared to agree, in present conditions, to a long-term moratorium on German short-term private credits. Any schemes, however, which may be devised for realising the credits which are practically frozen in Germany, and thereby creating a more favourable situation, depend on the creation of confidence, and on the rest of the world's being informed as to what the future figures of international indebtedness are to be. On the other hand, however, it is quite impossible for Germany to accept a settlement whose burden exceeds her capacity. There is no longer any room for the tactical considerations which in the past overrode practical objections to the reparations settlements, and the internal condition of Germany would completely preclude any acceptance of a "final" programme which could not be completely fulfilled. The Landtag elections in Hessen have just shown a doubling of the National Socialist vote since the Reichstag elections of 1930, and heavy losses of the Social Democrats to the Communists. If the Brüning Government is to maintain itself against this flood it will not have to allow itself to be forced by

diplomatic considerations into a policy which the people cannot understand. It is already a great popular grievance that the outward forms of the Young Plan are to be adhered to in revising the terms of reparations, as this seems to accentuate the inviolability of the Young Agreement which is so strongly opposed in Germany. In the negotiations now going forward in Paris, care will have to be taken that the forms of the Young Plan do not prevent a practical and tolerable settlement. That safeguarded, there will have to be a difficult campaign for the education of the German people as to what is and what is not possible in foreign politics.

The argument over the priority of political or private debt settlements is really only a preliminary skirmish, for it is clear that without an extension of the moratorium on private debts, Germany will not be able to pay reparations within any measurable distance of time, and that without a reparations settlement she can be given no new moratorium.

All economic circles were seriously disturbed last week by rumours of a proposed reduction in the rate of interest, and urgent protests came even from abroad, and especially from America, as to the injury such a measure would inflict upon German credit. The Government at first denied this rumour in somewhat ambiguous terms, and when this failed to produce the desired impression the Chancellor announced, in a notable speech at Mainz, "The Government has long been considering the possibility of reducing the rate of interest, but has never contemplated a compulsory reduction." That the Government must have been preoccupied by the question how interest rates in Germany might be reduced is self-evident, for the level of these rates in Germany is imposing an excessive burden on German economy. The Government, in its deliberations, must have reached the only correct conclusion, that a reduction of the level of interest can only be brought about by the accumulation of capital and by the establishment of confidence, which would make possible a reduction of the premium on risk-bearing. It is, indeed, possible that in the Economic Advisory Council, which still seems to be disappointing even the slight hopes which were pinned to it, the desire for a compulsory attack on domestic credit contracts is not yet dead, but it is highly improbable that any such attack will ever materialise. Even the latest idea, of levying a special tax on incomes from loan interest and using the proceeds to grant advances of interest to mortgagors in difficulties, can have no prospect of being carried out. The proposal would not be unreasonable if the tax could be kept very low, but the dangers of abusing such a tax are so evident that they must deter the Government from entertaining the idea.

The number of unemployed is only increasing very slowly. The increase of about 138,000 in the second half of October is scarcely greater than at the same time last year. From the end of June, when unemployment was at its lowest for 1931, to the end of October the number increased by 648,000; last year the increase from the lowest point to the end of October was 617,000. There is, of course, the big difference that 1.3 million more people are unemployed this year than last (4,622,000, against 3,252,000), but the increase as compared with last year is no longer growing. Of the total of 4,622,000, 1,185,000 are on unemployment benefit and 1,350,000 on emergency benefit. The rest are receiving poor relief or nothing at all.

In October a surplus of exports amounting to nearly 400 millions was achieved. Both imports and exports were higher than in the preceding month—a seasonal increase. It is still astonishing how little of the export surplus is reflected in the official German balance of *devisen*.

The trade treaties between Germany on the one hand and Roumania and Hungary on the other, which were to establish preferential rates for the import of grain from the two Danubian countries into Germany, in consonance with the Geneva resolutions, cannot be put into effect because some of the most-favoured-nations, namely Czechoslovakia, Argentina and Turkey, have refused their consent. The United States, Russia and Denmark have reserved their decision. Those sections of the German-Hungarian treaty which do not concern the preference will

come into effect shortly, and further negotiations are also to take place between Germany, Hungary and Roumania.

A new foreign exchange regulation, issued a few days ago, introduces further restrictions with exchange dealing and will seriously hamper the use by foreigners of their German holdings. It is, however, in the ultimate interest of the whole body of Germany's foreign creditors, as the foreign banks of issue have recognised. The new decree contains provisions regarding traffic in securities. Earlier decrees had already forbidden persons domiciled in Germany to buy foreign securities without permission from the "foreign exchange offices." This prohibition is now extended to foreign shares which are quoted on German bourses, and to German loans quoted on foreign bourses. Especially timid German capitalists have during recent weeks been buying large quantities of Svenska, Kreuger-Toll, and other foreign shares, as well as the dollar bonds of German industrial companies, and thereby reducing the gold of foreign exchange reserves of the Reichsbank. The purchase of German dollar bonds by German capitalists means the redemption of Germany's long-term foreign debt, which at the moment, when short-term debt cannot be repaid, is undesirable. The same applies to the second, even more important provision of the new decree: foreign holders of German securities can still sell their German holdings, but the proceeds of these sales may not be transferred abroad without permission. Foreign holders of German securities must be classed with Germany's long-term creditors, whose claims are not to be given a preference. This new decree has, of course, given rise to bitter feeling among many small and large capitalists abroad, though liquidation of holdings which the foreigner no longer considers desirable is in no way prevented. The foreigner can change the composition of his German investment portfolio, he can hold bank balances instead of securities, but he cannot demand foreign exchange for the purpose of transferring his property abroad.

The most important direct cause of this and the numerous preceding strengthenings of the regulation of foreign exchange is the unfavourable development of the position of the Reichsbank. Owing to the numerous flaws in the Basle standstill agreement the continued outflow of foreign exchange from Germany persists: by the middle of November the gold and exchange reserve of the Reichsbank fell to something under Rm. 1,200 millions, of which Rm. 630 millions were foreign credits lent to the Reichsbank for a few months.

AUSTRIA.

State and Credit-Anstalt — Personnel Reductions — International Clearing — Motor Spirit Monopoly — Foreign Exchange.

(FROM OUR CORRESPONDENT.)

VIENNA, November 14.

SOME degree of clarity has at last been created in the relation of the Federal State to the Credit-Anstalt. Austria had previously, it is true, some notion of the amount of the State obligations for the debts of the Credit-Anstalt and some knowledge was also available in regard to the liability towards the National Bank. Now, however, individual figures have been published, and the picture they outline is startling. It has been disclosed that the amount of the bills of exchange which the National Bank has discounted for the Credit-Anstalt is about 608 million schillings. In view of the fact that the total bill portfolio amounts to only 760 millions, this commitment is extremely heavy. Moreover, the bills which the bank has had rediscounted abroad are not included in the figures published. Furthermore, it is now known that the total guarantees of the Federal Government for the Credit-Anstalt amounted to 1,400 million schillings, and now, after small repayments have been made, the amount is still in excess of 1,200 million schillings, and it is hardly likely to fall any lower. This information has caused great consternation, especially in view of the fact that when the guarantee was taken up and when the relief action was started, the Credit-Anstalt authorities

gave the assurance that the total liability was only 140 million schillings.

All possible measures of reducing the risk borne by the State are being considered, but the course to be taken has not yet become clear. It is growing steadily more evident that Austrian State credit will shortly have to be freed from the responsibility for the Credit-Anstalt. Further, the National Bank is demanding a reduction of its risks in respect of bills discounted for the Credit-Anstalt. Within the last few days a plan has been contemplated to take a portion of these bills out of the portfolio of the National Bank and declare it to be a national debt, which will be amortised in the course of years and bear interest in the meantime. This in itself would not decrease the liability of the State, but it would permit the National Bank accounts to present a better appearance. According to the last report, the loan debt of the State amounts to 95.5 millions, and, if this national debt is increased, the shareholders of the National Bank will surely demand an extension of the charter.

The former managing director of the Credit-Anstalt, Herr Neurath, leaves on November 17th after the expiration of the month's notice prescribed by the Government. Both the management and the staff of the Credit-Anstalt have been greatly reduced. The retrenchment commissioners of the Government have worked out another plan for the curtailment of staffs. If it is put into operation, many of the Government offices will be amalgamated. In the ministries alone 15 per cent. of the clerks are being pensioned off. But the dismissal and pensioning of civil servants does not help very much, if there is not also an amalgamation of the various departments themselves and a general reform of the administrative machinery, a task which is not so simple in times of crisis. There is, of course, no prospect for a domestic loan, as the public is greatly disappointed that insurance policies made out in foreign currency values are not being paid in the respective currencies but in schillings, even though all premiums have up to the present been paid in the foreign values. The coupons on foreign securities must also be credited in schillings, as, in accordance with the foreign currency regulations, all foreign means of payment have been surrendered to the State. This also applies to the proceeds of the coupons of the League of Nations loan, in so far as they are in the possession of Austrians.

Attempts are now being made to arrange a clearing system between Austria and several neighbouring States in such a manner that, with the co-operation of the Government and the National Bank, foreign means of payment should not be demanded, but the goods themselves should be cleared. The respective balances alone should be taken into consideration. This plan is, however, attended by great difficulties, and it is doubtful whether the negotiations will be successful. The Prague Conference did not afford much hope in this direction.

The leasing of a motor-spirit monopoly has again been under discussion. Up to the present the Ministry of Finance has consistently opposed the project. Now, however, the resistance appears to be less strong, but there is no prospect for the monopoly. The discussions for the fusion of the Danube Steamship Company with the Federal Railways are still going on. This would be an advantage for the Credit-Anstalt, for the Danube Steamship Company owes it a very large sum, while the Federal Railways would again have the possibility of covering their coal requirements cheaply from the Fünfkirchen mines, which belong to the Danube Steamship Company. The only sufferers would again be the shareholders, who, like those of the State Railway Company, would have very little hope of ever seeing the enterprise pay a dividend again.

Under the pressure of public opinion, the Austrian National Bank has reduced the bank rate from 10 per cent. to 8 per cent. From the reasons advanced for the change it was clear that the hopes which had been entertained of strong support from abroad and, particularly, of the liberation of the credit of 60 million schillings, have not been realised. The high bank rate was maintained at the explicit wish of the Bank for International Settlements, even though Austrian economy suffered

seriously under the burden. The belief that the high bank rate would attract foreign capital has been weakened by the strict foreign currency regulations, not only in Austria but in other countries. Still, on the last occasion the National Bank was again able to publish a not unfavourable report, which showed that, since foreign currency has been controlled, the Bank has reduced its own holdings by only 15 millions. This, however, must not hide the fact that, in spite of all the restrictions in the allotment of foreign means of payment, the demand still remains very heavy. The explanation of the fact that the calls on the foreign currency holdings of the National Bank are not greater is that after the decree was issued the public sold 84 millions' worth, including 11 millions in currency and other values which had been declared. Of this, about half was required for foreign interest service and the repayment of bills of exchange, which had been rediscounted at foreign commercial banks. The other half was put at the disposal of commerce.

HUNGARY.

Parliament and the League Report — Budget Deficit — Winter Prospects.

(FROM OUR CORRESPONDENT.)

BUDAPEST, October 16.

PARLIAMENT is discussing the League Report on the financial position of the country. The debate has so far contributed very little to the real issue. Instead of putting forward practical propositions for balancing the Budget, members are indulging in futile criticism of the past. The League Report is blamed for failing to offer a solution of the crisis. It is a thousand pities that Parliament and Press alike entirely ignore the fact that a financial crisis arising out of a radical change in the price level in a debtor nation which is "over-borrowed" cannot be solved except by readjusting the State Budget as well as other fixed money charges to the country's reduced capacity to pay.

Both the parties supporting Government and the Opposition are urging the Government to declare a transfer moratorium on all foreign payments in order to secure the basic financial and economic structure of the country. A suspension of transfer on principal and interest is unavoidable, because there are more than 1,000 million pengő maturities of short-term credits within the next twelve months, and the interest and amortisation service of Hungary's total foreign obligations of 4,094 million pengő amount to nearly 300 million pengő. Reckoning with a total merchandise export of 500-550 million pengő in the next twelve months, it is obvious that Hungary cannot meet her debt service, either principal or interest, as her balance of payments, apart from merchandise trade, has no active item of importance. It would be very unwise to expect more than 100-120 million pengő active trade balance on a total export of 500-550 million pengő at a time when the country is surrounded by neighbours who are restricting imports for the same reason that Hungary has to force exports, namely, to meet foreign debt charges. But before a transfer moratorium can be declared by the Government it is necessary to balance the Budget, because foreign creditors will hardly agree to make sacrifices on the assumption that they are necessary to the preservation of the basic financial structure of the country unless the budgetary deficit is made up by further sacrifices by Hungarians themselves.

No statement has been issued so far by the Finance Minister on the budgetary situation. In the absence of the monthly statements of the Treasury the position of the current financial year may be gauged from the data published in the League Report and in the Report of the Committee of Six appointed by both Houses of Parliament to effect economies. The figures are very unsatisfactory. The deficit of the first quarter is 83.6 million pengő. Although tax receipts in November will in all probability improve the Treasury position, the fact still remains that expenditure is higher than revenue. As was stated in the League Report, the Hungarian Government proposed

to limit expenditure for the remaining eight months from November, 1931, to July, 1932, to 565 million pengő on an annual basis of 850 million pengő. The declaration of the Government states further "that the Government is fully aware of the dangers of inflation, and is determined to avoid it. If the Government finds it impossible to maintain Budget equilibrium during the current Budget year by measures which have now been taken, it will decide without further delay upon other reductions in order to ensure equilibrium. At the same time, it will take measures to secure equilibrium in the Budget of all State undertakings, especially that of the railways." These pledges must be carried out without further delay, because, as the Committee of Six has stated in its report, the State Railways will have a deficit of at least 18 million pengő, even on the revised estimates. It seems that an increase of charges as well as reduction of salaries and of the number of personnel is inevitable if the railways are to pay their way. The excessive personnel charges of the State Railways are due to the fact that the number of pensioners exceed those in actual employment, because many thousands of refugees from the lost territories are receiving pensions here.

The restoration of equilibrium in the Administration Budget is even a more difficult task than that of the State undertakings. According to the revised estimates, the expenditure for 1931-32 amounts to 922.9 million pengő, as against 806.5 million pengő in 1926-27. The expenditure on personnel and pensions has risen from 334.1 million pengő to 419.8 million pengő. Subsidies to autonomous administrations for salaries and pensions from 44.5 million pengő to 62.3 million. It is obvious that further reductions of salaries and pensions must be made before the end of the year, for revenue will hardly exceed 800 million pengő. If expenditure cannot be reduced to that level the only alternative would be either inflation or uncertainty whether the State would be able to pay its employees and pensioners in full on January 1, 1932, and onward. Whatever cruel sacrifices a further cut in personal services would involve, it is surely better than a complete chaos, which would result from the other alternatives. These measures require a more ruthless Finance Minister than Count Károlyi has so far been. Members of Parliament would do better to insist on immediate economy measures than to suggest futile financial and economic schemes which are nothing short of disguised inflation.

The country is facing the most difficult winter since 1919-20. The distress on the farms, especially in the north-eastern districts, is great, on account of the bad harvest. The Government has organised relief for the distressed areas, and the unemployed in the cities will receive some support through their trade unions, to which the Government will also contribute on a very modest scale. Although the political and financial outlook is uncertain, there is no need to fear disturbances, because the Hungarian people have not forgotten the evils and terror of the Bolshevik experiment in 1919, and will not seek their welfare in social and political upheavals.

HOLLAND.

Dutch East Indies Budget — Netherlands Public Finance — Capital Issues — Money Market — Industry — Stock Exchange.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 18.

THE necessary Bills for the approval of the Dutch East Indies Budget for 1932 have been introduced into Parliament. In 1930 expenditure totalled 891,541,000 guilders, revenue 753,973,000 guilders, leaving a deficit amounting to 137,568,000 guilders. In 1931 the deficit is expected to be 172,600,000 guilders according to the very rough estimate which can be made at present. Despite considerable economies and temporary increases in certain taxes, it has not proved possible to effect economies sufficient to counterbalance the further decrease in revenue. All efforts will be concentrated on restoring the balance

within the shortest possible time, according to the Government memorandum. Expenditure will have to be cut to a greater extent than was considered justifiable at the beginning of this year. The draft Budget for 1932 provides for 845,250,568 guilders total expenditure, and 724,516,972 guilders total revenue, so that the deficit is estimated at 120,733,596 guilders.

As a step towards restoring the equilibrium of the Budget in Holland the Second Chamber has now passed legislation for reducing the salaries of Government officials. The Bill encountered considerable opposition, but has now been passed in a modified form, the date from which the reduction is to come into effect being postponed to April 1, 1932. The salaries of Ministers are also being reduced. The Queen-Mother and Princess Juliana have voluntarily given up 10 per cent. of their State income, and the Queen herself is foregoing far more than 10 per cent. The Minister justified the cut in the salaries of Government officials on the grounds that many other classes of the community have also undergone, and are still undergoing, reduction in their income, that the index of the cost of living has dropped, and that the millions thus saved are needed to contribute towards balancing the country's Budget, for the sake of averting inflation. That the danger of inflation is not purely imaginary is distinctly demonstrated by the unsatisfactory development of the Netherlands balance of trade. In October, 1931, the figures were as follows:—

	(In millions of guilders.)				
	Jan.-Oct. 1930.	1931.	Sept. 1931.	1930.	1931.
Imports	2,072	1,613	153	198	160
Exports	1,476	1,130	120	151	111

Compared with September, imports in October have registered a distinct advance, while exports show a steep decline, with a consequent increase in the balance of imports over exports from 33 million guilders to 49 millions. Our balance of trade has always been passive, but this has not involved a deficit on our balance of payments as the deficit on the balance of trade has been compensated for by income from shipping, international bank and financial business, investments abroad, and so on. These sources, however, have been drying up; and it is therefore argued that if our total balance of payments is to be maintained special attention to the balance of trade is imperative; our imports must be reduced as much as possible and exports increased as much as possible. The Government is aiming at the achievement of this object, on the one hand, by the enforcement of the quota system, for which legislation has already been introduced into Parliament, and, on the other hand, by bringing pressure to bear upon the level of wages in order to stimulate exports. By means of the cut in the salaries of its officials, the Government has given a lead in this direction.

The course of the State finances continues disappointing. The Government returns show that in October the revenue was 8 million guilders lower than in 1930. The yield for the first ten months of 1931 amounted to 367,841,683 guilders, as compared with 421,874,976 in the corresponding period of 1930. The Government are endeavouring to raise their necessary cash requirements by the issue of Exchequer bonds. In this connection it is reassuring that the difficulty of procuring funds for cash requirements are already largely a thing of the past, both for the State and for the municipalities. The Municipality of Rotterdam has now received an advance of 4 million guilders from the State, but with the intimation that, if the municipality should want to convert the advance into a loan, the Government would have to exact conditions for such transaction.

The Province of North Holland has come on the open market for subscriptions to a 4½ per cent. loan of 2 million guilders at 97½ per cent. In addition, subscriptions have been opened for a 2½ million 5 per cent. loan at par for the Municipality of Bois-le-Duc, and the issue of a new loan is being considered by the Province of Limburg. Furthermore, the Government announces the issue of Treasury bonds to the value of 60 million guilders.

It is thus evident that the new issues market is displaying more animation, as far as loans for official bodies are

concerned. Generally speaking, revival of confidence is becoming more and more apparent; there is, in consequence, a firm tendency on the investment market, and the quotations for bonds have advanced further. This has rendered once more possible the issue of new loans. On the foreign bond market, also, a revival of confidence is manifesting itself. Dollar securities, for instance, have been firm lately in sympathy with the improved tendency of the dollar. German loans also enjoyed a firm tendency, and the Young loan in particular was in demand on hopes of French concessions to Germany. Scandinavian and other descriptions were also in demand.

On the Amsterdam money market, too, there are more signs of confidence. On the part of the banks there is more demand for Treasury bonds, indicating that there is now some inclination to invest funds at present lying idle, even if at very short term and on very liquid commitments. For this purpose Treasury bonds due at a not too distant date (six to eight months' bills, for instance, and sometimes 12 months' Treasury warrants) are particularly in favour. The result has been that discount rates have dropped again, while prolongation money is also at the lower level of $1\frac{1}{2}$ per cent. The hoarded bank notes are beginning to flow back to the banks once more, in view of which the banks are even considering a further reduction in the rates of interest on deposits.

The difficulties of Dutch industry are still increasing. The conflict in the textile industry of Twente with regard to a 5 per cent. wage cut is becoming more acute, and a partial strike has been declared. In connection with the various industrial difficulties a meeting has taken place at the Ministry of Labour, Commerce and Industry between representatives of the general associations of employers and of employees, with ex-Minister Dr. Kan as chairman, preliminary to the appointment of a Government commission which is to examine and report upon the prevailing crisis in industry. Dr. Kan has consented to preside over this commission.

On the Stock Exchange a good firm tendency is maintained, though trading is very limited in extent, with only slight price fluctuations in consequence. The greater liquidity of the money market has been a contributory factor to the improved sentiment. In some quarters on the Exchange it is thought that in these circumstances the issue of a big Netherlands State loan may be expected in December or January.

SWEDEN.

Currency Depreciation — Trade Balance — Banking Position.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, November 17.

THE fall in the rate of exchange for the Swedish crown has continued to form the centre of interest in financial circles in this country. As was to be anticipated, the forces which gained ascendancy with the suspension of the gold standard have continued to press down our currency at a remarkably rapid rate during the last two weeks. Our rate of exchange for the dollar, which may now be said to be the deciding factor for the international valuation of the Swedish crown, has risen practically without interruption from 4.60, when I last wrote, to 4.80 to-day. Viewed from an international standpoint, the Swedish crown has now dropped to not quite 78 per cent. of the old gold parity and even to little more than 77 per cent. if we measure it instead with the Paris quotation. This means that it has depreciated to an equal extent to the English currency, and has done this at a surprisingly rapid rate. With to-day's quotation the old parity between sterling and the Swedish crown has, in point of fact, been reached. With regard, moreover, to the other Scandinavian currencies, it has even for the moment outdistanced the Danish crown, which for several days has been quoted above par in Stockholm.

One of the material reasons for this development would still appear to have been extensive capital transactions for

one of our international concerns. It appears, however, that other factors also have played a considerable part. The question is asked whether the progressive expected decline in the currency has not led to increase of imports, since, from the importers point of view it must be more advantageous to purchase goods earlier than would otherwise be the case, as these goods at a later date would come out dearer if the crown continued to depreciate. It is by no means improbable that, contrary to what had been anticipated, the first few months after suspension of the gold standard will show an increased instead of a decreased surplus of imports.

Such a movement would represent nothing else but speculation in the anticipated depreciation of the Swedish crown; and speculation has certainly been one of the determining factors in the fall in the rate of exchange. It appears obvious that people have generally come to assume that depreciation of the Swedish currency would assume the same proportions as that of the English currency. This means, however, that we must be on the look out for a powerful swing of the pendulum in the opposite direction, particularly in view of the fact that our currency is now undoubtedly undervalued. Speculation based on this calculation would probably also contribute to excessive attempts at forcing up the value of the Swedish crown. Taken together these factors must further increase the difficulties of the business world, and a consequence will manifestly be an inevitable rise in the Swedish level of prices. It is possible that a comparatively long period may elapse before this expresses itself in any pronounced manner in the level of retail prices. It is, however, already possible even there to note a rising tendency, although naturally for the time being this has mainly shown itself in the level of prices for raw materials. Measured by the weekly price index of the *Svensk Finanstidning*, which is purely an index of the prices of raw materials, the upward movement has been a full 8 points since the week preceding the suspension of the gold standard, the index having in this period jumped from 89.9 to 97.9.

It is too early yet to prophesy the effect of this development on the foreign trade figures, as it is mainly during the month of November that the depreciation of the crown has gained ground. The particulars of quantities for foreign trade in October, recently made available, on the other hand throw little light on the effect of the depreciation of currency, which was, moreover, to be anticipated. The export figure to some degree fulfils hopes of the stimulating effect of the fall of the crown. In any case, from 64 per cent. of the 1929 figure in August and 65 per cent. in September, it has risen to 72 per cent. At the same time, however, imports have tended to increase, i.e., from 98 per cent. of the 1929 figure in September to 100 per cent. in October. Should it be found that November brought with it any acceleration of imports, the great demand for foreign currencies will be explained.

These statements may not be very cheering from the Swedish point of view. On the other hand, however, some economic data have been published in the course of the last few days which point to a surprisingly quick effect from the measures taken by the State Bank against a repetition of the currency *débâcle* of September. The official October report for the banks indicates a particularly noticeable cutting down of the volume of credit, a displacement which is the more significant in view of the fact that a progressive increase in the demands for credit is seasonally usual for the month. Last year these demands were swollen by 24 million crowns and two years ago by 16 million crowns during the same month. This year the burden has been lightened instead to the extent of no less than 87 million crowns. No doubt can exist that we see here a pronounced effect of the restrictive discounting policy. The degree to which the strain on the commercial banks during September has been overcome is also particularly noticeable. They were able during the last month to reduce their rediscounting with the State Bank by nearly 100 million crowns, and this in spite of the fact that, while they have kept considerably larger sight resources than normally, they have drawn on one another to a lesser extent than usual. At the same time, moreover, they were able further to check the deterioration in their position

vis-à-vis foreign countries. In the aggregate, the reduction of our net claims on foreign countries was only 6 million crowns, a sharp contrast to the change for the worse of September of fully 65 million crowns.

DENMARK.

Bacon and Butter Prices — Stabilisation of Supply — British Preference.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, November 15.

INTEREST is still chiefly concentrated on the agricultural situation. Last Friday the price of bacon was further reduced, and now stands at 66 öre, the lowest during the crisis. In Great Britain the demand has been reduced, while in Denmark the supply has been increasing. The number of swine slaughtered and the amount of bacon exported have recently fluctuated a great deal, and the effect on the market has not been healthy. The price committee has, therefore, taken steps to stabilise the supply of pigs for slaughter. Butter prices have risen 3 öre to 210.

The Danish farmers are following political developments in Great Britain, and especially the "Buy British" campaign, with great interest. Various occurrences have shown that the farmers in this country are anxious to give still greater preference to British imports. For instance, the co-operative slaughterhouses and dairies on Lolland-Falster have unanimously decided to buy in future British coal instead of Polish or German. The dairies in question use 10,000 tons of coal every year.

JUGOSLAVIA.

French Credit — Foreign Trade — Elections.

(FROM OUR CORRESPONDENT.)

BELGRADE, November 14.

THE nadir of gloom in Yugoslavia was reached towards the end of September. It was known then that the Government deficit, caused by the default of reparation payments, by falling receipts and by losses on the wheat monopoly, could not be much less than 2,000,000,000 dinars. By that time also the Government had claimed no less than 470 million dinars of the credit of 600 millions opened to it by the National Bank, and this, besides contributing to the difficulties of the Bank, helped to further the restriction of credit and the shortage of liquid cash. Added to this, malevolent rumours were spread by the Opposition: that an internal moratorium would be declared, that the service of State debts would be suspended, that the Government would lay hands on private deposits in banks, and that on October 1st probably no salaries would be paid. Government securities began to fall, and a panicky rush of private depositors on banks developed.

Fortunately, several things just then coincided to prevent a complete financial collapse. The first news of the visit of M. Laval and M. Briand to Berlin was distinctly favourable; the Minister of Finance, Dr. Diuritch, denied all rumours of a moratorium, of the suspension of debt service, and of a raid on private deposits; it was announced that salaries would not be cut more than 5-6 per cent., or, inclusive of bonuses, up to 10 per cent.; news was received of a French credit to compensate for the losses suffered through the operation of the Hoover Plan; and the trade returns for August showed a favourable balance of 106,000,000 dinars. All this helped to still the incipient panic.

The French credit of 800,000,000 French francs did not come through till October 21st, however, when it gave rise to a short spell of optimism. It was then announced that budgetary savings up to nearly 1,000,000,000 dinars had been effected by cutting down capital expenditure, grants to autonomous bodies and salaries, and that it was ex-

pected that the increased price of tobacco and the duty on sugar, together with the new tax on business turnover and the French credit, would suffice to bridge the gap.

Since then, although it would be ridiculous to talk of any revival of business with the continued gold scramble, the increasingly severe restrictions on dealings in foreign currency, and the creeping paralysis of international trade, yet things have been slightly easier in some ways. The French credit has enabled the National Bank to increase slightly its fiduciary circulation and to issue more credits, the figures for the latter being, on September 8th, 1,702 million dinars, on October 8th 1,933 millions, and on November 8th 2,096 million dinars. The rise of wheat prices and the preferential agreement signed with France for the export of 15,000 trucks of wheat from Yugoslavia give hope that the deficit on the wheat trade may be lessened. Government securities, though they show no rise, are maintained at a level above that of the end of September. Banks, while still insisting on notice being given for large withdrawals of deposits, are less rigorous in the matter of smaller deposits. Some of the money hoarded at the time of panic appears to be slowly finding its way back. Although all this may not amount to much, and one international shock or the continued drifting of inter-European affairs may undo it all, yet there is reason to be thankful for a short respite, during which matters are at least not getting visibly worse.

The fall of sterling, though it was a shock, has had little direct influence on Yugoslavia, as the amount of British capital in the country is small. One large bank only, the First Croatian Savings Bank, which holds the largest amount of deposits in the country and has extensive connections with England, has suffered considerably, and had, therefore, to sustain a severe rush. There is reasonable hope, however, that even this bank will gradually drift into calmer waters.

Trade is poor, nor can there be much hope of a revival with international conditions as they are. September failed to maintain the improvement registered in August, and the total for nine months shows a decrease of 30 per cent. in exports and of 28 per cent. in imports as compared with the previous year. The actual figures for the first three quarters are: Exports, 3,682 million dinars, as against 5,005 millions in 1930, imports, 3,800 millions, as against 5,276 in 1930; deficit in trade balance, 118 million dinars, as against 271 millions in 1930.

The results of the elections can only be of academic interest, as there were no Opposition candidates, although the number of voters, even allowing for all Opposition stories of false returns, is remarkable. Much of this may be attributed to the fact that the election law allowed several opposing Government supporters in every district, and since many of these were recruited from adherents of formerly opposing parties, the struggle between candidates in many parts was but little different from that under normal elections. Thus, although all candidates elected are supporters of the present Government, yet they hardly represent a homogeneous mass, and as their differences are bound to come to expression in time, it is more than likely that within the future Parliament there will begin the process of new party formation. For this reason it may hold many surprises for those who consider it merely a docile Parliament.

BULGARIA.

Tariffs — Trade — Banking — Politics.

(FROM OUR CORRESPONDENT.)

SOFIA, November 9.

THE expected reduction of import duties was introduced, although only partially, on November 3rd. The rate at which these duties are being calculated has been diminished from 27 to 25, 22, 20, 18, 15, 10 or 5 paper leva for one gold lev on various commodities, the most important of which are certain chemicals, mineral and vegetable oils, lubricating substances, woollen and cotton

textiles, window and other glass, soap, certain iron and steel goods of wide consumption, wire, some tinned foods, candles, wines and brandies. This is a result of the Government's desire to give satisfaction to widespread complaints as to the existing discrepancy between industrial and agricultural prices on the one hand, and to pave the way towards commercial agreements with foreign countries likely to purchase Bulgarian goods, on the other.

It is generally believed that further reductions will take place, as the commercial treaties now in course of negotiation are concluded. Conversations with the French Government, with a view to securing Customs facilities in compensation for important French purchases of wheat and possibly of tobacco, are reported to be making some headway. Negotiations are also being pursued for the conclusion of Treaties of Commerce with Czechoslovakia and, in a less advanced stage, with other countries. This may be considered the first step towards serious changes in the much-resented policy of excessive protection of local industry. A further attempt at dealing efficiently with this situation has been made by introducing, last week, a 10 to 12 per cent. *ad valorem* duty on raw materials and half-manufactured goods imported by local industrial concerns. Until now these imports have enjoyed an almost complete freedom.

It is also reported on good authority that the organisation of new industrial undertakings will be strictly regulated by the Government, and, in many cases, licences and privileges will not be granted in future. This line of conduct, strongly advocated by expert opinion for some time past, has required a good deal of firmness on the part of the authorities, as a powerful and well-supported opposition had to be faced in a drastic and uncompromising way. It is expected that the results, as regards the interests of both Treasury and consumers, will soon convince everybody of the soundness and opportuneness of the measure.

One of the main arguments of the opponents is the danger of increasing imports in a period of insufficient export trade. The fresh restrictions on dealings in foreign exchange will admittedly work as an efficient safeguard against excesses in this direction by placing in the power of the National Bank the absolute control over all means of payment for orders abroad. In point of fact, the foreign trade results for the nine months ending September 30th last, as compiled by the Statistical Office of the National Bank, do not appear to indicate a real danger of a great excess of imports over exports.

	1930.		1931.	
	Thousand tons.	Million Leva.	Thousand tons.	Million Leva.
Exports	360,838	4,548	533,081	4,322
Imports	235,160	3,404	211,624	3,616
Export surplus		1,144		706

Although these results may be considered satisfactory, especially if the persisting weakness of agricultural prices is taken into account, the huge amount of foreign exchange required by the Public Debt Service and for other payments of the State abroad—totalling at present 1,480 million leva plus about 130 millions needed until December, 1931, will thoroughly upset the final balance of payments. The resulting changes in the National Bank's cover and other foreign reserves in recent months appear clearly in the published statements of the Bank:—

	1931.				
	000's omitted.				
	July 7th.	Sept. 15th.	Oct. 7th.	Oct. 15th.	Oct. 23rd.
Gold coin and bullion	1,503	1,508	1,510	1,510	1,510
Gold exchange.....	253	167	48*	39	55
Other exchange.....	185	178	214*	183	201

* The Bank's sterling balances were transferred from "Gold" to "Other" exchange.

The cover ratio, after deduction of the bank's liabilities in gold exchange, is at present 35.26 per cent., the legal minimum being 33.33 per cent.

This situation has brought about a strict curtailment of demands for *devisen* by importers and a severe control

over export of foreign balances held here, but maturing trade obligations, as well as coupons and other foreign commitments of the State, are being punctually met. Although the normal functions of trade are seriously handicapped by these restrictions, they have so far been effective in keeping the lev on its former level of 139 to the dollar. Internal prices have not materially increased, and though nervous depositors, frightened by Press comments upon financial disturbances abroad, have withdrawn part of their balances with local banks to invest in real property and to hoard, the movement has not extended to really dangerous proportions, and, as the banks met all demands in full, the nervousness has almost completely died down. The cash position of the large banks is reported to be still strong, and fear of a possible recurrence of withdrawals is bringing about an all-round restriction of credits and calling in of loans. Discounting of good commercial paper is, however, still sought after at 11 and 12 per cent. Short-term foreign credits are being repaid, even where there has been no cancellation or notice from abroad. In the whole period between January and November this year there have been only three unimportant bank failures. The situation, in this respect, continues to be faced without serious apprehension.

The recent improvement in the prices of some agricultural produce is apparently having a good effect on local trade, especially in the provinces where peasants are buying more actively than for many months past. Transactions are being effected mainly on a cash basis, especially as a Bill for the compulsory reduction of peasant indebtedness is reported to be in preparation. As this Bill is likely to be passed, and also in consequence of rather too sanguine promises to the peasants in connection with the recent parliamentary and municipal elections, payments on old debts in agricultural districts are becoming difficult. This, unhappily, also applies to the payment of taxes, and, as compared with last year, the budgetary receipts on September 30th were 153,378,000 leva below the already unsatisfactory figures for the same period in the preceding exercise. The whole deficit accumulated until now is estimated at 1,360,000,000 leva. There is, as yet, no positive and workable plan for dealing with this situation. Retrenchments have been decreed and new taxation will probably be introduced shortly, but all the measures in preparation would hardly bring about adequate results. This remains the most serious feature in the present situation of the country.

Although internal politics and foreign relations may be described as improving on the whole, there remain important tasks to be dealt with firmly and without delay. The reconstruction and strengthening of local administration is more than ever essential to the proper working of public finance. The settlement of the long-drawn-out dispute with Greece is hampering almost every attempt at securing the much-needed co-operation of certain foreign financial markets. The country cannot afford to remain much longer in the state of political and financial isolation in which excessive nationalism has placed it. The composition of the present Government appears to be particularly appropriate for breaking the spell of this unhappy tradition and for embarking on a more constructive foreign policy.

Letters to the Editor.

AN EASTERN LOCARNO.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I hope you will allow me to make certain observations on the editorial note in which you comment on Mr R. G. Walmsley's letter under the above heading in your issue of the 14th instant.

As to the letter itself, I am sorry I cannot agree with you that its author's attitude is "characteristically English." I cannot for a moment assume that English public opinion would be so utterly ignorant of the "essential material facts" con-

cerning Polish-German relations as is your correspondent, who, with disarming credulity, supplies your readers with a catalogue of German propagandist arguments, including the surprising statement that, through the Silesian award, "four million individuals were removed from the German State," whereas the actual number amounted to 980,236.

While, therefore, dismissing Mr Walmsley's letter as too careless a contribution to the solution of the issues in question, I note with interest your assertion that

"there is a strong and widespread feeling among us that Eastern Europe is not our business, and that we have no call to undertake new responsibilities in this particularly dangerous field when we already have our hands so full of commitments in other parts of the world."

Your words bear a curious resemblance to those uttered by Lord Palmerston nearly a hundred years ago when defending his Government against the accusation of the Opposition that England condoned the violations by Russia of treaties regarding her Polish obligations, he declared, on the floor of the House, on March 1, 1848:—

"I need not remind the House how deep a sympathy the sufferings of Poland excited in this country. Many things have passed in Poland since that time which the British Government greatly regrets, and in respect to which the rights laid down by treaty have been violated. But when we are asked why the British Government have not enforced the treaty rights in every case, my answer is that the only method of enforcing them would have been by methods of hostility; and that I do not think those questions were of sufficient magnitude in their bearing on the interests of England to justify any Government in calling on the people of this country to encounter the burdens and hazards of war for the purpose of maintaining those opinions."

I may, therefore, say quite frankly that there are not many illusions entertained anywhere as to the willingness of England to assume new and special responsibilities at the present time in that part of Europe to which you refer.

There remains the consideration of your statement that "a universal sense of insecurity is the evil which is paralysing the economic and financial life of the world." While agreeing with it, I regret that you recoil from the unpleasant truth which is recognised on the Continent by friend and foe alike, namely, that the principal source of the lack of confidence and of the anxiety generally felt in Europe is to be found in the policy of Germany as it has been conducted from the Armistice up to the present time.

German propaganda which, during that period, spent many, many millions on the revisionist agitation in every country of the world, has obviously worked, not for the economic rehabilitation of Europe from the consequences of the war, but in the direction of increasing the difficulties which have largely been responsible for the present European misery. I may be allowed to adduce a few confirmations of this statement which bear directly on German-Polish relations, and I am sure you will willingly testify that they represent essential material and true facts.

1. When that part of Upper Silesia which voted overwhelmingly Polish in the Plebiscite was allotted to Poland in conformity with the stipulations of the Treaty, the German Government warned the Allied Governments that German industries would be ruined if coal supplies from Polish Silesia were cut off, and consequently Poland was obliged to undertake to supply to Germany at least six million tons of coal annually for a number of years. Immediately on expiry of the stipulated period, on June 15, 1925, the German Government declared an embargo on Polish coal for purely political reasons, with an utter disregard of all economic considerations.

2. This German embargo on Polish coal not only forced Poland to turn to the Northern coal export markets of Britain, but precipitated a commercial "war" between Poland and Germany. For six and a-half years the efforts of the Polish Government to terminate that senseless "war" were frustrated by the ill-will of Germany. Last year a commercial treaty was, indeed, signed and ratified by the Polish Parliament, but up till now Germany has not only refused to ratify it, but she has even terminated the interim Rye and Timber agreements with Poland.

3. While thus refusing for purely political reasons to regulate her trade relations with a neighbouring country of 31,000,000 people, and complaining of the economic fetters of the Peace Treaties, Germany coolly proceeded to throw her "Anschluss" bomb into the seething cauldron of Europe, pretending that she cannot exist without economic union with Austria, though, as you know, her trade with the seven million Austrians is highly competitive, and, in any case, of considerably lesser consequence to Germany's economy than her trade with Poland.

4. It is of particular relevance to remember on the eve of the Disarmament Conference, when Germany is pleading her

poverty as an excuse for her inability to meet her foreign obligations, that since the Armistice she spent more than 500 million pounds on her armaments, though she is supposed to be disarmed, and that Poland, though in a considerably less favourable geographical and strategical position, spent less than 200 millions during the same period.

5. The story of the six pocket battleships is too notorious to require detailed elucidation. Not even the threat of bankruptcy was strong enough to make the German Government agree to renounce their construction. We owe to Mr Wickham Steed the knowledge of the secret memorandum in which General Groener justifies their necessity by pointing to Poland as the country against which they are intended.

6. What, also, of the rallies of 150,000 "Steelhelmets" a stone's throw from the Polish frontier, when innocent on-lookers are being arrested by German authorities as spies? What of the Nazi storm troops? What of the Reichswehr-Red Army "Abmachungen"? What of the provocative speeches of German Cabinet Ministers like Herren Treviranus and Schiele?

These are the real causes that deepen that "universal sense of insecurity" which is paralysing the economic and financial life of the world. Well-meaning people like Mr Walmsley may invoke the notorious "cursory glance at the map," blissfully unaware that they are encouraging all the forces of destruction in Europe. By all means let us have a good look at the map; but does it not occur to you, Sir, that what is called "The Polish Corridor" is less a "gaping wound" in the side of Germany, which separates two million East Prussians from the 63 millions that live in Germany, than the central life-giving artery for the living body of 31 million toilers of Poland? Look again at the map. In the East of Poland the 900 miles of frontier with Soviet Russia are as dead to reasonable commercial intercourse as the Soviet monopoly of trade can make them. In the West and North, across the 1,200 miles of frontier with the Reich, Germany is waging a ruthless commercial war at an enormous expense to herself. In the South, the barrier of the Carpathian mountains is a sufficient natural hindrance to the development of trading relations. It is only through the "Corridor," that vital part of Polish national territory, through her free access to the sea, and thus to all countries of the world, that Poland has been able to frustrate the evil designs of her bad neighbours and to carry on her peaceful trade by increasing her overseas turnover from two to fourteen million tons of goods per annum in less than ten years.

Sir, there is no country in Europe which has suffered more through war and which more ardently prays for peace than Poland. But Poland will fight to the knife in defence of every inch of her territory. These are grave issues, and I have no hesitation to encroach upon the hospitality of your columns. The true facts of the European situation cannot be indefinitely ignored or glossed over without a deadly peril to the peace of the world. Germany to-day is seething with youth rendered almost crazy by the daily poison of lies about Poland, spread day and night by thousands of German papers and preachers of hatred.

Indeed, the issue to-day is not an "Eastern Locarno" with an English guarantee of the Polish-German frontier, but an appeasement of German agitation, a termination of the dangerous duplicity in German policy, German honesty in trying to work the existing settlement instead of clogging it, in short a cessation of Germany's desperate efforts to retrieve her defeat by another war and Germany's co-operation in establishing a political truce in Europe for the duration of the indispensable economic and financial reconstruction of the world. These are the subjects of the only peaceful revision which is possible to-day.

The February Disarmament Conference cannot but end an utter failure if these issues are not faced and solved. Economic recovery and reconstruction ought not to be complicated by political issues and provocative revindications which may only render the way out of the crisis more difficult or even impossible. Germany cannot be saved if she refuses to co-operate with other nations on the only reasonable terms possible to-day.

It is for agencies such as the *Economist*, with its great international reputation, to support that thesis with sufficient emphasis to make it quite clear to public opinion of the world, and to impress it upon German opinion in particular that Europe cannot recover without German-Polish co-operation, a co-operation which is sincerely desired by Poland.—Yours, etc.,

A CHOICE OF EVILS.*

MR BROOKS, one infers, is a Protectionist; but surely no subtler Protectionist ever rode forth to battle. He has the wisdom of the serpent and the harmlessness of the dove. His book, as he tells us, is "neither a partisan appeal nor a candidate's handbook"; it is an engaging presentation of argument and counter-argument. The blundering in consequence of the average Protectionist is not for him; he neither despises nor underrates the strength of the Free Trade position. If you argue that "many British consumers rely for their own purchasing power on foreign trade," Mr Brooks will concede your point. If you claim that employment in protected trades can only be increased at the expense of trades manufacturing for export, he is with you. If you urge that tariffs breed corruption, he is aware of it. His basic position, in short, is a sound one—that framing economic policy involves, at best, a choice of evils.

Every problem, says Mr Brooks, is in essence dynamic—a balancing of ebb and flow. Loss of trade here must be balanced against better business there. "Increased employment in coal and iron and steel is obviously to be wisely bought at a decrease in the employment in such industries as that of mock-antiques." "It is highly probable that in applying tariffs in Great Britain to the formation of a closer-knitted Empire the psychological factor will play a heavier part than the economic factor. (. . . The psychological imponderable is so often neglected in balancing probabilities.)" "Tariffs undoubtedly tempt corruption. . . . To that contention there is, again, only the answer of preference, strengthened thus, 'Give me relief from embarrassment and I will deal with corruption.'"

Quite clearly, if the case for tariffs is to be argued at all it should be argued on these lines, and the extracts just quoted show how well Mr Brooks has mastered his most appropriate technique. The protagonist of Free Trade (or free imports, as Mr Brooks would call them) can readily assemble statistics which give him, *a priori*, an overwhelming case—statistics showing our dependence upon overseas trade, its profitability, and the relative superiority of our standards of well-being over those of our competitors. These quantitative considerations can only be rebutted by qualitative ones. The statesmanlike attitude, says Mr Brooks, is this: "I conceive the future of Britain worthily to be of such-and-such a kind; by what means are we to shape it so?"

The drift of his argument—that tariffs represent a choice of evils, but that on the whole impalpable considerations incline one to consider them favourably—may thus well carry the complaisant reader an unsuspected distance. For this reason, Free Traders may regard the book as dangerous. While admiring Mr Brooks' intellectual equipment, and conceding to the full his honesty of conviction, they will feel he has unconsciously been influenced by, and has so selected for emphasis, "imponderables" which seriously distort his economic perspective.

Or perhaps it would be truer to put this criticism the other way round. Mr Brooks, we may say, has ignored, or has failed to do justice to, "imponderables" which are of great importance. The reactions in European politics of Britain's economic policy—the impracticability of the Empire Zollverein envisaged by Lord Beaverbrook—the dependence of the economic structure on our invisible exports—scant justice, perhaps, is done to these considerations. One cannot complain that Mr Brooks' argument is not a well-knit one; one can complain that its final pattern lacks solidity and balance.

The book, which is inductive in form—a sketch of tariff history with a critical commentary—is very attractively written. Its facts are selected with judgment and not unfairly. An index would be useful. Mr Brooks, moreover, has wit, good humour and a sense of style, and his book should take a high place in tariff literature.

The Stock Exchange.

THE OUTLOOK FOR AUSTRALIAN SECURITIES.

IN a leading article which appeared in the *Economist* last week, a correspondent described the heroic efforts which had been made by the Australian Government and people to effect an adjustment of their financial and economic position. It is probably true to say that no country, faced with the problem of curtailing public and private expenditure, has carried out the principle of "equality of sacrifice" so widely as Australia, for interest on the Government's internal debts, rates on mortgages and other fixed-interest obligations have been reduced, together with wages. This remarkable change of attitude on the part of Australian Governments towards the virtues of sound public finance and economy has so impressed the investor in this country that there seems to be some danger of his forgetting the reverse side of the picture—that while the internal financial situation has improved, the external economic situation has (up to the present) deteriorated. Indeed, the prices of primary products, until quite recently, fell so rapidly as to rob Australia of the benefits which would normally have followed from her internal readjustment.

It is advisable for the holder of Australian Government securities to realise that there is still an insufficient surplus on international account to meet overseas debt obligations. In fact, if higher average prices are not realised for primary products in the financial year ending June, 1932, it is not improbable that Australia will be obliged to borrow abroad to meet a deficiency unless her creditors scale down her debts or grant her a moratorium. It has been stated by Mr Scullin that the external interest payments of the Commonwealth and State Governments and municipal and public authorities amount to approximately £36 millions a year. The concession on account of the repayments of war debt, amounting to £5,500,000, or 15 per cent. of the total overseas obligations, might, under ordinary conditions, have provided sufficient relief, but the visible trade balance in 1930-31 was only £28.3 millions in Australia's favour, after allowing further export of £13 millions of gold. The internal gold reserves now amount to less than £10,000,000, including bullion and specie, and can no longer be drawn upon. The following table shows the visible balance of Australian trade for the past three financial years:—

VISIBLE BALANCE OF AUSTRALIAN TRADE.
(000's omitted.)

Period.	IMPORTS.		EXPORTS.		Total Imports.	Total Exports.	Balance of Imports (-) or Exports (+).
	Merchandise.	Bullion & Specie.	Merchandise.	Bullion & Specie.			
Years to June 30:							
1928-29...	143,281	368	137,706	3,927	143,648	141,633	- 2,015
1929-30...	130,759	323	97,378	27,749	131,081	125,127	- 5,954
1930-31...	60,159	39	75,764	13,047	60,558	88,811	+ 28,253
Month of—							
July, 1931	4,002	64	5,658	1,466	4,066	7,124	+ 3,058
Aug., 1931	4,934	49	4,294	296	4,983	4,590	- 393

As regards the current financial year, it will be seen that there was a surplus of exports (including gold) over imports for the two months of July and August last of £2,665,000. The improvement in the trade balance has been achieved, partly by the drastic restriction of imports following upon prohibitive tariffs and partly by the stimulus of exports consequent on the depreciation in the Australian exchange. Before the departure of Great Britain from the gold standard £100 sterling was valued at £130 Australian, and this rate has not yet been officially altered, in spite of the subsequent depreciation in the British pound. The effect of a double depreciation of the Australian pound in terms of gold has been to restrict still further the country's purchases of goods from the gold standard countries and to stimulate its exports. But there is a limit to these movements, and, until the values of her export produce advance, Australia cannot look for any further external,

permanent and healthy improvement in her trade balance.

The recent rise in the prices of primary products was, therefore, of considerable importance to Australia and to holders of its Government securities. Let us take the case of wool. Over the period 1923-29 the price of Australian wool (greasy) averaged 19d. per lb. In the 1929-30 season the average price was 11.3d. per lb., the total value of the wool exports being £36,596,100, as compared with £61,612,995 in the previous year. In 1930-31 the average price was 9.17d., and the exports realised £32,002,181. Wheat from 1923 to 1929 averaged 5s. 7d. per bushel. In 1929-30 the average export price was 4s. 10d., and, the harvest being extremely poor, exports amounted to £10 millions, against £20 millions in the previous year. In 1930-31 the average price slumped to 2s. 5.68d. per bushel, but an increase in quantity brought the export proceeds up to £14,743,459. The figures of wool and wheat exports for the past three years are shown in detail in the next table:—

(1 cental = 100 lbs.)

	WHEAT.		WOOL.		Total
	Weight (centals).	Value. £	Weight (centals).	Value. £	
1928-29	49,137,787	20,336,199	472,001	5,710,377	61,612,995
1929-30	24,234,424	10,036,535	449,146	3,664,991	36,596,100
1930-31	71,533,950	14,743,459	456,324	2,624,167	32,002,181

It would appear from this table that, if Australia is to make good, by exports, a debit balance on international account of, say, £15,000,000 (disregarding gold movements but taking credit for the war debts holiday), the price of wheat must double or the price of wool advance by 50 per cent. over the 1930-31 level, or, alternatively, that together the price of wheat must advance by 50 per cent. and of wool by 25 per cent. These estimates assume quantities to be unvaried. Actually, wheat prices in Chicago between September 30th and November 12th advanced by 36½ per cent., but about a third of this rise has since been lost. The present price is still no better than the average (above stated) for 1930-31. The gold price of wool similarly has increased by nearly 20 per cent. since the middle of September.

It would appear that the recent buying of Australian Government stocks has anticipated a very substantial advance in wheat and/or wool prices. Otherwise it could hardly be justified. The next table shows how the present market prices compare with the lowest prices ruling this year:—

	Lowest Price, 1931.	Present Price.	Yield %.		With Redemption. £ % d.
			Flat.	With Redemption.	
Australian Commonwealth 5% (1945-75)	58	89½	6 1 2	6 7 3	
Do. 6% (1931-41)	65	95	6 6 3	7 0 1	
New South Wales 5%, 1945-65 ..	47	79½	6 6 9	6 10 0	
Do. 3½%, 1933	30	60	5 5 3	6 17 3	
Queensland 5½%, 1934-36	55	89½	4 2 11	9 17 4	
Do. 5%, 1940-60	46	79½	6 5 9	6 12 0	
South Australia 4%	45	67½	5 3 8	6 15 0	
Victoria 3½%, 1929-49	40	61½	5 13 10	7 9 0	
West Australian 6%, 1930-40	66	92½	6 9 8	7 11 6	

A higher yield basis is obtainable from the State Government stocks, although the Commonwealth has made itself responsible for the payment of the interest on the State debts, as it demonstrated at the time of the default of New South Wales. It is not, however, forgotten that there is a considerable difference between the States in the matter of their budgets and administration. For example, Mr Lang, the Prime Minister of New South Wales, has held out against the reductions in wages and unemployment payments which the other States have effected, and has not attempted to bring his Budget into

any sort of balance. It was the opinion of our correspondent (in our last issue) that, while other State budgets would be balanced in about three years if trade conditions improved moderately, that of New South Wales would not be adjusted even if a very rapid trade recovery took place. But, internal finances apart, it is the uncertain future of the prices of primary products, an advance in which alone can make the payment of interest on the external debt assured, that suggests a question of the wisdom of the somewhat precipitate rise in quotations of Australian Government stocks.

The same criticism may be passed on the market in other Australian securities. Both the prior charges and the equity shares of the pastoral and finance companies have already registered considerable rises, as the next table will show:—

	Lowest 1931.	Present Price.	Per cent. Rise.
Australian Mercantile, Land and Finance— £5 shares fully paid	2½	3½	40
Dalgety— 5 per cent. non cum. pref. (£10).....	6½	7	3½
£20 ord. shares, £5 paid	4	8	100
New Zealand and Australian Land— 4 per cent. "A" pref. stock	49	55	12½
Ordinary stock	60	60	...

The last reports of these companies were decidedly mixed and not very encouraging. The results of Dalgety and the Australian Mercantile Land and Finance are shown in a "Note" in page 973. The Australian Mercantile Land passed its dividend for the year to June 30th last, but showed a profit of £61,725 in place of a loss in the previous year. Dalgety's gross profits in the same period dropped from £927,222 to £80,895. The New Zealand and Australian Land Company again reported a heavy loss (£80,249, against £104,796), and transferred £130,000 from its contingency funds to pay the preference share dividend and a dividend of 2 per cent. on the ordinary shares.

The Australian banks make a better showing, but in every case there is a considerable reduction in profits and dividends:—

	Shares.	Net Profits.		Dividends.		Present Prices.	Dividend Yield per cent.
		1929-30.	1930-31.	1929-30.	1930-31.		
Australian Bank of Commerce...	£1	180,693	89,904	7	4	14s. 3d.	5 12 3
Commercial Bank of Australia...	10s.	389,841	308,450	15	11½	17s. 6d.	6 8 7
Bank of N. South Wales	£20	994,825*	734,699*	10	9½	25	7 16 0
Commercial Bank of Sydney	£25 (£12½ pd.)	637,619	441,816	10	8½	10	10 12 6
English, Scottish and Australian	£5 (£3 pd.)	601,262	542,736	12½†	8†	4½	5 1 0†
National Bank of Australasia ...	£10	655,134	561,805	9	7	8½	8 4 8
Queensland Nat. Bank	£5	194,956	132,291	8	6½	4	8 2 6
Union Bank of Australia	£15 (£5 pd.)	525,655	283,019	12½†	7†	7½	4 10 4†

* Year to December 30.

† Free of tax.

It is unlikely that a very great improvement in bank profits will be achieved for the year to June next, in view of the drastic reduction in the national income and the cut in interest effected under the Government's scheme.

Australia, as a primary producer, has been severely shaken by depression, following immediately upon extensive drought, and may be congratulated on having escaped, so far, the damaging effects of a series of large-scale failures and suspensions, as in the crisis of the 'nineties. She has tackled many of her difficulties with spirit, energy and determination—if not always on strictly orthodox lines. She has the additional advantage of not being embroiled in the politico-economic controversies of the Old World. The evidence suggests, in short, that her trade and finance will revive as early as those of any other primary producer. It certainly does not suggest more than that. Recent recoveries in wool and wheat prices, so far as they have gone, are highly welcome, but the rise in Australian stocks has fully discounted them. Investors should look for reliable signs of a more world-wide revival before consenting to follow any further upward market movement of considerable dimensions.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. December 1.	ACCOUNT. December 3.
------------------------	-------------------------

REACTIONARY movements were again paramount, the resumption of dealings for the account failing conspicuously to coincide with any renewal of activity. Business was restricted by continued anxiety with regard to the finances of Central Europe, nervousness over the Sino-Japanese conflict in Manchuria, dissatisfaction with the supposed inadequacy of the "Anti-Dumping" Act, and the sharp fall in various commodities, particularly in wheat, silver, and later, copper.

Gilt-edged stocks reflected the stringency of the Money Market, and fears that the Chancellor's pronouncement against an early return to gold augured the continuance of high internal interest rates. Quotations sagged throughout the week, Victory Bonds and Funding Loan leading the declines, while War Loan was one of the rare exceptions. Australian issues suffered from profit-taking after their recent popularity, but Indian loans rallied when the Conference took on a new lease of life.

Foreign bonds had an irregular appearance. German bonds were steady on the somewhat improved atmosphere of the Franco-German negotiations, but were lower on Tuesday. Japanese loans were maintained, despite the negative progress made by the League Council at Paris. Brazilians improved on Dr. Whitaker's reassuring statement. Peru Corporation slumped heavily on the report (discussed on page 973).

Home rails had an unsatisfactory week, losing part of their recent gains. The traffic returns were unexpectedly unsatisfactory, and caused a sharp relapse in Great Western and London, Midland and Scottish. Argentine rails were fairly well maintained, in the face of a number of adverse factors.

The Industrial share market opened in the shadow of reactionary commodity prices. When it became apparent that buyers were holding back, declines occurred in most sections. Brewery shares were heavy as a result of discouraging trade reports following the recent increase in taxation. The decision of Fine Cotton Spinners to pass their interim preference dividend came as an unpleasant shock. Other textiles declined, though Courtaulds were temporarily supported on the possibility of increased import duties. Royal Mail prior charges weakened with the publication of the Voting Trustees' proposals for a renewal of the moratorium (summarised on page 971). Electrical shares were steady, but Engineering shares and Motors lacked support. Bank shares lost ground, particularly Bank of London and South America following the recent dividend reduction. Insurance shares were similarly dull. International issues improved slightly after a very weak opening, but among trans-Atlantics, Nickels reflected the cut in dividend. Cables and Wireless fell back on profit-taking.

Oil shares were again dull despite a continuance of better news regarding the industry in America. Paris and Amsterdam were quiet. The leading issues declined, consideration of a dividend might be postponed till the end of the company's year. The steadier tone of Rubber shares was fairly well maintained, but was not reflected in Ceylon companies, tea shares were very quiet, movements being mostly against holders.

The sharp reaction in silver and the break-up of the copper conference had a depressing effect on Mining shares. Kaffirs were influenced adversely by the determined opposition to South Africa's abandonment of the gold standard, and an all-round recession occurred. Rhodesians presented a cheerless aspect in the face of the copper position. De Beers were also marked down. Tin shares were dull with the metal, and Tintos declined sharply. Practically the only improvement recorded in mid-week was in Ashanti Goldfields.

FOREIGN STOCK EXCHANGES.

NEW YORK.

After a few scattered signs of better conditions early in the week, share prices again turned downward. Continued uncertainty regarding railroad prospects had a most discouraging influence. The New York Central figures for the third quarter shook the market severely, income being shown as only 4 cents per share, against \$1.75 in the third quarter of 1930. Selling of railroad securities affected bonds as well as stocks, many seasoned issues coming under pressure. This selling extended as the week progressed to other high-grade industrial bonds. The question of possible railroad wage cuts remained undecided as we went to press, though there was some evidence of readiness on both sides to discuss the issue amicably. The course of commodity prices was another discouraging market factor, the severe week-end reaction followed by partial recovery on Monday, the sudden drop in silver, and the cut in copper quotations on the failure of the Conference combining to produce the settlement of mind. Western Union reached the lowest level for many years, and the Radio group were weak on the drastic nature of the Radio-Keith-Orpheum scheme. Investors, indeed, were pre-occupied with the necessity of making the worst of bad news, and tended to give little weight to some of the more favourable factors, such as the maintenance of an improved position in the oil industry and a slight improvement in the operations of steel makers (excluding the U.S. Steel Corporation) to 81 per cent. of capacity. Freight car loadings for the week ended November 7th were 717,126, compared with 740,460 in the previous week and 81,401 in the corresponding week of 1930. The demand for automobiles is showing rather more than seasonal expansion, and it is expected that December production will be the largest for some months past. The \$500 millions capital of the National Credit Corporation has now been fully subscribed, but it is understood that requests for loan facilities from banks throughout the country have so far been relatively modest.

PARIS.

The mid-monthly settlement was accomplished without difficulty, money being plentiful and bull positions few. The volume of new business, however, proved greatly disappointing. The influence of Wall Street was unhelpful. The market, on the whole, showed considerable powers of resistance, but most prices were lower on the week. Egyptian Foncier and Central Mining were firm at the outset, but the decline in bank shares, particularly Banque de France, and the adverse effect of the Copper Conference collapse encouraged more extensive liquidation, and a weak tone generally on Thursday, Tintos declining sharply.

AMSTERDAM.

Listless conditions prevailed on the Amsterdam Bourse, business being at a low ebb. Sugar shares were weak on disappointing Java prices, but rubber share values were fairly well maintained. Tobacco shares, however, had a weaker tendency. Philips' Lamps and A.K.U. rallied on Wednesday, but a fresh reaction after hours caused sharp declines in many leading issues.

OTHER CENTRES.

Idle conditions prevailed, for the most part, on other bourses. A certain liveliness in copper shares was in evidence at the beginning of the week in Brussels, but prices subsequently trended downward. Stockholm was quiet, but moderately steady, Vienna dull, Basle and Zurich irregular. Unofficial quotations in Berlin revealed some improvement on the levels of the previous week. Dye Trust was done at 97.75 on the 71th (against 95.75), Siemens at 121.00 (against 118.75), General Electric at 34.25 (unchanged), and Reichsbank at 92.00 (against 91.50).

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

Business Forecasting.—It is regrettable that the earlier advocates of business forecasting made exaggerated claims for their "new" subject just before the onset of a devastating economic blizzard, of which the professional astrologers, with remarkable unanimity, failed to give warning. When Mr R. G. Glenday (an economic adviser of the Federation of British Industries) read a paper at the Royal Statistical Society, last Tuesday, the discussion concerned itself but slightly with the pros and cons of forecasting, most speakers evidently preferring the well-beaten tracks of monetary controversy. Even Sir Josiah Stamp did less than justice to the paper by his comparison of Mr Glenday with a violinist who had taken his audience completely into his confidence regarding the tools of his trade, but had omitted to say how he produced his music. In point of fact, Mr Glenday carried the discussion of business forecasting a step further than before by introducing a new conception of its scope—or, more correctly, by forcefully re-stating an old idea which his professional brethren had been in danger of overlooking. Practical business forecasting, basing itself on the trade cycle, has tended to concentrate its attention on deviations from a given trend, rather than on the trend itself. Thus, while some forecasters (though not all) announced the arrival of a depression in 1930-31, none foretold its extreme severity, because the latter characteristic was the result of international conditions—war debts, reparations, tariffs, rigid economic organisation in a period of increasingly fluid demand, etc.—which were non-cyclical. Mr Glenday is the first professed exponent of the new craft who has publicly accepted the implications of this fact, and future commentators may award him a pioneer's credit. If we interpret Mr Glenday's intentions aright, his paper was written to emphasise the contention that trade meteorologists must concern themselves not exclusively with the timing of primary and secondary cyclonic phenomena, but must go back to the origins of these disturbances. They must interest themselves less

in fluctuations and more in trends. One does not propose the abolition of the weather office because it prophesies a fine day which happens to be wet. One does expect it, however, to give warning of disastrous hurricanes. Mr Glenday's insistence that analysis must continually take account of long-term underlying factors is of greater moment than his own assignment of importance to particular forces, such as the quantity and velocity of money in relation to industrial demand. Mr Glenday, indeed, appears to be somewhat exclusively pre-occupied with the "supply" side of the equation and to give much too meagre a share of his attention to far-reaching developments affecting "demand" for available resources. But if last Tuesday's paper gives a new and more helpful orientation to future "forecasting" research, it will have amply served its purpose. The business world stands to lose so much by unpreparedness for major developments in the world situation that it cannot afford to discourage any movements which make the investigation of such changes their *raison d'être*.

Computation of Railway Traffic Figures.—Investors who have examined recent railway gross traffic returns for tangible signs of a quickening in British trade activity since the departure from the gold standard have obtained only a negative satisfaction. The returns for the last few weeks have run consistently below those of the corresponding weeks last year, and it is difficult for even the most optimistic eye to trace any regular or widespread tendency towards improvement. It has been suggested, however, that the figures are partly retrospective, and that they include not only passenger and goods receipts—paid for more or less simultaneously with the performance of the transport services in question—but cash settlements by traders running monthly and other "time" accounts with the railways, whose incidence may not be identical from week to week and may be governed by railway services performed in the recent past rather than the present. This assumption, however, is incorrect. The weekly statements of receipts represent the estimated return attributable to any given week's traffic, and are not affected by the cash position. To some extent they are estimates, based on a variety of data and past experience. That the estimates approach very closely to the true results, however, is shown by the very small corrections made when the results are revised at the end of each year. For example, in the first week of November last year, the total receipts of the four main line railways were shown as £3,039,000. Subsequent revision showed a net error of only 0.4 per cent. in this figure, the revised total being £3,049,000. It would appear, therefore, that the stimulation of trade to which attention has recently been drawn—as regards reports of the placing of new orders, the reopening of factories, the decline in the unemployment figures, etc.—has not as yet been reflected in any increase of traffic on the railways, unless more helpful factors have been cancelled by other influences in the opposite direction. On the whole, the experience of the railway managements has been that merchandise has yielded rather better results than were anticipated three or four months ago, but that heavy traffics have been more disappointing, and have given little tangible indication of any far-reaching change during recent weeks.

Ford in Italy.—Ford Italiana S/A is the only Continental subsidiary of Ford Motor Company, Limited, in respect of which no public share issue has yet been made in the country of incorporation, in accordance with the articles of association of the English company. Nor is such an issue imminent. Although the Italian business was conducted at a profit last year, the chairman, in his speech, did not disguise the difficulties which the company was experiencing in the Italian market. The recent imposition of an additional all-round duty of 15 per cent. on all imports has brought Ford business virtually to a standstill; since Ford units for the Italian market are shipped from Detroit via Barcelona, where they are assembled, no advantage was to be gained from the fall in sterling,

against which the extra 15 per cent. tariff was said to be designed. However, even before this last straw was added, the camel's back was severely strained. The price of a Ford 2-door sedan, as received from Spain, is 11,600 lire (£126 at par); the Italian duties, reckoned chiefly according to weight, amount to no less than 15,820 lire (£172), making the price to dealers 27,420 lire (£298); the retailer adds on anything up to 20 per cent., which brings the selling price to anything up to 32,900 lire (£357 10s.). The retail price of the comparable Fiat model is 19,250 lire (£209)!. This protection, moreover, is thought not to be the only assistance which the Italian motor industry is receiving. In an article entitled "Ford in Europe" (published in the *Economist* for February 28, 1931), reference was made to negotiations then being carried on with the Isotta Fraschini company. It was proposed that Ford should contribute some 49 per cent. to the reorganised capital of Isotta, in return for which the Isotta factory at Milan would manufacture the Ford car for the Italian market. Under these conditions the competition of Fiat and other Italian manufacturers might well have been met. These negotiations have been temporarily abandoned, and the present economic crisis is not likely to encourage their resumption for the present. It would seem, however, that some such agreement is highly desirable in order to assist Ford's progress in the Italian market, since the coming into full production of the Dagenham factory, even should the present sterling position endure, would hardly overcome the Italian tariff situation. Ford Italiana controls Italy, Sicily, Sardinia, Tripolitania and Libya. Yugoslavia has recently been transferred to the Istamboul company, which covers Arabia, Albania, Afghanistan, Bulgaria, Greece, Mesopotamia, Palestine, Persia, Roumania, Syria, Turkey, Montenegro, etc. Despite the present difficulties, the Ford organisation still has confidence in the possibilities of the Italian market. Branch service stations have recently been opened at Naples and Bologna (the head offices are now established at Genoa), which actually retail cars and generally maintain interest among the native distributors.

The Royal Mail Moratorium.—In a circular addressed to the first and second debenture holders of the Royal Mail Steam Packet Co. and the guaranteed preference shareholders of the White Star line, the voting trustees of the Royal Mail ask this week for a prolongation of the moratorium which is due to expire on December 31st next. The circular points out that the financial crisis which arose in August, 1931, and the general uncertainty which followed, enormously accentuated the difficulties of drawing up a scheme of arrangement under the depressed conditions of the shipping trade. A scheme has been formulated which aims at enabling the fleets of the various companies to be operated on the most economical lines. This is at present under discussion with banks and other individual creditors. Owing to its complicated nature and the possible necessity of modifications, it is not feasible to present it for sanction and render it binding before the expiration of the second preliminary scheme, on December 31st. Prolongation of the moratorium is, therefore, requested till June 30th next, though the before the expiration of the second preliminary scheme end of March next. The third preliminary scheme now submitted is on the same lines as the two schemes previously sanctioned, except that it covers not only the instalments of dividend on the preference shares of the White Star Line, already overdue, and that falling due on January 1, 1932, but also the half-year's interest on the due on January 1st. The half-year's interest on the first debenture stock due on January 1st next, will be paid punctually. The circular observes that the power of borrowing up to £250,000 conferred upon the company by the two previous schemes has not been exercised, but is preserved in the third scheme as a precautionary measure. Shareholders will scarcely hesitate to give the voting trustees the necessary authority. The process of "pulling the chestnuts out of the fire," thankless as it must needs be, can only be handicapped by interference at this stage.

Canadian Pacific Railway.—Prominent among the shares which have appreciated and reacted in sympathy with the recent rise and fall in wheat prices has been the common stock of the Canadian Pacific Railway. The traffic figures of this company are now showing the unpleasant results of the marketing of a poor wheat crop at abnormally low prices. As compared with the corresponding periods in 1930, the gross traffic figures for the first quarter of this year showed a decline of 15 per cent., for the second quarter of 19 per cent., and for the third of 30 per cent., while net earnings dropped by 24½ per cent., 8 per cent. and 51 per cent. respectively. The fourth quarter figures are usually the best of the year, and the directors probably anticipated this fact when they maintained the quarterly dividend of 1½ per cent. (for the quarter ending September 30th), which is payable on December 31st. The severe drop of 51 per cent. in the net earnings for the September quarter suggests that the company is reaching the limit of savings in operating expenditure. In the first nine months of 1930 it met \$20 millions of a decline of \$25½ millions in gross receipts by effecting savings in working expenditure. In the corresponding period of this year it has met a further decline in receipts of \$30 millions by savings of \$22 millions. This is a fine achievement, but the third quarter showed that the peak of economies had been passed—savings of only \$8½ millions being made to offset a decline in gross receipts of \$15½ millions. Estimates of net earnings for the whole year vary between 3½ per cent. and 6½ per cent., as compared with 8.24 per cent. last year (after the elimination of a non-recurrent item of \$6.1 millions). These estimates depend upon the views taken of the decline in gross receipts and the amount of savings to be realised in the last quarter. It is, however, expected that dividends of 5 per cent. for the year will be paid (against 10 per cent. in 1930). The market is chiefly concerned to know whether a recovery in earning power will

be seen next year. The reaction in the wheat market has left the level of grainstuff prices at about the average level for 1930-31. The wheat acreage sown this year in Canada showed a considerable increase on last year, but the official estimate of the yield is only 11.4 bushels, against 16 bushels for 1930-31, the total production being estimated at 271.4 million bushels, as against 397.9 millions. The acreage of barley and rye has declined, the total barley yield being estimated at 68 million bushels, as against 165 millions, and the yield of rye at 6 million bushels, as against 22 millions. The following figures, issued by the Dominion Bureau of Statistics, show the wheat position as at the end of September:—

	1930-1931.	1931-1932.
Carry-over, July 31st	111,094,912	133,381,623
Exports, wheat and flour, August and September	52,583,399	31,099,089
Balance (*)	58,511,513	102,282,534
Production	397,872,000*	271,400,000†
Domestic consumption	130,000,000	120,000,000†
Balance (†)	267,872,000	151,400,000
Available for export and carry-over (*) and (†)	326,383,000	253,682,000

* Final estimate. † Preliminary estimate.

The recent advance in grainstuff prices is encouraging, but it is too early to say that the prospects for Canada and its railroads next year have definitely improved.

Bass, Ratcliff and Gretton.—The latest balance sheet of this famous brewery company shows total reserves of £1,680,299, while the profit and loss account reveals that income has been more than sufficient to cover a repetition of last year's ordinary distribution of 19 per cent. The reduction of the final dividend to 12 per cent., tax free, for the current year, making 17 per cent. in all, must therefore be regarded as a precautionary measure. The carry-forward is increased from £320,181 to £394,181.

	Year to September 30,	1929.	1930.	1931.
		£	£	£
Brewery profit.....	1,247,958	1,207,405	1,143,079

Paid %	20*	19*	17*	
Carried forward	273,983	320,181	394,181	

* Tax free.

The recent increase in beer duty, which has already tended to reduce consumption, has been reflected in the market quotations of all brewery shares, and Bass has suffered with the rest. The company's ordinary shares at one time this year touched 62s., but have now fallen to 48s. At that price the yield is about £7 9s. per cent., tax free, allowing for the final dividend.

OFFER TO NEW READERS.

The outstanding features on the assets side of the balance sheet are a decline of £81,466, to £83,982, in advances to subsidiaries, and a drop of £20,781, to £135,586, in debtors. Cash is £52,110 higher, at £64,606. The surplus of liquid assets over current liabilities has been maintained. Goodwill stands at £37,743, but is more than offset by the general reserve fund of £75,000. The £1 ordinary shares stand at par.

Charterhouse Investment Trust.—The latest report shows a gross profit £27,838 lower, at £108,424, representing 8.79 per cent. of the book value of the investments. Net profit declined by £24,038 to £76,387. Some £32,371 was set aside for taxation and the dividend was reduced from 7½ per cent. to 5 per cent.:

	Year ended November 11,	1929.	1930.	1931.
		£	£	£

Decrease in carry-forward	16,001	50,031	1,748	

On November 11th, the book value of the quoted securities was £1,223,198, being 6.85 per cent. above the market value. Quoted shares (other than in subsidiaries' shares) were £153,816 lower than a year ago at £628,858, while quoted shares in subsidiaries and unquoted investments were £594,339 and £12,082 respectively, a combined decline of £37,305. A noteworthy feature of the balance sheet is the non-appearance of a bank loan shown in 1930 at £200,000. The securities depreciation reserve was increased during the year from £10,467 to £150,000, by a transfer from the general reserve, which now stands at £100,000. During the year no loss was sustained by any subsidiary company. At 15s. the £1 shares yield £6 17s. 11d. per cent.

First British Fixed Trust.—In an article in the *Economist* of May 2, 1931 (page 949), we discussed the underlying principles of "fixed trust" company management, with special reference to the First British Fixed Trust. This trust was formed last April by Municipal and General Securities Company, Limited, controlled by J. G. White and Company, Inc., of New York. This trust has now paid its first dividend, which amounts to 8d. per sub-unit, free of tax. This is equivalent to £5 11s. 9d. per cent. (before tax) on an ex-dividend price of 31s. 6d. per sub-unit. As the trust does not distribute fractions of one penny, a small balance of 0.09d. per sub-unit is being carried forward, as the property of sub-unit certificate holders. The trust is able, so far, to make out a fairly good case for the wisdom of its original selection of securities. Our analysis shows that of the twenty-four companies whose shares are held, only nine paid a lower dividend for their last complete year than for the previous financial period.

The total amount distributed by the twenty-four companies in respect of their last financial year showed a decline of less than 10 per cent. as compared with the previous period. This is an "unweighted" average, whereas the monetary value of the trust's holding, per unit, in different companies is not identical. It suggests, at least, that the original choice was mainly confined to stable dividend-paying securities in a difficult trading period. As the trust's distribution is based on amounts received during half-yearly periods by way of dividends on the component stocks, it is of interest to ask whether receipts are likely to come evenly as between one half-year and another, since British companies generally declare lower interim than final dividends. We find on examination that, had the trust been formed six months earlier, it would have received 33 per cent. more in dividends for the six months to April 30th last than for the half-year to the end of last month (which is covered by the present sub-unit distribution). That the next six months' payment will show an increase of such dimensions is unlikely, in view of the probability that some dividends due in the next six months may be reduced. In normal circumstances, however, the incidence of dividend payments may be such that the trust's unit holders will receive larger distributions in May than in November.

Two Australian Pastoral Companies.—The results of Dalgety and Company and the Australian Mercantile Land and Finance Company have shown a somewhat surprising dissimilarity during the past financial year, Dalgety's earnings suffering a further heavy reduction, while those of the Australian Mercantile have recovered in gratifying fashion:—

While the advances to the man on the land by the Mercantile Company have risen by £280,265 to £3,428,998, those of Dalgety and Company, Limited, have declined by £63,743 to £5,854,294. Both companies considerably reduced their debtor items last year, the former by £331,386 to £336,878, and the latter by £149,744 to £935,832. Creditors were also substantially reduced in both cases. The surplus of liquid assets over current liabilities in the Dalgety balance sheet was £5,854,294, a reduction of £83,743, while that of the Mercantile was £60,735 higher at £4,171,268. Both companies own stations in Australia, and conduct wool sales, receiving a commission from the grower, and are now, doubtless, benefiting from the recent rise in wool prices. The wheat crop has been affected by heavy rains, and is about 25 per cent. below that of last season. A review of the outlook

for Australia is given in a leading article on an earlier page. During the last few weeks Dalgety shares, priced at £8 per £20 share to £5 paid, yield £4 9s. 9d. per cent. The Mercantile £5 fully-paid shares stand at £3 5s. per share.

Peruvian Corporation.—Being dependent upon the export of guano and metals, the Peruvian railways have suffered severely from current economic conditions, including decreased areas under crops and low prices for basic metals. The gross revenues of the railways controlled by the Peruvian Corporation have fallen by £611,668 to £1,253,851, and, despite considerable economies in running expenses, the net receipts have fallen by £270,566 to £366,873. Of this sum £243,193 has been taken into the Corporation's accounts, as compared with £543,388 in 1930. The net result is a gross loss for the year of £68,209, as compared with a net profit of £283,072 in 1930. All dividends have been passed:—

	Year ended June 30.	1929.	1930.	1931.

Lake steamers reserve.....

Inc. or dec. in carry-forward ...

The number of passengers carried declined by 4.04 per cent., and the aggregate freight tonnage by 27.95 per cent. The coffee plantations have been written down heavily. Investments in British Government securities have fallen by £73,387 to £511,004, cash by £90,118 to £25,724, and bills receivable by £33,627 to £77,653.

A New Oil Distributing Company.—The formation of a private company called Shell-Mex and B.P., Ltd., with a nominal capital of £100 is more important than the latter figure suggests. It marks a further step towards rationalisation in the oil distributing trade and a further consolidation of the alliance between the Royal Dutch-Shell group and the Burmah Oil-Anglo-Persian groups. This alliance is now working in a practical way in three important areas of the world's markets. In India the Anglo-Persian shares with the Royal Dutch-Shell group in the trade surplus to the requirement of the indigenous oil companies. In the Eastern markets, outside India, the Anglo-Persian has an equal partnership with Royal Dutch-Shell group, their marketing organisations being merged in a company called Consolidated Petroleum. The

THE FIVE YEAR PLAN of the NATIONAL PROVIDENT INSTITUTION

will be of interest to all Business Men. It is specially designed to assist them in the present period of Economic Reconstruction.

48 GRACECHURCH ST., LONDON, E.C.3

market in Great Britain is now to be handled jointly by the two groups through the agency of the new company, Shell-Mex and B.P., Ltd. Associated with the Shell group in this organisation will be the Canadian and Mexican Eagle Oil companies. Each group is entitled to include in the arrangement any company whose capital as to 75 per cent. is held for the time being directly or indirectly by the participating companies. It is understood that the joint marketing company will be managed independently by directors representing both parties, and that the sales of no particular grade of petrol will be pushed to the disadvantage of any other grade of petrol marketed by the two groups. There is to be a pooling of distributive facilities so that the duplication of plant, unnecessary transport and handling will be eliminated. Presumably the two groups will agree the basis of profits according to the proportions of the trade which they are now handling. Shareholders will rightly assume that this latest development is designed to enable the two groups more effectively to meet the competition of the Standard Oil Company of Indiana, which is rapidly developing its sale of petrol at cut prices through a British subsidiary company. It is curious that no mention has been made of the Anglo-American Oil Company in the new marketing alignment, although it was announced in September that this subsidiary of the Standard Oil Company of New Jersey would co-operate with the other big groups so as to avoid a rise in prices consequent upon the departure of Great Britain from the gold standard. While American companies are unable to enter into marketing combinations in their own countries on account of the Anti-Trust laws, there would appear to be no reason why the Standard Oil Company of New Jersey should not combine with foreign companies in foreign markets. The announcement of the new marketing company had no effect upon the shares of the companies concerned, the market being more concerned with the interim dividend of the Anglo-Persian Oil, which is due shortly to be declared. It is feared that, like the Royal Dutch and Shell Transport, the Anglo-Persian will defer consideration of a dividend until the year's results are obtained.

The American Copper Conference.—Although no official statement has been issued regarding the New York conference on copper curtailment, which ended last Tuesday, its failure to agree upon any plan for limiting output, and thus to reduce the enormous burden of unsold stocks, led to very heavy liquidation last Wednesday, the loss on the day's trading in standard copper being about £3. The abrupt conclusion of the conference came as something of a shock, for hopes had been running high that a compromise would be reached with the Katanga interests on the question of a percentage reduction in output. Agreement, however, has not apparently been possible, and there is, unfortunately, ample evidence of a wide gulf dividing copper interests in the Old World and the New. Many rumours of the impending dissolution of Copper Exporters Incorporated are in circulation. For the moment the copper market is disorganised. So far as London is concerned, values have been raised by speculative buying; but, apart from loss of confidence, consumers will probably suffer little, for they have latterly adopted a very cautious buying policy. There is no certainty that the curtailment discussions have finally failed, but rather an expectation that the interested parties may come together again. Nor are there, in fact, solid grounds for supposing that the Copper Cartel is on the eve of a break-up. It is certainly difficult to see how American and African producers can find common ground, and the future will probably bring wide divergence. With the metal selling at 7 cents, however, producers have the strongest

of incentives to sink their differences in a real effort to obtain a reasonable measure of stability at a more remunerative price level. A renewal of efforts to arrive at a curtailment plan may therefore be expected.

Trinidad Leaseholds.—The directors of Trinidad Leaseholds explain the reduction in working profit from £452,637 to £349,727 by the fact that drilling expenses at the Guayaguayare Field, amounting to £50,063, had been charged against working costs instead of capital account as in previous years, and by the fact that revenues suffered from the continued fall in oil prices, although substantial economies and reductions in operating expenditure had been effected. After allowing for depreciation of £217,715, against £179,275 in the previous year, and £95,000 for taxes, against £70,000, the company was only able to show earnings of 1.4 per cent. on its ordinary capital, although dividends of 5 per cent. were paid. The reserve account has been decreased by £135,000, of which £75,000 has been applied to writing down the book value of shares in Tocuyo Oilfields and other companies, and £60,000 to a reserve against share interests in the North Venezuelan Petroleum Company and the Siparia Trinidad Oilfields, for which no market quotations are available. The carry-forward has been reduced from £105,730 to £30,151, which is accounted for partly by the dividend payment in excess of earnings and partly by writing £28,227 off the purchase price of the goodwill of the petrol distributing business in Great Britain. The following table, showing the distribution of profits for the past three years, brings home to shareholders the misfortunes which this company suffered:—

	Years to June 30.		
	1929.	1930.	1931.
Working profit	£ 683,550	£ 452,637	£ 349,727
Expenses and directors' remuneration	38,947	25,766	18,786
Depreciation	231,436	179,275	217,715*
Taxes	Nil	70,000	95,000
Earned for dividend	413,167	177,596	18,226
Gross dividend	393,469	98,367	65,578
Earned	31.9%	15.3%	1.4%
Paid	30%	7.5%	5%
Reserve	Nil	75,000	Dr. 75,000†
Carry forward	101,501	105,730	30,151‡

* Including £9,479 reserve in respect of claims against and allowance for loss incurred by a subsidiary company.
† Utilised as follows:—£10,625 written off shares in another company and £64,375 written off shares in subsidiary companies. During 1931 a further £60,000 was transferred from reserve account to reserve against shares in other companies.
‡ After writing off £28,227 purchase price of goodwill of United Kingdom petrol distribution business.

It will be recognised by shareholders that, while the company has a good oil-producing territory, it made a costly investment in the North Venezuelan Petroleum Company and the Tocuyo Oilfields of Venezuela. A test drilling on a portion of the concession held by the North Venezuelan Petroleum Company is now being carried out by the Standard Oil Company of Venezuela and the prospects are fairly encouraging. Tocuyo Oilfields has so far revealed nothing but unproductive wells and complex underground conditions. Further, the company has undertaken heavy capital expenditure in developing its petrol distributing business in Great Britain. It is selling its petrol at 1d. under the combine prices, and, therefore, cannot be making much profit. The directors, however, report a steady expansion in demand for the company's petrol. The ordinary shares are now quoted at 21s. 3d., having been as high as 78s. 9d. in 1930.

Burma Corporation.—Our mining correspondent writes:—Last year's note concluded with an expression of opinion that, in view of the fall in metal prices which had occurred since the date of the company's accounts, the maintenance of the 1929-30 dividend rate was unlikely. This warning has been fully justified by events. The interim dividend in respect of 1930-31 was at the rate of

3 annas instead of 7, and no final distribution has been found practicable. Some reduction in output was accompanied by a drop of about £6 per ton in the price of lead, 37 in zinc, £31 in copper, and 6½d. per oz. in silver. The difference represented no less than £1,100,000 on the year's production. To meet this position, drastic economies were effected in wages and staff, and also in development. Nevertheless, the net earnings amounted to less than one-fourth the previous year's total, and the disbursement of a modest 3 annas entailed a draft upon the carry-forward. Including investments, which have been written down to market value, the balance sheet discloses surplus cash assets to the amount of £857,700. We summarise the results of the past three years:—

	1928-29.	1929-30.	1930-31.
Ore mined	tons 463,060	500,590	462,180
Field refined lead	" 78,720	79,270	76,520
Field fine silver	ozs. 7,347,330	7,225,880	6,512,780
Working profit	£ 1,488,680	1,059,560	462,630
Ordinary revenue	£ 78,050	81,970	72,180
Depreciation, &c.	£ 253,900	225,650	179,930
Taxes and duty	£ 257,990	222,270	189,780
Net profit	£ 1,054,842	693,600	165,100
Per cent. earned	10.4	6.8	1.6
Per cent. paid (free of Indian and British tax)	10.0	8.1	1.9
Reserve	£ 235,640	235,640	202,760
Carried forward	£ 203,246	71,650	46,320

Despite reduction of the development frontage by about one-third, the ore reserves show only a trifling set back in quantity, there is a small shrinkage in the silver and copper values. The tonnage is now placed at 4,233,120, and the averages at 20.1 oz. silver, 25.5 per cent. lead, 5.3 per cent. zinc, and 0.76 per cent. copper. The quantity represents between nine and ten years' supply for the mill. In this connection, note may be taken of the improvement which has been effected in the efficiency of the treatment plants. Silver is now standing well above the level ruling on June 30th—while a small recovery has taken place in lead and zinc as measured in sterling. Hence the policy for shareholders would appear to be—“Wait and hope.”

Wankie Colliery.—Restriction of operations by the Katanga group, in the Belgian Congo, owing to the low price of copper, has exercised an adverse effect upon the fortunes of this Rhodesian enterprise. At 576,381 tons the sales of coal fell off to the extent of 278,700 tons, while the coke sales were 32,000 tons down at 65,900 tons. A cut of £20,000 has been made in the depreciation allowance, which now figures at £46,000; while debenture interest absorbed somewhat less than before. Nevertheless, the net profit came out at £139,800, in place of £189,800, entailing a reduction of 5 per cent. in the dividend rate. The 2½ per cent. now declared makes a total of 12½ per cent. for the year ended August 31st last. During this period the balance of the debenture issue was redeemed. In respect of the new colliery, the proved coal reserves are estimated at 11,298,000 tons, an expansion of 200,000 tons on the year. The Wankie is in a position to supply largely increased tonnage of fuel, but if the Katanga group eventually agrees to join in world curtailment of copper output a still further shrinkage in demand may be experienced—unless compensation is provided by requirements for Northern Rhodesia. The 10s. shares now stand at about 17s. 6d.

Mount Lyell.—Last year's experience on the part of this Australian enterprise in several respects runs parallel with that of the Burma Corporation. The adverse effects of low metal prices were partly counterbalanced by a cut in wages and salaries, and by greater operating efficiency. In another factor in the results was the treatment of an increased quantity of ore. Through the production of fertilisers the Mount Lyell holds a considerable stake in agriculture, and here also depression has ruled. For the twelve months ended September 30th the net profit amounts to £78,060, against £131,180 for 1929-30, and the dividends at 5 per cent. against 10 per cent. Exclusive of shares

in other companies, valued at £1,450,170, the net liquid assets stand at £373,400, a decrease of £80,100 over the period, due mainly to expenditure on new plant. The company in the current year will obtain the full benefit of recent additions to the treatment and power works. A somewhat pessimistic view of the copper position is taken by the directors.

COMPANY MEETINGS, &c.

PERAK RIVER HYDRO-ELECTRIC POWER COMPANY, LIMITED.

BETTER OUTLOOK—SUBSTANTIAL ECONOMIES.

The fifth annual general meeting of the Perak River Hydro-Electric Power Company, Limited, was held, on the 18th instant, at Winchester House, London, Mr Geo. Balfour, M.P. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, referred, first, to changes which had taken place in the company's administration.

Detailing the circumstances in which last January the creation of £400,000 prior lien debenture stock was authorised, the Chairman said that the directors had meantime refrained from issuing any part of the prior lien debenture stock except as collateral for a loan in the hope that they might be able to formulate a scheme of capital reorganisation which would enable them to cancel the prior lien; it was, however, quite useless to contemplate this until they saw signs of stability and improved trade conditions.

During the year under review the company had sold 58,540,000 units; the maximum demand on the plant had varied from 8,855 kilowatts to 11,900 kilowatts, the demand being 11,000 kilowatts at the close of the financial year.

TIN RESTRICTION IN MALAYA.

The bulk of the company's demand came from the tin mines, and they were, therefore, very much concerned with anything which affected that industry. For the year ended July 31, 1931, the price had fluctuated between £135 and £101 per ton, with an average of £117. In March last the tin restriction scheme came into force in Malaya, and the reduced output in Malaya of 2,000 tons per month represented over 38 per cent. of the total world restriction. In order to make that contribution the assessments of potential production of the individual mines in Malaya, based on the 1929 figures, had, since August last, each been reduced by 60 per cent. Shareholders, therefore, would readily appreciate that the operation of the scheme had caused a considerable loss of business to the company. Any improvement in world demand for tin, with a continuation in the improvement in price, would soon be reflected in increased revenue for the company.

The financial programme fixed when the prior lien was issued had been worked to and the estimates and forecasts justified. Following upon the reorganisation of the board, a rapid investigation of the position in Malaya and London was undertaken, with the result that, during the current year, expenditure in Malaya and London would together show a reduction of approximately £25,000. These reductions should enable the company to maintain last year's earnings, even with reduced receipts.

The directors had given close attention to the question of tariffs and introduced two months ago a special tariff to help the tin producers during these difficult times. Their efforts in that direction were fully appreciated by the company's consumers and would, no doubt, when trade improved bring their own reward.

Dealing with the accounts, the Chairman said that shareholders would be interested to know that the monthly receipts from customers had varied from approximately £15,500 to a little over £19,000, the total amounting to a little over £210,000 for the year, against which £15,000 had been reserved for bad or doubtful debts, leaving £194,098 brought in to the revenue account. The total operating costs for the year had amounted to approximately £81,520, leaving a balance of £113,513, or, together with miscellaneous London income of £2,210, a total balance of £115,723, which, deducting London office expenses and directors' fees, left £100,932 available for depreciation and interest charges.

Out of the available balance of £100,932 there had been paid £62,500 interest on the 5 per cent. guaranteed stock and £34,955 2s. 9d. had been applied to sinking fund account for the redemption of the 5 per cent. guaranteed stock. After providing those amounts there remained the sum of £2,358, which the directors proposed to carry forward.

Before moving the adoption of the report and accounts he desired to express the company's great appreciation of the work of the general manager, Captain Dane, and his staff in Malaya.

FUTURE PROSPECTS.

As to the position at present and the future prospect, he believed they had seen the worst. While he warned them not to be too optimistic, he did not hesitate to express the opinion that even this year they might see some improvement. Last year, in answer to a question, the then Chairman had said that the company would be on a sound basis with tin at £200 per ton. He (the speaker) thought they could build up their business satisfactorily even though the

price of tin did not reach that figure. If the world demand was restored, thus enabling Malaya to work her tin properties up to something like their capacity, a price of £150 per ton or over would enable them to add considerably and rapidly to their demand. The report and accounts were unanimously adopted without question or comment.

DALGETY AND COMPANY, LIMITED.

HON. EDMUND PARKER ON WOOL POSITION.

The forty-seventh annual meeting of Dalgety and Company, Limited, was held, on the 19th instant, at 65-68, Leadenhall Street, London, E.C.

The Hon. Edmund W. Parker (the chairman) said that since he last addressed the shareholders the atmosphere, both in the political arena and in the markets for the sale of the primary products of the Commonwealth and the Dominion, had by no means cleared. Indeed, a financial crisis of the first magnitude had developed in Australia, and an upheaval of this description had left its mark in many ways on the affairs of this company. In order to meet the grave financial situation in which Australia found itself it had been agreed to a reduction in the interest on the whole of their internal loans of £550,000,000 by 22½ per cent.; great retrenchment in the public services and heavy sacrifices by the general community had been agreed to, while imports had been drastically curtailed by means of prohibitive duties, and, as a result, the Commonwealth external trade position for the year ended June 30th last showed a great improvement.

OUTLOOK IN AUSTRALIA.

Australia was now experiencing a fine season, and he was hopeful that they were on the eve of a rise in the prices of her primary products. Given these factors and a fall in production costs, he believed—now that the financial position had been so bravely faced—that it would not be long before the road to permanent prosperity was open, though the process must necessarily be slow. During the year the exchange problem had become very acute, and it had caused the financial operations necessary for the carrying on of the company's business and the services of their debts on this side to be very costly. Although the depreciation in sterling must in the end benefit the Australian producer, he did not think that there would be anything but a very gradual reduction of exchange rates, so trading conditions must continue to be adversely affected for some time to come.

Most of the company's clients had passed through very trying times during the period under review, and a great number of their pastoral accounts would have to be nursed in order to allow their friends an opportunity of recovering their position.

The result of the year's operations was sufficiently satisfactory to enable the directors to recommend a dividend of 7 per cent., free of income tax, for the year, but in order to do this they had had to dip into the reserves to some extent beyond that shown in the profit and loss account. Every source of effecting economies had been and was still being explored, and already substantial savings had been made; he was certain that next year's results would show further progress in this direction. He thought the shareholders were to be congratulated on the balance sheet presented and he hoped it would be considered thoroughly satisfactory.

THE WOOL SEASON.

The 1930-31 wool selling season would rank as one of the leanest in wool history, and one which rendered it extremely difficult for the grower, and indeed for every section of the industry, to make ends meet. The season, however, concluded with everyone in better heart to face the future, owing to the measure of recovery which was experienced in the later months. Prices had fallen to a disastrous level in the earlier part of the season, but the last three months saw prices on a more remunerative basis. One of the best features of the season was the way in which owners met the market, and with the improved demand the wool year closed in Australia with a very small carryover.

In New Zealand many growers were not prepared to accept the miserably low prices to which wool had fallen—far below, indeed, the cost of production in most cases—and when the next selling season commenced in November there would still be some of the 1929-30 clip on hand, as well as of the season just past. The company in 1930-31 sold in Australia, New Zealand and London 521,245 bales against 511,580 bales in 1929-30. The Australian 1931-32 selling season opened in Sydney at the end of August, and unfortunately prices were on a lower basis again, but since then the market had improved. The September sales in London had opened with prices on a lower basis than at the end of July, but on September 21st the departure from the gold standard was announced, and prices rose rapidly. The wool trade at the moment

—in this country, at any rate—was in a healthier condition than it had been for some time.

The net profits for the year, at £128,469, showed a decrease of £107,476, as compared with the previous year, but he thought that in all the circumstances they had every reason to be pleased with the result.

In conclusion, the Chairman read the latest news received by cable, which stated that the general outlook in Australia was brighter, while in New Zealand the result of the British elections had inspired confidence in trade revival.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended November 14, 1931, amounted to £8,801,100 against ordinary expenditure of £6,260,600. After allocating £190,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £71,847, the operations for the week, as shown below, decreased the National Debt by £22,278,000 to £7,730,855,000:—

(000's omitted.)			
Treasury Bills	+ £6	Public Dept. Advances	— 1,550
		Nat. Savings Certificates	— 100
		Nat. Debt Commissioners	— 290
		P.O. and Telegraph Money	— 400
		Sundries	— 4
	+ 66		— 2,344

A complete analysis of the National Debt at September 30, 1931, was printed in the *Economist* of October 3.

THE FINE COTTON SPINNERS' AND DOUBLERS' ASSOCIATION, LTD.—The directors state that the result of the trading of the mills of the Association for the six months ended September 30th last, although it shows some little improvement on the last financial year, does not in their opinion warrant the payment of a dividend on the preference, preferred ordinary and ordinary shares. The directors trust that the improvement which has recently manifested itself may continue, and that the position at the close of the financial year may be more favourable.

THE MONTEVIDEO GAS AND DRY DOCK COMPANY, LTD.—The directors have announced that a law was passed on October 15th by the Uruguayan Government prohibiting the remittance of funds for the payment of dividends or of debenture interest of foreign-owned companies. The law also exacts that deposit be made in local banks of the equivalent dollars which would have been required to purchasing exchange for the payment of dividends and debenture interest, and which will not be withdrawable until January, when 25 per cent. monthly of the accumulated amount may be remitted. Remittances during the half-year ended June 30, 1931, were received at an average rate of exchange of 32.67d. per dollar as compared with the par rate of 51½d. per dollar. Since July 1st, the rate has been as low as 20d. per dollar. Under these circumstances, the board are unable to pay an interim dividend in respect of the half-year to June 30, 1931.

Barroilly State Railway.							

SOME IMPORTANT COMPANY RESULTS.—Some important company results are announced as we go to press. Messrs. Tate and Lyle's report for year ended September 30, 1931, shows an estimated gross profit of £992,731, against a gross profit of £385,938 for preceding year. The ordinary dividend is raised from 10 per cent. to 13½ per cent. The carry-forward is increased from £40,850 to £61,832. The Aerated Bread report to September 30, 1931, discloses a record profit. The profit figure is £194,666, against £171,065 for 1929-30, and £76,699 for 1928-29. The ordinary dividend remains at 5 per cent. The carry-forward is increased from £20,847 to £53,449. The bank overdraft of £49,698 has been repaid. Cash at bank is at £32,450, against nil. Peter Walker (Warrington) and Robert Cain shows profit of £523,337 for year ended September 30, 1931, against £570,805. The ordinary dividend remains at 7½ per cent. Weardale Steel profit is at £80,052, against £86,628, the deferred dividend remaining at 6 per cent. The net revenue of the Tobacco Securities Trust has been reduced from £800,954 to £644,050 for year ended October 31st. The ordinary dividend is reduced from 18 to 17½ per cent.

TEXTILE MERGER.—All the companies interested in the Textile Machinery Merger have now accepted the arrangements proposed by Sir Gilbert Garnsey. The companies to join the merger are:—Platt Brothers and Company, Ltd., Asa Lees and Company, Ltd., Howard and Bullough, Ltd., John Hetherington and Sons, Ltd., Brooks and Doxey (1920), Ltd., Dobson and Barlow, Ltd. The scheme is one whereby the six companies sell their machinery manufacturing assets to the merger company, which will be known as Textile Machinery Makers, Ltd. The merger company will

re-sell, without profit, these assets to a subsidiary bearing a similar title. The various companies will receive payment by taking shares. In this way the name and goodwill of the various concerns will be preserved. Platt Brothers and Company, Ltd. will own approximately just over 53 per cent. of the preference capital, and approximately just under 38 per cent. of the ordinary capital. Sir Walter Preston, M.P., will be chairman of Textile Machinery Makers, Ltd.

WALL PAPER MANUFACTURERS, LTD.—The profit for the year ended August 31, 1931, was £592,636. This compares with a profit of £672,916 for the year 1929-30 and £794,198 for year 1928-29. Including the amount brought in of £260,996 there is £853,632 available. Income tax absorbed £55,302, against £47,147. Debit interest again absorbed £40,569. Preference dividend absorbed £60,000 as before. The ordinary dividend is 10 per cent., absorbing £140,000 as before. The dividend on the deferred shares has been reduced from 15 per cent. to 10 per cent., absorbing £200,000, against £300,000. The sum of £75,000 is written off goodwill, against £100,000. Staff funds receive £10,000, against £20,000. The carry-forward is increased from £260,996 to £272,762.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of October are as follows: Production of oil, 46,110 tons; deliveries 45,210 tons.

STEAVA ROMANA (BRITISH), LTD.—Production of the Steaua Romana Company, Bucharest, for October, was 87,120 tons.

Commercial Reports.

MARKET SUMMARY.

After last week's irregular movements the trend of prices in the principal international commodity markets has been definitely downward this week. In New York the reaction in cereals, which became noticeable last week, continued further. It was, however, most pronounced in the case of wheat. Last week's improvement in non-ferrous metals, with the exception of copper, was not maintained. It appears that no agreement was reached at the international conference of copper producers, which caused a fall of copper to a new low level. Rubber has been barely maintained, while, among textile raw materials, cotton suffered a setback. Among other commodities, coffee, cocoa and sugar all realised lower prices this week. Sterling quotations of commodities which lend themselves to international arbitrage have moved in sympathy with international values. The turnover in this country has been smaller than a week ago, and markets were generally quiet. The demand for tea at this week's auctions has been less active than a week ago. Among other foodstuffs, butter and cheese have been cheaper. Foreign meat continued to decline in price in view of the heavy shipments from Argentina, Australia and New Zealand, but home grown qualities were slightly firmer. According to various reports from industrial centres, the situation of the coal trade, though slightly better than in summer, is still far from satisfactory. The restrictive policy pursued by some of the chief customers on the Continent hinders a definite upward turn in activity. Although transactions in iron and steel have slightly increased during the last few weeks, little headway has as yet been made. Among the textile trades, the recent advance in the demand for cotton goods has been followed by a slight reaction, but the improvement in the wool and rayon industries appears to have been maintained.

THE COAL TRADE.

SHEFFIELD.—The situation in the South Yorkshire coal market continues unsatisfactory, although improving slightly in slacks for boilers and blast-furnace coke. Shipments of best steams are well maintained at former levels, with prices firm at 18s. 6d. f.o.b., but there is little forward contracting. Coalowners are pressing for some modification of the existing quota arrangement. There is a steady demand for house coal, best ordinary qualities of which are quoted at 22s. at pits. Consumption of blast-furnace coke has increased and prices are firmer, 10s. to 10s. 6d. at ovens being the prices of good South Yorkshire brands.

GLASGOW.—The position of the Scottish coal trade has shown little change during the week. There is a fair day-to-day inquiry for prompt or early business, but forward business remains poor. The majority of the collieries are, however, fairly well placed for their outputs up to the end of the year, and maintain firm prices for most sorts. Washed trebles remain the strong feature of the market, with France a brisk buyer. The London demand for nuts has not been good lately, and some of the smaller sizes are showing a tendency to ease in price. Round coals are approximately as current quotations for the shipping trade are approximately as follows (f.o.b. district ports): LAMARSHIRE.—Ell best, 14s. 6d.; splint best, 15s.-15s. 3d.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 9d.; trebles, 16s.; doubles, 13s.-13s. 6d.; singles, 9s. 6d.; pearls, 9s.; dross, 9s. FIFE.—Screened navigation, 17s.; first-class steam, 13s. 6d.; third-class steam, 12s. 6d.; singles, 9s. 6d.-10s.; pearls, 9s. 6d.; doubles, 13s. 6d.-14s. 6d.; singles, 9s. 6d.-10s.; pearls, 9s. 6d.; LOTHIAN.—Prime steam, 12s. 6d.; secondary steam, 12s.; trebles, 16s.; doubles, 13s. 6d.; singles, 9s. 6d.; pearls, 9s. 6d.; Ayrshire.—Unscrened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 15s.; doubles, 13s. 9d.; singles, 10s.; pearls, 9s. 3d.; dross, 9s. 7d. 15s.

CARDIFF.—The most disturbing incident in the coal trade this week has been the imposition by France of a 15 per cent. surtax on coals imported from the United Kingdom. The old Customs on coals imported from the United Kingdom value represented a duty of 2½ per cent. on the declared import value plus an increase of charge of between 5d. and 6d. per ton; the new surtax increases the charge on bituminous coals to between 3s. and 3s. 6d. per ton, and on anthracite coal to about 5s. per ton. The effect of this measure has been to bring temporarily to a standstill new business in the Anglo-French trade, and to practically deprive this country of the whole of the benefit expected from the depreciation of sterling in terms of French francs. Shipments have continued at a low level, and a great deal of lost time has been reported from all the steam-coal areas of the coalfield. For nearly all grades prices have ruled on the basis of the minimum schedule. The following are the current approximate quotations:—Best Admiralties, 19s. 6d., are the current approximate quotations:—Best Admiralties, 19s. 6d., seconds, 18s. 9d. to 19s. 4½d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; cargo smalls, 11s. 6d. to 12s. 6d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 3s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s. to 19s. 6d.; pitwood, ex ship, 24s. to 24s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron is quieter, but the undertone remains firm, and makers are in a much better position than a few weeks ago as regards orders. Consumers' requirements, both locally and in Scotland, are practically covered up to the end of the year, and with diminishing stocks there is not a great quantity of free iron available before January. This being

so, producers are not pressing sales, feeling satisfied that there will be ample outlets for all the iron that they are able to offer, particularly as there is not likely to be any increase in the production for the present. It is a satisfactory feature that prices are not being advanced, and at the weekly market on Tuesday the old official figures were reaffirmed, viz.: No. 1, 61s.; No. 3, 55s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s., f.o.b. or f.o.t. A moderate business was reported, which included a few lots for export, which indicates some expansion of trade for Cleveland iron in that direction. The market for hematite is steady, and although business has recently been rather quiet, good deliveries are going forward and the large stocks held are being gradually reduced. The two extra furnaces in preparation are not likely to be blown in immediately, so that there are only four in operation on hematite in the district, which is insufficient to meet current requirements. The depletion of stocks is, therefore, likely to continue. For delivery up to the end of December ordinary mixed numbers are selling at 65s. per ton, and are firm at this figure. For delivery commencing January, buying continues rather slow, but premiums are asked for forward periods. Although the steel trade is showing signs of improvement in certain departments, there is an absence of large contracts. It is generally understood, however, that orders of importance are temporarily held up for one reason or another, and that some substantial business may soon be announced. Prices for steel under the rebate scheme are unchanged, and in other lines also remain unaltered from last week. The ore market remains almost idle. Best rubio is nominally 17s. c.i.f., and the freight, Bilbao-Middlesbrough, is about 5s. 3d. Coke is a little easier, and ordinary blast-furnace qualities are rather pressed for sale at 17s. delivered consumers' works. The demand, however, is very restricted. The number of furnaces in operation on the North-East Coast remains at 18.

SHEFFIELD.—Quietude pervades the local iron and steel trades which at present have benefited little by the depreciation of sterling. Buyers appear to be pursuing a "wait-and-see" policy, and uncertainty as to tariff changes may be affecting the situation adversely. More Continental semi-steel is being imported than was thought possible having regard to its increasing cost. Another surprising feature is the steadiness of the prices of imported materials essential to making steel and finished steel goods. Some have been modified in an upward direction, but a much larger number are unchanged. The largeness of stocks and the paucity of demand are responsible for this, but there is a general disinclination to raise prices until absolutely necessary. Prices of pig iron and crude steel are probably fixed until the end of the year, when they will be brought up for review. Merchants supplying alloys for heavy and special steels report a weakening tendency of demand. In this country special alloy steels must benefit by the sterling situation, as considerable quantities are imported regularly from Germany and Czechoslovakia. The October overseas figures reveal increased imports and decreased exports of such steels. Home demand for tool steels is improving a little. In the lighter and finished branches certain lines are benefiting by waning competition. In such goods foreign makers can now be undersold, both abroad and at home. The ordinary trade in cutlery and plated goods is extremely flat, but the situation is being saved by special contracts for articles for gift schemes and the steady development of the home and export trade in safety razors and blades. This item is approaching half the value of exports of cutlery.

GLASGOW.—The situation in the West of Scotland shows practically no change from that existing a week ago, and business is unsettled pending definite tariff announcements. There is just slightly more activity at the steelmaking plants, although there is still only a very small proportion of the producing plant in operation. There are numerous inquiries for semi-finished materials on the market at the moment, but not a great deal of actual business is being done. Sheetmakers in Glasgow remain busy, and there is a steady demand for both black and galvanised sheets for export, particularly in the thinner gauges. Tube makers are only partially employed. Sheet-metal workers, machinery makers and tool makers are, speaking generally, doing a fair amount of business, and the tendency is towards improvement.

CARDIFF.—In the heavier branches of the iron and steel industry in South Wales, the Government Bill for the restriction of the imports of wholly and mainly manufactured goods is strongly approved, and it is confidently anticipated that the Government

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low, Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £83,000,000. Annual Income £11,800,000. Full particulars on application.

MUTUAL AUSTRALIAN PROVIDENT SOCIETY
73-75 King William St., London, E.C.4. Established 1849.

OVER ONE HUNDRED YEARS OF SERVICE.
SCOTTISH UNION & NATIONAL
 INSURANCE COMPANY.
ASSETS EXCEED - £15,600,000
FIRE. LIFE. ACCIDENT. MARINE.
 Edinburgh: 35, St. Andrew Square
 London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1

will use the powers of the new Act to reduce imports of foreign steel bars. These have been exceptionally heavy during the past few weeks, and the c.i.f. prices of foreign bars have ruled round about 85s. per ton, compared with £5 per ton charged for Welsh bars. There has been a fair inquiry for tinplates, the prices of which have been steady at from 14s. to 14s. 3d. per basis box. Galvanised sheets, however, have been easier at from £9 2s. 6d. to £9 5s. per ton f.o.b.

OTHER METALS.

TIN.—There has been a considerable turnover in tin at the London Metal Exchange early this week owing to the increase in the activity of the motor and tinplate industries. There was, however, no corresponding activity in New York, and on Wednesday prices declined sharply. In New York the metal was quoted at 22.85 cents per lb. on Wednesday, against 23½ cents per lb. a week ago, and 23.10 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £131 17s. 6d. to £132 per ton, compares with £132 to £132 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 30,573 tons, show an increase of 320 tons on the week.

COPPER.—The copper markets in London and New York have recently been largely under the influence of rumours about the discussions of the delegates to the international copper producers' conference in New York. It now appears that the conference has failed to agree to a scheme of restriction. American producers were apparently disposed to restrict output to 26 per cent. of capacity, and representatives of British interests were willing to co-operate in a plan of restriction. It is reported that the failure to reach an agreement was due to the attitude of the Belgian delegates, who did not agree to a proportional cut in the output of the Katanga mines. This news was followed by a slump in the price of the metal. On Wednesday "Domestic" spot was quoted officially at 6.75 cents per lb. in New York, against 7 cents a week ago and 7 cents a month ago. Wednesday's official closing price for "standard cash" in London in terms of sterling, at £35 12s. 6d. to £35 15s., compares with £36 17s. 6d. to £37 a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 21,390 tons, show a decrease of 218 tons, while stocks of rough copper, at 773 tons, are 174 tons smaller.

LEAD.—The market in lead has remained steady, though business was slightly less active than last week. The recent advance in prices was, however, maintained. In New York, the metal was again quoted at 4.05 cents per lb. on Wednesday, against 4.05 cents a week ago and 4 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £14 12s. 6d. to £14 12s. 6d. per ton, compares with £14 6s. 3d. to £14 17s. 6d. on the corresponding day last week.

SPELTER.—The demand for spelter in London has been active during the past week and sterling prices advanced considerably. Wednesday's quotation in New York, at 3.25 cents per lb., shows no change as compared with that of the corresponding day last week. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," at £14 to £14 7s. 6d. per ton.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £95 per ton and at £220-£225 per ton respectively, have been maintained at last week's level. Antimony advanced sharply from £27-£27 10s. to £28-£30 per ton for "foreign," but quicksilver remained unchanged at £17 10s. per bottle.

TEXTILES.

THE COTTON TRADE.—Manchester.—The conditions prevailing in the market during the past week have not shown very much change. On the whole, however, the tone has been quieter, and spinners and manufacturers have booked fewer orders than recently. The lull has been partly due to a little distrust of current prices and uncertainty as to the effect of certain world factors. Makers of piece goods have met with plenty of inquiry, but there are numerous complaints of offers being unworkable. For India there are signs of more activity for Calcutta, and in addition to white shirtings being sold, occasional orders have been put through in dhooties. Mulls and jaconets have again been sold for Karachi, but very little can be done for Bombay at the moment. Trade with China has been somewhat disturbed by the slump in the price of silver at the beginning of the week, but operations have not been at a standstill, most of the buying being in white shirtings. Reports are being received of Hong Kong being rather over-supplied for the time being. A fair miscellaneous business has been done for Egypt, the Near East, South America and the Continent, and after reduced activity, there are indications of rather more buying for the home trade in plain goods and fancies. The yarn market has been slower, and to secure contracts, spinners have had to be prepared to shade prices. The larger output in both American and Egyptian counts continues to be well absorbed.

THE WOOL TRADE.—Bradford.—The attention of the trade, writes our correspondent, is once again directed towards London, where another series of sales of colonial and foreign wool will commence next Tuesday. The quantity available at 223,600 bales, shows that there will be generous offerings of most descriptions, and as there are 105,000 bales of New Zealand, there will be a by no means despicable supply of crossbreds, accompanied by 3,000 bales of Punta Arenas. The total quantity named is larger than was originally expected, and there is every probability of owners doing their best to meet the market, particularly as it is a foregone conclusion that prices for all descriptions will be higher than at the close of the previous auctions. Opinion varies somewhat about the extent of the rise, and as is usual after an upward tendency has been seen in consuming centres and a substantial amount of business has been done, some extreme forecasts are being made. It really seems, however, as if compared with the previous series around ten per cent. advance in merinos and 15 to 25 per cent. advance in medium and fine crossbreds, with low sorts 5 to 10 per cent. higher, sellers should be able to make some very good clearances indeed. The biggest advance will certainly be seen in fine crossbreds, for these are very scarce. The home trade is likely to be a very big buyer, for since the suspension of the gold standard trade has been steadily improving, outlets having been found for weights of tops which seem almost phenomenal, compared with the meagre sales which for a very long time have had to suffice. The improvement anticipated in London is fully justified by the upward tendency in values seen in Australia, and the ready way in which clearances have been effected. For several weeks that has been the only really open market in the world, though there is now a probability of South Africa and South America being more easily accessible. Even if bigger weights of wool can be bought from these two sources, there is no likelihood of any serious reaction in values. The position in Bradford does not need much comment. Prices for tops seem to have reached the limit for the time being, but there is still a demand for fine crossbreds and merinos. Spinners being well booked ahead, can face the future without much misgiving; they have no need to sell further forward unless they can do so at prices which cover the present cost of wool.

THE GRAIN MARKETS.

WHEAT.—The international wheat markets have been quiet during the past week and the downward trend in prices which set in a week ago continued unchecked. This downward movement has been stimulated by the increase in the estimate of the Canadian crop and by the heavy arrivals in North American markets which cannot readily be absorbed. Another adverse factor was the Farm Board's estimate of its wheat holdings, which, at 194,000,000 bushels, exceeded expectations. Continental demand is at present very small as, in view of the restriction of imports, the home crops are used up first. The general situation has, however, not deteriorated, and it is improbable that prices will again decline to the low level of the past summer. Crop reports from Argentina and the United States reveal generally satisfactory conditions, although in some districts of Argentina rain appears to hinder harvesting. In this country good progress is being made with seeding, and various reports suggest that the acreage under wheat will be larger than during the past season. Quotations in London, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 35s. per 496 lbs., as compared with 35s. 9d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 32s. 3d., against 33s. 3d.; No. 3 Northern Manitoba, Atlantic, ex ship, 31s. 3d., against 31s. 9d.; Russian, on sample, 29s. to 31s., against 30s. to 32s.; Australian, ex ship, 31s. 6d. to 33s., against 32s. 6d. to 33s. 6d. a week ago.

WHEAT FLOUR.—The turnover in flour has been smaller than last week and prices declined in sympathy with wheat. North American shipments, at 220,000 sacks, show an increase of 14,000 sacks as compared with the previous week. Of this total, 90,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 26s. per sack of 280 lbs., as compared with 27s. last week; delivered London, 25s., against 26s. Manitoba patents, ex store, 26s. 6d. to 29s. 6d., against 26s. to 30s.; and Australian, ex store, 22s. to 23s., against 22s. to 23s. a week ago.

BARLEY.—The market in barley has been less active, and prices showed a downward tendency, particularly as supplies, attracted by the higher level of quotations, became more abundant. On Tuesday, "December" futures were quoted at 42½ cents per bushel in Winnipeg, against 43½ cents per bushel a week ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 48 lbs., 25s. to 26s., as compared with 25s. to 26s.; Russian, landed, 23s. 6d. per 400 lbs., against 24s. 6d. a week ago.

OATS.—The demand for oats has remained steady, and prices are scarcely changed on the week. "December" futures, which, a

week ago, stood at 26½ cents per bushel in Chicago, sold at 26½ cents per bushel on Tuesday this week. Quotations in London, Wednesday: "River Plate," landed 19s. per 320 lbs., as compared with 19s. 9d. last week; "River Plate," ex ship, 18s., against 18s. 6d.; "Chilean White," landed, 28s., against 28s. 6d. a week ago.

MAIZE.—Maize declined further in price during the past week, owing to the falling off in demand for "Plate," which is still being shipped in large quantities. Tuesday's quotation in Chicago for "December" futures, at 44½ cents, shows a fall of ½ cent per bushel on the week. Quotations in London, Wednesday: "Plate," landed, 19s. 6d. per 480 lbs., as compared with 19s. 9d. last week; "Plate," ex ship, 18s. 6d., as against 18s. 6d.; "Plate," November-December, 18s. 9d., as against 18s. 6d. Yellow maize meal, ex wharf was quoted at £5 17s. 6d. per ton, against £6 a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

Chicago (No. 2 Winter).....	130½	73½	79½	64½	63½	59½

OTHER FOODS.

SUGAR.—There has been little activity in the raw sugar markets in London and New York, and in the absence of demand prices offered a setback. This deterioration in the situation is partly ascribed to the uncertainty about the production in Cuba and to the lowness with which the crop of Java is being marketed. "December" futures in New York were quoted at 1.23 cents per lb. on Wednesday, against 1.31 cents per lb. a week ago. Wednesday's sales of "raws" include "March delivery" at 8s. 10d. per cwt., against 6s. 8½d., and "May," 1932, at 6s. 10d. s. 6d. 10½d., against 6s. 10½d. to 6s. 10½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	15	1,400	840	1,505	5,833	26,988
Liverpool.....	12,413	8,644	12,780	11,686	40,064	73,340
Total.....	12,428	10,044	13,620	13,191	45,897	100,328
Last week.....	32,035	26,656	13,712	19,114	47,089	103,475

COFFEE.—Good Costa Rica and African qualities were readily sought at Tuesday's auctions. Cheaper varieties remained steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 24; delivered for home consumption, 92 bags; exported, 53; stocks, 2,358 bags, against 1,765 bags last year. Central American, landed, 2,585 packages; delivered for home consumption, 1,975; exported, 2,158; stocks, 65,565 packages, against 41,974 a year ago. Other kinds, landed, 540 packages; delivered for home consumption, 2,397; exported, 758; stocks, 1,269 packages, against 55,999 a year ago.

COCOA.—The market in cocoa has been quiet, and prices continued to decline. "December" futures were quoted at 4.60 cents per lb. in New York on Wednesday, against 4.90 cents per lb. a week ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, shows a fall of 9d. Last week's movements of cocoa in London were as follows: Landed, 688 bags; delivered for home consumption, 5,651 bags; exported, 304 bags; stocks, 142,748 bags, against 166,766 last year.

TEA.—The quantities catalogued for this week's auction comprised 59,648 packages of Indian, 17,016 packages of Ceylon, and

8,337 packages of Java and Sumatra tea. Competition has been less keen at the auctions this week, and the prices realised were generally lower than a week ago. The feature at the "Indian" and "Ceylon" sales was the lack of support given to tea of good quality. The setback was less pronounced in the case of common and medium varieties. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyassa-land.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.

Nov. 12 "	0 11-67	0 11-11	1 5-73	0 8-49	0 7-46	0 6-90	1 0-35						

RICE.—Business in rice has been quick, but prices are scarcely changed on the week. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 163 tons; delivered, 101 tons; stocks, 1,646 tons, as against 2,603 tons last year.

POTATOES.—The principal potato markets were abundantly supplied; but, in view of the strong demand, particularly for good home-grown varieties, prices advanced further. At the Borough Market, "Best King Edward" sold at from 9s. to 9s. 6d. per cwt., as compared with 8s. 6d. to 9s. per cwt. a week ago.

SPICES.—Trading in spices was generally quiet, and prices remained almost unchanged. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 21 tons; delivered, 17 tons; stocks, 370 tons, against 499 tons last year. White, landed, 64 tons; delivered, 67 tons; stocks, 416 tons, against 203 tons a year ago.

MEAT.—Supplies of meat, particularly of overseas origin, have again been heavy, and the tendency of beef and mutton prices was weaker. On the other hand, English beef and mutton have been a little dearer. On Wednesday, Argentine beef (chilled, hind-quarters) was sold at 3s. 8d. to 4s. 2d. per 8 lbs., against 3s. 8d. to 4s. 2d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 8d. to 3s. 4d., as against 2s. 10d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,875 tons, as compared with 9,623 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.8 per cent. of the supplies, as against 81.2 per cent. a year ago; and imported mutton, mainly New Zealand, formed 76.8 per cent. of the total supply, as against 72.9 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Much quieter conditions rule in the markets for oilseeds, &c., with an easier tendency in regard to prices. Only a small trade in linseed is reported. Old Crop Plate is in restricted supply and near positions are at a fair premium, seed on spot and afloat being held for £10, with November-December about £9 15s. New crop, January-February, is quoted around £9 5s., and for February-March £9 3s. 9d. has been paid. The quantity of linseed afloat for Europe has undergone a further slight contraction to 146,200 tons. Reports concerning the growing Argentine crop continue favourable, and harvesting in the northern provinces is imminent. Indian linseed is in little or no demand, Calcutta to London quoting around £11 10s. November-December cottonseed is quiet and lower in the absence of demand. Egyptian (black) for early shipment is quoted £6 15s., and for January, £6 15s. has been accepted. Linseed oil is in fair consumptive demand and steady current value of raw oil on spot ex Hull being £17 10s., and delivery to the end of the year £17. Cotton oil is neglected and lower, crude Egyptian quoting £21 and common edible £24 ex Hull mill. Other vegetable oils are quiet and without quotable change. Oilcakes and meals are in fair demand and late values hold.

HIDE, LEATHER AND ALLIED TRADES.—The limited quantities of domestic hides and skins arriving at the various centres appear to be responsible for the firm tone of the market. The majority of tanners are using every endeavour to keep prices down to a reasonable level. At Manchester this week advances ranging from 1d. to 1d. per lb. were realised for both clear and warbled ox and heifers, while 1d. per lb. more had to be paid for cows. The calfskin market was fairly steady, but sheep skins are in better request and making more money. A fair business is being done in imported hides, and here again values show an upward tendency, in some instances, of course, owing to exchange movements. In South American wet salted descriptions sales are limited, but business has been done in Frigorific ox at 5 1/2d., with 4 1/2d. paid for second ox. Rather more interest has also been taken in the position of drys, but the prices asked for the most part are considered excessive. As an indication of this B. A. Americanos are quoted at 6 1/2d., while 6 1/2d. is wanted for M. V. Americanos. The market in African hides has been most active, and some good business has been done in dry Capes at 7d. and 6d. for first and seconds, while dry salted 20/30 lbs. have sold at 1d. less. Some classes of Australians are in limited supply, with a fair inquiry in existence. Orders for sole leather have been confined in most instances to immediate requirements only, and the aggregate turnover has inclined to be slightly less. The decrease in sales has been most marked in connection with English and wet salted bends, for which only a restricted inquiry has been in evidence. Dry hide stock for the manufacturing end of the footwear industry has accounted for the best part of the trade done, with heavier weight bends showing some improvement. Business in regard to offal has been fair; pinned descriptions have been the best market, but more interest has been taken in rough shoulders. Producers and distributors of upper leather continue to find a satisfactory outlet for most descriptions of this stock, the chief inquiry being for glacé kid and willow calf. Box calf and patent, however, have received more attention, while a moderate trade is passing all the time for reptiles and suede. Carriers do not meet with much success in trying to increase turnover; business on account of overseas markets is very limited, while home trade purchases are generally confined to small quantities of kip butts and splits.

RUBBER.—The market in rubber has been steady both in New York and London, but the general situation remains unfavourable. The attitude of the Dutch Government is still obscure. World production has scarcely been curtailed and according to the latest information, consumption in the United States during October at 22,277 tons, shows a decline of 1,361 tons as compared with September. Wednesday's official closing price for standard ribbed smoked sheet in London, at 3d. per lb., shows a rise of 1/4d. as compared with the corresponding day last week. In forward positions, business has been done at 3 1/4d. to 3 1/2d. for January-March, against 3 1/4d.; and at 3 1/4d. to 3 1/2d. for April-June, 1932, as against 3 1/4d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 934 tons; delivered, 1,841 tons; stocks at the end of last week, at 131,189 tons, show a decrease of 1,418 tons as compared with the preceding week.

THE MONEY MARKET.

FRIDAY's Treasury bill tender rate reflected both the stringency of the previous few days and the fact that £45,000,000 of bills were on offer, as against £40,000,000 the week before, for although applications amounted to just over £60 millions, the rate rose from £5 10s. 0.35d. to £5 1s. 11.03d. per cent. The same day money became more plentiful, and the usual easy conditions prevailed

over the week-end with $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent. charged for new money and $4\frac{1}{2}$ per cent. for renewals. On Monday money became a little tighter owing to the absence of Treasury bill maturities and calling by two of the clearing banks, but conditions were not excessively uncomfortable and new money was obtainable at $5\text{--}5\frac{1}{2}$ per cent., with 5 per cent. charged for renewals. On Tuesday and Wednesday, however, much greater stringency prevailed, especially upon the latter day, when the small amount borrowed from the Bank had to be repaid, and it was only by means of special assistance that resort to the Bank was avoided. New money ran up to $5\frac{3}{4}$ per cent., and renewals outside the clearing banks cost $5\frac{1}{2}$ per cent.

The discount market has again been quiet and inactive. Hot Treasury bills were dealt in this week at $5\frac{1}{16}$ per cent., or a fraction above the tender rate. The market rate on three months' bank bills has also hardened, and on Wednesday German renewals could only be disposed of at fully Bank rate of 6 per cent. Other three months' bank bills changed hands at $5\frac{1}{2}$ per cent. These high rates mark, not only the prevailing monetary stringency, but also the market's lack of confidence in the general outlook and the reaction of the further depreciation of sterling. An early reduction of Bank rate is now quite out of the question, and even a further increase cannot be entirely ruled out of account.

It is clear that it is not desired to drive the market into the Bank, for on Wednesday the position was eased by special buying of February Treasury bills at $5\frac{1}{16}$ per cent., and this week's Bank return records an increase of £6.1 millions in the Bank's holding of Government Securities, with market resources in the form of Bankers' Deposits practically unchanged at £59.8 millions. It is easy to understand why market borrowing at the Bank is not desired, for were the market to borrow for a week at a time (the minimum period for which the Bank lends) it is quite likely that a day of stringency would be succeeded by six days of artificial ease, thereby giving the market and the world at large a false feeling of relaxation and security. On these grounds there is ample justification for the Bank's policy of rendering just enough assistance and no more than is required to keep the market in funds.

Discount { Call	4	4	4	4	$2\frac{1}{2}$ (Sept. 21, '31)
Houses { Notice ...	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$2\frac{1}{2}$ (Sept. 21, '31)
Market rate (3 months' bills)	$5\frac{1}{2}$ – $5\frac{3}{4}$	$5\frac{1}{2}$ – $5\frac{3}{4}$	$5\frac{1}{2}$ – $5\frac{3}{4}$	$5\frac{1}{2}$ –6	...

The technical key to the stringency is to be found in Public Deposits, which this week have risen by £5.8 millions to the high figure of £27.0 millions. Clearly, the Bank and the Treasury between them have decided to accumulate in advance a substantial proportion of the funds required next week for the payment of the War Loan dividend. By so doing they will obviate last-minute borrowing by the Government on Ways and Means Advances, and will reduce to a minimum the extent of the extreme ease that has succeeded War Loan dividend payments so often in the past. Here again the authorities are acting upon the right lines, for it would be most undesirable for easy conditions to prevail at a time when the Christmas expansion in the note circulation and contraction in the Bank's reserve will probably be beginning, when the exchanges were moving against London and when international economic affairs were rapidly approaching one of the most critical turning points since the war.

Apart from the above factors, money seems likely to be stringent during December, for, in addition to Christmas currency requirements, it is understood that income-tax demand notes will be issued early in December. In addition to the far heavier taxes that are this year to be demanded, there will be an incentive to taxpayers to be prompt in their payments, for only by paying up as much

as they can at once will they qualify for the extended terms of grace which are being granted this year in approved cases in respect of the balance due from them. Thus the turnover of funds to the Treasury seems likely to begin this year in December, whereas in previous years few people have paid before January. Thus, with the steps being taken to obviate the War Loan dividend ease, with a paucity of December maturities in the hands of the markets, and with the prevailing uncertainty and pressure upon the exchanges, December does not seem likely to prove an easy month.

Apart from the general causes of the depreciation of sterling, including the normal seasonal pressure and payments for imports made in anticipation of the new duties, a technical explanation of the rapidity of the fall is found in the fact that the foreign exchange market is to-day a very narrow one. The Treasury restrictions place no obstacle in the way of bank and other dealers evening out their books by purchases in the market on their own account, but the fact that exchange purchases for speculative or investment purposes are prohibited means that business is limited to normal commercial demands. In the long run this may be desirable, but in the short run it increases the likelihood of sudden and wide fluctuations.

In New York call rate is unchanged at $2\frac{1}{2}$ per cent., but open market discount rates on 90-day bank bills have been increased from $3\text{--}2\frac{3}{4}$ per cent. to $3\frac{1}{2}$ –3 per cent. The amount of gold earmarked on foreign account was steadily reduced during the week, while small quantities of gold have been imported from Argentina, Mexico and Canada. Apart from the heavy depreciation of sterling, and a fall in Swiss francs from 19.44 to 19.39 $\frac{1}{2}$ cents, the leading foreign exchange rates are practically unaltered.

The foreign exchange market was erratic, and movements were irregular, the general tendency being against sterling. As we write, this appears more pronounced as a result of the general weakness which developed in New York about Wednesday, followed by the selling of sterling by the Continent. The New York rate, after touching 3.58 on Thursday, is 3.60, against 3.77 last week. Montreal moved from 4.21 to 4.13 and Paris from 96 $\frac{1}{2}$ to 91 $\frac{1}{2}$. Brussels, Milan and Madrid were all at appreciably lower quotations than last week at 25 $\frac{1}{2}$, 70 and 42 $\frac{1}{2}$ respectively. Amsterdam went from 9.39 to 9.00, Berlin from 15 $\frac{1}{2}$ to 15 $\frac{1}{4}$, and Switzerland from 19 $\frac{3}{4}$ to 18 $\frac{3}{4}$. The Scandinavian currencies were the exception to the general trend, Stockholm being unchanged and weak at 18 $\frac{1}{2}$, Oslo losing $\frac{1}{4}$ at 18 $\frac{1}{2}$, and Copenhagen $\frac{1}{4}$ at 18 $\frac{3}{4}$. The South American currencies were again rather nominal owing to the restrictions, Rio and Monte Video being unchanged at 84 $\frac{1}{2}$ d. and 28d. respectively, whilst Buenos Aires gained 1 $\frac{1}{2}$ d. at 38 $\frac{1}{2}$ d. In the Far East, the rupee was $\frac{1}{16}$ d. lower at 1s. 6 $\frac{3}{4}$ d., but the yen advanced to 2s. 9d., against 2s. 7 $\frac{3}{4}$ d. last week. In the forward market, dollars remained at last week's quotations of $\frac{3}{4}$ and $1\frac{1}{4}$ premiums. On the Continent, Paris was stronger at $\frac{1}{16}$ franc and $\frac{1}{16}$ franc premium. Brussels, one month, remained at $\frac{1}{16}$ franc premium, but three months hardened by $\frac{1}{16}$ to $\frac{1}{8}$ franc premium. Milan was little changed at $\frac{1}{16}$ lira and $1\frac{1}{2}$ lire discount. One month's Madrid remained at $\frac{1}{4}$ peseta discount, but three months were quoted at a discount of $1\frac{1}{2}$ pesetas, against $\frac{3}{4}$ peseta last week. Amsterdam was at $1\frac{1}{2}$ cents and $2\frac{1}{2}$ cents premium for the two periods respectively. Berlin again was not quoted, and Switzerland was par for one month and $\frac{1}{8}$ franc premium for three. Silver prices were steadier and rose by $\frac{3}{4}$ d. to 18 $\frac{1}{4}$ d. for cash and by $\frac{1}{16}$ d. to 18 $\frac{3}{4}$ d. for forward as a result of India and China buying. The Chinese silver exchanges rose in sympathy; Hong Kong by $\frac{1}{4}$ d. to 1s. 4 $\frac{1}{4}$ d. and Shanghai by $\frac{3}{4}$ d. to 1s. 9 $\frac{1}{4}$ d.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade

BRITISH POLICY AND INDIA.

DURING the past week the centre of interest in the Indian problem has lain for the most part, not in St. James's Palace, but in Downing Street. The debates in the Federal Structure Committee of the Round Table Conference—conducted, as they have been, without the participation of the Moslem Delegation—have elicited generalities, not detailed definitions for the guidance of constitutional draftsmen. The tenour of the speeches on both sides could be foreseen pretty well before they were delivered. On the question of Financial Safeguards, as on that of Commercial Discrimination, arguments were duly marshalled anew in defence of familiar positions taken in advance; but the points of difference and agreement disclosed did not carry matters much further, or give a definite lead in the task of constitution-building. Such a result could hardly be achieved by set eloquence of debate; and though Lord Sankey's draft reports have summarised broadly the various views expressed, no serious effort was made to negotiate, on realistic lines of compromise, concession and bargaining, any agreed, workable terms of settlement.

Thus, even before Wednesday's demand by the Hindu Delegation for a "show-down," eyes were naturally turned to the attitude of the British Government, which was bound to have become increasingly conscious, as it listened in, that when the final stage—the Conference's concluding Plenary Sessions—was reached next week, there would devolve upon the Prime Minister the duty of enunciating future policy without much constructive help from the Conference itself. And, though the voice of Islam at St. James's had suffered a self-imposed silence, the voice of reaction at Westminster has muttered ominously, while a torrent of irresponsible newspaper propaganda had demanded, in effect, of the Cabinet that they should summarily terminate the Conference and "leave it at that."

But if there is one thing crystal-clear, it is that matters cannot be "left at that." Last January, with the full assent of the leaders of all the parties in the State, the head of the British Government made a declaration marking out a line of policy from which—save in circumstances of necessity established beyond dispute—there can be no departure if we hope to be acquitted either by Indian or world opinion of the charge of breaking faith. Let us recall the terms of Mr MacDonald's announcement. The Government, he declared, accepted the principle that responsibility for the administration of India should rest with Legislatures, central and provincial. Provincial Ministries should be drawn from and responsible to the Legislature (with a minimum of essential emergency powers reserved to the Governor), subject always to the overriding authority of the Centre in matters defined as of All-India concern. In the Central Government, given an All-India federal basis, the Executive should likewise be responsible to the Legislature, there being reserved to the Governor-General the subjects of Defence and External Affairs. The new Constitution, in its application to Provinces and Centre alike, should contain "such provisions as may be necessary to guarantee during a period of transition the observance of certain obligations" (e.g., financial "safeguards," rights of minorities, etc.), but it would be "the primary concern of His Majesty's Government to see that the reserved powers are so framed and exercised as not to prejudice the advance of India through her new Constitution to full responsibility for her own government."

It is necessary to recall the terms of that declaration, because—dismissing the puerility of noble Lords who would have us solve the Indian problem by forthwith incarcinating the whole of the Congress in the Andamans—there appears to be a tendency more widely-spread among the ranks of the Conservative Party, and of much greater practical significance, to hold the view that "things have now changed," and that the maximum

forward step which could now be taken would be to offer India provincial autonomy, without prejudice to the grant, at some indefinite future date, of responsibility at the Centre.

To what extent individual members of the Cabinet have been inclined to endorse this suggestion we do not pretend to know. Mr Gandhi himself, it would appear, toyed with the idea on the assumption that he might thus be able to capture Provincial Legislatures and so "pack" a Constituent Assembly, which would be charged with the task of framing an All-India constitution. But this royal road to full self-government, as the Mahatma has now recognised, could scarcely be opened by the sort of provincial autonomy, or constitution-building procedure, likely to secure the blessing of the Conservative Party's Indian Committee; and the belief that the British Government might yield to pressure from its Conservative supporters, and retreat from its pledge of responsibility at the Centre, provoked, on Tuesday, a manifesto from the Hindu Liberals (followed, on Wednesday, by demands for explicit assurances at the Federal Structure Committee meeting) protesting that the half loaf of provincial self-government would be as unsatisfying as the maintenance of the *status quo*. Sir Samuel Hoare disclaimed the idea that the Cabinet was as yet committed to any particular line of policy, and, until the Prime Minister has finally disclosed the Government's intentions, we may advisedly defer judgment on the Cabinet's statesmanship.

Yet, for all the confusion of the Round Table alignment—with the Princes, the Hindus, the Depressed Classes and the Moslems at sixes and sevens—one simple question confronts the British Government. Have conditions so altered that the pledge given ten months ago is no longer binding? That the answer is "No," there can be no reasonable doubt. Mr Gandhi has been intransigent? Doubtless, but last January there was little enough ground to hope that he would even attend the Conference; and since his coming to London scant pains have been taken to induce that inconvenient "cross" of saint and politician to talk in terms of sincerely-meant, working realities. If the Round Table's adjourned meeting has been mainly a beating of the air, the blame rests largely with the distractions of the British Government, immersed in electoral tactics and negligent of the issues of our major Imperial crisis. The minorities deadlock is a formidable obstruction in the path of progress? True, but this obstacle existed last January, when the declaration in favour of Indian self-government was made; and if the absence of Hindu-Moslem agreement on electorates is adduced as a reason why responsibility at the Centre cannot be workable, it is logically a reason *a fortiori* why there cannot be elected, responsible Legislatures in the Provinces.

In truth, if communal differences are to be utilised as a plea for withdrawal of the promise made last January, that India should acquire the status of a Dominion (subject only to certain transitional "safeguards"), logic demands that on this score we pronounce against any further extension of self-government at all. This, indeed, is precisely what our reactionaries at Westminster—whose voices in this, as in many another issue, are a pitiable travesty of the opinion of the country—wholeheartedly desire. But what would be the fruits of such a decision on the British Government's part? Discount as we may the theatricalities of Mr Gandhi's public pose, or the rhetoric of India's disillusioned Liberal believers in the continuity of British policy, the hard facts remain that no governmental system in a sub-continent embracing one-fifth of the human race is workable without the goodwill of the governed; that if boycotts, civil disobedience and terrorism are to be renewed and intensified, the lives and property of British subjects in India will be in almost universal jeopardy; and that the forces of the Crown available are inadequate in the last resort to deal with a

guerilla campaign conducted by a hostile population reckoned in hundred millions.

These are not words inspired by the spirit of melodrama which Sir Samuel Hoare deprecated at Wednesday's meeting of the Federal Structure Committee. Mr Churchill and his irresponsible adherents, these "no surrender" advocates of the strong hand in India, have yet to explain what troops they intend to mobilise, what calls they propose to make on the resources of an England which is utterly out of sympathy with their standpoint, for the maintenance of order in an India driven back on destructive opposition. They have yet to demonstrate how the security of Britain's £400 millions of investments in India is to be guaranteed by bayonets. And all of us must ask ourselves how any constitution in India is to work which fails to evoke the loyal co-operation of at least one dominant section of Indian public opinion.

By the time these lines are read, the Government's decision as to their future intentions for India may have been announced. We need not anticipate its terms; but of this we are convinced: the British Government must face up to the responsibility which the barren harvest of the Round Table Conference has placed upon it. Unless we are to witness a renewal in India of a disastrous struggle between fanatical nationalism and an Imperialism driven by events to greater and greater repression, the Government must stake its fortunes on a far-sighted, courageous policy. While abating nothing of its very proper determination to put down terrorism and maintain law and order, it should announce that it will itself decide the minorities question (utilising, it may be, the services of an impartial arbitrator, such as General Smuts), and that it will proceed with a minimum of delay to introduce legislation enacting provincial and federal (All-India) Constitutions whose entry into operation shall be conditional on acceptance of the minorities' award by the leaders of the two major communities concerned. The reservation of the subjects of Defence and External Affairs, and the incorporation of adequate financial "safeguards," both of which provisos would be demanded by the great majority of British opinion, might forfeit the support of Congress extremists; but by holding out to India an immediate, concrete Constitution, embodying, as it could do, all that Indian moderates aspire to in this generation, we should rally to British policy the overwhelming bulk of Indian opinion. Every consideration of good faith, duty and self-interest combines to urge that we cannot honourably or safely take any other course.

GERMANY AND HER CREDITORS.

A NEW chapter will shortly open in the chequered history of reparations. The first phase was the period of the Reparations Commission—with its astronomical figures of Germany's indebtedness—which came to an end with the final collapse of Germany's currency and the occupation of the Ruhr. Chapter two covered the calmer atmosphere of the Dawes Plan. That scheme was designed to make possible the re-establishment of Germany's credit; and, without attempting to fix Germany's final liability, it laid down specific payments for a series of years. By covering the first annuity with a foreign loan, by throwing upon the Transfer Committee, representing the Creditor Powers, the responsibility for transfer, and by introducing flexible provisions, such as the index of prosperity and the clause that the annuities should be varied if there was a large change in the value of gold, it created conditions in which confidence was, in fact, restored without the reparation creditors definitely abandoning any of their claims.

But, as all the world now knows, the task of meeting her obligations under this Plan was made easier for Germany by the inflow of foreign capital. As the annuity rose to its maximum and the rate of lending to Germany began to slow down, the full burden of the annuities for the first time made itself felt. This, coupled with the desire in Germany that control should cease and with the wish of creditors all over the world that there should be some finality, led to chapter three, which took the form

of the Young Plan, which purported to reach finality and to take the whole question out of politics. In return for a scaling down of the figures, the so-called transfer protection was swept away and the old flexible provision—*"here left out of the scheme. While no one can blame the experts for not having the gift of prophecy, it almost seems as if a mischievous Fate had been lying in wait to prove on the grand scale that 'the best laid schemes o' mice an men gang aft agley.'"* The ink was hardly dry on the Young Plan before a sensational fall in world prices began, to meet which contingency the "value of gold" provision of the Dawes Plan had been invented. From that moment events moved rapidly to the dramatic *dénouement*. To prevent the financial collapse of Germany, or even to mitigate it, the modest provisions of the Plan, under which the conditional annuities may be suspended for one or even two years, were quite inadequate, and even the total suspension of all Government debts under the Hoover moratorium failed to stave off the *crise de confiance* of this fateful summer and autumn. Hence, within less than two years of the signing of the Hague Agreement the problem must be taken up afresh, and chapter four opens with the convening of the Special Advisory Committee, for which the Young Plan made provision.

This step has been taken after a series of talks between international statesmen in Washington and Paris, the upshot of which was a formal application last week-end by Germany to the Bank for International Settlements to convene the Advisory Committee. The Young Plan provides that if the German Government declare to the Creditor Governments and to the Bank for International Settlements "that they have come to the conclusion in good faith that Germany's exchange and economic life may be seriously endangered by the transfer in part or in full of the postponable portion of the annuities," the Committee shall be convened. The Committee shall forthwith consider the circumstances and conditions, satisfy themselves that the German authorities have made "every effort in their power to fulfil their obligations" and "make a full investigation of her position with regard to her obligations under the Plan." The Committee is to act in a purely consultative capacity, and its findings have no effective force "unless confirmed and accepted by the Banks as trustee for the Creditors and, if necessary, by the Governments concerned." It is, however, added that "the Committee shall play no part in connection with the unconditional annuity accepted by Germany."

It must be remembered that this procedure forms part of a plan the authors of which believed that "in the scale of annuities and the conditions recommended we have given proper regard to the potentialities of all the economic conditions and financial forces normally and naturally involved," and that "we have provided for the possibility of meeting any abnormal or special difficulty arising which might seriously affect Germany's capacity for a time." It is evident from the German memorandum that Germany does not share these views, and as that statement, drawn up after prolonged conversations in Paris, is a document of great diplomatic interest, we reproduce it in full:—

The German Government herewith apply for the convocation by the Bank for International Settlements in Basel of the Special Advisory Committee provided for in the New Plan of The Hague of January 20, 1930. As to the cause and object of this application the German Government wish to make the following statement.

As early as the beginning of June of this year the German Government had arrived at the conclusion that, in spite of the most rigorous reductions of State expenditure and repeated increases in the burden of taxation, they would be unable to continue the payment of the annuities of the New Plan. The economic and financial situation of Germany was most seriously endangered already at that date. The German Government had, therefore, decided to draw the necessary consequences from this situation.

That decision was followed on June 21st by the declaration of the President of the United States of America, which proposed a one year's postponement of all payments on account of inter-Governmental debts, reparations and relief debts. The object of this far-seeing initiative was, as explained in the declaration, to contribute to the return of confidence, and thereby to promote the political peace and the economic stabilisation of the world; the debtor nations were thereby to be given time for recovering their national prosperity. The hope that this proposal would bring about a decisive turn in the world crisis has not been realised. As a result of later developments the Hoover year by itself proved to be insufficient to banish the danger of collapse. For this reason the British Govern-

ment in July took the initiative of calling the London Conference. The recommendations of the Conference resulted in the prolongation of the rediscount credit granted to the Reichsbank, in the so-called Basel Standstill Agreement, and in the report of the Basel Committee of Experts nominated by the Bank for International Settlements.

Important though all these measures were for creating an immediate alleviation, they were by their very nature bound to be of a merely preparatory character. The London Conference stated in its final declaration that the measures recommended by the Conference were only a first step, and that they should form the basis for more far-reaching action to follow. Accordingly, the experts who collaborated in the carrying out of the London recommendations always had the provisional character of all these measures before their eyes. The Standstill Agreement, therefore, states that the contracting parties have concluded the settlement provided only "for the period until a more permanent solution of the problem of German short-term indebtedness had been found." Similarly, the report of the Basel Experts Committee concludes by urging all Governments concerned most earnestly "that they should lose no time in taking the necessary measures for bringing about such conditions as will allow financial operations which will bring to Germany, and thereby to the world, sorely-needed assistance."

During the months which have since elapsed the economic and financial situation of Germany has reached a state of extreme tension. The facts which characterise this situation are generally known; in other countries, too, the pressure of the crisis has produced the most serious symptoms. The world has increasingly realised the inner interdependence of the different financial problems caused by the situation, and the necessity to tackle them as a whole without delay. In the course of the considerations as to the best method of approaching this task, lately the idea has come into the foreground to start by convening the Special Advisory Committee. As, under the system of the New Plan, the initiative for calling the Special Advisory Committee depends on an application by the German Government, the German Government have decided to take this step in order to do everything in their own power which may open the road to comprehensive combined measures of the Governments.

Under the New Plan this application is conditional on a declaration of the German Government to the effect "that they have come to the conclusion in good faith that Germany's exchange and economic life might be seriously endangered by the transfer in part or in full of the postponable portion of the annuities." In making this declaration the German Government feel bound to state that a declaration in these terms does not in effect do justice to the actual position. Since the New Plan was conceived the economic and financial situation of the world, particularly in Germany, has been fundamentally altered by an unparalleled crisis. As the New Plan confers upon the Special Advisory Committee the task of considering the position from all points of view, the Committee must examine the problem as a whole, and with regard to all its contributory causes, and, in doing so, must particularly consider the fact that the question of Germany's private indebtedness has to be settled in due time, before the end of February next, by an agreement to be concluded between the foreign creditors and the German debtors.

As the present circumstances require the necessary measures to be taken with the greatest urgency, the German Government propose that the Special Advisory Committee should meet without delay, and that it should carry out its task as quickly as possible, so that a conference of those Governments who are concerned with the decisions to be reached may take place in the nearest future.

The most significant point in this official letter, which closely conforms to the prescribed procedure, is that in which the German Government states that the actual position is far worse than that which is suggested by the formula to which its signature is appended. Neither the framers of the Young Plan nor the signatories of the Hague Agreement could possibly have foreseen the course of international economic events during the past two years—the catastrophic fall in commodity prices, the world-wide slump in trade, production and employment, the struggle of the nations to maintain the equilibrium of their Budgets and balances of payments, the failure of co-operation in commercial policy and the consequent resort, especially in recent days, to policies of high tariffs and ever-narrowing economic nationalism. Nor could they have foreseen two years ago that Germany would be forced into a position in which a postponement of the settlement of all her commercial borrowings would be inevitable. Yet these are the circumstances under which the Advisory Committee will meet.

The members of the Advisory Committee have been appointed according to procedure by the heads of the Central Banks of the creditor countries. They are M. Francqui, Vice-Governor of the Société Générale de Belgique (Belgium); Professor Rist, Deputy-Governor of the Bank of France (France); Dr. Melchior, a Vice-Chairman of the B.I.S. (Germany); Sir Walter Layton, Editor of the *Economist* (Great Britain); Signor Beneduce, a Director of the B.I.S. (Italy); Dr. Walter Stewart, Chairman of Case, Pomeroy and Company (America); and Mr. Nogara (Japan). This Committee of seven is empowered to co-opt four additional members.

Simultaneously with the session at the B.I.S. headquarters at Basle of the Advisory Committee, a body of international bankers will assemble in Berlin at the invitation of the German Debtors' Committee to discuss arrangements with regard to the question of German private debts and the measures which require to be taken in view of the prospective expiration of the existing "Standstill" Agreement in February next. Obviously the work of the two Committees must be to some extent inter-connected, for whatever views may be held regarding the priority of commercial and Government debts, the whole question of Germany's future solvency is the issue which really must occupy the attention of both Committees.

But neither one nor the other can settle the problem. The Advisory Committee is purely consultative in character. It can only recommend. It is for the Governments and the statesmen to adopt, to implement or to improve upon the conclusions at which the Committee arrives. Time is the essence of the problem, for financial and economic paralysis is stalking across Europe, and the first steps towards the reconditioning of the machinery of international trade cannot be taken until some reasoned decision has been taken upon the German problem by the statesmen of the respective countries. It is expected, therefore, that the meeting of the Advisory Committee will be followed early in the New Year by a conference of plenipotentiary statesmen meeting with the determination not to arrive at yet another patched-up compromise (for which, as Mr MacDonald has rightly said, the time has now long passed), but at a durable and agreed settlement which may form the basis upon which certainty and confidence—the first essentials of business revival—may be securely rebuilt.

FIFTY PER CENT.

THE hustle with which, as we described last week, the Abnormal Importations Act was passed through Parliament, was paralleled by the promptitude with which the Board of Trade availed itself of the new powers conferred upon it. The Act, permitting a duty of 100 per cent. to be placed upon any imported articles included in Class III. of the Trade and Navigation Returns, received the Royal Assent on Friday of last week. On Saturday morning Mr Runciman issued a first and extensive schedule of articles which he proposed to subject to an import duty of 50 per cent.; and on Wednesday that duty actually came into force. In the large tables appended to this article we have made an attempt to give as close an impression as possible of the scope and range of import trades affected by the first Order under the Act. For the figures given in them we cannot claim infallibility, because the classifications used in the Order do not in all cases correspond with the classifications given in the Annual Statement of Trade.

Nevertheless, our tables may be useful as presenting a rough picture of the extent to which the Government has this week laid an interfering hand upon the country's import trade. Total imports from all sources of all commodities now subjected to duty were some £30 millions in 1929 and nearly £28 millions in 1930; and it has been stated by certain organs of the Press, with a unanimity which suggests inspiration, that at the recent "forestalling" rate of import the volume would have amounted to some £44 millions per annum. The last-named figure would represent about one-seventh of the amount of Class III. imports entering this country in the year 1930. Another large list is daily expected to be issued from Whitehall, and although by one first stroke of the pen Mr Runciman has decreed the most abrupt disturbance in British trade ever created, except by the war, his activities in this direction are apparently not ended. The concern with which we await his second step is by no means lessened by contemplation of the first.

In our view Mr Runciman has made at the outset a tactical mistake. Both he himself and his Parliamentary Secretary were at pains to emphasise in the House of Commons that the Abnormal Importations Act was designed merely to check "forestalling" imports—not to "tax" imports, but to "keep them out." The only course of action appropriate to that declaration of

MR RUNCIMAN'S SELECTION.

policy was to impose, in cases where "forestalling" might prove to be actual or threatened, the full prohibitive duty of 100 per cent. Such action would have told the whole world that the present measure was a temporary improvisation to meet an emergency, and, to quote Mr Runciman's own words, would "keep the field clear" for any future action in the fiscal sphere that might be adopted as part of a permanent policy. By adopting the figure of 50 per cent. he had added unnecessarily to the uncertainty as to the Government's real aims, and has given to polemic Protectionists the opportunity for claiming that the "anti-forestalling" powers have been used to lay the foundations of a permanent high tariff for this country. The present steps cannot be regarded as in any way a clue to future tariff policy.

When we examine the schedule itself, it appears that Mr Runciman has studiously tried to avoid the inclusion of articles which are to any large extent used as raw materials of other industries. He has thereby limited the mischief which an entirely indiscriminate use of his powers might have wrought. But in one sense or another there are comparatively few commodities that are not a raw or semi-raw material in the eyes of some consumer. The high protection now imposed in the case of articles entering into clothing manufacture, building, administration (typewriters) and distribution (wrapping paper), will lead to some increase of costs to British producers. That aspect will become the more serious, no doubt, with the forthcoming extension of the scheduled lists. But other grave disadvantages are more immediately apparent. If any of our readers chances momentarily to have forgotten the truth that you cannot refuse to buy from your neighbour without reducing his power to buy from you, he will find a trenchant reminder in the despatches from overseas correspondents which appear on later pages. In France, and even in Holland and Belgium, alarm at the loss of markets is leading to action to curtail purchases from Britain. France has, indeed, led the way in retaliation, for, in addition to the imposition of an extra duty of 15 per cent. on British imports, her Government has revised its coal import quota in a way which means that France will reduce her purchases of British coal to the tune of no less than a million tons per annum. With such facts before us, can we be so sure that the new import restrictions may not aggravate, rather than improve, the position of this country's balance of payments?

Woollen goods are by far the most important category in the list, accounting, on the 1930 basis, for over one-third of the imports affected by the Order. Bradford has, indeed, received the lion's share of Mr Runciman's favour. If we steel our hearts to regard with complacency the difficulties which, as our Paris correspondent points out, are being created for the district of Roubaix, we may at least pause to question the wisdom of placing at this juncture so many obstacles in the way of those exports by which alone Germany can hope to meet the most pressing claims of her creditors, Britain included. A feature of the appended tables is, indeed, the frequency with which Germany appears as the principal source of a newly-taxed import. It is impossible to read the figures without realising that British action has added to the already formidable impediments in the way of Continental trade recovery, and we can, in consequence, only feel that we are ourselves responsible if British exports to the great European market show further declines.

Of the aggregate imports under Class III, about one-tenth is computed to come from countries within the Empire. Of the goods now proscribed by the Board of Trade the Empire share is even less—in 1930 only £1.8 millions out of a total of £28 millions. Nevertheless, there are important lines of trade in which Canada, India and the Irish Free State receive the benefit of a full 50 per cent. preference. On the basis of 1930 Canada will get this advantage on a trade of nearly £300,000 of vacuum cleaners and over £500,000 of rubber soles and heels (in which line she already almost monopolises our import trade), the Irish Free State in perhaps half a million pounds' worth of woollen and linen goods, and India on an export to us of carpets which exceeded £500,000 in 1929 but fell to below £400,000 in 1930. Strange figures are cut in the list by a few articles such as knife-sharpeners,

tapestry and damask, the trade in which might have been thought to be too insignificant to attract the attention of authority.

The figures given in our tables are those of *total* imports, and are inclusive of goods afterwards re-exported. Section 5 of the Act gives exemption to "articles imported for exportation after transit through the United Kingdom or by way of transshipment." On paper, therefore, it would seem that the British *entrepôt* trade will remain unaffected by the new duties. But their exemption is "subject to compliance with such conditions as to the security of a re-exportation of the articles as the Commissioners for Customs and Excise may impose." In this condition—which is an essential administrative adjunct to an effective protective duty—may lurk, we fear, many a harassing delay and many an obstacle to re-export business. It may be that Mr Runciman has chosen his list with the greatest circumspection possible under the circumstances. Nevertheless, all the circumspection in the world will not alter the fact that it is impossible to divert channels of trade, created by long experience of trial and error by private firms in various countries, without creating trade disturbance, whose ramifications will prove to be serious in their effect and almost unlimited in their scope.

MANCHURIA: THE BACKGROUND.

To many people in this country whose attention has been drawn to Manchuria by the international crisis of the last few weeks, the name "Manchuria" suggests some sort of *Ultima Thule*, a remote and exotic region somewhere beyond the pale of the ordinary workaday world, a place in which the writ of the League of Nations could hardly be expected to run. Such a conception of Manchuria is very far from the truth. In reality, Manchuria lies very near the heart of the modern world, for good or evil. Though it is a long way from Mukden to either Geneva or Washington in physical distance, Manchuria is, nevertheless, the point on which the political pressures of many of the Greatest Powers in the world converge. To put it bluntly, Manchuria might become the theatre of a world war in which not only China and Japan, but the U.S.S.R. and the U.S. and the British Empire would all be implicated. To pass from the political to the economic plane, it is also a long way from the banks of the Nonni River to the urban areas of England; yet the economic nexus between North Manchuria and London or Lancashire or the West Riding turns out to be remarkably close when we take account of the middle term. This middle term is Denmark. The Danish animal products are one of the main sources of British food-supplies, besides being the staple export of Denmark herself. The Danes raise their stock on imported feed. The staple imported feed for live-stock in Denmark is oil-cake; and this oil-cake that is imported into Denmark is largely made from Manchurian soya beans. These two illustrations, chosen at random out of many, may suffice to show that Manchuria already plays an indispensable rôle in the general life of the world.

The next point to notice is that Manchuria is a new country in both the economic and the political sense. The first shipment of Manchurian soya beans—from Dairen to Liverpool, by the enterprise of the Japanese firm of Mitsui—was made no longer ago than 1908. The immigration of Northern Chinese agricultural settlers into Manchuria did not begin until the ban maintained by the Manchu rulers of China (in order to save their homeland, and their kinsmen at home, from being engulfed) fell at last with the fall of the Manchu Dynasty itself in 1911. The export to Japan of Manchurian coal from the Fushun mines, which amounted to 1,849,000 tons in 1929, had been no more than 110,000 tons in 1912. In the political sphere, the present situation in Manchuria is hardly older than in the economic. The Russians only gained their foothold in Manchuria in 1896-98; the Japanese only in 1905; and the reversal in the political relations between Manchuria and China did not take place till 1911. From the seventeenth century of our era, down to 1911, China stood to Manchuria, politically, in the relation of England to Normandy after the Norman Conquest. Since 1911, Manchuria has

ECONOMIC DATA OF MANCHURIA.

The sketch map at the foot of this page shows the principal lines of the railways developed in Manchuria. The mileage in operation in 1930 was 37,000. The Chinese Eastern Railway (1,069 miles), connecting Vladivostok with Russia, via Chita, has Sino-Russian management with Russian and French capital. The Southern Manchurian Railway (690 miles), connecting the Korean frontier and Dairen with Mukden and Changchun, is a Japanese undertaking. Of the Chinese Government lines that from Peking to Mukden was constructed partly with British capital, and those from Ssuningkai to Taonan, Taonan to Anganchi (the centre of the bean area), and Changchun to Kirin were built with Japanese capital, the last-named being under Japanese management.

Of the developed coal resources, the most important are the mines at Fushun and Yentai, south-east of Mukden. The Fushun deposit is estimated at about 1,000 million tons. Production has risen from 2.4 million tons in 1917-18 to 7.0 million tons in 1929-30. Exports in 1929-30 amounted to 3.8 million tons, including 2.3 million tons to Korea and Japan and 1.3 million tons to China. There is also a coal field at Penhsihu on the Mukden-Antung line.

The main iron works are at Anshan on the S.M.R., between Dairen and Mukden. Production has risen from 57,000 tons in 1921-22 to 210,000 tons in 1929-30. There are considerable mineral resources across the Chinese frontier in the Province of Jehol.

The following particulars relating to Manchurian foreign trade, including trade with China proper, are taken from the 1931 report of the S.M.R. :—

(Million Haikwan taels.)		
Year.	Imports.	Exports.
1913	125.7	113.0
1920	205.1	225.9
1927	268.9	408.0
1928	303.0	434.0
1929	329.6	425.7

The following were the principal export and import commodities in 1929 :—

(Million Haikwan taels.)			
Exports.		Imports.	
Soya beans.....	168.2	Cotton piece-goods	60.1
Beancake	65.3	Tea, spirits and tobacco	26.7
Coal and coke	37.6	Wheat flour	23.5
Bean oil	21.6	Iron and steel	17.2
Millet	16.5	Wool, silk and miscellane- ous piece-goods	16.6
Seeds	12.4	Gunny bags	14.4

It will be seen that beans and beancake amounted to 55 per cent. of the exports and cotton piece-goods to 21 per cent. of the imports. The distribution of Manchuria's trade in 1929 was as follows :—

(Million Haikwan taels.)		
	Imports from	Exports to
Japan and Korea.....	138.7	168.9
China	99.5	93.1
United States	25.9	10.3
British Empire.....	26.2	28.8
Russia	15.7	40.3
Others	23.6	84.3
Total	329.6	425.7

The following figures, also from the S.M.R. 1931 report, show Japan's investments in Manchuria as at March 31, 1930 :—

		Million Yen.
South Manchuria Railway :—		
Direct undertakings		716.2
Loans to affiliates and Chinese railways		318.4
Japanese Government loans to China.....		98.7
Other investments		554.3
Total		1,687.6

MANCHURIAN RAILWAYS AND RESOURCES.

come to stand to China in the relation of the Channel Islands to England at the present day. The country which bred the last nomadic barbarian emperors of China has now been transformed into "the Three Eastern Provinces" of the Chinese Republic.

The social and economic development of Manchuria to-day can perhaps be conveyed most shortly and clearly to English readers by analogy with the development of North America in the nineteenth century. In fact, in Manchuria at this moment the social historian can study "in the life" a phase of social history which has already become obsolete in the New World. In Manchuria he will run across a number of familiar nineteenth-century American phenomena: a huge country (the area of Manchuria almost equals the combined areas of France and Germany); a vast influx of immigrants; a rapidly growing network of railways to carry the immigrants into the interior and to bring down their produce to the coast; a young mining and manufacturing industry near the seaboard; a still younger agriculture and lumber business (both on the grand scale) in the interior; and a "Wild-West" regime in the neighbourhood of the expanding frontier.

Immigration is the most important factor of all, because it is the key to the political as well as the economic future. A nation which populates an empty country can hardly fail to become complete master of that country in the long run; and, in twentieth-century Manchuria, the Northern Chinese are playing the dominant part that was played in nineteenth-century America by the Northern Europeans. The old Imperial policy of "Manchuria for the Manchus" is quite dead. The Manchus have gone the way of the Red Indians; and it is not the Russians and not the Japanese but the Chinese that have taken their place. The total population of Manchuria to-day is estimated to be 27,000,000—about the same as the population of Poland; but whereas one-third of the population of Poland are non-Poles, perhaps not more than one-twentieth of the population of Manchuria are non-Chinese (counting Russians and Japanese and Koreans and Manchus together). Latterly, the Chinese have been coming into the country at the rate of something like a million immigrants a year; a larger number than the net annual increase of the population of Japan. On the other hand, in 1928 the total number of Japanese in Manchuria was only 203,000 and the total number of Koreans (who were or had been Japanese subjects) 893,000.

These Koreans are mostly domiciled outside "the Japanese Zone," in territory under Chinese administration, and they are engaged in rice cultivation. Indeed, the Manchurian rice crop is mostly raised by these Korean settlers, and it is said to be capable of great expansion. On the other hand, soil and climate seem to condemn rice cultivation in Manchuria to yield precedence, permanently, to wheat, kaoliang, and above all to the soya bean; while, socially and politically, the Koreans in Manchuria are likely to be kept down by the higher economic competitive power of the local Chinese peasantry and by the unfriendly discrimination of the local Chinese authorities. As for the 200,000 Japanese residents in Manchuria, these are domiciled almost exclusively inside "the Japanese Zone" (i.e., the leased territory of Kwantung, containing Dairen and Port Arthur; the railway zone of the Japanese-owned South Manchuria Railway; and the Japanese settlements at Mukden, Antung and Tinkow). It is also significant that only 2,326 (1.22 per cent.) of these 200,000 Japanese in Manchuria are engaged in agriculture and only 8,838 (4.63 per cent.) in mining; whereas 40,746 (21.30 per cent.) are engaged in manufacture, 44,838 (23.51 per cent.) in commerce, 38,177 (19.9 per cent.) in transport, and 38,192 (20.00 per cent.) in the public service and the professions. In fact, the civilian Japanese population in Manchuria play the rôle of the Germans and the Jews in the pre-war Polish provinces of the German Empire. They are there as administrators and managers and technicians; but they are not on the land.

The inability of the Japanese to colonise the Manchurian countryside has been recognised by the Japanese

themselves very frankly; and the Japanese-owned S.M.R., a semi-governmental railway company which overshadows all other economic concerns in the whole of Manchuria, has pursued the enlightened policy of "stimulating Chinese immigration on the reasonable calculation that a growing population of the race which is able, in Manchuria, to settle effectively on the land will benefit Japanese interests in two ways. It will provide Japan with an expanding source of supply of raw materials and an expanding market for Japanese manufactures. In 1929, the total foreign trade of Manchuria was of the value of 755,225,360 Haikwan taels, of which her trade with Japan (including Korea) accounted for 307,608,645.

If some stroke of magic could eliminate politics from the Manchurian situation, the interplay between Chinese and Japanese activities in the development of this great and rich new country would be ideal, since it answers to both people's urgent economic needs. The Chinese need virgin soil for a congested peasantry; and Manchuria supplies this to them thanks to Japanese industrial and commercial organisation. The Japanese need sources of supply and markets, and Manchuria supplies this to them thanks to Chinese immigration. Why should not this interplay of Chinese and Japanese economic activities in Manchuria to-day be as fruitful and as friendly as the interplay between English capital and American pioneering was in the building up of the United States last century? But, alas, it is here that politics play havoc. In Southern Manchuria, as in Upper Silesia or the Polish Corridor, there is an ominous contrast between the economic activity in the material environment and the political tension in the psychological atmosphere. Such situation are explosive, as the Ostmark demonstrated yesterday and Manchuria is demonstrating to-day.

CANADA'S RAILWAY PROBLEM.—I.

(BY OUR OTTAWA CORRESPONDENT.)

The problem of unemployment is still a major source of anxiety to the Governments and people of Canada, but in the last few months it has receded in importance as compared with the problem of the railway situation. It has been recognised for some years that one of the fundamental economic disabilities of Canada lies in the fact that the exuberant optimism of pre-war days provided her with a physical equipment of transportation facilities far beyond the needs of her existing population. Comfort was derived from the hope that her superabundance of railways would in time prove merely to have been an intelligent anticipation of her future expansion, but this pleasant theory has been demolished by the world-wide depression, of which Canada has been suffering the full impact.

According to the "Canada Year Book" for 1931, Canada has a railway mileage of 42,378 miles, divided between her two systems, the Canadian National Railways and the Canadian Pacific Railway. The C.P.R. has found itself for the last dozen years in competitive contrast with the State-owned Canadian National system, which is the fruit of a merger of a series of derelict private railways with the old inter-colonial system, built after confederation as a link with the Maritime Provinces. As long as times were prosperous, and railway earnings seemed satisfactory, it was a favourite thesis that Canada had arrived at a peculiarly happy solution of her railway problem, inasmuch as there existed a very healthy and stimulating competition between her great private railway corporation and the State-owned line. Both the Liberal Ministry of Mr Mackenzie King and the Conservative Administration of Mr Bennett were committed to the continuance of this state of affairs, and when Mr Bennett, during the last election campaign, was charged with unfriendliness to the C.N.R., he retorted that his own and his party's policy was "Competition ever; amalgamation never."

But with the advent of the economic depression the railway situation has come to be viewed in a different and decidedly pessimistic light; and the more it is studied

the more baffling does it seem. Realisation has come that Canada's annual railway transportation bill has reached dimensions intolerable to a country whose national income has experienced a serious curtailment as the result of the collapse in the prices of the natural commodities which are her chief products; and with the realisation there has developed a clamorous public demand, supported by the Press of all shades of opinion, for some sort of immediate remedial action.

For some years after the war the Canadian National system had all the earmarks of an experiment doomed to failure, but, when Sir Henry Thornton assumed direction of its fortunes in 1923, he contrived to weld it into a unified coherent system and develop an *esprit de corps* among its personnel, with the result that, aided by the general economic prosperity which prevailed for half a dozen years, its earnings showed a remarkable expansion. Its operating surplus grew year by year until, in 1927, it was able to show net earnings of \$54 millions. This was sufficient to pay the fixed charges due to the public and leave a little over for capital development. In 1928, however, the earnings of the C.N.R. system began to shrink, and for the last two years the net earnings figures have been: 1929, \$46,818,025; 1930, \$26,510,937.

During the current year the shrinkage has become progressively worse, and in January-June the net earnings of the system were \$1,329,035, as compared with \$11,393,910 in the first half of 1930. Thus it seems probable that at the end of the year the revenue will be little more than the operating expenses, and the whole burden of the obligations due to the public (amounting to roughly \$50 millions) will fall upon the Federal Treasury. Under these circumstances the Government has called a halt to capital expenditure except where absolutely necessary, and has stopped the construction of the ambitious new terminals in Montreal, whose estimated cost is at least \$50 millions. But it is the capital burden involved in the Canadian National system which staggers serious students of the railway situation. At the end of 1930 the Canadian people had provided by cash or credit more than \$1,500 millions to the Canadian National Railways; and of this, almost three-quarters represented loans for which the annual interest has to be found.

The Canadian Pacific Railway has experienced a similar curtailment of earnings, and its net earning figures for the first three quarters of the present year are given as \$14,660,241, compared with \$22,883,999 in the parallel period of 1930. Last year the C.P.R. was able to meet its fixed charges and pay its usual dividend of 10 per cent. on its common stock by utilising some \$20 millions drawn from its special account; but it was only left with a nominal surplus of \$133,186. If the proportionate decline visible in the first three quarters is maintained, the total railway earnings for the whole year will be about \$22 millions, and the amount available from the special account cannot fail to be lower. At present the fixed charges of the C.P.R. call for interest amounting to roughly \$19 millions, and while these will easily be covered the directors may decide that it is wise to conserve the financial resources of the company at the expense of dividends.

The fact remains that, as a result of the world crisis, both the great railway companies of Canada have been reduced to straits which two years ago would have been deemed unthinkable. The car-loading bulletins published weekly by the Dominion Bureau of Statistics show a decline of 20 per cent. from the level of 1930, and of nearly 30 per cent. from that of 1929. Moreover, there has been a similar falling off in passenger traffic, as only the wealthier classes can afford to journey any long distance, and the American tourist traffic, which has been very profitable to both railways, has naturally shrunk. But another contributing factor to the troubles of the railways has been the competition of motor buses and trucks, which are now estimated to be diverting to themselves at least a hundred million dollars' worth of business which the railways formerly had. In 1921 there were only some 31,000 motor vehicles engaged in public transportation work in Canada, but last year their number

had mounted to 165,000. The motor truck services are able to offer cheaper rates between many places than the railway companies, and newsprint mills in Ottawa, for example, are using them to ship their products to Toronto. The railways feel deeply aggrieved at this motor competition, but, except in isolated localities, they have taken no steps to secure control of it by buying out the motor transportation companies.

The shareholders and friends of the C.P.R. are disposed to lay all their company's troubles at the door of the Canadian National Railway. They allege that Sir Henry Thornton and his subordinates, knowing that they have no shareholders' dividends to consider and that they have the Federal Treasury behind them, have spent money extravagantly, and that they have compelled the C.P.R. to embark upon heavy expenditures in order to meet this unfair competition. But the supporters of the C.N.R. and the principle of public ownership are not prepared to let this indictment go by default. They contend that, on the evidence available, public ownership of railways in Canada has not been less efficient or more extravagant than private ownership. Admitting that the capital obligations of the Canadian National have grown at the average rate of \$60 millions per annum during the last three years, they point out that the capital structure of the C.P.R. has shown almost as great an expansion, having been swollen from \$808 millions at the end of 1928 to \$951 millions at the end of 1930. They contend that the capital expansion of both companies is an intelligible advancement, as the railway systems of a new country must of necessity be constantly-growing organisations. As for wanton competition, they can point to cases, particularly in the Prairie Provinces, where the C.P.R. has spent a great deal of money on branch lines which invaded territory which the C.N.R. already served effectively.

Public criticism, indeed, has been fastening upon the numerous cases of wasteful duplications of services which are before its eyes; there are some places between which half-empty trains are running on the two systems on almost parallel tracks at almost the same time. In response to Press protests about this wastage, the managements of the two railways have taken steps to eliminate a part of it; the Canadian National, for instance, has reduced its train mileage by about ten million miles per annum without inflicting any undue hardship upon its patrons, and the C.P.R. has taken similar steps. But the competitive rivalry of the two systems places a certain limitation upon efforts in this direction, and an adequate solution of the problem of duplication will have to await the labours of the Special Railway Commission which the Bennett Ministry has decided to appoint.

Notes of the Week.

The League and Manchuria.—Having completed her occupation of Manchuria last week by the capture of the third of the three provincial capitals, Tsitsihar, Japan began to think about building a golden—or gilded—bridge for the retreat, not of the Japanese forces into the Japanese Zone, but of the League Council into an acquiescence in the *de facto* situation. She proposed that the League should send out a commission of investigation—not to investigate the military operations of either party in Manchuria and not to supervise evacuation or intervene in negotiations between China and Japan, but to consider the Chinese Government's ability to protect foreign life and property and to ensure the observance of treaties. The commission was to conduct its investigations not only in Manchuria but throughout the territories of the Chinese Republic. Though this bridge is rather gimcrack and the gilding rather thin, the Council have made the best of it; and on Wednesday they published the text of a new draft resolution on this basis. In this text there is no mention of the Council's abortive resolution of October 24th—the resolution which was invalidated by the single vote of Japan—whereby Japan was

called upon to withdraw her troops by November 16th. The new text reaffirms the resolution of September 30th, to which both China and Japan were parties, in which Japan's intention to withdraw was put on record, but this without a time limit. In the new resolution the Japanese and Chinese Governments are invited to take all steps necessary to assure the execution of the resolution of September 30th, "so that the withdrawal of the Japanese troops within the railway zone—a point to which the Council attaches the utmost importance—may be effected as speedily as possible." Further, "the two parties undertake to give to the commanders of their respective forces the strictest orders to refrain from any initiative which may lead to further fighting and loss of life, and to take all measures necessary to avoid any further aggravation of the situation." The League Commission is provided for, with vague terms of reference, but with the caveat that its appointment and deliberations are not to prejudice in any way the engagement taken by the Japanese Government in regard to the withdrawal of Japanese troops within the railway zone. While this text was being painfully hammered out at Paris, the Council was hourly faced with the prospect of a fresh Japanese military offensive—this time against the remnant of the Manchurian Chinese Army which is concentrated at Chinchow, on the Mukden-Peking Railway, in which British capital is invested, half-way between Mukden and Tientsin. (Reference to the map which appears on an earlier page will show that Chinchow is a tempting base for an advance towards some of China's most important coal and ore deposits.) On Tuesday of this week the Japanese drove the Chinese disbanded soldiers and bandits who were still at large in the neighbourhood of Mukden out of the country east of the Liao River. This was thought to be a preparatory step for an advance on Chinchow; and the Japanese military authorities were reported to have vetoed the acceptance by the Japanese Government of any clause binding Japan to observe an armistice. Since then, however, the military authorities are reported, from Tokyo, to have yielded to the consideration that military operations along the Mukden-Peking Railway might damage British interests and evoke a British protest; and they have accordingly allowed the Japanese Government to accept the new resolution with a reservation in favour of military measures, in case of necessity, for protecting Japanese lives and property against bandits. This is good as far as it goes; for it averts, or at least defers, the danger of a Japanese advance in a new direction which might bring Tientsin and Peking, as well as Mukden and Kirin and Tsitsihar, under Japanese military occupation. Still more important, it is the first victory which the Civil Government of Japan has so far gained over the militarists. Thus the new resolution seems sure of acceptance by Japan. The Chinese attitude, as we write, has still to be declared.

The Statute of Westminster.—On Tuesday, the Statute of Westminster Bill passed the Committee stage and the third reading in the House of Commons, after a division, which the Government won by 350 to 50 votes. In this division, the dissentient votes were not those of the Labour Party—which had publicly accepted the Bill at an early stage—but of members who are officially the Government's supporters. The cross-division of opinion which the Bill has produced was in evidence during the debates on Tuesday and on the previous Friday. On the Friday, when Mr Thomas, in moving the second reading, met with a distinctly hostile reception, the leading opponent was Mr Churchill, who was supported by a Liberal, Mr Hopkin Morris, but opposed by Mr Churchill's own frequent ally, Mr Amery. The unfriendliness displayed towards the Bill seems to have been due to a cumulation of causes: a feeling that this was a boring subject which had been handled in a pedantic way; a traditional dislike for giving written legal form to political relations in which non-legal factors of sentiment and evolution play an essential part; a certain soreness at having the virtual sovereign independence of the Dominions rubbed in, as it were, grain by grain; but perhaps above all a definite and concrete fear

(to which we alluded last week) that the Irish Free State might take advantage of the terms of the Statute in order to annul unilaterally certain of the safeguards which are embodied in the Anglo-Irish Agreement of 1922. These considerations, and the temper induced by them, governed the debate on the 20th. The final debate on the 24th began in a less hostile atmosphere, and the corner was turned when Mr Thomas read to the House a letter, dated November 21st, from Mr Cosgrave to the Prime Minister, putting on record the Irish Government's view that the Agreement of 1922 could be altered only by mutual consent, that good relations must rest upon good faith and upon a mutual belief in one another's good faith, between the two parties, and that any attempt to insist upon good faith by statute would undermine the Irish people's belief in the sanctity of the Agreement. This letter did not move Mr Churchill, but it shook Lord Hugh Cecil and mollified Sir Austen Chamberlain. A rejection of the Bill by the Parliament at Westminster after the passage of the corresponding Bills, according to programme, by the Dominion Parliaments, would have created a serious embarrassment for all States Members of the Commonwealth, whereas the Bill, now passed, merely puts into legal form certain developments which were implicit in the Balfour Report of 1926.

The Government and the Farmer.—Though the statement of the Cabinet's agricultural policy, made by Sir John Gilmour on Thursday evening, raises almost as many questions as it answers, one thing at least is clear: the Government, yielding once more to pressure from their Protectionist cohorts, have decided to plunge into dangerous and ill-considered schemes for interfering with the normal mechanism of the country's food supply. Their first proposal is to take powers to restrict by a tariff, of so far unspecified dimensions, the importation of non-essential agricultural and horticultural products which anticipate the home crops. Of this effort of statesmanship it is sufficient to say that if the need to "save the pound" is pleaded as justification, the means are derisory, while, though luxury duties on Italian carnations and French asparagus are economically perhaps less objectionable than many other forms of tariff, the farmers' friends at Westminster are hardly likely to be content that the fruit and vegetable grower should be protected while the raising of pigs and poultry is left unsheltered. Once more we are at the beginning of a slippery slope. The Government's second proposal to apply the principle of the quota to home produced wheat of milling quality is even more fatuous as a remedy for the country's troubles. There is apparently to be no guaranteed price and no State subsidy for wheat growers and, until the figure is announced, it is impossible to estimate what advantage in the form of artificially inflated prices the farmer may expect to derive at the consumer's expense. If the experience in other countries be a guide, pressure continually to raise the quota, and with it the cost of bread, will be insistent and, unless the Government proposes to control wheat prices, a successful ring on the part of British wheat growers, taking advantage of this partial monopoly now conferred statutorily upon them, might send British wheat prices soaring. What will be the attitude of the growers of barley and of oats? What will be the attitude of the millers producing flour in competition with foreign mills? And what, above all, will be the attitude of every agriculturalist who finds that the cost of the wheat and its by-products which he uses for poultry feed, etc., has been raised as a result of the Conservative Party's curious obsession that millable wheat, whose value is some 3 per cent. of our total agricultural output, must secure at all costs a higher protected price?

Two German Mistakes.—Recent news from Germany records two legal decisions which, from every point of view, are deplorable and disquieting. A Polish subject has been sentenced to six months' imprisonment for "treason," on the ground that he "spied" upon the great Stahlhelm demonstration of May 31st last; and the

editor of a German Radical newspaper has been sentenced to 18 months' imprisonment on the ground that, in the course of an article on civil aviation, he revealed official secrets, whose disclosure endangered national security. It is quite inevitable that enemies or critics of Germany will read serious interpretations into these two sentences. They will, in the first case, infer that, despite all the official affirmations to the contrary, the Stahlhelm organisation is a serious national military force, whose secrets must in the interest of the German nation be carefully guarded. In the second case, they will leap to the conclusion that the German Government, debarred by treaties from the possession of a military air force, is surreptitiously building up such a force under the pretence of encouraging civil aviation, and is prepared ruthlessly to punish anyone who discloses the fact. For ourselves, we are inclined to hope that innocuous explanations of both episodes will be forthcoming. It may be that in each case the sentences were due to other factors not reported in the Press; or it may be that local magistrates have been guilty of serious mistakes. If that is the case, we trust that such explanations will speedily be issued from an authoritative source. For the circumstances are such as to make it highly desirable for Germany to walk delicately in the eyes of the world. Vital conferences are pending between Germany and her creditors, at which the presence of goodwill and the absence of suspicion are the conditions of sound and permanent solution. Pending, too, is the Disarmament Conference, whose difficulties are already so formidable that they cannot afford to be increased by indiscretions on the part of Germany or any other nation. The German Government may then urge the difficulty of restraining their military hotheads in her disarmed condition surrounded by strong military forces. The plea will receive the greater sympathy if the German Government offers explanations which will allay the suspicions not unnaturally aroused by sentences like these. This is a moment when appeasement and not irritation of international susceptibilities is essential for Germany.

The Burma Conference.—On Friday, November 27th, the Burma Round Table Conference was formally opened in London by the Prince of Wales. The genesis of the Burma Round Table Conference goes back to the first session of the India Round Table Conference last year, when the separation of Burma from India was recommended by a sub-committee and was "noted" (or in other words virtually accepted) by the Conference itself. As a logical consequence, the second session of the Indian Conference, unlike the first, has not been attended by delegates from Burma; and a separate Conference is being held, on a proportionately smaller scale, to carry Burma along the road to self-government on her own account. Though the Burma Conference has opened just when the Indian Conference is on the point of closing, the members of the Burma Conference have arrived in London in time for an unofficial exchange of views with their Indian confrères. Compared to the Indian problem, the Burmese problem seems simple. Here is a country of relatively modest size and with a relatively small and homogeneous population. There is no religious diversity, no caste, no division between British territory and native States in treaty relations with the Crown. There seems no reason why the Burmans should not find their way to self-government as quickly and as successfully as their neighbours and co-religionists, the Siamese, who, after the Japanese, have solved the problem of "Westernisation" more effectively than any other people in Asia. In Burma, the most difficult point to settle will be the status and representation of the important foreign communities in the country who include not only Europeans but Indians and Chinese. Indeed, in Burma, the Indians find themselves in much the same position as the Europeans in India itself. Side by side with the Europeans, they constitute an alien trading community in Burma which will be anxious to be safeguarded in the pursuit of its lawful commercial activities. These, however, are minor problems. On the whole, the course of the Burma Round Table Conference may be expected to run smooth.

The Outlawry of Ex-King Alfonso.—The indictment against ex-King Alfonso came up before the Constituent Assembly at Madrid on the night of November 19th, and, after a debate in the small hours, the Assembly, at 4 a.m. next day, passed a resolution in which the late Sovereign of Spain was declared guilty of high treason. The resolution goes on to place Don Alfonso's person outside the pale of the law, to confiscate all his property in Spain, and to authorise any Spanish citizen to lay hands on him should he enter the national territory. In the debate, the King was defended by Count Romanones, and attacked, with the most vigour and effect, by the late Prime Minister of the Republican Government, Señor Alcala de Zamora, who was supported by his successor, Señor Azana. The debate brought prominently to light the deep resentment which has been smouldering against Don Alfonso ever since the great military disaster at Annual, in the Spanish Zone in Morocco, in 1921. At Annual, 'Abd-el-Karim won the leadership of the Rifis, while Alfonso forfeited the affections of the Spaniards. Rightly or wrongly, it has been widely believed in Spain that the King was responsible for the disaster through having intervened to secure the appointment of his personal favourites to military commands which they were totally incompetent to hold. It is also believed—and this is really the gravamen of the indictment—that thereafter the King deliberately brought on the dictatorship of the Marquess de Estella in order to prevent a public inquiry into the Annual disaster, in which his own reputation would have been involved. If this is really proved, it is serious enough. At the same time, it is perhaps more to the point that all this is now past history. The King has gone; and since his departure from Spain he has done nothing to embarrass the succeeding regime. In the circumstances, the Constituent Assembly's act has the appearance of being vindictive and more than the mere appearance of being unstatesmanlike. This act, if it profits anybody, will profit the King in exile and not the Republican Government in office; for exiles are innocuous in so far as they are left unmolested. It should be the cue of their successors to be sedulous in preventing them from being uncomfortable, and their own cue to insist upon becoming martyrs. In this case, the Constituent Assembly has played Alfonso's game for him—assuming that it is a game which he really wishes to play, though of this his conduct abroad, which has been thoroughly dignified and "correct," has so far given no indication.

Sterling and Gold Prices.—The past fortnight has seen a striking reversal of the price trend which characterised the first half of November. We show below, in the first instance, the figures of the *Economist* index based on the sterling price of fifty-eight commodities:—

"ECONOMIST" INDEX.
(1927 = 100.)

	Sept. 18, 1931.	Nov. 11, 1931.	Nov. 25, 1931.
Cereals and meat	64.5	71.9	70.4
Other foods	62.2	66.6	65.4
Textiles	43.7	54.0	53.7
Minerals	67.4	75.4	74.5
Miscellaneous	65.8	66.4	66.6
Complete index	60.4	66.6	65.9
1913 = 100	83.1	91.7	90.7
1924 = 100	52.2	57.6	57.0

The net result of the movement between November 11th and November 25th has been a fall of approximately 1 per cent. This movement contrasts with a much greater decline in our sterling index of primary prices and in our index of gold prices. The figures of these are given below, together with the full index numbers of four "gold" countries abstracted from the *Financial Times*:—

September 18th = 100

Date.	Economist Indices.			Irving Fisher, U.S.A.	Statistique Générale, France.	Milan Chamber of Commerce, Italy.	Statistik Reich, Germany.
	Complete Index (sterling).	Primary Products (sterling).	Gold Prices.				
Sept. 30th...	107.8	112.0	94.7	98.7	96.9	98.8	98.9
Oct. 14th...	108.3	114.3	95.7	98.9	95.9	99.7	98.0
Oct. 28th...	108.4	114.4	101.4	99.3	95.6	99.9	98.7
Nov. 11th...	110.3	119.3	103.5	99.3	95.0	99.3	98.3
Nov. 25th...	109.1	114.8	98.0	...	...	...	...

Comparing our three indices, it will be seen that gold prices (mainly of primary commodities) fell by 5.3 per cent. as compared with a fall of 3.8 per cent. in primary products and with a fall, as already stated, of 1 per cent. in the case of the complete *Economist* index. Between November 11th and November 25th the depreciation of sterling amounted to 3.8 per cent.

The Australian Crisis.—The Scullin administration, defeated on a trivial matter in the House of Representatives, has fallen in much the same way as the late Lord Rosebery's Government did in 1895. In both cases the Government had for long been insecure, and in both cases the final defeat came on a matter of no importance. Here, however, the parallel ends, and a new one begins; for, like Mr MacDonald, Mr Scullin has been in recent months constrained by the pressure of financial events to abandon pure Labour policy and to co-operate with the Opposition in carrying through the programme of retrenchment and debt conversion commonly known as the Premier's Rehabilitation Plan. The Plan has now been successfully launched, but in the course of the vicissitudes of the past year Mr Scullin became involved in a breach first with his more moderate colleagues, Mr Lyons and Mr Fenton, and, secondly, with the Labour extremists, typically represented by Mr. Lang, the Premier of New South Wales. It was the later breach that was responsible for his downfall. An immediate general election is to take place, but the Opposition has accepted the challenge thrown out by Mr Scullin during the debate which ended in his defeat, and so the parallel between him and Mr MacDonald comes equally to an end. Mr Scullin is not to assume the leadership of a National Government, and caught, as he is, between the Opposition (now led by Mr Lyons) and his own Left Wing, his prospects of victory are doubtful. Much clearly hangs upon the recent improvement in Australia's economic position. This was set out very clearly in an address delivered opportunely enough this week by Mr Andrew Williamson to the shareholders of the English Scottish and Australian Bank. Mr Williamson began with the trade balance; and after eliminating gold shipments and reducing Australian pounds to sterling, he showed that an import surplus of £33.4 millions in 1929-30 has been turned into an export surplus of £15.6 millions in 1930-31. Since the close of the period 1930-31, on June 30th, wool prices have improved, and current stocks are not excessive. Wheat shipments were relatively heavy in 1930-31, but prices were deplorable, though Mr Williamson added that Australia's export surplus has been successfully cleared and that the present outlook is brighter, both as regards prices and harvest prospects. Butter exports are steadily growing, and meat shipments are well maintained. Elsewhere in his address Mr Williamson emphasised the need for a reduction in costs of production, and condemned the rigidity of wages and the system of Arbitration and Conciliation Courts which was a leading cause of that rigidity. It is on questions such as these that the forthcoming election may well be fought, for greater elasticity must be given to Australia's economic structure if the work of recuperation so well begun is to be successfully completed.

Cotton Trade Deadlock.—Our Manchester correspondent writes:—There are indications of labour matters in the Lancashire cotton industry becoming more acute. It is quite possible that, before the end of the week, action will be taken by the employers which will cause a crisis. For the fourth time this year a deadlock has been reached in the negotiations on the more looms questions between the Cotton Spinners' and Manufacturers' Association and the Operative Weavers' Amalgamation. On Tuesday last there was a further joint conference in Manchester to consider the latest proposals of the workpeople. Mr John Grey, the chairman of the employers, at the close, said that the first two clauses were fundamental and mean a minimum wage of 50s. a week on plain cloths. The trade union officials were informed that the employers could not accept the principle involved or any modification of it. In the circumstances the negotiations came to an end, and the central committees of the Cotton Spinners' and Manufacturers' Association and the Operative Weavers' Amalgamation are to consider the situation on Friday this week. Manufacturers throughout Lancashire are becoming very tired of these fruitless discussions, and in their opinion the leaders of the workpeople are determined to put every obstacle in the way of the establishment of the more looms system. Of course, a few firms in Lancashire outside the Association are working the system satisfactorily in spite of the opposition of the trade union. Conferences continue to be held between the Master Spinners' Federation and the operatives in that branch of the industry with regard to production costs, and progress is very slow. This section of the employers have decided to press for a return to the working week of 55½ hours instead of 48 as at present. The Federation has asked the Cotton Spinners' and Manufacturers' Association to join them in this movement, and the matter is to be considered this Friday. In view of the failure of the negotiations relating to the more looms question there is a possibility of united action by the whole of the cotton employers of Lancashire on the hours question. A serious position of affairs, therefore, may arise at an early date, and, if this claim is pressed by the employers, it may be taken for granted that the trade unions will offer strong resistance.

The Silver Question.—Mr E. L. Franklin, one of the signatories of the International Chamber of Commerce report on the silver question, explained the motives behind the report in a speech this week to the American Chamber of Commerce in London. He began by emphasising that bimetalism was neither practicable nor necessary, for what the world was suffering from was not a shortage, but a maldistribution of its monetary metallic reserves. To add silver to gold as a basis for currency would not cure maldistribution, and, apart from this, at a time when the pound was not even on a single metal standard it was idle to talk of bimetalism. In any case, bimetalism, though it would impose a lower limit to the price of silver, would not prevent a rise so long as China was on a silver basis and India remained a hoarding nation. Mr Franklin next proceeded to consider the causes of the recent catastrophic fall in silver prices. The causes were not the same as those of the general fall in commodity prices, for production had not increased, nor had demand fallen away, but was still in excess of production. In the past there had been the abnormal supplies of silver thrown upon the market as the result of demonetisation, but these had practically come to an end and the main menace to-day was the 500,000,000 ounces held in the form of silver rupees in the hands of the Indian Government. It was to meet this potential menace that the first recommendation of the International Chamber's report was that a sales agreement should be reached between silver producers and the Government of India, and he argued that this proposal was made immediately practicable by the fact that 70 per cent. of the world's output was controlled and marketed by four American corporations. As regards the price to be fixed, Mr. Franklin held that it was premature to suggest a definite figure, but he said that if too high a price were fixed, Chinese export trade and purchasing power would be crippled, and Indian purchases would be checked. From the standpoint of China, and those trading with her, the

essential thing was to promote a stable price so as to put an end to the recent wide and unsettling fluctuations in the Chinese exchange. Mr Franklin concluded with a reference to the hope expressed in the report that some way could be invented of preventing the tarnishing of silver. The household work involved in the continual cleaning and polishing of silver was, he was sure, a real deterrent to the purchasing of real silver articles by the bulk of the population. Were this problem solved, there would be an immediate and wide market for mass-produced silver goods, and this would immensely increase the industrial demand for the metal.

Humber Coal Exports.—The serious decline in the coal exports from the Humber ports, writes a correspondent, is commented upon in the annual report of the Humber Coal Exporters' Association. For the first nine months of this year they totalled only 3,072,730 tons, compared with 4,522,914 in the corresponding period last year and 6,662,515 tons from January to September, 1913. While the exports of the country as a whole were 25 per cent. down this year compared with 1930, those from the Humber ports were less by 35 per cent. The Association attributes the decline to several factors, including high cost of production, excessive railway and port charges, competition from Poland, increased production and greater dependence on national supplies in other countries, import restrictions, and uncertainty following upon the introduction of the Coal Mines Act. Since the war there has been a marked change in the destination of coal from the Humber ports. Before 1914 80 per cent. of the coal went to the following countries, in order of importance:—Russia, Germany, Denmark and Norway. The loss of the Russian market and the competition of Poland and other countries has caused the order to be changed as follows:—France, Germany, Belgium, Holland and South America. The Humber Exporters' Association takes the view that the marketing schemes as at present constituted under the Coal Mines Act must hinder any revival of the export trade. While being sceptical whether any scheme of international partition of markets could be satisfactory to this country, exporters are prepared to lend whatever assistance lies in their power if such an expedient should be decided upon.

British Production.—The physical volume of production in the United Kingdom in the third quarter of 1931, as estimated by the Board of Trade, was 2.5 per cent. lower than in the second quarter of the current year, and 9.9 per cent. below that of the corresponding quarter of a year ago. The following table shows the comparative figures for the respective groups:—

INDEX OF PRODUCTION (1924=100).					
Group.	Year 1929.	Year 1930.	Sept. Quarter, 1930.	June Quarter, 1931.	Sept. Quarter, 1931.
1. Mines and quarries	96.8	91.3	84.3	79.7	75.7
2. Iron and steel and manufactures thereof	114.0	88.8	80.0	62.9	61.0
3. Non-ferrous metals	120.5	119.1	128.6	120.9	96.7
4. Engineering and shipbuilding	121.0	116.6	112.2	99.7	91.3
5. Textiles	98.5	79.5	71.4	75.0	70.3
6. Chemical and allied trades	115.8	102.2	105.5	96.1	91.1
7. Paper and printing	+	+	+	+	+
8. Leather and boots and shoes	98.5	101.4	98.3	99.1	95.4
9. Wood, drink and tobacco	106.0	104.9	108.3	100.4	108.6
10. Gas and electricity	135.8	138.7	+	+	+
Total of manufacturing industries (2-10)*	115.5	106.3	103.4	95.0	93.2
Total of all groups (1-10)*	111.8	103.3	99.5	91.9	89.6

* Including also various industries not specified above.
† Adequate information in respect of the paper and printing trades has not up to the present been available. The particulars received have been included in the general index.

† No information is available as to the quantities of gas made in each quarter. The available data for electricity have been included in the general index.
The fall of about 19 per cent., as compared with a year ago, in the index for engineering and shipbuilding is ascribed mainly to the depression in shipbuilding and marine engineering. The deterioration in the tinplate and electrical manufacturing industries was largely responsible for the decrease of 24 per cent. in the figure for non-ferrous metals. In the textile group an expansion of activity in the cotton, linen and silk trades was offset by a further

contraction in the output of woollen and worsted materials, jute manufactures and hosiery. Since the end of September a slight revival has become noticeable, particularly in the textile industries, and the latest available information suggests that the index for the December quarter may record a small increase in the volume of industrial activity.

The Russian Grain Situation.—A survey in the *Economist* of May 30th last indicated that the prospects for the satisfactory fulfilment of the Russian 1931 grain plan were much less roseate than Soviet official statements suggested, attention being particularly directed to a probable short-fall in the spring-sown crops. This view, writes a correspondent, appears to have been borne out by the event. Russian wheat shipments this season reached a much earlier and appreciably lower peak than last year, and in the past three weeks they have totalled only 801,000 quarters, against 2,367,000 quarters in the same three weeks of last year. The figures of "Collections," i.e., quantities of grain delivered to the official grain-receiving organisations, show the following percentages of the amounts officially planned for each month:—

	Per cent.
July	114
August	97
September	69
October	52

The progressive short-fall reflects the switching-over of the collections from a basis of good winter crops (and possibly heavy farm "carry-overs" from the good 1930 crops) in July and August, to a basis of poor spring crops from September 1st onwards. Spring crops are much more important than winter crops in Russia, making September and October more important than July and August in the matter of collections; normally the movement in September alone far exceeds July and August combined, and was planned so to do this year. This enhances the significance of the drop since September 1st, which continues to be a subject of bitter complaint in the Soviet official Press. The autumn grain-sowing plan called for an increase of 6 million acres over last year; but, with the sowing period practically finished, this plan appears to be petering out badly:—

AUTUMN SOWINGS.
(Winter Wheat and Rye.)

Period.	1930. Acres.	1931. Acres.
Sown by September 10th	35,500,000	46,500,000
September 11th-15th	10,200,000	10,100,000
September 16th-20th	8,300,000	7,100,000
September 21st-25th	8,500,000	5,200,000
September 26th-30th	6,700,000	4,500,000
October 1st-5th	3,800,000	3,200,000
October 6th-10th	5,100,000	3,200,000
October 11th-15th	4,000,000	2,700,000
October 16th-20th	3,600,000	3,500,000
October 21st-25th	3,500,000	1,600,000
October 26th-31st	2,900,000	2,000,000
November 1st-5th	1,800,000	2,200,000
November 6th-10th	2,900,000	600,000

Total sown by November 10th

1930	96,300,000
1931	92,400,000

On September 10th autumn sowings stood 11½ million acres ahead of last year, but have since fallen steadily short, owing, apparently, to weather and technical difficulties. On November 10th acreage fell 3,900,000 acres short of last year, and it appears physically impossible for this to be made up, considering the date; about 96 per cent. of the total had been sown by this date last year, and even that was considered protracted. The final return may well show more than 4 million acres short of last year instead of the planned 6 million increase.

A Scotch Banker on Stabilisation.—At the conclusion of his annual address to the shareholders of the Royal Bank of Scotland, the Duke of Buccleuch observed that "the stabilisation of the pound, however desirable, must wait, as we cannot afford to take action until we are absolutely assured that we can maintain the new basis as a definite and permanent arrangement." This observation, representing as it does the first statement on this important matter to be made by a bank chairman to his

shareholders, should help to dispel any idea that the banking world is anxious to rush the country into a premature restoration of the gold standard at an impracticable level of exchange. While he did not disguise the seriousness of our position, which called for much hard work and personal effort, the Royal Bank's chairman claimed that the country had secured, as a result of the election, a return of confidence and that sense of security which is essential to all trading enterprise, and that the suspension of the gold standard, despite its limitations, had had some stimulating effect upon the export trade. As regards the Royal Bank's own affairs, he contended that the contraction in deposits was quite moderate in the circumstances, and that the margin of banking profit had not been unsatisfactory. Full provision had been made for bad and doubtful debts, but these were of no more than reasonable dimensions. The bank had also had to write down its holdings of British Government stocks to conform to the low prices current on October 10th. This, though an important element in the bank's accounts, had been easily achieved out of inner reserves, and as short-dated Government bonds had been written down equally with longer-dated securities, there was room for considerable capital appreciation. Favourable reports could be made of the progress of the bank's recent acquisitions, including its Bond Street branch and the old Western Branch of the Bank of England; Williams Deacon's Bank had added its quota to the year's profits; and the two boards were working together most harmoniously, with every promise of the connection proving most beneficial to both institutions.

American Cotton Crop.—The United States Department of Commerce has announced that the amount of cotton ginned so far this season up to November 13th amounted to 14,210,000 bales. This total, writes our Manchester correspondent, was larger than expected, and compares with 12,130,000 bales a fortnight earlier and 11,963,000 bales same time last year. There is now every likelihood of the crop being over 17,000,000 bales, and, since there is a carry-over from last season of 9,000,000 bales, supplies are over-abundant. The recent reports, however, of a larger output have had practically no effect upon prices. It is significant that, although American cotton in Liverpool is now selling at round 4½d. a lb., the price in the Southern States of America is only about 5½ cents. According to the Annual Report of the Federal Farm Relief Board, the holding of that organisation is 1,300,000 bales, the cost being 16.3 cents a lb. The Board have promised to retain this cotton until the end of July next year. A strong movement is now going on in the United States for a big cut in the acreage for next season, and an attempt is being made to obtain a reduction in the area under cultivation of 50 per cent. The different organisations have now made arrangements to hold over 6,000,000 bales for a year at least.

Canadian Anti-Dumping Duties.—The Bennett Ministry finally yielded to the barrage of criticism about its dumping duties, writes our Ottawa correspondent. It was faced by widespread protests from consuming and importing interests, and apart from the protests of Liberal papers like the *Manitoba Free Press*, the outspoken criticism directed against the duties by Conservative papers like the *Ottawa Journal* and the *Calgary Herald* indicated a preponderance of public sentiment against them, largely upon the ground that they were an unfair blow, dealt at the bidding of selfish manufacturers, against Great Britain, Canada's best customer, at a time when she was struggling with unprecedented financial and other difficulties. The avowed aim of the latest Order-in-Council on the subject is to put British goods in the position that prevailed before Britain abandoned the gold standard. By the new regulation, which will be effective until December 31st, the par value of the pound sterling for special duty purposes is "pegged" at \$4.40, and the dumping duty will be the difference between the average value of the pound and \$4.40. The Customs Department will proclaim an average

value for the pound on the 1st and 16th days of each month. Importing interests consider this part of the new regulation a serious drawback, as the value of the pound for customs purposes may be changed every two weeks, and in many cases at least two weeks must elapse between the time that goods are shipped from a British factory and the time that they are cleared at the Canadian customs house. However, the change is greatly welcomed by Canadian importers, as under the original regulations trade with Britain had become a sheer gamble. The dumping duties will continue to apply only to goods of a class or kind produced in Canada; and other British goods, being exempt from the dumping duties, will enter on payment of the ordinary duties calculated on the basis of the pound at par.

Conditions in Norway.—The depreciation of the krone continues to form the chief subject of interest in financial circles here, writes our Trondheim correspondent. During the latter part of last month the quotations for sterling oscillated around 17.85, which corresponded fairly well to the international value of the krone, but during the current month the quotations for sterling have been at a considerable discount in comparison with quotations for kroner in London. This was especially conspicuous last week, when sterling was quoted here officially at 18.15, while Norwegian kroner in London were valued as low as 18.625, which was only a nominal quotation. The offer of sterling and other foreign exchanges on the domestic market could not meet the existing demand, and heavy obligations were thus incurred by the Norges Bank, to whom buyers of foreign exchange had to apply. This development is, perhaps, a reflection of the conditions in Denmark, and more especially in Sweden. The domestic value of the Norwegian krone has not hitherto been influenced very much by conditions introduced through the suspension of the gold standard. This is also clearly borne out by the official wholesale index for November 15th, which, at 119, has been unchanged since October 15th. An advisory council of bankers and representatives of industry and trade was formed some time ago in order to draw up the lines to be followed with regard to our future exchange policy. It has not been considered necessary to establish, as in Denmark, a central exchange control. The plan is to establish, on a free basis, an intimate co-operation between importers, exporters and bankers, imports to be restricted to a certain percentage of the imports during 1930. The consequences of the British tariff policy have not yet made themselves directly felt, but there is no denying that its existence will create new difficulties for our exporters. The duty of 50 per cent. which has already been introduced on various kinds of British imports includes certain Norwegian paper, such as kraft and grease-proof paper. It is, therefore, likely that the influx of fresh orders from British buyers of Norwegian paper will be greatly reduced, but, as the tariff has only been made valid for six months, Norwegian exporters are hoping for an improvement at the expiration of this period.

The Redistribution of Incomes.—Professor John Hilton, in his inaugural lecture as Professor of Industrial Relations in the University of Cambridge, made some suggestive observations on wage and interest problems consequent on our departure from the gold standard. Owing to the recent fall in prices, he said, real wages and real interest had been higher than industry could bear, and if the community attempted to stabilise them at that level, industry would languish. As, therefore, the average level of wage rates had remained almost unmoved while prices fell, so it must be kept unmoved while they rose again. The two million workers whose wages were governed by cost-of-living sliding scales had gained nothing by the fall in prices, and would, if their employers stood by their agreements, lose nothing by the rise. Employees in the export industries, who had suffered particularly severe reductions in wages, would, he hoped, secure increases greater than the increases in the cost of living; but if the large body of "sheltered" employees, whose wages have been to a great extent maintained during the decline in prices,

were to use their economic strength to maintain these advantages, the share of wages in the national income would still be out of proportion and economic recovery would be prevented. The same applied to the salary earner and the recipient of interest, both of whom must, if the balance was to be restored, lose the increment with which the price decline of the last two years had presented them. Professor Hilton pointed out that the only way of settling the distribution of the product of industry is by contest, but that the code of rules governing this contest provides that all the facts be disclosed, that the contest for the thing made should not be allowed to interrupt the making of it, and that those contestants who consent to a referee should abide by his decision.

Banque Belge pour l'Etranger.—The report and balance sheet of this institution is this year of particular interest, owing to the bank's ramifications all over the world. It should be noted, however, that the period covered ended on June 30th last, so that it takes no account of the recent momentous developments in world financial history. Even so, the directors in their report bear testimony to the intensity of the world crisis, and in these circumstances the accounts of the bank, summarised below, show the success with which it is weathering the storm:—

	Year ended June 30,		
	1929.	1930.	1931.
	Frs. thou.	Frs. thou.	Frs. thou.
Profits	30,595	30,855	23,099
Dividend (free of Belgian Coupons tax)	10%	10%	8%
Capital:—			
Subscribed	200,000	200,000	200,000
Paid up	158,424	158,424	158,424
Reserves	110,000	120,000	130,000
Creditors	4,298,808	3,770,511	3,861,760
Acceptances	803,821	730,027	672,000
Note issue in China	11,212	6,432	4,297
Debtors	2,891,769	2,392,027	1,625,446
Bills receivable	667,345	935,752	1,382,379
Investments and financial participations	84,797	216,689	293,542
Shares in allied and affiliated banks	171,255	177,183	142,963
Total of balance sheet	5,458,936	4,820,749	4,855,675

The reduction in the dividend is no more than common prudence, and the contraction in profits is amply explained by the reactions of the world trade depression. Further evidence of this is found in the big shrinkage in debtors (i.e., advances), but the expansion in bills suggests that this shrinkage may be partly due to accidental causes, variations in the dates of harvests and so on; for at one stage a crop will be financed by an advance and at another stage by a bill. Deposits are well maintained, and investments and participations are not excessive. The contraction in acceptances is shared in by most banks all over the world.

Prices — Foreign Trade — Silver and Copper — Banking — Railroad Rates.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 17.

MODERATE cheerfulness over the outlook persists in spite of a more sober tone in commodity and security markets. On the whole recent gains have been fairly well maintained, but markets have had little to sustain them in current operations. The sharp movements in wheat, rye, and some other grains and in mid-Continent crude oil prices, along with the speculative fireworks in silver, have obscured other price movements. Wholesale prices for October, according to the Bureau of Labour Statistics, dropped a little more than 1 per cent. Declines were noted in foods, hides, leather, textiles, and farm products. The October index of 68.4 showed a drop of 17 per

cent. from a year ago. Raw materials as a whole were lower. Prices by groups compare as follows:—

	October, 1930	September, 1931	October, 1931
All commodities	82.6	69.1	68.4
Farm products	82.6	60.5	58.8
Foods	88.6	72.9	72.6
Hides and leather products	96.5	84.8	82.2
Textile products	73.8	62.9	61.5
Fuel and lighting materials	75.1	63.3	63.4
Metals and metal products	90.4	87.2	86.5
Building materials	85.8	74.9	74.3
Chemicals and drugs	86.0	74.8	74.1
House furnishing goods	95.3	84.7	83.2
Miscellaneous	68.8	58.4	59.0
Raw materials	80.0	62.7	61.5
Semi-manufactured articles	75.5	66.3	64.7
Finished products	85.6	74.0	73.7
Non-agricultural commodities ..	82.8	71.7	71.2
All commodities less farm products and foods	81.5	72.0	71.4

Foreign trade improved moderately last month, thanks largely to an increased movement of cotton, which accounted for over half the \$25 millions rise in exports. Imports were slightly under the September totals, but exports, at \$205 millions, were \$35 millions more than imports, compared with a favourable balance of only \$10 millions in the previous month and with a small adverse balance in August. However, the rise was less than seasonal, and in dollar value exports were only about two-thirds those for October of last year. For the ten months the country's exports were \$2,047,000,000, leaving an excess over imports of approximately \$250,000,000.

The gold movement has slowed down, and there is no indication of a relapse into a state of apprehension over the banking position. The National Credit Corporation, the bank pool formed to thaw out frozen bank investments, after two weeks of operation announces that requests for money and loans actually made have been so small in proportion to the authorised capitalisation of \$1,000 millions that it has decided to continue to borrow from banks pending accumulation of enough loans to make it worth while to sell debentures to the subscribing institutions. Originally it was thought that an early call for 10 per cent., or \$40 millions of the subscription, would be made. Wall Street estimates actual loans at between 10 and 15 millions. It is clear now that the scheme is unlikely to bring on much, if any, credit inflation, and that it has performed its principal function of quieting nerves, relieving the bond market from bank investment liquidation and stopping currency hoarding. Bank failures have, as a natural consequence, diminished greatly.

The speculation in silver futures on the Metal Exchange has had a shock in the recent sharp decline. The coincidence of improvement in other markets with the recent rise in silver has stimulated efforts to promote schemes for a world-wide conference on silver and for bimetalism. These ideas are given no encouragement in most quarters in Wall Street, where the feeling against bimetalism runs very strong. Much surprise is felt here at the support given to that side of the case in Great Britain.

The Comptroller of the Currency has published statistics on the condition of national banks as of September 29th. Since, in the three months from the previous statement, 147 banks dropped out of the system and, in the year, 539 disappeared, through closing or merger, the figures make it difficult to draw comparisons. However, the drop of \$2,600 millions in resources compared with a year ago and of \$1,900 millions compared with June 30th last is less important than appears on the surface, owing to the diminished velocity of bank deposits, which reduced the floating items in the balance sheets. Since the end of June the national banks added \$33 millions to their Government bond holdings, and \$472 millions on the year. Other investments have dropped \$38.5 millions in the quarter, but have risen \$73 millions on the year. Presumably investments are carried at cost, since the Comptroller granted the banks this privilege with respect to high-grade bonds, so that the figures do not show the losses taken on investments owing to the sharp decline in prices. It is also impossible to estimate the great amount of shifting from second-grade into first-grade bonds in recent months which is known to have taken place. It is

likewise, impossible to draw conclusions on bank earnings, owing to the reduction in figures imposed by the elimination of so many banks.

Deflation in bank loans and investments has not yet ceased. For the week of November 11th the reporting member banks of the Federal Reserve System (city banks with approximately 40 per cent. of the country's banking resources) show a drop of \$19 millions in security loans and of \$70 millions in other loans, largely bill holdings, the sale of which was profitable on recent rise in rates. Investments were reduced \$25 millions. Brokers' loans have continued their decline. This week the market changed over to the new rule of Clearing House member banks not to lend money in the Stock Exchange pool for account of individuals and corporations. Transfer of part of the \$160 millions so employed to bank deposits, requiring about \$20 millions increase in bank reserves, had some effect on money, but the mild firming in rates was due mainly to the daily maturing of bills held in the Federal Reserve Bank's portfolio. Fundamentally, money conditions are quite easy.

The local banking group handling German credits is expecting an early communication from Germany on proposals for credit renewal at expiration of the standstill agreement. The feeling is that at least 20 per cent. of the credits should be liquidated, but there is, of necessity, willingness to negotiate time extension for the remainder.

A colourless statement is expected to issue from Washington, following the Hoover-Grandi conferences. Washington is now mainly concerned with ways of cutting into the \$2,000 millions deficit which is impending for the current fiscal year. President Hoover has swung round to a higher tax schedule, as have influential republican party leaders. Washington appreciates the impossibility of making good the entire deficit with fresh borrowing. Increase in taxes on the higher incomes, luxury levies, larger estate and gift taxes are fairly certain, with later, no doubt, an extension of the incidence of taxation to smaller incomes.

Railroad executives have worked out a tentative plan for acceptance of the Interstate Commerce Commission's proposal of a freight rate increase. Instead of payment of increased revenues into a pool for distribution to roads failing to cover interest charges as the Commission suggested, the roads proposed merely to form a pool to lend money to needy roads. Meanwhile active negotiations are continuing with heads of the railway labour unions, and there is a moderate prospect of an agreement on a wage reduction of perhaps 10 per cent.

FRANCE.

Public Works — British Duties — Revenue.

(FROM OUR CORRESPONDENT.)

PARIS, November 25.

THE Chamber has resumed work with the customary deluge of eloquence in the form of interpellations on a long list of subjects, and these have rendered difficult methodical work of a practical character. Nevertheless, good progress has been made with the Bill for the application of a further portion of the plan for the improvement of the national equipment. According to the report drawn up by M. Lamoureux, the Commission which has considered the Bill has slightly increased the total credits asked for, and has rejected the suggestion that the necessary 3,000,000,000 francs required to finance the State's portion of the programme shall be raised by loan. The Commission has left the Chamber to choose between the four other methods suggested by the Government: mobilisation of the annuities due from French industry in payment for supplies obtained under the system of German reparation payments in kind, advances by the Caisse des Dépôts and Consignations, a bond issue, or advances from the available funds now in the hands of the Treasury (which, on October 31st, totalled about 3,000,000,000 francs). The Chamber, in its turn, appears to be practically agreed to the Government's request that it should be

left to the Treasury to decide, in view of the state of the market, the best means to be adopted.

Another important measure of direct interest to investors, which was adopted by the Chamber yesterday and has now gone to the Upper House, is an omnibus Bill embodying an important series of reforms in regard to the fusion of companies, the removal of part of the burden borne by certain categories of issues in the form of double taxation, and the placing of French banks on the same footing as foreign banks in respect of the creation and issue in France of certificates to replace the actual scrip of *non-abonné* foreign issues negotiable here. Hitherto shareholders in French companies with foreign subsidiaries have been required to pay a triple income tax: (1) That imposed by the country in which the subsidiary is established, (2) French income tax on the yield entering France from the subsidiary, and (3) French income tax on the dividends distributed. So far as concerns *non-abonné* foreign issues, admitted to quotation on the Bourse and inscribed in French text, no French bank, in the present state of the law, can exercise the right to create and handle the bearer certificates which constitute the only form in which such issues can be negotiated here. The result has been that French banks have been deprived of a good deal of business of this kind, in the handling of which they have been replaced by British institutions. The leading case under this heading is that of the big issue of Canadian Pacific shares, which was admitted to quotation on the Bourse some three years ago and the handling of which was placed in charge of the Westminster Bank, French institutions being prohibited by the law from undertaking such business.

The new British fiscal measure imposing Customs duties of an additional 50 per cent. on foreign imports has been received with consternation by the French industrial and commercial world, and has relegated the whole question of German reparations and other foreign debt anxieties entirely into the background. Analysis of the incidence of the British protectionist plan, as so far developed, reveals that France will be harder hit by the new British duties than any other country, owing to the special nature of the majority of her principal categories of exports. The Minister for Commerce, M. Louis Rollin, declares that, in the case of many peculiarly French products, such as silk stockings and similar goods, which already have to bear a British import tax of 35 per cent., the new duties will raise the total impost payable to 85 per cent. *ad valorem*, which, the Minister insists, is a prohibitive rate. In the same interview M. Rollin defends French action in imposing a surtax of 15 per cent. on British products, on the ground that this is still inadequate to compensate the French manufacturer, when in competition with British goods in his home market, for the advantage which his British rival has secured for his export trade by reason of the depreciation of the pound. These 15 per cent. "compensatory duties," the Minister explained, are designed as merely temporary and "for the purpose of re-establishing the broken equilibrium between exchange rates and prices." The news that statements have been made in the House of Commons to the effect that the British Government proposes to make diplomatic representations to the Quai d'Orsay in regard to the French surtax has been received here with surprise.

In view of the fact that French foreign trade has been showing an unfavourable balance averaging 1,000,000,000 francs per month since the beginning of January, the alarm felt here as to the effect of the new British tariffs on this country's industry has been intensified. In many trades the conviction is expressed that henceforward, unless some agreement is come to between the two countries, the British market may be regarded as closed to French products. This is particularly the case in regard to the textile industry, the only great French industry still below pre-war levels. Between 40 and 50 per cent. of the French output of woollen goods has hitherto been absorbed by the British market, the closing of which must inevitably result in wholesale closing of a good many factories in the Roubaix district which have already been on short time for some months, and a consequent large increase in unemployment. M. Maurice Dubrulle, the chairman of

the International Wool Federation, takes consolation in the belief that British re-exporting trade will itself suffer a severe blow, as he contends that French goods must in future reach their eventual markets through other channels. So far as the glass industry is concerned, it is asserted that at least sixty French plants, mostly situated in the Lower Seine Department, and which depend almost entirely on the British market, will have to close down. Many other trades are expressing similar opinions.

Taxation returns for October, which is always one of the best months, indicate that the revenue continues to come in astonishingly well, in view of the general economic situation of the country. The total yield from "normal and permanent" sources was 5,203,000,000 francs, as compared with 5,587,000,000 francs in October last year and 5,987,000,000 francs in 1929. The entire yield was 284,000,000 francs (or slightly over 5 per cent.) below that of October, 1930, one-half of this decline being in respect of direct taxation, which produced 142,000,000 francs less than in the corresponding month last year, while the yield from the national domains was 66 millions lower. These declines, however, will have little or no effect on the Budget balance, as this year's estimates were naturally based on lower levels, as will be evident from the fact that the yield in October from indirect taxation and State monopolies was only 1,678,000 francs below expectations.

This deficit, as in previous recent months, would have been much more appreciable but for the fact that, as a result of largely increased Customs dues, and particularly those on foodstuffs, entries of foreign merchandise, notwithstanding a substantially lower tonnage, produced 52,304,000 francs (or practically 10 per cent.) more than in October last year, and no less than 162 millions more than was estimated for when the Budget was drafted. Without these increases of import duties the yield from indirect taxation and monopolies would have shown a deficit of 164,000,000 francs, as compared with estimates. The taxes on turnover—which yield substantially more than any other category of imposts, with the sole exception of income tax—and which produced 709 millions in October, yielded within a shade of 10 per cent. less than in October, 1930. This sum was collected in respect of sales effected during the previous month, and the drop in the yield may be regarded, in view of the far-reaching incidence of these taxes, as fairly exactly indicating the extent to which the country has so far been affected by the economic slump. The category "Contributions indirectes," which includes taxes on wines, spirits, amusements, motor car licences, etc., actually yielded 6,577,000 francs (or over 1 per cent.) more last month than in October last year.

GERMANY.

Young Plan Revision — Agricultural Debt — Reichsbank — Steel Results.

(FROM OUR CORRESPONDENT.)

BERLIN, November 6.

GERMANY has made, to the Bank for International Settlements and the reparations creditors, the application provided for in the Young Plan for the establishment of a special committee to inquire into her capacity to pay. The wording of the application has avoided the difficulty engendered by the limited powers allowed to the expert committee according to the Young Plan. The committee was only "to put forward for the consideration of the creditor Governments and of the Bank measures which, in its opinion, ought to be taken for the execution of the Plan." Now it is in fact, if not in form, to consider, not a mere alteration in the method of applying the Plan, but a revision of its content. For that reason the German Government lays great stress on the fact that the situation to-day is much worse than that envisaged by the Young Committee of Experts as likely to give occasion for the summoning of the committee.

At the same time, the discussion of the illusory problem of the priority of private or political debts comes to a long-merited end; the German Government states definitely

NATIONAL BANK OF GREECE Established 1841

Head Office: Athens.

Branches throughout Greece.

New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL

Capital paid up and Reserves Drs. 1,205,000,000.

that the committee will have to take account of the urgency of a new standstill agreement for private short-term credits. The negotiations for this will take place simultaneously with the proceedings of the Basle Committee and a conference of Governments will have to settle the new reparations arrangements promptly, so that the private agreements in the prolongation of credit can be constructed on this basis.

The declaration, in accordance with the intention of the Young Plan, is made by the German Government on its own responsibility, but there is no doubt that the contents, and probably also its form, were thoroughly discussed in the numerous conversations between Herr von Hoesch and the French statesmen, and that it, therefore, constitutes in effect, if not in form, a sort of preliminary Franco-German agreement as to the proceedings to be followed in making the new arrangements.

The agitation for a compulsory reduction of internal interest rates has now achieved a partial success. A new decree for the relief of the farmers of the Eastern Provinces makes it possible at the discretion of the so-called "Landstellen" which are organs of the Government, for arrears of interest owed by farmers to be cancelled, current interest to be reduced to 4½ per cent., and even for the principal to be reduced by half without the consent of the creditors, if the farm could not otherwise continue in existence. Only first-class mortgages are to be exempted from such measures. Farms thus relieved are to be placed under the supervision of a trustee who is responsible for seeing that the income from them is properly used for the continuance of production and for the fulfilment of the remaining obligations. Such supervised farms are at the same time protected against distraint. These measures have rightly been severely criticised, as they are very harmful to agriculture. They have completely stopped the flow of new credit, except in so far as it can be obtained from public sources. Many East German produce exchanges have discontinued quotations in consequence of the decree, for the grain trade, as an agricultural creditor, is very severely hit. It is only fair to recognise, however, that the Government were in an extraordinarily difficult position when they issued the decree. Up till then they had tried to help the farmers with cheap credits which they did not wish for the most part to provide out of Government funds, but out of long- and short-term loans raised on the credit market with a Government guarantee. This possibility was removed by the collapse of the credit market, while at the same time the increasing financial difficulty made it impossible for the Reich and the States to give help from their own resources. Meanwhile the need of the farmers was growing steadily more urgent, as many of their products—not, indeed, corn; but milk, butter, cattle and pigs—were falling heavily in price. Certainly many creditors of East German agriculture would have lost a part of their loans if there had been no Government intervention. As the Government seem surprised at the unfavourable public reception

of their measure, they will, no doubt, try to mitigate in its administration the hardships involved to creditors.

The proceedings of the Economic Council terminated on Monday. In thanking the Council, the President of the Reich observed that they were in agreement with the Government as to the economic measures which are now necessary to afford a basis for a revival. Much goodwill was evident during the Council's proceedings, but even this could not prevent three farmers' representatives and the representative of the Socialist salaried workers' unions from absenting themselves from the final sitting as a protest; while the other trade union representatives, including the Socialist Grassman, were only present out of consideration for the Chancellor and, still more, for the President. It proved impossible to secure agreement in the Council upon any resolutions. Dr. Brüning did, indeed, sum up the result of the discussions as it appeared to him; but on the most politically delicate questions, the social problems, his formulæ encountered open opposition from the Socialists, and more or less decided, if silent opposition from the other trade union representatives.

One of the formulæ framed by Dr. Brüning declared that a relaxation was necessary in the connection between prices and wages, and stressed the necessity of reducing them simultaneously. Cartels should not be dissolved, but compelled to maintain a moderate price policy; wage agreements should be more elastic and the compulsory putting into force of tariff wages by arbitration should be limited. In respect of credit policy, Dr. Brüning declared, this time unquestionably in agreement with all the members of the Council, that "all measures are to be rejected which might lead to inflation." Further, he stated that bank rates of interest should be reduced, and the margin between borrowers' and lenders' interest at the same time narrowed. The Government also wishes to take steps to reduce the cost of long-term credit. Undoubtedly, much of this will remain a pious aspiration, but the most important thing is that no compulsory interference with interest rates is recommended.

Disappointment with the result of the Council's deliberations is fairly general. What the Chancellor has formulated could have been stated before in a Government announcement; no new solutions have been offered and nothing has been done to make the political path of the Government in following these prescriptions any easier. It has, however, had a useful effect in demonstrating the superiority of Parliament over committees of experts, a demonstration which was particularly needed in this country.

At the end of the week the Government will issue an emergency decree in which it will make an attempt itself to solve the problems which were referred to the Economic Council. It is generally assumed that this decree will enable the Reich to take effective measures to meet the financial difficulties of the States and Communes, even if it involves increasing the turnover tax.

The unfavourable development of the gold and foreign exchange holdings of the Reichsbank continues. In the second week of November alone the bank lost Rm. 72 millions worth of cover, and even in the third week the loss was nearly 50 millions. Altogether, since the beginning of September and the coming into force of the "Standstill" agreement, the bank has lost Rm. 550 millions gold and exchange in spite of the larger active balance of trade during the same period. But for the great excess of exports over imports the position would be far worse. In two months the Reichsbank has provided 784 millions of foreign exchange to pay for imports, but in the same time it has received 1,200 millions out of payments for exports. None the less, this balance was too small; in the same period the Reichsbank had to provide nearly 200 million marks for interest on amortisations and over Rm. 700 millions for repayments of credit. These new announcements of the Reichsbank show that even during the "Standstill," Germany has been obliged to reduce her short-term foreign debt very substantially. The Basle agreement itself contemplates large repayments and contains omissions which necessarily involve

repayments, as, for example, the non-utilisation of reimbursement credits. In these circumstances it cannot be expected that the Reichsbank will be in any better position at the expiry of the agreement than it was at the time of its conclusion. It is only thanks to the great export balance and the severe exchange regulations of the Reichsbank that the transfer of the sums necessary for meeting the interest on the German foreign debt is proving possible.

The first reports of the big mining concerns are now published. The Klöckner-Werke closed their last business year with a profit of Rm. 6,800; Gutehoffnungshütte with a loss of Rm. 3 millions; Hösch-Köln-Neussen with a loss of 5.8 millions. The business year of these companies ends on June 30th, and must therefore have been rather more favourable than that of the other two big combined coal and iron companies, whose year ends on September 30th. These are Krupp, whose results are not yet known, and Vereinigte Stahlwerke, which has just announced that the gross profit of last year does not cover depreciation, so that there will be a loss of some millions. All these balance sheets show that the big steel concerns have worked without profit during the past year. The shareholders, who only received from 4 to 7 per cent. last year, will this time receive nothing. The financial condition of the German mining concerns has grown worse during the past year, because production could not be curtailed in proportion to the reduction in the market. The increase in stocks, which made necessary the taking up of short-term bank credits by nearly all the works, was partly a result of old contracts for the purchase of ore from the Swedish Grängesberg Company, under which the German companies were obliged to receive quantities of ore greatly in excess of their 1931 requirements. These contracts have now been annulled by agreement, and the works are also taking the most stringent measures to reduce their output.

AUSTRIA.

Public Debt — Foreign Trade — Finance and Industry.

(FROM OUR CORRESPONDENT.)

VIENNA, November 25.

THE explanations prepared for the Federal Finance Bill of 1932 give the following figures of Austrian indebtedness:—League of Nations Loan, 828.4 million schillings; International (1930) Federal Loan, 438.8 millions; Relief Debts, 405.8 millions; and other "currency" debts, 262 millions. Deducting from the International Federal Loan of 1930 the Austrian portion of 50 million schillings, the sum of foreign indebtedness remaining from the above-mentioned debts is 1,885 million schillings, or about 265.5 million dollars. According to the statistics of the National Bank of Austria, the total of public foreign loans for the years 1922 to 1929, excluding the League of Nations Loan (i.e., the sum of issues of public loans, including those of the provincial States and of the municipalities) is 56 million dollars. The total of the public foreign debt of Austria is, therefore, 321.5 million dollars. According to the same statistics of the National Bank, private foreign debts incurred in the years 1922 to 1929 were equal to 34.4 million dollars in long-term loans. As in the year 1930, apart from the big Federal Loan, neither public nor private loans of any size were contracted abroad, the long-term foreign indebtedness of public bodies and private concerns amounts to about 356 million dollars. In conjunction with the Standstill Agreement, the short-term foreign loans of the Credit-Anstalt amounted to about 70 million dollars, and at the negotiations for the standstill of the other short-term foreign credits in Austria a sum of 30 million dollars was mentioned. The addition of all these items, which are in part only estimates, gives a total of 456 million dollars, which represents the long-term and short-term foreign indebtedness of the public bodies and private concerns of Austria.

Austrian foreign trade with the neighbouring States has decreased still further in the past week. On the pretext that

Austrian exchange regulations are throttling merchant traffic, Yugoslavia has sequestered Austrian credits that country. Merchandise traffic is, therefore, seriously interrupted and can only be protected from further limitation if some form of clearing can be arranged through the intermediary of the two national banks. Czechoslovakia also entered upon reprisals against the Austrian exchange regulations, so that remittances from that country to Austria are practically impossible, the disposal of bills belonging to Austrians is attended with the greatest difficulties, and it is to be presumed that the Austrian National Bank will strike out of its clearing the quotation "Payments in Prague." Within Austria the purchase and sale of Czech crowns at the National Bank and at its pointed offices is still permissible. It is also feared that, no clearing arrangement results from the negotiations with Switzerland, goods traffic with that country also will cease. In view of all these measures, the crisis in Austria is of necessity become worse and unemployment must increase. The decrees of the Austrian National Bank make very difficult for importers to get in the necessary raw materials and semi-manufactured goods. If goods are exported, a corresponding amount of credit is sequestered in number of neighbouring countries.

If no change takes place shortly in this respect, unemployment must increase rapidly, and the merchandise turnover tax, which constitutes the backbone of the budget, will suffer greatly. For the year 1931 the revenue from this source was estimated at 255 million schillings, while the estimate for the year 1932 has been reduced to 3 millions. Meanwhile, the exchange regulations have been imposed in Austria and in the neighbouring States, so that further decline is inevitable. The loss of revenue from taxes must also increase on account of the privation among farmers, which has compelled the Government to instruct tax authorities, both Federal and provincial, to refrain from distraining upon small farmers for taxes, social imposts or interest on mortgages, the last being not expressly mentioned but actually respected in practice. This step was urgently needed, even though it means losses to the State finances. The impoverishment of the farmers has reached a shocking state. Cattle and grain prices have fallen, whereas there is no reduction in the prices of the various industrial products which the farmers must have. The retail price index, which is shortly to be published, will also show that the cost of living is rising. In consequence of this, privation among regular employees, whose salaries have all been cut down, also extending.

The Federal Railways have worked out a programme which is said to be calculated to restore financial equilibrium. This is all very well in theory, but it will not work in practice. Passenger traffic has fallen off seriously, and the last increase of fares has done no more than maintain revenue in face of the reduced number of passengers carried. It is difficult to see where the railways are to find the means to pay the legal indemnities to the thousands of railway clerks who are to be discharged, but something must be done in this direction. There can be no question of electrifying the railways, and it is just as impossible at the moment to raise a loan. It is true that the Federal Chancellor has stated that, when the Credit-Anstalt affair has once been cleared up and the Budget balanced, he will endeavour to raise first a domestic loan and then a foreign loan. One of the preliminary conditions of a domestic loan is that the movement of savings deposits should be steadied, and the Government has no intention of resorting to a compulsory loan. It has also energetically denied that it desires to reduce the guarantee which it has given in regard to the Credit-Anstalt. There is no doubt, however, that it will become necessary to approach the foreign creditors of the Credit-Anstalt and explain to them that the Government has committed itself far beyond its strength in according to foreign creditors a guarantee or a sum based on a total loss in the Credit-Anstalt, not of 140 million schillings, but of 1,400 million schillings. The foreign creditors will themselves see that they will be obliged to make concessions in regard to the period over which the repayments have to be made. Austria is already burdened enough, since, in addition to the commitments

mentioned in the beginning of this letter, it has to pay abroad under the Standstill Agreement, which does not embrace the Credit-Anstalt, 4½ million dollars per quarter, and to continue to do so for a period of about 1½ years.

HUNGARY.

Politics — Currency — Foreign Trade.

(FROM OUR CORRESPONDENT.)

BUDAPEST, November 23.

Four weeks have elapsed since the publication of the League Report, but in spite of the menacing budget deficit and other financial problems urgently awaiting solution, practically nothing has been done. An idle parliamentary debate continuing for more than three weeks, with scores of speeches dealing with everything except real and immediate economy proposals, does not afford much ground for optimism. It is just three months since the Károlyi Government assumed office, and it has not yet found a suitable Finance Minister who would carry on with the cruel legislation needed to save the basic financial structure of the country. On the other hand, there is no scarcity of candidates for the office of Prime Minister, but Count Károlyi has overcome more than one domestic crisis, and it is not impossible that ambitious politicians will have to wait longer than they expect before he is out of office. This political and financial uncertainty, however, is highly detrimental to the country, because it delays every sound measure.

The latest balance sheet of the National Bank shows that the total gold and statutory cover has decreased by 4.6 million pengő to 117.1 million pengő as on November 15th. The bill portfolio amounted to 396.9 million pengő, but the bills rediscounted with the B.I.S., amounting to more than 100 million pengő, are not included in the bank's weekly return. The note circulation amounted to 379.5 million pengő, a very satisfactory figure. Thanks to the favourable working of the gold pengő experiment, the note circulation is normal. The price level is stable, and the internal purchasing power of pengő is fully maintained.

Foreign trade returns for October were very satisfactory. Exports amounted to 62.4 million pengő, imports totalled 40.3 million pengő, thus leaving a favourable balance of 22.1 million pengő. The comparative figures of foreign trade for the first ten months are as follows:—

(In million pengő.)

	Imports.	Exports.	Balance.
January–October, 1930	710.5	734.3	+23.8
" " 1931	468.5	463.4	— 5.1

In all probability there will be an export surplus in November and perhaps also in December, so that the year 1931 will perhaps end with a slight merchandise export surplus, in spite of the deficit of 47.4 millions in the first half of 1931. But the favourable merchandise trade balance shown by the Statistical Office unfortunately does not mean a corresponding foreign exchange surplus in the holding of the National Bank, because a great portion of the export *devisen* evades the compulsory surrender. More severe regulations to control export *devisen* will come into force this week, but even so the National Bank will be fortunate if *devisen* of three-quarters of the exports as shown by the Statistical Office are placed at its disposal. It should not be overlooked that a great deal of merchandise is sold abroad against pengő notes, which thus find their way back to Hungary.

In view of the exchange and trade restrictions of Hungary's main purchasers, it is becoming more and more difficult to realise a merchandise export surplus. There is little hope that the situation will ease in this respect in the near future; indeed, it is more likely that further troubles will arise. The example set by Yugoslavia in preventing withdrawals from Austrian and Hungarian balances has been followed by Czechoslovakia. Similar difficulties have already arisen with Roumania, and if this tendency continues, trade will soon be completely paralysed in the Danube Valley, just at a time when people

in all the Succession States are beginning to realise that the break-up of the Austro-Hungarian monarchy and the creation of tariff barriers are the main reason for the desperate state of affairs in this part of the world.

Clearing agreements to carry on trade are being negotiated at present with Austria and Italy, the two most important export markets for Hungarian products. In the first nine months of 1931 exports to Austria have decreased to 114.1 million pengő, as against 197 millions in the corresponding period of 1930; imports have fallen from 73.8 millions to 52 million pengő, thus the active balance is halved. Exports to Italy have fallen from 92.8 million pengő to 42.9 millions, and the favourable balance of 63.3 millions is reduced to 18.4 million pengő.

HOLLAND.

British Tariff — Industry — Trade Policy.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 25.

THE ray of hope which was thought to be discernible last week, in view of the advancing prices of grain, cotton and metals, has quite disappeared, and has given place to a feeling of great uncertainty. This has been intensified now that England, the principal customer for our export products, has begun to raise import duties most drastically. As from to-day an import duty of 50 per cent. on the value in England is to be levied there on a large variety of goods. In these circumstances it will not be surprising if Holland has to have recourse to prohibition of imports and to quota systems in order to prevent her industries from being completely annihilated. The country is too small for the domestic market to afford an adequate outlet for her industries, and, in consequence, attention is being concentrated more and more on the possibility of a customs union with Belgium, embracing also the vast colonies of both countries outside Europe. If the two countries could succeed in combining to form a united front as regards tariffs, they would represent a block which would command the deference of other nations. Together, the two nations mean a group with a population of more than 14 million, vast colonies and great wealth.

The introduction of the English anti-dumping tariffs has not occasioned undue alarm for the time being, for, as far as the principal Dutch export articles are concerned, they only apply so far to a limited number of lines, such as paper and woollen fabrics. The country is therefore waiting to see what additional measures will be adopted by England.

The Bill for the all-round increase from 8 to 10 per cent. in the general tariff on imports into Holland was duly passed by the Second Chamber last week. An amendment to increase the duty on sugar from 2.40 to 5.40 guilders was rejected, as it was considered that this would be of a too protectionistic character and would not be in keeping with the fiscal revision of the import duties. The Minister of Finance promised, however, to present proposals for a technical revision of the tariffs shortly.

A favourable exception to the general industrial crisis in the Netherlands is formed by the coal mining industry. The net output of the Limburg coal mines was 1,155,788 tons in October, 1931 (October last year 1,100,899 tons). In the first ten months of the year the total production was 10,748,064 tons (last year 10,211,040 tons). The reorganisation of the International Viscose Company, the holding company of the Breda concern, took place last week, and the shares were written down to 25 per cent. of the face value. The A.K.U. has co-operated in this reorganisation, and directors of the A.K.U. have been elected to the Board of the International Viscose Company. As a result, the co-operation between the two Dutch artificial silk companies has become very close. An international selling company is to be founded at Arnhem shortly, for the purpose of marketing the products both of the Breda and of the A.K.U. concerns. In consequence, the competition between the different factories of

the two concerns on the world market will be eliminated. The resultant saving in selling costs will also be important. The Dutch artificial silk industry is, however, not yet optimistic as to the future; export prices averaging 2.59 guilders per kilog. for October, 1931, constitute a new low record.

With the object of maintaining the level of exports and meeting foreign competition, a general tendency to reduce wages is noticeable in the Dutch exporting industries. In this connection it is important that the cost of living in the Netherlands be reduced in proportion to the drop in wholesale prices. For this reason, the Minister of Labour, Commerce and Industry held a meeting on Friday with executives of three shop-keepers' associations, in order to consider what that section of the community could do in these critical times to ensure that the prices of the primary necessities of life adjust themselves to the general level of prices as rapidly as possible. The shop-keepers' associations undertook to give the matter earnest consideration, and hoped to submit concrete proposals to the Minister very shortly.

That the Government are also devoting their attention to the stimulation of the export trade is evident from the fact that a Bill empowering the Government to take temporary measures for the regulation of the export of certain articles is to be introduced into the Second Chamber within a few days. Before expressing an opinion as to the desirability of proceeding further with the anti-dumping Bill, the Government first wishes to gain experience in the operation of the quota system. A "National Crisis Committee" has just been formed on a large scale on the initiative of Princess Juliana, with the object of providing financial support to the victims of the crisis. Large gifts have already been received.

There has been a decided improvement in the Amsterdam money market, as is evident from the success accorded the issue of Exchequer bonds; 197 million guilders were subscribed for, and only 55 millions could be allotted. The loans issued by the municipality of Bois-le-Duc and the province of North Holland were also a great success, and the investment market benefited in consequence.

SWEDEN.

Exchange Fall — Control Attempts — Their Failure.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, November 24.

SWEDEN has experienced in her foreign exchange market a development which must be characterised as sensational. For nearly two months the attitude of the State Bank in relation to foreign exchange had been passive—a position which was by no means a voluntary choice, but was enforced by the course of events during the dramatic days just before the departure from the gold standard. When the Swedish crown, at the commencement of last week, fell to the same level as the £ sterling, the State Bank again appeared on the market quite unexpectedly and declared that its intention was to stabilise the crown on the same level as the £. The result was the opposite to what the Bank had anticipated. Instead of the comparative calm which had shown itself on the market, a state of chaos rose. Instead, moreover, of checking the fall of the crown, the Bank produced an accelerated downward tendency. The action terminated in a complete fiasco. The Bank was compelled by Saturday—that is to say, after four days—to capitulate; and as from the present week the market is again quite free.

From a psychological point of view the action of the State Bank can be understood, as it must be extremely nerve-racking for the management of a central bank to be compelled for a period of nearly two months to stand by and passively watch the currency depreciate as a result of forces which at least to some extent must be characterised as speculative. The error in the interference of the Bank was, however, that it chose neither the right means nor the right moment. The prerequisite for the success of

the Bank in its new policy was that it should have adequate means at its disposal. And this the Bank by no means had. The fact that it was necessary to abandon the position at the end of September was due precisely to the fact that the currency resources of the Bank were exhausted; and since that time practically no change had taken place. The currency reserve of the Bank, when it commenced its intervention in the market last week, amounted to such an inconsiderable sum as 21 million kronor, an absurdly small amount in relation to the strain which would necessarily follow, and the only possibility of increasing its resources was to dispose of part of the gold reserve. This, however, taking into consideration the provisions in force relative to the cover of notes, was conceivable only to quite a trivial extent. Under such circumstances, the result was, not surprisingly, that the State Bank quickly lost the greater part also of its last currency resources.

Fully aware of this, the Bank took a further course which was bound to lead to new disturbance in the exchange market. It decided on a rationing of the allocation of currency. It was, consequently, announced that the Bank would sell and buy sterling at a rate of exchange of 18.15, but that the requirements of currency must be notified before a certain hour of the day and substantiated by proper invoices. The technical procedure proved to involve such difficulties that a complete congestion immediately arose; and, in fact, this procedure meant obviously the Bank's right to regulate imports, which always involves the risk of ending in pure arbitrariness, assuming that the action is successful. The result could not be other than one official quotation for our currency and another in the open market. Those who did not succeed in obtaining currencies from the State Bank at its fixed rate of exchange had to cover themselves in the open market at considerably higher rates. The distrust abroad in the Swedish crown was increased in this way, and in speculative purchases of devisen naturally increased—in both cases the opposite to what the State Bank had intended. Whilst the State Bank on Saturday quoted dollars at 4.87, the dollar rose in the open market to as much as 5.05; and, as against the State Bank's fixed rate for sterling of 18.15, there was a corresponding "free" quotation of 18.60 to 18.75.

For a period of approximately one month after our departure from the gold standard the Swedish crown kept to an average of 87 per cent. of the old gold value, in spite of the fact that no measures were taken to support the rate of exchange. The fact that since the last days of October such a persistent fall in the Swedish currency set in is probably to be ascribed in the first place to a "forced" rate of importing and to speculation. It began to be anticipated that the depreciation of the crown would not stop at 13 per cent., and that it was probable that a new position of equilibrium was to be sought at the level at which the other Scandinavian currencies had already approached, viz., the level of the £ sterling. A "forced" rate of importing before this level had been reached would therefore be a paying proposition. As exchange to cover such imports had to be secured immediately, the demand for currencies was thereby very greatly increased. It is, moreover, by no means out of the question that a contributory reason for this development has been the propaganda in favour of import duties or a regulation of imports which has been pushed very intensively, particularly from Conservative quarters.

In view of our general position it appears reasonably probable that our currency would approximately have retained its level, had the market been allowed to develop freely. It does not even appear to be out of the question that a recovery would have taken place, when profits were taken by those who had bought foreign currencies on speculation. Viewed from this point, the intervention of the State Bank stands out as still more unfortunate, and there is scant reason for the expression of any satisfaction as regards the measure by which the bank sought to cover its retreat. It arranged with the commercial banks that they should adopt certain limitations of credit in order to cut down such imports as cannot be regarded

as indispensable. Even if this method should be regarded less unsympathetically than the pure rationing of currencies, it may nevertheless entail consequences by no means intended. Above all, the measure appears to be uncalled for just at the moment when, to judge from everything, the approximate level was about to be reached where the fall in the crown can be expected to stop, while the depreciation of the crown has now become so emphatic that this automatically has the effect of a bar on imports.

BELGIUM.

Public Finance — Industry — Agriculture.

(FROM OUR CORRESPONDENT.)

LOUVAIN, November 24.

PARLIAMENT has just begun work upon the Budget for the fiscal year 1932. In accordance with an old rule it has been divided into an ordinary and an extraordinary Budget, the latter including productive expenditure for public works. The estimated revenue from the ordinary Budget amounts to 10,837 million francs, and leaves a surplus over expenditure of 35 millions. Supply appropriated to administrative expenses and to the service of the public debt, taken alone, would show a surplus of 430 million francs out of the ordinary revenue, but this surplus will be almost entirely absorbed by the expenses arising out of the war (mainly pensions) and the deficit on the Post Office and on aviation. The extraordinary Budget amounts to 310 million francs, mainly required for new waterways, which will have to be raised by issuing debenture stock.

In the present situation the balancing of the ordinary Budget is something of an achievement. Taxation revenue was increased about 1,300 millions per annum by the passing of finance bills five months ago, but, in order to maintain the balance, additional ways and means amounting to 300 million francs have been deemed necessary. The Government has not yet explained what increases of taxation will be demanded, but they are expected to cover tobacco, alcohol, and perhaps motor spirit.

The estimates of the revenue from taxation appear to have been made on a prudent basis. On the other hand, non-taxation receipts are likely not to come up to the Treasury estimates. For instance, the German reparation payments falling due in the course of the second half-year of 1932 have been included, though the Hoover moratorium will very likely be prolonged or replaced by that provided for by the Young Plan. Also the bonds of the Reichsbahn obtained in connection with the Hoover moratorium have been treated as liquid, though it is not certain that they will be so.

It has been mentioned above that the Belgian Government will have to raise time money at least for the execution of public works. The home market for Government securities is at present depressed, and it will not be possible in the immediate future to offer here a loan for public subscription. The position of the Treasury has remained difficult in many ways, and some people anticipate that it will be necessary to have recourse to the issue of Exchequer Bonds (Bons du Trésor). Such an issue was responsible for the big financial crisis of 1926. Undoubtedly there is a danger of the adoption of unsound measures to meet the expansion in the estimates, but the present unfavourable situation should not be exaggerated, as the country is now in a position to take prompt action if its position were to be seriously threatened. The situation to-day is far from comparable to that of 1925-26 when the country had hardly recovered from the war.

Critics of the Budget memorandum have pointed out that the total reduction in expenditure will be very slight and less than might reasonably have been anticipated in view of the fall in prices. It has also been stressed that the reduction in estimates has been performed by cutting expenditure for purchases of material and for productive equipment, and not administration expenses. The

amount involved by pensions of all kinds has been steadily increasing. In short, the Budget for 1932 appears permissible in a period of crisis, provided that the few weaknesses indicated are attentively watched in order that they may be remedied promptly and energetically if they should become dangerous.

Belgian industry is still suffering from the disorganisation of the foreign markets and the depreciation of the sterling exchange. The metallurgical industry has been most affected by this depreciation, and its output, which had been stable for a year, decreased slightly in October. There is a remarkable stability in the textile industry; spinning mills, for instance, have obtained orders from British weaving enterprises, and in general the industry has enjoyed a slight improvement during recent weeks. Short time has extended over all the collieries, and pitmen are out of work two days per month. On the other hand, coal imports into Belgium have been automatically reduced, so that there has been no further increased stocks at the pithead, which amount to 3½ million tons. Still, the general outlook is still poor, and many of the recent balance sheets are really bad. Unemployment has been extending slightly; there were in October 75,000 totally and 120,000 partially unemployed. The share of the State in the unemployment relief fund will amount for the fiscal year 1932 to £2,200,000, according to the present state of unemployment, and a further million will have to be disbursed by the local Treasuries. In order to reduce this heavy burden the Government intended to accelerate the execution of certain public works, especially railway improvements, and has caused the National Railways Company to start the renewal of its passenger coaches.

Agriculture, which until the last few months enjoyed a preferential position, has been seriously affected by the crisis. Sales of Belgian eggs have become difficult in England and France, and in the latter country restrictive customs measures have just been taken. Denmark has recently flooded the Belgian market with cattle and meat at absurd prices (3 francs per kilo. live weight, about 2½d. per lb.). Arrivals of Danish butter have also forced the price of butter to a very low level. The representatives of agricultural districts have demanded the restoration of the pre-war import duties, and Parliament will shortly introduce them.

SWITZERLAND.

Banking — Foreign Trade — Unemployment.

(FROM OUR CORRESPONDENT.)

GENEVA, November 21.

THE economic situation in Switzerland is governed by the general crisis and the depression has been intensified by the depreciation of sterling, which was mainly felt in the embroidery and silk industries, both of which normally find their principal outlet in Great Britain. The Swiss Government has furnished the public with an exact statement on the country's financial situation, and M. Musy, chief of the Finance Department, laid stress, in Parliament, on the soundness of Swiss economy. The funds at the disposal of the Swiss banks are estimated at about £200,000,000, thus allowing for considerably more than normal withdrawals. The liquidity of the banks is based mainly on the large reserve deposited at the Swiss National Bank, the gold reserve of which now represents 154 per cent. of the note circulation.

Yet while the financial position is remarkably strong, the situation remains unsatisfactory in trade and industry, though a small improvement was recorded in September and October. The foreign trade returns for the first nine months of the year show that imports, at £66,459,873, were 16 per cent. lower than in the corresponding period of 1930. The decrease was particularly important in regard to raw materials—a sign of reduced activity in industry—foodstuffs and textiles. Exports, on the other hand, amounted to £41,444,852, a decrease of 22 per

cent. over last year, the drop being especially striking with regard to the watchmaking, textiles and machines industry. The adverse balance, which was £26,063,105 in 1930, reaches £25,015,021 for the first nine months of the present year, and there is no great hope of its being made good by means of indirect exports. The earnings of the hotel industry, for example, will be much reduced owing to the general crisis which prevented foreign visitors from spending their holidays in Switzerland.

Unemployment is increasing. The number of unemployed, which was 27,300 in January, gradually decreased to 14,300 in May, but since then it has risen again and reached 17,400 in July and about 27,500 in October. Unemployment is not general, however; it is mainly confined to a certain number of industries, particularly the watchmaking and textile trades, which together supply about 70 per cent. of the total of unemployed. Though unemployment is serious, it nevertheless only affects 4 per cent. of the works, and it does not reach the figures recorded during the crisis of 1922-23, when there were over 100,000 out of work out of 400,000 factory workers. But it is most likely that unemployment will further increase during the coming months, as several watchmaking and textile factories have given notice to their employees for the end of the year, and bad weather will, as usual, stop work in the building industry and in agriculture. The situation is, therefore, very gloomy, prospects for the coming winter are most unsatisfactory, and economic experts are of opinion that the worst of the crisis has not yet been surmounted.

CZECHOSLOVAKIA.

Industry — Exchange Conference — Budget.

(FROM OUR CORRESPONDENT.)

PRAGUE, November 23.

AT the end of October the Czechoslovak Foreign Minister, Dr. Benes, declared, in the sessions of the Foreign Committees of the Chamber of Deputies and of the Senate, that, in his opinion, the present world crisis is likely to last for some time to come. As the first remedy he recommends self-help, limitation of expenditure and protection of home finances. Dr. Benes does not exclude the possibility of a return to the older forms of commercial policy—compensations, quotas and limitations of imports. With regard to the future, he sees the only correct policy in a general endeavour towards international collaboration and solidarity.

Unemployment has increased, and the greatest depression is still manifested in the textile industry. The home market is weak, but on the whole fairly well balanced; the deterioration is mainly due to the export hindrances caused by the currency changes, exchange losses, difficulty of calculating prices, exchange restrictions and foreign customs duties abroad. A great blow has been dealt to Czechoslovak exports by the new duties in Great Britain, which will affect specially china, porcelain, glass, textiles, gloves and paper. Having regard to the importance of the English market for Czechoslovakian exports, it may be expected that the new tariff duties will have a serious and unfavourable influence on the further development of trade between the two countries.

Foreign trade for the first ten months of 1931 shows a great decline in volume when compared with the previous year. Imports amounted to Kr. 9,518 millions as against Kr. 13,065 millions; exports to Kr. 10,872 millions, as against Kr. 14,441 millions. The Stock Exchange index is very low; the Bourse has calmed down somewhat, but quotations fell even for very good industrial shares and are in consequence considered unduly low.

The foreign exchange control introduced in Czechoslovakia on October 2nd has recently been tightened in some respects, but the principle of "allotments in full" to meet payments for imports and other economic or legal obligations has not been relaxed in any way. It is, of course, doubtful whether this state of things can last.

The payments due to Czechoslovakia from abroad are coming in more and more slowly. According to the recommendations of the Foreign Exchange Conference, negotiations with Austria and Hungary are being conducted, and it is hoped that these will lead to a speedy conclusion, because in the last few days the National Bank of Czechoslovakia had to apply special restrictions with regard to both these countries. The Austrian and the Hungarian National Bank have not been allowing any transfers to be made from private deposits or accounts of the Czechoslovak nationals; consequently the National Bank of Czechoslovakia had to take similar steps by way of retaliation.

In these circumstances it is being discussed whether Czechoslovakia will not be forced to introduce certain import restrictions. In almost all the neighbouring countries there has been an artificial stimulation of exports, and import is restricted or even made impossible. It thus appears difficult for Czechoslovakia to persevere in her present policy of unrestricted imports.

The Budget for 1932 has passed the parliamentary committees, and is now to be dealt with in plenary session. Beside the reductions already effected in expenditure on materials, the Government has passed a resolution to effect further restriction with regard to personnel items and to increase the income tax. Another Banking Bill is under consideration, aiming at an enlarged protection of money deposits in the banks, increasing the responsibility of the members of boards of directors and in certain respects a further tightening control over the banks.

ROUMANIA.

Marmorosh Blank — Parliament — Budget

Agricultural Debts.

(FROM OUR CORRESPONDENT.)

BUCHAREST, November 16.

THE banking crisis in Roumania came to a climax when the Banque Marmorosh Blank and Company closed its doors towards the end of October after considerable efforts had been made to save it. The bank has now asked for an arrangement with its creditors under the supervision of the Courts. The balance sheet submitted for this purpose reveals assets of Lei 4,505,324,154, against liabilities of Lei 4,143,325,095, and the bank offers payment in full in the course of three years, free of interest, payment as to 20 per cent. to be made in the first year, 30 per cent. in the second and 50 per cent. in the third. The assets include over 1,600 million Lei in "participations," about 500 millions in land holdings, over 1,350 millions in current accounts and other debtors, and bills about 400 millions. Amongst liabilities figure deposits and creditors in current accounts, etc., 1,900 millions. The debts to the National Bank are shown under three headings: Special account, 167 millions; rediscounts, 991 millions; "syndicate," 700 millions; and they are eloquent proof of the considerable assistance rendered by the National Bank. The amount of 700 millions shown in the "syndicate" account appears to represent the facilities obtained by the bank from the syndicate of large Bucharest banks which was formed last summer for the purpose of assisting any of its five members when temporarily in difficulties. If this is so, the amount would be guaranteed jointly by the other four members of the syndicate.

The Banque Marmorosh Blank and Company was formed in 1848 and became a joint-stock company in 1904. It is one of the most important banks in Roumania, and has taken a prominent part in the economic development of the country. Its ramifications are widespread, and one of the causes of its downfall is undoubtedly the immobilisation of its funds in the industry and commerce of Roumania. The liquidation of its multitudinous "participations" and investments will be exceedingly difficult, and will only be possible with considerable loss.

The news of the difficulties of the Banque Marmorosh Blank and Company provoked a panic among the depositors

of the various banks all over the country. The withdrawals of deposits took alarming proportions, and grave fears were entertained with regard to other prominent banks. These have, happily, not been realised, thanks to the efficient measures taken by the Minister of Finance, in conjunction with the National Bank. Still, the amount of currency withdrawn from circulation and hoarded by the public is very large, and, although the withdrawals have now ceased, it cannot be said that public confidence has yet been restored. Especially in the provinces the banking situation is very serious. Many of the banks pay their depositors in small instalments. The strain put on the National Bank is clearly shown in the last statement. The note circulation is increased to 23,000 million Lei, and bills discounted to 13,000 millions, figures which compare with 18,000 millions and 7,000 millions respectively at the beginning of the year. Yet the provincial banks are clamouring for more help. In these circumstances it is only natural that the banks are calling in credits, as far as this can be done at present, and that the granting of new credits is practically out of question. This hits commerce and industry very severely, the latter particularly, as it is already much handicapped by the large outstanding debts of the State, and sees now the last plank, the support of the banks, withdrawn from under its feet.

Parliament reassembled to-day, and much speculation is rife as to the immediate future of the Jorga Government, which could easily be overthrown if the Opposition parties were to combine. If it remains in power it will only be because none of the larger parties is prepared to lead the country through the very difficult period of hardship and sacrifice inevitable for the rehabilitation of the economic situation. A very full programme awaits Parliament in the new session, but by far the most important measure will be the Budget for 1932. It is quite obvious that this year's Budget will close with a heavy deficit, and that it will be impossible to balance that of next year by the methods which have been adopted so far. Mr Argetoianu, the Minister of Finance, has evidently realised this, and his new proposals, in so far as they have been made known through the Press, are a masterpiece of contrivance. He begins next year's account with a clean sheet, and reduces the Budget to about 25,000 million Lei, providing only for the most necessary expenditure, such as the service of the public debt, the payment of salaries (much reduced), and the upkeep of existing equipment. This constitutes the ordinary Budget. All past deficits and old debts will be contained in an extraordinary Budget. The settlement of the floating debt will be entrusted to an Institute of Amortisation to be created for this purpose with an initial fund of 1,000 million Lei provided by the ordinary Budget. The extraordinary Budget is divided into three parts: (a) unpaid pensions, unpaid salaries of past years; (b) debts for material resulting from contracts, transactions, works, etc.; (c) expenses considered necessary by the different State departments for 1932 which will be met out of extraordinary revenue and will be authorised only to the extent that such revenue is available. It appears from this that all old debts of the State will be definitely disregarded until such time as money is found to meet them.

A further measure to be brought before Parliament will be the plan for the settlement of the agricultural debts, which for this purpose are divided into three classes: (1) Properties up to five hectares; (2) properties from five to 25 hectares; (3) properties over 25 hectares. Debts on the properties of the first class are to be paid within 30 years with 4 per cent. interest. The Institute of Amortisation is authorised to buy up debts of this kind. The conversion of the other debts is to be effected with the assistance of the Bank of Agriculture. The debts are to be reduced by 25 per cent. As regards properties of above 25 hectares, an amount of 60 per cent. of the total value is admitted for conversion. For the purpose of the conversion of the debts of the second class a maximum value of 7,000 Lei per hectare is fixed. The debts of the second and third classes will be payable to the Bank of Agriculture within 30 years with 8 per cent. interest. The creditor will be paid by the Bank of Agriculture. To provide funds, the latter is authorised to issue bonds carrying 8 per cent. interest, subject to annual drawings and guaranteed by the

State. The conversion of the debt can only be effected with the consent of the creditor. For debtors who are not admitted under the plan of conversion there is yet another means of settlement open: this is an arrangement with the creditor for the payment of at least 75 per cent. of the debt with 30 years with 7 per cent. interest. It is left to the courts of justice to decide if the debtor may obtain such an arrangement. It must be admitted that the measure is a serious attempt at a solution of the much-debated problem of the agricultural debts. Its success, however, seems at present problematical. Is the creditor going to assent to the substantial sacrifice which is asked of him? Will the Bank of Agriculture be able to place its bonds to provide the necessary funds? These are questions which become obvious at the most cursory examination of the proposals, whereas the direct arrangement between debtor and creditor bears too much similarity to the "concordat preventif" of commercial firms to encourage hopes regarding its merits as a satisfactory means of settling the debts.

TURKEY.

New Decree-Law — Import Restrictions — Revenue.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, November 17.

EVERYTHING of importance at Angora goes on behind closed doors, and the drastic measures which have been taken this week to restore the balance of payments are no exception. Orders were transmitted at night to close the Customs houses from the following morning and to permit no imported goods to leave the Customs till a new decree-law had been received. This secrecy was partly due to the belief of Angora that it is undesirable to have public discussions beforehand of measures which are to be decided "for the safety of the State." But it was also due to the lesson which the Turks learnt when their new tariffs came into existence in 1929, and when the announcement of the date of the change caused their market to be flooded with an excess of imports from which they have hardly yet recovered.

When Kemal Pasha opened the National Assembly at the beginning of November, he practically told the members that the State—like other modern States—was "in danger," not this time from foreign or internal enemies, but from the economic crisis. He implied that the Cabinet must act as a Committee of Public Safety in these matters. The first result is the present decree-law which restricts all categories of imports to quotas fixed every two months by the Cabinet. The first two months period will run from November 15 to the end of December next. The second will run from January to the end of February, and so on. The quotas fixed for the two-month periods will be known at least twenty days before the previous period runs out. It is not clearly indicated on what bases the quotas will be established, but the principle will be that the commercial balance, which is at present unfavourable to the extent of 20 million Turkish pounds, must be rectified. It appears that, in the first instance, the quotas have been based on the imports of 1930. It is hoped that, as the decree-law gets into working order, the Cabinet decisions will take into account the desiderata of the Chambers of Commerce and of importing traders.

An important point of the new decree-law is that goods similar to those now manufactured in Turkey cannot, while it remains in force, be imported at all. This will especially affect silks, textiles, leather goods, cement, etc., in which the recently founded industries in Turkey are handicapped by the rivalry of European countries and lately of Russia. There has been a good deal of outcry against "dumping," especially by Japan, who has increased her shipments very considerably during the past year and is underselling Turkish merchants. Though Angora has never admitted that the Turkish market was being deliberately flooded with goods similar to the new home manufactures, the leaders have always reserved to themselves the right of taking protective measures. The

present decree-law goes one better, and acts as a prohibitionist decree.

Another stipulation of the decree-law is that foreign concessionaires engaged in carrying out public works in Turkey on behalf of the Government or of semi-public institutions are to be obliged to purchase in the country goods to the amount of the articles they import. This proviso can, however, be suspended by the Cabinet if it thinks fit. As the public works involve importations on a very large scale, the importance of this clause to the economy of the country is obvious. Care will, naturally, be taken that the raw materials necessary for the industry of the country are still imported in sufficient quantities. How long the decree-law will remain in force is not indicated, but it is likely to be a permanent measure during the continuance of the world crisis.

As the Government bowed to outcries of the now extinct "Liberal" party two years ago, and introduced laws reducing taxes, and also abolished some years ago the heavy tax on the peasantry which was its chief resource, it is confronted this year with an insufficient revenue. Already last year it diminished the State expenditure by forty millions, and yet there is again a deficit in prospect. It is thought that the Cabinet will be forced to cut down the coming budgetary expenditure by fifteen millions to about 165 million Turkish pounds. Nevertheless, even then, the revenue will be insufficient, owing to the diminution of the revenue from imports, which have gone down considerably in the past year, and owing to the reduction in taxes. So the Government has decided to impose a special "Crisis Tax" on all salaried workers in the community, whether employed by the Government or by private firms. The law embodying this tax has not yet been drafted, but it appears that it will be passed before the Assembly rises at the end of this month. The very fact that the Assembly is to rise, instead of—as previously—sitting for six months, is a change which has been made owing to the economic crisis. It will give the House an opportunity of framing the Budget nearer to the opening of the Turkish financial year in June. The "Crisis Tax" is reckoned to bring in nine million Turkish pounds, and will make up for the diminutions in taxation which were too rashly undertaken last year.

Letters to the Editor.

ELECTIONS IN JUGO-SLAVIA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I crave your indulgence to furnish a few details concerning the recent elections in Jugo-Slavia on which you commented in your issue of November 14th? Full details are now available of every election division, and since there is no reasonable justification for questioning the integrity of the persons who signed the results for every polling station in that country, the results may throw some light on the election.

Of the total number of the registered electors in Jugo-Slavia 66 per cent. went to the polls on November 8th. In spite of the fact that there was only one national list 2,325,000 people voted. The number of votes cast was higher than that obtained by all the parties in 1927. All the big towns voted in greater numbers than they did in 1927. Not only did Belgrade poll 31,500 as against 27,000 in 1927; but also Zagreb, the metropolis of Croatia, with its 23,204 as against 19,530 in 1927, and Ljubljana, the Slovene centre, cast 13,464 votes against 10,101 in 1927. The poll in Croatia, for example, was 53 per cent. of the total number of electors, while in Slovenia it was 52 per cent. The Government obtained more votes in the Province of Sava, which practically covers Croatia, than the Croat Peasant Party did in the whole country in the 1927 elections. The Government majority in the Province of Sava over that of the Croat Peasant Party in 1927 amounted to 171,000, while their majority in the Province of Drava (Slovenia) over Dr. Koroshetz, the leader of the Slovene People's Party, in 1927 was over 12,000.

No matter what construction is put upon these figures there is no reason, I think, why they should not be allowed to speak for themselves. There is no material available to prove

First Number Now Ready.

The Crown Colonist

A Monthly Journal of Information for all concerned in the Trade and development of BRITISH EAST and WEST AFRICA, THE WEST INDIES, CEYLON, MALAYA and THE OTHER COLONIES, PROTECTORATES and MANDATED TERRITORIES OF THE EMPIRE.

Bahamas	Falkland Is.	Leeward Is.	Nyasaland	Sudan (A.-E.)
Barbados	Fiji	Malaya	Palestine	Tanganyika
Bermuda	Gambia	Malta	St. Helena	Trinidad
British Guiana	Gold Coast	Mauritius	Sarawak	Uganda
British Honduras	Hong Kong	Nigeria	Seychelles	W. Pacific Is.
Ceylon	Jamaica	N. Rhodesia	Sierra Leone	Windward Is.
Cyprus	Kenya	North Borneo	Somaland	Zanzibar

THE BRITISH COLONIAL EMPIRE, as distinct from the Dominions and India, has of late sprung into prominence. The potentialities of this vast but largely undeveloped asset, comprising nearly 40 separate countries spread across the globe, as an expanding market for British manufacturing industry are now recognised.

No journal at present exists, authoritative and technically competent, which, covering the Colonial Empire as a whole, makes its special concern the trade and industry, public services and private enterprises, growth and economic development of all the Colonies, their relations with one another, with the rest of the Empire, and especially with Great Britain.

This high place and function The Crown Colonist will endeavour to fill. Individually the Colonies are of varying degrees of importance, but collectively they form a great economic commonwealth spread across the world, united with strong bonds of loyalty to the mother country, and destined possibly to become of primary importance to the future of British manufacturing industry.

A complimentary copy will be sent on receipt of trade card or note heading to any Banker, Manufacturer, Merchant, or Exporter interested in Colonial Trade.

Monthly **The Crown Colonist** One Shilling

Illustrated

33, TOTHILL STREET, WESTMINSTER, LONDON, S.W.1.

Principal Contents

DECEMBER NUMBER.

- Colonial Markets.
Their Importance in British Trade, and the Work of the Department of Overseas Trade.
- Colonial Tariffs and Preferences.
A Summary of the Present Position.
- A Great Trading Enterprise.
From Bush Store to Africa House; Organisation and Methods of Operation of the United Africa Company throughout West Africa.
- Colonial Production of Tung Oil.
The essential raw material for the manufacture of varnishes and paints; a new Colonial industry.
- Science and the Empire Producer.
A descriptive account of what the Empire Marketing Board is doing for the Colonies.
- Colonial Forest Resources.
Their Care and Use; an introductory survey of the position. By W. G. Freeman, B.Sc., A.R.C.S., F.L.S., of the Imperial Institute.
- Special Correspondents' Reports.
Exclusive Trade Advice from our own Correspondents in Kenya, Rhodesia, Malaya, Ceylon, West Indies, and other Colonies.
- Colonial Produce Markets.
Specially contributed review of movements and prices in the principal Colonial products, Rubber, Tin, Sugar, Tea, Coffee, Maize, Cocoa, Sisal, Copra, Cotton, etc.
- Round the Colonial Empire.
All the Essential News at a glance from Kenya, Uganda, Tanganyika, N. Rhodesia, British Guiana, Hong Kong, Ceylon, Palestine, Malaya, Gold Coast, Nigeria, etc., etc.
- And Other Articles and Regular Features.

that undue pressure was exercised. But there seems to be a lot to suggest that the national appeal of the Government for the preservation of the unity and integrity of the country was one of the primary reasons for so strong a response. On the other hand, there seems to be growing a definite conviction among the masses of the people that the economic and social problems which are affecting their lives to a very great extent should have the priority which they did not enjoy before.—Yours truly,

16, The Vale, N.W.
November 18th.

JAMES RICE.

[Reports, more or less circumstantial, from Jugo-Slavia throw considerable doubt on our correspondent's suggestion that the figures of votes cast are impressive. In many cases there does appear to have been "undue pressure" put upon voters in order to prevent them from abstaining.—Ed., Econ.]

AN EASTERN LOCARNO.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I am obliged to the Polish Press Bureau for their courtesy in pointing out the clerical error in my previous letter, by which I used the term "by this award" where I should apparently have written with greater accuracy "by these awards." I would also myself correct the error in my letter whereby the total length of Germany's eastern frontier was made to apply to that portion of it which borders only on Poland. From these rather trivial errors in my reference to data Mr Czarnomski has seen fit to charge me with "utter ignorance" of the essential facts; but it is remarkable that he has made no serious attempt to refute any of the more essential data or conclusions. With the irrelevancies, generalisations and invective against the German Government of which the greater part of his letter is composed, I hope that some representative of the other party will be allowed to deal.

—Yours faithfully,
Brontë, Elmsley Road,
Mossley Hill, Liverpool.
November 25, 1931.

R. G. WALMSLEY.

Books and Publications.

BOLSHEVISM CONTRA MUNDUM?

In its quiet and unassuming way, Mr Loder's book* is a model of its kind. Its author carefully evades the more obvious pitfalls which beset the literary path of the itinerant politician home from Russia. He admits his philosophical hostility to the Communist conception of society in the preface, instead of obtruding it in the subsequent chapters. He makes it clear that his main object is "to give those to whom Bolshevism is instinctively repulsive grounds for opposition based on reason rather than on emotion or prejudice." His treatment is sufficiently objective to make one wonder whether those for whom it is written will appreciate it. At least, they will derive little enough comfort from his wary comment on the "slavery" legend. "It has been said that the collectivisation of the peasantry virtually amounts to the re-introduction of serfdom. Strictly speaking, this is not a proposition which could be sustained, but as a rhetorical expression it contains some truth." Part I of the book attempts an historical analysis, necessarily sketchy but otherwise unexceptionable, of the events leading up to the Revolution, and the early days of the Communist régime. Part II contains the personal impressions of a tourist who travelled fifteen thousand miles during two visits of a combined duration of four months, and learned something of the extraordinary diversity and complexity of the Russian problem. Part III touches on the more theoretical aspects of the Communist dictatorship, on the objects and achievements of the Pütiletka, and on the future of Communism vis-à-vis the capitalist world. Mr Loder envisages the possibility of "war to the knife" between the two creeds, if Bolshevism refuses to trim its rougher edges and Western Europe to seek a greater tolerance. In so far as this book throws its weight into the search for a *modus vivendi* it may be deemed to have justified itself. As its author writes in another context, "it is often not facts but what people believe to be facts that determine

* "Bolshevism in Perspective." By J. de V. Loder. George Allen and Unwin. 12s. 6d.

the course of events." At least, if our civilisation is to wreck itself on the rocks of conflicting social philosophies, let us be quite certain what exactly it is that we are to fight about.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Some Aspects of the Tariff Question. By Frank W. Taussig. Third edition. (London) Oxford University Press, Warwick Square. 20s. net.

This examination of the development of American industries under protection has now been brought up to 1930.

Bolshevism in Perspective. By J. de V. Loder. (London) George Allen and Unwin, Ltd., 40, Museum Street. 12s. 6d. net.

The author, who gives his personal impressions, gathered in two visits, an historical background, describes his main object as "to give to those to whom Bolshevism is instinctively repulsive grounds for opposition based on reason rather than on emotion or prejudice."

International Studies on the Relation between the Private and Official Practice of Medicine, with Special Reference to the Prevention of Disease. By Sir Arthur Newsholme. (London) George Allen and Unwin, Ltd., 40, Museum Street. 21s. net.

A valuable study of the organisation of medical services in the chief European countries.

Stalin. By Stephen Graham. (London) Ernest Benn, Ltd., 154, Fleet Street. 6s. net.

A short study of Stalin's life and work.

The Present Depression and Monetary Reform. By G. D. Birla. (London) East Indian Produce Company, Ltd., 30, Mincing Lane.

A plea for a currency of stable purchasing power in India.

A Market Analysis of the Population. Statistics for Great Britain and Ireland. Prepared by the Statistical Department of the J. Walter Thompson Company. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 2s. 6d. net.

A little book which should be of value to all business men when studying prospective markets.

L'Organisation du Crédit en Pologne. By Samuel Guterman. (Paris) A. Pedone, 13, Rue Soufflot.

A study of the trend of credit in Poland from 1924 to 1930.

Annuaire de la Société des Nations, 1931. (London) Williams and Norgate, Limited, 88, Great Ormond Street. 12s. 6d. net.

A useful handbook giving detailed information of the League's constitution, activities and personnel.

Official Year Book of the Union of South Africa, 1929-30. (Pretoria) Government Printing and Stationery Office.

A most valuable book of reference.

Lloyd's Calendar, 1932. (London) Corporation of Lloyd's. 3s. 6d. net.

Contains a considerable amount of new material, including articles on shipping, shipbuilding and the oil industry.

The Land Value Tax, 1931. By R. Strachan Gardiner. (London) Central Landowners' Association, 7, Charles Street, St. James's Square. 1s. 6d. net.

A guide to valuation, assessment and procedure.

The Stock Exchange.

IRON AND STEEL SHARES.

IRON and steel shares were in the van of the advance in British equity share prices between the departure from the gold standard and the general election. Individual shares rose by 50 to 100 per cent., and the nine iron and steel securities included in *The Investor's Chronicle* index by 50 per cent. The reasons are not far to seek. Iron and steel shares were outside the scope of the 1928-29 Stock Exchange boom, but participated more than proportionately in the 1930-31 slump. Before the suspension of the gold standard *The Investor's Chronicle* iron and steel share index was 73.6 per cent. below the level of December, 1923, while the index for all "general business" shares was only 23.9 per cent. below that datum point. Thus the "heavy" shares had ample scope for recovery. In the second place, the industry was backed as a favourite in the race to obtain the "benefits" of devaluation. There was no lack of publicity for the increased orders placed for British iron and steel products, while in the background, as a market factor, was the propaganda of certain Press and other interests for tariff support of the industry. The upward movement in values halted soon after the General Election, and a moderate recession has since taken place. A renewal of the rise, however, in the future is more than a possibility, and it is relevant, therefore, to examine the financial position of the leading companies whose shares are dealt in on the Stock Exchange.

The post-war depression of iron and steel securities was due not merely to Great Britain's inability to secure her former share of trade in an expanding world market, but also to the fact that the enormous war-time expansion of plant capacity was followed, in the ensuing boom, by the creation of a large volume of new securities. Many of

these being of a fixed-interest type, the prolonged depression found many companies unable to meet even their prior charge requirements. A vicious circle was created by their consequent inability to raise new capital, with their existing issues at a discount, at a time when far-reaching technical changes demanded constant readaptation of plant as the price of world competitive power. The first serious attempts to break the circle, by ruthlessly writing-off lost capital (including, in some cases, debenture capital), and rationalising productive power as a prelude to obtaining new financial facilities, had been inaugurated by several large interests shortly before the beginning of the world trade slump.

The table at the foot of this column gives particulars of the earnings, dividends and market capitalisation of a large number of British iron and steel concerns. The companies have been arranged under geographical headings, which must, to some extent, influence the course of any future process of consolidation. Within these groups (and in some cases cutting across them) the existing companies, from the investor's viewpoint, fall at present into one of four categories. In the first are included a select number of small or moderate-sized companies, which, as a result of moderate capitalisation—and/or peculiar advantages as regards situation, specialisation of product, etc.—have remained prosperous throughout the depression, and have paid regular dividends to date on all classes of shares. Examples are to be found in almost every area, as, for instance, some of the "Furness" companies, like South Durham on the North-East Coast, and Stewarts and Lloyds in Scotland—a prosperous tube-making concern which has an interest also in the Birmingham district.

CANADA.

After showing a healthier tone, the Canadian markets have suffered a fresh recession, which has brought many of the "pegged" stocks back to their former level. The sharp rise in wheat and other grains was mainly responsible for the forward movement, and the setback in grain prices for the downturn. The stocks of companies interested in Western business are now looked upon with a little more favour, but business conditions do not justify

any substantial advance. Some recent earnings returns have been disappointing. The liquidators of the Montreal brokerage houses which recently went into bankruptcy are faced with the necessity of unloading heavy blocks of Montreal Power, Brazilian Traction, and other key stocks, and hopes of a steady rise of prices during the winter months are regarded as slender. Arrangements have been made, however, with the creditors of Macdougall and Cowans, the largest of the "failed" brokerage firms, for a plan of reorganisation to enable the resumption of business. Newsprint stocks have been slightly more buoyant, as a result of plans for a gigantic merger of the leading pulp and paper companies. Distillery stocks have been weak, earnings having severely declined as a result of a curtailment of liquor purchases by the public. The bond market has been reasonably firm, but is marking time until the terms of the new Federal loan are made public. The Bureau of Statistics "Investors" index of industrial common stocks for the week ended November 12th was 85.9 as compared with 79.6, 74.9, and 73.6 for the weeks ended November 5, October 29 and 22 respectively.

PARIS.

The Paris Bourse opened in heavy and listless fashion. Liquidation followed the news of a sharp break in sterling, bank shares suffering heavily. In the speculative markets, Central Mining and Tinto relapsed. A slight recovery occurred on bear covering, but on Wednesday the tone was adversely influenced by the fresh relapse in wheat prices. Many quotations reached new low levels. International securities were especially affected. A partial revival was seen of pressure on German loans, while renewed weakness became general on Thursday following a further decline in sterling.

AMSTERDAM.

Unfavourable business reports and a general lack of interest unfavourably influenced the Amsterdam Bourse. Unilever and Royal Dutch were weak, though Philips Lamps were steadier on the announcement that the British import duties would scarcely affect the company's sales. On Tuesday, unexpected firmness developed, in which the speculative markets shared. Amsterdam Rubber were quoted higher, while Sugar and Tobacco shares remained steady. A reaction occurred on Wednesday, but Rubber shares showed unexpected powers of resistance.

OTHER CENTRES.

Moderate but intermittent activity was displayed by certain other European Bourses. Stockholm was fairly buoyant at the beginning of the week, domestic issues in particular being firmer, but a reaction followed. Oslo reported increased activity in whaling shares. Brussels improved after a weak opening. Unofficial quotations in Berlin, however, showed an appreciable decline during the week. Dye Trust was done at 95.00 (against 97.7 Siemens at 120.75 (against 121.00), General Electric 29.50 (against 34.25), and Reichsbank at 89.50 (aga-

INVESTMENT NOTES.

Industrial Shares and "Anti-Dumping."—No increase in activity in the industrial share market has followed the first Board of Trade Order under the anti-dumping Bill—which is discussed on page 993 of this issue—but brokers have been dealing with a large number of inquiries regarding the companies which will be affected. We give below a table of the leading companies operating in the trades affected by the Order, whose shares are dealt in on the Stock Exchange. We show the lowest prices recorded this year, the earnings and dividends in the last two years reported, and the dividend yields at present prices. The order given follows the order of the articles as detailed in the Board of Trade list:—

	Lowest, 1931.	Present Price.	Earnings Last two years.	%	Divs. Last two years.	%	Gross Div. Yield.
Twyford & Shanks £1	20/-	23/3	17.3	11.5	12.5	9.0	7.74

John Crossley & Sons £2	11/3	15/-	NH	NH	5.0	NH	...

Twyford and Shanks are the leading concerns manufacturing sanitary ware, glazed wall and hearth tiles. Both companies have suffered from foreign competition—the directors of Shanks attributing it to a large factory in Germany backed by unlimited American money. Wages were, however, reduced in this industry in June last, and the depreciation of the pound will, perhaps, provide a more effective protection than the anti-dumping Order. The protection of domestic glassware may help Canning Town Glass, which has been feeling the ill-effects of intense competition at lower prices. With regard to cutlery and tools, John Shaw and Sons, of Wolverhampton, are one of the leading machine tool firms, having a large export trade to India and the Colonies. The company has been earning nothing on its ordinary capital, and was forced to pass its preference dividends in July. As the Swedish-owned Electrolux is manufacturing in Great Britain, it will benefit from the duty on vacuum cleaners. The duties on wireless sets and parts may assist a number of companies, in particular Pye Radio, General Electric, Associated Electrical, Electrical and Musical Industries, and Marconi Wireless. Wireless, however, is merely a side issue for all these companies, except Pye Radio, which was prosperous before Protection was seriously thought of or the pound sterling depreciated. The duties on woollen and worsted goods may help Patons and Baldwins, Salts (Saltaire), Winterbotham, Strachan and Playne, John Crossley and Sons, and Illingworth Morris, woollen and worsted manufacturers and dyers, and Wolsey, manufacturers of woollen goods; while the duties on artificial silk stockings will be of some benefit to the artificial silk manufacturers, in particular Grouts (which has been earning nothing on its ordinary capital), Wardle and Davenport and Whitworth and Mitchell—the last two already prosperous companies. Phillips Rubber Soles, which explains itself, Dent Allcroft, glove manufacturers, Wiggins Teape, and E. S. and A. Robinson, paper and wrapping paper manufacturers, are other companies directly concerned. Quilt Manufacturers has been

earning nothing for ordinary shareholders, but may possibly be assisted by the duties on rugs and coverlets. The list of companies we have given is not exhaustive, but it serves to emphasise the wide range of companies whose shares may receive speculative attention as a result of the Board of Trade's solicitude.

Secret Reserves: An Accountant's Views.—The Kysant case was bound to cause much searching of heart among professional accountants, and it is well that eminent members of the profession should address themselves to the task of enunciating the conclusions it has suggested, particularly as regards the question of "secret reserves." For many years previously, accountants had frequently been accustomed to certify balance sheets, without qualification, containing items whose valuation was affected by the existence and utilisation of secret reserves. At least one accountant, of acknowledged authority, defended the creation and use of secret reserves as being no more than prudent financial policy. The opposite view has now been forcibly stated by Mr Henry Morgan, President of the Society of Incorporated Accountants and Auditors. Mr Morgan's view is that, so long as a secret reserve exists, every set of accounts is, technically, incorrect. When the reserve is created, certain liabilities are overstated or assets understated, and the profit is also understated. When a secret reserve, already existing, is continued, the profit-and-loss account may be correct, but the balance sheet is incorrect. When such a reserve is utilised, the balance sheet becomes correct, but the profits are overstated. Mr Morgan's *credo* is commendably free from the technical niceties which make the pronouncements of many accountants, like those of other professional men, difficult, at times, for laymen to apprehend. He does not controvert the theory (which all accountants apply in practice) that it is prudent to "err on the safe side" in estimating liabilities, but he sees no justification whatever for absence of disclosure when secret reserves are drawn upon. He shrewdly observes that if disclosure were made compulsory, the creators of such reserves would find, frequently, that their chief *raison d'être* had vanished. Mr Morgan does not agree that, where secret reserves exist, an auditor has done his duty merely by insisting that the accounts include some form of words intimating, more or less oracularly, that "balances" are present or have been drawn upon. He believes that in such a case the auditor should definitely qualify his certificate as being "subject to the non-disclosure of the amount of the reserve in question in the balance sheet or profit-and-loss account." Mr Morgan has thrown down a gage which, we imagine, some of his professional colleagues will not be slow to take up. They will probably point out that the element of approximation

ESTABLISHED at the most important commercial centres in South America and Portugal, the Bank of London & South America Ltd. is particularly well equipped to carry out modern banking business of every description.

must necessarily enter into the value of many items in every set of company accounts. Until the future has revealed the actual extent of many liabilities, it may be flatly impossible for an accountant to declare, categorically, that the provision made has been excessive. In such an event, the position of an auditor would be onerous in the extreme if he were deemed blameworthy unless he qualified his certificate. Nevertheless, the question of disclosure is so fundamental for investors that Mr Morgan's forthright contribution must be regarded as a public service, calculated to stimulate active discussion of a matter which cannot be left in its present unsatisfactory state.

Revival in New Issues?—Recent announcements of a number of industrial issues are not unwelcome, in view of the recent stagnation of the new capital market. During the first 48 weeks of this year total offerings in London have been only £100 millions, against £238 millions in the corresponding period of 1930, and £279 millions in 1929. During the three months ended October 31st last, indeed, total issues were negligible on balance, the excess of National Savings Certificate repayments over new purchases being practically equal to the whole of the new flotations. Such conditions cannot be regarded as "healthy." They suggest that an important part of the British financial machine has not been functioning. During the present month, however, the period of stagnation has been broken, though some of the issues have had a certain element of *force majeure*. Thomas Tilling, the road transport contractors, have invited ordinary shareholders to apply for 527,350 new £1 shares at 30s., to provide part of the finance required in respect of purchases of a controlling interest in transport undertakings and other capital expenditure. Messrs. Furness Withy have announced an early issue, subject to the sanction of shareholders, of £2,000,000 of £1 shares at a price estimated in the market at 21s. There has been much speculation as to the object of the issue, the suggestion of a possible purchase of the White Star Line being discredited, though that of the taking over of refrigerator tonnage for the South American trade, from the Royal Mail group, has commanded more support. Particulars will be found, in our "Capital Issue" columns, of an offer made this week by Lazard Bros. of £1,400,000 of 5 per cent. debenture stock, at 93, on behalf of the Galloway Water Power Company—a statutory company, not as yet in operation—to develop the hydro-electric power in the Galloway area, on the River Dee, and sell its output direct to the Central Electricity Board. Finally, Associated Electrical Industries is offering 1,399,560 £1 shares, to existing shareholders, at 21s., the proceeds being destined to finance the repayment of £1,396,390 of 7 per cent. mortgage debenture stock of a subsidiary—the British Thomson-Houston Company. These four issues involve a total, in money, of £5,662,553. The nature of the response evoked will be watched with interest. Although the present period of unsettled conditions and high interest rates is not, *prima facie*, favourable for extensive long-term capital operations, many companies which have been temporarily financing unavoidable capital requirements by recourse to bank loans would doubtless welcome an early opportunity to put these obligations on a permanent basis, provided this could be done at a reasonable cost. The banks, naturally, would view the process with favour.

Dalgety's Profits and Prospects.—With reference to our leading article last week on the outlook for Australian securities, it may be of interest to add the views expressed by the chairman of Dalgety and Company, Mr Edmund Parker, at the shareholders' meeting on November 19th. Mr Parker said that Australians were now experiencing a fine season, and were hopeful that they were on the eve of a rise in the prices of primary products. As regards wool, the 1930-31 selling season had been one of the leanest ever experienced, for it had been difficult for the growers to make ends meet. The

joint "wool cheque" for Australia and New Zealand had fallen to £31.2 millions, against £39 millions in 1929-30, and an average of £69.3 millions in the previous three years. But the end of the season found everyone in better heart to face the future, owing to the recovery in prices which had since occurred. The selling season opened in Sydney at the end of August, with prices again on a lower basis, the average price for greasy wool being 6½d. per lb., against an average at the same time last year of 8.60d. per lb. Since then the market had improved and the catalogues had been well cleared. The September sales in London opened with prices at a lower basis than at the end of July, but since the departure from the gold standard prices had risen rapidly with the depreciation in the value of sterling and a flood of orders had come from the home trade, which was replenishing its stocks. At the peak of the auctions prices had risen from 25 per cent. to 30 per cent. above the lowest point. This sharp rise had not been maintained, but Mr Parker was of opinion that the wool trade was in a much healthier condition, a good volume of business having been done both for home consumption and for export. As regards wheat, a large crop was harvested, the quantity being about 205 million bushels, but the quality had been seriously affected by rain in the Eastern States. The prices realised were the lowest known for forty years. For the 1931-32 season the acreage planted was smaller, and the total crop was estimated at 177 million bushels. Growers would benefit, he declared, by the depreciation in the £ sterling, and as, in addition to the recent advance in wheat prices, the Australian Government had voted a bonus to farmers of 4½d. a bushel on all wheat marketed, the returns would be far more satisfactory. Since Mr Parker's speech was made the defeat of Mr Scullin has introduced a new factor into the equation, the result of which can scarcely be foreseen until the outcome of the elections is known. As regards the company's prospects, the chairman stated that it had been necessary to dip into reserve to some extent in order to pay the dividend, but every source of possible economies was being explored. We take this opportunity of correcting a misprint, which occurred in our leading article, regarding the company's gross profits. These dropped last year from £927,222 to £801,895, not to £80,895 as stated in our article. It may be added that the company has written down, out of revenue, its freehold and leasehold properties from £1,196,800 to £306,800, and that its ordinary and general reserve funds now total £1,500,000, an amount equal to the paid-up ordinary capital. These figures are a testimony to the conservative policy of the directors and the strong financial position they have been able to build up.

Electricity Supply Company Prospects.—At a time when the outlook for industry as a whole is obscure and complex, it is not easy accurately to estimate the probable course of the electricity industry. Electricity supply companies have hitherto enjoyed an exceptionally favourable field and, as may be seen from the following table of recent profits and dividends, full advantage has been taken of the facilities provided by increasing concentration and the growth of "electrification":—

Name of Company.	Net Profit, 1929.	Ord. Div.	Net Profit, 1930.	Ord. Div.	High-est Price, 1931.	Low-est Price, 1931.	Price, Nov. 25, 1931.	Yield.
Bournemouth and Poole (£1)	12,410	15	116,814	15	62/6	54/6	58/9	5 2 3

Yorkshire Electric (£1)	341,083	8	332,558	8	34/6	28/6	32/6	4 18 6

* West End.

As regards future prospects, the companies may be roughly divided into three groups. In the first are included concerns supplying current to the London district and the Midlands, both highly promising areas from the electrical point of view. This group has scarcely been affected, in an absolute sense, by the current depression, the output of current for South-East England having increased by eleven per cent. in the twelve months to October 31st last. The predominant feature of the industry—increasing returns to capital expenditure—is here very noticeable. In the second group occur the virtually "stationary" areas of the North Midlands, Yorkshire and Lancashire, where, though output has not declined, the companies are required to earn increased revenue to meet the costs of increased capital expenditure. The third group—including North-East England, Scotland and South Wales—has had to bear the brunt of the industrial crisis, and one or two of the companies concerned may find it difficult to maintain dividends without calling on reserves. The fact that, in a time of stress, there has been so little falling off in consumption nevertheless speaks well for the future. The abandonment of the gold standard appears to have given an immediate stimulus to sales, particularly in Lancashire and Yorkshire, but in Scotland and on the North-East Coast, where shipbuilding is of great importance, there has been little appreciable improvement.

Aerated Bread Company.—As a result of intensive re-organisation—involving development, extension and improvement—this company is able to show a further increase in earnings for the year to September 30th. Gross profits rose by £22,906 to £198,075, and net profit was £104,665, against £79,828:—

	Sept. 28, 1929.	Sept. 27, 1930.	Sept. 26, 1931.
Net profit	16,242	79,328	104,665
Preference dividend	26,000	25,594	25,187
No. of times covered	0.62	3.10	4.15
Ordinary dividend:—			
Amount	...	48,437	46,875
Earnings	...	5.42%	7.61%
Paid	...	5%	5%
Inc. or dec. in carry-forward	-9,758	+5,297	+32,603

Additions to freehold and leasehold properties, during the year, were £19,891, bringing this item to £1,054,918—a total just short of the 1931 figure, since depreciation has been deducted from the gross amount. After allowance for depreciation, plant, etc., showed a slight rise. Debtors were reduced, but cash rose by £32,636 to £38,615. The bank overdraft of £49,698 has been completely repaid. The £1 ordinary shares now stand at par, and yield £5 5s. 8d. per cent.

Peter Walker and Robert Gain.—Trade depression and high taxation are responsible for a drop in gross earnings of this brewery holding company of £47,468 to £523,837. The net profit of £370,458, however, was more than sufficient to maintain the dividend:—

	Year ended September 30, 1929.	1930.	1931.
Net profit	417,266	418,005	370,458
Preference dividend	160,000	160,000	160,000
No. of times covered	2.61	2.61	2.32
Ordinary dividend:—			
Amount	170,250	170,250	170,250
Earnings	11.33%	11.36%	9.23%
Paid	7½%	7½%	7½%
To reserve fund	50,000	50,000	25,000
To superannuation reserve	5,000	5,000	5,000
Increase in carry-forward	32,016	32,755	10,208

The main alterations in the balance sheet are connected with the company's holdings in Peter Walker and Son,

Warrington and Burton, Limited. These, after deducting reserve, now stand at £3,800,000, a reduction of £305,767. Amounts payable by associated companies have risen by £350,000 to £580,000. At 16s. the £1 shares yield 10 per cent.

Tate and Lyle.—The accounts of these sugar refiners to September 30th last show impressive recovery. Trading profit, at £905,872, is more than four times the amount for 1930, while net profit, struck after deduction of income tax, fixed charges, and depreciation reserves, has increased from £339,584 to £731,418.

	1929.	Year to September 30, 1930.	1931.
Trading profit	782,373	213,949	905,372
Net profit	736,582	339,584	731,481
Brought forward	41,135	59,417	40,850
Preference dividend ...	71,500	71,500	71,500
No. of times covered	10.9	4.5	11.0
Ordinary dividend:—			
Amount	496,800	340,000	459,000
Earnings	21.4	7.9	21.1
Paid	15	10	13½
Reserve	150,000	26,651	180,000
Carried forward	59,417	40,850†	61,832

† After including £80,000 transferred from dividend reserve.

Last year it was found necessary to draw on reserves to the tune of £80,000. This year, the same amount is reallocated to dividend reserve, and a further £100,000 is added to general reserve, which now stands at £1,250,000. The carry-forward is increased from £40,850 to £61,832. The report makes no comment on the results, but it is to be supposed that the great advance in income is due largely to the fact that stocks, heavily written down to the low level of twelve months ago, have been liquidated during the past year at steadily rising prices. The current balance sheet shows stocks at £1,465,829, against a previous figure of £1,667,971. Investment revenue, over the same period, has fallen from £178,072 to £93,053. At 40s. the £1 ordinary shares yield about £7 2s. per cent., allowing for the final dividend.

Dennis Brothers.—The latest accounts of this commercial vehicle manufacturing concern suggest that new business has been affected by general trade depression during the past financial year. Trading profit has fallen from £296,514 to £137,524—a decline of no less than 53.6 per cent.—while net profit, at £135,743, compares with £286,805. Dividends on the ordinary capital (of which 17s. out of every former £1 share was returned to shareholders in earlier years) has been reduced from 28½ per cent. to 17s. per cent.:—

	1929.	Year to September 30, 1930.	1931.
Trading profit	346,356	296,514	137,524
Net profit	336,585	286,805	135,743
Brought forward	97,739	96,391	95,345
Ordinary dividend:—			
Amount	262,933	212,851	131,467
Earnings	472.5	410.3	180.7
Paid	350	283½	175
Reserve	75,000	75,000	Nil
Carried forward	96,391	95,345	99,621

Past finance has been highly conservative, and the balance sheet remains very liquid. Reserves alone total £650,000, or nearly nine times the issued capital. The balance sheet shows a slight decline in "stock on hand and work in progress" from £310,409 to £286,865. Shareholders will await with interest the chairman's speech, when further particulars relating to the company's position *vis-à-vis* its competitors may be forthcoming. At 21s. 8d., the 1s. shares yield 8½ per cent., allowing for the final dividend.

Second Co-operative Investment Trust.—A valuation of this Trust's investments at September 30, 1931, taking quoted securities at middle market prices and unquoted securities on the basis of "the best information available," showed a depreciation, after deducting reserves and the carry-forward, of 44.31 per cent., as against one of 20.15 per cent. at September 30, 1930. This fact makes unpleasant reading for shareholders, despite the directors' observation that, owing to the disorganisation of the stock markets, the valuation affords no true index of the worth of the securities held. The fact that 15.39 per cent. of the securities are located in Germany and 18.67 per cent. in other European countries outside Germany, France and Belgium—in other words, that 34.06 per cent. are held in the financial storm centres of the world—suggests that a significant part of the Trust's holdings must be unrealisable at the present time. The net revenue for the half-year ended September 30th last amounted to £23,410, against £30,396 in the corresponding period of 1930, and a dividend of 1½ per cent. actual, against 2 per cent., is being paid. The transfer to general reserve is £5,000, against £10,000, and £4,517 is carried forward, against £3,194 at September 30, 1930.

Tin—A Further "Cut."—On Tuesday last the International Tin Committee, representing the Governments of Bolivia, the Dutch East Indies, the Federated Malay States, Nigeria and Siam, held a meeting at The Hague. As a result, it was announced that, as from January 1st next, an additional cut of 15,000 tons a year would be made in the production and export of tin. In 1932, therefore, the output of these countries (which are estimated by supporters of tin restriction to control all but 9,000 tons of world output), will be reduced to 91,000 tons, or approximately 56 per cent. of the 162,000 tons produced in 1929. The table below is based on the presumption that the four chief participating countries will share the increased rate of curtailment in proportion to their present quotas. The figures show the effect of the various arrangements made since the quota scheme was introduced:—

(Tons per annum.)				
	Agreed 1929 Production.	After Initial cut, March 1, 1931.	After Second cut, June 1, 1931.	After Third cut, Jan. 1, 1932.
Malaya	69,366	53,853 (22.36%)	45,355	38,904
Bolivia	46,338	34,220 (26.15%)	28,818	24,701
Dutch East Indies	35,730	29,870 (16.4%)	25,159	21,564
Nigeria	10,412	7,830 (24.8%)	6,577	5,637
Siam	*25,000-30,000	*25,000-35,000	{	{
Others				
Total	186,846-191,846	150,773-160,773	124,909	109,806

* General market estimates.

† Tin restriction authorities' estimates.

Against the new estimated world production of 110,000 tons, deliveries for September and October, covered by the official returns, were at the rate of about 98,500 tons. It remains to be seen, therefore, whether the new cut will bring supply and demand into balance without a revival of consumption. The price of tin did not rise appreciably on the announcement, and fell on Thursday to £135 5s., against £136 at the beginning of the week.

Anglo-Persian Oil.—That the Anglo-Persian Oil Company would follow the example of the Royal Dutch, Shell Trading and Transport, and Venezuelan Oil Concessions in passing its interim dividend was generally expected in the market. A close connection between the Anglo-Persian and the Royal Dutch-Shell group exists, and has lately been cemented by the formation of a joint marketing company in Great Britain, to which reference was made in our last week's issue. Though the Anglo-Persian has been able to effect great economies in its operating, transport and refining expenditures—it is probably the cheapest producer of crude oil in the world—it has not been able to escape the effects of cut-throat marketing competition in this country and on the Continent. It may

be conjectured, however, that it will pay some dividend when the accounts for the whole year are available. In respect of 1930 it paid 15 per cent., which represented £534,298 gross dividends to the Burmah Oil Company, including the B.O.C.-A.P. Share Trust, on their holding of 3,561,990 shares, and £1,125,000 to the Treasury on the British Government holding of 7,500,000 shares. In the meantime the Anglo-Persian is making the holders of the 7 per cent. non-cumulative participating preference shares of Scottish Oils, Limited, an offer to acquire their shares, cum all dividends not already declared and paid, in exchange for 9 per cent. cumulative second preference shares of the Anglo-Persian Oil Company, Limited, ranking for dividend as from April 1, 1931, at the rate of two Anglo-Persian shares for three Scottish Oil shares, fractions being adjusted in cash. A similar offer is being made to the holders of the preference shares of the Pumpherson Oil Company, Limited, the Broxburn Oil Company, Limited, and the Oakbank Oil Company, Limited, but in these cases the shares to be issued in exchange will be the 8 per cent. cumulative first preference shares of the Anglo-Persian Oil Company, Limited. The Anglo-Persian is already in control of Scottish Oils through its holding of the ordinary shares, while Scottish Oils own all, or nearly all, the ordinary shares of the other companies named. The proposal represents a valuable offer to these preference shareholders, for hitherto the Anglo-Persian was under no obligation to pay their dividends.

Consolidated Gold Fields.—Twelve months ago the directors gave the lie to rumour by declaring a dividend upon the ordinary shares—though at the reduced rate of 7½ per cent. On the present occasion there was no room for doubt, a clear warning having been afforded by the postponement of the distribution due in October on the second preference shares. In view of the conditions which have prevailed during the year ended June 30th last, the gross income of the operating company, the New Consolidated Gold Fields, has fallen off to a less extent than might have been expected. It figures at £438,900, compared with £504,830 in 1929-30, but depreciation calls for £713,200, as against a provision of £300,000 twelve months ago. Towards meeting the former sum, £406,048 is transferred from the reserve built up in prosperous years, leaving that fund at a round £200,000. Some rather substantial changes are shown in the balance sheet. Investments are naturally down; loans at short call have been reduced to comparatively trifling proportions. On the other hand, cash advances and mortgages have been almost doubled. Altogether the position is less liquid than it was twelve months ago. At £7,019,400, the balance-sheet total indicates a shrinkage of about half a million. The results of the past three years are summarised below:—

	Year ended June, —		
	1929.	1930.	1931.
Investments	3,202,380	4,290,610	3,826,520
Shares in subsidiaries	1,054,460	1,147,590	1,118,640
Properties and ventures	373,370	399,090	477,490
Loans at short call	939,190	338,130	17,400
Debtors	164,760	263,090	177,440
Cash advances, &c.	703,340	672,450	1,234,390
Cash	366,540	376,220	150,090
Creditors	373,790	200,950	466,250
Net profit*	452,820	330,890	149,790
Dividend per cent.*	15	7½	Nil
Carried forward*	51,930	55,780	59,110

* Gold Fields Company. Other figures relate to the New Consolidated Gold Fields.

The information contained in the report as to the company's South African interests for the most part merely summarises what is already known—though it may be emphasised, in passing, that the gold shares figure prominently amongst the company's most satisfactory holdings. The purchase of a "substantial interest" in the Ashanti Goldfields has proved profitable, and the acquisition of an option over a block of shares in the Taquah and Abosso seems to have possibilities. On the other hand, the participations in the Lake View and the Wiluna—especially the latter—have so far turned out anything but well. A poor

story also has to be told of the company's oil interests. As affecting the Transatlantic investments, concerning which information is not readily obtainable here, note may be taken of progress on the part of the American Potash and Chemical Corporation—though recent conditions have necessitated a curtailment of output. The net earnings of the Celanese Corporation are on the upgrade. A record production by the South American Gold and Platinum Company has resulted in lower profits, owing to the disastrous fall in the value of the white metal. The Yuba Corporation was under the necessity of cutting its dividend from 20 cents to 10 cents; but the prospects of other gold-dredging enterprises appear promising. Gold Fields £1 ordinary shares are now quoted around 15s.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—English, Scottish and Australian Bank, Royal Bank of Scotland, Johannesburg Consolidated Investment, Wall Paper Manufacturers, Goode Durrant and Company, Anglo-Ecuadorian Oilfields, and New Modderfontein Gold Mining. Presiding at the annual meeting of the New Modderfontein Gold Mining Company, Mr John Martin, after discussing the influences which had necessitated the abandonment of the gold standard, expressed the view that (a) gold would continue to play an essential part as an international standard of value; (b) its future would not be determined by the countries which happened to produce gold; (c) countries going off the gold standard would be bound in course of time to return to it, if not at parity, on a stabilised devalued level, and (d) gold as a standard was still functioning, but it would do so more beneficially after an equitable redistribution of existing supplies. At the annual meeting of Johannesburg Consolidated Investment Company, Professor J. G. Lawn said that the level of expenditure in South Africa was on too high a plane, and the simplest and least disturbing method of remedying this was by a devaluation of its currency, which would help the farming, mining and secondary industries. At the annual meeting of Wall Paper Manufacturers, the chairman informed shareholders that during September there was a very large increase in imports of foreign wallpaper, presumably caused by the fear of a tariff.

CAPITAL ISSUES.

Reference is made in an "Investment Note" on page 1024 to a recent stirring in the dry bones of the new capital market. Apart from announcements of important issues, actual or pending, by existing companies to shareholders, a public offer has been made this week of debenture stock on behalf of the Galloway Water Power Company. The company's generating stations, when in operation, will be "Selected Stations" under the South Scotland Electricity Scheme, and the whole output will be purchased by the Central Electricity Board. As the running yield on the debentures is only 5½ per cent., the issue price would appear to take full account of the "semi-gilt-edged" character of the loan's auspices.

Grace National Bank

Hanover Square, New York, U.S.A.

Galloway Water Power Company.—Issue of £1,400,000 5 per cent. redeemable debenture stock (1947-91) at 93 per cent. The stock will be redeemed by means of a cumulative sinking fund, calculated to provide for repayment not later than December 1, 1991. The company will reserve the right to redeem the stock in whole or part on December 1, 1947, at par, on giving three months' notice. Interest and sinking fund payments will be covered from a date not later than August 1, 1936, by payments which the Central Electricity Board have covenanted to make to the company. Until such date, interest will be met partly out of grants to be received and partly out of capital.

West Surrey Water Company.—Issue by tender of £9,000 5 per cent. perpetual debenture stock, minimum price £98 per £100, yielding at that price £5 2s. per cent.; and also 2,000 £10 5½ per cent. preference shares, minimum price £10 5s. per share, yielding at that price £5 7s. 4d. per share. The net revenue of the company for the year to December 31st last was £22,606, covering interest on debenture stock, including the present issue, over five times.

[Other Stock Exchange information, including the latest dividend announcements, profit and loss accounts, reports and notices, weekly traffic returns and summary of balance sheets, will be found on page 1041 under the heading "Company News."]

We are informed by the Dunlop offices that there is no truth in the rumour that the United States Rubber Co. or any of its principal shareholders have acquired any interest in the Dunlop Tire and Rubber Corporation of the United States or the Dunlop Tire and Rubber Company of Canada.

We are informed that Mr H. E. Carter has resigned his seat on the board of T. S. Motors, Ltd., of which he was chairman, and that Mr H. Ramsbotham has also resigned his position as director, following his appointment as a Member of H.M. Government.

COMPANY MEETINGS, &c.

ROYAL BANK OF SCOTLAND.

ANNUAL GENERAL COURT OF PROPRIETORS.

SUCCESSFUL RESULTS—PROFITS WELL MAINTAINED.

THE BANKS AND THE PUBLIC.

RETURN OF CONFIDENCE IN TRADE.

THE DUKE OF BUCCLEUCH'S SPEECH.

The annual general court of proprietors of the Royal Bank of Scotland was held at Edinburgh on Wednesday, 25th instant, His Grace the Duke of Buccleuch, K.T., governor of the bank, presiding.

In moving the adoption of the report, His Grace said:—

I presume it will be your pleasure that the annual report and balance sheet with the auditors' report, which have now been in your hands for some days, shall be taken as read. The directors are pleased, having regard to the trying time through which we have been passing, to submit a statement of so satisfactory a nature.

DEPOSITS, ETC.

The deposits are down by nearly a million pounds—the amount as appearing in the balance sheet being £49,416,000—but such a fall is quite moderate in the circumstances. Dealing with large figures, representing sums occasionally held for quite temporary periods, we are bound to have substantial fluctuations from time to time. The amount at credit of small deposit accounts, opened under the scheme introduced a year or two ago, continues to increase in a marked way, and this department has been the means of bringing us numerous customers. Our note circulation is slightly up, whilst there is also an increase in our acceptances.

LIQUID RESOURCES.

On the other side of the balance sheet the opening items give the customary evidence of the liquid strength of the bank, whilst our investments under the head of British Government securities are increased by £1,380,000, bringing the total up to £15,108,000. There is a reduction in our portfolio of trade and bank bills, arising from the depressed trading conditions, whilst our holding of Treasury bills at £2,680,000, forming a further strong liquid element, is much the same as last year. Advances on cash credit and current accounts, and loans on stocks and securities, show moderate reductions, the causes of which are obvious. From these figures it is patent that the bank has a considerable reserve of resources available for trading purposes when, under improving conditions, the demand for accommodation develops.

PROFITS.

The margin of banking profit has not been unsatisfactory for the period covered by our financial year, and profits have been well maintained. The net profits exhibit a substantial increase upon the figures of the previous year owing to our having received the dividend on our holding of shares of Williams Deacon's Bank, Limited. According to our custom we have provided in a very full way for all bad and doubtful debts. In a time of unexampled difficulty such as we have been passing through the call for such provisions is unavoidable, although the directors are pleased to reflect that in all the circumstances these have not assumed anything more than reasonable figures.

BRITISH GOVERNMENT SECURITIES.

A much more important element has been the quite abnormal fall in the prices of British Government securities following upon the political and financial crisis. Thanks to the strong internal position of the bank we are able as usual to state in the report that all the bank's investments are valued in the balance sheet at or under the prices ruling at the date of the balance. As a proportion of our holdings consists of short-dated Government bonds which are payable at par within quite a limited number of years, and these with all our other investments have been valued at the low prices of October 10th, it will be realised that there is room for considerable appreciation in the quotations as then ruling.

APPROPRIATIONS.

In all these difficult circumstances the directors are pleased to find themselves able to recommend a dividend for the half-year,

payable at Christmas, at the same rate as formerly—17 per cent. per annum—and to make the usual appropriations to bank buildings and heritable property and pension reserve fund. As you will see, after giving effect to these adjustments, there is a surplus of over £71,000—which it is now proposed should be carried to inner reserves against contingencies. Hitherto it has been customary to add such a balance to the rest or reserve fund, but the directors feel that with that fund at £3,780,926 (which is already slightly more than the paid-up capital) it has reached such a figure that it is not necessary to add to it for the present. It may be noted that the capital and rest or reserve fund of the bank now amount together to over £7,500,000.

RECENT EXTENSIONS.

I am pleased to be able to report favourably of the various new or recently added constituents of our large organisation. Drummond's Branch, whilst retaining its original character and individuality under the same management, has become part of ourselves, and continues to prosper. Our branch in Bond Street, London, is making excellent progress and has already collected quite an important clientele. We feel honoured and have had much satisfaction in succeeding the Bank of England at their old Western Branch in Burlington Gardens, and I am glad to inform you that we have retained practically all the excellent private business previously conducted by them at that office. We are much indebted to Mr Howe, the former agent of the Bank of England there, who now represents the Royal Bank, for all his loyalty and good work on our behalf. We have opened five new branch offices in Scotland during the year.

WILLIAMS DEACON'S BANK, LIMITED.

You are no doubt interested to see from the report which is in your hands that we now own the whole of the shares of Williams Deacon's Bank, Limited—our important English associate. The arrangements for carrying on the two banks in association with each other through representation on the respective boards are working most harmoniously, and there is every promise that the connection will prove beneficial to both institutions. The business of Williams Deacon's Bank is well maintained and goes on as formerly, their customers and connections recognising that there is really no change so far as they are concerned.

In this connection may I express the gratification of the directors, in which I am sure you will join, at the acceptance by Lord Derby of the position of an extraordinary director of the Royal Bank. His Lordship's name is a household word in the area in which Williams Deacon's Bank chiefly operates, and he is well known for his local patriotism as well as for his eminent public services. I am sure this association will be regarded very favourably by the friends of Williams Deacon's Bank.

THE BANKS AND THE PUBLIC

Last year, speaking from this chair, I made a strong plea for public economy and protested against the growing expenditure of the time, much of which seemed to be not only wasteful but demoralising. I endeavoured to show the seriousness of the position which, as I pointed out, was even then tending to become a national emergency. I am no seeker for honour as a prophet, but we have truly had to face a great national emergency culminating in a financial and political crisis which has affected practically the whole business world. The banks have no politics, but on the occasion of the recent election they found that the question of the nationalisation and public control of the whole banking system of the country, including the joint stock banks, had become a plank in the platform of one of the contending parties. All this seems somewhat extraordinary to those connected with the practical administration of the banks, who have been engaged with much hard work and a good deal of anxiety in doing their best to encourage, develop and sustain the trade of the country over a series of most difficult years.

They are quite unconscious of any desire to dominate credit or industry or any other interest. Their chief care is to look well after their depositors' money, which is drawn from all classes of the community, and whilst at all times ready to make advances for trading and general purposes and to do whatever is necessary to uphold the industries and the credit of the country, they have constantly to keep their assets in a reasonably liquid state so that they may be in a position at any time to fulfil their contract to repay their depositors on demand. It would be difficult to conceive of anything less like the swollen money trust of the imaginations of some of the extreme critics of the banks than a Scottish bank, which is conducted on the lines suggested by the experience of over two hundred years of prudent management and service to the people. Happily there is another side to the picture. The banking structure of the country has recently been subjected to the keenest scrutiny by the distinguished body of men forming the Macmillan Committee, with an eminent Scotsman at its head. I think it may fairly be claimed that apart from a certain degree of criticism, to which all human effort is open, the banking system has emerged from that inquiry practically unscathed; but with all deference and respect to that Committee the banks have also received exoneration from an even more important tribunal—namely, the people themselves, who have surely given them a very striking vote of confidence. That is not surprising. The inhabitants of this northern part of the Kingdom do not need to be reminded of Lord Macaulay's dictum that "her schools and banks had transformed Scotland," or of the pronouncement of a well-known authority to the effect that the banking system of Scotland "has contributed more to the prosperity of our country than any other class of institutions"—and I might perhaps add Sir Walter Scott's remark in his famous defence of the Scottish bank note issues written more than one hundred years ago when, under the name of "Malachi Malagrowther," he said on behalf of the banks: "We are well, our pulse and complexion prove it: let those who are sick take physic."

TRADE REVIVAL

On the subject of the revival of trade it is only possible as yet to speak in very general terms. We have secured the desired return of confidence and that sense of security which are essential to all trading enterprise. There is a new atmosphere. Abandonment of the gold standard, as is daily pointed out, has had a stimulating effect upon our export trade, although that has its limitations. In various industries there are new and broadening inquiries, and connections dormant for years have been reopened. High hopes are centred upon the measures to be adopted by the National Government, but it must never be forgotten that in addition to what can be achieved in that way, much hard work and personal effort will be required before we are in the position to resume our old place in the markets of the world. It must be observed also that we are in the grip of a great world crisis, and substantial progress cannot be made unless by conference and negotiation the different Governments come to an agreement about war debts and reparations, and the great central banks on credit and currency problems. In the meantime the stabilisation of the pound, however desirable, must wait, as we cannot afford to take action until we are absolutely assured that we can maintain the new basis as a definite and permanent arrangement.

THANKS TO OFFICIALS AND STAFF

The directors desire to renew their expression of thanks to the officials and members of the staff at head office, London—the City and West End offices—Glasgow, and Dundee, and all the other branches for their loyal and willing co-operation.

The directors again desire to place on record their high appreciation of the valuable services rendered by Sir Alexander Wright, the general manager, during a year of considerable difficulty. In their thanks and appreciation they would also wish to include Mr William Whyte, the deputy-general manager.

APPROVAL OF ACCOUNTS: DIVIDEND.

With these observations I beg to propose that the report now submitted, containing a statement of the accounts and balance sheet, be approved, and that out of the profits of the year a dividend at the rate of 17 per cent. per annum for the half-year, under deduction of tax, be now declared in conformity therewith.

The report was approved, and the governor, deputy-governor, extraordinary directors and the retiring ordinary directors were re-elected, and auditors were reappointed for the ensuing year.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

WALL PAPER MANUFACTURERS, LIMITED.

SUCCESSFUL RESULTS OF A DIFFICULT YEAR.

The annual general meeting was held, on the 26th instant, at the Holborn Restaurant, London, The Chairman (Mr Alan V. Sugden), in moving the adoption of the report and accounts, referring to the accounts, said:—
The following are the comparative figures:—

	1931.	1930.
	£	£
Balance brought in.....	260,996	295,795

GENERAL CONDITIONS.

During the year there has been a decline in sales in practically every market, particularly overseas, due entirely to bad trade conditions.

The business, apart from world conditions, is in a very sound state, and is ready to go forward very promptly the moment there is the stimulus of increased demand.

So far, the exchange question has not caused any material change in our position; there have been signs of improvement in the export of our goods to certain markets, whilst the reverse is the effect to others.

Many markets exhibit a waiting attitude, as if desirous of knowing whether any further depreciation will take effect before deciding on further purchases. Impoverishment abroad is a very real factor in a business like ours.

On the other side a very high percentage of our raw materials, other than paper, are not produced in this country, and our costs have just recently increased as a consequence of the depreciated pound.

During September, there was a very large increase in imports of foreign wallpaper, presumably caused by the fear of a tariff. As that month's figure was about twice that for the corresponding month last year, we promptly brought it to the notice of the Board of Trade. The October figures also showed a considerable increase.

COMPETITION.

As a result of the reduction in purchasing power, there has been rather more price cutting by competitors during the past year. On the other hand, the departure from the gold standard has already created difficulties for merchants in this country who issue pattern books to the decorating trade containing foreign wallpapers, and also to the many multiple retail shops which trade in foreign goods. It is worth while warning our shareholders that, when buying, they should inquire if the article is marked "Crown" wallpapers.

Your board entirely believes in the necessity for a tariff on wallpaper, primarily on the ground of the lower wage rates paid in competing countries and of the general absence of trade union regulations and Governmental restrictions about which we make no complaint except that they do not always apply elsewhere.

THE WALPAMUR COMPANY.

It must be remembered that whilst wallpapers cater solely to interior decoration, the scope of paints goes beyond this field. It includes the protection of innumerable and varied surfaces, and also the production of "industrial finishes" for shipping, for machinery and for an enormous range of manufactured articles.

The Walpamur Company, despite general depression, has continued to increase its trade and the range of its products.

TAXATION.

I think it is my duty to draw the shareholders' attention to the considerable injustice our industry suffers from taxation. Not only do we bear our share of general taxation, but we are amongst those industries singled out for special burdens in the matter of duty on white spirit. In addition, I am much concerned at the effect which the increased instalment of income tax payable in January will have on our business, as this is normally the season of the year when decoration comes into consideration.

The resolution was carried unanimously and a vote of thanks to the Chairman, directors and staff terminated the proceedings.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK, LIMITED.

A YEAR OF EXCEPTIONAL DIFFICULTIES.

POSITION AND PROSPECTS IN THE COMMONWEALTH.

MR ANDREW WILLIAMSON'S INTERESTING REVIEW.

The thirty-ninth ordinary general meeting of English, Scottish and Australian Bank, Limited, was held, on the 25th instant, at 5, Gracechurch Street, London, Mr Andrew Williamson (the chairman) presiding.

Mr E. M. Janion (London manager and secretary) having read the notice convening the meeting and the auditors' report,

The Chairman first referred to the heavy loss which the bank had sustained by the death of Viscount Knutsford, who had been a director for 38 years.

Proceeding, the Chairman said:—The past year has been one of exceptional difficulty. It is not too much to say that, however you view it—politically, financially or industrially—it has been the most critical year in the history of Australia. When addressing you a year ago I explained how this critical position in Australia had arisen through the catastrophic fall in the world's prices of all the primary commodities which Australia produces, and by the export of which she is supplied with the necessary funds in London to pay for the goods she imports and to meet the annual obligations of her Governments for the payment of interest on her overseas debt, and for services, amounting to fully £36,000,000 a year. This was accentuated by over-borrowing in the past and by the hurtful effects of uneconomic legislation.

PREMIERS' AGREEMENT.

In short, Australia was faced with the double danger of unbalanced Budgets and unbalanced trade, a position of national danger of which we ourselves have recently had such painful experience, and from the dire consequences of which we have only just escaped, and with which we are still contending. I was, however, able to tell you that a plan had been agreed at a Conference of the Commonwealth Prime Minister and of the State Premiers—after consultation with Sir Otto Niemeyer, representative of the Bank of England, who, at the request of the Commonwealth Government, had visited Australia—by which the Budgets would be balanced.

Meanwhile, the Commonwealth Bank and the various trading banks had come to an agreement for the pooling of London exchange, whereby the Commonwealth Government was given the first charge on the various banks' London exchange to the extent of £3,000,000 a month, or £36,000,000 a year. This, of course, *pro tanto*, restricted the accommodation we could give to meet the trading requirements of our customers. These arrangements, together with a drastic limitation of imports, opened up a way to save the situation, and had the Premiers' agreement been resolutely and faithfully adhered to by all the signatories Australia would to-day have been much further on the road to financial recovery. The Federal Government, however, hung back, and the State of New South Wales broke away completely.

COMMITTEE'S REPORT.

At our last annual meeting I expressed the hope that the Federal Government would resolutely put into force the terms of the agreement. In this, however, we were disappointed, and matters were allowed to drift, with increasing unemployment, till in April last the situation had become so acute that the Commonwealth Bank found it necessary to intimate to the Loan Council representing the Federal Government and all the States that it would not continue to provide finance for the various Governments beyond a defined limit. The result was the appointment of a committee consisting of the Under-Treasurers of the Commonwealth and the various States and of four of the leading economists. This committee made a close investigation of the position and set out the steps they considered necessary to restore financial equilibrium. A conference of the Federal and States leading Ministers was then summoned to consider the report of this committee.

Their report recommended drastic reduction in Government expenditure and further taxation, with its incidence so spread as to secure as far as possible equality of sacrifice by the whole community, as well as reduction in the interest payable on the whole of the internal loan debt of the Commonwealth and all the States, and also reductions in banks and savings banks rates of interest on deposits and advances and on private mortgages. After full consideration, calling into counsel the leading members of the Opposition, and prolonged discussion, this report, with certain modifications, was approved and adopted, to be put into effect with all dispatch. The course so decided is known as the Premiers' Rehabilitation Plan.

CONVERSION LOAN ACHIEVEMENT.

An essential part of the plan, and which was the first to be carried out, was the issue of a Conversion Loan to place the whole internal

debt of Australia, Federal and State, amounting to £557,000,000, on to a practically 4 per cent. basis by the reduction of existing rates by 22½ per cent. The holders of the various existing loans were invited in the national interest voluntarily to convert their holdings into the new stock. This stupendous operation was so successfully accomplished that of the whole £557,000,000 holders of only between £16,000,000 and £17,000,000 refused. This marvellous achievement was a wonderful tribute to the patriotism of the Australian people, and immediately enhanced the credit of Australia overseas.

In accordance with the policy of the Premiers' plan, the banks as from June 26 last reduced the rates payable on fixed deposits arranged after that date by 1 per cent., with a view to the reduction in due course in lending rates. It will, of course, take time for the full effect of this to be felt, probably two years, for the contracts for previously fixed deposits cannot be altered and must run out to their due dates. The banks' lending rates have since been similarly reduced. In the special circumstances of the present time we are in full accord with this policy of the Premiers' plan, though the reduction of interest rates on overdrafts will be an additional burden on the banks, as their old fixed deposits still carry the old high rates of interest until they mature.

DUTY OF THE BANKS.

The first duty of the banks is to their depositors, who supply by far the largest portion of the funds with which the banks have to deal. Their next duty in the present critical times is to the Governments, but accommodation to the Governments can only be accorded when that can be done with perfect safety to the security of our depositors, and also with some regard to the necessities of our trading customers. If you will bear all this in mind you will recognise, from what I have already said of the general position, how severely the general difficulties of the present situations of affairs in Australia restrict for the time being the earning powers of the banks, and it is in this way, in a very marked degree, that the shareholders of the banks are contributing to the personal sacrifice in which the Governments have called upon all the people of Australia to share in order to rehabilitate the whole position and open the way for gradual and sound recovery.

During the last two difficult and anxious years the sheet anchor that has been the chief means of steadying the position and making the way to ultimate recovery possible without an intervening disaster has been the loyalty with which, at much sacrifice to themselves, the banks have co-operated with and supported the Governments. Had not the banks over a long course of years been ably and prudently conducted on sound economic lines, the support they have accorded to the Governments would have been impossible. I am glad to have this opportunity to bear a cordial tribute to the admirable way in which Sir Robert Gibson and his colleagues on the board of the Commonwealth Bank have, together with the trading banks, handled the many critical and delicate situations that have arisen. The whole of Australia is under a lasting debt of obligation to the banks which it would be difficult to exaggerate.

IMPROVED TRADE POSITION.

The balancing of the Budgets of the Governments—and keeping them balanced from year to year—is an essential factor in Australian recovery, but one of equal importance is the restoration of the balance of trade and the provision by the required excess of exports from Australia over imports to meet the fully £36,000,000 annual obligation in London for interest on overseas loans and services. The trade position has very definitely improved, as the following official statistics of Australian overseas trade for the last year showing an excess of exports amounting to £41,408,303. Eliminating the gold from both the imports and exports in both years, and reducing the exports of merchandise other than gold to British currency, we then have the figures for the two years, thus:—

To June 30,	Imports.	Exports.
1930	£130,755,597	£97,378,299
	showing an excess of imports of £33,377,298.	
1931	£60,159,042	£75,800,000
	showing an excess of exports of £15,640,958	

EXCESS OF TOTAL EXPORTS.

You will notice that last year imports fell by £70,596,555, and that exports also fell by rather over £21,500,000, showing a severe

shrinkage in overseas trade. If we add back the gold imported and exported last year, we have a real excess of total exports over total imports of £28,288,861, or a net improvement last year over 1930 in the trade balance of over £34,000,000. This is a gratifying movement in the right direction, but is still a long way short of the amount that Australia requires in the form of London money each year to provide for her annual obligations and for financing her export trade from London. During the last two years Australia, to pay her way, has exported £40,000,000 of gold, which cannot be repeated. Nor can she for probably some years to come materially increase the volume of her exports; relief must come through a recovery from the catastrophic fall in her commodity prices, and reducing her costs of production.

Since Britain was forced off the gold standard there has been a gratifying rise in world prices for practically all Australian exports. If this rise is maintained, and still more if the improvement goes further, and if the Federal and State Governments resolutely adhere to the Premiers' plan and costs of production are brought into closer relation to world costs, then we should witness a steady and all-round recovery, expansion of trade and industry, increased employment, a gradual improvement in exchange, and a steady advance towards more prosperous times.

THE ACCOUNTS.

From the reserve fund of £3,175,000 you will observe that there has been transferred to a special reserve for depreciation in Australian currency the sum of £1,585,000, leaving in the free reserve fund the sum of £1,590,000. The £1,585,000 carried to special reserve represents what it would cost to bring over to London at the rate of exchange ruling at the date of the balance sheet the assets which, in the event of final settlement, would have to be dealt with on this side.

The directors look on the present abnormal exchange position as only a temporary phase, and that the exchange will, as trade improves and the balance swings more and more in favour of Australia, gradually return to par. In such event this special provision would no longer be required, and the amount so earmarked would be restored to the general reserve fund.

DEPOSITS AND CURRENT ACCOUNTS.

Current accounts and fixed deposits together at £28,522,421 are less than in the previous balance sheet by 1,759,271, which has meant diminished profits. Until recovery in the general situation sets in and the poor returns, and in many cases losses, which traders are making are once again replaced by revived trade and normal profits, some further diminution of fixed deposits and current accounts may be expected. The reduction of interest on fixed deposits required by the Premiers' Plan may further accentuate this.

VERY STRONG POSITION.

Turning to the assets side of the balance sheet, you will see that our cash in hand and bullion and cash at bankers, including cheques in course of collection, at £8,589,192, is greater than last year by £1,811,454. This large increase in our cash shows a very strong position, putting our liquid resources into the ratio of 17s. 6½d. to the £ of our call liabilities.

Advances and other assets, after deducting provision for bad and doubtful debts and contingencies reserves, at £25,699,203, show a diminution of £3,168,845, a result of the cautious policy we have followed. It is interesting to note that our advances and other assets show a ratio to our current and fixed deposits at interest of 18s. 0½d. in the £.

PROFIT AND LOSS ACCOUNT.

The gross profits as shown by the profit and loss account, after deducting interest on the perpetual stocks—the necessary provision for bad and doubtful debts having been charged to contingencies reserves—amounted to £1,275,825, a shrinkage from the previous year of approximately £311,923. This, perhaps more than anything else, brings home to us with painful vividness how intimately the earning power and general prosperity of the bank are interlinked with the general welfare and prosperity of the whole community, and how ludicrous are the contentions of some Australian politicians that the troubles of Australia were largely brought about by the banks for their own selfish ends. Any more preposterous statement it is difficult to imagine, though we have found it recently re-echoed by the Socialists on this side.

As I have so often emphasised, the well-being of the banks is bound up with the well-being of the community. In a time of acute depression there is a shrinkage of banking profits in all directions, and there is a special obligation on the bank to support distressed customers wherever it can prudently do so, and to lighten their burdens as far as possible so as to assist them in tiding over a time of general and exceptional difficulty, even at the cost of concessions that curtail for the time being the bank's profits. In prosperous times we benefit, and in adverse times we suffer.

APPROPRIATIONS.

We have the sum of £437,134 available for appropriation. The appropriations we recommend are:—

- (1) To reserve fund, a further £15,000, bringing the total appropriation to £30,000.
- (2) To E.S. and A. Bank Officers' Provident Fund, £5,000.
- (3) To a further dividend of 4 per cent. free of income tax, making 8 per cent. free of income tax for the year, payable out of the profits of the year, £120,000.

After deducting these appropriations there is left to be carried forward to next year the substantial sum of £297,134.

While the reduction in the year's profits, with the consequent reduction in dividend, is a trying and painful experience for us all, it is the inevitable result of the depression from which the whole world is suffering, accentuated by the special causes arising from the state of things peculiar to Australia. Provided that the conditions laid down in the Premiers' Plan are faithfully observed in the spirit as well as in the letter, and that in the future politicians are not allowed to play fast and loose with economic law, I have no fear for the future of Australia, but these conditions need to be observed if full recovery is to be secured and a full tide of prosperity reached later on.

COSTS OF PRODUCTION.

Costs of production will have to be reduced. The needless and harassing burdens placed on industry, both primary and secondary, by the awards and regulations of the Arbitration and Conciliation Courts will have to be mitigated.

The fixation of wages ought in future to have some relation to the actual value the recipient can give in return, and not merely to what he can consume or to the number of years he has lived, totally regardless of individual merit. Probably the only way out of the morass into which these tribunals have led all branches of industry will be to abolish them altogether. (Hear, hear.) If employer and employed were left free to make their own agreements, I believe an immense change for the better would eventuate between capital and labour, to the lasting benefit of the workers and the good of the whole community.

GENERAL ELECTION PROBABLE.

In May next a general election was expected to take place for the Federal Parliament. We can only hope that this critical election, for critical it must be, will result in the firm establishment of a wise Government consisting of men who place the urgent needs of their country above all personal or party considerations, and who will be entitled to, and who will receive the full confidence and support of the people.

This morning a cable has come in intimating that the Federal Government in Australia was last night defeated and that there is the probability of an immediate or more or less immediate general election.

I will now, following my usual custom, give you a brief review of the principal branches of the export trade from Australia.

WOOL.

The quantities and values of wool exported during the last four years have been:—

To June 30.	Bales.	Value. £
1928	2,470,036	66,095,901
1929	2,643,885	61,612,995
1930	2,464,695	36,588,523
1931	2,673,890	32,002,181

While the quantity last year was increased by 209,195 bales the proceeds fell by £4,586,342 compared with the previous year; and, as contrasted with the year ended June 30, 1928, there is, last year, an increase in bales of 203,854 and a decrease in value of not less than £34,093,720. The average values for greasy wool for each of the last four completed years have been given by a high authority as 19.5d., 16.4d., 10.2d., and 8.3d. respectively. It is impossible in the case of wool, with between 800 and 900 different qualities, to give any really correct average, but the foregoing reflects closely enough the actual trend of prices, which have been disastrously adverse to this the chief of all Australia's exports.

During the year since our last meeting prices fell in January and February; they had a sharp recovery in March, falling away again in May and still further in July, but on our suspending the gold standard they advanced with the remarkably increased activity which then took place in the manufacturing side of the industry in Yorkshire. At the November-December sales which opened yesterday in Coleman Street there was a keen demand at an advance of 5 per cent. to 7½ per cent. for greasy merino over the September-October sales, and with prices par to 5 per cent. lower as compared with the prices ruling at the date of our last meeting. The rise so far is based mainly on the increased activity in our home market;

dividend of 45 per cent. was declared in June last. The ore reserves at end of 1930 amounted to 10,840,000 tons, of an average value of 8.9 dwts. over a stoping width of 61 inches.

NEW STATE AREAS, LIMITED.

The results for 1930 surpassed the previous year's record and operations in every way were satisfactory. The tonnage crushed shows an increase of 12,000 tons, and gold produced 54,507 fine ounces more than the production in 1929. Working costs increased 9½d. per ton, but the cost per fine ounce of gold recovered was reduced from 48.9s. to 45.2s.; working profit was increased by £181,074, the total for the year being £891,348. Dividends totalling 17½ per cent. were distributed and £511,650 was paid to the Government in terms of lease. In June last a dividend of 10 per cent. was declared. The improved results reflect the sound position of the mine, and a long and successful life is assured. The ore reserves at the end of 1930 were estimated at 2,716,000 tons, with a value of 8.9 dwts. over a stoping width of 50 inches.

VAN RYN DEEP, LIMITED.

The treatment of 771,000 tons resulted in a working profit of £463,516. The decreased profit is due to a fall in grade in keeping with the lower ore reserve value and to increased costs due to narrower stoping width in upper leaders, from which source it is now necessary to draw the greater percentage of ore. Dividends totalling 30 per cent., absorbing £359,068, were distributed. The development of the main reef leaders was practically completed, consequently there will be a gradual drop in the ore reserves on this reef. Exploratory work has been, and is being, done on the upper leaders with good results, and the mine has a considerable life ahead. A dividend of 12½ per cent. was declared last June. The ore reserves at the end of 1930 were estimated at 2,854,000 tons of an average value of 7 dwts. over a stoping width of 48 inches.

WITWATERSRAND GOLD MINING COMPANY, LIMITED.

The working profit for 1930 was £37,955 from treatment of 659,500 tons, representing increases of £22,608 and 18,500 tons compared with previous year. Two dividends of 5 per cent. were declared in 1930, absorbing £46,962. A dividend of 2½ per cent. was declared in June last. The ore reserves at the end of the year were estimated at 391,000 tons, of an average value of 5.5 dwts. over a stoping width of 54 inches. Less than 25 per cent. of the ore crushed is drawn from ore reserves, the balance being won from reclamation areas which contain a very large tonnage of low grade rock. The future of the mine depends on the trend of working costs.

THE LANGLAAGTE ESTATE AND GOLD MINING COMPANY, LIMITED.

The working profit for 1930 was £385,645, being an increase of £73,813 over the previous year. Two dividends of 10 per cent. each were distributed. The results of the operations and development were satisfactory. The major development programme was approaching completion, but a good deal of subsidiary development remains to be done. A dividend of 10 per cent. was declared in June last. The ore reserves at the end of 1930 were estimated at 1,530,000 tons, of an average value of 7.4 dwts. over a stoping width of 43 inches.

THE RANDFONTEIN ESTATES GOLD MINING COMPANY, WITWATERSRAND, LIMITED.

During 1930 the crushing of 2,573,000 tons yielded a working profit of £412,520, being an increase of 45,000 tons in ore crushed and £165,815 in profit earned compared with the previous year. The increase in the working profit is due partly to a larger tonnage and in greater measure to an improvement in the yield of nearly half a pennyweight. The improvement was well maintained during the current year, the first six months showing a working profit of £274,555. The ore reserves at the end of 1930 were estimated at 5,290,000 tons of an average value of 6 dwts. over a stoping width of 41 inches, showing a distinct improvement due to the large development programme accomplished and better values exposed. During the current year development work has been accelerated wherever possible and improved values have been maintained. The sinking of No. 2 North Shaft was completed in July at a depth of 4,576 feet, and the shaft is now being brought into commission. The Randfontein Leader and the West Reef were passed through near the bottom of the shaft, and the values were satisfactory, being equal to the average value of the mine. The most important feature is the progressive flattening of the reefs in the lower levels of the main section of the property where reefs maintain a steep dip from the surface down to a depth of 4,000 feet. The lowest exposures of the reefs show a dip of 15 to 25 degrees only, and there is no reasonable doubt that the reefs will become flat and finally assume reverse dip until cut by the Witpoortje fault which lies at a considerable distance to the east of the present workings, thus the

reefs to the west of the Witpoortje fault lie in the form of a syncline or trough. Had the steep dip persisted, the ore available for exploitation would be limited by the depth to which it could be mined, whereas with the changed conditions all the ore will lie at workable depth. Unfortunately, the sinking of No. 2 North Shaft proved to be more costly than expected, because of a heavy flow of water which was cut in depth; nevertheless, it is expected that the company will re-enter the dividend list at the end of this year. The redemption of the outstanding debentures is nearly completed. Debentures amounting to £155,200 fall to be paid in March next, leaving only £46,760 outstanding, which will be redeemed in March, 1933.

COAL.

For the financial year ended September last the Consolidated Collieries and New Springs Colliery distributed dividends of 7 per cent. and 7½ per cent. respectively.

SOUTH AFRICAN CARBIDE AND BY-PRODUCTS COMPANY, LIMITED.

This company had a successful year, with increased sales. The outstanding dividends on the preference shares were paid to the end of the company's financial year, and a dividend of 8 per cent. was paid to ordinary shareholders.

COPPER.

The copper interests in Northern Rhodesia are now consolidated into two strong groups, N'kana Group and Chester-Beatty Group, working in entire harmony and making control of production feasible, and ensuring opening up and equipment of the mines as expansion justified. It may now be said that the copper industry in Northern Rhodesia is organised on sound lines, making for progressive development and permanent advantage. The first producing mines will be Roan Antelope, N'kana, Mufulira and N'Changa West. The first two equipped with a concentration plant, its concentrates being smelted at one or both first two mines. Ore from N'Changa West would be treated in the first instance at N'kana. The Roan Antelope has been already producing for several months. The treatment of the ore has proved simple and satisfactory, as was anticipated. Working results fully confirm grade of ore as deduced from boreholes, and working costs are lower than the most hopeful estimates foretold. N'kana Mine is very near the producing stage, and Mufulira will follow soon after.

CHEAP PRODUCTION.

Both equipments are making excellent progress towards completion. Working costs have demonstrated that cheap copper can be produced in Northern Rhodesia, and when methods of mining and treatment have become perfected and standardised, there is every reason to hope that production will be as cheap as anywhere in the world. In the meantime, copper has suffered severely in the world depression. Attempts to regulate the price have proved abortive, because they were not accompanied by any adequate scheme of restriction of output. Seeing that big copper production is in comparatively few hands, it was hoped agreement would have been reached ere this, but interests were so financially strong and conditions under which copper is produced are so varied, that agreement has proved difficult. Though the conference recently held in New York, at which Northern Rhodesia was represented, resulted in no agreement being reached; such agreement will come one day, and gradually copper mining will resume its old position as a great industry. The mines are greatly helped by Northern Rhodesia going off the gold standard. The future is looked forward to with confidence.

PLATINUM.

Platinum producing companies suffered severely during the year from price cutting, the price reaching the low figure of £4 12s. 10d. per ounce. In April last negotiations were commenced with a view to forming a company for marketing the output of all important producers, and the first step taken was to steady up the price. The details of organisation took a long time to arrange, and the company has only just been registered, under the title of Consolidated Platinums, Limited. The new company will carry on research and propaganda and so increase sales of the metal. As it was felt that it would add strength to the South African position if the companies producing platinum in South Africa consolidated their interests by amalgamation, the Ferstegeluk Mine, belonging to Potgietersrust Platinums, Limited, and the adjoining Waterval Mine were formed into one company, called Rustenburg Platinum Mines, Limited, all the shares being held by the parent companies. The technical position is being constantly improved as experience is gained, and platinum can now be produced at a figure well below selling price. Providing the sales do not fall to a very low figure the position is hopeful, and it is reasonable to expect the establishment of platinum mining as a profitable South African industry.

DIAMONDS.

The diamond industry, in which the company has a considerable interest, is suffering from severe depression, due, partly, to world conditions and partly to lack of confidence in the stability of prices. Sales of uncut stones are limited in amount, and consequently production has been heavily curtailed. Although the industry is largely a luxury trade, yet diamonds have been looked upon as a convenient means of storing wealth. A luxury trade is bound to suffer severely in world-wide depression, but in time of uncertain currencies and crashing values it is reasonable to expect that diamonds would be still sought after as a hoarding medium had confidence not been undermined by actions of the Union Government.

Confidence is the only foundation on which the diamond industry can be maintained. This can be secured only by restricting production, eliminating competitive selling, and by the marketing of uncut stones through one channel. This essential condition was clearly recognised in the past by all interested in the industry, so that the Diamond Syndicate was able to secure the selling, not only of output of principal South African producers, but also of producers in Angola, Congo Territories and West Africa.

UNION GOVERNMENT'S ATTITUDE.

In this way confidence was established, and, although anxiety was felt for a time owing to the working of the rich alluvial fields in Lichtenburg and Namaqualand, the Diamond Syndicate, at heavy financial risk, was able to maintain the position until the Union Government, eager to establish a cutting industry in South Africa, sold diamonds to South African cutters at prices enabling the cutters to undersell European cutters who bought from the Syndicate. This competitive selling of uncut stones undermined the confidence in the stability of prices and threatened chaos in the diamond industry. Crumbling of confidence also hastened by alarming increase of illicit dealing, which led to the appearance in overseas markets of considerable quantities of diamonds which had not come through the usual channels nor paid export taxes, and which, in the first instances, were sold by people having no regard for the rights of others and no sense of responsibility or interest in the future of the diamond industry. Happily, the position is now changed; the Government has agreed to allow a representative of the Diamond Corporation to be present when diamonds are sold to South African cutters on condition that it has the right to send a representative when the Diamond Corporation sells diamonds.

IMPROVED ORGANISATION OF THE INDUSTRY.

While something is gained by this scheme, it is not so satisfactory as selling all uncut stones through one channel and so maintain a uniform standard of price, but it is hoped it will re-establish confidence as the Government has reverted to a stricter attitude regarding illicit dealing. The organisation of the industry is much improved in other respects. The De Beers Company now controls all principal South African producers, so facilitating regulation of output. Also, the Diamond Syndicate has been replaced by the Diamond Corporation, in which the principal South African producers are interested, and thus the industry is in an excellent position to profit by improvement in world conditions provided the Union Government consistently encourages re-establishment of confidence in stability of prices. The industry has suffered adversity in the past, but has always shown wonderful powers of recovery, and we believe the industry will again be prosperous when times improve, although it may be necessary to still further curtail production.

DIRECTORS.

The appointment of Mr H. J. Joel, the son of the permanent chairman, and Mr F. L. Johnson, who has been associated with Barnato Bros. in London for many years, and Mr J. H. Crosby, general manager in Johannesburg, was confirmed.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED.

Incorporated in the Union of South Africa.

SOUTH AFRICA AND THE GOLD STANDARD.

The thirty-fourth ordinary general meeting of shareholders was held in Johannesburg, on Tuesday, October 27, 1931.

The Chairman (Mr John Martin) said:—The directors' report and audited accounts for the year ended June 30, 1931, show that profit for the year was £2,044,237 and, adding the unappropriated balance of £251,978 brought forward and a small amount of £823 in respect of unclaimed dividends forfeited in accordance with the company's Articles of Association, there was a total of £2,297,038 which, as shown in the report, was dealt with in the following manner:—Dividends Nos. 49 and 50, of 65 per cent. and 60 per cent. respectively, absorbed £1,750,000; Government and Provincial taxation accounted for £278,304; a further amount of £26,652 was set aside towards meeting the company's outstanding liability in respect of miners' phthisis compensation; and the balance of £242,082 was carried forward, represented as to £132,066 by cash assets, mainly stores, materials and similar items, and as to the remaining £110,016 by net cash and investments, after allowing for all current liabilities.

Before leaving the subject of our finances, I should refer to the position of the cash investments of the company as affected by the depreciation of sterling, following upon the suspension by Great Britain of the gold standard. For many years past the proceeds of gold realisations in excess of current local requirements have usually been transferred to London for short term investment. Latterly, because of the altered circumstances, all funds as they come to hand have been retained in Johannesburg and invested on short term conditions, where possible. The position to-day is that the company's cash on current account, deposit and short loan amounts to £872,394. This total is held as to £514,184 in London and as to £358,210 in Johannesburg. Our sterling funds are not required for current purposes, and will be left in London to meet payments that may have to be made there. The largest demands will be on dividend account and the loss, if any, which the company will incur, as and when it becomes necessary to convert sterling funds into South African currency, can only be estimated if and when such conversions have to be made.

RECORD TONNAGE CRUSHED.

The tonnage crushed during the past financial year, at 1,934,000 tons, exceeded the previous year's record figure by 123,000 tons. The further minor alterations and additions that have been made to the reduction plant greatly facilitated this substantial increase. It was also partly due to the milling of a larger proportion of Upper Leader and South Reef ore, which has proved to be more easily crushed than Main Reef Leader ore. Working costs were reduced by 10d. per ton milled, compared with the previous year, but the yield and working revenue per ton milled were lower by 0.943 dwt. and 4s. 1d. respectively. The working profit per ton milled was therefore 3s. 3d. less, and the total working profit of £2,017,768 reflected a decrease of £170,409. The drop in the grade was, of course, to be expected in view of the lower average value of the ore reserve and the increased proportion of ore mined from the Upper Leaders and South Reef, amounting to 37 per cent. during the period under review, as against 27 per cent. for the previous year. The lower value of the ore obtained from reclamation was a contributing factor. The effect on working profits of the decline in yield during recent years has been offset to a considerable extent by the increase in the tonnage crushed and the substantial reductions made in working costs, despite the maintenance of a large development programme. The comparative figures for the past four years and the first quarter of the current year are as follows:—

	Year ended June 30, 1928.	Year ended June 30, 1929.	Year ended June 30, 1930.	Year ended June 30, 1931.	Three months ended Sept. 30, 1931.
Yield per ton milled dwts.	11.030	10.301	9.610	8.667	8.004
Average tons milled per month	135,500	142,750	150,917	161,167	166,333
Average development footage per month	4,880	6,248	7,611	6,977	7,334
Working costs per ton milled.....	19s. 5d.	17s. 9d.	16s. 10d.	16s. 0d.	15s. 6d.
Average monthly working profit	£186,814	£187,703	£182,348	£168,147	£154,645

The ore developed on all reefs during the past year totalled 893,800 tons of an average value of 6.1 dwts. per ton. This shows a decrease of 400,400 tons in quantity and of 1.2 dwts. per ton in average value as compared with the previous year's figures.

STOCK MARKET LOSSES.

which is due to the lower proportion of payability and the lower average value of the Upper Leaders and South Reef in comparison with the Main Reef Leader.

The ore reserve, as estimated at June 30th last, totalled 8,024,800 tons, of an average value of 7.8 dwts. per ton over an estimated stoping width of 49.8 inches. This included 1,235,800 tons averaging 6.2 dwts. per ton contained in shaft and safety pillars which are not at present available for stoping.

THE GOLD STANDARD.

During the past month every section of the community has been preoccupied and affected by the situation recated through the departure of Great Britain from the gold standard, of which for generations she had been the exponent and the mainstay. The world has entered upon an epoch of economic change, and the present financial crisis is unparalleled in modern times. It is not that gold has failed but that confidence has fled. And until a large measure of international confidence and co-operation has been restored, no country, irrespective of whether it is on the gold standard or not, can feel secure or regain any assured stability or prosperity.

I am led to express the view, without wishing to appear dogmatic, that (a) gold will continue to play an essential part as an international standard of value; (b) its future will not be determined—or even influenced—by the countries which happen to produce gold, whether such countries themselves remain on pre-war gold parity or not; (c) countries going off the gold standard will be bound, in course of time, to return to it, if not on the basis of parity, on a stabilised devalued level; (d) gold as a standard is functioning still, but it will do so more generally and more beneficially once an equitable redistribution of existing supplies becomes possible by the removal of the underlying political and economic causes of its present maldistribution, a maldistribution which, in itself, is a symptom and not a primary cause of the world's financial and industrial distresses.

The report and accounts were unanimously adopted.

ANGLO-ECUADORIAN OILFIELDS, LIMITED.

THE INDUSTRY'S DIFFICULT CONDITIONS.

The thirteenth annual ordinary general meeting of the Anglo Ecuadorian Oilfields, Limited, was held, on the 26th instant, at Winchester House, London.

Mr H. C. R. Williamson, the chairman, who presided, referred first to the loss sustained by the company in the death of the late Lord Forbes. Continuing, he said that it was with regret that the board submitted accounts showing an adverse balance, but shareholders who had followed the course of the market for crude oil would not be surprised. The price for mid-Continent crude of 36° Beaume gravity had fallen successively since June 30, 1930, from \$1.29 per barrel to 95 cents on October 27th; to 59 cents on March 5, 1931, on June 1st to 33 cents and on July 9th to 18 cents. Since then, however, there had been a recovery in successive stages to 38 cents on July 24th, 62 cents on August 22nd, and 77 cents on November 2nd.

Real progress had been made in the United States generally towards proration of output, but owing to the bringing in of numerous new wells in East Texas, with an enormous potential production from comparatively shallow sands, it had been

exceedingly difficult to keep the daily production of the United States fields within the desired bounds. Oil from Texas had been sold as low as 5 cents per barrel—practically given away owing to lack of storage facilities.

The problem of more or less equalising output and consumption had been tackled with some success also in countries other than the United States, and the various powerful oil groups had seen the necessity for co-operation. Russia, however, in oil as in other respects, remained an enigma and a danger. Under the five-year plan her products for 1931 was set at 192,500,000 barrels. On the basis of production to September, 1931, the total production for this year might be about 150,000,000 barrels, which was far short of the figure aimed at. The "Five-Year Plan" aimed at a production of 330,000,000 barrels in 1933, but it did not appear likely that that figure would be reached, based on progress to date.

In regard to their own company, production of crude oil for the year was 204,663 tons, an increase of over 15,000 tons, and their aim was to maintain production at about 16,000 tons per month. The number of wells producing had increased during the year from 231 to 342, while at June 30, 1931, ten wells were in course of drilling. The quality of their oil shipped as crude had been maintained and local business in refined products continued to expand, in spite of acute financial depression in Ecuador.

The report and accounts were unanimously adopted.

GOODE, DURRANT AND COMPANY, LIMITED.

SIGNS OF IMPROVEMENT IN AUSTRALIA.

The thirty-third ordinary general meeting of Goode, Durrant and Company, Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London.

Mr W. E. Pennick, vice-chairman, who presided in the unavoidable absence of the chairman (Mr J. A. Williams), said that for over thirty years the company enjoyed a measure of prosperity which enabled the directors to pay good dividends on the ordinary shares and to safeguard the business by the creation of substantial reserves which made it possible to meet the serious situation which had arisen without asking the shareholders to sacrifice any part of their capital.

He had recently returned to Australia, and in studying the situation there it was apparent that the two States in which the company was most interested—South and Western Australia—were suffering severely owing to the serious fall in the prices of primary products. Extensive credits had been given by both bankers and merchants in the past, and, owing to these low prices, many traders had been forced to realise that a big proportion of their assets were solidly frozen, and it would take some time to make them liquid again. The directors believed that the present trouble would lead to a much more satisfactory standard of trading in the future and a restriction of credit to a reasonable degree.

THE FUTURE.

He wished it were possible to give shareholders some definite assurance regarding the immediate future, but there was no question that the present year 1931-32 would be of a most critical nature. Australia had been passing through a period of extraordinary difficulty, but the directors thought there were signs of improvement. They believed that the people were doing their utmost to live economically and meet their obligations, and were certainly making reductions in the cost of Government and adjusting wages and salaries to a more economic level. With the improved prices now being obtained for both wheat and wool the agricultural industries would benefit.

Having read the latest telegrams received from the company's branches in Adelaide and Perth, which, he remarked, gave some hope for the future, the chairman said that the directors believed Australia would continue the prudent policy which had been adopted during recent months, and they had reason to hope that, by careful administration, and with improved markets, a period of prosperity would come again to the Commonwealth, in which they would all share.

The report and accounts were unanimously adopted.

Messrs Samuel Montagu and Company write on November 25, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,703,509 on the 18th instant, as compared with £120,698,392 on the previous Wednesday. About £100,000 of bar gold from India was available in the open market on the 23rd instant, and was taken for New York at the fixed price of 111s. 9d. per fine ounce. To-day about £220,000 bar gold from an undisclosed source was offered and was disposed of to the United States and the Continent at the fixed price of 111s. 10d. per fine ounce.

SILVER.

Prices have continued to fluctuate, but movements were not so wide as those recorded last week. On the whole, the market has shown a firmish tendency, due in a measure to the weakness of sterling, which caused sellers to hesitate. Business has been fairly general, the Indian Bazaars and China having both bought and sold, but speculative operations have been rather less in evidence. America has been disposed to sell for near delivery, and this, with a decline in offtake, resulted in the cash quotation being fixed at a discount of ½d. on the 23rd instant.

Quotations during the week:—

IN LONDON.		IN NEW YORK.	
Bar silver per oz. std.		Cents per ounce .999.	
Cash Two Months' delivery.			
November 19th	18½d.	November 18th	30½

REPORTS AND NOTICES.

MISCELLANEOUS.

FURNESS, WITBY AND COMPANY, LTD.—The directors desire to express their very keen appreciation of the many kind messages of sympathy which they have received from shareholders, from personal friends and clients, and from the public through the Press, in regard to the destruction of the *M. V. Bermuda*. We are informed that if the damage should unfortunately prove to be beyond repair, an order for the construction of a new ship will, in all probability, be placed immediately with a British shipbuilding yard, which should give employment to a large number of men during the next 18 months. The transfer books of the company will be closed from Tuesday, November 24th, to Wednesday, December 2, 1931, both days inclusive, for the purpose of the proposed new issue of ordinary shares.

STRAND HOTEL, LTD.—The report for the year ended September 30, 1931, discloses a profit of £130,541, comparing with a profit of £124,850 in preceding year, and a profit of £119,441 for year ended September 30, 1929. Adding £22,395 brought in to the accounts.

there is £152,936 available against an available balance of £130,555 for preceding year. Debenture interest again absorbed £11,360, while preference dividends again took £37,000. The preferred ordinary dividend has been raised from 13 per cent. to 14 per cent., absorbing £32,200, against £29,900. The same amount of money is allocated to holders of deferred shares, which makes their dividend 644 per cent., against a dividend of 598 per cent. for preceding year. The sum of £30,000 is put to reserve, against no allocation a year ago. The carry forward is reduced from £22,395 to £10,176. Turning to the balance sheet, we find that total assets have increased from £1,804,001 to £1,927,184. Leasehold and freehold properties and equipment have increased from £1,488,516 to £1,592,056, the latter figure including payments on account of work in progress on the Marble Arch site. Stock is lower at £10,930, compared with £11,418. Debtors are at £13,484, against £14,270. Amount owing by subsidiary company is £86,672, against £91,101. Investments stand at £135,715, against £114,257. The market value of these investments is substantially in excess of these figures. Cash has increased from £69,399 to £73,286. Creditors stand at £385,654, against £280,959. Bank loan is at £250,000, against £255,000. Reserve is at £180,000, against £150,000. The meeting will be held at Trocadero Restaurant, Shaftesbury Avenue, W.1. on December 3rd, at 12.30 o'clock.

				Specialty State Railway.			

CARDIFF.—The South Wales coal market is still acutely depressed. The French surtax of 15 per cent. on British coals has reacted more on South Wales than on any of the other coalfields of the country, and it is feared that the returns for the current month will show a considerable slump in the export trade with France. Strong representations are being made to the President of the Board of Trade, but in view of the recent changes in our own commercial policy, it is feared that the tax will not be withdrawn. Inquiries for all grades of bituminous coals have been extremely scarce, and quotations are nominally unchanged at minimum scheduled figures. Drys are a better market. Dry nuts are scarce and commanding prices substantially above the schedule, while dry large is also at a premium. Coke and patent fuel are steady, but with no expansion in business. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 19s. 19s. 4d.; best drys, 18s. 6d.-19s.; Black Veins 18s. 3d.-18s. 6d.; Western Valleys, 17s. 9d.-18s.; Eastern Valleys, 17s. 7d.-18s.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d.-12s. 6d.; coking smalls, 13s. 6d.-13s. 9d.; anthracite, best large, 36s.-38s. 6d.; Red Voin, large, 22s. 6d.-27s. 6d.; French nuts, 40s.-48s. 6d.; stove nuts, 39s. 6d.-43s. 6d.; rubbly culm, 8s. 3d.-8s. 9d.; foundry coke, 32s. 6d.-36s.; patent fuel, 19s.-19s. 6d.; pitwood, ex ship, 24s.-25s.

WORKINGTON.—This is the first week that the coal trade has shown any liveliness. The increased demand is due largely to the restarting of the linen mills in Ireland, and Ulster merchants are at last placing orders quite freely. The cross-Channel shipments are, however, still lighter than they were in the corresponding week in previous Novembers. Industrial fuel is in only moderate demand, small coal being especially difficult to market on account of there being so few ovens in operation in the district. House coal is in sharper request all round. Prices are firm. Best round is 22s. 6d.; washed doubles, 21s.; washed singles, 19s., all f.o.b. Small, 16s. 6d. per ton. Best house coal, 31s. 6d.; and house nuts, 30s. at station. Gas coal, 28s. per ton. Local coke is from 16s. 6d. to 17s. 6d. per ton.

SHEFFIELD.—Conditions in South Yorkshire are the reverse of satisfactory and, as a whole, do not improve. The amount of forward and spot business transacted lately is disappointingly small and the outlook is none too good. Nevertheless, shipments of best steams continue steady and prices are quite firm at 18s. 6d. f.o.b. The home demand for small fuel is rather better, but sales and deliveries of industrial coal continue rather restricted. Sales of house coal are below the averages for the season. Best house is quoted at 22s. at pits. Blast-furnace coke has gained further strength and prices have advanced to 12s. at ovens. Considerable quantities of this class of coke are being bought for central heating.

IRON AND STEEL.

MIDDLESBROUGH.—Now business in Cleveland iron continues quiet as requirements for the remainder of this year have been practically covered, and consumers have not so far turned their attention seriously to forward business. A few purchases have been made of important quantities for delivery commencing January, but buying on a more general scale will be necessary before long. News in the meantime is anxiously awaited as to the Government's intention in regard to tariffs on iron and steel. At Tuesday's market a moderate business was passing in Cleveland iron for December delivery, and odd sales were also made for the first quarter, prices being unchanged at the old official figures, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. In the hematite department business is also quiet, but producers have fair order books up to the end of the year, and stocks continue to be drawn upon. There still remains only four furnaces producing hematite in the district, and as there appears no immediate prospect of further furnaces being re-lighted, the reduction of stocks will continue. Ordinary mixed numbers can still be secured from makers at 65s. for delivery up to the end of December, but for the first quarter 65s. 3d. to 65s. 6d. is quoted. There are inquiries in circulation for important quantities for

delivery, commencing January, but business is slow to mature. Producers, however, are anticipating a buying movement before long. The finished trades show some improvement, and work is more regular in certain departments, but a greater influx of new business is urgently needed. Prospects in this direction are regarded as favourable. In shipbuilding, local builders are tendering for four or five cargo steamers, for which inquiries have been received, and a great effort will be made to secure part of the work for the Tees, where there are only two vessels under construction at the present time. In ore there is practically nothing doing. Best rubio is now offered at 16s. 6d. c.i.f., and the freight Bilbao/Middlesbrough is easier at 5s. Coke is not meeting with much demand, and it might now be possible to buy prompt lots at slightly under 17s. delivered works, but a little more is asked for delivery over the first quarter. The number of blast-furnaces in operation in the district remains at eighteen.

SHEFFIELD.—Most branches of the local steel industry continue depressed and it is evident that buyers are pursuing an extreme cautious policy. This is due in part to uncertainty as to the incidence of the new export duties. While these may benefit certain departments, it is realised that they may also react to the detriment of others, and there is a general disposition to mark time until the effects are revealed. Quietude is reported in the open-hearth department and also in the various fine steels for which Sheffield is famous. Exports of these have fallen off sharply of late and the home trade is none too good. Rollers of cold-wrought strip anticipate that duties on these products will ease the Continental competition against which they have struggled for a long time. The call for ferro-alloys used in special and ordinary steels has dropped to a new low level. In a minority of instances makers of steel products have booked a lot of new business since the departure from the gold standard. The cutlery trade is quiet except in the scissors and razor-blade departments, which are on full time. There is little doing in silver and electro-plated goods, the seasonal orders having been delivered. Prices of most materials and metals are steady but advances will probably be general after the turn of the year. An additional blast furnace is being lighted at Renishaw, Derbyshire.

WORKINGTON.—The buying movement that developed after the suspension of the gold standard and enabled makers in the North-West Coast pig-iron trade to dispose of nearly all the heavy stocks accumulated during eighteen months has spent itself, and the market for hematite is now featureless. Makers are paying the penalty of being well sold forward, and that they manage each week to sell the whole of their production is as much as can be expected. Very favourable circumstances indeed would have to arise for any free placing of orders on the scale that obtained at the beginning of October, and the general anticipation is that there will be no marked revival of buying until the New Year. Meantime the Midland and Continental demand is steady, there are larger Scottish and South Wales needs to satisfy, and local absorption is as considerable as can be looked for considering the state of the steel trade. Prices are firm, with Bessemer mixed numbers £3 14s. 6d. per ton at Glasgow; £4 1s. at Manchester; £4 3s. 6d. at Sheffield; and £4 4s. 6d. at Birmingham. Foreign users are paying 3s. per ton above the afore-mentioned figures. Special qualities are from 2s. 6d. to 5s. per ton in excess of the prices quoted above. Malleable iron is a steady trade at £5 17s. 6d. per ton delivered at Birmingham, but ferro-manganese is quiet at from £10 15s. to £11 5s. per ton home. The steel market is weak and shows none of the improvement recorded in the iron trade. Barrow, however, holds orders that have kept busy for two months the mills on rails and hoops, and Workington next month has a substantial tonnage of rails, fishplates and sleepers to roll. Native ore is in good local request at from 16s. to 18s. per ton, but Scottish and East Coast smelters' needs are small.

GLASGOW.—In Glasgow, business conditions have been exceedingly quiet this week, mainly because of the uncertainties attending the political situation. While there are a large number of inquiries on the market, buyers seem reluctant to make purchases beyond their actual immediate requirements. In practically every branch of the iron and steel industry this is in evidence. The steel plants remain very quiet. Sheet makers have still a fair tonnage on hand, but new business shows some falling off. There is a steady business being done by machinery makers and makers of machinery parts. Tube makers do not report any definite improvement and in the wrought-iron trade also dull conditions continue. Two blast furnaces at the Gartsherrie Iron Works, Coatbridge, have been rekindled this week.

CARDIFF.—There has been a slight improvement in the volume of the tinplate export trade during the past week, and quotations have been steady at from 13s. 9d. to 14s. 3d. per basis box. The factories are a little more actively employed, but current production is still below 60 per cent. of capacity. Welsh steel bars are ruling at £5 per ton, less a rebate on certain conditions, and as foreign bars are quoted 85s. c.i.f., the margin between the local and the imported material is now very small. Galvanised sheets are a shade firmer, at from £9 2s. 6d. to £9 5s. per ton f.o.b.

OTHER METALS.

TIN.—The outstanding feature this week has been the announcement, on November 25th, of the International Tin Committee (representing the Governments of Bolivia, the Dutch East Indies, the Federated Malay States, Siam and Nigoria) to make an additional cut in the production and export of tin of 15,000 tons a year from January 1, 1932. At the same time the International Tin Pool stated in a communiqué that they have increased their holding from 12,250 tons at the end of October to 15,800 tons. These two announcements had a favourable effect on the market in London. Buying was active at rising sterling prices. The market in New York has been dull at the beginning of the week,

but later a steadier tendency became noticeable. In New York the metal was quoted at 22.87 cents per lb. on Wednesday, against 22.85 cents per lb. a week ago, and 23.10 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £137 2s. 6d. to £137 5s. per ton, compares with £131 17s. 6d. to £132 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 30,550 tons, show a decrease of 23 tons on the week.

COPPER.—The downward movement in copper prices which began after the failure of the international conference of copper producers to reach an agreement became known continued throughout the past week. Quotations have established a new low record. It appears that Phelps, Dodge and Company have withdrawn from the U.S. Copper Exporters, Inc., probably in order to be free to export the metal without the restriction of price imposed by the association. On Wednesday "Domestic" spot was quoted officially at 6.25 cents per lb. in New York, against 6.75 cents a week ago and 7 cents a month ago. Wednesday's official closing price for "standard cash" in London in terms of sterling, at £33 15s. to £33 16s. 3d., compares with £35 12s. 6d. to £35 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 20,730 tons, show a decrease of 660 tons, while stocks of rough copper, at 773 tons, remained unchanged.

LEAD.—The demand for lead has been small during the past week and prices in New York declined. The London market was a little steadier, but quotations were barely maintained. In New York, the metal was quoted at 3.85 cents per lb. on Wednesday, against 4.05 cents a week ago and 4 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £14 10s. to £14 15s. per ton, compares with £14 12s. 6d. on the corresponding day last week.

SPELTER.—The London market in spelter has been active at the beginning of the week, but on Wednesday buying fell off and sterling prices declined in sympathy with the decline of the metal in New York. Wednesday's quotation in New York, at 3.15 cents per lb., shows a decline of 0.10 cent per lb. as compared with that of the corresponding day last week. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," at £14 to £14 6s. 3d. per ton, against £14 to £14 7s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, the quotation for aluminium has been maintained at £95 per ton, while antimony lost part of last week's advance by declining from £28 to £30 per ton for "foreign" to £28 5s. to £28 15s. per ton. On the other hand, nickel has been advanced from £220 to £225 per ton to £225 to £230 per ton, and quicksilver from £17 10s. per bottle to £18 10s. per bottle.

TEXTILES.

THE COTTON TRADE.—Manchester.—The market during the past week has continued steady. Although the general inquiry has been fairly extensive, spinners and manufacturers have met with a reduced turnover, and it is doubtful whether the production has been sold in certain branches. Buyers are certainly less inclined to place orders freely, but producers have the advantage of fair contract lists, and so far there has not been any particular pressure to sell. Inquiry in piece-goods for India has rather tended to expand and on the whole more sales have been arranged, but there is still an absence of bulk business. Most of the buying has been in light fabrics and fancies. The improvement in the demand for in light fabrics has been very welcome. Although the offtake for China Calcutta has been rather smaller than a week or two ago, useful lines have again been booked in white shirtings. Some moderate contracts have been arranged for Singapore and the Straits Settlements. Very little has been done for Egypt and the Near East. Printing cloths for South America have not been altogether idle. Only odd lots have been mentioned for the Continent. Irregular operations have occurred in home-trade fabrics, but clearances throughout the country are fairly encouraging. A slower demand continues to be experienced in American and Egyptian yarns for home use. Some spinners have been more prepared to consider offers and there are signs of supplies being rather more plentiful. Less activity has been reported in export numbers.

THE WOOL TRADE.—Bradford.—The chief event this week has been the opening of the sixth series of London sales, and, writes our correspondent, it must be admitted that the advance in values is not as much as was originally anticipated. The rise reported by selling brokers was about 5 per cent. less than was freely mentioned in certain quarters from which reliable forecasts are usually forthcoming. It must be said, however, that certain new factors have come into operation, and the full significance of some already at work was not realised. There has been an easier tendency in values

in Australia and South Africa. This has primarily affected merino wool, but there is no doubt that the opening of the New Zealand season at the end of this week has also been kept in mind. Besides this, spinners and manufacturers are having to recognise quite as much as ever the relationship between the market value of their commodities and the cost of wool. The reaction of all these factors in Coleman Street has been to leave greasy merino combing with an advance of no more than 5 to 7 1/2 per cent. compared with the close of the October series, and scoured up to 15 per cent. Fine crossbreds have been readily picked up at about 15 per cent. advance, medium and coarse qualities being a good 5 per cent. dearer. The prospect of a further improvement as the sales continue is doubtful. So far as the home trade is concerned, supplies in the hands of users are not excessive, and the Continent is buying quite as well as was expected. The demand for merinos, fine crossbreds and medium wools of carding length is satisfactory, but low preparing sorts are likely to drag. Prices for tops are steady. Most of the spinning and weaving machinery is busy, the bulk of the output still being for hosiery and dress goods. Further big quantities of wool are expected to be required for the latter, fashion having gone off artificial silk and other substitutes.

THE JUTE TRADE.—Dundee.—Business in the jute industry has quietened down to a considerable extent, mainly because of a fall in raw-material prices. It was the strength of the raw jute market which enabled producers to obtain advanced prices for jute yarns and cloth, so that when the fibre became easier buyers withdrew their support from the market. No change is made in the quotations of spinners and manufacturers, however, as there is the feeling abroad that the recent decline in raw jute values may prove to be only temporary. Up-country markets in India have maintained a firm undertone, despite the fact that speculators have depressed the position by profit-taking. America has been considering the question of putting additional tariffs on their imports of jute cloth and bags, with the view of helping the cotton industry, and this has had a depressing influence on the Calcutta goods market. America is by far the largest consumer of jute goods. For the nine months ending September 30th last, the exports of jute cloth from Calcutta to North America were 618,493,473 yards, out of a total exported of 780,440,759 yards, compared with 769,040,166 yards and 1,033,488,178 yards respectively for the same period last year. After being up to £23 7s. 6d., the value of Daisee-2/3 has reverted to £20 17s. 6d. and business done for full group, with three quoted at £20 15s., and four sold at £19 15s., December-January. Tossa assortment is offered at £22 10s., three at £22 5s., and four at £21, same shipment. First Marks are rather more freely quoted at from £25 and good Lightnings at from £23, with Green Circle Ram named at £23 15s., and Fuji-M First Mark at £24, December-January. Heart Ram tops are reduced to £22 10s., after being quoted at £24 7s. 6d. The quotations for hessian yarns are still 2s. 5 1/2d. for common 8-lb. cops and 2s. 6 1/2d. for 8-lb. spools,

Appreciation

Appreciation is the subtle element in industry and business that leads to higher achievement.

No man ought to be in executive control of a business until he has learned to appreciate the value of the efforts of others.

Success in industry is never due to an individual effort; it is the co-ordination of a combined effort. The modern burglar appreciates the degree of security offered by The Chatwood Safe, for recently a gang of burglars, over a period of a fortnight, attacked in neighbouring towns five different shops owned by the same firm.

At each of the first two shops the burglars failed after a strenuous effort to open The Chatwood Safe, and at the remaining three shops attacked by them, they did not even try to open The Chatwood Safe, but devoted their limited time to safes of other makes.

but buyers are not even offering to do business at 2s. 5d. and 2s. 6d. respectively, which are the prices at which business in any volume was last done. Twist is firm at from 4½d. to 4¾d. for 3-ply 8-lb., and sacking yarns rule from 2½d. to 3d. for 24-lb. web and 3½d. for 8-lb. chains. Rove prices are steadily held at £22 for 48-lb. and £19 10s. for 200-lb., and fine yarns are more or less nominal at 3s. 2d. for second quality 8-lb. Rio warp, 2s. 10d. for third, and 2s. 8d. for fourth. Carpet yarns are quiet. Cloth orders have been much fewer during the past week, but this has made no difference to manufacturers, who are now all fairly well engaged, and they are adhering to their prices of from 3½d. for 10½-oz. 40-in. and 2½d. for 8-oz. Linoleum bessians and heavy goods are of small interest. The Calcutta goods market has gone steadier, after displaying weakness.

THE GRAIN MARKETS.

WHEAT.—The downward trend in wheat prices which began a fortnight ago continued throughout the past week. Nevertheless, prices are still considerably above the low level which prevailed throughout the summer. Among the factors making for a decline, is the resumption of heavy shipments from Russia and the statement of M. Pavloff, director of the Soviet grain export department. The gist of this statement was that the Soviet Government intends to continue forcing the export of grain, and that the whole of the original export programme would be carried out, because the foreign currency plans of Russia are chiefly based on receipts for exports. Other adverse factors were the satisfactory nature of the crop reports from Australia and Argentina and the news of rainfall in the United States winter belt. In this country the sowing of winter wheat is proceeding rapidly under favourable circumstances, and according to various reports, the acreage under winter wheat is being increased. Quotations in London, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 34s. 3d. per 496 lbs., as compared with 35s. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 31s. 6d., against 32s. 3d.; No. 3 Northern Manitoba, Atlantic, ex ship, 30s. 6d., against 31s. 3d.; Russian, on sample, 29s. to 31s., against 29s. to 31s.; Australian, ex ship, 30s. 9d. to 33s., against 31s. 6d. to 33s. a week ago.

WHEAT FLOUR.—The markets in flour have been steady, but quotations declined in sympathy with wheat. North American shipments, at 247,000 sacks, show an increase of 27,000 sacks as compared with the previous week. Of this total, 84,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 25s. 6d. per sack of 280 lbs., as compared with 26s. last week; delivered London, 24s. 6d., against 25s. Manitoba patents, ex store, 26s. 6d. to 29s. 6d., against 26s. 6d. to 29s. 6d.; and Australian, ex store, 21s. 6d. to 22s. 6d., against 22s. to 23s. a week ago.

BARLEY.—The market in feeding barley has been quiet, and prices continued to weaken. On Wednesday "December" futures were quoted at 41½ cents per bushel in Winnipeg, against 42½ cents per bushel a week ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 48 lbs., 25s. to 26s., as compared with 25s. to 26s.; Russian, landed, 23s. per 400 lbs., against 23s. 6d. a week ago.

OATS.—There has been little demand for oats during the past week, and, despite the smaller quantities offered at the principal markets, quotations were easier. "December" futures, which a week ago stood at 26½ cents per bushel in Chicago, sold at 26½ cents per bushel on Wednesday this week. Quotations in London, Wednesday: "River Plate," landed, 19s. per 320 lbs., as compared with 19s. 9d. last week; "River Plate," ex ship, 18s., against 18s. 6d.; "Chilean White," landed, 28s., against 28s. 6d. a week ago.

MAIZE.—Argentina continues to ship heavily, but although there has been considerable buying, prices declined steadily. Wednesday's quotation in Chicago for "December" futures, at 39½ cents, shows a fall of 4 cents per bushel on the week. Quotations in London, Wednesday: "Plate," landed, 18s. 9d. per 480 lbs., as compared with 19s. 6d. last week; "Plate," ex ship, 17s. 6d., as against 18s. 6d.; "Plate," November-December, 18s., as against 18s. 9d. Yellow maize meal, ex wharf, was quoted at £5 17s. 6d. per ton, against £5 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to November 21.....	Owts. 73,670	Owts. 145,502	Owts. 215,048	Owts. 322,998

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Nov. 26, 1930.	Jan. 2, 1931.	Nov. 10, 1931.	Nov. 17, 1931.	Nov. 25, 1931.
Winnipeg (No. 1 Manitoba)						
—Cents per 60 lb.	148½	61½	56½	67½	64½	60½
Chicago (No. 2 Winter)						
—Cents per 60 lb.	130½	75½	79½	63½	59½	64½

The visible supply of wheat in Canada, at 59,579,000 bushels, shows an increase on the week of 1,077,000 bushels. Supplies a year ago stood at 62,355,000 bushels.

OTHER FOODS.

SUGAR.—The principal raw-sugar markets have been dull during the past week. In the absence of a satisfactory demand from refiners, prices in New York suffered a sharp setback. Sterling prices of raw sugar have also been lower, despite the fact that the value of the £ in terms of currencies on the gold standard has fallen considerably. The reduction made last Tuesday in the quotations for "British refined" sugar has acted as a slight stimulus to buying. "December" futures in New York were quoted at 1-11 cents per lb. on Wednesday, against 1-23 cents per lb. a week ago. Wednesday's sales of "raws" include "March delivery," at 6s. 6½d. to 6s. 7d. per cwt., against 6s. 8d., and "May," 1932, at 6s. 8½d., against 6s. 10d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
London.....	Tons. 186	Tons. ...	Tons. 753	Tons. 1,510	Tons. 5,266	Tons. 25,478
Liverpool.....	46,603	27,544	12,415	12,940	74,252	87,944
Total tons ...	46,789	27,544	13,168	14,450	79,518	113,422
Last week ...	12,428	10,044	13,620	13,191	45,897	100,238

COFFEE.—No auctions have been held this week on Tuesday. The spot market was quiet but steady. Brazilian, landed, 47s; delivered for home consumption, 337 bags; exported, 31; stocks, 2,456 bags, against 1,971 bags last year. Central American, landed, 829 packages; delivered for home consumption, 2,397; exported, 2,010; stocks, 61,987 packages, against 42,532 a year ago. Other kinds, landed, 288 packages; delivered for home consumption, 2,540; exported, 834; stocks, 48,183 packages, against 52,007 a year ago.

COCOA.—Cocoa prices declined sharply in New York in the absence of demand, but in London, sterling prices remained steady, despite a small turnover. "December" futures were quoted at 4-39 cents per lb. in New York on Wednesday, against 4-60 cents per lb. a week ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, December-February, at 24s. 3d. per cwt. f.o.b. London contract, shows a rise of 3d. Last week's movements of cocoa in London were as follows: Landed, 1,742 bags; delivered for home consumption, 3,769 bags; exported, 138 bags; stocks, 140,583 bags, as against 161,812 last year.

TEA.—The quantities catalogued for this week's auction comprised 55,918 packages of Indian, 15,490 packages of Ceylon, and 8,007 packages of Java and Sumatra tea. The quantity offered for sale this week has been smaller than during recent weeks. Nevertheless, prices were barely maintained, with the exception of those for the cheaper varieties. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

AVERAGE PRICE PER LB.														
Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.	
	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.	s.	d.

Nov. 19 "	0	11-27	0	11-60	1	4-68	0	9-12	0	7-66	0	6-74	1	0-03

RICE.—The market in rice has been quiet and prices generally were weaker than a week ago. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 175 tons; delivered, 99 tons; stocks, 1,722 tons, as against 2,382 tons last year.

POTATOES.—The advance in potato prices continued this week although supplies were abundant. At the Borough Market, "Best King Edward" sold at from 9s. to 10s. per cwt., as compared with 9s. to 9s. 6d. per cwt. a week ago.

SPICES.—The market for spices has been quiet, but prices remained steady. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows: Black, landed, 16 tons; delivered, 16 tons; stocks, 370 tons, against 450 tons last year. White, landed, 141 tons; delivered, 43 tons; stocks, 504 tons, against 251 tons a year ago.

MEAT.—The slight advance in the price of home-grown meat last week has given way to a reaction, and reports from the Smithfield market suggest that prices generally have been lower than a week ago. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 3s. 8d. to 4s. 2d. per 8 lbs., against 3s. 8d. to 4s. 2d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 8d. to 3s. 4d., as against 2s. 8d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,661 tons, as compared with 9,437 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83 per cent. of the supplies, as against 81.3 per cent. a year ago; and imported mutton, mainly New Zealand, formed 70.8 per cent. of the total supply, as against 64.5 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Extremely quiet conditions rule in the markets for oilseeds and their products and very little business is recorded. Variable exchanges and a poor trade outlook combined with ample supplies are contributing factors. Old crop plate linseed is now within narrow compass, but there is no urgency of purchase, the main interest centreing in new crop, shipment of which is expected to begin in late December. Old crop on spot and afloat is quoted around £9 7s. 6d., and business in new seed or January-February shipment has been done as low as £8 15s., since when values have rallied slightly. For December loading, 19 2s. 6d. is asked. Indian linseed is quiet, with Calcutta to Hull, November-December, quoted £11. Baltic linseed is also offering, the value on spot at Hull being £10. The quantity of linseed on passage to Europe is 144,800 tons, or 14,000 tons less than last week. Hopes entertained that it would be included in the list of articles subject to import duty having been disappointed, linseed oil has turned easier. Raw oil on spot ex Hull mill is quoted

£16 10s. and delivery to April, £16. Cotton oil is still neglected and again lower, crude Egyptian offering at £19 10s. and common edible at £22 10s. without attracting buyers. Oilcakes are in poor demand, but prices are unchanged.

HIDE, LEATHER AND ALLIED TRADES.—Prices for cattle hides were steady at the auctions held in Manchester this week and prices of all weights in both clear and warbled ox and heifers and cows remained at last week's level. The calfskin market was also fairly steady, although there was a slight firming up of prices for certain weights. Sheepskins are more readily disposed of at rather higher figures. Business in imported hides has moved on satisfactory lines, and the tendency of prices is toward advances. In the South American market sales of Argentine ox have been made at the equivalent of 5½d., and second ox at 4½d. It is reported that Germany has paid up to 5½d. for cows. Dry South American hides have been slightly weaker, B.A. Americanos having changed hands at 6½d., while Inservibles have realised a fraction over 3½d. Sales also include M.V. Americanos at 6½d., Cuyabanos at 5½d., and Sierra Cordobas at 8½d. Fair business has been done in various classes of Africans, and first and second dry Capes are now quoted at 7½d. and 6½d., while dry-salted 20-30 lbs., are offered at 1d. per lb. less. Business in Australian hides continues to be limited owing to the advanced prices being asked by shippers. Turnover in regard to sole leather has not been on a large scale, but at the same time the market remains firm and the level of prices has been maintained. English and wet-salted bends suitable for the repairing section of the trade have been taken up with a little more freedom, while there has also been inquiry for light weight dry hide bends for the shoe-manufacturing industry. Medium and heavy weights in the latter description, however, are not a very ready market at the moment, but against this additional interest has been shown in certain kinds of offal. Business in the upper-leather market is generally confined to the purchase of box and

The Frankfurter Zeitung

the leading German economic Journal, will inform you fully and systematically in a thoroughly objective manner regarding German financial and economic conditions and with regard to the general international business situation in Germany.

The 75th Anniversary Edition of the Frankfurter Zeitung has just appeared. Post-war world economic developments—the requirements, as seen by internationally famous experts, for constructing a successful economic system that is based on free enterprise and upon which can be built a sound general prosperity... are the subjects which comprise the keynote of this 75th Anniversary Edition of the Frankfurter Zeitung.

The price of the "75th Anniversary Edition of the Frankfurter Zeitung" is RM 10.—

Subscription Rates for the "Frankfurter Zeitung" are RM 7.50 monthly

Specimen copies free by the "Frankfurter Zeitung", Frankfurt am Main, Große Eschenheimer Straße 31-37 Germany

All men who say "I'm not the man I was" should write for the "NEW LIFE" Booklet. It will tell you the way to regain and maintain Energy, Vitality and Physical Powers.

willow calf and glaze kid, for both of which there is a steady day-to-day call. More activity has been noticed in connection with patent leather, while a dropping sale continues to be experienced in connection with both real and imitation reptile skins. Curried leathers are again inclined to be quiet, but dressers of sheepskins continue to make fairly satisfactory sales.

THE TIMBER TRADE.—This month opened with the market for European building and joinery woods still in favour of buyers, both for forward and spot business, although the October receipts were much lower than in the corresponding month of 1930 and 1929. Receipts for the ten months compared with the corresponding period last year showed a decline of 542,000 loads (of 50 cubic feet) on a total import of 3,493,720 loads, and a still larger deficit compared with the same time in 1929. London dock stocks, too, were lighter, as were October deliveries from docks, the real source of dissatisfaction being that the consumption has dropped appreciably as compared with last year. In planed and dressed woods, the imports, stocks and October drawings from docks were less than a year ago. The building trade remains dull, but there are signs of improvement in the erection of new business premises in anticipation of a larger manufacturing trade in this country. Opinion, of course, is divided on the question of import tariffs. Incidentally, it should be remembered that 90 per cent. of the raw material will have to come from abroad. Free-on-board business is still in progress. The clearing-up sales for the year prior to the closing of navigation and the market shows a better tone for parcels of good shipment. Much Russian, Finnish and Swedish wood is coming in this month, but Polish wood is hanging fire for a time. Whereas the softwood market is both a forward and spot buyers' market, the hardwood trade favours spot holders. Imports of States lumber dropped by more than 50 per cent. last month, forward buyers being averse to purchasing whilst the dollar is so high compared with sterling. The American feeling is that the United Kingdom will have to buy sawn hardwoods from the States sooner or later, as it is not easy to obtain in a few days, or even months, such large and as cheap quantities elsewhere. It is no secret that American exporters have been selling their lumber at a loss throughout the year. Mahogany is up in value on account of the shortage of logs to hand. Plywood imports made a little recovery last month, but are still some 60 million feet down on the year, and dock supplies

are now of only moderate volume. There is likely to be an increase in import of this wood manufacture in view of possible import tariffs.

RUBBER.—Little interest was shown in the market for rubber this week, and quotations were easier, both in New York and London. Meanwhile production continues to exceed consumption, with the result that world stocks are still increasing. Wednesday's official closing price for standard ribbed smoked sheet in London, at 2 1/2 d. per lb., shows a fall of 1/4 d. as compared with the corresponding day last week. In forward positions, business has been done at 3 d. to 3 1/4 d. for January-March, against 3 1/4 d. to 3 3/4 d.; and at 3 1/4 d. to 3 1/2 d. for April-June, 1932, against 3 1/4 d. to 3 3/4 d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 2,122 tons; delivered, 2,650 tons; stocks at the end of last week, at 130,661 tons, show a decrease of 528 tons as compared with the preceding week.

THE MONEY MARKET.

OWING to the approach of the end of the month, money was not so plentiful as usual at the week-end, and there was a sharp drop from £60.6 to £53.2 millions in applications for Treasury bills. As a result of this the average tender rate fell fractionally from £5 11s. 11.03d. to £5 11s. 6.27d. per cent. On Saturday new money was obtainable at 4 1/2 down to 4 1/2 per cent., but 4 1/2 per cent.

was charged for renewals. On Monday, the last day of November, conditions proved surprisingly comfortable for the end of the month. The narrowness of the foreign exchange market and especially of forward exchange dealings meant that the month-end settlement is now much lighter. Though $5\frac{1}{2}$ per cent. was paid in isolated cases for new money, 5 per cent. was the ruling rate both for fresh loans and renewals. On Tuesday, the War Loan interest was paid, and as the week progressed and the warrants were cashed, the market gained the benefit of this money. By Wednesday money was almost unobtainable at rates running down to 3 per cent., and renewals could be arranged at $4\frac{1}{2}$ per cent. By Thursday money had become a little more usable at $4\frac{1}{4}$ per cent.

Though business in bills is still limited, a better tone prevails in the discount market, and some small demand for bills is apparent. December maturities are now largely held by the banks, and this is likely to make money more stringent during the coming weeks. Hot Treasury bills were dealt in at $5\frac{1}{8}$ per cent. early in the week, but the abundance of money later drove the rate down to no better than $5\frac{1}{2}$ per cent. The market rate on three months' bank bills was generally quoted at $5\frac{1}{4}$ per cent., the higher rate being charged for German renewals. Following the declaration by the German Government that after the expiry of the standstill agreement there will be no discrimination against bills of later dates, it is announced that London acceptance houses have agreed to continue accepting German renewal bills right up to February 29th, the date when the standstill agreement is due to expire, even though those bills will mature after that date.

This week's Bank return reflects firstly the beginning of the Christmas expansion in the note circulation, and secondly the effects of the War Loan interest payment. The increase in the note circulation has so far amounted to £4.1 millions, and with no change in the fiduciary limit or in the Bank's gold holdings, the Reserve is reduced by the same amount to £38.1 millions. The Proportion is only 28.4 per cent., against 33.8 per cent. the week before, but much of the decrease is explained by the increase in the Banking Department's liabilities due to the War Loan interest payment, and this is a purely temporary movement. *Prima facie*, it appears that the normal Christmas expansion of the circulation can be fully provided for out of the existing fiduciary limit at the cost of running the Bank's Proportion down to a relatively low figure. As the notes will all return immediately after Christmas, and as this fact is well known to the financial world at home and abroad, there seems to be no real objection against allowing the Bank's Proportion to fall to this low figure just for two or three weeks.

	Nov. 12, 1931.	Nov. 19, 1931.	Nov. 26, 1931.	Dec. 3, 1931.	Previous Rate and Date Changed.
Bank Rate	%	%	%	%	%
Banks' Deposit Rate..	4	4	4	4	$4\frac{1}{2}$ (Sept. 21, '31)
Discount / Call	4	4	4	4	$2\frac{1}{2}$ (Sept. 21, '31)
Houses / Notice	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$2\frac{1}{2}$ (Sept. 21, '31)
Market rate (3 months' bills)	$5\frac{1}{4}$ - $7\frac{1}{4}$	$5\frac{1}{4}$ - $7\frac{1}{4}$	$5\frac{1}{4}$ -6	$5\frac{1}{4}$ - $7\frac{1}{4}$	...

The War Loan interest payment is mainly responsible for three big changes in the Bank return, namely, an increase of £14.9 millions in Government Securities, a contraction of £18.4 millions in Public Deposits, and an expansion of £26.3 millions in Bankers' Deposits. The inference is that, as suggested a week ago, a large portion of the money required for this payment was gradually accumulated by the Treasury in advance and lodged in Public Deposits, but that a fair amount had to be raised by borrowing from the Bank on Ways and Means. This latter operation is as a rule only carried out absolutely at the moment when the money is required, and so does not appear in last Saturday's revenue returns. It

may not fully appear in next Saturday's return, if part of the debt has been repaid in the meantime. The release of all this money has raised Bankers' Deposits to £86.2 millions, which amply explains the prevailing ease. It must be expected that tax payments, fresh issues of Treasury bills and other operations will rapidly reduce this figure to more normal proportions.

Following a conference between the Commonwealth Bank and the Australian trading banks, it is understood that for the time being the Australian exchange upon London is to be periodically fixed by the Commonwealth Bank, and the current rate is announced to be £125 Australian per £100 sterling. This compares with the rate of £130 10s. hitherto in force. In view of the recent trend of unofficial dealings this reduction in the rate has caused no surprise, nor would it have been natural for the Australian pound to have continued to depreciate against gold currencies *pari passu* with sterling. Apart from this Australia is now in several respects in a sounder financial position, so that an improvement in her exchange is amply justified.

Call money on Wall Street remains unchanged at $2\frac{1}{2}$ per cent., and so, too, are open market discount rates at $3\frac{1}{2}$ -3 per cent. for ninety-day bankers' acceptances. Gold exports have practically ceased, and the statement for the week ended November 25th showed an influx of \$3.3 millions, two millions of which came from Canada. The arrival of a further \$1.5 millions from Canada was announced on November 28th. Gold earmarked on foreign account also continues to decline, the release of \$3.5 millions being announced on November 30th.

The Foreign Exchange market was very irregular this week, fluctuations being frequent and wide. Sterling showed renewed weakness against all the principal currencies, although it was rather better towards the close. The New York rate went from 3.60 to 3.38, after touching 3.23, Paris moving similarly from $91\frac{1}{4}$ to $86\frac{1}{2}$ after $82\frac{1}{2}$. Montreal was quoted at 3.92. Brussels did not go quite so sharply against us at $24\frac{1}{2}$ after $23\frac{1}{2}$, and Milan also moved within narrower limits at $65\frac{1}{2}$ after $63\frac{1}{2}$. Amsterdam at one time touched 8.00, but went back to $8\frac{1}{2}$, and Berlin, after reaching $13\frac{1}{2}$, recovered to $14\frac{1}{2}$. Switzerland was at $17\frac{1}{2}$ after $16\frac{1}{2}$. The Scandinavian currencies recovered, Stockholm, Oslo and Copenhagen all being quoted at 18.10. The South American exchange quotations were still largely nominal on account of the currency restrictions in force, Rio being somewhere about $4\frac{1}{2}$ d., Buenos Aires at $40\frac{1}{2}$ d., and Montevideo at $31\frac{1}{2}$ d. In the Far East the rupee was steady at 1s. $6\frac{3}{4}$ d., but the yen improved sharply from 2s. 9d. to 2s. $11\frac{1}{2}$ d. The forward market showed fewer striking fluctuations, dollars moving up from $\frac{3}{4}$ cent and $1\frac{1}{2}$ cents premium to $\frac{1}{2}$ cent and $1\frac{1}{2}$ cents premium. One month's Paris remained at $\frac{1}{8}$ franc premium, but three months' was harder at $1\frac{1}{2}$ franc premium. Brussels also hardened at $\frac{3}{4}$ belga and $\frac{1}{8}$ belga premium, against $\frac{1}{8}$ and $\frac{3}{8}$ last week. Amsterdam was at 2 and 6 cents premium, a rise of $\frac{1}{2}$ cent in each case. No quotation was recorded for forward Berlin, and Switzerland was unchanged at par and $\frac{1}{4}$ franc premium. The silver market was quiet, with the weakness of the dollar exchange, and sellers were inclined to hold off. Prices advanced from $18\frac{1}{2}$ d. to $19\frac{1}{2}$ d. for cash and from $18\frac{1}{2}$ d. to $19\frac{1}{2}$ d. for forward on some support from India and China, and the absence of any large offerings. The China silver exchanges improved in sympathy, Hong Kong by $\frac{1}{2}$ d. to 1s. $4\frac{1}{2}$ d. and Shanghai by a penny to 1s. $10\frac{1}{2}$ d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's-Economist Services, 8, Boulevard Street, London, E.C.4.

AN END AND A BEGINNING.

THE Round Table Conference has come to an end. It is the end, not of a book, but of a chapter, and the ending is of such a nature as to leave both expectancy and hope with regard to the development in the succeeding pages. Nothing, indeed, has become the Conference so well as its manner of ending. Only a few weeks ago the life of the Conference seemed to hang by a thread, and had the end come then it would have meant an acknowledgment of a deadlock, which could not have failed to obstruct formidably and indefinitely further progress towards the realisation of Indian ambitions or the fulfilment of British pledges. To-day we can look back on a Conference which has fulfilled a purpose and marked the completion of a stage. If it has produced disappointingly little in the way of positive agreement on vexed questions, it has left the door open for settlement. Representative spokesmen of every shade of Indian opinion have frankly stated their views, discussed the claims of others, and looked hard facts in the face. The British Government, for their part, have reiterated Britain's pledges to India, and announced their determination to go straight on with the work of evolving the Indian Constitution. No Indian can longer remain in doubt that this country is in earnest; no Indian can longer pretend that the main obstacle to speedier progress lies anywhere but in the failure of the Indian peoples themselves to compose their own differences. If the Conference had done no more than to clarify those two facts, it would not have sat in vain. But it has done more than merely clear away misunderstandings and unrealities. It has paved the way—as nothing else could have paved it—for the real hard-tack committee work on the thousand practical problems of the constitution builder.

Thus, while the pessimist or the cynic may complain that the Conference has talked much and done little, it was possible for the Prime Minister to say, as he said in his farewell address to the delegates on Tuesday:—"Great strides have been made, greater, I am sure you will find, than the most optimistic think." This rosy estimate of the value of the Conference is the more striking because it came at the end of a speech in which frank acknowledgment was made of disappointments and difficulties. Mr MacDonald indulged in no pretences. He admitted and deplored the continued deadlock on the communal problem and the absence of settlement among the States as to "their place in the Federation and their mutual relationship within it." But with the admission he coupled an eloquent appeal to the Indians not to accept failure, but to "take further opportunities to meet together and present us with an agreement." Meanwhile, the policy of the British Government is clear and definite. "The great idea of an All-India Federation," said the Prime Minister, "still holds the field. The principle of a responsible Federal Government, subject to certain reservations and safeguards through a transition period, remains unchanged. And we are all agreed that the Governors' Provinces of the future are to be responsibly governed units, enjoying the greatest possible measure of freedom from outside interference and dictation in carrying out their own policies in their own sphere." The translation of these principles into concrete action may not have been rendered very much easier by the Round Table Conference. But, said Mr MacDonald, "we intend to go ahead." In order that the work of consultation and negotiation may not be interrupted, the British Government is to nominate a "small representative committee—a working committee—of this Conference which will remain in being in India, with which, through the Viceroy, we can keep in effective touch." Three other committees are to be set up at once:—(a) To investigate and advise on the revision of the franchise and constituencies; (b) to put to the test of detailed budgetary facts and figures the recommendations of the Federal Finance Sub-Committee; and (c) to explore more fully the specific financial problems arising in connection with certain individual States.

These committees are to get to work in India "under the chairmanship of distinguished public men from this country as early as possible in the New Year." If Indian agreements on the big outstanding problems are not forthcoming, "even this disability will not be permitted to be a bar to progress." In the absence of such agreement, "His Majesty's Government would have to settle for you not only your problems of representation, but also to decide as wisely and as justly as possible what checks and balances the constitution is to contain to protect minorities." In a word, if India cannot contribute agreed foundations on which to build the constitution, the British Government will endeavour to lay the foundations and to build themselves. Mr MacDonald warned the Conference that this alternative was unsatisfactory and would add greatly to the difficulties. But in his insistence that the Government meant to go ahead towards the fulfilment of their pledges to India under any circumstances, Mr MacDonald was emphatic.

This historic statement of the Prime Minister was debated in the House of Commons on Wednesday and Thursday, when it was clearly shown that the National Parliament is strongly behind the National Government in its Indian policy; and we are convinced that the House of Commons, fresh from close contact with the constituencies, speaks the almost unanimous voice of the British people. It will not escape the attention of Indian observers that this new re-statement of determination to proceed with the framing of a self-governing constitution for India comes from a Government and a Parliament in which the Conservative element is numerically supreme. The much-heralded opposition of Mr Churchill and his group came to very little indeed. One of the most significant events in Wednesday's debate was the speech of Earl Winterton, a Conservative ex-Under-Secretary for India, who appealed to Mr Churchill to withdraw his amendment because the Government's policy contained nothing against which he could properly fight. We have reached, then, this stage: all parties in this country unite to say to India, "It is our aim to give you the constitution that you want. For our part we are going on trying to build that constitution, but it can only be satisfactory if you compose your own differences and come in and help us with the building."

The position is one which holds a serious warning both for the British Government and for India. The former cannot hope to succeed in its task unless it can carry Indian opinion with it, including the support of Congress. Time, therefore, as Mr MacDonald admitted, is an essential factor. A constitution cannot be built in a month, but, on the other hand, long-protracted committee work spread over years would certainly be regarded by Indian opinion as a method of evading the transfer of responsibility by delaying tactics. We trust that Mr MacDonald, to whose tactful and untiring devotion the work of the Conference and its redemption from failure are mainly due, will keep this factor constantly in mind. As for Mr Gandhi, whose part in the Conference, although never so intransigent as had been expected in some quarters, has been curiously ineffective, upon his shoulders now rests a tremendous responsibility. A future which will fulfil Indian ambitions is within India's grasp. Is it possible that Mr Gandhi will deliberately choose to place impediments between the hand and the prize? Or, persuaded at last of Britain's good faith, will he abandon the policy of obstruction which might spell years of disturbance, suffering and disappointment for millions of his fellow-countrymen, and lend his co-operation to a task complex and difficult enough in the most favourable circumstances, but quite beyond the power of any British Government to perform successfully unless the maximum of Indian goodwill is forthcoming. The British Government and the British people have spoken. India's future lies in Indian hands.

THE DISARMAMENT CONFERENCE.

IN the first week of February next there is due to meet, under the Presidency of Mr Arthur Henderson, a World Disarmament Conference which is intended to be the largest and most important international congress to assemble since the Peace Conference itself. The membership of this World Disarmament Conference is to be wider than that of the League. It is to include not only the United States, who is not a member of the League though she took part in the Peace Conference, and not only Germany, who was not represented at the Peace Conference though she has since become a member of the League. It is to include also the U.S.S.R. and Turkey, countries represented neither at Paris in 1919 nor at Geneva since—with the notable exception of the Preparatory Commission for the Disarmament Conference, on which both Russian and Turkish delegates have taken an active part.

This Preparatory Commission, whose long and arduous labours came to an end only last year, held its first session as long ago as the spring of 1926, and was set up before the end of 1925. A general all-round process of disarmament, to be carried out by the ex-victors and the ex-vanquished and the ex-neutrals alike, was one of the fundamental provisions of the Peace Settlement. It was embodied in the Disarmament Chapter of the Versailles Treaty and in the correspondence that passed between the Supreme Council of the Allies and the German delegation before the Germans signed the Treaty, as well as in the Covenant of the League of Nations, which was itself an integral part of each of the four European peace treaties. Thus the obligation to take part in the Conference whose date is now approaching was implicitly undertaken by every signatory of the European peace treaties and by every original member of the League of Nations. In other words, the Conference was conceived a full decade before the present economic crisis began. But now the child of much diplomatic travail is due to come to birth at the height of the present "economic blizzard," at a moment when the storm is likely to be blowing with even greater fury than now.

Tantus labor non sit cassus: on that, all men and women of good will, in all countries, will be agreed. The worst fate for the World Disarmament Conference would be a miscarriage; and it is evident that the danger of miscarriage has now to be reckoned with very seriously. This danger raises a difficult and debatable question of practical policy which needs deep consideration now. We have to consider which of two alternative policies is the less dangerous in the circumstances. Is it wiser to let the Conference meet at its appointed date—to let the child be born into the world at the natural time, even though it be a time of storm and stress? Or is it wiser to postpone the date—to delay the birth beyond the natural time at the risk of a still birth? Which policy, which treatment, offers the lesser risk of catastrophe? That is the grave question on which statesmanship and public opinion throughout the world have to come to a speedy decision.

The argument for postponement is that the coincidence of date between the World Disarmament Conference and the world crisis is a pure accident and—having regard to the vexed inter-related issue of reparations and war debts—an untoward accident which may have to be undone if it is not to work serious mischief. Being men and not gods, we cannot change the date of the economic crisis. Therefore, it is contended, the only course of wisdom is to change the date of the Disarmament Conference by putting it off to some more convenient and propitious season, however distant. The advocates of lengthy postponement go on to argue that disarmament is, after all, a long-term, long-range operation. The ultimate goal is the practical objective of guarding against the outbreak of another Great War. But a glance at modern European history shows that a great war, like a great plague, confers automatic immunity from its own recurrence for at least a season. After the wars of Louis XIV, the world had peace for twenty-six years, from 1713 to 1739; after the Napoleonic wars the world had peace for thirty-three years, from 1815 to 1848. It may be, no doubt, that history moves nowadays at a swifter pace, so that our

period of automatic immunity may be shorter this time than it was one and two centuries ago. On the other hand, the Great War of 1914-18 was more destructive and exhausting, in its material and social and psychological effects, than its predecessors, so that, allowing for a difference of tempo, the period of recovery may be destined to be proportionately longer. On the whole (it may be contended on this argument), we shall be safe in allowing ourselves twenty-five years from the date of the Armistice as our time of grace for achieving disarmament before the next war may be expected to come upon us. If we aim at attaining our objective some time before 1943, we shall be within the safety line; and this gives us a whole decade more to turn round in. Surely, then, in the present unforeseen circumstances, it would be folly to insist rigidly on carrying out our disarmament programme up to time. The wise course is to postpone the World Disarmament Conference from February next until "the economic blizzard" has finally subsided.

The advocates of postponement *sine die* may also point out that some of the most important parties to the Conference—parties any one of which has the power to bring the Conference to grief—are not now in a suitable frame of mind. At the last full-dress debate on Disarmament in the House of Commons at Westminster, the leaders of all three political parties in Great Britain declared that the British Empire had gone as far as it could go along the path of disarmament without some proportionate response from other countries. In negotiation with the other two principal Naval Powers of the world we had achieved, at the London Naval Conference of last year, a comprehensive agreed limitation of our respective naval armaments. The next step forward, in the British view, must be taken by the Military Powers on the Continent of Europe. As for the German state of mind, there is a still more striking agreement among the otherwise more deeply divided political parties of Germany. The universal German feeling is that, unless the forthcoming Disarmament Conference results in the ex-victors voluntarily bringing down their armaments, forthwith, to the level imposed on the ex-vanquished States in the peace treaties, Germany will be morally entitled to regard the disarmament chapter of the Versailles treaty as having been invalidated by the failure of the other signatories to honour their own disarmament pledges. In that case, Germany, in the German view, ought to take the first opportunity to re-arm herself up to the present level of France and Poland. As for the French state of mind, it was revealed, with startling violence, in the organised wrecking of the great public meeting held in the Trocadéro at Paris last Friday, November 27th, under the auspices of the private and non-official International Conference on Disarmament which was in session in Paris last week. At this meeting, at which distinguished members of the Diplomatic Corps were present, the majority of the foreign speakers were howled down. A simultaneous French anti-disarmament meeting was held under the chairmanship of Colonel Marchand (whose name stands for the Fashoda incident and for the whole state of hostility between France and England which preceded the establishment of the Entente). And these French anti-disarmament demonstrations were approved by half the Paris Press. Better let sleeping dogs lie? The advocates of postponement might reply that the dogs of war are already awake and growling, and that we may be thankful if we can induce them to lie down and go to sleep again in the assurance that the item entitled Disarmament has been postponed, for an indefinite time to come, on the agenda of international transactions.

At first sight these arguments for lengthy, if not indefinite, postponement—which we have done our best to marshal in full force—may appear to be overwhelmingly strong. In a pertinent speech addressed to the National Peace Council last Monday Lord Reading observed "that it was useful to be an idealist, but in dealing with matters one must be a realist." What, then, in this difficult practical problem of the date of the Disarmament Conference, is the realistic point of view? In our belief, the fundamental realities of the present situation are

expressed in another passage of Lord Reading's same address. "One of the great obstacles," he said, "to prosperity at the moment was the lack of confidence in the world in the present economic and financial position, and they could not separate the financial aspect from the political aspect." Here, surely, is the heart of the matter. The essence of the present world crisis is the fact that all the local and sectional and departmental problems of human affairs have now coalesced into a single problem, no part of which can be solved without a concurrent solution of the rest. The world is suffering from a general failure of nerve towards all the practical activities of human society—political and economic—and the violent and intransigent and unreasonable temper which the nations are displaying over the question of disarmament is merely one of many symptoms of the general state of neurasthenia. In our belief—and this is the fundamental point—the advocates of an indefinite postponement of the Disarmament Conference have based their whole case on a false premise in assuming that the coincidence of date between the crisis and the Disarmament Conference is accidental. It is just because the Disarmament Conference is due and overdue, it is just because the problem of disarmament remains too long unsolved, that there is a world-wide sense of insecurity; and a sense of insecurity is the exact analogue, in the political and military sphere, of a restriction of credit in the economic and financial sphere. Nor are insecurity and lack of credit merely analogous in their nature. In the present instance the two disorders clearly spring from one and the same psychological root: from that general failure of nerve from which the world is now suffering. It is evident that the world's present nervous breakdown must be diagnosed and treated as a whole. We cannot hope to deal effectively with this or that symptom piecemeal.

What is the practical upshot of this approach—which we believe to be the realistic approach to our world problem? The practical point is that an international conference is going to meet in January in order to grapple with the problem from the economic and financial end. Assuredly this financial conference will not be able finally to solve the problem of credit unless its labours are to be supplemented, without undue delay, by another meeting of statesmen prepared to come to grips with the kindred problem of security; and the problem of security is a synonym for the problem of disarmament. It would be well advised, we think, to postpone the Disarmament Conference from February until later in the spring—clash of tempers over reparations and war debts might otherwise be as detrimental as actual clash of dates—but so far from it being necessary to adjourn the Conference until 1933 or later, we believe that it will follow most opportunely upon the financial conference; and that the two Conferences may well resolve themselves into the first and second sessions of a world conference for dealing with the world crisis as a whole.

A DISPUTE IN LANCASHIRE?

A SERIOUS labour dispute affecting both the spinning and weaving sections of the Lancashire cotton trade has become a possibility. This is the more disconcerting because, thanks to the combined operation of a depreciated pound and the Chinese boycott of Japanese cotton goods, Lancashire has been enjoying some degree of much-needed improvement in her staple export trade; and it will be a profound pity if a first-class labour dispute is allowed to occur at such a juncture. Two main dangers are involved. The worse is, of course, a deadlock and a stoppage, which would mean the loss of markets now laboriously being recaptured; the other, less formidable, but sufficiently serious, is the creation of a fresh split among the employers, and the consequent retardation of the already too slow progress of effective reorganisation. Let us hope that wisdom and restraint on both sides will prevent either of these unfortunate occurrences.

The employers in the two sections of the industry have started two separate movements for a revision of working conditions. On the one hand the Federation of Master Cotton Spinners' Associations has sent a letter to all the trade unions concerned, giving notice of the termination as from December 31st of the agreement entered into in July, 1919. On the other hand, the Committee of the Cotton Spinners' and Manufacturers' Association, which is the employers' organisation in the weaving branch of the industry, has asked its local constituent associations for authority to give one month's notice to abrogate the uniform list of prices for weaving and wages agreements. The two movements merit consideration from very different angles. The employers' action in the weaving section is not difficult to understand. The uniform list of wage rates, which the employers seek to abrogate, was drawn up no less than forty years ago, and the result of numerous variations and amendments during the last few years has been to render it both complicated and out of date. Nevertheless, this moment might not have been chosen for the precipitation of critical discussions, had it not been that the continued failure of the trade unions to make concessions in regard to the "more looms per weaver" question has driven the employers to despair. It may be fairly said that in the weaving section the employees are definitely to blame for any trouble that may arise, for the primary cause of the employers' present action is the intransigently obstinate resistance of the trade unions to the introduction of modern cost-saving improvements into the process of production—an obstinacy which even the growing difficulties of the industry over the last two years have entirely failed to shake. Almost as soon as these words are in print it will be known whether the local associations have empowered their central organisation to take the proposed action. If such power is given, let us hope

that the trade unions will respond by developing a more enlightened policy.

In the other section of the industry the shoe seems to us to be on the other foot. The agreement of July, 1919, which the Federation of Master Cotton Spinners' Association has given notice to terminate, effected a reduction in working hours from 55½ to 48 hours per week; and naturally enough the trade unions at once interpreted the notice of termination as representing an attempt by the employers to return to the pre-1919 working hours, which would mean a resumption of early morning work. Any such proposal would clearly evoke whole-hearted resistance from the workers and their unions, and, indeed, would rightly be regarded by the entire Trade Union Congress as the beginning of an onslaught on the whole principle underlying the Washington Convention. Fortunately, Mr Mills, the President of the Federation, cleared the air somewhat by a statement issued on Wednesday morning, in which he said that the Federation's action "does not by any means involve a crisis in the trade," and explained that the employers merely wanted "to make the subject of the agreement an issue for review with the object of achieving what is necessary to secure a more competitive position in the markets of the world and at the same time to provide increased employment for the workpeople." This statement has eased the situation a little, but it has by no means removed the suspicions of the trade unions that the employers are preparing a definite attack on working conditions, either by lengthening hours or by reducing wage rates, or both.

Certainly, the Spinners' Federation has chosen a strange time to launch an offensive. The depreciation of the pound is not a cure for industrial ills, but for the moment it has brought advantage to the Lancashire employers in the shape of a stimulus to exports which in time precedes a rise in the cost of living. But whatever means the authorities may take to carry out Mr MacDonald's avowed policy of maintaining the stability of the internal price level, some rise is inevitable. As that rise takes place and becomes really noticeable, pressure on the employers to raise nominal wages will develop, and the employers' proper and effective answer will be to point out that the rise in prices is doing no more than to deprive real wages of a part of the enhanced purchasing power gratuitously accorded by two years' fall in the price level. To choose the present moment for an attempt to reduce nominal wages is therefore not merely logically resisted by the trade unions, but is also extremely short-sighted policy on the part of the employers. And there is the added objection to the spinners' action that it has rendered more difficult the negotiations in the weaving section. There is, in our view, as much need among the spinning employers as there is among the weaving employees for thorough reconsideration of their position on lines of common sense and conciliation. Difficult negotiations lie ahead of the industrial world in the coming year, and it is deplorable that their successful and conciliatory handling, on which the recovery of this country in no small measure depends, should be jeopardised in advance by hasty actions in the present transition period by either employers' organisations or trade unions.

THE STEEL INDUSTRY AND PROTECTION.

The demand of the iron and steel industry for Protection is no new thing. As long ago as 1925 its case for a "safeguarding duty" was heard by the Committee of Civil Research, and its claims refused by Mr Baldwin and his Cabinet. Since then the demand for Protection has become steadily more insistent, particularly in the last two years of dwindling trade; and it was therefore certain that the National Government, returned to office with "a free hand," would be immediately and forcibly reminded that the iron and steel industry was prominent among the list of expectant claimants for its fiscal favours. Mr

Runciman, however, has stood firm against the clamour for hasty action. On Tuesday evening, he explained to a largely attended meeting of Conservative members that, owing to the vast complexity of the problems involved in any proposals for protecting the whole or parts of this vital industry, the question was one that demanded prolonged and careful study by the Board of Trade. One does not need to be a Free Trader to appreciate the reasons for Mr Runciman's decision. Indeed, we doubt if the most earnest and convinced Protectionist can examine the analysis of Britain's trade in iron and steel, which is published on the opposite page, without admitting that even the most carefully planned "scientific tariff" would have to pick its way very delicately lest grievous harm should be done, and the tariff become on balance a burden rather than a help.

Two main facts emerge from the table of iron and steel imports. The first is that out of imports of £23 millions in 1930 no less than £16 millions represent definite raw materials or semi-raw materials, while even in the class of "more finished materials" the majority of articles enter either into the cost of further stages of manufacture or into the cost of transport or construction. The second is that up to the end of October of this year the figures afford no evidence whatever of what the modern Protectionist calls "abnormal imports" or "dumping." True it is that, if Continental exporters of "semis" and home producers of finished goods feel that a high tariff is likely to be imposed in the next British Budget, steel imports into Britain are likely to increase; for to "forestall" a threatened tax is but human nature all the world over. But the 1931 data point, so far, to an all-round decline of imports, reflecting chiefly the depression of our "finishing" iron and steel industries.

The export table is equally instructive, since out of a total of £51 millions for 1930 no less than £41 millions come under the classification of "more finished materials," our exports of crude and "semis" representing to a large extent specialities in which British firms have learnt to excel and which are exchanged for other specialities in which they have been unable to compete. Taking the import and export figures together, the story is a very clear one of an export trade of finished products built up largely upon the economic use of cheap imported materials in earlier stages of manufacture. The average value per ton of our total exports, it will be observed, is double that of our imports.

The Protectionist urges that Britain is capable of making these raw materials and "semis" (or a large part of them) for herself, and that, by imposing a sufficiently high duty upon foreign imports, a large amount of employment would be provided for British workers in the iron and steel industry. The argument is superficially attractive, but it overlooks certain facts which explode it altogether. In 1930 Britain exported, directly, 40 per cent. of her steel production, and the proportion was higher before the great world depression began. Moreover, this figure takes no account of steel ultimately exported in the shape of articles (or their components) listed under other headings in our trade returns. This means that the bulk of the British steel workers depend upon our power to sell in foreign markets, where competition is very keen. To maintain their foreign sales our exporters must clearly be able to obtain their raw materials as cheaply as their competitors. If a general tariff on iron and steel were imposed, they would no longer be able to do so. The object of a tariff presumably would be to enable British producers to oust foreign material from the home market. What this would mean in cost to the consuming manufacturer of finished steel is shown by the following representative quotations, obtained from a well-known firm engaged in the industry.

The present price of British billets and sheet bars is from 105s. to 112s. 6d. delivered to buyers' works, while the Continental price is 55s. (gold) f.o.b. Antwerp, to which has to be added freight, which may vary from 8s. per ton to 20s., according to whether the user's works are located on the East Coast, South Wales, Scotland or the Midlands. The Ironmonger of November 28th says that British buyers have not been prepared to pay more than

* Estimated on basis of January–October period.

£3 8s. to £3 12s. (paper) f.o.b. Antwerp. Thus even the depreciation of the pound has not brought the sterling price of the imported material anywhere within range of the higher British price. The same story is true of steel bars, whose Continental price of about £3 17s. 6d. (paper) f.o.b. Antwerp (say, something under £5 delivered to the most inaccessible of English works), compares with British prices of from £6 2s. 6d. to £6 5s. for bars rolled in Britain from imported billets, and about £7 10s. per ton for bars which are "100 per cent. British." Can it be doubted that, if the British manufacturer were compelled to buy his material at British prices, he would lose the greater part of his export trade? To the picture of workers in the earlier stages of the industry being put into employment there is the reverse of export workers being thrown upon the "dole." Incidentally, although it may be true that physically British equipment might be equal to the task of producing at home most of the materials required by the finishing sections of the industry (except in times of booming trade, which unfortunately seem to lie far ahead) home production could not be worked up to the requisite level except after a considerable interval.

At this point it must be remembered that the more prudent of the Protectionists suggest that damage to the export trade might be avoided by a system of rebates on materials used in the manufacture of products afterwards exported. This is a possibility. The system is clumsy and involved and difficult to administer; but, if our rulers are driven into a protective measure for iron and steel, some rebate system aiming at mitigating the difficulties of the exporters would be indispensable to the scheme. But even if a perfect scientific tariff, with a perfect rebate scheme, could minimise the prospective damage which a tariff would deal to exporters, the objections to a tariff on steel would still be overwhelming. For, apart from the consideration that excluded imports would be diverted to other markets, in competition with British exports, it is palpable that dearer crude steel would affect adversely a wide range not only of "finishing," but of steel-consuming industries. The following table gives food for thought:—

	Heavy Iron and Steel Industry.*	Iron and Steel using Industries.†
Estimated number of insured persons, July, 1931	188,830	1,404,880
Unemployed, October, 1931	83,249	461,581
Percentage	44.1	32.9

* Pig iron, steel melting and iron puddling, iron and steel rolling and forging.

† Tin plates, iron and steel tubes, wire, engineering, vehicles, shipbuilding, stove and general ironfoundry, heating and ventilating apparatus, tools, cutlery, bolts, nails, &c.

Before imposing iron and steel tariffs, Mr Runciman has to look far beyond the iron and steel industry itself and consider the effect upon production and employment in a long list of industries employing many times as many workers as the "primary" iron and steel industry. The fact is that you cannot play with the question of a steel tariff without touching Britain's economic life in a very vital spot. Surely, with such grave and far-reaching factors involved, the keenest of Protectionists will hardly grudge Mr Runciman adequate time to study all the network of implications arising from the policy which is being pressed upon him. Of these implications we have only mentioned a few. Nor is it necessary to pursue the list further just now. Two conclusions stare us in the face. One is that there is no single industry in which arbitrary interference with imports could present more danger of serious and far-reaching consequences, likely, on balance, even under the most carefully framed tariff, to be disadvantageous to the interests of the nation as a whole. The other is that the supreme need of the steel trade is not to restrict imports, but to increase exports, whose catastrophic decline is shown by the table on the previous page. In our view, the iron and steel industry would do well to divert its attention from clamouring for State assistance and concentrate rather upon removing those causes (by no means all of their own creation) of backwardness of organisation and dearth of production which too often hamper it in the fight both for the home and for the international market.

EXCHANGE RESTRICTIONS IN EUROPE.

(BY A CORRESPONDENT.)

A STUDY of European Central Bank returns reveals the fact that it was the shock caused by the collapse of the Credit Anstalt in Austria last May which marked a distinct change between fairly normal credit conditions in Europe and the beginning of crisis. From the end of May the granting of new credits completely stopped and a withdrawal of credits already granted began. The Central Banks in the countries primarily affected did not immediately give up the struggle as lost. They tried to meet the demand with their resources of foreign exchange, which were consequently very much reduced. The German Reichsbank, for instance, utilised 768 million marks, or 30 per cent. of its declared gold and foreign exchange holdings, for satisfying the demands for *devisen* between the beginning of May and the beginning of September; and the Austrian National Bank used 383 million schillings during the same period.

During the summer the German Reichsbank obtained a credit of 630 million marks, the Austrian Government and Austrian National Bank credits totalling together 250 million schillings (of which 60 millions have been repaid), and the Hungarian National Bank credits equivalent to about 175 million pengő, while the Hungarian Government in addition in August received credits from France amounting to 354 million French francs. In view, however, of the magnitude of the short-term debts of these countries, it soon became evident that, in spite of the Hoover moratorium, the situation could not longer be kept in hand by normal means. The countries most seriously affected had to choose between either reducing payments abroad or accepting a depreciation in the rates of their foreign exchanges. On July 13th, Germany suspended foreign payments, and in the middle of that month detailed restrictions of foreign exchange payments were issued. In the same month Hungary also imposed restrictions.

These were the only two countries which interfered with their foreign exchange markets until, on September 20th, Great Britain went off the gold standard. Then came with a rush a new batch of countries, namely, Great Britain herself, who on September 22nd issued some very mild restrictions; Estonia and Greece, who followed on September 28th; Czechoslovakia on October 3rd; Finland on October 5th; Yugoslavia on October 7th; Latvia on October 8th; Austria on October 9th; and Bulgaria on October 15th; while Italy, on September 29th, had empowered her Central Bank to make regulations with regard to foreign exchange, although such regulations have not in fact been issued. Subsequently, Denmark introduced restrictions on November 19th, and Sweden made an attempt to regulate her foreign exchange market throughout four days in November, but having seen the complications which ensued, gave up the attempt. To some extent supervision is also in force in Norway and certain measures against the flight of capital are being applied in Lithuania.

Now foreign exchange restrictions can attempt to control either one or both of the following categories of exchange transactions:—

- (a) export of capital—the granting of credits abroad and/or repayment of foreign debts;
- (b) purchases of imports.

The restrictions introduced in Germany and Czechoslovakia control only operations falling into the first of these two categories, while in most other countries a control of imports has been introduced with the object of allotting foreign exchange only for the import of such commodities as are thought necessary for the maintenance of the economic life of the country (usually raw materials, foodstuffs, etc.). That is to say, in Germany and Czechoslovakia everybody who produces an invoice or other document as evidence of import of commodities, is entitled to receive foreign exchange without any further investigations being made. In the countries which have introduced restrictions falling into the second category, it is usually necessary to have the authorisation of some official or semi-official organisation in order to obtain the foreign exchange; and even then it may not always be

certain that the supply in the Central Bank is found sufficient to satisfy even the authorised need.

In Germany, foreign exchange (by which is meant foreign notes, claims, bills of exchange, cheques and gold in any form, but not foreign bonds or shares or other industrial participations, except bonds acquired after July 12th) must, within three days after acquisition, be sold to the Reichsbank or the bank usually dealt with, and may only be retained in virtue of a permit issued as an exceptional measure by the Reichsbank upon receipt of an application giving a statement of the reasons for the request. Foreign exchange is otherwise released by the Reichsbank only with the permission of the competent Landesfinanzamt (provincial revenue office). Forward business in foreign exchange may only be transacted with the permission of the competent Landesfinanzamt and subject to the consent of the Reichsbank. Money credits to foreign countries may only be granted with the permission of the competent Landesfinanzamt and the same applies to money debts to foreign countries, where the creditors are not banks. Where the creditors are banks, a permit must be obtained on each occasion from the Reichsbank Direktorium in Berlin under the Stillhalte agreement.

In Austria, as in Hungary, foreign exchange regulations are intended not only to prevent the flight of capital, but also to restrict what are thought to be unnecessary imports. In agreement with the rules applied in Germany, everyone resident in Austria was made liable to declare his holdings of foreign exchange as on October 9, 1931, and thereafter to offer for sale to the Austrian National Bank all foreign exchange held amounting to more than 500 schillings, within three days of its acquisition. The foreign exchange decree does not stipulate for what objects foreign exchange may be given, but only concentrates dealings in the hands of the National Bank. In practice the following system is applied:—In the case of imports the permission of the semi-official organisation "Devisenzentrale" must be obtained. Imported commodities have been divided into five groups, according to their importance for industrial purposes and for the consumers, and this division serves as a criterion for the granting of foreign exchange. The first group comprises foodstuffs; the second coal and other fuel; the third raw materials used in manufacture; the fourth semi-manufactured products; and the fifth finished articles. There is a further subdivision into (a) such goods as are necessities of life; (b) such as are needed by industries necessary for the maintenance of export; (c) luxury articles for foreign demand; and (d) luxury articles for domestic demand.

In Hungary very similar regulations are in force, the organisation officially entitled to restrict imports being the "Budapester Handels und Gewerbekammer." It will be remembered that as regards Austria a moratorium has been granted only to the Credit Anstalt and not to other Austrian firms and banks, whereas, in Hungary, but, in effect, creditors are not able to transfer funds from the Austrian or Hungarian market as the Central Banks' Stillhalte negotiations are at present being carried on; are unable to provide the necessary foreign exchange. It is noteworthy that, contrary to what took place during the last period of foreign exchange restrictions, at the end of the war, dealings on the "Black Bourse" are comparatively limited, the power of the supervision of a Central Bank being now much more effective than formerly.

It is obviously impossible, in a short article, to review the position in each separate country. Enough has been said to give some indication of the various systems in force, but, in conclusion, reference must be made to certain recent developments. The conference on foreign exchange restrictions, convoked in Prague under the auspices of the Bank for International Settlements, laid stress on the advantage of negotiating clearing arrangements between Central Banks in the various countries which have introduced clearing exchange restrictions. The National Bank of Austria, for instance, has entered into an agreement with the National Bank of Hungary, under which Austria will allot foreign exchange for the import of which Austria will allot foreign exchange for the import of grain and certain other foodstuffs, while Hungary will use the exchange thus obtained for purchases in Austria. When payments are made, the foreign exchange is not given to the exporter, but only transferred between the

Central Banks, which pay their nationals in their own currencies. These agreements, which amount to a kind of barter of commodities, ensure, in the first place, that some trade is made possible; and, in the second place, that the foreign exchange goes through the hands of the Central Banks. Agreements on similar lines have been introduced between Hungary and Czechoslovakia, and between Bulgaria and Austria. Even those countries which have not themselves imposed foreign exchange restrictions, but which find their exports hampered by the existence of such restrictions in other countries, are becoming parties to similar agreements in order to retain as much of their trade as possible. Poland, for instance, has concluded an agreement with Austria. Switzerland has entered into interesting agreements with Austria and Hungary, under which the Swiss National Bank has promised to make its own importers pay to it amounts due to Austrian and Hungarian exporters, those amounts being credited to the Austrian and Hungarian National Banks. The funds obtained are to be utilised partly for the purchase of goods in Switzerland; partly for the repayment of Austrian (or Hungarian) debts due to Swiss creditors, and the remainder is to be at the free disposal of the Austrian (or Hungarian) National Bank.

These clearing agreements may to some extent lessen the danger involved in the import restrictions, which otherwise threaten to cause a general collapse of international trade. There is a story told of a German professor, who is said to have explained the decline of the Roman Empire by the fact that, as the Empire grew and grew, in the end it comprised all the known world—and then it got no foreign trade. But a good story, where the Roman Empire is concerned, may be a grim reality for contemporary Europe. Divided, as it is, into 27 different Customs areas, Europe, to-day, looks like destroying its own economic existence by cutting trade relations in a despairing effort to maintain the stability of currencies. The Bank for International Settlements made an attempt at Prague to devise certain helpful measures as between Central Banks. It was found, however, that the application of import restrictions was in the majority of countries part of the commercial policy dependent upon the decisions of political authorities, and therefore outside the sphere of Central Bank action. In this, as in many other economic matters, ultimate responsibility rests with those in political power.

THE GREENGROCERY BILL.

THE debate at the beginning of this week upon the emergency Customs duties on fruit, vegetables and horticultural products revealed an extraordinary confusion of thought among the proponents of the measure as to what its purpose was. The Minister of Agriculture claimed that the measure dealt in the main with luxury articles, abstention from the consumption of which would involve no hardship to people of moderate means. He urged the necessity of the duties on the grounds that "agricultural produce can play a large part in helping to deal with the problem of the balance of trade," and that the step "will be an encouragement to the small agricultural producers." Yet he admitted that complete exclusion of all the commodities covered by the measure would contract our purchases only by some £7.8 millions upon the items which he classed as "luxuries," and by about £13 millions on the whole list. When allowance is made for exemp-

tions and for purchases not discouraged by the duty, it is obvious that, apart altogether from the general question of the repercussions of tariffs on exports, the argument that the stability of the pound depends on these duties is derisory.

Supporters of the duties stressed their luxury character and implied that they were intended only to prevent foreign producers of early fruit and vegetables from "skimming the cream of the market" before the British season begins. It is, however, far from clear that the duties are only to be operative on products "out of season," and many members pressed vainly for further enlightenment on this point. If that is the intention, it will require extraordinary ingenuity to carry it out. (Colonel Wedgwood pertinently inquired "what an early potato was and when an early potato became a late potato, or rather when a new potato became rather too old.") If, on the other hand, this list—which comprises cherries, currants, gooseberries, hothouse grapes, plums, strawberries, asparagus, green beans, brocoli and cauliflowers, carrots, chicory, cucumbers, endive, lettuce, mushrooms, peas (green), potatoes (new), tomatoes, turnips, cut flowers, plants in flower, flowers attached to bulbs, bulbs, foliage and rose trees—is intended to apply during any part of the normal season of the respective products, those who characterise these goods as luxuries must have curious and unhygienic ideas of the diet appropriate to working-class households.

For example, Mr T. Williams spoke eloquently of the very valuable part played in the diet of the poor by the cheap tomatoes now available from Holland; and in this he was supported later in the debate by Dr. Salter, who, speaking from thirty years' experience of general practice in an industrial neighbourhood, viewed "with the gravest possible alarm" any measure which would have the effect of reducing the quantity of fruit and vegetables obtainable by the working classes. In short, this "luxury" plea simply will not hold water. Duties on the goods specified are going to bear very heavily indeed on people of moderate incomes. They are going to involve interference of that most pernicious kind which forces people to substitute a less healthful form of expenditure for that in which they would have indulged if left to themselves.

The only other alleged excuse for these duties is the argument that they will benefit agriculture. But, as several Opposition speakers pertinently asked, if this be an emergency and temporary measure—so much an emergency measure that the Minister rejected an amendment providing for marketing boards to supplement protection, on the ground that they would take too long to set up—what possible basis would it afford for the extension of production in glasshouses and orchards which take years to come into full bearing? A *reductio ad absurdum* was effectively offered by Colonel Wedgwood, who suggested that much employment might be afforded by the growing of oranges and bananas under glass, if only the Government had the courage to make the people pay half a crown for a banana.

Moreover, it is arguable that the imports which these duties seek to exclude do not come into competition with home products to anything like the extent that our Protectionists are pleased to imagine. The housewife who buys freely of threepenny and fourpenny tomatoes will probably delete tomatoes from her menu altogether when only the English hothouse product is available, at something over a shilling per pound, and cheap foreign strawberries and cherries are bought chiefly by people who would seldom indulge in the English product. Mr T. Williams and Major Milner both quoted statistics of home crops and imports during recent years which left very little ground for supposing that foreign competition was excessive or was increasing. The British fruit and vegetable growers' cardinal handicap is inefficient marketing and the high costs and profit-margins of distribution. These troubles Sir John Gilmour has not attempted to touch.

In short, here is an ill-considered measure which will impose definite hardship upon consumers with small incomes, affect adversely the British jam-making industry, and irritate our customers abroad, without offering any hope that it will improve either the country's balance

of foreign payments or the situation of fruit growers. It is only possible to conclude that the Government are putting it forward less for its intrinsic value than as a *ballon d'essai*. It looks suspiciously as though the Member was right who designated it "Protection for the sake of Protection, not because it has any particular virtue in the case of these particular vegetables and flowers." It is, on the one hand, an attempt to insert the thin end of the food tax wedge, and, on the other, an attempt to placate the Conservatives representing country seats. Because the working man has only comparatively recently included fruit and vegetables in his dietary, taxes on them arouse less instantaneous and deep-rooted opposition than taxes on the so-called staple foods. But if these taxes are accepted without protest, can we suppose that the more traditional foods will long be immune? Once these are taxed, what is to become of the indispensable policy of keeping down costs and maintaining the internal value of the pound?

Notes of the Week.

The League and Manchuria.—While the League Council in Paris is still engaged on the arduous task of working out formulas and procedures under Article XI. of the Covenant which will be acceptable to both parties in the Manchurian dispute, the conflict of wills between the Japanese Civil Government at Tokyo and the Japanese military authorities in Mukden has come to a head. The Japanese have admitted that the Army is neither *de facto* nor *de jure* under the Government's control; and ever since the soldiers took things into their own hands in Manchuria on September 21st a struggle between these two unco-ordinated forces in Japanese public life has been going on. The test case has been the question whether the Japanese forces in Manchuria should or should not attack Chinchow—a point on the Mukden-Peking Railway in the extreme south-western corner of Manchuria, which now alone remains free from Japanese occupation and control. The report, last week, that the Japanese Army had accepted the Japanese Government's policy of leaving Chinchow unoccupied was premature. The Council, on its part, succeeded, on Thursday, November 26th, in securing, in principle, the consent of both the Chinese and the Japanese delegates to the first draft of a new resolution providing for the despatch of neutral observers to Manchuria, for the establishment of a neutral zone (presumably in the Chinchow area) between the Japanese and Chinese forces, and for the giving of instructions, by both Governments, to their military commanders in the field not to initiate hostile action. To this last formula the Japanese General Staff compelled the Japanese Government, on the same day, to request an amendment by telegram, on the ground that the formula was not in accord with the Japanese constitution. Meanwhile, British official observers who had gone to Chinchow had reported, on November 24th, that the rumours of a concentration of Chinese troops there were without foundation. On the morning of the 27th, however, the Japanese forces at Mukden entrained and started off along the Mukden-Peking Railway; there was a brush between the outposts of the opposing forces at Takushan, and Chinchow was bombed by Japanese aeroplanes. In other words, the Japanese military authorities had again taken the law into their own hands in the hope of once more presenting the Government at Tokyo and the League Council in Paris with a *fait accompli*. This time, however, the worm turned. The Japanese Cabinet appears to have made a personal petition to the Emperor, and the new Japanese filibustering expedition in Manchuria was countermanded on the day on which it had started out. At this point the Chinese delegate in Paris came to the Council's aid by intimating that China would be prepared to waive her demand for the insertion of a time-limit for the Japanese withdrawal into the Japanese zone if the withdrawal of the Japanese forces from the Chinchow district were confirmed by neutral observers. On the other hand, the Japanese delegation has continued to make difficulties. It has objected to the Council's efforts to secure the establishment of a neutral

zone on the ground that this is an unpermissible interference by a third party in a matter which must be settled directly between China and Japan. The Japanese are also objecting to any arrangement which would leave the Chinchow district under Marshal Chang Hsüeh-liang's authority. As we write, the resolution, with a covering statement by Monsieur Briand, which the Council has drafted, remains in suspense pending definitive acceptance or rejection by the Governments of Tokyo and Nanking.

France and Reparations.—The lengthy debate on foreign policy in the French Chamber ended last Friday in a vote of confidence in the Government's policy, carried by a majority of 327 against 151. In his concluding speech M. Laval reviewed the development of the financial crisis which had led to the London Conference, his visit to Berlin, and, later, his voyage to Washington. It was, he said, a still growing crisis from which "no nation could isolate itself." From this sound premise, however, he proceeded to develop the "French thesis" in relation to reparations. M. Laval claimed that his negotiations with Mr Hoover had resulted in agreement by the United States that the normal regime of the Young Plan should be substituted for the exceptional regime of the Hoover moratorium so that France would in future be protected against "initiatives," like that taken by the American President last June. Germany had now asked that the Advisory Committee provided for in the Young Plan should be convened; the Committee's report would be followed by a new conference of Governments; at such a conference the task of French statesmen would be to ensure that the rights conferred on France by the Hague Agreement were not impaired. "For the period of the depression we shall not refuse to examine the bases (*les modalités*) of new agreements between debtors and creditors. . . . We shall accept a new modification only for a limited period. We shall consent to a revision of reparations only in so far as there is at least an equivalent reduction granted us in respect of our war debts. We shall insist on the payment by Germany of the unconditional annuity, and we shall not accept the principle that Germany's private debts should have priority over reparations due to France." This statement provoked a letter in the *Times* of Monday last from a correspondent, Sir John Williams, who asked whether M. Laval's speech should be interpreted as meaning that France claims it to be the international duty of the German Government to prevent German nationals from paying their debts abroad until all current liabilities of the Reich for reparations are discharged. We find it difficult to credit M. Laval with such an intention; and, whatever interpretation may be placed upon his speech, there must at least be common ground in the proposition that the first consideration governing any plan with regard to Germany's future must be to restore and maintain her commercial credit. Nor are responsible circles in France likely to ignore the consideration, when it comes to "brass tacks" as opposed to Parliamentary debate, that the destruction, by default, of Germany's commercial credit would have repercussions shaking to its foundations the whole banking system of Europe, including that of France itself. M. Flandin, the French Minister of Finance, shot pheasants in Surrey last Saturday. But he was also in pursuit of bigger game, for, before his return to Paris, he met Sir John Simon, Mr Chamberlain and Mr Runciman for an informal interchange of views on the wide range of urgent financial and economic questions affecting the future, not only of France and England, but of the whole of Europe. Although no official information was issued as to the topics under discussion, it is natural to suppose that one of them was the attitude of the two Governments to the problem of reparations and debts, and it is tempting to hope that M. Flandin succeeded in softening the rather harsh impression created by M. Laval's speech.

Foreign Trade Policy.—Reports of forthcoming Anglo-French and Anglo-Belgian conversations on the question of mutual trade relationships appear to have occasioned

various alarms in Protectionist breasts. On the one hand there is a disposition to fear lest, by abatements of our 50 per cent. duties, the pound may be exposed to violation at alien hands, and the process of securing its chastity by a still more completely protective *ceinture* impeded. On the other hand, our more Imperially-minded protagonists of tariffs appear to have been seized with apprehensions lest the Board of Trade, by committing itself to some sort of preferential arrangement with European countries, might prejudice the results of their cherished plan to effect a wholesale diversion of our trade from its established natural channels by coupling still wider measures of high Protection with preferences exclusive to the Dominions. Indeed, on Tuesday, in the House of Commons, Mr Runciman was pressed to give, and gave, an undertaking that no preferential agreement—whatever that may mean—would be made with a foreign country until after next year's Imperial Conference. In so far as such a pledge may be considered to tie the British Government's hands in fiscal negotiations with other countries we regret that the President of the Board of Trade should have given this undertaking. Actually, however, we think that little concern need be felt on this score either by Protectionists or by those who stand for economic sanity in international trade. Bilateral conversations are an essential preliminary to wider action; but it may be doubted whether it is wise for this country to attempt to obtain final results by piecemeal negotiations. In saying this we are not referring solely or specifically to the case of France. French trade is hit hard by our Abnormal Importations Act; France has placed a 15 per cent. "surtax" on imports of British goods in consideration of the depreciation of sterling, and, by reducing her coal import quotas, has indirectly (not, be it said, by way of a discriminatory action) restricted her purchases from the South Wales mines. *Que MM. les assassins commencent.* We may leave it to negotiators from the French Ministry of Commerce and the British Board of Trade to fight it out with due regard to the various commercial treaties and most-favoured-nation clauses to which their respective countries are committed; the results are unlikely to be substantial, for, as matters stand, ill-considered clamour from the Conservative back benches that the pound must be saved would make it difficult for the Government to abate any of its duties. In any case, this country could not embark on a series of special preferences outside the Empire in view of our most-favoured-nation obligations. The most that could be done, if Protectionist pressure in this country were not too strong, would be to scale down, in relation to shipments from all foreign countries, the present very high duties on some articles. Apart from this, matters have now gone much too far to be tackled effectively by a series of bilateral agreements, necessarily slow of negotiation and rendered the more difficult by obligations of most-favoured-nation treatment. Attempts to liberate the frozen system of Europe's international trade by a process of selective bargaining will achieve little, and will be apt to complicate, rather than smooth out, the existing tangle. What is needed—and the need will be emphasised by the growing deadlock with every week that passes—is an international conference at which all the countries who are prepared to stand for the principle of lowering tariff barriers can form a definite low-tariff bloc which might or might not lead eventually to a complete Customs union. Such a bloc should be ready to denounce all existing most-

favoured-nation obligations if such a step were needed to existing high protective tariffs. Meantime, though conversations of all kinds with other nations on trade questions are to be welcomed, we must await, with such patience as we can muster, the day when the extinction of international trade will produce—as produce it will—a compelling movement to general tariff elimination.

The Weakness of Sterling.—During the past week the pound's exchange value has declined more abruptly than at any time—with the exception of the first few days' chaotic movements—since Great Britain went off the gold standard. On Wednesday a low point of 3.23 in the dollar quotation was momentarily touched, and, though a rally followed which left the dollar at 3.37 on Thursday afternoon, this figure compared with 3.60 on the previous Thursday and 3.77 a fortnight ago. In view of the narrowness of the market and the fact that the exchange is entirely unsupported, such wide movements are not wholly surprising, though in so far as a violent depreciation of sterling, even temporarily, would render much more difficult the task of keeping the internal price level steady, they are necessarily a matter of some concern. Various factors appear to have contributed to the depression of the exchange—payments for seasonal and abnormal "forestalling" imports; liquidation of sterling balances by Amsterdam; difficulties encountered by British exporters in obtaining payments for shipments to countries with increasingly stringent exchange restrictions; and, finally, some speculative "bear" selling of sterling by foreign interests prompted by the belief (not altogether dispelled by the Treasury's latest announcement) that the fiduciary portion of the note issue might be increased over Christmas, and that this would be regarded abroad as an inflationary step. The present position of the exchange should serve, we hope, to put an end to irresponsible agitation for a lower Bank rate. At the same time, nervousness in foreign centres as to the possible development of inflationary tendencies in this country appears to be exaggerated, having due regard to the steadiness both of the prices of non-imported goods and of the active circulation. On a long view, foreign opinion may be right to be "bearish" of our economic prospects should Protectionist pressure drive the Government (as we profoundly trust will not prove to be the case) into further extensions of their deplorable high tariff experiments. But, so far as the early future is concerned, while the continued world-wide financial strain and the approach of the end-year date when bank and other balance sheets are made up, may lead to further withdrawals of funds from London and a consequent weak tendency of sterling, it is unduly pessimistic to regard the stability of the pound as seriously menaced by any factor which could not be corrected, if need be, by the bold use of Bank rate on traditional lines. This, however, must be added: the recent slide in sterling exchange and, still more, the disturbance occasioned by its wide hour-to-hour fluctuations, emphasise very forcibly the vital need to develop a freer market in "forward" as well as "spot" exchange. The condition precedent to the realisation of this highly desirable objective is the repeal of the Treasury's regulations on foreign exchange dealings—regulations which, so far from protecting the pound, have only succeeded in robbing it of the steadying effect produced by normal dealings in a free market.

The Results of the Argentinian Elections.—The returns of the Argentinian elections, held on Sunday, November 8, have at last been published; and the National Democratic candidate for the Presidency, Don Augustin Justo, has won a substantial victory over Dr. Don Lisandro della Torre, the candidate of the Democrat-Socialist Coalition. In other words, the new administration will be continuous with the present irregular Government, under General Uriburu's provisional presidency, which has been in power since the revolution which overthrew the semi-dictatorial regime of President Irigoyen last year. This result of the recent elections was perhaps a foregone conclusion, since General Uriburu's Government took drastic measures for clipping its opponents' electoral wings. The candidatures of former active sup-

porters of the Irigoyen regime were vetoed, and the leaders of the Opposition were actually expelled from the country during the election period. Thus these Argentinian elections have by no means been free; and to the extent to which they have been "made" they are void of political value. Nevertheless, they must in fairness be regarded as a serious attempt to restore the political life of Argentina to its normal constitutional course. The Argentinians are justly proud of the fact that they have put the revolutionary method of politics behind them for the best part of a century; and the relapse into revolution last year was an effect of the world-wide economic depression, which has produced political portents in many countries. We may hope that Argentina is now well on the way towards a return to normal conditions of constitutionality and stability. The well-being of Argentina is a matter of close concern to Great Britain, for Argentinian prosperity is one of the essential conditions for a revival of world trade.

Constitutional Progress in Syria.—Syria is one of the three ex-Ottoman Arab territories which have been placed, as a result of the Peace settlement, under mandates of the "A" class—mandates, that is, which are envisaged as being transitory and which are eventually to be extinguished by the admission of the mandated territories to membership in the League of Nations as sovereign independent States. These three mandated territories of the "A" class are Palestine, Iraq and Syria; and, of the three, Palestine at this moment is stationary, Iraq is approaching its metamorphosis, and Syria is travelling along the same road that Iraq has traversed in advance of her. For "Syria" it would be more correct to say "the French mandated territory in the Levant"; since "Syria," in the wider popular sense, has been organised by the Mandatory Power into several separate States: the Great Lebanon, the Alouites, and Syria Proper; and even Syria Proper has been made to hive off the autonomous Governments of the Jebel Druze and Alexandretta. This mosaic of States is held together by a common Customs union and a common supervision on the part of the Mandatory Power; but it is probable that the Lebanon and Syria, at least, will eventually be launched by the Mandatory Power as separate States into the community of independent nations. This political sub-division of the mandated territory has been the French method of dealing with local diversities of nationality and religion. The Lebanon is predominantly Christian, Syria Proper predominantly Muslim, Alexandretta predominantly Turkish, while the Jebel Druze and the Alouites are named after two local religious communities. The Muslim Arab Nationalist opposition in the State of Syria Proper is the crux of the Mandatory Power's problem. This opposition is an aftermath of the abortive insurrection of 1925-26, and the bitterness has not yet died away. In 1930, however, the able and statesmanlike French High Commissioner in the Levant, M. Ponsot, succeeded in reaching agreement with a Syrian Constituent Assembly on all but half-a-dozen clauses of a Syrian Constitution. Last year this constitution was promulgated in the form in which the Assembly had voted it, except for the contentious clauses, in which the French, as opposed to the Syrian, version was made to prevail. M. Ponsot is now proposing to put this constitution into force; and, if the necessary support is forthcoming on the Syrian side, the next step will be to place Franco-Syrian relations on a treaty basis, following the Anglo-Iraqi precedent, as a preliminary to the admission of Syria (and, no doubt, also the Lebanon) to membership in the League in Iraq's footsteps. This is all to the good, but it makes it urgent for the Mandatory Power in Palestine to achieve some advance there. Otherwise, we may wake up one day to find our mandatory regime in Palestine left stranded.

The Second Dose.—The Board of Trade have issued their second Order imposing a Customs duty of 50 per cent. under the Abnormal Importations (Customs Duties) Act. The Order covers eleven classes of goods, the actual schedule being set out in the table on the opposite page; but with one or two notable exceptions the volume

of imports affected is inconsiderable, and it is difficult to understand why it was thought worth while to include certain goods in the Order. Jute tissues, for example, are imported almost entirely from India, and, as Empire goods are exempt from duties under this Act, the bulk of this category of imports will be unaffected. The largest and most controversial item in the list is woollen and worsted yarns, and their inclusion is open to all the objections of a tax upon a raw material. Mr Runciman has so far resisted successfully the pressure for an order on iron and steel imports, on this very same ground that iron and steel products are essentially raw materials, and it is not easy to understand why he has brought woollen and worsted yarns within the ambit of his new duties. The only possible conclusion is that he has been influenced by the increase in imports during October and early November, and in this connection a White Paper shows the following details regarding yarn imports:—

	1930.	1931.
	Lbs. thou.	Lbs. thou.
September	1,383	1,423
October	1,900	2,154
November	1,528	2,114*

* First 20 working days following period included in the October return.

The October increase was obviously seasonal, but the November, 1931, imports bid fair to be double those of November, 1930, so that presumably Mr Runciman saw a *prima facie* case in accordance with the spirit of the new Act, though he appears to have ignored the danger of any restriction in our imports of woollen yarn (and these are "specialised" imports) being more than offset by a consequent decline in our exports of woollen piece-goods. Meanwhile, the extent and intensity of the present "lobbying" on behalf of particular trades is most dis-

quieting, and a still more disturbing feature of the recent Orders is the frequency with which Germany crops up as a principal source of the imports concerned. In view of the paramount necessity of preserving Germany's stability and the grave consequences that would ensue upon a failure to do so, we would once more urge upon the Government the need of proceeding with great circumspection, and for taking into account all the consequences, both direct and indirect, that are likely to follow the application of these and similar duties. It by no means follows that the balance of trade or the stability of the pound would be benefited, even temporarily, by an indiscriminate imposition of duties under the new Act; and concessions to sporadic and interested pressure from individual industries means contributing, step by step, to the general paralysis of world trade.

Anti-Dumping Duties and Drawbacks.—Merchants generally, writes a correspondent, and especially the City textile houses, are seriously perturbed over the surprising information that, under the operation of the new 50 per cent. duties, there is to be no system of drawbacks on re-exports. This was not apparent on a first perusal of the Act, but has come to light since and is understood to be confirmed by the Board of Trade. Under Section 5 of the Abnormal Importations (Customs Duties) Act, 1931, provision is made for the exemption from duty (subject to Customs satisfaction) of "articles imported for exportation after transit through the United Kingdom or by way of transshipment." It is found that H.M. Customs interpret these words in a severely restricted way as covering only goods which are actually transhipped in bulk at port of arrival or pass through the country on rail "in transit" from one port to another. No provision is made to protect

TOTAL IMPORTS DURING 1929 AND 1930 OF ARTICLES LIABLE TO DUTY UNDER THE "ABNORMAL IMPORTATIONS (CUSTOMS DUTIES) NO. 2 ORDER, 1931."

the re-export trade of merchant houses who bring dutiable goods to their warehouses and break bulk before dealing with indents. The Irish Free State especially has been an important market to these wholesale houses; their travellers are continually on the road there, and many hundreds of made-up parcels are despatched from London daily. The refusal to apply the drawback system is the more remarkable since, under certain of the Safeguarding Duties, drawbacks have been allowed. British merchants cannot understand why, for example, the system of drawbacks which worked successfully under a 33½ per cent. Glove Duty for five years after 1925 cannot be conceded to them now that the same duty has been reimposed at 50 per cent. In the absence of drawback facilities the new duties will totally destroy this *entrepôt* trade so far as the taxed goods are concerned.

The Government and the Millers.—Indications point to a pretty imbroglio between the Government and the milling industry over the operation of the ill-considered scheme for the introduction of a quota system for next year's home-grown wheat crop. On Wednesday a deputation from the National Association of British and Irish Millers waited on the Minister of Agriculture, who presumably informed them of the details of a scheme which intimately affects their interests. Apart from the special difficulties entailed by inflated English wheat prices in the case of consumers (e.g., biscuit makers) who normally use that source of supply almost exclusively, but who might be forced to seek alternative competitive sources of soft wheat, the British milling industry has to face the fact that its whole economic position in relation to Canadian and other foreign competitors may be seriously prejudiced by the proposed British quota plan. The Government is, therefore, likely to be pressed strongly to embark still further on its career of food taxing by the imposition of duties on imported flour. But what of our flour exports, which amount to some four million hundredweight a year? How will this keenly competitive trade be affected if British mills are compelled either to use a prescribed percentage of English wheat, yielding flour which may not be acceptable to their customers' tastes, or, alternatively, to have the cost of buying transferable quota certificates added to their production costs?

Beer and Taxation.—Every economist, if not every Socialist, knows the doctrine of the optimum yield of taxation and realises that in every tax a point may be reached where an increase in the rate charged may result in a decline in revenue. It looks very much as if the beer duty is giving us a new example of the operation of this law. In his "crisis" Budget in September, Viscount Snowden raised the duty on beer from £5 3s. 6d. to £6 14s. 6d. per 36 gallons. Since then consumption has fallen sharply, as the following table shows:—

QUANTITY OF BEER CHARGED WITH DUTY.

		Standard Barrels.
1924	Monthly Average	1,727,700
1929	"	1,619,600
1930	"	1,567,600
1931	Monthly average, January to September	1,425,500
1931	October	1,152,000

These figures are compiled from information given in the House of Commons this week, which also showed the monthly average for the September quarter as 1,508,700 gallons. Whatever other influences may have been at work to produce a very sharp curtailment in consumption, the increased duty imposed in September is clearly responsible to a considerable extent. The extra "penny on the pint" seems to have produced more psychological effect upon the habitual consumer than years of hard work by the most ardent temperance reformer. But the Chancellor of the Exchequer, we take it, is seeking to obtain revenue, and not to enforce abstinence, and he is presented with an interesting exchequer problem.

London and the "Stillhalte."—Last Friday a statement was issued from the London Bankers' Clearing House giving the results of an inquiry made into the amount of facilities held at the disposal of Germany by London banks and accepting houses under the "standstill" agreement. The statement showed that the amount of these credit facilities being used on October 31st was under £55 millions, as compared with £64 millions on July 31st, and that approximately half of the credits were on a documentary basis, necessitating definite proof of shipment of goods. The publication of these figures was evidently intended to set at rest rumours which appear to have been current exaggerating the figure of Germany's liabilities in London under this head. It should, of course, be appreciated that the Clearing House statement does not cover the whole of Germany's short-term indebtedness to London. On Wednesday a further announcement was made by the Clearing House to the effect that confirmation has now been received from all the banks and accepting houses interested that they will continue up to February 29, 1932, to accept bills of customary tenor falling under the German Standstill Agreement.

Shipping Freight Index Number.—During November the average level of (sterling) shipping freights, as measured by our index number, rose further by approximately 1 per cent., and is now 4 per cent. higher than a year ago:—

	Average, 1913.	November, 1930.	September, 1931.	October, 1931.	November, 1931.
European Waters	110.0	89.5	82.5	90.8	91.1
North America	113.1	85.0	83.1	91.5	92.0
South America	123.4	90.4	85.3	89.6	85.0
India	106.3	99.8	86.1	97.6	99.1
Far East and Pacific	117.4	81.0	85.2	94.0	98.8
Australia	127.9	107.7	97.9	106.8	108.6
Total	116.3	92.2	86.9	95.0	95.8

The volume of business in November showed no expansion; indeed, the important Plate market absorbed considerable less tonnage than of recent months. Spasmodic chartering for Canadian grain, Cuban sugar, Manchurian beans, etc., was in evidence; but trade generally continued to reflect the restrictive influence of exchange and import regulations. Detailed movements were as follows:—

	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home trade	80.7	- 2.8	South America—outwards	65.2	- 2.1
Bay—outwards	108.3	- 1.8	South America—homewards		
Bay—homewards	96.8	...	India—outwards	104.8	- 7.0
Mediterranean—outwards	83.6	+ 2.9	India—homewards	109.8	+ 0.8
Mediterranean—homewards	96.5	+ 5.2	Far East, &c.	98.8	+ 4.8
North America	92.0	+ 0.5	Australia	108.6	+ 1.8

Expressed as a percentage of the average for 1913, the total figure of our index number for November works out at 82.3, compared with 81.7 in October and 79.3 a year ago.

The Credit Anstalt.—The negotiations which had been proceeding between the Austrian Government and a delegation consisting of Sir Robert Kindersley, Sir Otto Niemeyer and Mr S. L. Chandler, acting on behalf of the foreign creditors of the Credit Anstalt, resulted last Saturday in a provisional protocol, which was ratified on Tuesday by the Austrian Assembly. Only brief details of the concordat have been published, but it would appear that a preliminary agreement has been reached providing that the management of the Credit Anstalt shall in future be vested in a committee consisting of a Director-General and four members, of whom one is to be a foreigner. The Director-General himself may be either an Austrian or a foreigner, and is to be chosen by the management committee in agreement with the foreign creditors, subject always to the approval of the Austrian Government. This

powers, it would seem, are to be somewhat strictly circumscribed, in so far as major banking operations or the disposal of the Bank's assets are concerned, by the management committee. The Austrian Government, on its part, has apparently undertaken to pass the necessary legislation to reduce the Bank's expenditure on personnel and to provide that the Bank shall not be compelled on account of its existing statutes to go into liquidation contrary to the desires of the management committee. This undertaking is subject to the willingness of the signatories of the creditors' agreement of last June not to enforce their claims to repayment of their loans to the Bank. In his weekly dispatch, which will be found on a later page, our Vienna correspondent reports that the agreement is strongly opposed by the Social Democrats on the ground (1) that the creditors have not been more precise in their undertaking to be accommodating towards Austria in the matter of the State's guarantee in respect of Credit Anstalt losses, and (2) that the Director-General, with the approval of the management committee, has power to shut down summarily any of the Credit Anstalt subsidiary enterprises and to terminate collective agreements with employees. The latter proviso clearly raises issues which might become of serious political significance in Vienna. In so far as the State's guarantee is concerned, our Vienna correspondent cannot be accused of undue pessimism when he suggests that the Austrian Government would find it completely beyond its powers to make good in the near future guarantees which have already run up to the colossal figure of 1,200 million schillings. With every week that passes it becomes increasingly evident that the real problem is the salvage not so much of the Credit Anstalt itself as of the entire economy of Austria, a task which cannot be achieved simply by tightening up the Credit Anstalt management and effecting retrenchment in its expenditure on salaries, pensions, etc., but which requires the "unfreezing" of the paralysed trade of Central and South-Eastern Europe.

Australian Banking.—Our Melbourne correspondent, writing on October 30th, says:—The banking position in Australia, as disclosed by the quarterly average returns to September 30th of the trading banks, reflects, on the one hand, the shrinkage in business, which involves less trading demand for accommodation, and, on the other hand, the manner in which the banks are assisting the Governments as well as country producers. In New Zealand, also, there has been a diminution in trading requirements. The principal totals (relating to operations within Australia and New Zealand but exclusive of external business) as compiled from the returns in the various States, compare with those for the previous quarter and a year ago as follows:—

	Sept. 30, 1930.	June 30, 1931.	Sept. 30, 1931.
AUSTRALIA:			
Deposits	262,232,610	261,083,620	257,028,115
Advances and securities	276,652,349	262,604,620	268,433,833
Coin and bullion	2,739,617	1,960,359	1,997,165
Australian notes and cash with Commonwealth Bank	32,998,158	51,145,994	43,244,640
NEW ZEALAND:			
Deposits	56,150,539	54,996,125	53,466,003
Advances and securities	58,262,956	58,431,926	56,518,749
Coin and bullion	6,838,877	6,926,030	6,942,332
Legal tender notes of other banks	66,034	47,813	44,005

Advances and securities of the trading banks in Australia show a decrease of £8,218,516 for the past year as the net result of a decrease of £16,913,921 in advances and an increase of £8,695,405 in Government and municipal securities, inclusive of Commonwealth Treasury Bills, which are practically equivalent to cash from the banking point of view owing to the rediscount arrangements available with the Commonwealth Bank. The Commonwealth Bank, which is not included in the above figures, shows balances due to other banks nearly £23 millions, or an increase of over £7½ millions for the year. Its advances within Australia, inclusive of short-term loans, have risen to £29 millions, or an increase of nearly £15½ millions.

The Potato Market.—Complaints of potato dumping are apt to arise, as at present, whenever distress among potato growers coincides with the consumption in this country of more than the usual quantity of imported potatoes. Yet actually this alleged "dumping" might often be more appropriately designated relief work, and the use of the word "dumping" is in a small way as inept as it would have been to talk of "dumping" wheat into Russia in 1921. A recent report of the Ministry of Agriculture on the Organisation of Potato Marketing makes it abundantly clear that most of the troubles of British potato growers other than those, like the present crop failure, which are attributable to the weather, are due to the fact that in spite of a demand and a product which lend themselves more than usually well to market organisation, the potato trade is wholly unorganised to meet the fluctuations in supply which are inevitable in any agricultural product. The question of imports is only incidental to the subject of the report, but none the less the fact is clearly brought out that foreign imports fluctuate directly with home prices, or, more accurately, with the margin between prices at home and abroad, and that "increases or decreases in imports are the result, and not the cause, of changes in prices in this country." An analysis of home and foreign crops in the years 1922-30 shows that "natural conditions help to protect the British potato market from heavy foreign supplies, except where there was a need for them." This statement is borne out by the following figures of the British crops and foreign imports into Britain during those years:—

	In thousands of tons.	
	United Kingdom	Imports.
	Crop.	Year beginning September.
1922	6,478*	228.8
1923	4,495	331.2
1924	4,370	597.4
1925	5,377	319.2
1926	4,731	312.2
1927	4,911	494.8
1928	5,699	285.7
1929	5,867	264.7
1930	4,459	520.8

* Excluding crop in Irish Free State.

In each of the three years 1924, 1927 and 1930, in which imports were above the average, the home crop was below the average. It is, on the other hand, noticeable that little appears to be done to expand the British export trade in years of glut, though the evidence suggests that the demand in certain countries for British potatoes is sufficiently elastic to make this course worth trying. This apparent lack of enterprise is presumably due to the same absence of organisation which accounts for the lack of standardisation of produce and of trade practices, the maladjustment of supply as between markets, and as between different parts of the season, and the fluctuations in supply from season to season. The report, which has interesting sections on potato market organisation abroad, leaves the consumer wondering what claim the producer has earned on him, that in a bad season like the present, when natural conditions have disabled his British suppliers from meeting the full demand for sound potatoes, he should be prevented from availing himself of the supplies offered by other countries.

Conditions in Japan.—According to a recent speech by Mr Inouye, the Finance Minister, the Japanese Government economised on heads of expenditure to the amount of 43 million yen for the current financial year, and has, in response to the further decrease in the revenue since last September, made economies of 69 million yen in the forthcoming Budget. These economies, which are to be effected by means of financial and administrative readjustments, reductions of the numbers and salaries of Government staffs and revisions of the pension law, will, according to the estimates, keep total expenditure down to about 1,479 million yen. If 41.2 million yen expenditure on unemployment relief and 14.4 millions in respect of the Karafuto Special Account be deducted to make the figure comparable with that of the previous year, there

remains a total of 1,424 million yen, against 1,458 millions in 1931. As this will not, however, be enough to meet the anticipated diminution of the revenue, the deficit is to be covered partly by temporary increases in taxation and partly by the issue of a loan. The suspension of the gold standard in Great Britain gave rise to heavy sales of foreign exchange by the Yokohama Specie Bank, and in consequence about 220 million yen, in gold, had been exported by November 21st. The Bank of Japan twice raised its discount rate, which has stood at 6.57 per cent. since November 5th. The decrease in the gold reserve, which still amounted to 602 million yen on November 21st, is accounted for by Japanese investment in foreign currencies and by the excess of imports, which for the first ten months amounted to 1,140 million yen, against exports of 1,014 million yen. A favourable invisible trade balance of 100 million yen is, however, still hoped for. Japan's foreign liability was stated by Mr Inouye to amount to 2,217 million yen, of which 1,479 millions are Government loans, 244 millions local government loans and 495 millions the debt of private companies. Short-term debt is practically non-existent. Against these liabilities Japanese holders have 850 million yen securities in foreign currencies.

The British Overseas Bank.—While this institution has been affected by the world trade depression, its 1931 accounts are in some respects better reading than those of other banks mainly engaged in financing international trade. Its net profits at £166,000 are the highest for the past three years, though prevailing uncertainties have imposed upon the board the advisability of making a special allocation of £100,000 to contingencies out of current profits. In consequence, it has been necessary to reduce the dividend upon the "B" shares from 6 to 2 per cent. The leading items in the accounts are summarised below:—

	1929.	1930.	1931.
	£ thou.	£ thou.	£ thou.
Capital paid up	2,000	2,000	2,000
Reserve Fund	225	225	225
Deposits	5,114	4,549	3,047
Acceptances	4,659	3,927	4,277
Cash	278	294	197
Call Money	2,282	1,820	1,267
Balances Abroad	310	215	201
Bills Discounted	1,000	1,071	205
Government Securities	305	354	470
Other Investments	606	598	623
(incl. subsidiaries)			
Advances	2,161	2,149	1,918
Net Profit	160	140	166
To Reserve Fund	25	nil	nil
To Contingencies	nil	nil	100
Dividend:			
A shares	6%	6%	6%
B shares	6%	6%	2%

The main feature of the accounts is the heavy decrease in deposits, offset mainly by calling money from the market and by a big reduction in the bank's bill portfolio. The bank's ratio of cash to deposits is unchanged at 6.5 per cent., but the accounts show that the bank habitually operates upon a small margin of actual cash as opposed to call money and balances with banks abroad. The increase in acceptances, though welcome, may be accidental, due to the vagaries of the season and the maturity of crops. Investments have been increased, and the contraction in advances is by no means excessive. In connection with these two last items, much depends upon the current market prices of the bank's securities and upon the liquidity of its advances. In these days matters such as these are often not so much within a banker's control as he could wish.

Bank of London and South America.—As the accounts show, this institution, which is affiliated to Lloyds Bank, has shared in the manifold difficulties of South America; and the directors have in the circumstances thought it advisable to increase the allocation from current profits to contingencies by £50,000, and furthermore to transfer from the published reserve to contingencies the sum of £1,500,000. The report states that this transfer is made to provide for depreciation of capital employed abroad,

all bad and doubtful debts, and possible future contingencies. There is no doubt as to the wisdom of this step, in view of the financial, exchange and commercial uncertainties of the countries which the bank serves, though it by no means follows that the whole of this special appropriation will have to be used. In any case, the accounts reveal a cash position of unusual strength, and the fact that the directors have thought fit to declare even a reduced dividend is additional ground for reassurance. The main items in the accounts are appended below:—

	September 30th.	1929.	1930.	1931.
		£ thou.	£ thou.	£ thou.
Capital	3,540	3,540	3,540	3,540
Reserve	3,000	3,000	3,000	1,500
Deposits, &c.	40,992	39,363	34,312	34,312
Acceptances	2,453	2,092	1,513	1,513
Bills for collection	14,782	11,085	8,569	8,569
Cash	7,121	8,706	10,575	10,575
Bills receivable	15,602	12,864	9,474	9,474
Advances, securities, &c.	27,096	26,118	20,156	20,156
Gross profit	1,815	1,754	1,455	1,455
Net profit	435	390	332	332
To contingencies	45	100	150	150
Dividend	11%	9%	5%	5%

The contraction both in deposits and in such indices of general trade as acceptances, advances and bills for collection on account of customers illustrates the effects of the fall in commodity prices and the contraction in South American commerce, to which the decline in the bank's profits is obviously to be ascribed. The strengthening of the bank's cash position is in itself a consequence of the trade depression, for it suggests that the bank can no longer find adequate safe outlets for its funds. At the same time the increase is to be welcomed, for a greater margin of safety is required by most banks in these troublous times.

N.Y. Metropolitan Life.—Rather more than four years ago the Metropolitan Life Insurance Company of New York—the largest in the world—established a United Kingdom branch for the strictly limited purpose of transacting in this country group insurance business. Group insurance is devised to meet the need of the employees of an industrial company. One master-contract is issued covering each employee for a stipulated amount, generally one year's wages, and, provided the age distribution is normally constituted, the cost each year is usually about 1 per cent. of the pay roll. In conjunction with group insurance the company has introduced to this country a new method of providing for superannuation in the form of "Group Pensions." This scheme, like group insurance, is based on a master-contract and provides for each employee a stipulated amount of pension for each year of service after the inauguration of the scheme, and a stipulated amount of pension for each year of past service. The measure of the company's success in its attempts to popularise this new kind of group provision may be judged from the following figures relating to group insurance policies issued:—

NEW BUSINESS.				
Year.	No. of Policies.	Sums Assured.	Yearly Premiums.	
1927	2	£1,040,100	£13,253	
1928	13	1,084,290	11,799	
1929	27	2,390,533	20,956	
1930	47	1,383,413	14,669	

No figures are published separately for group pension business, but from the revenue accounts it appears that consideration money for group annuities during the last four years has amounted to £264,000. The total premium income during the same period from group insurance business has been £132,000, of which £62,000 has been paid out in claims. The first striking feature from the table is, of course, the large amount of each policy, which, however, is readily understood when it is borne in mind that each contract relates to a large number of lives. Although the number of policies issued has shown a steady increase it may not be without significance that the sums assured in 1930 show a large drop. The ability of industrial companies to add to their already large fixed charges in times

of trade depression is, of course, much reduced, while the activities of the Metropolitan Life have, in the meantime, stimulated a number of British offices to launch out in the same direction.

Record Transvaal Gold Output.—According to the monthly statistics supplied by the Transvaal Chamber of Mines, a record gold output has been achieved by the mines of the Transvaal. The total output for October was 945,113 ounces of fine gold, which compared with 916,024 ounces produced in September and 926,561 produced in October, 1930, which, incidentally, was the previous record output. In the following table we show the monthly output since the beginning of 1925:—

Month of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.
January	823,692	796,270	839,782	843,857	876,452	882,801	914,576
February	753,925	753,924	779,359	816,133	815,284	816,188	839,937
March	825,479	834,340	860,511	877,380	866,529	869,370	910,998
April	787,519	803,303	824,014	825,907	874,123	868,606	882,337
May	813,249	849,214	859,479	886,186	897,598	916,213	910,279
June	780,251	852,145	855,154	862,363	856,039	887,867	897,150
July	816,202	860,134	851,861	867,211	889,480	912,652	916,843
August	808,218	843,854	863,545	891,863	889,601	921,081	916,425
September	797,247	839,939	842,118	857,731	849,553	903,176	916,024
October	812,832	853,296	855,743	897,720	888,690	926,561	945,113
November	787,833	840,276	848,059	874,484	861,593	884,753	...
December	791,455	836,157	851,225	859,761	851,134	908,492	...
Total.	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	9,050,282

The aggregate of 9,050,282 ounces for the expired ten months of the current year compares with 8,926,515 ounces for the corresponding period of 1930. The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors at the end of October totalled 223,565, as compared with 224,326 at end of September. Comparative figures for the last eight months are shown below:—

	Feb. 1931.	Mar. 1931.	Apr. 1931.	May 1931.	June 1931.	July 1931.	Aug. 1931.	Sept. 1931.	Oct. 1931.
Gold mines	209,777	207,239	206,772	207,109	207,209	208,155	209,409	209,424	208,987
Coal mines	13,740	13,436	13,242	13,505	13,286	13,512	13,563	13,276	13,061
Diamond mines	4,333	4,206	4,030	3,689	3,345	1,817	1,705	1,626	1,517
Total	227,850	224,781	224,042	224,103	223,840	223,484	224,677	224,326	223,565

The native labour statistics show a small decline as compared with September.

UNITED STATES.

Finance — Railroads — Reparations.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 25.

THE country has travelled a long way from its former position of indifference toward financial and economic conditions in Europe and the rest of the world, but recently there has developed a tendency to look at home for the next impetus to trade. The horizon still shows no sign of improvement, but sentiment continues better. Company and individual earnings are poor and calls for assistance are numerous and moving, but the panicky feeling has disappeared. The approaching session of Congress is attracting much less attention for what is likely to be done on foreign debts and tariffs than on ways and means of meeting the Treasury deficit, placed for this year at fully \$2,000 millions. Both Parties are now agreed that taxes will have to be increased, but naturally there is a disposition to make the burden as light as possible for earners of small incomes, who, of course, are the most numerous and consequently have the most votes, and to look to borrowing for a large portion. The Treasury is hard at work on a new taxation schedule, which at first will probably be largely replacement of the 1924 rates, leaving imposition of special taxes on luxuries or sales taxes to be debated at greater length. Meanwhile, the

Treasury will have short-term maturities of over \$1,000 millions to meet on December 15th, and the market is looking for fresh short-term borrowing rather than a long-term bond issue. However, the market is now more favourable to long-term bonds than it was a month ago, the trend in money rates being downward with the virtual cessation of gold movements. This month the Treasury has added about \$35 millions to the floating debt by net bill sales.

Weaker money rates have not yet stimulated new capital offerings. In the past week the market has had a small railroad bond issue, which was quickly taken on account of its high-grade character, and there is a good demand among insurance companies for the new Canadian internal loan. For the most part the market, such as it is, is dealing with municipal loans. Rumours of a Japanese or an Italian loan may be dismissed as without foundation.

The chief domestic development is the railroad wage conference. At a formal meeting this week the railroad labour union leaders rejected the railroad managers' proposal for a 10 per cent. reduction, countering with the suggestion of a six day week and a guarantee of employment. The breakup of this conference will mean the holding of others by individual roads and groups of roads, and there is a fair chance of success. The contention of labour leaders that they should not be asked to take lower wages in order to support "idle" capital invested in railroads, while dividends are still being paid, is not taken seriously, being designed for union member consumption. The railroads would probably be willing to agree not to ask for more than 10 per cent. wage reductions if the unions would accept them at once, and the likelihood that, if the procedure of the Transportation Act were followed, cuts of 15 to 20 per cent. would be made on some roads, is scarcely likely to escape the notice of the unions. If an amicable settlement cannot be arrived at, a board of mediation, composed of disinterested men, may attempt a solution. If this should fail, either the railroads or the unions, or both, could request arbitration, or the President could create an emergency board to deal with the matter. Failure to agree at any point would probably mean a delay of four or five months.

The appointment of Mr Walter Stewart as the American member of the Basle Committee to look into revision of the Young Plan was well received. Mr Albert Wiggin also leaves this week on his way to Berlin to negotiate on short-term German credits. The view is strongly held here that these commercial and private credits should be regarded as standing alone, and payable regardless of what may be done about reparations. The public attitude of French statesmen on the question of priority is believed to mean failure on their part to appreciate the fact that without commercial credits the whole economic structure of Germany must collapse.

American banks will naturally work for the best deal under the "stillhalte" which they can make, but it is doubtful if they anticipate anything more than a very limited reduction in the total sums involved at the expiration of the present agreement. This will be disappointing to some of the American banks, but reports on the European side of the water that American bankers are determined to insist on full repayment may be taken with a grain of salt. Full confidence is felt in Mr Wiggin's appreciation of the fact that, while German debtors have the goodwill to pay, their present ability to find the necessary exchange is limited; but, at the same time, he is fully competent to protect the banking interests.

In good quarters it is believed that the committee called together by the Bank for International Settlements will "stay within" the Young Plan, however much they may alter its appearance. The prevailing view here still is that the reparations matter is primarily one for France and Germany to settle, and while one section of opinion thinks it would be "good business" to cancel both reparations and debts owed this country, no one thinks this will be done. It is probably in vain to hope for the American Congress to consent to any large debt reduction, but some relief, particularly on interest rates and maturity dates, is possible.

FRANCE.

Politics — Treasury Loans — Industry.

(FROM OUR CORRESPONDENT.)

PARIS, December 2.

THE first full-dress debate of the session in the Chamber, which came to an end at 3 a.m. last Friday, after a remarkably brief and characteristic declaration of the Government's foreign policy by the Premier, resulted in an incontestable victory for the Laval Cabinet by a majority of 176 votes (327, against 151). The actual voting, however, cannot be regarded as gauging the real strength of the Government's majority in the expiring Chamber. No fewer than 120 of the 609 Deputies constituting the Chamber abstained from voting, including 96 of the 110 members of the Radical Socialist Party (now once more led by M. Herriot, as the result of his re-election to the headship of the party at the recent annual congress). Of the minority of 151, no fewer than 120 comprised the Socialist and Communists. The real Laval majority was probably revealed by a previous vote on a motion by M. Herriot himself, which was rejected by 315 votes against 264 (with about a score of abstentionists scattered over no fewer than nine different groups). There seems now to be a general belief that the Ministry will retain power until at least after the elections in the spring, and that French policy will necessarily continue on its present lines so far as the pending important international conferences are concerned.

Party intrigues are now rampant again in the Chamber. An important section of the Left is pressing for an earlier dissolution than the constitution calls for, apparently in the belief that opponents of the Government's inherently Nationalist policy have nothing to gain by allowing the present Lower House to live out its full term. A proposal from the opposite camp, which seems to be finding a good deal of support, is for the suppression of the present system of second ballots, and its replacement by another which will lend itself much less easily to opportunist party alliances in respect of three-cornered contests. This is so obviously directed against possibilities of a revival of the Cartel des Gauches (which derived substantial advantages at the 1924 elections from the system then adopted of mutual support at second ballots), that its application for the spring elections is probably more than doubtful.

As a result of Socialist "indiscretions," which took the form of the publication in M. Léon Blum's newspaper of certain alleged confidential information as to advances to French banks and foreign Governments from the French Treasury, the Minister of Finance, M. Flandin, addressed, on November 19th, a letter to M. Malvy, the President of the Chamber of Finance Commission, setting forth in detail the list of these advances. This letter was read to the Chamber during the course of last week's debate, and furnished one of the most notable features of the discussion. The letter stated that, down to October 31st last, advances of foreign exchange totalling 1,413,000,000 francs had been made by the Treasury to French railway companies and shipping concerns, under Article 120 of the law of April 16, 1930. These advances were as follows:—

July 25, 1930.—Midi Railway Co., 15,000,000 (Swiss) frs.
August 6, 1930.—Compagnie Générale Transatlantique, \$3,829,170 (Canadian dollars).
October 20, 1930.—Est Railway, \$19,439,790.
November 21, 1930.—Midi Railway, \$4,800,000.
November 29, 1930.—Messageries Maritimes, \$8,305,753.
November 29, 1930.—Compagnie Générale Transatlantique, £1,424,400.
1930-1931.—P.L.M. Railway, £302,000 and \$8,035,000.

These operations, the letter stated, were almost all based on legal guarantees or State guarantees, except the second-mentioned advances to the Transatlantique Company, in which case mortgage guarantees were demanded on the occasion of the recent reorganisation of the company. The rates charged vary from 4 to 5 per cent., except in the case of the P.L.M. Railway, where the advance was limited to repayment by the end of 1932 and the rate fixed at 3 per cent. Reimbursements, except in the case of the P.L.M., are to be made by annuities.

Advances to foreign Governments have been as follows:—

Poland.—Amount outstanding on October 31st, 216,300,000 frs., secured on the annuity of amortissement of the Upper Silesian mines and State forest revenues, the rate of interest being 5 per cent. and reimbursement being in 15 years.

Yugoslavia.—Amount outstanding on October 31st, 263,300,000 frs., secured on State monopolies, the rate being 5 per cent., and reimbursement being by five equal annuities.

Advances agreed to during the recent Parliamentary recess:—

Yugoslavia.—250,000,000 frs. advanced (October, 1931) at 3 per cent., guaranteed by revenue from State monopolies, and repayable by half-yearly instalments within 2 years.

Hungary.—354,000,000 frs. advanced at 5½ per cent. on October 31st last, in the form of Treasury bonds, guaranteed *pari passu* with bonds issued in 1930, by surplus receipts affected to the 1924 loan by the American Relief Credit (gross revenue from Customs, sugar tax and tobacco monopoly, and the net revenue from the salt monopoly). Reimbursement in one-year bonds, renewable for six months.

Advances to various banks:—

Bank of Alsace-Lorraine.—Outstanding on October 31, 1930, 910,000,000 frs., secured on the whole of the bank's assets (realised by a committee under control of a representative of the Ministry of Finance), and by funds constituted by capital and reserves, and by an engagement of 20,000,000 frs. by board of directors. Reimbursement as and when assets are realised.

Banque Nationale de Crédit (operation begun on September 28th last).—Amount outstanding on October 31, 1931, 1,062,000,000 frs. Guarantees constituted by the whole of the bank's assets, the management of the bank being controlled by a delegate of the Bank of France, acting for the latter and for the Treasury; plus funds constituted by the bank's capital and reserves and an engagement of 20,000,000 frs. by the board of directors; and, lastly, by a fund of 260,000,000 frs. constituted by the principal Paris banks and by the Bank of France. Reimbursement as the assets are realised.

The Minister's letter concludes:—"I add, in reply to your question, that no engagement has been entered into by the Government, notably in respect of the Bank of France, as a counter-party to other advances agreed to by the latter."

Coal production figures for October indicate a slight increase of 150,000 tons on the month, allowing for an additional working day, and was within a fraction of that registered in October, 1930. Total production by the French mines (including Alsace-Lorraine, but exclusive of the Saar area) was 4,431,769 tons (27 working days), against 4,154,314 tons in September, and monthly averages of 4,568,000 tons in 1930 and 4,577,000 tons in 1929. Output of metallurgical coke from the colliery plants was 368,000 tons, against 346,500 tons in the previous month, notwithstanding the sharp drop in both iron and steel production. The increased coal tonnage on the month was due mainly to the gradual coming into operation of the new quota system designed to restrict entries of British and other foreign fuel. According to *La Situation Economique* (based on Ministry for Labour figures), the percentage of total unemployment in the colliery industry in October was 10.2, as compared with 4.8 per cent. in all the undertakings—those employing more than 100 units of labour—covered by the Ministry's systematic inquiry, and as against 5½ per cent. in all French industries, collieries included. The number of labour units employed by the collieries in October was about 1,500 fewer than in September; nevertheless, the average daily output was 164,139 tons, against 159,781 tons in the previous month. Coal imports in October were only 2,070,000 tons, against 2,436,000 tons in September, but were still 77,000 tons more than the new maximum quota, which fixes total entries at 1,993,000 tons.

Iron and steel production in October was fractionally lower under both heads, but 190,000 tons in the case of iron and 171,000 tons in that of steel below the output of October last year. The total output of pig iron was 637,000 tons, against 654,000 tons in September, 827,000 tons in October last year and a monthly average of 864,000 tons in 1929, which registered new high records in this country for both iron and steel production. The number of blast furnaces in activity was 103, against 139 in October last year, the number closed down or undergoing construction being 109, against 78. The total crude steel turned out was 626,000 tons, against 656,000 tons in the

previous month, 797,000 tons in October, 1930, and a monthly average of 808,000 tons in 1929. Activity remains at a very low level both in the home market and in export trade, with prices still dropping. Unemployment figures continue on the upgrade. Additional municipal and departmental funds are being opened, and entries of recruited foreign labour have, for all practical purposes, been suspended.

GERMANY.

Nazis — Loan Repayments — Security Values.

(FROM OUR CORRESPONDENT.)

BERLIN, December 1.

THE publication of the Hesse documents revealing the measures which the National Socialists would take if they succeeded to power is of great importance for domestic conditions in Germany. Its importance is in no way diminished by the fact that the originators of this programme maintain—thereby perhaps avoiding criminal proceedings—that it is only intended for use in the event of a temporarily successful Communist *putsch*, subsequently suppressed by the National Socialists. It is true that there was already no room for doubt that the National Socialists, if they ever came to power, would thoroughly errorise their opponents. Dr. Frick, who is not one of the most extreme members of his party, some time ago promised the Social Democrats and Communists a sort of massacre of St. Bartholomew, but those Conservatives who have been watching the rise of the National Socialists with sympathy consoled themselves by refusing to see in these and similar utterances anything more than irresponsible speeches for purposes of agitation. Now it has become evident that official sections of the party have been entertaining the idea of starving out their political opponents, should they not prove sufficiently accommodating, by confiscating all food supplies when they came into power, and by suppressing the slightest attempt at resistance by the wholesale use of firearms.

Nobody who has read these documents can have the slightest doubt left that if the Hitler Party came into power it would take away from all Germans who were not National Socialists every right to political liberty and would recognise even their right to personal existence only provisionally. Many illusions have thus been destroyed, and the revelation has in consequence very substantially strengthened the position of the Brüning Government. The groups of the moderate Right are beginning to see what enormous dangers for the State and the people they would conjure up if they overthrew Dr. Brüning and thereby helped Herr Hitler to power. Even in the Centre, all tactical considerations as to whether it would not be advisable to let the National Socialists govern for a time have probably been set aside as a result of the alarming impression made by the Hesse documents. The danger of Germany's drifting into a Hitler regime because her politicians are unaware of the seriousness of the peril is now substantially diminished.

The Chancellor has urgent enough need of this strengthening of his authority, for he has now to promulgate a new series of unpopular measures, in an emergency decree whose contents are not yet precisely settled. The decisive factor in German domestic politics will be the outcome of the negotiations with France on the reparations question. Without a success in foreign politics, Dr. Brüning will hardly be able, in spite of the improvement in the situation, to prevent the power of the National Socialists from resuming its growth and ultimately becoming overwhelming.

Dr. Luther, the President of the Reichsbank, has informed the representative of the Associated Press that Germany has repaid nearly five milliard marks since last autumn. It was already possible to calculate this total from the figures which had been published, but none the less it had produced a sensational effect. In a single year—and a year, too, which saw the greatest rise in her unemployment figure, which means that a large part of her productive capacity was out of action—Germany was

able to repay almost one-third of the short-term debts which she contracted in a more favourable period. It is true that this greatly overtaxed her powers, as Dr. Luther pointed out. In the period from September 1st to November 15th more foreign exchange was required for the repayment of debt and for other capital services than for payment for imports. For a country like Germany, which has to import its most important raw materials with the exception of coal, this is a fantastic arrangement of its balance of payments, and it is out of the question that the process can continue at anything like the same rate. The figures, however, show clearly that, if foreign countries show any sort of consideration for German economy, the repayment of Germany's commercial debts is absolutely assured.

For this it is, indeed, also essential that the obstacles placed in the way of German exports shall not be excessive. At the moment it looks as though almost all export markets were aiming at denying access, partly by means of duties and partly by refusing foreign exchange for purposes of import, to goods from Germany, and indeed from other countries as well. The Wiggins Report has already established with unsurpassed clearness the fact that the German export surplus which the repayments make necessary involves a serious disturbance to world economy, but Germany will be obliged to export to the extent that she has to pay, and she will only be able to pay to the extent that she is able to export. For that reason, standstill agreements, reparations agreements, and international trade policy are closely connected, and the attempt simultaneously to exact the greatest possible payments and to admit the smallest possible exports from Germany is doomed to failure because of the mutual incompatibility of these aims.

The Government and the Reichsbank have declared against the reopening of the German stock exchanges during the current year. They have been closed since September 18th, and will thus remain closed until the beginning of January. The most important reason which is adduced for not reopening them is the desire to avoid causing uneasiness among the public by the publication of stock exchange quotations. An active trade in securities is, of course, carried on by telephone among banks, and the public are able to buy and sell securities, but the publication of quotations is forbidden. A week ago securities had begun to change hands at rates which, at least to official eyes, seemed calculated to awaken uneasiness as to the state of particular undertakings, of agriculture, or of the German cities; and during the last few days this downward movement has continued. Only a few isolated shares are being dealt in at more than their nominal value; shares of big concerns can be had at 10, 20 or 30 per cent. of their nominal value, and according to the price of their shares factories which cost millions are valued at a few hundred thousand marks. One reason for the decline is the fact that at present in Germany everybody is looking to the yield on his capital, and it is known that most German industrial companies, banks (with the exception of the Reichsbank), and shipping companies will pass their dividends for 1931. Only last week the two greatest industrial undertakings in Germany, I.G. Farbenindustrie and Siemens and Halske, whose condition is very much better than the average, announced that they would have to reduce their dividends considerably for 1931. The greatest German public utility company, the Rheinisch-Westfälische Elektrizitätswerke, is also reducing the dividend on its ordinary shares from 10 to 5 per cent. for the year ended June 30, 1931. Almost all industrial companies are in a far worse state and their receipts are not at present covering their costs. In addition to these industrial losses they have incurred further losses in consequence of the decline in the value of their investments. This abnormal profit situation is, however, undoubtedly not the only cause of the decline; it is supplemented by the general nervousness which is causing many people at home and abroad to liquidate their interests in industry at all costs, and also by the complete absence of any speculative activity. Speculation would indeed be

severely hampered in any case by the high rates of interest which are now ruling. Bank credits cost 11-12 per cent.

The rente market is even gloomier. On the basis of income the holder of German fixed-interest securities has so far fared best: the manufacturer, the merchant, the farmer, the house owner, and the shareholder are all receiving less than a few years ago, while the rentier's income is unchanged, for so far all interest on long-term loans has been punctually met. None the less, even the best secured long-term loans have fallen so heavily that they now yield 13 or 14 per cent. In addition to the fear that interest payments may be discontinued (especially in the case of agricultural loans), fear of Government action is responsible for the fall. Some time ago rentiers feared that there might be issued an emergency decree imposing an all-round reduction of interest. At the moment it is feared that a coupon tax may be introduced. The effects of these fears are also clearly evident in the capital market; long-term credits are completely unobtainable, even in the form of first-class mortgages.

The only gleam of consolation afforded by the general slump in securities is the evidence of faith in the German currency. At an earlier stage, fear of inflation gave rise to a rush to invest in commodities, and therefore in ordinary shares; now practically nobody in Germany is anticipating a depreciation of the mark, and even the withdrawals of balances from the banks and savings banks have ceased since the Chancellor's victory in the Reichstag in the middle of October.

A few days ago the collapse of a medium-sized bank in Berlin caused some sensation. The Berliner Bank für Handel und Grundbesitz, which was founded by organisations of house owners and succeeded in substantially increasing the volume of its deposits in a few years, was obliged to close. Deposits amounting to Rm. 70 millions are involved, and some 70 per cent. of these will probably be lost, though it is said that some help will be forthcoming from the Reich to make possible an orderly liquidation. This failure is, however, in no way typical of German banking. The bank has never belonged to any of the banking organisations, it issued no interim balance sheets, and pursued a business policy of unparalleled frivolity. With a share capital of only Rm. 2 millions, millions of marks' worth of shares and long-term mortgages on land were purchased out of short-term deposits.

AUSTRIA.

Credit-Anstalt — Exchange Problems — Trade Crisis.

(FROM OUR CORRESPONDENT.)

VIENNA, November 30.

The negotiations between the Government and the foreign creditors of the Credit-Anstalt have led to a provisional result. Whether it can be realised will be seen shortly,* but in any case the Credit-Anstalt will still remain a major source of anxiety. The central point of the Vienna negotiations was the demand of the foreign creditors that the management of the bank should be strictly centralised and that they should nominate the managing director, who should be furnished with extraordinary powers. One thing is certain, namely, that Herr van Hengel will not become managing director, as for a time appeared likely. He is leaving Vienna for good. The Social Democrats appear to regard two decisions of the agreements as insufferable—on the one hand, the vague promise of the foreign creditors to be accommodating towards Austria in the question of the guarantee given by the State; on the other hand, the power exercisable by the managing director of the board of closing down, without further ado, any of the subsidiary enterprises of the Credit-Anstalt and also of serving notice of termination of the collective agreements with the employees.

In the matter of the guarantee, foreign interests will have to make concessions, for since May there has been

* The agreement was ratified by the Assembly on December 1st.

a fundamental change in circumstances. At that time the Government was optimistic, and was of the opinion that things could be straightened out with a sum of 140 million schillings. Since then, gigantic losses have been made known, new difficulties have arisen in individual subsidiary enterprises, and assets in neighbouring States have become uncollectable. According to the views of responsible circles here, the foreign creditors themselves do not know the whole extent of the losses. Their amortisation by the State in the course of twelve months, or even only the settlement of the claims of the foreign creditors by the State, is quite impossible. In the best of circumstances a long-term loan might be floated with the help of the creditors. Again, the proposed interference with the collective contracts might lead to serious political tension. Moreover, in view of the great difficulties of Austrian management of foreign currency, every payment made abroad must be very thoroughly considered beforehand.

It is true that the National Bank has not been obliged during the last few weeks to make use of its holdings of foreign values, but this is simply for the reason that it is constantly claiming the foreign currency and other values which are being reported as in private possession. But through this process the reserves which the banks, industry, and commerce have in such claims are vanishing. The attempts to obviate some of the difficulties by means of a special form of clearing arrangement with the Succession States are still in progress. It is intended to make such clearing treaties with Hungary, Yugoslavia, Germany, Switzerland, Roumania and Poland. The agreements may work out very well on paper, but in practice serious disturbances can hardly be avoided. How imperative these agreements are can be seen from the fact that the number of unemployed, which is constantly increased through the decline of export trade, will probably be in the neighbourhood of 400,000 at the beginning of December. At the middle of November there were 365,000 unemployed, or 50,000 more than at the same time last year. The index of general business in October had sunk to 70.1 as compared with 72.4 in September, and it will show further depreciation for the month of November.

The only business on the share market is offers to purchase. In certain brewery, building and electric shares there were rises between the middle and the end of November of up to 30 per cent. However, very little paper changed hands, and the turnover was due partly to speculation. But later the public began to buy timidly, as people are converting bank deposits into share holdings in view of the fact that the banks and savings banks recently reduced the rate of interest on deposits by 2 per cent. Also the schilling credits which foreigners have in Austria have been used to procure shares. On the other hand, apart from the National Bank shares, which rose rather considerably, bank shares are being neglected. The same applies to investment scrip.

In spite of the reduction of wages and salaries, according to the official statistics commodity prices show sharp and constant advances. The lowest level of the index (1923 = 100) was on September 15, 1931, when it stood at 59.9. By October 15th the index had risen to 60.6, and by the middle of November to 65.3.

How serious the crisis is in the heavy industries may be judged from the fact that orders in hand in the iron industry are given at 11.6 per cent. of normal, which is an unprecedented low level. The output of iron ore in October was not half so great as in October of last year, and it amounts to only one-fifth of the output of October, 1929. These are considerations which are the more serious in view of the decline of exports. In October, for instance, exports to Germany had fallen to 17.4 million schillings, as compared with 36.7 millions for October, 1930. Czechoslovakia took only 15 millions worth of goods instead of 19 millions worth, Italy 8.6 millions instead of 16 millions, Great Britain only about 7.9 millions worth instead of 10.3 millions.

During the last few days it has been announced that the Municipality of Vienna intends to increase the housing tax. The increased tax is to apply to all dwellings which

cannot be included in the strict category of small dwellings. The proceeds of this tax are to be employed to continue the housing policy of the City of Vienna, and 20 million schillings is expected from the new tax. As the Municipality of Vienna is obliged to throttle down its expenditure, owing to the decline in cash holdings, falling revenues, and the Municipality's reduced participation in the Federal taxes, it is desired to create the new tax in order to avoid stagnation in the housing scheme. In reality, such a plan is in direct contradiction of the declarations, which have been given by Social Democratic circles, namely, to protect the interests of the population and to cover the deficit by not increasing taxation but by practising the greatest possible retrenchment.

HOLLAND.

British Duties — Netherlands Bank — Stock Exchange.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, December 2.

THE new commercial policy of Great Britain undoubtedly threatens the existence of numerous Dutch industries. Not only is the English market completely closed for many of their products, but, in addition, keen competition is now encountered from English goods in other foreign markets, owing to the depreciation in the value of sterling. The Dutch industries which are the hardest hit include the bicycle tyre industry. England has been our chief outlet both for outer covers and inner tubes. Of the 803,185 outer covers, to a value of 771,000 guilders, exported during the first ten months of this year, 400,584 tyres, to a value of 375,000 guilders, were exported to England. The 50 per cent. import duty in England has also dealt a severe blow to the earthenware and wall tiling industries. By far the largest buyer of this line in January to October, amounting to 4,866 tons (last year 5,582) and a value of 875,000 guilders (last year 1,137,000), no less than 2,569 tons (last year 2,623), to a value of 493,000 guilders (last year 584,000) were shipped to England. The Dutch woollen fabric industry has also been badly hit by the anti-dumping measures in England. This industry, in fact, counts upon the home market for 70 per cent. of its production, and has to find an outlet abroad for the remaining 30 per cent. England has hitherto been our best customer.

Pressure is, of course, being brought to bear on the Government to take counter measures, and a Bill has been introduced into Parliament for the provision of relief to our exporting industries. The Bill empowers the Government to take temporary measures for the regulation of the export of certain classes of goods. Apparently such regulations will take the form of an allocation of the quota among the exporters.

The market for Dutch bonds has not been particularly animated lately, but there has been a decided return of confidence, as is amply illustrated by the results of the recent issue of exchequer bonds. The subscriptions were enormously in excess of the amount available for allotment, and the exchequer secured very satisfactory rates. Some pressure is being exerted on the market by a quick succession of issues for various municipalities. Money rates continue to follow a downward course. Prolongation rates averaged 1.758 in November, against 3.065 in October, 1931. The interest rate on bank deposits has also been reduced all along the line. Nevertheless, hoarded bank notes are flowing back to the banks at a very slow pace, and the Netherlands Bank's circulation of bank notes is still above the 1,000,000,000 mark, although a gradually declining tendency is noticeable. At the same time the stock of gold continues to show an upward trend, and now the gold cover of all liabilities payable on demand amounts to 70.22 per cent.

This week the Netherlands Bank issued the following official statement with regard to its holdings of sterling:—

The Board of Directors of the Netherlands Banks in their communiqué of September 27th stated that they had every reason to believe that they need not fear any loss on their sterling holdings.

From the consultations, both verbal and in writing, which have taken place meanwhile, it is now evident that the Bank of England is not inclined to acknowledge the claims which the Netherlands Bank considers it was reasonably entitled to make.

Although the Netherlands Bank is maintaining its point of view and is continuing its efforts to secure satisfaction, the Board is of opinion that, under these circumstances, they can no longer run the exchange risk on the Bank's holdings of sterling. It has, therefore, endeavoured to find a solution which would enable the Bank to retain the majority of its sterling, without further risk on the rate of exchange.

In co-operation with the Dutch Government, such a solution has been found. These holdings of sterling—as far as they can be destined for the redemption of the two Dutch East Indies loans in sterling, the redemption of which can be effected *in toto* as from July 15, 1933, and August 15, 1933, respectively—have been sold for forward delivery to the Dutch East Indies Government. Such sterling bills as could not be applied to the redemption purposes above mentioned have already been realised.

The losses ensuing from this transaction and the sales on forward delivery referred to, will result in a considerable adverse balance for the financial year 1931-32 for the Netherlands Bank. Schemes for economising in expenditure on salaries and otherwise have already partly been decided upon and other measures in view of the losses referred to are being considered.

It is needless to emphasise that, after the transactions above referred to, the sterling holding of the Netherlands Bank cannot be of any adverse influence in the fulfilment of its task of maintaining the gold value of the Dutch currency. The last weekly return issued shows that the gold cover for all liabilities repayable on demand amounts to 70.22 per cent., which is 30.22 per cent. in excess of the statutory minimum cover. The ability of the bank to fulfil the above-mentioned task remains, therefore, entirely unimpaired.

From this official statement it can be concluded that the two Dutch East Indies loans of £5,000,000 and £6,000,000 which were issued in London in 1923, are to be redeemed at par as early as next year. Part of the sterling necessary for this purpose has been bought for forward delivery from the Netherlands Bank. As has previously been reported, the aggregate sterling holdings of the Netherlands Bank are estimated at about £11,000,000. With sterling at its present level, it will be seen that the loss involved to the Netherlands Bank is very considerable. The capital of the Netherlands Bank is 20 million guilders, and the open reserves 15.5 million, a large part of which has accordingly now been lost. This will be the first time since the Netherlands Bank was founded in 1814 that it has had to close a financial year with an adverse balance and pass the payment of dividend. Last year a profit of 5 million guilders was made, and 7.2 per cent. dividend was distributed. The bank's loss means also a loss to the State of something like 4 million guilders, for seven-eighths of the profit has to be handed over to the State. In connection with these developments, the quotation for shares of the Netherlands Bank dropped from 133 per cent. to 105 per cent. in a single day, while the Dutch East Indies sterling loans failed to register any recovery, despite the early redemption at par.

The Stock Exchange tendency was weak all round, and Unilevers in particular suffered a considerable drop and reached a new low record. Philips Lamps were also on offer. All-round cuts in wages and salaries, on a progressive scale, are to be put into operation at the Philips Works as from January 1, 1932. The dispute with their foremost competitor, Telefunken, has been settled, but this failed to exert any influence on the market. Van Berkel's Patent have already acquired a factory site in England in view of the prohibitive import duties.

Since the practical standstill in the issues market during September and October, there has been some revival again the last fortnight. The aggregate of 10.23 million guilders for the issues in November is small, especially in comparison with November of last year, when the issues totalled 106.74 millions, but the Dutch loans issued this month have had very satisfactory results.

DENMARK.

Exchange and Import Restrictions.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, November 29.

IN Denmark as well as in Sweden it was intended to keep the sterling rate firm at 18.15 (which nearly corresponds to gold parity) and thus prevent Danish money from being influenced by fluctuations in the pound. This policy, how-

ever, had to be given up. During the week the sterling rate was raised to 18.30, and exchange rates on the free market were for some time quoted higher than the official quotations from the National Bank. On a further decline in the international value of sterling, the rate was, however, fixed at 18.20.

Almost simultaneously with these alterations a concentration of money dealings was carried out. In future, transactions in foreign money can only be effected through certain banks and stockbrokers. The National Bank will see that, in the disposal of money received by these banks and members of the Stock Exchange, which may only be dealt in at the rate quoted at the Copenhagen Bourse, preference is given to the import of industrial raw materials, especially those used by the export trades.

The Government introduced a Bill imposing import restrictions which was passed by the Danish Parliament in a few hours. This law provides that, until the New Year, the import of champagne, brandy, liqueurs, etc., is prohibited, while during 1932 the import of these goods will be restricted to half the import of 1931. Whisky is not included in these provisions. There will also be an increase of duty on certain luxury goods until the end of 1932. This increase covers certain fancy articles, including jewels, pearls and precious stones, as well as perfumes and big passenger motor cars.

ITALY.

Stock Exchange — Shipping Combine — Council of Corporations — Industry — Money.

(FROM OUR CORRESPONDENT.)

TURIN, November 23.

THE hopes which were entertained in some financial circles that the Banca Commerciale Italiana deal might mean support to the Bourses were soon disappointed, as the following figures show:—

	Oct. 31, 1930.	Nov. 7, 1931.	Nov. 14, 1931.	Nov. 21, 1931.
Bank of Italy	1,746	1,364	1,421	1,481
Banca Commerciale	1,415	1,300	1,307	1,301
Meridional Railways	1,004	630	688	627
Navigazione Generale	499	237	265	250
Chatillon	253	153	257	263
Montecatini	206	114	131	122
Fiat	255	128	150	136
Edison	693	416	475	452
Risanamento	1,069	764	806	762
Eridania	389	242	255	245
Fondi Rustici	93	10	11	11

After a short-lived spurt, prices have lost ground in the past week; some sellers were caught short, and were made to pay the penalty of their daring; a few Chatillon shares brought as much as 400. The abolition of the compulsory payment of 25 per cent. cash on speculative transactions (still to be paid on short sales) did not succeed in bringing to life a dead market. Forced liquidations of securities by weak holders is partly prompted by a regulation forbidding savings banks from making advances on collateral other than State or public securities. Savings banks will be able, with the sums thus realised, to buy debentures of the new institute for industrial credit, thereby providing it with the means of absorbing the floating mass of variable dividend shares. The amount of this floating mass is very difficult indeed to estimate. Probably out of 50 billion lire of share capital of the Italian joint-stock companies about 35 are the capital of private companies and never come on the market. Of the other 15 billions, the greatest part is in the coffers of banks as investments or collateral. The creation of the new institute—of which Signor Tumedei, a prominent member of the Budget Committee of the House of Deputies, was appointed vice-president, means that from 3 to 5 millions of these shares will be transferred to it from the banks. The investing public, which since 1925 has shown an invincible distaste for shares, will be persuaded to buy, in their stead, fixed-interest debentures.

The crisis has induced the biggest shipping concerns to combine into a new company, called "Italia," with a

capital of 740 million lire, which, after the New Year, will run the fleets of the Navigazione Italiana and of the Lloyd Sabaud. Each of these two will contribute 330 million lire, the rest of the capital being allocated to the Banca Commerciale group. The new company will control the Cosulich Line of Trieste, which, in its turn, will control the Lloyd Triestino, and, through it, the Sitar and the Italiana di Cervizii Marittimi. The Italia Company is authorised to issue 450 million lire of debentures, including 300 already extant and sold to the Istituto di Credito Navale, a semi-public body, which does for shipping concerns what the new Istituto Mobiliare Italiano will do for industries in general. As public works and public utilities are already financed by similar institutes, it looks as though the whole of Italian industry is gradually coming under the control of public institutes; that is to say, of the State, which will have its say in the choosing of directors and in the management of the companies. The tendency, however, should not be exaggerated. At the utmost, the direct or indirect public control of private industry will be limited to 15 out of 50 billions; there is a whole host of industrial and commercial concerns which are genuinely private, wholly outside the joint-stock companies' world, and in agriculture the joint-stock system has certainly not been a success.

More interesting from the point of view of the speculations as to present economic tendencies in Italy were the discussions, closed on November 13th, at the National Council of Corporations, the supreme consultative and partly legislative body of the corporative state. As Signor Bottai, Minister for Corporations, pointed out, the discussion marked the birth of a new sort of struggle between economic categories, which is taking the place of the old class warfare. It was a very guarded struggle between people promptly made to bow before Signor Mussolini's authority; but agriculture unmistakably set its face against industry and commerce. The subject was tariffs; a subject to which the imposition of new British duties is likely to add fire. No free traders' voices were heard; all university professors, with one solitary exception, preferring to serve as unbiassed experts. Strange to observe, agriculturists, who in past times were, except for wheat, free traders, went solidly in favour of protection, advocating a most extreme form of it, the so-called "balanced exports" system, a mercantilist revival in modern garb. Imports, they argued, should be subject to the condition that the importing country shall buy a corresponding amount of Italian goods. How the system could work; how, in a world of inter-dependent nations, separate balances could be struck in groups of isolated two nations, is difficult indeed to imagine. Agriculturists aiming at the exclusion of cereals and meat coming from countries like Argentina, United States, Yugoslavia, etc., whose purchases in Italy are small, hope to restrict in this way imports which to them are a nuisance. Industrialists, whose exports go to countries which could not possibly sell large quantities of goods to Italy, were greatly concerned at the prospect; and while, in the years immediately after the war, they were advocates of an inter-dependent double tariff system and bitter critics of the commercial treaty system, they now come forward as strenuous defenders of the most-favoured-nation clause. A motion was finally approved which sought to conciliate both tendencies, and recommended the appointment of a special reporting committee.

Economic indices are no better. In the first ten months of 1931 imports totalled 8,894 million lire, against 14,432 in the same period of 1930, and exports 8,236, against 10,109. The excess of imports over exports thus decreased from 4,323 million lire in 1930 to 1,658 in 1931; which is very good for the balance of payments, but not so good from the industrial point of view. Production of electricity decreased from 7,657.7 kw.h. in the first nine months of 1930 to 7,313.4 millions in the corresponding period of 1931. In the first ten months iron and steel production decreased respectively from 448,715 and 1,523,997 tons in 1930 to 425,812 and 1,229,982 tons in 1931. Cement and paper output also decreased. The most significant and almost solitary increase was in artificial silk from 22.6 million kg. to 25.5 millions. Goods carried on State rail-

ways decreased from 45.9 million tons in 1930 (ten months) to 37.6 in 1931, while goods shipped to and from Italian ports decreased from 30.1 to 27.4 million tons. Owing to the general decrease of industrial activity, unemployment is increasing:—799,744 (of which 226,000 were in receipt of benefit) at October 31st, against 446,496 at the same date in 1930. The October figure is a record for many years past. Even in the category of public works and building the figure is up, at 229,592, against 110,305 at the same date in 1930. This means that probably many public works which the State and other public bodies began for the sake of increasing employment, are being delayed for lack of funds.

The deficit in the State Budget during the first four months of the current financial year (July to October) is 1,099 millions, while the Treasury is in a very strong cash position with 2,574 million lire at October 31st, of which 2,309 were held in deposit at the Bank of Italy. This, in turn, is a consequence of our strong monetary policy. The note issue is not being allowed to increase, and to this end the Treasury are keeping a big deposit at the bank. Only by high taxation and postponement of public expenditures not absolutely urgent is it possible to keep 2,309 million lire of the Exchequer funds at the central bank, thus enabling it to face withdrawals of gold exchange bills reserving, keep internal discount and advances to a level corresponding to the needs of ordinary banks, and at the same time keep down the note issue at a level between 14 and 14.5 billion lire. Albeit achieved through great sacrifice, this stern monetary policy has been hitherto an unmistakable success.

GREECE.

Politics — Cyprus — Public Finances — Foreign Trade.

(FROM OUR CORRESPONDENT.)

ATHENS, November 26.

FEARS that an appeal to the country might soon be made have been dispelled by the opening of Parliament, which provided the opportunity for the recently obscure political situation to be entirely cleared up. The opposition parties declared themselves in agreement with the measures taken by the Government for the protection of the national currency.

Speaking of the recent disturbances in Cyprus, M. Venizelos, though he observed that the movement of Cypriots for their union with Greece could hardly leave the nation untouched, was most emphatic in deprecating the unlawful methods resorted to and the excesses committed by them, and the criticisms levelled in certain quarters here against the action of the local British authorities. The most vital interests of Greece, he said, require the undisturbed maintenance of friendly relations with Great Britain. Only if Great Britain were to be convinced that Cyprus was not at all useful to her, or that such usefulness as it might present could be secured by the retention only of a small part of the island, would it be probable that Great Britain would grant the national wishes of Cypriots; and this only if their relations with the Sovereign Power were restored to such a normal state as to preclude the possibility of supposing that Great Britain had yielded to violence. Indeed, he had reason to believe that the possibility of Great Britain's one day ceding Cyprus to Greece was not out of the question. Of one thing he was sure, however: that a revolt in Cyprus could not serve the cause of the population. He spoke in the same spirit also concerning the Dodecanese question, and, in both cases, his speech faithfully reflected sound public opinion in Greece.

The financial disturbance caused by the British crisis has necessitated a revision of the budget estimates for the current financial year. By curtailment or postponement of expenditure, and by the utilisation of a surplus of 250 million drachmas, the Minister of Finance feels confident that the budget can withstand, without danger to its equilibrium, a fall in revenue of 700 million drachmas for the remaining months of the present financial year. The prospective fall in revenue is put by the Minister at considerably less than this sum.

However, should a heavier decrease of revenue be subsequently indicated, the Government, he said, would not hesitate in proposing other cuts in expenditure, so as to ensure the equilibrium of the budget. A balanced budget and stability of the currency are the aims for which the Government will fight with all its forces. On the other hand, M. Venizelos declared that he is prepared to face public disgrace in order to impose, by regulating the export of foreign exchange, the restrictions required for securing a balance of foreign payments, even if, for more general reasons, the conclusion of a foreign loan be postponed and the inflow of capital from abroad suspended.

That the authorities are determined to take every possible measure for reducing the export of capital and thereby preserving the reserve of the bank of issue, is becoming more and more evident from the frequent consultations of the Government with their financial advisers and the gradual tightening of the measures of control regarding the external movement of capital. Imports of merchandise from abroad are also being increasingly restricted, and purchasers are urged to give preference to articles of home manufacture. Negotiations are, moreover, in progress with foreign interests for the purchase of wheat on credit. Economies in consumption are being contemplated, and the concentration of the import of sugar and wheat in the hands of a semi-public institution is proposed. In this way the authorities believe that exchange of products with the exporting countries might become easier, thus increasing the export of Greek products and reducing payments abroad. In addition, a Bill will shortly be laid before Parliament authorising the Government to increase by decree up to 1,000 per cent. the import duty on foreign goods coming from countries with which commercial agreements do not exist. This measure will be used as a weapon against those countries which export articles to Greece without importing Greek goods. Another Bill to be soon presented to Parliament will provide for the institution of a national economic council.

Provisional returns for October show a further contraction in the value of the foreign trade of Greece. Imports amounted to 242,684 tons, of a value of 795 million drachmas, and exports to 62,591 tons, of a value of 547 million drachmas. Imports in the corresponding month of last year were 224,961 tons, valued at 1,028 million drachmas, and exports 60,271 tons, valued at 788 million drachmas. For the first ten months of the year imports reached 2,122,709 tons, of a value of 7,511 million drachmas, against 2,115,530 tons and 9,049 million drachmas for the same period of last year, and exports 506,761 tons, valued at 3,285 millions, against 645,572 tons and 4,202 million drachmas for the corresponding period of 1930. Thus the commercial deficit for this year is smaller by 621 million drachmas. Important purchases of tobacco have been made in the course of this year by the Italian and Polish monopolies, while representatives of the French monopoly were recently here for similar purposes. The Austrian monopoly proposes the purchase by Greece of Austrian articles in exchange for the import by Austria of Greek tobacco. Public revenue for October shows a decline of 46 million drachmas in comparison with the receipts of October, 1930.

A difficult financial situation is reported by the Athens and Piræus Transport Company, which is one of the group of companies established jointly by British and Greek interests for the production and distribution of electric current. The difficulties of the company are ascribed by it chiefly to the keen competition of private taxicabs, which are running on most of the lines served by the company, in contravention of the contract with the State. The question is being considered by the responsible Minister, who declared that, if necessary, legislative measures will be enacted to stop this illegal competition.

Great satisfaction was felt here at the recent conclusion of an agreement with Bulgaria regarding the application of the Hoover moratorium in connection with the Caphantaris-Mollof agreement. It is wished and hoped that this first agreement may pave the way for a general understanding on all questions pending between the two countries.

that South Africa cannot maintain the present position. In a speech at the Agricultural Union Congress at Pretoria, on October 29th, the Minister of Finance announced that since September 21st the Reserve Bank had sold sterling and other currencies to the amount of £13,000,000 (South African money)—an entirely abnormal amount in spite of restriction of apparently genuine transactions. On the other side of the account is the fact that some 60 per cent. of the Union debt of £250,000,000 is held in London. The position of the Reserve Bank is one of great difficulty. The Board have for long endured a great deal of ill-informed criticism on account of the magnitude of their London balances. The point "went down" well with audiences or readers who disliked the idea of South African money lying abroad. A better-informed and less vocal body of critics questioned whether it was necessary for the Bank to keep all its foreign balances in London. In any case the Bank's shares have fallen from £200 to £120 in consequence of its loss in London.

A special session of Parliament has been summoned for the middle of November, before which the Government propose to place a somewhat remarkable suggestion—a special duty of 5 per cent. on all imports, and a bounty of 10 per cent. on exports other than gold, diamonds, sugar and bunker coal. In making the announcement (at the Agricultural Union Congress) the Minister of Finance reiterated the determination of the Government to retain the gold standard, and put this proposal forward as a palliative for some of the pressing difficulties in so doing. It seems to be generally regarded, however, as a scheme sounding better from a platform than it will look when practically administered. So far as the public are concerned, its results—should it prove workable at all—will be analogous to a departure from the gold standard. It is doubtful whether the percentages are large enough to be of practical use. It is almost certain that no administrative measure can secure to the producer—who is really the sufferer from exchange variations—the whole advantage of a bounty which must be paid to the shipper. Moreover, duties are to be charged on all imports whether from gold standard countries or not, and bounties are to be paid on all exports regardless of destination. Except in so far as the gold mines indirectly pay the expense, the producer of mealies and wool will simply be taking money from one pocket and putting it into another, less a percentage for expenses. The application of the 5 per cent. duty to all articles (including, apparently, the present free list) will disturb the incidence of Customs duties which, according to the Government protests, are the results of careful consideration and in pursuance of a settled policy. The export bounty is certain to attract special dumping duties in some countries.

The special session will also consider certain detail amendments to the Acts under which the Reserve Bank works, having for their object the restoration, partly from the Government's share of its profits, of the position as it was on September 21st. It appears not impossible, if admittedly improbable, that South Africa may establish a standard coin of her own—the number of differently valued "pounds" in the world being somewhat confusing and a cause of loss, at any rate, to holders of South African pounds.

The Board of Trade and Industries has just issued a voluminous report on its Cost of Living Inquiry. The value of the report has to be considered in the light of the fact that it is the work of the body on whose advice the Customs Tariff is devised and applied. Bearing this in mind, the report is still of great value as a record of facts not previously very accessible. It confirms the opinion already widely held that variations in the cost of living have been less considerable in the Union than in most places with the standards of living current amongst Europeans in South Africa. The tendency of the report is to underestimate the influence of world conditions in bringing about the local fall in the cost of living, and to attribute this fall to Government policy—which, as a matter of fact, has probably prevented a far greater fall, while providing a certain amount of artificial "development."

CURRENCY DEPRECIATION AND EXPORTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It appears to be one of the tenets of those who still regard the principles of Free Trade to be fundamentally and economically sound at the present time from a national point of view, that the fact that our currency is no longer "anchored" to gold automatically provides a corrective for an adverse balance of payments. Although it is the balance of payments which it is essential for the Government to keep stable, it is to the balance of trade and not to the balance of payments that attention should be paid if we are to argue the question of Free Trade or Protection. One should, therefore, examine the possible corrective effect on the balance of trade provided by the fact that we are no longer on a gold standard. Before I do this, however, may I venture a definition of the balance of trade? It is the excess of the value of home-owned output of goods and services (other than gold) placed at the disposal of foreigners, over the value of the corresponding foreign-owned output placed at our disposal.

It must be pointed out, first of all, that the depreciation of a currency must always stimulate exports, but there is a certain point after which it ceases to decrease an adverse balance of trade. The cause of this is that the currency depreciation has the double effect of increasing the volume of exports but decreasing its real value per unit. As long as currency depreciation results in the expansion of exports to the extent that the total real value expands we shall be all right, but the foreign demand for our goods is not perfectly elastic, and so a point will soon be reached at which depreciation no longer increases the real value of exports. In our case, the moment we left the gold standard, sterling depreciated, primarily owing to withdrawals of funds from London on capital account, but also owing to an adverse balance of trade. The result of this depreciation was to make our goods cheaper for foreigners and thus bring about an expansion of exports. This expansion was an expansion both of the physical volume of exports and of the volume of the money receipts in terms of gold. There was, therefore, an increase in the gold value of exports over the value of imports and a decrease in the adverse balance of trade. Suppose, however, that the depreciation of sterling had been much greater, owing to a much greater withdrawal of funds from the London market, it is quite possible that the point would have been passed at which the increase in the volume of exports more than counterbalanced the decrease in the money value in terms of gold received from the sale of these exports. The depreciation of sterling would, therefore, not have counteracted the adverse balance of trade.

While it still remains true to say that our present currency conditions must automatically provide a corrective for an adverse balance of payments the same is not true of the balance of trade. Considerations such as these would appear to render invalid the suggestion that all is now well, and, having abandoned the gold standard, we need no longer worry about adverse balances of trade, since these will only cause a depreciation of sterling which will then wipe out the adverse trade balance.

Although this should lead one to the conclusion that the needs of British trade may demand protection from "abnormal" imports, from the international point of view the fact still remains that all further hinderances to international trade can only have a detrimental effect on this country.—Yours faithfully,
King's College,
Cambridge.

ARNOLD

An Economic Christmas Gift

THIS TARIFF QUESTION

By COLLIN BROOKS. 7/6 net.

Mr. Brooks's delightfully written book, reviewed at length in *The Economist* on November 28, will be of great practical value during the coming year. Dedicated jointly to Cobden and Joseph Chamberlain, its lucid discussion of the various possible policies provides a basis for a reasoned opinion on the question of the day. "Mr. Brooks" said *The Economist*, "has wit, good humour and a sense of style, and his book should take a high place in tariff literature."

Descriptive leaflet from
41 & 43 MADDOX ST., W.1

[We are unable to follow our correspondent in his assertion that the case for Free Trade *versus* Protection must be argued in relation to the balance of *trade* and not of *payments*, but the fact to which he calls attention, that extreme currency depreciation tends to deplete industrial capital, and so impoverish the country concerned, is important, as the experience of Germany in 1923-24 showed.—Ed., *Econ.*]

RIGHTS OF PREFERENCE SHAREHOLDERS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the excellent article on the "Responsibilities of Directors," in your issue of November 14th, you mention the increasing tendency on the part of the proprietors and shareholders of limited companies to resign their control to the directors, and attribute this in a general way to the fact that the share capital is split up into large numbers of small holdings, which makes it increasingly difficult to get any coherent or definite policy expressed by the shareholders as a body.

May I call your attention to a feature of the capital structure of many modern concerns, mainly those built up by amalgamation, namely, the preponderance of *non-voting* preference shareholders in the total share value involved.

Many of our principal industrial companies are capitalised as to more than 60 per cent. of the total by means of such preference shares, the owners of which have absolutely no control whatsoever of the policy of the company.

The debenture-holders are protected more or less effectively by their debenture trust, but the non-voting preference shareholders have no power whatsoever to influence or determine the policy of the concern, or to protect their interests when threatened by an inefficient or dishonest directorate; and are, in the end, only consulted when reconstruction proposals are made main, only consulted when reconstruction interests, namely, in bad times which affect their preferential interests, namely, in an adverse sense.

In such companies as I refer to, sometimes the preference shareholders have voting rights, but the ordinary shares are of such a denomination and are so great in number that, although they may represent only 10 per cent. or even less of total share value, they are actually able to sway a meeting to the detriment of the preference shareholders, and a comparatively small proportion of the ordinary shareholders can, in practice, control the company.

When times are bright and dividends are being paid freely the preference shareholders have no particular grievance, and are quite satisfied with their position, but in times of depression, when first-class direction and good management are of vital importance, they have no effective power to make themselves heard. In such times, moreover, the market price of the ordinary shares is the first to suffer, and this permits the ambitious promoter or business magnate to acquire, for a ridiculously small outlay, the complete control of many millions of capital, and I venture to suggest that a number of the outstanding failures of the past few years can be traced to these circumstances.

While, as is frequently the case, particularly in amalgamations, the ordinary shares remain the property of the original vendors, who are probably active and able business men, they, by the effluxion of time, pass into the hands of legatees and others who may not be so active or capable, and who, furthermore, have little or no intelligent interest in the business itself, and in the hands of such people they are still more likely to be manipulated in favour of the ambitious City man.

It seems to be that, when the Companies Acts are amended, as they must be in the near future, provision should be made to render it illegal for any company to be capitalised in such a way that any large proportion of the shareholders are deprived of any effective control, and voting power should not be estimated on a *share* basis, but on a *share value* basis, i.e., twenty ordinary 1s. shares should not have twenty times the voting power of a preferred £1 share.

The very use of the term "Preference" share is in itself misleading. The average investor does not take the trouble, as a rule, to ascertain from the "Articles of Association" what his rights and powers are, and, as a rule, purchases a preference share because it seems to promise him a really steady income upon which he can rely. It is, however, obvious that a 7 per cent. preference share in a company which is losing money is of no more real value than an ordinary share in a similar company, and all that "Preference" means is that the preference shareholders have the first right to whatever profits may be earned.

In my opinion all shares should be of one class and par value and should have equal voting rights in the control of the company, and, if special inducements must be offered to investors, they should take the form of definite bonus payments which do not affect the general capital structure of the company.—Yours faithfully,
R. R. GRAY CHISHOLM.

22, Billiter Street, London, E.C. 3.

[There may be force in Mr Chisholm's contention that preference shareholders are required to relinquish a great deal as regards earnings, voting power, etc., in return for priority in the distribution of profits, when these are available. Wider appreciation of this contention may be reflected in the diminution of the popularity of preference shares in this country since the war. Some of Mr Chisholm's suggestions, however—particularly that of his last paragraph, which would involve the complete disappearance of the preference share—appear to go beyond progressive contemporary opinion.—Ed., *Econ.*]

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue].

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Monopoly of Credit. By C. H. Douglas. (London) Chapman and Hall, Ltd., 11, Henrietta Street. 3s. 6d. net.

Major Douglas, who has already broken many lances against the existing financial system, has returned to the charge. He advocates the abolition, not only of "bankers as at present understood," but of an economic system based on the theory of rewards and punishments.

The Bankers' Almanac and Year Book, 1931-32. (London) Thomas Skinner and Company, Old Broad Street, and Waterlow and Sons, Ltd., Great Winchester Street. 42s. net.

An invaluable work of reference, containing full particulars of the principal banks of the world and also a variety of convenient tables showing discount rates, exchange rates, Consol prices, gold points, and gold and silver prices. As a financial directory and reference book it has no rival.

"INVESTMENT"

AND

"THE COURSE OF THE COMING BOOM"

by

L. L. B. ANGAS

The first general reaction in the market, which was forecast in "The Course of the Coming Boom," published on September 21st, has now occurred. A further upswing is now indicated.

The above two books, which are recognised as authoritative text books on the subject, explain the action to be followed by investors with a view to maximum capital appreciation in the course of the rising half of this trade cycle.

The Stock Exchange.

AMERICAN RAILROADS.

THE fall in the market value of American railroad securities has assumed the proportions of a catastrophe. Between September 1, 1929, and October 1, 1931, the market value of all the bonds, preferred stocks and common stocks of Class I railroads listed on the New York Stock Exchange (covering over 90 per cent. of Class I railroad securities) declined from \$20,368,265,000 to \$12,142,538,000, a fall of over 40 per cent. This does not tell the whole story, for in the same period \$596.8 millions of additional par value of bonds was added to those already quoted on the New York Stock Exchange; while as an offset to a slight decrease in the amount of preferred stock outstanding, the number of common shares issued increased by over 16 per cent. The actual depreciation in the market value of bonds was \$1,004 millions (11 per cent.), of preferred stocks \$966 millions (58 per cent.) and of common shares \$6,256 millions (more than 65 per cent.). The fact that bonds of railroad companies have been widely held by savings banks, insurance companies, trust funds, and commercial banks, and the preferred stocks and common stocks by large numbers of conservative investors, emphasises the national character of these losses.

It is idle for American investors to lament the competition to which all railroads are exposed from other agencies of transportation, since one cannot put back the clock. Actually, between 1920 and 1930, passenger traffic on the American railroads declined by 40.6 per cent., while the freight carried by rail in 1929 was only 9 per cent greater than in 1920, despite the very considerable increase in economic activity in the latter as compared with the former year. Railroad security holders, however, must accept, with as good a grace as possible, the implications of the permanent exploitation of other forms of transport. Individuals will use their own motor cars whenever convenient, commercial firms will carry their merchandise by motor truck whenever the distance is within their economic range, waterways will continue to be used wherever available, oil will always be moved by pipeline (since for a liquid there is no more efficient or cheaper way), and, when time-saving is important, passengers and mails will be carried by air. Similar problems exist (except as regards oil) in railway administration in Great Britain. Indeed, as regards road competition, the problem is more acute in this country, for British distances are much shorter than American. For example, the average length of haul on the Union Pacific system is 403 miles and on the Santa Fé system 325 miles, as compared with an

average haul of approximately 57 miles in Great Britain. The only effective reply to road competition is the development of more efficient means of transportation—such as the exploitation of motor vehicles as feeders to the railway, and, wherever possible, the introduction of the container which can be lifted bodily from road to railway wagon.

It would seem, however, that the extent of the competition of motor trucks in America has been exaggerated. The available truck capacity in the United States is estimated at 5,570,000 tons, of which about half is believed to be employed in freight movements within towns, and is, therefore, not competitive with the railroads. In contrast with a competitive truck tonnage of 2,785,000 tons, the total freight car capacity of the railroads amounts to 115,000,000 tons. A liberal estimate puts the competitive ton-mileage of commercial motor vehicles in the United States at 30,000 millions, while the ton-mileage of the railroads in 1930 was 383,000 millions. There is a wide range of heavy materials which cannot be economically handled on the roads. Moreover, in the matter of terminal facilities in the great cities, the railroads hold a unique position. In New York City, for example, about 16,000 milk wagons start out at midnight to deliver milk which has been hauled for distances up to 350 miles by the railroads during the day. Transshipment to so many delivery vehicles could not be undertaken without extensive terminal facilities which the railroads alone can offer. As in the big cities, so in the ports. Where terminal facilities can be utilised and long hauls are involved, the railroads are supreme. On the other hand, few railwaymen in America would deny that a reduction in the cost of carrying passenger traffic is imperative, and especially that the elimination of duplicate and competitive passenger facilities by parallel railroads is urgent. The general conclusion regarding the competitive position of the American railroads was, however, well expressed by the Interstate Commerce Commission in its recent findings:—"The railroads now furnish the backbone and most of the other vital bones of the transportation system of the country, and we believe this will be the situation for a long time to come."

Apart from the question of competition—which is, after all, a necessary "evil" of any business—the American railroad companies have two major problems—rates and wages. On the question of rates they have some ground for complaint in the measure and the form of public con-

dition to which they are subjected. It may be doubted, in a first place, whether the financial consequences of the "recapture clause" of the Transportation Act of 1920 have been fortunate. When net operating income in excess of 6 per cent. on the value of properties must be paid in part to the Interstate Commerce Commission as contribution to a general railroad contingent fund, there is every incentive to press forward with capital expenditure to the maximum extent, instead of building up liquid reserve funds, in good years, against a period of depression. In the second place, the railroads have serious ground for complaint against the fixing of rates through the medium of public hearings, a procedure which is businesslike and wasteful of time and money. If a motor transport company quotes a rate under the established tariff of a railroad, the railroad is required to obtain the consent of the Interstate Commerce Commission before it can meet the competitive rate. The railroads recently applied for a flat increase of 15 per cent. in the level of freight rates. This, *prima facie*, would appear extraordinary at a time of widespread business depression. The companies, however, contended that public regulations prohibited them from sharing to the same extent as private industry in the profits of good times, while their present low earnings imperilled the credit and, therefore, the stability, of an industry on which all others were dependent.

The Interstate Commerce Commission, after a series of nationwide hearings, refused the application, but granted increases on certain commodities, which are expected to bring in additional revenue of \$100-\$125 millions, subject to a pooling of the additional earnings for the assistance of companies in need of funds to cover their fixed charges. The increased rates are to apply to heavy railroad traffics, such as minerals, etc., which are unlikely to be diverted to competitive means of transport. His concession by the Interstate Commerce Commission is as declared to be dependent on the working out by the railroads of a plan for the pooling of the increased funds by December 1st. The big railroads have asked whether the Commission will consider a scheme of loans from the pool, and, at the moment of writing, it is uncertain whether the Commission will agree. It is true that the new rates will more than cover the estimated deficits of the railroads not in receivership, which, it is intimated, will fail to earn their fixed charges this year by \$50 millions, but it is clear that the leading railroads find no satisfaction in the Commission's decision, and, as far as security markets are concerned, the scheme has failed entirely to benefit railroad credit.

The problem of wages is considered to be of greater importance than that of increased rates. The wages paid to railway employees are almost twice as high as the average for motor truck operatives. The total payroll of all railroads in 1930 was \$2,614 millions, as compared with \$2,965 millions in 1929. The payroll for 1931 is estimated at \$2,118 millions. It will be seen that even a 10 per cent. reduction would mean more to the companies than the increase of rates suggested by the Interstate Commerce Commission. A revision of wage rates is now being discussed individually by the companies with the leaders of the Railway Brotherhoods. No public reports of these conferences have been issued, and so far no agreement has been reached.

What is the present financial position of the leading railroads? The gross operating revenues of Class I railroads for the first nine months of this year totalled \$3,279,306,284, as compared with \$4,083,333,088 for the same period of 1930, a decline of 19.7 per cent. The operating expenses amounted to \$2,524,542,897, as compared with \$3,052,972,873, a decline of 17.3 per cent. The net operating income in the first nine months of this year amounted to \$407,660,068, which was at the annual rate of return of 2.08 per cent. on the property investment of the railroads. In the first nine months of 1930 net railway operating income was \$660,901,036, or at the annual rate of 3.44 per cent. of the property investment. Thirty-six Class I railroads have operated at a loss

over the first nine months of 1931, of which twelve were in the Eastern, seven in the Southern and seventeen in the Western District.

The principal railroads which are not expected to earn their fixed charges in 1931, according to the estimates of the Standard Statistics Company, are as follows:—

Alton Railroad.	Lehigh Valley.
Buffalo, Rochester and Pittsburgh.	Milwaukee, St. Paul and Sault
Chicago and Eastern Illinois.	St. Marie.
Chicago, Indianapolis and Louisville.	Mobile and Ohio.
Chicago, Milwaukee St. Paul and Pacific.	Nashville, Chattanooga and St. Louis.
Chicago and North-western.	Norfolk Southern.
Chicago, St. Paul, Minneapolis and Omaha.	Pere Marquette.
Denver and Rio Grande Western.	St. Louis-St. Francisco.
Illinois Central.	Southern Railway.
	Wabash.
	Western Pacific.

The following table gives the financial position of 15 of the leading railroad companies, showing the income available for the fixed charges for 1931, together with the earnings and dividends per common share in 1930 and 1931 (estimated):—

	Estimated Income available for Fixed Charges, 1931.	Estimated Fixed Charges, 1931.	Earnings Per Share.	
			1930.	1931 (est.).
Atchison, Topeka and S.F.	\$44,600,000	\$12,861,700	\$12.86	\$8.40
Baltimore and Ohio	38,340,000	31,000,000	7.44	2.00
Chesapeake and Ohio	39,407,200	10,950,000	4.44	3.90
Chicago and North-Western	14,060,000	15,835,000	4.27	Def.
Chicago, R. I. and Pacific	17,675,000	14,025,000	5.56	Def.
Erie	15,530,000	15,700,000	1.07	Def.
Great Northern	25,000,000	19,282,500	7.24	1.70*
Missouri Pacific	24,465,000	20,555,000	3.82	Def.
New York Central	69,955,000	60,470,000	7.01	1.20
New York, New Haven	25,290,000	16,910,000	7.33	2.80
Norfolk and Western	27,230,000	4,970,000	21.96	15.30
Pennsylvania	102,375,000	82,120,000	5.28	1.70
Southern Pacific	47,600,000	32,655,000	8.24	2.90
Southern Railway	14,880,000	17,830,000	4.72	Def.
Union Pacific	40,345,000	16,000,000	15.63	8.10

* Refers to preferred stock.

The table at the foot of the previous page gives the present prices and yields of the bonds and common shares of the same companies, the highest and lowest prices touched this year being shown for purposes of comparison. It will be seen that at the moment of writing the present market prices are in many cases the lowest so far recorded this year.

A comparison of present share prices with the highest reached this year—which, in turn, were not much more than half those of the peak of 1929 boom in many cases—makes sad reading. The losses of American railroad shareholders, like those of their British colleagues, have been heavy indeed. New York Central, for example, was regarded before the slump as among the soundest and safest investment shares in the market. Dividends of \$8 were being paid, but this year cuts have been made in each quarterly dividend, until an annual rate of \$4 has been reached. Even so, this dividend will not be fully earned this year, and may be cut again. Investors may frame their own estimates of the benefits which will accrue from the rate increase authorised by the Interstate Commerce Commission and the extra gains which may follow if a reduction in wages is agreed upon with the railroad unions. It would appear that the bulk of the increase from the new rates will come from mineral traffic and miscellaneous merchandise. On this assumption, Pennsylvania and New York Central will, it is expected, be the heaviest contributors to the pool, collecting together about 19.5 per cent. of the total increment. Baltimore and Ohio, Atchison, Southern Pacific, Chesapeake and Ohio and Union Pacific should follow in the order named. According to Messrs. Baker, Weeks and Harden, to whom we are indebted for a very thorough report on the railroad situation, the estimated savings on a 15 per cent. cut in wages for the chief railroads would be as follows:—(Estimated savings per share) Atchison, \$2.59; Baltimore, \$2.84; Chesapeake, \$0.55; Chicago, Rock Island, \$6; Erie, \$2.54; Missouri Pacific, \$4.88; New York Central, \$3.51; Norfolk and Western, \$2.18; Pennsylvania, \$1.72; Southern Pacific, \$1.81; Southern Railway, \$3.78; and Union Pacific,

** On old shares which were \$100

* N

** On old shares which were \$100.

* No regular rate.

\$3.22. In the case of Erie, Missouri Pacific, and Southern Railway, the figures do not allow for any deficiency in this year's earnings for preferred requirements.

We do not suggest, however, that the investor should anticipate anything like such extensive savings. Until there are genuine signs of a trade recovery, a purchase of railroad equity shares would be premature. But a wage cut would immediately improve the status of the railroad prior charges.

UNION MINIERE DU HAUT-KATANGA.

(BY A CORRESPONDENT.)

THE departure of the Belgian delegates from the recent New York copper conference was followed by a fresh decline in prices to the lowest figure on record. Before last week-end, however, news was received, simultaneously, of the Belgian acceptance of the output restriction proposals made in New York, and the withdrawal of the Phelps Dodge Corporation, the third largest of United States producers, from Copper Exporters, Incorporated. What exactly lies behind these moves, and what their ultimate consequences are likely to be, the market finds itself at a loss to say. For the present, however, the hard facts of the position are sufficient to occupy all minds. Six months' world supplies of new copper are in hand, together with large quantities of reclaimed metal. Current production is running about twenty per cent. ahead of absorption. Consumers, therefore, have little fear that any new arrangements are likely to cause a shortage of available supplies for a considerable time to come.

In the meantime, it is not irrelevant to ask why a corporation working in the heart of Africa, whose products were unknown twenty-five years ago, should have dominated the New York conference of world producers. A short résumé of the present position of the Union Minière du Haut-Katanga may, therefore, be of interest.

The Katanga copper belt of the Belgian Congo State is a range of hills and hillocks roughly 250 miles in length, running east and west near its southern border, with the tail of the lodes dipping south-east into the adjacent British Colony of Northern Rhodesia. Along this range at frequent intervals cupriferous deposits have been proved. In point of combined magnitude and grade of ores the area is, possibly, the richest of all known copper locations.

In the past three years, the copper output has been, respectively, 112,455, 136,992 and 138,949 tons. Each year mining development, maintained in full, has proved ore reserves containing over 5,000,000 tons of metal, the average copper contents of the ore being over 6½ per cent. At the beginning of the last decade a long equipment programme was inaugurated, aiming, on completion, at an annual output of 300,000 tons of refined copper. Half this scheme has now been carried out. The remainder, since the opening of the Benguella railway route, depends mainly on the course of trade conditions. A reduction and refining plant, costing £6,000,000, has been erected. Housing colonies and modern hospital accommodation have been built. From two to three millions sterling has been allocated for amortisation and reserves. Ordinary share dividends in the last three years (to 1930) have been 300 per cent., 300 per cent. and 240 per cent. respectively. The nominal capital, at present (inclusive of prior obligations), stands at £4,300,000, at par of exchange.

The ore is obtained by quarrying—a particularly cheap form of mining. The labourers' work is done by natives, of whom 13,700 were in employ last December. Machine-power is obtained in large and increasing measure from the corporation's own hydro-electric schemes, water energy being abundant. Until lately transport communication with the outer world was southward, the shortest rail journey from the border being 1,467 miles to the port of Beira, on the east coast of Africa. The new Benguella route through Portuguese Angola, which is 837 miles from border to port, runs almost due west, and saves a considerable mileage of sea journey to western markets. Electrolytic refining is carried out either by the company's own plant or by the Hoboken Company, in which Union

Minière holds a 50 per cent. interest. The latter's selling organisation is of world-wide scope and, despite the unfavourable conditions prevailing last year, sales in 1930 exceeded output. Control, financially, is permanently vested in the Congo State Government.

From mine to market, in short, Union Minière is virtually a self-contained unit, apart only from the railways over which its product is transported. At the present juncture, costs of production are obviously a deciding factor with all copper mining concerns. To ascertain the actual Union Minière figures, in this regard, would call for an intricate analysis of results, but it is doubtful how far past records would be a reliable indication of the corporation's competitive power. Its fields, in general, contain higher grade ores than those of other mines. Its profits can be largely determined by the grade of ore it chooses to treat, without impairing its future welfare, in view of its very extensive reserves.

The advantages which have brought Union Minière to the forefront of modern producers may thus be summarised as a practically unlimited copper deposit of great aggregate richness; an independent selling organisation with international ramifications; a plant capable of ready expansion, and unified direction of all its operations. Given these benefits, the influence of the corporation in the market, in future, seems likely to wax rather than wane.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
December 15.

ACCOUNT.
December 17.

THE falling pound affected the course of market prices to a much smaller extent than had been anticipated. The atmosphere of the "House" naturally was gloomy, and the volume of business was still further reduced, but at no time were signs observable of a considerable "flight" from fixed-interest stocks to equities. Gilt-edged securities were heavy at times, some of the Amsterdam banks being reported sellers of War Loan and other issues, but quotations became harder before the end of the week, and for any but large amounts the market was reasonably "free." Industrials opened badly, but the decline in sterling sufficed, subsequently, to keep quotations relatively steady on balance, though not appreciably to raise them. Altogether, events suggested that the eleven weeks which have elapsed since the departure from gold have served not merely to destroy some illusions regarding the extent of the "benefits" of devaluation, but also to habituate investors to the ups and downs of an unconvertible currency and to put a brake on over-hasty action.

The turnover was only moderate in the Gilt-edged market, but the decline in values was arrested, though little evidence was forthcoming of inside support. Five per Cent. War Loan was easier, but Funding Loan strengthened, and Four per Cent. Consols were harder. The Prime Minister's statement to the Round Table Conference scarcely affected India loans either way, but the announcement that the Indian Government would redeem the £15,011,500 5½ per cent. 1932 Loan on January 15th next was well received, the market canvassing the possibility of the whole being paid off without a funding offer. Although political news from Australia was satisfactory, the bonds were weak at the outset on reports (afterwards denied) that the City of Brisbane would pay the coupon of a New York gold loan into a local fund, pending an improvement in the exchange position.

Business in the Foreign Bond market was further contracted, except as regards loans payable in gold values, particularly French Rentes, which were active with the falling exchange. Other European issues were heavy. Far Eastern stocks were generally maintained, but South Americans lost ground, Brazilians showing a slight recovery after marked initial weakness.

A steady trickle of buying from the provinces was sufficient to keep Home Rails fairly steady, though the week's

traffic figures made the worst comparison with 1930 for some time past. Undergrounds were harder. A Note on the unofficial agitation against the terms of the London Traffic Bill appears on page 1084. Argentine rails failed to advance at the outset, despite satisfactory crop estimates and reassuring election news, but rallied when the peso rose—or, to be more correct, when sterling fell. The week's traffic returns, however, were uninspiring. American railroads—whose position is analysed in a leading article on an earlier page—moved irregularly, but Canadian Pacific were firmer.

The industrial markets opened very unsettled, but the tone improved with the decline in sterling, though signs of "panic" buying were absent. Dealings never reached large dimensions, and prices showed only a moderate advance. Courtaulds, Dunlops and Imperial Chemical responded to the change of tone, but did not hold all their gains. Textile shares were harder on fresh rumours of the improved trade, partially confirmed by the Bulletin of the Cotton Trade Statistical Bureau, but fears of labour troubles following the threatened denunciation of the 1919 agreement by the Master Cotton Spinners prevented the movement from going far. Coal and steel shares were easier following the publication of the poor Dorman Long results (dealt with on page 1086). Electrical shares were firm, particularly General Electric, and motor issues gained a few pence on a number of Midland buying orders. The Carreras profit figures were regarded as fairly satisfactory, and tobacco shares generally had a harder tone, but brewery shares remained undecided. The Electric and Music Industries report had, naturally, a depressing effect on the shares, which suffered a sharp setback on Monday. Furness Withy fell back despite the hopeful statement of the chairman, who declared, at this week's meeting, that assets exceeded issued capital by £6 millions. The P. & O. report (dealt with on page 1085) was regarded as moderately reassuring, but an initial rise in the £1 deferred units was not maintained. Bank shares were irregular, and both the volume of business and the price level of insurance shares tended to decline.

The oil share market had a steadier tendency, due rather to movements in sterling than to any change in the industry's outlook, although crude production in the United States again showed a decline. Royal Dutch were firm, and Paris was an intermittent buyer of "Shell" in a market not well provided with bearer stock. The dulness of rubber shares was accentuated by the absence of authentic news of developments in the industry. Anglo-Dutch showed a moderate recovery after their recent weakness. Tea shares, similarly, attracted little attention, Ceylon issues being considered fully valued at their present level, while Indian shares lacked support owing to the recent unfavourable trend of prices at the auctions.

Although the price of gold was adjusted in accordance with the lower sterling exchange, activity in Kaffirs did not last long. Tuesday's brisk buying being followed by recession, Paris and Johannesburg holding off. Rhodesians remained quiet. Rio Tinto failed to maintain a rise following the marking up of the price of copper, and tin shares weakened with the metal, the gold price of which reflected the disappointing delivery figures for November.

FOREIGN STOCK EXCHANGES.

NEW YORK.

After rallying at the beginning of the week, the stock markets again became depressed, and a number of shares broke new low levels. Despite the continuance of partial restrictions on short selling, the bear interest has increased recently, and there is an absence, at the moment, of factors which can be given a favourable interpretation. Railroad shares reached new low levels, the possibility of a speedy wage cut, by mutual consent, being regarded less hopefully. Sentiment was also affected by the application for a receivership for the Wabash Railroad. President Hoover's Annual Message to Congress, next week, is eagerly awaited, the general opinion being that an effort will be made, aiming at some improvement in sentiment, though on what lines is not clear. The practicability of a Government plan to aid the weak railroads is being canvassed, though the financial position militates against such a scheme. A more encouraging factor has been the attitude adopted by the New York Federal Reserve Bank, which, in its current monthly review, has pointed out that the banking situation has markedly improved, the reversal of the gold flow having been followed by a lessened demand

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 1079.)

for currency, fewer bank failures, and a less rapid liquidation of bank credit. The slightly harder tendency of wheat prices, on balance, has also tended partially to offset the pessimistic tone of the share markets, but metal prices have remained unstable. General trade has continued to recede, with signs that Christmas retail buying will be less than normal. Freight car loadings for the week ended November 21st were 653,600, compared with 690,463 in the previous week, 779,757 in the corresponding week of 1930, and an average of 943,720 during the seven years 1924-30. Stock markets had a firmer appearance at the close of Thursday's session, changes on the day having been largely in favour of holders.

PARIS.

The tone of the Paris Bourse was depressed early in the week, sentiment in practically every market being depressed by the break in sterling. Many shares reached new low levels, industrials and speculative issues alike sharing in the decline. On Tuesday, bank stocks same under pressure, and the "Dawes" and "Young" loans were liquidated. On Wednesday, the downward tendency persisted till the last hour of the session, when the recovery in sterling started a brisk rally which carried prices in some cases above the previous night's close. Thursday saw a further relapse, however, relieved by a welcome improvement in the Dawes 7 per cent. loan.

AMSTERDAM.

The Amsterdam Bourse opened in irregular fashion. Netherlands Bank shares declined sharply following the announcement of the Bank's sterling losses. Unilever had a weak appearance, but Philips Lamps showed some improvement and Royal Dutch and Amsterdam Trading were firmer. A listless tone subsequently spread to most markets, in sympathy with the trend of sterling. The volume of business contracted sharply, and many prices were marked down. In common with other centres, Amsterdam enjoyed a partial recovery in mid-week, when sterling took an upward turn, but the more speculative shares still continued to wear a friendless appearance.

OTHER CENTRES.

Irregular conditions prevailed on the majority of other Continental Bourses, the international situation being interpreted in somewhat pessimistic terms. Brussels recovered on Wednesday after a weak opening and Copenhagen was better, but Stockholm remained depressed. The Italian Bourses reported a limited business, at generally lower prices. Unofficial quotations in Berlin showed further declines, of much greater extent than in recent weeks. Dye Trust was done at 87.50 (against 95.00), Siemens at 108.75 (against 120.75), A.E.G. at 28.00 (against 29.50), and Reichsbank at 73.50 (against 89.50).

INVESTMENT NOTES.

Industrial Share Movements.—We show in the chart at the bottom of this page the course of individual share values during the last, and most unquiet, half-year, according to the daily index of thirty representative shares compiled by the *Financial News*. The major influences of the "Hoover" debt period were the announcement of the "Hoover" debt moratorium in June and the devaluation of sterling in September. The second, it will be observed, raised prices by twice as much as the first, but each movement was followed by a severe reaction. Broadly speaking, the "over rise" lasted a fortnight, the "devaluation" some six or seven weeks. The latter's force appears spent itself before the General Election, the subsequent upturn being very slight and short-lived. About the September-October rise occurred immediately on the announcement of the suspension of gold payments, represented, in the main, the adjustment of equity to the depreciated pound. The remainder of the year was covered by the month of October, mainly reflected in the redence given to reports of improved prospects in the export trades, while last month's fall (which, significantly, reflected the whole of the October movement) was due to disquietude regarding the international situation and growing scepticism regarding the adequacy of the depreciation, or any other purely internal factor, to restore moderate prosperity to British trade, independently of a revival in the world as a whole. Present prices are slightly higher than at the end of November, the fall-tendency of industrial values at the beginning of this year having been checked by a tendency on the part of holders to switch again into equities on the rapid rise of the pound. On the whole, although the chart does not disprove the views of those who maintain that the September "trough" may be a low point of the present depression, it is difficult to discover any evidence that a healthy recovery in ordinary share values has been effected.

More "Anti-Dumping" Shares.—The second order issued by the Board of Trade under the Abnormal Importation (Customs Duties) Act has not added to the Stock Exchange interest in industrial shares, which is at a low ebb. There are, however, a few companies which will be

assisted by the second order, notably United Glass Bottles, Linen Thread and Robinson and Cleaver. United Glass Bottles, which took over certain of the assets of British Glass Industries, one of the original Hatry promotions, has been enjoying prosperity for the last three years, and, apart from the domestic market, in which it holds a dominating position, is developing a successful export trade, which may be assisted by the depreciation of sterling. Linen Thread is the leading manufacturer of linen for the piece-goods trade, and has subsidiaries in the United States of America. Last year the writing down of stocks to current market values involved a substantial loss which wiped out all the company's trading profits. The company passed the 2½ per cent. bonus which had been declared for the previous three years, but maintained its dividend at 6 per cent., tax free. The earnings, dividends and market prices of United Glass Bottles and Linen Thread ordinary shares are shown in the table which follows:—

	Prices, 1931.			Earnings % Last 2 years.	Divs. % Last 2 years.	Yield %
	High.	Low.	Present			
United Glass Bottles £1	25/3	13/6	25/-	26.0	19.4	7.5
Linen Thread £1	28/3	15/-	25/-	8.7	Nil	6 plus 2½% bonus tax free

Both these companies have maintained a strong financial position. Robinson and Cleaver are the well-known firm of linen manufacturers and outfitters, and, in the year to July, 1931, suffered a diminution in profits, the ordinary shares earning 9.2 per cent., as against 19½ per cent. This company reduced its ordinary dividends from 10 per cent. to 6 per cent. The ordinary shares are privately held, but the Stock Exchange is interested in the 5 per cent. preference shares, which are quoted at 14s. 6d.

American Company Earnings.—The reaction in the New York stock markets, which is proceeding as we write, invites attention to the facts regarding American industrial earnings this year. The company reports for the third quarter of the year were disappointing. The National City Bank of New York, in its latest bulletin, gives a tabulation of the reports of 205 companies engaged in the major manufacturing industries and in retail trades. This

AVERAGE PRICE OF 30 BRITISH INDUSTRIAL SHARES.

JUNE TO NOVEMBER, 1931.

("FINANCIAL NEWS" INDEX: 1928=100).

discloses a total net profit, after all charges and losses, but before dividends, of \$97 millions in the third quarter, as compared with \$167 millions in the second quarter and \$131 millions in the first quarter. As compared with 1930, the September quarter reports showed a decline of no less than 49.2 per cent. Sixty companies reported deficits aggregating \$22.3 millions, while in the corresponding quarter of 1930 forty-two companies reported deficits aggregating \$12.1 millions. Forty-nine companies, however, improved their results as compared with September quarter of 1930. The tabulation is given as follows:—

* Gain due to one company.

If profits for the first nine months of this year be compared with those for the first nine months of 1930, on the basis of the returns obtained on capital, at book value, the percentage for the 205 companies is 4.9 per cent., against 9.5 per cent. Utility companies are not included in this table, but for the first eight months of the year the gross earnings of electric light and power companies were less than 1 per cent. below those for the corresponding period of 1930, an increase of 8 per cent. in the consumption of electricity by domestic users being offset by decreased sales to industrial plants and municipalities. Among other utility companies, the American Telephone and Telegraph established a new high record in earnings for the first nine months, the total being 4 per cent. above that of 1930. The railroads, however, have made the most disappointing showing. On the basis of complete reports for nine months, net operating income for the full year will be in the neighbourhood of \$543,000,000, which compares with \$885,000,000 in 1930, \$1,275,000,000 in 1929. This would give a rate of return on property investment of only 2.08 per cent. The report that the New York Central, which earned over \$15 per share in 1929, would earn only \$1.20 this year came as a profound shock to the market.

Royal Mail Company's Future.—The meetings of the first and second debenture stockholders of the Royal Mail Steam Packet Company and the guaranteed preference shareholders of the White Star Line on Monday agreed by overwhelming majorities to the extension of the moratorium until March 31, 1932—this date having been substituted for June 30, 1932, as originally proposed, to meet the wishes of the trustees of the first debenture stockholders. A proviso has, however, been inserted in the scheme to the effect that if a comprehensive scheme of arrangement is submitted and approved, the date may be extended to enable the necessary legal formalities to be carried through. Sir William McIntock stated that the Voting Trustees had discussed the position with

representatives of all the financial creditors (whose total claims amounted to over £50 millions), and sufficient acquiescence had been expressed, on general lines, to satisfy the Voting Trustees of the practicability of a solution, although the final settlement must inevitably occupy a considerable time. The scheme which the Trustees have in mind, apparently, is to be based on the consolidation of the operations of vessels directly owned by the Royal Mail and its "hundred per cent. subsidiaries" trading with South America, and the securing of the maximum economy and efficiency in working, independently of the present capital ownership of any particular vessel. The rights of creditors, however, will be preserved, and where security exists it will be maintained, although possibly not in its original form. All creditors throughout the group, however, will be asked to agree not to claim repayment or to enforce the realisation of their securities for a specified period—which, according to present intentions, will extend until December 31, 1934. These are, of course, only the broadest outlines, the working out of which will naturally present problems of the greatest complexity. Sir William gave no intimation of the taking of any steps to raise new capital, which would appear indispensable before the group can be put in a sound trading position. The willingness of the Voting Trustees, however, to accept a shortening of the period within which the detailed scheme is to be produced is of hopeful augury, since it suggests that matters are in a fairly forward state, and that no insuperable difficulties of principle are foreseen. Meanwhile, at the Furness Withy meeting on Wednesday (which approved an increase in the company's capital by 2,000,000 £1 ordinary shares), Sir Frederick Lewis denied the existence of negotiations for acquiring additional assets, but added, significantly, that his company had recently had such negotiations and it was always possible they might be revived. It is understood that Sir Frederick's statement had reference to discussions regarding the purchase, from the Royal Mail group, of the White Star or of certain refrigerator ships on the South American trade.

London Passenger Transport Bill.—In a Note in our issue of November 14th last we discussed the objections which the Metropolitan Railway had raised to the London Passenger Transport Bill in its present form. While we endorsed the principles of the Bill, we made it clear that the stockholders of the Metropolitan Railway had certain grievances which should be taken into consideration. A voluminous correspondence which has subsequently reached us suggests the real basis of the opposition which is now developing from other interests beside the Metropolitan Railway. It is that, when Lord Ashfield negotiated the settlement with the Labour Government, he made it clear that, if the compromise reached, as a result of months of negotiation, were not accepted, the Labour Government could be expected to impose far less advantageous terms on the shareholders. In other words, it is contended that the shareholders were subjected to political blackmail, and that now there is a National Government, with a different political bias, the stockholders should be able to get better terms. We question the wisdom of upsetting the compromise which, as we have said, has been arrived at after patient negotiation and a careful balancing of conflicting interests. Another argument is that, since this country suspended the gold standard, the London Passenger Transport Board "C" stock, which is to be given mainly to the equity shareholders of the Underground and Metropolitan groups, will have all the disadvantages of being a fixed-interest stock and none of the advantages of an equity stock, which by nature it is. This argument, however, depends on the assumption that Great Britain intends to remain off the gold standard indefinitely and that an inflationary rise of prices cannot be avoided. This appears to us untenable. A comparison between the London Passenger

Transport scheme and the Cables and Wireless merger is inadmissible, for the latter merger was devised at a time of active trade and widespread optimism to meet the potentialities of wireless telegraphy—a new invention, not comparable with the transport of London's passengers by electric or motor traction. To reject the London Passenger Transport Bill at this stage would be a dangerous proceeding. The problem of co-ordinating London passenger transport will brook no delay.

Electric and Musical Industries.—Unfavourable comment has been provoked by two features of the initial statement on behalf of Electric and Musical Industries, the holding company which has amalgamated the Gramophone Company and Columbia Graphophone. The first is the drop in earnings for the two constituent companies to £160,893 for the year to June 30, 1931 (when the merger took effect), as compared with a combined figure of £1,422,090 for the two concerns in the previous year, and the absence of a final dividend. The second is the obdurate policy which the board is apparently pursuing. The two constituent concerns have been converted into private companies, as a result of which the obligation to hold meetings in respect of the year to June 30th last is avoided. It might have been assumed, therefore, that a very full report on the position would have been provided in the directors' statement. On the contrary, the report merely declares that while the home factories are busy, the foreign subsidiaries have been seriously affected by trade depression, that competition between the two major concerns is being maintained in sales, though production is being centralised and rationalised, and that more than £200,000 has been charged to provide for rebates in selling prices to customers and to cover raw material losses. Had the two companies remained separate, each would have been under a legal obligation to state whether any subsidiaries had made losses and how far these had been taken up by the parent company. As each main concern is now a subsidiary, within the meaning of the Companies Act, of Electric and Musical Industries, the former subsidiaries (which have become sub-subsidiaries of Electric and Musical Industries) do not come within the provisions of the Companies Act as to disclosure. For the future, therefore, an important source of information regarding the trading results of the combine will be closed to shareholders. This is the more important as the very heavy drop in earnings to June 30th last suggests that some of the foreign subsidiaries must actually have made trading losses. This would not be surprising in view of the fact that the combine has subsidiaries, *inter alia*, in Germany, South America and the Far East—where depression has become acute. For the next few months, apparently, shareholders must remain in ignorance of the position in this respect. The board, doubtless, would defend its action on the ground that fuller disclosure might have given valuable information to competitors; but it is difficult to believe that this contention would have had any relevance as regards the very modest amount of information which the boards of the two constituent companies would have been required to give, had they remained under separate control. The statement, in short, calls attention to a serious omission in the present Companies Act, which, as a result of faulty draughtsmanship, covers only subsidiaries and not sub-subsidiaries. A summary of the combined balance-sheet statement appears on page 1100.

Aerated Bread Meeting.—Shareholders who attended the annual meeting of this catering company on Friday, November 27th, were quick to show their appreciation of the rigorous reorganisation which has raised the company's fortunes out of the deplorable condition into which they had fallen in 1929. In that year, earnings were insufficient to cover the preference dividend, and after an official investigation the board was reconstructed, and the management overhauled. In 1930, the ordinary capital earned 5½ per cent. and in the year to September 30th

last 9½ per cent. Presiding at the annual meeting, Lord Greenwood referred to the developments, extensions and improvements set out in the directors' report, and stated that the company was still acquiring premises for the purpose of opening further depots. The period covered by the accounts had not been an easy one, as a result of the curtailed spending power of the public consequent upon the general trade depression. The wave of economy which was sweeping over the country would naturally emphasise the reduction in purchasing power, while the abandonment of the gold standard, in so far as it made imports dearer in terms of sterling, would mean higher costs for food which had to be imported, because it could not be produced here. On the other hand, the company was now well prepared to take advantage of the first signs of trade expansion and returning prosperity. Ample provision had been made for depreciation, income tax, and all liabilities. Every asset in the balance sheet was properly valued, and there was nothing for goodwill, there were no mortgages and no loan debt. Instead of a bank overdraft they had a substantial credit balance, and after providing for the dividend recommended they were able to carry forward over £53,000. Altogether, the board deserves credit for ruthlessly carrying out a difficult task.

Peninsular and Oriental.—In view of certain historic P. & O. balance sheets, which raised obscurantism to a fine art, the directors deserve the warmest congratulation on the increasing intelligibility of their accounts—though, unfortunately, in their case well begun is not, as yet, more than half done. For the twelve months to September 30th last gross profit—i.e., results of voyages, interest, dividends, etc., rents of properties, after deducting administrative expenses and "an amount" for depreciation of steamers—totals £947,802, compared with £1,165,044 for the previous financial year. Net profit, after deduction of £100,000, against £90,000, for debenture redemption, amounts to £428,327, compared with

£605,439. Earnings on the deferred shares are paid out "to the hilt," the dividend being 6 per cent., against 10 per cent. for the year. In view of the difficult trading conditions which have obtained in the company's "sphere of influence" during the past year, shareholders may be content that a tax-free payment of 6 per cent. has been found possible. At the same time, it is noteworthy that the distribution is facilitated by "assistance from some of our allies"—an unusual phrase, with regard to which further enlightenment will doubtless be sought at the meeting. It is not clear, indeed, to what extent trading activities contributed to the total income. The balance sheet shows gilt-edged securities aggregating nearly £7 millions, from which a revenue might be expected of something like £350,000, or over 80 per cent. of the net income.

The balance sheet is a much more informative document than ever before. The total has increased from £26,714,671 to £40,105,398 as a result of the fact that investments and loans are shown in full, on opposite sides of the balance sheet, instead of last year's "sundry investments (less loans)." "Sundry loans against security" appear at £6,389,000 and "sundry deposits and loans from associated and subsidiary companies" at £7,291,105. Investments are divided into their various categories, and cash is shown separately. There is still no indication, however, as to whether the £13,654,071 of investments in subsidiary companies includes loans to subsidiaries, or whether the two items embracing loans from subsidiaries are really shown "net." The auditor's certificate states that the securities of the company have been "examined and verified," but the balance sheet itself fails to say whether liquid investments appear at cost or at market prices. At 24s. 6d. the £1 deferred units give a yield of about £5 1s. per cent. free of tax.

Rolls-Royce Purchase of Bentley.—The disposal of Bentley Motors, Ltd., which went into voluntary liquidation last July, has been the cause of a sequence of surprises. At the moment when acquisition by D. Napier and Sons, Ltd., seemed certain a higher bid was made by the British Equitable Central Trust, Ltd., which, it is understood, intended to merge Bentley with certain steel interests in the North of England. The final acquisition by Rolls-Royce, Ltd., places two of the highest-powered and highest-priced cars of British manufacture in the hands of a single company. Rolls-Royce, whose engines have already achieved sensational records on land, water and in the air, have doubtless had in view the fact that the Bentley product has built up an amazing reputation on the race tracks of the world. Trade depression is naturally felt first and foremost by the highest grades of a luxury industry. It is not surprising, therefore, to find that sales of the 44-h.p. Rolls have fallen from 456 in the year ending September 30, 1930, to 211 in the year ending September 30, 1931, though the introduction, some two years ago, of a model paying a lower annual tax has done much to maintain the company's business. Recently an arrangement was announced, writes a trade correspondent, with Messrs Rootes, Ltd., the car dealers, under which the Rolls-Royce subsidiaries in France and India were to undertake the distribution for Messrs Rootes of the Humber, Hillman and Commer cars and trucks in those countries, the heavy costs of maintaining sales and servicing organisations being thereby shared. There was recently a report

that shareholders in the American Rolls-Royce company were asking for a revision of the basic arrangement with the parent company, by which they were compelled to accept a quota of five cars a week from the Derby factory. The drop in sterling, however, has recently enabled the American organisation to reduce its prices. The number of Rolls-Royce cars in the United States has been put at about 2,000—the extremely high quality and long life of the product naturally resulting in a lower ratio of "replacement demand" than in the case of other makers. A recently rumoured arrangement, suggestive of the high value of the company's research work and of its technical achievements—and, incidentally, of the Schneider Trophy race—is that Delage, the French automobile manufacturer, has secured manufacturing rights for the Rolls-Royce Model R aircraft engine. The terms of the negotiation are said to include a payment of between three and four million francs for the blueprints, an order for between five and six million francs' worth of parts, and a royalty of 15,000 francs for each engine built.

Dorman, Long.—The latest accounts of this large North-East Coast iron and steel group of manufacturers present a picture of expensive stagnation. Trading profit at £340,905 compares not unfavourably with £347,824 for the preceding twelve months, but of the sum £215,961 is absorbed for "maintenance of idle collieries, mines and works." Stocks have been written down by £38,161, and £129,677 has been provided to cover exchange losses on the transfer of Australian payments. In order to meet these items (which, it is to be hoped, will be non-recurring) some £242,642—constituting the whole of the general reserve—is transferred to the profit and loss account. Interest on the two classes of debenture stock requires £306,188, leaving a balance of £10,376 to be carried forward, against £174,954 brought in. The net loss for the year is thus £435,865, compared with a previous profit of £22,844, and no preference dividend is recommended.

The board is well advised to make immediate provision for the year's losses. Apart from the value of the fixed assets (on the subject of which an auditor's note is appended to the financial statement), the balance sheet fails to reveal a liquid position, debts to the company of £942,550 being swamped by "debts owing" of £3,819,526, of which £2,941,700 is due to bankers. No profits on completed bridge contracts have been included in the accounts, though full provision has been made for losses arising on contracts completed during the year. It remains to be seen how far the company will benefit from the "exchange bounty" which has followed the abandonment of the gold standard and from any import duty which may be imposed.

Offer to Magadi Debenture Holders.—The Magadi Soda Company, Ltd., is a concern registered in 1924 in reconstruction of a company of the same name registered in 1911. The company owns a lease of territory with soda

deposits in Kenya, and has had an unfortunate career, earnings on more than one occasion having failed to cover the interest on its 6 per cent. first mortgage debentures, of which £425,700 are now outstanding. Imperial Chemical Industries, which holds all the ordinary shares, has now made an offer to buy out the debenture stockholders by issuing 7 per cent. Imperial Chemical preference shares at the rate of 40 £1 preference shares for £100 debentures. The offer also involves the issue of £250,000 in exchange for the existing debentures, which are to be cancelled. The circular to the debenture holders points out that the low price and apparently permanent contraction in the market for the grade of soda manufactured by the company appears likely to render the working of the deposits uneconomic for some considerable time. Further, the company is under an obligation to the Kenya Government to provide a minimum output of 100,000 tons of soda goods per annum. Imperial Chemical Industries, however, has made a tentative arrangement with that Government for a moratorium, during the period of which the Government will receive an annual payment of £10,000. Under present conditions, the directors believe, the alternative to the scheme would be default and a receivership for the debenture holders. In a liquidation, they estimate, assets would suffice for the repayment to debenture holders of less than 50 per cent. of their principal. The holders of less than 50 per cent. of the acceptance of 40 per cent. of their principal in preference shares of Imperial Chemical Industries now standing at par, which would yield them in interest £2 16s. for every £6 they formerly received. This is, indeed, Hobson's choice, but the balance of advantage appears to incline to acceptance of the Imperial Chemical offer. The latter represents a nice calculation of the Magadi debenture stockholders' "nuisance value." Presumably, though Imperial Chemical already has complete control of the Magadi Company's operations, it is prepared to pay a certain price to obviate the danger of the deposits being purchased, from a receiver, by a rival interest. Imperial Chemical Industries claim already to have given the company considerable assistance, partly by way of advances without security and partly by returning to it for its products a price "far less" than that realised from sales by the companies controlled by Imperial Chemical. Further, a liquidation would leave Imperial Chemical with a liability to contribute £154,000 of uncalled capital.

Tin Restriction Criticised.—The chairman of Pahang Consolidated, Mr Frisby, at the recent general meeting of his shareholders, freely expressed his objections to the of his shareholders, freely expressed his objections to the tin restriction scheme. He alleged that the scheme was ruining hundreds of miners in the Malay States and, if kept on long enough, would ruin all but a few mines. The basis of the Pahang Company's objections to restriction are, however, moral rather than financial, so far as its latest results are concerned. Its production of black tin last year was a record, being 2,835 tons, as compared with 2,698 tons in the previous year. The company appealed against the action of the State of Pahang in restricting its output, but lost its case. It is now appealing against the decision, relying upon a clause in its old lease which says that it shall have "full and free liberty to mine," and another which declares that it is not liable to any mining law, past, present or future, which interferes with any part of the lease. Whether there is any possibility of the abandonment of compulsory tin restriction in the near future, however, is more than doubtful. As we showed last week, the screw is to be tightened, as from next month. The November statistics now show that American deliveries have slumped to 3,550 tons, as compared with 5,385 tons for October and 6,270 tons for November, 1930. On the other hand, deliveries in Great Britain show an increase. The visible supply figures are nearly 10,000 tons more than a year ago. The chief difficulty which has

beset the supporters of restriction so far has been the continued fall in consumption, which succeeded in out-running every attempt to reduce world production.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Charterhouse Investment Trust, Wankie Colliery, Consolidated Gold Fields of South Africa, Tate and Lyle, Ansell's Brewery, Strand Hotel, Peter Walker (Warrington) and Robert Cain and Sons, and Luipaards Vlei Estate and Gold Mining. At the annual meeting of Ansell's Brewery, Mr J. A. Fairhurst pointed out that before 1914 the taxation on beer per barrel was 7s. 9d., whereas to-day it was 11s. per barrel, though during the same period the duty on tea had fallen from 1s. per lb. to nothing. The point was also emphasised at the meeting of Peter Walker (Warrington), when the chairman said that they hoped some method of raising revenue might be found less burdensome to the consumer, when the failure of the beer duty to produce an increased return had been proved beyond question. At the Luipaards Vlei meeting, Mr E. Turk said that the benefits to the company which would be derived if South African currency were linked with English sterling would be very marked, because not only would they be able to bring into production large quantities of ore at present considered below the pay limit, but their profit would increase in a much greater proportion than that of mines which were working richer areas on the Rand.

CAPITAL ISSUES.

Although the Galloway issue, discussed in this column last week, was not well subscribed, market omens have been deemed sufficiently favourable to encourage the *début* of an industrial concern, E. K. Cole, offering £1 preference shares and 5s. ordinary shares—a capital structure with which the years 1928 and 1929 familiarised British investors. The company manufactures all-electric radio apparatus, and has had a short but highly successful career since 1925. Profits have risen from £12,070 in the ten months ended January 31, 1929, to £114,493 in the year to January 31st last. The company has been enterprising and well managed, but investors cannot assume that future profits will increase at anything like the same rate as those of the last few years. We believe that it would be regrettable, whenever new industrial borrowing is resumed on a normal scale, if the old and bad arrangement is perpetuated, under which the public are required to subscribe (as in the present case) 20s. of preference capital to obtain the right to take up 5s. of ordinary capital.

BARCLAYS BANK LIMITED

The Bank issues Drafts and Letters of Credit on all the principal towns of the World; makes Mail and Telegraphic Transfers; effects Foreign Collections; establishes Documentary Credits and generally undertakes every description of British and Foreign Banking Business.

E. K. Cole.—Issue of 140,000 7 per cent. redeemable cumulative preference shares of £1 each and 140,000 ordinary shares of 5s. each at par, in the proportion of one ordinary share for each preference share applied for and allotted. The business of the company, operating under the trade mark "EKCO" was founded in 1925 to manufacture and sell radio products. Net profit for the year 1931 amounted to £114,498. The directors estimate that the profits for the current year will be sufficient to allow of a dividend of not less than 40 per cent. on the ordinary shares.

Littlehampton Gas Company.—Issue by tender of £28,700 5½ per cent. redeemable debenture stock, redeemable at par on January 1, 1942, at a minimum price of issue of £98 per £100 stock, yielding at that price £5 15s. 10d. per cent., allowing for redemption. The net revenue of the company for the year to December 31st last was £7,130, covering interest on the debenture stock, including the present issue, more than four times.

OIL OUTPUTS.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LTD.—The total production during the month of August amounted to 106,106 barrels, or approximately 15,158 tons. The total production during the month of September amounted to 104,984 barrels, or approximately 14,998 tons. The total production during the month of October amounted to 107,618 barrels, or about 15,374 tons.

PHOENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix group of companies for September was 50,433 tons. Production for October was 44,532 tons.

SERVICE PETROLEUM COMPANY, LIMITED.—Returns from Romano-Africana S.A.R. show the production from the company's oil wells at Gura-Oenitzi, Ceptura and Moreni, for the week ended October 18th totalling 4,232 tons (29,624 barrels).

COMPANY MEETINGS, &c.

TATE AND LYLE, LIMITED.

IMPROVED RESULTS DESPITE COMPETITION.

FUTURE OF THE BRITISH SUGAR INDUSTRY.

SIR ERNEST TATE'S REVIEW.

The twenty-ninth ordinary general meeting of Tate and Lyle, Limited, was held, on the 3rd instant, at Southern House, Cannon Street, London, E.C., Sir Ernest William Tate, Bt. (the president), in the chair.

The secretary (Mr W. Herbert Dickie) having read the notice convening the meeting and the auditors' report,

The President said: Gentlemen, before proceeding with the formal business, I wish to refer to the loss which the company has sustained by the death of their secretary, Mr Charles R. Hutchinson, in which took place suddenly about a month ago. He had been in our employ since the amalgamation in 1921, and previous to that had thirty-five years' service with Messrs Abram Lyle and Sons. He was a man who was a general favourite with all who knew him, and he will be greatly missed. I will ask you to stand for a moment as a tribute to his memory.

Those present having stood in silence for a few moments,

The President said: When we met here last year, it was my unpleasant duty to inform you that the good work of our refineries and sales organisation had been—to a large extent—nullified by a rapid and unprecedented fall in the raw sugar market, which had the effect of wiping out a large proportion of the refining profits owing to the loss on our stock of raw material.

This year, I am happy to say, we have not been faced by any abnormal circumstances, and I think you will agree that the balance sheet now placed before you is a satisfactory one. (Hear, hear.)

LARGE ALLOCATION TO RESERVES.

You will notice that, while recommending the payment of a reasonable dividend, we have allocated the large sum of £350,000 to various reserves. This figure is equal to over 10 per cent. dividend on the ordinary capital.

The dividend reserve, which we were compelled to draw upon last year, has been restored to the original figure. I should like to point out that the investment reserve, which stands at £261,000, represents the whole of the dividends received from the various beet sugar factories in which we are interested, after deducting 5 per cent. on the capital invested.

The figure standing to the credit of investment revenue in the profit and loss account is, you will notice, less than last year. This is mainly accounted for by the lower dividends received from the various beet sugar factories, and in a smaller degree to the fact that—in pursuance of our declared policy—the remainder of our gilt-edged securities have been sold to pay off the bank overdraft.

TREND OF SUGAR PRICES.

On October 1, 1930, the raw-sugar market was at about its lowest. Since then there has been a gradual upward tendency, with occasional spurts which have not been maintained for any length of time. Owing to the general world conditions, the market has been dull and lifeless, and the average level of prices has remained low. When this country went off the gold standard and the £ became worth about 16s., there was an immediate rise in the price of about 1s. 6d. per cwt., namely, from 5s. 6d. to about 7s. per cwt., but this rise has not been wholly maintained.

It is obvious, of course, that the raw sugar which we buy from dollar countries will cost us more, but this country is dependent upon countries with dollar currency only to the extent of 50 per cent. of its requirements, and it is perhaps due to this fact that the whole effect of the depreciation of sterling is not felt in the price of sugar here—part of it being borne by the dollar countries themselves.

I must point out, however, that the statistical position is becoming considerably stronger. The estimates for the production of sugar in Europe show a very large decrease, and the reserve stocks in Cuba are disappearing. It may take some time, but I am convinced that there is a tendency for the price to go up all over the world. Indeed, had it not been for the general trade depression, the facts I have stated would have caused a rise before this.

INCREASED SALES FOR HOME CONSUMPTION.

The output from our various refineries has been practically the same as last year. Our sales for home consumption have increased, but there has been a falling off in export business.

During the past year, competition has been very keen, which has caused a great deal of price cutting with a consequent loss of profit to all concerned. Owing to the fact that a number of beet sugar factories melt—and turn out in the form of refined—imported raw sugar, during the time when all the home-grown beetroots have been worked up, the refining capacity of this country is becoming greater than its requirements. Under these circumstances, competition is bound to be keen, but as I have said before, our sales for home consumption increased during the last year, and I have no doubt that with skilful management both in the refineries and salerooms, we shall be able to maintain our output, and thus keep our cost of production low. It is really on this feature, and with due care in the purchasing of raw sugar, that the success of the business depends.

HOME-GROWN BEET SUGAR INDUSTRY.

A gratifying feature is the increasing proportion of raw sugar which is reaching us from the home-grown beet factories.

What the future may have in store for that industry can only be guessed, but it seems fairly certain that further assistance will be sought from H.M. Government. I cannot imagine that the Government will ask the taxpayers of this country for further sacrifices in order to provide increased assistance or a permanent subsidy for beet sugar, unless the request comes from the British sugar industry as a whole. We can hardly be expected to do anything but oppose with all the power at our command, any attempt to further subsidise the production of white sugar, which competes directly with our finished products. (Hear, hear.)

We have always contended that the most economic and satisfactory method of working was for home-grown factories to use their plant to its utmost capacity in extracting raw sugar from as large a quantity of beets as possible, leaving the refining of the sugar to the old-established sugar refineries, which are specially equipped for this purpose.

We are pleased to see that—after trial—this method is being more generally adopted.

It is only on such lines that the British sugar industry as a whole can be united in a common policy.

EFFICIENCY OF THE REFINERIES.

I need hardly add that our refineries have been kept in a high state of efficiency owing to the skill and energy of the various heads of departments and the workpeople under them, and to these the board of directors wish to tender their sincere thanks for their loyalty and co-operation.

We also wish to tender our thanks to our sales managers, agents, office staffs, and all others connected in the ramifications of our business for the good work performed in the past.

After two years' service as manager, we have invited Mr Geoffrey Fairrie to join the board, and, being eligible, he will offer himself for election.

Mr W. H. Dickie, who has been assistant secretary for some years, has been appointed secretary in place of the late Mr Charles R. Hutchinson.

The President then moved the adoption of the report and accounts, and the declaration of the dividends as recommended.

Sir Leonard Lyle (chairman of the company) seconded the resolution.

DIRECTORS AND STAFF CONGRATULATED.

Lt.-Col. Sir Assheton Pownall, M.P.: Mr Chairman, if I might, I should like just to say a few words of appreciation on the very remarkable results which have been put before us this morning. You, sir, said there was nothing abnormal in the figures, but I venture to think that the year 1931 was really quite abnormal, and we, the members of Tate and Lyle, Limited, are lucky to have an increased dividend this year. I happen to have had a business career of some 36 years, and one has never known industrial companies to have such difficult times as those they have been passing through in the year

happy position of having an appreciable increase in the dividend paid in respect of the year 1931. I do just want to thank you most warmly—the board and the staff—for these very excellent results.

There is one special feature, I notice, in connection with the accounts: last year I think you said that the sum of £80,000 had been withdrawn for reasons which you then explained; this year we are not only replacing that £80,000—you, sir, were unduly modest, if I may say so, on that score—but I make out that we have not only replaced that £80,000, but £370,000 has been put to various reserves, including, of course, the extra £20,000 you are carrying forward. In other words, anything that was short-earned last year has this year been replaced five times over, and on balance we have strengthened our company by £270,000 in the two years. That, I think, is quite a unique state of affairs in a year like 1931, and I do most cordially thank all concerned for having done so much to sweeten our Christmas. (Laughter.)

SKILFUL ADMINISTRATION.

Sir Douglas Newton, K.B.E., M.P.: Mr. Chairman, I should like to endorse what has been said by the previous speaker. I think the results reflect the highest possible credit on the board and those engaged in the administration of the company's affairs. Their skilful administration has meant that at a time of great financial depression we are reaping a very great reward from their work. The signal success which they have achieved is not for us alone: it is for the coal miner and for the income-tax payer, for we are one of the few companies which is going to contribute a really substantial sum to the Chancellor of the Exchequer, and in that respect also the board deserves the very hearty thanks of all we poor income-tax payers. (Hear, hear.)

The President: On behalf of the board generally, I wish to thank Col. Sir Assheton Pownall and Sir Douglas Newton for their very kind remarks. It is a great satisfaction to us to have been able to put such an excellent balance sheet before you, and it is also a great pleasure to know that our efforts have been appreciated. (Hear, hear.)

The resolution was then put to the meeting and carried unanimously.

The retiring directors were re-elected, and the auditors were reappointed.

The President having announced that the dividend warrants would be posted to the shareholders on Tuesday, the 15th instant, the proceedings terminated.

THE STRAND HOTEL, LIMITED.

ANOTHER PROSPEROUS YEAR.

The twenty-fourth ordinary general meeting of the Strand Hotel, Limited, was held, on the 3rd instant, at the Trocadero Restaurant, Shaftesbury Avenue, London.

Major M. Gluckstein (the chairman) said that the accounts submitted indicated that the company had enjoyed another prosperous year, and this was especially gratifying in view of the general conditions in this country. Their turnover again showed an increase—a fact which could be regarded as more than satisfactory—and this increased turnover had been secured notwithstanding that, or perhaps because, the prices charged to their customers had been reduced from time to time, consistent with lower costs of foodstuffs.

The balance from trading account was £130,541, an increase of £5,892, and out of this they had placed £30,000 to reserve, bringing it up to £180,000. The dividend for the year on the participating preferred ordinary shares was 14 per cent., being 1 per cent. more than that paid for the previous year.

A separate company had recently been registered for the purpose of the development of the Marble Arch site, and the capital would be provided equally by Messrs. J. Lyons and Company, Limited, and this company. Work on the new building, which was to be called the Cumberland Hotel, was now well in hand and would be finished in about one and a half year's time.

Having remarked that the accounts disclosed a financial record which he hoped shareholders would regard as very creditable, the chairman concluded by moving the adoption of the report and accounts and the declaration of the dividends recommended.

Mr Maurice Salmon, in seconding the motion, said that owing to the depreciation of sterling abroad, prices in this country were now more attractive to the overseas visitor, and a revival in the number of such visitors might reasonably be expected. On the other hand, additional burdens had been laid upon industry by the higher taxation imposed by the second Budget, but he hoped that, in spite of this, they might look forward to a welcome return of general prosperity, in which the hotel industry would share.

The resolution was unanimously adopted.

WANKIE COLLIERY COMPANY, LIMITED.

POTENTIALITIES OF THE MINE.

The eighth ordinary general meeting of this company was held, on the 1st instant, at the Abercorn Rooms, London, Sir Edmund Davis (chairman and managing director) presiding.

The Secretary (Mr H. W. Lampard) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that shareholders would have realised from the report that the company had not altogether escaped the industrial depression which had unfortunately prevailed throughout the world. A large tonnage of the fuel supplied by the company was used in connection with the mining and transport of base metals, the market prices of which during the year under review had receded to such a low level as to cause severe restrictions in mining operations, naturally followed by smaller requirements of fuel compared with the previous financial year. Owing to judicious economies, the directors were able to submit what they considered to be, under existing conditions, a satisfactory report and accounts. Coal and coke sales for the period covered by the accounts amounted to 576,380 tons and 65,586 tons respectively, as compared with 855,088 tons and 97,855 tons during the previous year.

PROFIT AND LOSS ACCOUNT

The profit and loss account showed that the sales of coal, coke, and other products had produced a revenue of £407,539, as compared with £596,001 last year, while rents and sundry receipts in South Africa produced £13,244, as compared with £14,022. The cost of production amounted to £210,378, as compared with £329,671 last year. They had written off £46,024 on account of depreciation, as compared with £66,001 last year. The balance of profit for the year was £139,823, and after adding the balance brought forward, £73,690, and deducting the final dividend for last year, amounting to £49,778, there was a net total of £141,957. During the year two interim dividends had been paid, and the directors now recommended a final dividend of 2½ per cent., making 12½ per cent. for the year, as compared with 17½ per cent. for the previous year, and leaving £17,511 to be carried forward.

The restrictions in trade had meant the reduction of the European employees from 166 to 135, and of those remaining 57 per cent. were married, and the natives from 4,136 to 2,589, and of those remaining 31 per cent. were married. Of this married native percentage one-third was housed in good, permanent buildings which should last indefinitely. During the year the native labour supply had been ample for all requirements, making it possible to select candidates for employment, with the result that native labour efficiency was higher to-day than it had ever been.

GOOD PROSPECTS

He did not think that the reduction in output would be of long duration, as, with an increased price for copper, the Union Minière du Haut Katanga and the Chemin de Fer du Bas-Congo au Katanga would, no doubt, add to their requirements. In addition, the company was now beginning to derive some benefit from the very large expenditure they had incurred, so that they should be in a position to meet the full demands of the Northern Rhodesian copper companies. In this connection they had entered into contracts for the whole of their supplies for 13 years from October 1, 1931.

For the five months to October 31, 1931, they supplied the following tonnages of coal:—To Mufulira Copper Mines, Limited, 11,014 tons; to Rhokana Corporation, Limited, 12,123 tons; to Roan Antelope Copper Mines, Limited, 17,645 tons, making a total of 40,782 tons.

In order to show the progress of the sales to the Northern Rhodesian copper companies he might mention that in June they took a total of 4,600 tons, in July 6,105 tons, in August 8,787 tons, in September 9,859 tons, and in October 11,421 tons. They looked for a gradual increase in consumption for several months to come until those mines reached the maximum requirements on the basis of the initial plant they had now installed.

In conclusion, the Chairman said that since the date of the last meeting they had elected Mr A. R. Thomson, who had been the general manager of the company for 23 years, to a seat on the board. The resolution was seconded by Mr D. N. Shaw and unanimously adopted.

Mr D. N. Shaw said he had visited the mine during the year, and, having been there on many occasions, he had noticed the tremendous improvements effected. The mine was now at its very best, and in a position to supply enormous quantities of coal for any requirements that might be necessary. It was a great mine and a splendid asset for the shareholders.

ANSSELLS BREWERY, LIMITED.

CHAIRMAN'S REFERENCE TO HEAVY TAXATION.

The thirty-first ordinary general meeting of the shareholders of Ansell's Brewery, Limited, was held, on the 1st instant, at the Queen's Hotel, Birmingham, Mr James A. Fairlurst (chairman) presiding.

The Chairman, in moving the adoption of the reports and statements of accounts, said:

Gentlemen,—The directors' report and statement of accounts have been circulated amongst you and I presume that, as usual, you wish to take them as read.

None of the individual items calls for comment, but I should like to draw your attention to the fact that our licensed properties have increased from £2,051,462 to £2,099,042; our reserves from £320,000 to £340,000; and our carry-forward from £253,147 to £261,800.

TRADING RESULTS.

Now, turning to the trade results of our financial year, which ended on September 30th last, I should like to say that the results of our acquisition in Lucas and Company, Limited, have been disappointing, and the explanation may be the very depressing period the country has passed through since the acquisition was made. Nevertheless, you will see that we made a net profit of £166,200, against £174,734 last year, which shows a decrease of £8,600. I am sure that you will agree with me that such a result, having regard to the extraordinarily difficult circumstances in which it was attained, and to the fact that we had to bear the full incidence of the extra duty of 3s. per barrel imposed in April, 1930, is satisfactory and reflects great credit on the staff and workpeople.

When addressing you on the last occasion I ventured to say that:—

"The situation is now so bad that men of all classes are co-operating to remedy it, irrespective of any political bias which they previously had when circumstances were different."

A FORECAST JUSTIFIED.

I must confess that I did not realise that those words would prove to be so true that the next time I spoke to you there would be in power a National Government composed of all parties with an overwhelming mandate from the country to put right the situation to which I alluded and to protect and foster our industries and put the finances of our country in order.

It cannot be over-emphasised that this mandate was obtained in response to deliberate statements on the part of our leading statesmen and banking experts that our country was in an unprecedented crisis from which only swift and prompt action could save us. No Government will ever have a greater opportunity than the present one, and it is earnestly to be hoped that swift and prompt action will be taken in carrying out the necessary measures. Debating and theorising about such measures, in my opinion, will mean invaluable time wasted and will inevitably create such a disappointing result in the electorate that the consequences may be disastrous.

In the changed circumstances, it is reasonable to expect that the trade in which your company is legitimately engaged will receive a fairer and more reasonable treatment. Good beer is a healthy drink and one which for centuries has been treated as the climatic conditions. Yet our trade has been treated as the "Cinderella" of all trades and singled out for exceptional legislative interference and oppressive taxation. Such treatment is wrong, both socially and otherwise.

Although not affecting the figures under review, I must say something with regard to the additional beer duty of one penny per pint imposed by the recent supplementary Budget. It can only be described as a crushing tax. It has had and will have the effect of considerably reducing our output, and may possibly affect the method of payment and the amount of future dividends.

GROWING BURDEN OF TAXATION.

Prior to 1914 the taxation on beer per barrel was 7s. 9d., whereas to-day it is 114s. per barrel; contrasted, for instance, with the duty on tea, which has fallen from 1s. per lb. to nothing. The result is that working people, who have always been our best customers, have now, owing to their straitened circumstances, to forgo the beer which they have usually drunk with pleasure, simply and solely because they cannot afford it. They quite naturally resent this invidious and unnecessary deprivation. Apart from this, our decrease in output must inevitably react adversely upon those trades and occupations which depend upon us, and in particular it must postpone those schemes which we always have in hand for the

rebuilding and the alteration and improvement of properties which we either own or control.

I quite agree that these and other disadvantages which I could mention resulting from the increased taxation must be borne if our national revenue in the present crisis would thereby be improved, but I fear that the opposite will be the result, and therefore the sooner the taxation is remitted the better for the country.

THE BREWING INDUSTRY.

The history of the brewing industry is one of continuous improvement and progress, and from whatever angle it is viewed, whether socially, philanthropically or financially, it compares most favourably with any other industry in the land. The people have just demonstrated in a remarkable manner that they can be trusted, and as a consequence our trade should now be encouraged to supply them with the national beverage as cheaply and of as good a quality and in as comfortable and healthy surroundings and conditions as possible. With such encouragement our company, I can assure you, will not fail to do its share in the future, as it always has done in the past.

I now beg to move the following resolution: That the Reports and Accounts be received and adopted and that the following final dividends be paid for the half-year ended September 30, 1931, viz.: At the rate of 5 per cent. per annum (less income tax) on the preference shares and at the rate of 12½ per cent. per annum (making 12½ per cent. for the year) together with a bonus of 2½ per cent. on the ordinary shares (both less income tax).

Mr T. Ansell formally seconded, and the resolution was carried.

PETER WALKER (WARRINGTON) AND ROBERT CAIN AND SONS, LIMITED.

PROHIBITION BY TAXATION.

The tenth ordinary annual general meeting of this company was held, on the 27th ultimo, at Winchester House, London, E.C. Sir Charles A. Nall-Cain, Bart., J.P., D.L. (chairman and managing director), presided.

The Chairman, in moving the adoption of the report and accounts, said:—The profit and loss account, I am sorry to say, shows a reduction from £570,804 to £523,337, and is the lowest figure we have shown during the ten years the company has been in existence.

Last year we experienced the full twelve months of the increased duty of 3s. per standard barrel levied in April, 1930. This coming year, or at any rate for the first few months, we have to face the further impost of 31s. per standard barrel. The effect of this has already proved disastrous to the trade. It is plain that the duty is ceasing to answer the purpose for which it was imposed—that of revenue production—and is tending towards prohibition by taxation. The increase was proposed as an emergency measure simply, and we hope and believe when its failure to produce an increased revenue has been proved beyond all question, that other ways may be found of raising revenue, and that the beer duty may be reduced to a figure which will not be so burdensome to the consumer.

In spite of the adverse circumstances we have been called to face in the past year, we have persevered in our policy of modernising, improving and rebuilding our houses. Many thousands of pounds have again been spent during the past year in pursuance of that policy. We feel confident in so doing we are safeguarding our interests by studying the increasing demands of the public for facilities both for food and drink in a better environment.

Looking forward, I think it only right to warn you that if no improvement in trade or relief from taxation occurs very shortly, you must not rely on receiving the usual interim dividend in June; your directors will wait for the full year's results before coming to a decision regarding the ordinary dividend. There are those who urged us to reduce the final dividend for the year just closed, but we felt whatever the future may hold the dividend had been earned, and the shareholders were entitled to it.

Mr Arthur E. Pattinson (deputy chairman) seconded the motion, which was carried unanimously.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

LUIPAARDS VLEI ESTATE AND GOLD MINING COMPANY, LIMITED.

STEADY AND SUBSTANTIAL PROGRESS.

The ordinary general meeting of this company was held, on the 2nd instant, at Winchester House, London, E.C.

Mr E. Turk (the chairman), in moving the adoption of the report, said: The report and accounts show steady and substantial progress; in fact, the results of operations constitute a record in the history of the company, both in regard to tonnage of ore treated and revenue and profit obtained therefrom. Comparing results with the preceding twelve months, the plant had crushed 369,200 tons, against 294,800 tons; yield therefrom had been £395,796, as against £317,978; the net profit, as per profit and loss account, amounted to £44,829 against £37,633. The reduction in working costs was evidence of the efficiency of their manager and staff.

Developments in the mine had shown satisfactory progress. Of 18,095 ft. developed on reef and sampled 11,110 ft. disclosed ore of an average value of 6.4 dwts. over a stoping width of 42 in., equal to a payability of 61.4 per cent. That was an improvement on last year's figure amounting to 4 dwts. The ore reserve position remains a satisfactory one. The computation of the manager at June 30 shows fully and partially developed 1,102,500 tons, of an average value of 5.4 dwts. The increase for the year after crushing 369,200 tons of ore is 45,300 tons over the ore reserve total of last year. Our equipment is in a position to deal with 35,000 tons per month. Our recent crushings have averaged 31,500 tons, and we hope soon to reach the higher figure. The decision taken last week by the Union Government to remain on the existing gold standard and to put an increased duty on imports is likely to add to the burdens resting on the mining industry.

SOUTH AFRICA AND THE GOLD STANDARD.

Without wishing to go into any political question, as obviously the Union of South Africa must know best what is good for them in the national interest, I would like to give expression to the great disappointment which a company like ours was bound to feel when the South African Government decided to remain on the gold standard. The benefits to be derived from linking the South African currency with English sterling would be especially marked in a case like ours, because not only would we be able to bring into production large quantities of ore at present considered below the pay limit, but our profit would increase in a much greater proportion than that of mines which are working richer areas on the Rand. To illustrate this briefly: If, as a result of the gold premium we were to obtain only 2s. 6d. more per ton crushed—everything else remaining as at present—our profits would double, and the effect on the dividend-earning capacity of the company would be very great indeed, having regard to the fact that our share capital is only £224,000. Taking yesterday's price of gold in the London market, the premium should, however, work out at a very much higher figure than 2s. 6d. per ton crushed. At present the life of our mine is estimated to be 25 years or more, but with the gold premium it would become greatly extended.

IMPROVED PROSPECTS FOR CURRENT YEAR.

We look forward to the current year with a good deal of confidence. The company is now definitely established on a steady and progressive profit-earning basis, the ore reserve position is sound, the mine is developing well, and the financial position has been satisfactorily consolidated. In these days one is always reluctant to indulge in any predictions, but it seems reasonably safe to express the expectation that in the absence of any unforeseen factor the company during the forthcoming year will be in a position of considering the resumption of dividends.

Mr F. H. Hamilton, in seconding the adoption of the accounts, dealt in detail with the advantages of South Africa going off the gold standard.

Speaking at the meeting of Luipaards Vlei Estate and Gold Mining Company, held at Winchester House on December 2nd, Mr. E. Turk, the chairman, stated that the report and accounts showed substantial progress, the results constituting a record in the company's history, both in regard to tonnage of ore treated and revenue and profit obtained. The Chairman added that they looked forward to the current year with confidence, and hoped that in the absence of any unforeseen factor in the coming year they will be in a position of considering the resumption of dividends.

The report and accounts were unanimously adopted, and the proceedings closed with a vote of thanks to the chairman, directors, and the managers and staff in South Africa.

THE CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA.

EFFECTS OF GENERAL DEPRESSION.

LORD BRABOURNE'S SPEECH.

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Limited, was held, on the 3rd instant, at River Plate House, London, E.C.

Lord Brabourne (the chairman of the company), who presided, and moved the adoption of the report and accounts, said that the temporary postponement of the payment of the dividend on the second preference shares due on October 1st last must have prepared shareholders for a disappointing report. The steady downward trend of prices of all commodities, and the absence of any kind of encouragement to the stock markets, had continued throughout the company's financial year, and nothing short of a miracle could have averted the necessity of a heavy writing down of the great majority of the holdings—the sole cause of the unsatisfactory showing now made. Nearly every company had the same tale to tell, but political and other events of the last three months gave reason to hope that the beginning of the turn of the tide was discernible. The fly in their ointment was the very large figure of £713,225, which had had to be written off as a reserve for depreciation, a large part of which would be recovered as soon as general conditions improved. There was the whole story of the past year summed up in the one word "depreciation," but for the necessity of providing for that the profits earned would have justified payment of a satisfactory dividend.

The accounts of the old company might be disposed of in a very few words. The failure of the New Consolidated Gold Fields the operating company, to make a distribution on its ordinary shares had reduced the dividend item by £180,584; therefore after providing for both classes of preference shares, there remained a balance of £59,114, which was sufficient to allow the payment of a dividend on the ordinary shares and had been carried forward. The question would be asked why in view of the balance of £59,000 and of £32,000 in the New Company, and a reserve of £200,000, there should have been hesitation as to the payment of the second preference dividend, which required only £30,000, on October 1st. The answer was that the board were bound not to jeopardise the payment of the dividend on January 1st on the first preference shares. After that had been paid they would expect to clear off the arrears of the second preference dividend so soon as the general recovery which now seemed to be near was an actuality, and not merely a hope.

SOUTH AFRICA AND AUSTRALIA.

Having commented on the satisfactory position disclosed by the company's chief South African gold-mining interests, including Simmer and Jack, Robinson Deep, Sub Nigel and Consolidated Main Reef, the chairman said shareholders should understand that so long as the South African Government succeeded in its struggle to adhere to the gold standard, shareholders resident in Great Britain would receive an addition to future dividends on South African mining shares according to the rate of exchange ruling at the date of remittance. If, however, as all gold producers hoped would be the case, the South African Government found it was unavoidable to link its currency to sterling, it was estimated that the devaluation would be equivalent to an average reduction of two shillings a ton in working costs, and would enable vast

quantities of low-grade ore to be worked and so prolong the life of the Rand gold industry by many years.

Dealing with Australian interests, he said that while they had been greatly disappointed that operations on the Wiluna property since the plant started up had not turned out as satisfactory as anticipated, the board still had complete confidence that the enterprise would fulfil all that had been claimed for it. This company, as well as the Lake View and Star, in which they were also interested, in addition to their normal mining profit received a very important increment from the exchange premium of about 20½ per cent., the increase in the price of gold, the result of England's abandonment of the gold standard, and the gold bounty payable by the Australian Government.

They had acquired a further interest in Australian mining, viz., in the Gold Mines of Australia, Limited, which had recently exercised an option held on the Mount Coolon and Native Bear properties in Queensland. The recoverable value of the ore exposed there to date was confidently stated to be more than sufficient to cover the purchase price of the properties, the amount spent to date on their development, and the equipment of the mines with a plant capable of treating up to 200 tons per day. The outlook for further extension of the main ore body in depth and in length was regarded as very promising.

THE SILVER QUESTION.

The Mexican Corporation, dependent as it was on the prices obtainable for zinc, lead, copper and silver, had naturally been one of the chief sufferers from the long continued and, until recently, daily accentuated depression. Last year he expressed the belief that the fall in the price of silver was one of the chief causes of the world-wide trade depression, owing to the insufficiency of gold to meet the world's credit needs, and to the halving of the purchasing power of 700,000,000 Indians and Chinese. He was glad to note that the great majority of practical business men had come to the conclusion that something must be done to increase the purchasing power of silver-using and hoarding countries, and to diminish the world's dependence on the supply of gold, three quarters of which was sterilised in French and American hands. It had been stated that the remonetisation of silver on a 20 to 1 basis would increase India's savings by £600,000,000, and those of China by an incalculable amount. If Great Britain, India and the United States would co-operate to stabilise the price of silver, the benefit to the trade of the world would be immense, and at the same time in the judgment of many of those best qualified to express their opinions one of the fundamental causes of political unrest in the Far East would be removed.

Generally, he thought that they had weathered the storm, and now that the Country had the benefit of a Government not hostile but sympathetic to the development of British trade and industry they might look to the future with some confidence.

The report and accounts were unanimously adopted.

THE CHARTERHOUSE INVESTMENT TRUST, LIMITED.

AN OFFER TO THE SHAREHOLDERS.

The sixth annual general meeting of the Charterhouse Investment Trust, Limited, was held, on the 27th ultimo, at Southern House, London.

Sir Arthur Marshall, the Chairman, said that the report and accounts reflected a deliberate policy of the board in strengthening the financial position of the Trust. Dealing with the entry "Quoted Stocks and Shares in Subsidiary Companies as defined by Section 127 of the Companies Act, 1929," the Chairman said that they still retained, as part of their policy, the holding of Monument Property Trust, whose shares were quoted at a figure in excess of book value and formed a valuable asset. The other holding under that heading was in Associated British Maltsters. Describing how that undertaking had come into being through the purchase by the Trust in 1928 of the whole of the ordinary capital of the by the Trust in 1928 of the whole of the ordinary capital of the sub-fine old business of Gilstrap, Earp and Company, and the subsequent acquisition and amalgamation with four other first-class malting concerns, the Chairman explained the intention of the Trust in connection with their holding of ordinary shares in that company, which represented control of the largest undertaking of its kind in the country, had been to dispose of the holding either as control, or to the investing public, a course which at that time had appeared practicable.

The general collapse had rendered neither course practicable, and the Trust, while retaining the shares, had co-operated with the management of the merger, which in the three financial years since September 1, 1928, had shown profits of £114,938, £133,883 and £138,216 respectively, and had paid a dividend for each year of 15 per cent.

At the same time, the board did not regard it as the Trust's normal business to have so large a proportion of its funds employed in any one security as a long-term investment. They felt also that by disposing of a part of this holding, the funds so released could be used to advantage in the expected approaching revival of new issue activity. The board had, therefore, decided to offer to shareholders of the Charterhouse Investment Trust 500,000 of the Trust's holding of ordinary shares in Associated British Maltsters at 7s. each on the basis of one share in respect of each two Charterhouse shares held.

The report and accounts were adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended November 28, 1931, amounted to £6,916,300 against ordinary expenditure of £8,696,900. After allocating £190,000 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £60,643, the operations for the week, as shown below, increased the National Debt by £1,910,000 to £7,729,974,000:—

AGAR, CROSS AND COMPANY, LTD.—The directors announce that, as the trading results of the company for the year ending June 30, 1931, had resulted in a loss, no dividend would be payable on the ordinary shares. The half-year's dividends on both classes of preference shares, will, however, be paid as usual on December 31st next. It is proposed to hold the annual meeting on Friday, December 10th, The notice calling the meeting will be posted to shareholders on December 3rd.

THE ASSAM COMPANY, LTD.—The directors have decided, in view of the unsatisfactory condition of the tea industry, not to pay an interim dividend for year 1931.

THE CANADIAN BANK OF COMMERCE.—The board of directors have decided to pay dividends to shareholders on the London register in sterling at the current rate of exchange, instead of at the par of exchange as in the past. During the past year the bank's earnings, naturally, have been reduced by the marked contraction in the activity of all lines of business, and the directors therefore decided it was sound policy to omit the declaration of the bonus of 1 per cent. which of recent years it has been customary to pay to shareholders at this season.

CRÉDIT FONCIER D'ALGERIE ET DE TUNISIE.—An interim dividend of Frs. 16-50 per share has been declared by the board of this bank, payable on or after January 1, 1932, against coupon No. 48. This dividend is in respect of the bank's year ending December 31, 1931, and is the same as declared last year.

THE FORESTAL LAND, TIMBER AND RAILWAYS COMPANY, LTD.—In view of the adverse trading conditions prevailing throughout the current year, it has been decided to postpone consideration of a dividend payment on the ordinary shares until the final results for 1931 are available.

TADCASTER TOWER BREWERY COMPANY, LTD., announces that the net profits for the year ending September 30, 1931, after providing for debenture interest and depreciation, amount to £46,712, as compared with £49,379 for the year ended September 30, 1930, and the available balance, including the amount brought forward from last year to £61,642. Whilst the net profit would have warranted the payment of a total dividend upon the ordinary shares equivalent to that for the preceding year (12½ per cent.), the directors, in view of the decline in the company's trade since the imposition of the increased beer duty have come to the conclusion that it is in the best interest of the shareholders that the cash resources should be conserved by limiting the ordinary dividend to 10 per cent. for the year and carrying forward to next account £37,542.

REPORTS AND NOTICES.

The General Investors and Trustees, Ltd., announces the appointment of Mr Eric Davenport, C.A., as a director of the company.

Mr E. H. Blackith having asked to be allowed to retire from the position of London Marine Underwriter to the Phoenix group of companies (Phoenix Assurance Company, Limited, London Guarantee and Accident Company, Limited, and Union Marine and General Insurance Company, Limited), the directors have acceded to his request. The retirement takes effect on December 31st.

To succeed Mr E. H. Blackith, the London Marine Underwriter to the Phoenix group of companies, whose retirement is announced above, the directors of those companies have appointed Mr A. M. Richardson, at present assistant underwriter. The appointment takes effect from January 1, 1932.

RAILWAYS.

MEXICAN RAILWAY COMPANY, LTD.—Gross receipts for half-year to June 30, 1931, amounted to \$5,400,057, as compared with \$6,579,686 for corresponding period of 1930. Receipts from passengers and luggage decreased \$300,252, from express traffic \$52,427, from goods traffic \$779,561, from import traffic \$373,172, and from national goods traffic \$406,389; sundry earnings were less by \$47,389. From July to September (as advised by telegraph) receipts were \$2,241,800 against \$2,990,000, and expenses \$2,516,000 (\$2,856,000). Average sterling value of peso, at which remittances were received during half-year was 20-16d. against 21-41d. Monetary Law on July 27th made silver peso legal tender in Mexico. Exchange value since ranged from \$16-72 to \$9-02 to £. Credit of indemnity account is £1,620,073. Government's "extraordinary tax on receipts," based on gross receipts of previous year and payable in three instalments before end of present year, imposes burden on company of £124,000. Working of line for nine months (January to September) shows a deficit of \$70,200. The meeting will be held at Winchester House, E.C., December 9th, 2.30.

BANKS.

BANK OF MONTREAL.—Particulars of the annual statement received by cable reveal total assets are \$794,000,000, of which quickly available resources amount to \$417,000,000, equal to 52.11 per cent. of liabilities to the public. Included in the liquid assets are bonds and debentures, value \$236,000,000, gilt-edged securities, the majority of which mature at early dates, and of these, Dominion and provincial securities total \$169,000,000. Current loans in Canada amount to \$291,000,000, and deposits bearing interest a year ago. Profits total \$5,386,379, from which is deducted dividends amounting to \$4,320,000, provision for Dominion taxes of \$610,000, reservations for bank premises \$300,000, leaving a balance of \$156,379, making the total profit and loss carried forward \$1,103,426.

MISCELLANEOUS.

CHRISTMAS GREETINGS BY TELEGRAPH.—Imperial and International Communications Limited announces that reduced rates will be offered to the public between December 14th and January 6th, for overseas telegrams containing Christmas and New Year greetings. These messages always prove popular with the public, and last year a record total of over 120,000 was dealt with by the company. The charges for messages of ten words are extremely moderate, specimen rates being: 2s. 6d. to Eastern Canada, India and Burma, 3s. to South Africa, 4s. to the United States of America, Australia and New Zealand. Telegrams will be accepted

the year, against 50 per cent. paid last year. Tax provision takes £32,545, compared with £204,655, and £10,000 is taken to reserve for fluctuation in exchange. The carry-forward is £1,104,918 against £1,057,160 brought in.

FINANCIAL NEWSPAPER PROPRIETORS, LIMITED.—The Revenue account for year ended August 31, 1931, shows that dividends received (gross) less loan interest to August 31, 1931, amounted to £11,760, against £32,893 received in previous year. Rents receivable again amounted to £6,791. Transfer fees amounted to £77, against £31. The total revenue was £18,559 against £39,715. All dividends received from subsidiary and allied companies during this period have been included in revenue account. Otherwise no account has been taken of the profits earned by the subsidiary and allied companies to August 31, 1931. The net profit secured was £8,372, as compared with £28,462. Adding £43,124 brought in there is £51,496 available. The directors have appropriated £2,506 for income tax, and recommend that the remaining £48,990 be carried forward. The report states that during the very unfavourable period under review, the company received no dividend from its holding of the ordinary share capital of Financial News, Limited, but the profits of the other controlled publications were on the average fairly well maintained. The balance sheet is clearly set out, showing comparative figures side by side with those for August 31, 1931. Total assets are £870,050, against £877,909. Investments are shown at cost. In subsidiary companies they amount to £738,948, and in associated companies to £57,000. Leasehold premises, at cost, stand at £65,331. Cash is at £4,527, compared with £14,101. With regard to liabilities, loan from bankers is at £20,000, against nil. Loan from Financial News has been reduced from £215,760 to £184,660. The meeting will be held at Winchester House, Old Broad Street, on December 9th, at 12.30 p.m.

Commercial Reports.

MARKET SUMMARY.

In view of the continued shrinkage in industrial activity and international trade and the restrictions imposed by many countries on the movement of commodities, the downward movement in the gold price of the principal primary products has not yet been arrested. Among cereals, maize, oats, barley and rye declined further in New York. On the other hand, the market in wheat has been steadier. Coffee was a little firmer, but cocoa was again cheaper. The market in sugar has remained weak owing to the difficulties experienced by Cuba and Java in disposing of the quotas allotted to them under the Chadbourne scheme. Little interest was shown in cotton despite lower quotations, and the poor demand for rubber caused a setback in the price of that raw material. Non-ferrous metals, with the exception of copper and lead, continued to decline. Copper was a shade dearer, but it failed to recover to the level prevailing before the recent international conference of copper producers. Sterling quotations of commodities, such as wheat, raw sugar, and non-ferrous metals, which lend themselves to international arbitrage, have moved in sympathy with international values. Most of the other commodities have not risen in proportion to the sharp fall in the gold value of sterling. The principal commodity markets in this country have been dull in the absence of demand. According to reports from industrial centres, the demand for coal, iron and steel shows little improvement. In the textile trades, a slight expansion has taken place in the activity of the cotton and wool industries.

THE COAL TRADE.

SHEFFIELD.—The situation in the South Yorkshire coal market has shown no improvement. Actual bookings of business in the export section have fallen off somewhat, although the price of best steams continues steady at 18s. 6d. f.o.b. Quieter conditions are reported in industrial coal, and the tonnage of house coal going out is below the level of a year ago. Blast furnace coke has recovered somewhat, and makers are getting better prices than a month ago, good qualities being worth 12s. at ovens. Best house coal is quoted at 22s.

CARDIFF.—The only notable development on the Cardiff coal market this week has been the concession by the Marketing Association of 2s. per ton on sales of banked small coals. It is estimated that between 800,000 and 1,000,000 tons of slack have been dumped in the neighbourhood of the mines, and some time ago an award was given by an arbitrator in favour of a revision of the minimum schedule so far as it applied to those particular coals. The conditions, however, which have been laid down by the Executive Committee for the sale of banked smalls at the reduced price have not been favourably received by the market, and it is quite possible that the matter may be reconsidered at an early date. There has been no expansion in business during the week, and the Exporters' Federation has been informed by the Mines Department that as from December 1st the French import restriction decree will limit external supplies to 72 per cent. of the average monthly imports in 1928-30. South Wales normally contributes about 55 per cent. of the total coals exported from the United Kingdom to France, and will, therefore, be more affected by this further reduction in the quota than any other British mining district. Dry large and dry nuts are the only grades in the steam coal area that are commanding prices above the minimum schedule. Supplies of all other grades are greatly in excess of the demand.

The South Wales coal audit for the three months ended October shows a loss of £57,481, or 1.52d. per ton, on an output of just over nine million tons. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best dries, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubble culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 24s.

GLASGOW.—The Scottish coal market remains firm in tone, with the bigger sizes of nuts, and particularly trebles, a strong feature. The collieries report that export business has fallen away again during the past few weeks, but they are still fairly well engaged on orders booked some time ago. In Fife and the Lothians the position has been somewhat complicated as a result of the quota system. Several collieries in these districts report that at the present rate of production they will have reached their quotas by the middle of the month, and that unless they slow down operations it will be necessary to close pits then. They cannot see their way to pay quota prices, which have been substantially advanced, and they are refusing business which would involve buying from other collieries. Current prices for the shipping trade are approximately as follows (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s. 6d.; splint best, 15s.-15s. 3d.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 9d.; trebles, 16s.; doubles, 13s.-13s. 6d.; singles, 10s.; pearls, 9s.; dross, 9s. FIFE.—Screened navigation, 17s.; first-class steam, 13s. 3d.; third-class steam, 12s. 6d.; trebles, 17s.-18s. 6d.; doubles, 13s. 6d.-14s. 6d.; singles, 10s.; pearls, 9s. 6d. LOTHIAN.—Prime steam, 12s. 6d.; secondary steam, 12s.; trebles, 16s. 6d.; doubles, 13s. 6d.; singles, 10s.; pearls, 9s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 16s.; doubles, 13s. 9d.; singles, 10s.; pearls, 9s. 3d.; dross, 9s.

IRON AND STEEL.

SHEFFIELD.—There are several disturbing influences at work to prevent the steel trade from developing. Mainly, these consist of the uncertainty of the exchanges and of the intentions of the Government regarding tariffs. Local trade is quieter than ever in both the heavy and light steel branches, with instances of improvement in certain lines of goods manufactured from steel. There is a general indisposition to buy on a speculative scale. The pursuance of a waiting policy is in evidence in many directions. Buying and consumption of the various alloying materials of steel is at a low ebb. The recent advance of 20 per cent. on tungsten prices is maintained, and ferro-molybdenum has gone up 45 per cent. Steel prices are steady, and no advance in acid steel is contemplated. Quotations for basic steel may be increased in the new year. Local trade is not benefiting much by the new duties, as there are large stocks in this country of imported tools. Makers of scissors, razor blades and some kinds of tools are fairly busy.

MIDDLESBROUGH.—The market for Cleveland iron has become extremely quiet, due, no doubt, to tariff uncertainties and the adverse rates of exchange. There is a little buying yet to be done to cover requirements up to the end of the year, but consumers do not appear to be in any hurry to complete their arrangements, and are buying very sparingly. It was expected that by now a substantial move would have been made in regard to covering requirements for January onwards, but an altered tone seems to have come over the market, and buyers are now more inclined to await developments. Makers are well placed for orders up to the end of the year, and are optimistic as to future prospects. They made no change in official prices at Tuesday's market, which therefore remain: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. per ton f.o.b. or f.o.t. Hematite iron is also sharing in the lull in buying, and transactions recently have been on a small scale, and mostly for early delivery. Makers, however, show no weakening in regard to price, and adhere to 65s. for ordinary mixed numbers for December delivery, and 65s. 3d. to 65s. 6d. for the first quarter. Shipments of pig iron last month turned out rather disappointing, being nearly 2,000 tons less than in October. The details of the different clearances are as follows:—

	November, 1931.	October, 1931.	November, 1930.
Pig iron.....	13,956	15,901	12,301
Manufactured iron.....	2,052	3,403	4,369
Manufactured steel.....	33,911	26,143	30,748
	49,919	45,447	47,418

In the finished trades, very little new business of importance is coming to hand, but some departments are fairly well employed on old contracts, and are expecting new work. Prices of steel materials for home consumption under the rebate scheme are unchanged, viz.:—Plates, ½ in. up, £8 15s.; angles, £8 7s. 6d.; joists, £8 15s. Other quotations are: iron crown bars, £10; heavy steel rails, £8 10s.; 24-gauge black sheets, £8 5s.; and 24-gauge galvanised corrugated sheets, £9 5s., all for home use. In shipbuilding, an order for two colliers of about 2,000 tons d.w. each have been placed with the firm of S.P. Austin and Son, of Sunderland, the engines for which will be built by Messrs. Dickinsons, Sunderland. The ore trade continues practically stagnant. Best rubio is nominally 16s. 6d. c.i.f., and the current freight Bilbao/Middlesbrough is 5s. Imports of all kinds of ore into Middlesbrough during November totalled 47,059 tons, against 45,774 tons in October. Coke is weaker, and supplies of ordinary furnace qualities for early delivery can now be secured at 16s. 6d. to 16s. 9d. delivered works. The number of blast-furnaces in operation on the North-East Coast is unchanged at eighteen.

GLASGOW.—This week the outlook in the West of Scotland appears more cheerful, although there is still no great amount of important work being placed in this district. However, steelmakers are now to a small extent benefitting from the work recently contracted for at Clyde shipyards, and anticipate a steady demand for this class of material for some little time to come. It is reported this week that a contract for a cargo vessel of about 5,000 tons gross has been placed with Messrs Lithgows, Limited, of Port Glasgow. The demand for engineers' sections and also for semis remains quiet, and also that for steel bars and wrought iron bars. Tube makers have secured very little new business during the present week although there are many inquiries on the market. Sheet makers have booked a fair tonnage, chiefly of thin black sheets, and sheet rolling mills continue fairly well employed.

CARDIFF.—Business in the Welsh tinplate trade continues quiet. Some orders have been placed on Continental and Far Eastern account, and prices have been steady at from 13s. 9d. to 14s. 3d. per basis box. The volume of the export trade is increasing, and for the four weeks ended November 22nd last, shows an increase of 9,000 tons over the corresponding period last year. Prices of both native and foreign steel bars are unaltered at £5 delivered, and £4 5s. c.i.f., respectively. Galvanised sheets are a shade easier at £9.

OTHER METALS.

TIN.—Despite the decision of the International Tin Committee to curtail the output of tin by a further 15,000 tons during 1932, and the withholding of stocks from the market by the Tin Pool, the market in tin failed to improve. Not even the fact that there has been no further addition to the world's visible supply of the metal had any influence on its price. According to the London Metal Exchange, the visible supply of tin at the end of November, at 50,583 tons, of which about 15,000 tons are held by the Tin Pool, shows a reduction of 19 tons on the month. Throughout the week, buying in this country and in the United States has been on a small scale, and the gold price of the metal tended to sag. In New York the metal was quoted at 21.37 cents per lb. on Wednesday, against 22.87 cents per lb. a week ago, and 22.15 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £137 5s. to £137 7s. 6d. per ton, compares with £137 2s. 6d. to £137 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 30,510 tons, show a decrease of 40 tons on the week.

COPPER.—A slight spurt in copper values was caused at the end of last week by the news that the Belgian interests would accept the terms proposed at the New York Conference. Although this was subsequently denied in Belgium, the advance was only partly lost owing to an announcement that a conference of American producers will take place shortly for the purpose of discussing the situation. The market was further strengthened by a report that the Phelps Dodge Corporation will rejoin the Copper Exporters, Incorporated, after a change in the rules for marketing copper abroad. Buying was quite active in New York and London. In this country prices advanced sharply in proportion to the fall in the gold value of sterling. On Wednesday "Domestic" spot was quoted officially at 6.50 cents per lb. in New York, against 6.25 cents a week ago and 7 cents a month ago. Wednesday's official closing price for "standard cash" in London in terms of sterling, at £37 7s. 6d. to £37 10s., compares with £33 15s. to £33 16s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 21,023 tons, show an increase of 293 tons, while stocks of rough copper, at 772 tons, were 1 ton smaller.

LEAD.—There has been no improvement in the demand for lead. The fall in the gold value of sterling caused a slight advance in sterling prices. At the beginning of the week the metal received support in London from buyers, but later the market became inactive and prices declined a little. Stocks of lead in official warehouses at the end of November, at 12,498 tons, show a decrease of 32 tons on the month. In New York the metal was quoted at 3.85 cents per lb. on Wednesday, against 3.85 cents a week ago and 3.85 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £15 1s. 3d. to £15 5s. per ton, compares with £14 10s. to £14 16s. on the corresponding day last week.

SPELTER.—In the absence of any favourable trade development, there was a renewed decline in the price of this metal in New York. The depreciation of sterling gave a slight stimulus to buying in London. Stocks of spelter in official warehouses in this country amounted to 21,439 tons at the end of November, against 21,766 a month ago. Wednesday's quotation in New York, at 3.125 cents per lb., shows a decline of 0.025 cent per lb. as compared with that of the corresponding day last week. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," at £14 7s. 6d. to £14 17s. 6d. per ton, against £14 to £14 6s. 3d. a week ago.

OTHER NON-FERROUS METALS.—Despite the sharp decline in the gold value of sterling, the quotation for aluminium was maintained at £95 per ton. "Foreign" antimony at £28 5s.—£28 10s. per ton, was slightly easier, and quicksilver was nominal. On the other hand, the price of nickel has been advanced from £225-£230 to £250-£255 per ton.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week November 26th to December 2nd (inclusive) are 110,356 bales, of which 51,243 bales are American, 2,765 Brazilian, 2,610 Peruvian, 1,679 Argentine, 20,174 Egyptian, 4,321 African, 2,922 East Indian, 24,360 Russian, and 282 sundries.

Manchester.—The tone of the market has been rather steadier in sympathy with the firmer rates in raw cotton. Traders have been harassed by the wide fluctuations in the price of sterling, and although the further decline in the pound favours exporters, too much nervousness exists as to conditions throughout the world for trade to be active. A considerable inquiry has been experienced in cloth for India, and a fair turnover has taken place, chiefly in light fabrics and fancies. Most of the buying has again been for Karachi. The less satisfactory conditions in China are indicated by the decision to suspend temporarily the Thursday auction sale in Shanghai. Some business has been done, however, in white shirtings for Shanghai and Hong Kong. Fine goods and fancies have attracted attention for Java, Singapore and the Straits Settlements. The offtake for Egypt and the Near East remains poor. Only scattered sales have been mentioned for South America. Although mixed reports have been received from the home trade, some manufacturers have had a good week, and even been able to extend their order lists. The threat of a labour crisis has caused much discussion, but so far the market has not been vitally affected. Rates in American and Egyptian yarns have been rather firmer, but the turnover continues smaller, and it is now very difficult to sell the present output. Home counts have been sold in retail quantities, and not much has been done in export numbers.

THE WOOL TRADE.—Bradford.—The wool market has suffered a reaction. No doubt, writes our correspondent, a big change came over the situation just prior to the commencement of the current series of London sales, and instead of big advances now being in evidence, the best that can be said about most descriptions of the raw material is that they are holding their own compared with the close of the October auctions. Financial considerations have exerted a very great influence. It is recognised by consumers that there are big supplies of all descriptions of wool in sight, and it will need no small measure of patience to lift the current New Zealand clip, and the still unconsumed surplus from last season. Meanwhile, wool is selling in London rather more freely, without any advance on the lower level seen at the end of last week. Better support is being given by the Continent, particularly Germany, than was originally expected, and the sales are at least being partially helped by the excellence of the supplies. All good greasy merino and crossbred wools are commanding considerable attention, though scouring merinos are holding their own in price. Another feature is that clothing wools, particularly of really good quality, are selling relatively better than combing qualities, which is due to the improvement in the conditions of woollen manufacture. The Bradford market is perhaps just a shade steadier. Leading top makers are refusing to accept less than 24½d. for good 64's warp.

The best feature is the continued large consumption of merino and fine crossbred qualities. Spinners are pressing for deliveries against contracts, and topmakers are hoping for a renewal of demand to enable them to get back at least a small part of the depreciation in prices seen during the past fortnight.

THE GRAIN MARKETS.

WHEAT.—The downward movement in the gold value of wheat, following the sharp advance in October-November, appears to have spent itself, while leaving quotations about 20 per cent. above the low level prevailing throughout autumn. Among the factors making for greater steadiness are the increase in buying from the Continent, unfavourable weather in Argentina, lack of rain in parts of the United States winter wheat belt, and smaller primary receipts in North America. It is also expected that China will import considerably this year. In view of these factors, to which might be added the delay caused to sowing in certain districts of Europe by snowfall, it seems improbable that the gold value of wheat will again decline to the low level of last summer. Weather conditions in this country have become unfavourable, but fortunately sowing is almost completed. The outstanding event is the announcement of Sir G. Gilmour, Minister of Agriculture, to apply the principle of a wheat quota to home-grown wheat of milling quality. The carrying-out of such a policy, though it may help the farmer, means a tax on bread. On Wednesday, "December" futures were quoted at 54 cents per bushel in Chicago, against 54½ cents on the corresponding day last week, and 64½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 36s. per 496 lbs., as compared with 34s. 3d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 32s. 6d., against 31s. 6d.; No. 3 Northern Manitoba, Atlantic, ex ship, 31s. 6d., against 30s. 6d.; Russian, on sample, 27s. 6d. to 30s., against 29s. to 31s.; Australian, ex ship, 30s. 6d., against 30s. 9d. to 33s. a week ago.

WHEAT FLOUR.—There has been less demand for flour this week, and prices were easier in New York. North American shipments, at 228,000 sacks, show a decrease of 19,000 sacks as compared with the previous week. Of this total, 79,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, 25s. 6d. last week; delivered London, 24s. 6d., against 24s. 6d. Manitoba patents, ex store, 27s. to 31s. 6d., against 26s. 6d. to 29s. 6d.; and Australian, ex store, 21s. 6d. to 22s. 6d., against 21s. 6d. to 22s. 6d. a week ago.

BARLEY.—Barley has remained relatively steady. The recent advance has been practically maintained owing to the scarcity of offers. On Wednesday, "December" futures were quoted at 39½ cents per bushel in Winnipeg, against 41½ cents last week and 43½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 48 lbs., 25s. to 26s., as compared with 25s. to 26s.; Russian, landed, 23s. 6d. per 400 lbs., against 23s. a week ago.

OATS.—There has been a decline in the price of oats used for feeding purposes during the past week, which is partly due to the continued cheapness of maize. "December" futures, which last week stood at 26½ cents per bushel in Chicago, sold at 24½ cents per bushel on Wednesday this week, against 26 cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 19s. per 320 lbs., as compared with 19s. last week; "River Plate," ex ship, 17s. 9d., against 18s.; "Chilean White," landed, 28s., against 28s. a week ago.

MAIZE.—The downward movement in maize prices continued throughout the week. Argentina is still shipping heavily, but there has been a shrinkage in demand. Wednesday's quotation in Chicago for "December" futures, at 36½ cents, shows a fall of 3 cents per bushel on the week, and one of 2 cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 19s. 3d. per 480 lbs., as compared with 18s. 9d. last week; "Plate," ex ship, 18s. 3d., as against 17s. 6d.; "Plate," December-January, 19s. 6d., as against 18s. Yellow maize meal, ex wharf, was quoted at £5 15s. per ton, against £5 17s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

WHEAT FUTURE.	Jan. 2, 1930.	Dec. 3, 1930.	Jan. 2, 1931.	Nov. 17, 1931.	Nov. 25, 1931.	Dec. 2, 1931.
Winnipeg (No. 1 Manitoba).....	148½	58½	56½	64½	60½	59
Chicago (No. 2 Winter).....	130½	76	79½	59½	54½	54
Chicago (No. 2).....						

The visible supply of wheat in Canada, at 58,742,000 bushels, shows a decrease on the week of 837,000 bushels. Supplies a year ago stood at 57,723,000 bushels.

OTHER FOODS.

SUGAR.—There has been no improvement in sugar values in terms of gold. The weakness has been caused mainly by the difficulties experienced by Cuba and Java in exporting the quotas allotted to them in the United States and in the Far East respectively. Messrs Willet and Gray's estimate of this season's world crop, which shows an output appreciably below that of last year, comes therefore as a relief. The figures are 25,925,000 tons (cane and beet) for the current season, against 28,660,000 tons a year ago. Raw sugar advanced in this country owing to the depreciation in the gold value of the £, and last week's reduction of 3d. per cwt. for "British refined" sugar was restored on Tuesday. "December" futures in New York were quoted at 1.11 cents per lb. on Wednesday, against 1.11 cents per lb. a week ago. Wednesday's sales of "raws" include "March delivery" at 6s. 10½d. to 6s. 11d. per cwt., against 6s. 6½d. to 6s. 7d., and "May," 1932, at 7s. to 7s. 1½d., against 6s. 8½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	686	1,194	904	1,310	5,048	25,362
Liverpool.....	11,360	23,645	12,109	13,033	73,503	98,356
Total ...	12,046	24,839	13,013	14,343	78,551	123,718
Last week	46,789	27,544	13,168	14,450	79,518	113,422

COFFEE.—A strong demand was experienced at the auctions last Tuesday. The prices realised were generally higher than a week ago. Brazilian, landed, 176; delivered for home consumption, 145 bags; exported, 176; stocks, 2,320 bags, against 2,174 bags last year. Central American, landed, 5,162 packages; delivered for home consumption, 1,907; exported, 2,163; stocks, 63,079 packages, against 40,745 a year ago. Other kinds, landed, 4,773 packages; delivered for home consumption, 2,689; exported, 2,013; stocks, 48,254 packages, against 49,238 a year ago.

COCOA.—In the absence of an improvement in demand the gold price of cocoa continued to decline this week, but sterling prices show a slight advance owing to the depreciation in sterling. "December" futures were quoted at 4.24 cents per lb. in New York on Wednesday, against 4.39 cents per lb. a week ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, December-February, at 24s. 9d. per cwt. f.o.b. London contract, shows a rise of 6d. Last week's movements of cocoa in London were as follows: Landed, 937 bags; delivered for home consumption, 4,204 bags; exported, 407 bags; stocks, 136,909 bags, as against 162,061 last year.

TEA.—The quantities catalogued for this week's auction comprised 52,206 packages of Indian, 17,607 packages of Ceylon, and 13,535 packages of Java and Sumatra tea. At Monday's Indian auctions common and medium qualities were well supported, Most Ceylon grades remained unchanged on Tuesday's sales, while on Wednesday there was keen competition for Indian teas and prices hardened a little. Nevertheless, tea prices generally have by no means risen in proportion to the decline in the gold value of the £. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyassa-land.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.

Nov. 12 "	0 11-67	0 11-11	1 5-73	0 8-49	0 7-46	0 6-90	1 0-35						
Nov. 19 "	0 11-27	0 11-60	1 4-68	0 9-12	0 7-45	0 6-74	1 0-03						
Nov. 26 "	0 10-86	0 11-67	1 5-53	0 8-51	0 7-81	0 6-99	0 11-83						

RICE.—Rice has suffered a slight setback this week and spot quotations were lower. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 9s. 9d. per cwt., shows a decline of 3d. as compared with last week. Movements in London during the past week were as follows: Landed, 192 tons; delivered, 80 tons; stocks, 1,834 tons, as against 2,143 tons last year.

POTATOES.—The principal markets were abundantly supplied with potatoes this week, but the recent advance in prices was maintained. At the Borough Market, "Best King Edward" sold at from 9s. to 10s. per cwt., as compared with 9s. to 10s. per cwt. a week ago.

SPICES.—The market in spices was active this week, and prices were generally higher. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a rise of ½d. per lb. on the week

Movements of pepper in London during the past week were as follows: Black, landed, 3 tons; delivered, 37 tons; stocks, 336 tons, against 523 tons last year. White, landed, 91 tons; delivered, 66 tons; stocks, 529 tons, against 338 tons a year ago.

MEAT.—No improvement has taken place in meat prices this week. Despite the further decline in the gold value of the £, Argentine beef and New Zealand mutton was slightly easier. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 3s. 8d. to 4s. 2d. per 8 lbs., against 3s. 8d. to 4s. 2d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 8d. to 3s. 2d., as against 2s. 8d. to 3s. 4d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,468 tons, as compared with 8,959 tons in the corresponding week last year. Imported beef, principally Argentine, formed 83.7 per cent. of the supplies, as against 82.5 per cent. a year ago; and imported mutton, mainly New Zealand, formed 71.4 per cent. of the total supply, as against 73.4 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Generally quiet conditions have again prevailed in the markets for oilseeds and their products. Apart from the slowness of demand business has been hampered by the wide exchange fluctuations. Linseed is firmer in consequence of the depreciation in sterling, and old Plate on spot is held for £9 15s. and afloat for £9 10s. Business in new crop for January-February shipment has been done at £8 15s. to £8 17s. 6d., but for the same position £9 2s. 6d. is now asked. The quantity afloat for Europe has been reduced to 131,000 tons, including 8,300 tons from India. The results of the harvest in the northern provinces of Argentina are reported to be satisfactory, and private estimates anticipate a record out-turn of no less than two-and-a-half million tons. Cotton seed is a poor trade and prices have sagged, but are again advanced by reason of the altered exchange. Black Egyptian on spot and afloat is quoted £6 5s. and December loading £6 7s. 6d. Hopes of an import duty on linseed oil having been disappointed there is rather more pressure to sell and prices have fallen, raw oil on spot ex Hull mill at one time being purchasable at £15. Prices have been advanced in sympathy with seed, current value being around £16, while for January-April delivery the same figure is indicated. Cotton oil is dull and crude Egyptian quoted £19 10s. and common edible £22 10s. ex Hull mill. There is no improvement in the demand for oilcakes and meals and mill prices have been reduced 5s. per ton.

HIDE, LEATHER AND ALLIED TRADES.—Although a steady demand is experienced for hides from domestic cattle, writes our correspondent, the market is not quite so firm in regard to values

PLAYER'S

despite the fact that quotations were unchanged at the sales held in Manchester this week. It would seem that for the time being, at any rate, tanners are not prepared to pay advances, and it is quite possible that some easing of values will shortly become apparent. Calfskins are likely to maintain firm figures as supplies at the moment are not large, but the demand for sheepskins is not so good, and here also lower prices are a possibility. Sales of imported hides have not been so frequent, and generally speaking there is a weaker tendency in regard to values. In South American wet salted, business has been done in Argentine ox on the basis of 5½d., while seconds have sold at 4½d. Little change has been noticed in the position of dry South American hides, and orders have been put through for M. V. Americanos at 7d., B. A. Americanos at 6½d., and Cuyabano at 5½d., while in regard to African descriptions sales have included dry Capes at 7½d. and 6½d. for first and seconds, with ½d. less accepted for dry salted 20/30 lbs. Nigerians at 8½d., and unbathed Adis Ababas at 5½d. Only small sales are being made of Australian hides and although so far there is no change in quotations the tendency is towards lower figures. Business on account of sole leather has been quiet, and it is quite possible there will be no improvement until the New Year. Shoe manufacturers have been inquiring for limited supplies of dry hide bends in certain weights, but actual sales are usually for small quantities only. In English and wet salted descriptions trade has been quiet; the bulk of the business done in these has been on account of the repairing section, which has, of late, been clip, and water off for trade. Pinned bellies and shoulders have been on the lower level seen at small. Sales of upper leathers also have been given by the Continch the bulk of the business passing on by the excellence of the supsmall quantities, in addition to which scoured merinos are commanding done in patent. Swede and reptile that clothing wools, particularly of.

Bradford market is perhaps just a s. terms of gold declined further, makers are refusing to accept less than on the week, despite the

official closing price for standard ribbed smoked sheet in London, at 2½d. per lb., shows no change as compared with the corresponding day last week. In forward positions, business has been done at 3½d. to 3½d. for January-March, against 3d. to 3½d.; and at 3½d. to 3½d. for April-June, 1932, as against 3½d. to 3½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,031 tons; delivered, 2,119 tons; stocks at the end of last week, at 129,573 tons, show a decrease of 1,088 tons as compared with the preceding week.

begin in a few weeks' time. Meanwhile money has remained extremely easy, as the War Loan dividend has only been partially re-absorbed, and the Christmas expansion in the note circulation is for the moment hanging fire. Rates running from 4 down to 3 per cent. have been common all the week, and on Wednesday, when some Irish money reached the market, money was said to be unlendable. The following day calling by one of the clearing banks made money somewhat more usable. Renewals were arranged at 4 per cent. during the whole of the week.

The discount market has again been inactive, with a very limited foreign demand for bills. Last week some special selling of February Treasuries at 5½ per cent. was reported, presumably with the object of counteracting the relaxation caused by the War Loan dividend payment. Commercial bills are still eagerly sought for in special quarters, for use as collateral against the New York and Paris credits arranged last August. "Hot" Treasury bills were dealt in at 5½ per cent., and three months' bank bills were still quoted at 5½-6 per cent. The agreement among London acceptance houses to renew German bills drawn under the standstill agreement up to February 29th is generally regarded in the market as giving Germany an additional three months' lease of credit, and also as extending the acceptor's period of risk for three months. The market continues to take such bills only at Bank rate.

The most significant feature in the Bank return is the absence of any further expansion in the note circulation. It looks as if Christmas trade is being retarded by the general lack of purchasing power and in particular by the imminence of the January income-tax payments. Elsewhere, the Bank return mainly reveals the aftermath of the War Loan dividend payments, for Government Securities, which the previous week had risen by £15.0 millions, are this week reduced by £10.1 millions; while last week's increase of £26.3 millions in Bankers' Deposits has been followed by a contraction of £11.0 millions, the latest figure being one of £75.1 millions.

	Nov. 19, 1931.	Nov. 26, 1931.	Dec. 3, 1931.	Dec. 10, 1931.	Previous Rate and Date Changed.
Bank Rate	6	6	6	6	4½ (Sept. 21, '31)
Bankers' Deposit Rate..	4	4	4	4	2½ (Sept. 21, '31)
Discount { Call	4	4	4	4	2½ (Sept. 21, '31)
Houses { Notice ...	4½	4½	4½	4½	2½ (Sept. 21, '31)
Market rate (3 months' bills)	5½-7	5½-6	5½-7	5½-6	...

The Floating Debt statement for last Saturday included advances from the Bank on Ways and Means of £2.5 millions. This looks as if on December 1st the Treasury had borrowed a fair amount from the Bank, most of which was repaid by the end of the week. The contraction in Government Securities, however, may be to a limited extent due to sales of Treasury bills by the Bank. Bankers' Deposits still remain at a relatively high level, but there are no signs that any further steps are being taken to remove money from the market. No special sales of bills could be traced this week, and only a maximum of £40.0 millions of Treasury bills are being offered this week against £45.0 millions last week.

Little significance is attached in the market to the reduction in the Reichsbank's rediscount rate from 8 to 7 per cent. It has been made in sympathy with the clauses of the latest Government decree reducing interest rates, and so is looked upon as a purely domestic event. Nor can it exercise its usual effect upon the exchanges, owing to the restrictions now in force governing transfers of funds from Germany, the artificial state of the foreign exchange market, and the virtual suspension of forward exchange dealings. Generally, the market still takes a serious view of the German outlook.

The November averages of the nine English clearing banks reveal a setback of £17.4 millions in deposits and a contraction of £5.7 millions in acceptances.

Cash is practically unchanged, and call money reduced by £5.1 millions. Discounts are a shade higher at £238.2 millions, but investments have fallen from £313.0 to £309.0 millions, and advances from £894.4 to £884.6 millions. The averages generally bear evidence of a certain contraction in credit.

New York money rates are unchanged on the week, with call rate still 2½ per cent. and 3½-3 per cent. quoted in the open market for 90-day bankers' acceptances. The arrival of a further \$1,994,000 of gold from Canada was announced on Tuesday, and earmarkings upon foreign account have decreased by \$2,000,000. Business is perhaps a little better than a few weeks ago, but there are still no signs of real recovery. The new Budget proposals include a two-cent stamp upon cheques, and it will be of interest to see what effect this has on the quantity of currency in circulation.

The foreign exchange market was inactive this week, and fluctuations were less violent and between narrower margins than of late. Sterling was again weak against the principal currencies, but closed better than the levels touched towards the middle of the week. The New York rate went from 3.38 to 3.30, after touching 3.23. Montreal moved in our favour to 3.97. Paris, after falling to 82½, went to 84½, against 85½ last week. Milan improved by 1½ points to 64. Madrid was fractionally better at 40½. Amsterdam gained ½ at 8½, and Berlin ½ at 14, after 14½. Switzerland improved by ½ to 17. The Scandinavian exchanges all moved in our favour from their last week's common level of 18.10, Stockholm and Copenhagen going to 18.15 and Oslo to 18.25. The quotations for South American currencies were still largely nominal, Rio being better at 4½d., as was Buenos Aires at 41d., while Montevideo was unchanged at 31½d. In the Far East the rupee was better by ½d. at 1s. 6½d., as was the yen by ½d. at 8s. as a result of the weakness in sterling. Batavia was at 8½. In the forward market, New York was quoted at ½ cent and 1 cent premium. Paris at ½ franc and ¾ franc premium was rather weaker than last week. Brussels followed Paris and declined from ¾ to ½ belga premium for one week and from ½ to ¼ belga premium for three weeks. Milan was fractionally weaker at ¾ lira and 1½ lire discount, but Madrid improved from ½ peseta and ¾ peseta discount to ¾ peseta and ¾ peseta discount for one and three months respectively. Amsterdam was at 1 cent and 3 cents premium, exactly half of last week's quotations in each case. Berlin was again not quoted, and Switzerland remained at last week's level of par for one month and ½ franc premium for three. Silver prices rose by ½d. to 19½d. for cash, after touching 20½d. and by the same margin to 19½d. for forward, after touching 20½d. as a result of some speculative and general buying and little offering. The China silver exchanges rose in sympathy, Hong Kong from 1s. 4½d. to 1s. 5½d. and Shanghai from 1s. 10½d. to 1s. 11½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Beaufort Street, London, E.C.4.

THE FIRST ROUND.

THE first session of the new Parliament, which is closing as we write, has lasted five weeks—a short spell for a normal autumn session, but too long under the abnormal circumstances of to-day. For we live in times when the whole attention of the Executive needs to be concentrated upon economic and financial problems of unprecedented complexity. In saying this we do not mean that Parliament should abrogate its ultimate responsibility for the policy of the country—far from it. It is more necessary than ever before that the vital decisions which our rulers have to take should receive the sanction of the elected representatives of the people. Nevertheless, it has become clearer every day that this session has lasted that the House of Commons has been operating as a hindrance, rather than a help, to the Government in framing a policy suited to the needs of the domestic and the international situation. The arrival of the Recess is welcome, not because wholesome Parliamentary criticism is silenced, but because Ministers, upon whose shoulders rests a responsibility for difficult decisions, which must be arrived at in the interests of the nation as a whole, are given a respite from the harassing daily pressure of relentless partisans.

It is a truism of British Parliamentary history that huge majorities never make for effectiveness; and certainly the present House of Commons provides no exception to that rule. The Cabinet have, on the whole, shown recognition of the fact that, on October 28th, the electorate voted "national" and not "party." Both the Prime Minister and Mr Baldwin have kept the national aspect of the Government in the foreground, while the Liberal Ministers (and, on the whole, their followers) have, in the cause of unity, shown a forbearance which extends even to acquiescence in the breach of long-cherished principles. Unfortunately, neither the loyal correctitude of Mr Baldwin and his Conservative fellow-Ministers nor the forbearance of the Liberals has found any adequate counterpart among the Conservative rank and file. Even the Chairman of that Party has given Mr Baldwin the lie direct by claiming that the country has given "a mandate for Tory policy," while the incessant anti-Government agitation stimulated by the Press Lords and carried on at Westminster by groups surrounding the persons of Mr Churchill, Mr Amery and Sir Henry Page Croft forms one of the least creditable episodes in the political history of this century. So far the Government have triumphed against the forces of disruption. But how long can they prevail? The autumn session ends on that disquieting note of interrogation. The Government have won the first round in the fight against the high Protectionists—but they have only won on points.

As to the work of the session, apart from routine and a curiously unnecessary controversy over the passing of the Statute of Westminster, two topics have completely monopolised the time and attention of the House—namely, tariffs and India. A full-dress debate on India in both Houses, following the Prime Minister's statement of policy, found Parliament at its best. Although Mr Churchill, in the Commons, and Lord Lloyd, in the Upper House, led the reactionaries in a much-advertised attack and sought to annul the good work by which Mr MacDonald and Sir Samuel Hoare rescued the Round Table Conference from disaster, Parliament triumphantly and overwhelmingly reaffirmed the determination of Britain to redeem her pledges and to press forward through a sea of difficulties to the fulfilment of India's ambition for self-Government. On the tariff discussions a similar story cannot be told, and at times both the Government and the House of Commons have been seen at their worst. Harassed by party pressure, which should not have been exerted upon a national Administration so recently given a free hand by the electorate, Mr Runciman and his colleagues were soon driven into dubious courses.

We do not cavil at the introduction by the Government of a Bill to give the Board of Trade power to impose duties up to 100 per cent. on imports, if exclusion proved, after

the fullest consideration of our balance of payments and the movement of the exchanges, to be the only way temporarily to apply a quick enough check to dangerously extreme depreciation of the pound sterling. To take such powers was in keeping with the doctrine of the free hand, and the Bill itself was devised to meet a possible emergency which, in the view of a large number of people, both in Parliament and outside, might occur, and occur suddenly. It is rather with the method chosen for the utilisation of these powers that we find fault. Had Mr Runciman, in composing his list of "unessential" imports, or of those in whose cases he considered an immediate check to be necessary, pursued the method of applying the full 100 per cent. duty, he would have shown the world that he was merely indulging in a temporary emergency measure which had no relation whatever to permanent fiscal policy. But by adopting the rate of 50 per cent. and imposing it on a wide range of imports, he has aggravated the fears of foreign countries that Britain has really embarked on a high Protectionist policy, and this false step has already produced two serious results. The first is that the heightened belief abroad in the imminence of British Protection automatically stimulates the efforts of foreign exporters and home importers to forestall threatened duties. Secondly, the conception of his action more as a first step than as an emergency measure has led to vigorous retaliation on the part of countries whose interests are damaged, and, for the moment at any rate, the tariff war in Europe has been intensified and embittered. Moreover, in his choice of goods Mr Runciman has not always been happy. Even if one were to grant the necessity for checking the flow of certain goods in the present abnormal circumstances into this country, it would not be easy to condone the inclusion in the lists of dutiable goods a number of articles which are primarily used as raw materials, of which woollen and worsted yarns are the most conspicuous example.

The fact, however, is, and we trust that in spite of present tempers the truth will be realised abroad, that the future fiscal policy of Britain has not yet been decided. Realisation of this fact should be rendered easier by the Cabinet's firm refusal to be hustled by noisy clamour into the hasty adoption of Protective measures for the basic industries of iron and steel and cotton. Having resisted this clamour, it may be said of Mr Runciman and his colleagues that, although they may have queered the pitch, they have by no means sold the pass. In the crucial international conferences which lie ahead, and in which tariff discussions will play a vital part, Britain's National Government retains its complete freedom of action. It would, however, be idle to pretend that time does not press or that, unless it can be shown that there is some progress in Europe towards a wide adoption of economic policies calculated to remove the present trade paralysis and revive the shrinking volume of international commerce, the clamour in this country for the adoption, not merely of fiscal Protection, but of other policies of economic nationalism, may not become irresistible. Parliament is to reassemble on February 2nd. The future course of the economic history both of Britain and of Europe depends in no small measure on what happens in the interval.

Upon the developments in this short period also depends the fate of the Government. Is its life to be reckoned in months or years? An early break-up of the National Government, called into being by the instinctive voice of the nation to tide the country over a supreme emergency, would mark the biggest failure in the history of British democratic institutions, and to those who would lightly risk such a calamity we would recommend a little hard thinking. Obviously, there must be a limit to the price which the "moderates" in the Cabinet are prepared to pay for unity; and, if the National Government were to split up under pressure, what next? Presumably, either a Dissolution and all the accompanying danger and disturbance of another election; or a Conservative Govern-

ment under the guidance of those who, in the past critical month, have shown themselves narrow in vision and reckless in tactics. In the latter case the result, in our view, would be a serious decline of England's world prestige, an intensification of all the ills from which Europe is suffering, including especially the strangling of trade between nations, and at home, in all probability—and perhaps this thought may shake the nerves even of the Conservative rebels—a swing of the political pendulum which would, in a short time, send the Conservative Party indefinitely into the wilderness. Those who retain in these mad times an instinctive belief in the underlying political wisdom of the British people will not yet bring themselves to believe that 1932 will witness so tragic a failure on the part of our political leaders.

THE STANDSTILL AGREEMENT.

WHILE the Advisory Committee, convened in accordance with the Young Plan, has begun this week at Basle its deliberations on Germany's external indebtedness from the angle of her reparation liabilities, an international Committee representing Germany's short-term banking creditors has proceeded to Berlin, after some preliminary meetings in Paris, to consider the policy to be adopted when the "standstill" agreement expires on February 29, 1932. Since the attitude of all foreign bankers to whom German banks or firms are indebted on short-term must be contingent on a general settlement of Germany's future liabilities, including her political obligations, it is obvious that any decisions now taken by the Committee are likely to be of a provisional nature dependent on the results of the conference of Governments whose assembly is foreshadowed after the Young Plan experts have presented their report. Next to nothing has so far emerged in the Press with regard to the course of the bankers' negotiations, and though statements more or less well-informed have been published suggesting that this or that section of the Committee has been inclined to press for such and such a rate of repayment of the now "frozen" indebtedness or for the prior claims of particular forms of credits, all such considerations of detailed technique are clearly at present premature. The main issues on which the bankers have in the first instance to make up their minds are of a much more general nature.

To begin with, it is necessary to bear in mind that the question of Germany's short-term indebtedness, and the steps which have been taken, and may have to be taken to deal with it, are single aspects only of a much wider problem which arises in connection with the liabilities of the great majority of the world's debtor countries. The roots of this problem of "frozen" credit, which extends far beyond the bounds of Central Europe only, are to be found in a whole nexus of causal factors—political obligations, high tariffs, rigidity of the structure of prices and wages, loss of mobility of capital and, finally, growing illiquidity in creditor countries themselves. As matters stand, to suggest that a short-cut solution is to be sought along the lines of a sudden reversion to *laissez-faire* is politically and psychologically out of the question. Except on the vast assumption that the conditions precedent of free trade, mobility of capital and labour, abolition of foreign exchange restrictions, etc., could be immediately realised without friction, unrestricted application of the traditional nineteenth century purge of bankruptcy might, under present conditions, lead to economic disturbances so violent that democratic governments could hardly be expected to contemplate them. But if, for these reasons, it is essential to think ahead in terms of collective agreements for the regulation of outstanding credit, it is none the less desirable that we should consider carefully what are the eventual implications of this policy.

"Standstill" arrangements, of which the German *Stillhalte* is so far the most notable example, represent, when all is said, a remarkable, and in some ways disquieting departure from the classic system of individual relationships between creditor and debtor on which the modern world's economic structure has hitherto been developed. To-day, so far as international finance is con-

cerned, banking creditors are being constrained to think in terms not of individual debtors, but of communities accidentally encircled by a political frontier. In this conception of commercial obligations several obvious disadvantages arise. In particular, there is inevitably a tendency for the least solvent debtor to play too large a part in determining the credit-worthiness of a nation, and for sound potential debtors to be debarred from access to fresh credit facilities by the fact that credit has become immobilised by unsound debtors. Thus, on general grounds, we suggest that though instant reversion to individualist freedom in the sphere of international finance is not practical politics, the aim should be to avoid as far as possible courses obstructing gradual progress towards a return to greater freedom and elasticity.

We have emphasised these considerations because they appear to us to be relevant to all negotiations with reference to the future of the short-term capital now immobilised. In the case of Germany—and this, *mutatis mutandis*, applies to every debtor country—the further question has to be decided by banking creditors whether the objective is to re-establish credits at a level calculated to facilitate the maximum expansion of international trade or whether the aim is to be a general liquidation of the credit system to which the world has been accustomed in the past half century. To a large extent the answer depends on the actions of statesmen. If political relationships internationally are to be such that there can be no revival of confidence in international lending, then there is no option for the world but "economic nationalism" in finance, which must result in a universal degradation of material standards. But if the obstacles, whose removal lies in the competence of statesmen, are got out of the way, it is of prime importance that the givers of credit should envisage their policy in terms of the maintenance of maximum facilities to sound borrowers, and not of their progressive contraction. However weighty, for example, may be the reasons prompting, say, American banks to desire to "shorten sail" in their international short-term commitments, undue insistence on this policy would lead inevitably to greater impoverishment of the world.

How do these general principles apply to the particular case of the German "standstill" agreement, whose future after the end of February is to-day under consideration in Berlin? The broad elements of the problem are by now sufficiently familiar. Allowing for the milliard of reichsmarks estimated to have been repaid by Germany to foreign creditors since July, German short-term indebtedness amounts to about 11 milliards reichsmarks, of which about one milliard is due to the B.I.S. and other central banks, while some seven milliards are believed to be owed by German banks and firms to commercial banks abroad and are covered by the *Stillhalte* agreement. The remainder may be taken as representing the short-term legal liabilities of German debtors to other non-banking foreign creditors, though the question naturally arises of the extent to which the beneficial holders of these liabilities are foreign affiliates of German concerns. The banking credits are obviously of major importance, and these may be classified roughly under three heads:—

- (1) Self-liquidating credits based on actual goods forming part of Germany's foreign trade.
- (2) Self-liquidating credits based on actual goods whose movement is internal to Germany.
- (3) Credits utilised in the development of Germany's industrial production and in other forms of capital investment (including municipal borrowing), with the intention that they should be subsequently funded. In this category may be included advances which, in course of time, or by the force of events, have been relegated from categories (1) and (2) to that of pure finance bills.

This summary analysis represents, it should be appreciated, the existing situation of Germany's foreign credits rather than their original allocation. That is to say, it does not attempt to distinguish between direct credit lines opened in favour of individual German concerns and advances made in the first instance to German banks; nor does it attempt to differentiate between acceptance credits and time deposits. Within its limits, however,

it prompts the reflection that whereas category (1), involving no transfer problem, would be easiest of repayment, contraction of credit under this head would do the maximum harm to international trade. On the other hand, liquidation of credits under category (2) might be such a strain on the mark exchange, if the proceeds were transferred abroad with any rapidity, that the security on which category (1) reposes would thereby be impaired. In the case of category (3), funding in some form—so far as individual debtors may be solvent—appears to be the only possible course.

The amount of money involved in each of the three above categories has not so far been revealed, but it is probable *prima facie* that if it were thought advisable to wait for a year or two before attempting the refunding of category (3) credits, the problem of nursing temporarily this particular amount of immobilised advances—reduced, it may be, by a percentage of losses "written off"—would not be insuperable. With regard to the other two categories, an estimation to-day of Germany's future short-term credit needs depends on the incalculable factor of Europe's international trade future. On general principles we would suggest that financial policy should be directed to concentrating primarily on the maintenance of facilities under category (1) and to securing the contraction to what may be regarded as safe limits of the liabilities covered by category (2). It would seem advisable, however, that pressure should be confined in the first instance to their liquidation into reichsmarks whose transference abroad should be conditional on the situation of the Reichsbank, with which realised proceeds of credits called in might well be deposited.

To some extent, it is true, the question of partial repayment of the least indispensable of Germany's practically recallable short-term credits must depend on the needs of the creditors themselves, and it may be presumed that banks who have been inclined in the past to make advances "on trust" will feel themselves entitled to insist upon more specific security. Where assets have evaporated, losses may have to be faced. To seek an undertaking whereby the debtor community guarantees every individual debt would be mistaken policy, since it would impair the future credit-worthiness of sound potential borrowers. The question of "pooling" losses among creditors is obviously one for individual market arrangement. But, first and last, it is essential, we feel, that so far as possible Germany's foreign short-term creditors should endeavour to avoid a rigidly mechanical plan for the solution of their problem and should aim gradually at restoring the maximum elasticity of individual relationships between debtor and creditor. As matters stand to-day, the position and the outlook are so obscure that a plan based on fixed arithmetical calculations of future periodic percentage repayments might either result in harmful and unnecessary contraction of credit or in failure to save the creditors from enormous losses should their policy be interpreted as one of "putting in the broker's man." For, apart from all the minor questions of detail on which the Bankers' Committee will doubtless be deliberating (*e.g.*, whether it might be desirable that time deposits should have priority of repayment over acceptances in the interests of liquidity in creditor countries), the essence of the situation, as we see it, is that the problem of the *Stillhalte* agreement is by no means of unmanageable proportions, always given the one essential requisite of confidence that Germany will not be forced by her aggregate foreign liabilities of all sorts into a general moratorium or currency collapse. If that condition of confidence cannot be realised, the Bankers' Committee is wasting its time, for its problem admits of no solution.

THE POLITICS OF ISLAM.

ISLAM, like our own mediæval Western Christendom, is a political as well as a religious society. The Caliphate, which stands (or, rather, stood) for the unity of Islam, is a temporal office—the Caliph being the Islamic counterpart of the Holy Roman Emperor and not of the Pope. In contrast to this once actual and latterly

theoretical unity of Islam on the political plane, which the Caliphate embodied, Islamic unity on the religious plane has rested on the much looser and more casual basis of a *de facto* consensus among the doctors of the religious law. Whereas, in mediæval Western Christendom, the Papacy was the effective force and the Empire the shadow, in Islam the relative efficiency of the temporal and spiritual institution has been reversed.

It will be seen that there is some ground for regarding Islam as a political society first and foremost, and a militant society into the bargain. If we turn back to the founder's career, we find that Muhammad lived through years of frustration and adversity as a prophet without honour in his own country; and that his success began when he accepted an invitation to leave his native Mecca for the rival Medina and to divert part of his attention from theology to politics. At Medina, he performed brilliantly what had been asked of him. He created a polity out of a political vacuum, and he made full use of the military power which this political achievement placed in his hands. Before he died, he had imposed his will on Mecca by force of arms; and his Arabian principality became the nucleus of an empire which, under the Umayyad Caliphs, expanded to Morocco and Portugal in one direction and to Kashgar and Sind in the other.

Is Islam capable of repeating the military and political achievements which it performed in its youth, during the first century after the Hejira? This question is implicit in the word Pan-Islamism—a word which has been coined within the last half-century in order to express certain supposed Islamic aspirations and certain corresponding Western anxieties. The modern empire-builders of the West, while they have been extending their dominions far and wide over Islamic populations in Europe, Asia and Africa, have been haunted all the time by an uneasy feeling that they were challenging a tremendous latent social force which might one day erupt again and overwhelm the rash intruders upon the Islamic domain. In the Western mind, Pan-Islamism has figured as a bogey of the same tribe as Pan-Slavism or the Yellow Peril or the Rising Tide of Colour or the Jewish Hidden Hand. In Muslim minds, on the other hand, Pan-Islamism has been essentially a movement of self-defence. During the century which ended in the Great War, the Muslims were finding themselves worsted everywhere by Western aggression; and, in face of this formidable external danger, they have instinctively closed their ranks, as a herd of buffalo bunch together, heads outward and horns down, when attacked by a tiger. In such circumstances the herd-instinct naturally asserts itself. There is a sense of there being a strength in union and a safety in numbers; and Islam lends itself readily to a movement of this kind; for uniformity and fraternity are its key-notes. Islam is a brotherhood embracing millions of human beings of all races in three continents.

This aspect of Pan-Islamism as an instinctive mass-movement for self-defence is the reality. The Pan-Islamic bogey of Western scaremongers is a hallucination. It is not until we have dismissed this mirage from our minds that we can understand the contemporary politics of Islam as these have developed in our day, and especially during these "post-war" years.

When we look at the landscape of the Islamic world as it now presents itself, we at once notice certain striking contrasts. To begin with, there is a solid core of the

Islamic world, from Egypt to Afghanistan and from Arabia to Turkey, in which the Muslims are obviously masters in their own house. In this region regarded as a whole—and we shall notice certain exceptions in a moment—the Muslims constitute an overwhelming majority of the population, and most of these predominantly Muslim peoples and lands are politically independent already or else are well on their way towards independence at the present time. This solid core of Dar-al-Islam—compacted of Turkey, Persia, and Afghanistan and the Arab countries of Asia, with an African bridge-head in Egypt—presents a remarkable contrast in every way to the scattered fringe or penumbra of Islam around it: a Muslim fringe which extends in a vast circle from North-West Africa through Tropical Africa, India and Indonesia, China and the U.S.S.R., to the Balkans. These Muslims of the fringe are more numerous in the aggregate than the Muslims of the core; but they are everywhere under non-Muslim rule, and in many places—e.g., in Yugoslavia and in India and in European Russia—they are also a minority among the local population. This pronounced difference in situation and in circumstance between the Muslims of the fringe and the Muslims of the core is reflected in their respective political outlooks.

Broadly speaking, one may say that Pan-Islamism is the political creed of the fringe, while the Islamic peoples of the core have become converts to the neo-pagan polytheistic community-worship which has spread over the modern world from the West and which is commonly known as Nationalism. The reason for this differentiation of outlook between the two portions of Islamic society is not far to seek. It is in the fringe, among non-Islamic majorities and under non-Islamic regimes, that the sense of pressure and danger from alien aggression is the most acute; and it is here, therefore, that the Pan-Islamic manifestation of the herd-instinct on the defensive is most evident. At the opposite end of the scale we see Turkey assured of her power to hold her own under the strenuous conditions of the modern world since her victory over the Greeks—and over the principal Allied Powers incidentally—in the War of 1919-1922. In this assurance Turkey has thrown the cumbrous panoply of Islam aside. She has turned herself from a monarchy into a republic, abolished the Caliphate (which had been arrogated by the Ottoman Dynasty for the last four centuries), disestablished Islam, and in fact reconstituted herself as an *état laïque* on a purely Turkish national basis and a purely Western cultural basis, in the image of modern France. Between these two extremes we see the Indian Muslims hesitating in a choice of incompatible policies: on the one hand a policy of maintaining their solidarity with their fellow-Muslims outside India as a makeweight against the superior strength of the Hindu majority in India itself; on the other hand, a policy of trusting in their own strength to hold their own in a self-governing India.

Thus we see two movements, the Pan-Islamic and the Nationalistic, contending for the mastery of the Islamic world. Which of the two seems the more likely to prevail? Since the war the nationalistic movement has been unmistakably in the ascendant; and it has certain advantages over the Pan-Islamic which are likely to be decisive. It has the supreme advantage of being in harmony (a most pernicious unison) with the general spirit of the age, whereas Pan-Islamism is more and more losing its hold as the pressure upon the Islamic world from the West, which originally called Pan-Islamism into existence, is becoming less and less insistent.

The present weakness of Pan-Islamism was revealed at the Caliphate Conference, which met in Cairo in 1926 in order to consider what should or could be done to fill the void created by the Turkish Government's revolutionary step of abolishing the Ottoman Caliphate in 1924. The abolition of the Ottoman Caliphate had given Islamic society a shock, especially on the fringes, yet this Caliphate Conference assembled and dispersed without anything practical being accomplished.

This week another general Islamic Conference has opened its session at Jerusalem; and it will be interesting to see whether this latest attempt at keeping a Pan-Islamic spirit alive fares any better than its predecessor

fares five years ago. The place of meeting is well chosen, for Jerusalem is the next most holy city of Islam after Mecca and Medina; and, moreover, Palestine is the only piece of solid central core of the Islamic world in which the Muslims are, or at any rate feel themselves to be, threatened seriously now with the prospect of a permanent alien domination. On this account, one party among the Palestinian Arab Muslims, with the Mufti of Jerusalem at their head, are making a deliberate attempt to create, in Jerusalem, a social and religious centre for the whole Islamic world, in the hope that, in their struggle with Zionism, they may have at their backs the full force of Islam, as the Zionists, on their side, are backed by world-wide Jewry. This is an intelligent move, but it has great difficulties to contend with: the personal feuds among the Palestinian Muslims themselves; the jealousy of the theological university of Al Ashar at Cairo, and the hostility of the nationalists in Islam, first and foremost the Turks. The Turkish Government has actually sought and obtained assurances from the British Government, as Mandatory Power in Palestine, that, in this Jerusalem Muslim Conference, no questions that are controversial in a political sense will be discussed; that no action likely to disturb Turkey will be permitted; and that the question of the Caliphate will not be raised. This Turkish *démarche* is another indication that the days of Pan-Islamism are numbered; for a house that is so deeply divided against itself can hardly stand.

BRITAIN'S BALANCE OF PAYMENTS.

WHEN the National Government were seeking the suffrages of the electorate, their plea for a "free hand" to concert means for securing the stability of sterling was based on the assumption—indeed, the explicit assertion—that, on assuming office, they would make it their first pre-occupation to study our national balance of payments, in order to see whether, in the last resort, restriction of imports by tariffs ("not excluded" from their prospective purview) might be required in order to save the pound from dangerously extreme depreciation. The election won, the implied procedure has been curiously reversed. Tariffs we have had; but, in contrast with the vociferous applause which has greeted each new Abnormal Importations Duty, the Cabinet's lucubrations in the matter of our balance of foreign payments have been conducted in a secrecy impenetrable, apparently, by the brightest of our Lobby Correspondents, inviolable even by the lordliest of our ultra-patriotic Press magnates.

This reticence, however greatly we may value the silent service of the Departments, has its disadvantages. For, earnestly though the Board of Trade may be striving to supply the Cabinet with the most reliable of data for its painstaking consideration, the absence of any official pronouncement has allowed full play for the creation by our restrictionist politicians of a "myth," based on questionable evidence, which the public is in danger of accepting as a statistically established, incontrovertible fact. Our debit balance of transactions, we are told, will amount in 1931 to £100 millions (Lord Brentford, reluctantly relinquishing the meticulous accuracy of pounds, shillings and pence, has fixed it *ex cathedra* at £120 millions); and on this so-called "deficit" the whole case for trade contraction is made to repose. What form of capital transaction has filled this apparent gap? To this question our political pundits have vouchsafed no answer. Since we have raised no long-term loan abroad, they presumably mean (unless they conceive a nation's debit balance of payments to hang *in vacuo* as a depressing weight on the foreign exchange market) that we have borrowed (net) this sum on short-term account during the calendar year, or that individual British residents have—for reasons of their own—sold this amount of foreign investments since last January. Weighing all the considerations, and taking into account both the withdrawals of short-term balances from London and the transference of sterling into dollar and franc obligations represented by the Bank of England and Treasury borrowings last August, this hypothesis is *prima facie* extremely improbable. For though we were probably

borrowers (net) of a considerable sum on short term during the first six months of the year, the process, since July 1st, has almost certainly been reversed to a substantial degree; and there is no compelling evidence whatever to suggest that there has been any large-scale repatriation of our overseas investments.

Premising, then, the inherent improbability of the figures whose repetitive assertion has been used to justify a revolution in our fiscal policy, we may proceed to examine such data relating to our balance of foreign payments as our statistical organisation provides. Lean harvest, we are forced to admit. For the estimates of our 1931 "deficit" depend largely on the 1930 calculations of the Board of Trade with reference to our "invisible" exports; and those calculations, as the Macmillan Committee ruefully discovered, admit a margin of error and guess-work so large that little confidence can be placed in exact deductions drawn from their conclusions.

With this general reservation, we suggested three months ago (*Economist*, September 12th, p. 463) that, leaving out of account our exports of gold, our 1931 balance of transactions might result in a debit balance of £50 millions. To this preliminary forecast we return; and we propose to consider the various items in greater detail. As a starting point we may take the visible adverse balance of merchandise trade, which amounted in the first eleven months of this year to £369 millions, as compared with £341 millions in January-November, 1930. (Against this we had net exports of £28 millions, as compared with this we had net imports of £12 millions, of bullion.) From this we turn to the "invisible" items, which may conveniently be dealt with in inverse ratio to their quantitative importance.

(1) *Excess of Government receipts*.—In 1930 net Government receipts were officially computed at £21 millions, as compared with £24 millions in 1929. In 1931, allowing £5 millions for the loss on balance in the calendar year under the Hoover moratorium, we may reduce this figure to £16 millions.

(2a) *Net receipts from short interest and commissions*. Here we enter into the jungle of imponderable uncertainties. The Macmillan Report urged the need of the collection of figures of foreign bills and balances as a basis for estimation. Pending the publication of definitive official data in this connection, all that can safely be done on the strength of probability is to scale down the official estimate of £55 millions for 1930 (against £65 millions in 1929) to a guess of £40-45 millions (we cannot allow accurately for defaulted acceptances) for 1931.

(2b) *Miscellaneous receipts*.—This estimate is almost incredibly haphazard, since it takes no account of such important items as our net debit balance in payment of cinema royalties, and makes no real attempt to assess the positive and negative balances arising from tourists' expenditure. The official estimate for 1929 and 1930 was a credit of £15 millions. For 1931 we may be safer in tentatively hazarding a figure of £5-15 millions.

(3) *Net national shipping income*.—Here we dive still deeper into uncharted seas of conjecture. Based apparently on a prolongation of a rather crude and precarious computation, made years ago, and never pretending to assess the actual amount of currency earnings converted in a particular period into sterling, the 1930 official estimate of net shipping earnings was £130 millions in 1929 and £105 millions in 1930. Writing in September, we suggested that in 1931 this credit item might fall to £80 millions. Since then Suez Canal dues have been reduced, while sterling freights for whole cargoes have risen by 10-15 per cent. Making due allowance for the unemployment of cargo tonnage and the contraction of revenue from passengers, we may perhaps estimate this item for 1931 at £85-90 millions, with the reservation that there is probably a margin of error of £10 millions in either direction.

(4) *Net Income from Overseas Investment*.—As the Macmillan Report pointed out, the official estimates of this predominantly large item in our invisible exports have been subject to disconcertingly frequent and large revisions after publication. The most recent Board of

Trade figures appear to be an incrustation of many years' guess-work grown over an antiquated private estimate of British capital abroad. The estimate for 1929 was £270 millions (scaled down from an original figure of £285 millions) and for 1930 it was £235 millions; but it has never been clearly explained whether these estimates make allowance or not for the accretion of the overseas reserves of British companies or for repayments of capital.

As an alternative basis for estimation there are, however, the useful figures published by the Board of Inland Revenue, which have received less attention than they deserve. We give below the latest available return (i.e., that for 1928-29), adding for purposes of comparison the results of the 1927-28 sample inquiry published in these columns on November 1, 1930, and the calculations relating to 1929 published recently by Sir Robert Kindersley.

Class of Investment.	Inland Revenue, 1928-29.	<i>Economist</i> , 1927-28.	Kindersley, 1929.
	Mn. £	Mn. £	Mn. £
Overseas Governments ...	63.6	63.6	58.2
Overseas Municipalities ...		6.1	6.4
Companies not registered in Britain	45.2	56.7	61.7
Companies registered in Britain	130.0	65.3	86.0
Unlisted securities and other interests		70.0	19.0
Total	239	254	231

The Inland Revenue figures refer to *income*; the others exclude *undistributed profits*. Examination of our statistics of distribution of company earnings suggests that, making allowance for remittances to meet London office expenses, etc., we should "write up" the *Economist* and the "Kindersley" figures by £20-30 millions to make them comparable with those of the Inland Revenue. In the next place, it should be appreciated that the figure of £45.2 millions in the Inland Revenue return refers only to income paid through paying agents in this country, while the total excludes income arising from operations overseas of companies operating mainly at home. The addition to be made on this account may be put at perhaps £20-30 millions. Finally, though the income derived from unlisted securities, bearer bonds, real estate privately held and so forth is necessarily conjectural, we incline to the view that the "Kindersley" figure is considerably too low, whereas the *Economist* estimate was stated at the time of publication to be an "upper" figure.

Making the various adjustments indicated above, we arrive tentatively at the conclusion that the probable figure of gross income applicable more or less indifferently to 1928 and 1929 lies between the limits of £260-280 millions. To arrive at the balance of payments figure we may perhaps deduct £15-20 millions on account of interest and dividends on foreign investments in Britain, leaving £240-265 millions *net*.

Coming to later years, we have the Board of Trade estimate that net income from overseas investments declined in 1930 by £35 millions, and the suggestion of Sir Robert Kindersley that the fall between 1929 and 1931 may be expected to be "something like £70 millions." With regard to 1930 we are inclined to consider the official calculation an overstatement of the drop, which appears more likely to be of the order of 10-12 per cent.—say, £25-30 millions. In respect of 1931, defaults on Government bonds and other fixed-interest securities have not had an enormous effect on the income (perhaps 40 per cent. of the total) from these sources. On variable dividends (particularly those of plantation companies) and on other items the loss has been severe; but we see little reason to modify substantially the suggestion which we made last September, that the total fall under all heads would be of the order of at least £50 millions. We are inclined, having regard to the width of error possible at the margin, to hazard a figure of £45-55 millions. This gives us an aggregate decline of £70-85 millions since 1929, as compared with Sir Robert Kindersley's suggestion of about £70 millions.

We may now attempt to gather together these tentative conclusions in summary form, premising (i) that, as regards merchandise trade, "forestalling" imports, pro-

voked by our Protectionists' clamour, have added a complication which otherwise we might have avoided; and (ii) that though bullion imports and exports are strictly not eligible for inclusion in an income account, they may legitimately be included—as the Board of Trade does, and as we do below—when the object of inquiry is to ascertain how far excessive demand for *devisen*, arising from a debtor balance, is straining the sterling exchange.

ESTIMATED BALANCE OF PAYMENTS. (£ Millions.)

	1929. 366	1930. 392	1931. 380-385
Excess of visible imports			
Balance of Govt. transactions	24	21	16
Net shipping income	130*	100-105	85-90
Net income from investments	240-265	210-235	155-190
Finance Commissions and Miscellaneous	80*	70*	45-60
Total invisible exports	474-499	401-431	301-356
Balance of transactions.....	+ 108 or + 133	+ 9 or + 39	- 24 or - 84

* Official figures, probably including a margin of error though included here, *faute de mieux*, as approximations without upper and lower range.

We make no claim that this table presents anything like a closely accurate picture of our balance of payments. All that it purports to do is to indicate what, in our judgment, are the approximate limits of probability. The very fact that the data are so flimsy, and the margins of error so wide, reinforces powerfully a plea which we would strongly urge, that the Government should institute, if they have not done so, a searching inquiry into a vital matter which should long ago have been put on a sounder statistical basis. If our estimates contain a kernel of truth, and our debit balance of payments in 1931 lies—perhaps about mid-way—between £20 millions and £80 millions (and in view of the probable “swing-over” of tourist expenditure our estimate for 1931 may overstate the deficit as easily as that for 1930 may exaggerate the surplus), the alleged necessity for rushing through measures of trade contraction is strangely unconvincing. For the further factor has to be borne in mind that this year new issues in the London capital market on overseas account will probably be of the order of £50 millions, as compared with something like £100 millions in 1930 and £90 millions in 1929. When allowance is made for this, it is questionable whether the pressure on the pound would have been as great in 1931 as in 1930, had it not been that the influx of short money which enabled us in the former year to lend very much more than our apparent credit balance was converted by the world crisis into the efflux which drove us off the gold standard.

The behaviour and prospects of the sterling exchange are by no means matters for satisfaction or complacency; but, in the din of tariff importunities, sense of perspective and sanity with regard to our balance of payments are being lost. Apart from the fact that such relatively small debtor balance as may temporarily exist is due predominantly to the decline in the income from overseas investments which protectionism in this country would gravely jeopardise, panic use of restrictionist measures is being justified on grounds which wholly overlook the corrective effects of the depreciation of sterling, and which appear fantastically to assume that our reduced ability to obtain short credits and our investors' loss of income from abroad will not inevitably result in checking our foreign purchases. To clap on tariffs and justify them by reference to an unproved figure of £100 millions “deficit,” and to allow that figure to become a popularly accepted “myth,” is scarcely the part of statesmanship or honesty.

CANADA'S RAILWAY PROBLEM.—II.

A previous article appeared in our issue of November 28.

At the end of 1930 the Canadian National Railways reported gross assets of \$2,344,690,787, and on this huge sum it was able to report earnings of \$26,510,957, or less than 2 per cent. Allowing for provision for all charges, including interest on advances from the Federal Treasury,

there was a deficit of \$61,287,201 on the year's operations. The Canadian Pacific Railway, on its balance sheet at December 31, 1930, showed gross assets of \$1,371,969,694, and its gross income for the year (including special income, part of which was drawn from surplus) was \$58,291,581. After providing for all charges, including the old dividend of 10 per cent. on the common stock, there was a surplus for the year of \$133,186. The Canadian Pacific thus made much the better showing, but the returns of both railways could only be considered unsatisfactory in relation to the invested capital, as shown by their respective balance sheets.

The C.P.R. owes its relatively better position to its greater ability to cut expenditure. The following table reveals what it has accomplished in this direction in the last three years:—

	C.P.R.	
	Maintenance of Way and Structures.	Maintenance of Equipment.
1928	\$ 35,812,413	\$ 43,493,153
1929	33,325,104	39,853,871
1930	25,043,282	29,933,803

On the other hand, the C.N.R., as a State-owned system, could not hope to escape the restraints which politicians, fearful of losing votes, are wont to impose upon economies. As the following figures show, it was unable to curtail its maintenance accounts to the same degree:—

	C.N.R.	
	Maintenance of Way and Structures.	Maintenance of Equipment.
1928	\$ 45,010,559	\$ 47,918,236
1929	46,868,217	49,527,851
1930	39,777,566	43,091,329
