1. In July last, on the return of the British Delegation from the Congress of the International Chamber of Commerce held in Washington, where the economic crisis of the world was the chief topic of discussion, a general report was given to the British National Committee of the Chamber and a Sub-Committee was appointed to report in more detail.

The economic crisis of the world and Great Britain has developed so rapidly that the Sub-Committee believe the British National Committee will be glad to be informed without delay what their Sub-Committee consider to be the main causes, and will wish them to define also the steps which in their opinion Great Britain should take at once to protect her own economic position and to start better conditions in world trade.

2. The report which follows has been drawn up by the Sub-Committee with that object in view and the Chairman of the British National Committee, Lord Luke, is circulating it to the constituents of the British National Committee in the hope that they will publicly endorse it.

3. During the post-war years there has been a gradual upsetting of economic and financial equilibrium by:—

- (a) An uneven expansion in productive capacity—agricultural, mining and industrial;
- (b) The existence of international debts;
- (c) The post-war policy of high customs tariffs, and
- (d) The uneven distribution of gold stocks.

4. During the war, the disturbance of normal productive activity in the belligerent nations led to an abnormal development of production in neutral countries. After the war, the restoration of the impaired capacity combined with the maintenance and further extension of the new productive capacity has led to an over-supply of many products, when that supply is related to the demand.

5. International debts must be discharged by the transfer of goods, or services, or gold, or by balancing international investments either on long term or on short term. High customs tariffs have interposed a most serious obstacle to the discharge of these debts through the transfer of goods, while the attempt to discharge them by these means has forced international trade into artificial channels. Their discharge by short term loan has introduced financial instability inasmuch as the risk of sudden withdrawal of short-term moneys is a constant potential source of exchange crises. The new creditor nations have not consistently maintained a policy of long-term foreign investment in sufficient volume or with sufficient persistence to offset their unwillingness to be paid in goods or services.

6. In consequence of the insufficiency of the methods of discharge of international debts by the transfer and receipt of goods, or by foreign investment, it has been necessary to transfer gold. This abnormal demand for gold has raised its price and, as is well known, a rise in the price of gold expresses itself by a fall in the price of all other commodities.

7. The present maldistribution of gold is, therefore, directly caused by the desire of the creditor nations to be paid for their exports and for interest on their international loans, while at the same time these same creditor nations refuse to accept payments in goods or services, or to maintain their volume of foreign investments at an adequate level.

8. In some cases the desire for tangible guarantees for future security has coloured the outlook on international affairs in the post-war period to the detriment of the general economic situation. In other cases the change from creditor to debtor has come suddenly, both masked and accelerated by the war. Tariff policies, possible to debtors and regarded by them as great aids to national progress, have become high tariff policies regardless of the obligations imposed by the change of position from that of debtor to that of great creditor.

9. The creditor nations are failing to recognise the duty which lies upon the creditor of not preventing the debtor from paying. Exporting and creditor nations are not realising the truth that they cannot sell unless they support the world market, either as buyers or as permanent investors. For a great creditor nation in the world markets the two policies of selling freely and of refusing to buy are incompatible. Persistence in these two opposed policies is bringing about a state of affairs destructive of the fabric of world trade.

10. The inconsistency of these policies has resulted in a clash of two irresistible forces. Rich and energetic sections of the human race have inflicted great injury on the fabric of world trade without their people understanding that they are wrecking the world and in wrecking the world they wreck themselves.

11. Creditor nations must accept an adverse balance of trade as a corollary and complement to their wealth or must, alternatively, maintain an even flow of permanent investment abroad. Until this is recognised there is every prospect of prolonged depression, increased unemployment and unbalanced budgets. These factors have already threatened the stability of Great Britain, Austria, Germany and other nations.

12. The uneven expansion in productive capacity and the uneven distribution of gold stocks referred to above, have caused the calamitous fall in wholesale prices which has characterised the world depression. This fall in prices has, in turn, led to a disequilibrium between the costs of manufactured goods and the costs of primary commodities. The great world exchange between these two classes of goods has been interrupted so that all trading activity has diminished and unemployment increased.

Japanese forces, which are stationed on Chinese territory in Manchuria as a railway guard, took the offensive on a large scale. They have not only occupied the whole city of Mukden (beyond the limits of the local Japanese "railway town"), which is the capital of the Manchurian Chinese Government of Marshal Chang Hsueh-liang. They have also isolated the whole of South Manchuria from the rest of the world by occupying Newchwang, which is the Chinese Manchurian port on the coast of the Gulf of Chihli; Changchun, which is the point of junction between the Japanese South Manchurian Railway and the Russian Chinese Eastern Railway; Antung, which commands the railway bridge over the Yalu River where the South Manchurian Railway connects with the railway system of the Japanese dependency of Korea; and finally, Kirin, on a branch line running east from Changchun. Kirin is the capital of one of the three Chinese provinces into which Manchuria is divided; and it is the third most important city in Manchuria after Mukden itself and Harbin (the Russian centre). These swift operations, in which the highly organised and hard fighting Japanese troops have everywhere easily overcome superior Chinese forces, have in effect placed the whole of Southern Manchuria in Japan's power.

A serious feature in the present conflict is that the local Japanese military commander in the South Manchurian Railway zone evidently acted on his own initiative, without first consulting the Cabinet at Tokyo. It is also evident that he must have had, up his sleeve, ready prepared, the plans for the remarkable operations that he has conducted. Efficient though the Japanese Army may be, it is scarcely conceivable that a Japanese commander can have improvised such effectual operations over so wide a field with so small a force at such short notice. The inference is that this action had been contemplated for some time by the local Japanese military authorities in Manchuria and perhaps even by the Japanese War Office. They were only waiting for an occasion to press the button, and the occasion was provided by the incident of last Saturday night.

What will the Japanese Government do? The Chinese Government, this time, has behaved with restraint and good sense. Marshal Chang Hsueh-liang, who resides nowadays at Peking instead of Mukden, had no sooner heard the news than he telegraphed orders that his troops were to offer no resistance. The Central Government of the Chinese Republic at Nanking, besides addressing the inevitable note of protest to Tokyo, has raised the matter in the League of Nations Council at Geneva. In the meanwhile, as the local Chinese troops have recovered from their first surprise, sporadic fighting has broken out again in the areas which the Japanese troops have occupied.

The Japanese Government is in something of a quandary. It is difficult for it to withdraw without "loss of face," or, indeed, without serious discord at home. For it is already evident that the high-handed action of the Japanese military authorities in Manchuria is welcomed, by a certain section of Japanese public opinion, as a timely stroke which has cut the Gordian knot.

The public feeling in Japan about Manchuria is deep. It is bound up with the personal feeling, among the older generation, for their contemporaries who gave their lives in the Russo-Japanese war. The Russo-Japanese War has been the decisive war in modern Japanese history. The victory in it saved Japan from a great danger, was purchased at a great cost of Japanese lives and money, and raised Japan to the position of a great Power. This position largely depends on the status in South Manchuria which the Treaty of Portsmouth secured to her; and this is more than a question of sentiment or even prestige. The maintenance and expansion of Japanese industry depends upon Japan's command of South Manchurian coal and minerals. For these various reasons the Japanese people are bent on retaining the assets, of all kinds, which they hold in South Manchuria to-day. The prolongation of the leases of the South Manchuria Railway, and of the territory of Kwantung (containing Daiven and Port Arthur), was a prominent point in the notorious "Twenty-One Demands" which Japan presented to China in 1915; and while many of those demands were eventually scaled

down or quietly allowed to lapse, it is significant that the group relating to South Manchuria was insisted upon.

As for Chinese rights in Manchuria, the Japanese maintain that, but for the Japanese blood and treasure which was poured out in order to defeat the Russians in the Russo-Japanese War, all Manchuria would be Russian territory to-day. It is thanks to Japan, they argue, that the whole of Manchuria has remained Chinese territory. They do not contest Chinese sovereignty (not even the ultimate Chinese sovereignty over the leased territory, which is in suspense so long as the lease continues). More than that, they have reconciled themselves to the prospect that Chinese, and not Japanese, farmers will populate this vast empty arable country. They recognise that the Japanese are bad colonists; that the climate is against them, and that their higher standard of living would be enough in itself to prevent them from competing with the Chinese for the land. They realise that the function of the Japanese in Manchuria is to be administrators, business men and technicians, and that numerically they are bound to remain a drop in the ocean of Chinese peasant immigrants. But, having granted all this, the Japanese are utterly resolved to maintain their rights and assets in Manchuria as these now exist, without diminution, for an indefinite time to come.

And what of the Chinese view? The Chinese look upon the Japanese power in Manchuria as an abomination of desolation, standing in the place where it ought not, and they have no intention of coming to a compromise with Japan or recognising her claims in Manchuria in any way. At the points where these two national spirits come into conflict, the tensify of the atmosphere can easily be imagined. No one who has visited Mukden lately can be much surprised to hear that the storm has burst, and the League Council, which discussed the situation on an appeal by the Chinese Government, was presented with a problem which is formidable and delicate.

Notes of the Week.

Bank Rate.—The decision of the Bank of England authorities to raise Bank rate from $4\frac{1}{2}$ to 6 per cent. as from the opening of business on Monday may be regarded as a natural measure of precaution taken in conformity with traditional central banking practice to meet a situation whose developments could not be foreseen. In some quarters there was a disposition to hope that a reduction of the rate to a more normal level might be made on Thursday. These (scarcely well-founded) hopes were disappointed, and it was decided to leave Bank rate unchanged at 6 per cent. There is no reason to quarrel with the decision. Though it is true that there might not have been any difficulty in placing Treasury bills on Friday, even with a 5 per cent. Bank rate, the position of German renewal bills in the hands of London acceptance houses is rather more "sticky," and the fact must be faced that, so long as conditions of such great uncertainty continue, it will be necessary to tempt lenders with fairly high rates. At the same time, it is to be hoped that, taking a slightly longer view, the Bank Court should be clear in their minds as to the objectives which should influence their use of Bank rate. So far as the question of the retention in London or the withdrawal of foreign balances goes, there would be little difference under present circumstances between Bank rate at 5 per cent. or at 10 per cent.—with the qualification, perhaps, that premature lowering of the Bank rate might be misinterpreted abroad as a symbol of our disregard of the real need to resist stoutly any tendency to inflation in this country. Actually, so long as the present Government carries on with the Finance Bill and the Economy Bill, there is no risk of inflation occurring; the peculiar movements of the Stock Exchange (resulting from transference from fixed-interest into "equity" securities) are not such as could readily be corrected by high Bank rate; and, not only is there no advantage to be gained by unnecessarily increasing the

cost of Treasury bill financing, but there is no feature in the situation which calls at this juncture for a policy of deliberate restriction of trading credit, still less of general deflation.

India and the Gold Decision.—The issue on Monday of a decree suspending "the obligation of the Government of India to sell sterling or gold against rupees" followed on Thursday by the announcement of measures to control sales of exchange—was the inevitable sequel to the abandonment by Britain of the gold standard. In announcing the Government of India's decision to the Round Table Conference on Monday Sir Samuel Hoare made an appeal to Indians to remain calm and support the rupee, and Sir George Schuster, the Finance Member, while deprecating discussions on the decision, stated that currency reserves were £7,000,000 higher than a year ago. On Tuesday the Opposition in the Legislative Assembly demanded a debate, but this was vetoed by the Viceroy, a decision which, while doubtless motivated by the fear that indiscreet speeches might arouse panic, has created an unfortunate impression, which was presumably in Mr Gandhi's mind when he protested that the decision about the rupee had been taken "over the heads of the Legislative Assembly," and was a "striking proof of the unbending and unbendable attitude of the Government of India." This protest is, of course, wholly unjustifiable, and might be paralleled here by a complaint that the British Government's decision to abandon gold was taken over the heads of the House of Commons, who, though allowed to debate the necessary legislation, were presented with a *fait accompli*. Nevertheless, discussion of the facts in the Legislative Assembly might have served a good purpose by clearing the air of mystery and misunderstanding which the veto on debate undoubtedly intensified. As a precautionary measure the banks in India were closed, and until they open, it is impossible to judge the degree of calmness with which the situation has been received. It is to be hoped that the wild speculation in the cotton market in Bombay, fostered by flying rumours, is in no way symptomatic of the general atmosphere. As regards the progress of the Round Table Conference, it is exceedingly unfortunate that it should have coincided with this pre-occupying crisis, and it is still more regrettable that its proceedings are threatened with interruption by an appeal to the country. The fact that the Anglo-Indian negotiations are in progress is in itself a strong reason against holding a general election in this country.

Tempering the Wind.—It was a matter of general recognition that a comprehensive scheme of taxation and economies could not be evolved in two short weeks without proving to contain anomalies and inequalities. The main protests that have been made have been directed against the cuts in naval pay and teachers' salaries, and the heaviness of the forthcoming income tax instalment payable on January 1st. The Government have already taken steps to temper the wind to the shorn lamb, and on Monday, in the House of Commons, the Prime Minister announced the Government's decision, as "simplest way of removing just grievances," to limit to not more than 10 per cent. the reductions affecting teachers, police, and the Defence Services. In making these concessions Mr MacDonald may conceivably have been influenced by the prospective effects on purchasing power of the abandonment of the gold standard, and certainly by the immediate desire to make a conciliatory gesture to the Opposition. He gave, however, no explanation of motive, and was adamant on the retention of the proposed 10 per cent. cut in unemployment benefit, which, according to *Hansard*, he said was "necessitated by conditions of borrowing" and "must remain." Mr MacDonald emphatically stated that, in spite of these concessions, "the balance of the Budget will be maintained"; and Mr Baldwin, questioned on Wednesday on the effect of the concessions, stated that their total cost was £8,545,000, and that the loss to the

Budget would be made good by additional economies. This reassurance that, whatever the concessions made by way of adjustment this way or that, the Budget balance will be maintained, is of the highest importance, and has checked the uneasiness which might otherwise have been created abroad by apparent whittling down of a stern economy programme.

Franco-Italian Naval Conversations.—On the eve of the meeting of the League Assembly at Geneva there was a fresh exchange of views between the French, Italian and British Governments, in the hope of breaking the deadlock in the naval negotiations which has existed since the lapse of the Anglo-Franco-Italian naval arrangement of March 1st of this year. That arrangement lapsed because the French Government thought better—or worse—of it after it had been arrived at; and the hopeful feature of last week's exchange of views was that the initiative came from the French side. The failure in March was caused by France putting in a claim to build replacement tonnage in advance of December 31, 1936 (the date to which the three-Power arrangement was to run), since the effect of such replacement would be to give France a decisive advantage over Italy the moment the arrangement ran out. Presumably the French proposals of last week represented some modification of this claim; and for a moment there seemed to be hope that the new conversations would result in an agreed limitation, for a term of years, of at least some of the categories of vessels in which competitive building is still continuing. Unhappily, this hope was dispelled last week-end by a *communiqué* from the Italian delegation to the League of Nations Assembly in which it was announced that the new French suggestions had been examined by the Italian and British Governments; that there had been consultations between Rome and London; and that it was "not easy to foresee if and when the Italo-Franco-British naval conversations could be resumed with any probability of a practical outcome, seeing that the latest French proposal diverges considerably from the basis of the agreement concluded on March 31, 1930." This is disappointing. It would appear to mean that—unless the acuteness of the world-crisis produces a very drastic change of heart in all parties within the next few months—this naval question will still be open when the World Disarmament Conference meets; and the prospects of the Conference largely depend on our coming to it with a comprehensive naval limitation agreement between all the five naval Powers already achieved as a solid framework within which we may confine and handle the difficult business of European armaments on land. The present inability of France and Italy to arrive at a naval agreement with one another is not only serious in itself because it keeps up the tension between these two Powers in Africa and in Europe. It is even more serious because Great Britain is a party to the issue. An unrestricted competition between France and Italy in auxiliary craft might soon bring us to the point at which we had to avail ourselves of the so-called "escalator clause" in the three-Power pact of the London Naval Treaty of April, 1930, and to inform the United States and Japan that we found ourselves compelled, by the building programmes of other parties, to increase our own building in the categories affected. This might unravel the whole web of the naval limitation agreement which was successfully woven—up to the verge of completion—last year. In the present state of the world, it would of course be sheer lunacy on the part of everybody to allow this to happen. It is well for everyone to realise this while there is still time to be sane.

Sir Arthur Salter and the Crisis.—Speaking on the financial situation, in the Second Committee of the League Assembly, last Wednesday, Sir Arthur Salter, after insisting that recent events were in no way a sign that Great Britain had lost her position as a principal creditor country, since her ultimate resources were greater than her liabilities, went on to outline six methods

by which the gap in the balance of payment between debtor and creditor countries might be met. First, debtor countries might increase their exports relatively to their imports; second, banks might put more money into the market by the purchase of securities, thereby forcing up prices and inducing an outflow of gold; third, the gap could be reduced by a reduction in reparation and war debts; fourth, a check might be put on the run of short-term credits; fifth, new lending and investments might be put to a great extent on a long-term basis, and sixth, if the above measures failed to restore confidence, the investing public might be attracted if the governmental resources of creditor countries were made available as security for loans to debtor countries. Sir Arthur Salter urged the necessity of the prompt payment of attention by the governments concerned to the possibility of this measure, and he stressed the desirability of a new financial lead which would make it clear that all the great countries meant to support the League Covenant and the Kellogg Pact. He suggested three directions for League activity: a declaration by the Assembly of the necessity for new political and financial leads; the equipment of the League financial organisation to bring help in the provision of expert advice; and the hastening of the report of the Gold Delegation. Sir Arthur Salter concluded by suggesting that the Finance Committee of the League should elaborate the principles which should govern public borrowing, for the present situation would, in his view, have been much less difficult if all public loans had in the past been subject to the same disinterested scrutiny as League schemes.

Commodity Price Developments.—The decision of the Government to suspend the Gold Standard Act for six months caused a sharp advance in terms of British currency in the price of the principal raw materials. The effect of "bear" speculators to "cover" at first drove quotations up to an exaggerated level. By Wednesday, however, equilibrium in terms of world parity had been re-established. In the following table we show the prices of a number of representative commodities in this country and in the United States at the end of August, on the eve of the Government's announcement to suspend gold payments, and on Wednesday last:—

PRICES IN THE UNITED KINGDOM.

	Wheat.	Sugar.	Cotton.	Rubber.	Copper.	Spelter.	Tin.
Date.	Liverpool Futures, "December."	Raw Futures, "December."	American Middling, "spot."	Smoked Sheet, "spot."	"Standard Cash."	G.O.B.	"Standard Cash."
Aug. 31	Per 100 lbs. 4 0	Per 112 lbs. 5 10½	Per lb. 3 86	Per lb. 2½	Per ton. 33 1 3	Per ton. 11 15 0	Per ton. 121 1 3
Sept. 18	3 9½	5 5½	3 74	2½	27 14 4½	10 12 6	111 1 3
Sept. 23	4 1½	6 1½	4 49	2½	32 8 9	12 16 3	119 8 9

PRICES IN THE UNITED STATES.

Date.	Chicago Futures, "December."	Raw Futures, "December."	New Orleans Middling, "spot."	Smoked Sheet, "spot."	Electrolytic "Domestic," "spot."	East St. Louis, "spot."	"Straita" "spot."
	Per 60 lbs.	Per lb.	Per lb.	Per lb.	Per lb.	Per lb.	Per lb.
Aug. 31	Cents. 49½	Cents. 1 30	Cents. 6 67	Cents. 5½	Cents. 7 625	Cents. 3 80	Cents. 27½
Sept. 18	50½	1 32	6 08	5½	7 00	3 725	24½
Sept. 23	49½	1 33	6 23	5½	7 00	3 70	23½

It will be seen that the rise in British prices since Friday last conceals a further downward movement in the gold value of wheat, rubber, spelter and tin. A comparison of Wednesday's prices in the United States with those obtaining at the end of August reveals a fall in all prices with the exception of sugar and rubber. It is thus clear that the decline in the gold price of raw materials has not yet been arrested. A definite advance can only come about as a result of an increase in consumption, which is still delayed by the financial and economic crises.

Our Price Index Number.—Since movements of British wholesale prices will henceforth depend on two separate factors, namely: (i) changes in gold prices of commodities, and (ii) fluctuations in the exchange value of sterling, we have worked out our index number on the basis of the quotations which ruled on September 18th. The result, summarised below, will serve as a historical record and is a datum level whereby to measure future changes:—

BRITISH WHOLESALE PRICES.

(1927 = 100.)

	Aug. 31, 1931.	Sept. 18, 1931.	Percentage (+ or -).
Cereals and meat	69.7	64.5	- 7.5
Other foods	63.5	62.2	- 2.0
Textiles	44.1	43.7	- 0.9
Minerals	70.0	67.4	- 3.7
Miscellaneous	66.2	65.8	- 0.6
Complete index	62.3	60.4	- 3.0
1913 = 100	85.7	83.1	...
1924 = 100	53.8	52.2	...

The fall of 3 per cent. recorded between the end of August and September 18th is a measure of the reactions on trade of the financial crisis of those three weeks.

Cotton Trade Labour Problems.—Our Manchester correspondent writes:—On Monday an important conference was held in Manchester between representatives of the Federation of Master Cotton Spinners' Associations, the Operative Spinners' Amalgamation, and the Card Room Operatives' Amalgamation for the purpose of considering production costs. At the outset Mr Fred Mills, the President of the Masters' Federation, made a long statement. He said: "There appeared to us to be only two cost factors over which we as employers have any direct control or influence. These might be stated to be power and mill stores and supplies. Efficiency in management sharpened by the continued years of depression and the need for economy convince us that these items afford little if any possibility of securing further reduction. Other big factors entering into costs of production over which employers and operatives alone have control are wages, working hours, and labour conditions. The reduction in working hours from 55½ to 48 and a corresponding percentage increase in the wages lists in 1919 were an enormous stimulant to our foreign competitors. The fears expressed by us when the working week was reduced from 55½ to 48 hours, namely, that such a drastic cut in productive capacity would lead to an advantage being taken of it by our foreign competitors in the direction of increasing their running hours or adopting double or even treble shifts, has been fully confirmed. We are to retain our present volume of trade, not to speak of recapturing some of our lost markets, sacrifices will have to be made by everyone concerned. We are as desirous as yourselves to maintain for our workers the highest standard of living consistent with the general welfare of the industry in the country, but if the standard of living conflicts with the best interests of those employed in industry and with the welfare of the country as a whole we claim that some concession should be made." Mr Mills said further that the Federation had prepared proposals for cheapening the cost of production by re-adjusting wages, labour conditions, and machinery in both the spinning and manufacturing sections, but the details were not disclosed. After some discussion it was decided to adjourn the conference until Friday, October 2nd, and will give their reply to the employers' statement. All kinds of rumours are being circulated as to the intentions of the employers if the representatives of the operatives are not prepared to grant concessions in their working conditions. It can be said, however, that at the moment no definite decision on this point has been made. It is believed that the employers are keener to secure longer working hours rather than a reduction in wages. It is quite probable that this labour question will be affected by the suspension of the gold standard. There is every

probability of the deadlock which was reached a fortnight ago in the negotiations between the manufacturing employers and the weaving operatives on the more looms per weaver system being removed at an early date. Each side is willing to arrange a further joint conference, but there is some hesitation on the part of the employers and the trade union officials as to who should make the first move.

New Capital Issues.—Even in normal times the third quarter of the year is less prolific than the others in the matter of new capital issues in the London market. This year the crisis which has swept over the world in general and Britain in particular has had the effect of reducing the total of new issues in the September quarter to the meagre figure of £9 millions, which compares with £23 millions and £18 millions respectively for the corresponding quarters of 1930 and 1929. Of the £9 millions, the net sales of National Savings Certificates account for £2.3 millions, and one large issue in July by Tanganyika for £2.8 millions. No foreign Government or municipality, no Colonial municipality or Government, no Colonial railway entered the market, and industrial financing was at a very low ebb. The following table gives comparative figures for the first nine months of this and recent years:—

DESTINATION OF NEW CAPITAL.

	First Nine Months.					
	1912.	1913.	1928.	1929.	1930.	1931.
United Kingdom—						
Government	Nil	Nil	84,311,000	200,000	43,790,000	12,550,000
Other	36,533,400	25,595,200	127,336,400	116,488,200	79,309,200	38,146,900
British Possessions—						
Government	7,714,900	20,003,800	38,283,000	26,366,100	27,294,800	30,571,600
Other	27,786,900	36,944,200	13,858,800	29,939,200	10,862,200	7,872,800
Foreign countries—						
Government	35,501,800	56,948,000	52,141,800	56,305,300	38,157,000	38,444,400
Other	9,584,500	24,021,500	10,253,800	3,650,000	21,330,000	1,740,000
Grand total	151,030,700	150,321,400	290,685,200	193,057,700	192,589,200	98,265,200

The total, it will be seen, is little more than half that of the corresponding periods of the past two years. Our usual detailed tables analysing these statistics will be found in the statistical section of this issue.

The Commonwealth Bank Report.—Recent circumstances have vested this year's report of the Commonwealth Bank of Australia with unusual importance. The document is in the main a review of well-known events, though it states rather significantly that the Bank's increased profit is mainly attributable to its fuller functioning as a central reserve bank. On the question of the Premier's plan of last summer, the report states the roundly that on its execution in the spirit as well as in the letter depends the rehabilitation of the country. The first portion of the plan, namely, the voluntary conversion scheme, has already been carried out, but the next step is the achievement of budgetary equilibrium by the various governments, and here the report says, "Present indications are not as uniformly encouraging as could be hoped for." It is noticeable that in recent weeks the banks have had again to resist further requests for accommodation by the governments in connection with unemployment schemes. The report admits that Australia's main difficulty is the low world price of primary products, though this is now partially compensated for by the depreciation of the Australian pound. It calls attention to the assistance given by the banks by reducing by one per cent. their rates of interest for fixed deposits and advances, in addition to a voluntary reduction by many banks and other institutions in the rate of interest on their holdings in the loans of semi-Governmental bodies, this reduction taking the form of a rebate of one per cent. in the amount of such

interest if promptly paid. The report also states that legislation is contemplated for the relief of interest to mortgagors. As its own contribution to the general plan of rehabilitation, the Commonwealth Bank has given an undertaking that it will rediscount all Treasury bills taken up by the trading banks, so as to enable them to give further assistance to the Government without sacrificing their liquidity. The report concludes with a summary of the Australian banking situation. The past year has witnessed a slight increase in deposits bearing interest, and heavy declines in deposits not bearing interest and in savings bank deposits. The last decrease is attributed to the trade depression, which probably also explains a contraction of 7 per cent. in bank advances (exclusive of Government securities). The report also places on record the modification of the Commonwealth Bank's statutory gold reserve from 25 to 15 per cent., forced by the necessity of shipping £5,000,000 of gold to London to meet Treasury bills maturing there at the end of June.

The Bank Credits.—In reply to a question in the House, the Financial Secretary to the Treasury stated that as the transactions relating to the Bank of England July credits for £50,000,000 were carried out by the Bank on behalf of the Issue Department, the costs, therefore, fell to be dealt with under Section 6 of the Currency and Bank Notes Act, 1930. Section 6 broadly provides that profits arising in respect of each year in the Issue Department accrue to the Treasury, their ascertainment to be agreed upon between the Bank and the Treasury. For the purposes of the Income Tax Acts, such income shall be deemed to be income of the Exchequer, and any expenses of, or attributable to, the Issue Department shall be deemed not to be expenses of the Bank. The implication of the question put in the House was that any exchange losses arising from the depreciation of sterling that have to be met when the sums borrowed under the credit fall due for repayment will have to be borne by the Exchequer, but the Financial Secretary refused to commit himself on a matter that will not arise for nearly a year, when the whole situation may have greatly altered.

Insurance Doctors and Certification.—For some years past, Sir George Newman, in his annual report on the public health, has called attention to the "disquieting increase in claims for sickness and disablement benefit" during recent years. In his Report for 1930 (H.M. Stationery Office, 4s.), he states that the investigations of which a description was given in the preceding report have now been concluded, and that the results and the conclusions drawn from them have been embodied in a memorandum which has been circulated to all insurance practitioners. The principal conclusions are:—

- (1) That the increase in payments of benefit has been mainly due to an increase of payments made to persons who were not incapable of work;
- (2) that, without assuming that the standard of medical certification has deteriorated, or may not even have improved, it has nevertheless proved inadequate to check an increased tendency, for various causes, of insured persons to claim benefit;
- (3) that the investigations of the condition of a representative sample of all insured persons who were in receipt of benefit on May 5, 1930, and had then been in receipt of benefit for over a fortnight, indicated that at least 12 per cent. had ceased to be incapable of work before they ceased to draw benefit;
- (4) that the divergencies observed in the proportions of patients of different practitioners who cease to draw benefit, after notice of reference to the Regional Medical Staff has been received by the practitioner and the patient, are so great as to leave no room for doubt that lack of sufficient care in the issue of certificates is sufficiently widespread to have a serious effect on the benefit funds;
- (5) that a failure to appreciate the nature of National Health Insurance, and the consequences of payments of benefit to persons who are not incapable of work, plays an important part in contributing to the issue of certificates which ought not to be issued.

In order to protect the funds, the importance of earlier reference of cases is being urged upon the approved societies, and, with the same end in view, a new regulation has recently been adopted, under which a practitioner who appears not to be exercising reasonable care in the issue of certificates will have his attention called to the matter in a personal interview by a medical officer. The Report stresses the fact that laxity of certification is by no means

general, so that the best remedy for it is the bringing of representative professional opinion to bear upon those doctors whose standard is defective. It requires little imagination to see how great may be the temptation to doctors, on purely humanitarian grounds, to "stretch a point" in this matter, and it is, therefore, encouraging that this section of the Report concludes with the words: "It is satisfactory to observe substantial signs of increased vigilance and care in this certification of incapacity." Sir George Newman also reports a similar improvement in the matter of excessive prescribing.

Transvaal Gold Output.—The gold output of the Transvaal mines during August amounted to 916,425 fine ounces, as compared with 916,843 fine ounces in July. In August, 1930, the output amounted to 921,018 fine ounces. In the following table we show the monthly output since the beginning of 1925:—

Month of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January	823,692	796,270	839,782	843,857	876,452	882,801	914,576
February	753,925	753,924	779,339	816,133	815,284	818,188	839,937
March	825,479	834,340	860,511	877,380	866,529	889,370	910,998
April	787,519	803,303	824,014	825,907	872,123	868,606	882,337
May	813,249	849,214	859,479	886,186	897,598	916,213	910,279

October	812,832	853,296	855,743	897,720	888,690	926,561	...
November	787,633	840,276	848,059	872,484	861,593	884,753	...
December	791,455	836,157	851,225	859,761	851,134	908,492	...
Total.	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	7,189,079

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors at the end of August totalled 224,677, as compared with 223,484 at end of July. Comparative figures for the last eight months are shown below:—

	Dec., 1930.	Jan., 1931.	Feb., 1931.	Mar., 1931.	Apr., 1931.	May, 1931.	June, 1931.	July, 1931.	Aug., 1931.
Gold mines	203,473	209,442	209,777	207,239	206,770	207,109	207,209	208,155	209,409
Diamond mines	13,763	13,865	13,740	13,436	13,242	13,305	13,286	13,512	13,563
	4,607	4,325	4,333	4,106	4,030	3,689	3,345	1,817	1,705
	221,843	227,632	227,850	224,781	224,042	224,103	223,840	223,484	224,677

The decline in the number of natives employed in the diamond mines continued during August, but the numbers employed in the coal and gold mines showed a further increase.

LEAGUE OF NATIONS.

Views on British Situation — Austria and Hungary — Sino-Japanese Dispute.

(FROM OUR CORRESPONDENT.)

GENEVA, September 23.

THE news of the suspension of the gold standard in England created a profound impression at Geneva. It was received with mixed feelings. There is naturally a good deal of anxiety about its effect, as everyone realises that it is very different from previous monetary crises in Germany and France, but there yet remains at this critical moment an obviously strong belief in the capacity of Great Britain to meet the situation successfully. In fact, it is already noted that there seems to be far greater calm in England than in some of the other countries which might have been expected to be less shaken in their self-confidence. Indeed, there is some criticism of England for having taken a step which may so seriously upset the calculations of other States. For that very reason there is a certain satisfaction in other quarters at the turn of events, but this is partly based on

political grounds. The more modified satisfaction is due to the conviction that the facts of the situation are now made plain, that the time for talk alone is over, and that action must ensue; that the follies of international financial and economic policy are now more than ever patent, and that things which States have been too obstinate or too short-sighted to do, will now be more or less forced upon them by the march of events. Few people here now expect that political debts can continue as they are, and there has been talk of a joint proposition to the Assembly by a number of States, calling for an immediate international conference definitely to regulate the matter. Hitherto the general discussions, instead of tending towards a greater approach to economic and financial solidarity, have been towards a policy of *sauf qui peut*. There is a general fear of the imposition of a tariff in Great Britain, as the British people are still the best customers of a great number of countries in Europe, but the principal States which fear it have done virtually nothing to meet the British demand for several years for a reduction of tariffs, and the anger and criticism at the possibility of Great Britain's finally adopting a protectionist policy herself is altogether unreasonable and out of place.

Sir Arthur Salter explained yesterday morning in an Assembly Commission, the course of developments in England. His assurance that Great Britain is determined to honour her obligations, that the internal position is wholly sound thanks to the sacrifices made to secure a balanced Budget, and that the Government is ready to co-operate in any measure possible to minimise the difficulties in countries which in the past have been dependent on the London market for credits and for financial facilities, created a good impression. Estimates as to what may happen to the value of the pound vary greatly, but the present feeling is that France will do all she can to save a serious fall in order to escape the heavy financial losses which she herself would thereby incur; the observation here on many sides is that Great Britain would have been wise to have taken the step, if not years ago, at least before negotiating American and French credits, but there seems little doubt that the balancing of the Budget in the first place has been a steady factor of enormous importance.

What the repercussions of these immediate events may be on the League's efforts for Austria and Hungary is yet to be seen. The Austrian Government is to inform the Financial Committee on the possibility of its carrying through the internal financial measures suggested, but the Government's task cannot be easy, especially in view of the fact, so it is declared, that Austria has been able to obtain no definite promises that the necessary loans will be accorded to her in any of the financial markets, even if she puts her house in order on the lines indicated by the Committee; it is, however, anticipated that the Government will be able to do what is expected of it.

There is a strong tendency of extra-European countries and of several European States as well, to criticise the developments of the Commission for European Union. They have at any rate succeeded in obtaining assent to the proposition that there should be an end to the various special committees set up by the Commission, and that the technical work should, wherever possible, be done by the standing committees of the League. They argue, very reasonably, that economic problems are international and not purely continental.

For the first time what is considered here to be a grave situation in the Far East has been brought definitely before the Council of the League which met to-day at the request of the Chinese Government to consider, under Article 11 of the Covenant, the situation in Manchuria, where the fighting between Chinese and Japanese troops has led to the occupation of Chinese territory. There is, as always, a conflict about the facts, Dr. Sze, representative of China, asserting that the troubles were originated by the Japanese, and Mr. Yoshisawa, representative of Japan, asserting that the troubles were caused by Chinese troops destroying portions of the Southern Manchuria railway.

China in her request to the Council asked that the question of reparations should be considered and that the *status quo ante* should be restored, and declared her readiness to carry out any recommendations which the Council might make. The Japanese representative said the Chinese authorities in Manchuria had for some years endeavoured to endanger Japanese interests, and China's request for reparations should not be discussed before the Council had come to a decision. The establishment of the *status quo ante* also could only be settled on the spot. As to the policy which his Government was ready to pursue, he was awaiting information, but he said that China had proposed a settlement of the conflict by direct negotiations—a suggestion which had been well received at Tokio; premature intervention might therefore hamper developments towards peaceful solution. Dr. Sze said he was perfectly ready for the League to organise a commission to inquire into the facts, and so far as direct negotiations were concerned he questioned the possibility of these being carried whilst a large zone of Manchuria was occupied. The Japanese representative, however, gave assurances, for which Dr. Sze expressed his appreciation, that every effort would be made to localise the difficulties and reach a settlement.

Nothing could have been better than the wisdom with which Lord Cecil approached the question. He noted the fortunate fact that both China and Japan were members of the Council; he referred to Japan as one of the pillars of the League, said it always observed most strictly and rigidly its international obligations, and he therefore assumed that both countries would act unreservedly in the spirit of the Covenant. He quoted appositely the statement made by M. Briand as President of the Council at the time of the Greco-Bulgarian conflict, warning States of the dangers which might follow from military action taken in so-called self-defence—a statement supported by Japan and other representatives on the Council at that time. Lord Cecil also referred to the procedure which had been established for such cases, one which was an appeal by the President of the Council that troops which had penetrated into the territory of another party should immediately be withdrawn; there was no reason to make a difference this time. The Paris Pact was also involved, and as the United States had played so important a part in its preparation and was deeply interested, Lord Cecil proposed that the minutes of the Council's proceedings should be communicated to the United States so that they also might take any decision which they considered desirable.

The discussion continued all day, China emphasising the urgency of action as the situation was getting worse. The Council passed a resolution requesting the President to appeal to both Governments to do nothing to aggravate the situation or to make a peaceful solution more difficult, and to discuss with the Chinese and Japanese representatives adequate means of securing the withdrawal of troops without jeopardising the safety of nationals of either State. Lord Cecil's suggestion to send a copy of all the documents and proceedings to the Government of the United States was also adopted.

On the invitation of the third Commission of the Assembly, the United States has accepted a seat on the Commission for the discussion of the disarmament truce which the Italians have now developed in precise terms.

FRANCE.

Effects of British Suspension — Revenue — Capital Issues.

(FROM OUR CORRESPONDENT.)

PARIS, September 23.

THE news of the British Government's decision temporarily to abandon the gold standard fell like a bombshell on the market. It is understood that the French Government and the Bank of France were confidentially informed of the British decision on Friday evening, and that

NATIONAL BANK OF GREECE

Established 1841

Head Office: Athens.

Branches throughout Greece.

New York Agency, 51 Maiden Lane.

THE BANK OFFERS EXCEPTIONAL FACILITIES FOR BUSINESS WITH GREECE

Capital paid up and Reserves Drs. 1,205,000,000.

arrangements were at once made, with the utmost secrecy, for steps to be taken with a view to palliating, as much as possible, any aggravation of the situation of sterling if panic conditions developed here. Important secret conferences took place on Sunday between the Finance Minister, the Governor of the Bank of France, the official heads of the Bourse, and other high officials. It is significant that the British Chargé d'Affaires was also present at these. The question was discussed whether this market, like the London Stock Exchange and money market, ought not to remain closed on Monday. It was eventually decided that, in view of the impregnable position of the franc, the great French stock market might safely be allowed to open as usual, if only for the purpose of acting as a kind of buffer to absorb the first harmful effects of the shock to the world's financial centres. It was decided, however, that the Paris exchange market should be closed, at least for twenty-four hours, for the purpose of suppressing all possibility of speculative exchange operations that might quite possibly, in view of the delicate situation, start the pound irresistibly on the road taken by the franc in 1926. Simultaneously, the Bourse authorities were requested to take every possible step to curb bear speculation, by suppressing quotations, if necessary, of all issues directly depending on London, and of any others likely to be seriously attacked, and by strictly enforcing the market regulations calling for the deposit of cash, or other impeccable cover, simultaneously with the handing in of speculative selling orders, and so forth.

So well was the secret of the London move kept that, for some time on Monday morning, the Paris banks—following routine, in spite of the startling news broadcast by the newspapers—continued to buy all sterling offered at Saturday's closing rate, whereas hotels and tourist agencies were either refusing to accept sterling at any price or else offering rates between 80 and 90 to the pound. The Bourse, being the only important Continental market not closed, opened under an avalanche of selling orders from every part of Europe, including a large volume from London itself, and for some time the market was keyed up to the highest tension. Quotations of British Consols, German (Dawes Plan) 7 per cent., and a number of other issues were suspended from the start. Others were suspended after opening prices had been registered. The declines were sufficiently serious, in any case. Bank of France shares opened 1,790 (or over 12 per cent.) down, and Suez Canals, Rio Tintos and Royal Dutch were equally hard hit. To the general surprise, however, this deluge of offers was quietly absorbed forthwith, apparently by a large body of cooler-headed people, who realised the profitable opportunities offered through the mistaken psychology of the vendors. This sharply checked the downward rush; and, even if it did not prevent a certain amount of further weakness, rendered the development of panic conditions impossible. On Tuesday, the money market reopened, and

there was a sharp recovery on the Bourse. To-day, except in South Africans, the improvement was even more emphatic. So far as can be seen at the time of writing, the immediate repercussions of the sterling crisis appear to have been withstood well, so far as Paris is concerned.

Both in financial circles and among the general public, the sequelæ to last week's decisions in London are being followed with intense and, for the most part, sympathetic interest by the French. If there is some scepticism in certain quarters as to the probability of sterling regaining its normal standing within the next six months, there is a unanimous recognition of British traditional genius for surmounting the worst difficulties. In the business world it is readily admitted that the temporary devalorisation of the pound will almost certainly furnish British exports with a substantial and almost immediate stimulus, the far-reaching effect of which may be incalculable.

Assertions that the Bank of France's stock of foreign exchange includes 20,000,000,000 francs of sterling, which would represent an enormous direct loss through the fall in the pound, have been promptly met by M. Moret, the Governor of the Bank, with the declaration that "the greater part of the institution's holding of foreign exchange consists of dollars deposited in New York, and is, consequently immediately convertible into gold." It has been unofficially announced here that the sterling held by the bank does not amount to one-half of the £160,000,000 alleged. The fact that the large French balances in London have been left there, in spite of the French financial leaders' foreknowledge of the pending step, is regarded here as amply confirming the opinion that the present situation of the pound may be speedily remedied, and that financial co-operation between the two countries is much more thorough than is generally known.

The revenue, thanks to the policy of more or less systematically increasing a steadily growing number of import taxes, to give further protection to varying categories of French products threatened by foreign competition in the home market, continues to yield a surplus. The returns for August indicate total recoveries from all Budget sources of 3,276,843,000 francs, of which 3,229,862,000 francs was from "normal and permanent" sources, as compared with 3,331,718,000 francs from the same sources in August last year, and 3,580,972,000 francs in August, 1929. The decline of 102 millions came solely from direct taxes, which were 165 millions less than a year ago, owing to slower payment of income tax. Indirect taxes and State monopolies, not including tobacco, yielded 68 millions more than in August, 1930, but this was solely due to an increase of 127 millions in receipts from Customs duties. The yield from turnover taxes was only 37 millions less than a year ago, which suggests a certain improvement in trade in general as this figure represents the smallest decline for some months. The tax on Bourse operations gave 7,000,000 francs (or less than half the total expected), and was 166,000 francs below the yield of August, 1930. The yield from the 30 per cent. tax on spirits was 12½ millions more than expected, while the imposts on wines, beers and liqueurs, amusements, motor cars and sugars also exceeded estimates. The total revenue for the month from indirect taxes was 23,225,000 francs in excess of expectations, bringing the total excess for the first five months of the year to 146,185,000 francs.

New issues of capital in France during August were the smallest registered in any one month since the revalorisation of the franc. The total new offers were only 351,000,000 francs (against from 1,000 to 1,619 millions in each of the previous months), of which 13,000,000 francs represented share capital of new companies, 35,000,000 francs increases of share capital by old companies, and 303,000,000 francs new bond issues. The average yield offered by new bond issues was 4.85 per cent., against 4.60 per cent. in July and June, and means of 4.69 per cent. 5.36 per cent., and 6.03 per cent. respectively during the previous three years.

GERMANY.

Views on British Suspension — New Decree — Banking Supervision — Company Law — Amnesty Loan.

(FROM OUR CORRESPONDENT.)

BERLIN, September 22.

The suspension of gold payments in England is regarded by the German public as the worst symptom of the world crisis. It is feared that its consequences will intensify the confidence crisis throughout the world, and thereby add still further to Germany's difficulties. Anxiety is particularly keen in respect of the financing of German foreign trade. German importers' bills are mostly drawn on London, and it was one of the most important advantages to Germany of the standstill agreement that the extent of these import credits was not to be reduced, just as it was one of the most serious drawbacks to the Hague Agreement that these credits were only safeguarded in theory, and not in practice. If the disturbance to England's international financial position now interferes with the functioning of the accustomed machinery, Germany may be driven to pay cash for a still larger part of her imports, and, at the same time, it is likely that the purchasers of German exports would be in similar financial difficulties, so that Germany would have to grant still longer export credits. This would have a very unsatisfactory effect during the next few months on the German balance of payments, on which Germany's international position depends. It is also feared that the English currency crash may strengthen the universal tendency to increase the obstacles in the way of trade by raising tariffs.

The developments in England have, however, given rise to one hopes that this most convincing proof of the critical state of the world may force the countries with large gold holdings to mobilise the means of defence. So far Germany has resisted the temptation to escape from the general consequences of world deflation by an internal expansion of credit, though pressure in this direction was brought to bear upon the Government from powerful sources, but everybody in Germany is convinced that action to raise world prices would create new confidence, modify, at least to some extent, the acuteness of the crisis, and thereby bring nearer the moment of recovery.

Important decisions have been taken in domestic economic policy. A decree of the President, dated September 19, introduces the long-discussed supervision of private banks, brings about a reform of company law and promises a still more extensive taxation amnesty than that granted by the August decree in respect of all property and income from property which is used to subscribe to the new 4½ per cent. Reichsbahn loan, provided that the subscriber retains his holding until 1937.

That part of the decree which deals with banking supervision provides for the appointment of a "Banking Board of Control," and of a Reich Commissioner. The board is to lay down the lines on which the Banking Commissioner is to carry out his duties, but the Commissioner is an official, and as such, subordinate to the Minister for Economics. No sharp line of demarcation is drawn between the competence of the board and that of the Commissioner, but difficulties are hardly likely to arise, as the five members of the board include, besides the Commissioner himself, the Secretaries to the Ministry of Economics and the Ministry of Finance respectively, so that there is a majority of Reich officials. The remaining members are the President of the Reichsbank and a Reichsbank director nominated by him. The Commissioner's duties are formulated in very general terms as follows:—

"The Reich Commissioner for Banking shall keep himself continually informed of the state of German banking and credit, especially in their relation to other countries, and shall influence general banking policy in the economic interest of the community."

For the exercise of this influence the Commissioner has at his disposal no powers which are likely to exercise a very great direct effect. He can demand information of all kinds from the banks and from their customers. He can attend and speak at general meetings, and can demand and compel the calling of extraordinary general meetings,

or meetings of the governing bodies of the banks. Finally, he can

"make proposals to the Board of Control for the adoption of general principles in the conduct of banking business. The Board of Control shall decide what general principles, if any, are to be laid down for the banks in the conduct of their business. This authorisation shall also cover the establishment of principles to govern the conditions under which the banks may exercise the voting rights carried by the securities deposited with them for safe keeping."

Whether these outlines will have any binding force will be decided by the Government, which is to issue decrees for the execution of these provisions. It may be assumed that the Commissioner will only be able to influence the essentials of banking policy in so far as he convinces public opinion that he speaks with authority. That is an effective barrier against the damaging attacks to which political pressure might give rise. The Commissioner will be able to render positive service to the banking world if he is able, through his powers of demanding information, to ascertain how far individual banks, unknown to each other, are granting large credits to the same borrowers. It is well known that in the case of Nordwolle and many other failures this lack of mutual contact among the banks has played a very detrimental part.

The reform of company law has only been undertaken in the emergency decree in those respects which the Government regarded as urgent. It is still intended to bring before the Reichstag a Bill which will include a number of reforms which are not being carried out at present. The new regulation aims at compelling companies to greater publicity and the publication of more accurate balance sheets. Reports will have in future to explain the financial status and relations of the company, and go particularly into any differences from the position of the previous year; to give information on relations with dependent companies, on the amount of shares held and changes in these amounts; to reveal any guarantees; to make known the total payments to directors and members of the supervisory board, and to disclose membership of any cartels or similar associations. Further, the rights of individual members of supervisory boards to demand from the directors information relating to business transactions have been extended. The penalties for infringement of duty on the part of members of the supervisory board have been made more severe and provide in extreme cases for five years' penal servitude, but breaches of duty due to mere negligence are still not punishable. The decree contains detailed provision for the auditing of balance sheets by chartered accountants. The chambers of trade completed several months ago their preparations for the admission of chartered accountants, who have hitherto operated in Germany without being subject to licence requirements and without any particular Government regulation. Company directors may not in future receive credits without the express permission of the supervisory board. All the regulations of individual companies as to the composition and remuneration of their supervisory boards are to cease to have effect at the next general meeting, when new regulations are to be enacted by a simple majority, and a new board elected. Nobody may serve on the supervisory boards of more than twenty companies.

The new 4½ per cent. "Amnesty Loan" is intended primarily to provide as convenient a way as possible for the return of exported capital. Whereas the August amnesty decree only granted exemption from tax penalties and from back payments of taxes due before 1930, the subscribers to the new Amnesty Loan are granted complete exemption from all taxation until 1937. Perhaps an even more important point is the fact that the "capital fugitive" does not have to confess his offences in respect of taxation, but can subscribe to the loan not only at the official places but also at any notary's office. As the loan is also free of inheritance and gift taxes it has attractions for many taxpayers who have honourably fulfilled their obligations. Simultaneously with the raising of the loan, the total amount of which is not limited at the outset, the penalties for evasion of taxation are, being made extraordinarily severe. Offences will in future be tried by special courts, and the penalty for deliberate fraudulent evasion will be imprisonment.

The proceeds of the loan will be placed at the disposal of the Reichsbahn, which is to be required, in the interests of employment, to use it for placing new contracts. The Government is determined that the Reichsbahn, which also receives a large part of the savings from the Hoover Plan, shall spend as much as possible in orders to industry. The railway company, on the other hand, disquieted by the very severe decline in its income in consequence of the crisis, would like to use all possible means of increasing its liquidity. The Government's wish is strengthened by the fact that railway contracts would benefit principally the iron industry of the west, which is regarded as a particular danger point for social unrest during the coming winter.

SWITZERLAND.

Effect of British Suspension — Decline in Bank Shares — Fall in Deposits — Effect on Trade.

(FROM OUR CORRESPONDENT.)

BASEL, September 24.

THE news of the London decision arrived in Switzerland a few days after the close of the Swiss Bankers' Conference in Lausanne, at which the state of the nation's economy was investigated and, as might be expected at such a time, deplored.

Banking is one of the major Swiss industries. The comparatively small proportion of purely national business to the total turnover makes the banks extraordinarily sensitive to disturbances in neighbouring countries and has forced them in the last few months to maintain a preposterously high level of liquidity. This, in turn, has brought a serious decline in profits which, coupled with the effects of the German "standstill," has affected the nerves of the stockholders.

Commitments in foreign countries, especially Germany, form an unduly high proportion of the total assets of the Swiss banks, and, in consequence, there has been a steady decline in bank shares over the last week, following the serious difficulties in which several French-Swiss institutions had become involved. This is reflected in a substantial shrinkage of deposits. Some of this money has found its way into Cantonal banks which are State guaranteed, but the increase in net circulation proves that much of it is being hoarded both at home and abroad, and is not likely to be returned to the banks even if there is a rise in money rates. There are indications that rates are rising slightly already, not the least important of these rises being that in the rate of the recent Federal Conversion loan which, in spite of criticism, it was necessary to fix finally at four per cent.

The effect of the English suspension of convertibility has been to accentuate all these tendencies. In spite of recent selling, when the announcement from London was made, Swiss interests were still in possession of fairly large sterling balances. The abnormally high figure of 675,000,000 francs Swiss bankers' balances at the Central bank is believed to be the result of sterling withdrawals, and to prove that the major portion of sterling balances had already been withdrawn. The Swiss National Bank reserve and ratio are not believed to be materially affected by its sterling balances, but the aggregate volume of the Swiss National Bank's resources to that of Swiss commitments abroad in the event of difficulties is small. A source of anxiety exists in the belief that a considerable proportion of Central European commercial paper in Swiss portfolios is in sterling denominations.

The principal strain will no doubt be felt in a decline of exports, both visible and invisible. Not less than 20 per cent. of Swiss exports of goods are taken by the United Kingdom, and the British contribution to the revenue from tourists is estimated to be as much as 35 per cent. of the total.

The most striking feature of the Swiss reception of the news is the dumbfounded attitude which it has induced.

Many bankers can hardly bring themselves to believe that it has really happened or that it can last for more than a day or two. There is talk everywhere that "something must be done"; "a credit must be arranged"; "Switzerland is ready to do its part"; but hardly anywhere a realisation that a new chapter—and probably a long one—has begun in the economic history of the world.

HOLLAND.

The Crisis — Bank Assistance.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, September 24.

It was inevitable that the crisis in London should involve great difficulties for Amsterdam. The market had not recovered from the blow of the closing of the German banks; the situation on the Amsterdam exchange was becoming daily more and more serious; and forced liquidations brought about new low records day after day. The big money lenders began to show alarm and liquidated prolongation holdings on a large scale, thus intensifying selling pressure. The board of the Amsterdam Stock Exchange met at the end of last week to consider whether the exchange should be closed. The meeting was not in favour of closing, but was only desirous of combating excesses and unjustified selling pressure. A stricter supervision was exercised on the exchange in consequence.

The report of the suspension of the gold standard in England, therefore, naturally gave rise to great anxiety here. Special measures were speedily decided upon. The Netherlands Bank, with the object of averting further forced liquidation, immediately announced that it was prepared to take over prolongation positions called in, or to be called in, on the basis of the prices obtaining on Wednesday, September 16th. The other banks also promised their utmost co-operation for providing the most reasonable accommodation practicable. Thanks to this assistance, the Amsterdam market on Monday morning was prepared for any eventualities, and expectations were that the market would be opened in the usual way. Later on, however, reports from abroad came in that many of the foreign exchanges were not opening, and this development gave rise to new problems. Would not these foreign countries, deprived of their usual means of trading, take steps to get a large part of their offers placed direct in Amsterdam? The Amsterdam market is so closely connected with foreign markets that very intense pressure might be exerted. Moreover, the English Ambassador at the Hague had requested the Minister of Finance to keep the Amsterdam exchange closed. The board of the Amsterdam exchange was accordingly requested to give immediate advice, and a quarter of an hour before the time for the official opening of trading it was announced that the Minister of Finance had ordered the exchange to be closed that day.

The news was received calmly. Confidence was felt in the powerful position of the banks, as well as in the reasonable and comparatively low amount of the prolongations outstanding, the necessary margins for which are as a rule paid in promptly. Undoubtedly the confidence prevailing in the country has played an important part in enabling the Amsterdam exchange to be re-opened soon again. When, on Tuesday, it proved that the New York and Paris markets had been fairly normal, there was no longer any reason to keep the Amsterdam exchange closed any longer, especially as the Netherlands Bank had published a declaration on the following lines:—

"The Netherlands Bank is prepared to make advances to approved borrowers against securities including the margin present, at the prices quoted on September 19th, subject to such securities having been already loaned on that date. In valuing these securities, the Netherlands Bank will take the exceptional circumstances into consideration.

"Although it reserves the right to decline to accept securities offered, the Netherlands Bank will not be unduly exacting towards borrowers.

"The interest to be charged by the Netherlands Bank will be, until further notice, 2 per cent. per annum above the average prolongation rate."

Subsequently the Netherlands Bank even dropped the reserve it made with regard to accepting, for instance, sterling loans as security. Despite the depreciation of the value of sterling, those securities will nevertheless be acceptable at the rates fixed on Saturday, September 19th.

Thanks to this action on the part of the Netherlands Bank, the private banks have since undertaken to co-operate. The offer of the Netherlands Bank applied only to securities bought before September 19th, not to any new purchases of securities, so that it seemed possible that the exchange would have to run exclusively on cash transactions for the time being. Under the lead of Messrs van Loon and Company, however, the banks have now made funds available for the purpose of financing new prolongations.

The course of exchange trading on Tuesday left a very good impression, and it is satisfactory that, whatever difficulties may yet be in store for Holland, the prompt co-operation of her banks has enabled confidence as to the immediate situation to be maintained.

AUSTRIA.

Repercussions of British Crisis — Anticipated Effect on Trade — Economics.

(FROM OUR CORRESPONDENT.)

VIENNA, September 22.

THE suspension of the gold standard in Great Britain at first made a deep impression in Austria and caused considerable disquiet. Very soon, however, opinion grew calmer. The board of the National Bank took the view that, in spite of the low level of their foreign holdings, no great demand upon them was to be anticipated. According to the views of the National Bank, economic relations with England have recently been less active, while of the 150 million schillings advance made by the Bank of England, 50 million schillings have already been repaid. Repayment of the remaining 100 millions is not due until October 16th, and meanwhile the prospects of sterling may become clearer.

As far as most of the public were concerned, it was really the moral shock, owing to the critical situation of British public finances, which provoked this commotion. In addition, numerous private people own British fixed-interest securities and the British section of the League of Nations Loan, redeemable in sterling, enjoys special popularity. It is probable that a certain amount of money will be lost in this way.

From January to July, 1931, Austrian imports from England amounted to 45 million schillings, against 53 millions for the corresponding period of the previous year, while Austrian exports to England amounted to 53 millions, against 57 million schillings. As a consequence of the fall in the value of the pound, it is feared that, provided merchandise prices in England do not go up too much, English competition at home and abroad will become very keenly felt.

On the first day sterling was not bought by Vienna banks, as there was no official foreign clearing. On the following day the pound was traded in privately at 29 to 30 Austrian schillings, in comparison with 34½ schillings before the suspension. It is an interesting fact that both at the banks and in private trade rather large quantities of English bank notes were offered, which showed that, trusting in the stability of the pound, many savers who had taken their money from the Austrian banks had believed themselves safe in investing in English currency, but here again it was soon noticeable that rather large amounts which were offered for sale were very shortly withdrawn.

All references to the extent of the retrenchment and the consequent reduction of purchasing power in the hands of the masses are countered with the statement

that, in view of events in England, Austria is more than ever compelled to reduce expenditure. The difficulties which are really feared are connected with the assumption that it will be far less easy than heretofore to raise the foreign credits. In view of the announcements that the placing of foreign loans and the purchase of foreign shares are no longer in Great Britain's interest, an anxious search is in progress for purchasers for the new loan which is to be issued and even for the short-term treasury bonds. It is assumed that it will be more than ever necessary to turn in the direction of France. In view of the events in England it is feared that there may be serious restrictions in Hungary and a further disinclination to meet the claims of Austrian creditors is anticipated.

The following despatches, received from our correspondents before the gold standard was suspended in Great Britain, are necessarily out of date, but we print them as giving a picture of conditions immediately before the suspension.

UNITED STATES.

NEW YORK, September 16.

NEITHER the economic nor the financial picture has changed materially with the passing of the third quarter income-tax payment date. Hope of much worth-while business improvement in the third quarter has, of course, been given up, but there is still expectation of some seasonal upturn later in the autumn. Financial markets have weakened further, but in shares the bear interest is becoming crowded, and a rally on purely technical counts is anticipated.

Liquidation of bonds is apparent in the railroad section and foreign groups, but some amelioration of conditions has come from the more liberal attitude of bank examiners. Strictly interpreted, the national banking laws require the national banks to write down any capital losses suffered from investment holdings. This practice involves sale of securities, and often closing the banks which have their own capital impaired, followed by further sale of assets. Recently the banks have not been required to write off losses on bonds which, in the opinion of the examiners, have a reasonable chance of recovery in price. Banks organised under State laws are also, it is reported, obtaining some relief in this respect. While this would not be regarded as sound permanent practice, it should have the effect of lengthening the life of many banks and of relieving to some extent the pressure on the security markets.

The recent Government 3 per cent. 24-year bond issue for \$800,000,000, sold largely to meet current expenditure, but also to refund some of the short-term indebtedness, has been selling at a small discount. Banks in many instances subscribed rather more than they wished, in order to make sure of their allotment and also to secure for a month or so Government deposits, on which they pay no interest. They can afford to sell the bonds at a small loss in order to obtain the use of funds free in that period, and many have done so.

New capital issues have increased somewhat in the past week. The total rose to \$105,000,000 against \$6,000,000 in the previous week and \$140,000,000 a year ago. Flotation of \$50,000,000 of Canadian National Railways bonds, backed by the Dominion Government, was largely responsible. The bulk of the remainder were Government and municipal financing. Small public and utility capital issues of high grade have been taken, though slowly, in the current week, and there was a turnover of around \$2,000,000,000 at the tax date. This included approximately \$800,000,000 in new Treasury long-term bonds and \$300,000,000 in Treasury certificates, and retirement of \$680,000,000 of notes and certificates. Interest payments this month on the public debt amount to about \$100,000,000, and it is expected that income-tax collections may run between \$300,000,000 and \$400,000,000. Company dividend payments at mid-month were comparatively small, as were bond maturities, but they will be large at the end of the month.

An interesting financial operation has been completed in the refunding of the \$50,000,000 of Argentine notes due October 1st. The Argentine Government has shipped \$20,000,000 in gold to retire that amount of the debt. Brown Brothers, Harriman and Company are heading a banking group to extend a six to nine months' credit on six to nine months' notes, while half the remaining \$10,000,000 will be provided by a peso credit from American exporting companies. The Argentine Government expects to ship another \$5,000,000 in gold. Presumably, Argentina will attempt to refund the short-term loans next year, when it is hoped market conditions will be more favourable. The Government had unofficially announced its intention of shipping the full \$50,000,000 in gold necessary, provided it was found to be impossible to refund on any but onerous terms. Reduction of the gold obligation to half will, of course, relieve the Argentine of some deflation which otherwise would have had to take place, and the whole operation reflects the country's good credit standing in spite of the disturbances all over South America.

Pending the collection of quarterly income-tax cheques the Treasury has made a temporary overdraft at the Federal Reserve Bank of upwards of \$100,000,000, which has increased member bank reserves. Call money is kept at 1½ per cent. officially and 1 per cent. unofficially, but Federal funds have dropped to ½ to ¾ per cent. Little or no sign has been seen of the usual seasonal rise in credit demand. Federal Reserve credit outstanding was up only slightly on the week, and the member bank reports show a sharp reduction in loans on securities and a small rise in "other loans," which probably means larger bank holdings of bills. Meanwhile, the volume of bankers' bills outstanding continues to decline. A drop of \$138,000,000 in August brought the total to the smallest in three years. Since the beginning of the year the decrease has been \$466,000,000. Most of the loss last month was in bills created for export of goods from the United States.

Domestic trade conditions are somewhat better in retail trade lines and unimproved in the heavy industries. Cotton consumption in August was 73,000 bales higher than a year ago, but was 25,000 bales less than for July. The steel trade is running unchanged at around 80 per cent. of capacity, but is experiencing moderately better demand for structural and railroad steel. Railroad freight-car loadings were down slightly in the opening week of this month, and, in general, no change for the better has taken place in the railroad situation. More roads have announced reduction in official and salaried personnel compensation.

Conditions in the oil and copper industries continue to be highly unsatisfactory. Gasoline stocks are now beginning to mount, the season of high consumption having passed. It is becoming more difficult for Oklahoma to maintain a shutdown with the Texas fields now producing about 950,000 barrels daily. The leading oil-importing companies have made a proposal to the oil States that, if domestic production be kept down enough to bring steady liquidation of oil storage, they would further restrict their imports. Stocks of refined copper rose in August, for the fifth consecutive month, to a new high record of 455,775 tons, the gain in the past twelve months being 80 per cent. in spite of curtailed output. Prices have sunk to new low depths, at 7½ cents, partly due to resale of copper bought by Germany a few months ago and which was permitted by the Export Association. In addition to the stocks of copper reported, there are very large supplies held in fabricators' hands and under consignment.

DENMARK.

COPENHAGEN, September 21.

DURING the last few months prices in Denmark have continued downward, though not so rapidly as before. From an index of 115 in April wholesale prices have declined to 110 in July and 109 in August, while in August, 1930, the figure was 128. At the same time, the cost-of-living index has declined from 157 in April to 154 in July, as compared with 165 in July, 1930. The decline

was particularly marked in the prices of agricultural exports, and in the early summer the quotations for bacon and butter reached very low levels, though subsequently there was some improvement. These low prices for commercial agricultural produce have still further reduced the chances of profit, and many farms are now being worked at a loss. A computation made by the official Bureau of Agricultural Economy shows that for the working year from the spring of 1930 to the spring of 1931 the capital invested in agriculture has produced a yield of only 4 per mille, while if the computation had been based on the prices prevailing in June the yield would actually have been negative. An increasing number of farmers have consequently come into difficulties and the number of compulsory sales of farm estates has shown a rather pronounced increase during the last few months.

In spite of the difficult situation, the production of the principal agricultural exports has been continued to the full capacity, as will appear from the following figures representing the quantities of agricultural produce exported up to September 11, 1931, compared with the exports during the corresponding period of 1930:—

	January 1– September 11, 1930.	January 1– September 11, 1931.
Butter, tons	119,990	122,400
Bacon, tons	195,658	256,845
Eggs (1,000 scores)	29,481	34,364

In the course of the last few months Danish industry, too, has been severely affected. Orders are far more difficult to obtain than before, and the number of unemployed industrial labourers is 40 per cent. higher than at the same time last year. As yet unemployment does not create any particular anxiety, but it appears likely to become rather more serious in the months to come. A summary of Danish industrial exports during the first half of 1931 shows that, in spite of the prevailing world depression, the market abroad for Danish industrial products has been fairly well maintained. From a total of Kr. 150,000,000 in the first half of 1930 the value of industrial exports has declined to Kr. 120,000,000 in the first half of 1931. Even though this reduction covers a decline of prices, it also includes a reduction of the quantities exported, which has been very pronounced as far as cement is concerned. The exports covered by the statistics for the first half of 1931 comprise to a great extent goods previously ordered, and this particularly applies to ships and machinery. As it is reported that the exporting concerns in these lines have experienced very great difficulties in obtaining new orders, it must be expected that future statistics will show a considerable decline. Hitherto sales in the home market have been fairly well maintained, owing largely to the very extensive building activity, which as far as Copenhagen is concerned exceeds all previous records. On July 1, 1931, more than 8,000 flats were in the course of construction in Copenhagen.

The firm tendency of the money market in the great European countries since June-July did not assert itself immediately as far as Denmark is concerned. The increase of the English Bank rate late in July did not lead to a corresponding increase in Denmark until about a month later, after the termination of credits granted to various Danish firms abroad, which forced them to endeavour to obtain loans from Danish banks.

Under the influence of the rising rate of interest the prices of bonds declined throughout August, and still more decidedly during the first ten days of September, when a number of "black days" were experienced on the Copenhagen exchange. Not only did the prices of bonds decline, but shares, especially industrials, fell substantially in many cases, apparently with little cause. A recovery, however, began towards the end of the second week.

During the first seven months of the present year Danish foreign trade has been as follows:—

	(In million kroner.)	January–July, 1930.	January–July, 1931.
Imports		1,006	833
Export of Danish goods		888	743
Export of foreign goods		56	43
Excess of imports		62	47

In spite of the fact that the export prices are still very low in comparison with the prices of import goods, the balance of payments of the country is in order, and it has not been necessary during the year to increase the net debt to foreign countries. In the first seven months of 1931 the excess of imports was only Kr. 47,000,000, against Kr. 62,000,000 in the corresponding period of 1930.

BELGIUM.

LOUVAIN, September 18.

THERE has been little change in the economic situation. Firms doing business with Germany, notably the wool trading quarters of Verviers, have suffered from the German crisis, but, on the other hand, a slight improvement has been perceptible in the metallurgical industry. A general strike has just been avoided, at least temporarily, in the coal industry. The coal situation has, nevertheless, become still more difficult. The collieries have refrained from reducing output in order not to increase costs, so that enormous stocks, totalling about 3½ million tons, have been heaped up at the pit-head, and pit-owners have been incurring heavy financial charges. To facilitate competition with foreign producers, the Belgian pit-owners are soon to give notice to terminate the collective labour agreement which makes wages dependent as to 75 per cent. on the cost of living.

Owing to the state of the industry, coal-extracting companies and miners have joined the numerous agriculturists and industrialists who have been advocating protection against imports. Though there have been some regrettable concessions, the Government has not gone far towards meeting these demands. Future customs policy seems much more uncertain, and there seems to be a real danger that measures much more destructive of the principles of Free Trade may be passed. Opponents to such a programme have nevertheless been active in the Press. The leaders of the Belgian Labour Party have been at variance on this question, though the party in general has seemed to be more attached to Free Trade. In this matter the influence of the agricultural groups, which are in general inclined to Protectionism, has been strongly felt in the Catholic Party. The "Boerenbond" has only given moderate support to the Protectionist movement.

The general Budget for 1932 is in course of preparation; its balancing will be very difficult, and some cutting even in consolidated estimates has been felt to be necessary. A commission presided over by M. E. Francqui has hinted at serious abuses in the establishment of both old-age pensions and war pensions. The Francqui report has created much excitement in the Press and among the public, but it is doubtful whether the Government will feel strong enough to carry out its recommendations.

The 5 per cent. public loan was issued for public subscription at 96 per cent., too large a discount, for it has remained at a premium over the subscription rate, at 97½ per cent., despite the unfavourable general trend of securities and the anticipation of new loans.

NORWAY.

TRONDHEIM, September 2.

At the annual meeting of the Norwegian Bankers' Association in Bergen a few days ago Mr Sandberg, director of the Christiania Bank og Kreditkasse and president of the lenders of Norway, gave a general survey of the economic problems of Norway, as seen from the bankers' point of view. This year, Mr Sandberg said, the annual meeting of the

association was held under the stress of the international crisis and the difficulties encountered by our home industry. Striking evidence of the effects of the crisis could be found in nearly every phase of the economic and industrial life of the country, but the severest effects were perhaps experienced on the stock market, the index showing a fall of about 25 per cent. for the period June, 1930, to August, 1931. Mr Sandberg pointed out that the price level in Norway at present is about 11 per cent. lower than a year ago, and there was consequently an urgent need of a corresponding reduction in costs of production, general expenses and wages, not only in private business, but also—and perhaps in the first place—in the national and local administration.

Conditions on the money market have been rather easy during the month, with only small variations in the returns of the Norges Bank. As might be expected at the turn of the month, the return as per August 31st shows an increase of about 15 million kroner in the item Loans and Discounts, while at the same time deposits at sight have increased by about 12 million kroner. Foreign balances went up from 8 million kroner to about 12 million kroner, and there was also a slight increase in the holding of securities. The result was an increase of the note circulation of nearly 7 million kroner.

Imports during July this year amount to 63 million kroner, as against 73.7 million kroner during the same month last year, while exports amount to 24.9 million kroner, against 58.7 million kroner for the same month last year. There is consequently an adverse trade balance for July of 38.7 million kroner, compared with 15 million kroner for July, 1930. The total value of imports during the first seven months of the year amounts to 479 million kroner, as against 568 million kroner during the same period last year, while the corresponding figures for the exports value amount to 257.3 million kroner and 411 million kroner. It is significant of the effects of the labour dispute that, while the value of exports of paper and wood-pulp during the first seven months of 1930 amounted to about 109 million kroner, the value of these items during the same period this year has dwindled to about 50 million kroner.

It is stated in the papers to-day that the proposals of the Public Mediator have been definitely accepted by the workers with a fairly large majority, and that work will then be resumed on Monday or Tuesday next.

FINLAND.

HELSINGFORS, September 14.

DEPOSITS received by the joint-stock banks, which had risen slightly in June and July, were reduced again in August by 94.7 million marks, so that their total was 7,793.9 million marks, compared with 8,131.2 millions at the end of August, 1930. The accumulation of deposits was in general also poor in the case of the savings banks and other similar institutions. With regard to the credits of the joint-stock banks, the falling tendency that had been experienced since February continued in August, when the reduction amounted to 16.1 million marks. The total credits of the joint-stock banks had thus dropped from 9,891.1 millions at the end of August, 1929, to 9,100.2 millions a year ago and 8,971.9 millions this year. As usual at this season of the year, the foreign position of the joint-stock banks improved. The increase in their net foreign balances was 23.0 million marks, the total being 53.1 millions.

The position of the Bank of Finland became slightly more strained during August, chiefly owing to the increase by some of the joint-stock banks in their re-discounting of bills at the central bank. On September 8th the amount of re-discounted bills was 112.1 million marks, in comparison with 88.8 millions at the end of August and only 13.1 millions on September 8, 1930. At the same time the foreign balances of the Bank of Finland continued to fall slowly, as they have ever since the end of March. During August the reduction was 50.8 million marks, and

during the first week in September another 28.7 millions. The reserve of foreign currency amounted to 591.4 million marks on August 8th, as against 917.0 millions a year ago and 530.1 millions two years ago. The ordinary cover has fallen off slightly, but still represented 67.8 per cent. of all liabilities payable on demand on the same date.

The fall in prices proceeded again during the summer after a check in this tendency during the winter. The wholesale price index stood at 81 in August, against 86 in March; whereas the corresponding drop last year was only from 92 to 89. The cost-of-living index experienced a similar reduction. It has dropped 4.5 per cent. since the end of 1930, while the fall in the wholesale price index amounts to 5.8 per cent.

The volume of foreign trade was considerably less during the summer than in previous years, and the reduction in the value of trade was still greater. The value of imports in August only amounted to 289.9 million marks, in comparison with 443.8 and 610.4 millions one year and two years before. The value of exports amounted to 423.1 million marks, as against 539.6 millions in August, 1930 and 904.4 millions in the same month in 1929. Thus there was a surplus of exports for August this year amounting to 134.0 million marks, compared with 95.8 and 294.1 millions in the preceding years. For the first eight months of this year there was a surplus of exports of 573.9 million marks, the most favourable balance of trade on record.

As in many other countries, the depression has seriously affected public finance. In 1930 the yield of most sources of revenue fell off, and during the current year this development has continued. The Government was obliged to cancel some grants already approved in the Budget and to take all other possible steps for curtailing expenditure. As it is to be expected that the decrease in revenue will probably continue in 1932, the drawing up of the Budget has proved unusually difficult. It is, therefore, all the more satisfactory that the revenue balances the expenditure according to the Government's Budget proposals. The revenue has been calculated cautiously and is reduced by over 500 million marks. The expenditure cancelled is considerable, amounting to about 637 million marks. It has been impossible to avoid the reduction of grants for a number of useful purposes, so that the Budget is in the nature of an emergency budget. As the expenditure and revenue have been balanced without resorting to fresh or increased taxation or loans, the Budget is, nevertheless, strong, and fulfils the most important demand of the moment.

POLAND.

WARSAW, September 18.

THERE have been considerable withdrawals of deposits from Polish banks during the past six months, and undoubtedly some curtailment of short-term money placed in this market by foreign institutions. The published figures show that the total deposits of joint-stock and private banks (not including Government or savings banks) declined from 878 million zlotys on December 31, 1930, to 835 millions on March 31, 1931, and to 708 millions at the end of June. Further withdrawals in the month of July are estimated by the Institute for Economic Research at 60 million zlotys from all private banks, 30 millions from municipal savings banks and 18 millions from the Post Office savings bank.

The Director of the Institute for Economic Research estimates that the flight of capital from Poland from the political disturbances in Germany last September to the end of July of the present year amounted to about 500 million zlotys (roughly, 12 millions sterling). This estimate is based on the following figures: the decline in the gold and foreign exchange reserves of the Bank of Poland, 183.8 millions; external loans contracted by the State, 250.1 millions; excess of exports over imports, 275.4 millions, making a total of 709.3 millions. From this must be deducted payments on account of long-term loans,

135 millions, and merchandise credits, 64.7 millions, leaving a net capital outflow of 509.6 million zlotys. A capital flight equivalent to 12 millions sterling during such a period of unexampled depression and uncertainty is not of vital importance, but it is none the less embarrassing; and, if it is merely the opening phase of a steady outflow, the financial and economic consequences will soon begin to assume much greater importance. The political and social consequences, on the other hand, should not be unduly exaggerated. Polish peasants have been accustomed for centuries to hard work and privation. Their lot to-day, difficult as it looks, is incomparably better than it has often been in the past. They have plenty to eat and enough to wear, and to the great bulk of the population such problems as bank deposits, currency stability, etc., are not matters of consequence.

The Budget deficit for the month of August is 13.4 million zlotys, making a total deficit of 115.6 millions for the first five months of the fiscal period. Even more inquieting than the size of the deficit is the drastic fall in revenues from 229 million zlotys in April to 169 millions in August. The July revenue of 192.8 millions was "padded" by heavy receipts from the State Monopolies. Very serious efforts are being made to cut down expenditures (except so far as the Army is concerned), and large numbers of Government employees have been discharged. The full effect of economies in this direction, however, will not be felt for several months, because the law requires the payment of three months' salary to a discharged employee unless three months' notice is given. The policy of drastic retrenchment is very disastrous for the manufacturers and tradesmen whose principal customers are public servants and their dependents. Even the comparatively wealthy farmers are very restricted buyers of manufactured articles, so that industries are largely dependent on the purchasing power of Government and municipal employees. The deferred payment habit is very widespread in Poland, and Budget retrenchment not only stops new buying but it prevents debtors from meeting their outstanding debts. The buying of imported goods, except absolute necessities, has virtually ceased.

The August 15th crop estimate places the wheat harvest at 19.8 million quintals, rye at 51.6, barley at 14.8, and oats at 24.6. The final crop figures for last year were: Wheat 22.4, rye 69.6, barley 14.6 and oats 23.5 million metric quintals. With the present year's crop hardly more than sufficient for domestic needs, grain prices are showing a firmer tendency despite distress selling to pay taxes and other unavoidable obligations. A marked price improvement is anticipated later in the year which should substantially improve the position of farmers who are able to hold their grain off the market, but not to such an extent as to enable them to meet more than their most pressing commitments.

JUGOSLAVIA.

BELGRADE, September 14.

ECONOMICALLY the country is still in the slough of depression, escape from which can be effected only in concert with the rest of Europe. The State has been badly hit by the suspension of reparations, the net loss being somewhat over 700 million dinars. The budget had, therefore, to be drastically revised, and cuts to the extent of 714 million dinars introduced. Cash stringency has also helped to play havoc with the Governmental scheme of wheat monopoly. Burdened with large stocks of wheat it was unable to sell abroad even at a loss, the Export Society found itself unable to bear the financial strain and had to have recourse to promissory notes instead of cash. Many of these the poorer peasants had to discount at a heavy loss with local tradesmen, missing thus the benefit of a guaranteed standard price specially introduced for them. To recoup some of its losses the State has issued a law obliging mills to buy their wheat for milling from the Export Society at 240 dinars per quintal, the purchase price having been 160 dinars. This, again, has resulted in a rise in the price of bread, the staple food of the Yugoslav working classes.

The general political uncertainty has also had its effect on the stock market, and industrial shares have lost heavily. In interesting contrast with this is the constant increase in savings deposits, which have grown from 12,000,000,000 dinars on December 31, 1929, to 13,880,000,000 dinars on December 31, 1930, and to 14,242,000,000 dinars on June 30, 1931. The presence of such large accumulations of savings, coupled with the fact that the fall in securities has been provoked by very small sales, amounting to less than 1 per cent. of the total issue, gives hope that a fairly brisk recovery may be expected as soon as the economic and political state of Europe give any reason for confidence.

Trade is decreasing further in volume, exports for the first seven months amounting to 2,667 million dinars, as against 3,876 millions in 1930. As imports are worth 2,970 millions, against 4,056 millions in 1930, the deficit is 303 million dinars, compared with 178 millions in the previous year, and the shrinking in the volume of trade is nearly 30 per cent.

According to the statistics published by the Zagreb Chamber of Labour, the country's balance of payment in 1930 was adverse by 1,394,000,000 dinars, as against an adverse balance of 751,000,000 dinars in 1929. The assets, which make a grand total of 8,756,000,000 dinars, are composed as follows: Exports, 6,780,000,000 dinars; tourists and visitors, 700,000,000; emigrants' remittances, 600,000,000; reparations, 426,000,000; freights for goods imported on Yugoslav vessels, 160,000,000; and minor items, such as legacies, interest, pensions, 90,000,000 dinars. The debits, the grand total of which is 10,150,000,000 dinars, read as follows: Imports, 6,960,000,000 dinars; business gains of foreign investors and contractors, 1,300,000,000; service of State debts, 900,000,000; freights for goods exported on foreign vessels, 190,000,000; and various items, such as foreign travelling, international payments, legacies, etc., 900,000,000 dinars. The chief reasons for the increased deficit in 1930 were the adverse trade balance (in 1929 the trade balance was favourable) and the decrease in remittances from emigrants in U.S.A., owing to the depression in the States, by 200,000,000 dinars. Business gains by foreigners increased by 100,000,000, while the service of State debts remained practically the same.

CANADA.

OTTAWA, September 11.

THE Bureau of Statistics, in its latest crop survey, published September 9th, places its first estimate of the wheat crop of the prairie provinces at 248,400,000 bushels, as compared with 374,500,000 bushels for 1930. This figure is rather higher than most people anticipated, and the *Manitoba Free Press*, in its latest survey, forecasts a rather larger yield of 254 million bushels. The figure published by the Bureau for the leading field crops of all Canada, with the comparative data for the previous year, are given below:—

Field Crops.	1930. Thousand Acres.	1931. Thousand Acres.	1930. Bush. per Acre	1931. Bush. per Acre	1930. Thousand Bush.	1931. Thousand Bush.
Canada:						
Fall wheat.....	815.0	739.9	25.8	28.5	21,022.0	21,077
Spring wheat.....	24,082.9	23,369.5	15.6	10.7	376,850.0	250,323
All wheat.....	24,897.9	24,109.4	16.0	11.3	397,872.0	271,400
Oats.....	13,258.7	13,650.0	31.9	24.9	423,148.0	339,380
Barley.....	5,558.7	4,775.2	24.3	17.8	135,160.2	72,516
Fall rye.....	1,091.0	775.0	15.0	7.1	16,321.0	5,466
Spring rye.....	357.0	212.1	16.0	9.9	5,697.5	2,110
All rye.....	1,448.0	987.1	15.2	7.7	22,018.5	7,576
Flaxseed.....	581.8	599.4	7.6	4.6	4,399.0	2,758

The market movement of the new crop, despite its smallness, is somewhat tardy, and prices have again shown a tendency to recede. The stocks of Canadian grain in store in Canada and the United States on August 28th were 102½ million bushels, which is, roughly, six million bushels above the figure for the corresponding date of 1930.

Business fails to show any evidence of an improving trend, and in some lines there are signs of a further recession. Though the carloading figure for the week

ending August 28th, at 49,011 cars, shows an advance of 1,518 cars over the figure for the previous week, it is 23,430 cars below the figure for the parallel week of 1930, a loss of, roughly, 30 per cent. Retail merchants report that sales have gained a certain impetus from the usual seasonal purchases of warmer clothing, but their volume is lower than a year ago, as the general cuts in wages and salaries have curtailed purchasing power. Most factories continue to work well below capacity, and the iron and steel plants are now feeling the pinch severely. It is expected that the comprehensive programme of new public works, which is being undertaken by the co-operative effort of the Federal and Provincial Governments and such municipalities as have funds, will result in generous orders for materials like cement and structural steel, which will help some industries; but, taken all round, the industrial outlook for the winter is very dark. The unemployment situation is, naturally, worst in great cities like Montreal, Toronto, Winnipeg and Vancouver, but it is also bad in the pulp and paper and mining areas. As it is desired that as much labour as possible should be employed, road-building will constitute the largest item in the Government's relief programme, and single unemployed men will be drafted into construction camps in the northern hinterland of Ontario and Quebec, where better roads are most needed.

One hopeful development is the vigorous attempt by Canadian cattlemen to regain their former position in the British cattle market. They have been compelled to do so by their comparative exclusion from the American market by the Smoot-Hawley tariff; its fruits are shown in the fact that during the year ended June 30, 1931, Canada only exported 24,875 head of cattle to the United States, as compared with 194,074 in the previous twelve months. Two years ago the export cattle trade to Britain had completely disappeared, and no cattle at all were shipped across the Atlantic. During the whole of 1930 the shipments to Britain only amounted to 6,000 head, but already this year, up to the end of August, 16,000 head have been shipped. Moreover, carloads of cattle are steadily moving from the West to Montreal, and all available cattle space in outgoing steamers is chartered for some time to come. A shipment of cattle has been made to France, and the Minister of Agriculture has announced that France, which rarely before took any Canadian cattle, will take 10,000 head in the next ten months.

This week, Dr. Botha, the Trade Commissioner of the Union of South Africa in the United States, has arrived in Ottawa, accompanied by a prominent South African business man, to discuss with the Canadian Government the basic terms of the new trade treaty for which the Bennett Ministry some time ago opened negotiations with the Hertzog Government. It is understood that satisfactory progress is being made with the negotiations and that the prospects of working out a mutually profitable treaty are good.

A statement issued by the Department of Finance shows that revenue for the first five months of the current fiscal year ending August 30th, at \$155,432,274, is down by, roughly, 30 million dollars, compared with the figure for the previous parallel period. There has been a notable falling off in the income tax returns, which have shrunk from 63 to 47 million dollars, and Customs returns are down by 12 million dollars. The ordinary expenditure, placed at \$141,034,265, shows a decline of nearly 1½ million dollars, but no account is given in the statement of the special and capital expenditures which cannot fail to have been abnormally heavy. This week the Canadian National Railways have successfully floated a new loan for \$25,000,000 worth of 20-year gold bonds bearing interest at 4½ per cent. These bonds were unconditionally guaranteed by the Dominion Government, and will, therefore, yield the investor 4.61 per cent. The issue was sponsored by a group of Canadian banks and Canadian investment houses, and was so eagerly taken up that the books were closed at the end of the first day with a heavy over-subscription.

Commodity prices continue their downward tendency, and the monthly wholesale index of the Dominion Bureau of Statistics fell from 71.7 in July to 71 in August. Thirty-

five quotations were higher, 104 were lower, and 363 were unchanged. The largest decline was in the group "non-ferrous metals and their products," whose index fell from 62.5 to 60.9, owing to lower quotations for electrolytic copper, silver, lead, zinc, and antimony.

ARGENTINA.

BUENOS AIRES, August 18.

WORLD prices for produce are reacting unfavourably upon Argentine interests, but Argentine producers are now reported to be reducing their costs in consequence, and should, by next season, be well on their way to making a profit on cereals and meat, even at the present levels, which give \$5.30 paper per hundred kilos for wheat, \$3.65 for maize and \$10.70 for linseed. This season's maize harvest has proved a record. The official estimate puts it at 9,500,000 tons, of which there are still rather more than four million tons to be shipped.

The following table sets forth the export position for the first seven months of 1930 and 1931, both volumes and values being contrasted:—

	First Seven Months 1930.		1931.	
	Tons.	Thous. \$	Tons.	Thous. \$
Pastoral products	753,838	164,551	695,128	140,677
Agricultural products	5,163,815	213,515	9,940,211	229,633
Forestry products.....	195,483	10,530	143,732	8,030
Sundry products	130,910	6,087	83,869	5,511
	6,244,046	394,683	10,862,940	383,851

The amount of imports at the corresponding date is not yet known. Judging by the present reduced receipts of the Buenos Aires Customs, some \$20,000,000 under the corresponding figures for the same date last year, the diminution has been considerable, and promises to be cumulative. This is an aid to the campaign in favour of economy that is now being pressed on with vigour, alike in official and in private circles, but no amount of economy will enable the Republic to meet its coming short-term loans in cash without having recourse to the gold held by the Conversion Office.

During the past month provision of funds wherewith to meet the \$50,000,000 U.S. loan, due on October 1st in New York, has been the principal care of the Ministry of Finance. A sum of \$108,000,000 paper was subscribed by banks, insurance companies and other enterprises having large capital funds, the proportion of the banks being \$72,000,000 paper. It is reported that an offer of part renewal for a further six months was received at the beginning of September, but the terms, 7½ per cent. per annum, were so severe that the offer was not considered.

It is now becoming plain to all that the short-term borrowing so popular during the last ten years, internal as well as external, has, in principle, been tantamount to the issue of notes, and that it is, therefore, not sufficient to take into consideration merely the published note circulation when calculating the specie backing behind the nation's currency. The present provisional Government deserve the credit of being the first to recognise, and to act upon, the truth of a state of affairs that has been patent to competent observers for over a decade. As long ago as December, 1922, consolidation of the internal floating debt was mooted, while subsequently, during the presidency of Dr. Alvear, his Minister of Finance, Dr. Victor Molina, prepared an excellently comprehensive scheme embracing currency reorganisation and consolidation of internal short-date obligations. Failure to bring anything to a practical end must, in both instances, be laid at the doors of Congress. This is the more to be regretted seeing that everything points to consideration of currency problems being in all likelihood the first item of practical importance that will figure on the agenda of the Republic's representatives when they assemble after the elections of November 8th; assuming that circumstances do not force the hand of the present authorities and compel them, much against their will, to legislate by decree in connection with this most important matter.

Books and Publications.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Modern Currency and the Regulation of its Value. By Edwin Cannan. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 5s. net.

Professor Cannan's chief concern in this stimulating little book, published just before the suspension of the gold standard, was to show that the limitation of currency had been carried too far, and that the mistake could be corrected without abandoning the gold standard.

Housing Policy in Europe. (London) P. S. King and Son, Ltd., 14, Great Smith Street. 5s.

A valuable study, made under the auspices of the International Labour Office, of the methods adopted by thirteen European countries to meet the post-war housing problem.

The Geneva Experiment. By William E. Rappard. (London) Oxford University Press, Warwick Square. 5s. net.

A reprint of four lectures on the League of Nations. The main divisions of the subject are: Constitutional developments, the organisation of peace, and the prevention of war.

England in Transition. By M. Dorothy George. (London) George Routledge and Sons, Ltd., 68-74, Carter Lane. 7s. 6d. net.

A short and most readable book, delightfully illustrated, on life and work in the eighteenth century.

Ulster To-day and To-morrow. By Denis Ireland. (London) The Hogarth Press, 52, Tavistock Square. 1s. 6d.

An interesting essay.

A Short History of Imperial Preference. By Major the Rt. Hon. George C. Tryon. With a foreword by the Rt. Hon. Neville Chamberlain, M.P. (London) Philip Allan and Co., Ltd., 69, Great Russell Street. 2s. 6d. net.

A concise and readable little book.

The Values of Life. By Viscount Ennismore. (London) George Allen and Unwin, Ltd., 40, Museum Street, and Education Services, 28, Commercial Street. 3s. 6d. net.

An essay on the five great types of human experience: the æsthetic, the moral, the scientific, the religious and the practical.

Poverty in Plenty. By J. A. Hobson. (London) George Allen and Unwin, Ltd., 40, Museum Street. 2s. 6d. net.

The thesis is that our economic problem is at bottom a moral problem, and that equitable distribution is the only reliable means of utilising productive power in such a way as to secure a reasonable standard of life for everybody.

Börsenkredit, Industriekredit und Kapitalbildung. By Fritz Machlup. (Vienna) Verlag von Julius Springer, 1, Schottengasse, 4. Rm. 12.

A study of the workings of the supply and demand for capital on the Stock Exchange, and its interactions with the market for capital for industrial and other uses.

Beiträge zum Thema: Diskonttheorie und Konjunkturzyklus; in geschichtlicher und theoretischer Betrachtung. By Ernst Hugo Meder. (Hamburg) Verlag Hermann Göpner. Rm. 2.50.

A monograph, in German, on discount rate and the trade cycle.

Le Migrazioni e le Previsioni Demografiche e Sociali. By Imre Ferenczi. (Rome) Cassa Nazionale per le Assicurazioni Sociali.

Reprint of an Italian article on population migration in Europe.

The Ukrainians in Poland. By M. Felinski. Published by the Author, and printed by Reynolds and Company, Ltd., 32, York Road, King's Cross, London.

An account of their political, economic and social life.

Red Villages. By Y. A. Yakovlev. Translated by Anna Louise Strong. (London) Martin Lawrence, Ltd. 5s.

An illustrated *ex parte* account of Soviet agriculture.

Is Soviet Trade a Menace? By W. P. Coates. (London) The Anglo-Russian Parliamentary Committee, 5, Robert Street, Adelphi. 1s.

A booklet aimed at proving that a development of trade with the U.S.S.R. is essential in the interests of this country.

Annual of Statistics of the Ministry of Finance. (Warsaw) Polish Ministry of Finance.

A useful collection of Polish official statistics.

The Calendar of the London School of Economics and Political Science, 1931-32. (London) School of Economics, Houghton Street, Aldwych. 3s. 6d.

Science at the Cross Roads. (London) Kniga (England), Ltd., Bush House, Aldwych. 10s. 6d.

The papers presented by the delegates of the U.S.S.R. to the International Congress of the History of Science and Technology.

International Review of Agriculture. July, 1931. (Rome) For the International Institute of Agriculture, Bestetti & Tumminelli S.A., 32, Via Michelangelo Caetani.

An indispensable source of statistical and general information on the agriculture of all countries.

Journal of the Parliaments of the Empire. July, 1931. (London) Empire Parliamentary Association, Westminster Hall, S.W.1. 10s. net.

Denmark, 1931. Published by the Royal Danish Ministry for Foreign Affairs and the Danish Statistical Department.

A statistical guide book to social and economic conditions in Denmark.

Traffic Tables, July to December, 1931. (London) Fred. C. Mathieson and Sons, 16, Copthall Avenue. 1s.

Archiv für Eisenbahnwesen. September-October. (Berlin) Verlag von Julius Springer. Rm. 10.

This number deals to a greater extent than usual with German railways. There are also articles on the railways of Czechoslovakia, Bulgaria and China.

The Stock Exchange.

NEW PROBLEMS FOR THE INVESTOR.

FROM an investment point of view, as from innumerable other aspects, the Government's decision last week-end marks the end of an epoch. The gold standard has been suspended overnight, and no one knows when or how we shall return to it, or whether some new order will eventually take its place. The political future also is dark. A "National" Government was formed to preserve the gold parity of sterling, and has renounced it. A new Government may attempt to stabilise sterling on a new gold basis, with the help of tariffs. No one can say what may follow.

Clearly, the investor cannot look ahead more than a few weeks. No great significance should therefore be attached to the behaviour of the stock markets in the first few days of this revolutionary change. Jobbers and brokers acted upon the elementary rules applicable to a country unliking its currency from gold. First, the shares of the South African gold-mining companies were advanced. This was axiomatic. As the gold they produce will now bring a higher price in terms of sterling, their costs of production are not increased by the devaluation of the pound, and as they will show higher profits and pay larger dividends in terms of sterling, the sterling prices of their shares must naturally be enhanced.

Next, the equity shares of British industrial companies were sharply marked up. Here the investor is treading on more dangerous ground. The following table shows the rises in a few leading shares:—

	Price, Sept. 19.	Price, Sept. 24.
Associated Cement £1	19/6	23/1½
Assoc. Newspapers (Defd.)	11/-	13/-
Babcock and Wilcox £1	41/3	51/3
Baldwins 4/-	2/-	3/1½
Brit. Amer. Tob. £1	3/4	4/4
Calico Printers £1	5/7½	10/7½
Coats £1	34/6	46/3
Co. of London Elect.	40/-	44/1½
Courtaulds £1	1½	1½
Dorman Long £1	3/7½	5/4½
Dunlop £1	15/1½	18/3
General Electric £1	33/-	45/-
G. Western Ry. (Stk.)	38½	45
Guest Keen £1	15/9	19/-
Imperial Chemical £1	10/4½	14/-
Pincham Johnson 10/-	20/6	24/9
South Durham Steel £1	17/-	21/3
Staveley Coal £1	23/6	27/6
Stewarts and Lloyd £1	13/6	17/-
Vickers 6/8	7/4½	9/3

Probably these sharp rises were due, primarily, to the closing of "short" commitments, and only secondarily to the taking up of "bull" positions. But it is curious that the Stock Exchange should have marked up all industrial shares on the broad principle that a depreciated exchange confers at once a bounty on the export trades and a protection upon the domestic trades. No attempt has been made to differentiate between exporting companies with a high or a low ratio of raw material costs to total costs of production, although the former will obviously benefit less than the latter from a depreciated exchange. Nor has the public differentiated between those companies whose export trade is handled from this country and those with ternal trade is handled from this country and those with subsidiary companies manufacturing abroad, although the latter do not gain from a depreciated pound sterling, except in so far as their subsidiaries have profits in foreign currencies to remit home. Clearly, even if the first effects of inflation or a devalued pound are a stimulation of exports and a restriction of imports, there is great danger in the indiscriminate "boom" in industrial shares which is being canvassed by the popular Press.

Further, does the Stock Exchange itself appreciate the implications of an industrial boom based upon devaluation? First, such a movement involves the assumption that our foreign competitors will not follow our example and devalue their currencies, or, if they do, that we shall continue deliberately to "devalue" the pound a little ahead of all other depreciating currencies. Otherwise our industries will lose the stimulus of their export "bounty." Secondly, it has to be assumed that while internal prices rise, money wages will remain steady, or, at any rate, will increase so much more slowly that profits will rise steeply. But can it be taken for granted that

wage increases can be resisted or can be kept below a point necessitating a rise in the sterling prices of British goods offered to the foreigner? These are dangerous assumptions for the investor to make at this stage. Further, the shadow of a general election—whose result would be incalculable—is already being cast over the markets. The "bulls" of British equity shares, in short, must needs imagine much more than is good for them.

Turning to fixed-interest securities, there were certain inevitable changes to be made in the prices of foreign goods when the Stock Exchange reopened. A number of sterling overseas loans have been made on a gold basis, the principal and interest being payable in other currencies at a fixed rate of exchange, based on the gold parity of sterling. Why all our overseas loans were not made on a gold basis it is difficult to understand. But even the German 7 per cent. ("Dawes") and 5½ per cent. ("Young") international loans were issued in this country on a sterling basis. The prices of the gold loans were, of course, marked up this week in terms of sterling, except in those cases where default had already been committed or was expected. The next table gives some examples:—

	Price, Sept. 19.	Price, Sept. 24.	Basis.
Japanese 5½% Conversion, 1930	97	105	Sterling or dollars at \$4.86.
Brazil 6½% sterling bonds, 1927†	37½	35	Sterling or dollars at \$4.86 at option of holders.
Belgian 7% Stabilisation Loan, 1926	105	104	Sterling or fixed equivalent in guilders, at option of holders.
Potash Syndicate of Germany 7% Series A	65	74½	Sterling or dollars at \$4.86 at option of holders.
Potash Syndicate of Germany 6½%	60	69	
Argentina—Port of the Capital 5%	60	60	"London, Buenos Aires (4/- per peso), Potos (25 rs. per £), Berlin (20 rm. per £)."
4% Gold Loan of 1910	55	50	As for Port of the Capital.
5% Sterling Irrigation bonds	70	65	As for Port of the Capital.
City of Buenos Aires 5% Loan, 1913 and 1914	70	70	London in sterling and Germany in Rm. at 20.45 to £.
Poland 7%	60	55	Sterling or dollars at \$4.86 at option of holders.
Uruguay 5% External gold bonds, 1919	50	50	London in sterling or Montevideo at \$4.70 Uruguay gold or New York at \$4.86.
Norway 3½% Conversion Loan, 1894...	89	89	London or other centres at fixed rates.
San Paulo Coffee 7%, 1930	67½	73	London in sterling or New York in dollars at \$4.86.
San Paulo Coffee 6%, 1928	25	25	London in sterling or New York at \$4.86.
Newfoundland 5%, 1949-54	86½	86½	London or Montreal at \$4.86.
Tokyo Electric Light 6%	83½	81	London or New York at \$4.86.

† Market expecting default, after official statement of Brazil's inability to purchase exchange for interest on external debt after October 1st.

The most difficult problem facing the investor is undoubtedly that of the gilt-edged market. On the resumption of business, British Government stocks were quoted at prices several points below the close on the previous Saturday, but buyers were attracted, and some recovery tendency was evident. There are two opposing schools of thought. First, it is argued that the balancing of the Budget and the return to sound finance for the Unemployment Insurance Fund have enhanced the credit of the British Government, and that when the present financial crisis in Europe is passed and Bank rate returns to a normal figure, the prices of British Government stocks will rise above the level at which they stood before the departure from gold. This view appears to assume that

Just Published.

THE COURSE OF THE COMING BOOM IN SECURITIES

by L. L. B. ANGAS

This remarkable publication, appearing the day following the collapse in sterling, and forecasting certain stock market movements which have since occurred, will prove invaluable to investors as a guide in the forthcoming months. Mr. L. L. B. Angas's forecasts of stock market movements have, in the past, shown an uncanny accuracy, as witness his publications "The Coming Rise in Gold Shares" and "The Coming Collapse in Rubber." This latest publication can be equally recommended.

Publishers: ST. CLEMENTS' PRESS, PORTUGAL ST., W.C.2
Telephone: Holborn 7600.

5/- nett.

the pound will not be allowed to depreciate very far, and will be stabilised at no distant date or even restored to its former gold parity. For if inflation is not checked and a substantial rise in prices avoided, the equilibrium of the budget may be endangered once again, involving a fresh threat to the stability of our finances. Those who believe in the enhancement of British Government credit may point to the improvement in the price of United Kingdom $5\frac{1}{2}$ per cent. dollar bonds which has already taken place in New York this week. The New York price for these bonds rose on Wednesday from 98 to 98, but it must not be forgotten that the redemption yield, allowing for repayment at par in February, 1937, is still the comparatively high figure of 5.9 per cent.

The opposite school of thought points to the difficulties of checking inflation once it has started. If the depreciation of the pound developed apace, there would be a rush from all fixed interest securities into equity shares. Even if the inflation were checked, it is argued that Bank rate and discount rates might be kept at an artificially high level, which would exert a downward pressure on the prices of gilt-edged securities and make it impossible to put forward a conversion scheme for 5 per cent. War Loan.

Whatever the merits of these rival theses—which at bottom are less divergent than they appear at first sight—it is clear that no definite view can be taken until it is known what policy the Government is likely to adopt for the stabilisation of the pound. Having regard to the existing level of interest rates, not to mention the onerous rate of direct taxation, it is held in some quarters that the present price of Government stocks do not appear unduly low. The next table shows the yields—gross and net—returnable at Thursday's prices as compared with prices on the previous Saturday:—

	Highest of 1931. (Jan. 5.)	Price, Sept. 19.	Flat Yield† per cent.	Price, Sept. 24.	Flat Yield† per cent.	Flat Yield† per cent. after tax at 5s.
Consols 4%	97	85½	4 14 11	81½	4 19 6	3 14 8
Conversion 3½%	85½	75	4 14 0	71½	4 18 0	3 18 6
Conversion 5%	108½	101½	5 1 3	97	4 18 6	3 19 4
Funding 4%	97½	88	4 13 0	83½	4 18 6	3 13 10

† Allowing for accrued interest.

In 1921, when the dollar exchange averaged \$3.80 to the £, the highest and lowest prices touched by 5 per cent. War Loan were 92½ and 82½. In that year, however, Bank rate averaged £6 2s. 4d. per cent., the great deflation period having begun. Investors should remember, again, that a Depreciation Fund begins to function when 5 per cent. War Loan is below 95. The prospectus of that loan provided for a payment of one-eighth per cent. of the total amount of the loan in respect of each month, so long as the unexpended balance of the fund was below £10,000,000. Whether the Government will take powers to waive the provisions of this contract is doubtful—but not, perhaps, impossible.

The near and long-term prospects of the gilt-edged market are, indeed, difficult to visualise at this stage. One thing, at any rate, is clear—that the Government cannot both pursue inflation and maintain the market value of its stocks. It has been pushed off the gold standard. Until it returns to a stable standard in some shape or form its credit, we believe, cannot be rated so highly as before.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 6.	October 8.

AFTER an initial Saturday's business had produced somewhat extensive declines in most markets, particularly in gilt-edged securities; with evidence of foreign selling, the Government's decision to suspend convertibility of sterling

into gold effected a change in the market outlook which may be described as revolutionary. As is shown in a subsequent Note, the Stock Exchange was closed on Monday and Tuesday, though a fairly active "Street" market developed in numerous issues on the latter day. Wednesday's re-opening of the "House" was, on the whole, reassuring, gilt-edged securities being firmer than had been feared, while ordinary shares showed only a moderate rise after their substantial gains in previous unofficial dealings. On Thursday, however, an unexpectedly heavy fall in sterling against the dollar and the franc produced more disquieting symptoms of a "flight from fixed interest," gilt-edged being weaker all round, whilst many equity shares advanced rapidly in an active market. The week's events, in short, showed that professional and private investors were uncertain of the extent of possible developments under the new currency regime, and were liable to be unduly swayed in their judgment by day-to-day changes in the outlook.

Gilt-edged stocks suffered substantially in last Saturday's dealings, War Loan falling at one time to 96½, the lowest level since 1922. On the resumption of business on Wednesday, this stock, regarded as a key-security by virtue of its amount and extensive foreign holdings, was at one time at 92, but steadily advanced to 95½ on domestic buying orders. Other British Government securities followed an approximately similar course. On Thursday, however, War Loan was much weaker, the whole market trending downwards despite reports of a certain measure of official support. India loans were marked down on the rise in the Indian Bank rate, and Dominion issues declined in sympathy with British Government stocks generally. Dealings in foreign bonds were peculiarly difficult. French Rente prices were adjusted in accordance with the decline in sterling, and firm or rising prices were quoted for foreign loans payable in gold or dollars—even in the face of adverse conditions, such as the effect of the Mukden fighting on Sino-Japanese issues. Bonds payable in sterling, however, were weaker, while dealings were frequently nominal when loans were in default or the currency position of particular countries was regarded as doubtful—Norway and Sweden being examples of the latter condition.

Home railway prior charges were marked down, but ordinary stocks, especially Great Western and London Midland and Scottish, showed substantial gains, on the view that the "inflation bounty" on British exports would involve increased traffic, particularly in coal. Foreign railway share quotations were adjusted more or less to the new exchange levels, the rise in Argentine railway shares being scarcely affected by the decision of the Buenos Aires Grat Southern to pay no final dividend. San Paulos, however, slumped badly on the unexpected reduction in the interim payment.

The industrial markets were more active than for months past. Propaganda, from Stock Exchange and Press sources, at the beginning of the week, dwelt extensively on the "stimulating" effects of devaluation on domestic industry, and substantial rises occurred in many active industrial counters in Tuesday's "Street" dealings. The further rise on Wednesday was in most cases moderate, but on Thursday the market showed more signs of taking the bit between its teeth. Shares in the export trades were singled out for chief attention. Babcock, Vickers, Dorman Long, Guest Keen, Bleachers, Coats, Fine Spinners and Calico Printers belong particularly prominent. Among the motor shares, demand was more selective, but Austin was strong on the announcement of a 100-per-cent. dividend and a record turnover. Breweries improved after last week's post-Budget selling, and tobacco shares were active. Provision shares were in sustained demand, but general store issues received less attention. Newspapers were in intermittent demand, but a fair amount of stock was forthcoming. Among shipping shares, P. & O. and Furness Withy were in demand. Bank shares remained, however, out of favour, particularly when only partly paid, and insurance shares were easier where changed.

The prices of all raw commodities were raised, in terms of sterling, and corresponding adjustments were made in

share values. Despite the sharp rise in rubber prices, rubber shares were not particularly active, the ability of many companies to earn profits, even under the new conditions, being greatly doubted. A fair inquiry for tea shares followed the active conditions recorded at the commodity auctions, when common teas were particularly firm. The changed conditions found many bear commitments outstanding in the oil share market, and prices were driven up sharply on extensive covering in a market not well provided with stock supplies. Kaffirs, naturally, were conspicuous in Tuesday's unofficial dealings, but further inquiry found more stock available as the week progressed. Copper shares advanced under the lead of Rio Tinto, while tin shares, after a certain initial reluctance to follow the commodity, were marked up all round on a fresh sharp rise in the metal on Thursday.

We are officially informed that Mr Harry Lowe Urling and Mr William Nickell, trading as Urling and Company, were declared defaulters upon the Stock Exchange, on September 23rd, 1931.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Heavy selling pressure caused many prices to break new low ground last week-end, when uncertainty as to the British position was at a maximum. Foreign bonds were particularly weak, United Kingdom Five and a Half per Cents. of 1937 falling 8½ points. The decline, however, was general, industrials, rails and utilities being all liquidated. Bank shares showed especial weakness. Sun Life of Canada dropped 175 points, despite a fresh denial that the company was selling shares. When London's decision became known, it was not deemed advisable to close the Stock Exchange, but the severe precautionary measure was taken of declaring short selling a violation of the Exchange's constitution, and requiring members to report all such sales which were made. On Wednesday, however, following the re-opening of the London Stock Exchange, the ban on short selling was lifted, though members remained under the necessity of reporting details of short positions to the Business Conduct Committee. In the meantime, an extensive covering movement had developed, investors taking a not unhelpful view of the ultimate prospects of sterling, and regarding a widespread effort of British holders to "cash in" on their American securities as highly improbable. Sentiment was encouraged, also, by the statement that leading bankers had formed a \$250,000,000 pool to support high-grade bonds, including foreign issues. On Wednesday United Kingdom Five-and-a-Half per Cents. rose to 98. Rises of 5 to 10 points occurred throughout the list, bank shares recovering, while advances in wheat and cotton prices encouraged speculative buying in

other directions. The announcement of wage reductions by Steel Corporation, Bethlehem Steel and General Motors was taken as a bull rather than a bear point. On the other hand, uneasiness was felt at the prospect of substantial gold withdrawals from America by France. The prospect was conveyed of an early decision on the railroads' application for a rise in freight rates, though unanimity on its probable effects on earning power was as far to seek as ever. On Thursday markets were inclined to be easier all round, though a moderately firm undertone persisted.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yield on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

in the first half of 1931 as compared with the corresponding months (a) of 1921 and (b) of 1929:—

(First Six Months.)		
	1931 compared with 1921— Increase or Decrease %	1931 compared with 1929— Decrease %
Operating Revenues:—		
Freight	-10.5	-27.9
Passenger	-49.2	-32.2
Total	-18.3	-28.7
Operating Expenses:—		
Transportation	-32.1	-22.3
Maintenance	-27.9	-28.3
Total	-27.3	-23.7
Taxes	+23.5	-16.4
Net Operating Income	+64.0	-57.6

It will be seen that all the improvement in traffic, realised since 1921, has been lost in 1931. Further, the present net operating income is required to cover a much larger capital investment. Many people fear that any increase in rates will result in heavy losses of traffic to competing transport services, whether by road or water. Only time can prove the accuracy of this forecast. The Stock Exchange has taken a "bullish" view of the possibility of wage cuts, but the expectation of any real improvement in the prices of American railway stocks is hardly justified until the Interstate Commerce Commission's decision on rates has been published.

Sheepbridge Coal and Iron.—A reduced output of coal under the terms of the Coal Mines Act of 1930 and depressed conditions in the iron trade are reflected in this Midland company's accounts for the year to June 30th last. Net profit, after payment of interest and provision for depreciation and directors' fees, appears at £74,344, compared with £93,723 in 1930. The preference and ordinary shares receive their full 5 per cent. fixed dividend, as last year, while £20,000 is added to reserve account, standing at £280,000, and the carry-forward is depleted by £12,582.

Year to June 30.	1929.	1930.	1931.
Net profit	52,089	93,723	74,344
Brought forward	88,603	103,045	99,842
Preference dividend	8,368	8,368	8,368
No. of times covered	6.2	11.2	8.8
Ordinary dividend:			
Amount	29,279	58,558	58,558
Earned %	3.7	7.0	5.5
Paid %	2.5	5.0	5.0
Reserve	Nil	30,000	20,000
Carried forward	103,045	99,842	87,260

The balance sheet reveals few important changes. Investments stand at approximately the same figure as last year, but the cash item has been depleted, and £30,000 of 3½ per cent. Conversion Loan secured for £25,532. A sound liquid position is disclosed, available assets at £370,585 exceeding current liabilities by £247,045. At their present price of 12s. 6d., the £1 ordinary shares give a yield of £8 10s. per cent., allowing for the final dividend of 3½ per cent.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To Publisher, "Economist Newspaper Ltd.,"

Address

Gaumont-British Picture Corporation.—A substantial increase in profits has been reported by the Gaumont-British Picture Corporation for the year to March 31, 1931. This is satisfactory, but earning power, nevertheless, is still relatively low in terms of total capitalisation. In the year to March, 1930, the company earned only 3 per cent. on the amount of its share and loan capital plus share premiums. In the year to March, 1931, it earned practically 6 per cent. The company is thus overcoming gradually the handicap of its original high capitalisation. All its subsidiary companies are making good progress. Denman Picture Houses have been able to pay a dividend of 2½ per cent. The General Theatre Corporation is not yet paying ordinary dividends but has increased its carry-forward by £28,000. Provincial Cinematograph Theatres, which is the mainstay of the company's business, again had a successful year and paid a dividend of 15 per cent. The net profits for Gaumont-British shareholders, after allowing for depreciation of £30,388 (against £10,603) and income tax of £38,758 (against £19,311), amounted to £364,488, an increase of 66.1 per cent. over those of the previous year.

	Years ended March 31,

* Including £56,824 interest account.

† Including £17,040 for debenture stock sinking fund account in 1929-30 and £16,000 in 1930-31.

It is, unfortunately, impossible to say how the increase in profits last year was distributed, as the profit and loss account does not now show the interest from investments separately from the profit from theatres. It will be seen that £64,093 has been applied to reserve against nothing last year. All stocks of silent films have been written off by the subsidiary theatres and the expenditure on converting theatres for talking films has also been drastically written down. At £2,500,000 the general reserve is now equal to the whole of the ordinary share capital. The 10s. ordinary shares are quoted at about par against a high level this year of 14s. 6d.

Cohen Weenen.—That tobacco manufacturing profits have hitherto escaped the worst effects of trade stagnation is again demonstrated by this Godfrey Phillips' subsidiary. Net profit is down nearly £10,000 as compared with last year, but is very little below the figure for 1929. The 7 per cent. participating preference shares again receive 9 per cent., while the previous dividend of 36 per cent. on the ordinary capital is maintained, out of 46.9 per cent. earned.

Year to June 30.	1929.	1930.	1931.
Trading profit	116,480	116,136	107,827
Expenditure	14,611	6,089	6,937
Net profit	101,869	110,047	100,890
Brought forward	6,821	15,617	35,664
Preference dividend	48,000	54,000	54,000
Rate %	8	9	9
Ordinary dividend:			
Amount	18,000	36,000	36,000
Earned %	51.6	55.4	46.9
Paid %	18	36	36
Expenses written off	27,073	Nil	Nil
Carried forward	15,617	35,664	46,55

The carry-forward item is increased from £35,664 to £46,554. The company has not yet begun to build up a reserve fund, but the balance sheet is liquid, creditors totalling £68,872, while a bank overdraft, against security, of £74,500 is offset by debtors of £204,254. It remains to be seen how the recent addition to the tobacco duty will affect the current year's profits. The £1 participating preference shares are quoted at 1½, giving a yield of about £8 9s. 6d. per cent. allowing for the participating dividend.

London Express Newspaper.—In the face of fierce competition for circulation and advertisements, this company has succeeded in achieving a record "balance from trading account" of £219,716. After deduction of all fixed charges, of a satisfactory allowance for depreciation, and a small item for income tax, net profit at £164,639 compares with £67,032 for the previous twelve months. Dividend on the £308,000 of old ordinary capital and the £100,000 of new shares is again maintained at 10 per cent. The carry-forward is increased from £4,229 to £50,104.

Year to June 30.	1929.	1930.	1931.
Profit	133,235	141,154	230,959

Paid %	10	10	10
Carried forward	2,418	4,229	50,104†

† After writing off £15,181 issue expenses.

The capital of the company was increased during the year by the issue of 500,000 7 per cent. cumulative preference shares, the proceeds being used to redeem and cancel the £100,700 of the company's outstanding 8 per cent. debentures, and to acquire £128,970 6 per cent. debenture stock of the Daily Express Building Company and £250,000 8 per cent. debenture stock of the Sunday Express, Ltd. At their present price of 37s. 6d. the £1 ordinary shares give a yield of £5 12s. 8d. per cent. allowing for the dividend of 10 per cent.

Harrisons and Crosfield.—In view of the steady price decline in the commodities dealt in by these well-known Eastern merchants and traders, a fall in net profit from £352,004 in 1930 to £236,485 in 1931 is no surprise to shareholders. The deferred shares are receiving only 12½ per cent. against 20 per cent. for 1930 and 85 per cent. for 1929.

	1929.	1930.	1931.
Net profit	363,523	352,004	236,485
Brought forward	96,998	104,472	106,587
Preference dividend	37,800	37,800	37,800
Preferred ord. dividend	100,000	100,000	100,000
Management dividend	84,062	39,030	17,500
Deferred ordinary div.:			
Amount	114,187	73,059	47,803
Paid %	35	20	12½
Written off investments	...	100,000	40,000
To reserve	20,000	...	100,329
Carried forward	104,472	106,587	...

Profits have not been distributed to the hilt, a further sum of £40,000 being added to reserve. The directors, however, have taken the precautionary step of transferring £200,000 from general reserve to a special reserve against

depreciation of investments, which are valued in the balance sheet at £1,123,422, excluding subsidiary holdings of £331,220 and gilt-edged securities. Stocks are down from £391,760 to £230,018. At 33s. 9d. the £1 deferred shares yield £7 12s. 8d. per cent., allowing for the final dividend.

Goldsborough Mort.—This company of Australian stock and station agents, pastoralists and wool brokers has been adversely affected by the heavy fall in prices of primary products. Though a record number of bales was disposed of during the year (the total at 339,730, showing an increase of 105,173 bales), net profit fell by £75,843 to £114,976, and the dividend rate was halved. At the end of the season only 14,244 bales were in hand compared with 76,154 bales in hand twelve months previously. The following table shows the results of the past three years:—

Year ended March 31.	1929.	1930.	1931.
Net profit	318,647	190,819	114,976
Dividend:			
Amount	300,000	200,000	120,000
Earned	15.93%	9.54%	4.79%
Paid	15%	10%	5%
To reserve account	20,000	9,181	5,024
Decrease in carry-forward	1,353	...	...

The majority of the company's sales were concluded before the improvement in prices which occurred in March last. A saving of £43,000 was effected in administration expenditure, and the taxation charge was £27,000 less at £65,528. During the year advances were reduced by £277,310 to £5,068,741. Current liabilities exceed liquid assets by £561,319, comparing with an excess of £909,925 in 1930. The ordinary shares, at 18s. 9d. per share, yield £5 6s. 8d. per cent.

New Modderfontein.—The publication some weeks ago of the ore reserve estimate as at June 30th aroused much discussion as to the prospects of this company, and resulted in a fall in the price of the shares. The full text of the annual report, issued to shareholders in this country at the end of last week, shows that the bulk of the shrinkage is accounted for by the results on the main reef leader, hitherto the most important ore body in the mine. Here the difference in the total amounts to 949,000 tons. An increased footage was performed, but "a large proportion was for the purpose of exploring blocks hitherto classed as unpayable." In the 1930 report warning was given that no great additional tonnage could be expected on this reef in future. Small decreases are shown in the tonnages represented by the South reef and by leader N.A. 7; but on leaders N.A. 1, 2 and 4 the quantity has risen by 276,700 tons to 2,040,500 tons. As a whole the ore reserves indicate a decrease of 732,200 tons in quantity and

Costs	17/9	16/10	16/-
Profit	26/4	24/2	20/11
Total working profit	2,252,430	2,188,180	2,017,770
Dividends	1,960,000	1,925,000	1,750,000
Rate	140	137½	125
Carried forward	302,060	251,980	242,080
Ore reserves	7,857,600	7,431,900	6,789,000
Value per ton	8-9	8-6	8-0

Several factors contributed to the further expansion in the tonnage of ore milled—the adequate supply of native labour, minor alterations to the reduction plant, and the use of an increased proportion of the more easily treatable South Reef and Upper Leader. The reduction in costs was largely attributable to the performance of less development work than in 1929-30, the footages being respectively 83,270 and 91,830. The further shrinkage in profit entailed a fresh cut in the dividend rate, although the carry-forward was drawn upon to some extent. That the earnings of the current year will be on a somewhat reduced scale is foreshadowed by the consulting engineer—though the position, so far as shareholders are concerned, may naturally be modified as a result of the increased sterling value of gold.

Nourse Mines.—As in the case of the Consolidated Main Reef, an important feature of last year's operations consisted in the acquisition of additional ground. The company has applied for the undermining rights of 97 acres formerly owned by the Jupiter Company, and has pegged a further 120 claims adjoining the south-eastern boundary of the property. These areas lie on the dip of the Geldenhuis Deep, and will substantially extend the life of the Nourse Company. Thanks to the treatment of the record tonnage of 805,400, with a reduction of 6d. to 23s. in the cost ratio, the working profit expanded from £56,300 to £84,100. Accordingly, the dividend, which in 1929-30 was 5 per cent., as against 2½ per cent. previously, was further raised to 7½ per cent., leaving the somewhat increased balance of £80,000 to go forward. Performance of the unprecedented development footage of 43,620 had the effect of increasing the ore reserves by 122,000 tons, to 1,413,500 tons, the value being somewhat better at 6.1 dwt. The quantity represents less than two years' supply for the mill. Capital expenditure during 1930-31 amounted to only £2,000 odd, but for the current session an outlay of about £35,000 is envisaged. As regards earnings, the consulting engineer states that, given a continuation of the present adequate supply of native labour, profits should be maintained at approximately the level of recent months.

COMPANY MEETINGS, &c.

CITY OF SAN PAULO IMPROVEMENTS AND FREEHOLD LAND COMPANY, LIMITED.

EXCHANGE AND LAND VALUES.

The nineteenth ordinary general meeting of the City of San Paulo Improvements and Freehold Land Company, Limited, was held on Thursday, September 24th, at River Plate House, London.

Mr Herbert Guodalla, F.C.A. (the chairman), said that owing to sales cancelled they had an actual increase in the book value of their freehold land of £12,594, so that the land now stood in the balance sheet at a book value of £2,151,928. Although sales had been small during the year, the selling price showed a considerable appreciation in currency over the valuation.

All their land was within the confines of the City of San Paulo, and what they termed their unsold developed saleable area consisted of 930 acres spread over nine estates, some of which were bound to command high values. They also possessed a considerable area, amounting to 680 acres, of undeveloped land, which in time to come would undoubtedly prove an important asset. In his opinion, a new valuation at the present time would show a material increase over that made in 1925, but he was bound to add that an analysis of the situation showed that so far the value of freehold land in San Paulo had not responded to the fall in currency exchange. He could not help thinking, however, that in time the value of their land would attain a figure more nearly in relation to the value of the currency.

With regard to the question of exchange, it was most difficult to prophesy as to the future. The directors found it impossible at present to form any reliable estimate as to what amount should be allocated out of reserve to deal with that matter. Their main asset was their freehold land, and in currency at 6d. it was worth much more than the amount at which it stood in the balance sheet. Their other big asset consisted of debtors for land and houses sold with interest by monthly instalments over six or seven years. It was their opinion that in due course the value of freehold land would adjust itself according to the exchange position. That applied also to the improvements and to the houses which they owned.

If they could forecast with any accuracy what the fluctuations in exchange would be in the next six or seven years during the collection of their debts, the company would be in a fortunate position, but it must suffice at the present moment to know that in their opinion their reserves were more than ample to meet any contingency in that respect. Recent circumstances—he might almost say daily circumstances—had rendered it much more difficult to estimate the question of the relative value of the milreis to the sterling of this country.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended September 19, 1931, amounted to £9,758,400 against ordinary expenditure of £8,021,700. After allocating £465,000 to Sinking Fund and £15,003, the operations for the week, as shown below, decreased the National Debt by £1,287,000 to £7,688,838,000:—

† Nominal amount of capital introduced, £22,158,480.

the suspension of the gold standard by this country, and very little business can be done until the position becomes clearer to importers. In view of the fall in sterling, prices in all directions have been advanced to meet the difference. Old crop Plate linseed, after touching new low levels last week, is now quoted £8 2s. 6d. per ton for seed on spot and for shipment to November; while new crop, January-February shipment, is regarded as worth £8 to £8 2s. 6d. The quantity of linseed on passage to Europe at 123,300 tons is 3,500 tons less than last week, the reduced total acting favourably on the near positions. Cottonseed is neglected, and here again values have been adjusted to higher figures, black Egyptian (old crop) being held for £6, with new crop, October and November-January, quoting £6 5s. Demand for vegetable oils has been poor, apart from latest developments, raw oil ex Hull for October-December delivery falling to £13 10s. per ton naked. This week quotations have moved in an upward direction to £16 10s. on spot and £16 5s. October-December. Cotton oil is also dearer but quiet, crude Egyptian being held for £20 and common edible for £23, ex Hull. All other vegetable oils have been advanced 30s. to 50s. per ton. Oilcakes are also dearer.

HIDE, LEATHER AND ALLIED TRADES.—Opinions regarding the future outlook of both the leather and hide markets have altered considerably since this country went off the gold standard. Prices for many descriptions of imported raw material show a tendency to advance, but it is hoped that this will be compensated for by a restriction of the large imports of foreign leather which have been dumped on this market for some time past at very low prices. At the domestic hide and skin auctions held in Manchester this week, prices for most descriptions of ox and heifer hides were cheaper by from ½d. to ¾d. per lb., while a weaker tendency was in evidence for cows. Calfskins were a poor market, and prices for these also were lower by up to ¾d. per lb. Foreign hides, generally speaking, show an advancing tendency on account of the depreciated value of the sterling, but until more definite information regarding this latter is available, it is difficult to give prices for individual descriptions with any degree of accuracy. Latest news regarding South American wet-salted descriptions is that Argentine ox are in the region of 4½d., with second ox quoted at the equivalent of 3½d. These figures, of course, are more or less nominal, as some shippers prefer to await developments rather than accept orders under present conditions. African and Australian hides are also quoted dearer, but here again it is not possible to give figures in view of the uncertainty of the position. In sole leather a fair amount of trade is being done, and in view of recent events buyers are taking considerably more interest in the position of the market. There has been a considerable turnover in English and wet-salted

bends in the better grades, repairing selections being the most wanted sorts. Shoe manufacturers, also, have been looking around for supplies, and here business has been done in light and heavy weights in dry hide bends, although perhaps not to the extent that might reasonably be expected. Pinned shoulders and bellies have been an average market, but the inquiry for rough offal remain very restricted. The tendency of prices in regard to upper leather is rather firmer, especially for imported descriptions which have been such a feature of trade of late. Box and willow calf has been moved off in regular quantities, in addition to which a steady calf has been experienced for black and brown glacé kid. Moderate trade has also been done in patent, and here again a slightly firmer attitude in regard to values is noticeable. Fancy upper leathers are not a brisk market, business usually consisting of orders for small lots.

THE TIMBER TRADE.—Larger supplies of European building and joinery woods, particularly from Russia and Finland, came to hand in August, but, writes our correspondent, the total imports this year, at 737,327 Petrograd standards (of 165 cubic ft.), are 152,000 standards down compared with the corresponding period 1930. Poland is the only country which has shipped larger quantities to the United Kingdom this year. Despite the irritants to good business—holidays, political crisis, financial crisis and very wet weather for outside work—the demand has been very fair from smaller stock on hand compared with a year ago. The weakest spot in the market is that the production this year is too large compared with the actual demand, not only in the United Kingdom but in every consuming country on the Continent, and so far as can be gauged there does not seem at the moment any prospect of an improvement. Hence auction sale prices here have been weak and there is no desire to hold stocks of any large volume. Beside the heavy industries, the building and packing-case trades are depressed; these are the largest of the timber trade's customers and the loss of their orders is a severe handicap. The unsatisfactory timber consumption in the United Kingdom and the Continent is having a very bad effect on Finland and Sweden, and the whole position—forward and spot—is aggravated by the increasing export of cargoes to this country. As things are, it seems evident that foreign shippers will have to hold some large surplus stocks home for delivery next first-open-water. Pitwood imports have been on a low scale throughout the year. At 1,217,237 loads (of 50 cubic ft.) for the first eight months of this year, they are 673,536 loads down compared with January-August, 1930. French supplies have fallen a third compared with those of last year. Russian supplies also have declined, although that should not be

The Financial Situation . . .

You keep in closest touch with the trend of events when you read *The Daily Mail*. THE MONEY MARKET.

At the end of last week conditions in the money market were still unsettled, and while £40,000,000 of Treasury bills were offered, only £34,630,000 were allotted, and the average rate was £5 12s. 8.37d., against a Bank rate of 6 per cent. It is thought that the market did not tender very freely, and the belief finds some support in the fact that "hot" Treasury bills have not been very easy to

for long. Receipts of mahogany logs and lumber have been low, and although stocks in first hands are small, there is not much hope for forward business. The deplorable hurricane disaster at Belize, British Honduras, is likely to have some effect—if but little—on spot values in these days of declining consumption of mahogany, as British Honduras stocks in London brokers' hands consist of only eight logs, and although there are fairly good supplies of foreign logs they are not up to the standard of quality that was expected to come forward from the Colony within the next few weeks. Smaller supplies of sawn hardwoods arrived last month, particularly American, and as sterling-dollar exchange may depress forward buying, which has been quiet, spot prices should become more steady. Demand, however, still leaves much to be desired. Plywood imports increased by nearly ten million sq. ft. in August, but the deficiency for the year is still nearly 54 million sq. ft. Taking the wood market generally, it is to be expected that forward buyers will continue to be very careful, and that during the new quarter any surplus of imports over those of the corresponding quarter of last year is likely to be for shippers' account.

RUBBER.—In view of the uncertain foreign exchange position, the price of rubber fluctuated considerably during the past week.

The turnover has been large in this country, but the world situation shows no improvement, and the price of rubber in New York, at 5½ cents per lb., is the same as last week. Wednesday's official closing price for standard ribbed smoked sheet, at 2½d. per lb. shows a rise of ½d. as compared with the corresponding day last week. In forward positions, business has been done at 2½d. to 2½d. for October, against 2½d. to 2½d.; and at 2½d. to 3d. for January-March, 1932, against 2½d. to 2½d.; and at 2½d. to 3d. for movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,776 tons; delivered, 1,508 tons; stocks at the end of last week, at 136,072 tons, show a decrease of 730 tons as compared with the preceding week.

NATIONAL PROVIDENT INSTITUTION

MAXIMUM INITIAL PROTECTION

combined with
PARTICIPATION IN PROFITS

is given by the

procure this week. As last Friday's issue included the useful end-of-the-year maturity, this shows how difficult it was proving for the market to find its new bearings, and this was also marked by the narrowness of business in the discount market and by the relatively high rate of 5½ per cent. then current on three months' bills.

This week there has been a definite improvement in tone. For one thing money has been quite plentiful, and by Thursday more was available than was really needed. Last Monday, when there were no Treasury bill maturities, and again on Wednesday, which was the last day of the month, with a heavy foreign exchange settlement, it was feared that money would be scarce; but even on these days the situation was fairly comfortable, and Wednesday's rate of 5½ per cent. was the highest for the week. Apart from this, rates of 4 and 4½ per cent. have been common both for new money and renewals.

This greater comfort has given rise to suggestions that the clearing banks have tacitly agreed to suspend their weekly calling from the market for making-up purposes. This probably exaggerates what is actually taking place. No doubt some attention has been paid to the relevant passages of the Macmillan Report, where window-dressing is condemned; but there is no definite agreement to suspend the practice. What is far more likely to have happened is that the banks are not making up on quite their former scale or with quite their former regularity, and that on certain occasions when a bank's time to make up has arrived it has found that it has sufficient cash in hand for its purpose without having to call from the market.

There was no question during the week of the market having to have recourse to the Bank of England, nor was there evidence of special assistance being given on any large scale. The Bank return, however, further details of which are given below, suggests that a certain amount of Treasury bills may have been taken off the market with a view to facilitating the placing of Friday's weekly offering.

	Sept. 10, 1931.	Sept. 17, 1931.	Sept. 24, 1931.	Oct. 1, 1931.	Previous Rate and Date Changed.

Market rate (3 months' bills)	4½-½	4½-½	5½	5½-½	...

The decision of the Bank Court on Thursday to make no change in Bank rate conformed to general market expectations. The general bearing of Bank rate on Great Britain's present monetary policy is discussed elsewhere in this issue of the *Economist*. The City is keenly alive to the dangers of any inflationary tendencies being allowed to develop at this juncture and recognises that, whatever may be the case in a few weeks' time, it would be premature at present to take undue risks in connection with the Treasury bill position in order to satisfy the natural desire of manufacturers and merchants for some relief from the present necessarily onerous burden of high money rates, which the crisis has brought in its train.

By Thursday a better tone was pervading the discount market, and greater confidence was being felt in sterling. The rise in the New York rate from \$3.80 at the end of last week to \$3.95 on Thursday was regarded as extremely encouraging, and in some quarters the opinion was being expressed that the American banking situation possesses such elements of instability that the pound merits greater confidence than the dollar. On Thursday afternoon some Continental buying of bills was in evidence,

and a marked improvement in War Loan was recorded. The general impression was that a movement back towards sterling was beginning, inspired by the strength of the London banking system and by the lack of confidence in many foreign banks.

This week's Bank return reveals a moderate increase of £4.5 millions in the note circulation, easily explained by the incidence of quarter day with all the customary cash demands. The return shows that the Bank's gold holdings have risen by £1.2 millions, as a result of recent acquisitions from Scottish banks, and so the Reserve is only £3.3 millions lower. There has been an increase of £16.5 millions in Government Securities, but Other Securities are £7.8 millions lower. Among liabilities, Public Deposits have risen by £30 millions, and Bankers' Deposits are £1.5 millions lower. These last now stand at £62.6 millions, which is high enough to provide the market with adequate funds.

News from New York is not too reassuring. Heavy gold shipments have recently been made, mainly to France, but also to Holland, Switzerland and other European countries, and this is evidence of a general loss of confidence both in the United States and in the centres that have been taking the gold in order to strengthen their own position. The United States note circulation increased last week by \$77 millions, which is further evidence of the deterioration of confidence. Money, consequently, is becoming more stringent, for while call rate remains at 1½ per cent., time rate has been raised from 1½ to 2½ per cent., and the New York Reserve Bank has increased its buying rate on bills by ½ per cent. Sixteen small bank failures were reported on September 28th. Last week the Federal Reserve system reported brokers' loans to have fallen to \$1,207 millions, which is the lowest figure since December 12, 1928. This is regarded as evidence of a complete absence of market speculation.

Very wide fluctuations characterised the early stages in the foreign exchange market this week, sterling being very weak against practically all currencies, and especially the franc and the dollar. Later the tendency of sterling became far more favourable, as a result of the absence of alarm in London, heavy repatriation of British funds from America, and the departure of Norway, Sweden and Denmark from the gold standard. Towards the close a noteworthy feature was the increasing divergence of the values of the pound in Paris and New York in favour of the former centre. The following were as far as they can be indicated the approximate spot quotations of the various currencies at midday Thursday. As before, no forward quotations are available:—New York, 8.94-8.97; Montreal, 4.55-4.65; Paris, 100-101; Brussels, 27½-28½; Milan, 77-78; Madrid, 44-45; Lisbon, 109½-110; Amsterdam, 9½-10.00; Berlin, 16½-17.00; Switzerland, 19½-20½; Stockholm, 16½-17½; Oslo, 17½-18½; Copenhagen, 17½-18½; Helsingfors, 150-170. The South American quotations were:—Rio, 3½d.-3d.; Buenos Aires, 32½d.-33½d. and Montevideo, 21½d.-22½d. In the Far East the rupee stood at 1s. 5½d.-1s. 5½d., and the yen at 2s. 5½d.-2s. 6½d. Silver prices rose early in the week to 19½d. for cash and 19½d. for forward as the result of heavy speculative buying on both China and India account, but later reacted as a result of heavy both-way transactions, also probably largely of a speculative nature. Of the Chinese silver exchanges, Hong Kong ranged between 1s. 1½d. and 2s. 0½d. and Shanghai between 1s. 5½d. and 1s. 7½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Bouverie Street, London, E.C.4.

THE TASK AHEAD.

AFTER a fortnight's experience of a currency no longer securely anchored to gold, it is something gained that all the features which emerge from a survey of the situation need not be set down on the debit side of the account. This is not to say that the repercussions of Great Britain's enforced decision to suspend the gold standard have not been less severe, or seem likely to be less difficult to manage, than was to be expected. Stunned by the first shock, the whole world's financial system is still reeling; and, as we indicate in a later article, the underlying significance of developments abroad is in some respects disquieting. Nevertheless, though Norway, Sweden and Denmark have been forced off the gold standard, and though it is still premature to conclude that the "drift from gold" has yet nearly reached its final conclusion, there has so far been no catastrophic collapse of currencies, and outward symptoms of an aggravation of the crisis in the form of banking suspensions have not hitherto been of a dangerous magnitude.

The pound sterling, after some violent downward fluctuations towards the end of last week, has "floated," without support, on a fairly even keel. In this country there has continued to be a welcome absence of any signs of nervous disquiet on the part of the general public; indeed, the repatriation of balances from abroad, coupled with fairly widespread buying in small amounts of British Government securities, has afforded reassuring evidence of confidence in the country's ability to weather the storm. On the other hand, the unbalanced exuberance of spirit with which the suspension of the gold standard was at first greeted in some quarters, and which was reflected last week in the beginnings of a boom in equity shares, whose development might have had highly undesirable consequences, has been effectively checked by the decision of the Stock Exchange Committee to permit cash dealings only. Premature talk of an imminent British "boom" has been replaced by a growing realisation that to suspend the gold standard is by no means the sword stroke of a monetary Alexander which cuts the Gordian knot of every economic difficulty.

This growing sense of the magnitude of the problems yet to be solved, which (rightly, we hope) we detect in the general attitude in this country, is a definitely hopeful feature in the situation. The most valuable lead which can be given by this country to the world to-day lies in the direction of greater steadiness, both psychologically and technically, of monetary point of view. With the latter aspect of the question we deal in greater detail in a subsequent article. No less important, however, is the capacity of every section of opinion—including that of the banker, the industrialist, the politician, the trade unionist and the man in the street—to "see things steadily and see them whole." For the very lack, so far, of visible disturbances or untoward developments affecting the life of the average citizen, as a result of having a currency no longer convertible into gold, carries with it the risk of longer convertibility into gold, carries with it the risk of failure to appreciate how great in some ways were the advantages which we have had to surrender, and how vital it is that we should cling steadfastly to such measure of stability as we have the power to retain.

We must not lose sight of the fact that the gold standard originally had one supreme merit; its inherent characteristic was that it provided a stable currency, and, in normal times, was successful in achieving within reasonable limits, stability of prices. But the gold standard, put to the test in the last few years of a world in economic disequilibrium, with currencies stabilised at all sorts of levels, and international payment balances distorted by large war indebtedness, has failed to avert an unprecedented and disastrous fall in prices, with all the economic and social disadvantages attendant on such a movement, it has broken down and collapsed, only a few years after its post-war re-establishment, not because of its own innate defects, but because of adventitious disorders and impediments, financial and political. Until

those impediments are removed, those disorders allayed, there can be no question of countries who have been forced off the gold standard struggling forthwith to return to it. But though we may rightly for the time being decline to expose ourselves once more to the old forces of disequilibrium, we must avoid, so far as in us lies, substituting for pre-existing burdens and difficulties a monetary anarchy much worse.

The initiative in the task of attempting to restore stability does not rest primarily with Great Britain in her present situation, and we cannot in any case act alone. At the same time, though we are now only one among the minority of the world's great nations who have found it impossible to remain on the gold basis, we have by no means forfeited, even after this lapse from financial grace, our traditional monetary leadership. As Professor Rist points out in a communication to the *Economist*, which we print in a subsequent column, the world is not in a position readily to dispense with the services which London has rendered, and is still uniquely in a position to render, to international trade. Stability of sterling is almost a *sine qua non* for the prosperity of the world; and there is good reason to believe that the Scandinavian countries, who have followed Great Britain in going off gold, as well as many nations (even less comfortably situated) who may yet be driven to suspend gold payments, would readily make common cause with British monetary policy, or even definitely link their currencies to sterling, if they had the assurance that they were not thereby exposing themselves to the possibility of violent price changes and of the inflationary risks inseparable from a depreciating currency. Though it may be early yet to look for the assembly of a world monetary conference, failing which we can see no ultimate solution of the whole range of problems bound up in the international crisis, not a day should be lost by the Government and other responsible authorities in beginning conversations with other countries for the purpose of exploring fully and frankly, with all the cards on the table, the possibilities of a basis of common agreement.

The success, however, of such conversations must largely depend, we would once more emphasise, on our own attitude. It would be disastrous if we allowed the impression to be created abroad that we were merely concerned to use this situation to extract the maximum competitive advantage in international trade. We must always bear in mind that, though we may have some hope of gain to our export trades through depreciation of sterling, this benefit will be reaped only on the condition (a) that there is not a proportionate rise in our internal price level, including particularly our wage costs, and (b) that our foreign competitors are not so outraged by the selfishness or greed of our policy that they feel forced to join in what might appear to them to be a competition in financial manœuvring, and decide to "go one better" than ourselves. On a somewhat different plane—where considerations of honourable obligation and the long-range interest of this country in living up to its high tradition of fair dealing join hands—the argument is equally strong that it is our duty to limit as far as we can the exchange losses which must fall to a greater or less extent on those who trusted in British credit and the stability of sterling.

And this being so, we must not only determine to do all that we can to maintain a steadiness in the sterling exchange by demonstrating our resolute intention to eschew the tempting but fallacious expedient of deliberate inflation; we must equally beware of rendering our good intentions frustrate through drifting into inflation, either because of failure to maintain a balanced budget or through failure to devise and apply the monetary technique appropriate to the new situation that has been created. On the latter question we make some observations on another page; our views on the Budget question are familiar to our readers. If inflation is to be avoided, it is absolutely essential that the State should pay its way

without recourse to borrowing for the purpose of filling the gap between income and expenditure; and though it is satisfactory that the recently issued declaration of policy by the Labour Party categorically condemns inflation, it would be more reassuring if the leaders of the Opposition made it clear that, in the event of their return to office, they would refrain from any action that would imperil budgetary equilibrium, and would make it the first and cardinal point of their policy to maintain it.

Finally, and this point is just as important as the others we have mentioned, we must endeavour at all costs not to be led away by the notion that depreciation of the currency is a short cut to prosperity which can be taken without expence to anyone, or, still less, taken again and again. The plain truth is that the chief factor which had weakened our power to defend the gold standard when the crisis came was that the price level in this country, supported by a level of wages which could not be maintained in conditions of unexampled world depression, was too high. In so far as the reduction in the purchasing power of the pound sterling abroad is accepted by all concerned as a solution of the difficulty—easier and in some ways more equitable than direct cuts in wages—the country may ultimately benefit if the world can surmount without too grave losses the critical situation which the disturbances occasioned by the fall of sterling have brought to a head. But, even at best, we must not assume that we have necessarily solved the whole of the difficulties which have been responsible for the depression of our export industries and our heavy burden of unemployment during recent years. Currency depreciation does not eliminate at one stroke the rigidity of costs or the lack of balance between sheltered and unsheltered wages which have impeded the successful functioning of our economic mechanism. Just as, in the wider international sphere, our aim must be to achieve a more rational system of currency and credit, so at home economic rationalisation in the most comprehensive sense, involving an improvement in our industrial technique and equipment and a more flexible wage system based on greater mutual confidence and understanding in industrial relations, must be more than ever our objective. In a crisis which has developed with bewildering rapidity, it would be rash to assume that we have yet escaped from the possibility of world disaster. What is certain is that the most that either this country or the world has got is—opportunity.

PARTIES AND THE COUNTRY.

Is there to be an early election? If so is it to be a party election or an appeal by a national three-party Government? Or will the present administration carry on, either in its present form, or after some reconstitution? It was thought that last week-end would provide the answer to these questions. But it did not, and after a week of perplexing rumours and manoeuvres, they remain, as we write, to be decided at any moment.

To foreign observers, and indeed to many English, the position must be a matter for sheer bewilderment. Only a few weeks ago a National Government was formed to carry the nation through a typhoon. Initial steps towards shortening sail and getting the ship under control have been taken through an emergency Budget and an Economy Bill. But the typhoon still rages; the pound is adrift; major tasks of seamanship remain to be performed. Yet the burning question of the hour is whether the Captain and officers and crew should leave the ship to drift for a month, while they fight a battle to decide whether new officers should supersede the old. It is seeming madness, reminiscent almost of the ship that went "Hunting the Snark," in which "the rudder got mixed with the bowsprit sometimes."

And the Bellman, perplexed and distressed, Said he had hoped, at least, when the wind blew due East,

That the ship would not travel due West.

Yet, in reality, the story of what has occurred is a simple one, albeit not too creditable to some of those concerned;

and one thing that is certain is that a full measure of public sympathy is due to Captain MacDonald, who for the second time in a few weeks has been faced with a situation calculated to make the most exacting demands upon his patriotism and statesmanship.

Let us record the story as simply as possible. By the end of last week the pressure of the campaign of the rank and file of the Conservative Party for a General Election on a full tariff issue reached a climax and Mr Baldwin felt it necessary to inform the Prime Minister that the campaign was uncontrollable and irresistible. The Prime Minister was thus faced with a very delicate situation, in which three courses were open to him. Should he resign? If so he would plunge the country into a party election, stultify his own sacrifices for the nation, and incur the risk of a Labour victory and the annulment of much of the good work done by his National Government. Secondly, should he surrender to the Protectionist clamour, replace Mr Snowden and the present Liberal Ministers by *soi disant* Liberals, and lead an appeal to the country on behalf of a practically Conservative administration possessing a thin veneer of national unity? On all grounds such a course was repugnant to Mr MacDonald personally and presented obvious disadvantages and risks from the national point of view. A third alternative remained, and that was to make one last supreme effort to create a real unity, to induce Liberals and Conservatives to reach a compromise on the tariff issue, and thereby to be enabled either to carry on with the present administration, or, at worst, to make a three-party appeal to the electorate.

It is not surprising that the Prime Minister was attracted by the third course, but its exploration threw the Liberals on to the horns of a dilemma. In the absence of any concession to the need for unity by the Protectionists, the onus of concession fell with unfair incidence upon them. Yet they knew that a break up of the Government spelt a very difficult position at the polls and the probability of a party split. Moreover, from first to last, the Liberal leaders have been impressed with the overwhelming importance of saving the nation, if possible, from the chaos of a confused election. So the Liberals explored the road of compromise, respecting and approving the Prime Minister's desire for unity and, if an appeal to the country should prove to be inevitable, for a "Doctor's Mandate" to apply any remedies that might prove necessary. They travelled some long way upon this road. They achieved unanimity in the Parliamentary party for a formula, which, while expressing extreme disapproval of a distracting general election, expressed a willingness to consider all emergency measures, even tariffs, if they should prove necessary after full investigation. For the moment it appeared that this Liberal *détente* had achieved its purpose. The gesture appeared to have strengthened Mr MacDonald's hands, and it was taken to be a symptom of a satisfactory *dénouement*, when the *Times* on Tuesday both printed a letter from Mr J. M. Keynes, declaring the tariff issue to have been rendered irrelevant by the devaluation of the pound, and itself editorially advanced towards Mr Keynes's new position. But Wednesday's hope that the danger of an election was being averted was quickly dashed to the ground. It became immediately evident that the Conservatives were entirely indisposed to accept the Liberal formula or to acquiesce in a blank cheque for Mr MacDonald, which might or might not include tariffs.

There, as we go to press, the matter stands, and the grave menace of an election hangs over our heads. Yet we cling to a last hope that saner counsels will prevail, and venture to make one last appeal to the Conservative leaders. It is this. For the sake of unity, to avoid the disastrous results of a five- or six-party "dog-fight," to assure firm and strong direction of the State during the crucial months ahead, Free Traders have conceded a willingness to consider methods of import control and even tariffs should events prove them to be desirable. Cannot Protectionists move one step, too, and for the same overwhelming purpose of saving the State, agree to wait a while and see whether the experts are not right who say that devaluation has knocked the bottom out of their case for tariffs? Even a breathing space of a few months would be of great value. It would allow all the machinery of

balancing the Budget to be set in full motion; it would assure us a strong authoritative Government to treat with India and participate in the fateful international conferences which must be imminent. All honour to the leaders of all three parties who, a few weeks ago, put their hands to the plough. But the furrow has only been begun, and there must be no looking backwards yet.

INDIA AND THE CRISIS.

To appreciate the nature of the problems which have confronted the Government of India during the past fortnight, it is important to relate the position created by the Great Britain's suspension of the gold standard to the general economic situation in which India was already placed. The world trade depression, and in particular the catastrophic decline in the price of primary products, had hit India, like all raw material producing countries, with extreme severity. In addition, her trade had been adversely affected by the uncertainties surrounding the political future, which had also led to a substantial export of private capital, motivated partly by mistrust of India's financial stability and partly by speculative hopes of profit in the event of a change being made in the legal exchange ratio as a result of political pressure.

In the financial year ended March 1, 1931, the "positive" balance of India's merchandise trade amounted to only 62 crores, as compared with 79 crores in 1929-30 and 86.5 crores in 1928-29. After allowing for imports of gold and silver on private account, the credit balance in 1930-31 was 37.5 crores, as compared with over 52 crores in both the preceding years. Moreover, it is significant that during the year the Government of India were able to purchase only 7.26 crores' worth of sterling through the market, while they had to meet demands for sterling at the statutory rate to the amount of 7.75 crores. The Government's requirements had to be met in large part by borrowings in London, sterling issues during the year totalling £31 millions. The budgetary position also had deteriorated. The revised estimate for 1930-31 disclosed a deficit of 13.5 crores against an original estimate of a surplus of 0.8 crores, and rupee Treasury bills outstanding on March 31, 1931, amounted to 55.4 crores, an increase on the year of 19.3 crores.

By a combination of economies and increased taxes, the Finance Member, in his Budget last spring, endeavoured to restore the balance between revenue and expenditure in 1931-32, but, as will presently be seen, his plans were rendered ineffective by the intensification of the world crisis and the growing depression of India's foreign trade, upon which, in its bearing upon Customs receipts, so large a part of the revenues of the Government of India depends. In the first four months of the current financial year India's merchandise imports amounted to 46.5 crores, against 63 crores in April-July, 1930, but exports fell from 88 to 52.7 crores and the credit balance of trade (including specie transactions) fell from 13.3 to 5.8 crores. Government remittances, amounting to £9 millions, were effected wholly by transfer through the Paper Currency Reserve; there were no purchases of sterling in the market. By July 31st Treasury bills outstanding had risen to the high level of 80.8 crores, and on August 6th Bank rate was raised from 6 to 7 per cent., an abnormal move at this season of the year.

In these circumstances the Government of India had to decide what its policy should be with regard to the rupee exchange ratio in the light of Great Britain's enforced suspension of the gold standard; and since the period of indecision would have inevitably entailed dangerous speculation in the currency, the question had to be decided with the utmost rapidity. Three alternatives were theoretically open:—(1) To adhere to a gold standard; (2) to go off the gold standard, but not to maintain a fixed ratio to sterling, thus allowing the rupee to find its own level; and (3) to maintain the fixed rupee-sterling ratio at 1s. 6d.

The economic considerations which we have outlined above suggest that the objections to the first course were superable. India's ability to remain on the gold stan-

dard was demonstrably less than that of Great Britain. Such a policy would have entailed a further deflation of internal prices, an increase in the burden of debt, impairment of credit and curtailment of enterprise, disastrous to the balance of India's Budget, and wholly beyond her capacity to support. On the other hand, if the second course were to be followed and the rupee allowed to "float," the support afforded to the exchange by "Reverse Councils," i.e., sales of sterling by the Government of India, would no longer be provided; and there would be a serious risk of an internal flight from the rupee on a gigantic scale, involving an exchange depreciation to which limits would be set only by the rupee's bullion value. The resulting precipitate rise of prices, involving the certainty of an unbalanced Budget, widespread ruin among holders of India's internal debt, and the probability of dangerous social and political reactions, would be consequences which the Government of India could not justifiably contemplate. Unlike Great Britain, India is on long term a debtor and not a creditor country. Lacking any substantial foreign assets, she has no solid basis with which to attempt to maintain, as Great Britain now has to do, the stability of an "unanchored" currency.

There remained only the third course—to endeavour to maintain the link with sterling—and this is the course which the Government of India rightly decided to follow. It is a course which has many advantages for India. Over 45 per cent. of India's foreign trade is done within the British Empire; her annual public expenditure in Great Britain amounts to £35 millions, apart from maturities in respect of her £570 millions of public indebtedness to Great Britain; and, above all, India, who has been accustomed to borrow heavily abroad for capital investments, has habitually looked to London as the natural lender. To superimpose on future borrowings from this source the difficulty of a fluctuating exchange ratio would have been a most unwise policy.

To decide, however, that the aim should be the maintenance of the rupee-sterling exchange ratio is not tantamount to the achievement of this objective. An essential condition precedent to the maintenance of stability is budgetary equilibrium in India; and this question the Government at Simla has had to tackle this week. On Tuesday Sir George Schuster, the Finance Member, had to acquaint the Legislative Assembly with a serious deterioration in the position of the 1931-32 Budget. His revised estimate was that there would be a short-fall of 11.33 crores in tax revenue and of 8.23 crores in other receipts, leaving a prospective deficit in the current year of 19.56 crores. About the same deficit on the present basis of revenue and expenditure was to be anticipated next year, so that in making plans to cover the current and next succeeding Budget he had to face a total deficit of over 39 crores, which had to be made good in eighteen months.

The Government's proposals took two lines. Firstly, there would be drastic retrenchment in the Government services, including an emergency cut, as from December 1st, of 10 per cent. in salaries exceeding 40 rupees per month. Secondly, there would be additional taxation; all existing taxes would be increased by a temporary surcharge of 25 per cent., with the exception that (1) there would be no increase in the Customs duty on exports, and (2) the surcharge on income tax in 1931-32 (levied in respect of the whole year) would be only 12½ per cent. Further, there would be new duties of 10 per cent. on machinery and dyes and of half an anna a pound on raw cotton. Inland post and telegraph rates would also be increased by 50 per cent., and as from March 1, 1932, the salt credit system would be abolished.

The effect of these proposals would be as follows:—

	1931-32.	1932-33.
	Crores.	Crores.
Prospective deficit on present basis.....	19.56	19.50
Economies and cuts	0.90	8.90
Additional tax revenue.....	8.11	15.10
Post and telegraph	0.37	0.73
Total improvement	9.38	24.73
Resulting balance	Dr. 10.18	Cr. 5.23

In 1932-33 the Army authorities had guaranteed a net reduction of 4.5 crores, in addition to pay cuts of 0.25 crores; while civil retrenchments would be—pay cuts

1.15 crores, other economies 2.5 crores. Thus the Finance Member was able to estimate that the aggregate deficit for the two years would be slightly less than 5 crores.

These proposals, which involve legislation by H.M. Government to cover the reductions of salaries of officers in the employment of the Government of India whose rights have been guaranteed under the Government of India Act, represent a drastic programme which, however necessary it may be, is not likely to be popular either in this country or in India. The increase in Customs duties will undoubtedly hit Lancashire, and in India there is certain to be loud opposition both to any increase in the salt tax and to the new duty on raw cotton imports. But, unpalatable as both the proposed economies and new burdens may be, it is impossible to argue that the needs of the situation could have been met by any less heroic measures. Even if this Budget has to be "certified," it is essential that it should go through without substantial modification.

For even though Sir George Schuster has devised steps whereby to make ends meet over the period of the next eighteen months, the fact remains that, at best, he is faced in the current financial year with a deficit of 10 crores; and the gap will have to be met by borrowing either in India or in London. As we have already stated, the volume of outstanding rupee Treasury bills has grown to an unwieldy figure; it stood on September 4th at 82.4 crores. Bill maturities in October and November are particularly heavy, and though the level of money rates in India (Bank rate was raised on September 22nd to 8 per cent.) may be calculated to attract offers for the Government's bills, the position has obvious elements of difficulty. An appreciable proportion of these rupee bills are believed to be held outside India by British banks and trading companies, and should there be any serious doubt, occasioned by adverse political development, as to the stability of the Indian Budget or of the rupee, renewals might be difficult to effect. Though the first effect of the British gold suspension was, as might be expected, to arrest the previous pressure of demand in India for sterling drafts, it would be premature to conclude that this factor, which has added greatly to the Government of India's difficulties, will now be eliminated, or that the Ordinance, issued in India on September 21st, restricting dealings in foreign exchange in all circumstances, will wholly stop the tendency towards a "flight from the rupee." In the event of political disturbances, pressure would certainly be intensified. Moreover, the sterling maturities which the Government of India has to meet in the near future are considerable, and include nearly £15 millions falling due for repayment in January, 1932. In so far as depreciation of the rupee in relation to gold stimulates Indian exports, India will have eventually an ampler supply of export bills to enable her to support her exchange; but, so far as the near future is concerned, her situation is not easy.

A favourable factor, whose importance should not be overlooked, is that the Government of India holds a Currency Reserve approaching £40 millions in gold and sterling. This may serve in good stead; and, if circumstances dictated, shipment of gold from India might well be an alternative preferable to external borrowing. For in the light of the world crisis and of the disabilities under which London itself is labouring, it would be idle to pretend that an Indian loan could be placed here without great difficulty or without the necessity for a rate of interest which might seem unconscionable to less well informed sections of opinion in India. Last July the Prime Minister stated that H.M. Government would not "allow a state of affairs to arise which might jeopardise the financial stability and good government of India," and that, if need be, Parliament would be asked to authorise financial support under suitable conditions to the Government of India. There is no question of this country seeking to retreat from the undertaking thus given; but, in the present position of world affairs and of Great Britain's own finances, it becomes necessary to speak of all financial guarantees and obligations in terms of what is practicable. England's desire to support India's credit in every eventuality is undiminished; but events have dried up the well springs of

credit all over the world. The implementing of our undertaking is to-day a much more difficult proposition.

This being so, the financial and economic situation in which India is placed has a direct political bearing. It is, we suggest, imperative that all the parties to the Round Table Conference should appreciate that nothing could prevent a critical financial situation arising in India, were a breakdown of that Conference to be followed, as it might be followed, by a serious recrudescence of political disturbances in that country, intensified—more to-day than before civil disobedience was called off—by communal friction. In no spirit of alarmism, but because we, like all friendly observers of India's fortunes, are impressed with the magnitude of the financial difficulties which at best confront India in coming months, we earnestly hope that the Round Table Conference will succeed in solving its perplexing problems in a spirit of good will and compromise.

LONDON'S MONETARY POLICY.

In an earlier column of this issue we have emphasised the desirability of keeping before our eyes, as the immediate end in view, the achievement of as great a steadiness as possible in our economic situation. From the purely monetary point of view the realisation of this aim depends upon our adopting lines of policy calculated to further it.

By this we do not mean to imply that the time is yet ripe for a decision to be taken as to the future level at which it is desirable to attempt to stabilise once again the exchange level of the pound, or that it would be desirable to mobilise resources which would enable the authorities to attempt to "peg" sterling at any precise level. The immediate "pegging" of the pound in relation to gold would mean that, if we were not to risk the undesirable possibility of having to "let go" again, we should be assuming an obligation to follow in our internal price structure the future course of gold price movements. These movements, as may be seen from figures which we print on a later page, have been violently downwards during the past fortnight. While this is largely due to the depreciation of the pound, they are influenced by the events that are so quickly succeeding one another in other centres; their future trend is, in fact, incalculable; to attempt to conform to them is not practicable and might be highly disadvantageous. But though the wise policy may be that there should be no intervention designed artificially to influence the long-term trend of sterling, it is highly important that every effort should be made by the London market to minimise the extent of hour-to-hour fluctuations round the exchange's mean figure; to maintain as "close" a quotation for "spot" sterling as possible; and, above all, to provide the freest possible market in forward exchange.

As a condition precedent to progress along these lines, it is clear that in the light of the last fortnight's developments, Bank rate should not be hastily reduced. The beginnings, now fortunately arrested, of an unhealthy speculative boom in securities and commodities last week, emphasise the desirability of keeping Bank rate conditions; and the large number of increases during the past few days in the Bank rates of Continental countries underlines the need to keep money rates in London at a level calculated to offer adequate attraction to short-term capital. On the assumption, however, that a 6 per cent. Bank rate is likely to be the minimum for some time, there is much to be said for withdrawing without delay the present exchange restrictions imposed by Treasury Order. Such restrictions could not be really effective in preventing a flight from the pound, were there signs (and there are none) of such a tendency. On the other hand, the greater the freedom of dealing, the narrower is the margin likely to be between buying and selling rates, whose present "spread" is a serious handicap not only to London's purely financial business, but to our exporters. Moreover, it is possible that the absence of a completely free market in "spot" exchange is tending actually to impede the repatriation of balances at present held

abroad, but which would be brought back to London more readily if their owners were assured that rapid retransference to a foreign centre would not be impossible should untoward developments render such a course desirable to them.

The key question, however, is the vital need to expand the present restricted market in forward exchange dealings. In this matter there are two important considerations. In the first place, so long as it is impossible for British exporters and importers to cover forward exchange risks, and so long as the same protection is not available on an adequate scale for all dealers, both at home and abroad, in the sterling bill, the paralysis of trade, which the existing credit crisis must in any case to some extent produce, will be accentuated, and the hopes which are pinned in this country on a commercial revival will be largely disappointed. In the second place, there is the factor of the large foreign balances still held in London and invested to a considerable extent in Treasury bills. Until facilities are provided whereby banks and other financial institutions abroad who control these balances can secure themselves against the risk of incalculable loss resulting from further depreciation of sterling, there will be a tendency either for these balances to be gradually withdrawn (and this would mean a progressive impairment of the resources which have enabled London in the past to play its rôle of financier of world trade), or for them to be kept, at any rate, in a much more liquid form than the British Government's ninety-day bills. Any widespread disinclination on the part of foreigners to renew their holdings of Treasuries would clearly involve the risk of highly undesirable consequences, since recourse might ultimately have to be had to Ways and Means Advances, with the inevitably inflationary effect of such borrowings.

The precise technique whereby a larger forward exchange market can be developed is a matter which the authorities should be, and doubtless are, studying with the closest attention. We have already suggested that, to facilitate such development, the Government should consider the immediate removal of the restrictions which, as a precautionary step in the first uncertainty, they quite properly took. Apart, however, from having greater freedom of dealings, the market may require other assistance. To an extent much greater than was the case even in the 1919-25 phase of fluctuating currencies, forward exchange operations on the part of individual banks and private institutions may be impeded to-day by the element of risk involved in retaining balances in the hands of foreign banks whose solvency may unexpectedly prove doubtful. The development of a forward market would be greatly assisted by co-operation on the part of central banks for the purpose of providing unquestionably safe keeping for the resources involved in these transactions. That central banks should provide these facilities was, it may be recalled, a recommendation of the Genoa Conference which met, in a period of exchange instability, in 1922.

A FRENCH VIEW OF THE POUND.

The following first impressions of the situation created by Britain's suspension of gold payments has been sent us by Prof. Charles Rist, the distinguished French economist.

(1) *The Causes of the Crisis.*—The pound has fallen, like a good soldier, fighting for the stability of the currencies of Central Europe. It was because London had a large part of its resources immobilised in Germany and Austria that it was impossible during recent months to make good the withdrawals of foreign balances from London by calling in foreign credits. In a word, London was having to "carry" not only its own currency, but that of a large part of Europe.

The pound fell as a result of unjustifiable panic; the forces which led to its fall were largely external to England itself. In my opinion, the financial crisis would never have become so acute as it did, had it not been for the recrudescence in Europe during the past year of a policy of nationalism which superimposed on an already serious economic crisis a universal sense of political uncertainty.

Branches and Agencies throughout the East.

EVERY DESCRIPTION OF HOME AND EASTERN BANKING TRANSACTED.

Enquiries invited.

(2) *The Consequences.*—The repercussions caused abroad by the depreciation of the pound will be more serious from the financial point of view than from the angle of commerce.

So far as international trade is concerned, there will be some increase of British exports, but I do not believe that at this juncture such an expansion should create real inconvenience in foreign countries. (As I see it, the fall in retail prices of finished goods in Europe has, as matters stand, not gone far enough.) At the same time, one must naturally expect the clamour for Protection to be redoubled.

In the financial sphere there can be no question of the gravity of the repercussions. It would be a difficult matter for the world to do without the marvellous credit mechanism represented by the London market. No doubt Paris and New York can play a certain rôle, but foreign trade cannot be adequately financed without recourse to London. Now, so long as the pound is fluctuating, the process of financing trade through London must be, I would not say paralysed, but rendered extremely difficult. In any case, the foreign short-term capital which used normally to be lent in London, and which thus formed a necessary element in London's credit mechanism, will hesitate greatly before it returns there.

(3) *The Factor of Uncertainty.*—A further disturbing factor is the uncertainty felt by the whole world as to the future of the pound. Will there be definite devaluation? Or possibly a return to gold parity? An end to this uncertainty as quickly as possible is a matter of great importance. As soon as the world can have clearer assurance on these questions, anxiety will be lessened and financial transactions be made possible on a large scale. But, so long as nothing is known of England's intentions, sterling exchange will remain unstable. Before 1925 everyone knew that the pound would return to gold parity, and though the pound was depreciating the speculation in it was limited to "buying for a rise." To-day the world knows that a considerable section of British opinion views favourably the idea of devaluation. Foreigners will not place short-term capital in London until they know what line of policy the British Government is inclined to take.

In a word, the vital thing is not so much that the pound is inconvertible, as that it has become an unstable currency.

(4) *Desirable Policy.*—How should the situation be met? The first and foremost aim should be to restore the stability of the pound on whatever level seems most reasonable to the authorities in London. As soon as a decision is reached I am convinced that international co-operation can rapidly be mobilised to ensure that the decision is effective. Stability before all.

(5) *The Need for Rapid Action.*—A further reason why it is important that there should be no delay in reaching decisions of this nature in Great Britain is that, in the meanwhile, the "mal-distribution" of gold cannot but be aggravated. Since the Bank of England will no longer be a buyer of gold—or a buyer only at a price below the market level—the flow of gold is bound to be in the direction of Paris, New York and Berlin, and a situation which has given rise to almost universal dissatisfaction will be worsened.

(6) *Psychological Considerations.*—Rapid action is equally vital for psychological reasons. At all costs

countries which have recently stabilised their currencies and which have naturally been inclined to attribute all their present troubles to the fact of stabilisation must be prevented from getting into their heads the idea of imitating England. In such an event we should be reverting to the monetary chaos for whose alleviation the Bank of England has worked so hard during the last ten years, and the situation would be the more serious in that the countries which hold the largest stocks of gold—France and the United States—would not be able or inclined to come to the assistance of the whole world at once.

(7) *More General Considerations.*—Contrary to an opinion which is widely held, I am by no means convinced that the question of debts and reparations has played a very important part in the crisis which has just culminated in the suspension of the pound's convertibility. The best proof that this has not been the case is to be found in the fact that the Hoover moratorium did not change the situation at all and failed to check the withdrawal of funds from Germany and England. To find a remedy for present troubles, it is necessary to go much deeper than these two factors. In the first place, an end must be put to the growing nationalist and bellicose manifestations visible in parts of Europe, which were at the root of the first withdrawals of capital. In the second place, there must be greater freedom of international trade, and negotiations set on foot again for a reduction of tariffs. In the third place, the countries which are continually asking for capital loans from so-called "rich" nations, must be willing to give the lenders effective guarantees of good management and of material and moral security.

In short, those who were responsible for the outbreak of war in 1914, on the pretext that the organisation of Europe was intolerable, must not begin again to-day to declare that Europe's new organisation is insupportable, thus voluntarily or involuntarily giving the impression that nothing but another war can better it. Realisation of sound policy depends, in my opinion, on a close alliance between the three Powers in the world who are the strongest financially and the most determined to maintain peace, namely, England, France and the United States.

DEVELOPMENTS ABROAD.

It would be on every ground regrettable were public opinion in this country to be concentrated on our domestic problems—numerous and difficult though those problems are—to the exclusion of interest in developments in other countries. If we are to keep our heads cool and our minds clear in the present emergency, it is essential that we should abandon every vestige of an insular point of view, should realise that our own fortunes are inseparably bound up with those of foreign nations and that no solution of the world's economic crisis can be achieved except in terms of an international recovery. Events move with bewildering rapidity; and it is so difficult to keep track of developments from day to day that, for the period of the crisis, we propose to continue week by week the publication of our Diary and to print a greatly amplified service of foreign correspondence.

These features will, we hope, be of use to readers in helping them to obtain some picture of the course of events; but, at best, the canvas is so enormous, and the details so complicated, that it is by no means easy to deduce correctly the real trend which successive phases of the crisis are taking. As we read the situation at the time of going to press, the developments of the past week have been at once less outwardly catastrophic than might have been feared, and at the same time more ominous than the more optimistic observers in foreign countries were at first inclined to think would be the case.

Let us glance first at the surface manifestations. The three countries of Scandinavia are now definitely off the gold standard, a step foreshadowed as long ago as September 22nd by Denmark's decision to suspend gold exports. As we showed in an article last week, the British market absorbs 25 per cent. of Sweden's, 26½ per cent. of Norway's and over 55 per cent. of Denmark's total exports. Thus it was not unnatural that these three countries should be the

first of our foreign neighbours to follow Great Britain's example in suspending the gold standard. Moreover, Sweden, like Great Britain, was suffering from the strain of carrying—in a time of acute world depression—a very high level of real wages; and it would appear that this consideration had some weight in determining her authorities' decision. In all three countries, the exchange position appears to be well in hand, notwithstanding the inconvertibility of the currencies, and while the authorities both at Stockholm, Copenhagen and Oslo are evidently impressed with the desirability of maintaining stability in their internal price levels, there seems reason to suppose that if and when there is greater assurance of future stability in sterling exchange and the British price level, Scandinavia may be inclined even to link its currencies to the pound.

Apart from the Scandinavian abandonment of gold, the currency position has not shown signs of pronounced crisis during the past week. The Italian lira, after some weakness, recovered as a result of assurances by the Government that there was no intention of departing from the gold standard. It will be observed, however, that our Italian correspondent expresses some anxiety as to the ultimate reactions on the Bank of Italy of a deterioration in Italy's balance of payments as a result of a possible shrinkage of Italy's exports to Great Britain. Early this week the reichsmark had also a significant tendency to depreciate; but while this was apparently due in part to ill-informed rumours that Germany intended to declare a suspension of the gold standard, the real cause was the considerable strain placed on the exchange by the transfer of foreign "reichsmark balances" released under the terms of the "standstill" agreement. Whether Germany can ultimately succeed in maintaining her currency at parity with gold remains to be seen, but for the moment the situation for her is governed by three factors:—(a) her obligation under the Hague Agreement to remain on a gold basis; (b) the magnitude of her public and private foreign indebtedness in terms of gold currencies; and (c) her deep-seated fear of the possibility of a renewed inflation—a feature to which our Berlin correspondent this week calls particular attention.

In short, there has been no marked progress to record in the violent exchange disturbance of currencies. What is more disquieting in the development of the latest phase of the crisis is the indication of growing banking strain—not only in the "distressed" countries, but even in centres where gold stocks are largest, and where the stability of currencies seems *prima facie* most assured. Throughout the world losses occasioned to holders of sterling balances and to merchants who have invoiced goods in the form of forward sterling, have been heavy. One consequence has been enforced liquidation of securities, which has had to be concentrated on the few "gold currency" bourses still operating. The fall of security values has weakened the security of collateral held by banks in return for advances and has begun to lead to a vicious spiral of curtailment of credit and sales of bonds by banks themselves. On Wall Street, selling has been particularly severe, and the pressure has been accentuated to some extent by hoarding of dollars on the part of the public, which in turn has forced the banks to call in loans and liquidate their portfolios. In France a large bank has had to be supported; reports, ill or well founded, of banking difficulties in Switzerland are current; and in general—with this country as almost the sole exception—there is a growing sense of fear at the possibility of yet undisclosed banking insolvencies.

Difficulty in the banking world is, in fact, the salient feature which emerges from reports this week from centres abroad. It is a development which was to be feared and whose full effects have yet to be seen. For, it should be remembered, banking difficulties, just as much as actual depreciation of currencies, are capable of having cataclysmal repercussions on international trade, on stock markets, and on the whole of the world's financial structure.

Meanwhile, a not altogether unnatural consequence of events has been doubts of the gold exchange standard. Those central banks which hold a part of their currency reserves in London are already faced with a serious

exchange depreciation which, if not corrected by a rise of sterling, is already sufficiently large in certain cases to reduce the percentage of note cover below the legal minimum. Some countries adopted the gold exchange standard system rather unwillingly, and only did so in view of the great difficulty which would have arisen if there had been a severe blow, and three important European central banks have now definitely decided to convert their foreign reserves into gold. These decisions are largely responsible for the large call that has been made on America's gold in the last few days either in the form of "earmark" or of actual export. The crisis has, in fact, precipitated the gold scramble to avoid which such great efforts have been made.

If the withdrawals from New York continue, they will present the Federal Reserve system with an awkward problem; for in the present situation there is a shortage of commercial bills with which the gold withdrawn must be replaced.

A DIARY OF THE CRISIS.

Friday, September 25th.

Danish Bank rate raised from 4½ to 6 per cent.; Norwegian Bank rate raised from 5 to 6 per cent.

Italian Government announces duty of 15 per cent. (except coal, 10 per cent.) on all imports not subject to special international treaties.

Bolivia suspends convertibility of peso for thirty days or longer if necessary.

Indian banks reopen without disturbance; Finance Minister Banque Nationale de Crédit in difficulties; Finance Minister summons Paris bankers' conference to deal with the situation.

Wide fluctuations sterling between \$3.90 and \$3.40. Closing rates: dollar 3.80, French franc 96, guilder 9½, Swiss franc 19½, lira 74, reichsmark 16.

London Stock Exchange, further fall of fixed-interest stocks; equities lose early gains. Stock Exchange Committee announces that as from September 26th all bargains must be for cash and may not be continued from day to day; no further option business may be transacted; bargains already entered into for the account to be settled on October 8.

Foreign bourses: Wall Street irregular, wide fluctuations; Paris and Amsterdam heavy liquidation, general fall.

Saturday, September 26th.

Announced that Banque Nationale de Crédit will be supported by guarantee fund established by leading French banks.

Irish Free State Government declare that they will remain on sterling exchange standard.

Norway ships Kr. 27 millions gold to Switzerland. Sterling steadier. Closing rates: Dollar 3.84½, French franc 97, guilder 9½, Swiss franc 19½, lira 73, reichsmark 15½.

London Stock Exchange quieter, small recovery gilt-edged. Foreign bourses steadier.

Sunday, September 27th.

Norway and Sweden decide to suspend gold standard. Norwegian Bank rate raised from 6 to 8 per cent. Italian Bank rate raised from 5½ to 7 per cent. Greek Bank rate raised from 9 to 12 per cent.

Egyptian Government decides to prohibit the export of gold. MM. Laval and Briand in Berlin; public reception favourable.

Netherlands Bank announces that it will unconditionally maintain the gold standard, and that "by virtue of conversations recently held with the Bank of England," the Bank has every reason to believe that it "need not fear any loss" on its holdings of sterling bills, the interest on which "automatically offsets a possible temporary difference in book value."

Monday, September 28th.

British Cabinet meeting discusses possibility General Election; no decision reached.

Denmark decides suspend gold standard (gold exports already prohibited since September 22nd).

Netherlands Bank rate raised from 2 to 3 per cent.; Swedish Bank rate from 6 to 8 per cent.

Franco-German agreement announced to set up Joint Commission, with permanent secretariat, to examine all economic questions affecting the two nations.

Sterling's movements narrower. Closing rates: Dollar 3.83½, French franc 98, guilder 9½, Swiss franc 19½, lira rises to 80, Scandinavian currencies 17-18 nominal.

London Stock Exchange quieter, small movements. Foreign bourses: Wall Street weak, but volume liquidation small; gold exported \$20 millions, mainly to France; gold earmarked \$31 millions; sixteen small banks in various States suspended payments. Paris irregular, Rentes and bank shares lower. Amsterdam quiet.

Tuesday, September 29th.

Mr MacDonal has audience with H.M. the King. British Cabinet meeting again discusses possibility General Election; no decision reached. Commons pass Economy Bill by 297 votes to 242.

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital and Reserve Funds, £3,600,000.

Head Office: 38, St. Andrew Square, Edinburgh

OVER 200 BRANCHES IN SCOTLAND

LONDON OFFICE: 38, Threadneedle St., E.C.2

Every description of Banking Business transacted.

Emergency Budget introduced in Indian Legislative Assembly.

People's Bank of Northern India suspends payment. Danish gold suspension bill passed, also enactment reducing legal minimum gold cover from 50 to 33½ per cent.

Bulgarian Bank rate raised from 8½ to 9½ per cent. Three German private banks—Paul Wildschutz und Sohn, Bassler und Thoma, and Seifert und Schmidt—suspend payment.

M. Venizelos issues decree to control export of currency from Greece.

Sterling steady, narrow movements. Closing rates: dollar 3.84, French franc 97½, guilder 9½, Swiss franc 19½, lira 79, reichsmark 16½. Some pressure on Berlin exchange through transfers of released "reichsmark balances" under "standstill" agreement.

London Stock Exchange quieter, gilt-edged close firm, industrials dull, German bonds weak.

Foreign bourses: Wall Street weak with increased selling; gold "earmarked" \$40 millions. Paris nervous, heavy liquidation, particularly on foreign account. Local bank at Rheims suspends payment. Amsterdam dull, quiet.

Wednesday, September 30th.

Further meeting British Cabinet; still no decision regarding dissolution.

Sterling firmer. Closing rates: dollar 3.92, French franc 91½, guilder 9½, Swiss franc 20.

Stock Exchange: London steady. Wall Street weak, continued liquidation; gold earmarked \$19 millions; Central Trust Savings Bank of Illinois suspends payment. Paris quieter; further restriction short selling imposed. Amsterdam weak, further selling. Schueler Bank of Cologne suspends payments.

Thursday, October 1st.

Further Cabinet Meetings: no official announcement of Election policy. After failure to obtain foreign credits, Bank of Finland rate is raised from 6 per cent. to 7½ per cent.

Stock Exchanges: London bonds firm, equities irregular; Wall Street, bonds sold heavily, equities dull, "earmarking" gold \$24 millions; Paris, quiet; Amsterdam, dull. Further gold shipment Holland to Paris.

Sterling better. Closing rate: Dollar 3.98, French franc 100½, Guilder 9½, Swiss franc 20½, Reichsmark 16½.

STERLING AND WORLD PRICES.

In the present unstable monetary situation the course of the wholesale prices of commodities in this country in relation to the trend of gold prices becomes a factor of great importance. We propose, therefore, for the next few weeks to publish our usual index number of prices at weekly instead of monthly intervals. The index number, calculated on the basis of the prices on September 30th, is given below. Corresponding figures relating to a year ago, the end of last month, and September 18th, i.e., a date immediately before the suspension of the gold standard, are added for purposes of comparison:—

BRITISH WHOLESALE PRICES.

(1927 = 100.)

	End Sept., 1930.	End Aug., 1931.	Sept. 18, 1931.	Sept., 1931.
Cereals and Meat	79.5	69.7	64.5	68.0
Other Foods	74.5	63.5	62.2	68.1
Textiles	56.9	44.1	43.7	49.5
Minerals	79.5	70.0	67.4	72.9
Miscellaneous	76.7	66.2	65.8	68.9
Complete Index	73.2	62.3	60.4	65.1
1913 = 100	100.8	85.7	83.1	89.6
1924 = 100	63.3	53.8	52.2	56.3

It will be seen that since September 18th sterling prices as measured by our index number, have risen by 7.8 per cent., whereas the depreciation of sterling in relation to the dollar amounts to about 18 per cent. This discrepancy, however, may be misleading unless it is borne in mind that during the same period there has been a pronounced downward movement in gold prices. We show in the next table a list of the prices of a few representative commodities in British and United States markets:—

PRICES IN THE UNITED KINGDOM.							
Date.	Wheat.	Sugar.	Cotton.	Rubber.	Copper.	Spelter.	Tin.
	Liverpool Futures, "December."	Raw Futures, "December."	American Middling, "spot."	Smoked Sheet, "spot."	"Standard Cash."	G.O.B.	"Standard Cash."
	Per 100 lbs.	Per 112 lbs.	Per lb.	Per lb.	Per ton.	Per ton.	Per ton.
Aug. 31	4 0	5 10½	3.86	2½	33 1 3	11 15 0	121 1 3
Sept. 18	3 9½	5 5½	3.74	2½	27 14 4½	10 12 6	111 1 3
Sept. 23	4 1½	5 1½	4.49	2½	32 8 9	12 16 3	119 8 9
Sept. 30	4 1½	6 6½	4.44	2½	33 8 9	13 1 10½	122 18 9

PRICES IN THE UNITED STATES.							
Date.	Chicago Futures, "December."	Raw Futures, "December."	New Orleans Middling, "spot."	Smoked Sheet, "spot."	Electrolytic "Domestic," "spot."	East St. Louis, "spot."	"Straits," "spot."
	Per 60 lbs.	Per lb.	Per lb.	Per lb.	Per lb.	Per lb.	Per lb.
Aug. 31	49½	1.30	6.67	5½	7.625	3.80	27½
Sept. 18	50½	1.32	6.08	5½	7.00	3.725	24½
Sept. 23	49½	1.33	6.23	5½	7.00	3.70	23½
Sept. 30	47½	1.37	5.70	4½	7.00	3.65	22½

The commodities listed above, however, are those particularly subject to speculative influences and extreme fluctuations. In the endeavour to afford a slightly better, though admittedly rough, guide to the gold prices trend, we have worked out provisionally an index number of the gold prices of the following commodities:—

Wheat	Sugar	Copper
Maize	Lard	Tin
Oats	Bacon	Rubber
Linseed	Cotton	Lead
Coffee	Wool	Pig Iron
Cocoa	Cotton-seed Oil	Petroleum

The quotations for all the above commodities are taken from the various American markets, with the exception of wool, for which we have taken the Le Havre quotation.

This "gold" index number, taking the prices of September 16th as a base, shows a fall of 2.5 per cent. as on September 23rd and one of 5.3 per cent. as on September 30th. Thus the true divergence between the course of sterling and that of gold prices can be expressed shortly as follows:—

	Sept. 18, 1931.	Sept. 30, 1931.
Sterling prices (<i>Economist</i> Index)	100	107.8
Gold prices (our Special Index)	100	94.7

The above figures suggest that there is at present a fairly wide disequilibrium between sterling and gold prices; for, on the basis of an 18 per cent. depreciation in sterling exchange, the index of sterling prices in relation to a 94.7 "gold" figure should theoretically be about 115.4.

The inference is that complete re-adjustment to the existing exchange level would require either a further rise of sterling prices, or, alternatively, a further fall of gold prices. Which of these two alternatives occurred would depend on the relative strength of sterling and gold currencies in determining the course of markets.

So far as the British commodity markets are concerned, the past week has put a distinct check on the signs of speculative activity which were visible a week ago. This speculation, however, so far as can be ascertained, did not attract any considerable volume of buying on the part of outsiders gambling "for a rise," but was confined in the main to regular dealers, whose motive in making speculative commitments was the desire to make good capital losses occasioned in other directions as a result of the trade crisis.

FOREIGN INVESTMENTS OF THE UNITED STATES.

In the light of the present world "credit-crisis" the extent to which the United States is involved in the economic fortunes of other countries is a matter of great interest. Some light on the subject is very opportunely thrown by an estimate of the volume and distribution of America's foreign investments, published recently by the United States Department of Commerce.* The investments which form the subject of its study are divided into two classes: (1) direct investments, which embrace corporate investments in American-controlled manufacturing and selling organisation; in the stocks and bonds of foreign-controlled manufacturing and selling corporations; in purchasing agencies; in petroleum lands, refining and distributing facilities; in mining and smelting properties, public utilities, plantations and other miscellaneous properties; and (2) portfolio investments, which are defined as foreign bonds; shares of foreign corporations that are traded in on American stock exchanges as "American shares" or are held in their original form; and bonds of American subsidiaries of foreign corporations and of American corporations that lend abroad directly. Short-term loans are not included in the analysis.

The table below shows the estimated total of private long-term investments abroad at the end of 1930, and its geographical distribution:—

PRIVATE LONG-TERM AMERICAN INVESTMENTS ABROAD, BY TYPES AND GEOGRAPHIC AREAS, AT END OF 1930.

(In thousands of dollars.)			
Area.	Direct.	Portfolio.	Total.
Canada	2,048,787	1,892,906	3,941,693
Europe	1,468,648	3,460,629	4,929,277
Mexico and Central America	930,843	37,733	968,576
South America	1,631,105	1,410,821	3,041,926
West Indies	1,072,000	161,484	1,233,484
Africa	115,329	2,500	117,829
Asia	419,504	603,445	1,022,949
Oceania	154,594	264,700	419,294
Total	7,840,810	7,834,218	15,675,028

After certain minor adjustments the figure finally arrived at is \$15,170,028. Europe, Canada and South America, in that order, are by far the most important areas of American foreign investment. There is a general tendency for direct investment to predominate in countries which have large undeveloped natural resources, or which are politically unstable, and there is also a predominance of direct investment in Great Britain, owing to the close cultural and business ties between the two countries.

American investments in Canada are larger than in any other single country, and it is remarkable that the public utility holdings, which amount to \$998,916,000, exceed those of Government and municipal stocks, which are estimated at \$857,185,000. In addition to this large sum of public utility stocks, United States citizens hold a further \$412,674,000 of Government-guaranteed railroad stocks. Investments in Canadian manufacturing amount to \$584,747,000, mostly direct; in mining and smelting to \$428,052,000, all direct; and in paper and pulp to \$413,253,000, of which \$284,525,000 is direct investment.

The most important geographical group is that of Europe, and the following table shows United States European investments by countries:—

PRIVATE AMERICAN LONG-TERM INVESTMENTS IN EUROPE, BY TYPES, AT END OF 1930.

(In thousands of dollars.)			
Country.	Direct.	Portfolio.	Total.

The enormous investment in Germany practically all dates from the floating of the Dawes Loan in 1924. Government, municipal and Government-guaranteed stocks account for all but \$376,273,000 of the portfolio investments. Of the private corporate securities over half are obligations of manufacturing companies. Of the investments in Great Britain, which comes second among European countries, over two-thirds consist of direct investments, and of these more than half are in manufacturing enterprises. American holdings of British securities are principally either Government obligations or "American shares." In Belgium, also, direct investments, especially in manufacturing, are large, but two-thirds of the United States investment in Belgium is in the bonds of the National Government. American investments in France are composed principally of Government issues and small holdings of private corporate securities, but there has been a considerable repatriation of Government issues lately. Direct investments are mainly in manufacturing, petroleum and public utilities, especially telephones. The figure for the Netherlands is to some extent misleading, as the Royal Dutch Company, whose operations are decidedly international, plays a large part. In the North-European countries American investments consist mainly of securities. The United States has little investment in the Balkans, and such investments as she has in Russia are not included in these figures.

When United States citizens invest in Latin America they almost invariably require a direct and dominant interest in the management, as is shown by the fact that, of some 5½ milliard dollars, only three-tenths was in the form of securities. Total American investments in Cuba, at \$1,066,551,000, are larger than in any other country except Canada and Germany. Mexico comes next among Latin-American countries, with \$694,786,000 of direct investments and a volume of portfolio investment which cannot be estimated until the Mexican National Railway Bond question is settled. Investments in Argentina, Chile and Brazil amount to \$807,777,000, \$700,935,000 and \$557,001,000 respectively. The United States has little capital invested in Oceania and Africa, and of the investments in Asia those of \$444,639,000 in Japan and \$201,333,000 in the Dutch East Indies are the most important.

The fact emerges very plainly from the study that the economic fortunes of the United States are closely bound up with those of the rest of the world, and, most of all, with those of Europe. It is fortunate that there are signs that the recognition of this fact is beginning to spread in the United States, for, until it is generally appreciated there, there can be little hope of a solution of the world's difficulties.

SOME WIDER PROBLEMS.

It was, of course, inevitable that the bewildering developments of the past few weeks should concentrate the whole attention of the country, its statesmen and its Press upon the break that has taken place in the currency system and the threat which had developed to the stability of our national finances. How the pound was swept from its gold moorings, where it will drift to, where and how and to what it will eventually be anchored, are questions that naturally absorb all thoughts. Yet in that absorption there lies a real danger lest, in the shock of this latest phase of

the world crisis, we should even for a moment forget the grave European developments that preceded it, or lose our realisation that day by day great European problems of politics, commerce and finance call ever more insistently for solution by co-operative international effort. When we use the word "crisis" to-day we are thinking of the pound. We ought to be using it in the far wider sense of the world-wide economic depression and of the peculiarly pressing difficulties still besetting Central Europe, which remains, as it was three months ago, the centre of the storm.

At the beginning of July, let us remember, Central Europe was steering so fast and straight for disaster that President Hoover was moved, in the interests of world stability, to initiate a year's holiday from all war-debt and reparations payments arising out of the war and the Peace Treaties. This, it was hoped, would provide a breathing space during which the governments could get together and work out measures for stopping the rot. But events moved fast. First Austria, then Germany were swept into financial crisis. Hasty *ad hoc* conferences of statesmen, of bankers and of experts, passing the problem from one to the other, eventuated in the arrangement of temporary alleviation of financial strain. But measures at present in force are purely temporary. The main underlying causes of strain and depression remain; concrete proposals for their more permanent alleviation have, indeed, been put on paper by League Committees, but they have led to no definite action. The September meeting of the League Council and Assembly, faced with such new irritants as the Sino-Japanese dispute in Manchuria, has made little headway with the urgent work of restoring security and prosperity to a harassed continent.

We have in these columns examined over and over again the causes underlying the world distress in general and the particular troubles of Europe, and last week we printed the analysis of the bad influences at work as given by the British Committee of the International Chamber of Commerce. Their list of bugbears is familiar: uneven expansion of productive capacity, maldistribution of gold, the existence of international debts, the post-war policy of high Customs tariffs, the lack of tangible political security. What is going to be done to eradicate these causes? They are not eradicated by Mr Hoover's one-year debt holiday nor by the six-months "standstill" agreement among Germany's creditors. Eradicated or modified they must be if Europe and the world are to be saved from collapses far worse than have yet been seen. Time, moreover, is the essential factor. The sands are running out. Germany, with her economic system frozen, is facing a winter of stern difficulty, and facing it without the promise that, at the end of it, intolerable strain will not be reimposed, or that there will be permanent rectification of the system which brought her to this pass. She cannot wait; Central Europe cannot wait; and because they cannot wait none of the other nations can afford to wait.

It is generally assumed that, in the near future, an international conference must be called to take decisions as to the future of international currency policy. Such a conference will be necessary, but by itself it will barely touch the fringe of the great tangled web of problems which demand a concerted policy of solution. Behind and beneath the financial problem lies the question of debts and reparations; above and beyond the problem of economic policy lies the question of the political appeasement of Europe and of the means to provide the feeling of security that now, by its absence, obstructs the path to a reduction of armaments. In our view nothing less is needed than a conference of plenipotentiary statesmen to survey the whole political problem with no subject barred, whether it be of debts or reparations, of treaties and frontiers, or of tariffs, armaments, or minorities. As in individual countries political parties are joining hands to tackle domestic troubles, so, faced by a growing world chaos, the governments of the nations must get together and contribute what is in the power of each to arrest its advance. And each of the great Powers has contributions that it, and it alone, can make. In the matter of debt revision the initiative can only come from the two great creditor countries, the United States and France; France alone, with her military preponderance, can lead the way

with certainty to armament reduction; and Britain can perhaps make the French lead easier by contributing more than she has yet done in the Treaties of Versailles and Locarno to provide France with the security which she demands as a condition precedent to a policy of disarmament and appeasement; Germany can make a contribution, intangible perhaps, but invaluable by refraining from those manifestations which have recently embittered Franco-German relations. It is something to the good that M. Laval and M. Briand have resumed in Berlin their conversations with Dr. Brüning and Dr. Curtius. Personal contact will serve to clear the ground of misunderstanding. But Europe's ills will not be cured by a bilateral Franco-German economic understanding even if that be achieved. All such arrangements must be judged by their suitability to fit into more comprehensive schemes, and, after all, are only secondary to the great political problems which can only be solved by concerted action.

In these great Councils of Peace it is essential that Britain's voice should speak with weight and authority. It is one of the tragedies of recent events that, owing to pre-occupation with home affairs, her responsible statesmen have been absent from the vital deliberations at Geneva. For years the moderating influence of Britain has been the most helpful factor in the sphere of European negotiations. It is quite essential in this time of crisis that this influence, momentarily withdrawn with unfortunate results, should be fully and authoritatively restored. We had hoped that Lord Reading, backed by the authority of a three-party Government, would find himself able promptly and effectively to assume the rôle of British spokesman; and it is not the least of the great drawbacks of an early general election that for several more precious weeks there will be no authoritative British participation in the fateful discussions of international affairs.

Notes of the Week.

A Labour Opportunity.—Two party conferences were due to be held next week, that of the Conservatives at Birmingham, and that of the Labour Party at Scarborough. The former has been cancelled, presumably because of the Party leader's belief in the imminence of a general election. The Labour conference, according to present information, is to be held, and on Wednesday were published the resolutions to be submitted by the National Executive. The gist of the more important resolutions can be summarised briefly:—the Conference is to be asked to affirm that Socialism is the real solution of present problems, to press for extension of national control of industries, to condemn the 1925 restoration of the gold standard, to disapprove both deflation and inflation, to demand public control of credit and banking, to urge the policy of stabilisation of wholesale prices, to recommend an international currency conference, and the reconsideration of war debts and reparations, to reject tariffs to support the policy of import and export boards and the recognition of basic industries as public utilities, to further the policy of disarmament, to urge the public ownership and control of land, and finally to condemn the method of balancing the Budget by the cuts of the Economy Act, and to call for maintenance of social standards. In normal times this programme would call for little comment, because in matters of general policy its line is almost everywhere the same as that adopted by previous Labour conferences. But under present circumstances there are two resolutions which are of immediate importance. The categorical repudiation of inflationary policy is very welcome, for it was of first importance at this juncture that the world should know that none of the British parties would willingly use the printing press. But the satisfaction derived from this resolution is somewhat impaired by the final point in the programme, namely, the condemnation of the economy cuts. The Conference is asked to call upon the next Labour Government "to restore as rapidly as the urgent claims of the unemployed and other

depressed sections of the community will permit the remuneration of teachers and other public servants and the reductions in the various services affected by the Act." The meaning of this is not clear, and the interpretation is all-important. It has been read by some to mean that a Labour Government coming into power in a few weeks' time would immediately cancel all the economies instituted specifically for the purpose of balancing the Budgets of this year and next. We trust that this interpretation is wrong and that Mr Henderson will say so at Scarborough; for, were it to be correct, it would mean that the only means left to a Labour Government to balance the Budget would be either penal taxation or the inflation which the Conference is asked to condemn. Mr Henderson has a great opportunity to serve the country next week by making it plain that he and his colleagues if returned to office would avoid such indiscriminate reversal of the acts of the present Government as would drive them on to the slippery slope of inflation, or into the false assumption that the purse of the taxpayer is bottomless.

Parliament's Progress.—The Economy Bill has reached the Statute Book. The third reading was carried in the House of Commons on Tuesday by a majority of 55, while the Lords passed it through all its stages on Thursday. The Finance Bill, embodying the Budget taxation proposals, will be finally sanctioned by the end of the week. The remaining items in the programme for the present session were announced by the Prime Minister on Wednesday. They are the Consolidated Fund (Appropriation) Bill, the Sunday Cinemas Bill, and a short Bill "to deal with the possibility of exploitation of the public in articles of food of general consumption." Mr MacDonald expressed the view that this programme could be completed by Wednesday, when the House would adjourn. So the emergency work of the session draws to a close. Essential measures for rectifying the situation of the public finances have been expeditiously passed, and the consistent steadiness of the Government majority proves that the present Administration has adequate power and sanction to carry on for the time being. Yet who knows whether the Parliament which adjourns on Wednesday will ever meet again? In connection with the election controversy it is often argued that Parliament has done its work and that, therefore, dissolution is desirable. This argument overlooks the essential fact that where the work of authorisation by Parliament ends, the work of administration by the executive begins. And it is sometimes forgotten that not one of the Orders-in-Council by which the Government is empowered to proceed has yet been issued.

France and Germany.—The visit paid by Messieurs Laval and Briand to Berlin last week-end is of only less international importance than the visit which Monsieur Laval is to pay to Washington this month, and the fact that it went off with some show of cordiality and without any untoward incident is a really important point on the credit side in the world crisis. No doubt there was a certain element of artificiality in the proceedings. Superlative precautions were taken by the German police for the protection of the French visitors; the friendly German crowds are reported to have been "hand-picked"; and even Herr Hitler appears to have done his bit by instructing his followers to "pay no attention" to the distinguished strangers in their midst. All this will have been clear enough to the French visiting party and to the French public at home. At the same time, we believe that the French people, who are extremely sensitive to all manifestations of German feeling in regard to Franco-German relations, will be favourably impressed by the reception which the representatives of France have been given in the German capital; and that French opinion will be right in regarding this reception as significant. So much for the "imponderables" of the visit. As for concrete results, it appears that not only all political questions, but also the question of Reparations were excluded from the scope of these Franco-German conversations,

tions, and that attention was concentrated upon concrete possibilities of economic co-operation between the two countries. This shows a sense of realities on both sides; for the immediate issue, which eclipses all other issues in Germany, is whether the country can be carried through the approaching winter without a "Nazi" or a "Communist" or a "Nazi-Communist" revolution. In the face of this issue, the political questions of the "Anschluss" and the "Ostmark" become luxuries which Germany cannot afford to indulge in, while on the other side it would be idle for France to consider what is to happen when the Hoover Moratorium comes to an end if once the revolution has engulfed Germany in the meantime. The economic discussions of last week-end have resulted in the setting up of a strong joint Franco-German economic committee; and there is no doubt about the practical task with which this committee will have to come to grips straight away. By bringing together French capital and German technique, it will have to seek ways and means of opening up some prospect of reasonable employment for the younger generation of the German middle class which, in its present economic desperation, is the spear-head of the German political revolutionary movement. If, in the short respite that remains, enough practical work on these lines can be done to give the German middle class a convincing prospect of employment, it is possible that their minds may be turned back from desperate courses into those prosaic constructive channels which are, after all, the age-long habit of the European bourgeoisie. In that event, the situation on the Continent this winter might be saved; and, after that, France would find herself in a position to obtain from Germany almost any guarantees of political security which she desires, in exchange for the indispensable French contribution to economic and social stability in Germany. Meanwhile, the new Franco-German joint economic committee must act quickly. Only last Sunday, when the French Ministers were in Berlin, the "Nazis" and the Communists obtained sweeping electoral successes in Hamburg. Hamburg is one of the traditional strongholds of Liberalism in Germany, but it is also particularly hard hit by the crisis in international finance and trade. These Hamburg elections are a danger-signal which the French cannot ignore.

The Manchurian Conflict.—In an article published last week, we dealt with the outbreak of the conflict in Manchuria and with its antecedents. We have now to record the sequel up to date, pending the final *dénouement*. On Tuesday, September 22nd, at Geneva, the League Council met to consider an appeal from the Chinese Government under Article 11 of the Covenant; and, after hearing the Chinese and Japanese representatives state their respective cases, the Council took two steps. It asked the two parties to withdraw their troops, and it communicated the minutes of the meeting to the Government of the United States. This action was taken on the motion of Lord Cecil, who was strongly supported by the representatives of France, Italy and Germany. Before the note from the Council reached Tokyo, the Japanese Government had already vetoed the withdrawal of all troops to Harbin and had ordered the withdrawal of all troops to the limits of the Japanese Railway Zone except—and these are big exceptions—at the three vital points of Mukden, Changchun and Kirin. Almost simultaneously, the Japanese Government published a statement on the situation in which nothing was said about the date of evacuation, but in which China was invited to enter into negotiations with Japan *à deux* for a comprehensive settlement of the Manchurian problem. Meanwhile, Mr Stimson had delivered an unofficial warning in a personal conversation with the Japanese Ambassador in Washington, and he had also informed the League Council at Geneva, by telegram, that his Government was "in whole-hearted sympathy with" the Council's attitude as expressed in their resolutions, and that it was taking action itself on similar lines. On the same day, the Chinese reply to the Council's note to China and Japan was received. The Chinese Foreign Minister, Mr

C. T. Wang, announced that his Government accepted—and was acting upon—the Council's recommendations unreservedly. The Japanese reply, which was received next day (that is, on Friday, September 25th), was less satisfactory. It re-affirmed the Japanese Government's demand for Sino-Japanese negotiations *à deux* (a procedure which would give the stronger power an advantage, in contrast to a public handling of the controversy in the forum of the League). It contended that the retention of Japanese troops at Mukden and Kirin, outside the Japanese Railway Zone, did not constitute a military occupation. And it only committed itself to completing the withdrawal of its troops "in proportion as the situation improves." Commenting on the Japanese reply in the Council, Lord Cecil drew a distinction between the League's primary task of maintaining peace, as contrasted with the secondary and subsequent task of inquiring into the merits, and eventually removing the causes, of the dispute out of which a breach of the peace had arisen. The implication of Lord Cecil's speech was that the Japanese Government's announcement about the withdrawal of its troops was to be accepted by the League Council as a substantial satisfaction of its demands. In some quarters, Lord Cecil's attitude has been criticised as an admission of inability, on the League's part, to call the stronger of the two disputants to order. And perhaps this is the Chinese Government's interpretation, since China has now agreed to the negotiations *à deux* which Japan has proposed. With Japanese troops still in possession of Mukden and Kirin, the balance, in these negotiations, will be heavily weighted against the Chinese; but perhaps—in the present state of the world—we ought to be content that negotiations should be put in hand under any conditions. Naturally, Chinese feeling has been aroused, and it has found expression in outbreaks of violence. There have been ugly anti-Japanese riots in Hong Kong, while at Nanking the Chinese Foreign Minister, Mr C. T. Wang, has been attacked in his office and brutally mishandled by Chinese students who consider, most unfairly, that he has done less than he might have done to further the Chinese cause.

The Round Table and Minorities.—The Round Table Conference has got down to the hard core—and a very hard one it is—of India's racial problems. The Prime Minister delivered to the Minorities Committee, on Monday, an admirable address on the communal question, the main theme of which was that arbitration was, in his view, unhelpful and that the onus of settling racial differences must rest upon the various sections of the Indian delegates themselves. This appeal has met with a definite response. Mr Gandhi, who has not abandoned his hope of achieving a comprehensive settlement of this age-long problem, has entered into conversations with the Aga Khan, which have progressed to a degree satisfactory to Mr Gandhi, if not to all his followers. Meanwhile, during these Hindu-Moslem negotiations, the delegates of the Sikhs and other minorities have agreed to co-operate in a search for a possible *modus vivendi* between themselves. It is difficult to be hopeful of a quick solution which can satisfy the opinion of races differing widely in custom, law, habit and ideal, and any progress in the negotiations between the present delegates from the various races must in any case be slow. Nevertheless, the fact stands out clearly and undeniably, that, unless and until some degree of understanding has been reached between them, there is little hope of achieving any substantial degree of harmony or progress in India. Of that fact we are constantly and forcefully reminded by such events as the deplorable killings in Cawnpore and Kashmir. No British Government can hope to invent and impose a racial settlement. It is the Indians alone who in this vital matter can work out their own salvation, and Mr MacDonald did well to say so in strong and eloquent terms.

The Bank and the Treasury.—On September 30th the question was raised in the House of Commons by Mr E. F. Wise of the liability of the Exchequer to recompense the Bank of England for any loss on exchange that might

arise when the time comes for the Bank to repay the equivalent of £50,000,000 it borrowed in Paris and New York last August in order to support sterling. In reply, the Financial Secretary to the Treasury made it clear that any liability should properly fall upon the tax-payer, both in equity and in law. He made it clear that in arranging these credits the Bank was acting with the cognisance and approval of the Government of the day and in the sole interest of the nation. That the use of both the Bank and the Treasury credits failed in the end to save the pound did not imply that it was so much wasted effort. It was the duty of the country to make every possible effort, and at least these credits enabled the gold standard to be maintained until the Budget had been balanced. It is, however, to be observed that it is not yet to be assumed that there will be any loss on exchange. The Bank has in hand, if the worst comes to the worst, enough gold to cover both its own and the Treasury credit, and this gold can be tendered at par. As and when sterling depreciates, this gold appreciates in value, and its appreciation in fact exactly offsets the exchange loss incurred on the bank and Treasury credits combined. What claims there will be on this appreciating asset or how it will be used it is too soon to say. While it does not follow that these credits will have to be repaid in gold, there is no need now to make special provision for this loss, for it is balanced automatically by gains—equally of a book-keeping character—elsewhere.

Six Months' Revenue.—For all practical purposes the revenue returns of the first six months of the current financial year are of purely historic interest, for they are based upon Mr Snowden's original Budget of last April, now superseded by his new Budget which he laid before Parliament as the Chancellor of the National Government. Yet the returns are of some value as evidence of the short-fall of revenue, which was one of the major causes of the deficit with which Mr Snowden found himself faced last August. Comparing estimates for 1930-31 and 1931-32 last April, Mr Snowden anticipated a decline in income tax of £12.0 millions. The decrease to date, during the slack season of the year when total receipts are very small, is already £6.3 millions. For surtax he looked for an increase of £7.5 millions. So far he has had £2.3 millions. Stamps were expected to decline by £3.0 millions,

but the decline to date is £8.3 millions. Taking inland revenue as a whole, he was prepared last April for no contraction at all, for both year's estimates were £437.0 millions. In actual fact there has so far been a decline of £13.7 millions. Customs and excise were expected to fall by £14.6 millions and non-tax revenue by £8.9 millions. In actual fact the deficiency to date is £2 and £20.2 under these two heads respectively. The final result is that in place of an estimated decline in revenue over the whole year of £23.4 millions, there has been a decline over the first half of £33.2 millions, notwithstanding the fact that part of the additional revenue proposals contained in last April's Budget came into force at once. As regards expenditure, debt service shows an increase of £4.9 millions and supply services one of £3.5 millions over last year's returns for the first six months. The total increase, including sinking fund, is £5.2 millions. This corresponds to an original estimated increase of £21.1 millions, but the whole basis of this estimate has been destroyed by the decision to include road fund and unemployment insurance fund borrowings in the Budget for the year, and by the economies proposed in the Bill now before Parliament. The salient feature of the returns is the serious deficiency in certain items of revenue. It is a matter for careful consideration by the Treasury whether, in the country's state of depression and financial stringency, which is acutely affecting many taxpayers' ability to pay, even with the new taxation the required revenue will, in fact, be obtained. This makes retrenchment still the paramount necessity.

The Incidence of Income Tax.—In our issue of September 19th we gave some figures relating to the incidence of the new taxation imposed by Mr Snowden in his emergency Budget. Further light on the burdens of the direct taxpayer are afforded by a White Paper (Cmd. 3954) issued this week by the Treasury. From the tables given we have compiled comparative statistics showing the position of the income-tax and surtax payer in the various categories of income for the year before the war, in 1929-30 and under the latest Budget. Almost as striking as the huge increase since pre-war days in the burdens on higher incomes is the substantial and sudden rise in the amounts this year demanded by the Exchequer from the income ranging from £500 to £2,000 per annum.

Egypt and Sterling.—Up to the outbreak of the war Egyptian bank notes were convertible into gold on demand, and were covered by gold to the amount of 50 per cent., and securities for the balance. The outbreak of war led to a decree establishing inconvertibility; and difficulties in procuring gold led to the substitution of British Treasury bills for the statutory gold cover, in excess of £E.3.3 millions. The Egyptian pound was pegged to sterling at the rate £1 sterling = £E.0.975, and the National Bank of Egypt bought and sold exchange on London for banks at this rate, and for private individuals at a nominal difference from it. The level of prices in Egypt naturally followed that in the United Kingdom, and rose until the first half of 1920, to fall gradually later, as sterling appreciated. Exchange with gold currency countries also inevitably moved parallel to that of sterling. Once sterling came back to a gold basis, Egyptian currency, though theoretically not on a gold basis, was so in practice. The one weak point was that the National Bank of Egypt might refuse to sell sterling exchange, if it so chose, since there was no legal compulsion in the matter. But no case of refusal is known, and Egypt enjoyed the advantages of a sterling exchange, which was virtually a gold exchange, though the League of Nations thought differently. Telegrams from Alexandria on September 23rd stated that the Egyptian Government had decided, on the advice of bankers and traders, to maintain the connection between the Egyptian pound and sterling, and not to go on to a gold basis. The advantages of this to the financial interests, which have their securities chiefly in sterling, is obvious. The advantages to the people and the Government are less clearly manifest, and telegrams of the 24th hinted that difficulties had already arisen over the payment of the coupon. Bonds of the Egyptian Debt state that they are payable *en or*, and it is likely that bondholders will refuse to accept payment in paper. Indeed, the Caisse de la Dette Publique, custodians of the rights of bondholders, have never ceased, since 1914, to protest against payment in inconvertible paper. An analogous position arose after the devaluation of the franc, and numerous actions were brought against companies whose capital was quoted in francs and against others who had made contracts of insurance, for example, in francs. The object was to obtain payment in gold francs. Nearly all these actions were successful, and there is thus abundant precedent in the Mixed Tribunal's decisions, in favour of the bondholders of the Egyptian Debt. At the depreciation of the £ sterling of 20 per cent. the amount required for the service of the whole debt will be raised from £ ster. 4.3 millions to £ ster. 5.4 millions. The Unified, Privileged and Guaranteed Debts are secured on the revenues of thirteen provinces, which are paid automatically into the Caisse. In the second place, by the Decree of November, 1904, they are secured on all the resources of the Egyptian Treasury. The Caisse de la Dette holds a reserve fund of £E.1.8 million in Egyptian securities, worth, at market price, about £E.1.3 millions and £E.1.15 millions in cash. The Egyptian Government has a reserve fund which was recently stated to be £E.40 millions, but it is known that half of this has been frozen in buying cotton, or in advancing money on cotton; and of the balance, roughly, half is in British securities and cash, and half in Egyptian securities. The present budget is drafted to show a small balance; but, since its passage, the Government has undertaken heavy commitments in connection with the new Crédit Agricole, or bank of agricultural credit. Payment of the coupons appears to be well secured for the moment, but the decision to maintain the bond between sterling and the Egyptian pound may well cost the Egyptian Government dear, in the event of a long-continued and serious depreciation of sterling.

Indian Budget and Lancashire.—Our Manchester correspondent writes:—The Emergency Budget introduced into the Indian Legislative Assembly on Tuesday has caused a good deal of consternation amongst Lancashire traders. The imposition of a temporary surcharge of 25 per cent. on all but one of the taxes existing means that the import duty on cotton piece-goods will now be 25 per cent. as against 20 per cent. This is another burden which Lan-

cashire manufacturers will have to bear. Rayon manufacturers also are concerned at the increase in taxation on all artificial silk cloths, which has been advanced from 20 to 40 per cent. This is a blow to rayon makers, coming as it does at a time when trade with India in rayon cloths has been rapidly diminishing. The tax of 10 per cent. on all machinery will, of course, affect the textile machinery manufacturing firms. Considerable surprise has been expressed at the new duty of half an anna per lb. on all raw cotton imported into India. During the past few years there has been a tendency for the Bombay mills to manufacture finer cloths made from cotton grown in the United States and in Egypt and Africa. This new tax will somewhat compensate Lancashire manufacturers of fine fabrics, and will help them to compete against the Indian mills, which are expected to turn their attention more to coarse and medium quality fabrics.

Textiles and Devaluation.—Our Bradford correspondent writes:—Wholesale clothiers, tailors, and apparel manufacturers and retailers in general are put in a more difficult position than are spinners and weavers by the recent financial upheaval. They might have, just as much as the wool or cotton merchant, a conviction that prices will rise, but, whereas the latter buys raw materials heavily, it is not open to them to "go and do likewise" to nearly the same degree. As wool or cotton pass through the machines their ultimate form and use become increasingly more defined, until at last they are steered into just what fashion demands at the moment. But fashion changes. The mill man can buy two years' supply of cotton or wool at once, and it will still be usable at any date. But the mantle and gown manufacturer, and the retailer, cannot be sure that cloth, or garments, bought now will be saleable in four or six months. Therefore, if he distrusts his surplus funds, he must put them into raw materials, whose prices thus do not reflect only the demand of the mill man. Specialisation undoubtedly is always more practised in raw and semi-manufactured than in fully-manufactured goods. The devaluation of sterling has sent up quotations for cotton and wool enormously, those for yarns rather less, and those for fabrics least of all. There is an unhealthy element in the rush of recent new orders in that buyers of both cloth and yarn wish to state no delivery date, or as few and for as small proportions as possible. Too much of the business is speculative—on paper only. Some firms have ordered as much cloth in one week as they have bought in the past two years, but there is no increased demand from the man in the street. Does this mean, after the present rush, a cessation of buying for an even longer period than usual? Traders in textiles have welcomed the recent unaccustomed activity, but not quite everything in the garden is lovely yet.

Japan's National Accounts.—Our Tokyo correspondent writes:—The national accounts for the fiscal year ended on March 31st last, which were published last week, disclose a surplus of 39,108,000 yen, revenue amounting to 1,596,972,000 yen, and expenditure to 1,557,863,000 yen. The disclosed surplus, however, is mainly accounted for by a new loan of 38 million yen, so that we have only narrowly avoided an unbalanced Budget. The revenue shows a decrease of 17,147,000 yen in comparison with the revised estimates for the year, and of 229,472,000 yen as against the actual receipts of the preceding year. Receipts from taxation revealed a decrease of 61,768,000 yen. While death duties and the tax on the note issue produced 5.4 and 1.4 millions respectively more than were anticipated, income tax, business profit tax, sake, sugar, and textile duties and Customs fell by 3.4, 5, 19 and 38.8 millions respectively short of the estimates. As for non-tax revenue, profits of State monopolies alone show an increase of 18.5 millions, while postal receipts were down by 23.7 millions, earnings of Government undertakings by 16 millions, and revenue from State-owned forests by 8.8 millions. On the other hand, aggregate departmental expenditure shows a fall-off of 114,929,000 yen on the estimates, and of 178,453,000 yen upon the preceding year. Not all the

Total Floating Debt outstanding	1,248,814,000	1,370,130,000
Net Increase	44,327,000	44,065,000

Treasury, September 30, 1931. * Includes £334,000 the proceeds of which were not carried to the Exchequer within the period of the account.

departments have spent so much as they asked for: the Army and the Navy, the Home Office, Communications, and the Treasury have surpluses of 37, 25.7, 20.3 and 13.2 millions respectively. Of the realised surplus, 33 millions was earmarked for deferred expenditure and some 1½ millions was allocated to debt redemption, leaving a "free" balance of 4½ millions. The prospective Budget deficit for the current year was estimated by the Treasury at 54 million yen. To make up this estimated deficit economies to the extent of 35 millions were agreed upon in the Cabinet Council, but no definite expedient has yet been devised to bridge the gap of the remaining 19 millions, the Economy Committee's plan having been temporarily dropped on account of the discord among the Cabinet Ministers on the proposed merger of departments.

Population Problems.—Two interesting papers on different aspects of the population question were read before the British Association last week. Professor Huxley's theme was the "new phenomenon of the first magnitude, which is likely to affect all countries in the present century," presented by the spread of contraceptive practices and the consequent danger of depopulation. He pointed out that, though human population problems have the same aspects as those of animals, there are certain fundamental differences, notably the steady increase, owing to inventions, of the optimum density of human population; the human faculty of long-distance migration, and the great variation of human fecundity. The dangers of life have been so greatly reduced that man's natural powers of reproduction are now excessive, but they are no longer exercised to the full. In the discussion which followed, other speakers referred to the tendency of the poorer and weaker sections of the community to multiply most rapidly, and Mr Haldane made the interesting point that the acquisition of wealth tends to sterilise those who acquire it. Another aspect of the same question was the subject of Dr. Edwin Cannan's Presidential address to Section F, in which he traced the changes which have taken place during the last hundred years in the attitude of economists to the population question. After dealing briefly with the earlier part of the period, he proceeded to examine the effect on present-day theories of production and distribution of the declining birthrate with its concomitant expectation that the population of this country will, before long, cease to increase. He suggested that it is becoming less and less necessary to insist on the need for restriction of population, and even insistence on the necessity of saving is less urgent, since saving will only be a condition of improving the standard of life, instead of, as with an increasing population, a condition of its maintenance. Further, the decline in the rate of increase of the population has brought about a transfer of emphasis from the production of food and primary products to the production of comforts and luxuries. From the theory of distribution, the landlord living on an income which the classical economists visualised as automatically expanding with every improvement in the general prosperity of the community, is gradually fading out, leaving "the theoretic arena open for discussion of the sharing of the whole produce between earnings of work and income derived from possession of property of all kinds." The advance of civilisation has, so far, caused the aggregate share of property to increase more rapidly than that of labour, because the amount of property has grown more rapidly than the population and so counterbalanced any decline in the rate of income per unit of property. Dr. Cannan considers that there is no evidence to show whether this tendency will be checked or intensified when the growth of population ceases, but he reminded his hearers that in any case this division of the product of industry between workers and property owners is losing its significance, as the proportion of the population which derives its income from one of these sources alone is steadily diminishing. In the question of distribution, the emphasis now is principally upon unemployment, and Dr. Cannan devoted the last part of his paper to combating the widely-held belief that unemployment in this country is accentuated by over-population.

He stressed the fact, too often forgotten, that demand for the products of industry is not something outside and independent of the amount of products, and continued: "Unemployment arises, not from insufficient demand for the products of industry as a whole, but from the number of persons offering to work in particular branches of industry being in excess of the number admissible, having regard to the conditions and wages which are required to satisfy both the would-be workers who are unemployed and the persons already in employment." Dr. Cannan did not, however, show that it was impossible for these requirements to be, in all occupations simultaneously, too high to allow of the absorption of the would-be workers, and this demonstration seems indispensable to his argument. We welcome, however, his conclusion that a stationary or declining population will increase rather than diminish the necessity for promoting geographical and occupational mobility of labour.

Overseas Correspondence.

LEAGUE OF NATIONS.

The Crisis — Action in Central Europe — Tariffs — Disarmament — The Sino-Japanese Affair.

(FROM OUR CORRESPONDENT.)

GENEVA, September 30.

It cannot be said that the depression under which the Assembly opened has been noticeably dispersed now that the meeting is ended. It is not reasonable, however, to attach too much blame for this to the Assembly. What is required for the grave emergencies of to-day is swift and immediate action dependent almost entirely upon what one or two States are prepared to do. The Assembly of the League is not designed to be an executive body for emergency measures, still less a dictatorial body on either economic or political matters. At the back of the minds of many, though they would not admit it in blunt terms, is the idea that the League is an oracle at Geneva where the States of the world go to receive instructions, whereas the fact is that States go to Geneva to endeavour to find out what they can do in common; the League is nothing more or less than the greatest common measure of agreement at any given moment. The Assembly cannot cancel reparations due to France or other countries if they are not willing; the Assembly cannot give long-term credits to Germany; it cannot reduce tariffs; it cannot take direct action or compel it; it can only attempt to proceed by discussion, persuasion and conference.

Though it must be admitted that it is difficult to point to any definite step which has an immediate influence on the crisis, the full exchange of views and the refreshingly positive proposals of Sir Arthur Salter and others must have their effect in the long run, while the Assembly, in carrying on its regular work, has not only done much towards building up the basis of international co-operation, but continues to take steps to have League machinery ready as soon as the States have been able to make up their minds what they require to be done. A single example of this is the instruction to the Financial Committee to consider M. Francqui's proposal to establish an institution for long-term and medium-term credits, and in the general authority given to enlarge the competence of the Financial Committee so as to ensure that action may be taken without delay. The situation as it is, however, depends still in the first place on what may come out of the meeting of the French and German Ministers in Berlin for any fairly immediate improvement in political and financial confidence.

The Assembly has taken and repeated for itself the views of the Basle Committee, the Sub-Committee of Experts, and the Financial Committee on the urgent necessity for political confidence; but confidence is not an automatic machine, and the experts, in emphasising the need of it, wanted the statesmen to act upon it. There

is little more that the experts can do. The one direct line of action which was laid before the Second Committee by Sir Arthur Salter (and to which the *Economist* referred last week) received a completely negative response from the French Minister of Finance, M. Flandin, who jauntily explained that political debts did not matter much, that the working of the gold standard was in no way to blame for the present maldistribution of gold and capital, that creditor countries had no obligations to give credits, and much of the same kind, in opposition to the general understanding of the requirements of the moment. It was, however, valuable to have the concrete suggestions of Sir Arthur Salter on record.

To take a few positive elements, the Financial Committee has reported on Austria, Hungary and Bulgaria and in none of the cases does it consider the difficulties insuperable. A detailed programme has been worked out for Austria, and a strong delegation is proceeding to Vienna for detailed execution of the plan of reforms. The work is not so far advanced in Hungary, where the League has not had the opportunity of a preliminary inquiry as in the case of Austria. The Committee agrees with the Austrian Government's view that to meet the requirements of the Treasury and to protect the foreign exchange of the National Bank, it will be necessary to raise 250 million schillings by foreign credits; the Committee considers such credits essential for the reconstruction of Austrian finance. The Committee, however, says that it cannot hide the fact that the success of individual methods of reconstruction in particular countries is closely dependent on the early solution of the general world price problem, which did not exist in the earlier reconstruction plans undertaken by the League. This problem was not confined to Austria, and was equally present in the great primary producing countries of the world. The Committee says it can only repeat and emphasise the warnings of the Basle and other committees.

The report of the Second Committee on economic matters, presented by M. Rolin, the French Minister of Commerce, was somewhat rhetorical. Underlying it is the usual assumption that it is other Governments which must listen to the wise words of the experts. However, there is a good deal of work provided for, despite the fact that there were crocodiles' tears about the failure of the World Economic Conference and of the successive conferences with a view to concerted economic action. The Governments are to be asked to present, if possible before next January, their observations on the report of the Subcommittee of Economic Experts. Amongst other things, an examination is to be made of the proposals for the execution of public works calculated to mitigate the effects of the depression and to assist the resumption of activity. The report shows also some appreciation of the anxieties expressed by overseas delegates that in the work of the European Commission their interests should be safeguarded.

It is impossible to enter into the important decisions taken with regard to amendments to the Covenant, the convention for improving means of preventing war, the disarmament truce and a number of other matters, except to say briefly that the Assembly, being unable to agree on the precise proposals put forward by Italy, has accepted a general resolution by which the Governments will be asked before a given date to say clearly and definitely whether they will refrain during twelve months from any measure involving an increase in armaments. This is the second best, but it was all that could be expected, and, as Lord Cecil said this morning, the replies will provide a great exposition of where the Governments of the world stand.

The Sino-Japanese conflict has, however, been the main interest, and the Council has followed its normal procedure of quiet and diplomatic pressure upon Japan to withdraw its troops from the occupied territories. The Japanese Government gave an undertaking to withdraw the troops as soon as they could safely do so, and subsequently informed the Council that the withdrawal had begun. Though some attempt has been made to act on the Chinese suggestion that a supervisory commission should be sent

to Manchuria, there seems a prospect of at least some arrangement by which there will be for the time being a joint Sino-Japanese body. If this sees the end of the immediate occupation all will be well, but if not, Lord Cecil said it may be considered whether the League should not lend some help in supervising the situation on the spot. This is a point which the Japanese have steadily resisted, and the Council has probably been wise not to push them too hard. The idea which seems to find favour in some quarters that the way to handle this matter is to bounce the Japanese representative round the Council chamber is a strange notion, as regards any State, least of all a great Asiatic Power. But it is interesting to note the rather subtle way in which the Council has moved. It first of all sought and obtained the most whole-hearted official support for its action from the United States Government, which promised to act on the same lines; the President of the Council informed the Assembly that he would probably have a communication to make to it on the subject; he went out of his way at a Council meeting to express the sympathy of the Council with Mr C. T. Wang for the attack which had been made upon him by Chinese Nationalists on the erroneous grounds that he had been weak in his League of Nations policy. This morning the promised account was given by the President of the Council to the Assembly, and the Council has given authority to the Secretary-General to keep the League offices in China and Japan telegraphically informed of proceedings in Geneva so that there should be no misunderstanding of what is happening.

UNITED STATES.

Opinions on British Crisis — Industry — Wage Reductions — Prices — Foreign Trade — Money — Bank Investments.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 23.

FINANCIAL New York took calmly the news of England's abandonment of the gold standard, although until shortly before the event there was no general expectation of it. Some of the insurance companies and banks, anxious over the recent weakness in United Kingdom bonds, are reported to have liquidated, and most banks with funds lent in the London market had drawn them down and hedged the remainder in the futures market, so that losses will be negligible. American credits in London were estimated here at no more than \$50,000,000, nor was American investment in British securities particularly heavy.

Most commentators are disposed to assume that the British authorities understood their position better than anyone else, but the feeling here is, nevertheless, general that it might have been better to have given up gold before resorting to the use of so much foreign credit. As Wall Street sees it, the French attitude has been helpful, and much hope is placed in French co-operation both in regard to the British and the German situations.

The bill market has advanced an eighth per cent., the first change in rates since last May, and the fifteenth this year. The firmer tone was connected with the British position, but was due partly to other factors, such as the sales by domestic banks to secure greater liquidity against withdrawals of deposits and also to meet increased commercial demand for credit in some sections of the country.

Foreign bank sales, however, were reported to be heavy, and the fact that this week the Federal Reserve Bank announced an increase of \$109,100,000 in earmarked gold for foreign account lends colour to the report that France or other European countries are further building up gold reserves. France is believed already to have more than sufficient gold, and it is thought that some of the small European nations with currencies heretofore moored to the pound sterling are now shifting to the dollar and are seeking to build up gold reserves here. Gold under earmark at the Federal Reserve Bank now amounts to \$180,000,000, a new high record total. The country's gold stock is now reduced to less than \$4,900,000,000. If

the current change marks the beginning of large redistribution of the gold supplies, it will be well liked here.

The domestic industrial situation has changed little. In the absence of any appreciable rise in trade, two of the country's major corporations have announced wage or salary cuts. After cutting the pay of salaried personnel by an average of about 10 to 15 per cent. over a month and a half ago, the United States Steel Corporation is putting into effect at the beginning of next month a 10 per cent. reduction in the wages of ordinary labour. The industry is now operating at a loss, and, in any event, the Steel Corporation increased wage rates and reduced hours eight years ago. The dividend was cut from 7 to 4 per cent. last summer. The cuts in wages will affect over 200,000 men, and, on the basis of present employment, at about 90 per cent. of the regular payroll, will probably save the Corporation some \$30,000,000 a year, or about \$3.50 a share on the common stock. The Bethlehem Steel Corporation has announced a similar cut. The General Motors Corporation is cutting salaries 10 to 20 per cent., but for the time is leaving wages unchanged.

Since these corporations are the leaders in the country in financial policy as well as in size, their action will stimulate wage cutting generally and will probably leave only the railroads on the old wage base. Lower wages for the railroads also are more than probable. Hearings of evidence on the freight rate increase case are completed, and the final arguments are being made. A decision is expected soon, and it is now believed that the 15 per cent. blanket advance will not be allowed, but that enough increase in some categories of freights will be granted to bring in about \$250,000,000 of additional revenue. However, the railroads need further assurance that their securities will be protected and their credit maintained, and, in spite of the prospect of strikes, an attempt will no doubt be made later to lower wages.

While the action of the Steel Corporation has brought some criticism from labour leaders, the Washington Administration has been silent on the subject. The view is held to prevail there now that wage reductions are inevitable, and the lack of reference to the supposed agreements not to cut wages which industrial leaders gave to President Hoover at White House conferences in the autumn of 1929 is significant.

President Hoover this week addressed the national convention of the American Legion, the chief organisation of ex-Service men. He endeavoured to impress upon them the burdens already carried by the national Treasury, and urged them not to ask for additional bonus payments. While his address was favourably received, the Congress to extend favouring legislation. However, the country is less friendly to further payments than it was, and an addition to the deficit on this account may be avoided.

Commodity prices are showing more firmness at the moment. The Bureau of Labour statistics index for August gained three-tenths of 1 per cent. In July the index was unchanged from June. Farm products were slightly lower, as were raw materials generally, although sharp gains were noted in petroleum and its products. The index numbers are as follows (1926 = 100):—

	August, 1930.	July, 1931.	August, 1931.
All commodities	84.0	70.0	70.2
Farm products	84.9	64.9	63.5
Foods	87.1	73.1	73.7
Hides and leather products ..	98.9	89.2	88.5
Textile products	77.7	65.4	64.2
Fuel and lighting materials ..	75.4	58.2	62.3
Metals and metal products ..	92.7	87.5	87.1
Building materials	87.4	75.8	75.4
Chemicals and drugs	87.3	77.3	75.5
House-furnishing goods	95.9	88.0	87.5
Miscellaneous	71.2	61.0	58.5
Raw materials	81.8	64.3	64.1
Semi-manufactured articles ..	78.1	69.5	68.3
Finished products	86.4	74.0	74.6
Non-agricultural commodities...	83.8	71.5	72.1
All commodities less farm products and foods	83.3	71.8	72.3

Foreign trade returns for last month were poor, but better than had been expected. Exports of \$165,000,000 were \$1,000,000 under imports, the first import excess since May, 1929, and with that exception the only one since the first four months of 1926. Exports were the smallest since September, 1914, and imports the lowest since September, 1916. The declines from July were 10 and 6 per cent. respectively for exports and imports. For the first eight months exports are down 37 per cent. from last year, and imports are 33.5 per cent. lower.

This month is ending with virtually no sign of trade improvement outside those retail and wholesale lines which are having the benefit of reopening of the schools, special bargain sales and seasonal improvement. The steel industry is barely at 30 per cent. of capacity. Motor output is running under August, and an even further reduction is now predicted for October. However, steel prices are holding fairly well. Railroad traffic is still low and so far is not coming up to the usual seasonal autumn increase, due largely to holding of grain on the farms, the slow coal movement, and increasing motor competition.

Apart from the temporary disturbance caused by the débâcle of sterling, monetary conditions are unchanged. Short-term funds are as plentiful as ever. At the moment the banks are doing some window-dressing in preparation for an expected call for condition statements, and also they are continuing their trend toward greater liquidity. On the other hand, public hoarding of currency seems to be waning. Member banks of the Federal Reserve system report a large gain in Government security holdings, due to the recent Treasury financing, and their security loans are declining.

The Federal Reserve Board has made available a more detailed classification of member bank investments than has heretofore been published. For the year ending with June member banks had added \$1,280,000,000 to their United States Government security holdings, of which \$580,000,000 was in short-term obligations. Other security investments increased \$380,000,000. Holdings of foreign bonds decreased by \$47,000,000 to a total of \$642,000,000. Investment in State, county and municipal bonds rose \$300,000,000, railroad bonds were up \$100,000,000, and public utility bonds rose \$75,000,000. In the two years ended with June member bank investments rose \$2,060,000,000, a reflection of the sharp decline in demand for bank credit.

IRISH FREE STATE.

Views on Sterling Situation — Possible Benefits to Farmers — Railways — Foreign Trade.

(FROM OUR CORRESPONDENT.)

DUBLIN, September 28.

EVERYBODY in the Free State has watched the British financial situation with a sympathy that is not wholly disinterested. The economic and financial ties connecting the two countries are so close that a crisis in Great Britain cannot fail to have important repercussions here. Great Britain is by far the largest customer for Free State exports, and every circumstance affecting the purchasing power of the British consumer is of interest to Irish producers. Moreover, Irish investors hold very large quantities of British securities, and the condition of British credit vitally affects the value of their investments. But what is most important of all, the Irish pound is tied hand and foot to sterling, and every change in the value of sterling produces a precisely equivalent change in the value of Irish money. It is small wonder that the economic situation in Great Britain should be observed with such keen anxiety in the Free State.

Needless to say, the Opposition has attempted to make a point against the Government for having placed the value of the Free State currency so completely at the mercy of the British financial authorities. To have refrained from doing so would have been more than

human. In 1927, when the Currency Act was passed, many people were in favour of tying the new currency to the dollar. The argument against this course was that a rate of exchange with Great Britain would have been an inconvenience and possible an impediment to trade. Nobody at that time could reasonably have been expected to foresee the events of the last few weeks, and the decision was finally taken to base the new currency on the pound by means of a sterling exchange standard, which worked quite successfully until the recent crisis. Now the Irish Free State has been driven off the gold standard through no fault and by no wish of anybody in Ireland.

It is difficult to say with certainty whether the Free State will lose or gain by the departure from the gold standard. On the one hand the value of dividends from British Government securities and other sterling investments will be reduced, but as against this must be set off the reduction in the burden of the land annuities and other payments made by the Free State to Great Britain. Assuming that the depreciation of the pound stimulates something in the nature of a trade revival, the Free State should stand to benefit in two ways: in the first place, the demand for high-class foodstuffs would be increased, and in the second place the price of agricultural products would probably rise more rapidly than that of manufactured articles. There is a general feeling in Dublin that the Irish farmer has a good deal to gain from a little "inflation," provided it does not equally affect some of his Continental competitors. It is interesting to note, however, that he will probably not be allowed to reap such a differential gain for long, as Denmark, New Zealand and Australia have apparently decided to follow the same course as Great Britain.

It is taken almost as a matter of certainty that one result of the crisis will be some measure of Protection in Great Britain, and considerable discussion is heard as to the possible reactions of such a fiscal revolution on the Free State. If a tariff were imposed which excluded food from its scope, things would remain much as they are at present, except in the case of a few manufacturers who export to Great Britain. If, however, foodstuffs were included in the tariff, the question would at once arise whether the principle of Imperial Preference would be adopted. If it were, the Irish farmer would enjoy a measure of competitive advantage over his foreign rivals that would be very agreeable and should prove very profitable.

The condition of the railways is becoming more and more unsatisfactory. Road competition, both for passengers and goods, is making their position impossibly difficult. The Great Southern Railway has passed its preference dividend, has given notice of dismissal to hundreds of workers, and has closed several of its branches. Shareholders, employees, and the public are suffering various degrees of inconvenience. Meanwhile the Government is apparently quite oblivious of the crisis that has arisen. Public opinion is clamant for immediate action regulating the competition between rail and road and protecting the public against the loss of a valuable service; but all that can be obtained in official circles is a vague promise that a Bill dealing with the whole subject of transport will be introduced when several other lengthy and contentious measures have been passed through the Dail.

FRANCE.

The Berlin Visit — The Franc and the Slide from Gold — Bourse Restrictions.

(FROM A CORRESPONDENT.)

September 30.

THE week in Paris has been one of conflicting influences. Favourable news of the visit of M. Laval and M. Briand created some increase in confidence early in the week, but

the effect was more than counteracted by the abandonment of the gold standard by the Scandinavian countries; while satisfaction felt at the salving of the Banque Nationale de Crédit was impaired by some talk of banking trouble arising in another quarter. On Wednesday morning unfavourable influences came definitely into the ascendancy, and heavy selling of securities developed on the Bourse both on foreign and on domestic account. The substantial nature of the wave of liquidation, and the prevalence of the belief that further foreign liquidation was impending, led the authorities to place severe restrictions on forward selling. Credit sales were prohibited except in cases where selling orders are accompanied by certificates or by proof of definite ownership, or by the cover of 40 per cent. in cash and one-quarter of the amount of scrip involved. The bears being thus checked, the tone became definitely quieter on Wednesday, and some international stocks recorded a slight recovery in price.

Although the pessimists belittle both M. Laval's reception in Berlin and also the results of his conversations with the German Chancellor, well-informed opinion appears reasonably satisfied. While there is no inclination to magnify the actual results so far attained, there is a feeling that at least a moral gain has been recorded. M. Laval, the first French Premier to visit Berlin since 1878, has been favourably received, even though the manifestation of enthusiasm may have been confined to a small section of the Berlin population. Moreover, personal goodwill between M. Laval and Dr. Brüning has been further cemented, and the speeches of both statesmen at the Berlin banquet suggested a realistic and practical attitude. Nevertheless, it must be admitted that Paris opinion has been disturbed by the fresh Hitler victories in the Hamburg elections, which are read as a severe reminder of possible political effects which may ensue from persistent aggravation of economic strain, unless something is done to alleviate present conditions. The agreement to explore the possibility of a Franco-German economic entente is, therefore, being examined carefully; but at this point no one is inclined to use any stronger phrase than that of M. Laval himself, when he said that in Berlin he had attended at "the birth of a hope." The establishment of a joint Franco-German committee to explore avenues of co-operation in the economic sphere is accepted as a desirable step in the procedure of getting together, and it is supposed that the Layton Report will be the basis of early discussions. But it is not clear that the Ministers have got beyond agreement on method of procedure.

That M. Laval is to visit Washington so soon after his visit to the German capital, on the invitation of President Hoover, is taken as significant of the United States' continued practical realisation of the close interdependence of nations—a realisation which is rapidly being forced upon the minds of Frenchmen by the flight from the gold standard, and the new dangers and problems that this movement involves for the economy and banking system of France. It would not be fair to say that any general feeling of apprehension has been caused by the events of the past fortnight, and there are few signs of any doubts as to the stability of the franc. But there is, on the other hand, in banking circles full realisation of the growing strain that events can hardly fail to exert upon those centres which, like Paris, remain on the gold basis; and the withdrawals of balances from America on a considerable scale are due at least as much to the aim of fortifying the home position as to uneasiness, which, nevertheless, exists in same quarters, as to the strength of certain parts of the American banking structure.

Since the wave of Bourse liquidation last Wednesday there have been rumours of the preparation of further severe restrictions upon speculation, and the authorities are well alive to the possibilities of bouts of distressed liquidation recurring from ex-gold centres and are prepared to ensure that such movements shall not be aggravated by the action of home speculators.

GERMANY.

French Minister's Visit — Dr. Luther and Gold Standard — Bank Failures — British Capital — Savings Banks — Ruhr Wages — Hamburg Elections.

(FROM OUR CORRESPONDENT.)

BERLIN, September 29.

THE German public attached little hope to the visit to Berlin of the two French Ministers, and the very cordial demonstrations with which they were received were expressive of wishes rather than of expectations. The fairly concrete and at the same time far-reaching content of the conversations has almost occasioned surprise. A Franco-German economic committee is to be set up, composed of Government officials. Expert economists and trade unionists are to be co-opted *ad hoc* in connection with individual subjects of discussion, and these advisers will be nominated by the Government after consultation with the associations affected. The chair, as long as the commission meets in Berlin, will be taken by a Minister, presumably Dr. Trendelenburg, as Deputy-Minister of Economics.

Any suspicion that this arrangement is not meant to have binding force is forestalled by the fact that the Commission is to have a permanent secretariat, whose duty it will be to bring before the Commission any question which offers an opportunity of economic co-operation between the two countries. An important subject for discussion will certainly be the problem of international cartels. That is an important element in French economic policy, as was already clear at the Economic Conference in 1927, and the not very favourable experience with the International Steel Cartel has not altered this. But any industrial measures naturally raise financial questions too, and it may be taken for granted that on the German side particular stress will be laid on the treatment of credit problems.

The question whether Germany will follow the example of Great Britain in respect of her currency, or will adhere to the legally-established parity with the dollar, is answered on behalf of the Reichsbank by a speech of Dr. Luther before a meeting of the German savings banks. The President said:—

Many people may think that if England, with her financial strength, acts "magnanimously" as they call it, poor Germany has no need to cling proudly to her gold currency. It may also be a temptation to many that there are signs of a stimulus to trade on the other side of the Channel, that industry there is reviving, and that the burden in respect of the repay-receiving new orders, and that the burden in respect of the repayment of debts has grown lighter during the last week. People point to the fact that inflationist countries receive a premium on exports as their costs have not adapted themselves to the depreciation of the currency. All that is true in itself: we have, indeed, experienced it ourselves. But have we not also experienced what follows? Have we quite forgotten that this advantage is only present in the first stage of inflation, and that as soon as costs and prices catch up the premium on exports vanishes? If we are capable of thinking on such subjects at all, we must be convinced that in our case prices and costs would rise almost immediately, so that Germany would scarcely enjoy the first stage of inflation because everything would almost at once be calculated in terms of gold. . . . Then there would certainly be a demand to create a new "first stage," and so on. For this reason there is no question for us of a carefully-controlled dose of inflation.

Dr. Luther went on to stress the peculiarities of the German currency situation, which, he said, even apart from the danger of inflation, must preclude any question of Germany's following the example of Great Britain:—

Our daily bread depends upon the maintenance of a stable currency . . . our debts to foreign countries are predominantly not in marks, but in gold, dollars, or other gold standard currencies, and only to a very small extent in pounds. As therefore our foreign debt is the most important part of our indebtedness, to the extent which we obtained the anticipated relief in respect of the difficulties which have arisen from the depreciation of sterling, we should, having regard to our position, fail to receive the hoped-for relief in respect of our debts. . . . The milliards of foreign debts which are now subject to the standstill agreement would, with every decline in the value of the mark, stand at a higher value in the books of the debtors, who after a point would be irretrievably bankrupt. Germany's attitude cannot, therefore, be independent of the line taken in this matter by other countries.

This statement of the President of the Reichsbank was further emphasised, at the same meeting, by a very clear

and decided pronouncement of the Chancellor, who said:—

A poor country must be cheap. If it succeeds in establishing its payments and prices on this basis the effect would be secured, on a solid foundation, which a depreciation of the currency would only give for a very fleeting period. Conditions in Germany, however, are very different from those in Britain. No people that has had to endure, as Germany has, the ghastly experience of such inflation, can tolerate a fresh blow, in times of the greatest uncertainty and fear, to confidence in the future of their savings.

The Finance Minister spoke in the same sense at the meeting of the German State Party on Sunday. All the authorities who are responsible for financial policy in Germany are agreed that the gold and dollar parity of the mark must be maintained in all circumstances.

Meanwhile the sterling crisis has already brought about the failure of two banking houses of great standing: Deichmann and Co., of Cologne, and S. Schönberger and Co., of Berlin and Amsterdam. Deichmann and Co. was founded in 1858, and has been closely connected with J. Henry Schroeder. Debts could not be recovered and a number of industrial participations which were involving the house in losses could not be sold. The amount of the liabilities is not yet known. S. Schönberger and Co. is a more direct victim of the sterling crisis. The Bank had transacted a large volume of forward exchange business. Dealings of this kind in various gold currencies are widespread, and perfectly sound in themselves, but just for that reason commitments had attained a volume many times exceeding the former capital, and a loss of several million marks is anticipated. The other liabilities may amount to about 10 million marks. The Amsterdam subsidiary dates from 1923. Until last year the banking house of Bleichröder had shares in Schönberger, but this holding was not taken over when Bleichröder amalgamated with Gebrüder Arnhold.

An attempt is made in the latest weekly report of the Institut für Konjunkturforschung to analyse the capital relations between England and Germany. English capital invested in Germany is estimated approximately as follows:—

In Millions of Marks.	
Long term loans	1.10*
Holdings of shares, etc.	0.15
Ascertainable long-term investments (minimum)	1.25
Short-term loans to 28 leading German banks	1.10†
Other short-term loans (minimum)	1.00

* Nominal amount issued in England.

† Middle of July.

It is not known what volume of mortgage bonds and other marketable securities are in English hands, but they are by no means negligible sums. The German claims on England cannot be very great, but the depreciation of the pound, nevertheless, threatens German commerce with substantial losses, losses which may be devastating to certain branches of industry, especially textiles and paper, as a large part of their export contracts were in terms of sterling. These losses cannot yet be estimated as they depend on whether current contracts will in future be carried out in sterling or translated into terms of gold.

The German savings banks have great cause for anxiety. The July runs have ceased, but the withdrawals still exceed the payments into the banks, as they did before the July crisis. This is probably not due to mistrust, but to the pressure of the crisis upon the incomes of the masses, who, unable immediately to adjust their standard of living to reduced salaries and wages, are drawing upon their savings to meet current expenses. Between June and August the savings banks lost 7.5 per cent. of their deposits of 11 milliards, and withdrawals are expected to amount to 10 per cent. by the end of September. As the savings banks do not keep many liquid assets but have some 40 per cent. of their assets in mortgages, the means of meeting these withdrawals had largely to be procured by having bills discounted at the Reichsbank through the Acceptance Bank.

The wage agreement in the Ruhr mines expires on September 30th. Neither the conciliation negotiations nor the arbitration proceedings which have been instituted have led to any result. According to German law an arbitration

award can only be given if either the workers' representative or the representative of the employers, who sit with the Government representative on the tribunal, agrees to it. If, as in this case, the employers demand a heavy wage reduction which the Government arbitrator considers intolerable, and if he cannot get the workers to agree to a compromise, no result can be reached. In order to avoid this, which would mean that both parties would recover their freedom of action and a big labour dispute might follow, the President of the Reich, as once on an earlier occasion, issued an emergency decree requiring the arbitrator to appoint two more independent experts, with whose support he may then issue an award. As this award will presumably be given binding force, the danger of a strike or lockout has been avoided.

The elections in the Free State of Hamburg have led to a sweeping victory for the Radical parties. The Communists have added 21,000 votes to their poll at the last Reichstag elections, at the expense of the Social Democrats, and the National Socialists have increased theirs (which was, however, lower than in other parts of the country) by 40 per cent. Of the middle-class parties only the State Party and the German National Party have increased their votes; the German People's Party, the Economic Party, and the Christian Socialists have declined. The new City Council has no working majority. The Social Democrats, with 46 seats, remain the largest party, but the 35 Communists and the 43 National Socialists make the assembly, which has 160 seats, incapable of action. The result will be either that the old Senate will carry on the Government for a time, or else that the Reich Government will have to govern Hamburg by means of emergency decrees. This illustrates the steady increase in the internal political difficulties of Germany, and the action of the Reich may form a precedent for the situation which may arise in Prussia after the Landtag elections next spring.

HOLLAND.

Gold Standard Maintained — Stock Exchange — Demand for Protection.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, September 30.

THE relief measures of the Netherlands Bank, for which the board of the Amsterdam stock market appealed last week, contributed considerably towards assisting the Stock Exchange. The bankers' syndicate formed for the purpose of providing the market with funds for new prolongations also played its part. After one day, it is true, this syndicate was dissolved, but the bankers participating continue to be prepared to provide funds for the purpose in view, so that the threatened shortage of money was surmounted and a sudden boom manifested itself on the stock market. To a large extent the sharp rise in quotations was the result of covering on the part of scared bear operators, for there was no hope of success for bear manipulations now. In addition, however, other important factors played their part. The rise in shares was attended with a serious depression on the bonds market, to such an extent that even first-class loans proved hardly saleable. Several exaggeratedly low quotations were struck out from the quotations list by the board.

It is, therefore, evident that the situation is still by no means calm, and the situation in England, particularly the sharp drop in the quotation for sterling in the Netherlands, gave rise to a very nervous tendency. The uneasiness grew more and more intense when the English Government failed to publish any policy for meeting the crisis. In commercial and industrial circles the menace to Dutch interests was soon realised, as it means the cessation of exports to England on the one hand, and, on the other hand, competition here of British products. Meetings are being arranged in many parts of the country, and the call for adequate protection and support is becoming more and more insistent in the Netherlands. Meanwhile, Dutch exporters who have contracts for forward delivery have resolved to demand payment in gold pounds.

It is not surprising that in some circles the view was expressed that the only thing for the Netherlands to do in the circumstances was to abandon the gold standard too, and this was already being discounted by large offerings of bonds and demands for shares. The Netherlands Bank deemed it imperative to put an end to the existing uncertainty by publishing a communiqué to the following effect last Sunday:—

In view of questions which have been put to us, we desire to state that there is no reason for us to conceal the fact that our foreign bill portfolio does consist partly of sterling bills. In consideration of conversations held very recently with the Bank of England, and in view of the particular character of our sterling assets as the gold-bill portfolio of a bank of issue, we have every reason to believe that we need not fear any loss on these assets. The sterling bills held in our portfolio are yielding interest which in the meantime automatically offsets possible temporary loss in book value. For the Netherlands Bank, as a bank of issue, there can never be any reason for parting with its sterling bills at an inopportune moment. We declare most emphatically that our holdings of sterling bills will not impede the Netherlands Bank from fulfilling its function as bank of issue to the fullest extent. At the same time, we declare that we shall unconditionally maintain the gold standard. There is no inflation of Dutch currency, and no such inflation is to be expected.

The gold position of the Netherlands Bank is stronger than it has ever been before.

In connection with rumours in circulation to the effect that the Dutch East Indies had suspended the gold standard, the assurance was published that neither at the Colonial Office nor at the branch office at Amsterdam of the Javasche Bank was it known that any such measures were under consideration. The President of the Javasche Bank added that in this crisis the interests of the Dutch East Indies and of the Netherlands were so closely intermingled with regard to the guilder that depreciation of the East Indian guilder as compared with the Dutch guilder must be regarded as out of the question.

Mr Vissering's reassuring statement of Sunday, however, failed to affect the Stock Exchange. The big offers of bonds continued, and at the same time the funds still available for the shares market dwindled away more and more, so that the prolongation rates advanced rapidly. The situation on the foreign exchange market also became more serious, through the steep advance in all foreign currencies. The dollar and the French franc approached the gold export point, and gold has already been shipped to France. The Netherlands Bank found it necessary on Monday to raise its discount rate from 2 per cent. to 3 per cent., while the rate for advances on merchandise and securities was even raised from 2½ per cent. to 4 per cent. This active bank rate policy constitutes, of course, one of Mr Vissering's measures for maintaining the gold standard in the Netherlands. Whether he will be successful will have to be seen, but it may be pointed out that the tendency on the foreign exchange market was decidedly more satisfactory on Tuesday as the result of this measure.

AUSTRIA.

Drastic Retrenchment — Exchange Rationing — Industry — Sterling Losses.

(FROM OUR CORRESPONDENT.)

VIENNA, September 29.

THE next few days will witness decisions on important questions of national economy, but it is uncertain whether they will be made by the present Government or only after the establishment of a coalition. The Government desires to diminish the salary list by cutting down payments to the civil service by 82 millions and to curtail consumption of materials by 130 to 140 million schillings. This economy is to be effected by a cut in the emoluments of active officials, by increasing contributions to the pension fund, by diminishing special allowances, by prohibiting the engaging of fresh officials and by suspending all promotion. The civil servants declare that they cannot agree to such a curtailment, which would mean a loss to them of 16 per cent. of their income. Public meetings are to be convoked and even in the Government Party there is some diffidence in regard to such measures against the voters. As the Municipality of Vienna was also unable to carry out the

many cuts contemplated in its salary list and is in similar difficulties, an understanding on the question will have to be arrived at between the Social-Democratic Party and the present or a future Government. Further, a crisis tax is to be levied as a supplementary personal income tax. The tax on motor spirit is to be more than doubled. On the railways and at the post office service facilities are to be cut down and investment activity suspended.

The great question is, however, whether all these increases will suffice to outweigh the deficit which every tax and impost item will suffer owing to the inevitable diminution of consumption and the general impoverishment. The heaviest burden for the State is the assumption of responsibility for the Credit-Anstalt. This bank continues to work at a loss, as practically every business activity is hampered. Expenses are now to be reduced by the dismissal of about 400 to 500 bank clerks. Salary cuts are also to be imposed on the clerks and the management of the Credit-Anstalt, as its employees are paid much more than those of the State and those of the public bodies. Even if a reform of the administration is carried out and savings thereby effected, it is difficult to see how the institute will get along without the greatest difficulty.

The National Bank has drastically curtailed the issue of foreign currency. Of the means of payment demanded at clearing scarcely 10 per cent. has been allowed. It would perhaps have been better if the National Bank had resorted earlier to such measures and so prevented the procuring in Vienna of foreign means of payment for Hungarian, Yugoslavian, Roumanian and Polish account and the consequent inroads upon the holdings of the National Bank. Between July 31st and September 15th holdings of gold receded from 214 to 189 million schillings, though foreign currency notes calculated in cash holdings rose from 127 to 142 million schillings, while the foreign currency notes not included fell from 224 to 124 millions. In the week from September 15th to 23rd a further weakening of the foreign currency note holdings of the National Bank is observable. Now, however, it is regretted that holdings of foreign currency, which include pounds, were not last week diminished through sales, and that sales of gold approximating 25 million schillings were made out of the bank holdings. The restricted allotment of notes and the efforts of neighbouring countries to procure foreign means of payment have led, as always in such times, to the growth of clandestine transactions, in which notes, gold and, recently, also silver are negotiated at a premium.

The exchange is still closed, although no further decline on the share market is feared. On the contrary, in private trading there is a demand for individual Hungarian securities, which were previously offered in large quantities from Hungary. The closing of the exchange was enacted, however, because individual Austrian loan certificates are dealt in abroad, and it was not desirable that the relatively high rates which have been paid for these at home should be subjected to a pressure from foreign sales with consequent disquieting effect upon the public. In view of the shortage of money, mortgage business cannot carry out fresh issues. For first mortgages the rate is 11½ per cent. It is, however, worthy of note that a strong demand for real estate has again set in and houses containing small flats are being sought. Luxurious buildings find no purchasers.

In industry the ironworks complain of poor sales, and when the orders from the Federal Railways, which were placed a short while ago as emergency work, are completed more men will have to be dismissed. In the machine industry German competition has become weaker, but Czechoslovakia is competing more keenly. In textiles demand for gentlemen's and ladies' materials has commenced as a result of the bad weather, and the shoe factories are also busier. The drop in the pound has hit individual Austrian exporters rather hard, and complaints in this connection are made by clothing and textile manufacturers, the whole of the fancy-goods industry, the timber and paper industry, the glassware industry, the perfumery and drug manufacturers and by producers of certain fats and oils. Further, in view of the depreciation of sterling, import is feared of finished products of the heavy industries, hardware, crude metals, wool and woollen goods,

cotton and cotton goods, leather, machines, asbestos, rubber goods and, most important of all, of automobiles and motors.

Rather heavy losses appear to have been suffered in Vienna on pound notes. A number of private people who had no confidence in the schilling bought English pound notes several months ago, while for some reason or other French notes enjoyed little attention. This was probably still the effect of recollection of the franc crisis. Losses were suffered on these holdings of pounds as well as on fairly large amounts of English State loans which have been acquired by Austrians. The banks, too, probably have large sterling credits in England.

ITALY.

Reception of British News — Monetary Situation — Reaction on Industry.

(FROM OUR CORRESPONDENT.)

TURIN, September 23.

THE first repercussion of the suspension of the gold standard by Great Britain was in Italy one of bewilderment. The shock was keenly felt, especially in Milan, Turin and Genoa. Importers who had covered their future sterling requirements and exporters who had not already sold their sterling bills, felt anxious about their prospective losses. The official quotation of the pound sterling was suspended and banks refused on Monday and Tuesday to quote prices across the counter. The bourses were not closed, however, and business went on as usual. Prices of securities, especially speculative ones, were marked down, but falls were not spectacular. Bourse editors observed in their notes that the volume of transactions had already in the course of a long-dated depression been so much reduced, and the prices were so low, that there was not much room for further reductions. Press comments were singularly sober. A few debated in an historical mood on the passing of the sterling myth and on the transference of the leadership of the world money market from the sterling to the dollar; others, like ex-minister Alberto De Stefani, spoke only of a provisional act of foresight and insisted on the fundamental sanity and strength of Great Britain, which are a guarantee that the pound will be restored to free convertibility into gold. Even in the modest headlines, newspapers reveal a unanimous tendency not to stress the importance of the event. Some even hint that, had the British Press and the British politicians not made such a fuss about the dangers surrounding sterling, foreigners would not have been seized with panic, and things would not have drifted to the present impasse.

As to repercussions on the Italian economic and monetary situation, there do not appear on the surface symptoms akin to those which bred havoc in London. The gold reserve of the Bank of Italy has increased between December, 1927 (first balance sheet after stabilisation) and August 10, 1931, from 4,547.1 to 5,872 million lire; the bill and securities gold exchange reserve has decreased from 7,558.8 to 3,495 million lire; the total gold reserves decreasing thus by 3,238.9 million lire. But the notes issued decreased also by 3,399.3 millions (from 17,992.2 to 14,592.9). The other items do not reveal any really dangerous tendencies. Frozen credits of the Bank of Italy toward the Institute of Liquidations, after having diminished from 1,433.8 million lire at December 31, 1927, to 626.2 millions at December 31, 1930, are again increasing, but the latest figure of 1,207.6 millions at August 1, 1931, is yet of manageable dimensions. Nor has Italy big foreign deposits, liable to be called in for an emergency. No figures are published; but there is quoted in banking circles the figure of 2,000 million lire as representing the amount of foreign deposits held at call or short notice in Italian banks; but against it there can be set a much higher figure, of from 6,000 to 9,000 millions of deposits or securities held by Italian residents in foreign countries. It is a widespread impression that the majority of Italian securities issued in New York or other markets are in the possession of

Italians; so that they are not liable to be suddenly thrown on the market as if they were held by foreigners.

The apprehensions which are felt as a consequence of the British suspension are on the commercial and industrial side. Italy and England are direct competitors in some lines, such as textile goods, in the Levant, India and the Far East. In other places also the decline in English exports has been made good by Italian goods. The fall of sterling will no doubt give a temporary fillip to British exports and perhaps damage Italian trade. Italy, like many other countries, is suffering from some of the ills under which England is labouring. Professor Mortara, in his well-known "Prospettive Economiche" for 1931, has calculated that the increase in State and local taxation, had, in present lire, increased in 1930-31 by 145 per cent. over 1913-14, and by 51 per cent. over 1925-26. The increase in terms of lire of constant-purchasing power was, respectively, 140 and 98 per cent. This is a crushing burden; and equally high is the burden of fixed interest of debts on industry and agriculture. As the (Bachi) wholesale prices index number decreased between 1927 and June, 1931, by 33.8 per cent. and the national total cost of living index number (Central Statistical Institute) between June 1, 1927, and June 1, 1931, by only 17.3 per cent., the comparatively low purchasing power of wages is an obstacle to complete readjustments between wholesale prices and wages. It is feared that if the British suspension were followed by other weak countries, the menace to our exporting industries and to our balance of trade, much improved in later months, may become very strong and react on the Bank of Italy gold reserves.

HUNGARY.

Effect of Sterling Movement — League Advisers — Budget Deficit.

(FROM OUR CORRESPONDENT.)

BUDAPEST, September 28.

THE suspension of the gold standard in Great Britain did not affect the pengő directly, as dealings in foreign exchanges have been under the supervision of the National Bank since July 14th, and the Stock Exchange is closed since that date. The Hungarian Government, after the Central European banking troubles, which led to the temporary closing of banks and restrictions of deposits, decreed that all banking deposits and claims are gold pengő. This decree was intended to restore confidence among the depositors and to check inflation, and its operation proved effective, as the note circulation of the National Bank, which stood at 503.8 million pengő on August 7th, decreased to 352 millions by September 23rd. The sterling quotation of the National Bank corresponds to the devaluation of sterling on the principal money markets. On September 28th it stood at 21.90 pengő instead of 27.82, its gold parity. As Hungary is heavily indebted to London, if the stability of the pengő is maintained at the gold basis and sterling is devalued, the burden of the foreign indebtedness of the country will be lightened. Great as would be the gain on existing commitments from the devaluation of sterling—amounting to £30 millions approximately—it would not compensate Hungary for the temporary inaccessibility of the London market for further loans which are urgently needed for the reconstruction of the finances of the country.

The delegation of the League of Nations appointed by the Financial Committee at the request of the Hungarian Government to investigate Hungary's financial position on the spot, will arrive this week. The names of the members of the delegation are not officially announced yet, but it is certain that the American member will be Mr Royall Tyler, who worked in close collaboration with the League and Mr Jeremiah Smith, junr., the former Commissioner-General, to the great satisfaction of Hungary as well as of the League of Nations. In all probability the delegation will include Mr A. Loveday, the Director of the Financial Section of the League, and Mr Per Jacobssen, the Budget expert of the League, both of whom previously assisted Sir Arthur Salter when the first reconstruction plans began to operate in 1924. Apart from the above-mentioned

American, British and Swedish members, there will be a French, Italian, German and a Czechoslovak member, and Monsieur Avenol, the Deputy General Secretary, is also expected to visit Budapest. There is little doubt that the investigation of the League's delegation will convince the Council of the League and the creditor nations that Hungary cannot recover from her immense financial and economic difficulties without effective aid through the League of Nations.

According to the official statement made by the Hungarian Government, the budget deficit for the financial year ending June 30, 1931, amounted to 150 million pengő, of which 116.9 million is shown by the Administration Budget and 33.1 million pengő by the State enterprises. The deficit was covered partly from the £3 millions loan which was contracted in November, 1930. Apart from this deficit, according to Dr Teleszky, former Finance Minister, and present financial adviser of the Government, the debts contracted by the departments and enterprises amount to 363 million pengő, and guarantees assumed by the State total 200 million pengő, of which about 60 to 90 millions effective losses will have to be met from the Treasury, so that the total obligations of the State not included in the budgetary deficit for 1930-31 are estimated at 420 to 450 million pengő. It is obvious that the 420-450 million pengő, which is half of the total expenditure of the Administration Budget, cannot be met from current resources, and will have to be consolidated into a long-term loan. The £3 million loan concluded in London in November, 1930, and the £5 million Treasury bills placed in August, 1931, are not included in the 420-450 million pengő, of which about half is borrowed from abroad.

NORWAY.

Suspension of Gold Standard — Stock Exchanges Closed.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, September 28.

ECONOMIC developments in Norway during recent hours have been rather kaleidoscopic, as, indeed, in most of the other countries of the world. The immediate consequences of the drastic step on the part of the Bank of England on Monday last were not so overwhelming as might have been expected. The idea of a similar step on the part of the Norges Bank was, of course, at once openly discussed, but various declarations from authoritative quarters seemed to give sufficient reason to believe that such a course would not be followed, though it might become necessary to increase the Bank rate. No surprise was, therefore, caused by the raising of the Bank rate on the 26th from 4 to 5 per cent., which was in itself a heavy burden on our industry, recently escaped from the throes of a six months' labour dispute. However, the hopes that had been entertained that this increase would prove sufficient to safeguard our gold and maintain the parity of the krone were to be completely frustrated.

At a Government conference on Saturday night it was decided provisionally to suspend the obligation of the Norges Bank to redeem its notes in gold, and, at the same time, export of gold under any form whatsoever was prohibited. Yesterday the Norges Bank decided to increase the discount rate from 6 to 8 per cent. as from to-day.

There is as yet no reason to take it for granted that the Norges Bank has definitely given up the thought of once again bringing the krone back to parity. On the contrary, the increase of the Bank rate may certainly be regarded as an indication that the Bank intends to maintain as far as possible the purchasing power of the krone, and also to secure its position abroad if England brings the pound back to parity.

On the whole the new state of affairs seems to be accepted by the public with resignation, and it is a source of satisfaction that the three Scandinavian countries have agreed on the same policy both as regards discount rates and the gold suspension.

Conditions on the foreign exchange market were already rather difficult last week, with very limited business, and when the quotations were at last fixed to-day (nearly three hours later than usual) there was, of course, a con-

siderable movement against the krone. Sterling had been quoted at 16.50 since the 22nd, with transactions taking place at even lower figures; but to-day the quotation was 19.85. For other currencies the rise was at a rate of about 30 per cent., and even at these rates very few transactions took place.

The Stock Exchange has been closed for several days, and, as far as can be ascertained, the date for its re-opening has not yet been fixed.

DENMARK.

Suspension of the Gold Standard.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, September 27.

FOLLOWING the departure from the gold standard by Great Britain, bond and share quotations in the Copenhagen Stock Exchange were suspended. After a temporary cessation of quotations for sterling the pound was fixed at 17.50, while other quotations, though nominal, remained unchanged. Rumours of a probable departure from the gold standard began to arise, but after negotiations with the Government the National Bank published at the end of the week a declaration that it was determined to adhere to the gold standard. After the raising of the discount rate from 4½ to 6 per cent., sterling was quoted on Friday and Saturday at 16.50 and 16 respectively. On Sunday the agricultural organisations, at a special meeting, passed resolutions calling upon the Government to suspend gold payments and declaring that otherwise there would be a collapse of Danish agriculture, which depends very largely on exports to England. Meanwhile the export of gold had already been prohibited. Before the Cabinet meeting, which had been fixed for Monday morning, the news of the suspension of gold payments by Norway and Sweden arrived, and on Tuesday, following an appeal by the National Bank to the Government, an Act was passed suspending until the end of November the obligation of the Bank to redeem its notes in gold, and to purchase gold. The Bank is to act in accordance with the Royal Bank Commissioner's wishes in currency dealings, and is to pay to the State any profits arising out of the suspension. The Act also provides for the appointment of an Exchange Committee. The gold cover of the Bank's note issue has at the same time been reduced from 50 to 33½ per cent.

CZECHOSLOVAKIA.

Repercussions of British Crisis — Rise in Bank Rate.

(FROM OUR CORRESPONDENT.)

PRAGUE, September 22.

THE suspension of the gold standard in Great Britain caused great surprise, but the first somewhat chaotic impression gradually gave place to a more confident opinion. This development was reflected accordingly on the Stock Exchange. The Stock Exchange, which, in sympathy with foreign exchanges, showed a declining tendency for some time, weakened further on receipt of the news from London; but the drop in prices was not considerable, and they recovered the following day. The Board of the Prague Stock Exchange did not consider it necessary to take an extraordinary action, and the House remained open. The board, however, are determined to stop excessive speculation, but do not so far think it necessary to check normal business. It is the general opinion in Czechoslovakia that the action taken by the British Government is an internal affair, due to particular circumstances and to the atmosphere of international lack of confidence, and that it will have no direct influence on economic and money matters in Czechoslovakia. In this country there was no serious repercussion either from the case of the Austrian Kreditanstalt or, later on, from the case of the Danatbank in Germany, and on this occasion, too, the situation has remained quiet. The feeling is gaining predominance that Great Britain and other leading States in the international markets will have sufficient foresight and power to maintain the stability of sterling.

On the other hand, conditions in England have a great influence on the Czechoslovak trade, because a considerable part of the Czechoslovak export trade, as, for

instance, that in iron and sugar, is calculated and sold in sterling. Weakening of sterling might, therefore, cause losses, though these might, of course, be balanced by the fact that imports of some goods are also calculated and paid in sterling.

It is not likely that the value of sterling will have any direct influence on the Czechoslovak loan of 1922, which is to be converted in 1932. The Skoda Works issued mortgage debentures in sterling and in French francs. The placing of Czechoslovak money in England, owing to the general confidence in the home money market, is of secondary importance.

The monetary situation is steady. The Treasury is liquid and has adequate reserves, so that no extraordinary steps are deemed necessary. In spite of the great general importance of the action taken by the British Government on the world trade, its direct influence on the Czechoslovak money market should not be over-estimated. Meanwhile the board of the National Bank considered it necessary, in view of the nervousness of the whole world, to take the precautionary measure of raising the rate of discount to 6½ per cent.

POLAND.

Effects of British Crisis — Saving on Sterling Debt — Intensified Competition.

(FROM OUR CORRESPONDENT.)

WARSAW, September 25.

BRITAIN's abandonment of the gold standard appears to have caused no more disturbance to Polish banking and currency than did the German crisis of mid-July. The atmosphere is calm, and the banks and stock exchanges have functioned normally throughout the week.

Poland undoubtedly stands to gain on balance by the depreciation of the pound. No authoritative figures have yet been published on the subject, but it is generally accepted that short-term sterling and merchandise credits granted to Poland exceed by several million pounds the holdings of sterling by Polish banks and industrial enterprises; while long-term and intermediate loans (exclusive of the war relief debts) also amount to several millions sterling. At a rough estimate, Poland's debts in sterling (including war relief credits) possibly amount to about £12 millions, while sterling credits (that is, bank deposits in London, bills received for exported merchandise, etc.) are probably well below £2 millions. On this estimate, therefore, Poland appears to be a potential gainer of about £1,000,000, assuming a 10 per cent. depreciation in sterling and the resumption of war debt payments on the expiration of the one-year moratorium, or of £500,000 if the war debts are cancelled.

Looking further ahead, however, the depreciation of the pound is likely to have less pleasant consequences for Poland, since it undoubtedly foreshadows an intensification of British coal competition in the Baltic and Scandinavian markets based on a lower price level; probably lower prices for Polish butter, bacon and other farm produce now being shipped in increasing amounts to the English market; keener competition from British imports, and greater difficulty in securing sterling credits for Polish banks and industrial enterprises pending definite stabilisation of the pound.

Just Published.

THE COURSE OF THE COMING BOOM

by L. L. B. ANGAS

This remarkable publication, appearing the day following the collapse in sterling, and forecasting certain stock market movements which have since occurred, will prove invaluable to investors as a guide in the forthcoming months. Mr. L. L. B. Angas's forecasts of stock market movements have, in the past, shown an uncanny accuracy, as witness his publications "The Coming Rise in Gold Shares" and "The Coming Collapse in Rubber." This latest publication can be equally recommended.

The Stock Exchange.

THE OUTLOOK FOR GILT-EDGED STOCKS.

TOWARDS the end of last week, when the pound sterling fluctuated between \$3.42 and \$4 in a single day, gilt-edged security prices were more erratic than at any time in living memory—the Great War not excepted. This week's return of stability suggests that fears of a large-scale flight by investors from fixed-interest into equity securities, as a species of "inflation insurance," were, to say the least, premature. Many investors, however, are seriously questioning the advisability of a certain re-orientation of their portfolios, and their answer to the question: "Should I retain my gilt-edged stocks?" must have a decisive effect on values in every market during the critical weeks ahead.

The total nominal amount of long- and short-dated British Government stocks quoted in the Stock Exchange Official List (including Treasury Bonds and Local Loans, but excluding guaranteed stocks and Trade Facilities issues) is no less than £5,900,000,000. Even if holders of no more than 2 per cent. of this total were to decide on a change of policy, the resulting transfer of nearly £120,000,000 of stock would have immense repercussions on the market. The distribution of British Government securities is more than nation-wide. The Colwyn Committee, four years ago, published an estimate that the then National Debt of Great Britain was held approximately as follows: By the Bank of England, £70 millions; by other joint-stock banks, £750 millions; by the Post Office and Trustee Savings Banks, £215 millions; by Savings Bank depositors *in propria persona*, £240 millions; by insurance companies, approximately £350 millions; by railway companies, £80 millions; by persons liable to estate duty,

£2,350 millions; by foreigners, trusts, charities, trade unions, joint-stock companies, etc., £1,650 millions. These figures are, of course, the broadest possible approximations, but they serve to show that British Government stock holding is a prerogative of innumerable persons and institutions, high and low, rich and poor. All have one feature in common—a desire for the maximum of security.

What conditions governed the market in recent months, before the taking of last week's decision? An answer is suggested by examination of a chart on this page, in which we show the course of average Stock Exchange values (according to the Actuaries' Investment Index) for three long-term British Government issues (Four per Cent. Consols, Four per Cent. Funding and Three and a Half per Cent. Conversion), 41 industrial debentures, 86 industrial preference shares and 131 ordinary shares, over the whole period since the peak of the last Stock Exchange boom in January, 1929. In the same chart we show the course of Bank rate, with an inverted scale, since the movement of gilt-edged values is normally inverse to that of general interest rates. The chart shows that while, in the first phase of the decline in British security values, the maintenance of a high Bank rate caused a drop in fixed-interest stock prices as well as in equities, the collapse of the New York boom, in October, 1929, ushered in a period of cheap money, rising gilt-edged values and rapidly declining prices for equities. Other fixed-interest stocks, however, showed little resilience, debentures rising but slowly, and preference shares even tending slightly to fall during this period, as

FLUCTUATIONS IN BRITISH SECURITY VALUES 1929-31.

WITH THE COURSE OF BANK RATE, REVERSED.
(ACTUARIES' INVESTMENT INDEX. DEC. 31, 1928=100.)

"industrial risks" began to have an increasing effect on market psychology. After a slump before the Budget of April, 1931, gilt-edged rose, this spring, to a peak, only to recede in the summer, with the beginning of the German crisis and the "fight for sterling," and to fall to the lowest level for nine years, on the suspension of gold payments last month.

By every traditional criterion, British Government stocks are "cheap" to-day. Five per cent. War Loan has recovered to 96½, after touching 90½ last week, and Three-and-a-Half per Cent. Conversion Loan to 72 after 67, but one must go back to 1922 for a previous example of the prices prevailing at the beginning of this week. The numerous buying orders for relatively small amounts—£100 to £10,000—which sustained the market even in last week's worst phases, may have been based upon this consideration. But is it necessary, so long as the £ remains unlinked from gold or any other objective base, to adopt new criteria of gilt-edged values?

The reply would appear to depend entirely on the course of events during the next few weeks or months. A hopeful view would assume that everything will progress as the Government hopes, the pound will remain relatively stable with no more than a moderate depreciation in terms of gold, and the Budget remain balanced. In such a case the "limited devaluation" of sterling may result in a check to imports, an export bounty and lower effective internal costs—in a word, in enhanced competitive power of British industry. This, in turn, might naturally be reflected in an increased "reward of industry" (expressed in sterling), and a perceptible tightening of interest rates, following a demand for extended facilities to finance an enhanced volume of business, after the passing of the present "crisis" rates for money. Thus a legitimate economic incentive might be forthcoming for a moderate increase in the demand for industrial ordinary shares, with its corollary, a limited decline in fixed-interest securities.

But if the stability of sterling is maintained, the lengths to which such a movement can go will be limited. The actual increase in profits will be governed by the ability of British industrialists to make effective use of their new opportunities, by the rate of recovery from acute depression in buying markets, and by the policy of other nations in retaining or rejecting the gold standard, which must obviously affect the scope of Britain's differential advantage.

Sooner or later, however, the question must arise of a return to a stable currency medium. We discuss this matter, in greater detail, on an earlier page. If sterling were stabilised at a lower exchange value than \$4.866, the "benefits" of the temporary departure from gold would continue, but in the meantime would probably have been partially offset by increased raw material prices and pressures for higher wages, etc., following a rise in internal costs and profits of possible tariff interference with the normal course of trade. If an attempt were made to restore something like the old parity for sterling the restrictive effect of "deflation" on industrial activity would be felt. In either case, there would be a limit to the increased attractiveness of ordinary stocks as a result of higher dividends. If "stabilisation" were effected without significant deflation, the re-establishment of confidence might find the Government able to draw upon an enhanced national income (in sterling), for the service of the debt, and an improved budgetary position would be reflected in a steady recovery in gilt-edged prices, which might ultimately restore the scheme of Five per Cent. War Loan conversion to the realm of practical politics.

Incidentally, the view that fixed-interest stocks in general must necessarily command lower prices because their interest is payable in a depreciated currency has no sound foundation. The purchasing power of the annual income from such securities, it is true, will be reduced, but as the Stock Exchange price of the principal is expressed in terms of the same depreciated currency, the ratio between the two, other things being equal, is unchanged. If currency stability, in short, can be taken for granted, it is difficult to see how the outlook for gilt-edged stocks can have changed, permanently, for the worse. Last week's selling, however, was prompted by

fears, natural after the first shock of the departure from gold, that the pound would go the way of the mark in 1923, for which the present Government cannot be held blameless. The new Cabinet, on its inception, appeared to have taken a leaf from the book of those preachers of an earlier generation, who endeavoured to induce right living in this world by eloquently picturing the horrors of the next. Nervous investors, dismayed by the imagined approach of the very contingency the Government had been formed to prevent, read into last week's wide movements in the franc and dollar exchanges the first confirmation of their fears.

In this week's calmer atmosphere, many stockholders have perceived that this view involves an assumption which it is to be hoped that events will disprove. Those who to-day maintain the necessity for a cautious investment policy, admit the likelihood of a national effort to avoid inflation at all costs, but are anxious lest external factors should force the country's hand. The present crisis, it is urged, may have been aggravated by various weaknesses in the British economic system, but its basic causes have been international. Conditions in many foreign centres are still dangerously tight, and have been made more rather than less difficult by London's decision. Much has been heard in the last few days of the difficulties of many Continental financial institutions, large and small, and the widespread selling of high-class international securities like Kreuger and Toll has been a disturbing sign of the "struggle for liquidity," whose effects, thanks to the continued closure of many European stock exchanges, must necessarily be concentrated at a few points.

If foreigners endeavour to realise their security holdings through the London Stock Exchange, they may find that a very large number of British fixed-interest stocks and foreign bonds are, for the moment, almost unmarketable. Extensive liquidation of those stocks for which a free market still exists—gilt-edged securities—if it were met by an extensive marking down of prices (which is the customary weapon of dealers against a "one way" movement), might provoke new fears among British holders, re-start a "flight from fixed interest," and release uncontrollable inflationary forces.

This view appears to us exaggerated. Although foreign holdings of high-grade British stocks may still be considerable, even after their extensive repatriation during recent weeks, they would appear to be now mainly located in countries, the policy of whose nationals will probably be influenced less by *force majeure* than by the opinion they form as to the future of the pound. Until the present transitional period has passed, therefore, and the level of ultimate "stability" of sterling can be ascertained, much may depend on the psychological effect produced by events in Great Britain. For example, from the point of view of the gilt-edged market, if a general election is finally decided upon, there is everything to be said for having it over quickly, since the interim period must necessarily be a critical time for sterling in foreign eyes.

For the present, therefore, it may well be that gilt-edged stockholders, while retaining a hopeful mind as to the long-term prospects of the market, will be largely swayed in their day-to-day judgment by the behaviour of the gold exchanges, and will welcome, above all things, a settled political situation at home and the beginnings of an effort to secure international co-operation to ameliorate financial conditions abroad.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

AFTER we went to press last week Gilt-edged stocks showed exceptional weakness, the leading British Government issues falling 1½ to 2 points on Friday, September 25th, to the lowest levels for many years. This disturbing movement was associated with a further levering up of industrial and mining shares and unprecedentedly wide fluctuations in the dollar and franc exchanges. Late in the

(Continued from page 619.)

afternoon the Stock Exchange Committee announced that, from the next day, dealings in all markets would be for cash—a revival of a restriction in force during and after the war. The rule did not immediately result in a spectacular decline, but as this week progressed a perceptibly firmer tone in gilt-edged stocks, with its corollary, an orderly recession in industrials, attested the return of healthier conditions. On Thursday the recovery of gilt-edged prices was particularly well marked. The chief factor was, of course, the increased stability of the sterling-dollar exchange, but it was also evident that the market's resources were being augmented by the tentative return of funds previous put on deposit outside by nervous holders, and by reinvestment of the proceeds of the sales of dollar securities by some of the larger financial houses, to whom prices for many first-class British securities appeared tempting. Last week's inflationary fears, in short, tended appreciably to subside, though the possibility of unfavourable contingencies, including a decision for a general election, remained in the background of market sentiment.

Gilt-edged stocks, though irregular at times, showed small gains on balance each day, culminating in a well-marked recovery on Thursday. War Loan was in demand, and Conversion Fives and Funding Loan improved consistently after going ex dividend on September 26th. The market for India loans was narrow. The India Government's emergency budget proposals, though well received, drew attention to the difficulties of India's position, which are dealt with in a leading article on an earlier page. Home corporations were steadier, though somewhat heavy. Among Dominion issues, Australians were largely marked down.

With the completion of adjustments in the price of "gold" and "sterling" bonds, the foreign market settled down to less active conditions. The difficulties of financial institutions in several European centres were reflected in heavy selling of German issues, though French railway bonds obtained some support. Brazilians were heavy on the uncertainty regarding interest payments (discussed in an Investment Note on page 625.) Chinese bonds were assisted by the announcement of the coupon payments on the 1908 issue, but Japanese showed some weakness.

Speculative buying of home rails did not last long, and, though the week's traffic returns were less unfavourable than was expected, prices declined all round on the considerations set out in a Note on page 624. Argentine rails fluctuated with the exchange and suffered badly from profit-taking in mid-week. Antofagastas receded on the passing of the interim dividend.

The new regulation prohibiting fresh dealings "for the account," succeeded in pricking the bubble in equities. The closing of speculative bargains was quite orderly, but the volume of dealings fell off considerably. Iron and steel shares best maintained their improvement, but electrical manufacturing shares slipped back and motors were undecided. The higher tariff proposals of the Indian budget caused a sharp mark-

ing down in textile and rayon shares, though some improvement occurred later. Breweries suffered from further scattered selling, and tobacco shares lost ground. Shipping shares were dull. Little interest was taken in newspaper issues. The Swedish industrial group, with Kreuger and Toll, were heavily liquidated from the Continent early in the week, and though a slight rally occurred later, much uncertainty was caused by the report that the interim dividend of Swedish Match had been postponed. Bank shares were harder, a few buyers being attracted by the high yields of the partly-paid shares. Movements in insurance shares were usually against holders.

On the steadier tendency of sterling, commodity prices receded in many cases, and share prices lost ground. Tea shares were an exception, a moderate demand for stock on the firmness of the commodity, finding holders reluctant to part with stock originally bought at higher levels. The rubber share market, however, sank into its former lethargy, with prices easier all round. Speculative business in oil shares fell off sharply, the decision of the leading companies to collaborate "to the fullest extent" failing to prevent a sharp decline in quotations towards the end of the week, accentuated by selling, partly of a forced character, from the Continent.

The Kaffir boom was definitely checked, London playing, mostly, a neutral rôle, while Paris endeavoured to realise and Johannesburg was ultra cautious on uncertainty as to South Africa's currency policy. A harder tone, however, was noticeable before the week-end. The price of tin fell back and the share market became dull. Among copper shares, Rio Tinto were affected by Paris selling.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The tone was heavy in all markets, general liquidation driving many pivotal stocks to new low levels. The selling was due partly to unfavourable sentiment regarding the policy of overseas countries in relation to the gold standard, partly to realisation of the assets of banks which had recently failed, and partly to reductions of the holdings of institutions in Great Britain and other European countries. Doubts were also expressed as to the possibility of avoiding a rise in the Federal Reserve rate, following the firmness of market rates and the further ear-markings and withdrawals of gold, which totalled no less than \$279 millions during September. Further reductions of wages were announced, American Smelting and Refining, and the Aluminium Company being among the larger concerns following this policy. Trade indicators remained obscure. The business index of the *New York Times* was 68.9 for the week ended September 19th, against 69.8 for the previous week. Car loadings for the same period were 742,000, as compared with 958,000 in the corresponding week of 1930. The earnings of all railroads for August were recorded at \$56½ millions, against

\$95 millions in August last year. The U.S. Steel Corporation was estimated to be operating at 31 per cent. of capacity. On Thursday the Stock Exchange showed greater buoyancy, despite the news of the suspension of the firm Curtis and Sanger for insolvency. Rails were firm, the Baltimore and Ohio payment being above expectation.

* 2-hour session.

PARIS.

Though calmer conditions obtained, on the whole, business was restricted and the general tone unsettled. The foreign banking situation was anxiously watched. The prompt action of the authorities in protecting the Banque Nationale created a favourable impression, but bank shares generally continued to decline. Rentes were again sold to provide liquid funds. On Tuesday dealers experienced one of the worst sessions so far, heavy selling from abroad and renewed nervousness sending quotations down all round. Restrictions regarding the Coullisse account market were withdrawn, however, and in the cash market regulations calling for spot delivery of stock were relaxed to permit of delivery in seven days. The exchanges were again weak and quotations for Norwegian kroner had to be suspended. The end-of-month settlement passed off with less difficulty than had been anticipated, but the forthcoming account all selling orders, other than those for the purpose of liquidating buying positions, are to be accom-

panied either by the shares or by a cash cover of 40 per cent. and 25 per cent. of the shares.

AMSTERDAM.

A more settled tone prevailed on the Amsterdam Bourse at the opening, Unilevers being in demand, while several important securities registered advances, including Philips Lamps, A.K.U. and Royal Dutch. Renewed depression was the keynote of a very restricted turnover on Tuesday, however, the bond market being depressed and foreign loans weak. Business remained on a small scale, the prevailing uncertainty with regard to the exchange position militating against any pronounced movement.

INVESTMENT NOTES.

Restrictions on Stock Exchange Business.—Late on Friday last week the Stock Exchange Committee announced that, as from Saturday, September 26th, all dealings would be on a cash basis only. Further detailed regulations have been issued this week. All bargains must be for cash and may not be continued from day to day. No fresh option business may be transacted. Bargains already entered into, before the close of business on Friday, September 25th, will be settled in the ordinary way on Account Day, October 8th. Unless otherwise arranged, no delivery of securities will take place on Saturdays. Among the detailed regulations regarding buying-in and selling-out, the most important is that the deliverer of securities deliverable by deed of transfer, who does not receive a ticket by 11 o'clock on the fourth business day after the date of the bargain, may "sell out" such securities. It is understood that no objection will be taken to existing contingencies being continued, but that they must not be increased or transferred from one member to another. Settlement prices, it is believed, will be officially fixed as in the past through the usual "make-up" list. The prohibition of dealings "for the account" has necessarily reduced the volume of speculation in the Stock Exchange, outside the gilt-edged markets, where dealings have always been on a cash basis, and its effects may limit the business of many of the smaller brokerage firms, to whom last week's activity in industrial and mining shares offered a prospect of increased receipts after a long and trying period of stagnation. The Committee's partial reversal of its earlier decision, last week, to reopen the "House" without any restrictions on business, was doubtless influenced by a fear of the development of an unhealthy boom in equity shares, associated with a "flight" from fixed interest stocks. Sterling, at the time of the decision, was weak and exceedingly erratic on the foreign exchanges, and the Committee may well have desired to check, at the outset, a movement which might have reached dangerous proportions when nerves everywhere were on edge, and the immediate repercussions of the departure from gold could not be foreseen. Undoubtedly, however, if the ban on dealings "for the account" is prolonged, it will be felt as a hardship by many members, and—more important from the public point of view—will deprive markets of the breadth and resilience which, in normal times, it is the function of speculation to provide. It may be hoped, therefore, that if this week's indications of greater stability all round are maintained, the Committee may see their way to revert to normal procedure at the earliest possible moment. The course of events in the last few days suggests that, on reflection, the speculative public has realised that the world slump has been by no means ended by Great Britain's departure from the gold standard. In any case, the public is still free to speculate for the rise in commodities such as rubber, tea, tin, lead and copper, and it would be regrettable if speculation, curbed on the Stock Exchange, were to break out in less desirable quarters.

Business Forecasting.—An important discussion on "Business Forecasting" took place in the Industrial Co-operation Section of the British Association centenary meeting, last Monday. Business forecasting, as it has developed since the war, is a science (or hopes to become a science), claiming by expert diagnosis of facts and tendencies at any particular moment, to afford investors and business men some idea of major changes in the outlook for varying periods ahead. Its technique is based mainly on the facts that the outcome of many regular tendencies can be deduced in their early stages, that there is a rhythm in business affairs (to which the term "trade cycle" is sometimes applied), and that certain changes frequently precede other changes in time—a falling off in industrial activity, for example, usually coming some weeks or months after a decline in equity share prices. While many

workers in this field are content to present the relevant facts with no more than a constructive diagnosis (on the general lines followed, e.g., in our *Monthly Supplements*) numerous "services" in America, and at least one in England, go further and assume the rôle of the scientific prophet. The representatives at Monday's meeting were chastened in spirit, since, unfortunately, scarcely a single institution had forecast the time and scope of the worst business depression of this generation. There was a perceptible tendency among some speakers to urge that business forecasting should confine its activities to diagnosis. Sir Josiah Stamp, however, made the sound point that psychology must influence even the selection of data. Sir Josiah suggested the construction of forecasts of varying "strengths" for varying periods ahead, and explained the inaccuracy of some recent forecasts by reference to the impact of world factors never previously encountered in history. If the forecasts had been correct for the present period, he declared, they must have been "cooked." We venture to question this dictum. Mr John A. Crabtree, chairman of the Management Research Groups Movement, whose paper was the basis of discussion, showed how his own firm, faced in 1927 with developments which would have involved financial loss if their later stages had coincided with an industrial depression, extemporised a forecasting technique. This suggested, first, that a break in America would occur somewhere between June, 1928, and December, 1929, and, secondly, after the break, that worse conditions lay ahead. Broadly, the professional "services" would seem to have successfully predicted the American minor trade recessions of 1923 and 1927, but to have failed badly in their predictions of 1929-31. Both success and failure may have had an element of fortuity. The speedy recoveries from the two minor depressions may have been due, in part, less to the conjuncture of particular statistics and curves than to early and determined action by Governor Benjamin Strong, of the New York Federal Reserve Bank. The latter's death before 1929-31 was an "abnormal factor," but the failure of the Federal Reserve authorities to take similar determined action to check the share boom by using the weapon of money rates early in 1928 should have warned the forecasting services of the danger of the movement's getting out of hand. Later, the rapidity of the fall in commodity prices was the plainest possible portent of the severity of the coming depression. In general, we regard the recent failures of forecasting as an argument, not for restricting its scope, but extending its technique. All prophets are sorely tempted to work by routine, to restrict their observations to data readily reduced to numerical form and susceptible of pictorial representation, and to neglect the big economic factors which, however "abnormal," are capable of being perceived by the economist. No one could have forecast Great Britain's departure from the gold standard, but the effect, e.g., of post-war debt settlements and tariff policy on gold supplies, prices and international credit, could and should have been taken into account as a long-term influence making an ultimate crisis inevitable.

Home Railways and "Devalorisation."—While the gross traffic receipts of the "Big Four" railways for the thirty-nine weeks ended September 27th are, possibly, no worse than anticipated, the figures, set out in the table below, afford little solid comfort for junior stockholders:—

DECLINE IN GROSS RECEIPTS FOR 39 WEEKS ENDED SEPTEMBER 27, 1931.				
(000's omitted.)				
	Passengers.	Merchandise.	Coal and Coke.	Total.
L.M.S.R.	-1,398	-2,588	- 334	- 4,320
L.N.E.R.	-1,191	-1,880	- 927	- 3,998
G.W.R.	- 801	- 881	- 538	- 2,220
S.R.	- 718	- 245	+ 70	- 893
Total	-4,108	-5,594	-1,729	-11,431

Before the gold standard announcement, quotations for home railway stocks reflected a gloomy view of the outlook. A brisk demand, however, subsequently arose

based presumably on supposed improved earning prospects, and most stocks registered sharp advances:—

	Price, Sept. 16.	Price, Sept. 24.	Price, Sept. 30.
Great Western ord.	40½	46	44
L. and N.E. def.	3½	4½	4½
" 5% pref. ord.	8	11	10½
" 5% pref., 1955.	57½	57½	57½
" 4% 2nd pref.	20	24	22½
L.M.S. ord.	15½	19½	18
" 4% pref., 1923	28	33½	32½
Southern def.	10½	11	10
" 5% pref. ord.	40	39½	37½
" 5% pref.	65½	62½	56½

Impartial consideration suggests that the movement is at least premature. Theoretically, the depreciation of sterling should result in increased exports, and the railway ways are certainly "on tiptoe" to take full advantage of any such advance. On the other hand, a revival in exports is conditional on the action of other countries, since any spread of devalorisation would automatically abolish our export "bounty," while the intensification of world economic and political disturbances might well prove a counteracting influence. At the same time, the automatic reduction of "real" wage costs, which in the case of railway ways are of prime importance, must have an appreciable effect on net receipts for some time to come. When present stocks of material are exhausted the railways will certainly have to pay more for imported supplies and steel. The increase of cost of oil will affect the railways' road competitors adversely, but all the companies have turned many of these competitors into sources of investment revenue. Tourist traffic may increase with the depreciation of the pound, but it is doubtful whether England's reputation as a holiday resort is sufficiently high for full advantage to be taken of this factor. Passenger traffic at home is bound to be detrimentally affected by "economy." In general, therefore, while some railway stocks may have fallen to very low levels, on a long-term view, investors who buy on the light-hearted assumption of a spectacular and early rise in net receipts may have disappointment in store. Quotations have shown a much easier tendency in the last few days.

Brazilian Bond Position.—Considerable doubt exists, as we go to press, on the question whether Brazil has or has not officially defaulted upon her overseas interest obligations. In the *Economist* of September 5th last, page 443, we discussed the Government's announcement of the temporary suspension of the redemption of foreign debts, with the exception of the two Funding Loans and the Coffee Loan of 1922. On September 17th, Messrs. N. M. Rothschild and Sons, the London agents, declared that while the October 1st coupons of the Five per Cent. Funding bonds of 1898 and the Seven and a Half per Cent. Coffee Loan of 1922 would be paid, no announcement was to hand regarding the coupons due on the same date, on the unsecured loans of 1888, 1889 and 1913. On the next day, information was made public to the effect that the Government had been unable to purchase sufficient exchange to provide for all the October 1st interest, but was in consultation with its bankers and would make a further announcement in due course. This announcement had not been made by the end of September, although in the meantime payment was advertised of the October 15th coupons of the 6½ per cent. Sterling Loan of 1927, the funds for which were received on September 1st last. The Brazilian exchange has continued to show weakness recently, and the reported grant of a monopoly in exchange transactions to the Bank of Brazil, as from September 29th, can obviously have little effect on its long-term trend. An early official statement is eminently desirable and is the least the bond-holders can ask for. Meanwhile, as the October 31st interest date has passed without holders of certain loans receiving interest, Brazil, apparently, must be counted for the time being at least in the list of defaulters.

Industrial Profits.—During the month of September, we received the annual reports of 74 companies, covering financial periods ending at varying dates around June 30th last. The percentage decline in net profits, as compared with the previous year's figures for the same companies, is the greatest recorded since the inception, last April, of our monthly statistics (as distinct from our more extended quarterly reviews). The number of reports received, and the percentage declines shown, month by month, have been as follows:—

Reports Published in	No. of Companies.	Per cent. decline in Net Profits (1931 compared with 1930).
April	217	- 10.49
May	211	- 22.3
June	192	- 21.93
July	185	- 39.46
August	55	- 19.59
September	74	- 44.02

We next set out the figures for various industrial groups, according to reports received during the last three months. We hope to comment at greater length on these statistics in a subsequent issue:—

INDUSTRIAL PROFITS JULY, AUGUST AND SEPTEMBER, 1931—PRELIMINARY FIGURES.

Group.	No. of Companies.	Net Profit (after Payment of Debenture Interest): Reports received during July, August and September, 1931.		Increase or Decrease.
		1929-30. £	1930-31. £	%
Breweries	20	8,603,425	8,003,306	- 6.97
Canals and docks	1	6,000	6,000	—
Electric lighting and power	1	204,777	220,281	+ 7.57
Financial, land and investment	28	1,999,585	505,422	- 74.72
Hotels, restaurants, &c.	2	27,777	23,585	- 15.13
Iron, coal and steel	26	648,901	<i>Dr. 8,648</i>	-101.48
Motor and cycle	3	<i>Dr. 309,829</i>	<i>Dr. 117,814</i>	...
Oil	1	<i>Dr. 27,480</i>	<i>Dr. 26,516</i>	...
Rubber	60	909,795	<i>Dr. 198,203</i>	-121.56
Shipping	7	1,658,127	<i>Dr. 366,298</i>	-122.09
Shops and stores	9	1,286,773	364,086	- 71.70
Tea	24	490,395	69,703	- 85.82
Telegraphs and telephones	2	1,379,090	1,321,208	- 4.2
Textiles	16	606,912	44,181	- 92.72
Tramways	1	445,490	144,521	- 67.55
Trusts	21	1,554,520	1,361,358	- 12.43
Waterworks	4	27,472	30,956	+ 12.99
Other companies	88	5,172,314	4,545,821	- 12.11
Total	314	24,690,044	15,905,949	- 35.58

A large share of the September decline is attributable to the bad showing of the White Star Line (which recorded a loss of £108,556, against a profit of £270,545 in the previous year) and of the Oceanic Steam Navigation Company. The Calico Printers showed a debit balance of £175,289, against a profit of £69,186 in the previous year, while the Ardath Tobacco Company's earnings declined by £186,655. Among the larger companies the best showing was made by Gaumont British and Staveley Coal.

Gaumont-British Picture.—Mr Mark Ostrer, at the meeting of Gaumont-British this week, claimed that his company had become the dominant factor in British film production, as well as the biggest distributor in this country of British films. The company's studio at Shepherd's Bush, he declared, had been enlarged to three times its original size, while the studio of the associated company, Gainsborough Pictures, had also been reconstructed. Mr Ostrer stated that 34 British films of feature length had been "trade shown" in ten years, but did not say how many films his company had actually produced as against the fifty produced by British International Pictures. So popular had the British films become, according to the experience of his company's circuit of 350 theatres, that Mr Ostrer claimed that the company's renting houses had eventually changed over "from a product mainly American to a product substantially British." We hope that the change-over will be somewhat more definite than Mr Ostrer implied as time goes on. With regard to the outlook for the current year, Mr Ostrer confessed that the trade depression had affected theatre attendances, and that the increased entertainments tax would add to the difficulty of maintaining the earnings of the circuit. Nevertheless, he thought that the profits for the current year would prove "quite satisfactory." The accounts of the company were analysed and discussed in our issue of September 26th.

The White Star Meeting.—To devise order from chaos is always a thankless task, but shareholders, at last week's White Star Line meeting, would appear to have realised that patience was the most useful contribution they could make in the circumstances. Mr Walter Runciman showed that the company's assets consisted of holdings in the Oceanic Steam Navigation Co., Shaw, Savill and Albion Co., and the Australian Commonwealth Line, acquired from the Commonwealth Government in 1929, there being an undischarged liability in each case. The amount due on the purchase of the Oceanic shares was £2,350,000, payable in 1936, while a further £100,000 had been paid in connection with the Shaw, Savill and Albion shares, leaving £300,000 outstanding. A request to the Australian Government from the voting trustees for a moratorium in respect of the £165,000 which fell due last month was receiving consideration. With regard to the sum of £2,370,550, which represented the amount unpaid and in arrear on the company's ordinary share capital, the board had carefully considered the possibility of enforcing the calls, but they had come to the conclusion that for the present nothing could be gained by drastic action. In reply to a question, the chairman stated that 6 per cent. interest would be charged on the outstanding calls. Turning to the operating side of the company's affairs, Mr Runciman affirmed that the fleet of the Oceanic Company had been maintained in a state of efficiency. The "Britannic," which was completed during the year, had proved so successful as to justify the decision to proceed with the construction of a sister-ship, the "Georgic." The relative position of the White Star Line in the North Atlantic passenger trade had been maintained, though the emigration business had been adversely affected by the restrictions imposed by the Canadian and American authorities. At the same time, the cargo carried during the year showed a decline of no less than 230,000 tons, the principal decline being in the outward Australian trade, and there was no reason to suppose that a revival in the export trade was in sight.

Montague Burton.—The report to March 31st last shows a satisfactory increase of profits. After payment of the preference dividend, one-third of the sum standing to preliminary expenses, £57,693, is written off, leaving a balance of £274,964 to be carried forward. Last year nothing was written off preliminary expenses, and £168,024 was carried forward. No dividend has been paid on the ordinary shares, all of which are held by the directors and their friends. The earnings of these shares

have been retained in the business and have improved the liquidity of the company.

Year ended March 31.	1929.	1930.
Net profit	£ 282,471	£ 273,134
Preference dividend	114,447	108,500
Ordinary dividend	168,024	164,634
Earnings per share	8.4	8.2
Paid %	Nil	Nil
Increase or decrease in carry forward ...	...	+ 106,940

The company has now paid off its temporary overdraft, the necessary funds being raised by the mortgage of unencumbered properties. Affected by the mortgage of unencumbered properties, the company has felt the effect of the diminution of its purchasing power in several industrial areas, it has been less marked than in many businesses, and has been offset by the increasing custom of business and professional services. During last year the company opened twenty-six new shops, but it is not intended to expand any further in new shops, but it is trade has revived. As a result of this direction until properties previously owned by the company have been transferred to a subsidiary of which the entire share capital is held, the freehold and leasehold assets are up by £1,839,420 and now stand at £5,942,661. On the liabilities £1,839,420 and taken over from Key Estates, Ltd., amount side the loans and swell the total of loans secured by mortgage to £2,350,475. The company is both a trading concern and a real estate enterprise, an increasing income being derived from the letting of portions of its premises not required for its own business.

Unilever Share Position.—A statement issued by the board of Unilever, Limited, over the week-end, resolved a problem which had been troubling holders of the shares of Unilever, Limited, and Unilever N.V. The above shares of the gold standard and depreciation of sterling had created an anomalous position as regards the dividends of the two companies, the ordinary shares of the Dutch company, which were quoted only 1s. 3d. higher than those of the English company before the departure from gold, being 3s. 1½d. higher last Saturday. The directors' statement reminds shareholders that the two companies were formed upon the footing of equality of interests in the joint equities. So long, therefore, as the disparity in the exchange continues, the ordinary dividends of each company will be declared in Dutch guilders in such a way that the same amount of dividend will be paid on the same amount of ordinary shares in each company (the nominal being taken for this purpose, as the equivalent of £ sterling guilders), and in the case of the English company the dividend so declared will be paid to shareholders in sterling at the rate of exchange ruling between England and Holland on the day of declaration. Adequate provision has already been made for this contingency. The 7 per cent. preference share dividends of each company will be declared and paid in sterling and guilders respectively, at the rate of 7 per cent. fixed by the respective statutes of the companies.

Lautaro Nitrate and "Cosach."—Early in September a meeting of English and French shareholders of the Lautaro Nitrate Company, which is now one of the largest subsidiaries of "Cosach," the merger company for the Chilean nitrate industry, protested against what they described as the "grave injustice" of a levy of 60 per cent. on nitrate production as security for "Cosach" bond issues. It was declared that about 60 per cent. of the whole amount would, in fact, be contributed by the Lautaro Company. A statement in reply has been issued this week from the London office, insisting that the merger having been carried through with the consent of the necessary shareholding majorities of the constituent companies, no fundamental change in its conditions could now be made without the complete dissolution of "Cosach" and the setting up of a new concern. This, the present state of the industry, would be a hazardous proceeding. The statement further pointed out that

Lautaro, along with other producers, had been relieved of an export tax of 100 pesos (£2 10s.) per ton, while the appreciably lower bond service charge was payable, not on every ton of nitrate shipped, but only on a tonnage sufficient to meet the service charge. The statement did not deal with the contention that Lautaro was responsible for too heavy a share of the bond service. Whatever the merits of this contention, however, it would appear highly improbable that, at this stage, the bondholders of "Cosach" would be prepared to consider any modification of their security. Rumours have lately been current in Chile that the Government might dissolve "Cosach," but, according to a statement which leading members of the present Government and Opposition are reported to have made this week to a Press correspondent in Santiago, all that is contemplated is a number of minor changes in the company's constitution, following a resolution by the Chilean Chamber in August calling for revision of the Cosach Law. The question, however, may conceivably become a political issue at the next Presidential election.

Oil Stabilisation.—An important conference has been sitting at Tulsa, Oklahoma, representative not only of most of the American oil industry but of a fair proportion of the oil industry outside America. It has been trying to reach a world stabilisation scheme by enlisting the support of the Standard Oil, Royal Dutch-Shell and Burma Oil-Anglo-Persian groups which control the bulk of the production in South America and the East. The scheme, which has now been presented by the conference to the Secretary of Commerce, contained the following provisions:—The limitation of American production by international State compacts, the curtailment of foreign imports into the U.S.A. to 140,000 barrels daily, an absolute embargo on the imports into the U.S.A. of refined oils; the curtailment of production of American-owned foreign fields, and the limitation of foreign production by international treaty. It is understood that the Royal Dutch-Shell and Anglo-Persian and Burmah Oil are prepared to collaborate by restricting production in Burmah, the Dutch East Indies, Persia and Irak, but the difficulty is to obtain the consent of the independently-minded American companies operating in Venezuela to any scheme which forbids free entry for their oil into the United States market. Probably individual interests will upset this ambitious attempt at world stabilisation. An interesting announcement has been made by the big marketing companies in Great Britain, which shows that competing oil interests are ready to practise real co-operation in the face of a common danger. The Anglo-American (Standard Oil), Anglo-Persian, Burmah Oil, Mexican and Canadian Eagle and the Royal Dutch-Shell groups have agreed to "collaborate to the fullest extent in the United Kingdom" in view of the present exchange difficulties. They are to develop "ways and means to secure that this co-operation will afford the unhampered supply of requirements at the lowest possible costs." In other words, they are ready to pool supplies to avoid a rise in the price of petrol following the depreciation in the pound.

Sub Nigel.—The suggestion in last year's "Note" that increased dividends might be expected, has proved amply warranted by results, the total being 60 per cent. in place of 40 per cent. previously. This highly satisfactory result is the outcome of a number of favourable factors—expansion in average yield as well as in tonnage milled, with a substantial reduction in costs—the latter in face of the performance of a much larger development footage than before. Of last year's earnings, £101,240 was absorbed by capital outlay, while the Government's participation called for £79,260. In 1929-30 the sums were £91,650 and £11,880 respectively. At £46,870 the carry-forward shows a small reduction. We contrast the results of the past three years—

	1929.	1930.	1931.
Ore crushed tons	291,400	323,800	378,000
Yield per ton	76/-	69/10	74/9
Cost per ton	42/3	44/-	37/5
Profit per ton	33/9	25/10	37/4
Total working profit.....	£491,160	£418,760	£705,650
Dividends, per cent.....	50	40	60
Development footage ...	42,367	45,290	58,140
Ore reserves tons	891,000	965,000	1,206,000
Average value ... dwts.	18.2	18.0	17.3

Operations in the Lease area continued to give results as a whole much in excess of those in the remainder of the mine. The payable percentage was 50, as compared with 54.3; but the inch-dwts. figure at 716 in place of 474. The total of 604 for the whole mine compares with 510 inch-dwts. in 1929-30. The decrease in the value of the ore reserves is partly accounted for by an increase of four inches in the calculated stopping width to twenty-seven inches—an "economic average"—at which it may be regarded as approximately standardised. Moreover, the reduction "is more than counterbalanced by the improved underground and surface sorting." With an additional tube mill in operation, and a further saving in costs likely, "a material increase in profits can confidently be anticipated for the current year." Sub Nigel 10s. shares are quoted at 65s. showing a gross yield on last year's dividend of approximately 9 per cent.

Gold Bonds—A Correction.—In our leading article last week we included, in a list of foreign government bonds issued on a gold basis, Belgian 7 per cent. Stabilisation Loan of 1926. This was incorrect, as the interest is payable in sterling or in guilders at the current rate of exchange. We would take this opportunity of adding to the list of gold loans Roumanian Stabilisation and Development Loan Monopolies Institute 7 per cent. Guaranteed Sterling Bonds, and Poland 7 per cent. Sterling Bonds, both of which have the privilege of a fixed dollar rate of exchange.

CAPITAL ISSUES.

The virtual suspension of the normal working of the new issue market in London during the financial crisis can scarcely be regarded as at an end by virtue of this week's offer to the public of debentures on behalf of Savory and Moore, underwritten by Investment Registry. The company, which was formed in 1928 to take over a business of manufacturing retail chemists, established circa 1780, is a sound concern of established reputation. As the debenture stock, however, is covered only twice as to interest by recent profits, and twice as to principal by net assets (exclusive of trade marks, patents and goodwill), its backing is not over-generous. The high yield of slightly over 7½ per cent. would appear to take this factor into account.

Savory and Moore.—Issue of £185,000 7½ per cent. first mortgage debenture stock at 99½ per cent., redeemable on September 30, 1931, by means of a cumulative sinking fund commencing in 1932, which is to be applied annually in redemption by purchase at or below 102 per cent., or by drawings at 102. The company reserves the right to redeem the whole or any part of the stock on or after September 30, 1933, at 102 per cent. The company was formed in 1928 with the object of taking over the business of Savory and Moore, manufacturing and retail chemists. The directors estimate that the profit for this year should be at least twice the amount required to cover interest on the debenture stock.

REPORTS AND NOTICES.

MISCELLANEOUS.

IMPERIAL AND INTERNATIONAL COMMUNICATIONS, LTD.—Estimated traffic receipts for eight months ended August 31, 1930, and 1931:—

	1930.	1931.	Rise or Fall.
January	£ 519,485	£ 412,908	— 106,577
February	460,052	390,461	— 69,591
March	492,316	447,668	— 44,648
April	456,120	386,706	— 69,414
May	466,279	371,704	— 94,575
June	413,471	374,502	— 38,969
July	437,220	377,774	— 59,446
August	411,090	334,326*	— 76,764

Aggregate for 8 months—

January to August, 1930 to 1931

* The sum of £18,500 must be deducted from the message receipts for August, 1931, in making a comparison with August, 1930, owing to changed conditions of sharing traffic.
† In comparing aggregates, regard must be had to the notes issued with the traffic figures for March to August, 1931.

TOKYO ELECTRIC LIGHT COMPANY, LIMITED.—The return for August, 1931, is as follows: K.W. hours sold, 273,316,000; gross revenue, yen 8,236,000; sterling equivalent at par of exchange, £843,503; decrease over corresponding period last year, £63,806.

Buenos Ayres Great Southern Railway Company, Ltd.—In view of the depreciation of Argentine exchange, the uncertain outlook and the necessity for conserving the company's cash resources, regret that they are unable to recommend the payment of a final dividend on the ordinary stock for the year ended June 30, 1931, although the results of working would allow of a small final distribution, after meeting debenture interest, preference dividends and all other fixed charges against net revenue. The annual ordinary general meeting of the company has been fixed for October 28th, on which date warrants for the payment of dividends on the company's preference stocks will be posted.

Commercial Reports.

MARKET SUMMARY.

The outstanding feature of the past week has been the sharp decline in terms of gold in the value of the principal raw materials. This decline is partly ascribed to the general deterioration in trade and industry and to the expectation of a reduction in the demand for certain commodities through the decreased buying power of countries which suspended the gold standard. A further contributory cause is the large number of "distress" sales in the United States and other countries. The principal cereals were all quoted at lower prices than last week in the United States, and the Chicago quotation for "September" wheat at 44½ cents per bushel shows a fall of no less than 3½ cents on the week. The New York quotations for Brazilian coffee and cocoa on Wednesday were also lower than a week ago. Sugar is one of the few exceptions in recording a slight rise. The market in cotton has been dull and New Orleans Middling dropped from 6-23 cents per lb. last week to 5-70 cents on Wednesday last. In the absence of an improvement in demand rubber registered a new low level in New York. Among non-ferrous metals, tin and lead continued to decline and the market in copper was inactive. In this country price movements are mainly determined by exchange fluctuations and there is a continuous tendency to keep sterling prices in equilibrium with gold prices. Incidentally it should be noted that the price of commodities which are produced in the United Kingdom has not advanced in proportion to raw materials which have to be imported. Thus the quotations for coal are practically unaltered and there are already signs of an increasing demand from foreign buyers. The same holds good, though to a lesser extent, of iron and steel, and it is expected that imports of the latter materials will fall off considerably. Manufacturers generally have bought raw materials in large quantities, in the hope of an expansion in exports and in order to cover themselves against any further depreciation in the value of the £ in terms of gold.

THE COAL TRADE.

GLASGOW.—Business has been better during the past week, but to what extent this has been due to the fall in sterling and to seasonal influences it is difficult to say. There is, however, a brisker foreign enquiry and there is a confident feeling that business will be helped by the depreciation in the value of sterling. Some difficulty is, however, experienced in quoting prices, owing to the exchange fluctuations. Prices generally have an upward trend, with trebles and doubles strong spots: LANARKSHIRE.—Ell best, 14s. 3d.; splint best, 15s. 9d.; splint second, 14s. 3d.; navigation, 14s. 3d.; Hartley, 15s. 6d.; steam, 13s. 6d.; 15s.; navigation second, 14s. 6d.; trebles, 14s.; doubles, 13s.; 10s. 6d.; pearls, 9s. 9s. 3d.; trebles, 13s. 6d.; doubles, 13s.; singles, 10s.; 9s. 3d.; dross, 9s. FIFE.—Screened navigation, 17s.; first-class steam, 13s.; third-class steam, 11s. 6d.; trebles, 15s.; doubles, 13s. 6d.; singles, 10s. 6d.; pearls, 9s. 6d. LOTHIANS.—Prime steam, 10s. 9d.-11s.; secondary steam, 10s. 6d.; trebles, 14s.; doubles, 13s.-13s. 6d.; singles, 10s.; pearls, 9s. 6d. Ayrshire.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 14s.; doubles, 13s.; singles, 9s. 3d.; pearls, 9s. 3d.; dross, 9s.

SHEFFIELD.—Business in South Yorkshire continues inactive but expectations of an improvement in the export section are general. Best steams continue in request and are none too plentiful, the export price being firm at first f.o.b. The home industrial demand is as poor as ever, the call for house coal and small fuels, time of year, and there is a surplus of secondary and small fuels. Best ordinary house is quoted at 20s. 6d. to 22s. 6d. at pits. Blast furnace coke has changed hands at as low as 9s. 6d. at furnaces. Sales for industry are very poor, but there is an increasing demand for coke for central heating.

CARDIFF.—On the Cardiff coal market this week business has been in a large measure suspended, owing to the price uncertainty created by the suspension of the gold standard and the depreciation of the £ by the suspension of the gold standard and the depreciation of the £ in terms of foreign currencies. In the case of Germany, the fall in the exchange has cheapened British coals in terms of marks by about 20 per cent.; in the case of France by 11-1 per cent.; and in the case of Italy by about 14 per cent.; but the price of British coals shipped f.o.b. to Scandinavia shows very little change, compared with that in August, while in the case of the Argentine, the exchange is more favourable to this country than it was a month ago. Quotations for South Wales coals, however, remain unchanged on the basis of the existing minimum schedule, but while some collieries have shown a reluctance to enter into forward commitments pending more stabilised exchanges, others have been prepared to enter into contracts even over next year, on the basis of current quotations. There has been a little more activity in foreign inquiries and one or two orders which have been placed for October shipment are believed to have been diverted to Cardiff entirely by the fall in the value of the sterling; but this week there has been little, if any, expansion in the volume of trade at the docks of the Great Western Railway Company. Proposals are under consideration for the disposal of surplus stocks of small coals, but the Executive Committee of the Marketing Association reaffirmed this week its recent decision not to make any change in the schedule prices of these grades. The following are the current approximate quota-

tions:—Best Admiralties, 19s. 6d.-20s.; seconds, 18s. 9d.-19s. 4½d.; best drys, 18s. 6d.-18s. 9d.; Black Veins, 18s. 3d.-18s. 6d.; Western Valleys, 17s. 9d.-18s.; Eastern Valleys, 17s. 3d.-17s. 7½d.; best small steams, 13s. 6d.; coking smalls, 13s. 6d.-13s. 9d.; cargo smalls, 11s. 6d.-12s. 6d.; anthracite best large, 30s.-37s. 6d.; Red Vein large, 22s. 6d.-27s. 6d.; machine made cobbles, 40s.-45s.; French nuts, 43s.-46s.; stove nuts, 39s. 6d.-43s. 6d.; rubbly culm, 8s. 6d.-9s.; foundry coke, 30s.-36s. 6d.; patent fuel, 18s. 6d.-19s. 9d.; pitwood, ex ship, 26s.-26s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—There is a better feeling in connection with Cleveland iron, and a slight expansion took place in the volume of transactions. Official prices have been considered too high for some time past, and in consequence consumers have only purchased for immediate requirements, but with the advance in Continental prices owing to the variation in exchange rates, they have been anxious to make larger purchases, and have not found makers too easy to deal with. A comparatively important business was reported up to the end of last week, but it was not considered advisable to advance prices under all the circumstances, and on Tuesday the old figures were reaffirmed, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge 57s. f.o.b. or f.o.t. Further business was reported at these figures, and an early advance is considered as not altogether unlikely. Business has been most active in hematite iron, which is not surprising, seeing that the price had fallen to such a low level, and it is directly affected by the rise in the costs of imported ores. Makers and merchants seemed slow to realise the position. Up to Wednesday last they have been quite willing to accept 59s. 6d. for mixed numbers for fairly early delivery, but the following day a number of orders came forward both for home and export, and the price quickly jumped by stages to 63s. for mixed numbers and 63s. 6d. for No. 1. A large business in the aggregate was transacted, which was practically all for early delivery, as makers are now unwilling to sell far ahead. After Thursday, buying eased off a little, but odd lots were sold at further advances, and at Tuesday's market up to 65s. had been paid, which was makers' minimum price at the close. In the finished trades the tone is better on the advance in Continental steel prices, and a fair amount of new business is being booked. Prices for home, under the rebate scheme, are unchanged as in most of the other heavy lines, but local semis are 10s. to 15s. higher since the withdrawal of foreign competition. 24-gauge galvanised corrugated sheets are advanced to £10, and 24-gauge black sheets to £8 5s. For ore no prices are quoted, owing to the dislocation caused by fluctuations in the rates of exchange and increased freights. Consumers, however, have large stocks on hand, and important balances of old contracts still to take out, so that they do not need to make fresh purchases. Coke, although still plentiful, is inclined to stiffen in price, and medium blast-furnace qualities are now quoted at 15s. 6d. delivered consumers' works. The number of blast-furnaces in operation in the district remains at seventeen.

SHEFFIELD.—Enquiries are coming in sufficiently to indicate increased exports of steel, and a number of manufacturers are covering future requirements of hematite pig iron and Swedish iron and steel material. The import trade in Continental billets and sheet and triplate bars has come to an end for the present. The uncertainty of the exchanges also renders buying of ferro-alloys from Scandinavia impossible. The sellers will only contract on the condition for payment in Swedish and Norwegian currency at the date of shipment. The position of this important trade is profoundly modified by the abandonment of the gold standard by Scandinavian countries. Some ferro-alloys are being sold out of stocks in this country at advances of from 20 to 30 per cent. Fairly large stocks of Swedish iron and steel are held in this country. Prices of British hematite pig are rising. The prospects of an early general election are a further unsettling factor in trade.

ESTABLISHED at the most important commercial centres in South America and Portugal, the Bank of London & South America Ltd. is particularly well equipped to carry out modern banking business of every description.

GLASGOW.—Monday of this week was the Glasgow autumn holiday and steel plants in the West of Scotland were closed then and also on the preceding Saturday. The present uncertainty in regard to the political situation and the disturbance caused by the departure from the gold standard have combined to make business exceedingly difficult, especially in those branches which are partially dependent on foreign supplies for their raw material. Steelmakers do not report any improved demand, which is largely accounted for by the scarcity of shipbuilders' specifications. There is quite a considerable amount of repair work on hand at Clyde yards, but a continued lack of contracts for new vessels. Users of semis are pressing for delivery of material previously contracted for with Continental works and there is a poor demand for home semis. There is a good deal of business being done in thin black sheets for export and in both black and galvanised sheets for the home trade, and prices have been further advanced this week. There is also a somewhat better demand for tubes. Other branches remain quiet.

CARDIFF.—On the Swansea Metal Exchange on Tuesday inquiries were more active and the prices of tinplates were increased to 15s. 3d. to 15s. 6d. per basis box, compared with 13s. 6d. a week ago. Welsh steel bars, however, were unaltered at £4 12s. 6d. per ton, but there were no quotations for foreign bars and some doubts are entertained as to whether all deliveries on contracts will be affected in view of the fall in the sterling value of French and Belgian francs. Galvanised sheets are a shade firmer market at £9 15s. per ton.

OTHER METALS.

TIN.—In view of the progressive decline in the activity of the tin-using industries, the international situation of the metal continues to deteriorate. World prices in terms of gold were again lower during the past week. In New York the metal was quoted at 22½ cents per lb. on Wednesday, against 23½ cents per lb. a week ago and 26-80 cents at the beginning of September. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £122 17s. 6d. to £123 per ton, compares with £119 17s. 6d. to £120 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 30,376 tons, show a decrease of 377 tons on the week.

COPPER.—The international position of copper is no better than that of tin. In fact, output is only partially under control and stocks remain enormous. Prices in terms of gold are lower than they have been for many years. "Domestic" spot has again been quoted officially at 7 cents in New York, but transactions are reported at an even lower level. Wednesday's official closing price for "standard cash" in London in terms of sterling, at £33 7s. 6d. to £33 10s., compares with £32 7s. 6d. to £32 10s. a week ago. Stocks of refined copper in British official warehouses at

the end of last week, at 22,536 tons, show a decrease of 13 tons while stocks of rough copper, at 1,424 tons, increased by 225 tons.

LEAD.—Though New York prices remained unchanged at 4-4½ cents per lb., the demand for this metal has recently been a little better and prices have been firm. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £14 to £14 3s. 9d. per ton, compares with £13 5s. on the corresponding day last week.

SPELTER.—There has been a setback in the gold price of spelter during the week. In New York the metal was quoted at 3-65 cents per lb., against 3-70 cents per lb. on the corresponding day last week. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," at £12 17s. 6d. to £13 6s. 3d. per ton, compares with £12 12s. 6d. to £13 on the corresponding day last week.

OTHER NON-FERROUS METALS.—The sterling prices of other non-ferrous metals were higher this week in proportion to the depreciation of the £. Aluminium has been advanced from £85 per ton to £95 per ton on Friday last week. Nickel was quoted at £215-£220, against £197 10s.-£202 10s. a week ago, and foreign antimony was advanced from £22 10s.-£22 15s. to £25-£25 10s.

TEXTILES.

THE COTTON TRADE.—Liverpool.—The market during the last week has been very excited under the influence of the dollar exchange, and a very large business has been done. The crop of late has been doing exceptionally well, and weather has been ideal for picking. The South so far has not been a free seller, and the present price is not attractive to buyers in view of the great possibility that the coming season's consumption will be less than the production, and the carry-over into the next crop larger than ever. Spot sales for the week 24th to 30th (inclusive) are 108,000 bales, of which 41,700 bales are American, 3,500 Brazil, 5,200 Argentine, 13,500 Peru, 25,200 Egyptian, 6,350 African, 2,850 East Indian, 9,340 Russian, and 360 sundries. Imports for the same period are 13,297 bales, of which 2,673 bales are American, 2,060 Brazil, 510 Argentine, 4,561 Peruvian, 1,400 Egyptian, 1,671 African, 400 East Indian, and 22 sundries. Quotations, September 30th:—American Middling, 4-46; Egyptian Sakel, 6-95; Uppers, 5-21; Brazil Fair, 4-44; Peru G.F. Smooth, 4-84; West African Middling, 4-44, and East African G.F., 5-34.

Manchester.—The market during the past week has been more subdued, and there is no doubt that the enthusiasm of traders has been somewhat damped by the sharp fall which has taken place in raw cotton prices since last Thursday. The burst of activity last week caused a wave of optimism to spread over Lancashire, and with many operators caught short there was a rush to cover, not only in raw cotton, but also in yarn. The turnover in piece goods has not been equal to the sales in yarn, and some spinners are now rather nervous as to what will be the attitude of users in view of the fact that cotton has suffered a substantial decline from the high point touched following the suspension of the gold standard. In certain respects the turnover in cloth has been disappointing. In this connection the outstanding feature has been that India has not been stimulated to act more freely. Traders have also been depressed by the increased duties on cotton and rayon cloths, as announced in the India Budget proposals on Tuesday. There has, however, been a large volume of trade for China with considerable support from Singapore and Java. Several other outlets, including Egypt, South America, and the Continent, have provided a bigger demand. Decidedly more activity has shown itself in home trade fabrics. During the past few days, however, less business has been done, many buyers having satisfied their requirements for the time being. Big orders have been booked in American and Egyptian yarns. Prices have been advanced, and at the beginning of the week, when cotton was falling, there was not a corresponding decline in yarn prices. Spinners generally are more favourably situated than has been the case for months back.

THE WOOL TRADE.—Bradford.—Some very encouraging developments have been seen in the wool market, writes our correspondent. Prices in Australia and London have made a distinct recovery, and there is every probability of the advance being maintained. Though there has been a rise of 6d. per lb. in merino tops, wool has been selling in Sydney on a combed basis delivered Bradford, which is still higher than the figure which this advance represents. This improvement in wool has, however, no element of the fictitious about it. It is a direct result of a recovery in confidence brought about by the suspension of the gold standard and the placing of a big volume of new business in tops and yarns. The lead was given by the home trade, and since then Continental buyers have followed the pace, with the result that good greasy combing,

DAILY—TWO PENCE.

merinos are now 5 to 7½ per cent. above the close of the July series and there is a distinct improvement in scourings. Faulty wools have also met with a greatly-improved demand at about 10 per cent. more than was paid at the opening; fine crossbreds are 10 per cent. above the July level, and medium 5 per cent. New Zealand slips have recovered all the ground lost at the opening, and are now fully 5 per cent. dearer. Second-hand wools are meeting with a much better reception, though a profit is not yet realisable on some of the dearer purchases. The decision to extend the sales two days is indicative of the changed attitude of buyers, and of the improvement in prices being sufficient to induce owners to offer their wools. Though business is quieter in Bradford, quotations for all qualities of tops are firm. Even to-day's prices of 26d. for warp 64's and 1s. for 46's carded are reasonable enough, in view of the altered manufacturing outlook to encourage further new business. Anticipations are entertained in some quarters of the upward movement continuing until 64's tops reach 2s. 6d., but at the moment there is no desire to force the pace. Spinners have been able to realise better prices for both weaving and hosiery yarns, and there has been a revival of interest in piece goods on export account.

THE JUTE TRADE.—Dundee. — A welcome change for the better has taken place in the jute industry. Business in cloth and yarns has been brisk and spinners and manufacturers have sold their production for several months ahead. There has not been much speculative buying and it is to be hoped that consumers will take delivery as the material is made. Formerly, prices of all commodities were very low, and there has been a rush to purchase at the bottom prices. Many have been disappointed and have had to pay much higher terms, as both spinners and manufacturers have taken the first opportunity to raise values of yarns and cloth to a more economical level. Already a proportion of the standing looms and spindles have been restarted to cope with the larger orders received and the outlook for the jute industry is ever so much brighter than it has been for many months past. Inquiries are still pouring in for all kinds of yarns and cloth, including many from the Continent and elsewhere, but unfortunately Canada and America have been notably quiet as prospective buyers. Last week, raw jute rose about £4 per ton all round owing to heavy buying by the Calcutta mills and those countries which were favoured by the drop in the Exchange. The fibre has quietened down for the moment, but it may only be a pause before rising to a higher level. It will be remembered that the supply of jute is none too plentiful and if trade were to return to normal higher prices might be expected. Good First Marks are now up to £22 10s. and Lightnings have been sold at £21, September/October. Buyers have paid up to £19 5s. for the full group of Daisee assortment and £20 for single marks, while Tossa assortment is offered at £20 5s. for the full group and £21 paid for single mark, October/November. Prices of jute yarns are all advanced and a considerable business has been done. Common 8-lb. cops have been sold at from 1s. 10d. up to 2s. 2d., and now spinners are naming 2s. 3d., with spools quoted 1d. more. Twist is dearer at 3½d. to 4d. for 3-ply 8-lb., and sacking yarns have been sold at 2½d. for 24-lb. weight and 3½d. for 8-lb. chains. Rove has been rushed up to £22 paid for 48-lb. and £19 for 200-lb., while the finer yarns are very firm at 3s. 1d. for second quality 8-lb. Rio warp, 2s. 9d. for third and 2s. 6d. for fourth. A large business has been done in carpet yarns at from 3½d. for 14-lb. warp. Manufacturers have been unable to cope with the inquiries which have been made for jute cloth, and they are reluctant to quote owing to the uncertainty of the situation. For 10½-oz. 40-in. 3½d. has been paid and 2½d. is the rate for 8-oz. A really good business has been done and prices should be maintained for some time to come. The home trade has bought largely of linoleum hessians, but America has so far shown little interest. Heavy goods are all dearer and a better demand is experienced. Calcutta goods have improved in value, hessians to the extent of

2s. to 2s. 6d. and heavy goods about 6s. during the past ten days, owing to increased demand. A large business has been transacted on spot here at a steady advance in prices.

THE GRAIN MARKETS.

WHEAT.—The steadiness which has characterised the principal wheat markets during recent weeks has again given way to a downward movement in prices. In Chicago, "September" wheat was quoted at 44½ cents per bushel on Wednesday, against 47½ cents per bushel on the corresponding date last week. Factors making for the renewed decline are the general stagnation of business, a temporary decline in the demand for "cash" wheat, and reports that this year's Russian crop will be equal to the "bumper" crop of 1930. The fall in prices might have been even more pronounced but for the relatively small volume of wheat coming on the markets in North America and the absence of selling pressure from Russia. Reports of the condition of the crops of Argentina and Australia are favourable, but it must be remembered that in both cases the acreage sown is much smaller than last year. A forecast of the probable yield of the Australian crop at 170,000,000 bushels shows a reduction of 38,000,000 bushels as compared with last year. In view of the size of visible supplies, a definite upward movement in the near future is improbable. According to Mr G. Broomhall, the world's visible supplies of wheat and flour in terms of wheat on September 1st amounted to 500,000,000 bushels, against 469,000,000 bushels on the corresponding date in 1930, 435,000,000 bushels in 1929, and 232,000,000 bushels in 1928. After a period of speculative activity in the wheat markets of this country last week, sterling prices have adjusted themselves to world prices, and business has been generally quiet this week. Quotations, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 28s. 6d. per 496 lbs., as compared with 27s. 6d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 26s. 9d., against 25s. 9d.; No. 3 Northern Manitoba, Atlantic, ex ship, 25s., against 24s. 6d.; Russian, on sample, 22s. 6d. to 27s., against 20s. 6d. to 25s.; Australian, ex ship, 25s. 6d., against 23s. 6d. a week ago.

WHEAT FLOUR.—International flour prices declined in proportion to the fall in wheat prices. In this country there has been an expansion of buying in view of the rise in prices. Quotations of British milled flour, though higher than last week, are still below world prices. North American shipments, at 202,000 sacks, show a decrease of 6,000 sacks as compared with the previous week. Of this total, 91,000 sacks were consigned to Europe. Quotations Wednesday: Straight run, delivered country, 22s. per sack of 280 lbs., as compared with 21s. last week; delivered London, 21s., against 20s. Manitoba patents, ex store, 25s. to 27s., against 22s. 6d. to 25s. 6d., and Australian, ex store, 18s. 6d. to 19s., against 17s. 6d. a week ago.

BARLEY.—The sterling quotations for barley have advanced sharply this week and business in this country was brisk. The British crop is now being harvested under favourable weather conditions. Prices in terms of gold are scarcely changed on the week and the large supplies of maize prevent any definite advance in quotations. Quotations, Wednesday: "English feeding," f.o.r., per 448 lbs., 27s., as compared with 20s. to 24s.

OATS.—There has been no improvement in the demand for oats and in view of the heavy supplies, particularly in North and South America, prices in terms of gold declined further. On Wednesday, "September" oats were quoted at 20 cents in Chicago, against 21½ cents a week ago. Quotations, Wednesday: "River Plate," landed, 17s. 6d. per 320 lbs., as compared with 15s. 9d. last week; "River Plate," ex ship, 16s. to 16s. 6d., against 14s. 9d.; "Chilean White," landed, 24s. to 25s., against 23s. to 24s.

MAIZE.—Trading in maize has been active, but shipments from the Argentine are too large to be readily absorbed. Consequently, prices in terms of gold declined during the week. On Wednesday last, "September" maize was quoted at 36½ cents, against 39½ cents a week ago. Sterling prices showed a sharp upward movement, which eliminated the discrepancy in terms of gold between British and International prices. Quotations: "Plate," landed, 17s. 3d. per 480 lbs., as compared with 16s. 3d. last week; "Plate," ex ship, 15s. 6d., as against 14s. 6d. to 15s.; "Plate," September/October, new, 15s. 3d., as against 14s. 6d. Yellow maize meal, ex wharf, was quoted £5 5s. per ton, against £5 a week ago.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Oct. 1, 1930.	Jan. 2, 1931.	Sept. 16, 1931.	Sept. 23, 1931.	Sept. 30, 1931.
Winnipeg (No. 1 Manitoba) Cents per 60 lb.	148½	74½	56½	53	54½	53½
Chicago (No. 2 Winter) Cents per 60 lb.	130½	80½	79½	49½	48½	44½

The visible supply of wheat in Canada, at 51,238,000 bushels, shows an increase on the week of 4,123,000 bushels. Supplies a year ago stood at 651,658,940,000 bushels.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

OTHER FOODS.

SUGAR.—There has been a slight improvement in the international sugar position early this week, and prices in New York showed a slight rise as compared with last week. The outstanding feature in this country is the heavy demand for refined sugar by distributors. Although prices of "British refined" were advanced 9d. per cwt. the demand could not be satisfied, and sales had to be rationed each day. Raw sugar prices in terms of sterling rose sharply this week in proportion to the fall in the gold value of the £. Wednesday's sales of "raws" include "December delivery" at 6s. 5½d. to 6s. 6½d. per cwt., against 6s. 1½d. to 6s. 3d., and "March," 1932, at 6s. 8½d. to 6s. 9½d., against 6s. 4½d. to 6s. 6½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	179	1,082	1,180	1,113	18,980	28,587
Liverpool.....	3,900	10,604	14,858	14,368	58,076	86,034
Total.....	4,079	11,746	16,038	15,481	77,056	114,621
Last week	21,738	25,512	16,148	16,015	89,015	118,356

COFFEE.—This week's auctions of coffee were characterised by keen competition at rising sterling prices. Last week's movements of coffee in London were as follows: Brazilian, landed, 94; delivered for home consumption, 127 bags; exported, 67; stocks, 2,173 bags, against 1,148 bags last year. Central American, landed, 96 packages; delivered for home consumption, 1,584; exported, 1,423; stocks, 85,625 packages, against 59,591 a year ago. Other kinds, landed, 471 packages; delivered for home consumption, 2,468; exported, 1,386; stocks, 71,072 packages, against 71,117 a year ago.

COCOA.—Cocoa has been in good demand at rising sterling prices. In terms of gold, however, the commodity has been cheaper and Wednesday's quotation in New York at 4.26 cents shows a fall of 0.36 cents on the week. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, November-January, at 24s. 9d. per cwt. f.o.b. London contract, shows a rise of 3s. 3d. Last week's movements of cocoa in London were as follows: Landed, 738 bags; delivered for home consumption, 4,605 bags; exported, 742 bags; stocks, 190,768 bags, as against 201,858 last year.

TEA.—The quantities catalogued for this week's auction comprised 66,975 packages of Indian, 23,326 packages of Ceylon, and 11,871 packages of Java and Sumatra tea. The auctions on Monday and Tuesday showed keen competition among buyers for nearly all grades of tea, and sterling prices, which did not advance last week in proportion to the depreciation of the £, were considerably higher. A slight reaction became noticeable on Wednesday's auction of Indian tea. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	AVERAGE PRICE PER LB.					
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyassa-land.
Sept. 25, 1930	s. d. 1 5.10	s. d. 1 0.91	s. d. 1 7.50	s. d. 0 11.04	s. d. 0 11.38	s. d. Nil
Sept. 3, 1931	1 3.54	0 8.07	1 3.35	0 6.60	0 6.07	0 5.74
Sept. 11 "	1 3.66	0 7.92	1 3.70	0 6.96	0 6.09	0 6.00
Sept. 17 "	1 2.39	0 8.23	1 4.23	0 7.84	0 6.47	0 6.55
Sept. 24 "	1 3.66	0 9.27	1 4.74	0 8.24	0 7.32	0 5.85

RICE.—The market in rice has been steady and sterling prices, which remained unchanged last week, advanced slightly in view of the lower value of the £ in terms of gold. Wednesday's quotation for Burma No. 2, cleaned, October-November, in singles to the Continent and to the United Kingdom, at 9s. per cwt., shows a rise of 10½d. as compared with last week. Movements in London during the past week were as follows: Landed, 19 tons; delivered, 50 tons; stocks, 1,134 tons, as against 2,507 tons last year.

POTATOES.—There have been abundant supplies of potatoes at the principal markets, but the demand was again heavy and prices remained firm. At the Borough Market, "Best King Edward" sold at from 7s. to 7s. 6d. per cwt., as compared with 7s. to 7s. 6d. a week ago.

SPICES.—The market in spices has generally been steady and sterling prices were slightly higher than a week ago. Wednesday's quotation for "Black Singapore," at 6½d. per lb., shows a rise of ½d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 14 tons; delivered, 15 tons; stocks, 590 tons, against 786 tons last year. White, landed, 91 tons; delivered, 82 tons; stocks, 525 tons, against

MEAT.—Sterling prices of meat at the Smithfield market have been scarcely changed on the week. Since the suspension of the "gold standard" in this country, prices have been rather lower than before and an upward tendency has as yet scarcely been noticeable. It must, of course, be remembered that stocks of foreign meat in this country are considerable, and that the United Kingdom is the principal market for foreign meat. On Wednesday Argentine beef (chilled, hind quarters) was sold at 4s. 2d. to 4s. 6d. per 8 lbs., against 3s. 10d. to 4s. 6d. on the corresponding day last week, whole New Zealand frozen mutton realised 3s. 6d. to 4s. 2d., as against 3s. 6d. to 4s. 2d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,857 tons, as compared with 8,319 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.6 per cent. of the supplies, as against 80.9 per cent. a year ago; and imported mutton, mainly New Zealand, formed 69.6 per cent. of the total supply, as against 74.2 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—After a burst of activity in the closing days of last week much quieter conditions prevail. Business more than usual is influenced by the rates of exchange. Plate linseed was in active demand and up to £9 2s. 6d. was paid for old crop, October shipment, and £9 for new, January-February, but prices have receded in sympathy with the exchange to £8 10s. for all positions. Indian linseed is quiet, £10 15s. being asked for Calcutta, September-October, to Hull. Supplies of linseed are ample, and favourable reports of the growing crop in Argentina continue to come to hand. The quantity on passage to Europe is 127,700 tons, or 4,400 tons more than last week, and there is a substantial balance yet to be shipped. Cottonseed advanced sharply on advices from Alexandria, and up to £7 2s. 6d. was paid for new crop, October loading, current value being around £6 12s. 6d. A good trade has been done in most vegetable oils at higher figures. Linseed oil also engaged much speculative attention, and for raw oil on spot ex Hull £18 was paid, with later positions at a rising premium. This week, however, trade has been less active, Wednesday's spot quotations being £17 15s. spot and £16 10s. October-December. Cotton oil is firmer, and up to £23 was paid for crude Egyptian ex Hull, and this remains about present value. Oilcakes and meals are in improved demand and dearer.

HIDE, LEATHER AND ALLIED TRADES.—There has been a considerable change in both the English and foreign markets for hides, and prices are now established on a higher level. At Manchester this week all ox and heifers over 60 lbs. made ½d. per lb.

more money, while lighter weights were $\frac{3}{4}$ d. per lb. up. Cows were also dearer to the extent of from $\frac{3}{4}$ d. to $\frac{1}{2}$ d. per lb., while bulls made $\frac{1}{4}$ d. per lb. more money. The calfskins market was distinctly firmer than for some weeks past, advances of up to $\frac{1}{4}$ d. per lb. being recorded. Compared with last week, sellers of imported hides now seem prepared to enter into business with rather more freedom, and asking prices for practically all descriptions are about one penny above the rates ruling a fortnight ago. In the South American market sales of Argentine ox have been made on the basis of 5d., with $\frac{1}{4}$ d. asked for second ox. Dry South American hides have also sold with more freedom, M.V. Americans making 5 $\frac{1}{2}$ d., Inservibles 3 $\frac{1}{2}$ d., and B.A. Americans 5 $\frac{1}{2}$ d. The market for African hides is now operating a little better, sales of Capes having been made at 6 $\frac{1}{2}$ d. and 5 $\frac{1}{2}$ d. for first and second drys, with 5 $\frac{1}{2}$ d. and 4 $\frac{1}{2}$ d. asked for drysalted. In view of the higher prices now being asked for imported sole leather, the home-produced article has come in for a greater amount of attention than has been experienced for many months past. In English and wet-salted hides the market has been quite active and the considerable sales made have covered light, medium and heavy weights, the larger part of the inquiry being centred on the two former. Dry hide bends for shoe manufacturers' needs also have been in greater request, and here again the call in varying degree has been for all weights. Good business has also been forthcoming on account of offal; both bellies and shoulders in satisfactory quantities have changed hands, orders covering rough as well as pinned descriptions. Producers and distributors of upper leathers also report a much more active market, with prices showing advances for most sorts. Anxiety to cover requirements is most noticeable on such lines as box and willow calf, patent and glacié kid, but at the same time there has been more interest taken in the position of reptile leathers and other grades of the fancy type. The curried upper leather section also has found business more brisk, and although the development of trade has not been equal to that for other descriptions, orders coming to hand are usually for larger quantities.

RUBBER.—There has been no improvement in the international statistical position of rubber. The price of smoked sheet in New

York, at 4 $\frac{1}{2}$ cents per lb., shows a decline of $\frac{1}{4}$ cent. on the week. The market in this country has been active, which is, however, the result of fluctuations in the exchange rather than of an expansion in consumption. Wednesday's official closing price for standard ribbed smoked sheet in London at 2 $\frac{1}{2}$ d. per lb., shows a fall of $\frac{1}{4}$ d. as compared with the corresponding day last week. In forward positions, business has been done at 2 $\frac{1}{2}$ d. for October, against 2 $\frac{1}{2}$ d. to 2 $\frac{3}{4}$ d.; and at 2 $\frac{1}{2}$ d. to 3d. for January-March, 1932, as against 2 $\frac{1}{2}$ d. to 3d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,163 tons; delivered, 2,401 tons; stocks at the end of last week, at 134,834 tons, show a decrease of 1,238 tons, as compared with the preceding week.

THE MONEY MARKET.

THE payment of the 3 $\frac{1}{4}$ per cent. Conversion Loan dividend on October 1st made money much easier, and this was at once made clear by the result of last week's Treasury bill issue. On September 25th, when admittedly conditions had still to adjust themselves, only £34,630,000 of the £40,000,000 of Treasury bills on offer were allotted, and, even so, the average rate was £5 12s. 8.37d. per cent.

On October 2nd the full £40,000,000 of bills on offer were allotted, and the rate eased to £5 11s. 0.07d. per cent. On Saturday there was the same superfluity of funds as used to be apparent in more normal times, and new money was finally offered down to 2½ per cent. This week money was again easy, as little calling by the clearing banks was in evidence, and 4-3½ per cent. was the ruling rate for new money. By Wednesday there were signs that supplies of funds were beginning to contract, but even so the rate remained unchanged, 4 per cent. being charged for renewals outside the clearing banks during the whole of the week.

This week's Bank return illustrates the extent to which money has lately been available, for it shows that bankers' deposits had expanded by £16.2 millions to the extremely high figure of £78.8 millions. The principal explanation of this big increase is the Conversion Loan dividend payment, reflected in the contraction of £19.5 millions in public deposits, but this is not the whole explanation, for on previous occasions when this payment has been made its effect has not been to supply the market so liberally with funds. A common market theory is that many of the Treasury bills issued on September 25th, and paid for from September 28th to October 3rd, were taken by the Bank, with the result that last week, the market was receiving the proceeds of maturing bills and had comparatively few new bills to pay for. This theory, however, finds no definite support in the Bank return, which shows a contraction in Government securities since a week ago, and practically no change either way over the past fortnight. Last week witnessed a further increase of £2.1 millions in the note circulation, but this is hardly exceptional for the time of year.

	Sept. 17, 1931.	Sept. 24, 1931.	Oct. 1, 1931.	Oct. 8, 1931.	Previous Rate and Date Changed.
Bank Rate	4½	6	6	6	4½ (Sept. 21, '31)
Banks' Deposit Rate..	2½	4	4	4	2½ (Sept. 21, '31)
Discount / Call	2½	4	4	4	2½ (Sept. 21, '31)
Houses / Notice	2½	4½	4½	4½	2½ (Sept. 21, '31)
Market rate (3 months' bills)	4½-5	5½	5½-6	5½-6	...

The discount market has been inactive, and many brokers are running narrow books, and so are needing less money than usual. At the same time there has been a fair demand for short bills and "hot" Treasuries, and these rates have tended to fall away. On Thursday, October and November bills were quoted at 4½ per cent., and December at 4½ per cent. Notwithstanding some reported sales by the Bank, which are believed to explain partially the slight drying-up of funds as the week progressed, the rate on hot Treasuries has fallen from 5½ to 5½ per cent. Three months' bank bills were quoted over the wide range of 5½-6 per cent., the rate depending partly on the names on the bill; but some special buying was reported at 5½-6 per cent. There has been practically no foreign buying of bills, and this has narrowed the outlet for commercial bills to one or two quarters. Nor is there any sign of any big return of foreign funds to London, though certain small sums have reached here this week.

Since the suspension of the gold standard, no Cape gold has been sold in the London market, and £2,114,000 has now accumulated and is lodged in London under the ownership of the South African mines. A further £1,153,000 is due next week, but the following week an insignificant amount is coming, and it is possible that with the suspension of the gold standard in London, the South African Government is deciding to mint the gold at Pretoria. This, however, is still surmise, and, in the meantime, bar gold is quoted nominally at a premium corresponding to the depreciation of sterling. One theory is that it is thought undesirable for sales to take place until it is known whether or not the proceeds of the sale will be thrown on the exchange market; but here, again, this suggestion must be accepted with great reserve. It is also

possible that those responsible have still to adjust conditions to the new situation.

The forward exchange market is now beginning to develop, and certain rates are quoted in a succeeding note. Inquiries show that, though genuine traders should experience no great difficulty in covering moderate needs, the market is still somewhat narrow. The official restrictions upon foreign exchange purchases are one reason, but another is that dealers are showing some reluctance to fill their books too far or too exclusively with certain names. Thus business has still to broaden out before the market another is that dealers are showing some reluctance to fill can be called either free or active, as indeed is proved by the wide margins in the rates now current.

In New York call money up to Thursday remained at 1½ per cent., while time money was a nominal 2½ per cent., with 3 per cent. charged for six months' money. Commercial paper hardened during the week, the rate for prime names rising from 2 to 2½ per cent. Open-market discount rates were unchanged, with 1½-2 per cent. quoted for 90-day bank bills. After the close of business on October 8th the New York Federal Reserve Bank announced that its re-discount rate was raised from 1½ per cent. to 2½ per cent. Mr Hoover's statement of October 6th, discussed in a later page, had a good effect, and the proposal for a \$500,000,000 bank pool and his announcement that international debts would be discussed with M. Laval on his visit to Washington were particularly welcome.

Sterling opened the week strongly against all the principal currencies, but reacted sharply later and, after some signs of recovery, finally became erratic. The New York rate opened at 3.91, then rose to 3.97, next fell to 3.76, and finally recovered to 3.83. Montreal was at 4.33. Paris, after touching 100½ and 95½, went to 97½. Brussels remained at about last week's levels on balance at 27½, while Milan gained 2½ to 3 points at 74½. Madrid was stronger at 42½, and Amsterdam was very firm at 9.50, after touching 9.47½. Berlin showed little change, and was a weak market at 16½. Switzerland remained firm at 19½. The Scandinavian currencies were comparatively steady, Stockholm being quoted at 16½ and Oslo and Copenhagen at 17½. The South American exchanges were weak and irregular, but quotations were more or less nominal. Rio, on balance, showed little change at 3½d., but Buenos Aires fell considerably to 29½d. Montevideo was also weak at 21d. In the Far East the rupee was firm at 1s. 5½d., and the yen was decidedly better at 2s. 6½d. Forward quotations were once more obtainable for a few currencies, but only between rather wide margins. New York, one and three months, stood either side of par. Paris, one month, ranged between par and ¼ franc premium, and three months between par and one franc premium. Brussels was at par to ½ belga, and par to one belga premium for the two periods respectively. Milan was unquotable. Madrid, for one month, stood at par to ½ peseta discount, and for three months at par to 2½ pesetas discount. Amsterdam was at par to 5 cents discount for one month's delivery, and at par to 10 cents discount for three months. Switzerland ranged between par and ½ franc premium for both periods. Silver prices largely followed the dollar exchange, cash rising by 1½d. to 16½d. and forward by ¾ to 17d., after both had been higher. The China silver exchanges rose in sympathy, Hong Kong from 1s. 2d. to 1s. 3d., and Shanghai from 1s. 6½d. to 1s. 7½d.

BANKING SUPPLEMENT.

With this issue is published the Economist Autumn Banking Supplement. It contains an analysis of some banking aspects of the British Crisis, and a retrospect of the Macmillan report. The banking situation in the United States, France, Germany, Central Europe and the Dominions is also reviewed, with special reference to the world financial crisis.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

THE UNWANTED ELECTION.

ALL efforts to avoid an election have failed. Parliament has been dissolved, and on October 27th the electorate is to instal a new House of Commons. After two years of a Government which claimed to have a policy, but enjoyed no majority, followed by five weeks of a Government which professed to have a short-term programme, but no long-term mandate, the constituencies are to be asked to give a mandatory majority to a Government whose head disavows either a distinctive policy or a definite programme. The position is bewildering, and if it be true that the world is mad these days, then this election is well in tune with the temper of the times. We abate no jot of our repeated contention that to plunge the country into confusion at this critical phase of British and world affairs is a blunder of the first order, for which history must be left to apportion the blame among the political leaders. The great issues of the day are such that they can be decided only in the council chamber by cool brains, not by heated debate upon a thousand platforms. Moreover, we hold more strongly than ever that the election was unnecessary and could have been avoided. Does not the Prime Minister's manifesto itself prove it? The only factor which threatened the Government with disintegration was the Conservative Party's propagation of the view that their leaders could not remain in office without power to introduce a tariff policy. The programme on which Mr MacDonald appeals to the country gives tariffs a bare mention among a host of possibilities. A Government returned on the strength of his manifesto will clearly have no shadow of a mandate for embarking upon the high tariff policy which commends itself to so large a section of his Conservative followers, or, indeed, to fasten any sort of tariff policy permanently on the country. If it is possible for Mr. MacDonald and his Conservative and Liberal colleagues to fight an election upon a programme too vague either to satisfy or to repel any section, why was it impossible for the Cabinet to hold together and show a firm front to the world upon great questions, on which there is no difference of opinion, until calmer times are reached? That is a question that jumps to the mind; and there is no answer.

But it is of little use to speculate upon what might have been. The election is here, and the country has got to make the best of it somehow, although to derive sound judgment out of the medley of conflicting unrealities is a task that will test to the utmost the political sense of the British people. Mr MacDonald took the initiative in issuing his election manifesto. It is an appeal for a blank cheque. "Steps of the utmost importance nationally and internationally must be taken to secure stability. . . . These are times of exceptional urgency and exceptional conditions, which demand exceptional treatment. As it is impossible to foresee in the changing conditions of to-day what may arise, no one can set out a programme of detail on which specific pledges can be given." In so far as policies definite or possible are hinted at, there is much that any party would endorse, and also gleams of hope for partisans of every camp. Even Mr Henderson cannot quarrel with the intention to pursue "a monetary policy which will establish sterling in confidence and authority," or the attempt to reach "international agreements which will remove some of the most fruitful causes of the economic misfortunes—like war debts and reparations—from which the whole world now suffers so grievously." Again, that "the Budget must not be allowed to slip into deficits" is a tenet undisputed by any section. There will be no dissent from these vague—if pious—pronouncements.

But what of the sops to Cerberus? "The possibility of home and Imperial development in all its aspects must be studied." Is that a double-baited hook to tempt both the Press Lords and the wizard of Churt? "The Government must be free to consider every proposal likely to help, such as tariffs, expansion of exports and contrac-

tion of imports, commercial treaties and mutual economic arrangements with the Dominions." The net is wide enough to contain anyone from Mr Runciman, with his advocacy of luxury import control, to Lord Beaverbrook's Empire Crusaders. More intriguing still are the statements that "everything that is possible will be done to meet hardships," and that the Government "must watch how the devaluation of money and the economies which had to be made to balance the Budget affect the lives of our people." Can that be read as an olive branch to official labour on the question of the cut in the dole?

We have posed many questions. They cannot be answered fully until the manifestoes of all the leaders are issued and until the electoral campaign develops in the Press and on the platform. We can only recall at the present juncture that the Army which Mr MacDonald leads into battle is composed of incongruous battalions of varying political colour and very divergent battle cries of their own. Behind him will march Mr Baldwin and the official Conservatives, whose manifesto first speaks guardedly of tariff possibilities, and then advocates agricultural protection extending to quotas for food imports; the high tariff Conservatives as typified by Mr Amery; Lord Beaverbrook with his revival of a policy of Empire Free Trade, which the Dominion Premiers at the last Imperial Conference scotched, if they did not kill; Lord Rothermere with his shaded variation of Imperial Protection; the MacDonald Labour candidates repeating their leader's appeal for a "free hand"; the Liberal Ministerialists with a similar appeal, but with the emphasis laid on Free Trade; the Liberal group formed by Sir John Simon, with "tariffs" of an entirely indefinite description nailed to the mast. What will the voter make of the infinite variety of interpretations which these various chieftains and their followers will place upon the national appeal of their Commander-in-Chief?

Nor will the opposing hosts present a united front. Mr Henderson and the official Labour Party will preach Free Trade, the gradual substitution of Socialism for a sick and battered capitalist system, the maintenance of social standards, reversal of "cuts," but no inflation and a balanced Budget. On one flank will be the Independent Labour Party crying for the moon of "Socialism in Our Time"; on the other, Sir Oswald Mosley and his small group pushing a doctrine indistinguishable from Fascism; and, behind, a small but motley company of Co-operatives, Independents and Communists. Inevitably the babel of voices will be deafening and bewildering. There is no clear-cut issue of policy. If an attempt be made to raise one in the form of Socialism *versus* Capitalism the issue is entirely unreal and out of date. If Individualism means the non-interference of the State it has long ago been buried. No Government of pure Socialistic colour could impose more drastic interference with the individual trader than that which is sanctioned by the Foodstuffs (Prevention of Exploitation) Act—a measure introduced last week by a Conservative President of the Board of Trade, which prescribes prison or penalties of £500 for any trader who charges for his foodstuffs a price regarded as excessive by a departmental tribunal.

It is this unreality that makes this election so extremely dangerous and unfortunate. While the financial and economic tempest still rages, and the minds of Ministers, public and Press should be concentrated solely upon grave and fundamental problems, the whole country is to be plunged into wordy warfare on false issues, inconsequences, and irrelevant, though bitter, controversies. It is a profound, and grievous pity. What may come of it, as Mr Pepys would say, God knows. To those who are responsible for fighting and guiding the course of this election we would appeal to remember that the littlenesses of the parish pump, which are often

allowed to loom so large in the heat and fury of the hustings, are of less account than the dust, compared with the great national problems that confront us; and to remember, too, that even Britain's difficulties are only a small part of vast world problems which still await the constructive attention of statesmanship. If they will all realise that the true gravity of the times does not permit of the angry ventilation of party trivialities, the damage done by the election may be minimised. And to our readers abroad, in whose ears the noise of this mad battle will be magnified, we should say this: It is not as bad as it sounds. That we are fighting instead of standing together in this crisis is deplorable; that we are suspending urgent tasks for three weeks of inconsistent debate is folly. But no catastrophe is threatened. There is no considerable party in the State that does not profess the policy of peace and disarmament; of international settlement of debts, reparations and tariffs; and at home a balanced Budget and the avoidance of inflation. The most likely outcome is a House of Commons of very much the same political complexion as that which has just been dissolved. In any case, whatever the confusion of the contest, whatever the figures of the polling, the peroration of Mr Philip Snowden's last Budget speech will still be justified: "England yet shall stand."

THE WIDER ARENA.

WHILE Great Britain has been giving almost undivided attention to the political crisis, and will be still more distracted for a further three weeks by the parochial excitement of a General Election, in which issues that have largely lost their significance and arguments which have ceased to be relevant will be hotly debated, greater events abroad are moving with increasing rapidity and unfolding the gigantic drama of a world in change.

On Monday there will be a historic meeting of the Bank for International Settlements at Basle. That institution, barely eighteen months old, is suddenly faced with a situation which is nothing less than a complete upheaval of its whole foundations. Apart from the nations interested in reparations, only those nations whose currencies "fulfil the practical requirements of the gold or gold exchange standard" are eligible under the statutes to participate in the Bank. Not only are the Bank's reparations functions in suspense as a consequence of the Hoover moratorium, but it will be faced next week with the confusing and bewildering aftermath of the suspension of the gold standard by one of the seven founder Powers and by three other important participating nations. Set up for the purpose of facilitating and improving the mechanism of the monetary system by means of which the world's trade is carried on, the Bank now finds the whole system thrown again into the melting pot. Of the nations who participate in its activities many will have lost a considerable part of the "backing" of their note issue, and have suffered losses to an extent which has not only made serious inroads into capital, but in some cases has reduced the percentage of their "cover" to a figure below the legal minimum.

In these abnormal circumstances it is not surprising that the banking authorities of the United States should have deemed it advisable to send Dr. Randolph Burgess, Deputy-Governor of the Federal Reserve Bank of New York, to attend the B.I.S. meeting. The Federal Reserve Bank is not a member of the B.I.S., but is deeply concerned with the financial difficulties of European banks of issue. In dealing with these difficulties, and endeavouring, so far as they may, to lay foundations for sound future monetary policy, a heavy responsibility rests on central bankers; and Mr Montagu Norman, who, we are glad to learn, is sufficiently well to attend Monday's meeting, will have a difficult part to play. He will miss at the board table the presence of Dr. Vissering, the *doyen* of central bankers, who has guided Holland

through difficult times and whose retirement was announced on Wednesday. In his successor, however, Holland has found a banking leader well equipped to step in at this crisis and deal with problems which are essentially international in their scope. Dr. L. J. Trip, formerly President of the Bank of Java, was a member of the International Advisory Committee for the Reorganisation of the British Indian Banking System, and was a member of the Committee of Economic Experts which recently met at Geneva. His experience and outlook should be most valuable at this juncture.

Central banking problems, however, represent only one facet of a many-sided crisis. The despatches which we publish on later pages from our various correspondents abroad reflect almost uniformly the far-reaching nature of the difficulties which have arisen and will continue to arise. To take only one illustration, the fact that there is hardly a country in Europe in which there are free dealings in foreign exchange exemplifies the extension of the paralysis which is creeping over a system based on credit. In South-Eastern Europe difficulties are obviously coming to a head, and, to those who read between the lines of the despatch from our Budapest correspondent, it will be apparent that for Hungary the question of declaring a complete moratorium on all foreign payments is arising in insistent shape. Such a decision, if it cannot be averted, is bound to have severe repercussions on the other countries of Balkan and Central Europe already undergoing an almost intolerable strain.

From Germany the latest news suggests that a political crisis is being rapidly superimposed on a continuing economic crisis. The Reichsbank's serious losses of foreign exchange are due partly, as our Berlin correspondent points out, to the withdrawal of reichsmark balances under the "standstill" agreement, and partly to the fact that German exporters for reasons which he explains in his letter are unable to comply with the order to surrender to the Reichsbank all *devisen* which they procure. The drain has led to fresh restrictions on the acquisition by private individuals of foreign exchange; and on Wednesday, following further stringent retrenchment decrees, Dr. Brüning resigned and, at the request of the President, began to reconstruct his Cabinet. As we write, his task is not yet finished; but the indications appear to be that, while moving a little further to the Right, he will endeavour to man his Government to a large extent with non-political experts, and will still make the People's Party his *point d'appui*. Whether, when the Reichstag meets next week, he will still be able to retain the united support of the Social Democrats, or whether the ominous marshalling of the Nationalist and Hitlerite forces next week-end, at Bad-Harzberg will lead to a Fascist *coup d'état*, or—less directly—to the proclamation of a naked dictatorship by Dr Brüning himself, remains to be seen. But, whatever the immediate future holds for Germany, it is clear that her situation is a warning that a financial crisis of this magnitude is not a mere technical question, but impinges on the whole sphere of political and social life.

To deal with the situation is a task which confronts the statesmen of the nations and which brooks no delay. In the *communiqué* issued after the White House Conference on Wednesday, President Hoover stated that he proposed to discuss with M. Laval, during the latter's coming visit to the United States, "the question of such further arrangements as are imperative during the period of depression in respect of inter-governmental debts." Expectations in the Press that Mr Hoover had called this conference for the purpose of announcing a sensational move towards either a prolongation of his moratorium plan, or the scaling down of debts and reparation payments, were not fulfilled; and some disappointment appears thereby to have been occasioned. Apart, however, from such difficulty as Mr Hoover might have in carrying with him certain elements of Congress, it was not likely that he should have forgotten that failure to prepare French opinion for his announcements last June led to a month of querulous discussion which largely nullified the effect which his moratorium plan was intended to produce. Thus, while Lord Reading talks to M. Laval in Paris, President Hoover makes ready to receive his French guest

at Washington. Here are, perhaps, the beginnings, or—shall we say?—the promise, of a preliminary accord between the world's two great creditor nations which may serve as a basis for the wider international agreement essential to a solution. But events are moving more rapidly than the statesmen.

THE ELECTION AND FISCAL POLICY.

THE election manifesto of the Prime Minister and the coincidence of a distinct change in the tone of the chief Conservative newspapers, combine to suggest that it is not the intention of the Conservative leaders and organisers to lay any primary or conspicuous emphasis on the demand for the immediate adoption of tariffs. It remains, however, very uncertain how far the fiscal question will be kept in the background or pushed to the front in a course of the sound and fury of electioneering. Even if a section of the Conservatives endeavour to make the tariff issue subservient and secondary to an anti-Socialist appeal, it would appear certain that in many constituencies other propagandists will force the fiscal controversy to the front. This being so, it is worth while to examine the form in which the argument for the adoption of Protection is likely to be presented by its principal advocates. Among those to be presented by its principal advocates, still who, even since the devaluation of the pound sterling, still continue their belief in the urgent need for a tariff, there are two clearly defined schools. First, there are those who think that in the present emergency the tariff is needed as a temporary weapon; secondly, there are those who retain as firmly as ever their belief that a tariff must be adopted as a permanent part of Britain's economic structure.

Let us examine the respective theses of these two schools of thought. The first, that which asks for temporary emergency tariffs, bases its arguments almost solely upon the necessity for correcting the trade balance. They argue, with the consent of all enlightened opinion, that the restoration of a favourable balance of payments is one of the supreme necessities of the moment. But they cannot bring themselves to share the belief of many former tariff advocates (including Mr J. M. Keynes) that the goal will be achieved by the depreciation of sterling exchange, without the artificial assistance of protective duties. They fear that the pound's depreciation is insufficient to rectify the balance, and further that, as Sir John Simon, Sir E. Hilton Young and others have suggested, the curtailment of imports and the stimulus to exports will prove to be merely temporary and fleeting, unless sterling depreciation is progressively continued under the influence of inflation. Both fears are unfounded. Of the two fears, that relating to the alleged inadequacy of the sterling depreciation to correct the balance is the less understandable; for the mere fact that the pound has been cut adrift from its gold moorings and left to find its own level assures that the means of correction are set automatically in force, and readjustment of the balance of imports and exports must follow.

More insidious, but no more serious, is the fear that, although the pound's depreciation is acting to restrict imports and increase exports, this favourable influence is purely temporary and will pass away, leaving behind it the necessity for a tariff to set the balance right. Those who accept this view are presumably basing their prediction upon the experience of certain foreign countries, which have, indeed, found that the bounty on exports provided by the depreciation of their currencies has been of an evanescent character. But they have overlooked an essential fact. The situation of this country is entirely different from that of, say, Germany during that country's period of inflation. In the case of Germany the advantage to exporters was lost through proportionate rises in the cost of living, leading to higher wages and higher manufacturing costs. But there is no reason whatever why that vicious circle should be repeated here. Supposing, as there is reason to believe, the pound (disregarding temporary fluctuations caused by big capital movements) is retained, pending eventual decision as to stabilisation, around its present level of, say, \$3.80, no justification exists for fearing a rise in the British level of retail prices such as to lead to general wage increases. True, some food imports from countries still on the gold standard will rise in price. But these form only a part of the necessary purchases of the British people. A rough calculation, which commends itself to high authorities, is that a depreciation of 20 per cent. in the gold value of the pound need not lead to a rise in British retail prices of much more than 5 per cent. Such a rise, even were it to occur, would not justify the general lifting of wages, since the steep fall of prices over the past three years had previously created an increase of at least as much, or more, in the purchasing power of British wages. If that be so, and a disproportionate rise in the British price level can be prevented, then the bounty on exports, as well as the restriction on imports, caused by the depreciation of sterling will be not temporary but permanent.

The second school, the advocates of a permanent tariff, besides relying upon the familiar academic case for protection, derive from the present situation two new arguments. To the fears of the neo-Protectionist school (referred to above) they add the contention that in the present unsettled state of affairs anything may happen, and therefore Britain must immediately take the precaution of arming herself with tariff powers. Again, they profess that the protective effect of currency depreciation is unscientific, since it is universal and not "selective" in its application to imports, and that therefore a "scientific" tariff is still necessary. The second of these arguments need not occupy us for long. A "scientific" tariff is a dream of the Protectionist, which has never yet come true in any country. Even if it were a possibility, its compilation would take years of work. Indeed, Professor Hewins, the tariff economist, whose services to the Conservative Party have been long and devoted, has confessed that he has been at work for years endeavouring to

produce a "scientific" tariff and has not yet concluded the task. As a measure to meet an emergency, we may rule out once for all the so-called "scientific" tariff.

We return to the argument that the instability of the present position makes a tariff "more imperative than ever." We agree that no man can foresee the future. In the topsy-turvy conditions of to-day it is even possible to conceive a collapse of the currencies either of our own or other countries such as would necessitate some temporary control or regulation of imports into this country. Were such a situation to arise, the question of the best method of dealing with it would have to be examined in relation to all the circumstances, and it is unlikely that the traditional tariff method would prove to be the most suitable. But the bare possibility of a situation arising in which some form of import control might become a fleeting necessity does not seem to us to justify the country in sanctioning the immediate institution of high emergency tariffs, which the present position in any case does not demand, because the payment balance "adjustment," which is the chief aim, is being automatically secured. Moreover, the imposition of substantial protection now would tend to impede the balance adjustment in two ways. It would increase and accelerate the rise in prices and set in motion the vicious process of higher wages and higher costs, thereby robbing our exports of the bounty which depreciation has given them. By imposing a new addition to export costs it would in fact leave our balance of payments where it was before.

Secondly, it would also lead, without a shadow of a doubt, to a vigorous retaliation by other countries, which would also contribute seriously towards reducing the competitive opportunities of our manufacturers in foreign markets. To impose a tariff in such unsettled circumstances as those of to-day would make confusion worse confounded.

So far we have been considering the fiscal problem purely from the British point of view. But it is necessary to look further afield and consider what repercussions abroad would follow the adoption by Britain of a high tariff system. High tariffs, we must remember, have played a conspicuous part in bringing the world into the difficulties of to-day. They have been an integral part of the narrow nationalistic policies, which have frustrated the work of international co-operation and appeasement; they have concentrated production unnaturally and hampered its proper distribution; they have checked the flow of trade and rendered impossible the payment of international war debts in the form of goods. In fact, one international conference after another has recognised quite clearly that the tariff system is part and parcel of the great problems which must be solved if prosperity is to return not only to Britain, but to the world. In the international negotiations, which are clearly imminent, the tariff position must be discussed and all methods for reaching saner economic policies investigated. In this discussion and investigation the influence of Britain will be powerful. If we plunge for tariffs now, not only will that influence vanish, but the road to European tariff reduction will be rendered infinitely rougher than it is now. There is much truth in the view expressed the other day by a well-known American writer:—"If England goes in for tariffs, it will be a further long step in the direction of international collapse."

From this cursory glance at the vital international aspect let us return for a last word on the home position. A vast majority of instructed opinion has long held that the only solution of British economic problems lies in the effective stimulation of the export trades. Real division of opinion is concerned only with the means and even the possibility of creating the stimulus. To-day the abandonment of the gold standard has (whether we like the means or not), in fact, presented us with the stimulus. It would surely be sheer madness to risk throwing away the new opportunity which an ill wind has blown to us; and that risk we should very gravely incur by adopting the system of protectionist tariffs into our economic life. The restoration of competitive power to our export trade is the keynote of the situation. Restoration is in force. Above all things, let us not jeopardise its continuance.

AMERICA'S MONEY PROBLEMS.

THE present crisis resembles the onslaught of a thunderstorm in a mountain range, when the lightning strikes first one peak and then a neighbour. Austria received the first shock last May, next came Germany, and then ourselves; and in each case severe damage was done. Now it is apparently the turn of the United States, for in the middle of September a drain of gold began on a scale comparable only with the gold losses incurred by Germany and Great Britain in earlier months. It is true that, so far, much of the gold so lost has not been removed physically from the United States, but has only been "earmarked" on foreign account, but the effect is just the same as a physical loss, especially as earmarking is in many cases proving only the prelude to shipment. As regards the actual magnitude of the loss, exports from September 18th to October 3rd were returned at \$92.3 millions, against which must be set imports from Canada, Mexico and the Argentine amounting to \$15.5 millions. Earmarkings and subsequent shipments bring the total loss to a much higher figure, whose magnitude is indicated by the contraction of \$449 millions in the Federal Reserve Banks' gold reserve between September 17th and October 8th.

A primary cause of these withdrawals is one that has been basic to the whole of the world financial crisis, namely, a loss of confidence by banks, both in the stability of foreign centres where they held balances, and in their power to meet the demands of their customers out of their home resources without drawing upon their funds lodged abroad. Ultimately this reduces to a lack of confidence of the banking public in the power of the banks to meet their engagements, and this is brought home in an article on the French banking situation published in the Banking Supplement, which accompanies this issue. It is true that in certain respects the American banking position has been arousing misgivings. The increase in the note circulation shows that hoarding is definitely taking place, and this hoarding is evidence of public distrust in the stability of American banks. The steady stream of bank failures corroborates this. Again, it is realised that depressed trade, and the collapse of security and real estate values during the past two years, has undermined the value of banking collateral and impaired the liquidity of the banks. Still, allowing for these somewhat ominous signs, it is probably true to say that the need of foreign banks to strengthen these home resources was a more cogent cause of the withdrawals.

The suspension also of the gold standard in Great Britain had three important results. Firstly, it gave a further shock to confidence. Secondly, it prevented foreign banks from drawing upon their sterling balances except at a heavy loss, and so drove them back on their dollar balances. Finally, it destroyed all faith in the safety and efficacy of the gold exchange standard, for foreign central banks found that the sterling exchange which they had legitimately held as part of their legal reserve had lost part of its value, thereby undermining their own stability, and inflicting upon them losses in many cases commensurate with their own capital. The result has been a general and hurried abandonment of the gold exchange standard and the conversion by central banks—notably those of Belgium and Switzerland—of their *devisen* into gold. This is an important explanation of American gold losses. Incidentally, it largely accounts for the diminution from Frs. 869.9 to Frs. 624.5 that occurred during September in central bank deposits on their own account at the Bank for International Settlements, which, in its turn, has had to realise assets in order to meet this drain. Thus, the movement possesses a world-wide scope, but circumstances both domestic and general have combined to make the main brunt fall upon the United States.

Inevitably the question is raised, how much gold is the United States free to lose. Current estimates vary, and no rigid calculation is possible, for long before the final limit had been reached, credit restriction, monetary stringency and a general deterioration of *morale* would have developed to an intolerable degree. It may be said at once, however, that the published returns of the Federal

Reserve system, including its current ratio of gold to liabilities, are a most incomplete guide. The real crux of the Reserve system's position is that, while the ratio of the gold cover to its notes need be only 40 per cent., the remaining 60 per cent. of the notes must be covered either by gold or by eligible paper, and this last excludes Government securities bought in the open market, and in practice consists of rediscounted Treasury bills and also of acceptances and other credit instruments based upon trade. Now the depressed state of trade has reduced the Reserve Banks' holdings of assets of this last kind and has forced them *en défaut de mieux* to add enormously to their holdings of Government securities. The actual figure for the last named was \$728 millions last August, against only \$150 millions two years before, while during the same period "eligible paper" had fallen from \$1,141 to \$316 millions. Add to this the actual and potential increase in the note circulation, and it is clear that this is the major factor in any calculation of the minimum gold requirements of the United States.

Some calculations have recently been published under the authority of the National City Bank of New York. Based on the statement of September 23rd, they give the Reserve system \$615 millions of free gold, after providing for the needs of the note issue and for the minimum 35 per cent. gold reserve against deposits. In addition they estimate that the New York member banks hold \$200 millions of "eligible" acceptances which, in case of need, could be sold to the Reserve Banks to be used by them as cover to their notes. Additional eligible paper, which could be rediscounted by the New York banks, would—again in case of need—raise the margin of free gold by another \$900 millions. Thus the United States could, at the last gasp, part with \$1,700 millions of gold, though the National City Bank very pertinently calls this a theoretical maximum. The practical limit is far below this figure.

Against this, what is the potential demand? Here again we are in the region of imponderables, for there is no estimate extant of the size of foreign balances in New York. A rough calculation, however, shows that European central banks together still hold foreign exchange equal to some \$1,400 millions. Not all of this, of course, is in dollars in New York, and not all of it could be disposed of. On the other hand, this figure does not include the large foreign (including dollar) holdings of commercial banks. It seems likely, therefore, that the potential threat to America's gold is sufficient to cause inconvenience even if partially carried out, and this week's increase in the New York re-discount rate is indicative of this.

What, then, is the remedy? The real remedy is the restoration of world confidence, and, no doubt, an appreciation of the significance of these calculations is bringing America to realise the wisdom of making her contribution to world co-operation in this imperative task. There are, however, domestic and technical remedies that she can apply, and some of these were outlined in a statement by Mr Hoover, issued to the country on October 7th, after a conference at the White House between the President and forty leaders of the Republicans and Democrats in Congress. To judge from cabled reports, Mr Hoover is making three specific proposals:—

(1) The formation of a banking consortium to administer a revolving fund of \$500,000,000 to be raised by a levy upon all banks equal to 2 per cent. of their deposits. This consortium is to operate under the title of the Emergency Credit Corporation, and it will be able to make loans to any financial institution and to re-discount banking assets not now eligible for re-discounting at the Federal Reserve Banks. It is perhaps intended that its own obligations should be rediscountable at the Reserve Banks, but legislation is needed to authorise this. It is understood that New York banks have already agreed to subscribe \$150,000,000 of the required sum.

(2) A scheme under which the twelve reserve banks and bankers in their territories should be prepared to make some advances on the assets of closed banks, or to take over some of these assets, in order that the receivers of those banks may pay some dividend to their depositors in advance of what would otherwise be the case pending liquidation.

(3) A recommendation to Congress that the eligibility provisions of the Federal Reserve Act be broadened,

thereby giving greater liquidity to banking assets. Coupled with this are proposals for subscription of further capital stock by the Government to the Federal Land Banks, and, if necessary, the creation of a finance corporation similar to the War Finance Corporation, set up to facilitate the provision of credit to quarters, which, owing to the abnormal circumstances prevailing during the war, were experiencing difficulty in obtaining it through the usual channels.

While the formation of a banking consortium appears to be a fairly drastic measure, it is difficult to see any real distinction between it and one of the big British banks with its widespread system of branches. The reason for the numerous American banking failures is not only the imprudence of their managers, not only the slump in values, but the fact that each one is a small isolated unit, dependent upon itself alone. Were that same small bank a branch of a big system, as it would be in England, it could get into just the same illiquid condition or incur just the same losses as it actually has, and yet survive; for the system would automatically come to its aid, and all that would happen would be at the most a change of management. There seems no doubt that it is lack of a branch banking system which explains many of the recent American banking failures, simply because what in England would be a branch, is in America an independent bank. If this view is correct, the formation of the consortium is nothing more than the creation of a banking pool of mutual support of exactly the same character as that provided automatically by a great British bank for every one of its branches.

As regards the remaining proposals, taken together they represent the administration of a mild dose of inflation. The widening of the scope of eligible paper will, by increasing the supply at the disposal of the reserve system, release gold to be added to America's so-called free stock, and so indirectly the problem of America's gold losses will be to some extent met. Apart from this, on general grounds, these proposals would have to be regarded as palliatives, except that they are palliatives applied in the most effective place. By giving additional support to the banks, they should restore the confidence of depositors. This should check the present tendency towards hoarding and, by arresting the withdrawal of deposits, should release banks from the need of calling in their loans and throwing securities on the market. This should stop the fall in security prices, and may even permit a rise to take place. The moment security prices improve, a greater margin of safety between bank loans and the collateral between them will be brought into being, and this will further strengthen the banks and restore public confidence. This is clearly Mr Hoover's line of attack, and, while in one sense it may be a psychological line, it is one based upon a reasonable mixture of psychology and sound sense. For this reason it possesses distinct elements of hope.

A DIARY OF THE CRISIS.

Friday, October 2nd.

House of Commons passes Finance Bill. Serious rioting in Glasgow.

Comptoir Lyon-Allemant, head office Paris, several provincial branches, closes doors.

Reichsbank return shows week's loss gold and foreign exchange 232.7 million marks; note cover \$1.2 per cent. Further restrictions on acquisition foreign exchange announced.

Sterling reacts; dollar closes 3.91½

Stock markets:—London, bonds firm, equities quiet; Paris, irregular; Wall Street, dull, but less liquidation; New York gold shipments \$37.4 millions, mainly to France.

Saturday, October 3rd.

Announced Lord Reading will visit Paris October 6. Austrian Economy Bill passed by Assembly and Senate.

Announced that National Bank of Denmark will place necessary credits at disposal of Handels Bank "to meet possible heavy withdrawals."

Bank für Handel und Gewerbe, Leipzig, suspends payment. Canadian Prime Minister reiterates Canada's determination to remain on gold standard.

Lithuanian Bank rate raised from 7 to 8½ per cent. Sterling has further reaction; dollar closes 3.88.

Stock markets:—London, bonds dull, equities shade firmer; Paris, irregular; Wall Street, heavy liquidation; New York gold exports \$10 millions (to Holland); "earmarked" for foreign account \$5.8 millions.

Monday, October 5th.

Japanese Bank rate raised from 5.11 to 5.84 per cent.
Finnish Government decree gives Bank of Finland entire control foreign exchange dealings.
Important failures Montreal stockbroking firms.
Sterling irregular; closing rate dollar 3.83 after 3.75.
Stock Exchanges:—London, British Government securities fractionally lower, foreign bonds weak, British industrials steady, international equities flat. Wall Street, Paris, Amsterdam violent liquidation, all-round slump of prices.
Following visit by Prime Minister to Mr Lloyd George at Churt, Cabinet decides at midnight to dissolve Parliament.

Tuesday, October 6th.

Prime Minister informs Parliament election date probably October 27th.
Dr. Curtius, German Foreign Minister, tenders resignation. New emergency decrees German Government published, providing, among other things, drastic punishment for tax evasion and reductions official pensions. Dresden People's Bank suspends payment.
President Hoover summons Congress leaders to discuss "a programme of national unity in setting up constructive forces in place of the destructive forces now working in this depression." Franklin Trust Company of Philadelphia and eighteen minor United States banks suspend payment.
Sterling firm, closing dollar rate 3.90 after 3.77.
Stock Exchanges:—London, British Government securities improved, industrials quiet; Paris, steady; Wall Street, sharp recovery on bear covering and hopes of outcome President's conference.

Wednesday, October 7th.
Parliament prorogued. Election nominations October 16th. Polling October 27th. Prime Minister issues manifesto asking for free hand.
President Hoover announces proposals to increase banking liquidity United States.
Lord Reading in Paris visits M. Laval.
German Government resigns. Dr. Brüning entrusted with formation of new Cabinet. Further decrees issued for "safeguarding the economic and financial situation and for combating political excesses."
Dr. Vissering, Governor Netherlands Bank, resigns and is succeeded by Dr. Trip.
Swedish and Norwegian Bank rates reduced from 8 to 7 per cent.
Greek Government announces more drastic exchange control measures.
Sterling uncertain, closing dollar rate 3.88.
Stock Exchanges:—London, slight reaction, gilt-edged slightly lower, equities firm; Wall Street, firm opening, close easier; Paris, further recovery.
Gold exported from New York \$31 millions, earmarking increased \$6 millions.

Thursday, October 8th.

Stricter measures foreign exchange control announced Austria, Jugo-Slavia and Latvia. Four German, one French, one Estonian and six American banks suspend payment.
Sterling opened lower, but recovered, closing dollar rate 3.87½ after 3.82½.
Stock exchanges:—London, steady to firm; Paris, heavy declines; Wall Street strong.
New York, gold exported dollars 18 millions, earmarked dollars 28 millions. New York Federal rate raised from 1½ to 2½ per cent.

INDUSTRIAL PROFITS.

THE proportion of company results published during the period July-September is always smaller than that for any other quarter of the year. Thus, the profits disclosed by our usual analysis are, to some extent, less representative than usual of the real trend of earnings. With this qualification, however, the figures disclosed by the following table are a striking reflection of the progressive deepening of the industrial depression. The accounts of 320 companies which have reached us during the past three months show net earnings, after payment of debenture interest, amounting to £15,996,685, a decline of £8,797,017, or 35.5 per cent., as compared with a year ago:—

NET PROFIT (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	No. of Companies.	Reports Published in		Increase (+) or Decrease (—).	
		1929.	1930.		
Third quarter	329	£25,232,486	£23,626,502	— 1,605,984	— 6.4
Fourth quarter	509	39,272,377	32,174,677	— 7,097,700	— 18.1
1930.					
First quarter	596	75,816,474	67,736,226	— 8,080,248	— 10.6
Second quarter	619	79,430,653	64,051,136	— 15,379,517	— 19.4
Third quarter	320	24,793,702	15,996,685	— 8,797,017	— 35.5

After eighteen months of irregular fluctuation, the third quarter of 1930 marked the beginning of a downward movement which in the past quarter has attained its maximum. In the next table the aggregate results, which relate, it should be borne in mind, to working periods ended some on March 31st and some on June 30th, are analysed by groups of undertakings. The almost universal incidence of the depression is illustrated by the fact that only two of the fifteen groups show an improvement on last year's position, and, in the case of one of the two, the improvement represents only a diminution of heavy losses previously recorded:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	No. of Companies.	Reports Published in Quarter ended September 30.		Increase.	Decrease.
		1930.	1931.		
Breweries	20	£8,603,425	£8,003,306	£600,119	7.0

Iron, coal and steel	26	648,901	Dr. 9,648	658,549	101.5
Motor and cycle	3	Dr. 309,329	Dr. 117,874	192,015	62.0
Oil	1	909,795	Dr. 30,516	15,036	70.0
Rubber	60	1,658,127	Dr. 366,298	1,105,998	121.6
Shipping	9	1,286,773	364,086	2,024,425	122.1
Shops and stores	7	489,395	69,703	922,687	71.7
Tea	16	606,912	44,181	419,692	85.8
Textiles	21	1,554,520	1,361,368	562,731	92.7
Trusts	5	31,199	34,789	193,152	12.4
Waterworks	93	7,207,671	6,237,831	969,840	13.5
Miscellaneous	320	24,793,702	15,996,685	8,797,017	35.5

In a number of instances the aggregate figures for particular groups are a reflection of the adverse results of one or two undertakings whose magnitude has an undue weight in the average. For example, in the case of the financial and land investment group the diminution of net earnings is accounted for largely by the heavy loss made by the Hudson Bay Company; in the shipping group the conversion of substantial profit into a large debit is attributable to the unfavourable showing of two units of the R.M.S.P. combine; and in the shops and store group, where the majority of undertakings continue to make steady profits, the drop in earnings is explained mainly by the loss disclosed in the case of Waring and Gillow. On the other hand, losses were somewhat widely spread in the case of the iron, coal and steel and rubber groups, and, though the loss made by Calico Printers figured largely among textiles, a number of other concerns in this group also did badly. Earnings of trust companies, in whose case a certain time-lag has naturally to be allowed for, were fairly well maintained, and in the large miscellaneous group the aggregate profit showed a fall of not more than 13.5 per cent. But it may be noted that, of the 93 companies in this category whose accounts were examined, eighteen had an actual debit balance on the year. In many of the groups an unusually large proportion of gross profits had to be allocated to provide for depreciation of stocks—a form of loss which may be regarded as perhaps non-recurring—but actual trading losses were by no means infrequent.

The next table shows the distribution of profits during each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1930.				
Third quarter...	£23,626,502	£14,830,457	62.8	4,469,225
Fourth quarter...	32,174,677	20,766,299	64.5	6,564,790
1931.				
First quarter...	£67,736,226	£42,043,943	62.1	14,731,666
Second quarter...	64,051,136	37,090,515	57.9	17,512,738
Third quarter	15,996,685	11,479,274	71.8	5,937,287

The salient fact which emerges from the analysis of the past quarter is that, in order to pay preference and ordinary dividends, after providing for debenture interest, reserves had to be drawn upon to the tune of nearly £1½ millions. This is a feature not visible in British industrial finance since the slump of 1921 and is, *prima facie*, disquieting. One qualification, however, has to be borne in mind. It should not be assumed that the concerns which

made no profits, or made actual losses, actually trenched upon their capital resources in order to pay dividends to shareholders. The dividends disbursed represent for the most part a legitimate distribution of earnings made by the more prosperous concerns. It remains true, however, that if the 320 concerns, whose results are averaged in the above table, are envisaged as an integral whole, the distribution of profits was in excess of actual earnings.

This consideration has to be remembered in connection with the analysis by individual groups which follows:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
Breweries	£8,003,306	£5,872,080	73.4	666,882
Financial, land, &c.	505,422	848,368	167.9	447,824
Gas	78,893	70,859	89.8	1,317
Hotels, restaurants, &c.	23,585	Nil	...	12,400
Iron, coal and steel	Dr. 9,648	512,260	5,309.5	112,495
Motor and cycle	Dr. 117,874	Nil	...	Nil
Oil	Dr. 30,516	Nil	...	Nil
Rubber	Dr. 196,203	18,566	9.5	8,487
Shipping	Dr. 366,298	252,960	69.1	58,125
Shops and stores	364,086	485,743	133.4	293,639
Tea	69,703	148,951	213.7	82,126
Textiles	44,181	359,474	813.6	282,536
Trusts	1,361,368	805,856	59.2	408,422
Waterworks	34,789	24,401	70.1	4,245
Miscellaneous	6,237,831	2,079,756	33.3	5,588,789
Total ...	15,996,685	11,479,274	71.8	5,937,287

It will be seen that, in a number of the foregoing categories heavy drafts on a group's accumulated resources were in fact made, although, as stated, the cause of this phenomenon was not the payment of illegitimately large dividends by individual concerns, but the fact that the group's aggregate profits, minus the dividends disbursed by the profitable companies, left a debit balance. In the by the profitable companies, left a debit balance. In the important miscellaneous group the amount reserved, 9.2 per cent., compares with 20.5 per cent. at this time last year and 24.4 per cent. two years ago.

The ratio of net profits to capital in the past quarter was 4.6 per cent., as compared with 8.6 per cent. in the previous quarter and 8.8 per cent. in the third quarter of 1930. The average rate of ordinary dividend fell from 8.3 per cent., both a year ago and in the June quarter of 1931, to 5.4 per cent. We print on page 682 our usual tables showing average rates of debenture interest and preference and ordinary dividend over a period of years, and also analysed by groups of undertakings in the past quarter.

INSURANCE AND THE POUND.

THE security of insurance policies underwritten in the London market has deservedly won world-wide recognition. Lloyds is a household word which has passed into the language of almost every trading nation; and the leading British companies equally enjoy a prestige and "sphere of influence" extending far beyond the shores of Great Britain. On this important element in the financial mechanism of the City the suspension of the gold standard and the resulting depreciation of sterling necessarily fell at first with a disturbing shock.

From the point of view of British residents in this country holding life policies or policies which cover any form of "internal" risk, the only obvious cause for anxiety that might have been occasioned by the suspension of the gold standard was lest precipitate depreciation of sterling, accompanied by a headlong fall in the value of fixed-interest stocks, should undermine the assets which form the basis for the security of their policies. Fortunately, as events have proved, there has been no catastrophic slump on the Stock Exchange. There has been only a limited depreciation of sterling; fixed-interest securities have not declined in this country to a serious extent; and in many cases insurance companies have been able to offset part of the losses incurred in their investment portfolio by realisation at a substantial exchange profit, of dollar and other "gold" securities. Moreover, though an increase in the sterling value of stocks of commodities might, eventually at least, raise the question of the necessity of

Stock Exchange

orders on Stockholm are executed with the least possible delay on telephone Stockholm 0101; or by cable:

KREDITBOLAGET

SKANDINAVISKA KREDITAKTIEBOLAGET

providing additional cover, and though a marked change in the whole range of the British internal price level would ultimately involve also considerations of the adequacy of life policies, no such disturbance of sterling prices has yet taken place as to make these factors of much more than hypothetical relevance.

The effect, however, of the fall in the value of sterling on the relations between companies and underwriters and their clients abroad has been at once more immediate and more complicated. The situation which has developed, and the steps which are being and will have to be taken to deal with it, have by no means yet assumed definite shape. The process of readjustment must take time, and, at the moment, all that can be done is to indicate briefly some of the main problems involved. And, as a preliminary, it is necessary to bear in mind that the policies underwritten in the London market to cover risks of foreigners, whether in respect to life, fire, marine or other accident dangers, are sometimes drawn up on a sterling and sometimes on a foreign currency basis. We may conveniently deal, first, with the considerations which apply to sterling policies.

In the case of sterling life policies the position is simple. The liability of the company is in no way affected by the depreciation of the pound; nor is the ratio borne by future premiums to the policy affected, since these also are paid in sterling, which costs the policyholder less to procure. The whole of the loss, represented by the fact that to the foreigner the value of the policy for which he has been paying has diminished, falls on the policyholder.

The value of sterling policies underwritten to cover fire risks has similarly diminished. In this case, however, the position is complicated by the fact that there are two kinds of policies, namely, those "subject to average" and those not so subject, the latter being commonly known as "first loss" policies. So far as policies "subject to average" are concerned, the situation is as follows. Should a total loss occur, that loss will fall on the policyholder in so far as the depreciation of the pound makes the value of the policy inadequate to cover the "gold" value of the building or goods destroyed. Should a partial loss occur, the liability of the company becomes greater than it was before the fall in the pound, since the value of the destroyed property has risen in terms of sterling. At the same time, this increased liability will in many cases be mitigated for the insurance company by the fact that, through the fall in the pound, the value of the goods in sterling, has risen and so brings the "average" clause into operation. By the application of this clause the policyholder cannot claim the full actual gold value of his partial loss.

What happens in the case of a sterling fire policy not "subject to average"? Here the underwriter's maximum liability is still represented by the total sterling value of the policy under-written. Should total loss occur, the excess of the gold value over the sterling value of the property destroyed falls on the policyholder. On the other hand, the underwriter has the liability to meet all actual loss up to the maximum cover insured, and the cost to him of meeting partial losses becomes proportionately heavier. The only mitigating circumstance for underwriters is that owing to the fall in gold prices, there is to-day a certain amount of "over insurance" which may offset to some extent, from the underwriter's point of view, the added burden of meeting partial "gold" losses out of accumulated sterling premiums.

The considerations which apply to fire policies are equally relevant to policies covering accidents of all kinds; but the problem which arises in the case of sterling marine policies requires separate mention. Firstly, there are "time" or "hull" policies covering vessels themselves, as distinct from their cargoes. Here the liability of underwriters of sterling policies for total loss is unaffected by the depreciation of sterling, and in so far as the value of a sunk vessel to its foreign owner is not sufficiently covered by the sterling value of his policy, the difference represents a loss which falls on him. (In this connection it is worthy of note that the world-wide trade depression has so reduced the value of shipping that almost all "time" policies had before the suspension of the gold standard a margin of "over insurance," so that it would be unwise to jump to the conclusion that many foreign vessels are now running under-insured.) These policies, however, though their terminology is different from that of fire policies, have the same effect as "not subject to average" fire policies in the event of partial loss. That is to say, if a vessel suffers damage any added cost in sterling of gold currency payment for repairs falls wholly on the underwriter.

Cargo policies, on the other hand, are normally subject both to "particular average" and "general average." So far as the first form of average is concerned, the position of the underwriter is not affected by the fall in sterling. Because he is liable for a portion of the insured value if the cargo is under-insured owing to the conditions of exchange, the loss must fall on the cargo owner. The "general average" loss, on the other hand, must rise considerably, since all salvage charges, warehouse charges, and similar expenditure incurred in a foreign port of refuge are automatically increased by the fall in sterling.

So much for the considerations which apply to sterling policies. The position of policies drawn up in terms of foreign currencies is obviously much simpler from the technical point of view. Here the liability of the underwriter is directly increased *pro tanto* with the depreciation of sterling, though in so far as foreign currency risks (e.g., the large volume of fire business undertaken by British companies in the United States) is underwritten through subsidiaries, which accumulate premiums in foreign currencies, the depreciation of sterling is not so important a factor. In every case, however, though the situation is for the moment greatly complicated by the question of re-insurance, the problem for the future consists simply of the steps which underwriters will have to take to guard against an incalculable increase of liabilities through exchange fluctuations, if premiums paid in terms of foreign currencies are converted into sterling.

Enough has been said to indicate the far-reaching effects both on insurer and insured of the changed value of sterling. The fact that the disturbance would be increased proportionately to the extent to which sterling depreciated is one important reason why every effort should be made to secure the pound from excessive depreciation. How far foreign policy holders will have eventually to increase the insured value of sterling policies is a question on which it would be premature to speculate until the eventual exchange level of sterling is known. For the moment, the fact that there has been no serious interruption in the flow to London of new foreign business offered in the world market is a tribute to the indispensable part which London plays in world insurance.

HOLDING COMPANIES ABROAD.

(BY A CORRESPONDENT.)

ONE of the consequences of the suspension of the gold standard has been the endeavour, both in this country and almost universally throughout Europe, to check international capital movements by means of exchange restrictions. During the post-war period of crisis, these measures proved to be ineffective in every country where they were applied; there is every reason to believe that at present they have even less chance to succeed. For, in the course of the last ten years, immense progress had

been made towards internationalisation of capital. Innumerable new channels have been established through which capital can flow from one country to another.

One channel which has recently become increasingly popular is that provided by the establishment of holding companies in countries where such companies receive favourable treatment. During the last few years many hundreds of holding companies, controlled by British, American, French, or other interests, have been registered in Switzerland, Luxembourg and Liechtenstein. According to the figures published in a recent circular of the Basler Handelsbank, during the six years ending 1930 1,002 new holding companies have been established in Switzerland, with a total nominal capital of 1,196,853,000 Swiss francs. Taking into consideration the capital increases of holding companies, the nominal capital of holding companies established in Switzerland increased during that period by over 2.8 milliard francs. In Luxembourg the law favouring holding companies became operative on July 31, 1929, and by the end of 1930 145 holding companies were established with a total capital of 1,335,701,000 Luxembourg francs. In Liechtenstein 575 companies were registered by the end of 1929. Although no details are available as to what proportion of them represents holding companies, considering that the population of the Duchy of Liechtenstein is only 11,000, and that it is not a commercial or industrial centre, it may be safely taken for granted that the predominant majority of these companies are holding companies controlled by foreign interests.

The governments and local authorities of these countries duly realise the advantages gained by the establishment of foreign holding companies on their territory. In the first place, it provides their treasuries with a new source of revenue of increasing importance. In spite of the favourable rate of taxation applied to holding companies, the receipts obtained through their taxation are by no means inconsiderable. Apart from this, local banks are bound to benefit by the movement to no slight extent. Foreign financial interests have to avail themselves of their collaboration in the establishment and administration of their holding companies. Especially in Switzerland, the law prescribes that a certain number of directors of companies registered under Swiss law should be Swiss citizens. For this reason participation has to be given to Swiss bankers or other local business men or individuals of standing in the foreign-controlled holding companies. Lawyers, brokers, etc., have also their due share of the benefits arising through the movement. It unquestionably contributes to increase the importance of the countries concerned in the sphere of international finance. On the other hand, the establishment of foreign holding companies does not necessarily tend to constitute an inflow of foreign capital. In the majority of cases the capital of holding companies is invested in securities outside the countries where they are registered, and the proceeds are also spent outside those countries. In spite of this, the benefits obtained are sufficiently large to make it worth their while to encourage the movement.

Switzerland was the first to realise the advantages of attracting foreign holding companies. The Kanton Glarus introduced legislation favouring them as early as 1908. Its example was followed by several other Kantons, and at present twelve Kantons, including Basle, Geneva and Zurich, apply a reduced scale of taxation upon holding companies. There is a movement on foot to induce the Government of the Swiss Federation to exempt holding companies from the Federal coupon tax, on the ground that, with the increasing competition of Liechtenstein and Luxembourg, Switzerland may prove a less attractive sphere for foreign holding companies at a time when the movement is likely to increase. That the Swiss authorities are aware of the interests involved is shown by the fact that when, after the war, they agreed to include the Duchy of Liechtenstein in the Swiss Customs territory, they stipulated that Liechtenstein should apply the same scale of taxation on holding companies as is in force in Switzerland. On the other hand, they have, of course, no means of counteracting the growing competition of Luxembourg otherwise than through a reduction of Federal taxes on holding companies. From a Swiss point of view, this is

becoming increasingly necessary, as the discrepancy between the interest rates prevailing in Switzerland and in Luxembourg, which has so far been a factor in favour of the former, tends to narrow down. In any case, the factor of interest rates is only considered by companies desirous of raising locally part of their capital. In Switzerland itself, there is keen competition between the various Kantons to attract foreign holding companies. The Kantons of Glarus and Graubünden charge the lowest rates, but the financial centres of Basle, Geneva, and Zurich are more popular, in spite of their slightly higher rates of local taxation, which is more than counteracted by the better facilities in these centres for the administration of holding companies. In Basle, the number of holding companies increased from 11 in 1922 to 70 in 1929, and 98 in 1930. The number of holding companies in Zurich was 14 in 1919, 37 in 1922, and 203 in 1929.

The above facts and figures give an idea as to the extent of the movement. Flight from taxation is one of the motives for the establishment of all these holding companies, but there are other motives. In certain cases, it is regarded as desirable to establish an international company on a neutral territory, so as to conciliate conflicting national interests. In other cases, the object of establishing a holding company in Switzerland is to issue debentures to the Swiss public. In any case, it seems probable that the present unsettled conditions will stimulate the development of the system. It may provide a channel for evading exchange restrictions in certain countries, while troubles in the leading financial centres may also divert capital towards this type of investment.

THE BRITISH MOTOR MARKET.

I.—Private Cars.

The annual British motor show opens on October 15th. In the following article a correspondent analyses the scope for expansion in the home market. A similar examination of the commercial motor position will appear in our next issue.

It is sometimes overlooked that the important position which the motor engineering trade now occupies in British industry—it employs over 247,000 people, or more than the shipbuilding—has been attained very rapidly. Since the industry only dates from the beginning of the century, it must be reckoned a newcomer, and as there are now over a million and a half cars in existence in Great Britain and Northern Ireland, it follows that the rate of expansion has been very high. It is interesting, therefore, to inquire at what rate it is now expanding and what scope the future holds. The answer to these questions will be found in the degree to which the demand—for the purpose of this article the home demand—has been saturated.

In dealing with private passenger cars it is essential to relate the question of saturation directly to the different income levels at which the various classes of cars are bought, since they determine the possible limits of potential demand. It is proposed to classify private cars into the following groups: Light car class (1-12 h.p.), medium car class (13-20 h.p.), and luxury car class (21 h.p. and over). Certain individual makes of cars may not fit into this classification quite perfectly; but broadly, owing to the present system of motor taxation, horsepower (for which alone detailed statistics are available) governs price, so that a division on this basis represents approximately the different income levels.

Saturation point means the point where the industry ceases to expand. This situation follows from the facts (a) that there is a definite, though moveable, limit to the potential demand for cars determined by movements in population, prices of securities and cars, and distribution of incomes; and (b) that the effect of cumulative new production is to bring the number of cars in existence nearer this limit. As the latter process goes on it is clear that the demand for cars from people who never previously owned one (expansion demand) must shrink unless the potential limit is increased by any of the causes mentioned above. At the same time, the demand from people who wish to replace a worn-out car or obtain a new model in

place of an old one (replacement demand) will remain the same unless diminished by any of the causes affecting the limits of potential demand. It follows from this that saturation is the point where expansion demand is equal to nil.

It is statistically possible to arrive at a reasonably close estimate of the degree to which the various classes of private cars have reached saturation. Expansion demand is measured by the increase in the number of cars in use from one year to the next; and since total new demand is represented by the new registrations, the volume of replacement demand may be obtained by deducting the expansion demand of any one year from the new registrations of that year. Having obtained the volume of expansion and replacement demand, it is now possible to set up a standard of saturation by expressing the two groups as percentages of the total new demand (annual registrations.) Saturation is the point where expansion demand has dropped to nil, and when this happens the replacement must be 100 per cent. of total new demand; consequently our standard of saturation is—how far from 100 per cent. is the proportion which replacement demand bears to new registrations?

It is now possible to assess the stages of saturation reached by the three groups defined above as representing the different income levels:—

LIGHT CAR CLASS (1-12 H.P.)

Year.	Cars in Use.	New Regs.	Expansion Demand.		Replacement Demand.	
			No.	Percentage of New Regs.	No.	Percentage of New Regs.
1927	445,303	81,892	65,478	80	14,414	20
1928	503,056	79,922	57,753	72	22,169	28
1929	565,502	90,587	62,446	69	28,141	31
1930	612,108	83,365	46,606	56	36,759	44

This table suggests, on the whole, that there is considerable scope for light cars. The rapid fall from 69 points off saturation in 1929 to only 56 in 1930 is probable largely due to the depression which has caused temporary suspension of expansion demand. The average degree from saturation attained between 1927-30 was 69.

The following table shows the situation in the next highest income grade:—

MEDIUM CAR CLASS (13-20 H.P.)

Year.	Cars in Use.	New Regs.	Expansion Demand.		Replacement Demand.	
			No.	Percentage of New Regs.	No.	Percentage of New Regs.
1927	248,607	65,575	46,467	71	19,108	29
1928	297,348	67,345	48,741	72	18,604	28
1929	339,279	64,232	41,931	65	22,301	35
1930	372,587	60,243	33,308	55	26,935	45

This group also shows room for expansion, although rather less so than the preceding class, the average degree from saturation attained 1927-30 in the former being 66.

The next group, luxury cars, presents the less pleasing picture of over-saturation. Here the number of cars in use has decreased from year to year, and as a result expansion demand is a negative quantity. The figure of replacement demand given below is also theoretic, because the new registrations must in the case of over-saturation represent the actual volume of replacements. The difference between these two figures shows that not only has demand ceased to expand but that replacements have fallen off as well. If we say that replacements fell during 1930 by 4,335 cars, this measures the volume of over-saturation, which may be expressed, in this case, by saying that the market for luxury cars was over-saturated 27 points.

LUXURY CAR CLASS (21 H.P. AND OVER.)

Year.	Cars in Use.	New Regs.	Expansion Demand.		Replacement Demand.	
			No.	Percentage of New Regs.	No.	Percentage of New Regs.
1927	106,202	14,136	- 7,388	...	21,524	166
1928	100,153	14,226	- 6,049	...	20,275	143
1929	94,721	14,596	- 5,432	...	20,028	138
1930	90,386	15,852	- 4,335	...	20,187	127

The unfavourable impression conveyed by the word "over-saturation" may be modified by the consideration that the degree of over-saturation is being rapidly reduced as manufacturers cease producing certain models. Moreover, a large part of the luxury class consists of foreign cars. It seems, however, that for the time being there is little possibility of expansion.

Notes of the Week.

The Scarborough Conference.—The shadow of the coming election was over the Labour Party Conference at Scarborough, and since the delegates were anxious to be back in their own constituencies as soon as possible, the proceedings were compressed into a shorter time than usual. They were not, however, without interest. On the very first day, a resolution on party discipline led to the severance of the Independent Labour Party from the official Party, Mr Maxton taking the resolution to be tantamount to his expulsion. So we now have the extraordinary position that the official Labour Party has shed both its MacDonald and Snowden head and also its Maxton tail. The resolutions presented to and passed by the Conference were summarised in these columns last week, and the debates upon them elicited some important declaration by ex-Ministers, particularly by Mr William Graham, in which he announced his adherence to a vigorous Free Trade policy, to which the Conference duly committed itself—and one by Mr Henderson in which he said:—"We are convinced that the decaying fabric of capitalism cannot be patched up any further. We must go forward decisively and courageously to a Socialist Society." Any tremors which this electioneering slogan might have aroused in the hearts of timid constitutionalists were somewhat strikingly allayed by Mr Graham, who, in an interview published in Thursday's *Manchester Guardian*, nailed his flag stoutly to the mast of sound finance. His words are worthy of recording:—"Labour entirely denies the suggestion that there is any danger to the stability of sterling in the return of a Labour Government. We have made it abundantly clear that we stand for a balanced Budget, and that this balance will be attained on thoroughly sound lines. . . . Labour," he continued, "is opposed root and branch to any inflationary policies." That is a timely and useful pledge from the man who, were Labour to win the election, would in all probability assume the office of Chancellor of the Exchequer. Thursday was marked by an incident which is of peculiar interest on the eve of an election. A resolution was moved to the effect that the Labour Party should refuse to take office unless returned to Westminster with a clear majority. This, on the motion of Mr Henderson himself, was overwhelmingly defeated; and so Labour remains free, if the opportunity should arise, to form an administration with the support of other progressive elements. Whether that opportunity will arise, or whether the Stock Exchange is correct in its estimate of a large clear majority for the Government, is a matter of pure speculation until the campaign has had time to develop some definite lines of contest.

The Government and Prices.—The Foodstuffs (Prevention of Exploitation) Bill, which the House of Commons passed before being dissolved, gives wide powers to the Board of Trade. Clause I. reads as follows:—

If it appears to the Board of Trade, that by reason of the action of any persons in exploiting the present financial situation there is, or is likely to arise in Great Britain or in any part thereof, any shortage of or any unreasonable increase in the price of any article of food or drink of general consumption, the Board of Trade, may by regulation make such provision as they consider necessary or expedient for the purpose of remedying or preventing that shortage or increase in price.

Infringement of regulations made by the Board of Trade is punishable by a heavy fine or imprisonment, or both; so that the Bill, though limited in its application to foodstuffs, goes much further than the Consumers'

Council Bill, which the late Government introduced and had to withdraw. The desirability of keeping the retail price level in this country as steady as possible—some increase in the price of imported foodstuffs is, of course, inevitable—is so important that it is perhaps as well that the Board of Trade should have these powers in reserve. It would be manifestly against the public interest were there to be any tendency for the present margin between wholesale and retail prices, which represents the cost of internal distribution, to be increased. At the same time, it is to be hoped that the powers, if used at all, will be used with discretion. Experience has shown that control of prices is apt to lead to the disappearance of the controlled article from the market, and the task of deciding what is an "unreasonable increase" in price is a matter of great delicacy. Indeed, Mr Alexander's speech in the second reading debate seemed to reveal some misconception as to the equity of the raising of the price of stocks to a level covering costs of replacement. It would appear that so far neither wholesalers nor retailers have done this, and the consumer is consequently benefiting. But, as Professor Robbins pointed out in a recent letter to the *Financial News*, all that happens in this case is that a transfer of capital from the distributor to the consumer takes place. If the consumer does not save the difference, but goes on spending as before, the real capital of the country is depleted in proportion to the fall in the purchasing power of the money capital of the dealer. The ultimate impoverishment of national capital that may be brought about by the dealer's inability to adjust prices quickly enough to cover replacement costs was demonstrated in the final phases of the German post-war inflation. Provided, however, that there is no further serious depreciation of the pound, this consideration is not of great practical moment.

Mr Goodenough and Sterling.—In the course of an address which he delivered at Halifax last Tuesday, the chairman of Barclays Bank expressed himself as definitely in favour of endeavouring to return to the gold standard at the pound's previous parity with the dollar. "It is my opinion," he said, "that a definite statement on the part of the British Government of its intention to return to the gold standard in all its integrity would result in a steady improvement in the present serious world conditions." He admitted that a return to the gold standard with the old parity would necessarily be very gradual, and could not finally be undertaken until its maintenance could be assured. "Its realisation would depend to a considerable extent upon the final solution of war debts and the reparation problem, a general adjustment in order to help international trade settlements so as to allow of a sufficient flow of commodities from one country to another, and an understanding between creditor nations as to the methods to be adopted in working the gold standard." On the other hand, "any such step as would lead to a permanent devaluation of the pound must shake the world's confidence in sterling besides operating unfairly to those who have saved and invested their money in sterling both at home and abroad." As a means of assisting us to restore the "integrity" of the gold standard, Mr Goodenough thought that it might be advisable to restrict imports by a "carefully considered tariff." It is a view from which, with all respect due to a distinguished banker, we totally dissent. Apart from the fallacious nature of the argument that a tariff is needed to help the balance of trade or that it could give more than a fleeting corrective to it (a question which we discuss in a leading article), it would be unwise to decide without mature consideration to link our currency once more to gold. Gold prices are still falling heavily, and reversion to the gold standard might mean that we should have to force down the price level in this country by restriction of credit and suffer again all the harmful effects of deflation. Still less is it easy to contemplate with satisfaction the prospect of fighting our way back to parity with the dollar in the interest of the holder of fixed-interest securities. It is true, as Mr Goodenough rightly pointed out, that we can ill afford to allow our income from overseas investments to be unduly curtailed by excessive depreciation of

the pound. But it may well be that by devaluation of the pound at a reasonable level, which would make it easier for foreign debtors to pay us their sterling obligations, we can find the only means of saving ourselves from total loss of many of our investments abroad. Above all, so far as our internal situation is concerned, to work, as Mr Goodenough suggests, for an increase in the pound's exchange value until the old parity with gold was regained, would mean recreating the old intractable problem represented by an uncompetitive price level in our export trades. Many problems of technique, of international adjustments and of equity present themselves, and some of them are exceedingly difficult to solve. Depreciation of the pound, as we have insisted in these columns, is no short cut to prosperity. But we have at least automatically readjusted our export prices at a cost in the form of dearer imports which falls not inequitably on all alike. If the world price level is destined to fall and to remain at a much reduced figure, the claim of the receiver of fixed interest to secure a greatly increased return of real purchasing power is a very weak one.

Dwight Morrow.—The unexpected news of the death of Mr Dwight Morrow means a grievous loss not only for America but for the world; for here was a statesman of whom the world, in its present crisis, had great need. In fact, Mr Morrow possessed that peculiar and by no means common combination of qualities and capacities and experiences which is eminently required at the present time; and, had he lived, there can be little doubt that twelve months hence he would have been one of the outstanding figures on the stage of world affairs. A student and thinker by temperament, and to the end actively devoted to the interests of his old college, Mr Morrow first became known on this side of the Atlantic as a partner of J. P. Morgan and Company, seconded for war service in Europe. As America's representative on the Allied Maritime Council, and later as a member of the peace delegation, he quickly won the confidence of his colleagues by his quick apprehension and sympathetic understanding. He broke entirely new ground when he resigned his partnership in this New York financial house in order to take up the post of American Ambassador in Mexico in the autumn of 1927. His acceptance of the ambassadorship when President Coolidge offered it was in itself the act of a bold and large-minded character. He was giving up a position in which his eminence and affluence were assured and undertaking a task which might have exceeded any man's capacity and broken any man's reputation. When Mr Morrow went to Mexico City, Mexico was still in that state of turmoil in which China remains to-day. The Government was precarious, the population in ferment, the State at loggerheads with powerful foreign interests. Mr Morrow secured a settlement of this controversy within three months of his arrival on the spot; and, though his financial and business experience no doubt stood him in good stead, the feat was really achieved by the brilliant diplomatic gifts which he now displayed. Nor was the settlement of the oil controversy Mr Morrow's greatest diplomatic achievement in Mexico. His diplomatic *chef d'œuvre* was the unobtrusive but effective part which he—a Protestant citizen of the United States—was able to play in bringing about a settlement of the controversy between the Mexican Government and the Roman Catholic Church. Mr Morrow was soon called upon to employ his diplomatic gifts in a wider field as one of the United States delegates to the London Naval Conference of 1930; and thereafter he resigned his ambassadorship in order to enter the field of domestic politics. He had been mentioned for next Republican candidate for the Presidency. Who knows how far a statesman of his character and ability might not have gone if Fate had spared him? His loss can be ill afforded.

The Situation in Manchuria.—While at Geneva Japan has succeeded in canalising the Manchurian dispute into the channel of direct negotiations between the Japanese and Chinese Governments *a deux*, the situation in Manchuria itself is palpably growing more awkward for Japan, and this in several ways. Trade is at a standstill. The

normal operations of banditry in Manchurian territory outside the Japanese Railway Zone—e.g., in the Chinese port of Newchwang—are now involving the Japanese themselves in armed intervention, in default of any effective local Chinese Government; and thus the Japanese Government is being compelled to extend its area of military occupation, though the success of the Sino-Japanese negotiations depends upon a withdrawal of the Japanese troops to within the limits of the Railway Zone at the earliest possible moment. Most awkward of all, there are already arising in Manchurian Chinese circles, in Kirio and elsewhere, sporadic movements in favour of local independence against both the regional Government of Marshal Chang Hsueh-liang and the All-China Central Government at Nanking. There is no reason to suppose that these movements are being instigated by the Japanese. They are sufficiently well accounted for by the apparently incurable spirit of factiousness which has been the keynote of Chinese politics for the last twenty years. Indeed, in face of this autonomist movement, the Japanese are showing every symptom of embarrassment. Wiser in their generation than the French in the Rhineland eight years ago, they evidently realise that a native autonomist movement which breaks out under a foreign military occupation is incapable of profiting the occupying Power and is only too likely to recoil upon the foreigner's head. As it is, this will probably happen in Manchuria, however "correct" the Japanese behaviour on this point may be. For the fact remains that this autonomist movement has actually occurred under the present irregular Japanese military regime, and presumably would not have occurred if the Japanese military authorities in Manchuria had not broken bounds. Thus the odium can hardly fail to fall upon Japan. The situation is awkward, not only for Japan and China, but for the world, which can ill afford any addition to its present troubles. Fortunately, there is one notable asset on the credit side in the personality and policy of the Japanese Foreign Minister, Baron Shidehara. The fact that he will be responsible, on the Japanese side, for the conduct of the Sino-Japanese negotiations is a guarantee that these will be conducted in a liberal and conciliatory spirit as far as Baron Shidehara's power extends. The danger is, of course, that while the negotiations are in train, some further untoward incident on the actual scene of conflict may excite the Japanese military authorities into taking the bit between their teeth again.

The Pope's Appeal.—Non-Catholics as well as Catholics will welcome and follow the lead which the Pope has taken in his appeal for "a crusade of charity and help" which he has launched in an Apostolic epistle of October 2nd. The document is brief, but it effectually deals with the heart of the matter, for it is addressed to everybody in his or her dual capacity as a private individual and as a citizen. In the private sphere, the Pope calls for charity, during the coming hard winter, towards the poor, and especially towards the children—a form of "direct action" which is in the oldest tradition of the Christian Church and which was indeed instrumental in saving some vestige of civilisation out of the wreck of the Ancient World some fifteen centuries ago. In the public sphere, the Pope makes a powerful appeal for disarmament. The Catholic Bishops, all over the world, are exhorted to bring these appeals home to their flocks. On the very date of the Pope's Epistle from the Vatican, the Fascist Grand Council in Rome passed a resolution in which they declared, among other things, that the world crisis "will not be solved except by the application of measures to be taken without delay that comprise in the first place the entire problem of armaments and also that of debts and reparations. The Grand Council accordingly approves the activities recently displayed by Signor Grandi at Geneva, which, overcoming prejudices and difficulties, succeeded in putting the international question of armaments upon a real and concrete basis." The Fascist Grand Council is, of course, the governing body of the Fascist movement, and thus Fascism has endorsed, without reservation, a policy which was first publicly

enunciated by Signor Mussolini himself in the summer of 1928. The Italian Government and the Holy See are showing the sincerity of their declared intentions, as far as their own relations are concerned, by proceeding with the steps necessary for implementing the recent agreement in regard to the dispute over the Azione Cattolica. In fact, the two Powers that have their seats in Rome have been giving a noteworthy lead to the world. It is one of the lesser ironies of the present world crisis that, at this very moment, the seamy side of the Fascist regime should have been given a sensational advertisement by the exploit of an anti-Fascist Italian airman who, from some base of operations outside Italy, has succeeded in flying over Rome and dropping fly-sheets of protest against the Fascist tyranny in the Roman streets.

Politics in Spain.—Temperatures are running high in Spain now that the Cortes is deliberating on those articles of the draft constitution which determine the fundamental tendency of the Republic. On Tuesday, in the course of a wrangle over the form of words that should assert the nation's priority over the individual property rights, the Prime Minister, Señor Alcalá Zamora, and the whole Parliamentary Committee responsible for the draft, gave and then took back their resignations. The law, as finally passed, vests the ownership of all "natural sources of wealth" in the State, and, property being assessed deliberately in terms of social utility, provides for its gradual socialisation. Normally there will be due compensation for the expropriated, but this proviso is explicitly made without prejudice to the superior interests of the State. There is to be no confiscation of personal as distinct from real property, but, on the other hand, nationalisation of public services, mines, commercial monopolies, etc., is to take effect forthwith. How these measures can be reconciled with the original promise to recognise the sanctity of private property is a riddle which no foreigner can be expected to solve. Despite heroic efforts by Señor Alcalá Zamora, whose wisdom and courage have provided one of the biggest surprises of the new Spain, the fissures in the Republican-Socialist coalition are now, it is clear, beyond repair. Señor Prieto, the Finance Minister, is fully representative of Socialist opinion in inveighing against Catalan intransigence, specifically on the question of stock exchange prerogatives, and, above all, labour legislation. Señor Miguel Maura, Minister of the Interior, on the other hand, has threatened that he will not stay in the Cabinet a minute longer if the anti-clerical measures which are being pressed fanatically by the Left parties are passed into law. Postponement of the section on the relations of Church and State pending negotiations with the Vatican has temporarily eased the Government's situation. It has at the same time given a chance for the "heaven to rage furiously together." Rome has evidently decided to make its peace with the present moderate Republican Cabinet lest worse befall, and has even taken the unprecedented step of accepting the resignation of the exiled Primate, Cardinal Segura. Whether the whole Jesuit order is to be dissolved, in accordance with the popular clamour, or only those of its leaders replaced who are known to be out of sympathy with the new regime, is still in the balance. The campaign (inspired by French ideas that are so strong among Spain's intellectuals) to deprive ecclesiastics of their part in the schooling of the country is waxing fast and furious. *El Debate*, the Catholic newspaper, has taken up the challenge, however, pointing out, with some justice, that the Church has been for a long time the only medium through which Spaniards have obtained any education at all, and that, in any case, it has an honourable record as compared with the State schools.

Sterling and World Prices.—During the past week little change has occurred in the level either of sterling or of gold prices. As may be seen from the table which follows, sterling prices, as measured by the *Economist* index number, have fallen by 0.5 per cent., while there has been a fractional increase in the index figure for the staple commodities included in our new "gold" index, the nature

of whose construction was explained last week. (See *Economist* of October 3rd, page 602):—

ECONOMIST INDEX.

(1927 = 100.)

	Sept. 18. 1931.	Sept. 30. 1931.	Oct. 7. 1931.
Cereals and meat	64.5	68.0	67.6
Other foods	62.2	68.1	68.3
Textiles	43.7	49.5	49.8
Minerals	67.4	72.9	72.7
Miscellaneous	65.8	68.9	67.8
Complete Index	60.4	65.1	64.8
1913 = 100	83.1	89.6	89.2
1924 = 100	52.2	56.3	56.0
Sept. 18, 1931 = 100	100	107.8	107.3
Gold price index	100	94.7	94.9

As there has been no appreciable alteration during the week in sterling exchange, the existing disequilibrium between sterling and gold prices, which was noted a week ago, has not been adjusted.

Cotton Trade Affairs.—Our Manchester correspondent writes:—The cotton-spinning employers of Lancashire, after giving close consideration during the last couple of years to a scheme for regulating production and prices, have been compelled to abandon the project. The scheme provided for a definite control of this section of the industry, and a few months ago a detailed plan was worked out, the proposals being embodied in the Cotton Spinners' Scheme, 1931. Originally the idea was that the American and Egyptian branches should be dealt with separately, but it was thought advisable to make the scheme applicable to all spinners. About a couple of months ago the scheme was approved at a general meeting of the members of the Master Spinners' Federation. It was then decided to have meetings in the districts for the purpose of explaining the proposals. After these had been held, ballot papers were sent to all members for the purpose of securing a definite expression of opinion. The result was announced on Tuesday last, and the figures were very disappointing, as only 27.65 per cent. voted in favour, there being 28.07 per cent. against. Members amounting to 22.22 per cent. were in favour of the scheme with qualifications, and no replies were received from 22.06 per cent. The Committee of the Federation, after considering the figures, decided by resolution that no further action should be taken in the matter, and the scheme will have to be dropped. It is quite evident the basis of these proposals was antagonistic to the strong individualism which still prevails in Lancashire. Since the suspension of the gold standard three weeks ago there has been a definite improvement in Lancashire trade. The turnover in yarn and piece-goods has been larger than in any similar period for many years back. An outstanding event has been the revival of buying for China. This development has been partly due to the rise in silver and partly owing to the Japanese boycott in China. This week manufacturers have secured contracts for standard goods which have not been bought for many years past, and a very big business has also been done in yarns. There is disappointment that India has not yet given increased support, but inquiry is now broadening, and some merchants are considering the question of buying speculatively owing to the anticipation of a larger demand in the near future. Some Lancashire firms have not yet experienced any definite relief, but the majority of spinners and manufacturers have distinctly more orders on the books than a month ago, and the prices now being secured are more remunerative. At the beginning of this week the Egyptian Government estimated the cotton crop for this season at 6,415,798 cantars. The growth for last season was 7,551,931 cantars. The record crop in Egypt was in 1926-27, when the output was 8,680,237 cantars. This official forecast was rather less than expected, but stocks of Egyptian cotton are heavy, and a rather smaller production this season should not have any vital effect upon the situation.

Coal-Mining Results.—The statistical summary issued by the Mines Department for the second quarter of the current year shows that the relatively favourable conditions obtaining during the first quarter were not maintained:—

Period.	Tonnage Dis-posable (Mill.)	Costs per Ton.		Proceeds per Ton.	Profit per Ton.	Output per Man-shift.	Earnings per Man-shift.
		Wages.	Total.				
1930.		s. d.	s. d.	s. d.	s. d.	cwts.	£ s. d.
1st quarter	60.0	9 2	13 4	14 5	1 1	21.94	9 3
2nd "	51.6	9 5	14 1	13 11	0 2	21.32	9 3
3rd "	50.1	9 5	13 11	13 9	0 2	21.34	9 4
4th "	52.6	9 3	13 7	14 1	0 6	21.84	9 4
1931.		s. d.	s. d.	s. d.	s. d.	cwts.	£ s. d.
1st quarter	52.2	9 2	13 6	14 3	0 9	21.78	9 2
2nd "	47.5	9 3	13 11	13 10	0 1	21.44	9 2

A sharp decline in the tonnage disposable commercially and in the output per man-shift was accompanied by an increase of 5d. in the cost per ton. As the average amount realised per ton was 5d. less than in the previous quarter, the result was a loss of 1.34d. per ton. Of the increase of the 5d. in the cost per ton, wages accounted for 1½d. The increase of 3d. per ton in "other costs" reflects the decline in output, with no corresponding decrease in general expenses. Despite the reduction in the selling price per ton, some of the Continental producers were apparently able to secure a larger proportion of the overseas trade in coal. The district results show that with the exception of Yorkshire, North and South Derbyshire, all fields were worked at a loss. The prospects for the industry, however, may be greatly modified by the fall in the exchange value of sterling.

An International Coal Conference.—At the invitation of the Central Council of the British coal-mining industry, representatives of Belgium, Czechoslovakia, France, Germany, Holland and Poland met in London on Wednesday and Thursday last week for a discussion on the coal export trade. Mr Evan Williams, President of the Mining Association of Great Britain, presided over the conference. The unsatisfactory situation of the coal export trade was recognised, and the delegates agreed that greater stability was desirable. Although the meeting was merely preliminary in character, it appears that the possibilities of an international agreement for regulating supplies were discussed. A committee was appointed for the purpose of preparing a statement on the results of the discussions. The report will be submitted to the coalowners' associations in the various countries for their consideration, and it is expected that a further conference will be held in the near future.

Shipping Freights.—Our index number of whole-cargo shipping freights showed little alteration in September, as compared with the previous month. The latest figure of the index is 10.7 per cent. lower than a year ago:—

AVERAGE 1898-1913=100.

	Average, 1913.	Sept. 1930.	July, 1931.	August, 1931.	Sept. 1931.
European Waters	110.0	87.3	81.2	80.6	82.5
North America	113.1	91.2	85.5	82.3	83.1
South America	123.4	95.7	86.3	86.3	86.3
India	106.3	103.0	87.6	87.3	85.2
Far East and Pacific	117.4	89.2	85.2	82.6	97.9
Australia	127.9	117.5	95.2	92.6	97.9
Total	116.3	97.3	87.3	86.6	86.9

During the first half of the month, business in all directions was at a low ebb. After the suspension of the gold standard in this country, the freight markets, in sterling, were upset and irregular. At the end of the month there was a somewhat better inquiry for colliers, but, apart from a steady demand for tonnage to load Argentine grain, trade was hesitant on all homeward routes. Changes in the monthly average for each section are shown in the next column.

THE DIFFICULTY

of finding a large initial premium for a Life Assurance Policy is overcome by the new Scheme whereby Life Assurance can be purchased by Monthly Premiums. No extra charge for this convenience. Full benefits from payment of first instalment. Ask for Monthly Premium Booklet. LEGAL & GENERAL ASSURANCE SOCIETY LIMITED Head Office: 10 Fleet Street, London, E.C.4 Estd. 1836

AVERAGE 1898-1913=100.

	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home Trade	75.7	+ 4.1	South America—out-	67.3	- 2.3
Bay—outwards	99.1	+ 5.5	wards		
Bay—homewards	83.9	+ 1.6	South America—	105.3	- 1.6
Mediterranean—out-			homewards	82.1	- 2.1
wards	77.1	- 5.5	India—outwards	90.2	- 2.5
Mediterranean—			India—homewards	85.2	- 2.1
homewards	83.7	+ 2.1	Far East, &c.	97.9	+ 5.3
North America	83.1	+ 0.8	Australia		

Expressed as a percentage of the average for 1913, the total figure of our index number of September works out at 74.7, compared with 74.4 in August and 83.6 a year ago.

Anglo-French Trade and the Pound.—French exporters to Great Britain (our Paris correspondent writes) are protesting strongly against the loss caused to them, in connection with the execution of existing contracts, by the depreciation of the pound. The Lyons silk exporters assert that their contracts with British importers, which are in sterling values, totalled about £5,000,000. The members of the Lyons Syndicat de la Soierie, on Tuesday, after studying the question thoroughly, passed a resolution unanimously to execute integrally all existing contracts made in sterling, but added a rider appealing to their British customers to recognise the justice of reimbursing the consigning firms, so far as concerns deliveries made prior to September 21st, with the difference between the old contract prices and the new sterling rates. In a *communiqué* since issued the Lyons organisation states that it relies on its British customers who are parties to contracts passed in French francs to execute them completely, in accordance with the recommendation of the London Chamber of Commerce.

Japan's National Accounts.—Our Tokyo correspondent writes:—The national accounts for the fiscal year ended March 31, 1931, disclose a surplus of 39,108,000 yen, revenue amounting to 1,596,972,000 yen and expenditure to 1,557,863,000 yen. The disclosed surplus is, however, mainly accounted for by a new loan of 38 million yen. The revenue shows a decrease of 17,147,000 yen in comparison with the revised estimates for the year, and of 229,472,000 yen against the actual receipts of the preceding year. Receipts from taxation revealed a decrease of 61,768,000 yen. While the death duties and tax on the note issue produced 5.4 and 1.4 millions respectively more than were anticipated, income tax (— 3.4), business profit tax (— 5), *sake*, sugar, and textiles duties (— 19), and Customs (— 38.8) fell short of the estimates. As for non-tax revenue, profits of State monopolies alone show an increase of 18.5 millions, while postal receipts were down by 23.7 millions, earnings of Government undertakings by 16 millions, and revenue from State-owned forests by 8.8 millions. On the other hand, aggregate departmental expenditure shows a reduction of 114,929,000 yen on the estimates, and of 178,453,000 yen upon the preceding year. All the Departments have not spent so much as they asked for, the Army and the Navy, the Home Office, Communications, and the Treasury having left over 37, 25.7, 20.3 and 13.2 millions respectively. Of the realised surplus, 38 millions was

earmarked for the deferred expenditure and some 1½ millions was allocated to the debt redemption, leaving a "free" balance of 4½ millions. The prospective Budget deficit for the current year was estimated by the Treasury at 54 million yen. A saving of 35 millions by economy and the postponement and slowing down of schemes was agreed upon in the Cabinet Council; but no definite expedient has yet been devised to bridge the gap of the remaining 19 millions. The Economy Committee's plan has been temporarily dropped on account of discord among the Cabinet Ministers on the proposed merger of Departments.

Poland and the Gold Standard.—Our Warsaw correspondent writes:—While Government spokesmen and bankers are assuring the public that the determination and ability of Poland to remain on the gold standard must not even be questioned, astute business men who are not blinded by national pride appear to realise the desirability—if not inevitability within a few weeks—of the gold standard being abandoned. The argument privately presented by the "abandonists" is that an orderly retreat at this stage, with a substantial reserve of metal and foreign *devisen* still available for the defence or re-establishment of the zloty at a later date, would be much more prudent than a die-hard fight for a few weeks with the gold reserve gradually melting away, and with the ultimate possibility of the complete exhaustion of foreign exchange reserves. The opinion of the Government and leading bankers, however, seems to be that any sign of weakness in their determination to maintain the gold standard would forthwith result in the collapse of the zloty. The argument from the bankers' side is that as the Polish public has passed, within a comparatively brief time, through three periods of currency devaluation, any talk at this moment in "high places" of the abandonment of the gold standard would be quite likely to result in a stampede. For the time being the exporters of coal, textile goods, wood, food products and grain express a very firm determination to meet price competition in depreciated sterling and Scandinavian currencies. Their ability to do so for any length of time, however, is largely dependent on the relatively high price level which prevails in the home market. If, therefore, domestic sales cannot be maintained in adequate volume, the export trades will quickly set up a clamour for the abandonment of the gold standard.

Anglo-South American Bank.—It has been for some time common knowledge that this institution has been operating under exceptional difficulties, owing to the heavy fall in the prices of South American staple commodities and to the acute trade depression on that continent. This year's results were therefore awaited with unusual interest. As regards the bank's current experience, the results are on the whole reassuring. Net profits have only fallen from £491,000 to £461,000, and in view of the adverse circumstances already referred to the shrinkage might easily have been greater. The dividend on both the "A" and "B" shares is reduced from 10 to 6 per cent., and while this will impose a considerable sacrifice upon the shareholders it is clearly an essential precaution. The main anxiety before the management of the bank is one that is common to many banks to-day, namely, the depreciation in the value of its holdings in subsidiaries and foreign banks and of its capital employed abroad. Somewhat drastic measures have had to be taken, for in addition to an appropriation to investment reserve account of £100,000 from current earnings, the directors have thought it necessary to transfer to a special reserve for depreciation of capital employed as above, and to meet other possible losses, £2,275,000 out of the present general reserve fund of £3,275,000, thereby reducing the bank's general reserve to £1,000,000. The report concludes by saying that when world conditions permit exchanges to become stable a more precise allocation of this special reserve will be made. The hope is expressed that the recuperative powers of the countries where the bank works will release at any rate a substantial proportion as a free reserve.

Scottish Temperance and General.—The year 1930 was the forty-eighth year since the company's foundation. At the end of its first year the life fund was £914; to-day it is £6,724,000, and the chairman, in his speech, stated that the fund is larger than that possessed in 1883 by any other company with the exception of the Scottish Widows, which was then 70 years old. The new business in 1930 showed a slight decline at £1,122,000 compared with £1,222,000, though part of this was due to a reduction of single premium business received. Interest earnings, owing to the rise in the standard rate of income tax, were 1s. 1d. down at £4 16s. 6d. per cent., but the expense ratio has risen from 12.6 per cent. to 13.9 per cent. by reason of the loss of single premium income. Of the investments, £1,600,000 is in mortgages, and a further £900,000 is represented by ground rents and properties. Such investments in these times are a very real source of comfort. The Stock Exchange securities not unnaturally show some depreciation during the year, but the aggregate book values still remain less than the market values, the difference constituting a hidden reserve.

Reinsurance Corporation.—After experiencing a severe setback in 1929 this company made a notable recovery last year. Fire and accident premiums together amounted to £537,000, compared with £518,000, but whereas 1929 showed a loss of £35,900, 1930 resulted in a profit of £15,150. The marine account also makes a better showing, the premiums having gone up from £162,000 to £191,000, and although, as in former years, the account has required a subsidy from profit and loss the amount of it is reduced from £12,700 to £3,050, being represented only by interest left in the account. After taking account of items in the profit and loss account, the net trading surplus works out at £10,467, compared with a net loss in 1929 of £50,130. The dividend has been maintained at 10 per cent. and the payment leaves a margin of interest earnings of over £5,000, so that the company's resources have been augmented by £15,000 during the year. The whole of this has been utilised to strengthen the general reserve fund from £75,000 to £90,000. The company's business consists wholly of reinsurance, and it is controlled jointly by the Royal Exchange and Yorkshire groups.

Overseas Correspondence.

UNITED STATES.

Effect of Gold Suspensions — Deficit — Money Market — Gold Movements — Bank Investments.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 29.

IN financial and commercial quarters there is no tendency to minimise the unfavourable aspects of the business outlook, but satisfaction is felt at the ability of markets, so far, to survive the blows from Europe and the lack of improvement at home without more serious damage. To say that Great Britain's action in abandoning gold was expected here would be going too far, unless a very short time prior to the event were covered. There is no great tendency to criticise the action finally taken, it being assumed that the position at the time required so drastic a step, and many observers here felt that Great Britain had assumed too heavy a burden in resuming gold payments when she did so without revalorisation. At the same time, in some quarters it is felt that more might have been done earlier towards tightening up the London money market along orthodox lines. American banks are not believed to have suffered much by the drop in sterling, their engagements in London not having exceeded \$50,000,000 and commitments having been hedged.

No great gain either to Great Britain or to this country is expected to follow the abandonment of gold. Some inquiries have already been received by bankers on financing

business for other countries, but the building up of an extensive structure for bill financing, such as London has, would, it is recognised, take a long time and much special knowledge. Few are willing to predict the immediate future for foreign exchanges and commodity prices on the numerous gold abandonments, but the developments abroad are regarded as increasing if anything the burden of the trade depression in this country.

Extreme weakness in foreign bonds is the most distressing of the first effects of Europe's "holiday from gold." Even the United States Government issues have weakened somewhat as an indirect result of Europe's difficulties. Heavy gold shipments and earmarkings have contributed to a somewhat firmer tone in the money market. In addition, the sharp decline in income-tax collections for the third quarter make further Government borrowing, to help make good a large deficit, a virtual certainty. Tax collections for the third quarter are estimated at about \$287,000,000, as compared with \$498,500,000 for the same period of last year, and the deficit for the current fiscal year already is in excess of \$300,000,000.

Some relief is felt at the American Legion convention vote, placing that largest of ex-service men's organisations on record as opposing further demands for cash bonus payments. But with all economies and avoidance of special appropriations which are likely, the fall in revenue promises a large deficit. It will probably be met partly by increased borrowing and partly by a higher income-tax schedule. Secretary Mellon, of the Treasury, is endeavouring to prevent all attempts to suspend the action of the sinking fund in Liberty Bond retirement, and in this he has the support of all financial leaders.

The latest Treasury bill tender for \$100,000,000 went at an equivalent interest rate of 1.22 per cent., as compared with 0.62 per cent. for the previous sale. It was the first since last May that the Treasury has had to pay as much as 1 per cent. on its non-interest-bearing discount bills. Other evidence of a firmer trend in money rates is to be found in a sharp increase in the open market and in the Federal Reserve Bank's buying rate for bills, and in quotably higher rates for time money.

In the past week bankers' bill rates have advanced ½ per cent. for short and medium maturities and ¼ for long terms, and the Federal Reserve Bank met the rise by lifting its buying rate by ¼ per cent. Before raising its buying rate, however, the Reserve Bank kept doors open and bought all bills offered, thereby saving the dealers and banks from loss and doing much to offset in the money market the effect of heavy gold earmarkings. It is estimated that the Federal purchased more than \$100,000,000 of bills dumped on the market by foreign holders. The week has brought the heaviest gold movements on record here, earmarkings of metal at the Reserve Bank for foreign account amounting to \$214,086,000, while actual shipments in excess of imports were approximately \$24,000,000, of which \$19,000,000 went to France as a profitable exchange transaction. Other exports were taken by Holland, Czechoslovakia, Russia, Germany and Switzerland. More gold is leaving for France.

Further exports or earmarkings of gold are expected to continue, as foreign central banks are in the process of building up gold balances in an effort to remain on gold. New York and Paris doubtless will draw most of the world's free gold, while the tendency will be for the gold standard countries to increase their holdings. It is hoped that imports will be more than offset by earmarkings. Once the emergency is passed, gold will be released from earmark and put to work in the investment market. At all events there need be no alarm of other than a mild firming up of money. Yesterday, for instance, when time rates were quotably advanced, the banks were "over" some \$100,000,000 in their reserves, and the Federal Reserve Bank, while it might later lift its discount rate if the open market warrants, has no intention of changing its cheap money policy against trade revival. In a recent survey the Federal Reserve Board found that "free" gold in the system amounted to \$700,000,000, and, in making allowance for notes held by Reserve Banks in excess of over-the-counter requirements, the total was

Westminster Bank Leaflets

For the benefit of that large section of the public which finds itself bewildered by business language, the Westminster Bank issues from time to time simply worded explanations of various ways in which it is able and glad to be of use to its customers. Amongst its publications are the following: *Points before Travelling*, notes on the Protection of Travellers from Loss. *Thirty-nine Advantages of an Account with the Bank*. *The Saving Habit*, an outline of the Home Safe system. *Safeguards for Travellers*, a warning against carrying foreign notes. *Securities*, their Custody and Supervision. *Wills, Trusts, and Settlements*, the Bank as an Executor. Copies may be had on asking at almost any branch, or by addressing a postcard to the Secretary, Westminster Bank Limited.

41 LOTHBURY, LONDON, E.C.2

\$1,000,000,000. This amount of gold, which could be spared, could easily be augmented by another \$1,000,000,000, inasmuch as substitution of Federal Reserve notes for gold certificates and the use of discounts (which presumably would increase if much more gold were shipped) as collateral for Reserve notes instead of gold could release that much metal.

Bank liquidation of security collateral loans continues, the past week's statement of reporting city member banks of the Reserve system showing a further reduction of \$53,000,000, and brokers' loans dropping by about \$60,000,000. Although the banks have sold Government bonds—member bank investments declining by \$68,000,000 last week—they are now turning to other bonds with the idea that price depreciation has been carried too far in many instances. The market has been a thin one and prices have dropped largely because of the absence of bids, and not primarily on account of heavy liquidation. Member bank holdings of securities other than Government's increased \$43,000,000 for the week.

Contrary to reports, no banking pool has been formed to support the bond market. What has happened is that the large investment banks, acting individually, but after general discussion of the matter amongst themselves, have placed buying orders in the bond market for such issues as are regarded as intrinsically sound. The railroad and public utility markets have been noticeably strengthened by this support, and it has been discovered that no large amounts of bonds were obtainable at the registered sales prices reported on the Stock Exchange. New issues have been small. It is understood that over half the recent Canadian National Railways issue for \$50,000,000 was subscribed for by the Canadians and paid for in American dollars, which did nothing to help Canadian exchange.

Practically no change in business conditions has taken place. The steel industry is still dragging along at around 30 per cent. of capacity and railroad traffic is held back by the immobility of wheat, cotton and general merchandise. September seems to have sunk to a still lower level than August. Wage and salary reductions are spreading rapidly, but so far no alarming signs of social unrest have appeared.

A good deal of interest attaches to the forthcoming visit to this country of Monsieur Laval. It is supposed that he will wish to give our Government first-hand intelligence of the position of France on reparations, inter-allied debt payments and disarmament. Few believe that the insistence of France last summer for clarification of details regarding the German moratorium indicated a closed mind on the subject, but it is recognised, of course, that France will rightfully expect any arrangements for further debt suspension fully to protect her position.

FRANCE.

Budget Economies — Russia's Bills — Import Quotas.

(FROM OUR CORRESPONDENT.)

PARIS, October 7.

THERE is now every likelihood that the Budget, after all, will be disposed of before the end of the present financial year, and that it will be balanced, without requiring additional taxation, by ruthless cutting down of expenditure. Taking all the circumstances into consideration, the Government's decision approximates to the heroic. With general elections due in May, the 1931-32 Budget will be the last which retiring deputies will be called on to discuss. The problem facing the Cabinet, therefore, was how to avoid a repetition of the pre-election budgetary inflation which has characterised previous corresponding years. Supplementary expenditure already authorised (in connection with soldiers' pensions, the national insurance system and other vote-catching possibilities) fore-shadowed a practically certain deficit of 5,000,000,000 francs. The enormous Treasury surpluses of Poincaré and Chéron days have disappeared, thus leaving the Government with the alternative of a policy of sweeping economies or one of increased taxation; and the latter is recognised by all parties to be impracticable.

Further assistance from the Caisse Autonome d'Amortissement is practically impossible. Last year the Caisse helped out the taxpayers by taking over 1,900,000,000 francs of debt charges, which would otherwise have had to be met from the Budget, but this was—somewhat vaguely, it is true—only in consideration of an implied undertaking by the Government that, before the end of the current financial year, the Caisse should be compensated by the application of a massive Rentes conversion plan, which would correspondingly reduce the obligations of the Caisse under its sinking fund programme. Unfortunately, since this arrangement with the Caisse d'Amortissement was made the application of the Rentes conversion plans has been found for the present impracticable. This has rendered further relief of the Budget, by means of the indirect suspension of the sinking fund adopted last year, both inadvisable and impracticable. The Government has thus been driven back—probably not altogether against its will—towards a frank adoption of a policy of sweeping reductions of expenditure; and this at a period when the existing legislature is on the eve of expiration, and when expenditure for electoral purposes is most difficult to curb.

According to the latest official reports, the steps already taken have resulted in proposed expenditure during the coming twelve months having been reduced by about 3,000,000,000 francs, with more to follow. It is anticipated that strengthening of the rules of the Chamber, which is now under consideration in official quarters, will prove effective in still further restricting the possibilities of unnecessary expenditure designed to benefit deputies who are seeking re-election. So far as financial considerations are concerned, it now seems probable that the Laval Ministry will succeed in arriving at a balanced Budget without recourse to either loans or additional taxation, and without a further raid on the sinking fund. How candidate-deputies will react against this suppression of what has usually, in the past, been regarded as an electoral "slush" fund remains to be seen, but there are already indications that the country as a whole is behind the Government and its majority in the Chamber.

Exactly what Mr Hoover's object has been in inviting M. Laval to visit Washington is the subject of intense speculation in Paris. There is a good deal of nervousness displayed, and the newspapers to-day have been filled with suggestions of a pending "sensational declaration" by Mr Hoover. The general hope appears to be that, whether or no M. Laval's visit to the White House be followed by one from the head of the German Cabinet, the French Premier's interviews with Mr Hoover will, in any case, clarify Washington opinion as to the real situation in Europe, and to this extent, at least, will prepare the way for widespread common action.

In unofficial circles in Paris the Russian (rather than the German) financial situation is now regarded as the key to the whole European problem, both political and economic, as well as financial. According to Professor Bessonoff, in an article in *La Vie Economique des Soviets*, a journal published in Paris under the auspices of the Russian Government, Soviet bills totalling 520,000,000 reichsmarks, representing supplies of all kinds furnished to Russia by Germany, will become due for payment before the end of this year. These bills, the Professor stated, the Soviet Government will be unable to meet. Now, 350,000,000 reichsmarks of the Soviet bills, which become due this year, are guaranteed up to 60 per cent. by the German Government (under the law of February 26, 1926), and the balance of 170,000,000 reichsmarks up to "from 50 to 75 per cent." under the German Government plan for insuring export credits. Germany herself, it is evident, is incapable of renewing the bills in question, and no help is likely to be forthcoming from the United States, Italy, Austria or Norway, all of which are already hopelessly involved in Russian Soviet commitments.

All this explains the underlying reasons, perhaps, for the suggestions put forward in certain circles here during recent months for the conclusion of a new Franco-Russian commercial agreement. The exact origin of this project is unknown. What is known is that it is alleged to have the approval of M. Briand and M. Rollin, Minister for Commerce, and the support of the leading officers of the *Confédération Générale de la Production Française*, the *Comité de Forges*, the *Compagnie Générale de l'Electricité*, the *Chambre Syndicale des Forces Hydrauliques*, and several other great industrial associations and public companies. Virulent attacks have been made on the Government during the past week by a section of the Paris Press, alleging that further long-term loans to Russia are under consideration for the purpose of compensating Germany for the Soviet default. The Ministry for Commerce has issued an official *communiqué* stating that "neither the French Government nor the industrialists consulted by it have at any moment envisaged the extension to the Soviet Government, either directly or indirectly, of credits for the purpose of facilitating commercial transactions with French industry."

Following the application, a few weeks ago, of the quota system to imports of timber, wine and (so far as Great Britain and Belgium are concerned) coal, a decree has this week been promulgated bringing imports of live and dead meats, tinned foods, milk, butter, cheese and other dairy products under similar restrictions. This step is admittedly for the purpose of protecting French agriculture against foreign competition. The report attached to the decree states that imports of live bullocks, which totalled only 122,000 quintals during the first seven months of 1929, have amounted during the corresponding period of this year to 230,253 quintals. Imports of beef are stated during the same period to have risen from 62,174 quintals to 319,442 quintals, and of butter from 32,000 quintals to 139,000. The decree fixed the maximum quota of live bullocks allowed to enter at 23,000 quintals, fresh and refrigerated beef at 39,000 quintals, and butter at 12,000 quintals. The quota system, it is asserted, is to be regarded as having an exceptional and temporary application.

GERMANY.

Cabinet Reconstruction — Reichsbank Return — Foreign Exchange Losses.

(FROM OUR CORRESPONDENT.)

BERLIN, October 7.

WHEN the Reichstag reassembles on October 13th it will find a materially altered Cabinet. The Foreign Minister, Dr. Curtius, has perforce to go since the German People's Party, his own party, has for months been carrying on a sharp opposition to him. It can probably be assumed that, in the present situation, Dr. Brüning will not regard it as expedient to pick a politician for this portfolio. Such

an appointment would necessarily give rise to either foreign political or domestic political interpretations which might be unpleasant for the Chancellor. Hence, it is most probable that a civil servant will be chosen as Dr. Curtius' successor. Thus, the Chancellor will retain his decisive influence on foreign policies, and there will be no change in the route heretofore followed.

The Chancellor will now also fill the two vacant Ministries—Economics and Justice. The natural thing would, perhaps, be to give the politically important post of Minister of Economics to a personage whose political tendency could aid the Chancellor in regaining a firmer hold on his not altogether dependable supporters. But it is, nevertheless, more likely that he will here also not appoint a politician, but some man from Germany's economic life, who, however, could also naturally exert political influence.

A part of the Press is referring to the coming reorganisation of the Cabinet as "an extension of the Government toward the Right." Even if this should be true as to the personages chosen, this must not be interpreted as meaning that Dr. Brüning intends to steer a course farther rightward. On the contrary, there is good reason for believing that the Chancellor is more disposed just now to make concessions to the Left. In the emergency decree which is to be made public this week he has not yet included his decision as to social-political questions, but there is hardly any doubt that he will not accede to the desire of the employers to suspend for a time all collective wage agreements. Moreover, social-political reforms are to be considered first by a commission, to be appointed by President von Hindenburg from representatives of employers and employees—a fact which further shows that the Government will not resort to any extreme solution.

The political difficulties which Dr. Brüning must master will, however, not be small. The leaders of the National Socialists and of the German Nationalists will meet in the next few days in Bad Harzburg to prepare a joint plan of campaign against the Government. This alliance of open enemies would not be so dangerous for the Government if it were not that at the same time parts of the former Government *bloc* have gone over to the "working alliance of the national opposition." It has already been reported in the Press that, in addition to some agrarian Reichstag Deputies, other personages who enjoy influence in the political field between Hugenberg and the Centre will also be present at this Bad Harzburg conference. The signal for a general attack will undoubtedly be given from the Right.

But Herr Brüning still has a good chance of withstanding the storm, for the German People's Party, which he needs for a majority in the Reichstag, appears to have decided after some wavering to remain in the Government coalition. Its leader, Dr. Dingeldey, put forward at a conference in Schleswig the question "whether the People's Party, in view of the coming hard winter, can risk forcing the Social Democrats and the trade union organisations into the opposition." With this question he obviously intended to draw a line of demarcation against the policy of the National Socialists and German Nationalists, and, if the People's Party does not again change its mind, the votes of lack of confidence and motions for annulling the various emergency decrees, which can be expected when the Reichstag meets, will probably be defeated. This situation is also not likely to be changed by the fact that the Socialists have less freedom of action now than formerly, owing to the fact that, under the leadership of Deputies Rosenfeld and Seydewitz, who had long been in opposition to the party leadership and who were recently excluded from the party, a radically leftward "Socialist Labour Party" has been organised, which is endeavouring to attract supporters from the parent party.

The last report of the Reichsbank showed that a not inconsiderable amount of foreign currency has flowed from the bank:—

	Gold and other Covering.	Total Money in Circulation. (In millions of marks.)	Bills.
August 31	1,722	5,313	3,101
Sept. 23	1,672.2	5,123	3,003
Sept. 30	1,440	5,644	3,669

The extent of the strain is due, above all, to the fact that end-of-the-month requirements coincided with heavy demands from the savings banks. These are now subjected to withdrawals which are small in comparison with total deposits, but which are continuous, as a result of the economically straitened situation of many unemployed depositors. In addition to all this, the pound sterling crisis caused the public to wonder uneasily whether the mark might not follow the pound downward. For these reasons the savings banks, which, following the runs of the July crisis, have at their disposal only limited liquid funds, have made heavy calls on the Reichsbank. The withdrawals of *devisen* were in the main a result of the paying out of foreign mark deposits, of which, under the Basle agreement, 25 per cent. had to be paid. Hence the losses were to be expected. But it is not altogether understandable why the extraordinarily high surplus of Germany's foreign trade did not cover the greater part of these losses, and how a lowering of the Reichsbank's holdings as against the close of the preceding month could come about. This "riddle of the export *devisen*" is engaging the attention of the German Press in high degree. It would appear that German export firms, despite all efforts of the legislators to keep the payment of debts within the limits of the Basle agreement, are still paying their own debts by the proceeds of their exports. This is probably true above all as to debts owed in pounds sterling. In addition, the difficulty of securing reimbursement credits from England for the financing of exports may well have led in many cases to the German exporters securing at first no money at all for goods shipped, since he has to finance the operation himself.

Before the end of the month the Reichsbank had detected gaps in the legislation and decrees affecting foreign currency and had demanded that the Government should close these up. An emergency decree of October 2nd limits holdings of *devisen* without a licence from the Reichsbank to 200 marks. The previous figure was 1,000 marks. The same figure applies to exports of marks. *Devisen* that have not been secured through the Reichsbank, or from another German bank with the Reichsbank's approval—that is, above all, "export *devisen*"—must be offered to the Reichsbank within three days and, upon demand, sold to it.

The Reich has decided to employ its own funds to a limited extent for the assuring of domestic credits; it has for years been doing this for export credits and has had favourable results. The greatly increased uncertainty of credits has made it practically impossible for the "Hermes A.-G.," the only large insurance concern that still insures credits in Germany, to reinsure its risks adequately, and the risk is too great for the Hermes alone. Hence it has done little business for a year. As a result of the pound crisis, which has made reinsurance in English companies almost impossible, the insuring of credits has probably come to a complete end. The new emergency decree will provide that the fund established for insuring export credits can also be used to cover a guaranty by the Reich for domestic credit insurance. The detailed agreements between the Reich and the Hermes as to the extent of the guarantee and the *modus* appear to have been reached already, but they have not yet been made known.

ITALY.

Stability of the Lira — Emergency Decrees — Tariff.

(FROM OUR CORRESPONDENT.)

TURIN, October 5.

THE first two weeks following the suspension of the gold standard in England may be described as a successful fight on the part of the Italian Government, the Treasury and the banks to save the convertibility of the lira from the world monetary turmoil. On the evening of September 23rd an official *communiqué* was issued from the Government and the Bank of Italy stating that no change was to be made in the stabilisation rate fixed by the decree of December 21, 1927. This *communiqué*, which was repeated with great emphasis on September 29th, was

deemed necessary in view of the popular notion that the lira was fixed at the rate of 92.46 to the pound (the so-called *quota novanta*). It was officially stated that the true rate of stabilisation was 7.919 grammes of fine gold for every 100 lire, irrespective of the vagaries of sterling, the mark, or even the dollar. In the first scare, when gold standards tumbled down one after another, it appeared to some foreign observers that the lira was also doomed, as it was quoted at a discount of 5 to 6 per cent. against the dollar, 8 to 9 per cent. against the French franc, and even more than 10 per cent. against the Swiss franc. This situation, however, was short lived, for by the end of last week the exchanges had settled down just a little above the gold point, and a few bears in Paris and other foreign countries were obliged to search for cover with no lire available on the market.

The technical situation, of which the Bank of Italy quickly availed itself, was that Italy had no current foreign debts worth noting. Other lines of defence were utilised. On September 28th the Bank rate was increased from 5½ to 7 per cent. On that day, also the Finance Minister issued a decree to the effect that no forward sale of any security could be received on the Bourses if unaccompanied by the deposit of the security sold or of 25 per cent. of the cash, and no forward purchase, if unaccompanied by a deposit of 25 per cent. of the cash. Speculative transactions were thus killed outright. On September 29th the Finance Minister was authorised to regulate transactions in foreign exchanges, and on the same day the Fascist Credit Confederation circularised rules obliging all banks to send to the Bank of Italy a statement of their foreign exchange holdings as well as those of their foreign associates, and to make inquiries as to the future exchange needs of their clients, limiting credits to those who are reputed to possess foreign balances or to be receiving foreign bills in payment of exports. No bank can buy on its own or its clients' account foreign or Italian securities issued in foreign centres. Foreign exchanges cannot be negotiated for future dates, nor be sold to customers who cannot justify their request on commercial or other admissible grounds.

On September 25th a new general tariff of 15 per cent. *ad valorem* was imposed on all goods, previously dutiable or free, entering Italy. The duty on coal is 10 per cent., and different rates have been fixed for oil and gasoline, while cereals, the duty on which had only recently been increased, and such goods as may be entitled to special treatment by virtue of existing commercial agreements, are excepted. The objective of the new tariff is primarily a financial one, for the Exchequer hopes to receive from it a net yield of some 800 million lire yearly. But it may also be regarded as the first reaction to the suspension of the gold standard in England and other countries. Whether the duty will counteract possible "dumping" as a result of the depreciation of the pound, or whether it will initiate retaliation by other countries, remains to be seen. In the meantime, however, the General Confederation of Industry evidently has some misgivings, for on October 3rd it passed a motion, worded by Signor Olivetti, urging, in very prudent language, the adaptation of the tariff to the necessity of maintaining international trade.

AUSTRIA.

Economics — Banking Position — Exchange Dealings.

(FROM OUR CORRESPONDENT.)

VIENNA, October 5.

THE Minister of Finance, Dr. Redlich, has resigned. In a letter to the head of the Government he has declared that, apart from the acceptance of the retrenchment programme, there are great difficulties to be dealt with, and he personally is unable to handle them. He is overworked and feels that a Minister who is not a parliamentarian has to contend with extraordinarily serious obstructions. The fact is that economy is increasingly difficult, for, though it is possible to curtail the salaries of employees, revenue from taxation must shrink. The yield of the retrenchment measures is estimated as follows:—

The emoluments tax, 18 million schillings; the crisis tax, 27 millions; the automobile traffic tax, 3 millions; the motor spirit tax, 9.6 millions; the prolongation of the sugar tax, 23.6 millions; and the beer tax, 9.8 million schillings. If one takes into consideration a saving on Civil Service salaries of 80 million schillings and on material consumption of 132 millions, the result is an immense budgetary improvement, but it remains to be seen to what extent these savings will appear only on paper, for in the year 1928, when much more favourable economic conditions still obtained, there were in the whole of Austria only 630 census forms declaring incomes over 90,000 schillings, and only three showing an income of over one million schillings. Since that time the crisis has greatly reduced fortunes, and the big incomes which were enjoyed in financial circles have been particularly hard hit.

The Federal Railways will also try to reduce the deficit by putting up passenger fares by 6 per cent. to 20 per cent. The milk rate is to be increased, but other goods rates will probably remain about the same. Last year revenue from passenger and luggage traffic amounted to 219.6 million schillings, and that from goods traffic to 372.5 millions. There was a reduction in the latter case of 40 million schillings as compared with the previous twelve months. This year it is to be feared that the drop will be still greater and affect both goods and passenger traffic, as tourist traffic suffered badly through the crisis and imports and exports closed very weak.

Further savings are to be effected at the Credit Anstalt, where at least 140, and probably more, clerks are to be dismissed. Through parliamentary action it was possible to dissolve all managerial contracts at one month's notice. The opinion, however, is spreading that the assumption that the bank can be completely reconstructed is hardly well founded, and that sooner or later it will have to be liquidated or converted into a smaller institute. Various personages have tried to get the other banks, too, to fuse, but most of the institutes have flatly refused to consider the proposal. It was a mistake to let the Credit Anstalt handle such an immense business for this little country, and to let the other banks amalgamate would simply mean repeating the mistake.

Within the last few days the Niederösterreichische Escompte-Gesellschaft has been energetically vindicating its position and has provoked a declaration from the Austrian National Bank to the effect that after careful examination it appears completely untrue that the Escompte-Gesellschaft owes large sums of money to the Banque Nationale de Crédit in Paris, which, as is well known, has recently been in difficulties; furthermore, that it is completely false that negotiations have taken place between the Escompte-Gesellschaft and the Austrian National Bank with a view to rendering assistance of any kind.

Rumours and feelings of panic have greatly increased during the last few weeks, and they are intensified by the circumstance that the Austrian National Bank has introduced the strictest control of foreign currency business. It is refusing to supply foreign exchange wherever the requests are not proved to be absolutely urgent. It has refused to place at the disposal of the banks, which for some time now have been in the habit of issuing bonds made out in foreign currencies, foreign means of payment required to meet such bonds. It has also refused to accord to the Municipality of Vienna a modest sum in dollars to enable the Municipality to support the quotation of the Vienna City Loan in New York. The National Bank takes the quite proper view that it must wait and see whether fresh credits will be accorded in Paris for Austria. As is well known, there was a suggestion made in Geneva of such credits to an amount of 250 million schillings. Until these are available, the bank intends to maintain its holdings of foreign currencies.

For the time being, however, the National Bank is averse to the proposal made from various quarters that a general control of foreign values should be introduced on the lines followed in Germany and Czechoslovakia. It points out that in the "hold-up" contracts, which have been made by the banks and other firms with foreigners

under its leadership, the undertaking has been given that the instalment payments must under all circumstances be made. Further decisions as to policy by the National Bank will only be made when it is quite clear what is to happen in regard to the Paris credit negotiations. If these negotiations do not result in a tangible success, the financial crisis in Austria will be acute. At the end of last month very big calls were made on the Austrian National Bank, as all the banks and savings banks withdrew heavily and handed in bills of exchange for discounting purposes. A portion of the money withdrawn by the public is being used for investment in mortgages, on which it is often easy to get 15 per cent. on a first charge.

The stiff attitude of the National Bank in regard to foreign currency has brought into being unofficial trade in foreign means of payment, and considerable higher prices than those of the official quotations of the National Bank are being quoted. The amounts changing hands are not very large, it is true, but prices run up to 12 per cent. above official rates. In consequence of the foreign currency regulations in force in their own countries, Czechoslovakian, Hungarian, Polish and Yugoslav dealers are trying to procure foreign means of payment here, and there also appear to be orders from Germany. If no improvement takes place shortly in this connection, Austria, too, will have to resort to wider measures of control.

HUNGARY.

League Experts Inquiry — National Bank — The Pengö.

(FROM OUR CORRESPONDENT.)

BUDAPEST, October 5.

THE expert inquiry by the League of Nations, which Hungary requested, is being conducted at present in Budapest under the leadership of Mr Royall Tyler, the former Deputy High Commissioner of the League in Hungary, and of Mr A. Loveday, Director of the Financial Section of the League. The other members, including M. Charles Rist, the former Vice-Governor of the Banque de France, Sir Bertram Hornsby, former Governor of the Bank of Egypt, Mr Pospisil, Governor of the Czechoslovak National Bank, Signor Suvich, and Herr Hemming, are expected this week. The main preoccupation of the experts will be to devise means to safeguard the stability of the currency. Urgent action is absolutely necessary. The pengö is linked to the gold standard, and it is essential that its stability should be preserved at all cost, because Hungary, being a borrowing agricultural country, with low wages and debts fixed mainly in gold currencies, has everything to lose and nothing to gain by devaluation. It is the avowed policy of the Government not to inflate, but it is not enough to declare against inflation, it is essential that every step should be taken without delay to avoid drifting into it.

According to the balance sheet of the National Bank of Hungary on September 30th the total note circulation amounted to 882.8 million pengö, as against 414.6 million at the end of August. The decrease of the circulation is due to the confidence in the gold pengö, which was decreed by the Government after the removal of restrictions of deposits in August. The total statutory cover amounted to 111.5 million pengö, against 121.2 millions at the end of August. The statutory gold cover—as enacted by the Banking Law in 1924 when the League of Nations reconstruction scheme began to operate—is fixed now at 24 per cent. As the present note circulation is the lowest for years, and there is little hope of its further reduction, it is essential to preserve a minimum gold holding of 100 million pengö to safeguard the stability of the currency. The bill portfolio of the National Bank is very high. It amounts to 385.3 million pengö, excluding the bills rediscounted by the B.I.S., and it is desirable that it should be gradually reduced to a more normal level. Credit restrictions, heavy taxes and reduced national income, all bitter remedies by

themselves, are however absolutely necessary to check an inflationary rise in the price level. The League experts will have to decide, jointly with the Hungarian Government, before October 15th what steps are necessary to this end.

Unfortunately the bad harvest and the marketing difficulties of agricultural products leave little hope for a substantial export surplus with which to pay interest service on Hungary's foreign obligations. There can obviously be no question of capital repayments of the short-term loans now maturing, and the £3 millions Treasury Bonds due in November will have to be prolonged for another year by the issuing bankers as well as the other private and public banks, the problem of which is still unsolved in the absence of a "standstill" agreement.

HOLLAND.

Sterling Depreciation and Dutch Exports — Proposed Remedial Measures — Netherlands Bank — Bourse.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, October 7.

NEARLY three weeks have passed since the English Government announced the suspension of the gold standard in England, and still the world is in uncertainty as to what plans England will adopt for the future. Will the gold standard be reverted to, or will sterling continue on the paper standard and be brought to a certain degree of stability at a given level? Trade can hardly afford to wait very much longer for a well-defined scheme, for the existing uncertainty is proving a great handicap to commerce.

Holland, in particular, with its great export trade to England, is experiencing the adverse effects very acutely. In agricultural circles the situation is very gloomy, the more so because the German crisis has already dealt a severe blow and has crippled a considerable part of our export trade to Germany. In July and August, 1930, exports of fruit and vegetables to Germany amounted to 126,000 tons; in the corresponding months this year only 65,000 tons were exported. Although this decline of 61,000 tons meant a great handicap to our agricultural and horticultural interests, the disadvantage was somewhat compensated by an increase in exports to England. The exports of fruit and vegetables to England rose from 34,000 tons in July, 1930, to 45,000 tons in July, 1931. In August, 1930, the figure was 35,000 tons, and in August, 1931, 40,000 tons. With the help of these increases the growers managed to get through the summer fairly well, although, of course, much lower prices were realised.

Through the suspension of the gold standard in England, however, the fruit and vegetable exporting trade with that country has become extremely difficult. In the first place, the drop in sterling has involved serious losses on the produce already sold but not yet paid for, for the exporter has to wait 10 or 20 days before he receives the proceeds of the produce shipped. The total exports of fruit and vegetables in September, 1930, amounted to 4 million guilders, in September, 1929, to 6 million guilders, and in September, 1928, to 7 millions, approximately half of which went to England. Estimating the exports for September, 1931, at 4 million guilders, of which about 2 millions would go to England, the loss thus involved to the Dutch exporters, taking the depreciation of the £ at 25 per cent., would be about half a million guilders.

In view of these circumstances, the Ministry of Home Affairs and Agriculture held a meeting of parties involved in the exportation to England of agricultural, horticultural and dairy produce for the purpose of discussing possible measures. In the course of a lengthy discussion a plan was put forward for stabilising the rate of exchange of sterling for the purpose of the parties interested, which

stabilisation would be effected by the Government (or the Government in conjunction with the organisations concerned), who would shoulder the responsibility for the profits or losses accruing from fluctuations below or above a given rate. A small committee was appointed to examine and elaborate the scheme and to discuss the matter with the Government and several important banking institutions. The committee is also to investigate by what means trading with England for forward delivery can be resumed.

The Tilburg woollen fabric manufacturers have submitted an address to the Government, pointing out, *inter alia*, the difference between import duties on English fabric in the Netherlands and elsewhere. It was shown that Holland, with an import duty of 8.3 per cent., is the least protected of all the countries; whilst, on the other hand, Dutch fabrics are taxed more heavily than English goods in Australia, Canada and South Africa, where England enjoys the benefit of preferential tariffs. In consequence, Dutch goods in South Africa, for instance, are not charged 5 per cent., but 15 per cent. *ad valorem*.

In shipping circles in the Netherlands great difficulties are being encountered, too. The competition of the Dutch shipping companies with the English shipowners has naturally become more intense, and reduction in freight rates has already had to be resorted to. An increase in English exports to Holland may, on the other hand, have the beneficial effect of causing more activity in the port of Rotterdam.

As against these increasing difficulties for Dutch commerce and industry, the situation of the foreign exchange market has improved last week. After the declaration of the Netherlands Bank, and the rise in bank rates, greater calmness has characterised the market, and more confidence has been shown in the guilder. The shipment of 22,580 kilogrammes of gold to Paris was necessary, but, on the other hand, gold to the value of \$11½ millions is due in the Netherlands from New York. The Netherlands Bank holds gold immediately available for export without limit, and this, no doubt, also helped to give confidence in the guilder.

During the present crisis the resources of the Netherlands Bank are meeting exceptionally heavy demands. Apart from the withdrawals of gold referred to above, some foreign exchange holdings are also being disposed of, mostly French francs and dollar bills. As regards credits in Holland, the facilities for giving advances on securities based on the rates effective on September 19th, have not been used to any great extent. On the other hand, numerous inland bills were offered for rediscounting. This is the result of the stagnation in the acceptance market; on the bill discounting market even the best acceptances were, and still are, being refused, so that recourse has to be made direct to the Netherlands Bank.

The tendency on the bond market, under the prevailing circumstances, has been firm once more, and State and municipal loans advanced by leaps and bounds. The recent drop in the bond market was partly attributable to French offerings, as the banking difficulties there made it necessary for the French banks to ensure themselves sufficient liquidity. The tendency on the shares market has been, however, very weak again, and numerous forced liquidations took place daily, thus depressing rates more than ever. The great difficulties still in store for Dutch commerce and industry are apparently being discounted in advance. On Tuesday, however, there was a sudden change in the tendency on the stock market, due to expectations of a statement from President Hoover; the tendency, both for shares and for debentures, became very firm. The Holland-America Line is unable to pay the interest on its debentures issue, and a reorganisation is proposed.

The recent occurrences have, naturally, left their mark on the new issues market too. In September, new issues totalled only 3.5 million guilders, as against 17.1 in August, 1931, and 18.2 millions in September, 1930. Some issues already announced were withdrawn.

SWEDEN.

The Gold Decision — Causes of Abandonment — Trade Balance Position.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 6.

WITH such surprising swiftness have events developed since England dropped the gold standard that it is somewhat difficult to answer the question: "Could Sweden have maintained the gold value of her krona (crown), or was it necessary to follow the example of England in the existing situation?" It may be said, perhaps, that this question is now of academic interest only, as the Swedish State Bank, after striving energetically for eight days to withstand the temptation, was finally forced to capitulate. In actual fact, however, an attempt to answer the question put leads to a clarification of the course of events and renders possible a broader judgment.

It may be stated in the first place that Sweden has shown herself, in an almost surprising manner, capable of withstanding the effects of the international depression which has come more and more to the fore during the last two years, although these effects have naturally begun to make themselves progressively felt. Right up to August of the present year, however, production in the most important industries was maintained on the average at 103 per cent. of the level for the year 1923-24, whilst the average for 1929 was 135 and for 1930 131, in which connection it should be noted that the index in question (that of the "Svensk Finanstidning") includes very few of the purely home market industries, in regard to which the output has certainly dropped to a considerably lower level. Unemployment has kept at a fairly low level, and the influences on the finances of the State, which have begun to make themselves felt almost everywhere, have in Sweden so far been conspicuous by their absence. The latest Budget, the result of which has just been published, even closed with a small surplus.

It has, however, long been obvious that it was only a question of time before the effects of the depression would press upon Sweden also, if the crisis continued. This was suggested first and foremost by the increase in the figures on the wrong side of the balance of trade, the movement of which causes increasing anxiety. Already last spring this was much in evidence, the surplus of imports for January-May reaching the considerable figure of Kr. 180 millions. It is certainly normal for the spring months to show a marked balance on the wrong side, an effect of purely seasonal conditions, but the surplus of imports for the same period last year, in spite of the depression abroad, which was already in full swing, was no more than Kr. 97 millions. Although the summer usually brings a decided reversal to a favourable trade balance, this year, on the other hand, the unfavourable balance has continued to increase. Up to and including August the surplus of imports was no less than Kr. 226 millions, and if this rate of increase continued it would have led, perhaps, to a balance on the wrong side for the whole of 1931 of something like Kr. 800 millions. How serious this tendency was will best be seen from the fact that the years immediately preceding the period of depression showed a surplus of exports—for instance, for 1929 Kr. 30 millions.

Neither to the Swedish public nor to foreign observers, however, would the serious side of this tendency appear to have emerged clearly, owing to a special circumstance which camouflaged the situation. The difference between the rates of interest abroad and in Sweden, which has been particularly striking during the two last years, has led to the Swedish commercial banks relying less and less on the State Bank for their ordinary requirements of working capital. They have instead borrowed at much lower rates of interest abroad and have sold to the State Bank the currencies which in this way they have had at disposal. Whilst the home credits of the State Bank have almost continuously fallen, this reserve of currency has therefore shown an abnormal increase, a movement which has, moreover, been strengthened by the influx of foreign capital, particularly German, to

Sweden. The maximum point was thereby reached last autumn when the holding of foreign currencies by the bank amounted to Kr. 410 millions, whilst the year before the maximum was Kr. 282 millions, and before that Kr. 263 millions during the exceptionally favourable year 1927. At the end of last year, moreover, the Swedish banks still had net claims on foreign countries for Kr. 554 millions, as compared with Kr. 584 millions one year previously.

It goes without saying that this was a very unfortunate development, which, as mentioned, contributed, in the first place, towards giving a false idea of the actual position, and, secondly, constituted a great risk in the event of a swift alteration in international connections. On the one hand it gave the impression that our position could very well stand an unusually big debit balance of trade. On the other, it is to be noted that the large reserve of currency was, in fact, set off by abnormally large short-dated liabilities to foreign banks which might suddenly demand payment of their claims. Particularly illuminating as showing how sensitive this position was, may be mentioned the fact that the commercial banks, which at the end of January, 1930, had short-dated net claims abroad of Kr. 172 millions, showed at the end of May this year, on the other hand, short-dated foreign net liabilities of Kr. 141 millions, and during the same period foreign deposits with the commercial banks had increased from Kr. 98 to Kr. 343 millions.

When the German crisis broke out in July the consequences were at once felt very perceptibly by the Swedish commercial banks, and these consequences were subsequently aggravated at a rapid rate when the English crisis came on top of it. In a comparatively very brief time our short loans abroad had to be settled, and this had to be done almost entirely by home resources as at the same time our considerable investments abroad were tied up to a very great extent. The only road to be followed in this state of affairs was that the commercial banks should buy back from the State Bank at a continuously increased rate of rediscount the currencies which they had previously sold to the bank and deliver them abroad, viz., a procedure opposite to that followed during the last two years. From the end of the half-year and onwards to September 19th the reserve of currencies of the State Bank was drawn on to the extent that no less than about Kr. 200 millions, and, when England departed from the gold standard, the holding of foreign currencies by the State Bank had shrunk to only Kr. 97 millions, an amount which was manifestly too small even to cover normal requirements of currencies, as it was necessary to count on a continued unfavourable balance in our foreign trade account. It was, therefore, clear that it would be necessary to raise a big foreign loan in order to meet indispensable requirements under all conditions which the spring must bring with it.

In other words, Sweden was particularly ill-equipped to meet the pressure which was necessarily a consequence of the decision of England to suspend the gold standard, and the decision of England to suspend the gold standard, and it goes without saying that speculators would take advantage of this possibility. Unless a very considerable foreign credit could be arranged almost immediately it was quite out of the question that the State Bank would be able to master the situation. The demand for foreign currencies speedily became of such proportions that it was only possible for the State Bank to prevent its holding of foreign currencies being completely exhausted within a week by shipments of gold. In currencies and gold the bank had in six days to hand over Kr. 95 millions, causing the reserve to sink to Kr. 33 millions and the holding of gold by Kr. 31 to Kr. 199 millions. At the same time, it was declared on the one hand that the gold standard would be maintained, and, on the other hand, the negotiations for a foreign loan were pushed forward. When, on account of the feeling of panic in Paris and New York, it was impossible to bring these negotiations to a conclusion during the course of the critical week the bank had to give up the struggle. Had it been possible, on the other hand, to arrange a sufficiently large foreign credit at once everything points to the fact that it would have been possible to maintain the position.

NORWAY.

Prices — Exchange — Bank Return — Stock Exchange.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, October 5.

THE raising of the Bank rate on Monday last was considered absolutely inevitable, in order to check speculation. As far as commodities are concerned, there has already been some instances of a rise of prices, but the general inflation that was expected at the beginning of last week has, fortunately, not yet materialised. A meeting between representatives of our Merchant Associations and the Minister of Trade took place early last week, and it was agreed that there should be no increase of prices so long as existing stocks could be drawn upon.

After the sharp decline of the krone on Monday last, when sterling was quoted at 17.85, against 16.50 on the previous Saturday, a reaction set in on Tuesday, continuing—with a setback on October 2nd—throughout the week. The return of the Norges Bank dated September 30th naturally indicates the strain on its gold reserve experienced during the last week of the month. Gold fell from 146 million kroner on September 22nd to 118 million kroner, while notes in circulation rose by about 18 million kroner, deposits at call by 20 million kroner and balances abroad by some 25 million kroner. A new item, amounting to 27.2 million kroner, has been introduced into the Bank return under the heading "Gold deposited with foreign banks, at free disposal." According to the statutes of the Bank, this amount cannot be treated as a reserve in the same way as the ordinary holdings of gold in the vaults of the Bank, but was set aside for special purposes. On the whole, the last Bank return presents a far more favourable position than was anticipated, and seems to give some ground for the hopes of an impending reduction of the Bank rate.*

The Stock Exchange reopened to-day after having been closed for a fortnight. Bonds were, of course, quoted at considerably lower prices than at the suspension of operations, but buyers were rather keen, especially as regards Government bonds. Shares were also firm, shipping and industrials being favourites.

CZECHOSLOVAKIA.

Sterling Reactions — Bank Rate — Industry — Budget.

(FROM OUR CORRESPONDENT.)

PRAGUE, October 6.

HAVING raised its rate from 5 to 6½ per cent. on September 22nd, the National Bank of Czechoslovakia decided to restrict dealings in foreign exchange. A daily control of purchases of foreign exchange at the banks was introduced, as well as control of transfers on foreign account. As, however, these steps were not found sufficient to give a clear view of the capital movement between Czechoslovakia and foreign countries, a Government decree was issued on October 2nd, which reintroduced the control of foreign exchange to the same extent as in 1924. This control consists chiefly in the obligatory surrender of foreign exchange necessary for payments abroad, and the requirement of licences from the National Bank before foreign securities can be purchased, arbitrage operations in foreign exchange undertaken, or credits allowed to foreign firms. It should be pointed out, however, that the accounts of foreigners in foreign currencies as well as in Czechoslovak crowns are not subject to any restriction.

End-of-the-month requirements were rather heavy. The note circulation rose by 1,017 million Cz. K., to 7,172 million Cz. K.; and discounts and loans against securities increased by 696 million Cz. K. to 1,721 million Cz. K. The Stock Exchange naturally was under the influence of general nervousness and of the trend on other stock

*Norwegian Bank rate was reduced from 8 to 7 per cent. on October 7.

exchanges. The share market, after a temporary drop, regained approximately the August level; on the other hand, gilt-edged securities weakened after the raising of the discount rate. The foreign exchange market has settled down, and sterling is again quoted regularly. Our own currency is firm, as a result chiefly of the fact that the short-term indebtedness of Czechoslovakia abroad is of secondary importance.

With regard to industry and trade the depreciation of sterling is causing uncertainty not only as far as Great Britain is concerned, but also with regard to those countries where prices of import and export goods were calculated in sterling as a stable gold currency. Arguments are arising whether sterling, after the suspension of the gold standard may still be considered the same currency as "gold sterling," which was agreed to as a medium of payment. Similar difficulties are occurring also in the trade relations with the Scandinavian countries.

These questions were discussed by the Federation of Industries and Chambers of Commerce, who came to the conclusion that in view of the various aspects of our foreign commercial relations, it is not possible to propose uniform steps through official action. The opinion, however, was expressed that the difficulties caused by the fall in value of sterling could be amicably settled by individual negotiations between the firms in question. It was also recommended that the Czechoslovak firms should meet the foreign firms where possible.

The State's balance sheet for the year 1930 was published lately and shows an effective deficit of 666 million Cz. K. instead of the budgeted surplus of 53 million Cz. K. Having regard to this fact and to the general economic situation of the country, the Government are forcing energetic economies in the Budget prepared for the year 1932, so that it may be confidentially expected that the Budget will be balanced. The municipal elections, whose political significance is important, passed quietly and showed no substantial alterations in voting.

SWITZERLAND.

Banking Position — Gold Reserves.

(FROM OUR CORRESPONDENT.)

GENEVA, October 4.

SOME anxiety has been felt abroad, and even in this country, with regard to the financial position of Switzerland as a result of the world crisis, and it was thought that Switzerland, with other countries, might have to abandon the gold standard. A recent reassuring statement by M. Musy, Chief of the Finance Department, makes it clear, however, that the Government has no reason to abandon the financial policy it has pursued during and since the war.

The importance of Switzerland as a banking centre is shown by the fact that the aggregate balance sheets of the Swiss banks rose from £240 millions in 1906 to £880 millions in 1930; that their total profits increased during the same period from £3,760,000 to £15,080,000; and that in 1929 they paid over £2 millions to the State in taxation. The £880 millions deposited in the banks and administered by them may be analysed as follows:—

Mortgages	Thous. £
Securities (Swiss Confederation, cantons, municipalities and banks).....	296,000
Cash in hand	60,000
Loans to municipalities	20,000
Exchange bills	8,000
	80,000
	464,000

These form first-rate assets, the total of which corresponds to over one-half of the funds deposited in the banks. Then follow:—

Guaranteed accounts current.....	Thous. £
Other accounts current	212,000
Debtors	36,000
	96,000
	344,000

With regard to the engagements of Swiss banks in foreign countries, it may be stated that these amounted to £31,400,000 in Germany in March, but were reduced to £23,240,000 in July, and have since been further diminished. The total amount that Swiss banks have abroad in the form of short- and long-term loans, and holdings of French francs, dollars and pounds, does not exceed 15 per cent. of their aggregate engagements in short- and long-term loans. But, on the other hand, their total reserves aggregate £26,000,000, so that the situation remains sound and solid, even allowing for the banks sustaining losses abroad.

The position of the banks is closely connected with that of the Swiss National Bank, whose gold reserve has steadily increased since last year. A fortnight ago the Swiss National Bank held gold coin and gold bars to a total of £53,720,000 and £19,120,000 in gold currencies, against which the circulation was only £51,400,000. The figure of the gold reserve would have made a further issue of £82,000,000 in banknotes possible in case of need; and by converting foreign currencies into gold bars the issue could have been increased to £134,000,000. On September 30th the gold reserve had risen to £77,970,000, of which £64,348,000 was in gold coin and gold bars, while notes in circulation amounted to only £58,479,000. There is, therefore, no reason for anxiety in regard to the financial situation of Switzerland or of the Swiss banks. The latter's position is stronger now than it has been for some years, and deserves the confidence which Swiss and foreign investors have placed in it.

ARGENTINA.

Effect of British Gold Suspension — Political Situation.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, September 26.

BUSINESS in Buenos Aires has received with almost excessive optimism the changed monetary conditions due to Great Britain's abandonment of the gold standard. This may be primarily attributed to two main causes: in the first place, depreciation of the pound as compared with the dollar has been reflected in an improvement of the quotation in sterling of the Argentine peso, while the second, and more important factor, is the rise in price of all Argentine exportable produce. Cereals benefit through the fact that America's surplus stocks can no longer be regarded as an immediate threat to the market, while the European demand for wool and hides has put new heart into the export trade.

There is, moreover, considerable local jubilation over the almost complete cessation of imports from the United States. The high rate ruling for the dollar, in conjunction with the recently imposed additional duties on the majority of merchandise brought from North America, is acting as an emergency brake, and, for the moment, United States trade with Argentina has stopped, at any rate as regards shipments hither. With regard to Continental business, and more especially French business, the Argentine import position is, at the time of writing, somewhat obscure, and orders for both French and Italian merchandise are being suspended where such a course is possible, while no new engagements are undertaken. This is chiefly attributable to the exchange uncertainty, for during the past week the only continuous exchange market has been made in dollars and in sterling, other rates being unquoted and termed "nominal," though business has been done on the basis of London-New York-Paris quotations.

Prompt action was taken by the Banco de la Nacion to curb any tendency towards speculation, and that institution announced that it would henceforward consider the U.S. dollar as standard, establishing 180 Argentine gold dollars to \$100 U.S. as the basic rate, a course which led to frequent fluctuations in sterling. It is, however, reasonable to expect that, when the market has settled down—and provided that the first effect of the changed

conditions in Europe and the United States is maintained as regards demand and prices for Argentine produce—the Argentine peso will gradually improve as the year brings the country nearer to harvest time.

There is, however, one local influence of the highest importance that must not be overlooked, namely, the effect upon trade of the political situation and its culminating point—the Presidential Elections, billed to take place on November 8th. If these are carried out according to plan and the actual provisional Government hands over the affairs of the nation to a duly constituted, and, therefore, unquestionably legal, successor, complete with Congress and the whole machinery of provincial administration, which forms so important a part of the Federal form of government, all will be well, irrespective of whatever party may be able to bring its candidates to power. If, on the other hand, anything occurs to prevent the elections from being carried to their logical conclusion, nobody can say what the effect on the country is likely to be. Fortunately there is every reason to assume that the alternative just stated is reasonably remote.

Books and Publications.

THE CITY OF MARKETS.*

WHEN a successful novelist and man of letters, who is also assistant editor of a London daily financial newspaper, publishes a book on "The City," one looks for two things: an informed story and more than average skill in the telling. Mr Collin Brooks does not disappoint his readers. His most recent work is a very adequate description of the most complex square mile upon this earth. He has not essayed to write a textbook on the City of London. His aim is rather to take the general reader, who knows sufficient of the High Temple of Finance and Commerce merely to be perplexed by its ceremonies, for a tour within its walls in the company of a rather jovial raconteur, who is a fellow human being first and an expert second. He describes the founding and the foundering of the Royal Exchange, the life and work of the members of the Stock Exchange, the Money Market, the Metal Exchange, the Coal, Iron and Steel, Tea, Rubber and Produce Exchanges and Lloyds. "Here," he declares, "is the House Without Windows (but not without statuary), commonly called the Bank of England. Here is the Metal Exchange, the abode of 'The Forty Just Men.' This is Mincing Lane, where Samuel Pepys saw a house on fire. Keep together, please, whilst I give you an account of the history, organisation and practical working of each of these famous institutions." This is a difficult style to maintain, but the test of Mr. Brooks' success in his medium is his ability to compel the reader, say, who is not interested in rubber to read his chapter on rubber and to end by being interested in rubber. The author, however, is more than an effective City museum guide. He endeavours to set each sight into its context as an institution affecting the daily life of innumerable men and women in fact to justify the ways of the City to men. There is relevance in the effort to-day. Mr Brooks, on the whole, proves equal to his task, though his energy shows slight signs of flagging before the end.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]
(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Economic Essays and Addresses. By A. C. Pigou and Dennis H. Robertson. (London) P. S. King and Son, Ltd., Orchard House, Westminster. 10s. 6d. net.

Most of the papers collected in this volume have already appeared in print. Those by Professor Pigou deal for the most part with questions of advanced economic theory, but the paper on "Limiting Factors in Wage Rates" is of interest to the general reader. Mr Robertson's essays, except for a brief note on international trade, are all financial subjects.

* "Something in the City: Men and Markets in London." By Collin Brooks (London), Country Life, Ltd., 20 Tavistock Street, W.C.2. 8s. 6d. net.

Everybody's Business. Hartley Withers. (London) Jonathan Cape, 30, Bedford Square. 10s. 6d. net.

Mr Withers, who can make the technicalities of the money market into genial bedside literature, has now undertaken an explanation of the general economic structure and functioning of the modern world in a similar vein. Though his book was completed early in June, readers whose interest in economics was only born last week will nevertheless find in it the answer to many of their questions.

Politics and the Younger Generation. By A. L. Rowse. (London) Faber and Faber, Ltd., 24, Russell Square. 10s. 6d. net.

An explanation of the Labour point of view with regard to the position of Great Britain in the world crisis.

How to Read the Money Article. By Charles Duguid. Sixth edition, revised by F. W. H. Caudwell. (London) Effingham Wilson, 16, Copthall Avenue. 5s.

An up-to-date edition of an elementary guide by the former City Editor of several leading London papers.

The Stabilisation or the Equalisation or the Insurance of Wool Values. By Sir John Higgins. (Melbourne) British Australasian Wool Realisation Association, Ltd.

A carefully-worked-out proposal for the formation of an association to ensure to wool-growers an average annual price over long periods.

The New Russia. (London) Faber and Faber, Limited. 24, Russell Square. 3s. 6d. net.

A collection of broadcast talks by eight speakers, including Dr. Margaret Miller, Sir Bernard Pares and Mr. H. G. Wells.

Direct Taxation in Austria. By John V. Van Sickle. (London) Oxford University Press, Warwick Square. 13s. 6d. net.

A detailed study of Austrian taxation since 1914, with the object of demonstrating the relation between public finance and the production and distribution of wealth.

Unemployment Benefit Plans in the United States and Unemployment Insurance in Foreign Countries. (Washington) Superintendent of Documents. 50 cents.

Part I. gives an account of a very large number of company and trade union plans in the United States; Part II. deals with public schemes in eighteen other countries.

Kingston's Continental Price Conversion Tables. By A. G. Kingston. (London) Kingston's Translations Institute, 96-98, Leadenhall Street. 4s. net.

A useful set of tables by which sterling prices per unit of British measurement can be converted at a glance into prices per metric unit in any of the principal continental currencies.

Jahrbuch 1930 des Allgemeinen Deutschen Gewerkschaftsbundes. (Berlin) Verlagsgesellschaft des ADGB, Insetstrasse 6a.

An annual statistical survey of a wide range of matters affecting labour in Germany.

THE COURSE OF THE COMING BOOM

by L. L. B. ANGAS

This remarkable publication, appearing the day following the collapse in sterling, and forecasting certain stock market movements which have since occurred, will prove invaluable to investors as a guide in the forthcoming months. Mr. L. L. B. Angas's forecasts of stock market movements have, in the past, shown an uncanny accuracy, as witness his publications "The Coming Rise in Gold Shares" and "The Coming Collapse in Rubber." This latest publication can be equally recommended.

The Stock Exchange.

WALL STREET AND MR HOOVER.

MR HOOVER has a habit of stepping in at the eleventh hour to avert disaster. Last Monday the liquidation of stocks on Wall Street had assumed such dimensions that it seemed impossible to avoid an investors' panic and a run upon the banks. The volume of transactions reached 3,200,000 shares, and all the leading common stocks—the hopes of the industrial future of America—touched new low levels. On the following day a dramatic change in sentiment was witnessed. Mr Hoover had announced that he was calling a conference of political leaders, following upon a meeting which he had held with representatives of the banks and of the real estate business. It was rumoured that the country banks were to be saved by making their paper eligible for rediscount by member banks of the Federal Reserve system. Immediately a wave of buying swept through the Stock Exchange. "Short" positions were liquidated, and a recovery developed as spectacular as the slump of the previous day. On Wednesday a minor reaction followed, which did not, however, wipe out the recoveries. The extent of the fall, rise and reaction in some of the leading stocks is shown in the following table:—

	High, 1931.	Sept. 26.	Oct. 5.	Oct. 6.	Oct. 7.

AMERICAN SHARE VALUES.

STANDARD STATISTICS COMPANY INDICES—1926=100.

(LAST WEDNESDAY IN EACH MONTH.)

Elsewhere in this issue we discuss Mr Hoover's "new plan" in greater detail. To what extent can it bring about a recovery in security values? We must first consider the forces which have brought about the catastrophic fall in security prices this year. The chart which we have compiled of the end-month fluctuations in the price indices of representative utility, railroad and industrial stocks from 1926 to the present day permits the boom and slump in Wall Street to be seen in perspective. Utility shares, after the fantastic inflation of 1929, have now returned to 1926 levels. Railroads have never been so low since 1897. Industrials, on October 4th, touched their lowest levels since June, 1924. At the beginning of this year the usual attempt was made to discount a trade recovery in the spring. But the trade indices were reactionary, and the attempt did not last so long as that in the spring of 1930. By the last week in April all the ground gained had been lost. Since then, apart from a minor rally, the decline has more than kept pace with declining trade. It has been persistent and devastating. Not only has the confidence of the individual investor been undermined, but many inflated corporate positions have perforce been disintegrated.

When forced liquidation begins it tends to set up a vicious circle. Each time a new low level of security prices is reached, the shrinkage in the value of collateral held by the banks brings further liquidation of bank loans. Further, the country banks have their funds "frozen" in loans to farmers secured on crops which are difficult to market. Not only has the number of bank failures this year been increasing, but the size of each failure has been significantly increasing. Between June and August 414

banks failed for \$450 millions, against 198 banks for \$125 millions in the corresponding period of 1930. Forced distribution of bank assets and liquidation of bank loans are, no doubt, the root cause of the decline in security values which has persisted since March this year, but we must not under-estimate the justifiable selling of common stocks, whether by "bears" or disillusioned holders, which has followed the issue of company reports of a depressing nature.

The bond market has suffered equally with the share market. In fact it has had difficulties to contend with peculiar to itself. Various legal restrictions are placed upon the investments of financial institutions. In New York, and certain other States, according to the "Guaranty Survey," the law does not permit the investment of funds of savings investments of financial institutions. In New York, Massachusetts and certain other States, for example, the law does not permit the investment of funds of savings banks and trustees in the obligations of railway companies unless the earnings of such companies have, for a consecutive period of specified length, been sufficient to meet the amount of the interest on all bonds and other fixed charges, with a certain definite margin of safety. In New York, the law provides, *inter alia*, that a railroad company must have earned its fixed charges at least one and one-half times during five of the last six fiscal years preceding the date of investment before its bonds are eligible for savings banks and trustees. This margin, further, must have been shown during the fiscal year immediately preceding the investment. Under this requirement, the failure of any railroad company to earn its fixed charges with the required margin for two consecutive fiscal years automatically makes its bonds ineligible for a period of at least six years, even though its earnings record may be maintained without interruption both before and after the two-year lapse. It was shown before one of the recent hearings of the Interstate Commerce Commission on the railways' application for higher freight rates, that 67 companies, representing 90 per cent. of the earnings of the country's railroad system, would earn their fixed charges only 1.37 times during the first half of this year. Between October 1, 1930, and June 1, 1931, the market value of all railroad bonds listed on the New York Stock Exchange all declined by \$685,000,000. Recently, an estimate has been made showing that bonds with a par value of \$5,877,600,000—representing 77 per cent. of all railroad bonds legally listed for investment by savings banks and trustees in the State of New York—are in danger of removal from the list.

The law, however, does not specify that bonds removed from the "legal" list must be sold immediately. In the New York State, for example, it is left entirely to the discretion of the Superintendent of Banks to decide whether or not a savings bank should dispose of such securities. In the case of railroad bonds which are well secured and have a good record, but have been made ineligible for purchase by the present trade slump, it is unlikely that savings banks would be compelled, or would be inclined, to sell at a great sacrifice. Nevertheless, since it is important that these institutions should hold only securities which are readily marketable, even high grade railroad bonds may continue a reactionary market.

Federal Government securities also have come within the scope of bank liquidation. Partly as a result of the hoarding of Federal Reserve notes, members of the Federal Reserve system have had to reduce their investments by very substantial amounts.

In the foreign bond market, the position is distressing. Defaults in South America and distrust of the European situation have demoralised the market to such an extent that it is impossible to sell many foreign bonds, even if there has been no default. For example, Colombian and Brazilian issues, on which interest is still being paid, are standing at "default" levels, and even Argentine Government bonds are not far removed, in market appreciation, from the category of defaulters.

The logical effect of Mr Hoover's new plan should be to arrest the decline in security values. It may even produce a recovery, if it induces buying from those centres which are least hard-hit by depression and low commodity prices. The discounting by

by a National Credit Institution with a capital of \$500,000,000 of such assets of country banks as are not eligible for re-discount by the Federal Reserve Bank will liquify the resources of the embarrassed country banks, and serve to prevent for a time a renewal of forced liquidation. This is all to the good. Moreover, the American Bankers' Association are acting up to the plan by urging all banks not to sell investments at sacrifice prices or to force any excessive liquidation of securities which are held at collateral for loans. While it is improbable that the limited amount of inflation of credit which Mr Hoover's plan may bring about will be allowed to be expended, to any great extent, in the purchase of securities "for the rise," yet in so far as commodity prices are raised there may be a return to favour of equity stocks.

Further, it must be well understood in Wall Street by this time that America has not the power to bring about a substantial improvement in American trade without a recovery in world trade. Until a solution is found of the problem of reparations and international debts, and until the dangerous crisis in Germany, which threatens to be political as well as financial, has been solved, there is little justification of a return of bullish sentiment to the markets in Wall Street. The "bulls" may argue that common stocks are thoroughly deflated—the average yield of 50 industrial common stocks, according to the Standard Statistics Company, is nearly 8 per cent., as compared with a low level of 4.15 per cent. in 1930 and 3.10 per cent. in 1929. But America, with her steel plants working at under 30 per cent. of capacity, with her army of unemployed still rising—a figure of seven millions is a reasonable estimate of the present total—and with a prospect of a deficit on her Budget of \$1,500 millions, has little ground for optimism about her immediate trade future. The most hopeful news for holders of American securities would be that the political authorities had recognised the indispensability of an international conference to settle world trade and financial problems. It may be that discussions of certain of these issues with M. Laval, on his forthcoming visit to Washington, will encourage Mr Hoover to support a new plan which will be international instead of national in its scope and objectives.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

MARKETS remained quiet but relatively steady during the heavy New York liquidation at the beginning of the week. The upward reaction in Wall Street coincided with the announcement of the dissolution of the British Parliament and an early general election. The "House," which had previously given lukewarm support to the idea, to say the least, proceeded to put the best construction on the *fait accompli*. Gilt-edged remained firm, though slightly irregular, and a moderate but widespread demand was experienced for industrial shares likely to come within the scope of possible tariff proposals and for the equity stocks of companies in the railway and "export" industries. The movement had insufficient impetus to encourage attempts to bring about a "boomlet," but suggested, nevertheless, that a short-lived operation of this character might not be far off.

Gilt-edged stocks showed fewer sharp upward movements than in the latter part of last week, but values were sustained by numerous small buying orders, and fluctuated day by day in sympathy with sterling, with a rising trend. India loans were mostly firm, though little dealt in. Australian issues improved on more encouraging trade figures, and the announcement that New South Wales was repaying the interest previously remitted to holders of New South Wales Stocks by the Commonwealth Government, which was withdrawing all legal proceedings.

The foreign bond market was quiet, interest being chiefly centred on French Rentes, which moved with the sterling-franc exchange, and on German issues. The latter were depressed by unfavourable news from Germany, particularly the fall of Dr. Curtius, but recovered appreciably on the announcement by the Bank of International Settlements of the payment of interest on "Dawes" and

(Continued on page 670.)

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

SAVORY AND MOORE, LTD.—Investment Registry, Ltd., announce that letters of allotment and regret in connection with the issue of £185,000 7½ per cent. first mortgage debenture stock in Savory and Moore, Ltd., were posted Wednesday afternoon, October 7th.

(Continued from page 667.)

"Young" bonds in gold. Chilean bonds showed improvement and a fair turnover occurred in selected Japanese loans.

The market put up the prices of home railway junior stocks after the election announcement, without precisely asking why. The week's traffic figures were colourless, but suggested that, so far as seasonal influences were concerned, the railways were holding their own. Argentine rails were weak on a break in the peso exchange, though all the companies, except B.A. Great Southern, published slightly higher traffic returns. American rails registered wide movements, breaking from one to eight points both on Monday and Tuesday, and thereafter reflecting the substantial gains of the rest of the American market.

The American break had surprisingly little effect on the industrial market, apart from the inevitable marking down of "international" counters. The ensuing American recovery found attention concentrated in London on the possible effects of a National Government victory at the elections, though operators were content, mostly, to watch the course of demand outside rather than back the movement with their own money, having regard to the ban on any but cash dealings. Rumours that the Committee would shortly reinstate fortnightly accounts, but allow no carrying-over of stock, elicited no confirmation. Electrical equipment shares recovered after initial weakness on American sales, and motors were harder. Iron and steel shares remained in steady demand on tariff talk, though Babcock and Wilcox fell back after declaring an interim dividend "subject to tax" instead of "free of tax." The leading textile issues were bought from the North of England, Courtaulds changing hands freely. Tobacco shares showed signs of revival, and breweries recovered after unusually wide movements early in the week. Cables and Wireless were speculatively purchased, and Dunlop attracted similar interest. Imperial Chemical also came within the "tariff zone." Insurance shares advanced, demand induced by dividend announcements finding a shortage of stock. Bank shares, though not active, were higher where changed.

The rubber share market again had an idle appearance, the leaders showing a few scattered advances in sympathy with the stronger tone of the commodity. Business in tea shares suffered a contraction, buyers being unwilling to take up many shares after the recent rise. Oil shares were initially liquidated from New York and Paris, but rallied later, the American crude oil production figures showing a further decrease.

In the mining share market, Kaffirs were firm, but the predicted boom again missed fire, the absence of carry-over facilities exercising a markedly restraining influence. Some finance company shares strengthened, but Crown Mines, Geduld and Daggafontein encountered profit-taking after a rise. Chartered were a little better on bear covering, but inquiry for other Rhodesians was modest. Incalculable fluctuations in tin prices checked any possible expansion of business in the shares. The advance in copper quotations, however, encouraged a demand for Rio Tinto from London and Paris.

NEW YORK.

THE abrupt fluctuations in sentiment and prices in Wall Street are discussed at length in a leading article on page 666. The heavy falls in quotations last week-end were succeeded by something closely resembling panic on Monday, when the shares with the soundest earning position were among the heaviest sufferers. The view that the causes of the movement were chiefly domestic, having little direct connection with the gold drain, was confirmed by the extraordinary rally which occurred on President Hoover's announcement of the calling of a conference to deal with the internal situation. Sharp rises took place in every section. The short interest was taken completely by surprise and covered on a very large scale. The pace was too rapid, however, to be maintained, and a more uncertain tendency developed on Wednesday. On Thursday, however, the tone was firm. Undoubtedly the conference's decision was influenced not only by Monday's heavy liquidation, but by outward and visible signs of embarrassment in certain quarters, exemplified, over the border, by the failure of two well-known Canadian brokerage firms, Messrs McDougall and Cowans and Messrs Greenshields and Company, the latter having done a large mail order business. American trade indicators remained unfavourable, the steel industry continuing to operate at under 30 per cent. of capacity, while car loadings for the week ended September 26th were 788,000, against 742,000 in the previous week and 950,381 in the corresponding week of 1930. "The New York Times" index of American business was 68.0 for the week ended September 26th, against 68.9 for the previous seven days.

PARIS.

Fears of impending trouble in Germany undermined any real confidence in the French stock markets. Bank shares were again subject to bear attacks, and rentes had an irregular appearance. South African shares were initially out of favour in sympathy with London quotations, but recovered on Tuesday. The weakness of Wall Street produced unfavourable reactions, and there was no sign of any general upward trend at any time. An improved tone supervened in mid-week, but was checked by profit-taking on Wednesday, when sentiment again became depressed.

BERLIN.

When the German stock markets were reopened on September 3rd after a respite of almost two months, writes our Berlin correspondent, it was generally expected that the coming weeks would be more quiet. At once, however, there came a sharp upward movement in stocks, due in the main to fears of a mark inflation by capitalists who preferred to hold stocks and loans, which in Germany are for the most part based on gold or dollars. When, later in September, it became known that the Reichsbank was supporting the German currency with all its resources, sharp declines occurred in the Bourses. The general nervousness, the weakness of the dendency of foreign stock markets, and the decline of the German loans in New York and London led, especially between September 14th and 18th, to losses of from 20 to 30 per cent. in Berlin. September 18th, contrary to all expectations, was the last Bourse day in Germany. After the announcement of England's decision the Bourse in Berlin was also closed on September 21st, and in contrast to the London Stock Exchange was not later reopened. At first it was the general unrest and anxiety about the currency and the future of Germany's economy that moved the authorities to close the Bourse. Later, however, the attitude of the Reichsbank also played a decisive rôle. In the course of the last few weeks—in trading from hand to hand after the closing of the Bourse—foreigners have sold considerable amounts of German stocks and transferred the proceeds to their own countries, as a result of which the Reichsbank has lost foreign exchange. In order to hinder selling by foreigners, the

publishing of any "free" quotations—mainly business done by telephone—was prohibited on October 3rd. As a result, transactions in stocks have been reduced to a minimum, for the givers of orders fear to suffer loss as a result of uncontrollable quotations. The following table contains the "free" quotations in the most important German stocks for October 2nd, the last day on which quotations were permitted to be made public. The number is naturally small. The table shows that most industrial stocks have held their own fairly well. Heavy losses are shown only by bank stocks and the stocks of the A.E.G. and the United Steelworks (Vereinigte Stahlwerke). Concerning the A.E.G. all kinds of unfavourable reports are being circulated, and as to the Vereinigte Stahlwerke the conviction is increasing that its capital is much too high. Loans again fell. Eight per cent. gold mortgage bonds changed hands at about 80 per cent. The heaviest loss in the course of the last month was recorded by the 7 per cent. Obligations of the Vereinigte Stahlwerke, which dropped from 50 to 35 per cent.

AMSTERDAM.

Uncertainty and irregularity continued on the Amsterdam bourse, with a general recognition of the seriousness of the international situation. A considerable degree of nervousness was in the air with regard to the American position, and the difficulties of the Copenhagen Handelsbank added to the uneasiness. Certain shares, however, were in demand, for special reasons, Royal Dutch strengthening visibly after initial weakness, while Unilever and Philips' Lamps were mainly firm. The resignation of Dr. Vissering as president of the Netherlands Bank was taken as a bear point.

OTHER CENTRES.

Many minor foreign bourses remained closed, while in those centres where a market still existed dealings were few and far between and the general tone dull. Brussels, Oslo, and Milan fluctuated uncertainly, and, apart from minor rallies, proved largely featureless.

INVESTMENT NOTES.

The "House" and the Election.—The Stock Exchange has accepted the decision to hold a General Election with its customary determination to make the best of all things, if it cannot control them. No slump in gilt-edged stocks followed the announcement. Indeed, writes a "House" correspondent, the character of the buying which took place on Tuesday this week, when rises ranging from 1 to 1½ occurred in the Consol market, was suggestive of the dual effect of cessation of heavy sales and the small investor's confidence in the financial stability of the country. In one instance, an order to sell £250,000 of a Four per Cent. British Government stock was carried out so easily that the seller received ½ per cent. more than he expected, and the buyer was ready, at the end of the day, to take another quarter million of stock at a still higher figure. The small man, of course, is not buying in what the market calls "lumps," but where Stock Exchange dealers find themselves

surrounded from ten o'clock in the morning till four in the afternoon by brokers armed with orders to buy amounts such as £100, £250, and other sums up to £500 stock—nine out of ten orders being of the same description—the psychological effect on the market is considerable. The Stock Exchange realises, however, that it is not the best of centres from which to judge the prospects of a General Election. The City man has little opportunity for making contact with the political feeling prevailing in the North, the Midlands, and other industrial areas. He knows the danger of being too much swayed by the opinions of men like himself, who possibly understand the intricacies of the gold standard, devaluation, etc., a little better than the average member of the electorate. He takes a sober view, prophesies a majority for the National Party, but is not prepared to back his judgment too far. He believes that prices will go higher if his views are correct, but is a trifle uneasy at what may happen afterwards. The first flush of enthusiasm may give place to more sober considerations when the shouting is over, and the approach of the year-end brings nearer demands for tax payments. Nevertheless, the General Election is regarded in the "House" as one of the most momentous in the history of the nation. For this reason, even the dealings which take place in "Majorities" are deprecated by some members, who consider that the issues hanging upon the election are too serious to be made a gambling medium.

War Loan Conversion.—The discussion by the late House of Commons, on Thursday last week, of clause Eleven of the Finance Bill, which has now received the Royal Assent, produced an informative statement by Mr Snowden as to the Treasury's intentions regarding the Five per Cent. War Loan. It appears that, when the time is deemed opportune for conversion to a lower rate of interest, holders will be given three months' notice, with the option of transferring into new stock or demanding repayment in cash at the end of the period. The operation, however, will follow the precedent set by Mr Goschen in his famous conversion of "Consols," rather than the practice in previous conversion issues since the war. Unless the holder signifies dissent, he will be deemed to have agreed to the Treasury's proposals. He will, in effect, retain his old stock but the price attached to the stock will be different. Mr Snowden refused to say what would happen at the end of the three months, declaring that the Government's policy could only be decided when the result of the offer was apparent, but the tenor of his speech made it abundantly clear that no question of a "forced conversion" could arise. This view was strongly supported in subsequent speeches by members on the Government side. Mr Snowden was emphatic on the point that, whatever changes in the conditions attached to the present stock it might be desirable to incorporate in the conversion prospectus, no modifications would be imposed which would violate any of the conditions under which the Loan was originally subscribed. Commenting on the Government's powers to incorporate in the conversion terms the right, existing in the present stock, to pay dividend without deduction of tax at source, Mr Snowden declared that "a very considerable amount" of War Loan stock was held abroad, and there were obvious advantages in inducing foreign investors to buy sterling stock. Mr Snowden would appear to regard these advantages as having been strengthened by the devaluation of the pound. But as the Government's powers to issue stock under these conditions are permissive, and not obligatory, the Treasury's policy will doubtless be governed by conditions existing at the time when the operation is launched. Mr Snowden, naturally, said nothing regarding the probable date of the offer.

Austin Motor.—In these days the maintenance of high earnings, handsome dividends and generous reserve allocations is so rare a phenomenon that the directors of the Austin Motor Company may justly take to themselves a

good deal of the credit for their company's success, which they over-modestly attribute to the "safeguarding" duties. In the twelve months to July 31st last the company increased its sales of cars in the home market by 26 per cent.—a result which, to judge by the monthly Ministry of Transport figures of car registrations, would appear to be due, in no small part, to the popularity of its "baby" car of under 8 h.p., and the favourable reception of its new 12-h.p. six-cylinder model, introduced last January, rather than to any expansion of demand for its higher horse-power models. As the market for cars as a whole has not increased during recent months (the total new registrations of cars taxed on horse power during the first seven months of 1931 was only 94,744, against 104,900 in the same period of 1930), it must be assumed that the Austin Company has increased its share of the market, probably at the expense of the smaller concerns. If it is legitimate in a "seasonal" industry to write up the figures for the preceding period of seven months on a twelve months' basis (as is done in the table below), it will be seen that this year's profit was slightly below last year's proportionate figure, but that the same conservative policy was followed:—

	Year to Dec. 31, 1929.	7 Mos., to July 31, 1930.	Equivalent, on 12 Months' Basis.	Year to July 31, 1931.
Profit	£ 1,297,446	£ 858,137	£ 1,471,092	£ 1,376,244
Taxes, fees, maintenance and depreciation	602,658	395,045	677,220	752,012

(a) 6½ years' dividend arrears paid off.
(b) After paying preference arrears; 318 per cent. after allowing for preference payments at normal rate.
(c) Actual.

The accounts are conservative throughout, charges for maintenance and depreciation being on a generous scale, so that although the company has expended £304,324 on new plant in the last twelve months, the balance-sheet item "plant and machinery" shows an increase of only £188,783. Accompanying the report is a leaflet replying to criticisms, from the labour side, of the 100 per cent. ordinary dividends. The company points out that each of its workers on the average receives a pay packet 2½ times as great as the labour union rates. In the past 58 months it has expended £43,570,000 on wages, salaries, service and purchases, and paid out only £1,691,000 net for debenture interest and dividends. Ordinary shareholders are paid no more than 25 per cent. gross on their capital as it stood before the writing down of 1927, after being required to go dividendless for the ten years to 1929. The capital reduction under the 1927 scheme is now seen to have been severe, but if the directors desire to prevent future misunderstanding regarding their dividend rate, they should urge an amendment in the law to allow of the issue of "no par" shares. The report says nothing regarding the experience of the companies formed to manufacture its 7-h.p. car abroad, except that licence fees received from this source during the year were £5,658. Though the British company is not directly concerned in the finance of the foreign concerns, many investors look for substantial royalties from them. Any reference to the position by the chairman at next Monday's meeting would be appreciated.

Textile Shares—A Note of Caution.—The tendency for professional operators and investors alike to regard our departure from the gold standard on September 21st as the augur of inevitable trade revival was reflected in the somewhat indiscriminate buying of industrial equities, and particularly of those shares which would be the first to benefit from a bounty on exports. The following table of representative textile shares indicates that in some instances as much as 50 per cent. has been added to their value, and prices are still firm as we go to press:—

Name of Company.	High., 1931.	Low., 1931.	Sept. 16.	Sept. 23.	Oct. 7.	Present Yield Per cent.

* Tax free.

Activity in the share market merely reflected the stimulating effects of devaluation in the North, where a brisk demand accompanied rising prices for cloth and yarn. The liveliness of the market was in part due to eagerness to replenish stocks in anticipation of increased trade, but in part, also, to purely speculative purchases, as was shown by the reluctance of purchasers to name a delivery date. On the whole, it would appear that the genuine reports of factories reopening and new outlets secured are not as yet sufficiently widespread to justify unrestrained optimism. The remarks which we have made before on the subject of the world economic position are as relevant to cotton and wool as to any other export industry. The to cotton needed this season has still to be imported at a higher price, and any benefit that may be derived from the cheapening of Indian cotton in relation to American, as a result of the "pegging" of the rupee exchange to sterling, will be shared by our competitors. In the last resort, the textile trade, which is first and foremost the producer of goods for mass consumption, must depend on a *bona fide* expansion of demand for renewed prosperity. The danger of over-production in relation to the effective consuming power is materially increased by the world-wide movement for "economy," and as long as the demand of all markets for finished goods is steadily contracting the "equity" of the industry can very easily be exaggerated.

Imperial Airways.— "The only British Air-line" showed a trading profit of £155,165 for the year ended March 31st, as compared with £169,376 for the previous year. A decline of £5,729 in investment income, and of an increase of £5,355 in aviation expenditure, and of £8,886 in provision for obsolescence, combined to reduce the net profit by £7,999 to £27,140. The ordinary dividend has been reduced to 3 per cent. The following table shows the result of the past three years:—

Year ended March 31.	1929.	1930.	1931.
Net profit	£ 78,861	£ 35,139	£ 27,140
Ordinary dividend—			
Amount	35,558	18,371	14,041
Earned %	16.63%	7.45%	4.35%
Paid %	7.5%	5%	3%
W/O preliminary expenses, &c. ..	20,664	2,500	2,500
Obsolescence reserve	20,000	...	...
Increase in carry-forward	2,639	14,268	10,591

The main item of interest in the balance sheet is the increase of £166,064 in progress payments on aircraft under construction, now £258,148, and the acquisition of interests in Cobham-Blackburn Air Lines, £52,432. The

directors report that the lower traffic revenue has been to a large extent counteracted by substantial operating economies. There were no expansions in the company's European services during the year. There was a satisfactory increase over the England-India route, the number of letters carried showing an average weekly increase of 18 per cent. Since the close of the year under review the Italian Government has given provisional permission for the company's planes to call at certain Italian ports, thereby avoiding the Central European route. The route from England to Central Africa was opened early in March, and so has had little effect upon the year's accounts. The route to South Africa is expected to be opened late in the present calendar year. Although freights have been reduced, the planes are operating at a lower cost per ton mile than has previously been the case. The company's accounts would be far more informative to shareholders if the amount of subsidy received each year were clearly shown. Clearly, the company has a long way to go yet before it can stand on its own feet.

Lampert and Holt.—From the viewpoint of shareholders, the accounts of 1930, broken by the appointment of a receiver on August 27th, are of less importance than the statement signed by Sir William McIntock and addressed to the debenture stockholders. The profit and loss account shows that losses on voyages for the year amounted to £21,962, while, after payment of all expenses, including debenture interest, but before making any provision for depreciation, the total loss amounted to £544,342. Of this sum, no less than £408,100 was accounted for by the trading loss of the company's subsidiary, the Liverpool, Brazil and River Plate Steam Navigation Company, and £18,156 by Archibald McMillan & Son and the Companhia Navegacao das Lagoas:—

	Year to December 31.	1928.	1929.	1930.

NEW BOND STREET, W.1

8th October, 1931

The receiver's report points out that, following his appointment in August last, it was decided that the services should be continued on a limited scale, and those which had resulted in the heaviest loss suspended. Out of a total fleet of 31 vessels there are now 14 in service and 17 laid up. At the same time, steps were taken to reduce standing charges and direct voyage expenses, resulting in a saving at the rate of approximately £112,000 per annum. The standard of the fleets has been fully maintained, and the voyages completed since December 31st last and the current voyages show that further losses have been avoided. After including investment income, there is a balance of net revenue for the period from January 1, 1931, before making any provision for depreciation and debenture interest. The report observes that until an improvement in trade conditions occurs it is unlikely that it will be possible to earn any substantial amount towards depreciation. The sale has been effected of the shareholding of the company and its chief subsidiary in the Argentine Navigation Company, and the proceeds used to repay a bank loan of £685,000 and to provide £137,500 for the carrying on of the business. There is due and unpaid a total sum of £317,000 from the Royal Mail Company. Sir William estimates, "with all reserve," that on the basis of a going concern, assets show a total value of £3,151,021, to meet debenture holders' claims for £3,000,949. It is emphasised that the present break-up value of the company's assets would be very much smaller than the above figure, and that a realisation in the present state of the market might well be impossible. In view of the success already achieved by those now in control, by way of stopping leaks in a structure which was on the point of foundering when they assumed command, debenture holders will be content to leave affairs in their hands.

United Molasses Statement.—The interim report issued last week by the United Molasses Company shows that the trading profit of the company and its subsidiaries totalled roughly £160,000 for the half-year ended June 30th last. On the other hand, depreciation calculated at the same rate as last year would require £150,000, while losses amounting to £115,000 have occurred as a result of the necessities of jettisoning molasses for which no market could be found at prices high enough to pay costs of transport from the producer to the consumer. It is also necessary to make provision for certain non-recurring losses in subsidiary companies amounting to £80,000, making the total net deficiency, after debiting the above items, £185,000. The report observes that since the annual meeting, held in April last, there has been a renewed decline in the absorption of molasses throughout the world—for industrial purposes, because of the chronic depression in the relevant industries, and for cattle-feeding purposes because of the reduced purchasing power of agriculturists. The Chadbourne sugar restriction scheme has not yet had time to influence the market appreciably, since hitherto it has functioned only in Cuba, whose decline in production has been roughly offset by a fall in American consumption. The immediate outlook must be considered far from rosy. The most that can be hoped for from the second half-year's trading is a repetition of the first half-year's results, but as a very large proportion of the Eastern crops now being produced will have to be wasted, the allowance under this head will of necessity be greater. The company's £1 ordinary shares, which in 1929 were run up to £8½, are now quoted at 5s. 7½d.

Thos. W. Ward.—In view of unprecedented trade conditions and the heavy stocks which the company is carrying, no ordinary dividend is being paid for the year ended June 30th. The report shows a loss on the year's trading of £62,796, which compares with a profit of £80,079 for the previous year. In order to meet the preference and employees' dividends some £100,000 is transferred from the reserve fund making, with the

amount brought forward from last year, a total of £128,159. Dividends absorb £33,471, leaving £31,892 available for the carry-forward.

Year ended June 30.	1929.	1930.	1931.
Net profit	£ 111,915	£ 80,079	Dr. £ 62,796

Carried forward	36,677	28,159	31,892
* Tax-free.		† Less tax.	

The balance sheet is less liquid than its predecessor. Stocks are shown in the balance sheet at £1,140,021, as against £953,744. Land, buildings, steamships, plant, etc., are down by £109,997. Although the year's operations began with stocks of raw materials at pre-war values, the directors have been obliged to write down stocks by further considerable sums. The quarterly dividends on the preference shares, due September 30th, have been postponed.

Malayalam Plantations.—The annual report for the year ended March 31, 1931, shows a small profit, made entirely on the tea side of the business. Gross profit from the sale of tea was £93,605, against £82,683 for the previous year. Although the tapping of rubber was suspended on all estates during the three months May, 1930, and January and February, 1931, the cost of producing the commodity exceeds the proceeds of the sales by £72,000.

Year ended March 31.	1929.	1930.	1931.
Net profit	£ 220,945	£ 82,426	£ 2,530
Ordinary dividend	161,361	38,802	...
Earned %	12.9	4.9	2.5
Paid %	12	2.5	...
Inc. or dec. in carry-forward	+12,632	+10,007	+2,530

In 1931 the output of rubber was 5,117,747 lbs. compared with 5,244,749 for the previous year, while the price obtained was 3.13d. per lb., as against 7d. per lb. The unsold stock has been valued at 1.30d. per lb. Harvested at 8.79d. per lb., 8,447,486 lbs. of tea was disposed of at 11.46d. per lb. Last year's figure was 9,722,986 lbs., sold for 11.05d. per lb. Speaking at the annual meeting, the chairman, Mr. H. J. Welch, reviewed the company's policy in regard to rubber. On June 1st last half the rubber estates were closed down, and the remaining estates are to be closed as soon as possible, and at as little loss as possible to the company. Some expense will be caused by obligations to the employees, but next year, by means of caretakers, it is hoped that estates can be maintained at a cost of 30s. per acre. The prices obtained for tea have improved, and, with better quality coming forward, further betterment is hoped for.

Swedish Match.—A statement has been issued by Mr Kreuger to the effect that, owing to the abnormal "slump conditions," payment of the interim dividend on Swedish Match shares will be postponed until further notice. Mr Kreuger adds that the match sales for the first six months of 1931 were greater than for the corresponding period of 1930, but the company may have to devote part of its 1931 profits to writing down the value of securities held. This announcement, following so quickly upon the reassuring statement of the directors of Kreuger and Toll, which was referred to in the *Economist* of September 5th, came as a decided shock to the market, both Swedish Match and Kreuger and Toll falling to record low levels. It will be recalled that the directors of Kreuger and Toll had stated that there had been no case of default, delay or difficulty as regards the service of the company's holding of Government bonds. This seemed to imply that as

dividends are normally payable out of the recurrent profits (not out of trading or financing profits) dividends would be maintained. But if the directors of the Swedish Match Company consider it necessary to use part of their profits for writing down the value of their investments, presumably the directors of Kreuger and Toll will think likewise and withhold payment of dividends. The shares of both Kreuger and Toll and Swedish Match have subsequently recovered from the worst, but it is surprising that Swedish Match shares should stand below their par value (£5 10s.) and well below the price of £6 15s., at which they were introduced in the London Stock Exchange in 1927. Shareholders need not, however, be unduly alarmed. If the match sales continue to exceed those of 1930, the revenues of the match monopolies held by the group must be sufficient to cover the interest on the Government loans, which are specifically secured on the match monopoly receipts. It is only the German Government loan of \$125 millions which is not specifically secured on match monopoly receipts. The profit-earning capacity of this company is not affected by the withholding of profits from shareholders for the purpose of writing down depreciated investments.

First Co-operative Investment Trust.—The report for the half-year to July 31, 1931, shows a decline in net revenue as compared with the corresponding half-year in 1930 from £48,231 to £36,874. Dividends have been reduced from 2 per cent. actual to 1 per cent. actual. Investments, at cost, are shown as £1,916,200. On the basis of middle market prices as at July 31st (except in the case of German and Hungarian securities, which were valued as at July 11th and 13th), and a valuation of unquoted securities on the best information available, the market value amounted to £1,129,812. After deducting reserves—investment reserve £40,000, general reserve £25,000 and entrance fee reserve £20,000—there is a depreciation of 35.42 per cent., as compared with a depreciation of 26.2 per cent. at January 31, 1931. Even so, this valuation gives an unduly optimistic picture. First, in these days of wide prices, there is a great deal of difference between the middle price and selling price. In the second place German securities, which represented nearly 17 per cent. of the total, were valued when the Bourse was last open during July; but, of course, these prices would show a heavy decline if the Bourse were re-opened to-morrow. The portfolio shows a slight change-over from bonds to preference shares and ordinary shares:—

DISTRIBUTION OF HOLDINGS.

	Percentage of Valuation.		
	July 31, 1930.	Jan. 31, 1931.	July 31, 1931.
Bonds and debentures	51.36	55.47	53.23
Preference	16.05	14.87	15.78
Ordinary and deferred	32.59	29.66	30.99
	100.00	100.00	100.00

It is, however, more important for the shareholders to study the geographical distribution. The Trust has obtained very little benefit from exchange profits, as only 6.84 per cent. of its securities are held in the U.S.A., 8.78 per cent. in Belgium and 1.28 per cent. in France. The fact that 16.71 per cent. of its securities are held in Germany is the real weakness of the Trust's position, seeing that in Germany the whole financial and economic crisis of the world appears to be concentrated. The shareholders, however, can do nothing, for the Trust only agrees to "marry" buying orders for clients against selling orders. The report suggests, altogether, that while those in control are following a conservative policy to-day, the original effort to pay out the impossible rate of 7 per cent. on the ordinary shares was not abandoned in time to prevent the company subsequently finding itself in a decidedly "tight" position—made more difficult by its heavy stake in overseas countries where "freezing" of assets has occurred.

New Capital Issues in September.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in September, and in recent years:—

Monthly Average.	United Kingdom.	(000's omitted) British Possessions.	Foreign Countries.	Total.
	£	£	£	£

Sept., 1930 ... 850	1,193	1,785	Nil	3,828
Sept., 1931 ... Dr. 50	750	Nil	21	721

For the first time for some months, encashments of National Savings Certificates exceeded sales in September. Only two share offers were made during the month, both being "for shareholders only." The London and Thames Haven Oil Wharves offered 300,000 £1 ordinary shares at a premium of 30s., and the Pangnga Mining and Exploration Company issued 420,100 1s. shares at par.

Sherwood Starr.—Our mining correspondent writes:—Considerable importance attaches to the developments at depth which took place in this company's property last year. In the event, the new discoveries proved of greater significance from the standpoint of quantity than of value. At 151,300 tons the ore reserve estimate of June 30th

Wherever
you go

YOU
CAN BE
SURE
OF
SHELL

shows an increase of 41,800 tons, but the value has fallen back fully 20s. per ton to 46.6s. The net result is an expansion of approximately £70,000 in the gross value of the ore opened up. In this connection it may be noted that the development footage performed during 1930-31 amounted to 2,856, as against 1,792 in 1929-30. With the somewhat reduced tonnage of 56,000 put through the mill, the revenue average jumped from 46s. to 49s. 6d. Costs came out at 24s. 3d. per ton, in place of 22s. 10d., the difference being partly due to the treatment of accumulated slimes. The net working profit amounted to £63,770, as compared with £60,420. Dividends totalling 30 per cent. leave the somewhat increased balance of £16,080 to go forward. For 1929-30 the distributions aggregated 25 per cent., and £10,000 was placed to reserve. The balance sheet shows cash assets £21,700, against creditors £20,090 and dividends due £16,800. In the light of these figures and of the nature of recent monthly returns, it would seem doubtful whether last year's dividend rate can be maintained.

CAPITAL ISSUES.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total recorded, excluding conversions, Jan. 1 to Oct. 3, 1931, £98,649,194
Total, including conversion, recorded Jan. 1 to Oct. 3, 1931, £109,528,179.

National Savings Certificates.

Total net receipts, April 1, 1931, to September 30, 1931, £5,750,000.

MONTE VIDEO WATERWORKS COMPANY, LTD.—The directors report that the ordinary business of the company made good progress during the half-year ending June 30, 1931, the net revenue in Uruguayan currency being the largest in the company's history, whilst the ratio of expenses to receipts shows a marked decline. These favourable features, however, have been more than counterbalanced by heavy losses sustained in the conversion of the currency net revenue into sterling. The average rate realised for the Uruguayan dollar during the half-year was only 32 1/2d., as against a par rate of 51d., a loss of approximately 36 per cent. The following is a comparative statement of the gross and net income in currency in Monte Video of the first six months of the years 1929, 1930 and 1931:—

	1929.	1930.	1931.
Gross revenue	931,656.42	979,012.51	1,044,669.79
Working expenses	427,735.68	434,105.71	390,545.61
Net income	503,920.74	544,906.80	654,124.18
	45.91%	44.54%	37.38%

When converted into sterling, the net receipts for the half-year ending June 30th last amounted to approximately £58,000. This sum, after making provision for interest, income tax and other revenue charges, leaves a surplus of approximately £40,000 towards dividend on the ordinary stock. In view, however, of the fact that the rates of exchange which have ruled since July 1st are considerably under desirable to postpone consideration of a dividend on the ordinary capital until the results of the working for the whole of the present year are ascertained.

DUNLOP RUBBER.—The board of the Dunlop Rubber Company regrets that owing to the continued trade depression and the present crisis, it is unable to declare an interim dividend upon the ordinary stock. The board has also decided that, owing to the obscurity of the outlook, the declaration of the dividend on the company's "A," "B" and "C" preference shares can only be considered when the accounts for the year 1931 are complete.

GODFREY PHILLIPS, LTD.—The directors of Godfrey Phillips, Ltd., state that, in view of the present financial conditions coupled with the extra capital required to finance the new duties, consideration of the interim dividend on the ordinary shares is postponed for three months. The volume of trade for the past eight months has been greater than for the corresponding period of last year.

OVER ONE HUNDRED YEARS OF SERVICE.
SCOTTISH UNION & NATIONAL
INSURANCE COMPANY.
ASSETS EXCEED - £15,600,000
FIRE. LIFE. ACCIDENT. MARINE.
 Edinburgh, 35, St. Andrew Square.
 London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1

payment of these dividends is subject to the passing of the resolutions which will be submitted at the annual general meeting of shareholders, to be held on Monday, October 12th, and if approved, the dividend warrants will be posted on October 31, 1931. The company has had a record year. The sales of cars in the home market exceeded those of the previous year by 26 per cent.

CITY AND INTERNATIONAL TRUST, LTD.—Net revenue (subject to audit) for year ended August 31, 1931, after charging management expenses, income tax, debenture and bank interest, &c., amounted to £60,171 16s. 8d.; balance brought in from previous year, £12,136 16s. 6d., making amount available £72,308 13s. 2d.; 5 per cent. dividend paid on preferred stock, £30,000, leaving £42,308 13s. 2d.; 2½ per cent. interim dividend on ordinary stock paid March, 1931, £10,000, leaving £32,308 13s. 2d. The board now recommend payment of a final dividend on the ordinary stock of 2½ per cent. (making 5 per cent. for the year), £10,000, leaving to be carried forward, £22,308 13s. 2d.

Commercial Reports.

MARKET SUMMARY.

The sharp downward movement in the gold value of the principal raw materials last week has been followed by a slight reaction, as will be seen from our specially constructed gold index on an earlier page. The turnover has generally been not very large, and quotations moved irregularly. Among cereals, wheat, oats and maize have all been quoted at lower prices in New York, which is partly ascribed to the small "cash" demand. Sugar and coffee have been maintained at last week's level, but cocoa advanced a few points. In textile raw materials, cotton again declined sharply from 5.70 cents per lb. to 5.43 cents per lb. for "New Orleans middling." Base metals have been dull owing to the absence of an improvement in demand, and lead and spelter have been sold below last week's prices. In this country prices of the more sensitive commodities fluctuated according to movements in the exchange. The sterling quotations for commodities, which by their nature do not lend themselves to international arbitrage, are, however, still considerably below gold prices. A slight improvement has become noticeable in some of the principal industries of Great Britain. The main reason for this is, of course, the depreciation in sterling, which renders British goods less expensive in terms of gold. Thus various reports from the principal districts show an expansion in inquiries from abroad for coal and iron and steel. Among textile manufactures, the turnover in cotton and rayon goods has begun to increase.

THE COAL TRADE.

SHEFFIELD.—The export market for best steam coals and foundry coke has stiffened. The first-named are scarce and command 18s. per ton f.o.b. Coke is fetching a shilling per ton more than a fortnight ago. Consumption at home is likely to increase and stocks are declining. Actual demand for industrial and house coal is as weak as ever. A threatened increase of 2s. on house coal has not materialised, at any rate outside the London area. It is admitted that there is no justification for such a step. Best ordinary house coal is quoted at 22s. at pits.

GLASGOW.—Export business has improved, but shippers find some difficulty in quoting owing to the exchange fluctuations and also because of an upward trend in freight rates. Prices generally are firm. Washed trebles and doubles are strong features, especially in Fife and the Lothians, where supplies are now rather short. Steams are also a stronger market in these districts. In Lanarkshire, where the collieries are more dependent on the home trade, there has only been a slight improvement in business, due to seasonal influences. Prices for the shipping trade are approximately as follows (f.o.b. district ports):—LANARKSHIRE.—Ell best, 14s. 9d.; splint best, 15s. 9d.; splint second, 14s. 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 14s.; trebles, 13s. 6d.; doubles, 13s.; singles, 10s.; pearls, 9s. 9s. 3d.; dross, 9s. FIFE.—Screened navigation, 17s.; first-class steam, 14s.; third-class steam, 12s. 6d.; trebles, 15s. 16s.; doubles, 13s. 6d. 14s.; singles, 10s. 6d.; pearls, 9s. 6d. LOTHIANS.—Prime steam, 11s. 6d. 12s.; secondary steam, 11s.; trebles, 15s. 16s. 6d.; doubles, 13s. 6d. 14s.; singles, 10s.; pearls, 9s. 6d. AYRSHIRE.—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 14s. 6d.; doubles, 13s. 6d.; singles, 10s.; pearls, 9s. 3d.; dross, 9s.

CARDIFF.—Inquiries on the Cardiff coal market have been a little more active this week, and the shipments have also slightly improved, but the general position shows very little change. Prices are nominally unaltered, many of the pits are working irregularly, and the glut of small coals is greater than ever. It is estimated that one group of collieries alone has stocks of small coals exceeding 200,000 tons, and of an approximate f.o.b. value of £100,000. There has been a renewal this week of the attempt to lower the minimum prices for these grades, and to market them on a collective basis, but the Executive Committee of the Marketing Association

has adhered to its recent decision to maintain the existing minimum schedule. Pitwood supplies from Bordeaux have been almost entirely suspended for the time being, owing to the dispute between the exporters and the South Wales importers over the terms of payment, in view of the depreciation of the sterling in terms of francs, but stocks are considerable, and ex-ship prices are a shade weaker than they were a few days ago. The following are the current approximate quotations:—Best Admiralties, 19s. 6d. to 20s.; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 18s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; cargo smalls, 11s. 6d. to 12s. 6d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s.; foundry coke, 30s. to 36s. 6d.; patent fuel, 18s. 6d. to 19s. 9d.; pitwood, ex ship, 26s. to 26s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron is firm, the position of makers having been considerably strengthened by the increased business transacted during the last week or two. Considerably more iron has been sold to Scotch consumers recently than for some time past and there are indications that this trade will further expand seeing that Continental competition is practically withdrawn owing to the rate of exchange. Local consumers who had only been buying from hand to mouth have recently bought larger quantities. Altogether the market shows a different aspect, and although makers are still booking at the old prices, an upward move is not improbable before long. Tuesday's market was quite active, and makers reported orders coming forward very satisfactorily, particularly on home account, but not wishing to jeopardise the improvement by hasty action, they adhered to the old official figures, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. Hematite continues a very firm market and although buying has subsided somewhat from the scale recently experienced, orders are still coming in at the top figures reached and buyers are willing to go as far as possible ahead. Producers, however, are not anxious to sell beyond the end of the year and for this period quote 65s. as a minimum for ordinary mixed numbers. For delivery commencing January substantial premiums are asked owing to the uncertainty of costs of coke and imported ores. In finished steel large sales have been made recently under the rebate scheme arrangement, and there are important inquiries on the market in other directions from which it is expected some good business will result. Sheets are in much better demand and makers of "somis" are booking more orders. Prices of the latter are maintained at the advances of last week. The ore market is idle, there being no buyers, and no prices are quoted. The rise in freights already represents an advance of about 2s. per ton, in addition to which there is the difference in exchange to take into account. Approximately best rubio to-day should be about 18s. 6d. to 19s. c.i.f. Imports of all kinds of ore into Middlesbrough for September totalled 48,030 tons, against 46,958 tons in August. There is only a limited demand for coke, and producers' stocks are heavy. Prices are firm and ordinary furnace qualities are not less than 15s. 6d. delivered consumers' works for fairly early delivery, with some brands quoted at 16s. An extra blast-furnace has recently been blown in at Cargo Fleet works for the firm's own requirements. This makes the total now in blast in the district eighteen.

SHEFFIELD.—The unsettled economic conditions of the world are not conducive to business in iron and steel and the aggregate amount of orders and work on hand in Sheffield has increased only slightly. There has, however, been some buying of hematite pig iron and wire rods and consumers of Swedish iron and steel, various imported metals and alloys, are endeavouring to cover forward requirements before the cost of these has been increased by tariffs. Stocks have been heavily drawn upon. Business in imported materials is impossible under present conditions. Foreign suppliers under contract are endeavouring to saddle the loss due to the drop in the value of the sterling upon the importers here. Deliveries are being held up pending a settlement of this difficult problem. Tungsten, chrome and silicon, largely used in iron and steel making, have gone up 20 per cent. Business with makers abroad, however, is suspended. The state of the exchanges has almost stopped German, French and Belgian imports to this country, and German cutlery, if bought now, would cost as much as British. No foreign competition exists, however, in table cutlery and electro-plated ware. Prices of American files are affected by the reduced value of sterling. There are, however, large stocks in this country and the sellers have not yet modified their quotations. No general improvement in trade is anticipated this side of the Parliamentary election.

GLASGOW.—There has been a little more activity in some of the manufacturing trades this week, due principally to overseas buyers taking advantage of the monetary situation and also through home buyers anticipating possible increases in the event of tariffs. In the heavy steel trade the position remains unsatisfactory and there is little business being done. There is also very little demand for home semis, although there is less business being placed with the franc basis. Sheet makers have booked a considerable tonnage of light black sheets for Japan and there has also been a fair amount of business booked for other overseas markets. Employment in this branch is better than for some little time, although not all plants are able to keep going at full capacity.

CARDIFF.—More business is passing in the tinplate and galvanised sheet trades, and one or two steelworks, as well as tinplate factories, have resumed operations after having been idle for many months.

Prices of tinplates have ruled between 14s. 6d. and 15s. per basis box, but steel bars have been advanced by 7s. 6d. to £5 per ton. Foreign bars are still unquoted and imports under contract are declining. Galvanised sheets are quoted up to £10 per ton.

OTHER METALS.

TIN.—The international situation of tin shows no improvement on the week, and prices in terms of gold remained unchanged. In London, buying was active early in the week, and sterling prices advanced to £125 17s. 6d. per ton on Monday. As buying became restricted at that level, prices again declined. In New York the metal was quoted at 22½ cents per lb. on Wednesday, against 22½ cents per lb. a week ago, and 25.65 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £124 2s. 6d. to £124 5s. per ton, compares with £122 17s. 6d. to £123 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 30,139 tons, show a decrease of 237 tons on the week.

COPPER.—The principal event of the week has been the announcement that an international meeting of copper producers will be held in New York during the current month. It appears that a discussion will take place on the working of the copper cartel founded five years ago, and on the possibilities of an international scheme for the control of output. The past week saw little change in the markets for copper, but sterling prices are slightly higher than a week ago. "Domestic" spot has again been quoted officially at 7 cents in New York, against 7.025 a month ago. Wednesday's official closing price for "standard cash" in London in terms of sterling, at £33 16s. 3d. to £33 17s. 6d., compares with £33 7s. 6d. to £33 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 23,121 tons, show an increase of 535 tons, while stocks of rough copper, at 1,424 tons, remained unchanged.

LEAD.—As a result of considerable selling pressure, the price of lead in New York declined from 4.40 cents per lb. to 4.00 cents per lb. In view of the increase in production during August, this is not surprising. According to the Metallgesellschaft, A.G., the daily average of world production at 3,539 metric tons, shows an increase of 143 tons on July. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £12 15s. to £13 per ton, compares with £14 to £14 3s. 9d. on the corresponding day last week.

SPELTER.—In the absence of an improvement in demand the position of sellers became weak, and quotations in New York fell from 3.85 cents per lb. to 3.575 cents per lb. The market in London has been active, and sterling prices on Wednesday, though lower than a week ago, recovered above the low level touched earlier in the week. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," at £12 3s. 9d. to £12 16s. 3d. per ton, compares with £12 17s. 6d. to £13 6s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £95 per ton, and at £215-£220 per ton respectively, have been maintained at last week's level. Antimony again changed hands at £25-£25 10s. per ton for "foreign" and quicksilver was quoted at from £20 to £20 15s. per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—A smaller business has been passing during the past week, and prices have declined steadily. Quite apart from the effect the rate of exchange has had on prices, cotton is now more attractive, and any further decline is likely to meet with considerable resistance. Of the cotton used in the world last season, 51 per cent. consisted of growths other than American. This year it is anticipated that owing to lower prices there will be a greater use of American as against outsiders. Various private crop estimators have raised their estimates of those of September last. Fossicks give 15,375,000 bales, against 14,718,000 bales; the New York Cotton Service, 16,004,000 bales, against 15,503,000 bales; Clement, Curtis, 15,908,000 bales, against 15,512,000 bales; and McFaddens, 15,904,000 bales. Imports for the week 1st to 7th (inclusive) are 15,406 bales, of which 2,155 bales are American, 374 Brazil, 5,649 Argentine, 2,630 Peru, 2,777 Egyptian, 1,252 African, 9 East Indian and 560 sundries. Quota-tions, October 7th: American Middling, 4-49; Egyptian Sakel, 7-00; Uppers, 5-32; Brazil Fair, 4-44; Peru G.F. Smooth, 4-94; West African Middling, 4-44; and East African G.F., 5-34.

Manchester.—The market has tended to become more active. Most spinners and manufacturers have reported an increased inquiry. Actual business has been somewhat irregular, but in certain quarters a substantial turnover has taken place. In piece goods, there have been freer operations for China, and in addition to fancies being purchased to an encouraging extent, more buying has occurred in the standard makes, such as grey and white shirtings. Some of the scattered sales have taken place. A fair miscellaneous trade has been mentioned for Egypt and the Near East, and steady buying has been experienced for certain African outlets, South America and the Continent. A persistent demand has been met with in home trade fabrics. Numerous manufacturers have now more work to go on with than for some time back, and sellers' quotations are much firmer. A steady business has again been done in American and Egyptian yarns for home consumption. Extensive buying has been reported in yarns suitable for China. Doubler's much busier. The market as a whole presents a better appearance, and it is expected that the improved demand will be maintained, as there is little probability of lower values.

THE WOOL TRADE.—Bradford.—The fifth series of London sales finished on Wednesday. According to our correspondent, prices did not fully hold their own during the last few days compared with the previous week. In view of the fact that the sales had been extended three days for the disposal of an additional 24,000 bales, the results were fairly satisfactory. Any slackening in competition or failure of the offerings to command the best prices of the auctions must be attributed almost entirely to the requirements of buyers being filled for the time being. Yorkshire and other English buyers bought the bulk of the wools offered, French and German competition being restricted by lack of financial facilities. The suspension of the gold standard has created an entirely new relationship between this country and on the Continent. It has not operated prejudicially on wool-buying power, but there are big stocks of the raw material in France, and neither that country nor Germany have the same prospect of exporting big quantities of fully manufactured goods to England. Very little change has been seen in Bradford this week, but the volume of business in tops and yarns has been smaller, and prices for the former have eased slightly, particularly merinos. Crossbreds are steady, and comparatively inactive.

THE GRAIN MARKETS.

WHEAT.—The renewed downward movement in wheat prices at the principal international markets continued throughout this week. The Chicago quotation for "December" wheat was 40½ cents per lb. on Wednesday, against 47½ cents a week ago. The favourable factors, such as the decrease in the acreage sown in the Southern Hemisphere, the small quantity of wheat coming on the markets in the United States and Canada, and the probability of considerable import requirements by European countries, are more than outweighed by the unsatisfactory general situation and by the huge proportions of accumulated stocks, particularly in the United States. Harvesting of the British wheat crop, which has

THE CRISIS

WHAT IT IS
HOW IT AROSE
WHAT TO DO

by
ERNEST BEVIN
and
G. D. H. COLE

Everyone wants to know about the Crisis. Why did it happen, and how is it to be ended? Is the 'National' Government right in trying to meet it by cutting down wages and benefits and stopping expenditure even on productive objects? Or is the Labour Party right in calling for a policy of expansion? Why did we go off the Gold Standard, and are the results good or bad? Shall we go back to gold, or work out a new standard instead? In this booklet, Mr. Ernest Bevin, the Trade Union Leader, who served on the Macmillan Committee on Finance and Industry, and Mr. G. D. H. Cole, the well-known Economist, who is a member of the Economic Advisory Council, collaborate in answering these vital questions, which are the real issues of the impending General Election.

been hampered by unfavourable weather, is now practically complete. Supplies of English wheat are, however, small, and farmers are unwilling to dispose of their crop at the present low prices. Quotations in London, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 28s. per 496 lbs., as compared with 28s. 6d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 26s. 3d., against 26s. 9d.; No. 3 Northern Manitoba, Atlantic, ex ship, 24s. 9d., against 25s.; Russian, on sample, 22s. 6d. to 27s., against 22s. 6d. to 27s.; Australian, ex ship, 25s. 6d., against 25s. 6d. a week ago.

WHEAT FLOUR.—Flour, too, has been cheaper and foreign markets were generally dull. In this country, the demand for flour has been quiet and sterling quotations were reduced. North American shipments, at 152,000 sacks, show a decrease of 50,000 sacks as compared with the previous week. Of this total, only 71,000 sacks were consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 21s. per sack of 280 lbs., as compared with 22s. last week; delivered London, 20s., against 21s. Manitoba patents, ex store, 24s. to 26s., against 25s. to 27s.; and Australian, ex store, 18s. to 18s. 6d., against 18s. 6d. to 19s. a week ago.

BARLEY.—The market in barley has been steady and prices are scarcely changed on the week. The crop of the Northern Hemisphere has been estimated by Mr S. Broomhall at 142,560,000 quarters of 400 lbs., against an actual production of 167,570,000 quarters a year ago. Quotations in London, Wednesday: "English feeding," f.o.b., per 448 lbs., 27s., as compared with 27s.

OATS.—The demand for oats has been a little better during the past week and prices were well maintained. Quotations in London, Wednesday: "River Plate," landed, 17s. per 320 lbs., as compared with 17s. 6d. last week; "River Plate," ex ship, 16s., against 16s. to 16s. 6d.; "Chilean White," landed, 24s. 6d., against 24s. to 25s.

MAIZE.—Argentine shipments are still large and the quantities offered continue to exceed demand. This week supplies have been particularly large, which resulted in a sharp fall in prices. Quotations in London, Wednesday: "Plate," landed, 16s. 6d. per 480 lbs., as compared with 17s. 3d. last week; "Plate," ex ship, 14s. 9d. to 15s. 3d., as against 15s. 6d.; "Plate," October-November, new, 14s. 9d., as against 15s. 3d. Yellow maize meal, ex wharf, was quoted at £5 5s. per ton, against £5 5s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Oct. 8, 1930.	Jan. 2, 1931.	Sept. 23, 1931.	Sept. 30, 1931.	Oct. 7, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	72½	56½	54½	53½	52½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	78½	79½	48½	44½	46½

The visible supply of wheat in Canada, at 49,304,000 bushels, shows a decrease on the week of 1,934,000 bushels. Supplies a year ago stood at 69,467,000 bushels.

OTHER FOODS.

SUGAR.—Although the international markets in raw sugar have not been very active during the week, prices have been maintained at last week's level. December "futures" were again quoted at 1.37 cents per lb. in New York. The outstanding event during the past week has been the publication of Mr. Licht's estimate of the European crop. Excluding Russia, he estimates the yield for the season 1931-32 at 6,171,000 tons, against 8,631,150 a year ago. His figure for Russia at 2,150,000 tons shows an increase of 139,850 on the previous season. Sterling prices of raw sugar were firm and the recent advance in quotations for British "refined" has been maintained. Wednesday's sales of "raws" include "December delivery" at 6s. 8½d. to 6s. 9½d. per cwt., against 6s. 5½d. to 6s. 6½d., and "March," 1932, at 6s. 10½d. to 6s. 11½d., against 6s. 4½d. to 6s. 6½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	19	825	2,597	983	16,402	28,429
Liverpool	4,670	1,905	23,314	10,207	39,425	77,732
Total	4,689	2,730	25,911	11,190	55,827	106,161
Last week ...	4,079	11,746	16,038	15,481	77,056	114,821

COFFEE.—At this week's auctions all good qualities realised firm prices, but ordinary grades were irregular. Last week's movements of coffee in London were as follows: Brazilian, landed, 354; delivered for home consumption, 161 bags; exported, 46; stocks, 2,320 bags, against 1,348 bags last year. Central American, landed, 2,296 packages; delivered for home consumption, 2,018; exported, 3,444; stocks, 82,459 packages, against 56,085 a year ago. Other kinds, landed, 3,452 packages; delivered for home consumption, 2,123; exported, 3,471; stocks, 68,930 packages, against 69,151 a year ago.

COCOA.—The London market in cocoa has been quiet during the past week, and sterling prices were slightly easier. In New York, however, the demand has been a little better, and "December futures" advanced from 4.26 cents per lb. on Wednesday last week to 4.46 cents per lb. on the corresponding day this week. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, November-January, at 24s. 6d. per cwt. f.o.b. London contract, shows a fall of 3d. Last week's movements of cocoa in London were as follows: Landed, 2,890 bags; delivered for home consumption, 10,971 bags; exported, 435 bags; stocks, 182,242 bags, as against 200,075 last year.

TEA.—The quantities catalogued for this week's auction come priced 66,242 packages of Indian, 22,168 packages of Ceylon, and 8,533 packages of Java and Sumatra tea. Competition at this week's auctions has been less keen, and lower prices were realised, particularly for common Indian teas. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyassaland.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.

Oct. 1 "	1 3-74	0 11-17	1 6-08	0 9-00	0 7-89	0 7-44	1 3-07						

RICE.—The market in rice has again been steady, and sterling prices were maintained at the higher level attained last week. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. 6d. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 203 tons; delivered, 61 tons; stocks, 1,276 tons, as against 2,107 tons last year.

POTATOES.—There has been a steady demand for potatoes at the principal markets, but, as supplies are now abundant, prices remained unchanged. At the Botolph Claydon Market, "Best King Edward" sold at from 7s. to 7s. 6d. per cwt., as compared with 7s. to 7s. 6d. a week ago.

SPICES.—The market in spices has been quiet, and last week's advance in prices was not generally maintained. The "spot" pepper market was dull. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as

MISCELLANEOUS COMMODITIES.

follows: Black, landed, nil; delivered, 12 tons; stocks, 569 tons, against 726 tons last year. White, landed, 36 tons; delivered, 62 tons; stocks, 499 tons, against 320 tons a year ago.

MEAT.—Meat prices at the Smithfield Market have been scarcely changed despite heavy supplies. Quotations for English meat have been a little lower, but Argentine beef was sold at firmer prices. On Wednesday Argentine beef (chilled, hind quarters) was sold at 4s. 2d. to 4s. 8d. per 8 lbs., against 4s. 2d. to 4s. 6d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 6d. to 4s., as against 3s. 6d. to 4s. 2d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,145 tons, as compared with 9,236 tons in the corresponding week last year. Imported beef, principally Argentine, formed 84.6 per cent. of the supplies, as against 81.7 per cent. a year ago; and imported mutton, mainly New Zealand, formed 71.2 per cent. of the total supply, as against 75.4 per cent. last year.

VEGETABLE OILS AND OLSEEDS.—Generally, quieter conditions now rule, though movements in prices are frequent owing in the main to exchange fluctuations. Linseed offers freely, but demand is slow. Old crop Plate is steady around £8 7s. 6d. for shipment to November, while new crop is quoted £8 2s. 6d. January-February. Calcutta linseed to Hull has been done at £10 15s., October shipment. The quantity of linseed on passage to Europe, at 132,200 tons, is 4,500 tons higher on the week, and there is still 365,000 tons (Plate and Indian) available for export to the end of the year, as against 276,000 tons actually shipped in the remainder of last year. The United States, however, is an active purchaser. Owing to steadier exchange quotations and a less promising trade, outlook, Egyptian cotton seed has dropped sharply, old crop on passage now offering at £6 2s. 6d., and new for November-January, £6 5s. Linseed oil is quiet and prices lower on the week. Raw oil on spot ex Hull mill is quoted £16 10s., and for delivery to December

£16 5s., but attracts very little interest from consumers. Cotton oil is easier, and crude Egyptian (old) offers at £22 and new at £23, with common edible £26. Oilcakes and meals are in good request and in instances quotations are lower than last week.

HIDE, LEATHER AND ALLIED TRADES.—On account of the Shoe and Leather Fair, which is being held in London this week, no sales of hides and skins have taken place at either Leeds or Manchester. The market for domestic supplies, however, is firmer all round, and with a good demand experienced for most descriptions prices have shown an upward tendency. In the foreign hide market, business is now proceeding rather more freely, and some good sales have been effected of late at the higher prices. In the frigorific market parcels of Argentine ox have changed hands on the basis of 4½d., while light ox and cows have sold at a fraction over 4½d. In addition to orders from this country, business has also been done on account of the Continent and the U.S.A. Dry South American hides also have been an active market, orders for B.A. Americanos having been put through at 5½d., and M.V. Americanos at 5½d. Some descriptions of Africans have sold better. Cape hides, however, do not meet with much interest at the figures being asked for them, but a little more activity has been noticed in connection with Australians. Sales of all classes of leather have been on a larger scale than for a long time past, and in the sole section of the industry very satisfactory clearances of stock have been made. Light weight bends have changed hands freely, and the position of the market is such that most tanners have considerable orders on their books for future delivery. Medium and heavy weights also have shared very favourably in the business done, in addition to which an active inquiry is experienced for pinned shoulders and bellies. Rough off, however, remains only a moderate sale. Similar conditions are met with in the upper leather market. Buyers have been busy securing supplies of both box and willow calf and glacé kid, and the majority of producers and distributors have been able to clear off a considerable quantity of the stock recently held. Other descriptions of upper leathers have shared to a greater or lesser degree in the present activity, and the position now is that some firms are not prepared to commit themselves ahead for supplies.

RUBBER.—The low level to which rubber prices had fallen last week resulted in a broadening of inquiries from America and the Continent. Prices have since recovered a little, and on Wednesday "smoked sheet" was quoted at 4½ cents per lb. in New York, against 4½ cents a week ago. Wednesday's official closing price for standard ribbed smoked sheet in London at 2½d. per lb., shows a rise of ¼d. as compared with the corresponding day last week. In forward positions, business has been done at 3d. to 3½d. for December, and at 3½d. to 3¾d. for January-March, 1932, as against 2½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,227 tons; delivered, 2,138 tons; stocks at the end of last week, at 133,923 tons, show a decrease of 911 tons, as compared with the preceding week.

THE MONEY MARKET.

CONDITIONS have remained comfortable, and little change is noticeable. The Treasury bills issued on October 9th went at an average rate of £5 11s. 4.68d. per cent., or at only a few pence higher than in the preceding week. The New York and Paris rediscount rate increases had practically no effect upon London, but this was only to be expected, as London rates are still far above those current in

both the other centres. Money has been in ample supply, and there was a definite surplus available over the week-end, with rates at times running down as low as $2\frac{1}{2}$ per cent. These low rates, however, were abnormal, and, taking the week as a whole, 4 per cent. was the ruling rate for both old and new money. As in previous weeks, the clearing banks were calling very lightly; and this, with the absence of any large calls in respect of new capital issues, helps to explain the ease which became more pronounced on Thursday with the release of Treasury Bond dividends.

Apart for some demand by the clearing banks for late December Treasury bills, which were dealt in at 5 per cent., there was little business passing in bills early in the week, but on Wednesday there was rather more activity. The bank bought November Treasuries at $4\frac{1}{2}$ per cent. and late Decembers at $5\frac{1}{2}$ per cent., while hot Treasuries were dealt in at $5\frac{1}{2}$ per cent. There are still wide variations in the market rate on three months' bank bills. German renewals are currently charged $5\frac{1}{2}$ per cent. and $5\frac{1}{2}$ per cent., unless they carry a first-class London name, but other three months' bank bills have changed hands at rates down to $5\frac{1}{2}$ per cent. There has lately sprung up a fairly general demand for small quantities of Treasury bills from private individuals throughout the country. The motive behind this demand is that, with Treasury bills yielding practically as much as long-term Government securities, it is better to buy them and avoid any risk of capital depreciation. The banks are now receiving many applications of this kind, often from several customers who join together to make up an amount large enough to be dealt with by the banks.

A retail demand of this kind for a few thousands at a time cannot, of course, affect the tender rate, which is based upon an issue of forty millions, but it may help to explain the margin now existing between the tender rate of $5\frac{1}{2}$ per cent. and the relatively low rates at which, to the profit of the market, hot Treasuries are changing hands. Meanwhile, there is a general agreement in the City that discount rates should be maintained at about $5\frac{1}{2}$ or $5\frac{3}{4}$ per cent. There seems to be little chance of any reduction in Bank rate until after the election at earliest, and, in view of the uncertainties both at home and abroad, there is good reason why discount rates should not fall away. The upward trend of money rates abroad is another argument in favour of the maintenance of London rates.

	Sept. 24, 1931.	Oct. 1, 1931.	Oct. 8, 1931.	Oct. 15, 1931.	Previous Rate and Date Changed.
Bank Rate	6	6	6	6	$4\frac{1}{2}$ (Sept. 21, '31)

Discount { Call	4	4	4	4	$2\frac{1}{2}$ (Sept. 21, '31)
{ Notice ...	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$2\frac{1}{2}$ (Sept. 21, '31)
Market rate (3 months' bills)	$5\frac{1}{2}$	$5\frac{1}{2}$ - $5\frac{3}{4}$	$5\frac{1}{2}$ - $5\frac{3}{4}$	$5\frac{1}{2}$ - $5\frac{3}{4}$	...

The Bank return records a contraction of £2.6 millions in the note circulation, which now stands at £356.7 millions, against £351.6 millions on September 16th. Allowing for the current seasonal expansion and for the notes recently issued to the Scotch banks in exchange for gold, this disposes, at present, of any idea of currency inflation or hoarding. Payments for Treasury bills in excess of maturities and reductions of £5.1 millions in Government securities and of £2.8 millions in discounts and advances between them explain a sharp drop of £8.8 millions in bankers' deposits. These still stand at the relatively easy level of £70.1 millions, but even so a contraction in the week of nearly nine millions would have caused some stringency if there had been any big demand for money.

The September averages for the nine English clearing banks relate to dates before and after the suspension of the gold standard, and so it is difficult to draw any definite conclusions. The further decline in deposits probably reflects the heavy withdrawals of foreign funds which con-

tinued up to the suspension of gold payments on September 21st.

To meet this drain the banks have drawn to a limited extent upon cash and call money, but mainly have allowed their bills to run off, the reduction in discounts being £26.8 millions, against £32.9 millions in deposits. Advances expanded by £2.6 millions.

Following the rise in New York rediscount rate from $1\frac{1}{2}$ to $2\frac{1}{2}$ per cent. on the evening of October 8th, money rates there gradually adjusted themselves to the change. Call money rose from $1\frac{1}{2}$ to 2 per cent., but commercial paper, which rose from 2 to $2\frac{1}{2}$ per cent. during the week prior to the increase in the rediscount rate, remained on balance unchanged. Open market discount rates responded fully to the rediscount rate increase, 90-day bankers' acceptances being quoted at $2\frac{3}{4}$ per cent., against $1\frac{3}{4}$ per cent. a week ago. The Boston Reserve Bank has raised its rediscount rate from 2 to $2\frac{1}{2}$ per cent., while the Cleveland rate has advanced from $2\frac{1}{2}$ to 3 per cent. It is generally agreed that America's gold losses, amounting from September 1st to October 14th to \$550,000,000, was a major cause of the increase, but a further explanation is advanced that the recent era of cheap money having failed to achieve its objective of supporting the bond market, a spell of dearer money is now needed in order to draw funds back into the banks; thereby checking hoarding and relieving the banks from the need of realising bonds in order to meet customers' withdrawals. On October 15th rediscount rate was further increased to $3\frac{1}{2}$ per cent. Meanwhile, the outflow of gold continues. During the first fortnight of October \$158.2 millions were exported, of which \$135.4 millions went to France.

The foreign exchange market was quiet this week, and considerably steadier, with fluctuations on a much narrower scale. The general tendency of sterling was firm against all the principal currencies. The New York rate rose from 3.83 to 3.87 $\frac{1}{2}$, and Montreal from 4.33 to 4.37. Paris, after a good deal of movement, went from 97 $\frac{1}{2}$ to 98 $\frac{3}{4}$. Brussels was unchanged at 27 $\frac{1}{2}$. Milan weakened fractionally to 74 $\frac{1}{2}$. Madrid lost $\frac{1}{2}$ at 43 $\frac{1}{2}$. Amsterdam moved very slightly in our favour to 9.55. Berlin, after touching 17 $\frac{1}{2}$, recovered to 16 $\frac{1}{2}$, a loss of $\frac{1}{2}$ on the week. Of the Scandinavian currencies, Stockholm lost $\frac{1}{2}$ at 16 $\frac{1}{2}$, as did Oslo and Copenhagen at 17 $\frac{1}{2}$. Switzerland was weaker by $\frac{1}{2}$ at 19 $\frac{1}{2}$. Quotations of the South American exchanges were all nominal, and in the case of Buenos Aires and Montevideo no dealings were recorded on account of prevailing restrictions. Roughly, the rates were:—Rio, 34d.; Buenos Aires, 32 $\frac{3}{4}$ d.; and Montevideo, 20 $\frac{1}{2}$ d. The Far Eastern exchanges were very firm with the appreciation of silver, the rupee being unchanged at 1s. 5 $\frac{3}{4}$ d. but the yen was fractionally weaker at the close at 2s. 6 $\frac{1}{2}$ d. Forward quotations were inclined to be a little more settled than of late, but some currencies were still unquotable. New York stood at $\frac{1}{2}$ cent and one cent discount for one and three months respectively, and Paris at $\frac{1}{2}$ franc and $1\frac{1}{2}$ francs premium. Brussels ranged round $\frac{1}{2}$ belga premium for one month and $\frac{3}{4}$ belga premium for three. Amsterdam was firmer at one cent and $1\frac{1}{2}$ cents discount. Silver prices fell on balance by $\frac{3}{4}$ d. for cash to 17 $\frac{1}{2}$ d. and by $\frac{1}{2}$ d. for forward to 17 $\frac{1}{2}$ d. The China silver exchanges were stronger, Hongkong gaining $\frac{3}{4}$ d. at 1s. 3 $\frac{3}{4}$ d. and Shanghai $\frac{1}{2}$ d. at 1s. 8d.

THE DUST OF THE ARENA.

At the end of last week the list of declarations of party policy was completed by the publication of the texts of the Labour and Liberal election manifestos, the latter accompanied by a distinctive "scholiast's gloss" in the shape of a letter addressed to his constituency by Mr Lloyd George. The Labour Party's "Call to Action"—to give it its official title—was made up partly of an arraignment of the "National Government," on the ground that a false front of unity masked its true purpose as an instrument of capitalist oppression, and partly of a manifestation of party faith. The urgent necessity for Socialist reconstruction in the face of capitalist economic anarchy was emphasised; and a mandate was sought to impose some measure of public control over banking and the market for new capital, and to secure greater efficiency in industry by reorganisation on a "public service" basis. Tariffs were rejected without qualification; both currency inflation and deflation aimed at bringing sterling back to its old parity with gold were equally condemned; the need was urged for an international conference to deal with every aspect of the world crisis; and continuity of past policy was promised in regard to the problems of India and disarmament. Finally, with regard to the immediate domestic situation, the Economy Act was denounced as harsh and unjustified, and the hope was held out that the "cuts" in the case of teachers and other public servants would be restored "as rapidly as the claims of the unemployed and other depressed sections of the community permit." On the other hand, a balanced Budget was accepted "as the first condition of sound national finance."

The Liberal "Address to the Nation" emphasised the still critical nature of the present situation and the vital need to avoid inflation. The Budget must be balanced, however regrettable it might be to put a temporary check upon measures of social reform and national development. In addition, it was necessary that the country should secure a favourable balance of payments "by whatever methods, whether related to currency, to the expansion of exports or the restriction of imports, which might be found necessary and effective for that purpose." The Liberal Party, however, stood as an independent party which considered that, whatever emergency measures might be found to be necessary to deal with the immediate situation, Free Trade was "the only permanent basis for our economic prosperity." To this advocacy of Free Trade Mr Lloyd George added with emphasis that, since no new mandate was needed by Parliament to deal with the currency question or the national emergency as a whole, the election, forced on the country by the Conservatives, must be regarded as "a mere Tory ramp" designed to foist on Great Britain a disastrous tariff at the risk of deepening, intensifying and exasperating differences between class and class.

The various party pronouncements made, the arena was open for the contestants to marshal their forces and align their positions; but the past week of marching and counter-marching, with batteries here deliberately masked, and manœuvres there obscured from public scrutiny, has raised a still impenetrable cloud of dust over the portion of the terrain occupied by the "National" allied forces. On the one hand, there has been evidence of determined endeavours on the part of Conservative headquarters to keep the field as far as possible clear for a straight fight between "National" and Opposition candidates. In a few cases, notably that of Sir Herbert Samuel's constituency, the attempt has failed, and until Nomination Day it will remain uncertain how many three-cornered contests will be staged. It seems possible, however, that this strategy will be effective in considerably reducing the number of triangular elections. On the other hand, though a more or less solid front may be thus secured, the homogeneity of the army led by the Socialist Prime Minister has scarcely been enhanced by

the divergence between the various operation orders issued by Mr MacDonald's corps commanders and their sundry lieutenants.

Less in the hope of elucidating the position for our readers than because the *obiter dicta* of an election unique in British history for its irrationality seem to warrant a record of such permanence as these columns can give them, we propose to quote a few salient passages from speeches delivered in the past week by leading figures in the "National" ranks.

We may begin conveniently with Mr MacDonald, who observed last Monday at Seaham:—

I am a Labour candidate, I have not changed one idea or ideal that has guided me through the whole of my political life. . . . At the moment the national situation is such that we have to have a combination of parties, not a coalition Government, not a permanent change, but a temporary change. . . . I stand where I do with men who do not agree with me, men whose opinions I do not share . . . for the purpose of getting the nation over its temporary difficulties.

Having thus repeated his original declaration that the Government of which he is leader is asking the country for an "emergency mandate" to deal—not on party lines, but with open minds and a free hand—with whatever developments in the crisis may arise, Mr MacDonald showed, as he could not but do, that he was aware of the growing tendency for tariff protection to be pushed into the front of the programme by the less discreet among his Conservative supporters. Referring to the position of our balance of payments, Mr MacDonald expressed his willingness to consider any proposal on its merits; but, he added, "I do not believe that anyone in his senses . . . would suggest that by a tariff the Government should increase the cost of living at a time when the devaluation of the £ is now threatening of itself to increase the cost of living."

From these words it is tempting to conclude that the Prime Minister must have serious doubts of the mental balance of Mr Baldwin, who, in a speech at Birmingham last Friday, delivered himself as follows:—

If anyone can show me any method as swift in its execution and as sure in its results as I believe the tariff to be, I will examine that method with sympathy and interest. But until I am convinced of that, I adhere to the conclusions to which I came years ago, that the one weapon to deal with this subject is the weapon of the tariff. . . . The character of the National Government must be largely determined by us Conservatives because of the size of the Party.

The divergence of the policy of the Conservative Party from that of the leader of the Government was further underlined on the same occasion by Mr Neville Chamberlain, who declared that "there is no policy that we can see that can be an effective substitution for the policy of protection"; while Sir E. Hilton Young, speaking at Carlisle last Friday, went so far as to say that "no general low revenue tariff of 10 per cent. or so will serve to stabilise the £ . . . it must be on a basis of some 33 per cent." Nor have the protectionists in the Conservative camp troubled to pretend that in their view a tariff would be a remedy of temporary application. Sir Austen Chamberlain, speaking at Birmingham on Tuesday, stated that he and his colleagues "wanted for this great reform (i.e., a tariff) a national mandate which put it on a firm basis . . . and let the foreigner know that this thing has come to stay." To add still further to the elector's mystification, Sir Herbert Samuel, in his election address, assured his constituents that "the people are not called upon now to decide for or against a system of tariffs"; the *Times*, in a leading article this week, declared that "this election is not being fought in order to give the Conservative Party a mandate to impose tariffs only . . . it is being fought to give the nation a Government determined to save it from . . . inflation"; and Mr Churchill, to the final bemusement of democracy, announced at Epping on Tuesday that "the claim that Parliament must have a specific mandate from the electors for every important step it takes is a thoroughly bad and vicious constitutional doctrine. . . . The new House

of Commons will be completely free to set up a permanent general tariff."

What impression upon the electorate will be made by the various party attitudes we find ourselves totally unable to predict. By one section of the Conservative Press the voter is being asked to align himself under the patriotic flag in a naked issue of class war. We hope and believe he will pay no heed, whatever his economic circumstances or his political prejudices, to such a deplorable invitation, whose results would be apt to have the repercussions of a boomerang on those who have seen fit to issue it. But what is he to do? What is he even being asked to do? On the one hand, he is being offered by the Labour Party a programme which in many general issues, such as international affairs, is both uncontroversial and unexceptionable, but whose insistence on the maintenance of expenditure must occasion doubts as to the reliability of the promised Budget balance, and whose projected experiments in Socialist reconstruction of our financial machinery (with regard to which Mr. G. D. H. Cole has more to say on a later page) may strike many of Mr Henderson's more cautious adherents as a risky undertaking in the present critical situation of monetary affairs. On the other hand, he is being asked to give a mandate to an alliance of parties, which declines to call itself an Anti-Labour Coalition, yet unites in attacking Mr Henderson's policy, and whose leaders variously declare that they would regard success at the polls as giving them a mandate for an emergency non-party policy and as representing the "final triumph" of tariff reform.

In short, the elector does not know what is to happen if the "National" alliance carries the day and is faced with the task of translating into common action the different views and beliefs of its leaders. Will the "immediate desires," which Mr MacDonald assures us have been "put into the background for the time being," re-emerge insistently and, if so, will the "National" Government break up? Sir Herbert Samuel trusts that this will not be the case; but he has said "if some section of the House of Commons were to break up national unity and insist on party policy then . . . probably there will have to be another election." But is this the probability? Sir John Simon, speaking at Cleckheaton on October 12, stated that, though he agreed that economic arguments against tariffs were weighty, "if the broad base National Government finds it (i.e., a tariff) necessary, I am not going on that ground to refuse to support the National Government." If, then, the new Parliament contains an absolute majority of Conservatives and Simonite Liberals combined, does this mean that there will be, not as Sir Herbert Samuel thinks, another election, but the reconstruction of the "National" Government into a virtually Conservative Government which will claim, with Mr Churchill, that it has a mandate for "a permanent general tariff"?

The tragedy of this electoral situation is that the voter who is neither a Protectionist nor a Socialist seems likely in many cases to be placed in the dilemma of having to vote for one or other of two parties each of whose policies in part he dislikes. In asking for general support, as a statesman standing mid-way between reaction on the one hand and rash experiments on the other, Mr MacDonald *prima facie* is making an appeal which, in other circumstances, would evoke an enormous response from the electorate. The trouble is that the "independent" ground on which he stands appears to be slipping from under his feet.

On the other hand, we find ourselves unable to accept Mr Cole's dictum that, as a result of this election, the one straight issue in British politics has become, or will remain, that of Socialism *versus* Capitalism. This verdict is, in our opinion, an over-simplification of the position, just as misleading as the theory that fiscal policy is the test of "patriotism." Nor are we convinced that Mr Cole, for all the façade of Socialist theory and project in the official Labour manifesto, reads correctly the mind either of the majority of Labour's political leaders or of the bulk of the Labour electorate. Even though a result of the election may be a great diminution of "middle party" representation in Parliament, this will not mean that Mr Disraeli's "two nations" have now emerged as

the epitome of British politics. In the evolution of a centre party, embracing all the best elements of the three traditional political parties of the past, we believe that the best hope for the future of British politics is yet to be found. Such a party is not in sight, and it may require not only the lamentable confusion, hypocrisy and unreality of this election, but still less satisfactory consequences which this election may have in store, to bring such a party into being. In the meantime, the political soul of England, "hot for certainties" in the electoral maze of irrelevant controversies and unreal issues, is doomed, we fear, to get a very dusty answer.

THE LEAGUE AND MANCHURIA.

THE threat of war between China and Japan over Manchuria, which the Council of the League of Nations is dealing with this week in a special session at Geneva, is a test case. The prevention of war is the primary purpose for which the League has been brought into existence. True, this is a negative task. Yet, unless the League is able to demonstrate its ability to fulfil its primary negative task with effect, it will be powerless to carry out the great constructive work for which its services are so sorely needed by a disorganised world. The essential condition for a co-operative economic reconstruction of the world is general confidence; the essential condition for confidence is the assurance of peace. On several occasions during the last dozen years the League has been successful in preventing breaches of the peace between small countries: Greece and Bulgaria; Paraguay and Bolivia. The open question—a question which, so long as it remains open, will continue to keep alive the sense of insecurity throughout the world—is whether the League is capable of preserving peace in an affair in which one of the parties is a Great Power.

This question has loomed up once already, eight years ago, without receiving a clear answer. When the murder of the Italian General Tellini on the Graeco-Albanian frontier was followed by the Italian bombardment and occupation of Corfu, a situation arose between Italy and Greece which was not unlike the present situation between Japan and China. On that occasion the supreme disaster of war was avoided by a diplomatic compromise which amounted to a distribution of the necessary "loss of face" between the League and Italy. Italy accepted the loss of face involved in withdrawing from Corfu and refraining from further measures for imposing her will upon Greece by force of arms. The League accepted the loss of face involved in allowing the dispute to be taken out of its hands and referred to the Conference of Ambassadors, who did what was expected of them by rendering a decision which approximated closely to the Italian Government's terms. At the beginning of last week it looked as though the present Sino-Japanese dispute might be settled in some such way as this—settled, that is, by some compromise which would have the solid merit of avoiding war, without altogether escaping the serious defect of allowing the stronger party to get the benefit of its strength by obtaining pacifically the gist of what it had been threatening to extort by force. The week before last the Japanese Government had accepted in principle the League's request that it should withdraw its troops to within the limits of the leased territory and the railway zone in Manchuria, where Japan is entitled by treaty to maintain armed forces. This Japanese concession to the League's representations had been rather grudgingly made, and had been qualified by explicit exceptions which, though professedly temporary, were by no means unimportant. It was announced, for example, that, among other places outside the treaty limits, the Chinese occupation of Mukden itself was to remain under Japanese occupation for the time being. This was not satisfactory, but it was possible to condone it as a necessary stage in the Japanese manoeuvres of beating a dignified retreat; and in these circumstances it seemed only common sense that the League should not make things too difficult for Japan, short of going out of its way to build her a golden bridge.

This was the situation at the beginning of last week; but since then, unhappily, events have taken a more serious turn than they ever took in the Corfu affair of 1923. The sinister feature in the present Manchurian affair is the recalcitrance of the Japanese military authorities in Manchuria towards the Japanese Civil Government in Tokyo. The origin of the whole trouble was a high-handed military *coup* which was executed—in nominal reprisal for an alleged act of local provocation on the Chinese side—by the Japanese military authorities on the spot, without the approval or even the cognisance of their home Government. Last week it was presumed that this act of insubordination—deplorable as it had been—was at least an isolated aberration on the Japanese Army's part, and that the Japanese Government, after having been caught napping, had re-asserted that absolute authority over its public servants which is one of the hall-marks of a civilised commonwealth. Unhappily, this week, that reasonable expectation has been falsified. Undeterred—or possibly even provoked—by the assurances which the Japanese Government has given to the League Council, the Japanese military authorities in Manchuria have resumed the offensive.

At the beginning of last week the commander of the Japanese forces in South Manchuria, General Honjo, published in Mukden a declaration that Japan would no longer recognise the local Chinese administration of which Marshal Chang Hsueh-liang is the head. The Tokyo Government contented itself with issuing an official *démenti* of its own officer's unauthorised pronouncement on this matter of high policy. Thereupon General Honjo followed up words by a fresh series of militant acts. On Thursday, October 8th, he bombed Chinchow, a city of Manchuria, in the area under Chinese administration, which is situated on the Mukden-Peking Railway some hundred miles south-west of Mukden. The reason given for this act of war was that Chang Hsueh-liang had established the seat of his Manchurian Government at Chinchow since the Japanese occupation of Mukden, and that the Japanese intelligence service had ascertained that he was converting the town into a base for a projected Chinese military attack against the Japanese-owned South Manchurian Railway. Japanese military aircraft are also reported to have bombed the important Chinese town of Taonan in north-eastern Manchuria—a place which is likewise a railway centre and likewise right outside the limits of the Japanese zone. On Friday, the 9th, the Japanese Cabinet in Tokyo discussed General Honjo's latest acts in Manchuria; but their meeting ended without their having either dismissed the General or tendered their own resignations to the Emperor.

Since then, events have moved very fast indeed. On the 9th itself, while the Japanese Cabinet was refraining from action at Tokyo, their representative in China was delivering to the Government at Nanking a strongly-worded note requiring the Chinese authorities to suppress anti-Japanese manifestations in China, including the boycott of Japanese goods and the severance of business relations with Japanese firms. It is true, and not surprising, that the anti-Japanese manifestations in China have been violent and widespread. It is also true that the Chinese Central Government at Nanking would not be able, even if it were willing, to prevent them. Accordingly, the Japanese Government is taking its own measures for the protection of its nationals in China. Japanese warships have landed marines at Shanghai, and there is another Japanese warship anchored, up the Yangtze, off Nanking itself. This opens up the alarming prospect of a wide extension of the area of armed conflict unless the tension is eased without delay.

On the 9th, again, the Chinese representative on the Council of the League of Nations asked, on account of the serious information regarding events in Manchuria which he had received, that a special meeting of the Council should be summoned immediately. In response to this request, the President of the Council, Señor Lerroux (Spain), instructed the Secretary-General to telegraph on the same day convoking a meeting for Tuesday, the 18th (one day, that is, in advance of the date when the next meeting was to have taken place). It is in these circumstances that the Council has reassembled this week.

The MERCANTILE BANK of INDIA LIMITED.

Head Office: 15, Gracechurch St., London, E.C.3

Branches and Agencies throughout the East.

FIXED DEPOSIT ACCOUNTS.

Rates will be quoted on application.

Meanwhile, between Friday and Tuesday, events continued to move fast, partly for good and partly for evil. It is very much, indeed, to the good that the United States Government has telegraphed to Geneva, exhorting the Council to exert itself to the utmost within its own field of action and giving an assurance of energetic American support. And it is an even more important step that the American Government has instructed Mr Gilbert, its Consul at Geneva, to accept the League Council's invitation to attend the Council's deliberations. This is an event of first-class importance; for it has removed, at a stroke, in this Manchurian crisis, one complication—the uncertainty about American intentions—which has always been reckoned among the League's major unsolved problems hitherto. In taking this line, the Administration at Washington can count upon carrying American public opinion with them; for the traditional American horror of foreign entanglements is limited, like the similar British feeling, to the European Continent. There is an instinctive assumption in American minds that the affairs of the Far East, unlike the affairs of Europe, are an American concern. Thus, though the League finds itself confronted this week with the task of prevailing upon one member which is a Great Power, it is fortified by the assurance that one of the two Great Powers outside the League is working whole-heartedly with the League on this occasion. As for the other non-League Great Power, Russia, she has not yet made any sign. Yet it can hardly be supposed that, with her heavy stakes in North Manchuria, she wishes to see Japan get her own way in South Manchuria by main force.

As for China and Japan themselves, their juridical obligations are clear. They are both bound by the League Covenant; they are both bound by the Kellogg Pact; they are both bound by the Nine-Power Treaty, signed at Washington on February 6, 1922; and Japan is also bound by the Four-Power Treaty signed at Washington on December 13, 1921, the other signatories of which are the United States, Great Britain and France. So far, the Chinese Government has refrained, under great provocation, from taking any action contrary to its international pledges. At the same time, President Chiang Kai-shek has declared, in a speech delivered on this last Monday, the 12th, that, "if the League and the signatories of the Kellogg Pact fail to fulfil their sacred duties, China will not hesitate to make the supreme sacrifice of bankrupting the country for half-a-century to go to war."

As we go to press, the issue still hangs on the outcome of the Council's emergency session at Geneva. The proceedings opened on Tuesday with a series of statements by the representatives of the two parties: Dr. Sze and Mr Yoshizawa. The Japanese case is that Japan fully intends to withdraw her troops within the limits of her zone as soon as this can be done without jeopardy to Japanese lives and property outside. The Japanese military operations, including the latest bombing raids, are represented as being necessary protective measures. The settlement of the controversy is declared to be a matter for direct Sino-Japanese negotiations without the intervention of other parties. The Chinese case is two fold. Dr. Sze met Mr Yoshizawa's contention by quoting the declarations made by Monsieur Briand and Lord Cecil in 1925, *à propos* of the Graeco-Bulgarian crisis, to the effect that an invasion of foreign territory could not be justified on the plea of self-defence. He then went on to

raise a larger issue. China is relying, in this crisis, on the League Covenant and on the Kellogg Pact, and if these instruments are not proved to be effective in this test case, what are the prospects of the World Disarmament Conference, and what are the prospects of international economic reconstruction by co-operative effort? This, surely, is the heart of the matter. In this Manchurian affair, neither the League nor the United States, nor the world, can afford a failure. Happily, failure is not yet by any means certain. In fact, so far from exhibiting impotence, the League is entirely responsible for the fact that war has not yet been declared.

THE FUTURE OF CURRENCIES.

THE monthly meeting last Monday of the Board of the Bank for International Settlements—the first occasion since Great Britain's suspension of the gold standard for personal contact to be resumed between central bank Governors—was held at the beginning of a week destined to witness the temporary abandonment of gold by three additional countries, and a steady, though not sensational, intensification of the existing financial and economic strain. Indeed, it was at the very moment that the Board was in session that Northern Rhodesia, a British Protectorate, and Southern Rhodesia, a self-governing British Colony, intimated their decision to keep the exchange value of their currency linked with that of the pound sterling—a decision whose reactions on the position of the Union of South Africa forms the subject of comment in another article.

On the same day Finland also decided to suspend the gold standard. In making this decision she may to some extent have been influenced by the consideration that the British market is an important outlet for her exports, particularly of timber, but the step was actually forced upon her banking authorities by the loss of 500 million finmarks' worth of foreign exchange during the preceding three weeks, as a result largely of the withdrawal of credits which she had obtained from United States banks. Since Finland is the first of the countries which had previously experienced a phase of extreme inflation to follow Great Britain's lead in suspending the gold standard, the effects of her departure from gold were awaited with some anxiety. Reports from Helsingfors indicate that the immediate result was a general inclination on the part of the public to rush to buy equity shares and retail commodities, but the policy of the Bank of Finland in raising Bank rate to the stiff level of 9 per cent. should have the effect of keeping any inflationary tendencies within limits. Fortunately Finland has a substantial surplus on foreign trading account.

The actual decisions taken at Basle on Monday were in part a foregone conclusion, and, for the rest, were not of far-reaching moment. The Board decided to renew for a period of three months its share (one-fourth) of the \$100 million credit which was granted to Germany by the B.I.S., the Bank of England, the Bank of France, and the New York Federal Reserve Bank, and which was to mature on November 4th. It also decided to invite the three central banks mentioned to take similar action in the case of their portions of the credit; and there seems little reason to doubt that this course will be adopted. It was further agreed that the B.I.S. credit to the Bank of Austria of 90 million schillings and the outstanding balance (100 million schillings) of the Bank of England's credit to Austria, due for repayment on October 16th, should be prolonged until January 16, 1932, while a prolongation was also announced in respect to the credit of \$3 millions granted by the B.I.S. to the Bank of Yugoslavia. These formal decisions represent little more than the official recognition of a *fait accompli*, since in neither instance could immediate repayment be exacted from the debtors, while the conditions of the new capital market in every centre are such that it would be impossible for these short-term obligations to be at present funded into long-term loans.

Apart from the renewal of the credits the only other determination of the Board which had a direct bearing on the crisis was the decision to invite representatives from

countries which have found it necessary to restrict dealings in foreign exchange to meet at Basle to discuss means of co-ordinating and regulating such restrictions with a view to alleviating to some extent the inconvenience thereby occasioned to international trade. The intention was that the discussion should be concerned with matters of detail rather than of principle and that they should be confined to the countries of Central Europe. Exchange restrictions, however, are matters in which Governments and not Central Banks must have the last word, and it is possible that the constitution of the Committee and its place of meeting may be changed. Though the conference at the outset may only seek to secure a simplification of some of the present restrictions, this matter cannot be discussed without quickly opening up the whole question of the mutual adjustments which will permit the resumption of international trade. The talks may, therefore, do something to clear the ground for further action.

It was not to be expected that this meeting of the Board of the B.I.S. would succeed in evolving any definite plan for dealing with the crisis. The task of rebuilding a structure whose very foundations have been shaken cannot be approached without deliberation and careful preparation in advance. Not only so; as the *Economist* has emphasised throughout this phase of the crisis, the problems now involved, in the shape of international indebtedness, reparations, tariffs and other matters of high policy, lie far beyond the scope of effective action by banking authorities alone. The international agreements which are essential for world recovery are necessarily the concern of statesmen. None the less, it is a matter of satisfaction that direct contact between central bankers should this week have been resumed, and, in a crisis whose development may be unexpectedly rapid, it is more than possible that at the next monthly meeting of the B.I.S. Board the bankers may be able to take a clearer view of the situation, if not to pave the way for agreed lines of future policy.

And, in this connection, it is of the greatest importance that however great may be the distractions of the General Election, public opinion in this country should endeavour to keep firm hold of the realities of the situation. At the moment there is an appearance here of temporary "shelter" from the world-wide economic blizzard. Whereas the scramble for gold and a sense of uneasiness regarding the dollar (which appears to persist in some Continental centres, notwithstanding the assurance which Dr. Burgess, of the New York Federal Reserve Bank, gave the meeting of the B.I.S. Board) are still leading to gold exports from the United States, while even in the best situated European countries still on the gold standard the situation is characterised by a hoarding of currency, nervousness of depositors and growing paralysis of trade, Great Britain gives at the moment the impression of being insulated to some extent from the troubles of the outer world. The depreciation of the pound has already stimulated some new orders for her export trades, and the pound itself, after its initial sharp decline, has now for three weeks displayed a remarkable steadiness.

This in itself is satisfactory, but it should be appreciated that quite irrespective of the factor of our balance of payments on current account, the future movements of the pound are likely to be determined to a considerable extent by the flow inward and outward of capital. This being so, the course of sterling will be influenced greatly by the trend of opinion here as to its future exchange level. Any tendency to regard further substantial depreciation of the pound as other than a most undesirable development would, we suggest, be dangerous. If the impression is created abroad that there will be no attempt made in this country to prevent the pound's sliding to an exchange level of 3.50 to 3 against the dollar, the pressure which foreign industrialists abroad are already in some cases bringing to bear on their Governments to abandon the gold standard as a riposte to intensification of competition from British goods, may become irresistible. The idea of wholesale depreciation of currencies is not one which should be welcomed by British opinion, for though "selective" abandonment of the gold standard—particularly by countries which, like Great Britain, have not hitherto inflated and still have a high internal

level of prices and wages—might not have any disastrous results, it would be undoubtedly optimistic to hope that the course of events, if once a real "landslide" from gold began, would be of advantage to the interests of Great Britain. Rather is it likely that the upshot would be a complete loss to Great Britain of such limited benefit as she may still expect to derive from the suspension of the gold standard. But, of even greater weight than these calculations of advantage from the particular standpoint of British exports, there is the general consideration that a universal abandonment by the world of the gold standard would involve the gravest possible risk of a race in competitive inflation whose results no sensible person can lightly contemplate.

THE ROUND TABLE CONFERENCE.

IT is quite clear, even to the casual observer, that the Indian Round Table Conference has, to say the least, lost a great part of the momentum which it acquired during the first session of the Conference at the end of last year. Indeed, there are some, including persons in close touch with the daily work of the Conference, who express the opinion, or the fear, that it will end in mere stalemate if not in something worse. It is desirable, therefore, that the main features and conditions of the present situation should be clearly appreciated, and that there should be general understanding of the forces at work and the issues on which success or failure will turn.

It will be remembered that at last year's session the whole problem of India's future government took on a new, extended and highly promising aspect owing to the early declaration from the side of the Indian Princes that, under equitable conditions, they would enter with British India into an All-India Federation. Prior to this declaration the problem of the Conference had been visualised, both here and in India, as primarily a problem relating to British India. It was hoped that it would be possible to bring the Indian States into at least the beginnings of an organic connection with British India; but no very clear ideas had been expressed as to the manner in which this should be accomplished. Neither the Simon Report nor the Government of India Despatch on the Report regarded the Federation of All-India as anything but a distant ideal, and, therefore, the declaration of the Princes came with and, therefore, the declaration of its unexpectedness. It is not too much to say that the prospect of the realisation of this lofty conception of a federalised India vitalised all the proceedings of the last session of the Conference and profoundly impressed all sections of British political opinion from Left to Right.

It will be recalled that Lord Reading, conscious of the strength and value of the stabilising element which the Princes would form in an Indian Federal Government, declared on behalf of the Liberal Party that he was prepared to concede responsibility to the Federal Government and, of course, wide autonomous powers in the Provinces, subject to certain clearly defined safeguards which he laid down. His position was wholeheartedly accepted by the Labour Government; and the Conservatives, though they would prefer to see a definite scheme worked out, they were clearly much influenced by the declaration. The momentum thus gained carried the Conference successfully through a series of crucial decisions with regard to Defence, the North-West Frontier and the Indian Services. But, unfortunately, the ancient and thorny problem of inter-communal relations had to be left entirely unsolved. This particular problem found concrete expression in the demand by the representatives of the various Minority communities in India for constitutional safeguards which went deep into the fundamental parts of the Constitution. Further, the specific terms and conditions on which the Princes were to enter the Federation, including all sorts of important adjustments between the States *inter se*, and the vastly difficult subject of Federal Finance, had to be left over for the next session of the Conference.

It is idle now to regret that the work of the Conference was not renewed at the beginning of the summer immediately after the crowning act of Lord Irwin's statesman-

ship was accomplished, namely, the pact with Mr Gandhi, which has kept India largely free from internal turmoil during the past six months. But there are very strong grounds for believing that, had conditions here made it possible for the Conference to resume its work, either in England or in India last April, all the problems, whether of Minority relations or of relations between the States and British India, and between the States themselves, would have been less formidable than they are to-day. The long interval which elapsed between the adjournment last January and the reassembly in September led to a certain crumbling of the undoubtedly promising position attained at the first session. A perusal of the Indian newspapers and a study of events in India during the months between January and September show opinion in India on the subject of inter-communal or Minority adjustments to have been steadily hardening. The Muhammadans, in particular, held hundreds of public meetings all over the country which consolidated the community's front and gave added strength and weight to their far-reaching claims. Hindu communal opinion advanced along a similar path, and the grievous events in Cawnpore, and later in Kashmir, made the task of those who were working for inter-communal peace well-nigh hopeless.

Splits occurred also among the Princes, even among those who had been present at the first session of the Conference, and these found their most important and dramatic expression in the declaration of the Maharaja of Patiala, in which, in effect, he withdrew his support from immediate Federation and preferred instead to begin by setting the Princes' own house in order, so as to give the States unity of policy and, consequently, a better bargaining position *vis-à-vis* British India. In England, of course, a succession of fateful events, culminating in the present deplorable election, has inexorably thrust Indian affairs into the background and has deprived the Indian Conference of the benefits of the undivided attention of certain British leaders, notably the Prime Minister and Lord Reading, whose influence and wisdom were of incalculable value in the last session.

It is in such conditions as these that the Conference has resumed its work with the task in front of it of coming to decisions on the immensely difficult and fundamental practical problems which, as we have said, were left over from last time. In a word, the delegates are trying now to make and put together the working parts of a constitution which shall be able to function unhindered and untroubled by friction caused by age-old inter-communal and inter-State rivalries and antagonisms, a constitution which shall receive wholehearted support in India and yet square with the opinions, the rights, and the conscience of the majority of British people.

Is it any wonder that the work of the Conference is proceeding slowly, or, indeed, that it should be brought almost to a standstill? Let us remember the years that it has taken the other parts of the Empire to achieve their federation, and, be it noted, federation of an infinitely simpler sort and on an immeasurably smaller scale than the Federation of All-India. We are dealing here not with a few million folk, comprised in a handful of homogeneous States, each of them autonomous and with only their own interests and authority to consult. Here, we are dealing with a problem which is literally unique. The 350 million people of India are divided between a number of races, creeds, cultures, languages, and stages of development. The British Provinces are not autonomous units, and the Indian States with which the Federation is to be made are virtually sovereign territories in treaty relations with the British Crown, and politically connected with British India only by the somewhat exiguous tie formed by the fact that their paramount power also governs British India. Think, too, of these complexities as shot through with ancient irreducible communal and particularised rivalries and antagonisms, and then a faint conception of the truly bewildering difficulty of the task now in front of the Round-Table Conference will begin to emerge.

Lastly, in this connection, the presence of Mr Gandhi as representative of the Left Wing of Indian political opinion should not be overlooked, for he has brought a new and undoubtedly disturbing element into the problem. All the representatives of British India last time were men

who have always believed in constitutional methods of agitation, and who, on the whole, have had practical ideas as to the pace and scope of political development in India. Mr Gandhi has come with the mandate of the Karachi Congress as his demand. He demands independence for India as complete as that enjoyed by any of the British self-governing Dominions, and this includes absolute Indian control over Defence and Finance. His prestige among certain sections of the delegates is great, and, in any case, his influence overshadows that of any other Hindu in India, so that his dissent from anything which his Indian colleagues might agree to is bound to be a formidable thing. His action cannot but be of some anxiety to the British delegates and to some sections of the Indian delegates, notably the Muhammadans.

Mr Gandhi has tackled the Minorities problem and has failed to achieve any solution, not only by reason of Muhammadan intransigence, but because he has undoubtedly not been able to carry with him the majority of his Hindu colleagues. Nevertheless, the difficulties, even in this respect, have been somewhat narrowed. The problems of Sind and the North-West Frontier have been disposed of; the allocation of residuary powers to the Provinces appears to be a foregone conclusion; and even in the vexed question of joint or separate electorates it is possible that differences will not prove insuperable. But the hard, irrefragable core of the problem, namely, the arrangements for Bengal and the Punjab, remains untouched. There, the Muhammadans demand a statutory majority of the seats in the Provincial Councils, and this is a claim which the Hindus will not admit. In the Punjab, the position is complicated by the Sikhs, who in no circumstances will agree to an absolute majority of Muhammadans in their Provincial Council. It is difficult to see how this problem of the Punjab and Bengal can be solved by negotiations between Hindu and Muhammadan representatives. And, even if they come to an agreement, the other Minorities, notably the Depressed Classes and the Anglo-Indians, have still got to be fitted into the scheme. The Muhammadans have announced that until the whole question of their safeguards and position in the new Constitution has been disposed of they are not prepared to go on discussing the basic parts of the Federal Constitution. Finally, the vitally important questions of the weightage to be given to the Indian States in the Federal Legislature, of the part which they are to play in the Executive, of the extent to which they will have to surrender their sovereignty to the Federal Government, and the whole vast question of Federal Finance all remain to be settled; and these cannot be tackled until the Hindu-Muhammadan and other Minority problems have been satisfactorily solved.

This is a formidable catalogue of difficulties, but the thing that must not be done is that any section concerned in the future of India should lose heart. It would be worse than foolish, it would be criminal, to under-estimate the strength of the difficulties which have been discussed above, the more so because the problem of Minority safeguards is now not likely to be solved by negotiations among the delegates themselves. Nevertheless, a Federation of All-India there must be, and if it should be found impossible to achieve that Federation at this Conference, then a beginning may have to be made with those parts of the main scheme which are possible at this stage, and particularly with Provincial autonomy and some responsibility at the Centre in British India. From such a beginning it might be possible to proceed slowly, but naturally, until conditions were brought into being which would enable a future Conference to erect a greater structure.

SANITY versus TARIFFS.

A FRONTAL attack by massed forces is often easier to repel than a series of sporadic flank attacks by forces of varying strength and employing varieties of strategy and weapons. More insidiously dangerous, therefore, than a fight on a clear-cut tariff issue is the present series of flank attacks upon our fiscal system which the electorate is witnessing. It is, as will be seen from a previous article, difficult to say precisely where the tariff

issue stands in this election. Some Protectionist supporters of the National Government are keeping their fiscal theories in the background. Others, while giving lip service to Mr MacDonald's appeal, are making tariffs the main plank in their platform. Among the latter there are three distinct sections. One tells us that the effect of the depreciation of sterling is inadequate and fleeting and must be supplemented by a low tariff. Another argues that nothing short of high Protection will bring prosperity back to Britain. (Prominent in this section is Sir E. Hilton Young with his advocacy of a general tariff of the order of 33½ per cent., which would place Britain right among the high Protectionist nations.) The third, led by Lord Beaverbrook, wants Protection for the purpose of achieving what he euphemistically calls Empire Free Trade. We wish that every voter who is assailed by these various and contradictory tariff pleas could before polling day read a survey* of the tariff problem from all angles which has been issued this week by ten British economists under the chairmanship of Sir William Beveridge. The survey was undertaken before Britain left the gold standard, but an Epilogue is added dealing with the new circumstances. It is this Epilogue which lends supreme interest to the volume at the present moment. For in it the truth is relentlessly brought out that, whatever its dangers and drawbacks, the abandonment of the gold standard has automatically and finally cut the ground from under the argumentative case (such as it was) for the introduction of Protection into the economic system of this country. The succinct passage in which this conclusion is contained merits reproduction:—

As soon as a country is off the gold standard, the balance of exports and imports gets adjusted rapidly and automatically by the exchanges. If more sterling is offered on the exchange market than is asked for, as will happen if imports are too high for exports, the value of sterling in other currencies, no longer sustained by gold, must sink; imports are rapidly made dearer and exports cheaper, and equilibrium of the trade balance comes automatically. The problem for the Government becomes, not that of balancing the exchanges, but of avoiding at all costs internal inflation. Its primary duties are a balanced budget, severe control of credit, a veto on the printing-press, and avoidance of a tariff. For to impose a tariff when the exchange is fully free to fluctuate, is to deprive ourselves of the one obvious benefit which the break with gold confers—the stimulus to exports. If in such conditions we tax imports, the exchange moves in our favour, but it does so directly at the expense of exports; as it becomes more difficult to import, so it becomes more difficult to export. Tariffs and setting the exchange free from gold are mutually exclusive policies.

From this the authors turn to the argument, heard now upon the Protectionist platform, that the effect of currency depreciation upon the trade balance is inadequate and temporary. They describe it as "a complete misunderstanding," and continue:—

While a currency is depreciating, various complex reaction are set up which stop when the process of depreciation stops. But, unless and until prices and wages rise in proportion, the effect of encouraging exports and discouraging imports remains so long as the currency remains, however fixedly, below its former value in terms of other currencies. Leaving the exchange free to fluctuate itself brings about, through the exchange market, the relation of internal and world prices necessary to adjust the balance of trade. It acts just as contracting credit and lowering prices by a rise of bank rate acts under the gold standard. It has all the effects of a tariff in making imports dearer, and the additional effect of making exports cheaper. With an exchange free to fluctuate, a tax on imports hits directly at exports; its only effect is to bring about stabilisation of the trade balance at a slightly higher level of the exchange and a reduced volume of international trade. It makes employment in the export trades certainly less.

The case is unanswerable, as also is the further statement that a tax on imports is no remedy for any of the dangers or disturbances which may result from the divorce of the currency from the gold standard.

While this brief Epilogue so eloquently drives home the truth that even the theoretical argument for tariffs has been killed by the course of recent events, it should not monopolise the reader's attention; for in the rest of the volume will be found chapters demonstrating in effective style that many of the claims now being placed

* *Tariffs. The Case Examined.* By A Committee of Economists, under the Chairmanship of Sir William Beveridge. London: Longmans. 7s. 6d. net.

before the electors by various Protectionist schools were fallacious even under gold standard conditions. For instance, tariffs are being preached as a means to maintain a high standard of living. Here is the conclusion of Sir William and his colleagues:—

For maintenance of the standard of life of any high-wage country against competition from low countries, Protection is either unnecessary or unavailing; in the particular country of Britain, with a high standard dependent upon specialisation, large exports and cheap imports, Protection means an attack on the standard of life, not a defence of it.

Again, the idea, nurtured by Mr Baldwin and others, that, by adopting a tariff Britain can bargain her neighbours' tariffs down, is dismissed after a survey of the history of tariff bargaining, ending with the Imperial Conference of 1930:—

If we had any doubt before what tariff bargaining means in practice, we should have none after the Imperial Conference of 1930. The Dominion Premiers, anxious as they were, alike on grounds of sentiment and business, to make a bargain with us that would find a market for their wheat and wool, could not offer for this purpose to lower a single duty of their own. Their own vested interests barred the way.

A special chapter entitled "The Possibilities of Imperial Preference" may be recommended as giving the most conclusive of reasoned answers to the impracticable, if attractive, policy of an Empire economic unit and a vast diversion of trade from foreign to imperial channels. A careful review of possibilities leads to the verdict that

Imperial Preference, as a practical proposition, cannot be presented to-day . . . as a means to freer trade; to lower, if discriminating, tariffs. It means that Britain should put import duties on food and raw materials that now come in free from foreign countries, in order that the Dominions may tax yet more highly foreign manufactures that they tax already. It is an addition to tariffs, not a reduction of them.

The two essential truths are also clearly brought out: That the Protectionist policies deliberately adopted by the Dominions have made a campaign for a "Free Trade Empire" hopelessly out of date; and that the scope for Imperial Preference is immensely smaller than is usually supposed, because from its possible scope must be excluded two groups of commodities—namely, those of which the Empire has a substantial export surplus, and which the Empire's own supplies are only a small proportion of the Empire's demand. Since the book was written, we may remark in passing, the Canadian Government (as recorded elsewhere in this issue) has itself underlined the futility of pursuing Empire Free Trade by its action in raising tariff rates on British goods to rob the Mother Country of the advantage of the depreciation in the £.

There is much else in the book that deserves more space than we have to give. The "mass production argument," which has attracted some industrialists, is met and answered; and the idea is disposed of that tariffs are likely to bring any alleviation of unemployment. The "quota system" is examined and its Protectionist effect exposed. Export re-marrying and presentation of facts relating to these problems is welcome and timely. But, as we have said above, the most topical pages of the book are those in which it demonstrates that with the passing of the gold standard—and in spite of the grave problems which its suspension has raised—the question of our balance of payments, suddenly brought to the front by the fall in our receipts from overseas, has been resolved in the only way possible to us—so long as we were not able and willing to adjust our price level to the fall in world prices. Events have, in fact, changed the whole perspective of the problem. In the world's present situation to cheapen the cost of our exports and to do everything possible to maintain the solvency of other countries, and particularly of our debtors, are the vital problems. It was never more clear than to-day that to adopt a narrow and restrictive policy of protection would harm, and not help, this country. Perception, brought by high protection in other crisis, of the havoc wrought by high protection in other countries had already suggested doubts to many who were attracted by protectionist ideas of the wisdom at this moment of leading this country into the same morass. The suspension of the gold standard has destroyed the last vestige of the case.

The foundations of international trade must now be laid afresh. In the light of recent experience, there can clearly

be no restoration of a stable monetary basis—it would certainly be a profound mistake for this country to be a party to any such plan—unless it is accompanied by a reversal of the policies that have so disastrously impeded the freer movement of goods. This country would be false to its traditions no less than to its own self-interest if it fails at this critical moment to throw its great influence on the side of a saner counsel and against the forces of private interest and economic nationalism.

A SOCIALIST VIEW.

In the following article Mr G. D. H. Cole, who is a member of the Government's Economic Advisory Council, and whose work as an exponent of Socialist reconstruction will be familiar to our readers both at home and abroad, states, at the Economist's request, the immediate economic objectives, as he sees them, of Labour policy.

For a long time now the Labour Party has been, by its resolutions and declarations of policy, a Socialist party. But the present crisis has made it, for the time at least, Socialist in a new sense, and with a new immediacy of intention. Hitherto, the underlying assumption of Labour Party policy has been twofold. It has assumed both the stability and the "squeezability" of capitalism. But at length both these assumptions are being seriously questioned; for the Labour Party does not deny that there is a real crisis, that the Budget must be balanced, or that balancing it is bound to be, under any circumstances, a difficult and disagreeable task.

Labour has based its past policy mainly on the "squeezability" of capitalism. That is to say, it has aimed both at improving directly wages and working conditions, and at transferring from rich to poor through taxation a steadily increasing amount of "economic surplus." Its immediate appeal to the electors has been largely based on promises to extend the social services—promises which involve the finding of the money out of the pockets of the rich. But of late, though the *rentiers* have profited greatly from falling prices, and though there is still obviously a huge amount of "surplus" left, the fall in variable profits has made it a good deal harder to reach this "surplus" by direct taxation, without discouraging capitalist enterprise, or even "driving capital abroad"—the old familiar charge against Socialism as an economic policy.

This situation no doubt arises out of the world depression, and out of the longer trade depression from which Great Britain has suffered. But the end of the world depression is certainly not yet; and the British depression itself arises from causes some of which would remain in being even after a revival of world trade. Labour is coming to the conclusion that the old policy of advancing wages and improving the social services under Capitalism will no longer work; and even that, if Capitalism is left intact, the standard of living is certain to be forced down. It is, therefore, turning to Socialism of a different sort; for its object is no longer merely a redistribution of wealth, but even more an increase in the quantity of wealth produced, to be secured by a fundamental change in the economic structure of society.

There is, of course, nothing new in Labour's demand for the nationalisation, or socialisation, of the basic industries and services. That is one of the oldest ingredients in the Labour programme. But hitherto socialisation has been thought of in practice as an essentially gradual affair, spread over a number of years, and applied first to one industry and then, after an interval, to another. I do not mean to suggest that now Labour is thinking of a simultaneous socialisation of all the basic industries. But it is thinking, as it has never thought before, of a large simultaneous extension of public control over a wide field, of "National Economic Planning," and, especially, of the socialisation of the banks as a means to this simultaneous extension of control.

At the moment, Labour is very angry with the bankers, whom it regards as the chief source of the late Government's dissolution. For the great mass of the Labour Party is convinced that the Government's fall was the result of financial dictation, though it is not quite sure precisely on whose shoulders to lay the blame. Mr

MacDonald, in refusing to modify the new cuts in unemployment benefit, appears, indeed, to have admitted that not merely the balancing of the Budget, but the cutting of unemployment benefit as a means of doing this, was made a condition of the loans which were under negotiation by the Labour Cabinet, and have since been concluded by its successor; and, from whichever side of the Atlantic this dictation mainly came, its coming is deeply resented. The crisis has brought the socialisation of banking from the background right into the forefront of the Labour programme, and has caused a somewhat lukewarm proposal for the nationalisation of the Bank of England to be converted into an urgent demand for full public ownership and control of the joint stock banks as well.

As far as the Bank of England is concerned, this demand arises from a sense that the control of monetary policy is now essential both to the preservation of the standard of life and to the hope of industrial expansion. Labour is alarmed at the possibility that the bankers may desire to repeat the calamitous mistake of 1925, and restore the pound once more to its old parity; for it is realised that this could not be done without a drastic scaling down of wages in order to reduce costs. The great majority of the Labour Party would definitely far sooner have devaluation; for, though this may cause some rise in prices, it is not believed that the cost of living need rise by any means in proportion to the fall in the external value of the pound. Control of the Bank of England is regarded as the means to a "managed" currency, which will regulate the value of the pound so as to protect wages and stimulate industrial expansion, both by lightening debt burdens and by permitting a less rigid credit policy. But the Labour Party is distinctly against inflation. It wants the pound to find its natural level in relation to other currencies; but it would decisively reject any proposal to raise British prices and costs by an inflation of the currency.

But the Labour demand for socialisation extends also to the joint-stock banks. The motives are, in this case, somewhat different, and even more closely connected with Labour's plans for industrial reorganisation. The depressed industries, such as steel and cotton, must, it is felt, be reorganised, unified, and equipped with new capital and credit in order to make their reorganisation effective. An essential part of this process is to rescue them from their dependence on the banks, by converting the frozen credits and debentures now owned by the banks into contingent claims to a share in profits, and to ensure that available bank credit shall be rationed as effectively as possible in the national interest. Repeated failures by these industries to "rationalise" themselves have induced a belief that their reorganisation can only be brought about under the direct auspices of the State, and by their conversion into great public corporations under State control.

If this is to be the policy in relation to industry, it is felt to be out of the question to leave the joint-stock banks, on which these industries must depend for their supply of credit, in private hands. Indeed, the rationing of credits through a socialised banking system is held to be one of the chief means of advancing at once towards a "national planning" of industrial production on co-ordinated lines. Side by side with this reform, the Labour Party wants a National Investment Board, to gather in a large proportion of the savings of the community, and direct their investment in industry with a view to this co-ordinated plan of production. Capital and credit supply are alike to be as far as possible publicly controlled; and through these controls authority is to be exerted over the "rationalisation" and expansion of the various industries.

This policy has been forced upon the Labour Party by the waning of its belief in the stability and "squeezability" of the capitalist system. Capitalism, it is urged, is showing itself, all the world over, growingly unstable and restrictive. Instead of helping production to expand, it is deliberately damping it down at the hope of maintaining prices, and thereby perpetuating world depression. It is therefore necessary to take the productive system firmly in hand, and to re-

shape it in such a way as to make it less dependent on export trade, more nearly related to domestic demand, and more able, where it does depend on exports, to work along lines of mass barter instead of competitive marketing governed by the exigencies of private profit.

In this sphere of policy, Labour's third alternative to Free Trade and Tariffism emerges in this election far more plainly than ever before. Import Boards and Export Boards for bulk purchase and sale of international commodities now move up to the forefront of the Labour programme. Tariffs are rejected, because of their effects on the consumer; but bulk purchase and sale—that is, virtually, international barter based on the State control of foreign trade—becomes a clearly formulated alternative policy.

These elements—socialisation of the banks, a National Investment Trust, conversion of the basic industries into great public corporations, and the creation of Import and Export Boards for the control of overseas trade—form together an ambitious and far-reaching programme that is the more exacting in that it would be essential to success that the various measures should for the most part be carried simultaneously into effect. Herein, indeed, rather than in any change in the actual measures proposed, lies the vital difference between Labour's programme in 1931 and in previous years. Labour stands committed to work or maintenance for the unemployed, to the steady improvement of wages and social services, and to a progressive diminution of economic inequality; and it now sees no chance of securing these ends by merely gradualist methods within the general structure of the capitalist system. Hence the demand for a large dose of constructive Socialism here and now, as the only means by which the pledges given to the employed and the unemployed can be effectively redeemed.

British Labour is far from having become revolutionary: it thinks of realising its objects by parliamentary means, and of introducing a large dose of Socialism rather than a Socialism full, complete and authoritative on the Russian model. But it does now stand, as it has never in effect stood before, for Socialism as an immediate political objective. That goes far to explain the closing of the ranks against it, and the virtual return, in the present election, to a two-party system. For this is the first election in Great Britain that has ever been fought on the straight issue of Capitalism *versus* Socialism.

A DIARY OF THE CRISIS.

Friday, October 9th.

China requests that special meeting of Council of League of Nations be summoned to consider Manchurian crisis created by Japanese occupation. Meeting summoned for October 13th.

Dr. Brüning reconstitutes German Cabinet as follows:—

Dr. Brüning, Chancellor and Foreign Affairs.	Herr Schiele, Agriculture.
Herr Dietrich, Vice-Chancellor and Finance.	Herr Treviranus, Communications.
General Groener, Defence and Interior.	Herr Schätzal, Posts.
Herr Stegerwald, Labour.	Herr Hermann Warmbold, Economic Affairs.
	Herr Joel, Justice.

Reichsbank return shows reserve 78.7 million marks lower; cover 30.1 per cent.

French bank rate raised from 2 to 2½ per cent.

Sterling steady, closing rate dollar 3.87½.

European stock markets:—London, gilt-edged fractionally lower, equities firm; Paris, sharp recovery; Amsterdam, moderate rally. Swedish bourse reopens; prices steady after initial decline.

Wall Street opens firm, reacts in later dealings.

County Trust Bank, Philadelphia, suspends payment.

New York, gold exports \$45 millions, earmarkings \$22 millions.

Saturday, October 10th.

Governors central banks assemble at Basle for Board meeting B.I.S., October 12th.

Herr Hitler has audience with President Hindenburg.

Sterling steady, closing rate dollar 3.87½.

European stock markets:—London, gilt-edged quiet, dull, equities still improving; Amsterdam irregular.

Wall Street quiet, steady at first, irregular at close. Gold earmarking \$19 millions.

Sunday, October 11th.

Nazi-Stahlhelm demonstration at Harzburg attended by Herren Hugenburg, Hitler, Schacht and General von Seeckt. Anti-Japanese riot Canton.

Monday, October 12th.

Board of B.I.S. decide to renew for three months the \$25 millions credit granted to the Reichsbank, and to invite the Federal Reserve Bank, the Bank of England and the Bank of France to take similar action.

Also agreed that B.I.S. credit of 90 million schillings and Bank of England credit of 100 million schillings to National Bank of Austria, due for repayment on October 16th, should be renewable until January 16th, 1932.

Decided also to invite representatives of all countries where restrictions in currency transactions have been imposed to meet at Basle and discuss methods of alleviating the inconvenience thus caused to trade.

Gold standard suspended in Finland and Northern and Southern Rhodesia. Finnish Bank rate raised from 7½ to 9 per cent.

Sterling steady, closing rate dollar 3.88.

European stock markets:—London gilt-edged dull, equities firm; Paris and Amsterdam quiet, steady; Brussels weak.

Wall Street closed, Columbus Day holiday.

Tuesday, October 13th.

Reichstag reassembles; Dr. Brüning makes declaration of policy.

League Council hears Chinese and Japanese submissions in regard to Manchuria.

Sterling steady, closing rate dollar 3.88½. Reichsmark weak, 17½.

European stock markets:—London, dull; Paris, Amsterdam and Brussels, minor irregular improvement; Stockholm, bank shares weak, equities firm.

Wall Street, general decline, small volume liquidation.

Failure announced prominent firm New York bond dealers.

Ten minor banks suspend payment. New York gold exports \$13 millions, mainly to France.

Wednesday, October 14th.

League Council discuss Manchurian crisis. Statements by Japanese and Chinese representatives. American participation in the discussions proposed.

Resignation of Spanish Government, following resolution expelling Jesuits.

Sterling steady; closing rate, dollar 3.88. European stock markets:—London, gilt-edged brighter, industrials steady; Paris quietly firm; Amsterdam shade weaker; Brussels weak.

Wall Street general decline.

New York gold exports \$47 millions.

Thursday, October 15th.

League Council: Proposal to invite attendance United States observer agreed, Japan alone dissenting.

Sterling shade lower; closing dollar rate 3.87.

European stock markets:—London, quiet and undecided; Continental bourses similar.

Wall Street, early gains lost in later dealings. New York Federal Reserve Bank Rate raised from 2½ per cent. to 3½ per cent.

Gold export \$17 millions.

First National Bank of Youngstown, Ohio, and fourteen other minor banks suspend payment.

THE DOMINIONS AND THE GOLD STANDARD.

(BY A CORRESPONDENT.)

THE abandonment of the gold standard by Great Britain was bound to have disturbing effects upon monetary and trade conditions in the various Dominions, and it may influence the movement for closer Imperial economic relations. When the decision was taken on September 21st the currencies of two Dominions—Australia and New Zealand—had for some months been at a discount in relation to sterling of 80 and 10 per cent. respectively. The two other great Dominions, whose banking systems have more independence, had been able to maintain parity, and this was true also of the Indian currency and of the various "satellite" currencies of the Crown Colonies and Possessions. The action of the British Government created difficult problems throughout the Empire.

It was inevitable that the "satellite" colonial currencies, whether on a gold-exchange or sterling basis, should maintain parity with sterling and follow the British pound. The decision, however, of the two Australasian Dominions to follow the pound was dictated by custom and economic interest. Lacking established machinery for the working of independent systems, they would in any case have found difficulty in improvising credit and exchange arrangements. The balance of economic advantage, moreover, obviously lay in their maintaining the link with Great Britain and profiting by the immediate tendency for

sterling prices to rise in their principal market. New Zealand exports well over 70 per cent. of her exports to the United Kingdom and another 5 per cent. to other British countries outside Canada and South Africa. The corresponding figures for Australia are rather less than 40 per cent. and a little more than 11 per cent. Since a substantial rise in sterling prices has already developed for their main export commodities there is an obvious gain to these Dominions in the fact that their export prices will rise immediately, just as their main export season is opening—a gain that is emphasised by the contrary tendency towards falling prices of such commodities in other markets.

Nor is this gain likely for some time to be counterbalanced by increasing costs. Many of their costs, such as interest and taxation, are relatively fixed, while wages are largely controlled by awards and have recently been reduced. Import prices will, of course, tend to rise, substantially for imports from gold-standard countries, but more slowly for British imports, which are a larger proportion of the total and should tend to increase. The net result should be a stimulus to purchasing power and a distinct encouragement to further concentration of trade with Great Britain. Some improvement in the Australian and New Zealand exchange rates will be a natural consequence, but this may take a little time to develop.

How long this temporary stimulus will last, and to what lengths it will go depends obviously upon the future course of sterling; but it seems evident that a favourable situation has been created both for the Australasian Dominions and for British exporters in their markets. The limits of this improvement will, however, be set by the wider international consequences of the British decision. If the ultimate effect of abandoning the gold standard turns out to be a serious unsettlement of foreign currencies, with a widespread lapse from existing parities, hurried invocation of emergency tariffs, and an aggravation of the tendency to hamper world trade, the ultimate result may well prove to be a boomerang. From the Imperial as well as the national point of view, therefore, there is a strong case for limiting the depreciation of sterling. A mild fillip to inter-Imperial trade is much to be preferred to a scramble for the immediate and somewhat illusory gains from rapidly depreciating currencies, followed, as such a scramble must be, by the ultimate collapse of trade.

If the other Dominions were placed like Australia and New Zealand it would be possible to argue a stronger case on the ground of inter-Imperial trade for a substantial measure of depreciation. But the situation in Canada reinforces for Great Britain the desirability of keeping the fall in the pound within limits. Indeed, it illustrates the dangers and disadvantages accruing from even the present measure of depreciation. About 25 per cent. of Canada's exports go to the United Kingdom, and perhaps another 5 per cent. to other British countries; but 46 per cent. went to the United States in 1929-30, and from the United States Canada draws almost 70 per cent. of her imports. Moreover, she has substantial foreign relations with New York, and has good grounds, therefore, for her present attempt to maintain her currency at parity with the U.S. dollar, though that attempt has not been wholly successful, and a substantial divergence has appeared between the exchange value of sterling in New York and Montreal—a divergence reflected in the discount at which the Canadian dollar stands in New York.

More serious, however, from Great Britain's point of view than the mere disturbance in the Montreal-London exchange rate is the fact that the recent policies of the Canadian Government have appeared to be based upon the interests of Canadian industrialists rather than upon the advantage of Canadian agriculturists exporting wheat to Great Britain or of British exporters to Canada. Trade between Great Britain and Canada is bound to be severely restricted by the Canadian Order-in-Council of September 30th, by which power is taken to invoke the dumping provisions of the tariff against imports bought at less than the par rate of exchange.

South Africa is in a peculiar position. Approximately 50 per cent. of her exports consist of gold bullion; and of the commodity exports almost 70 per cent. are marketed in Great Britain. Gold has naturally gone to a premium in

sterling, and sterling prices of such commodities as wheat and wool have risen. Adherence to the gold standard has resulted in a rate of exchange which places the South African pound at a premium of nearly 20 per cent. above sterling. The balance of economic advantage would seem to point towards South Africa following the British example. The Union Government has relatively small sterling obligations to meet; and the fact that the two Rhodesias suspended the gold standard in favour of sterling on October 12th is an added reason for abandoning gold, since the trade and tourist relations between Southern Rhodesia and the Union are close, and competition from British products in the Rhodesian market is likely to be adverse to South African trade. But the experience of the Union after 1915, when gold production (under very different circumstances) was discouraged by rising prices, may be a factor making for retention of the gold standard by South Africa. There is also the consideration of the desirability of discouraging other countries from abandoning gold, and perhaps some hope that the British abandonment may be only temporary.

Two large questions are raised by this brief survey. First, in the Commonwealth, as in Great Britain, the case for Imperial tariff schemes as a method of economic improvement has been exploded. The attitude of Canada confirms the lessons of similar exhibitions of colonial nationalism in the past, and especially the recent past. The deplorable situation that has arisen between Canada and New Zealand, for example, does not bode well for the use of tariffs as a method of effecting Imperial economic unity. Secondly, the present crisis has thrown into striking relief the weakness arising from the lack of anything approaching an Imperial policy in banking and currency organisation, particularly the lack of strongly organised central banks in the Dominions linked closely with the Bank of England. There are possibilities of considerable strength, not, indeed, in the pooling of credit, but in the mutual reinforcement and support of credit institutions of this type—strength that would be available, not only in crises, but in the constructive strengthening of inter-Imperial trade and economic relations.

THE BRITISH MOTOR MARKET.

II.—Trucks and Buses.

In an article published in last week's "Economist," dealing with the market for private cars, a correspondent defined "saturation" as the point at which "replacement demand" becomes 100 per cent. of total new demand (annual registrations). In the following article he applies this formula to the market for commercial vehicles.

UNLIKE private cars, which are principally used for pleasure, and the demand for which must be, therefore, related to different income levels, commercial cars are used for profit, and consequently the question of saturation must be linked with the purpose which the vehicle is intended to serve—in the case of a truck its useful load and in the case of a bus its seating capacity. Bearing in mind this distinction, the following table may be drawn up:—

TRUCKS (ALL CLASSES).						
Year.	Vehicles in Use.	New Regs.	Expansion Demand.		Replacement Demand.	
			No.	Percentage of New Regs.	No.	Percentage of New Regs.
1928	311,410	37,911	23,395	62	14,516	38
1929	336,122	53,770	24,712	46	29,054	54
1930	354,948	53,331	18,826	35	34,505	65

Trucks are more highly "saturated" than either light or medium private cars. Partly this is due to the repressive effect of the trade depression on expansion demand. The average for 1928-30 shows 48 points off saturation, against only 35 points for 1930, and it is probable that cyclical fluctuations in trade affect commercial cars more than private cars, since the former are regarded as instru-

ments of profits. That there is still, however, plenty of scope in certain classes may be seen by analysing, on the same lines, the popular 1-2-ton lorry (this is unladen weight, but it is an approximate guide to useful load):—

TRUCKS (1-2 TONS UNLADEN WEIGHT).						
Year.	Vehicles in Use.	New Regs.	Expansion Demand.		Replacement Demand.	
			No.	Percentage of New Regs.	No.	Percentage of New Regs.
1928	71,403	16,173	11,196	69	4,973	31
1929	96,713	32,295	25,310	78	6,985	22
1930	122,756	31,469	26,043	83	5,426	17

Whilst the 12-cwt.—1-ton group, or tradesmen's van, is probably largely over-saturated, this medium lorry class seems to offer some scope for expansion. The heavy lorry is in itself the most economical means of transport of goods by road, and it is likely to be even more so when the use of heavy oil, for which this type is most suitable, is perfected. At present, trucks of over 2 tons represent only about 25 per cent. of the total lorries in use.

The buses group, which term is taken to mean hackneys with a seating capacity of more than eight persons (*i.e.*, excluding taxis and hire cars), has naturally a more stable and inelastic demand than any of the preceding classes. It is only to be expected, therefore, that the degree of saturation should be fairly high:—

HACKNEYS (EXCLUDING UP TO 8 PERSONS CAPACITY).						
Year.	Vehicles in Use.	New Regs.	Expansion Demand.		Replacement Demand.	
			No.	Percentage of New Regs.	No.	Percentage of New Regs.
1928	47,088	9,139	3,940	43	5,199	57
1929	50,642	9,176	3,534	39	5,622	61
1930	53,462	8,505	2,820	33	5,685	67

This relatively high degree of saturation is somewhat offset by the greater scope revealed in the 26-32-seater class, which tends to show that the demand for charabancs is by no means exhausted:—

HACKNEYS (26-32 SEATS).						
Year.	Vehicles in Use.	New Regs.	Expansion Demand.		Replacement Demand.	
			No.	Percentage of New Regs.	No.	Percentage of New Regs.
1928	10,950	2,835	1,453	51	1,382	49
1929	13,267	3,116	2,317	74	799	26
1930	14,675	2,691	1,408	52	1,283	48

In drawing some final conclusions from the present survey it may be remarked that the described method of calculating the extent of saturation of demand yields at least two interesting results. The first is that the market for commercial vehicles appears to offer less possibilities than that for private cars. This may be summarised by the following table, representing the degrees from saturation of the two groups:—

DEGREES FROM SATURATION POINT.		
	Private Cars.	Buses and Trucks.
1928	62	58
1929	57	45
1930	49	35

A probable explanation of this fact is to be found in the main phenomenon of the trade depression—namely, falling prices. Private cars are demanded by wage and salary earners and by receivers of fixed and variable investment incomes. A falling price level is to the advantage of the first three classes, and gives them a surplus which may be spent on motor cars—more particularly so as wages and salaries in this country have been generally "inelastic"—while the decline in demand from the variable investment income receivers cannot be compared with the effects of a falling price level on general business and, consequently, on the demand for commercial vehicles. The downward turn of the trade cycle has, therefore, tended to maintain the demand for private cars relatively higher than that for commercial cars.

Another interesting result of this method is the comparison it enables one to draw between the British market and the American. The latter has developed at a much greater rate than the British market—it produces annually more than three times the total number of cars in use here—but this very rapidity of development has led to a much higher degree of saturation.

DEGREES FROM SATURATION POINT.

(All motor vehicles.)

	United Kingdom.	United States.
1928	59	40
1929	54	40
1930	45	5

The comparison goes far to explain the motives which have led American manufacturers to bend their efforts of recent years towards expansion of exports.

Notes of the Week.

The Attacks on the Bankers.—"Baiting the Banker" is becoming a favourite sport of the Labour Party to-day. The sport has many attractions. The banker is a figure of mystery to the million. There is no end to the legends of wickedness which may be invented, without trespassing too far upon electoral credulity. Moreover, it is safer to bait the banker than the politician, because the former has little if any chance of defending himself or hitting back. So the sport grows in popularity. That the bankers, at the end of August, conspired to destroy the Labour Government is a cry designed to tickle the ears of the uneducated; and we may dismiss as mere electioneering clap-trap the T.U.C. slogan: "The first Labour Government was destroyed by a Red Letter. The second Labour Government has been destroyed by a Bankers' Order." Such ebullitions are common form at election times, and may be disregarded. But far more formidable, because it deals in half-truths, is the criticism of recent British banking policy, of which the statement made by Mr G. D. H. Cole and Mr Ernest Bevin, in a recently published pamphlet* may be regarded as typical. The burthen of this attack is that the British banks, in order to bolster up Germany, took "the heavy risk of lending for a long period money which they had only borrowed on short-term terms." This is neither a fair nor an accurate statement of the case. In the ordinary sense of the term, they did not "borrow" at all. They accepted foreign deposits. Ought they to have refused them? Secondly, the assertion that they lent "for a long period" is again, at best, only a half-truth. Some, no doubt, of the credits given by British to German banks lost, when re-lent to German industry, the liquidity normally attaching to short commercial credits; but the lenders relied for the repayment of the loans (which were technically in the main credits repayable at sight or in ninety days) on the liquidity of the German banks. Finally, was the whole policy of financing Central Europe wrong? In Mr Cole's and Mr Bevin's own words, it stayed off "German default and probably German revolution as well." It might be possible for the authors of "The Crisis" to argue with greater force that the deliberate maintenance of money rates in London at a level which attracted "bad money" proved, in the end, to have made London's position unduly vulnerable; or that, ideally, the rapid development of the 1931 crisis should have been foreseen earlier. In times of unexampled difficulties British bankers—like those of other countries—made mistakes, no doubt. But if criticisms are to be made, let us have them fairly stated.

to do with any inflationary policies and would balance the Budget "on thoroughly sound lines." Similar pledges have been given in other authoritative Labour statements, and they are welcome. We have not, however, yet been told how the Budget is to be balanced and inflation avoided, without fresh taxes or economy "cuts"; and we hope that Mr Graham will be more explicit on this point before the election is over. Meanwhile, the Council of the Trade Union Congress, in its manifesto issued on Thursday, makes no bones about it. They would attempt to do it by increasing the already enormous burden on higher incomes. At least, we can read no other meaning into the assertion that Labour "refuses to accept the assumption that the taxable limits of the nation have been reached while enormous wealth continues to accumulate in the hands of the few." Does this mean that, with the economy policy reversed, at least £70 millions of new taxation is to be imposed upon the "rich" in the next Budget, if the T.U.C. has its way? If so, do Mr. Graham and Mr Henderson agree that this is feasible, or that it justifies the expression "balancing the Budget on thoroughly sound lines"? They should tell the country without delay.

Dr. Brüning's Ordeal.—This is a fateful week for Germany. Within a few hours it will be known whether Dr. Brüning, with his reconstructed Cabinet, can secure the support of the Reichstag for his policy of conciliation abroad and financial rectitude at home. As we go to press there seems to be some reason for the prediction that Dr. Brüning will obtain a narrow majority, although the issue must be in doubt so long as the position of the parties of the Middle Right remain doubtful. Much has happened in Germany since our last issue appeared, and the events are reviewed by our Berlin correspondent on a later page. Following the political crisis precipitated by the resignation of Dr. Curtius, the Foreign Minister, Dr. Brüning reorganised his Cabinet, and has taken over the portfolio of Foreign Affairs himself. His attempt to induce leading industrialists to join the Cabinet was unsuccessful, and apart from the inclusion of General Groener, a trusted confidant of President Hindenburg, and of one industrialist in the shape of Professor Warnbold, the new Cabinet is composed mainly of old colleagues. The week-end afforded some opportunity to measure the strength and temper of the forces allied against the Administration. On Saturday Herr Hitler was received in audience by the President, and on Sunday Harzburg was the scene of a monster "Nazi" demonstration, at which, besides Herr Hitler, General von Seeckt and Dr. Schacht, the late President of the Reichsbank, appeared among the principal orators. The eyes of the world are upon the Reichstag, and the supersession of Dr. Brüning by a Government in which extremists, at either end of the political scale, were in control would arouse new and serious fears, not only of Germany's stability at home, but of her future rôle in European politics. Germany is still the storm centre of Europe's financial crisis, and upon the relations between Germany and France depends all hope of progress in the re-establishment of peace and security on the Continent. Let us hope that our Berlin correspondent is correct in asserting that the vigour of the proceedings at Harzburg on Sunday have caused a sufficient revulsion of feeling among timid flirts with Hitlerism to enable Dr. Brüning to overcome the challenge which, on a direct vote of "no confidence," he is now facing in the Reichstag.

Signor Grandi's Coming Voyage.—Last Sunday it was announced by the State Department at Washington that the Italian Foreign Minister, Signor Grandi, has been invited to pay an official visit to the United States, that the invitation has been accepted, and that the Minister is to sail from Naples for New York on November 7th. He is to spend ten days on American soil. The terms of the announcement are markedly cordial. The State Department almost goes out of its way to mention, in passing, that President Hoover would have been delighted

The T.U.C. and Taxation.—We recorded last week a specific pronouncement by Mr William Graham, who is presumably Chancellor-designate in the next Labour Government, to the effect that Labour would have nothing

* "The Crisis." What it is. How it arose. What to do. By Ernest Bevin and G. D. H. Cole. (London.) The New Statesman and Nation. Price 6d.

to receive a visit from Signor Mussolini himself had it been possible for the head of the Italian Government to leave Rome at this juncture; and the texts of the American note of invitation to Signor Grandi and the Italian note of acceptance breathe the same cordiality. This positive step towards bringing the American and Italian Governments into closer contact with one another is not the first move in this direction that has been made since the beginning of the world crisis. It will be remembered that the American Secretary of State, Mr Stimson, spent some time at Rome during his recent tour round the capitals of Europe. On that occasion the main subject of his conversations with the Italian Government is reported to have been the problem of disarmament, and the proposal for a general armaments holiday, pending the outcome of the Disarmament Conference, which Signor Grandi has since put forward at Geneva, is believed to have been made with the American Government's knowledge and approval. Unhappily, little has come of Signor Grandi's proposal so far, and we may presume that the main purpose of his forthcoming visit to Washington is to take up again the joint discussion of the problem of disarmament which was begun between him and Mr Stimson at Rome. It is interesting to observe how, all over the world, the logic of formidable events is breaking down long-cherished prepossessions. A few years ago it would have seemed incredible that the Government of the United States should be inviting the Prime Minister of France and the Foreign Minister of Italy to visit America in order to enter into personal consultations on international problems. At this eleventh hour America is discovering that she cannot in the last resort disentangle herself from a distressful world, and that world-peace and world-confidence are the indispensable conditions of American prosperity. It is to be hoped that President Hoover will be able to translate this new comprehension into action while there is still time.

Church and State in Spain.—A new crisis has arisen in Spain, as was inevitable so soon as the newly-constituted Cortes came to grips with the question of the relations of Church and State. On Tuesday, by a majority of 287 to 45 the Cortes approved Article 3 of the Republican Constitution, which deprives the Roman Catholic Church of any special State protection. This vote was a foregone conclusion, but it appeared on Tuesday that, thanks to eloquent appeals by the Premier, Señor Zamora, himself a devout Catholic, and Señor Fernandez de los Rios, the Minister of Justice, the intransigent anti-clerical measures contemplated under Article 24 of the Constitution had been staved off. On Wednesday, however, the scene changed. Article 24 was passed in a form which means, among other things, the dissolution of the Jesuit Society and the confiscation of its property. This decision, which was strongly influenced by a powerful speech from Señor Azana, the Minister for War, led at once to a political crisis. The Premier, Señor Zamora, resigned, and with him one of his chief colleagues, Don Miguel Maura. This caused a curious situation, since no supreme authority to appoint a new Prime Minister as yet exists under the new Constitution. An emergency method of meeting the *impasse* was adopted. The senior remaining Minister, Señor Lerroux, invited the President of the Cortes to take steps for the formation of a new Government, and the President thereupon called upon Señor Azana to make the attempt. The latter accepted, and was so immediately successful that, before Wednesday was out, he was able to present his new Cabinet to the Cortes. Señor Lerroux retains the office of Foreign Minister, so that there will be no break of continuity in Spain's representation and policy at Geneva. So far as domestic policy is concerned the changes in the Cabinet indicate a definite move towards the Left, and it would appear that Señor Azana and his Cabinet are at present assured of a large majority in the Cortes. But it cannot be expected that the Clericalists will submit to their defeat without a bitter struggle. The new Spain is not yet through its initial period of strife.

Ismet Pasha at Athens.—At a time when the world is at sixes and sevens, driven distracted by the evil genius of Nationalism, we may find not only some consolation but also a real ground for hope in the spectacle of reconciliation between two nations which, for six centuries past, have made themselves notorious by their classic feud. The visit of the Prime Minister of Turkey, General Ismet Pasha, to Athens represents a return of M. Venizelos's visit, a year ago, to Angora, and it sets the seal upon the great work of appeasement and settlement and understanding which has been achieved jointly by Greek and Turkish statesmanship, assisted by the good offices of Italian diplomacy. Already the reconciliation has been reflected in the armaments bills of the two countries, which have fallen notably during the past twelve months; and the cordial interchanges of visits between Greek and Turkish athletes, students, journalists and so on are trivial but significant signs that the change of spirit is genuine and that it has not remained confined to the statesmen but has permeated the two peoples. Now to any Greek or Turk or foreign student of Græco-Turkish relations as recently as ten years ago, the present friendship between Greece and Turkey would have been inconceivable. Any one, in 1921, would have prophesied that not ten years but ten decades or ten centuries must pass before these two peoples could begin to forget the wrongs which they had mutually inflicted and suffered. M. Venizelos himself was born a Turkish subject in Crete, and has spent the best part of his life in striving to liberate Turkey's Greek subjects from Turkish rule. Mustafa Kemal Pasha's birthplace is Salonica, which has been conquered from Turkey by Greece in Kemal's own lifetime. And the Ghazi has won his fame by repelling a Greek invasion of the heart of the Turkish homeland in Anatolia. This Anatolian War of 1919-1922 was a war to the knife, which was accompanied on both sides by wholesale devastation and massacre, and was followed by the forcible expatriation of the Greek minority from Turkey and the Turkish minority from Greece. And this was the finale of a process of war, massacre and eviction which had been going on intermittently for a century, since the outbreak of the Greek War of Independence in 1821. That, again, was a revolt against a Turkish domination of Greece which had lasted some four hundred years. Yet to-day this formidable account between the two nations has not only been liquidated but has somehow been expunged so that it has left no rancour behind. The solidity and sincerity of the new Græco-Turkish entente is attested by the signature, at Athens last week, of five matter-of-fact agreements, three of which are concerned with the last outstanding points in the great problem of the exchange of populations. The other two provide respectively for the suppression of smuggling in Græco-Turkish waters in the Ægean, and with Græco-Turkish—and, if possible, Græco-Turco-Bulgarian—collaboration in the development of the Oriental tobacco trade. The nature of these agreements is reassuring; for Governments do not deal in these prosaic and concrete terms unless they really mean business.

America's Money Problems.—With reference to the article bearing this title, which was published in last week's *Economist*, a correspondent writes:—On the whole, the article presents a fair picture of the position, but there are one or two questions of fact upon which further comment appears desirable. It is extraordinarily difficult to make any reliable estimate of the actual size of America's "free" gold. The recent heavy acquisitions of Government securities by the Reserve system were not due to the system's inability to secure other assets, but were a deliberate matter of policy on the Reserve Banks' part. The Reserve Banks bought Government securities heavily in order to make money more plentiful and easier, and to enable member banks to pay off their borrowings. If and when they decide to reverse that policy, rediscounting by member banks will automatically increase. The effect is that the Reserve system can add to its supplies of eligible paper whenever it thinks fit. In any event, there is no shortage of eligible paper in the country. It is true that abandonment by many countries of the gold exchange standard is a major cause of American gold losses, and

that whatever the final limit to such losses may be, long before that limit was reached the banks would be having to borrow, monetary stringency would arise, commodity prices would be depressed, business recovery would be retarded, and America would lose any power she has to extend fresh credits to foreign countries. Still, the "free" gold available is in excess of foreign short-term balances in New York. As regards the note circulation, no general hoarding of notes is taking place, but every time a bank failure occurs there is a purely local outbreak of hoarding in the vicinity concerned; and, so far, these notes are not yet returning to the banks. As for the \$500,000,000 bank pool, its main object is to relieve the bond market. Since the end of April, reporting member banks alone have thrown \$300,000,000 of bonds on the market, and they have done so not so much in order to meet actual demands from their customers as by way of a precautionary measure to meet any such an eventuality. The depression of the bond market is a major cause of such banking weakness as exists, and in order to break this vicious circle the pool has been created. The pool's obligations are not eligible for rediscount, and indeed, the pool will not take over bonds, but will merely lend against them as collateral. It should also be understood that the pool is not entitled to use its \$500,000,000 resources as a basis of further operations beyond the limit of that figure. On the other hand, it is possible that the Reserve system may obtain power to make "lombard loans" for short periods against approved securities, though these powers will be subject to rigid restrictions as regards the minimum rate of interest charged, and the class of securities eligible as collateral for such loans. The *Economist's* analogy of the automatic banking pool provided in England by the branch-banking system is a perfectly fair one. The American pool is definitely to be non-inflationary and to provide solely for a re-allocation of the existing credit fund.

The Cape Gold.—Since the suspension of the gold standard on September 21st the weekly sales of Cape gold in the London market have practically come to an end, although gold has continued to arrive in London each week, so that approximately £3½ millions is now held by the Bank of England on behalf of the South African Reserve Bank. This has given rise to some speculation as to the cause of the suspension of open market sales, the more so as it was reported this week that £1,000,000 of presumably Cape gold had been sold to France. The normal procedure is well known. The gold is sold to the South African Reserve Bank by the mines, who are then quit of the whole transaction. The Reserve Bank ships the gold to London, where it is lodged at the Bank of England, and is then sold for sterling in the London market, the proceeds being added to the Reserve Bank's sterling balance. The divorce of sterling from gold, and the adherence of South Africa to the gold standard, means firstly that the sterling price of gold varies with the sterling exchange against the leading gold currencies; and, secondly, that the value in South African pounds of the Reserve Bank's sterling balances is equally subject to variation. The practical result is that the Reserve Bank has to avoid accumulating more sterling than it is advisable to keep against its immediate and probable needs, as otherwise there might be a risk of loss through depreciation. This explains the absence of sales of Cape gold since September 21st. As regards the reported sale to France, there is no definite evidence that the amount is as much as a million, but if such a sale has taken place it probably represents a special transaction. The main point is that for a time at least sales of Cape gold will be regulated by the South African Reserve Bank's current requirements of sterling.

Overseas Trade in September.—It is obvious that the effect of Britain's abandonment of the gold standard could not possibly be reflected in the value figures of September's overseas trade, for statistics take time to collect, and it must not be supposed that the published figures for any

particular month refer precisely to the trade transacted in that period. And since the abandonment of gold did not take place until September 21st, it cannot be considered as a factor in the September returns. As normally, (August being a holiday month) both imports and exports show a slight increase over the previous month. The comparison of the figures for September and the nine months with those of the corresponding periods of 1930 and 1929 is given below:—

MONTH OF SEPTEMBER.
(000's omitted.)

	1931.	Increase or Decrease as compared with			
		September, 1930.		September, 1929.	
Imports	£ 68,318	£ -10,272	% -13.1	£ -30,098	% -30.5
British exports	29,846	-12,895	-30.1	-25,258	-45.9
Re-exports	3,763	-1,632	-30.3	-2,975	-44.2
Total exports	13,607	-14,527	-30.2	-28,233	-45.7
Excess of imports over total exports	34,711	+ 4,255	+ 14.0	- 1,865	- 5.2

FIRST NINE MONTHS.
(000's omitted.)

	1931.	Increase or Decrease as compared with first nine months of			
		1930.		1929.	
Imports	£ 621,353	£ -163,675	% -20.8	£ -275,801	% -30.7
British exports	292,391	-148,725	-33.7	-251,021	-46.2
Re-exports	48,255	-19,423	-28.7	-36,183	-42.9
Total exports	340,646	-168,148	-33.1	-287,203	-45.7
Excess of imports over total exports	280,707	+ 4,473	+ 1.6	+ 11,402	+ 4.2

The drop in the nine months' totals, both for imports and exports, are greater than can be accounted for purely by the downward movement of prices. In particular, the export decline reflects the serious contraction of international trade caused by the world depression. A point brought out by the figures, and one too often overlooked by fiscal controversialists, is that we are not faced by any serious swing in the balance of visible trade. Indeed, the excess of imports over exports is barely £4½ millions larger than in the period January to September, 1930. In a country so dependent as is Britain upon overseas supplies, there are limits to the contraction in the volume of imports, and the supreme trade problem of the country is the increase of its exports. How some of the leading exports have declined in volume is seen in the next table:—

SOME LEADING EXPORTS.
(Quantity.)

	First Nine Months.		
	1929.	1930.	1931.
Coal	44,124,337 tons	41,768,603	31,628,727
Pig iron and ferro alloys	423,289 tons	251,616	155,858
Railway material	357,805 tons	337,723	152,901
Total iron and steel	3,274,285 tons	2,520,092	1,450,846
Textile machinery	97,786 tons	72,410	38,779
Total machinery	416,441 tons	366,997	244,024
Cotton yarns	126,137,300 lbs.	102,414,100	93,966,100
Cotton piece-goods	2,848,350,300 sq. yds.	1,995,959,300	1,297,498,400
Wool tops	244,807 cents	208,255	199,721
Worsted yarns	28,629,300 lbs.	23,146,600	20,919,100
Worsted tissues	84,771,300 sq. yds.	62,701,000	42,981,400
Worsted piece-goods	37,365,000 sq. yds.	26,545,700	22,572,900
Linon piece-goods	54,527,400 sq. yds.	47,880,200	46,896,000
Leather boots and shoes dozen pairs	714,026	693,954	502,540
Leather	265,727 cwt.	194,865	117,875
Paper and cardboard	3,692,258 cwt.	3,342,107	2,388,194
Locomotives	28,746 tons	34,981	18,425
Motor cars and chassis	31,383 number	22,289	16,766

It is an eloquent story of the effects of the world depression, coupled with the high level of British production costs. Provided the domestic price level can be saved from a serious advance (such as tariffs would inevitably bring), the returns of coming months should show substantial revival on the export side of the account, together with a much needed reduction in the mass of unemployment which is concentrated so largely in our exporting industries.

Sterling and World Prices.—The past week has brought increases of an approximately equal amount in both sterling and gold prices. The weekly figures of the *Economist* index number and of our new "gold" index, a list of whose components was given in our issue of October 3rd, is set out below:—

	ECONOMIST INDEX. (1927 = 100).		
	Sept. 18, 1931.	Oct. 7, 1931.	Oct. 14, 1931.
Cereals and meat	64.5	67.6	70.1
Other foods	62.2	68.3	67.4
Textiles	43.7	49.8	51.0
Minerals	67.4	72.7	74.1
Miscellaneous	65.8	67.8	66.3
Complete Index	60.4	64.8	65.4
1913 = 100	83.1	89.2	90.0
1924 = 100	62.2	66.0	66.5
Sept. 18, 1931 = 100	100	107.3	108.3
Gold price index	100	94.9	95.7

In comparing the trend of the sterling and gold indices, it should be borne in mind that the "gold" index is based on only eighteen prices of primary commodities, subject normally to considerable market fluctuations.

Iron and Steel Production in September.—Obviously neither the production figures nor those of foreign trade for September reflect any influence of the suspension of the gold standard on the iron and steel industry. The number of blast furnaces in operation, which had fallen to 64 by the end of August, fell further to 62 by the end of September; and the production of pig iron, which had fallen to 275,700 tons in August, touched only 248,200 tons in September—a decline, allowing for the fewer days in September, of about 7 per cent. Steel production, which was unduly low in August on account of the holidays (357,300 tons), rose to 400,500 tons, but was very much lower than in September last year (580,600 tons). The following table, which gives the production of pig iron and steel in each quarter in the last two years, illustrates the rapid decline in production which has taken place. Pig iron production in the third quarter of this year was only 44 per cent. and steel production 50 per cent. of production in the first quarter of 1930:—

PRODUCTION OF PIG IRON AND STEEL QUARTERLY, 1930 AND 1931.

	Pig Iron.		Steel Ingots and Castings.	
	1930.	1931.	1930.	1931.
	(In thousands of tons.)			
1st quarter	1922.8	1012.5	2373.6	1388.7
2nd "	1797.3	993.5	1988.1	1261.4
3rd "	1327.8	840.9	1653.3	1186.5
4th "	1148.9	...	1283.5	...

Imports of iron and steel in September amounted to 220,300 tons and exports fell to 139,200 tons, the lowest level for many years. The following table gives the imports and exports of iron and steel quarterly in the last two years:—

IMPORTS AND EXPORTS OF IRON AND STEEL QUARTERLY, 1930 AND 1931.

	Imports.		Exports.	
	1930.	1931.	1930.	1931.
	(In thousands of tons.)			
1st quarter	850.0	609.3	983.8	481.2
2nd "	683.0	667.5	813.7	518.0
3rd "	618.0	653.2	722.5	451.6
4th "	757.3	...	637.8	...

Owing to the greatly reduced demand, imports in 1931 have been lower than in 1930, but represent a much greater proportion of the total demand for home consumption and export. Exports have fallen to a much greater extent than imports, and the average monthly excess of imports over exports throughout the first nine months of the year amounted to no less than 53,200 tons.

Improvement in Lancashire.—Since the end of the third week in September, writes our Manchester correspondent, a distinct change has come over all engaged in the cotton industry. Spinners, manufacturers, merchants and agents have encountered a definite trade revival and the business done has been on a large scale. It is held in some quarters

that the buying movement has been stimulated owing to external matters which may not last, but suffice it to say that numerous producers have obtained relief and are now in a much stronger position to hold out for better prices. So long as Lancashire has the advantage in exporting as a result of the depreciation in the value of the pound there is no reason to believe that the industry will meet with any setback. It must be realised, however, that, if the industry is to be placed on a sound basis, the efforts to reduce production costs will not have to be slackened in any way. Conditions at the moment are abnormal, and many things may happen in the near future, but the relief obtained has been very welcome and there is ground for believing that the larger demand for goods will spread. For a very long time traders have been under the handicap of falling prices, but there is now little likelihood of cheaper rates for raw cotton.

The Shipbuilding Returns.—As was to be expected, the shipbuilding returns, issued by Lloyd's Register for the quarter ended September 30th, are indicative of extreme depression in the British shipbuilding industry. The work in hand, which includes 122,000 tons of tankers, amounted at the end of September to only 417,000 tons, as compared with 556,000 tons at the end of June and 1,117,000 tons a year ago. A grain of comfort is perhaps to be derived from the fact that vessels commenced in British yards during the past quarter totalled 39,000 tons, as compared with 23,000 tons in the June quarter; but a minor upward fluctuation from such a low basis can scarcely be regarded as significant of real improvement. Abroad, there is also evidence of depression; and the tonnage under construction in foreign yards at the end of September, 1,114,000 tons, shows a decline of 157,000 tons as compared with three months ago. It is, however, significant that, comparing the aggregate figures of tonnage under construction in the United States, France, Italy, Sweden, Germany and Holland at the end of September with those of a year ago, the contraction amounts to only 17.5 per cent., as compared with a reduction of 62.5 per cent. in this country. It remains to be seen how far the depreciation of sterling will act in countering for the future the effects of subsidisation of shipbuilding in foreign countries which are still on the gold standard.

British Agriculture.—In view of the emphasis which would-be saviours of British agriculture tend to lay on cereal growing, an estimate of the value of agricultural and horticultural produce sold off farms in England and Wales, published recently by the Ministry of Agriculture and Fisheries, is of particular interest. The relative importance of the various branches of agriculture during recent years is clearly illustrated by the following table:—

	BRITISH AGRICULTURAL OUTPUT. (Million £.)				Average, 1926-30.	
	1925-26.	1927-28.	1928-29.	1929-30.	Value.	Proportion of Total %
LIVESTOCK AND LIVESTOCK PRODUCTS.						
Live stock	77.2	74.2	78.6	75.3	75.3	34
Milk and dairy produce	58.2	55.0	56.1	57.3	55.3	26
Poultry and eggs	15.3	15.9	16.9	18.7	16.4	8
Wool	2.7	3.85	2.8	1.8	2.9	1
Total	153.4	149.0	154.3	153.1	150.8	69
FARM CROPS.						
Corn	24.1	22.25	20.9	18.4	21.8	10
Potatoes	11.8	13.1	10.6	7.0	11.0	5
Sugar beet	1.2	4.0	3.6	5.3	3.5	2
Hops	3.4	2.9	2.5	1.5	2.8	1
Hay, straw and miscellaneous products	5.6	5.15	5.5	5.4	5.4	2
Total	46.1	47.7	43.1	37.6	44.5	20
FRUIT, VEGETABLES, FLOWERS, &c.						
Fruit	9.7	9.4	6.9	8.4	8.1	4
Vegetables	8.4	7.85	10.5	10.5	9.2	4
Flowers and honey and glasshouse produce	6.5	6.6	6.5	6.65	6.5	3
Total	24.6	23.7	23.9	25.5	23.7	11
All Products	224.1	220.6	221.4	216.2	219.0	100

Although the figures represent gross receipts by farmers,

thus cancelling variations in the quantity and value of feeding stuffs and fertilisers purchased, as well as changes in the wages bill and in the price realised per unit of output, it will be seen that the value of livestock and livestock products constitutes by far the most important branch of agriculture in England and Wales. Despite the large fall in wholesale prices, the gross receipts of farmers for these products in the past year were equal to those of five years ago. An encouraging feature is the growth in poultry farming, which balanced the decline in the receipts for meat, dairy produce and wool. It is true that cereal farming has been declining, but it should be remembered that the receipts for corn have formed only about 10 per cent. of the total receipts during the past five years. Although the relative importance of cereals is somewhat underestimated in the above table, since considerable quantities are used by farmers for feeding purposes, it is, nevertheless, a fact that wheat alone accounts for no more than about 5 per cent. of the total value of all our agricultural produce. Among farm crops, beet sugar alone shows an increase, which is, however, mainly ascribed to the subsidy to growers. Vegetable growing is showing welcome development, as may be seen by the increase in receipts since 1926. The total value of all products, at £216,200,000, shows a decline of only about 2.3 per cent. as compared with the year 1925-26.

Polish Exports to Russia.—Our Warsaw correspondent writes:—In the light of reports now coming from Upper Silesia concerning the export of iron and steel products (principally for construction purposes) to Soviet Russia, it appears that the immediate net gain to Poland from the fall of sterling must be considerably scaled down. Soviet bills on account of these exports are for the most part on a sterling basis, running on the average for about eighteen months. As the Upper Silesian foundries shipped more than 300,000 tons of products to Soviet Russia in 1930, and close on 200,000 tons during the first half of the present year, there is very clearly a great potential loss even if only a substantial portion of the bills is expressed in British currency. This business, of course, is highly competitive, the Upper Silesian mills having quoted very low prices in order to avoid the closing down of blast furnaces that would otherwise have been necessary. There was no margin of profit to cover such an unexpected contingency as the depreciation of the pound. Not all of the prospective loss, however, falls on Poland—perhaps not even 50 per cent. of it. The capacity of Polish banks and industrial enterprises to carry Soviet bills is strictly limited, even with generous Government support, so that a large part of the paper has been discounted abroad—principally in Germany, but some also in England. The Poles seem to feel, however, that no loss should be necessary, since the contracts implied sterling at gold parity. It is, accordingly, announced that Polish holders of these sterling bills have opened negotiations with the Soviet authorities in Warsaw in the hope of securing Soviet approval to payment of sterling at the gold rate.

Denmark's Credit Policy.—Our Copenhagen correspondent writes:—The suspension of the gold standard is still the all-engrossing event of Denmark's financial life. Things, however, have settled down now to some degree, and the past week has given rise to no serious dislocation. The fact that the credit policy of the banks has been made clear has been a contributive cause to the calmer tone. In a statement to the newspapers on Monday morning the Minister of Commerce declared:—

The credit policy now to be pursued must tend in the direction of, in a normal way, giving credit to all legitimate industries, but to finance no kind of speculative trade. Furthermore, the necessary credit, in cases which offer a possibility of increased employment, will certainly be given in a normal way. It is, of course, out of the question to restrict the development of the productive and legitimate industries—on the contrary.

In the same way, foreign exchange will be available for all purchase of raw and semi-manufactured materials, etc., necessary for production, while foreign money will, as before, be refused for purchase of luxuries.

The question was discussed on the same day among the banks, and the following statement was issued:—

At a meeting to-day between the National Bank and the principal banks, at which the Minister of Commerce was present, it was agreed to join the Minister's declaration of this morning to the press concerning the credit policy of the banks.

After this statement it was assumed that dealings in shares and bonds at the Copenhagen Stock Exchange would soon recommence. With regard to this matter, there has been a good deal of discussion, but the Exchange is not likely to open at least until the middle of this week.

U.S. Cars at Olympia.—Foreign makers who are usually responsible for a large number of stands at the Olympia Motor Show have suffered a severe setback as a result of the depreciation of sterling, writes a correspondent. Renting of exhibition space naturally took place some months ago, and the falling off in the number of foreign exhibitors from 45 to 33 (there are only four British exhibitors less) was due to the decline in the business done in this country during 1931 by importers of foreign cars. Statistical evidence of this is to be found in the trade returns for the first nine months of the year:—

	1930.	1931.
Cars and chassis ... No.	7,763	2,566
Trucks and chassis ... No.	1,411	1,278
Parts	Value £1,218,946	£1,857,960

And now, at a moment when nearly every British maker has announced further considerable price reductions, the foreigner is faced with the prospect of having to raise his prices and with considerable uncertainty in accepting business beyond the limits of his stocks. Among the American exhibitors, Chrysler is the only one to announce immediate increases. Rather than suffer from the unsettledness which lack of a well-defined price policy creates among trade and public alike, the company has purchased sufficient dollars to cover its purchases from the American factory to the end of the year, and has boldly raised prices from £26 on the cheapest De Soto model to £150 on the Chrysler Imperial Eights, the new prices to remain fixed to the close of the year. Chrysler are increasing the number of their purchases in this country, and some models are claimed to be 65 per cent. British. Should the present currency situation continue, the company might consider the erection of a factory in this country. General Motors, Ltd., who import the Buick, Cadillac and La Salle, state that there will be no increases in price on these models before the new year, when the new models are announced and when prices will naturally have to be reconsidered. The British distributors of Willys Knight, Marmon, Packard, Stutz, Auburn, Borden and Studebaker, all of which figure in the higher-priced market, have sufficient stocks to enable them to defer any decision with regard to price increases until a later date, when it is hoped that a clearer exchange situation may better enable them to formulate some policy for the future. However, price increases are admittedly inevitable should the present position endure. Studebaker Distributors, Ltd., state that until the £ appreciates in value they will be unable to import any more cars. Distributors of Auburn-Cord lines can accept non-stock business only on a dollar basis, which involves a gamble for the British purchaser. On the other hand, there is a feeling that, since America's need for her export markets is likely to become more and more pressing, the factories may assist their British distributors by supplying goods at little above cost price in order to retain goodwill. Such is the position of Hudson Essex cars, which, though almost wholly imported, trade in the low-price market with a saloon selling at £195; their business in this country must depend on their continuing to offer a cheap car.

Anglo-South American Bank.—The balance sheet of this bank, as at June 30, 1931, supplements the information given in the annual report, which was summarised in last week's *Economist*. The effect of the creation of the special reserve for the depreciation of capital employed abroad and other possible losses is seen in its true perspective, both against the issued capital and reserve fund of

the bank and also against its holdings of foreign securities, and shares in subsidiary and foreign banks:—

	June 30, 1929. £mn.	June 30, 1930. £mn.	June 30, 1931. £mn.
Issued capital	4.37	5.63	5.63
Reserve fund	3.36	3.38	1.13
Special depreciation reserve fund	...	...	2.27
Acceptances, &c.	8.33	9.40	12.49
Deposits, &c.	50.36	49.81	40.64
Cash	9.43	8.00	7.22
British Government securities	6.26	7.22	4.51
Foreign securities	2.92	2.15	1.89
Bills receivable	9.24	9.02	6.27
Holdings in subsidiary and foreign banks	5.26	5.25	4.86
Advances	28.38	31.41	27.13
Gross profits	2.20	2.13	1.92
Net profits	0.48	0.49	0.46
Dividend { amount	0.35	0.39	0.26
{ rate	10%*	10%*	6%*

* Less tax.

In considering these accounts, it should be appreciated that they relate to a date preceding the recent intensification of the world crisis, with its serious results in both England and South America. In determining their policy, however, the directors clearly had subsequent events in mind, for the report is dated October 6, 1931, and its reference to the instability of exchanges shows clearly that in creating the special reserve and in reducing the dividend from 10 to 6 per cent. the directors must have been guided by the present uncertain outlook. Superficially, the balance sheet reveals a definite shrinkage in the bank's resources, but only a relatively moderate decrease in profits, and the last is by itself insufficient to require so heavy a deduction in dividends. This, again, suggests that the directors have been influenced less by current facts than by the uncertain outlook, which besets not only banking but all classes of business.

Licences and General Insurance.—This company transacts all classes of insurance business excepting life, and was founded forty years ago with the object of specialising in an unusual class of insurance, namely, indemnity to licensees in the event of the non-renewal or forfeiture of their licences. Until shortly before the war the company confined itself entirely to this class of business, but since that time has developed an increasing connection in fire and accident business. During recent years the company has experienced an extremely lean period, but it is very satisfactory to observe that the 1930 report shows a considerable improvement, which has been achieved wholly in the fire department, where a loss of £30,000 has been turned into a small profit. Formerly the account included a considerable proportion of reinsurance treaty business, but this has been largely reduced, with the result that the claims ratio and commission ratio have come down to more moderate levels. The detailed figures of the last two years are as follows:—

	1929.		1930.	
	Amount of Profit.	Percentage of Premiums.	Amount of Profit.	Percentage of Premiums.
Fire	£ 30,000	22.4	£ 688	0.5
Accident	235	1.6	1,074	7.2
Employers' Liability	179	0.7	535	1.7
Licences and General	8,188	22.5	3,606	1.1
Marine	...	...	135	0.6
Profits from sales of securities	...	...	17,834	...
Less items debited to profit and loss account	21,398	...	22,532	...
Total net trading surplus	28,750	...	14,935	...
	...	...	7,597	...

The dividend has been maintained at 20 per cent. and costs £15,913, compared with interest earnings of £21,271. The net result of the year's operations has increased the surplus funds by the sum of £12,955, whereas in 1929 they were depleted in the aggregate by

£47,187. The company's total premium income amounts to £530,000, against which departmental and other reserves, apart from capital, amount to £375,000. At their current level of about 40s. the shares yield exactly 5 per cent., a yield which is substantially less than that afforded by the average insurance share these days.

Banking Pool — Gold Movements — Business — Railway Questions.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 7.

PRESIDENT HOOVER's proposal for a banking pool to come to the assistance of banks with frozen assets, his suggestions for somewhat similar aid to the "distressed" real estate situation, and his forecasts of favourable developments with regard to foreign debts have absorbed the country's attention. Wall Street's bankers started to work immediately on setting in motion the machinery for carrying out the President's plan. The mechanism will be similar to the emergency measures resorted to in 1914, just before the establishment of the Federal Reserve system. This was the Aldrich-Vreeland emergency currency plan, and it provided for the use of Clearing House certificates to make good the money shortage existing at that time.

Neither the Federal Treasury nor the Federal Reserve Banks will be called upon to supply any cash or credit under the present proposal. The banks themselves will subscribe to a central institution, which will have a nominal capital and the power to issue at least \$500 millions of debentures. These debentures will be sold to banks subscribing to the institution, and the money from the sale will then be available to banks applying for assistance. Local clearing house associations or their equivalent will be set up in the various cities for the purpose of passing on collateral of banks asking for help.

It is not to be assumed that all banks in danger will be helped, or that bank failures will cease. Banks which are solvent and have sound assets, but assets which can only be realised at a great sacrifice, will have help. President Hoover and his advisers realise that the most serious trouble in this country is lack of confidence, particularly in the banks, although as a whole the banks are sound and the Federal Reserve system was never in a stronger position. A mild hysteria has been attacking otherwise sane bank depositors, who have drawn out deposits to such an extent that cash in circulation has risen three quarters of a billion in a year, and this has forced the banks to liquidate investments. This has led to unfortunate repercussions on the securities markets, as well as to the closing of many banks.

The scheme was hailed with enthusiasm from the start as a confidence restorative, and the quick rebound of both the share and the bond markets reflected the favourable impression. There are, of course, certain doubts raised about the scheme, but no responsible person is willing to say much for publication in condemnation of it at this time, realising as all do that it will be easier to correct defects later than to allow things to continue to drift. Such criticism as might later be directed against the plan has to do with the proposal to widen the scope of the Federal Reserve system's discounting power. The banking organisation to provide temporary aid is meant principally as a stop gap. Later the Reserve Banks, if granted the power by Congress, might be expected to take over the debentures referred to above.

As it is, the Federal Reserve Banks may buy from members U.S. Government bonds, properly endorsed bankers' bills, and commercial paper of approved type. They may not discount ordinary stocks and bonds or real estate mortgages. Those advocating the change in the

Federal Reserve Act to overcome this recognise the danger of indiscriminate credit expansion, but believe that in emergencies such as now exist some sort of "Lombard loans," ought to be made by the Reserve system. Anyhow, the Reserve system is now in the position of having a great reservoir of credit, which a great many banks needing temporary assistance are unable to tap because they have not the necessary eligible paper. Much of the banking difficulties come, of course, from mismanagement, but not all; and it is the deserving institutions which are to be helped.

Meanwhile it is also planned to form credit institutions to relieve the congestion in real estate and provide more capital for home building. President Hoover's third plan has to do with the foreign situation, which, he realises, dovetails with the domestic position. It is believed likely that Premier Laval will be told that if France and the other ex-allies can see their way to reducing reparations, and perhaps going further along the road to armament reduction, a request for a downward revision of debts owed this country could be presented in the justifiable hope of favourable consideration by the Government. In informed quarters here there is no expectation of a Washington proposal for further extension of the moratorium in advance of more comprehensive plans.

Gold movements continue on a large scale. More than \$75 millions is going to France this week, and "ear-markings" at the Federal Reserve continue to rise. They have totalled about \$300 millions since the middle of September, and exports exceed \$150 millions. This week about \$35 millions is due from Japan and \$10 millions from Argentina, but the net import gain of \$400 millions

from January 1 to August 31 already has been converted into a net export. This is causing no alarm, although, in spite of Federal Reserve purchase of bills to offset it, combined with currency circulation increase, it is giving the short-term credit market a slightly firmer tone.

New financing for September was only slightly larger than the \$126 millions for August, the month being "sweetened" by large Federal Intermediate Credit Bank, State of New Jersey, State of New York, and Canadian National Railway bonds. The latter, incidentally, were more than 50 per cent. subscribed by Canadians and were adversely affected by the heavy discount on the Canadian dollar.

Trade activity is making no noticeable improvement outside the retail field, and the recurrence of unseasonably warm weather is holding even retail business back. Bank insolvencies are running fairly large, but other commercial failures are on the decline. Steel ingot output last month dropped 10 per cent. as compared with August, and averaged only 28 per cent. of capacity. The present rate is estimated at 29 per cent. Pig-iron production declined 6 per cent. since August, but the rate of fall has grown less. Prices are rather unsteady, and it is not yet clear that the mills will be able to retain the recent wage cuts instead of lowering prices. Railroad traffic and electrical output are gradually falling. In the eight months the railroads earned only 2.14 per cent. on their investment.

A fillip was given to railroad shares by the announcement of final agreement on disputed points holding up the Eastern trunk line consolidations. The roads have presented an application to the Interstate Commerce Commission to approve in principle the proposed consolidation

of all Eastern and South-Eastern mileage into four main systems. If approval be granted, it will, of course, take a considerable period to round out the consolidations by acquisition of minority holdings; but the fact that, after eight years of bickering, the principal roads involved were able to agree on a plan made a good impression. The case for higher freight rates has also been completed, and it is hoped that the Interstate Commerce Commission will make a decision shortly. Some increase is expected, but scarcely the 15 per cent. requested. What the roads would gain from authority to raise rates to any great extent is problematical, in view of the growing competition from motor trucks; but the sentimental effect of such permission would be of some help.

FRANCE.

M. Laval's Visit — Production — Prices — Unemployment.

(FROM OUR CORRESPONDENT.)

PARIS, October 14.

THE near approach of the date of M. Pierre Laval's departure for America has made the French Premier's visit to Washington the outstanding topic of the day. So far, the leader of the Government has been absolutely reticent as to the nature of the programme to be discussed at Washington, and the most widely differing intentions have been attributed to the pending conferences. The bulk of the French Press inclines to the view that the conversations will be limited to international financial problems, including the German situation, the "redistribution of gold," and international credits. One Opposition journal to-day insists that disarmament will be the "essential theme" of the conference, but this theory meets with little support here.

This speculation has not been set at rest by the official announcement of the list of experts who will accompany the Premier to Washington. These will include M. Bizot, Assistant Director of the Mouvement des Fonds at the Treasury; M. Rueff, Financial Attaché at the French Embassy in London; Professor Basdevant, juriconsult at the Quai d'Orsay; M. Albert Buisson, Presiding Judge of the Seine Tribunal de Commerce; M. Louis Aubert, of the Superior Council for National Defence; and probably Professor Charles Rist, formerly Deputy-Governor of the Bank of France. MM. Farnier and Lacour-Gayet, of the Bank of France, have already left for New York, where it is understood they will have important conversations with the American financial leaders in preparation for M. Laval's visit.

Industrial production figures for August, which were issued this week, show further slight declines in most of the nine great industries covered, although both metallurgy and extractive industries record fractional improvement on the month. The general index figure (1913=100) is returned as 121, as compared with 123 in July, 139 in August last year, and means of 140 for 1930 (the record high year), 139 in 1929 and 127 in 1928 (base: 100 in 1913). Iron and steel production figures for August (revised figures for which are now available) remained practically unchanged on the month, the output of pig iron having been some 2,000 tons larger, while the crude-steel total was about 5,000 tons down. Compared with August, 1930, steel production was 17 per cent. smaller, and that of iron nearly 20 per cent. lower. Pig iron totalled 682,000 tons for the month, against 845,000 tons in August, 1930. Steel output was 645,000 tons, against 775,000 tons. Provisional figures for September indicate that the output of coal from the French mines was 4,310,000 tons, or 120,000 tons more than in August, 17,000 tons more than in July, but 311,000 tons less than in August, 1930. The mines in the Saar district contributed a further 880,000 tons, against 921,000 tons in August and 1,053,000 tons in August, 1930. Iron-ore output in September was 3,165,000 tons, against 3,089,000 tons in the previous month, and 4,060,000 tons in August last year.

The French steel plants, like those in Belgium and Luxemburg, are reported to be continuing to operate up to 75 per cent. of capacity (as compared with 30 per cent. in the United States). Iron exports during the first eight months of the year totalled 309,370 tons, against 345,983 tons during the corresponding period of 1930, while imports were 56,512 tons, against 98,671 tons. Steel exports were 1,598,974 tons, against 1,749,575 tons, and imports 59,917 tons, against 86,776 tons. The drop in steel production from 6,380,000 tons to 5,453,000 tons was chiefly due to the weakness of the home market.

The Statistique Générale returns the unweighted general index figure representing wholesale prices (45 products) at the end of September as 437 (July, 1914 = 100), as compared with 455 in August, 535 in September last year, and means of 543, 623 and 634 in 1930, 1929 and 1928 respectively. The figure representing wholesale prices of French products (29) is returned as 504 (against 521 at the end of August and 595 in September last year), while that for imported products (16) is given as 316 (against 335 in August and 428 a year ago). The figure for foodstuffs dropped during the month from 475 to 454 (against 538 a year ago), and that for raw materials from 414 to 398 (against 534 in September, 1930). The weighted wholesale price figure, covering 126 commodities, is returned as 473 at the end of September (1913 = 100), against 488 end of August and 566 end of September, 1930. The weighted wholesale price figure for Paris, covering 13 common household articles (July, 1914 = 100) is returned for September as 559, against 583 for August and 634 a year ago, and the weighted retail price figure for the same articles at the end of September as 588, against 595 at the end of August, and a mean of 614 for 1930.

Railway receipts have latterly been steadily rising, the weekly averages having increased from 270,000,000 francs in May to 289,000,000 francs in August, but this has been due chiefly to holiday traffic. The average in August last year was 317,000,000 francs, the average for that year having been 296,000,000 francs, against 299,000,000 francs in 1929 and 284,000,000 francs in 1928. The average number of trucks loaded daily in August was 51,720, against 51,020 in July, 56,720 in August, 1930, and daily means of 65,400 in 1930, 65,100 in 1929, and 63,300 in 1928. The index figure representing railway traffic in August is returned as 120 (1913 = 100), against 130 in August, 1930, and means of 128, 127 and 122 for 1930, 1929 and 1928 respectively.

Unemployment is apparently again slightly on the increase. The total number in receipt of official benefit throughout the country at the end of September was 38,524, as compared with 35,916 in July and 364 in August last year. M. Léon Blum, the Socialist leader, has insisted that there are now 650,000 totally unemployed workers and 2,500,000 partially unemployed. The *Bulletin de la Société d'Etudes et d'Informations Economiques* asserts, however, that these figures are exaggerated. The *Bulletin* points out that the only real sources of information on this subject are the unemployment funds and the monthly inquiry of the Ministry for Labour covering firms employing over 100 workers, and agrees that the number in receipt of the "dole" is undoubtedly much below the real number of totally unemployed and thus affords no reliable indications. In criticising M. Blum's figures, the *Bulletin* argues that the Ministry for Labour inquiry shows that the firms covered by it employed 2,814,752 wage-earners in August, 1930, and only 2,596,752 in August this year, or a difference of 8.4 per cent. The Socialist leader, the *Bulletin* observes, appears to have assumed that the whole of the country's wage-earners; that these total 7,500,000 units, which is a substantially larger total than the last census figures revealed; and that the whole of the workers displaced among firms employing over 100 hands have failed to secure work elsewhere. As to partial unemployment, the *Bulletin* frankly admits that 33 per cent. of the French wage-earners are working short time,

and that therefore the total number of part-time workers may be considered as at least 2,000,000, although it must not be overlooked that a large proportion of these are still working over 40 hours a week.

GERMANY.

New Cabinet — Dr. Brüning's Chances — Dr. Schacht and the Reichsbank — New Decrees.

(FROM OUR CORRESPONDENT.)

BERLIN, October 14.

WHEN Dr. Brüning decided to alter the composition of his Cabinet it was at first assumed that he would merely induce some of his colleagues to resign, and would name a few new Ministers. But he chose an unusual course, and one not without danger, in submitting to President von Hindenburg the resignation of the entire Cabinet and receiving from him the immediate commission to form a new administration. The Chancellor's resignation, which he had intended to be merely a formality, appeared for a time likely to result in a real crisis because some of the men whom he had in view refused his invitation to enter the Cabinet. Without doubt the President, and the Chancellor as well, desired to weaken the aggressive Opposition attitude of the parties rightward from the Centre by including in the Government some men representing "Business." But the only new man whom Dr. Brüning has been able to win is Professor Warmbold, formerly a member of the board of directors of Farbenindustrie, who also enjoys good relations with agriculture. He received the portfolio of Minister of Economics. Dr. Joel, Secretary of State in the Ministry of Justice, was made Minister of Justice, and Herr Groener, the Minister of Defence, will be at the head of the Ministry of the Interior. Dr. Brüning himself becomes titular Foreign Minister, which means that this Ministry will be conducted in fact by the Secretary of State, von Bülow.

In entrusting the Minister of Defence with the Ministry of the Interior, formerly conducted by Dr. Wirth, Dr. Brüning has made, politically, his most important change. The Minister of the Interior has, to be sure, no direct executive powers, since the execution of the Reich's laws concerning the matters falling under his office—above all, police legislation—is left to the various State Governments. But he must protect the rights of the Reich, keep the actions of the States within the bounds of the Constitution, and assure uniform execution of the laws. That the Department of the Reich concerned with police matters should be combined with the command of the Reichswehr is evidence of determination to protect the Reich against every extremist element which might attempt to overthrow the Government by violent means. It means especially a challenge to the extremists of the Right; for these hate Herr Groener more than any other man in the Cabinet. And, finally, the extension of the powers of Herr Groener, between whom and President Hindenburg strong bonds have existed since the last days of the war and the first months of the post-war period, will assure to the Cabinet President von Hindenburg's confidence in increased measure.

Thus, the very composition of the Cabinet shows that the Chancellor's experiences in building it have not deprived him of the courage to take up the gage of battle boldly against his opponents of the extreme Right. Here he can, as before, count on the support of the Socialists, who, however, have lost seven of their 143 Deputies to the newly organised Socialist Labour Party—a loss which, in view of the slender Government majority in the Reichstag, is not unimportant. The Chancellor is also sure of the support of the Centre, his own party, and of the German State Party. But the majority of the German People's Party has declared itself against him. This party, which represents especially the interests of the industrialists, reproaches the Chancellor with having failed to make possible a sufficient reduction of industrial wages or of social burdens, despite the fact that the *per capita* unemployment payments dropped from an average of 86

marks per month in 1929 and from a monthly average of 74 marks for the fiscal year of 1930 to 58 marks in September, 1931. However, about a third of the deputies of this party will probably vote for Dr. Brüning, and a definitive split in the party is not unlikely. The other groups of the moderate Right will also be divided in the voting. At the time of writing a scant victory for Dr. Brüning on the "no confidence" motion looks not improbable.

The Government's prospects have been improved by the "declaration of war" made at the conference of the "National Opposition" in Bad Harzburg. The united National Socialists, German Nationals, Stahlhelm members and leaders of the Landbund assembled there decided to move in the Reichstag a vote of lack of confidence, and also to demand the rescinding of all emergency decrees, the dissolution of the Reichstag, and new elections on November 8. In addition—a pure agitators' step—they demand the cessation of the Reich's grants-in-aid made to help cover the expenses of police administration in Prussia, which is ruled by a Cabinet of the Left. In the joint declaration the "organisations making up the national opposition" proclaim that "in future cases of unrest they will defend the life and property, house, farm or place of labour of those who, with us, stand openly on the side of the nation, but they refuse to protect with their blood the present Government and the system that to-day is dominant."

This denunciation of solidarity with citizens of opposing views or with the State itself has brought a revulsion of feeling to many waverers. The demand for new elections on November 8th—obviously a deliberate gesture intended to mark the close of the thirteen-year period since November, 1918—has without doubt frightened the small parties of the Middle Right, whose chances in an election would not be rosy. Many deputies of these groups, who would otherwise have voted with the Opposition, will perhaps stand by the Government bloc for this reason.

At the Harzburg conference Dr. Schacht, former President of the Reichsbank, also spoke, to the accompaniment of especially loud applause from the National Socialists. The fact that Dr. Schacht sharply attacked his successor created a sensation. But from an objective viewpoint what he had to say was anything but sensational. That among the 1,400 millions of marks in gold and devisen shown by the Reichsbank report there is contained also the 100 million dollar credit which the bank received from the other banks of issue, and that the sum includes, further, 50 million dollars from a credit from the Gold Discount Bank, has been made known to the public repeatedly. Why should not the Reichsbank include this credit in calculating its currency cover? That was the aim with which the credit was granted. Every bank of issue in other countries does the same thing. And, finally, when a private debtor abroad receives a short-term credit and hands over the devisen thus received to a bank of issue, the bank will, as a matter of course, count these devisen as part of its gold cover, despite the fact that they can be withdrawn after a short period. The situation is in principle the same when the bank itself is the debtor. The extension, just made, of the 100 million dollar credit has shown that a bank of issue can count with greater certainty on support from other central banks abroad than can a debtor as a rule on the sense and goodwill of his creditor.

"For fear that the public might become nervous," said Dr. Schacht, "it is not informed that the Reichsbank's portfolio consists now only in fractional part of discounted bills that accord with its regulations." The expression "fractional part" is an exaggeration. But that the Reichsbank has had to accept "irregular" paper in order to put the Danat Bank, the Dresdner Bank and the savings banks on their feet, has been discussed at column length in all German newspapers. The technical possibilities and the requisite private business security for this procedure were both created by the organising of the Bank of Acceptance. The business security is achieved by limiting the extent of these discounts, which the Reichsbank is watching carefully. It has thus brought it about that its note circulation of

September 30, 1931, was not higher than on September 30, 1930, despite the fact that currency circulates much more slowly. It can also claim that the fall of the pound sterling has not destroyed the equilibrium of the German currency.

All this Dr. Schacht termed a sign of "lack of uprightness" in German politics, and he declared along the same line that Germany's indebtedness abroad, according to recent statistics, is greater than was set forth in the Basle Report, and that this has not been made known to the public. It is true that the returns which, under the emergency decree, debtors have been compelled to submit have shown higher figures than the Basle experts were able to establish. But the dependability of these reports is very dubious. The Reichsbank would have subjected itself to justified reproaches if it had given publicity to these still absolutely unverifiable figures.

The new Brüning Government will submit to the Reichstag at once a "third emergency decree of the President for the security of economy and finance and for combating political excesses." The first and second emergency decrees "for the security of economy and finance" were issued in June of this year and December, 1930. The new decree, which came into effect on October 7, contains, like its predecessors, a great sheaf of the most varied legislative measures which Parliament would have dealt with in normal times. The Reich's contribution for the rehabilitation of the municipalities is increased from 60 to 230 million marks. The conversion of short-term municipal credits into long-term credits will be carried through without imposing any compulsion on the creditors. These will, however, have a strong incentive to consent to this conversion because of the fact that a special Department to be organised by the Ministry of Finance for the conversions will be able to convert the short-term into long-term credits guaranteed by the Reich. In addition, there will be created for each State a conversion fund which will be augmented by 12 per cent. of the receipts from the taxes on house rental values.

The altering of the highly complicated provisions governing this tax is one of the most important provisions of the new decree. Heretofore a third of the sum received from this source had to be used for erecting new dwelling-houses. The Governments of the various States are now authorised to do away with this restriction. The total proceeds of this tax—estimated at 1,300 million marks for the current year—are reduced by 20 per cent., a step which, in part, has become necessary to give house owners compensation for the increased revaluation interest which they will have to pay from January 1st for their old mortgages.

For the rest, the new emergency decree brings sharp pressure on all public undertakings to reduce their expenditures. In future the State Governments can dictate to the municipalities and other self-governing bodies any reduction of expenditure regarded as necessary and useful. The erection of new administrative buildings is forbidden. The pensions of officials are reduced from a maximum of 80 per cent. of the salary to a maximum of 75 per cent. In order to ease the burden on economic life, employers are given the right to reduce all "disproportionately high" salaries in so far as these exceed 15,000 marks a year. Only in the case of unemployment insurance and the pensions of war invalids does the new decree bring some mollification of the provisions of the June decree. It contains more drastic provisions for the investing of the funds of savings banks, a number of paragraphs aimed to further the creating of rural settlements, sharp provisions for the protection of railway traffic against private autobus competition, the compulsion to use potato flour in all bakeries using wheat flour (this to improve the market for Germany's great production of potatoes), and a great number of provisions dealing with less important problems.

Of great political importance are the provisions granting greater powers to the police for combating political excesses. The circulating of illegal printed matter and the evading of prohibitions by newspapers are made much more difficult, the film censorship is made more drastic, and it is made easier to detain persons arrested for offences

committed with weapons. The police have the right to take action against owners of buildings or keepers of public-houses who grant the use of their rooms for "activities dangerous to the State," and especially for the sheltering of violent groups. The Berlin police, acting under this authority, have already closed a number of "barracks" of the National Socialist storm troops.

AUSTRIA.

Exchange Restrictions — The Budget — Bankruptcies — Municipal Finances.

(FROM OUR CORRESPONDENT.)

VIENNA, October 12.

THE Austrian National Bank has finally been compelled to press for the introduction of a strict regulation of foreign currency business, and the Financial Administration has had the legal measures passed at express speed through the National Council. It was undoubtedly a mistake to delay so long with these measures and not to prevent foreign means of payment from leaving the country. There has developed a "black" exchange at rates considerably higher than those officially quoted. It remains to be seen whether the severe punishments threatened will have the effect of inducing holders of hoards of foreign currency to deliver them to the National Bank. This may result to some extent, but the principal effect of the restrictions will be the limitation of imports. Occasionally the National Bank has in recent days accorded only 2 per cent. of importers' demands and rejected the rest of the applications. This is the most effectual means of bringing down imports.

In the second "standstill" agreement, which applied not to the foreign obligations of the Credit-Anstalt but to those of the other banks and firms, it was provided that no check should be placed upon free dealings in foreign currency as long as the agreement remained valid. In the past few weeks, however, the international situation has changed so much that the National Bank was obliged to inform the members of the "standstill" syndicate that it was compelled to insist, in agreement with the Financial Administration upon the introduction of foreign currency regulations. This, however, does not prevent due discharge of obligations, i.e., the making of the monthly payments.

It was also necessary to put a stop to current rumour and to explain to the public that the 190 millions of foreign means of payment lent by the Bank of England and the Bank of International Settlements is already calculated in the foreign currency holdings. It would therefore be wrong to regard them as a reserve whose release would mean a considerable increase of the cover. In the last report of the Bank, gold holdings amounted to 189.5 million schillings, foreign notes and valuta which could be counted upon to 114.7 millions, and other foreign currency to 87.4 millions. It will therefore be seen that the 190 million schillings plays a very important part, and its repayment out of the holdings of the National Bank would mean a most severe shock. For this reason it is also expected that in one form or another the prolongation of the 190 million schillings is bound to take place.

The preliminary work on the new Budget is also now in progress. One of the most important questions, but one which it will be most difficult to put through Parliament, will be the reduction of the subsidy to farmers. In the Budget for 1931 expenditure amounted to 2,137 million schillings, of which 793 millions covered the salary list and 1,344 millions costs of materials, so that nearly 64 per cent. went on materials. No less than 125 millions of subsidies were included in this amount, namely, for cultivation of sugar beet 34.4, for agriculture and forestry 5.8, for the emergency gift to agriculture and forestry 68.0, for aviation 2.3, for the Danubian Steamship Company 2.5, and for the Post Office Savings Bank 5.5 million schillings. Those are only a few of the subsidies which are admitted officially. Unofficially,

a further 100 million schillings at least has been granted, and it will be necessary to effect incisive savings. Now that a drastic curtailment of the salaries of civil servants has been effected, a start should be made on the reform of the whole administration. This will be quite possible, as there are a number of superfluous offices, and the Federal Government and the individual States often rule against one another. But these measures, too, will of necessity increase unemployment, and the unemployed already number over 800,000.

Up to the present the economic crisis has been more noticeable in the provinces than in Vienna, as most of the subsidiary enterprises of the Credit-Anstalt, in which short time has been introduced and output diminished, lie away from Vienna. In conjunction with the new foreign currency regulations, some optimists look forward to recovery of domestic industries and of business life. In any case, it is a fact that consumption of Austrian coal, the quality of which does not come up to that of Czechoslovakian and Polish coal, will probably increase. Many of the people, too, who will now be forced to hand over their holdings of foreign means of payment will not deposit all the proceeds in the banks. It is likely that they will buy clothes, food and furniture. On several days motor cars, furs and furniture have been in demand.

There are no signs of inflation, as any tendency in this direction is counterbalanced by the circumstance that the National Bank is issuing no more notes, the salaries of all regular employees are falling, and taxes are being collected with rigour. It is urgently necessary that depositors at the savings banks should be reassured, so that they may prefer to leave their money in the banks rather than keep it at home. On several days last week there were important withdrawals. Official compositions with creditors and bankruptcies also are on the increase. The severe shocks to which they are exposed are crippling even old firms, who are liquidating voluntarily while they are still able. Several respectable houses in Vienna have already resolved to take this step.

The Municipality of Vienna is also feeling the effect of the times upon its revenue from local rates and taxes. On the year 1931 there is a deficit of 94.4 million schillings, which is to be covered out of cash reserves to an extent of 48.3 millions. It was presumed that the final deficit would not exceed this sum. Owing, however, to the revision of the apportionment of taxes between the Federal Government and the individual States, which proved to be necessary, the Municipality of Vienna suffered a loss of 28.8 million schillings. Further, the municipal taxes, especially as they were largely based upon consumption, entertainments and luxuries, have receded, whereas expenditure has been greatly increased through the spread of unemployment. For these reasons the municipality is compelled to effect big savings, and for the year 1932 estimated expenditure has been cut down by 19.3 per cent. House-building, of which the city was so proud, is also being affected by the cut.

HUNGARY.

League Finance Committee — Problem of the Pengő.

(FROM OUR CORRESPONDENT.)

THE Financial Committee of the League of Nations has been convened to a special meeting, which is being held this week in Budapest, to deal with the Hungarian financial situation, which requires urgent handling. The summoning of this meeting did not come as a surprise; its necessity was foreshadowed in the report of the Committee to the Council of the League in Geneva on September 19th. The Committee expressed their desire to elaborate with the Hungarian Government a definite plan at an early date for the amelioration of the financial situa-

tion in Hungary and publish a report on it. The inquiry which is being conducted at present in Budapest at the request of the Hungarian Government has apparently convinced the League experts that, in order to preserve the basic financial structure of the country, they can lose no time in submitting their report to the Financial Committee. It is very fortunate that it was possible to arrange for the Committee to meet in Budapest, because much can be gained by direct contact on the spot with the Hungarian Government, which is anxious to do everything in its power to safeguard the stability of the currency and to balance the budget. In order to achieve this, however, it will be necessary to resort to further drastic measures which will involve heavy sacrifices for Hungarians as well as for their creditors abroad.

The most pressing problem of Hungary is to preserve the stability of her currency, which was stabilised on the gold standard when the League of Nations Reconstruction scheme began to operate in 1924, and has been maintained ever since. Readers of the *Economist* are familiar with the difficulties which hit the Central European borrowing countries in general, and Hungary in particular, when the withdrawals of foreign funds began in May, 1931, after the collapse of the Austrian Credit-Anstalt. The Hungarian Government, in order to maintain the stability of the pengő, restricted free dealings in foreign exchanges as early as July, 1931, and declared that banking deposits, debts, claims, etc., are in gold pengő, thus checking speculation which might lead to the collapse of the currency. The gold pengő experiment has been successful so far, and confidence in the banks has been restored. This is demonstrated by the fact that note circulation, after having reached its peak at 503 million pengő in August, decreased to 350-380 million pengő in September and October, which is quite normal. Unfortunately, the statutory gold and exchange cover of the National Bank, in the absence of further foreign funds and a merchandise export surplus, has decreased to 113.8 million pengő, which is a very low figure, and the bank cannot afford to lose much more gold without seriously endangering the stability of the currency more or less maintained so far. In order to safeguard the stability of the currency and to maintain confidence in the gold pengő it is absolutely essential that the National Bank should preserve a gold reserve of 100 million pengő. The fall of the gold cover of the bank below 100 million pengő might destroy confidence in the gold pengő, which might lead to a currency collapse in spite of the best intention of the Government to avoid inflation.

An authoritative report by the Financial Committee on the financial situation of Hungary will be very opportune at this juncture. It is impossible to forecast the future of Hungary, because her future depends largely on factors which are beyond her immediate control. While the restoration of budgetary equilibrium and the maintenance of the stability of the pengő would serve as a solid basis for the future, the economic welfare of the country chiefly depends on tariff policy and on world prices. At present both tariff policy and world prices are the greatest hindrances to Hungary's economic recovery. The Financial Committee of the League when dealing with the fortunes of Austria and Hungary—two countries with which the League has been closely connected in the past, and towards which the League has moral and, in certain circumstances, legal obligations—will realise that financial aid alone will not suffice to bring about economic order in the Danube Valley. The fact that 12 years after the end of the Great War trade in the Successor States of the Austro-Hungarian Monarchy is more dislocated by currency and tariff restrictions than ever before, alone suffices to explain what is wrong in this part of the world.

It is to be hoped that the lessons of the crisis will be learnt, and it will be realised that currency and budgetary restoration can be successful only when it is established on a sound economic basis. And yet we witness, in the modern epoch of radio, speed and efficiency, Hungary compelled to barter with Czechoslovakia to exchange cattle for timber and similar bargaining taking place with

more or less success among the seven other Successor States which constituted one economic unit up to 1918. If the League of Nations will not take the lead to bring about normal trade and credit conditions in Central and South-Eastern Europe, the financial restoration will not be a lasting one. It is futile to attempt to gauge the capacity of the Danubian countries either to borrow or to pay, so long as the economic forces of the countries concerned cannot be developed on natural lines.

The financial difficulties of Hungary may be overcome if foreign creditors will wholeheartedly co-operate with the Hungarian Government under the auspices of the League of Nations. It is as yet too early to estimate when the moratorium which is impending on all foreign obligation can be lifted. Much depends on the big creditor nations, whose action through the League of Nations and the B.I.S. may greatly improve the welfare of Hungary as well as the chances of her foreign creditors.

ITALY.

Gold Reserves — Unemployment — Budget Figures.

(FROM OUR CORRESPONDENT.)

TURIN, October 11.

"HAPPY the peoples who have no history"—this may be the motto of the week. There is no development in the situation of the lira. The gold reserve of the Bank of Italy increased from 5,373 million lire at the end of August to 5,445 millions at the end of September, while the gold exchange reserves decreased, between the same dates, from 3,465 to 2,938 millions. The total reserves thus decreased from 8,838 to 8,383 million lire, a decrease of 455 millions. This is the price paid for the defence of the lira, not a formidable loss during such a critical period, and one partly counterbalanced by a decrease from 14,645 to 14,474 million lire in the total notes circulation.

Apparently the first shock of the British gold suspension has spent its force here, but the newspapers give vent to some anxiety about the next one, possibly coming from a German collapse. It may be, however, that Italian economy is too secluded, too small-agriculturalist, to be much concerned with international monetary portents. Even the higher figures of unemployment (about 650,000 at the beginning of the autumn, against 400,000 last year) do not arouse as much concern as they would in a purely industrial country, because the unemployed here receive aid from relatives on the land, thus rendering sufficient the present unemployment subsidy of 7.75 lire per day, payable for a maximum of 120 days.

The State Budget has not been obliged as yet to subsidise the Unemployment Fund, save indirectly by way of public works. Extraordinary appropriations to the Public Works Department have increased by 655.3 million lire to 1,316.5 millions since the beginning of the financial year; and this has been officially announced to be 520.9 million lire at the end of the second (August) month of the financial year. Should the deficit go on increasing at this rate it may well become heavy at the end of the year.

It should, however, always be remembered that these Budget deficits are paper deficits. It may be that in some future time the Exchequer will be obliged to pay, on account of the July-August, 1921, Budget, 520.9 millions more than the taxes received. In the meantime, so far as hard cash goes, the Exchequer has in these same two months received 2,631 millions and disbursed 2,172.7 million lire, so that the cash in the till has been increased by 458.3 millions. In fact, as Signor Mazzucchelli has pointed out in his monthly review in the *Rivista Bancaria*, the cash position of the Italian Exchequer is strong. Things may change, but for the moment there is plenty of cash funds to bear the brunt of the present monetary turmoil.

HOLLAND.

Gold Exchange Policy — M. Trip's Appointment — Plea for Import Restrictions.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, October 14.

DURING the past week the Netherlands Bank has been responsible for providing some big surprises. In the first place, the weekly statement showed that the present crisis had entailed some far-reaching adjustments in the division of assets. Mr Vissering consistently followed the "gold exchange" policy. By means of maintaining an extensive portfolio of foreign bills, as well as balances abroad, the Netherlands Bank was able to operate actively on the open-exchange market wherever it was necessary in order to keep the rate of exchange within the gold points, thereby reducing the shipment of gold. Through the drop in the value of sterling, however, confidence in the stability of foreign currencies has been badly shaken, and the Netherlands Bank has deemed it advisable to abandon its "gold exchange" policy and to revert to the "gold" policy instead. As a result the Netherlands Bank has converted its dollar bills and balances into gold. The holdings of foreign bills accordingly show a drop of 116.8 million guilders, or more than 50 per cent.; in addition, balances abroad to a total of over 11 million guilders were converted into gold. The Netherlands Bank's stock of gold increased by about 90 million guilders, and, in consequence, the gold covering for the bank-note circulation increased from 67.9 per cent. to 74 per cent. Gold to a value of 30 million guilders was shipped abroad from the Netherlands. The extent of the changes in these various items will be seen from the bank's return, which is printed on a later page of this issue.

The efflux of gold was principally to France. The rate of the French franc has, in fact, dropped to below the gold export point, but this does not necessarily mean that there will be no further movements of gold to France, for it may be assumed that the Banque de France will adopt the same attitude as the Netherlands Bank towards the "gold exchange" policy. Holdings of sterling, the bank states, have remained at the same level. It may thus be assumed that the remaining foreign bills held, amounting to some 153 million guilders, are principally sterling bills, on which, according to Mr Vissering's recent declaration, no great losses are to be feared.

The news of the unexpected resignation of Mr Vissering as President of the Netherlands Bank caused great disappointment. His successor, Mr L. J. H. Trip, on assuming his new appointment, declared that he regarded the maintenance of the gold standard in the Netherlands as his primary duty. "With all the means within my power," he stated, "I shall maintain the standard of our coinage, for it is my conviction that the world would become a chaos if gold were no longer the standard coin. The future policy of the Netherlands Bank will undergo no change in any respect whatsoever. All efforts will be concentrated on maintaining the stability of the guilder, and there is no doubt but that this will be accomplished. All conditions requisite for attaining this are present, but confidence is also imperative. The maintenance of this confidence must be the aim not only of the Government, but of the Netherlands Bank, and, above all, of the public. There is no doubt that we shall manage to get through these troubled times; if only the Dutch public maintains its reputation of being calm, cool and collected there will be no untoward occurrences, and the gradual process of adjustment can develop unabated. In my opinion, we are not passing through a crisis which will be succeeded by a boom period, but rather that a much lower standard of living will thereby be reached. The one great obstacle is that . . . retail prices have not yet adjusted themselves sufficiently to wholesale prices."

As regards the difficulties of Dutch industry, the Association of Catholic Employers has submitted a petition to the Minister of the Interior. The petition points out that

the abandonment of the gold standard in England represents for English industry the equivalent of a wage reduction, an increased import duty and an export bounty, amounting to about 20 per cent. "In addition," the petition continues, "we do not consider it at all unlikely that the existing import duties on industrial products may soon be raised, and that new duties will be imposed." What the loss of part of the English market would mean for Holland is best illustrated by the fact that in 1930 England took 22.28 per cent. of the Netherlands' entire exports, and was her chief customer.

The Association states that, owing to the extent to which protectionism is gaining ground throughout the world, the retention of the English market has become a matter of vital importance to the Netherlands. They feel that Holland will have to take immediate steps to regulate the importation of certain industrial products, in the fear that not only England but other countries will turn to the Netherlands as the only country whose market is open to all comers for the dumping of their goods. They consider that Parliament should invest the Government with powers to limit by a quota the importation of certain products in order to prevent the Dutch market from being flooded with foreign goods. Despite the pressing demands from all branches of Dutch industry, however, the Government has so far made no move in this direction.

NORWAY.

The Pound and Industry — Bank Rate Reduction — Stock Exchange.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, October 12.

THE fate of the krone is occupying a front place in the Press and among the public generally. The answer to this question, however, is so closely connected with the future of the £ that it is almost futile to try to tackle the problem at this juncture. The consequences of the depreciation of the £ are already making themselves felt in our export industry, whose chief markets are in England and her Colonies. The stabilisation of the £ on a lower level than the present quotation would be a serious blow not only to our export industry, but to the shipping and whaling industries, whose income is chiefly derived from contracts in terms of sterling.

Apart from the reduction of the Bank rate from 8 to 7 per cent. on Wednesday last, the week saw no event of outstanding importance as far as domestic economic developments are concerned. The decision of the Norges Bank to reduce its rate was received with the greatest satisfaction, and, although the present rate must still be regarded as abnormally high, the step is an indication of the Bank's intention to curtail the burdens of the crisis as much and as soon as possible. That the reduction was carried through in agreement with the Riksbank in Stockholm underlines the economic co-operation, already initiated at the outset of the crisis, between the two countries. In contradistinction to the week ending October 3rd the movements in the foreign exchange market last week have been against us, the quotation for sterling having risen from 17.35 at the beginning of the week to 17.60 to-day, the top of the curve being reached on Wednesday with 17.70 kroner to the £.

The tone on the Stock Exchange continued firm during the week, especially as far as Government stocks were concerned, and there was a marked tendency on the part of the public to re-invest. Thus the 4½ per cent. Government Loan of 1931, floated just before the outbreak of the crisis, rose during the week by about 3½ per cent., and a similar rise occurred in other Government and State-guaranteed loans. The rise that was anticipated in whaling and industrial shares has, however, not materialised, the tendency having been towards only moderate firmness.

SWEDEN.

Bank Rate Lowered — Stock Exchange Opened.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 13.

FINANCIAL interest during the past week has been mainly centred on two events, namely, the lowering of the Bank rate and reopening of the Stock Exchange. They are naturally intimately connected, but this does not prevent the first-mentioned from being considered as the more important. The exceptionally high rate, 8 per cent., which the State Bank fixed simultaneously with its decision to depart from the gold standard, has been the subject of extremely pungent criticism, and this not only from the advocates of a suitable dose of inflation, but even from the adherents of the gold standard and a well-ordered monetary system. The fact that it must be extremely onerous for industry would scarcely appear to need discussion.

It was difficult in the present position to determine what bank rate would be the right one, when it was a question of making it manifest that the suspension of the gold standard was a forced emergency measure and that it was by no means the intention of the responsible authorities to allow this step to be the thin end of the wedge for a pure inflation. It is, however, clear that the Bank rate as a weapon has at the present time lost a great deal of its normal efficacy, and it must, therefore, be regarded as hazardous to employ it to too great an extent, as it is easily possible thereby to give foreign countries an erroneous idea of the difficulties Sweden has to overcome.

It might be said from this point of view that a Bank rate of 8 per cent. signified a greater display of force than was called for by the necessity. It must be borne in mind, however, that increases in the Swedish Bank rate have followed one another particularly closely during the last few months: from 3 per cent. it was raised to 4 per cent. on July 31st, on the departure of England from the gold standard to 5 per cent., again, four days later, to 6 per cent., and in connection with our own suspension of the gold standard to 8 per cent. If we accept such a rate as a decided declaration of principle, it may perhaps have its justification, but in such case only for quite a short time. In other words, a new lowering of the rate should be imminent, a matter to which the market would by no means be indifferent. Significantly enough, it has already previously been discounted by the Stock Exchange, where bonds were firm at the beginning of the present week.

The Swedish crown has kept comparatively stable, or even firm, since the dropping of the gold standard. If we except the first few purely panic rates, it kept during the first four days round about 84 per cent. to 86 per cent. of par in Paris and New York, improved during the following eight days to an average of 86 per cent. to 87 per cent., and at the beginning of the present week has continued slowly to rise. In other words, the depreciation is less than in the case of some of the other new paper currencies. Manifestly, however, little is indicated thereby as to what the value of the new Swedish gold crown will be. "A retention of the home purchasing power of the Swedish crown" has been indicated as the directing point for the Swedish financial policy. Should the increase in prices through imported goods be very pronounced, this must lead to a restrictive discounting policy. It is possible, of course, on the other hand, that the tendency for an increase in the price of imported goods will be counterbalanced by a continued fall in the price of goods quoted in gold currencies, due to a continued fall in price in the gold currency countries. It appears to be inevitable under all circumstances that the outcome will be a permanent reduction in the gold value of the Swedish crown. Whether this will correspond, however, with that of the English currency is still quite unknown.

Like the Bank rate, the closing of the Stock Exchange has been the subject of very divided opinions; this not so much because it was closed during the first few days of panic, but that there was so long a delay in re-opening it. In point of fact, it was impossible to form any exact idea of the international quotation for the Swedish crown

so long as it was not possible to buy and sell international securities on the Stockholm Stock Exchange. Fortunately the re-opening of the Stock Exchange had no unpleasant consequences whatsoever. The fact that the drop in the price of bonds was fairly considerable is reflected, of course, in the first place by the abnormal Bank rate, but this has, as mentioned, already been adjusted to some extent. As regards shares, on the other hand, the fall was almost less than one would have been inclined to expect. A very good idea of this will be obtained by calculating the Stock Exchange value as regards the concerns quoted in the "A" list. During the first eight months of the year this had fallen by about Kr. 920 millions, a depreciation which was increased by no less than about Kr. 490 millions during the days the Stock Exchange was open in September. Between the dates of closing and re-opening of the Stock Exchange a new depreciation of Kr. 320 millions was recorded. As of this about Kr. 245 millions was to be attributed to our international securities, the fall in regard to the purely home concerns was no more than about 75 millions, a by no means overwhelming figure.

CZECHOSLOVAKIA.

Exchange Restrictions — Stock Exchange — Budget for 1932 — Import Regulations — Unemployment.

(FROM OUR CORRESPONDENT.)

PRAGUE, October 12.

THE restriction of the dealings in the foreign exchanges was taken quietly and regarded as unavoidable in the present situation, especially with regard to the development of conditions in the neighbouring countries. These measures having been taken by the National Bank, the withdrawals of foreign exchange ceased. The indebtedness abroad, which after all is only slight, showed a further decline during the week, especially with regard to United States dollars. The currency remained firm.

Also on the Stock Exchange, which reacts to the trend of events on the foreign bourses, further calming down became apparent. The quotations of gilt-edged securities, which temporarily declined as a result of the raising of the discount rate, partially recovered. On the share market stagnation prevailed, and the quotations did not decline to any considerable extent.

The Budget for the year 1932 is to be presented to Parliament at their first meeting to-morrow. The expenditure figures at 9,319 million Cz.K. (against 9,839 millions in the Budget for the year 1931), the revenue figures at 9,323 million Cz.K. (against 9,847 millions in 1931). Expenditure was reduced in comparison with 1931 by 520 million Cz.K. The State undertakings are budgeting for an expenditure of 8,930 millions and a revenue of 10,760 millions; this includes State railways with 7,800 millions of revenue and 7,876 millions of expenditure. The national debt amounts to 37,551 million Cz.K., viz., 25,991 millions of internal debt, 8,350 millions of external debt, and 3,300 millions of Treasury notes; the whole debt service for 1932 will call for 2,161 million Cz.K.

The difficult question of import regulations of corn and flour was ultimately solved by the Government fixing the exact amount of imports of these commodities for October; the import licence will depend on the purchase of a corresponding quantity of home produce. In this way the conflict with treaty obligations, especially as far as Roumania and Jugoslavia are concerned, was avoided.

There has been a pause in the negotiations for the treaty of commerce with Hungary; it is to be resumed probably in November; difficulties also arise with regard to the question of payments for Czechoslovak exports, as there are severe foreign exchange restrictions in Hungary. The number of unemployed rose to 228,383 during September, which is 13,373 more than in August and 123,870 more than in September, 1931.

GREECE.

British Gold Suspension and its Effects — Bank of Greece's Reserve — Control of Foreign Exchanges.

(FROM OUR CORRESPONDENT.)

ATHENS, October 8.

THE abandonment of the gold standard by England came as a very painful surprise here. Such was the faith in British financial power that, though the economic and financial difficulties of the United Kingdom were fully realised, nobody expected that they would finally drive England off the gold standard. Apart from the economic ties which are so close between the two countries, the traditional feelings of friendship and admiration for England found on this occasion an echo in sympathetic Press comments, and in a general wish that Britain will soon be able to regain her financial stability and maintain her supremacy as the principal economic and financial centre of the world. The absolute confidence in British solvency and the stability of the pound may be gauged from the fact that Greece, like so many other countries, had linked up her money with the pound sterling. State and private contractual engagements were often stipulated in sterling, considerable funds were deposited with London banks, and very large sums were invested in British as well as in foreign securities issued in pounds sterling. In fact, since the war the bulk of Greek investments has been in sterling securities. It is obvious, therefore, how deeply are Greek interests affected by the fate of the pound, and how harmful for British financial prestige in this country would be an eventual devaluation of sterling.

On receiving from London the news of the suspension of the gold standard, the Hellenic Government announced that Greece would maintain the gold basis of her currency. The dollar replaced the pound as a basis for calculating the value of the drachma in foreign currencies. At the same time reassuring statements were made by the authorities concerning the stability of the drachma. It was thought advisable, however, to close the Athens Stock Exchange. Moreover, as the bank of issue had not been following a gold policy, part of its reserve—about one-fourth of the total—was deposited with the Bank of England in current account. According to the statutes of the bank, this deposit can no longer be included in the note cover. Steps were taken, therefore, to ascertain whether the Bank of England would be disposed to consider this deposit as a liability in gold and not in paper sterling. The opinion of the B.I.S. on this matter was also asked. While the reply of the Bank of England is not yet known, the B.I.S. stated that no decision had yet been taken, and that the question would be submitted to its next board meeting.

Pending this decision, the Bank of Greece continues to include its sterling balances in the cover of the circulation, converted into dollars at the current rate of exchange on New York. In addition, and with a view to reinforcing its reserve, it borrowed a sum of 5,000,000 dollars from the National Bank of Greece. Thus, its weekly statement, dated September 30th, shows the proportion of reserve to the note circulation and other demand liabilities at 46.57 per cent., as against a statutory minimum of 40 per cent. As, however, the first repercussion of the British crisis was an unusual demand for dollar exchange, the authorities took the precautionary measure of instituting a control on transactions in foreign currencies. Accordingly, on September 28th, a decree was published in the Government Gazette, by virtue of which the purchase and sale of gold, gold coins, foreign exchange and foreign bank notes is thereafter effected exclusively by the Bank of Greece, which will sell, at its discretion, for commercial and other economic needs only. The proceeds of exports must be handed to the bank against payment of its equivalent value in drachmas. The encashment of cheques in drachmas drawn abroad is not allowed unless the equivalent in foreign exchange has previously been sold to the bank. Existing deposits in foreign exchange, coins and bank notes are repayable in drachmas at the current rate for the respective currency.

What will be the ultimate effects of the English crisis on the financial and economic situation of Greece it is too early yet to say. It is obvious, however, that the country is bound to feel, in common with the rest of the world, the unpleasant repercussions of recent events. Their first result—a personal one—was the regrettable resignation of the Governor of the Bank of Greece, M. Diomède, the reasons for which are not yet clear. A further effect—in the case of a lasting depreciation, or, possibly, a devaluation of the pound—will be a saving in the Budget and in the expenditure of some individuals or corporations on account of the service and repayment of loans and other contractual obligations in sterling. The profit arising from this economy is offset, however, to an important extent by the loss to Greek holders of the bonds of such loans. Yet another advantage for this country—assuming that the prices of English exports will not rise, and that the imports of currants from Greece will not diminish appreciably—is derived from the fact that Greek imports from the United Kingdom are approximately double Greek exports to that country. Against these advantages, however, should be placed the immense losses to Greek holders of sterling securities and funds, while the financing of public and other constructive works, hitherto chiefly effected through the London market, will be an added difficulty.

BULGARIA.

Export Difficulties — Foreign Exchange Control — Commercial Treaties — Budget.

(FROM OUR CORRESPONDENT.)

SOFIA, October 9.

RECENT developments connected with the gold value of sterling have resulted in a serious dislocation of the Bulgarian export trade. The great majority of exports have always been contracted in pounds, and practically the entire volume of export business going through the seaports of Varna and Bourgas was being financed by means of sterling sight drafts. According to the National Bank Statute Law, only gold and currencies freely convertible in gold are admitted as legal cover for Bulgarian bank notes. On September 22nd the National Bank stopped quoting the pound, and for nearly ten days sterling drafts could not be negotiated in Bulgaria, the National Bank having the exclusive monopoly of foreign exchange dealings. The difficulty has been settled by a hasty compromise, and quotations were recently resumed. Nevertheless, the wide fluctuations of the sterling rate continue to act as a deterrent to exporters.

The adoption of other currencies, such as the French or Swiss franc, the guilder or the dollar, as a basis of export business cannot be effected on an extensive scale, because the respective money markets do not offer the same facilities for technically smooth working. Moreover, British documentary credits have always played a leading part in the ultimate development of financing exports. French, Swiss and Dutch credits are not available in sufficient measure for this special purpose, and great difficulties have resulted. Exports dropped to a disquieting degree on account of this new handicap, coupled with the existing troubles caused by falling prices, and, in other departments of the export trade, by the disturbed state of the German and Austrian markets. Troubles in foreign markets also caused the raising of the official discount rate from 8½ to 9½ per cent., and a general restriction of credit, while banks and trading houses are building up reserves of liquid cash in preparation for further difficulties in the market.

The effects on the foreign trade balance and on the country's reserves of foreign exchange are very serious, especially at this period of the year, when heavy payments abroad are approaching on both Treasury and private commercial accounts. It seems fairly probable that the reinforced restrictions in foreign exchange dealings will hardly meet the requirements of the situation. There is much comment on the advisability of setting up an organism for

NATIONAL BANK OF GREECE Established 1841

Head Office: Athens.

Branches throughout Greece.

Capital paid up and Reserves Drs. 1,205,000,000.

distributing gradually the foreign exchange available according to the importance and urgency of requirements. Opinion in responsible quarters is reported to see in such a measure the only way of saving the gold cover of the Bulgarian currency. According to an official statement by the Minister of Finances, the gold reserves of the bank are at present about 32 per cent. of the notes in circulation.

In order to quicken exports the Government arrived at a decision which, in the opinion of almost every financial expert here, ought to have been taken some time ago. The Council of Ministers announced yesterday to the Press their resolution to enter immediate negotiations for commercial treaties with foreign States willing to co-operate with the Bulgarian Government to this effect. The urgent necessity of reducing import tariffs has been of late widely emphasised in different circles, and public opinion is apparently ripe for substantial changes, especially in duties on goods of prime necessity. Peasant protests against the excessive prices of manufactured goods have become so loud and widespread that the Government had hastily to pass legislation regulating artificially the selling prices of such goods. The effects of such action will probably be as inadequate as in former instances both here and abroad. It would appear that a resolute and systematic modification of import duties could achieve better, quicker and more general results without engaging the Government in the supervision and other expenditure which the above legislation will necessitate.

The position of the Treasury has not improved. In addition to heavily reduced receipts due to general economic difficulties and to an inefficient budgetary policy, the deficits of the Grain Purchasing Office have greatly widened the gap between revenue and expenditure.

Political uneasiness is gaining ground. The Government difficulties are greatly increased by party criticism exploiting the troubles of the moment. Good will and courage cannot be denied to M. Malinoff's* Cabinet, but, unhappily, efficient and competent men are scarce, and the efforts of those in charge of the country's affairs do not appear to find in Parliament the ready and disinterested backing the situation so badly needs.

Letters to the Editor.

THE POUND—A GERMAN VIEW.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The "French view of the pound" expressed by Professor Rist seems to me wrong from the beginning. The pound has not been fighting for the stability of the European currencies; if it has been fighting at all it has been fighting against the mal-distribution of gold provoked by France and the U.S.A. and other countries which, as one English paper

* On October 12th M. Malinoff resigned on grounds of ill-health, and was replaced by M. Mucharoff, formerly Minister of the Interior.

has put it, are lending umbrellas in time of sunshine and calling them back when the first drop of rain is falling. The causes for the decay of the pound were not at all external. There have been other disasters of magnitude since 1918 besides the collapse of Austrian and German banks, and there has been no shaking of the external position of British credit. Professor Rist is very wrong when he attributes the British crisis to "unjustifiable panic." If he would consider the revelations of your May Report, the enormous adversity of your trade balance—in spite of falling prices of food and raw materials since 1929—the deterioration of your balance of payments up to a real deficit in the current year and add to this the growing social unrest, he would understand that there is no great temptation for foreign investors to place their money just now in England. The credit-crisis is indeed justified.

Quite another question, however, arises when you ask for the causes of these economic facts, which have gradually undermined British economic welfare. These are indeed to a great extent "external." They relate to the world economic crisis, to tariff policy, of which France is no less an example than my country or the U.S.A., the peace treaties with their enormous burdens on all sides, the exaggerated "rationalisation" of industries and all the other facts which from Canada to Yokohama and Italy to Argentina have led to a universal overproduction. These facts, coupled with the maldirection of gold, have led to the present climax of economic depression, and Great Britain, being more than any other country bound to international trade, has become the main sufferer. It is very shortsighted—not to use a more significant phrase—to pretend that Germany—once more—is the cause of your troubles. Your money here has been indeed not more "immobilised" than in Australia or South America. It is not the immobilisation of your assets which has ruined the pound, but the mobilisation of short-term credit by your creditors, chiefly France and the U.S.A. You have been since the end of the war an ardent fighter for understanding and peace. I hope that you will not lend your ears to the "ideal" of Professor Rist: "England, France and U.S.A.," i.e., a new alliance against the rest of the world. If understanding comes it must be universal. If not, England will certainly not be an equal partner between the U.S.A. and France, but probably be in the position of those poor relations who, in the hope of being gently treated, have to agree to everything.—Yours, etc.,
Ballenstedterstr 16a, HERMANN LEVY.
Berlin, Germany.
October 5, 1931.

[Professor Levy may rest assured that the one thing Great Britain will not do is to form an alliance with the United States and France against the rest of the world. Whether we are destined to become a poor relation or not depends, as Professor Levy says, very largely on world events. But these, almost as much as our internal conditions, depend on the statesmanship of this country. Britain's future rests in British hands.—Ed., Econ.]

BRITISH MOTOR SHARES.

No event in the British commercial year is better stage-managed than the Olympia Motor Show. The stirrings in the share market, which usually precede its opening, have this year found the public in not unappreciative mood, thanks to the success of the private-car industry in more or less maintaining its productivity in a period of wide-spread depression, to the recent disclosure of unexpectedly large profits by the Austin Company, one of the two largest producing units, and to the general buying movement in industrial shares, stimulated by the devaluation of the pound and the hoped-for return of a "well-disposed" National Government. In the *Economist* of last week (page 651) we published a review by a correspondent of the probable dimensions and distribution of the future demand for private cars in this country. What are the financial prospects of the industry?

The history of the trade in Great Britain exemplifies the view that it commonly takes about a quarter of a century to make "big money" out of a major invention. The industry is "new" in every sense. Though the petrol-driven internal-combustion engine dates from the nineties, the democratisation of motoring, accompanied by the emergence of a few great concerns from the welter of competing British producers, has been effected only in the last decade. Ten years ago, Oxford was a University town, with Sir William Morris just beginning his remarkable rise to fame. The Austin Motor Company, having greatly expanded its capital immediately after the war, had been hit by the slump between wind and water and was struggling against a receivership. The production of all motor vehicles (including commercial vehicles) was under 70,000, against 236,528 last year.

To-day motor production exhibits the characteristics of a new and expanding trade in innumerable ways. It shows the virility of youth, in the constant improvement of its manufacturing and technique, and the progressive reduction of its selling prices. It is a fiercely competitive industry, in which the battle is to the strong, and the identity of the latter is becoming less difficult to discern. It is still developing virgin soil in its potential market, and is greatly concerned with the ratio between "expansion demand" and "replacement demand." Its leading figures are generally self-made men, in the best sense. Sir William Morris is popularly credited with having made his life's start from a small bicycle shop. Sir Herbert Austin, whose company has paid out £10½ millions to its workers in the last five years, first visited the site of his present works, twenty-seven years ago, with £5,000 in his pocket.

Though there are over 40 firms in Great Britain producing private cars, the investor's choice of shares has been narrowed down to a very few companies. About two-thirds of the total output of cars (by number) is in the hands of Morris Motors and Austin Motor, the latter companies having lately begun to challenge the former for the position of the largest national producer. The Singer Company, third on the list, has not recently expanded its business as rapidly as was expected. If names like Standard, Rover, Riley and Armstrong-Siddeley be added, appreciably over 75 per cent. of the "sales power" of the trade will be represented, apart from producers for specialised parts of the market, like Rolls-Royce, or makers of marine or aviation engines, etc. The table at the head of the next column shows the recent financial results of a number of British producers.

Outside the territory of the two largest concerns, which are a law to themselves, there has lately been a noticeable tendency for the medium-sized firms to lose ground, and for some of the more enterprising of the smaller companies to improve their earnings position. This phenomenon has usually followed the putting on the market of a particular model which has caught the public fancy. Opportunities

of this kind may be expected to recur, but public taste is fickle, designs change frequently, and investment in the successful smaller companies is a specialised affair, of interest mainly to the capitalist with local or other differential knowledge and connections.

To the general investor, the two largest companies offer relatively well-secured fixed-interest issues but little opportunity to share in their equities. All the £2,000,000 ordinary capital of Morris Motors is privately held. The company, indeed, can best be regarded as a private business, the proprietor of which, once he has paid out some £225,000 annually on £3,000,000 7½ per Cent. Cumulative Preference shares, is at liberty to do as he will with his own. Sir William Morris, in fact, appears to be taking a leaf out of the book of his great American predecessor, Mr Henry Ford, by steadily feeding his business on its own profits and building up an immensely strong financial position. Apart from generous depreciation allowances—which are a vital necessity in every new industry—the company has added £1,974,374 to its effective working capital out of revenue in the last three years alone. At the end of last year liquid assets (including £2,802,625 of Government securities) exceeded current liabilities by no less than £4,550,000. The company should clearly be able to finance any practicable developments for some time ahead without recourse to the public market.

The Austin Motor Company has an unusual capital structure. Out of a total issued debenture and share capital of £3,412,374 only £150,000 is in ordinary shares. The reorganisation scheme of 1927, which marked the end of the company's post-war difficulties, changed the structure without altering the distribution rights of the various shares in the least. The £250,000 7 per cent. cumulative preference shares and the £1,000,000 6 per cent. (tax free) cumulative "B" preference shares were left untouched, and have since obtained all their arrears of dividend. The 1,500,000 £1 preferred ordinary shares had 10s. per share written off, but their maximum dividend was increased from 10 per cent. to 20 per cent.

The 600,000 £1 ordinary shares had 15s. written off, but retained the whole of the equity. To-day the shares are receiving 25 per cent. on their original amount, i.e., 100 per cent. on their written-down value. This figure, intelligible to the expert, has caused some misunderstanding in the eyes of "Labour," and involved the company in a defence of its policy when no defence was needed. If business develops, and it is desired in future to raise the dividend, an ill-informed but powerful clamour against "profiteering" will inevitably be raised. Presumably, therefore, the directors may be expected, when the company's reserve (at present £200,000) has reached fair proportions, to consider the advantages of a bonus share issue, which will leave the equity of the ordinary capital unchanged, but enable the nominal dividend rate to be reduced. The company, incidentally, has power to issue 2,850,000 shares of £1 each, at present unclassified.

The following table of "priority percentages" affords a useful indication of the "cover" of the various classes of securities of the two companies, on the basis of earnings in the last financial year:—

MORRIS MOTORS.		AUSTIN MOTORS.	
Class of Security.	"Progressive" Percentage of Earnings taken.	Class of Security.	"Progressive" Percentage of Earnings taken.
7½% preference shares	0 to 23½	6% debenture stock	0 to 13½
Ordinary shares	23½ to 44½	Debenture sinking fund	13½ to 21½
Retained "in the business"	44½ to 100	7% pref. shares	21½ to 23½
		6% pref. shares	23½ to 33½
		Prefd. ord. shares	33½ to 51½
		Ordinary shares	51½ to 69½
		Retained "in the business"	69½ to 100

In the years following the war the lot of the investor in motor shares was not a happy one, and the cautious attitude thereby inculcated is evidenced by the comparatively high yields obtainable to-day on many motor shares, both fixed interest and ordinary:—

	High, 1930.	Low, 1930.	Present Price.	Yield on Dividends, %	Yield on Earnings, %

† Free of income tax.

The outlook for the industry is promising in some directions and narrowly circumscribed in others. It is unlikely that, even under a tariff regime at Westminster, the industry would obtain a large addition to the 33½ per cent. protective duty it has enjoyed, with a single year's interruption, since 1915. But its real "safeguard" is the high efficiency low horse-power engine, an unique British product which is perfectly adapted for the requirements of a country of high motor taxation, short distances, and superlatively good road surfaces. The concentration of sales effort on the small car of seven to ten horse-power has tapped a hitherto unexploited market in the lower-middle and upper working-classes. Here, foreign competition is virtually non-existent, while as regards medium horse-power cars (up to about 16 h.p.), the industry's chief competitor, the Ford Company, is already established on British soil. The competitive power of the Ford works at Dagenham is still an unknown quantity, but the British manufacturers have made serious efforts to forestall it, not merely by price reductions, but by a strategic policy of bringing the six-cylinder engine—which is not yet manufactured by the Ford Company—into the lower horse-power groups.

In the foreign market, however, the British producer has still to find a footing in the populous countries of Europe, South America and the Far East. The home market continues to absorb from five-sixths to seven-eighths of total British production. The concentration of output in the hands of a few powerful firms may

eventually make for increased competitive power—the Austin Company, for instance, is developing an important export business in motor engines. The steady improvement of road conditions abroad is another long-term influence in favour of the British product. Efforts, however, to popularise low-power cars for street work in foreign cities have so far met with indifferent success, judging by such indications as the sales of the "baby" Austin car in America.

For the present, therefore, future dividends must depend mainly on the maintenance of the home market, the ability of the leading manufacturers to tap new strata of demand by a further cheapening of low horse-power models, and the extent to which Chancellors of the Exchequer, pressed for resources, can be relied upon not to add further to the burdens of the heavily-taxed motorist. The latter may not always find the producers of essentials, like petrol, as ready to oblige him in the matter of running costs as they are to-day.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

THOUGH the Stock Exchange remained optimistic as regards election results, and quotations for "majorities" hardened as the week progressed, the upward movement of values, based on devaluation and tariff considerations, proceeded less smoothly than last week. On Tuesday the market showed signs of preliminary profit-taking. The recession, however, did not go far, and by Thursday a firm tone again prevailed, though few striking gains were recorded. Gilt-edged stocks were assisted by the steadiness of sterling, and made measurable headway after early uncertainty following the announcement of higher bank rates in New York and Paris. Domestic news, for the most part, was good, the fall in the unemployment figures provoking particularly favourable comment. Foreign developments, however, caused slight uneasiness, Manchuria, Germany and Ireland being regarded as possible centres of disturbance. The announcement of the failure of a large bond-dealing house in New York, and the subsequent weakness of Wall Street, were unhelpful factors. On the whole, however, the course of markets in London suggested that, until the elections were over, domestic rather than external influences would continue to govern prices.

Gilt-edged stocks were dull at the outset, on scattered realisations. An improved tone was experienced, however, by mid-week, Five per Cent. War Loan and Four per Cent. "Consols" being particularly firm. The reinvestment of repatriated funds from abroad was again in evidence from time to time. India loans were irregular, tending to slip back after appreciable rises on a disproportionately small turnover. Australian issues were in greater favour, for reasons described in an Investment Note on page 725. Some £1,000,000 of Central Electricity Board Five per Cent. Stock, placed privately, was on offer at 94½, free of stamp, the price causing a downward adjustment in the quotation of the existing stock.

The Japanese air raids in Manchuria created an unfavourable Far Eastern atmosphere, but the resultant selling of Japanese—and to a less extent of Chinese—issues was partially arrested after the beginning of the Geneva negotiations. German bonds gained little from the announcement that the interest on the "Young" Loan would be paid in gold, further declines, however, being partially arrested by the good effect produced by Dr. Brüning's speech in the Reichstag. Among South Americans, Chilean stocks were steadier on the victory of the Presidential candidate of the Right.

Home railway issues encountered profit-taking after substantial rises. The recession, however, did not last long or go far, a firm tone being again established by Thursday, though the week's traffic figures showed no evidence of the expected upward tendency in receipts. Argentine rails rallied on an improvement in the peso, but received a sharp setback on the publication of the Buenos Aires and Pacific report, with its intimation of the passing

of final dividends on the second preference, 6 per cent. preference, and ordinary stocks. The absence of a final dividend on Entre Rios had been generally anticipated, and the decision to make no payment on Argentine North Eastern "C" Debentures was without effect on prices. American railroads were easier in sympathy with the general movement of values in Wall Street.

The undertone in industrial shares was firm throughout, but incipient profit-taking in mid-week checked the rise in quotations. The proportionate advance in certain markets, however, remained of noteworthy dimensions, as is shown by a table appearing on page 722. Electrical shares were undecided, and motor shares showed no sustained advance, despite the publicity associated with the opening of the Olympia Show. Breweries were easier, but tobacco shares obtained some support, Carreras being particularly firm. Cables and Wireless showed consistent improvement, though reports of a very considerable increase in September receipts were received with caution. Iron and steel issues showed symptoms of being over-bought, but the readiness with which tentative offerings were taken up by the market suggested that this view was premature. Textiles, similarly, obtained renewed support from the North upon scattered selling. Stores were firm, Harrods improving on the purchase of the stock and goodwill of the Haymarket Stores. "Internationals," lost ground on the recession in New York, and the Swedish group were easier on Stockholm liquidation. Good investment buying continued in evidence in the insurance share market, but bank shares showed greater irregularity.

Business in oil shares remained unexpectedly restricted. The tone was good, but little stock was available, the Stock Exchange restriction of transactions to a cash basis accentuating this feature. Prices on the whole were consolidating its rise to 3d., and although share prices were steady, the market remained in idle mood, under the influence of nebulous restriction rumours. Tea shares, whose prospects are discussed on page 726, showed few changes, holders of fairly substantial amounts of stock wisely refraining from pressing it upon the market.

Mining shares were less active than in the previous week. Dealings in Kafirs were restricted by exchange difficulties as between Paris and South Africa, by uncertainty regarding South Africa's ultimate policy as to the gold standard (which has now been abandoned in Rhodesia) and by the absence of any announcement of the disposal of recent arrivals of gold in London. Union Corporation were marked down, on the postponement of the interim dividend. Rhodesian copper shares showed the strength, Roan Antelope registering a sharp advance. The rise in tin prices to the highest point for the year had no marked effect on the share market. San Francisco Mines declined sharply on the announcement of the decision to suspend mining operations.

FOREIGN STOCK EXCHANGES. NEW YORK.

THE market remained under the influence of the Hoover proposals at the end of last week, the rise in the New York Federal Reserve Bank rate from 1½ to 2½ per cent. failing to check the firmness of share values. The reception of the proposals in the country were deemed satisfactory, though some disappointment was expressed at the indifferent response of certain banks to the request for subscriptions to the debenture issue of the new Credit Corporation. The Stock Exchange was closed on Monday for the Columbus Day holiday, and opened weak the following day. Pressure on high-grade bonds was accentuated by the failure of Kountze and Co., an old-established firm with a large trade "over the counter" in bond investments. The somewhat exaggerated expectations formed on the first announcement of the Hoover Plan were replaced by scepticism, equally overdone, as to its practical results. Pressure was brought to bear on all the leading issues, including railroads, the absence of a statement by the Interstate Commerce Commission regarding an increase in freight rates causing some foreboding as to its decision. By Wednesday the weakness had become pronounced, leading issues losing from 1 to 7 points in a thoroughly dull market. An unfavourable impression was created by the cut in the dividend of the Western Union Telegraph Company, for the final quarter of the year, from \$2 to \$1.50 per share. The announcement was accompanied by the intimation of a 10 per cent. reduction in the salaries of many employees. Western Union shares fell to the lowest level for ten years. The influences at work, otherwise, were chiefly psychological, the market failing to respond to the declaration of an extra \$2 per share Woolworth dividend, or to the American Telephone's announcement of a record revenue for the first nine months of the year. The market was steadier on Thursday, closing slightly higher. A few signs were observed, however, of an improving trade situation. Freight car loadings last week showed a more than seasonal rise at 778,000, compared with 738,000 in the previous week. Improved buying of steel was reported, though steel mill activity was unchanged at 29 per cent. of capacity. The New York rate was further raised from 2½ per cent. to 3½ per cent.

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the standstill at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

PARIS.

Last week the indices of share market quotations, both for French stocks and foreign securities listed in Paris, reached the lowest level for several months. After the announcement of the raising of the Bank of France's rate from 2 to 2½ per cent. it was generally felt that the movement had been overdone, and markets opened this week with an appreciably firmer tone. Business, however, never reached large proportions, and such real buying as occurred had a timid character. The declaration of options, on Wednesday, prior to the mid-monthly settlement on the Parquet, passed off almost without notice. French industrials, generally, were steady. Bank shares, however, showed some irregularity. On Thursday prices slipped back, in sympathy with New York. Money for the settlement was arranged at ½ per cent. Government issues were irregular, and industrials lower.

AMSTERDAM.

The Amsterdam Bourse had a quiet but firm tone. Dealings remained restricted in volume, large investment interests regarding the international situation, in its political as well as financial aspects, as much too uncertain to justify the taking up of new commitments. A very little buying, however, was sufficient to raise many quotations a point or two early in the week. Conditions subsequently, however, showed greater irregularity. Among sugar shares, Amsterdam Trading were unable to hold an initial rise. Philips Lamps recovered after a weak opening. The Unilever N.V. dividend was in accordance with expectation, the shares retaining their steady undertone. Bond prices were maintained, on a small turnover.

OTHER CENTRES.

None of the closed Bourses of the Continent was reopened with the exception of Copenhagen, which announced its intention of resuming dealings on Thursday. The tone at Oslo was steady. Stockholm opened stronger, but suf-

fered a recession in mid-week, Kreuger and Toll reaching a new low level. The Swiss Bourses were somewhat nervous, though prices showed only slight variations. Brussels opened weak, under the influence of political possibilities in Germany, but strengthened to some extent on moderate buying of depressed stocks. Unofficial dealings which have taken place in Germany reveal a further decline of one to four points in securities like Siemens, General Electric and Reichsbank.

INVESTMENT NOTES.

The Rise in British Industrials.—Those who welcomed the restriction to a cash basis of Stock Exchange dealings, on the ground that undesirable speculation would be prevented, could not have expected the advance which has since occurred in the market valuation of British industrial "equities." Some examples are given in the following table:—

	Prices on Sept. 19.	Prices on Oct. 14.	Per cent. Increase.
Iron, Coal and Steel Shares:			
Babcock and Wilcox	41/3	51/9	25.5
Cory ord.	50/-	60/-	20.0

L.M.S. ord.	14	21½	53.6
Southern 5% pref. ord.	35½	41	15.5

The prohibition of short selling is, doubtless, partly responsible for what appears have been an exaggerated rise in market values. Indeed, the market is particularly vulnerable, for it would be liable to a sharp setback in the event of adverse news, as there would be no support from "bear closing." It should also be observed that the rise has not shown great discrimination. Profit taking in the last few days has brought prices back, but there is no doubt a change in sentiment in the industrial share markets—how far it is coloured by election hopes and tariff promises we cannot say—and a willingness on the part of the investor to acquire the leading British industrial "equities" for long-term investment. Whether it will last longer than the election, always provided the pound remains stable, time must be left to show.

"Majorities."—Dealings in election "majorities" this year are confined to one party—namely the supporters of the National Government. In previous years, a market was made for each party—Conservative, Liberal and Labour, and, occasionally, even for Independents. This year quotations are concerned merely with the prospective majority of the National Government. It does not appear to have occurred to jobbers that the "National Government" is an amorphous body, and that there may be some dispute at the end of the elections as to what the National Government's majority exactly is. Dealings began in National Government majorities at around 100, and the steady rise which has subsequently occurred has reflected the growing optimism of Stock Exchange members regarding the outcome. "Majorities" touched 180, fell back to 158, and recovered again. If the nominations con-

firm the Stock Exchange view that vote-splitting will be avoided as far as possible, a further rise is possible, for the Stock Exchange has always been anti-Socialist. Indeed, the more optimistic of the Conservative members are talking of a majority of 200. It may be useful to explain how dealings in "majorities" work. A speculator—the operation is, of course, a mere gamble—buys or sells a money unit, say, 2s. 6d. or 5s. or 10s. or £1. If he sells £1 of "majorities" at 160, he will gain £1 for every majority seat less than 160. If the National Government were defeated, he would receive £160 plus the number of the Labour majority. If, however, the National Government gains a majority larger than his "bargain," he will lose £1 for every seat in excess of 160. The experience of previous years does not suggest that the Stock Exchange view of election results is any more reliable than other guesses, though at the last election the market was less wide of the mark than on other occasions. The quotations a fortnight before the polls in the 1929 elections made the following comparison with the actual result:—

	Market Quotations.	Actual Result.
Conservative	270	260
Liberal	90	58
Labour	245	289

Naturally, optimism in the House always errs on the side of the Conservatives.

Japanese and Chinese Bonds.—The Sino-Japanese troubles have upset the market for the bonds of the two countries. Prices have been marked down this week as a precautionary measure, and margins have widened. The following table shows the recent trend of prices of various stocks:—

	July 31.	Sept. 29.	Oct. 14.
Chinese Government 5% Gold 1896	102	99	97
4½% Gold 1898	89	77½	73½
5% Gold 1912	43½	38	34½
5% Reorg. Gold 1913	68	63½	58
Shanghai-Nanking Rly. 5% Sterl.	45½	37½	35½
Tientsin-Pukow 5% debs.	16½	14½	12½
Chinese Engineering & Mining Co., £1 ord.	28/1½	31/3	28/-
Japanese Govt. 4% 1899	80½	62½	58
5% 1907	96	74½xd	70
4% 1910	76½	59½	53
6% 1924	102	92½	87
5½% Conv. 1930	99	107½	104½
South Manchurian Rly. 5% Bonds	102	92½	94
5% 1923	93	75	67½
4½% Ster.	97	85½	82½
City of Tokyo 5½% 1926	97	84½	77½
City of Osaka 5% Ster.	96½	89	87
City of Yokohama 5% Ster.	97½	97½	95

Dealings have been scarce, investors preferring to await the result of the negotiations at Geneva. Japanese bonds, for the most part, have reacted to a greater extent than Chinese. Owing to more encouraging news, quotations were steadier on Wednesday, but no great recovery can be expected till there is clear evidence that the mediatory efforts of the League of Nations Council have achieved definite success.

Chilean Bonds.—Satisfaction has been caused in London by the overwhelming victory of Señor Juan Montero at the Chilean presidential election. As the President-elect is a man of sound ideas regarding the maintenance of Chile's credit abroad, Chilean stocks have remained steady, with rises in one or two instances:—

	June 30.	July 31.	Oct. 7.	Oct. 13.
Chilean Government—				
5% 1909	65	45	20	20
5% 1910	70	45	30	30

Cosach 7% debs.	75	75	75	75

Prices of Government bonds are still at "default" levels, but a victory for the Left might well have placed them on the rubbish heap. Bondholders will hope that, under Señor Montero, the question of resumption of payments at the earliest date will receive earnest attention.

Interest Payments on "Young" Bonds.—The Bank of England announced, at the end of last week, that it had received information from the Bank of International Settlements that it was the latter's intention to effect, as nearly as possible, payment of interest on the bonds of the German 5½ per cent. loan of 1930 in sterling of an amount equivalent to the gold value of sterling current when the loan was issued. The market learned with satisfaction of the decision to pay on a gold basis (which was ratified by the board of the B.I.S. at this week's meeting), the bonds immediately rising from under 40 to 44. The revival, however, was short-lived, the present price of the stock being no more than 38½. The announcement, in fact, followed the terms of the German Finance Minister's statement which accompanied and formed part of the London prospectus of the loan. The relevant passage declared that "the bonds will be expressed and payable in the currency of the country of issue at the equivalent of its present gold value." The market, however, was inclined to ask, as a matter of curiosity, what the position would be if certain instalments of the next payment (which is due to be made on December 1st next) had already been remitted to London in sterling before the announcement of the British Government's decision to depart from the gold standard. Any deficiency in the amount available as a result of the subsequent depreciation of sterling would necessarily be required to be made good by someone—but by whom, exactly, it would be difficult to say, particularly in view of the present moratorium on Reparation payments under the "Hoover plan."

Earnings Yields of British Shares.—Although the Actuaries' Investment Index has been published for less than eighteen months it has already made itself invaluable to many investors—particularly "institutional" investors. The decision to extend its scope to include figures of yields "on earnings," as well as "on dividends," will be widely welcomed. The first issue of the new service gives figures, as at the end of each year since 1928 and at the end of last month, for the same companies and groups as are included in its share price index. The main results may be summarised as follows:—

Group.	No. of Securities.	Yield on Dividends.				Yield on Earnings.			
		Dec. 31, 1928.	Dec. 31, 1929.	Dec. 31, 1930.	Sept. 30, 1931.	Dec. 31, 1928.	Dec. 31, 1929.	Dec. 31, 1930.	Sept. 30, 1931.
Ordinary Shares.		%	%	%	%	%	%	%	%
Banks and Discount Cos.	11	5.19	5.78	5.38	7.13	6.24	6.82	6.33	8.80
Insurance Companies	24	3.88	4.64	4.66	5.91	5.85	8.06	6.18	7.57

The figures show a wide spread between different industries. Disregarding those sub-groups covering separate industries, in which the inclusion of "negative earnings" (i.e., losses) affects the comparability of the figures from a market point of view, it appears that in no sub-group is the investor satisfied with an earnings' yield of less than 8 per cent., except in the case of gas companies (7.45 per cent.) and of insurance companies (7.57 per cent.). He is, apparently, willing to accept a lower earnings' yield on coal shares (8.02 per cent.) than on bank and discount company shares (8.80 per cent.). The earnings' yield on brewery shares is no less than 13.77 per cent. On the shipping securities chosen by the Actuaries, the dividend yield is only 3.51 per cent., but the earnings' yield is no less than 29.24 per cent.—despite the fact that the group includes some "negative earnings." An element of time-lag must, of course, always be reckoned with. The yield on dividends is affected at once by the reduction or passing of a dividend, whereas the yield on earnings must await publication of a complete year's detailed accounts. The Actuaries have tackled the difficult problem, "What are earnings?" with customary thoroughness, and, though some of the rules adopted must necessarily be arbitrary, little fault can be found with their methods as a whole. They may decide, however, as time goes on, that small sub-groups—including, say, less than ten shares—may afford useful indices of share values, but much less reliable measures of earnings yields, particularly in unsettled times. A single company making a loss, possibly as a result of abnormal features in its own position, may upset the figure for the whole of a very small group. The Actuaries, in other words, may ultimately decide to reject, as unreliable, the figures for sub-groups which are too small to allow the so-called "law of averages" sufficient elbow room. In the meantime, users of the Index may concentrate attention mainly on those groups in which no "negative earnings" are included, or on those, like the "miscellaneous industries" group, which are sufficiently broad in their composition to obviate undue "weighting" by negative figures. In this connection, it would be useful if the Actuaries would state the number of companies in each sub-group which have "negative earnings."

Investment Trusts and the Slump.—Recent reports suggest that the slump in security values—particularly in those of bonds—is creating not a few problems for managers of British investment trusts. The older trusts have been writing-down their portfolios and accumulating reserves for many years against such an eventuality as the present. The Second Alliance Trust, for example, has issued a report showing that at July 31st last the market value of its securities was 11½ per cent. below book value, but that the depreciation was amply covered by reserve. This trust was established in 1883. Many of the post-war trusts, however, particularly those registered between 1926 and 1928, bought their stocks near the top of the boom. In theory, a trust company limits its losses by switching from less stable into more stable securities when markets lose their equilibrium; in practice, its scope in this respect is far more limited than is generally realised. In any case, a slump like the present,

Address.....

which has hit foreign bonds as well as equity shares, is too severe to enable the shrewdest manager to avoid depreciation over a large part of his portfolio, particularly if his company has not been in existence sufficiently long to accumulate very large reserves. The following table, which has been compiled from the reports of those post-war investment trusts which have published their figures during the last week or two, shows the extent to which the world-wide fall in values has left its mark on trust company accounts:—

Company.	When Registered.	Date of Valuation.	Depreciation in Investments.		
			1929. %	1930. %	1931. %
First Co-operative	1924	July 31	(a)	21.8	35.42
Mid-European Corp.	1924	July 31	Surplus	Fully covered.	17.00
Capital and National	1927	July 31	Not stated.	5.09	23.82
Tor Investment	1927	July 31	Surplus	Surplus	11½
City and International	1926	Aug. 31	Surplus	13.45(b)	33.95
London and Strathclyde	1928	Aug. 31	1.49	16.34	37.33
City and Foreign	1928	Aug. 31	Surplus	13.7	38.01

(a) Depreciation (amount not stated) more than covered by reserves, &c.
(b) Without allowing for general reserve.

The unfavourable showing as regards portfolio values stands in strong contrast to the stability of income shown by practically all British investment trusts. The latter feature is clearly brought out in the next table:—

Company.	Date of Balance Sheet.	Investment Income.		
		1929.	1930.	1931.
First Co-operative	July 31*	£ 134,392	£ 118,948	£ 97,906
Mid-European Corp.	July 31	171,381	199,980	182,953
Capital and National	July 31	57,236	61,661	60,779
Tor Investment	July 31	21,504	21,200	20,789
City and International	Aug. 31	111,665	116,598	105,330
London and Strathclyde	Aug. 31	49,323	51,807	51,100
City and Foreign	Aug. 31	15,968	23,847	19,393
Total		561,469	594,041	536,260

* Figures for two half-years in each case.

The drop in the aggregate receipts of the seven trusts in 1931 as compared with 1930 was only 9 per cent. All investment trust receipts, however, are affected by an element of time-lag, the figures for 1931, for instance, representing dividends and interest paid during the last twelve months on the shares in the trusts' portfolios, but actually earned, mainly, in 1930. The trusts, of course, are entitled to pay dividends from income even though their investments show capital depreciation. In view, however, of the relatively high percentages under the latter heading, in some cases, shareholders may expect to suffer some reduction in dividends. Prudent managers will increase their reserves at a time like the present, even though they may regard present prices as largely "artificial," and expect an appreciable revival in values later on.

Harrods' New Purchase.—Harrods, Limited, announce the purchase of the stock and goodwill of the Civil Service Co-operative Society, which conducts a general and department store business in the Haymarket, London, and in Aldershot. The premises in the Haymarket are to be closed on October 17, and the goods will be transferred to Harrods, where a sale will take place after the Election. The stock taken over has a value of more than £100,000. The Haymarket premises remain in the hands of the Civil Service Co-operative Society. This purchase marks a further stage in the expansion of Harrods, which already owns Dickins and Jones, and D. H. Evans, and Shoolbred and Company. Presumably, the results of this purchase have been satisfactory, and a large percentage of Shoolbreds' customers have gone over to Harrods—otherwise the latter would hardly be taking over the business of the Civil Service Co-operative Society. The Society's history has been chequered since it acquired in 1919 the Junior Army and Navy Stores. In recent years it has made losses, and in May, 1929, shareholders were asked to give

consent to negotiations for the sale of the Haymarket Stores, and for a return of the preference stock out of the proceeds. These negotiations failed. The shareholders were subsequently asked to assent to the cancellation of the cumulative dividends on their shares on the understanding that if a suitable opportunity arose for the sale of the Haymarket Stores, the whole of the capital paid up on the preference stock would be refunded and any surplus applied to the ordinary and deferred shares. The ordinary shareholders have not received a dividend since 1919-20, and the preference dividend has remained unpaid for the past ten years. The nominal capital of the company is £375,000 in £250,000 preference stock, £100,000 ordinary shares, and £25,000 deferred shares. Harrods now have an issued capital of £6,215,194, of which £4,000,000 is in preference shares. There are no debentures outstanding. Business was last done in the Civil Service Co-operative Society £1 ordinary shares at 1s. and in the 7 per cent. cumulative preference stock at £25.

Splintex Safety Glass Scheme.—This company's report is accompanied by details of a proposed capital reduction scheme. The year to June 30th last resulted in a loss of £20,192, making the accumulated loss £35,270, and the dividend on the 8 per cent. preference shares was again passed. It is proposed to write down the 159,740 £1 8 per cent. cumulative preference shares to 6s. 3d. per share, and the 1s. ordinary shares to 3d. per share, reducing the capital from £250,772 to £74,918 15s. Preliminary expenses of £20,000 will be written off, processes and patents will be written down by £69,517 to £1, land and buildings by £8,002 to £74,771, plant and machinery by £11,524 to £23,936, investments by £33,313 to £1, European rights by £14,629 to £1, and profit and loss debit by £35,270. On the liabilities side the mortgage will be increased by £2,400 to £33,040. After utilising the reserve fund of £10,221, some £420 will remain to form a contingency reserve. The arrears of twenty-seven months on the preference shares will be wiped off. Should the above scheme be agreed to, certain motor trade interests are prepared to take up, at par, the remaining 500,000 unissued 3d. shares, besides a substantial quantity of shares already held by two of the company directors. The scheme, at least, does not ask existing shareholders to throw good money after bad, but fuller details of the proposed "deal" with an outside interest should be furnished to shareholders.

Australian Stocks.—Australian Government securities have enjoyed a gradual appreciation in market value since the departure of the Mother Country from the gold standard. The extent of the rise in representative stocks is shown:—

	Price, Present Sept. 19.	Price.	Yield, per cent.			
			Flat.	Redemption.	£ s. d.	£ s. d.
Commonwealth 6%, 1931-41...	77	86	7 0 0	8 5 0		
Commonwealth 5%, 1945-75...	65	76	6 14 0	6 17 0		
New South Wales 5%, 1932-42	62	70	7 4 0	9 10 0		
Queensland 4%, 1940-50	53	60	6 13 0	8 4 0		
South Australia 6%, 1930-40...	76	80	7 11 0	9 11 0		
Victoria 5½%, 1924-34	75	78	7 1 0	14 16 0		
Western Australia 4%, 1942-62	60	62	6 12 0	7 3 0		

There are various reasons for the change in market sentiment. In the first place, there is considerable satisfaction over the figures of Australian foreign trade. For the financial year ending June, 1931, imports amounted to £60,160,000 and exports to £88,999,000, giving a favourable visible trade balance of £28,830,000 (of which £18,000,000 represented bullion exported, against £27,748,000 in the preceding twelve months). This result has been achieved partly by the drastic restriction of imports following on the prohibitive tariff imposed and partly by the stimulus to exports following on the depreciation in the Australian exchange. Before

the departure of Great Britain from the gold standard £100 sterling was valued at £130 Australian, and this exchange rate has not yet been altered. No doubt the Australian Government is loath to give up the advantages accruing to its export trade from the disparity between the Australian and British pounds. The effects of a double depreciation in the Australian pound in terms of gold will be to restrict still further the country's purchases from the gold countries and to make Australian wheat and wool cheaper in the British market than wheat and wool from other primary producers. How long this advantage can be maintained it is impossible to say. As long as the Australian pound stands at a big discount in relation to the British pound the extra burden of the external debt payments remains, but the fact that Australian exports sold on a gold basis will command a greater number of pounds sterling has the effect of reducing this extra burden. Further, the budgetary position has been improved by the conversion of the internal debt, which is expected to save over £6 millions a year. Actually the Australian budgets have not yet been balanced. The Premiers' Conference at the beginning of September estimated an aggregate budget deficit on the Commonwealth and State budgets of from £15 millions to £18 millions. The Australian banks have already agreed to provide £16 millions towards this deficit, but no more. It is urged that a firm stand by the banks may lead to further economies in the State budgets. The market is undoubtedly impressed by the changed attitude of Mr Lang, the recalcitrant Premier of New South Wales, who has promised that his Government will meet the interest payments due on its debt and has given some undertaking of good financial behaviour in future. It must not be forgotten, however, that Australia still has an unfavourable balance on her international account. The total interest payments on the external debt of the Government and public authorities amount to about £36 millions a year. The favourable visible balance of trade to June last was about £16 millions apart from bullion. The prospects of the export trade,

however, have improved. The wool clip is of good quality and possibly of record weight, and the season so far has been favourable for wheat, although the acreage has been reduced. The fact that exports of Australian produce will command a greater number of pounds sterling eases the transfer problem, and gives greater confidence to those who believe that Australia will be able to avoid default.

Central Argentine Railway.—The report of the Central Argentine Railway for the year ended June 30th last, shows shareholders why their ordinary dividend was cut from 5 per cent. to 1 per cent. As will be seen from the table below, the company actually secured higher net operating receipts than in the previous year, despite a drop of £371,000 in gross receipts. This result reflected the success of the company's efforts to reduce working costs, which fell by £458,000, their percentage of gross receipts being 73.07, against 74.69 in 1929-30. Unfortunately, the railway had less to bring in "from certain specific reserves created in previous years," while exchange losses cost shareholders no less than £790,000, against £125,000 in 1929-30. In short, the absence of a final dividend this year was due partly to the directors' unwillingness to deplete their reserves on last year's scale, and partly to the fall in the Argentine peso, the latter phenomenon itself costing ordinary shareholders nearly 2½ per cent. in dividend. The results for the last three years are shown:—

Years ended June 30.	1929.	1930.	1931.
Gross receipts	14,251,699	11,567,717	11,196,659
Working Amount	9,817,898	8,639,856	8,181,903
Expenses { Per cent. of gross receipts	68.89%	74.69%	73.07%

Carried forward	312,174	285,230	553,131

* Including £300,000 additional contribution to Renewals Fund.
† Ordinary stock.

During the year, some £3,012,000 5 per cent. Redeemable Debenture Stock was issued. The total capital expended during the year was £4,784,525. The number of passengers carried decreased by 1.1 per cent. The total passenger receipts, however, fell by 9.3 per cent., continued stagnation of commerce and unsatisfactory conditions in rural districts bringing about a heavy curtailment of long-distance travel and impelling the company to offer increased cheap fare facilities. Goods traffic increased in tonnage by no less than 18.7 per cent., but receipts showed an increase of only 1.1 per cent. This was a disappointing result for a year in which the amount of maize transported was the highest in the company's history. Increased revenue from the movement of crops, however, was almost completely swamped by a heavy drop in "general merchandise" traffic. The fall in imports, which benefited the trade balance of the Argentine, reduced the tonnage of such traffic, handled by the company, to the lowest figure for any post-war year.

Tea Share Outlook.—Tea shares have shown appreciable strength recently after a long period of stagnation. Although buyers have shown disinclination to go much further, the undertone of the market has remained steady

this week, and the advances made from the lowest point of the year are substantial:—

Share.	Highest, 1930.	Lowest, 1930.	Lowest, 1931.	Present Price.	Yield at Present Price.
Assam Company (£1)	36/-	24/6	9/9	15/-	3 6 9
Jhansia (£1)	51/6	38/-	22/6	30/-	6 13 4
Jokai (£1)	75/6	48/9	19/3	28/9	2 16 0
Consolidated Tea (£10)	26½	13½	6½	8½	2 17 0
Eastern Produce (£1)	90/-	63/9	34/4½	38/9	11 13 0
Darjeeling Consol.					
dated (£1)	72/6	55/9	44/4½	52/6	7 12 3
Anglo-Ceylon and					
General (£1)	37/2½	24/-	13/9	15/-	3 6 9
Doom Dooma (£1)	83/9	72/6	38/4½	47/6	8 8 6

The movement is associated with a sharp rise in the price of the commodity at recent weekly auctions. Last spring the market showed signs of collapse, Northern Indian teas fetching an average of only 7.73d. in the London sale rooms at the end of June, while the average for Ceylon teas fell to 10.28d. and that for all teas to 8.75d. By the end of September the average for Northern India teas had recovered to 1s. 3.74d., that for Ceylon to 1s. 6.08d., and that for all teas 1s. 3.07d. A setback then occurred, but the influence of a rise of about 75 per cent. in prices, from the lowest, has, naturally, profoundly affected market psychology. The abandonment of the gold standard has been one factor in the equation—incidentally, it has given a differential advantage to the British producer against the Dutch grower, who remains on the gold standard—but other influences have been at work, including good quality and better marketing. Earlier in the year unduly large supplies of Ceylon tea were coming to London, some of which would in more normal times have been marketed at Colombo. Exporters from Ceylon, however, have recently been regulating their shipments with more reference to London's absorptive capacity. At the Harrisons and Crosfield meeting on Tuesday Mr Eric Miller was relatively pessimistic as regards the outlook for rubber (declaring himself an unrepentant advocate of Government intervention), but much more cheerful as regards the tea industry. He showed that, although the total output in India, Ceylon and the Dutch East Indies last year, under a restriction scheme, was 57 million pounds below the 1929 level, the figures for the first eight months of the current year showed only an increase of 9½ million pounds over those of 1930, despite the abandonment of restriction. World consumption fell by 16 million pounds in 1930, but in 1931, in spite of world-wide depression, is expected to be at least equal to the 1929 figure. London tea stocks at the end of last month were 28 million pounds below the corresponding figure for 1930 and 7 million pounds below that for 1929. The real decline, however, may be a little less than these figures imply, since clearances in the early part of last month were exceptionally heavy owing to anticipations of the reimposition of a duty on tea in Mr Snowden's Emergency Budget. Mr Miller's figures, altogether, bear out the opinion we expressed in our last review of the outlook (see the *Economist*, September 12, 1931, p. 479), that the position of tea was far more healthy than that of the majority of primary commodities.

Cam and Motor.—Twelve months ago, writes our mining correspondent, the end of this Rhodesian enterprise appeared to be in sight. The Cam and the Petrol lodes were showing unpayable results at depth, while on the Motor the profitable runs of ore proved short. During the past session a noteworthy improvement has occurred in all three directions. As a consequence, despite the extraction of the record tonnage of 292,000, the ore reserves, at 878,000 tons, display a small increase, though the value is about 2s. 6d. down at 48.1s. In this connection mention may be made of the success of the measures taken to reclaim material previously written off. In the last month of the company's financial year just over 9 per cent. of the ore milled came from this source. At £191,600 the net mining profit for 1930-31 fell £12,200 short of the total for the preceding period. Writings off totalled £25,800, in place of £31,960, but on the present occasion £14,680 has been placed to reserve. This appropriation,

with the £35,320 standing to the credit of share premium account, makes the round sum of £50,000. The dividend total of 17½ per cent., comparing with 20 per cent., leaves £4,460 to go forward, against £12,070 brought in. At the date of the balance sheet the sums due (including the final dividend of 10 per cent.) exceeded the liquid assets by about £18,000. A feature of last year's operations was a reduction in costs accompanied by an improvement in the ratio of extraction. These changes are attributable partly to increased efficiency but mainly, it would seem, to a decrease in the antimony contents in the Motor lode, which has simplified the treatment. Almost contemporaneously with the issue of the annual report of the company came the announcement of Rhodesia's departure from the gold standard. It is calculated that on the basis of gold at 106s. 6d., and with expenses at that level, the Cam would earn an additional 15 per cent. That the market price of the shares should have made so little response to this prospect may be attributed to the existence of doubts on several points.

San Francisco Mines.—Some shareholders appear to have been much surprised and perturbed at the decision of this company's directors temporarily to suspend production at the end of 1931. Actually the determination to follow such a course need not have occasioned any surprise had it been arrived at earlier. Save for a trifling surplus in May, operations each month from April inclusive have resulted in a loss. For September the amount was \$48,407, although the return had the benefit of a plus adjustment of \$22,750. The latest deficit is the largest yet shown. With metals on the up grade as measured in sterling, it is at any rate on the cards that the suspension may not be carried into effect. It may be recalled that an interim dividend of 10 per cent. was paid on account of the year ending September 30, 1930, but that there has been nothing since.

COMPANY MEETINGS, &c.

HARRISONS AND CROSFIELD, LIMITED.

MR ERIC MILLER'S REVIEW OF THE TEA AND RUBBER POSITION.

Mr Eric Miller's speech at the annual meeting of Harrisons and Crosfield, Limited, on Tuesday, October 13th, included his usual review of the tea industry, in which he stated that the present price of common Indian tea was well below the average cost of production and that a continuance of too low prices must eventually result in the closing down of many estates. On the other hand, the latest crop figures showed that the increase in output during 1931 was comparatively small and consumption was expected to increase this year in spite of the general world-wide depression, as low prices induced most of the countries in the East to absorb more tea and India was already ahead of normal.

For years past he had regularly stressed the importance of quality production, and the course of the market had again pointed the moral, as throughout the whole year good prices had been paid for fine teas, and the growers who had suffered most had been those who had been attempting to reduce costs by producing the largest possible crops irrespective of the capacity of their factories to handle them properly.

Referring to the rubber industry, Mr Miller pointed out that cheapness of price could only give minor encouragement to consumption because the raw rubber cost was a relatively small part of the price of most articles made from rubber, and also that research on technical improvements prolonged the life of the finished article so that in the case of motor tyres mileage had been trebled during the last ten years.

He showed that leadership and example within the industry were incapable of remedying the situation and that the alternatives were either for producers to drift along penuriously until many of them had exhausted their funds, or for the Governments of the principal rubber-producing countries to collaborate in the preservation of the industry. He alluded to international agreement among the Governments of the tin-producing countries, including the Netherlands Indies, and expressed the hope "that the latter, with out whose co-operation nothing can be done, will soon express their willingness to join an international conference to consider the rubber problem for the benefit of all concerned."

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the ten days ended October 10, 1931, amounted to £13,430,000 against ordinary expenditure of £29,833,900. After allocating £550,828 to Sinking Fund and having allowed for a decrease in Exchequer Balances of £21,420, the operations for ten days, as shown below, increased the National Debt by £16,934,000 to £7,714,728,000:—

(000's omitted.)

Bank of England Advances ..	+ 2,750	Treasury Bills	— 1,250
Public Dept. Advances	+ 32,900	National Savings Certificates ..	— 950
British Loans Abroad	+ 17,509	Principal of British Government Loans Abroad	— 16,460

GOLD MOVEMENTS.

There have been no bullion operations on foreign and Colonial account announced at the Bank of England during the week ended Thursday, October 15th.

Messrs. Samuel Montagu and Company write on October 14 1931, as follows:—

GOLD

The Bank of England gold reserve against notes amounted to £135,239,162 on the 7th instant, as compared with £134,817,860 on the previous Wednesday. No South African gold was offered in the open market yesterday, but to-day about £40,000 from West Africa was disposed of to Continental buyers at the fixed price of 106s. 6d. per fine ounce. Southern and Northern Rhodesia have now departed from the gold standard, it being announced on the 12th instant that both these countries had decided to adopt sterling currency. Quotations during the week :—

	Per fine ounce.	Equivalent value of £ sterling

Average	106s. 10.83d.	15s. 10.7d.

SILVER.

The market developed a firmer tendency and compared with last week prices have ruled considerably higher. Movements in the United States exchange and the developments in the situation in Manchuria between China and Japan at first tended to restrain sellers, and moderate buying, mostly to cover bear sales, carried prices to 17½d. for cash and 17¾d. for two months' delivery by the 12th instant. At this level, however, China and America were more disposed to sell and yesterday saw a fall to 17½d. and 17½d. for the respective deliveries, which was followed to-day by a further fall to 17½d. and 17½d. The off-take continues poor and yesterday the discount on cash silver increased from ½d. to ¾d. Owing to the uncertainty of the factors which at present govern the market, the tendency still remains very undecided.

CARDIFF.—There has been no appreciable change this week in the position on the Cardiff coal market. The Portuguese State Railways are stated to be inquiring for 125,000 tons of smalls over November–March, or 250,000 tons over November–July, and the Brazilian Central Railways for 80,000 tons of two-thirds large and one-third small for delivery before the end of the present year; there has been a little more activity also in shipments at the local docks, but the volume of business continues very restricted, and many of the collieries have found it difficult to keep working without partial loss of time. Quotations are unaltered and are ruling nominally on the minimum schedule basis for practically all grades. There has been a spurt at Swansea in the demand for anthracite coals, and last week's total shipments were the largest recorded for some months. The following are the current approximate quotations:—Best Admiralties, 19s. 6d. to 20s.; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 18s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 38s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s.; foundry coke, 30s. to 36s. 6d.; patent fuel, 18s. 6d. to 19s. 9d.; pitwood, ex ship, 26s. to 26s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron continues firm, and the position of makers has been considerably improved. Local and inland consumers are buying steadily for their requirements two or three months ahead, and further sales have been made to Scotland, which brings the total sold to that market to quite a considerable figure. Stocks are now being drawn upon to meet current requirements, and the depletion will be greater when deliveries under recent sales get into full swing. It may then be found necessary to increase the production in order to cope with all demands, and it is expected that makers will favour this procedure rather than advance prices, which would have a detrimental effect by checking the improved demand that has set in. It is stated that the special concessions to Scotch consumers are now withdrawn, and that the full official prices will operate for future purchases. At the market on Tuesday increased interest was shown in business, several transactions of importance being reported. Official prices were unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s. f.o.b. or f.o.t. Some sales were reported on export account, but so far the quantities sold are only of small dimensions. The position in regard to hematite is strong, and a steady flow of new business is coming to hand, both for home and Continental destinations. Large stocks are, of course, still held at the different producing works, but recent sales are making an inroad into these. There are only two furnaces producing on the Tees at present, but one or two more are likely to go in very shortly. For ordinary mixed numbers for delivery up to the end of the year 65s. is the present figure, and the tendency is upwards. In the finished trades the demand is more active. Some good orders have been booked recently, and the prospects for further improved business is encouraging. The demand for sheets is better at recent advances, 24-gauge galvanised corrugated sheets are now quoted at £10 and 24-gauge black sheets £8 5s. Mills producing semis are well employed owing to the suspension of offers of Continental material. Prices of steel for home under the rebate scheme are unchanged, viz.: Plates, ½ in. up, £8 16s.; angles, £8 7s. 6d.; joists, £8 15s. Heavy steel rails are £8 10s., and iron crown bars £10, both for home. There is no buying of foreign ore, and prices are quite nominal. For best Bilbao rubio, 17s. 6d. c.i.f. is now indicated as a probable price for early delivery, but this is purely an estimate, as there is nothing to actually fix values. There is not much demand for coke with so few furnaces blowing, but producers are firmer in their ideas of price and now name 16s. 6d. for good average qualities delivered consumers' works for early delivery, and 17s.

a month or two ahead. The number of blast furnaces in operation in the district is unchanged at 18.

SHEFFIELD.—The advantage which should accrue to export trade through the depreciation of our currency has not yet had much effect in stimulating business, although here and there one hears of increased booking of orders from overseas. The trade position is still in a very disturbed state and is not likely to settle until a new Government is formed. Comparatively little buying of imported materials is taking place. There is much negotiation with foreign suppliers of materials with respect to contract payments. Efforts are being made to obtain premiums on invoices sufficient to indemnify the suppliers for loss on the exchange. This movement is being resisted, although one hears of cases of compromise. Swedish iron, steel and ferro-alloys are being advanced about 15 per cent., which buyers here are not willing to pay. Some stocks have, however, been sold at the old prices. Buying of Continental crude steel has almost ceased. Prices of British material are firm but unaltered. The open-hearth steel department is still slack. Increased inquiry suggests more business at a later date. Prices of American tools are being advanced. Those of American files are not yet changed as there are large stocks in this country. Returns for September show considerable imports of crude steels and a substantial outward trade in the more finished steel goods. The outlook for tools and certain classes of cutlery is considered to be brighter, as foreign tools will be expensive in the near future. There is a fair amount of confidence about.

GLASGOW.—Some of the smaller engineering firms and makers of fittings, &c., for engineers, instrument makers and others are decidedly busier than they have been for some little time, and in some cases have sufficient work on hand to ensure employment for several months. At the steel plants the same improvement is not taking place and on the whole the situation in the Glasgow area shows little change in any of the heavier departments. The demand for semis is small and in the tube trade things remain quiet. Sheet makers are fairly well employed and the export demand for black sheets is maintained, as also that for both black and galvanised for home users. Prices of black are unaltered and for galvanised quotations for 24-gauge galvanised and corrugated are 7s. 6d. per ton less than a week ago. There is only a very limited demand for bar iron or re-rolled steel bars.

CARDIFF.—On the Swansea Metal Exchange on Tuesday conditions in the tinplate trade were stated to be comparatively quiet. The factories are operating a little more regularly, but they are producing principally for stock, in the expectation of an expansion of demand in the near future. Quotations are unchanged at 14s. 6d. to 15s. per basis box. Welsh steel bars are unaltered at £5, but it is reported that rebates are being allowed to tinplate works not using foreign bars. Imports of the latter last week were again heavy, and totalled over 9,000 tons, compared with 5,500 tons the previous week. Deliveries of foreign blooms and billets were also exceptionally large, totalling over 11,000 tons, compared with less than 3,000 tons the previous week.

OTHER METALS.

TIN.—There has been an improvement in the international situation of tin. Prices in terms of gold advanced following considerable buying orders in the United States. This expansion in buying is, of course, partly explained by the seasonal increase in the activity of the motor industry in the United States. In New York the metal was quoted at 23½ cents per lb. on Wednesday, against 22½ cents per lb. a week ago, and 25.00 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £130 15s. to £131 per ton, compared with £124 2s. 6d. to £124 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 29,905 tons, show a decrease of 414 tons on the week.

COPPER.—Although no change has taken place in the price of copper in the United States, there has been an improvement in demand during the past week. In London, too, the volume of transactions has increased at advancing sterling prices. "Domestic" spot has again been quoted officially at 7 cents in New York, against 7.625 a month ago. Wednesday's official closing price for "standard cash" in London in terms of sterling, at £35 10s. to £35 12s. 6d., compares with £33 16s. 3d. to £33 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 22,779 tons, show a decrease of 342 tons, while stocks of rough copper, at 1,324 tons, are 100 tons smaller.

LEAD.—This metal has been a little steadier this week. New York quotations remained unchanged at 4.00 cents per lb., but London prices in terms of sterling advanced slightly. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £13 7s. 6d. to £13 8s. 9d. per ton, compares with £12 15s. to £13 on the corresponding day last week.

SPELTER.—The market in spelter has again been depressed, and prices in New York declined further from 3.575 cents per lb. to 3.45 cents per lb. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," at £12 16s. 3d. to £13 6s. 3d. per ton, compares with £12 3s. 9d. to £12 16s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £95 per ton, and at £215–£220 per ton respectively, have been maintained at last week's level. Antimony advanced from £25–£25 10s. to £25–£26, while quicksilver was slightly cheaper at £19 17s. 6d. to £20 5s. per bottle, against £20 to £20 15s. a week ago.

TEXTILES.

THE COTTON TRADE.—Manchester. The market has continued to present a firmer tone and the tendency in most quarters has been for prices to harden. This situation has given confidence to buyers of yarn and cloth, and the improved demand has been well maintained. Here and there, however, the stiffer rates quoted and the extended delivery dates required have checked trade. Most producers are much less anxious to sell than a month ago. In the cloth market the most active outlet has again been China and a considerable inquiry has been dealt with. Encouraging sales have been put through in grey and white shirtings and printed and dyed goods. The business offering for India has shown some expansion, and rather more activity has occurred in light bleaching descriptions, chiefly for Madras and Karachi, but numerous offers put forward cannot be entertained. Only scattered transactions have been reported for Egypt and the Near East, but freer operations continue to take place for Africa, South America and the Continent. An irregular business has been done in home trade fabrics. It is still difficult to restart weaving sheds that have been stopped, but numerous manufacturers are now running more looms than a few weeks ago. Rates in American and Egyptian yarns have tended to harden and the demand continues to improve. A fair amount of business has been done from day to day in home counts. Active buying has again been reported for China, especially in two-fold descriptions. Doubtless are busier than for a long time back.

THE WOOL TRADE.—Bradford. There has been a slight improvement in the activity of combing, spinning and weaving, coupled with an encouraging interest in the raw material. A substantial expansion in business is, however, unlikely during the present period of political uncertainty. It need not be ignored that the last London sales did not leave values for the raw material at the highest point, and that subsequently there has been no disposition to force the pace unduly in Australia or South Africa. The situation in the latter centre is extremely disappointing, because the rate of exchange makes it impossible to land wool here at a price satisfactory to the grower. The time is approaching for the disposal of the New Zealand and South American clips. No great advance in values is at all likely. Very little can be said about the Bradford market. Prices for merino tops are steady. Some firms seem disposed to sell at reasonable prices, these evidently having no desire to see dearer wool. The consumption of merinos is good, medium and low crossbreds being the qualities in which the most improvement is needed. Prices for the two latter are, if anything, just slightly in buyers' favour.

THE JUTE TRADE.—Dundee. With prices of raw jute still showing a tendency to advance, there is a renewed interest on the part of buyers of jute yarns and cloth. Speculators are manipulating the raw jute position, and a good deal of "bear" covering is reported from Calcutta, but the Indian Mills are not operating to much extent. Arrivals of the fibre into up-country stations continue to be very small compared with normal, and this in turn affects the quantities coming into Calcutta. Spinners here have purchased a fair number of parcels of raw jute during the period of the advance, and they have paid up to £19 10s. for Daisee assortment full and also short group, October/November shipment. Daisee and Tossa also short group, October/November, and white jute has been qualities have come in for most attention, and white jute has been more or less neglected. Tossa-3 has been sold freely at from £19 15s. to £20 10s. for short groups, October/November. The value of best First Marks is now £23, and good Lightnings have been sold at from £20 10s. to £21 5s., October/November. Daisee-3 has been disposed of at up to £19 5s., and four's at £18, while Tossa-2/3 is quoted at £20 15s. for the full group, £20 10s. for three's, and £18 10s. to £19 for four's, October/November. Further business has been transacted in jute yarns. Hessian descriptions have been sold at from 2s. 1½d. to 2s. 2d. for common 8 lb. cops, and 2s. 2½d. to 2s. 3d. for 8 lb. spools, the higher rates now being very firmly adhered to. Twist has been done at 3½d. to 4d. for 3-ply 8 lb., and sacking yarns are firmer at 2½d. quoted for 24 lb. warp, and 3½d. for 8 lb. chains. Rove has been turned over at £20 10s. to £21 10s. for 48 lb. and £18 10s. to £19 for 200 lb., with sellers now at not less than £21 and £18 10s. respectively. The finer yarns are quiet, but steady at from 3s. for second quality 8 lb. Rio warp, 2s. 8d. for third, and 2s. 5d. for fourth. Carpet yarns have been fairly freely dealt in at 3½d. for 14 lb. warp. Cloth business has generally been quiet, but a number of manufacturers have secured fair orders, and prices are very steady. The lowest for 10½ oz. 40 in. Hessians is 3½d., and for 8 oz. 2½d. Works as a rule are better employed, and longer hours are being worked, while looms which have been standing idle have been re-started. Linoleum Hessians have not experienced much of an increase in business, and the demand for heavy goods has continued only of a moderate extent. Calcutta goods are all firmer in sympathy with the raw material, and also because of an improved business done, especially in heavy goods, Australia being a notable buyer of the latter.

THE GRAIN MARKETS.

WHEAT.—After reaching its lowest point a week ago, the downward movement in wheat prices at the principal international markets has given way to a firmer tendency. The immediate reason for this improvement is to be found in the temporary expansion of demand in several countries. Whether this advance will mark the beginning of a definite upward movement in wheat values in terms of gold it is as yet too early to say. The International Institute of Agriculture in Rome has estimated the European wheat crop at about 1,370 million bushels, which is almost equal to that of last year. The total production of the northern hemisphere (excluding China and Russia) has been estimated by the Institute at 3,050 million bushels, a decrease of 145 million bushels on last year. The crops of the southern hemisphere are progressing satisfactorily, but it should be remembered that the acreage under wheat has been severely reduced in Argentina and Australia. If the above estimates prove correct, the world's production will therefore be only slightly smaller than a year ago. Visible supplies at the end of the last crop year amounted, however, to 463 million bushels against 412 million bushels on August 1, 1930. It appears, therefore, that the estimated decrease in this year's world production is not sufficiently large to bring about substantial inroads into stocks, and on that assumption it is improbable that values in terms of gold will be established on a substantially higher level in the near future. Quotations in London, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 30s. per 496 lbs., as compared with 28s. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 27s. 9d., against 26s. 3d.; No. 3 Northern Manitoba, Atlantic, ex ship, 26s., against 24s. 9d.; Russian, on sample, 23s. to 27s., against 22s. 6d. to 27s.; Australian, ex ship, 27s. to 28s., against 25s. 6d. a week ago.

WHEAT FLOUR.—In sympathy with wheat, foreign flour has slightly risen in value in terms of gold. North American shipments, at 283,000 sacks, show an increase of 131,000 sacks as compared with the previous week. Of this total, 123,000 sacks have been consigned to Europe. There has been a good demand for flour in this country, but "home milled" has remained unchanged. Quotations in London, Wednesday: Straight run, delivered country, 21s. per sack of 280 lbs., as compared with 21s. last week; delivered London, 20s., against 20s. Manitoba patents, ex store, 24s. to 27s., against 24s. to 26s.; and Australian, ex store, 18s. 6d. to 19s., against 18s. to 18s. 6d. a week ago.

BARLEY.—Barley has been bought in larger quantities this week at rising prices. In Winnipeg, December "futures" advanced from 30½ cents per bushel on Wednesday last week to 31½ cents per bushel on the corresponding day this week. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 24s., as compared with 27s.; Russian, landed, 18s. 9d. per 400 lbs., against 17s. 3d. a week ago.

OATS.—The market for oats has been steady and prices in terms of gold have been slightly higher, with a corresponding rise in sterling prices. Quotations in London, Wednesday: "River Plate" landed 18s. 6d. per 320 lbs. as compared with 17s. 6d. last week; "River Plate," ex ship, 17s. 3d. to 17s. 9d., against 16s.; "Chilean White," landed, 25s. 6d., against 24s. 6d. a week ago.

MAIZE.—Although shipments of maize from the Argentine are still heavy, the demand is sufficiently large for their absorption. During the past week there has even been an advance in maize quotations at the principal markets in terms of gold with a proportional rise in sterling prices. Quotations in London, Wednesday: "Plate" landed, 18s. per 480 lbs., as compared with 16s. 6d. last week; "Plate," ex ship, 16s. 6d., as against 14s. 9d. to 15s. 3d.; "Plate," November–December, 17s., as against 15s. Yellow maize meal, ex wharf, was quoted at £5 5s. per ton, against £5 5s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931–32, 1930–31, 1929–30, 1928–29:—

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £2,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low. Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £83,000,000. Annual Income £11,800,000. Full particulars on application.

MUTUAL AUSTRALIAN PROVIDENT SOCIETY Established 1849.

The visible supply of wheat in Canada, at 47,567,000 bushels, shows a decrease on the week of 1,737,000 bushels. Supplies a year ago stood at 68,144,000 bushels.

OTHER FOODS.

SUGAR.—There has been more activity in raw sugar at the principal international markets. "December" futures in New York were quoted at 1.38 cents per lb. on Wednesday, against 1.37 cents per lb. a week ago. The New York market remained firm, despite considerable selling by producing interests. Sterling prices of raw "futures" advanced, but quotations for "British refined" remained unchanged. Wednesday's sales of "raws" include "December delivery" at 6s. 9½d. to 6s. 10½d. per cwt., against 6s. 8½d. to 6s. 9½d., and "March," 1932, at 6s. 11½d. to 7s. 0½d. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.

45 East 65th Street, New York, N.Y.

COFFEE.—At this week's auction in London business was dull, and with the exception of outstanding qualities prices were slightly easier. Last week's movements of coffee in London were as follows: Brazilian, landed, 123; delivered for home consumption, 297 bags; exported, 42; stocks, 2,104 bags, against 1,316 bags last year. Central American, landed, 1,162 packages; delivered for home consumption, 2,883; exported, 3,470; stocks, 77,718 packages, against 53,111 a year ago. Other kinds, landed, 1,326 packages; delivered for home consumption, 3,690; exported, 2,021; stocks, 64,545 packages, against 69,541 a year ago.

COCOA.—Cocoa has experienced a better demand during the past week, and in New York "December" futures were quoted at 4.59 cents per lb. against 4.46 cents per lb. a week ago. In London, too, business has been a little better, although sellers asked higher prices. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, November-January, at 25s. per cwt. f.o.b. London contract, shows an advance of 6d. Last week's movements of cocoa in London were as follows: Landed, 432 bags; delivered for home consumption, 6,307 bags; exported, 303 bags; stocks, 176,064 bags, against 183,779 last year.

TEA.—The quantities catalogued for this week's auction comprised 64,247 packages of Indian, 20,430 packages of Ceylon, and 9,873 packages of Java and Sumatra tea. Slightly lower prices have been realised at this week's auctions, particularly for Indian tea, and a considerable quantity of the latter has been withdrawn. It must, however, be remembered that the quantities offered for sale were considerably larger than a year ago. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mining Lane on Garden Account:—

figure of £60.5 millions, thereby making money less plentiful. The two reasons are probably complementary, as with less cash at their disposal the clearing banks had probably to call in order to bring their weekly cash ratios up to the customary level. This suggests that it can hardly yet be said that the banks have abandoned window-dressing as they were recommended to do by the Macmillan Report.

Last week witnessed an unusually big demand for Treasury bills, applications for the £40 millions on offer reaching £61.5 millions. As a result the average rate fell to £5 10s. 5.56d. against £5 11s. 4.63d. per cent. last week and to some extent the market missed the tender. There is no doubt that applications were stimulated both by the wide margin current a week ago between money rates and the yield on Treasury bills, and also by the turn of about $\frac{1}{2}$ per cent. between the Treasury bill issue rate and the rate obtainable upon hot Treasuries. It is also possible that some foreign applications for Treasury bills were received, but though the strength of sterling encourages this view, there is no direct confirmation. Now that money is tighter, Treasury bills are less profitable to the market, though they still give a good return compared with earlier in the year. On the other hand, the fact that last week's tender was partially missed meant that there was a keen demand for hot Treasuries, and dealings were reported on Monday down to 5 $\frac{3}{4}$ per cent. Some prospective buyers, however, held off until later in the week, or even went without their normal week's quota altogether.

	Oct. 1, 1931.	Oct. 8, 1931.	Oct. 15, 1931.	Oct. 22, 1931.	Previous Rate and Date Changed.
Bank Rate	6	6	6	6	4 $\frac{1}{2}$ (Sept. 21, '31)
Banks' Deposit Rate..	4	4	4	4	2 $\frac{1}{2}$ (Sept. 21, '31)
Discount { Call	4	4	4	4	2 $\frac{1}{2}$ (Sept. 21, '31)
Houses { Notice	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	4 $\frac{1}{2}$	2 $\frac{1}{2}$ (Sept. 21, '31)
Market rate (3 months' bills)	5 $\frac{1}{2}$ -7	5 $\frac{1}{2}$ -7	5 $\frac{1}{2}$ -7	5 $\frac{1}{2}$ -7	...

Commercial bills are still subject to very wide quotations. German renewals are again quoted at 5 $\frac{1}{2}$ per cent., and there is an obvious reluctance in the market to take them without examination. It is also reported that since the standstill agreement came into force, London credits for Germany have in some cases been reduced to the amount of bills actually outstanding against them at the operative date of the standstill agreement. Other three months' bank bills when available are dealt in at 5 $\frac{1}{2}$ down to 5 $\frac{3}{4}$ per cent., and as already stated, hot Treasuries are wanted at still lower rates. There is a fair demand for Treasuries to be paid for on Saturday, as by taking these up on that day and selling them at a profit early in the following week, remunerative employment is found for money over the week-end. This week the demand for short bills fell away.

The Bank return reveals a contraction of £1.5 millions in the note circulation, and it is noticeable that the trend of the note circulation is exactly the same this autumn as in previous years. Allowing for a small net change in the Bank's gold holdings, the Reserve has risen by £1.8 millions, and the Proportion now stands at 42.9 per cent. Public deposits are £4.7 millions higher as a result of discrepancies between the dates of Treasury bill payments and maturities. Discounts and advances have run off by £3.7 millions, and other securities by £4.1 millions, but Government securities have risen by £2.6 millions. These movements possess little significance. The net result is that bankers' deposits are £9.6 millions lower on the week, and as already described, this has made money less easy. The Bank's gold stocks are now equivalent to 28.1 per cent. of its outside liabilities, including therein both notes in circulation and deposits. This is 6 $\frac{1}{2}$ per cent. less than the corresponding ratio a year ago.

On Thursday evening of last week the New York Reserve Bank raised its rediscount rate from 2 $\frac{1}{2}$ to 3 $\frac{1}{2}$ per cent. This followed the previous week's increase from 1 $\frac{1}{2}$ to 2 $\frac{1}{2}$

per cent., and two increases of a whole point in successive weeks are unprecedented. The other Reserve Banks are slowly coming into line, but those of Cleveland, Atlanta and Kansas City still maintain rates of 3 per cent. The Richmond and Dallas rediscount rates are at 4 per cent., while those in the remaining centres stand, like New York, at 3 $\frac{1}{2}$ per cent. The general impression is that the increase is designed partly to check the gold efflux, and partly to attract hoarded notes back into the banks. Gold losses to October 21st amounted to \$746,000,000, shipments accounting for \$329,000,000 and earmarkings for \$417,000,000.

Call money in New York has been adjusted to 2 $\frac{1}{2}$ per cent., against 1 $\frac{1}{2}$ per cent. a fortnight before; but early this week it was obtainable "outside" at 2 per cent. Open market rates on bankers' acceptances were raised from 2 $\frac{1}{2}$ to 3 $\frac{1}{2}$ per cent. The new National Credit Corporation is now functioning, and the Treasury has announced that its gold notes will be accepted as collateral against deposits of Government funds. This will release existing collateral, consisting of paper eligible for rediscount at the Reserve System, and so indirectly the foundation of the Corporation will enable member banks to obtain fresh credit, and will provide the Reserve System with additional eligible paper. This will ease the situation if the gold drain continues. The October Federal Reserve Bulletin announces that the earlier gold losses were easily replaced by the discount and purchase of acceptances and other eligible paper, so that the amount of free gold in the possession of the Reserve Banks is substantially unchanged. New York bankers are resisting strenuously the alleged French pressure to enforce higher rates in New York, but reports of French action of this kind should be received with great reserve, especially as this week the Banque de France is believed to have bought \$20,000,000 of American bankers' acceptances.

The Foreign Exchange market was rather more active this week, and fluctuations were frequent and often wide. Sterling, after opening weakly, recovered shortly afterwards and moved strongly at the close against all the important currencies. The New York rate went from 3.87 $\frac{1}{2}$ to 3.94 $\frac{1}{2}$, after touching 3.96 $\frac{1}{2}$. Montreal lost seven points at 4.44. Paris moved from 98 $\frac{1}{2}$ to 100 $\frac{1}{2}$ and Brussels from 27 $\frac{1}{2}$ to 28 $\frac{1}{2}$. Milan lost $\frac{1}{2}$ at 75 $\frac{1}{2}$, and Madrid $\frac{1}{2}$ at 44 $\frac{1}{2}$. Amsterdam weakened from 9.55 to 9.75. Berlin lost $\frac{1}{2}$ at 17.00. Switzerland was considerably weaker at 20.10. The Scandinavian currencies without exception moved in our favour, Stockholm being quoted at 16.90 and Oslo and Copenhagen at 17 $\frac{1}{2}$. The South American exchanges remained largely nominal in view of the restrictions, Rio being 3 $\frac{1}{2}$ d., Buenos Aires 32 $\frac{1}{2}$ d., and Montevideo 21d. In the Far East the rupee was firmer at 1s. 5 $\frac{3}{4}$ d., but the yen weakened from 2s. 6 $\frac{1}{2}$ d. to 2s. 5 $\frac{3}{4}$ d. Forward dollars were at $\frac{1}{2}$ cent and $\frac{1}{2}$ cent discount for one and three months respectively. Paris was quoted at $\frac{1}{2}$ franc and $\frac{1}{2}$ franc premium, and Brussels at $\frac{1}{2}$ franc and $\frac{1}{2}$ franc premium. Milan was again quotable, but transactions were few and not large, one month's delivery being at $\frac{1}{2}$ centesimi and three months at 1 $\frac{1}{2}$ centesimi discount. Madrid was decidedly weaker at wider discounts of $\frac{1}{2}$ peseta and 1 $\frac{1}{2}$ pesetas for the two periods. Amsterdam for one month's delivery remained at last week's quotation of 1 cent discount, but the three months' rate went from 1 $\frac{1}{2}$ cents discount to 2 cents premium. Switzerland was quoted at $\frac{1}{2}$ franc and $\frac{1}{2}$ franc premium. Silver prices weakened on balance by $\frac{1}{2}$ d. to 16 $\frac{1}{2}$ d. after touching 17 $\frac{1}{2}$ d. for cash. Forward also fell by $\frac{1}{2}$ d. to 17d., after touching 17 $\frac{1}{2}$ d., chiefly as a result of heavy Chinese sales on the rise and the absence of support. The China silver exchanges declined in sympathy, Hong Kong from 1s. 3 $\frac{1}{2}$ d. to 1s. 2 $\frac{1}{2}$ d., and Shanghai from 1s. 8d. to 1s. 7 $\frac{1}{2}$ d.

ECONOMIST INTELLIGENCE BRANCH.

Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

AWAITING THE VERDICT.

WITH ears deafened and minds bewildered with the most confusing babel of voices ever heard at a British general election, the people of this country face the task of deciding on Tuesday who shall be entrusted with the guidance of their destinies in the very critical period that lies ahead. In one respect the position is clearer than it was a week ago. Nomination day saw so large a withdrawal of Conservative and Liberal candidates, and the consequent assurance of so many straight fights between "Nationalist" and Labour in constituencies where triangular contests were expected, that the early prospect of a majority for Mr MacDonald's Government has changed into a probability which is nearly a certainty. But in other respects the past week has brought no clarification at all; and, as polling day approaches, it becomes daily more impossible to detect upon what issue the majority of the electorate think they are voting, or to gain any idea of what the people's verdict will mean when it has been given. Indeed, in the matter of distracting attention from the real issues of the day, in the creation of confusion, and the introduction of red herrings, the politicians and the Press between them have had a triumphant success.

The verdict—whatever it will mean—will be given on Tuesday. In so far as a majority for the Government accrues, it will be rightly interpreted as the justification of Mr MacDonald's action, and the condemnation of that of Mr Henderson and his colleagues, and as a vague expression of the desire for a strong Government to tackle big problems. But of any majority demand that any particular line of policy should be followed, the results cannot, in the nature of things, give any proof whatever. What does a vote for a National candidate mean? For the past three weeks we have endeavoured in vain to elucidate the question, and the party leaders have not made it any easier this week. For instance, the Chancellor of the Exchequer, in a broadcast speech on Saturday said:—

"I do not believe that the Conservative leaders would regard a majority obtained in the circumstances of this election as giving them a mandate to carry a general system of Protection in the new Parliament."

Mr Snowden's belief is clearly justified by the Prime Minister's appeal to the country and by the tone of his subsequent speeches. But it was promptly repudiated by Mr Neville Chamberlain, the Conservative Minister of Health, who stated categorically on Monday that the Government would be empowered, if they received a majority, to impose a tariff, if on examination they decided that it was the right thing to do, without a further appeal to the electorate. And, indeed, it is perfectly clear that, in far too many constituencies the Conservative candidates and their workers are forcing tariffs into the foreground. Sir Austen Chamberlain, First Lord of the Admiralty, calls upon his constituency to win "a triumph" for Protection; and at the same time the Liberal Home Secretary, Sir Herbert Samuel, and the Liberal Minister for Education, Sir Donald Maclean, are actually being opposed by official Conservatives (despite an honourable and courageous protest by Mr Baldwin) simply because they refuse to go further in relation to the fiscal question than the Prime Minister himself. On the other hand, while some Conservative Ministers, and many Conservative candidates, among whom Mr Churchill, Mr Amery and Sir Henry Page Croft are prominent, have allowed their Protectionist enthusiasm to carry them far beyond the terms of the agreed National appeal, other important sections of Conservatives have given Mr MacDonald a more faithful following. Mr Baldwin himself, while reiterating his belief in Protection, has given no sign that he would regard a National majority as justifying permanent tariff measures immediately. Moreover, the most influential of all Conservative newspapers, the *Times*, has studiously refrained from putting one foot out of time with the Prime Minister's marching orders.

Pleading on Tuesday that the issue before the country was to choose between men who would save and men who would destroy the pound, the *Times* went on to say:—

"There is no other issue, and it is an issue upon which men of all parties can fight for victory and work after victory. . . . There is no insuperable cleavage between them on the fiscal issue, for the bridge between those who think that tariffs will be necessary and those who admit that tariffs may be necessary, is clearly to be found in that kind of tariffs, if any, which prove necessary to their common determination to save the currency."

As a sequel to this on Thursday the Prime Minister himself laid it down that "this election does not give instructions to apply tariffs forthwith," and pledged himself to take no share in turning a national majority into a party one. All—and they are many—who are working and will vote for the Government on a basis such as this, would have every right to consider themselves betrayed, if the Government were to use a majority secured on Tuesday to impose high tariffs or any permanent system of Protection upon this country.

In a word, whatever the National majority, there will be no conceivable mandate for Protection. The only danger is lest an electoral landslide reaching proportions that would give Conservatives a clear majority in the House of Commons should embolden the tariff monomaniacs to cashier Mr MacDonald and his Labour and Liberal colleagues, and force a Protectionist policy upon their own leaders. How great this danger is cannot be foreseen. It may be that those who, like the Stock Exchange, forecast a majority of 200, are counting too much upon the visible weakness of the Socialist leadership, and upon the power of the "nation before party" slogan, while reckoning too little for the odium of the "economy cuts," the Free Trade broadcast of Mr Lloyd George, the stimulating goad applied to official Labour by Mr Snowden's bitter denunciation of all Labourites as Bolsheviks, and the oft-expressed antipathy of the masses of the people to "tariff reform." Let us hope that a large enough body of members will be returned, if not pledged to Free Trade, at least committed against high or permanent tariffs, to protect the country against a sudden plunge into the morass of economic insanity. In the absence of another Zinovieff letter—has Lord Beaverbrook got one up his sleeve?—such a result is by no means impossible.

Nevertheless, whatever Tuesday may bring forth, there can be no occasion for national rejoicing, and indeed no reason for satisfaction that the election has taken place. Whatever else it may have done—supposing present forecasts to be within miles of accuracy—the election will have shut out the possibility of a really National Government in which the official representatives of Labour should participate and share in responsibility. This is a profound pity. For in the foreign sphere times are at hand when the voice of the Government needs to be, beyond all doubt and question, the voice of Britain; while at home great problems face us which can only be solved by willing Labour co-operation. Depreciation of the pound will correct the trend of the British balance of payments and has torn up the paper case for Protection. But it has not in any way solved such problems as the disparity between "sheltered" and "unsheltered" wages, nor in the least diminished the need for the urgent prosecution, by employers and employees together, of greater efficiency in British productive industry. The country has been forced to waste three vital weeks in squabbling bitterly over non-essentials. It will not lightly forgive the rulers whom it is to elect on Tuesday if they, or any section of them, are tempted by a turn of fortune's wheel to subordinate grave considerations of national advantage to the fulfilment of party aspirations.

M. LAVAL AT WASHINGTON.

IN the First Book of Kings it is narrated how, after King Solomon had made a navy of ships in Ezion-geber, the Queen of Sheba, with a great train, "came to prove him with many hard questions." These questions King Solomon is reported to have answered with candour and sapience; and the Queen, impressed by his "wisdom and prosperity," presented him on her departure with one hundred and twenty talents. It is tempting to detect in this story *mutatis fortiter mutandis*, some analogy with the visit which M. Laval, whose vessel is within sight of the Statue of Liberty as these lines are written, is paying to President Hoover. The French Prime Minister is perhaps unlikely to be impressed to-day with the prosperity of his distinguished host's country, but the question of leaving in his care many talents of gold, if only under conditions, will certainly be one of the subjects of discussion, and it seems likely that M. Laval's questions may be hard enough for the President to answer.

From the day that the "Ile de France" sailed—with M. Laval and his impressive train of financial experts, juriconsultants, and last, but not least, journalists on board—the ether has crackled with wireless messages embodying many and various views and rumours as to the French Premier's intentions. He will use the dollar balances of the Banque de France as a weapon wherewith to persuade the United States to endorse French policy in connection with reparations and disarmament; he has a detailed plan in his pocket for the final solution of every international problem, political and economic; he is prepared radically to modify French reparations demands; he will propose a twenty-five per cent. budgetary reduction in armaments if Mr Hoover will agree to a fifty per cent. scaling down of all international debts; he has no such intention; he will insist that between reparations and debts, on the one hand, and security and armaments, on the other, there is no connection at all. From these conflicting accounts it is safe to draw only one conclusion: that M. Laval, who is in reality a student rather than master of world problems, has gone to America on a voyage of exploration, with an open mind and with no promises made to his fellow countrymen at home. Whatever he may say to Mr Hoover, and whatever indications of French policy may emerge in their conversations, M. Laval has been careful to avoid giving the impression that he is the bearer of any definite programme whatsoever. If, unlike Sheba, he returns home unimpressed and with empty hands, he cannot be assailed in the Chamber for "failure."

Direct personal contact between the heads of States is always of some value, but we find ourselves unable to be unduly optimistic as to the outcome of the Laval-Hoover conversations. In the first place, it is impossible to disguise the wide divergence which there is likely to be between their respective points of view; and, in the second place, though any approach to mutual understanding between the two great creditor countries of the world would be of considerable significance, the fundamental problems with which they will be confronted admit of no solution without reference to the other participants in the crisis. In the purely monetary aspect of Franco-American relations, an accord should not involve any insuperable difficulty; indeed, the financial experts who are accompanying M. Laval may be relied upon to recognise that, unless steps can be taken by concerted Central Banking action to arrest the flow of gold from New York to Paris, the results will be just as embarrassing to France as to the United States, namely, further deflation of gold prices and still greater depression of trade. But in the wider sphere, where considerations of economic advantage merge into issues of high national policy, there are much tougher nuts to crack.

Let us weigh briefly the possibilities. Firstly, there is the question of reparations and debts. French opinion has undoubtedly tended to form a conception of "reparations proper" as being that part of the Young Plan annuities which accrues to France net, i.e., after she has paid her war debts to her Allies—in round figures \$85 millions. It might well be that M. Laval would be willing to accept, or would even propose, the cancellation of all

inter-governmental payments arising out of the war with this one exception. It is a proposal to which Great Britain, from the standpoint of her own advantage, would not be likely to offer any opposition, since her receipts and payments on reparations and war debts account approximately balance. But is Mr Hoover in a position to accept? It would mean to the United States a loss of \$250 millions; the United States Treasury is faced with a formidable Budget deficit of \$1,500 millions; and the President has yet to secure the formal ratification by Congress of the twelve months' moratorium which, at his instance, became operative last summer. There are indications in reports from Washington that the idea of a further extension of the moratorium, for say three or five years, is being entertained at least tentatively in the White House; but from the point of view of America's domestic politics, "giving time" to debtors is psychologically by no means the same thing as finally writing off acknowledged bad debts. Moreover, there is a strong body of opinion in the United States which considers that the test of capacity to pay must be applied not only to Germany, but to every nation indebted to the United States, and that the ability to provide from Budgets undiminished sums for the maintenance of armaments is *prima facie* strong evidence of ability to continue to meet governmental obligations abroad. But if it becomes a question of France continuing to pay any of her own war debts, M. Laval, with the temper of his Deputies last summer in mind, seems likely to contest that this proposition automatically involves an increase in German payments, over and above the irreducible figure of French "reparations proper."

This will at once bring into the discussions the question of (a) the economic, and (b) the political capacity of Germany to pay. So far as the economic factor is concerned, the Report of the Basle Committee disclosed the fact that, before Germany can begin to pay reparations, she must have an export surplus of some \$200 millions, required to meet the service of her private indebtedness abroad. In 1930 Germany's export surplus was \$375 millions. This surplus has greatly increased during the present year, and last month it was at the rate of over \$1,000 millions a year. But it should be borne in mind that the recent surplus has been achieved only as a result of a contraction of imports so drastic that, not only has the standard of German living been greatly depressed, but there is reason to think that there has not been a replacement of stocks of materials commensurate with sales abroad. In other words, Germany has been living on her capital. If it is psychologically possible to keep up this "forced" rate of export, and to stop the present drain on the Reichsbank's reserves of foreign currency by even stricter compulsion on exporters to surrender *devises*, it may be possible for Germany next February to begin the gradual liquidation of her foreign debts frozen under the "standstill" agreement. But from this it is a long way to the resumption of reparations; for neither psychologically nor economically can restriction of imports be continued indefinitely beyond a certain point, while the volume of German sales abroad, given the present acute depression of world trade and the uncertain future of currencies, is highly problematic.

But, if it is difficult in the middle of a world crisis to arrive statistically at any reliable estimate of Germany's future capacity to create an export surplus, the political side of the question is equally obscure. On the one hand, even though under the Hoover Plan the payment of reparations has been temporarily suspended, it is undoubtedly to reparations that the German "man in the street" is inclined to attribute in the main his present crushing burden of taxation and unemployment. It may be said that Dr. Brüning secured in the Reichstag last week a majority for his "policy of fulfilment," but it would be unsafe to assume that the voting would have gone as it did but for the belief, entertained even by the Government's supporters, that the policy's real aim is to point to the demonstrable impossibility of its fulfilment. On the other hand, there is the intangible, but none the less important, factor in the German situation that the successive reductions of reparations from their original astronomical figure to annuities growing progressively less with the breakdown of each plan which the creditors put forward have had the

result that, in the mind at any rate of the generation growing up in Germany to-day, there is a feeling that the payment of reparations is wholly divorced from economic practicability.

These considerations are bound to obtrude on discussions at the White House so far as the reparations and debts aspect of the international tangle is concerned. Yet, however much Mr Hoover and M. Laval may recognise that inter-governmental payments arising out of the war have contributed to the mal-distribution of gold and to the world economic crisis, the fact will remain that neither statesman may be able to agree to what Congressmen and Deputies would join in regarding as a sacrifice of national interests. Can Mr Hoover secure from M. Laval a *quid pro quo* which would enable him to feel justified in taking the great political risk of agreeing that the United States should assume the whole burden of cancelling every inter-governmental debt except M. Laval's "reparations proper"—always provided that the German Government felt itself in a position to give an unconditional undertaking to maintain this unilateral payment to France for a specified number of years? The only possibility in this direction would seem to be a dramatic reciprocation by M. Laval in the direction of armaments. If President Hoover can secure from France agreement on a really big reduction in expenditure on fighting forces, with necessary guarantees against budgetary camouflage, he might be willing to stake his political life on the risk of cancelling debts.

But here the further difficulty arises that M. Laval has so far given no indication of readiness to depart from the position taken in the French Armaments Memorandum of last July, namely, that France will reduce her armaments only in return for "precise engagements" for effective mutual assistance in case of aggression." To ask Mr Hoover to give "precise engagements" of this nature is to "prove him" with a question at least as hard as any devised for Solomon by the Queen of Sheba. A consultative pact? Perhaps. According to "Pertinax," at M. Laval's elbow on the "Ile de France," the suggestion that America might agree to consult with other Powers in the event of a threat of war was put forward to M. Laval before he sailed by the American Ambassador at Paris—and rejected as inadequate. But to go beyond this and to undertake a more definite commitment in the European imbroglio would be a huge step for Mr Hoover to take without the assurance of Congressional endorsement.

Yet, intractable though the problem may be which M. Laval and his host will have to discuss, if their conversations are to be more than an agreeable exchange of compliments, there are perhaps two features in the situation from which a grain of encouragement can be derived. The appointment of the United States observer to participate in the League Council's discussions in the Manchurian crisis may fairly be regarded as evidence that American opinion is gradually being educated to realise that the United States cannot live in isolation from any of the

world's major issues. Of these, Europe, no less than China, is one. Again, it is perhaps not too much to hope from the recent Franco-German conversations that not only M. Laval but the vast majority of intelligent Frenchmen are beginning to recognise how precarious is the "system" of Europe at which French policy has aimed. Apart from the long-distance question of the effect of the re-emergence of Russia as a predominant Power, France to-day—not without signs of incipient nervousness in the form of domestic hoarding of currency and even bullion—stands rich, feared and hated, in the midst of a Continent whose trade and economic life is paralysed. M. Laval may well have in mind that the Midas touch proved a heavy burden to its possessor.

THE SHADOW OF THE GUNMAN.

THE political crisis of last week was the most serious that the Free State has experienced in the whole course of its career. After the final suppression of the Republican Party in 1923 the country enjoyed a long period of rest from active agitation. It was known that large quantities of arms were hidden in dumps in different parts of the country, but they were not unearthed for several years. Apart from one or two isolated outrages, such as the murder of Mr O'Higgins, public order was not menaced by the gunman, and both life and property were secure. During the last few months, however, there has been a renewal of active revolt against the Government. Murders both of police and civilians have been committed without anybody being brought to justice. Juries and witnesses have been systematically intimidated, and many serious crimes have gone unpunished. Quite recently a new form of intimidation has begun, namely, the attempted coercion, by means of domiciliary visits, of members of the Dail and Senate who were suspected of being in favour of sterner measures for dealing with political crime.

Until recently the agitation was inspired principally by nationalistic aims. The chief participants in the movement were known or suspected to belong to the extreme Left Wing of the Republican Party, which is imbued with separatist ideals. Within the last few weeks, however, an element of social, as distinguished from political, revolution has arisen. A new organisation named Saor Eire, with an avowedly Communist programme, has been publicly formed, and it is known that there is a connection between this body and the militant section of Republicans. The country is in a condition that makes the task of fomenting discontent easy. The economic crisis has not left Ireland unscathed, and the stoppage of emigration to America has created a class of idle and discontented young men easily aroused by the prospect of any excitement. Moreover, there is a desire among the Communist section, which is very anti-Catholic, to embarrass the organisation of next year's Eucharistic Congress.

It is impossible to say how far the movement of discontent is inspired from Russia. Many wild allegations of "Russian gold" have been made, but the evidence of actual connection with the Bolsheviks is somewhat flimsy. However, whether the situation is the result of Russian agitation or is of home manufacture, it is regarded by the Government as extremely grave and menacing. A special session of the Dail took place last week, at which there was introduced emergency legislation, of a very extreme degree of severity, in the shape of the Public Safety Bill. Special military courts have been established for the trial of seditious offences; wide powers of search, arrest and detention have been conferred on the police; and provision has been made for the nomination by the Governor-General of members of either House in the event of the existing members being prevented by intimidation from attending. As was to be expected, this drastic legislation was not passed without much heated discussion, in which both parties indulged in lamentable personal recriminations.

The official Opposition Party, led by Mr de Valera, opposed the Public Safety Bill, not because they sympathised in any way with armed agitation, but because they believed the measure would do more harm than good. They reminded the House, quite truly, that coercion had never succeeded in Ireland, to which the Government replied that repressive measures, which would not have been tolerated in the case of an alien administration, were justified if operated by a native Government. Mr de Valera expressed the view that the gravity of the crisis was being exaggerated as good election propaganda for the Government, and that, in so far as there was a crisis, it was caused by the dissatisfaction of the country with the Treaty and the oath of allegiance, and by the prevailing economic depression. He argued that, if the oath of allegiance were abolished, all sections of political thought could conscientiously enter the Dail, and that unconstitutional agitation would be no longer necessary.

The Labour Party was divided in its attitude towards the Bill. It was apparent from the debate that no germ of Communism has entered the parliamentary representatives of Irish labour, who denounced unconstitutional action of all kinds, whether Separatist or Bolshevik, with book, bell and candle. It seems possible, indeed, that the Labour Party might have been induced to give their undivided support to the Bill if they had been handled a little more tactfully by the Government. They dislike Mr de Valera's party intensely, and might well have been consulted by the Ministry on the policy which they would have been willing to apply to the suppression of armed disorder. Nobody acquainted with the Irish Labour movement would believe that it would refuse to co-operate in a measure designed to protect the ordinary citizen from the gunman, and to relieve jurors of an impossible task. Still, even as it was, two members of the party voted with the Government, which also obtained the support of all the independent members of the House. The Government, therefore, securing a comfortable majority.

The Bill was passed through its final stages on Saturday. On Sunday there was read in every Catholic church in Ireland an extremely strong pastoral letter signed by every bishop condemning revolutionary action in the most emphatic manner. The statements in this document regarding the widespread growth of Communist propaganda supported the case made by Mr Cosgrave in the Dail, and there is no question that the action of the Catholic hierarchy will greatly strengthen the Government in the execution of its difficult task. The pastoral letter mentioned certain organisations by name as being definitely sinful for Catholics to join, and laid it down clearly that the Government can be legitimately put out of power only by the ballot box, and not by the gun. References to recent events in Spain suggest that the Irish bishops have been alarmed by the rapidity with which Bolshevism and anti-clericalism can spread in an apparently Catholic community.

What the effects of the Public Safety Act will be is difficult to foretell. It is possible that the mere existence of the machinery of martial law, supported by the

approval of the Church, will be sufficient to quell the threatened disturbances, but it is equally possible that the Act will provoke resistance and help to create popular heroes or martyrs. A general election must be held next year, and it is certain that the Public Safety Act will play a large part in determining the result. Will the electorate welcome a strong policy aimed at protecting the ordinary citizen against the gunman, or will it resent a measure reminiscent of "Bloody Balfour" and "Buckshot Foster"? One thing at least is certain: the Act is a measure which can be justified only by the most extreme necessity. It puts plenary powers in the hands of the armed forces and places the ordinary citizen completely at the mercy of the army and police. If the election results in a change of Government, the Act may prove an extremely dangerous weapon in the hands of an administration less experienced and less tolerant than the present executive council. It should, therefore, be repealed at the earliest possible moment that the public safety allows.

THE GOLD RUSH.

It was inevitable that the suspension of gold payments in England should have a profound effect upon the position of leading central banks. Some who were engaged in operating the gold exchange standard were in possession of substantial holdings of sterling as part of their legal reserve against their notes and other sight liabilities, while others—such as the Banque de France—held equally large quantities of sterling, even though they were operating the full gold standard. All these central banks have had to face a 20 per cent. depreciation of their holdings of sterling, which for many of them means a substantial proportion of their legal currency reserves.

This situation has already had several far-reaching results. Many countries have summarily abandoned the gold exchange standard as a snare and a delusion, and their central banks have begun hurriedly to convert their *devisen* into gold. The general tendency has been to leave their sterling holdings intact, but to exchange dollar balances and bills for gold; and this is a major cause of the recent efflux of gold from the United States. Again, commercial banks have not been immune from the consequences of the crisis, and have had to meet the suspicion and distrust of their customers, fostered by very numerous (if individually not very important) bank failures all over the world. They have had to face the immobilisation under the "standstill" agreement of such part of their assets as they had ventured in Germany and Central Europe; they have suffered, in common with the central banks, a 20 per cent. depreciation of their sterling holdings; and, last, but not least, they have had to deal with the wide-spread dislocation to trade caused by the depreciation of sterling, which is the currency of world commerce. Thus commercial banks have, on the one hand, witnessed an outflow of notes into the hands of distrustful customers, and, on the other hand, they have had to mobilise their available assets, both at home and abroad, in preparation for further demands for currency.

It is important, therefore, to examine the extent of these movements, in order to see how serious have they become. Some indication of their magnitude is afforded by the following tables, summarising salient features in the returns of the central banks of the leading countries still adhering to the gold standard. The tables deal with changes in the central banks' holdings of gold and *devisen*, the fluctuations in the note circulation, and the position of commercial banks as evidenced by their deposits at the central banks, and the extent to which they are having to rediscount their bills. For comparative purposes all figures are reduced to dollars at the par of exchange. In certain cases it has been necessary to qualify the main headings of the tables, owing to the failure of some central bank returns to give the exact information required. All tables take the week immediately preceding the suspension of the gold standard in England as their starting point. The different bank returns relate to various dates in the calendar week.

The first two tables relate to gold and *devisen*, and in view of the recent abandonment of the gold exchange standard and the substitution by many central banks of gold for *devisen*, should, obviously, be considered together.

Swiss National Bank	109	92	66	69	21	...

* Not available.

Three features emerge from these tables. The first is the extent to which the central banks of Holland, Belgium and Switzerland have turned their *devisen* (mainly dollar holdings) into gold. The second is the increase in the gold stock of the Banque de France, accompanied by an actual increase in the Bank's foreign exchange. This indicates that the French gold withdrawals from the United States have, so far, represented mainly the mobilisation and repatriation in gold of dollar holdings by the French commercial banks who have sold to the Banque de France most of the gold imported. The increase in *devisen* may be the result of the transfer of dollar balances from the Caisse d'Amortissement and the Treasury to the Banque de France. More doubtfully it has been suggested that the Banque de France may have increased its *devisen* in order to lend support to the dollar.

The third feature is the continued loss by the Reichsbank of both gold and *devisen*, as a result of "standstill agreement" withdrawals, and possibly also the payment of debts by the affiliations in foreign countries of German concerns. Allowing for Germany's present favourable trade balance this loss points to the Reichsbank's failure so far to obtain all the foreign exchange accruing to exporters. Finally, as regards America, gold losses up to October 9th had amounted to about \$450 millions. Of this France took \$80 millions, while gold withdrawals by the central banks of Belgium, Holland and Switzerland came to \$280 millions, nearly \$100 millions being unaccounted for, but probably representing gold in process of shipment on October 9th. Realisations of *devisen* by these three banks amounted to \$210 millions, and it is a fair inference that the margin of \$70 millions between their gold acquisitions and sales of *devisen* represents some mobilisation by the commercial banks of these countries of their dollar holdings, as is known to be the case with the French banks. These movements have continued during the last few days, for between October 9th and 23rd, the Reserve system lost a further \$273 millions, making \$720 millions in all. The Dutch and Swiss central banks have also made heavy conversions of *devisen* into gold.

The next table deals with note circulations. A temporary expansion is normal at the end of the quarter, and this must be allowed for in interpreting the table. The main indication to watch for, however, is whether an expansion of the note circulation is taking place upon such a scale as to suggest that hoarding is taking place, thereby pointing to public lack of confidence in the banks.

NOTE CIRCULATION.
(\$ millions; foreign currencies converted at par of exchange.)

Week ending:—	Sept. 19.	Sept. 26.	Oct. 3.	Oct. 10.	Oct. 17.	Oct. 24.
U.S. Reserve Banks	2,006	2,045	2,098	2,269	2,322	2,383
Banque de France	3,040	3,062	3,198	3,206	3,210	...
Reichsbank	991	974	1,072	1,053	1,055	...

notes, as opposed to cheques, are the principal medium of circulation in different countries, it is unsafe to jump to positive conclusions. The expansion in the American note circulation, which has been in progress for some time, was discussed by a correspondent in last week's *Economist* (page 701). In France it has long been the usual experience for the note circulation to expand with the influx of fresh gold, and, as the next table shows, private (largely bank) deposits at the Banque de France are also growing. Hence it seems fair to deduce that the French banks are as much preparing for possible pressure in the future as suffering from such pressure at the present moment. The increase in the German note circulation appears to be a reflection of withdrawals by savings bank depositors. The proportionate expansion in the three last countries listed in the table is a little ominous.

This brings us to the two final tables, namely, private deposits and rediscounts at the central banks. It is here that the exact information required is not always available. Most central banks fail to distinguish between "bankers'" and "other deposits" in the English sense of the term, and not all distinguish rediscounts from bills bought in the open market. Again, some central banks are mainly "bankers' banks," while others, notably those of France and Germany, deal extensively with the public. Finally, there are divergences in the procedure of the various money markets, and the Dutch and Swiss central banks in particular make loans in addition to or in substitution for rediscounts. The last point, however, is one of minor practical importance.

PRIVATE DEPOSITS.

(\$ millions; foreign currencies converted at par of exchange.)

Week ending:—	Sept. 19.	Sept. 25.	Oct. 3.	Oct. 10.	Oct. 17.	Oct. 24.
U.S. Reserve Banks (member bank accounts)	2,418	2,280	2,364	2,277	2,223	2,276
Banque de France (comptes courants et comptes de dépôts de fonds)	709	707	688	775	887	...
Reichsbank (daily maturing obligations)	91	126	143	116	128	...
Netherlands Bank	68	70	71	58	62	...
National Bank of Belgium	39	33	17	28	35	...
Swiss National Bank (sight engagements)	131	140	138	149	180	...

REDISCOUNTS.

(\$ millions; foreign currencies converted at par of exchange.)

Week ending:—	Sept. 19.	Sept. 25.	Oct. 3.	Oct. 10.	Oct. 17.	Oct. 24.
U.S. Reserve Bank	263	310	328	463	628	698
Banque de France	268	324	342	372	372	...
Reichsbank (bills and cheques)	673	700	855	869	890	...
Netherlands Bank (loans)	36	45	45	46	47	...
National Bank of Belgium (bills)	116	120	117	122	124	...
Swiss National Bank (bills and lombard loans)	16	15	24	21	24	...

Taking the tables together, it is clear that American member banks are being subjected to some pressure, for their balances at the Reserve system are declining, and they are having to rediscount with greater freedom. The increase in French banks' balances points to a precautionary strengthening of liquid resources; and this, as already explained, should be construed with the repatriation of French dollar balances and the shipments of gold from New York. It is also noticeable that Treasury and

Caisse d'Amortissement balances at the Banque de France are growing; if the experience of previous years be a guide, this is an additional cause of French gold imports. The banks of Holland, Belgium, and Switzerland are experiencing in varied degree the same kind of pressure as is noticeable in the United States.

In the light of these figures it is clear that the suspension of the gold standard in Great Britain is having wide-spread and in many ways untoward repercussions. Quite apart from the fact that the Scandinavian countries were rapidly forced off the gold standard by loss of *deviën*, and that throughout Central and South-Eastern Europe a fictitious adherence to that standard is being maintained only at the price of exchange restrictions which are paralysing trade, the "gold rush" is demonstrably creating disturbances which render uncomfortable the position of even the central banks most solidly entrenched on gold. The breakdown of the gold exchange standard is in itself sufficiently serious, for it intensifies the world demand for gold and is calculated to depress gold prices still further, to the detriment of world trade.

INDIAN FEDERAL FINANCE.

THE report of the Federal Finance Sub-Committee of the Round Table Conference covers much the same ground, and deals with similar problems, as the Finance Report of the Simon Commission. The fact, however, that the Round Table Conference is now considering a constitution which includes the Indian States means that the problem is cast from a rather different angle, and there are some fundamental differences in the basis of the scheme now proposed. In view of the States' desire to preserve their present status as far as possible unchanged, the functions of the Centre are reduced to a minimum. A corollary of this is that the Centre is to be assigned certain sources of revenue and that the residuary powers of taxation are to be left to the States and Provinces. It is recognised that the taxes assigned to the Federation should be of such a kind that they fall on the inhabitants of Provinces and States alike. As the States are unwilling to surrender to the Federation the right of direct taxation in the form of income tax, this means that the sources of revenue assigned to the Centre will be very much the same as at present, *i.e.*, customs, salt, opium and other non-alcoholic excises, but that the important item of income tax will be assigned to the States and Provinces. It is hoped, however, that the States will agree to the corporation tax being retained by the Centre.

The report points out that the need of revenue of the Centre and Provinces, respectively, will not be appreciably different from what it is at present, and, at all events to begin with, it is improbable that any considerable head of revenue could be surrendered by any of the Governments without acquiring alternative resources. In view of their proposal with regard to the transfer of the income tax, therefore, the Committee are led to suggest that the Provinces should make contributions to the Centre on some scale to be agreed upon, provided that these contributions should be extinguished by annual stages over a definite period of, say, 10 or 15 years. At the same time, the existing contributions from the States to the Centre would be reduced *pari passu*. The underlying assumptions of this proposal are either that the expenses of the Federal Government will tend, over a period of time, to fall, or that the yield of customs, the main source of Federal income, will expand, or the imposition of additional excises (*e.g.*, matches, cigarettes and other articles of common use) will develop into expanding sources of revenue as alternatives to the income tax which the Centre now receives. Possibly all three tendencies will, in fact, be manifested.

This scheme is the inevitable conclusion from the attitude adopted by the Indian princes, namely, that they are willing to permit all-India excises to be imposed in their territories, but not to surrender their right of levying direct taxation. It is couched, however, in very general terms and opens up a number of difficulties. In the first place, no attempt is to be made to remove the

remaining internal customs barriers of India and to provide some alternative source of revenue to those States which at present levy their own customs duties. It is to be regretted that it has not proved possible to propose this step towards the economic unification of India. Again, the provincialising of the income tax raises an administrative problem. The Committee recommend that the income tax should still be collected and administered by a central service, and most of them think that it should be levied on a uniform basis throughout British India. But this suggestion is a departure from the principle that the right to impose and administer a tax should be vested in the authority which receives the proceeds. The suggestion is thrown out that this difficulty might be partially met if it were laid down that the Federal Finance Minister, before introducing any proposals to vary the income tax rate, should be compelled to consult provincial Finance Ministers. It will be recalled that the Statutory Commission proposed a more detailed piece of machinery for dealing with centrally collected taxes, the proceeds of which were to be distributed to the Provinces in connection with its scheme for setting up a Provincial Fund. Clearly, the present proposal will require a similar elaboration.

Again, the Committee is very cautious in its reference to the suggestion that individual Provinces might be empowered, if they so desired, to raise or appropriate the tax on agricultural incomes. This is, of course, a matter of acute controversy in India, but, in the absence of any practical suggestion for introducing greater variation into the system of land revenue, it will not be possible to secure by any other means greater elasticity in the yield of taxation upon the agricultural production of the country, which is by far its largest economic activity.

The Committee recognise that the expansion of sources of revenue may ultimately make it possible for the allocation of the proceeds of certain taxes to be diverted from, for example, the Centre to the Provinces, or *vice versa*, and they very properly suggest that the constitution should not be so rigid as hitherto in this matter. At the outset, as already indicated, they propose contributions from the Provinces to the Centre, but in the long run it may well be that these payments will be in the other direction, unless greater functions are ultimately given to the Federal body. The Committee suggest that the Constitution should lay down the basis of allocation of any such surplus revenue, but do not themselves make any proposals. Indeed, on a great many points they give indications rather than definite conclusions; and indeed the Report reveals differences of opinion on many important matters. They, therefore, propose that all these matters—including estimates of future revenue and expenditure; the basis of contributions from the Provinces to the Centre, on the one hand, and the allocation of proceeds of centrally collected taxes on the other (*i.e.*, whether such distribution should be on a *per capita* or some other basis); the question of the taxation of agricultural incomes, and many other points—should be referred to an expert committee which, it is suggested, should draw up a detailed financial scheme for the Federation as a whole. This committee will have so important a function to fulfil that it is recommended that the field of inquiry should be divided into two parts—the one, a general survey of the problem and an examination of the general scheme; and the other covering those matters which concern the States and their relation to the Federation. These inquiries, it is suggested, might be taken up by two separate committees with a common chairman.

After considerable discussion of this Report, the Federal Structure Committee will apparently adopt it, subject to the important qualification that the Expert Committee is not to be free to make changes in principle but is to be given a "fact-finding" mandate. This will leave many important matters indeterminate, and it is evident that the work of producing a definite financial scheme has yet to be taken in hand. The principles outlined in the present Report are, however, sufficient indication of the general basis on which it may be possible to establish a Federation between the States and British India.

Though the Report shows all the evidences of compromise, it may afford a working basis for a commencement of federation. This, after all, is the important point for the present. Into what mould the ultimate financial structure of a Federated India will grow is another story.

THE DANISH FARMER.

Denmark's decision to follow Great Britain's lead and leave the gold standard lends special immediate interest to the following description, contributed by a correspondent, of the problems and position of the Danish farmer. Reference to the Danish Government's decision to provide funds to meet agricultural distress will be found in our Copenhagen correspondent's letter on a later page.

The British farmer is frequently invited to regard his Danish rival as a model of agricultural perfection, by imitating whom he may overcome his own difficulties. There may, therefore, be a certain consolation in observing, though without malice or exultation, the unhappy position of Danish agriculture at the present moment. During the first years after the war the Danish farmer abounded in prosperity, but rapid deflation in 1925-27 hampered his export trade and taxed his capacity for production at an economic figure. The net return on agricultural land fell from 8 per cent. in 1921 on the capital value to 1.8 per cent. in 1925. The Danish response was to increase production, tighten control and lower costs. New legislation in 1928 established a stricter supervision over bacon factories, and, while fixing grades for eggs, required every egg exported to hold a licence. The control over eggs is the more instructive in that only 20 per cent. of the egg export is in co-operative hands. Denmark, like the Irish Free State, is not afraid to exercise compulsion over the independent trader.

This attempt to meet the crisis appeared at first to be successful. The profit on agricultural capital rose again to 6.5 (1928) and 5.8 (1929). Great Britain, which in 1927 took 56 per cent. of the Danish exports, took 59 per cent. in 1930, and though the price of bacon, butter and eggs in England was steadily falling, an increase in the quantity exported went far to maintain the return in value. In 1929 more than £27,000,000 was paid by this country to Denmark for bacon, £20,000,000 for butter, and £4,700,000 for eggs, and these three represented 96 per cent. of the total sum of imports. But in 1930 the fall in British prices continued and became sharper; bacon lost 40 per cent. of its value; cereals, eggs and butter 20 per cent. to 30 per cent.; and, though an increase of 25 per cent. in the quantity of bacon sent to England maintained the value at £27,000,000, an addition of 7 per cent. to the butter was insufficient for the purpose, and Danish eggs also lost ground. The process has been repeated in 1931.

If the Danish farmer's costs were proportionately reduced, it would seem that the sale of ever greater quantities at an ever lower price might be indefinitely continued, and it is true that the maize and other cereals which he imports as feeding stuffs were 80 per cent. cheaper in 1930 than in the previous year, and have again fallen in 1931. The Dane is the one agricultural producer for whom grain prices can never be too low. But grain does not solve all his problems. Competition from the British Dominions is more acute, as production and export have there been brought under closer control, and in 1931, for the first time, the imports of Empire butter into England have begun to exceed those of foreign countries. Preference for home-grown and Empire goods no doubt exerts a certain influence over the British consumer; but more important is the reduction in price and the improvement in quality which organisation in the Dominions and the National Mark at home are bringing about. The Dane no longer rules the market.

Up to the time of Denmark's departure from the gold standard, the farmer was finding it difficult to make his labour costs conform to the needs of competitive markets. The introduction of Polish labour is no longer permitted, and though 90 per cent. of the farms are owned by actual cultivators, two-thirds of them require to employ addi-

tional labour outside their own families. Danish labour is no longer cheap; for whereas the retail cost of living in 1930 stood at 159 (1913 = 100), the corresponding figure for wages was 261 per cent.

Interest on mortgage debt and an instalment of principal have also to be found. The average farmer holds 60 per cent. of his capital from a mortgage institution. The total of agricultural mortgage debt is double that of 1914, though rateable values have risen only 60 per cent. and farm valuations are still inflated. Despite the lenient policy of the credit associations, the proportion of overdue loans is uncomfortably large; indefinite postponements cannot be allowed, and it is improbable that the Government would support the credit associations as it supported the Landmandsbank. The Danish farmer is, consequently, at the present moment, for the first time since a generation, in serious distress. His net income, after allowing for family labour, but not for mortgage charges, was estimated at £3 10s. per acre in 1928, £3 3s. in 1929 and only £1 in 1930. It will be a minus quantity in 1931, and the payment of mortgage dues has in many cases become impossible. Farms meanwhile are fully stocked; there has been a huge increase in the number of pigs and poultry in the last two years, and the area of arable land is being steadily, though slowly, extended. (In 1,500 square miles Denmark has 7,000,000 acres under the plough; England and Wales in 51,000 square miles have 9,600,000.) Reduction of outlay seems therefore impossible; at all events, it cannot be immediate, and the Dane's only remedy appears to be a continuance of his existing policy, selling more goods at a lower price, and asking his creditors to be patient.

The introduction of a tariff or a control over imports in Great Britain would be a final blow. Germany has set up new barriers against the entry of live cattle and butter, and the restriction of the British market might well bring the Danish farmer to despair. If a British tariff provided for imperial preference, his rivals would gain on him; and under a quota regime he can hope for no British favours, since our exports to Denmark are not important, amounting in 1930 to only £14,000,000.

The prospect is not bright, but the history of the last fifty years proves the resourcefulness and the organising power of the average Danish cultivator. The Folk High Schools are there to give him courage; the agricultural farms to provide science. He produces 48 bushels of wheat per acre and 727 gallons of milk per cow. The output of sugar beet per acre is 50 per cent. above that of Great Britain. Still more intensive cultivation, still closer organisation of purchase and sale, and a limitation of production (*e.g.*, of pigs) by the authority of the State appear to be the only remedies available to him, and it is noteworthy that precisely these measures are being recommended by experts to the British farmer.

A DIARY OF THE CRISIS.

Friday, October 16th.

Mr Gilbert, U.S. observer, joins League Council in Man-ohurian discussion, with authorisation from U.S. Government "to participate in the discussions of the Council when they relate to the possible application of the Kellogg-Briand Pact to which the U.S. is a party."

Opposition motion in Reichstag of no confidence in Brüning Government defeated by 295 votes to 270, the Economic Party voting with the Government.

British General Election, nomination day. Candidates nominated:—Conservative 517, Labour 513, Liberals 180, National Labour 21, New Party, 23, Communists 25, others 27. M. Laval sails for New York.

Sterling weaker, closing dollar rate 3.85½.

European stock markets:—London, bonds quiet, equities firm; Paris, weak; Amsterdam, dull.

Wall Street, rally follows weak opening. Gold exports \$42 millions, released from earmark \$8 millions.

Saturday, October 17th.

Japanese Note to League Council takes exception on legal grounds to co-option of U.S. observer.

Reichsbank weekly statement shows further 66 million marks loss of gold and foreign exchange; note circulation 28.6 per cent.

Financial Committee of the League of Nations, investigating situation of Hungary, confers with Count Karoly.

Irish Free State Constitution Amendment Bill passed giving military tribunals summary powers.

Sweden and Norway decide to reduce Bank rate from 7 to 6 per cent. from October 19th.

European stock markets:—London, gilt-edged improve, further small advance equities; Amsterdam, general recovery. Wall Street, undecided. Gold exports \$10 millions, gold earmarked \$10 millions.

Sunday, October 18th.

Further meeting League Council. Japan reserves right not to recognise Council's decisions and retains liberty future action.

Brazil announces three years' suspension of cash payments in respect of external debt services, excepting two Funding and 1922 Coffee Loan.

Monday, October 19th.

League Council holds private session. Announcement from Washington that Japan withdraws objections to U.S. observer. M. Briand, on behalf of League Council, makes certain suggestions to the Japanese representative for settlement of Manchurian dispute.

Signor Grandi, Italian Foreign Minister, invited by German Government to visit Berlin. Invitation accepted and visit arranged for Sunday, October 25th.

Canadian Government issues Order-in-Council prohibiting gold exports, except by licence.

Sterling firm, closing dollar rate 3.90½.

European stock markets: London, general rise gilt-edged and equities; Continental Bourses all firmer.

Banque Commerciale Africaine de Paris suspends payment.

Wall Street, quiet. Gold movements negligible. Eleven small banks in various States close doors.

Tuesday, October 20th.

United States join with Great Britain and other members of the League Council in dispatching note reminding China and Japan of their obligations under the Briand-Kellogg Pact. League Council awaits reply from Japanese representative to suggestions made by M. Briand on previous day. Reported from Tokyo that Japan will propose five fundamental principles as basis of agreement with China:—

- (1) Both countries agree not to commit any act of aggression.
- (2) They promise to abstain from hostile agitations, boycotts, and propaganda.
- (3) Japan undertakes to respect the territorial integrity of Manchuria.
- (4) China guarantees the protection of Japanese subjects in Manchuria.
- (5) Japan and China will make arrangements providing for co-operation in the avoidance of ruinous competition between the South Manchurian and other railways, and China will give effect to all existing railway treaties.

Sterling rises, closing dollar rate 3.94½.

European stock markets:—London, strong; Paris, Amsterdam, both firm.

Wall Street, moderate advance. Gold exports \$1 million, earmarkings \$8 millions. Reported from New York that Banque de France asks for more than the ½ per cent. now paid on foreign central bank deposits.

Wednesday, October 21st.

Fighting reported at Tiehling on South Manchurian Railway. Reported from Tokyo that Japan is willing to substitute for Principle (5) of her terms (see above) a general declaration by China to respect treaty rights. Chinese delegation reported to have handed M. Briand memorandum embodying Chinese terms of settlement:—(1) Evacuation of Manchuria; (2) neutral committee to control evacuation; (3) creation of permanent arbitration committee to deal with future disputes in Manchuria.

Inner committee of League Council meet and decide to submit to full Council meeting on Thursday proposals for settlement.

Further improvement sterling, closing dollar rate 3.95½.

European stock markets:—London, general reaction; Paris, Amsterdam, weak after firm opening.

Wall Street, dull tendency, particularly railway stocks. Gold exports \$22 millions, earmarkings \$9 millions. Monongahela National Bank of Pittsburgh suspends payment.

Thursday, October 22nd.

League Council in public session considers draft resolution (see next column) for settlement Manchurian dispute.

M. Laval arrives Washington.

Roumanian bank Marmorosch Blank and Company closes its doors pending reconstruction.

Sterling reacts; closing dollar rate 3.93.

European stock markets:—London, improvement after weak opening; Paris and Amsterdam similar.

Wall Street, weak tone. Gold exports \$1 million. Earmarked \$3 millions. Imported from Japan \$7 millions.

Notes of the Week.

The League and Manchuria.—The *détente* at Geneva which resulted from the final withdrawal last Monday, albeit belatedly and with reluctance, of Japan's objections on constitutional grounds to the co-option by the League Council of a United States observer had inspired hopes that the League's slow but steady process of applying moral pressure to the disputants in the Manchurian crisis would yield good results. By Wednesday night, however, fears had begun to arise that these hopes were not in the way to immediate fulfilment. Although no further public developments had taken place at Geneva, reports of the attitude both of Japan and China (noted in our Diary of the Crisis) appeared to point to a considerable divergence of view as to acceptable terms of settlement; and, still more discouraging, it was rumoured that the Japanese reply to the suggestions which M. Briand had put forward on behalf of the Council on Monday was not considered satisfactory. These suggestions are understood to have required from Japan the evacuation of Manchuria, with no time limit or neutral observers imposed, in return for certain guarantees from China. Stiffened, apparently, by Japan's somewhat intransigent refusal to consider even this compromise, the League Council, at its public session on Thursday, took the plunge and presented a resolution in the following terms:—

The Council calls upon the Japanese Government to begin immediately and to proceed progressively with the withdrawal of troops into the railway zone, so that the total withdrawal may be effected before the date fixed for the next meeting of the Council—November 16th.

It calls upon the Chinese Government, in execution of its general plan, to assume responsibility for the safety of the lives of Japanese subjects resident in Manchuria . . . and requests the Chinese Government to associate with the Chinese authorities designated for that purpose, the representatives of other Powers in order that such representatives may follow the execution of the arrangements. It recommends that the Chinese and Japanese Governments, as soon as the evacuation is completed, begin direct negotiations on questions outstanding between them.

The Council decides to adjourn till November 16th, on which date it will examine the situation, but authorises its president (M. Briand) to convoke a meeting at any earlier date should it, in his opinion be desirable.

Until the reception of this resolution is finally known—its adoption requires an unanimous vote—the situation must remain critical. But the Council has merited praise for propounding terms which lack neither justice nor courage.

Dr. Brüning's Victory.—Last week we described Dr. Brüning's then imminent ordeal. We have now the welcome duty of reporting his victory. The Reichstag reassembled on Tuesday, October 13th, and the vote on the joint Opposition motion of no confidence was taken last Friday. The motion was rejected by 295 votes to 270—565 members, in all, taking part in this division out of a total membership of 577, and only three of the members who were present on this occasion abstaining. The Reichstag has now adjourned till February. The circumstances in which this victory has been won (by the unexpectedly large margin of 25 votes) are of the utmost significance. It is a victory over the united opposition of Nazis, Hugenberg Nationalists and Communists; it has been gained at a moment when Germany is falling under the deepening shadow of the coming winter, and when the extremists of the Right have been recently heartened by their electoral success at Hamburg, by President Hindenburg's reception of Herr Hitler, and by the Nazi-Nationalist fraternisation (if it really was a fraternisation) the Sunday before last at Harzburg. Nor was the vote taken in a hurry after the Reichstag had re-assembled. The deputies had four days in which speakers of all parties could, and did, air their views. As the debates proceeded during the four days, the Government's prospects perceptibly improved; and the final victory may be ascribed to two causes. One cause is the steady adherence of the Social Democrats to their policy of supporting Dr. Brüning, notwithstanding the fact that the Chancellor's policy of economies has borne hardly on the German working class as well as on other sections of the population. Dr. Brüning could not possibly have

won his victory if the Social-Democratic vote in the Reichstag had not once again been cast solidly in his favour. On the other hand, the margin of 25 votes by which he won might well have been cast on the other side if his own personality had not once again asserted itself, as it did in his reply to the debate—a reply which preceded the division and which was perhaps the turning-point in the struggle. The Chancellor took his stand on the preservation of national unity. "The aim of the responsible politician," he declared, "must be to prevent the German people from being divided into two hostile camps during the coming months of want and international tension. That is what I am fighting for." It is on this issue that Dr. Brüning has won, and his victory in these circumstances will help Germany, if anything can, to come through the winter without political revolution and economic chaos.

Cabinet Secrets and Electioneering.—We have seen nowhere any comment on what appears to us to be one of the most unfortunate features of the General Election. It is the competition between certain Ministers of the late Labour Government to make electioneering capital out of "disclosures" of private Cabinet discussions. Until recently a Cabinet Council was regarded as a secret and confidential occasion, and up to the time of the Great War no note of the proceedings was allowed to be taken by any member, except the Prime Minister, who occasionally jotted down notes as an *aide-memoire* for a subsequent report to the Sovereign. Thereafter, it is true, minutes began to be taken, but the documents containing them were, and still are, secret State papers. Now, if the precedent set by Mr Snowden and Mr Graham is to be followed, all the secrets of the Council Chamber may be shouted upon the housetops. It is, in our view, a most deplorable development, carrying with it a threat of grave restraint upon the free and unfettered discussion of national and international issues which should be the function of the Cabinet. If Ministers have to prepare their phrases as carefully for the Cabinet room as for the platform, and feel that intimate discussions with colleagues are liable to public misrepresentation, then the Cabinet will become an inept and ineffective instrument of Government. Nor does the danger end there. If every passing remark in the Cabinet is liable to correct or incorrect publication, according to the taste or interpretation of colleagues, indiscretions (harmless or occasionally inevitable in any committee) might be blazoned round the world and cause a constantly recurring international friction. If one minister is free to repeat in public any chance remark of another upon wage cuts or tariffs, what is to prevent Mr Henderson from publishing any heedless word of a colleague on the subject of French, or German, or American policy? Cabinet secrecy and Cabinet loyalty, even after the break up of an administration, are absolutely essential to the successful functioning of representative Government. Ministers in breaking this rule, have taken a dangerous and unjustifiable course. Moreover, it is a course which is as unfair as it is dangerous; for the disputants over Cabinet events are relying largely upon their memories, and memories are apt to become distorted in the heat of the hustings. Incidentally, in his castigation of Mr Graham Mr Snowden has allowed bitterness to override logic. We hold no brief for Mr Graham, but even if he did in the August crisis consider the possibility of a revenue tariff as a *pis aller*, it by no means follows that he can be accused of protectionist leanings. These personal recriminations do not improve the tone of the election campaign.

The New Government in Spain.—Last week we recorded the replacement of Señor Zamora's Government at Madrid by Señor Azana's in consequence of the voting, in the Constituent Cortes, on the contentious clauses in the new constitution which deal with the relations between Church and State. The new Ministry, which

held its first meeting last Thursday, October 15, proceeded forthwith to take administrative action on some of the clauses which the Cortes had already passed: for example, in regard to the cutting down of the emoluments of the higher ranks of the ecclesiastical hierarchy, and in regard to the prohibition of educational work on the part of the religious orders. The new Government appear to be in no danger of finding themselves without an ample majority in the Cortes for carrying through the constitution with its anti-clerical clauses and corollaries. At the same time, there are certain rather serious danger-signals. As a sign of protest, no less than 43 deputies—credited with representing over 2,000,000 electors—have withdrawn from the Cortes altogether; the clerical feeling in the Basque country and Navarre is being inflamed; and there is a remarkable tendency in Catalonia to take the clerical side against Señor Azana and his colleagues. Perhaps the Catalan Nationalists feel that they and the clericals in other parts of Spain are equally threatened by a vigorous movement for the All-Spanish Republic, secular and indivisible. Meanwhile, the Pope has made another public protest against the treatment of the Roman Church in Spain. It seems hardly possible that the anti-clericals in Spain, however vigorous they may be, should be able to ride roughshod over the Spanish clericals without a severe struggle, and it is to be hoped that Señor Azana's Government will not "ask for trouble," which neither Spain nor the world, at this moment, can well afford. As it is, the unity of the pro-Republican parties—a unity which they had solemnly bound themselves to maintain until after the passage of the new constitution—has been almost irretrievably broken up; and this is a grave misfortune; for the statesmanlike resolve to avoid dissension on secondary matters in order to co-operate on essentials was the chief guarantee that the Spanish Revolution would do its work in a conciliatory fashion and therefore with an enduring effect. The ability of the new Government to control the forces of disruption which it seems to have let loose may be tested severely.

Bank of England's American Credits.—Considerable mystification was caused in London on Thursday by cables from New York to the effect that the Bank of England had repaid \$100 millions of the \$125 millions credit obtained on August 1st from the Federal Reserve Bank. It appears that the origin of this story was the disclosure in the Federal Reserve Bulletin, published on the previous day, of the fact that the Reserve Bank's holdings of foreign bills had declined on September 30th by approximately that amount as compared with a month ago. From this the quite unwarrantable deduction appears to have been drawn that the whole amount of the bills was necessarily British, and that the Bank of England had in fact repaid four-fifths of its indebtedness to the Federal Reserve Bank. The facts, however, appear to be that, as is generally known, a considerable portion of the British Treasury credit in America was utilised during the flight from the pound, not in providing spot dollars, but in covering commitments for forward deliveries of dollars on various dates running considerably ahead. Thus, at the end of September a substantial proportion of the Treasury credits would be still temporarily available in the form of dollars. These, no doubt, were placed to the credit of the Bank of England with the Federal Reserve Bank, thus enabling the Bank of England to retire, again temporarily, a proportionate amount of the bills which it had presented to the Federal Reserve Bank in the terms of its rediscount credit. As and when dollars are required to meet forward exchange commitments on their due dates, it will presumably be necessary for the Bank of England again to have recourse to its rediscount facilities within the limits of its total credit. It is clear that the figure on September 30th of the Federal Reserve Bank's bill holdings gives no indication whatever of any real repayment by the Bank of England. The story of repayment has gained such wide currency and prominence that it would seem to be desirable for the Bank of England to issue an official explanation of the real state of affairs.

Foreign Interests in China.—The present troubles in Manchuria lend particular interest to an article* by Mr George H. Blakeslee in the current issue of *Foreign Affairs* which gives a picture of the extent and importance of various foreign interests in China, and emphasises the particular value to Japan of her assets in that country. So far as foreign investments in China are concerned, statistics are not easily available, but it has been estimated that they probably reach a sum of \$3,000 millions. The chief participants in this amount are Great Britain, Japan, Russia, and the United States, whose respective shares are estimated approximately as follows:—

	Million \$
Great Britain ...	1,250
Japan ...	1,250
Soviet Russia ...	200-400
United States ...	250

British investments in China, although amounting to a substantial figure, represent only a small proportion of her total foreign holdings. They are centred mainly in Hong Kong, the towns of the Yangtze Valley, and in the International Settlement at Shanghai. British holdings of Chinese Government loans are estimated to amount to about \$165 millions, while approximately \$400 millions are invested in real estate, \$95 millions in railways and \$10 millions in mines. The importance of British shipping in China is illustrated by the fact that in 1929 over 44 per cent. of the Chinese coastal trade was carried in British ships. Japan's investments in China approximately equal those of Great Britain and represent practically the whole of her foreign investments. Some 75 per cent. of these holdings are in South Manchuria, the South Manchuria Railway being Japan's chief asset in this area. In addition, however, she holds large interests in mines, steel mills, factories and hotels. In view of her own lack of mineral resources, Japan is largely dependent on Chinese mines, and in this connection the Fushun Colliery, the world's largest open cut coal mine, operated by the South Manchuria Railway Company, is of particular value to her, and has an output capable of meeting all deficiencies in the Japanese market for some time to come. Japan's interests in the Far East are also increasing in Shanghai and several northern ports. In shipping she is only second to Britain, while she has made great progress in the cotton industry, and at the beginning of 1930 owned and operated 39 per cent. of all the cotton spindles in the country. An estimate of Russia's investments, which are located chiefly in North and Central Manchuria, depends largely on the valuation of the Chinese Eastern Railway, which is a matter of some difficulty. There is difference of opinion as to whether this asset should be valued on the basis of original cost of construction, upon total expenditure, including annual deficits, or upon the present cost of replacement. On the later basis it has been estimated that \$50 millions represents a fair figure, but any calculation is complicated by the fact that, under the Sino-Soviet Agreement of Mukden in 1924, the Chinese Government will become the sole owner of the line sixty-three years after its original opening, i.e., in 1963. American investments in China are comparatively small. Her commercial interests are mainly in Shanghai, and until recently were particularly concerned in the petroleum business. During the past three years, however, United States capital has been sunk in several Chinese utility concerns, and in civil aviation. These business interests have been variously estimated at between \$95 and \$125 millions. But America's missionary and philanthropic interests in China are much larger than those of any other country, and represent a capital sum of probably something between \$52 and \$70 millions. The importance of Chinese commerce to Japan is again emphasised by the statistics of foreign trade. In 1929 Japanese trade with China amounted to \$500 millions, United States trade to \$398 millions, and British trade to \$160 millions. But whereas the Japanese figure represents 24.4 per cent. of

her total world trade, that of the United States amounts to only 3.5 per cent., and that of Great Britain to only 1.6 per cent. of their respective foreign commerce. These three countries share between them about three-quarters of China's total foreign trade. The relative importance of China to these countries was somewhat aptly expressed by a leading Japanese diplomat, who said: "Japan's interests in China are vital; British interests in China are substantial, American interests in China are—sentimental!"

Canada and Gold.—The Order-in-Council issued by the Canadian Government, on October 19th, formally prohibiting the export of gold, except under licence, is, in fact, simply the conferring of legal recognition to a previous *fait accompli*. For some months the Montreal exchange on New York has been at a discount which would have allowed a substantial profit on gold shipments to the United States. Though gold on one or two occasions has been exported from the Dominion to New York, the market has been kept by the Canadian authorities under a sort of unofficial control. Indeed, our Ottawa correspondent points out, in a letter which we print on a later page, that though Ministerial spokesmen have recently proclaimed that the Dominion was still on the gold standard, that standard had already been suspended in a strict sense long before the Order-in-Council was published, since business interests, who had applied for gold in order to meet obligations in the United States, had been refused it, while Canadian holders of a maturing dollar loan were paid in Dominion notes, though the American holders received gold. The Federal Government will, doubtless, be able to meet in gold its obligations maturing in the near future in New York, but the Canadian currency must now be regarded as openly off a gold basis. The dwindling premium enjoyed by the Canadian dollar over sterling should, at any rate, help Canadian wheat exporters to some extent in competition with the Argentine.

A Warning from the Continent.—On a later page of this issue our Amsterdam correspondent describes the trade difficulties caused to Holland by the depreciation of sterling and other currencies, and reports a strong movement for import restrictions to deal with the new situation. A project for tariffs even up to 40 per cent. is spoken of. Our Trondheim correspondent tells a not dissimilar story of the trend of affairs in Norway. These two despatches, coming on the top of Canada's action in raising customs rates against British imports, are worthy of serious attention at this moment. The depreciation of the pound is by itself proving sufficient to cause in other countries a demand for protective tariffs. If to the depreciation of the pound we were to add a British tariff, it is quite clear that the dogs of tariff war would everywhere be unleashed. Britain's adoption of Protection at this juncture would certainly instigate a perfect welter of tariff increases all round the world; and, as every student of recent economic history must know, such a result would intensify the world depression and bar the way against concerted measures for the renewal of trade activity.

New Security for German Loans.—A correspondent writes:—In pre-war times house property in Germany was mortgaged on the average up to 70 per cent. of its value. Since inflation relieved homeowners of a great part of this burden, the German Government, in addition to a Rent Restriction Act, has imposed since 1925 a heavy tax on rents (*Hauszinssteuer*), which recently has been 48 per cent. of the pre-war rent, but is to be reduced by 20 per cent. from March 1, 1932. It is believed that the German Government has recently been considering a scheme for capitalising the rent tax into a kind of consolidated debt. The suggestion is that the rent tax should be abolished, but that there should be introduced in its place a permanent mortgage on house property up to the amount of, say, three times the assessed annual amount

of the present tax. In that way the German Government would become the owner of first-class mortgages of a capital value of several milliard marks. These mortgages could be used as a security for Government credit operations. It is true that under this scheme the Treasury would have to face some loss of current revenue, but it would be of great advantage to the Government to have at its disposal a substantial amount of valuable assets which could be placed as security for internal or external loans, by which a part of Germany's short-term debt might be consolidated and additional capital provided for her trade and industry. Since mortgages in real estate are a form of security well liked in some foreign capital markets, the scheme appears to offer possibilities for the refunding abroad of part of Germany's short-term liabilities now frozen under the "standstill" agreement.

Sterling and World Prices.—During the past week gold prices, as measured by our new index number, based on the prices of eighteen primary commodities, have recovered nearly to the point at which they stood immediately before the British suspension of the gold standard. On the other hand, as will be seen from the following table, sterling prices, as measured by the regular *Economist* index, have remained virtually unchanged:—

"ECONOMIST" INDEX.
(1927 = 100.)

	Sept. 18, 1931.	Oct. 14, 1931.	Oct. 21, 1931.
Cereals and meat	64.5	70.1	70.9
Other foods	62.2	67.4	66.8
Textiles	43.7	51.0	51.4
Minerals	67.4	74.1	73.9
Miscellaneous	65.8	66.3	66.2
Complete Index	60.4	65.4	65.5
1913 = 100	83.1	90.0	90.1
1924 = 100	62.2	56.5	56.6
Sept. 18, 1931 = 100	100.0	108.3	108.4
Gold price index	100.0	95.7	99.4

Although there was a slight rise during the past week in the exchange value of sterling, the rise in gold prices leaves the disequilibrium between gold and sterling prices more marked than ever. It should, however, be borne in mind that only about one-third of the commodities included in the *Economist's* index number are such as to be immediately affected by depreciation of sterling.

A Foreign Exchange Analysis.—We print on this page a table showing the premium or discount on sterling established by other currencies since the British abandonment of the gold standard. Quotations are given for the Wednesday before the abandonment took place and for each subsequent Wednesday. The figures tell their own story, in which some of the prominent features are the consistent maintenance by the French franc of a premium over the dollar, the past week's all-round recovery of sterling, and the fact that the premium on sterling established by the Swedish krona is three times as large as that established by the currencies of Norway and Denmark.

† Buying rate, demand.

Employment and the Cost of Living in September.—On the whole employment showed no improvement in September. According to the *Ministry of Labour Gazette*, among the workers insured against unemployment in Great Britain and Northern Ireland, the percentage unemployed at September 21st was 23.2, as compared with 22.7 per cent. at August 24th, and 17.6 per cent. a year ago. It is estimated that on the above dates the numbers of insured persons in work were approximately 9,326,000, 9,365,000 and 9,679,000 respectively. The total number of persons registered as wholly unemployed at September 21st was 2,044,482. This was 86,087 more than a month ago, and 631,240 more than a year ago. Those temporarily stopped at September 21st amounted to 654,755, as compared with 661,829 at August 24th and 596,773 a year ago, while the unemployed among those usually in casual employment numbered 112,378—1,180 less than a month ago, but 12,735 more than in August, 1930. The Ministry's latest returns show that on October 12th the total number of registered unemployed had fallen to 2,766,746, including 2,120,410 wholly unemployed, 531,002 temporarily stopped, and 115,334 normally in casual employment. But while those temporarily without work have decreased during the first fortnight of October by 100,000, the numbers wholly unemployed have increased by 39,750. With regard to the cost of living, the index number of the Ministry of Labour at October 1st registered 45 per cent. above the level of July, 1914, as compared with a similar figure on September 1st, and 56 per cent. a year ago. For food alone the index was also stationary during the month at 28 per cent., as compared with 43 per cent. last year.

Trade Union Membership.—Detailed statistics of the number and membership of trade unions in Great Britain and Northern Ireland at the end of 1930 are published in the current number of *The Ministry of Labour Gazette*. These figures are based on returns collected by friendly societies, by trade unions and by the Ministry of Labour, and relate to the organisations of salaried and professional workers, as well as those of manual wage-earners. We print below the figures for 1930, with comparisons covering the previous five years:—

Year.	Number of Trade Unions at End of Year.	Membership at End of Year.	Percentage Inc. (+) or Dec. (−) on Total Membership of Previous Year.
1925	1,156	5,497,000	− 0.7
1926	1,143	5,209,000	− 5.2
1927	1,137	4,908,000	− 5.8
1928	1,123	4,792,000	− 2.3
1929	1,113	4,839,000	+ 1.0
1930	1,098	4,825,000	− 0.3

The total number of trade unions in existence at the end of last year include twenty having their headquarters in Northern Ireland; while of the total membership some 81,000 members were in Irish Free State branches and about 27,000 in overseas branches of certain unions. Workers in the manufacturing industries represented about 40 per cent. of the total membership at the end

* "The Foreign Stake in China": *Foreign Affairs*, Oct. 1931 (New York) Council of Foreign Relations, \$1.25.

of last year. The metal and textile industries together had 24 per cent. of the membership, while transport services accounted for 27 per cent., and mining and quarrying for 13 per cent. Other groups well represented in the unions were Government, commerce, distribution, finance and teaching. Of the female membership, 58 per cent. were in the textile industry and the teaching profession.

Deep Sea Fisheries.—In the second quarter of the year landings of wet fish from the deep sea fisheries were, as usual, heavier than in the first quarter, when weather conditions were not so favourable. This particularly applies to the landings of British-caught fish at ports in England and Wales, where there was a substantial increase in weight and a substantial fall in aggregate value, the same applying to a comparison with the second quarter of 1930. At times supplies much exceeded demand and forced down prices to an unremunerative level, notably at Hull, where the unsold surplus had to be turned over to the factories making fish meal and fertiliser. In Scotland, however, the position was different. The following table relating to the April-June quarter is compiled from the returns of the Ministry of Agriculture and Fisheries:—

April-June.	Weight in Cwts.		Value.	
	1930.	1931.	1930.	1931.
<i>British-caught.</i>			£	£
England and Wales.....	3,334,620	3,382,535	5,042,085	2,757,700
Scotland.....	1,780,454	1,289,321	935,628	841,875
Shellfish.....	...	...	107,671	103,861
Total.....	5,115,074	4,671,856	4,085,384	3,703,436
Foreign landings.....	641,048	511,840	347,198	263,445
Imports.....	554,730	357,018	931,733	834,275

In England and Wales the effect of big supplies on prices was to reduce the average first-hand value to 16s. 3½d. per cwt., as compared with 18s. 2½d. per cwt. in the second quarter of 1930. In Scotland smaller landings kept up values, the average being 13s. 0½d. per cwt., as against only 10s. 6d. per cwt. Both foreign landings and imports of wet fish were also smaller, and possibly relieved the pressure on the market to some little extent. The statistics for the completed half-year printed below emphasise the general features just referred to:—

January-June.	Weight in Cwts.		Value.	
	1930.	1931.	1930.	1931.
<i>British-caught.</i>			£	£
England and Wales.....	6,050,547	6,108,724	6,287,368	5,877,054
Scotland.....	2,883,524	2,269,359	1,859,078	1,679,097
Shellfish.....	...	...	183,131	167,615
Total.....	8,934,524	8,378,083	8,146,446	7,556,151
Foreign landings.....	1,010,388	905,164	597,528	535,842
Imports.....	1,366,748	1,010,445	1,957,876	1,709,660

The landings of British-caught fish during the half-year in England and Wales were only a matter of 58,000 cwts., or less than 1 per cent. more, but the decrease in aggregate value was £410,314, equal to 6.5 per cent., while the average value was but 19s. 2d. per cwt., as against 20s. 9½d. per cwt. in the first half of last year. In Scotland the decrease of 614,165 cwts. was equal to 21.3 per cent., and the decrease in value of £179,971 equal to 9.6 per cent., the average realised being 14s. 9½d. per cwt. as against 12s. 10½d. per cwt. The landings of foreign-caught fish were rather less, but constituted 9.7 per cent. as against 10.1 per cent. of the total British and foreign landings. Imports also were less. As a set-off to the last-named we exported during the half-year 475,634 cwts. of wet fish, valued at £562,203, as compared with 450,865 cwts. and £572,505. Our exports of cured or salted fish (not canned) had a f.o.b. value of £1,364,495, as against £1,757,285, herrings representing about two-thirds of the total. At the same time, Great Britain imported cured or salted fish to the value of £177,381, as against £312,074, and canned fish valued at £1,862,145, as against £2,005,502. The re-exports of the former had a value of £104,924 and of the latter £392,018, comparing with £209,844 and £522,376 in the corresponding half of last year.

Transvaal Gold Output.—The gold output of the Transvaal mines during September amounted to 916,024 fine ounces, as compared with 916,425 fine ounces in August. In September, 1930, the output amounted to 903,176 fine ounces. In the following table we show the monthly output since the beginning of 1925:—

Month of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.
January	823,692	796,270	859,782	843,857	876,452	882,801	914,576
February	753,925	753,924	779,339	816,133	815,264	818,188	839,357
March	825,479	834,340	860,511	877,380	866,529	889,370	910,998
April	787,519	803,303	824,014	825,907	872,123	868,506	882,337
May	813,249	849,214	859,479	886,186	897,598	916,213	910,279
June	780,251	852,145	855,154	862,363	856,029	887,867	897,750
July	818,202	860,134	851,861	867,211	889,480	912,652	916,843
August	808,218	843,854	863,345	891,863	889,601	921,081	916,425
September	797,247	839,939	842,118	857,731	849,553	903,176	916,024

November	787,633	840,276	848,059	872,484	861,593	884,753	...
December	791,455	836,157	851,225	859,761	851,134	908,492	...
Total.	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	8,105,103

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors at the end of September totalled 224,326, as compared with 224,677 at end of August. Comparative figures for the last eight months are shown below:—

	Jan., 1931.	Feb., 1931.	Mar., 1931.	Apr., 1931.	May, 1931.	June, 1931.	July, 1931.	Aug., 1931.	Sept., 1931.
Gold mines	209,442	209,777	207,239	206,770	207,109	207,209	208,155	209,409	209,424
Diamond mines	13,865	13,740	13,436	13,242	13,305	13,286	13,512	13,563	13,276
Total	223,307	223,517	220,675	220,012	220,414	220,495	221,667	222,972	222,700

The number of natives employed at the mines shows little change on the month.

Overseas Correspondence.

UNITED STATES

Credit Corporation — Gold — Reserve Position — M. Laval.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 14.

ALTHOUGH the seriousness of the Manchurian troubles is appreciated, domestic developments of the past week captured the imagination of the security markets and brought about a sharp rise in prices, followed by the inevitable sobering up on a closer examination of the position. It is thought that the National Credit Corporation, the name for the organisation formed at President Hoover's solicitation to extend help to needy banks, will begin operations in a few days. Virtually \$500 millions have been pledged by the banks, and this sum doubtless could be doubled if needed. The Corporation will operate in close harmony with local clearing-house associations. It has no intention of buying or lending money on doubtful assets, but will confine itself to security of recognised standing which, owing to depressed markets, cannot be disposed of advantageously and is ineligible for discount at the Federal Reserve Banks.

No one thinks, of course, that this scheme is going to lift the country out of a business depression, but all hope that if it can swing into action at once it may do good by instilling confidence in banks and relieving the security markets from the pressure of bank sales. For the week of October 7th the reporting member banks in leading cities showed a further drop of \$85 millions in their investments, while their security loans were reduced by \$265 millions.

The tendency of timid bank depositors to withdraw their funds and hoard currency is widely denounced; an undoubtedly is an important factor in the banking situation, just as the numerous failures have helped to weaken public confidence in the banks. The new credit organisation

tion, it is hoped, will do much to break up this vicious circle. Hoarding of American currency is not confined to American citizens. Some estimate that as much as \$400 millions are now hoarded abroad. This week, for instance, \$1 million of a gold shipment to France were in \$20 gold pieces, whereas the usual practice is to ship gold bars.

No rapid diminution of the gold flow is taking place, although imports also continue. Since September 20th the total loss of gold in this country through exports and earmarkings tops \$500 millions. No great anxiety over the departures is shown as yet, but the money market is firming up, along with the inflation in currency circulation. The Federal Reserve Banks have done much to offset the tightening effects of gold exports and bank currency needs by buying bank bills in large volume. Last week the system's bill portfolio rose \$112 millions; the member banks borrowed \$135 millions; and total reserve bank credit increased \$261 millions. Money in circulation rose \$185 millions. The bill purchases are paid for with Reserve Bank notes, which have increased by nearly \$1,000 millions as compared with a year ago. Member banks are borrowing \$463 millions, against \$173 millions a year ago, and total Federal Reserve Bank credit outstanding, at \$1,839 millions, is \$827 millions higher than last year, in spite of the steady decline in trade. In fact, Reserve Bank credit outstanding is now higher than it was at the height of the boom period.

Obviously the Federal Reserve system's cheap money policy has failed to stimulate either business or bond markets, and its partial abandonment is regarded as advisable, although the lifting of the New York discount rate from a 1½ to a 2½ per cent. basis last week came as a surprise. Rumours of a change a fortnight previously had been stoutly denied, and it is likely that, while the rising tone of the money market dictated a restoration of the official rate from an abnormally and ineffective low level to a normal level, other shifts in the scene were important influences. Whatever the case may be, the automatic upward adjustment of bank commercial paper rates was a distinct help to the banks, which have been on a starvation diet induced by the excessively cheap money policy of the Reserve. It is now thought that deposit rates will be lifted shortly, and that the banks will thereby attract corporation money now placed in the short-term security markets, as well as make a bit more on their lendable credit.

With a further rise of a half per cent. in bill rates this week, followed by a rise in the Federal Reserve's buying rate, after an additional \$50 millions in bills had been bought from the banks, the asking rate on 90-day bills is now 2½ per cent. Any further rise would therefore suggest a higher discount rate. Banks sold about \$200 millions in bills to the Reserve in recent weeks and still hold around \$400 millions, which the present rate levels prevent them from selling except at a loss and which therefore they probably will hold to maturity. The Treasury is having to pay the cost of rising interest rates. Its latest discount bill issue of \$50 millions found a lack of eager bidders and went at an average interest rate of 2½ per cent., compared with 1.22 per cent. on September 30th and the record of 0.46 per cent. on July 27th. While firmer money is thus an accomplished fact, it is unlikely to change the aspect of things for the worse. The Federal Reserve system's reserve ratio is still higher than 67 per cent., and gold reserves at \$3,036,000,000 are \$60 millions higher than a year ago. Also, in spite of the low interest rates and falling deposits, the strong banks have been able to get along fairly well. The statements of condition for their third quarter show that the thirteen large New York banks, which hold the bulk of deposits, earned from June 30th to the end of September a total of \$82,438,000 and paid dividends of \$28,761,000. The banks suffered a substantial loss in gross deposits, most of which was seasonal in character. Only two institutions failed to cover their regular dividends. The bank share market, after having sunk alarmingly, has turned quite buoyant.

Business conditions show no important change. The steel industry, while feeling some stirrings of autumn

business, is still operating at around 29 per cent. of capacity. Freight car loadings for the first week of October were the highest for any week of the year, but were far below a year ago. An Interstate Commerce Commission decision on the higher freight rate application is expected within a few days, and the general run of conjecture is that a rise of about half the 15 per cent. asked will be granted. In any event, after the announcement the railroads probably will take up the question of wage reductions for their unionised labour. This must be done through concerted action, as the unions make a general contract with the roads. Wages elsewhere continue to be levelled down and, apart from certain commodities such as wheat and cotton, prices are receding.

Premier Laval's visit is awaited with much interest, but hopes should not be raised too high of a material early reduction in international debt payments. The Administration's view is believed to be that, given an accord among France and other European nations on German reparation reductions, as well as possibly promises on armaments, this Government would consider scaling down the debts due to the United States. Just how far the temper of the country would permit Congress to go is problematical, but if such reduction could plausibly be proposed as a cure for the business depression, and if higher taxation resulting from it could be so distributed as to disturb very little the majority of citizens, the deal might be made. In principle the American is not opposed to cutting the European debt, but he is not at present disposed to shoulder an additional tax burden for that purpose, light as his present burden relatively is.

FRANCE.

Election Dates — Budget Problems — Overseas Trade.

(FROM OUR CORRESPONDENT.)

PARIS, October 21.

It now appears to be practically certain that, by force of circumstances, the dates of the General Elections for the Chamber will have to be fixed for April 17 and 24, which are the only two Sundays free that will enable Constitutional requirements to be met without general inconvenience. The new Chamber must hold its opening sitting on June 1st, so that the latest possible date for the elections would be May 15th (with May 22nd for second ballots). This happens to be Whit Sunday, however, which most French people spend away from home. The previous two Sundays will be devoted to the great national Joan of Arc commemoration (May 8th) and Labour Day (May 1st), which are equally unsuitable. This bringing forward of the date of the polls will naturally still further curtail the time available for disposing of the Budget.

The problem of how to accommodate the passage of the 1931-2 Budget by the expiring Chamber to the fact that it would thus come into operation under the auspices of an entirely fresh Lower House, has now received definite solution. The new Budget will be drafted to cover only the nine months to the end of 1932, from which period there will be a return to the old financial year, which began as from January 1st. This was the system in vogue down to the beginning of 1930, when M. Tardieu found himself compelled, in order to gain time for the annual financial discussions, to postpone the beginning of the Budget year to April 1st. M. Tardieu's difficulties were due to the time-wasting methods that seem inherent to most Continental parliaments. M. Laval, although in part for somewhat different reasons, has now been obliged, like his predecessor, to make a second change in the period covered by the annual Budget. The coming Budget, therefore, will be only what may be termed an interim one. The new Chamber, which will begin work on June 1st, will within three months of coming into existence be called on to take up in earnest, in the spirit directly inspired by the electorate, the nation's new national and international financial problems.

The elections for the *Conseils Généraux* (county councils) throughout the country last Sunday have given a fairly good indication of the probable present trend of the electoral mind. An analysis of the returns foreshadows that, if last Sunday's voters cast their ballots similarly at the coming General Election, as it may fairly justly be inferred they will, the new Chamber will possess a substantially reinforced Centre and appreciably weaker Extremist Parties of all kinds. Last Sunday's outstanding characteristic was a somewhat sharp defeat of Communist, Socialist and "Die-Hard Reactionary" candidates in many of the cantons. The Socialist leader, M. Léon Blum, himself lost his seat as a county councillor of the district. The Radical Socialist candidates, on the whole, held their ground unexpectedly well. These local elections are usually regarded as affording fairly sound indications as to the real state of mind of the mass of the parliamentary electors, which explains what the foreign observer is inclined to regard as the exaggerated importance ascribed to them in French political circles.

The evolution of the new Budget Bill is proceeding vigorously. According to official announcements, "equilibrium will be obtained without recourse either to a loan or to new taxation, and without any fresh call on the Caisse d'Amortissement." The Budget Minister, M. Pietri, states that proposed expenditure has been substantially brought down, and that "equilibrium will be obtained thanks to certain exceptional resources on which we believe to be able to count this year." Whether this is an allusion to the pending application of part of the Government's extensive Renten conversion plans is not clear. "Customs receipts," the Minister added, "will without doubt compensate for loss of revenue from income tax on industrial and commercial profits and from the turnover taxes." The Caisse d'Amortissement will continue to make itself responsible for the additional 1,900 million or so of debt burden which it took over from the Budget last year, but will still command about 2,500,000,000 francs for debt extinction purposes. "The resources constituted by the unconditional annuity of the Young Plan will form part of our estimated revenue." It is also intended to put into operation a further portion of the Tardieu plan for new public works for the re-equipment of the national economic plant. This will be organised with a special view to absorbing unemployed labour. The necessary money will in all probability be furnished by a loan issue.

Taxation continues to come in satisfactorily. The total yield from all "normal and permanent" Budget sources in September was 3,617,598,000 francs, as compared with 3,414,272,000 francs in September, 1930, and 3,368,910,000 francs in the same month of 1929 (since which latter date a good deal of taxation relief has been accorded). The yield from the imposts which are grouped in this country under the heading of "indirect taxes" and from State monopolies (other than tobacco) was about 113½ millions in excess of Budget estimates. This, however, was solely due (like the similar "surpluses" in June, July and August) to the recent increases in various schedules of the Customs duties, especially in regard to entries of agricultural products. In September import duties yielded 118 millions more than in September last year (notwithstanding the substantial drop of over 800 millions in total imports, a decline which was only in small part due to lower yield from most of the *ad valorem* duties), and nearly 165½ millions more than Budget estimates. Since the beginning of the financial year, last April, total recoveries have resulted in an excess over Budget estimates of 312,120,000 francs. During the same period Customs duties have produced 918,312,000 francs more than expected, so that apparently, but for recent revisions upwards of Customs rates, the half-year would have resulted in a deficit of 606 millions instead of in a surplus. The yield from taxes on securities in September was 11½ millions more than in September last year, while stamp duties were 2,978,000 francs higher, and petrol duties nearly 15 millions more. Most of the other categories showed a falling off on the month. The drop in turnover taxes, which yielded 580,000,000 francs, was only 54½ millions, or about 8½ per

cent.; which suggests that business in general during the holiday period was not so unsatisfactory as was generally alleged. It is also significant that amusement taxes in September produced 1,788,000 francs more than in the same month last year.

The foreign trade figures for September, which were made known on Saturday, show small increases in both exports and imports. Exports had a value of 2,434,654,000 francs (or about 118½ millions more than in August), and as compared with 3,360½ millions in September, 1930, while imports were 3,345,851,000 francs (or 156 millions more than in August), as compared with 4,225 millions in September, 1930. Imports exceeded exports during the month by 911 millions, as against a deficit of 974 millions in August and 1,402 millions in June last, which was the highest deficit figure ever registered. The detailed figures for the first nine months of the year are as follows:—

	First nine months of 1930.	1931.	Differences in 1931.
Imports:—			
Foodstuffs	8,066,702,000	10,848,334,000	+2,781,632,000
Raw materials	22,622,716,000	15,526,670,000	-7,096,046,000
Manufactured goods	8,526,363,000	6,998,533,000	-1,527,830,000
Totals	39,215,781,000	33,373,537,000	-5,842,244,000
Exports:—			
Foodstuffs	4,458,856,000	3,185,454,000	-1,273,402,000
Raw materials	7,672,734,000	5,508,074,000	-2,164,660,000
Manufactured goods	20,537,784,000	14,711,594,000	-5,826,190,000
Totals	32,669,374,000	23,405,122,000	-9,264,252,000

The large increase in imported foodstuffs since the beginning of the year has, of course, been due to last year's poor French harvest, caused by the heavy storms which ruined much of the 1930 wheat crop. The nine months' exchanges show a total deficit balance of 9,968,000,000 francs, as compared with one of 6,646 millions for the corresponding period of 1930. The drop in exports latterly has been chiefly due to a falling off in foreign purchases of French agricultural produce, chemical products, motor cars and textile goods. Exceptionally, potato exports have been larger this year, down to the present, but the coming into operation of the British embargo on imports of potatoes coming from districts in which disease due to the ravages of the Colorado beetle (*dioryphora*) exists is expected to prove a serious blow to this form of trade. Simultaneously, entries of foreign cattle, fresh and frozen meats, wines, cereals, fruits and farm produce in general have been substantially larger this year, owing to successful foreign competition against the high domestic prices of home produce of these categories. How serious this competition has been is evidenced by the fact that total prohibition was recently imposed on entries of foreign wines of all kinds. Imports of wool, cotton, rubber and chemical and engineering products, on the other hand, have fallen off considerably.

GERMANY.

Reichstag — Economic Council — Reichsbahn Loan — Trade — Unemployment.

(FROM OUR CORRESPONDENT.)

BERLIN, October 21.

CHANCELLOR BRÜNING'S victory in the Reichstag was above all a personal victory. In the last weeks before the decisive session of the Reichstag venomous intrigues were formed against him, but no one has ventured to speak of him face to face otherwise than with expressions of high respect, not only for his uprightness, but also for the strength of his will and his grasp of the situation. Even Adolf Hitler, in his open letter to the Chancellor, used almost respectful tones. Naturally the Opposition has not abandoned hope that Dr. Brüning's authority will exhaust itself in the coming months. But to-day the

Chancellor occupies a position of such moral strength as no other Chancellor has enjoyed since the war.

At the same time, the majority in the Reichstag was not due to Dr. Brüning's impressive speeches alone. Among the groups of the moderate Right, whose support was courted by both sides, the feeling that responsibility for an overthrow of the Cabinet could not be assumed became steadily stronger in the course of the proceedings. It must even be assumed that some deputies of the German People's Party and the Landvolk group voted against the Government only because they were unwilling to disregard the decision of a majority of their parties, and because they were further convinced that the Government would win despite their votes.

The next task facing the Government is the solving of the social problems of the day. This is to be undertaken above all with the help of a "Wirtschaftsbeirat," an Economic Advisory Council to be composed of the various departments of economic life and of the trade unions, with President von Hindenburg as chairman. As a matter of fact, an Economic Advisory Council is already in existence—the "Reichswirtschaftsrat," which was created by the Constitution. But this organ has not understood how to acquire authority. Hence the Government regards it as necessary to create by extraordinary means a new advisory body. It is questionable, however, whether it will be possible to achieve unity of opinion in this council. Trade unions and employers have but recently used very sharp language to each other in public utterances. The questions which they must now deal with are extraordinarily ticklish. Without abandoning the system of collective wage agreements, such agreements are to be given an element of elasticity in order to make possible a better adjustment of wages to the capacities of the different employers in the time of crisis. Hence the negotiations will be attended on the one side by the wild protests of the Communists, who accuse the trade union leaders of treachery, and on the other side by the no less loud protests of the groups of the political Right, to which most of the employers probably belong, against any concession to "Socialism." President von Hindenburg will have to make use of his great moral authority in order to keep both sides at the conference table until such time as the differences shall have been somewhat worn down. A compromise in the problem of the controlling of cartels, which will also occupy the Council, will probably be reached more easily than in matters of social policies.

The Government has achieved an almost astonishing success with the tax-free Reichsbahn loan. More than 170 million marks have been subscribed, and the period for subscriptions has been extended, as the last days brought a pronounced increase of subscriptions, and there were indications that a number of people might still subscribe. The greatest part of these subscriptions has, without doubt, come from tax-evading capital, whose owners desire to take advantage of the taxation amnesty. The desire to bring capital back to Germany may also have been furthered by the psychological effect of the sterling crisis. Since the pound has lost a part of its value, the faith in the security of investments abroad has been severely shaken in Germany. And since the tax requirements that brought about the flight of capital do not come into consideration for the subscriber to these loans during the next years, and he needs only to accept a comparatively small interest return on his property, the shifts in the currency situation have obviously been very effective. Naturally, the result does not come up to the fantastic ideas held in many quarters regarding the extent of the flight of capital and of the possibility of replacing it. But all sober observers have seen their expectations greatly exceeded. The Reichsbahn, which receives the proceeds of the loan, will use the money for increasing its orders for material. The Reichsbahn is thus well financed for this year, since a very considerable part of the Hoover Plan savings also go to it. The idea is, of course, to ease the crisis in the labour market through new orders. A further factor is the realisation that the Reichsbahn represents an extra-

ordinarily great asset to the Reich; hence its property must not suffer depreciation through the effects of the crisis. This is also the reason for the drastic step taken by the Reich through its new decrees regarding the competition of privately-operated automobile trucks with the railways.

Germany's foreign trade in September reached a new record in surplus of exports over imports. Exports were 835 million marks, imports only 448 millions. In 1929, the year of the largest foreign trade figures, exports and imports were about equal, with a monthly average of, roundly, 1,120 millions. That the value of imports decreased so much more than that of exports is explained only in small part by the fact that the imports consisted in the main of raw materials, and hence were more strongly affected by the worldwide drop in prices than were the exports. For the greater part, the decline in imports is a result of the declining German purchasing power, and of a situation of production that has grown worse in far greater extent than the worldwide decline. The German export trade seems not to have been greatly affected by the pound crisis, despite contrary expectations held in many quarters. The drop in the pound's value naturally amounts to an export premium for Germany's English competitors, but one conjectures that fear of the introduction of protective tariffs in England and other countries has led different countries to make covering purchases which have compensated for the increased activity of the competitors.

Despite this great surplus of exports, the Reichsbank lost more gold and *devisen* in the first half of October. The covering of the Reichsbank notes amounted on October 15th to only 28.6 per cent, the \$150,000,000 of foreign credits being calculated as a part of the covering. Happily the Reichsbank and the responsible Press have for months been explaining to the German public that the stability of a currency is not dependent on the percentage to which it is covered. Thanks to the "freezing" consortium and the German legislation governing *devisen*, the German payment balance is not seriously menaced, despite the recent losses of foreign currency. It is true that the Reichsbank has in the course of the last month had to pay out somewhat over 400 million marks in gold and *devisen*, but this was due solely to the effect of previous happenings. The "freezing" agreement came into effect at the end of September, and all seasonal credits, all foreign accounts due as a result of "term" engagements in foreign currency, and 25 per cent. of the mark deposits had to be released and transferred to the foreign creditors. The next months, as a result of the "freezing" agreement, will bring only small withdrawals of *devisen*, and the German *devisen* provisions render practically impossible any transfer of German property to foreign countries. In these circumstances the export surplus must sooner or later make itself felt in an expansion of the German stock of gold. The Reichsbank is now trying with all its energies to add to its covering funds the sums of foreign currency due to German exporters. In a period of international nervousness and anxiety about currency, the Reichsbank will doubtless not succeed in doing this completely; but, nevertheless, all calculations make it appear very probable that the present percentage of covering can be maintained until the end of the year. What will happen then, especially when the "freezing" agreement expires on March 1, 1932, can, of course, not be predicted. But there is no room for doubt as to the firm decision of the German Government to maintain the stability of the currency at all costs.

The demands made on the Reichsbank through presentation of domestic bills have also increased. But, despite the simultaneous losses of gold, they will probably not be regarded as a reason for increasing the present discount rate of 8 per cent. The Reichsbank has been compelled in the last few days to accept considerable sums of paper in order to make it possible for the Savings Banks to meet depositors' withdrawals. An increase of the discount rate would make no change in the amount of such bills or of future bills in a crisis. An increase of the interest burdens for good commercial paper, on the contrary, would further increase deflationary pressure, and it is the Reichsbank's effort to avoid this as far as possible.

Unemployment figures have taken a not unfavourable turn in recent weeks. In the second half of September—in which, however, the harvesting of the potato crop regularly required extra labour—the total number of unemployed increased by only 31,000, as against 21,000 in the same period of 1930. Since the (very high) minimum standard of the summer, the total has increased by roughly 400,000, against 369,000 in the same period last year. The following table shows the development:—

Date.	Increase in two weeks		Totals.	
	1930.	1931.	1930.	1931.
July 15	75,000	2,000	2,716,000	3,956,000
July 31	49,000	34,000	2,765,000	3,990,000
August 15	80,000	114,000	2,845,000	4,104,000
August 31	38,000	111,000	2,883,000	4,215,000
September 15	100,000	109,000	2,983,000	4,324,000
September 30	21,000	31,000	3,004,000	4,355,000

These figures cover those registered at the employment agencies as seeking work, and hence include both those drawing support and those receiving none. Of the 4,300,000 unemployed, 1,300,000 receive payments from unemployment insurance, 1,100,000 from the "crisis aid," that is, mainly at the expense of the Reich, and about one million are dependent on the Poor Relief funds of the municipalities. The remainder live from their savings or are supported by relatives.

AUSTRIA.

Credit-Anstalt — Budget Cuts — Exchange Control.

(FROM OUR CORRESPONDENT.)

VIENNA, October 19.

THE big change in the Credit-Anstalt is now completed. At the beginning of his activity the new Minister of Finance gave notice to all the directors and assistant directors of the bank. Only the few directors nominated since the collapse of the institution remain. Previous to this change there was a serious crisis in the reconstruction committee, whose chairman, the former Minister, Dr. Gürtler, and vice-chairman, Dr. Mosing, have resigned their positions. Both of these gentlemen were of the opinion that the majority of the directors, and especially those under whose management the collapse took place, should immediately withdraw. The managing director, Dr. Spitzmüller, was not of this opinion, but the Government went over his head and issued the dismissals. In so doing they were guided by the fact that with every day that passes the liability of the Federal State for the Credit-Anstalt is growing, and there is talk of figures running into alarming amounts. The proceedings at the Credit-Anstalt are also beginning to take on political significance, for the farmers, the officials and the business people, who now have to pay new taxes or whose salaries are being reduced, have been voicing the sharpest complaints at election meetings against the relief action for the Credit-Anstalt and against its management; and there have been demands that the courts should intervene. Criminal proceedings are therefore in progress against the former director of the Credit-Anstalt, Fritz Ehrenfest. The report of the chartered accountants is still being kept secret, but it is said that at the meeting of the reconstruction committee and the Ministry of Finance there are computations of the losses of the Credit-Anstalt and of the guarantee of the State which amount to a very high sum, several times as great as the first estimate of 140 million schillings. It is pointed out that the Budget cannot be balanced, and that all retrenchment will be in vain so long as no definite figures are available in regard to the deficit of the Credit-Anstalt and the amount of the guarantee assumed by the State.

The estimates for the year 1932, which will very shortly be submitted to the National Council, provide for a saving on materials consumed of 265 millions, and on salary expenses of 55 million schillings. The most drastic retrenchment is being effected in the Ministry of Commerce, at the War Office and in regard to agriculture. Originally the Ministry of Commerce estimate figured at 105 million schillings, but it has been reduced by exactly one-third; drastic cuts have been made in the appropriation for roads and buildings. The estimated expenditure for

the Ministry of Agriculture for the year 1931 was 121.6 millions, and now a curtailment of 31 per cent. is shown. The War Office required 110.4 millions, and the curtailment will amount to 28.5 per cent. It is also intended to make important savings at the Ministry of Education and at the State theatres. The previous expenditure of 97.7 million schillings is to suffer a reduction of 22 per cent., and the deficit of the theatres, which necessitated a State allowance of seven millions a year, is to be brought down to three millions. At the Ministry for Social Administration alone there are practically no possibilities of retrenchment in view of increasing economic distress and of the growth of unemployment. In the State enterprises a general reduction of expenses of 10 per cent. is to be made. The Government appears to be optimistic in regard to the development of the tobacco monopoly and of the Customs duties, although the introduction of the strict control of foreign currency business will undoubtedly lead to a big loss of Customs revenue. The regression in the consumption of tobacco cannot be counterbalanced by an increase of prices.

As a result of the compulsory surrender of foreign means of payment, the National Bank shows a very considerable influx of foreign currency, which the Bank needs urgently; for the 190 million schillings credit which has been prolonged and, until the end of the year, is still to remain a debt to the Bank of International Settlements or the Bank of England, may not be utilised. Furthermore, bills of exchange which were passed by the National Bank for discount by foreign banks, are not being prolonged. Consequently the bill portfolio has swollen, as the National Bank is placing these bills in its own portfolio. Furthermore, holdings of *devisen* show a decline, because the foreign means of payment which the National Bank received for these bills of exchange have again run out. Still, for a few weeks now the National Bank has a breathing space and hopes that the negotiations which are taking place in Paris will result in a small advance against Treasury bonds presently to be issued.

The National Bank is adhering rigidly to the official rates for foreign exchange. By means of the severe punishment regulations it has suppressed private trading, in which considerably higher prices had figured. Further, the sending abroad of Austrian notes is being rendered difficult by every available means, and the suspension of quotations on most of the foreign markets is a reflection of the restrictions which the National Bank is imposing in regard to the conversion of schilling notes for any but absolutely legitimate requirements. Every effort is being exerted in Austria to avoid inflation. The rigorous collection of taxes and the drastic measures of retrenchment which are everywhere being put through will take care of this. There is no intention to open the Bourse, and the sale of shares and investment stocks is therefore still more difficult. Further, in regard to making advances against security, the credit institutions are very cautious. Savings banks are observing a similar attitude. Mortgages are also not easy to raise, especially as the banks have been told to exercise the greatest reserve in issuing fresh credits and to maintain ample cash in hand.

The complete paralysis of money and credit transactions with Hungary makes it very difficult to collect outstanding debts in that country, and this circumstance is exercising a depressing influence upon Austrian trade. Commerce with Yugoslavia and Poland, and latterly with Czechoslovakia, in which country a still sharper control of foreign values has been instituted, is also damped down considerably.

HUNGARY.

League Financial Committee — Currency — Budget Problems.

(FROM OUR CORRESPONDENT.)

BUDAPEST, October 20.

THE Financial Committee of the League of Nations, which was convened to a special meeting at Budapest on October 16th, began its deliberations under the chairmanship of Signor Suvich. The Committee is very strong,

Sir Otto Niemeyer, Monsieur de Chalendar, Mr Ter Meulen and Mr R. N. Olds, the former American Under-Secretary of State, being present. It is expected that the Committee will conclude its work by the end of the week. No official statement has been given of the proceedings, but it is no secret that the Committee is considering the material collected by the experts of the League who have been investigating the financial situation of Hungary on the spot since October 1st. Although an official *communiqué* is expected when the Committee adjourns, it is uncertain yet whether the report on the finances of Hungary, prepared by them, will be published before it is submitted to the Council of the League. Readers of the *Economist* are familiar with the precarious currency and budgetary conditions in Hungary, which require urgent handling in order to preserve the basic financial structure of the country on which its future recovery depends.

The latest return of the National Bank is satisfactory. The note circulation has decreased by 4.9 million to 362.6 million pengő, the bill portfolio has diminished by 9.4 million to 364.4 million pengő. The gold and gold exchange holding amounted to 116.4 million pengő, a slight increase on the previous week. The note circulation, which has oscillated between 350 and 400 million pengő in the last six weeks, is very satisfactory; the absence of increase demonstrates that depositors trust the banks and the gold pengő. The gold holding of the Bank slightly increased on October 1st, but this is due only to the fact that the rationing of foreign exchanges for merchandise imports was very vigorous. As was pointed out in previous dispatches, Hungary can at last balance her imports by merchandise exports, but there is no hope of an export surplus with which to pay interest, sinking fund and other maturities due in the next few months.

The endeavours of the Government to balance the budget have been examined by the Finance Commission. There is a considerable deficit in the first quarter of the current financial year, which begins on July 1st. No official publication is available yet of the results of the first quarter, but they will be made public in all probability on November 1st. In view of the depressed economic conditions and the fall in the price level, in spite of the increased taxes, it would be unwise to expect more than 800 million pengő revenue in the current financial year. As the expenditure, in spite of the cuts already effected, amounts to nearly 900 million pengő, further curtailments will have to be enforced in order to restore the equilibrium of the budget. The State enterprises' budget, especially that of the State railways, needs thorough reorganisation. The finances of the municipalities are also in a very unsatisfactory state, and their wasteful expenditure must be drastically cut down. The balancing of the State budget, as well as that of the State enterprises and municipalities, will involve heavy sacrifices.

ITALY.

Gold — Foreign Trade — Unemployment.

(FROM OUR CORRESPONDENT.)

TURIN, October 19.

GREAT prominence is given in the newspapers to the fact that 80 barrels of gold were landed on Friday at Genoa for delivery at the Bank of Italy, and that the proportion of gold reserves (exclusive of gold bills), which stood at 25.2 per cent. on December 31, 1927, just after the stabilisation decree, has increased continuously thereafter to the present level of 37.3 per cent. As the legal cover for notes in gold and gold bills is 40 per cent., we are, so the comments run, very near to having reached the legal requirements in gold alone. This would appear to mean that the final policy of the Bank of Italy would be to abandon the gold standard system. This should perhaps be regarded as a final stage, because at present foreign exchanges are strictly controlled and only "cash" foreign bills are sold. Forward coverings are thus barred, with no small discomfort to industry and trade.

Figures published this week of September foreign trade point to a favourable balance, imports being restricted to

839.2 million lire, against 1,272.6 millions in the corresponding month of last year, while exports decreased only from 901.5 millions in 1930 to 871 millions in 1931. This favourable balance of 31.8 million lire may be exceptional, but it is a symptom of a tendency. In the first nine months imports decreased from 13,066.2 million lire in 1930 to 9,106.5 millions in 1931, while exports decreased only from 9,048.7 millions to 7,405.4 millions, so that the import excess decreased from 4,022.5 millions to 1,701.1 millions. What is the true significance of this sharp contraction of foreign trade, and what will be its future consequences, is not so easy to see. Reductions from 31,451 tons in the first half of 1930 to 22,714 tons in the same period of 1931 in the imports of raw jute, from 128,140 to 95,009 tons of raw cotton, from 31,339 to 26,892 tons of wool, from 521,062 to 284,698 tons of broken iron, from 92,565 to 48,979 tons of pig iron, from 61,376 to 34,217 tons of iron and steel, from 5,375,899 to 4,605,593 tons of coal, from 95,012 to 87,951 tons of cellulose, not fully compensated by some increases such as from 329,555 to 433,694 tons of mineral oils derivatives, or from 16,816 to 20,050 tons of hides, may well cause some misgivings as to the activity of Italian industry. But from a monetary point of view they point to an easy situation; so much the more as it is prognosticated that the balance of international payments, including invisible items, will close with a favourable surplus. Pilgrimages, most famous of all that of St. Anthony of Padua, which had been suspended when Church and State were at loggerheads about the Catholic Action, were restarted once peace was restored, and they are bringing money into Italy.

That industrial activity is on the down-grade is indicated by the unemployment figures. In 1930 unemployed were 394,630 at the end of September, reaching 642,169 only at the end of December, and rising to a maximum of 765,325 at the end of February, 1931. After a short-lived decrease to a minimum of 573,593 at the end of June, we are again up with a figure of 757,764 at the end of September. As the subsidy period is generally 90 (in some cases 120) days, the number of unemployed on the subsidy list is only 234,000. To provide for the others a big drive has to be made on public charity, with large subscriptions coming from employers, public bodies, employees and workers on the pay roll.

The limitation of the Bourses to cash transactions has reduced business to a dwindling fraction. In the first week of October transactions in securities reached only 3.5 million lire daily, which is a decrease of 80.5 per cent. on the same week of the past year, and of 96 per cent. on the maximum turnover reached in the third week of May, 1928. Quotations are lifeless but quiet, which is, perhaps, the utmost we can expect.

HOLLAND.

Exchange Problems — Tariff Agitation — Trade.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, October 21.

SINCE the suspension of the gold standard in England and the resultant increase in the intensity of foreign competition in the Dutch market, various branches of Dutch industry and commerce have submitted petitions to the Government stressing the urgent necessity for safeguarding measures. As a result, the Minister of Labour, Commerce and Industry has instructed the Director-General of Labour to institute a speedy inquiry into the situation in the various branches of industry. The work was commenced immediately, and a questionnaire has been supplied to every industrial undertaking employing more than ten persons. The replies have to be sent in by October 21st and, with the aid of the particulars thus secured, the report of the Minister will be compiled. In Parliament, also, several members have questioned the Ministers with regard to the Government's intentions for dealing with the prevailing economic crisis in the Netherlands. The Minister of Home Affairs announced in this connection that the Government intends to introduce a Bill for

coping with the problems which have been encountered lately with regard to imports. As to schemes for providing employment, the Government has already done much in this direction, and it is hoped to extend these further. The Government is prepared to furnish unemployment funds with additional support again in 1932 if necessary.

Evidently the introduction of a general emergency Bill can shortly be expected in Parliament, and in most circles increased import duties are anticipated. As a matter of fact, in view of the budgetary deficit, legislation has already been proposed for an all-round increase of the 8 per cent. import duty to 10 per cent., whilst, in addition, a Bill has also been introduced for investing the Government with power to enforce temporary measures for coping with artificial competition from abroad. This would enable the Government, for a period of one year at the most, to restrict imports or to levy special tariffs up to a maximum of 40 per cent. without reference to Parliament. These proposals are, generally speaking, viewed as paving the way to a more protectionist commercial policy in the Netherlands, and accordingly there is violent opposition on the part of the Liberals. In addition, it is considered in some quarters that the measures proposed are in contravention with the Treaty of Oslo. The Government, however, states that the Treaty of Oslo does not restrict Holland from exercising its right to take temporary measures with regard to the import of merchandise, if such be considered necessary for fiscal or economic reasons. If such measures be adopted, the Government is only called upon to give notification thereof, and to give due consideration to any appeals made by other signatories if they consider their interests are endangered. It should be remarked, however, that the Treaty was built up on the assumption that the signatories would abstain from taking such measures as far as possible, and that they should only take recourse to them in the event of absolute necessity.

The Government is closely following the trend of public opinion expressed in the Press and elsewhere with regard to an entire or partial Netherlands-Belgium customs union. The responsible Minister has stated that, in principle, there can be no objection to two or, as the case may be, three of the signatories of the Oslo Treaty extending their co-operation beyond the actual scope of the Oslo Treaty, if they wish to do so. The Government considers that it is very doubtful whether the creation of a Netherlands-Belgian-Scandinavian customs union would be a useful development, but that, apart from that, the extent to which the signatories of the Oslo Treaty can develop their co-operation is very large.

From all the developments referred to, it is evident that Holland is tending to follow an active foreign commercial policy more and more for the sake of saving at least what has been achieved in the way of industrial enterprise.

The problem of the fluctuating sterling rate of exchange gave rise to discussions over here as to the institution of an official foreign exchange futures market, with clearing house under the management of the Netherlands Bank. Although operations in sterling for forward delivery met with considerable obstacles the first few days after the suspension of the gold standard in England, everything is working fairly normally again now, and customers can now cover their exchange risks at their banks by buying or selling sterling for forward delivery in the usual way. The necessity of an official market for forward sterling is, therefore, no longer being felt so urgently.

State revenue continues its downhill trend. The income in the month of September was 34.6 million guilders, against 40.8 millions in September, 1930. The total revenue in the first nine months of the year was 334 millions, as compared with 380.3 millions in the corresponding period of 1930.

Reports from commercial and industrial circles continue unsatisfactory. Great loss is being involved to port interests by the fact that most steamers no longer bunker in Rotterdam, Amsterdam or Flushing, but bunker with English coals in England owing to the lower prices in guilders there. France has now announced the institution of a quota system for the importation of Dutch cattle and produce again, and has already put the system partially

into operation, while at the same time Denmark is exporting large quantities to Holland as a result of the depreciation of the Danish exchange. In agricultural circles things are as gloomy as ever, with the failure of the potato crop and the handicap of the German commercial policy.

As regards the Tilburg woollen industry, practically all the factories are still in operation for the time being, some even with more than one shift, but it is taken as certain that there will be very serious unemployment in a few weeks time, unless the Netherlands Government take measures in time to prevent the market over here from being flooded with foreign fabrics and ready-made wear.

SWEDEN.

Bank Rate — Banking Position — Trade Balance.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 20.

As anticipated, last week brought a new fall in the Bank rate, although not on Thursday, the expected day, but only on the Saturday, to come into force the beginning of this week. Our official minimum discount rate is thereby again down to 6 per cent., or the same rate as was fixed on the abandonment by England of the gold standard. If the notably stable position of the Swedish crown during the past few weeks is maintained, it should be possible to anticipate fresh falls in the Bank rate. The Stock Exchange has, moreover, shown a particularly firm attitude at the end of last and the beginning of the present week. It is, however, open to question whether all factors have been taken into calculation in this connection, as it must be remembered that the position may be complicated if New York is forced to raise its Bank rate higher. Moreover, a large factor of uncertainty is what effect would be produced on the Swedish crown if any considerable foreign holdings of international Swedish securities were to be thrown upon the Stockholm Stock Exchange.

It can, therefore, scarcely be said that the position has become any clearer. We must content ourselves with stating that the first panic feeling has been overcome and that the tone has become more calm. In one respect the position has materially improved. It is possible to conclude from the September bank reports that the strain of the international liquidation crisis on the Swedish commercial banks has passed. Their position in relation to foreign countries has, in fact, improved in a particularly striking manner. At end of May the net liabilities at short date for foreign account were no less than 141 million crowns, and at the same time the foreign deposits with our commercial banks amounted to 343 million crowns. At the end of last month the first-mentioned debit balance had become converted into a credit balance of 94 million crowns, whilst the foreign deposits had dropped to 66 million crowns. In other words, the latter were more than fully covered by short date claims abroad, a state of affairs which has not prevailed since March last year. The commercial banks have thereby improved their position in relation to foreign centres since the end of May by 235 million crowns, and their foreign borrowing has been reduced by 277 million crowns.

This improvement, however, could only be brought about by a corresponding deterioration in the position of the State Bank. During the third quarter, the depletion of its currency reserve reached the abnormal figure of 301 million crowns, 95 million crowns of which were lost during the last week of our adherence to the gold standard. The result for the country as a whole has, in other words, been a very serious deterioration of the balance of payments. Our total foreign banking credit balance fell during the third quarter by 112 million crowns, whilst normally for this period there is a somewhat marked improvement. Moreover, since the beginning of the year the deterioration in the balance of payments amounts to no less than 329 million crowns, the foreign credit balance having fallen to only 264 million crowns, as compared with 578 million crowns a year ago. When we add to

this the fact that so great a proportion of the foreign claims consists of bonds, it is manifest that it will be impossible to avoid a foreign loan, even apart from the need of such in order to give the State Bank adequate strength, when it again desires to carry through a definite stabilisation of the Swedish crown.

The consequence of the release from the gold standard must, of course, be a stimulation of export and a contraction of import, which should gradually bring about equilibrium in the balance of trade. In the figures for foreign trade during September it is still, of course, too early to trace any effects in this direction. It is possible, however, to ascertain that the fall in exports has not continued. Moreover, imports fell sharply at the same time. Manifestly, however, in spite of last month's figures, it appears by no means improbable that the margin on the wrong side in the visible balance of trade for the first three quarters of the year will amount to 250 million crowns. In other words, much remains to be set right before the proportion again becomes anything like normal.

DENMARK.

Reopening the Bourse — Relief for Farmers and Unemployed.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, October 17.

The outstanding event in the financial sphere this week was the reopening of the Bourse, which had been closed for nearly a month. Uncertainty as to the level at which quotations would settle down caused a good deal of excitement. The experiences of other countries on the reopenings of their bourses led to considerable fear of big fluctuations. These, however, in the event, proved moderate. It is true that Government bonds, municipal bonds and the Credit Association's bonds were all quoted at a lower rate, as a natural consequence of the higher discount and interest level caused by the events of these last weeks, but the fall in most cases amounted to only 3 or 4 per cent.

The reopening of the Bourse led to a rise in equity stock and share quotations, which in some instances amounted to as much as 15 per cent. This is partly explained by the fact that the devaluation of the Danish crown is expected to create better conditions for industry and for shipping. Moreover, during the weeks prior to the closing of the Bourse, a considerable fall in quotations had set in—a fall which caused the National Bank, in its annual report, issued last week, to declare that, on the whole, it seemed to be an exaggerated expression of the reduction of income caused by the falling price level.

This week has also seen an important agreement between the Government and the Conservative Opposition with regard to support for the distressed farmers during the crisis, and extra support for the unemployed. For this purpose Kr. 41 million have been placed at the Government's disposal. The money will be obtained by a 25 per cent. increase in the income tax, and by an addition to the beer and petrol taxes and the silk duty. This agreement has given rise to sharp protests from industry, trade and shipping.

NORWAY.

Bank Rate — Import Regulation.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, October 19.

The Bank return dated October 15th again revealed an increase in the gold reserve of about 2 million kroner, while notes in circulation declined by about 4 million kroner to 292.4 million kroner. Loans and discounts were reduced by 6 million kroner, while balances abroad remained practically unaltered. This favourable position, as well as the desire to relieve our trade and industry of

the deadweight of a high discount rate under the present extraordinary conditions, led to the decision taken by the Bank on Saturday to reduce Bank rate to 6 per cent. as from to-day. When the reduction from 8 to 7 per cent. took place on October 8th the general opinion was that a further reduction would occur in the near future, and movements of prices on the Stock Exchange also indicated that such an event was anticipated. However, in spite of this, the reduction was hardly expected before the turn of the month. This comparatively rapid liquidation of the extraordinary conditions in the domestic money market has naturally caused great satisfaction, and will stimulate business and inspire more confidence in the future on all quarters. Again, as on the previous occasion, this step was taken in co-operation with the Riksbank in Stockholm. It is not generally expected, however, that a further reduction of the Bank rate will be possible for some time.

On Wednesday last a conference was held in Oslo at the invitation of the Industrial Association of Norway (Norges Industriforbund), at which representatives of our export and import industries, as well as of agriculture, trade, banking and many other branches, were present. The programme of the conference was to discuss the best course to take in order to maintain the economic independence of the country during the present conditions. As a result of the discussions, a manifesto was issued to the Press, the gist of which was an appeal to the public to give preference to goods of Norwegian origin to the extent that this was possible. It was expressly stated by Mr Throne Holst, who presided, and who said that he was in favour of free trade in principle, that it was not the aim of this action to make Norway a self-supporting country at any price or to suppress all imports, but to endeavour to counterbalance the difficulties experienced by our export industries through such regulating measures as had lately been taken in most countries. Although this way of trying to solve the problems that had been forced upon us under the present state of affairs was not, he went on to say, without its serious drawbacks, there seemed, under the prevailing circumstances, no other course open.

During the week just elapsed the krone has been comparatively stable, the movement being rather slightly against us. Government stocks, after having shown some weakness during the earlier part of the week, hardened slightly towards the end of the week, while shares have only attracted small attention, prices showing a sagging tendency.

CANADA.

The Pound — Government's Policy — Tariff Regulation — Business.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 3.

The abandonment by Britain of the gold standard could scarcely fail to have serious repercussions in Canada. Immediately after the arrival of the news Mr Bennett, in his capacity of Finance Minister, announced that Canada would not follow the British example; but the Canadian dollar at once began to slide downward in New York. It reached bottom at 85½ cents on September 30th, and has since been fluctuating between that point and 88 cents, while sterling in Montreal has been ranging between \$4.30 and \$4.45. In view of Canada's intimate financial and trade relations with the United States this decline of the Canadian dollar is a source of serious embarrassment both to Government and business interests, whose obligations in the United States call for their discharge in American currency. It is contended here that Canada's financial position does not justify this sharp decline in the dollar, and that the reason for it is the inability of Americans to differentiate between the British and Canadian situations and to realise that allegiance to the same sovereignty does not necessitate an identical financial plight.

The Federal Government has made every provision for meeting in gold certain obligations which mature soon in

New York and anticipates no difficulty about its own immediate commitments. The obligations of certain provinces, however, constitute a less simple problem. Ministerial spokesmen proclaim that the Dominion is still on the gold standard, but it is an open secret that in a strict sense the standard has been suspended, inasmuch as certain business interests which applied for gold in return for legal tender, in order to meet obligations in the United States, have been refused it, and a virtual embargo upon the export of gold now exists.* Moreover, Canadian holders of certain unconverted portions of a loan, amounting to 14 million dollars, which matured on October 1st and was payable in gold, were paid in Dominion notes, while the American holders received gold. Steps have also been taken to prevent speculation in exchange, and the Government is asserting its right to buy such gold as the country produces. Mr Bennett has announced that "Canada will honour her obligations in accordance with the terms of the borrowing contracts," and presumably, if the exchange situation does not right itself at an early date, appropriate steps will be taken to help the embarrassed provinces in their difficulties.

The decline of the pound also affected the trade situation, and in this connection the Bennett Ministry has pursued a somewhat tortuous policy which has aroused considerable criticism. On September 28th it promulgated an Order-in-Council decreeing that for the purposes of collecting duties the value of imports from countries with depreciated currencies would be based on the rate of exchange on the day of shipment. But as soon as Canadian manufacturers realised that this regulation implied a substantial increase of the British tariff preference they flooded Ottawa with representations against it; they alleged that owing to the prospect of cheaper British goods many orders for domestic mills had been cancelled and diverted to Britain, and that if this diversion continued many local plants, particularly textile mills, would have to close down.

The Bennett Ministry is so dependent upon the support of industrialists that it could not afford to disregard these representations, and accordingly on September 29th it passed another Order-in-Council reversing its previous decision, and ordaining that for duty purposes the value of shipments from Great Britain would be computed as if the pound sterling were at par. Next day this move was followed by a third Order-in-Council, which declared that the difference between the depreciated pound and the par pound should be treated as a "dumping duty" to be collected on all importations from Great Britain. The two later Orders-in-Council have aroused strong criticism from many quarters, and it is likely to grow in volume, especially now that other European countries have abandoned the gold standard. The later Orders-in-Council were directed only at Great Britain, and the result is that, for the time being, Scandinavian countries enjoy an advantage in exportations to Canada. It is objected that the Government has no legal authority for these tariff Orders-in-Council, but in Ministerial circles it is contended that the wide powers in tariff matters taken at the Emergency Session convey the requisite authority. The episode is, however, a very convincing revelation that the present Canadian Ministry is determined to persevere with the policy of rigid economic nationalism to which it is committed and to consider Britain's difficulties as no excuse for departing from it.

Meanwhile there is little change to record in the general business situation. A bulletin recently published by the Department of Trade and Commerce claims that signs of an improvement are visible in a progressive increase since March of imports of raw cotton, raw wool and wool yarn and crude petroleum, and that in August several important Canadian industries, notably sugar refining and flour milling, showed a distinct gain in production, while during the month a new high record of gold output was established. But the latest business

survey of the Bureau of Statistics does not exactly confirm this claim, as the following table of weighted indices of the physical volume of business in Canada, based on the six-year period 1919-24, and corrected where necessary for seasonal variations, clearly shows:—

	Aug. 1930.	July, 1931.	Aug., 1931
Forestry	169.0	152.1	135.6
Mining	143.2	126.5	112.3
Construction	219.0	136.0	119.5
Manufacturing	145.7	137.2	136.3
Employment in trade	139.1	133.0	132.7
Imports	128.1	104.0	92.6
Exports	107.5	81.9	89.6
Carloadings	126.4	96.3	92.3
Shares traded	220.9	97.0	66.9
Share debits	136.7	119.1	119.5

Some of the recessions revealed by this table are severe, and the only substantial gain is in exports, which is largely seasonal. The majority of business indices continue to be unsatisfactory, and the car-loading figure for the week ending September 26th, at 50,325 cars, shows a decline of 3,469 cars as compared with the figure for the previous week, and of 20,481 as compared with the corresponding week of 1930. Again, in August the production of pig iron, placed at 23,212 tons, was the smallest tonnage reported for any month since December, 1924, and was 17,000 tons below the figure for July; the production of steel ingots and castings for the month, placed at 52,491 tons, showed a gain of 16 per cent. over the July output and the first increase for five months. The great majority of Canadian industrial plants continue to work well below capacity, and with a large proportion of the population experiencing a reduction in purchasing power the outlook for the winter is decidedly gloomy. The continued fine weather has tended to keep fuel bills low, but has also retarded the sales of warm clothing and heavier footwear. Some remnants of the Western grain harvest have still to be completed in Alberta, but the crop has been garnered under favourable conditions and its quality is reported to be high. The export demand, however, remains weak and wheat prices are still well below 60 cents. Many Western farmers are finding it impossible to meet their obligations to mortgage and implement companies, but the latter are showing great consideration, based probably on the knowledge that foreclosures would be futile. Exporters of cattle, apples, grain and other produce to Britain find their business adversely affected by the exchange situation, but it is hoped that it will operate as preference to such Canadian products as have to meet American competition in the British market.

AUSTRALIA.

The Tariff — Exchange Rates — Government and the Banks.

(BY A CORRESPONDENT.)

MELBOURNE, September 24.

THE Commonwealth Parliament is now giving detailed consideration to the various tariff amendments which have had provisional validity by resolutions of the House at various dates during the last two years. A notable feature was the elaborate statement, on September 16th, by the Minister of Customs, who offered reasons why protection on galvanised iron should be granted at a higher rate than that recommended by the Tariff Board, the recommendation of the latter being set aside, partly for the reason that it was based on an estimated output of 60,000 tons per annum, which is unlikely to be reached for some time. As regards the tariff generally, however, country members are showing more restiveness against the weight of protection at its present high level, which accentuates the disparity between prices of wool, wheat and other primary products and manufactured goods.

The departure of England from the gold standard has given rise to the question whether any alteration in Australian exchange on London is to be expected. But, while prices for Australian exports in British currency have advanced, and the weight of the interest payable

in London is thus reduced, the main point remains that the total amount of Government remittances, £36,000,000 per annum (subject to any reduction under the Hoover Plan), plus private requirements, is still so heavy as to dominate the position, notwithstanding the curtailment of Australian imports. The Australian trade returns for 1930-31 showed an excess of exports of £28,300,000 (British currency), but of this nearly £12 millions net was due to gold shipments, a special item for which there is now little further possibility. Another factor is that there is still a substantial amount of money in Australia awaiting remittance, the influence of which would be felt if exchange rates became more favourable.

The result of the request made by the Premiers for further banking accommodation was announced in the House of Representatives, on September 17th, by the Prime Minister, Mr Scullin, who presented a letter from Sir Robert Gibson, chairman of the Commonwealth Bank, in which he set forth the great amount of assistance already given in various ways, and stated that the banks would endeavour to provide £3,000,000 for a wheat bounty and £2,250,000, or a smaller amount, towards financing, until December 31st, such public works now in progress as are considered necessary and productive.

In going this far, it is felt in financial circles that there is something to be said for finishing works in hand, suspension of which would be uneconomic, though the amount of assistance to the Government makes a further addition to the inflation already represented by the degree to which the Governments are leaning on the banks. At the same time, it has been apparent that the object of Government policy is simply to spend everything obtainable, subject to no limitation except that of sheer inability to raise more money, and there is now much talk of expanding the note issue still further.

Limited dealings in the new Commonwealth 4 per cent. securities have taken place at prices declining from 84 to 79½ for the 1938 maturity, and from 82 to 79½ for the 1941 date. The recent announcement that those who dissented from the reduction in interest are to be compelled to convert, thus rendering the whole thing compulsory, has made a bad impression amongst private holders.

NORTHERN IRELAND.

Finance — Economy Bill — Tax Burden.

(FROM OUR CORRESPONDENT.)

BELFAST, October 17.

THE revenue of Northern Ireland—like Cæsar's Gaul—may be divided into three parts. In the first place, certain revenues which were formerly collected in the area by the British Treasury, but which had no parallel in Great Britain, have been made over to the Northern Ireland Government as a contribution towards the expenses incidental to the organisation and administration of a new State. The principal source of revenue involved is the Land Purchase Annuities collected from Northern Ireland land tenants who bought out their holdings under one or other of the Irish Land Purchase Acts prior to 1921. The income from these annuities in the present year is estimated at £860,000. In the second place certain taxes formerly collected by the British Treasury have been handed over, both as regards their collection and incidence, to the Northern Ireland Government. These transferred taxes include death, stamp and motor vehicle duties, and entertainment tax, and are estimated to yield £1,578,000 in the current year. The third source of revenue—from which the bulk of the income of the province is obtained—consists of reserved taxes collected by the British Treasury—Customs and Excise, income and super tax—estimated to yield £6,720,000 this year. The reserved taxes collected in Northern Ireland are paid into a separate account and the actual amount paid over to the Northern Ireland Exchequer represents the balance after deducting the cost of reserved services in the six county area (e.g., the cost of the Post Office) and the contribution of Northern Ireland to Imperial services. The actual amount of this "Residuary Share of Reserved

Taxes" paid to Northern Ireland is determined by the Joint Exchequer Board in accordance with the formula arrived at by the Special Arbitration Committee appointed in 1923. Broadly, the underlying principle of the award of this Committee was that Northern Ireland should retain sufficient revenue to maintain the same or equivalent social services as are maintained in Great Britain.

In the early years after the establishment of the Northern Ireland Government very considerable sums were available as a contribution to the Imperial Exchequer. Until March 31, 1922, the contribution of Northern Ireland was at the rate of £7,920,000 a year, the sum fixed by the Government of Ireland Act. This statutory contribution was excessive, and had to be modified. Nevertheless, substantial contributions continued to be made, and from the establishment of the Northern Ireland Government up to March 31, 1928, these contributions aggregated £22,224,000. During the past year or so the amount of contribution it has been possible to make has been small. In the current year it is placed at £75,000, and even this figure was only possible through a raid on the Road Fund.

This reduction in the contribution to Imperial services has, of course, been brought about by two sets of circumstances—falling revenue and increased expenditure on social services concurrently with the expansion of these services in Great Britain. Whereas in 1922-23 reserved taxes were able to yield £11,037,396, in 1930-31 the revenue from this source is estimated at only £6,720,000. The position, indeed, has been reached when not only will Northern Ireland be unable to make any significant contribution towards the cost of Imperial services but every effort will be necessary to effect economies in expenditure if she is going to "live on her own" and at the same time maintain a standard of social services broadly similar to that of Great Britain.

The need for economy was recognised by the Government at the commencement of the present financial year when reductions were made in Ministerial salaries, and in the salaries of Members of Parliament, teachers and policemen. Since the introduction of the Economy Bill in the Imperial Parliament further economy measures have been adopted in Northern Ireland. Parliament was summoned on September 24th and an Economy Act passed enabling "cuts" to be made in the rates of unemployment benefit and doctors' capitation fees similar to those adopted in Great Britain. So far as unemployment benefits are concerned, the position is governed by the Unemployment Re-insurance Agreement, which was entered into between Great Britain and Northern Ireland in 1926 with the object of maintaining the Unemployment Funds of both countries in a state of parity on the basis of their respective insured populations. In order to maintain this arrangement it will be necessary to cease borrowing for the Unemployment Fund in Northern Ireland when the debt reaches £2,550,000, which is approximately the equivalent of the statutory borrowing limit of £115,000,000 in the case of the British Unemployment Fund. The amount borrowed by the current account of the Northern Ireland Unemployment Fund was £2,256,000 at August 31st, and the cessation of borrowing is estimated to involve a direct additional cost to the Exchequer of £177,000 in the current year and £492,000 next year.

In connection with the recent Economy Bill in Northern Ireland a White Paper was circulated which contained a number of estimates regarding the cost of unemployment. The original estimates for the current year, on the basis of 25 per cent. unemployment, showed a total State expenditure of £1,333,000. After the introduction of economy proposals and the cessation of borrowing, the estimated cost for the current year on the basis of 29 per cent. unemployment is £1,622,000, while a preliminary estimate for 1932-33, on the basis of 30 per cent. unemployment, is £2,223,000. The additional revenue which is estimated to be obtained in Northern Ireland from the changes in reserved taxation announced in Mr Snowden's second Budget is £441,000, against which it is stated that a drop of £141,000 in the yield of Inland Revenue must be offset, leaving a net gain of £300,000. It will be noticed that this is just about equal to the increase in the cost of unemploy-

* It was announced by the Prime Minister on October 19th that an Order-in-Council had been passed prohibiting the export of gold except under licence.

ment. Figures are not yet available regarding the probable effect of the new taxes on the revenue for 1932-33, but, in view of the preliminary estimate of practically £900,000 in the increased cost of unemployment, it is apparent that the financial position in 1932-33 will be one of difficulty. This is especially the case because, whereas in the current year some £205,000 has been available towards the cost of derating from the Rating Relief Suspense Account, this account will now be exhausted, and, in introducing the Budget for this year, Mr Milne Barbour remarked that, "to meet the cost of derating for the future, we must either effect economies or provide extra revenue from some source or another."

In these circumstances very special interest attaches to a report which has recently been issued by a Committee set up in July, 1930, to inquire into the financial relations between the State and Local Authorities in Northern Ireland. The Committee present a table showing that the expenditure per head of the population on "domestic" services—i.e., exclusive of such expenditure as that on National Debt and National Defence—amounted to £11 2s. in Great Britain and £10 12s. in Northern Ireland in 1930-31. Of these sums only £1 4s. represented the expenditure per head out of rates levied in Northern Ireland, as compared with £3 15s. in Great Britain. Whereas in Great Britain approximately 50 per cent. of the cost of police and 45 per cent. of the cost of education is borne by local authorities, in Northern Ireland practically the whole of the expenditure on these services is borne by the State, only a little over 5 per cent. being defrayed by local authorities in the case of education and less in the case of police. Despite the fact that rate-borne expenditure is very much higher in Great Britain than in Northern Ireland, the Committee have, however, been unable to recommend any material increase in the burden of expenditure which should be defrayed out of rates. Indeed, they consider that the rateable capacity of Northern Ireland has been nearly reached.

This conclusion is largely based upon a comparison of the burden of rates relative to State taxation in Northern Ireland and in Great Britain. During the four financial years 1925-26 to 1928-29 the revenue from State taxation ranged from £14 19s. to £15 11s. per head in Great Britain and from £6 14s. to £7 1s. per head in Northern Ireland. During these same years the amount of rates per head ranged from £3 16s. to £4 5s. in Great Britain and from £1 13s. to £1 15s. in Northern Ireland, giving a percentage of rates to total tax revenue (including rates) of round about 20 per cent. in both countries. After the introduction of de-rating the ratio of rates to total tax revenue (including rates) fell to about 15 per cent. in Northern Ireland, but remained at about 20 per cent. in Great Britain. Apparently, therefore, the burden of rates in relation to the yield of taxation in Northern Ireland is not so very different from Great Britain.

The figures quoted above indicate the very much lower yield of both taxes and rates per head of the population in Northern Ireland than in Great Britain. Nevertheless, "domestic" expenditure per head of the population is only slightly less than in Great Britain (£11 2s. and £10 12s. respectively in 1930-31). The surplus revenue of Great Britain above that of Northern Ireland is, of course, being expended on Imperial services. If, however, through the reduction of armaments, or the conversion of debt, it becomes possible for Great Britain to increase her expenditure on social services in the future, then the ability of Northern Ireland to follow suit may well be questioned. Already the "domestic" expenditure of Northern Ireland absorbs practically the whole of her revenue. The Committee remark: "In the course of this process of keeping pace with (or, rather, out-stripping), Great Britain's normal domestic expenditure so far Northern Ireland has avoided the financial consequences by a process of attrition of the Imperial contribution. With it at vanishing point (£75,000 in the current year), Northern Ireland's expenditure has, in our opinion, dangerously exceeded its economic limit. This is illustrated by the fact that the 1931-32 Budget was only balanced by having recourse to various temporary ex-

pedients." Hitherto it has been the object of Northern Ireland to maintain as high a standard of social services as Great Britain. The Committee consider that some curtailment of social services in Northern Ireland may be necessary.

Letters to the Editor.

RUSSIAN BILLS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Your issue of October 10, No. 4,598, contains an article from your Paris correspondent in which the author, citing an article published by me, "La Vie Economique des Soviets," maintains that, according to my calculations, the Soviet Government will not be able to pay 170 million marks to German firms until the end of the current year.

This statement by your Paris correspondent is an absolute invention from beginning to end. Never and under no circumstances have I ever said anything of the kind. The exceeding punctuality with which the Soviet Government fulfils its obligations does not need any special proof.

The article to which your Paris correspondent refers appeared in No. 138 on June 15, 1931, of the journal "La Vie Economique des Soviets," under the title "Le financement de nos commandes en Allemagne." This article is a translation of my article which appeared in the German periodical "Sowjetwirtschaft und Aussenhandel" No. 8, of May 1, 1931, under the title "Die Finanzierung der Sowjetbestellungen in Deutschland." In this article I showed that German economy is in a position to take up and finance considerably larger Soviet orders than were contemplated in the agreement of April 14, 1931 (300 millions credit).

I would request you to publish this letter in the next number of your valuable journal.—Yours, etc.,

Berlin SW 68,
Lindenstrasse 20-25.
October 16, 1931.

PROFESSOR S. BESSONOFF,
Mitglied des Rates der
Handelsvertretung der U.S.S.R.

[We are glad to give publicity to Professor Bessonoff's denial of the statement attributed to him. The article in "La Vie Economique des Soviets," of which he has sent us a copy, completely bears out what Professor Bessonoff says in his letter. It appears to have been misquoted in the Paris press; and we regret that our Paris correspondent unwittingly gave currency to a misinterpretation.—Ed., Econ.]

FASCISM AT HOME.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Although my attention has only just been drawn to Professor Salvemini's letter in your issue of August 29th concerning a previous letter of mine (I was absent in America at the time), I trust you will allow me space to reply.

Professor Salvemini is at pains to prove that Italy underwent economic difficulties even before the world depression. It is, of course, notorious that the whole world has been in difficulties ever since the end of the war, and if Italy is no exception, her difficulties were being seriously dealt with and overcome, as the returns for all aspects of her economic life indicate. Even the figures which Professor Salvemini quotes for dishonoured bills from 1926 to 1930 show little alteration in that period, and, indeed, that for 1930 is less than those for 1927 and 1928.

With regard to the alleged fall in wages, on which Professor Salvemini lays so much stress, we must remember that before 1926-27 wages oscillated irregularly as a result of agreements between the various employers' and workers' unions, which were not yet legally recognised bodies, while the currency and prices also oscillated. The deflation of the currency began in the summer of 1926, and by December, 1927, when stabilisation was effected, the lira stood actually higher in the market than the figure at which it was stabilised. At the same time the syndical system was legally organised, and subsequent wage agreements were the result of a definite plan in correspondence with enhanced value of the lira and the reduction of prices. In the spring of this year the Government adopted a general scheme of wage reduction, combined with an active policy of price reduction. Altogether in the period from 1926 to 1927 the reduction in paper wages amounted to about 25 per cent. (in some districts and occupations the difference may have been a little more or a little less), and this is just about the extent of the fall in prices; in house rents the reduction has been even greater. Apart from figures, anyone

who compares the conditions of the Italian workers to-day with those of a decade or two ago cannot fail to be struck by the great improvement attained in food, clothes, housing and general well-being.

Professor Salvemini's remark about *polenta* shows that he still holds to the exploded theory that it is unwholesome. What was unwholesome in the diet of the Italian workers 30 or 40 years ago was the exclusive consumption of *polenta*; but when it is varied, as it is now, with other kinds of food, it is wholesome and nourishing, as well as extremely appetising.

In the matter of unemployment, if it were true, as the writer asserts, that Italian statistics are "systematically falsified," it would be useless to discuss them. But, as it happens, Italian statistics, under the auspices of Professor Jini, a scientist of world-wide repute, are known to be at least as accurate as those of any other country. Professor Salvemini himself proceeds to quote the Italian figures and to base arguments on them, and those figures simply show that unemployment in Italy was greater before 1929 than after. That year, a phenomenon common to all other countries. He adds that Italian unemployment figures cannot be compared with those of more highly industrialised countries; but the fact that Italy is still predominantly agricultural is an advantage and justifies the Government's policy in favour of developing agriculture more than industry. The fact remains, however much it may displease Professor Salvemini, that there is far less unemployment, relatively to the population, in Italy to-day than in Great Britain, Germany, Austria or the United States. The assertion that agricultural labourers and a part of the industrial workers do not receive unemployment relief suggests that these categories do not figure in the unemployment returns. The statistical bulletin, however, gives figures both for the insured and the uninsured, for agriculture and industry.

As for the methods of dealing with unemployment, the Italian authorities do not put much faith in insurance, agreeing in this with Sir William Beveridge, who in his recent essay, "Causes and Cure of Unemployment," defines the existing British insurance scheme as an anæsthetic, which relaxes both social and individual effort. Italy instead is adopting the method of public works calculated to increase the country's wealth. Professor Donham, Dean of the Harvard Business School, in his book "Business Adrift," advocates for the United States a system very similar to that of Italy, his view being that the only cure for unemployment is work.

The best answer to Professor Salvemini's statements is, I think, contained in the following passage: "But though her (Italy's) foreign trade and her home industries have undoubtedly experienced a severe decline in activity, the statistics at present available suggest that by facing early the necessity of a reduction in her industrial costs and in her public expenditure, she may have placed herself in a position to weather the depression with greater success than many other countries." The quotation is from an Editorial Note in the *Economist* for September 12, 1931, commenting on a report of the British Department for Overseas Trade.—I am, Sir, Yours faithfully,

2, Via Antonio Bosio, Rome.
September 26, 1931.

LUIGI VILLARI.

Books and Publications.

EYES OF YOUTH.*

No doubt it is a good thing that the old should from time to time be put in their places by the young. This Mr Rowse has indeed achieved with great thoroughness. Before him he finds two generations that obstruct the path of his own—the old, who stand condemned by their failure to escape from the outworn conceptions of pre-war politics, and the middle generation, mostly rendered impotent and often cynically indifferent to public affairs, by the shattering experiences of the war, from which they have never recovered. True, there are honourable exceptions, to whom Mr Rowse pays generous homage. But his judgments are candid and ruthless, even upon those whose outlook might be supposed to have much in common with his own. Let Mr Cole, Mr Ernest Bevin, Mr Tawney or the Archbishop of York refer to Mr Rowse's index, and each will find his place duly and frankly assigned.

* "Politics and the Younger Generation." By A. L. Rowse. Faber and Faber. 1931. 10s. 6d.

Nevertheless, Mr Rowse's elders should make an effort to overcome the irritation which his attitude will almost inevitably arouse, for he has much to say that is both interesting and constructive. Moreover, he is refreshingly optimistic. Rapidly surveying the economic position of this country, he finds that we are by no means "finished." In politics he regards us still as the natural leaders of the world; and he has a fine faith, begotten of direct experience, in the vitality and sense of the working class.

Into his pages Mr Rowse has compressed both projects of practical reform and a sketch of the philosophy by which he is inspired. The former include reformation of the Houses of Parliament and expropriation of "non-productive" interests, notably landlords and prelates of the Established Church. (Mr Rowse appears to have a particularly violent objection to the expenditure of public money upon religious purposes, though he does not grudge those who die unhappy and friendless the solace of a comfortable illusion.) He would reform the education system, not excluding the Universities; and, above all, in every phase of economic policy he would work and work again for equality and the abolition of class.

For one who fears so much the dead hand of the past Mr Rowse is curiously favourable to Marxism, which is, indeed, the corner stone of his philosophic position. Political parties, he believes, have vitality only so long as they roughly correspond to coherent economic groups; while international relationships are interpreted (in some of the best chapters of the book to which a short review cannot do justice) in the same terms. Particularly does Mr Rowse hold that to Marxism is due the readiness with which the present age reads its social problems in the light of their history; and the one weakness of English as contrasted with Continental Socialism he finds in the comparative failure of the former to apprehend Marxism as a consistent and relatively complete social philosophy.

Mr Rowse's chapters deal with much beside politics and economics, notably art and morals (concerning the attitude of youth, on which he has some interesting things to say). Of all he writes with great vigour and sincerity in a style of his own, which pays a most practical tribute to his avowed contempt for the "correctness" of expression dear to the English cultured classes. Seldom, indeed, can an Oxford scholar have produced a book which does more consistent violence to the common rules of English syntax.

TARIFF FALLACIES.

MR WILLIAMS'S book* falls roughly into three parts. The first three chapters contain a brief and objective history of tariff policy and propaganda in Britain. His next three chapters are argumentative in character: he deals successively with the balance of trade, with "the price theory of Protection," and with the problem of efficiency where industries are protected. The remainder of the book covers various miscellaneous topics; in particular, commercial treaties, "safeguarding," and Imperial preference.

The weakest part of the book, which throughout is strangely perfunctory in its expression, is its argumentative passages. Mr Williams writes as though he is tired of his own arguments (as indeed he may well be); the average heckler at a Free Trade meeting could do better with the balance of trade argument than he does. His general line is that exaggerated emphasis is laid upon our "external" balance of trade and that the "internal" balance of trade (e.g., as between London and Sheffield) is not less important. Why should not Sheffield cutlery sell their razor blades to London hatters, and in return wear London-made, instead of foreign, hats? Let us, says Mr Williams, encourage non-competitive imports; but keep out competitive ones and so secure full employment for our own people.

This argument, so far from submitting the case against tariffs "to the test of precise analysis" (which is the claim that Mr Williams modestly makes for it), in fact begs a number of relevant questions. What, to begin with, are competitive,

* "Through Tariffs to Prosperity." By Herbert G. Williams. Philip Allan. pp. 208. 7s. 6d.

as opposed to non-competitive, imports? The distinction is surely one of degree and not of kind. Peaches are sold in this country at 2d. each, and, quite probably, by keeping them out we could create a certain amount of employment for the home peach-grower. But this hardly seems a good argument for excluding them. In short, the basic assumption of the Free Trader—that welfare is maximised by giving competitive advantage free play—is practically ignored by Mr Williams. He rejects the division of labour in the international field as an exploded form of economic Darwinism.

"The price theory of Protection," as it grandiloquently calls itself, is hardly less familiar as a tariffist contention. It has become, by virtue of constant repetition, the accepted platform answer to the Free Trade argument that tariffs tend to raise prices. It used to be urged that the foreigner paid the tax; now it is claimed that, from the consumer's point of view, there is no tax; because control of the home market will enable prices to be reduced. The argument is usually supported by illustrations drawn from America—which, seeing that the United States is internally a "Free Trade continent" is rather curious. The short answer to it, of course, is that tariffs do not in practice achieve what is claimed for them; if they did, a point would be arrived at at which they could safely be taken off. But if we look at, for example, motor cars—our most important protected industry—we find, after fifteen years of also continuous Protection, that our manufacturers are as insistent as ever on the need for a high rate of duty. The argument that motor-car prices have fallen, which seems to impress Mr Williams, is quite irrelevant, in view of the steady fall in world prices and the special circumstances of this particular industry. The real test of the "price theory of Protection" would be to take off the duty on motor cars and see what happened then.

Mr Williams's book, considered as an introduction to the tariff question, is, however, more remarkable for its omissions than for what it includes. Thus, he hardly deals at all with the international aspect of the tariff problem, though this far transcends in importance its domestic aspects; he makes no attempt to compare the standard of life or general wellbeing of protected countries and our own and he seems to be quite unconscious of the part which our exchange and shipping activities play in the maintenance of our prosperity. If the book is designed—as its general tendentiousness would seem to imply—as a *vade mecum* for Protectionist speakers, these points ought to be dealt with.

With the crisis in world trade, and the abandonment by Britain of the gold standard, the bottom has dropped out of Mr Williams's world. Protected countries have shown that their resistance to the ravages of the slump is inferior to our own; while suspension of gold payments has deprived our Protectionists of their one valid argument—that it might have been psychologically easier for us to restrict imports, and so diminish real wages by a subterfuge, than to bring down money wages to a competitive level.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Problem of Unemployment. By Paul H. Douglas and Aaron Director, with a Preface by Frank Aydelotte. (London) George Allen and Unwin, 40, Museum Street. 15s. net.

This exhaustive study of the present labour problem is the result of an investigation initiated by Swarthmore College. The final section of the book, after a consideration of the systems at work in the chief European countries, puts forward a plan of unemployment insurance for the United States.

The Pound Sterling. By A. E. Feavearyear. (London) Oxford University Press, Warwick Square. 15s. net.

An opportune publication covering the history of the pound from its inception to the Currency Note Act of 1928.

Lancashire and the Far East. By Freda Utley. (London) George Allen and Unwin, Ltd., 40, Museum Street. 16s. net.

This book is primarily concerned with labour conditions in Japan; the British, Japanese and Indian competitive position; and general conditions and British Imperial policy in India in relation to the Lancashire cotton industry.

An Outline of Modern Knowledge. Edited by William Rose. (London) Victor Gollancz, Ltd., 14, Henrietta Street. 8s. 6d. net.

This book, which is wonderful value for money, is a collection of memoranda by experts on outstanding aspects of (a) Science, Philosophy and Psychology; (b) Economics, Political Science and History; and (c) Literature and Art.

The German Credit Problem. By E. Saxon Napier. (London) London General Press, 6, Bouverie Street. 2s. 6d. net.

An interesting and informative little pamphlet on Germany's credit difficulties, containing a suggested remedy for their solution.

The International Labour Organisation. With a Preface by Albert Thomas. (London) Geo. Allen and Unwin, Ltd., 40, Museum Street. 12s. 6d. net.

A companion volume to the recently published survey of the work of the League during the first ten years.

The End of the Russian Empire. By Michael T. Florinsky. (Washington) Carnegie Endowment, 2, Jackson Place. \$3.00.

An interesting picture of Russian national life during the war and of the events which led to the establishment of the Soviet regime.

Commerce Year Book, 1931. Vol. I. United States. (Washington) Superintendent of Documents. \$1.00.

The latest edition of this yearbook is as valuable as ever in its supply of official statistics of every branch of economic life in the United States.

Foreign Affairs, October, 1931. (New York) Council of Foreign Relations, 46, 65th Street, New York. \$1.25.

This number contains an article by Viscount Cecil on "Facing the World Disarmament Conference."

The Countryman, October-December. Edited and published by J. W. Robertson Scott at Idbury, Kingham. 2s. 6d.

Readers who have been deprived of country enjoyments this year by the absence of a summer may find partial compensation in reading the "Countryman" in the comfort of their own fire-sides.

Political Science Quarterly. September, 1931. (New York) Academy of Political Science, Columbia University.

Sir Arthur Salter contributes an article in this number on the Silver Problem.

Ehrliches und unehrliches Silbergeld. By Dr. Gottfried Kunwald. (Jena) Verlag von Gustav Fischer.

A lecture on silver currency.

Europe—United States. Vol. III., Industrial Problems; Vol. V., Distribution Problems; Vol. VI., Economic Crises. Unemployment. (Paris) International Chamber of Commerce, 38, Cones Albert.

Further volumes in the important series of studies by the International Chamber of Commerce. Volume II. consists of monographs on cost of production; mass production; and economic aspects of the wage question.

The Hibbert Journal, October, 1931. (London) Constable and Company, Limited, Orange Street. 2s. 6d. net.

Just Published.

THE COURSE OF THE COMING BOOM IN SECURITIES.

by L. L. B. ANGAS

This remarkable publication, appearing the day following the collapse in sterling, and forecasting the stock market movements which have since occurred, will prove invaluable to investors as a guide in the forthcoming months. Mr. L. L. B. Angas's forecasts of stock market movements have, in the past, shown an uncanny accuracy, as witness his publications "The Coming Rise in Gold Shares" and "The Coming Collapse in Rubber." This latest publication can be equally recommended.

The Stock Exchange.

JAPANESE BONDS.

THOUGH the immediate cause of the recent selling of Japanese Government bonds has been the widespread fear of war in Manchuria, investors have undoubtedly been influenced by a certain trepidation regarding the effect of world depression and falling prices on Japan's internal economy. This has been enhanced rather than assuaged by recent specific developments which have appeared to present a picture of Japanese trade, threatened on the one hand by the boycott in China and higher tariffs in India, and on the other by the competition of Great Britain and other countries whose goods are being sold in terms of depreciated currency.

Japanese bonds before the present world crisis were valued in London under a 5½ per cent. basis and in New York on approximately a 5½ per cent. basis. Subsequent selling has lowered Japanese Government credit, as expressed in bond prices, to a 7 per cent. basis in London and a 6½ per cent. to 8 per cent. basis in New York. The following table gives the price of representative stocks in London and New York, a month ago and on Wednesday of this week:—

LONDON MARKET.				NEW YORK MARKET.			
Sterling Issues.	Price on Sept. 20.	Price on Oct. 21.	Yield %.	Dollar Issues.	Price on Sept. 20.	Price on Oct. 21.	Yield %.
Japan 4½, 1899 ...	71	59	6.76	Japan 4½, 1954 ...	97½	95½	6.79
Japan 4½, 1910 ...	68	56	7.14	Japan 4½, 1958 ...	93	69	7.77
Japan 4½, 1907 ...	85	74	6.73	Japan 4½, 1953 ...	96	71½	8.36
Japan 4½, 1924 ...	100½	87	6.90	Taiwan Electric 5½ ...	86	70	7.85
Japan 5½, 1924 ...	94	78	7.05	Yokohama 6½, 1961 ...	87½	74	8.11
Japan 5½, 1930 ...	97½	104½	4.99	Tokyo City 5½, 1961 ...	76	71	7.75
				Japan 5½, 1930 ...	88	83½	6.59

* Guaranteed by Japanese Government.
† This loan commands a higher price in sterling, as it is payable in U.S. dollars at the fixed rate of 4/8665.

Too much importance must not be attached to the high yields obtainable on the dollar bonds, as the New York bond market has been suffering from causes peculiar to itself, which have tended to depress all bonds alike. The disparity between the yields obtainable on bonds of identical security is evidence of the chaos that still exists in the New York bond market. How far do present prices bear direct relation to Japan's own financial position?

On any comparison of national indebtedness Japanese Government credit deserves to stand on a relatively low yield basis. Though the national debt has been increasing steadily since the war, Japanese loans have been raised for the most part for productive or reconstructive purposes, and at 66.42 yen, or £6 16s. per head, national indebtedness is still relatively low. Australia's per capita indebtedness is £123. The following table shows the growth in internal and external debt for the past ten years:—

AMOUNT OUTSTANDING AT END OF FINANCIAL YEAR.				
Year.	Internal Loans.	Foreign Loans.	Total.	Debt per Head.
1920-21 ...	1,820	1,424	3,244	41.42
1921-22 ...	2,185	1,359	3,544	44.68
1922-23 ...	2,450	1,359	3,809	47.02
1923-24 ...	2,576	1,621	4,198	50.39
1924-25 ...	2,823	1,507	4,330	51.29
1925-26 ...	3,520*	1,479	4,999*	57.88
1926-27 ...	3,711	1,461	5,172	58.96
1927-28 ...	3,944	1,453	5,398	60.81
1928-29 ...	4,380	1,451	5,831	64.98
1929-30 ...	4,513	1,447	5,959	66.42

* Since the year 1925-26, special exchequer notes have been included.
† The population in this period has increased from 78,318,323 to 89,726,948.

It may be observed that under the National Loan Redemption Act the national debt must be redeemed to

an amount, each year, equal to 1.16 per cent. of the total outstanding at the beginning of the preceding year. An amendment to this Act in 1925 required an additional appropriation of not less than 25 per cent. of the Budget surplus actually created in the year before the preceding year. From 1915-16 up to 1927-28 the Budget total (revenue and capital items) was growing at a somewhat disconcerting pace, and it was not until 1929 that a determined effort was made to reduce Government expenditure. This was part of the Government's plan for the removal of the gold embargo, which was actually carried out in January, 1930. For example, the Government not only banned the issue of loans for financing expenditure in the General Account but reduced by one-half the programme of loans in the Special Account. It also urged the local governments to retrench their expenditure and undertook to restrict the issue of local loans as in the case of national loans. Further, it decided to allot German reparation payments, amounting to 6.8 million yen annually, to the redemption of the national debt.

Our next table, which gives the total revenue and expenditure (ordinary and extraordinary) for the past four years, shows the reductions which were effected in expenditure in 1929-30 and 1930-31:—

ANNUAL STATE REVENUE AND EXPENDITURE.					
Years ending April 1st to March 31st.					
(In million yen.)					
Financial Year.	Revenue		Expenditure		
	Extraordinary.	Total.	Ordinary.	Extraordinary.	Total.
1927-28	1,485	2,062	1,172	594	1,765
1928-29	1,505	2,006	1,184	631	1,815
1929-30	1,481	1,826	1,212	524	1,736
1930-31*	1,516	1,609	1,226	385	1,611
1931-32 (estimates)	1,397	1,489	1,182	307	1,489

* Represents the working Budget.

In the 1930-31 Budget, income tax accounted for 13½ per cent. of the total ordinary revenue and other taxes for 45½ per cent., while the receipts of public undertakings accounted for 33½ per cent. Under the Public Account Act, the surplus created in each financial year is transferred to the Budget of the succeeding year. The net surpluses actually created in 1927-28 and 1928-29 were 52.5 million yen and 42.6 million yen respectively. In 1930-31 there was no surplus, and in the current year it is anticipated that there will be a deficit of 54 million yen, which is to be met as to 39 million yen by economies or postponement of works.

As regards the external trade returns, a steadily rising trend was shown up to 1930, broken only by the slump of 1920-21, the great earthquake of 1923 and the financial disturbance of 1927. The efforts made in 1929 in connection with the removal of the gold embargo caused a remarkable development in foreign trade. In comparison with the returns of the preceding year, the exports for 1929 showed an increase of 9 per cent., while imports increased by less than 1 per cent. In 1930 a heavy slump in exports was seen, which was not entirely countered by the fall in imports. The total exports and imports for the last six years are shown in the following table:—

(In million yen.)					
Year.	Merchandise.		Gold and Silver Bullion.		
	Exports.	Imports.	Exports.	Imports.	Excess of Exports.
1925	2,305	2,573	22	...	22
1926	2,045	2,377	36	2	34
1927	1,992	2,179	49	8	41
1928	1,972	2,196	3	3	...
1929	2,148	2,216	3	...	3
1930	1,470	1,546	311	10	301
1931 (six months)...	577	691	113	7	8

The principal exports of Japan, in 1929, were as follows:—

(Thousand yen.)	
Raw silk.....	781,040
Cotton tissues.....	412,707
Silk tissues.....	149,955
Potteries.....	36,962
Knitted goods.....	36,711
Refined sugar.....	29,975
Wheat flour.....	26,816
Cotton yarns.....	26,756
Paper.....	26,288
Tinned and bottled foods.....	25,681
Coal.....	23,215
Marine products.....	22,350

The slump in the prices of the principal commodities exported has been responsible for the disturbingly large adverse balance of trade shown in the first half of 1931. Raw silk, for example, has fallen in price by 28 per cent. since the beginning of the year. The second half of the year is, however, usually the more favourable, and it is reported that up to the end of September the foreign trade resulted in an excess of imports over exports of 76 million yen for Japan proper and 40 million yen for overseas territories, making a total import surplus of 116 million yen. This is actually a decrease of 100 million yen as compared with the corresponding figure of 1930.

As regards the balance of payments (current items), it is officially reported that there was still a favourable balance up to the end of September, 1931, amounting to approximately 100 million yen. In 1929 the favourable balance on international account was estimated at 12.9 million yen, but in the previous two years there were deficits, on "current items" of 105.2 million yen and 163.9 millions respectively, as will be seen from the next table:—

BALANCE OF INTERNATIONAL PAYMENTS.

(Million yen.)				
(a) Current Items.				
	Debit.		Credit.	
	1927.	1928.	1927.	1928
Merchandise	2,389.7	2,401.0	2,106.6	2,077.6
Gold coin and bullion	0.1	0.4	36.1	...
Interest and dividends ...	102.7	108.0	99.6	93.1
Miscellaneous	246.4	255.7	391.4	430.5
Total	2,738.9	2,765.1	2,633.7	2,601.2
(b) Capital Items.				
Long-term sale of securities..	158.4	144.7	150.4	332.8
Other long-term payments	118.2	134.7		
Short-term pay- ments	...	...	172.7	87.3
Total	276.6	279.4	323.1	420.1

Even if the estimates of the balance of international payments can be accepted as an assurance that the yen exchange from the trading point of view is not yet endangered, consideration must be given, however, to inward and outward movements of capital. Obviously a creditor country cannot be forced off the gold standard unless its own nationals indulge in a "flight of capital" or unless there is an excess amount of short-term balances which can be withdrawn by foreigners. As regards the latter, Japan is in the happy position of having no appreciable short-term liabilities to foreigners. On the other hand, Japanese holdings of securities in foreign countries amounted to 783 million yen at the end of June, 1931, against 665 million yen at the end of December, 1930. This increase in the amount of Japanese investments abroad, together with the payment for the adverse visible balance of trade, was responsible for the gold loss of 246 million yen last year and 7 million yen in the first nine months of 1931 sustained by the Bank of Japan.

The departure of Great Britain from the gold standard at first threw the Japanese exchange market into confusion. There was a rush to buy dollars, mainly for the cover of import bills, as sterling funds had become tied up. This led to the shipment of gold, and it is expected that the Yokohama Specie Bank will ship about 70 million yen of gold during October. The Bank of Japan has, therefore, seen fit to raise its rate of discount by 0.73 per cent. to 5.84 per cent., and if it is successful in lessening the disparity between the yield of internal and external Japanese securities, the outflow of funds may cease of its own accord. In that event a serious danger to the yen exchange will have been removed. But whether Japan

will deem it wise to depart from the gold standard voluntarily, in order to protect its trade against the competition of the gold standard countries, is a question which events alone can decide. Until it is answered, investors may tend to maintain an open mind and a somewhat conservative attitude towards Japanese securities. That a complete and peaceful settlement of the Manchurian situation would be hailed as a bull point is evidenced by the firmness of prices this week, whenever news from Geneva suggested the probability of such a development. Apart, however, from any temporary movement of this character, due to special circumstances, it is clear that the permanent return of Japanese stocks to their traditional popularity in this market will be hastened by the rehabilitation of world trade generally, from whose recent malaise Japan, like every other country, has been a sufferer.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

In the first half of the week the rise in industrial shares continued without check, accompanied by a strengthening of election "majority" quotations to over 200. The pound showed steady appreciation in terms of the dollar, and Gilt-edged stocks remained firm, with evidence of further repatriation of balances previously sent abroad for safe keeping. The extent of the rise in some sections of the market, on "devaluation" and "tariff" hopes began, however, to be regarded as disproportionate to the volume of real inquiry in a somewhat narrow market, and on Thursday signs of hesitancy became evident. The tone of the foreign bond market was firm, despite the absence of signs of definite progress in the Geneva negotiations for a settlement of the Manchurian question, and the not altogether favourable atmosphere for the Hoover-Laval discussions. The more speculative markets, with a few exceptions, made little headway, partly owing to the irregular movements of many commodity prices.

Investment demand for Gilt-edged stocks was well maintained, though more irregular conditions supervened before the end of the week. Most issues showed substantial rises, War Loan being particularly strong. Funding Loan and Victory Bonds were also well absorbed. Increased inquiry for the longer-dated India loans found stock in only moderate supply, and some sharp gains were recorded. Australians remained firm, investors showing a tendency to switch from Commonwealth to the higher-yielding State bonds.

The foreign market, for the most part, was in optimistic mood. Japanese loans enjoyed a good recovery, the market making the most of good news from Geneva and ignoring less favourable developments. European sterling bonds, such as Austrian Sixes and Belgian Sevens, were in demand on the appreciation of the pound, but German bonds again came on offer. Despite the somewhat gloomy picture painted by the chairman of the Anglo-South American Bank (whose speech to shareholders is dealt with on page 774), many South American stocks were supported. A good reception was accorded to the funding scheme of the Brazilian Government, details of which will be found on page 773.

Home railway prior charges continued to improve in sympathy with British Government stocks, while the junior securities came within the scope of the boomlet in British industrials. The week's traffic figures, however, showed slight evidence of an immediate improvement in the outlook, and a reaction in values occurred in the latter part of the week. A rise, similarly, in Argentine rails, based primarily on "sentiment" and possibly, also, on the economies in expenditure revealed in the B.A. Great Southern report, did not survive the publication of a disappointing batch of traffic figures and a setback to the peso. The 1930-31 results of the Great Southern and the Western are dealt with on pages 776 and 777.

The industrial market made the most of a further decline in the unemployment figures, and the apparently favourable progress of the National Government's election campaign. The pace of the upward movement, however,

became too rapid, and although inquiry continued to come for selected shares from the Midlands and North, signs of a check to the rise were observable as the week progressed. Coal, iron and steel issues were supported, to the accompaniment of encouraging reports from industrial centres. Prices, however, tended to recede immediately a few sellers appeared on Wednesday and Thursday. Electrical shares became more subdued after a substantial advance. Motor issues also showed greater irregularity, despite the improved results announced by the Standard Company. The publicity given to the reopening of some Lancashire mills encouraged activity in textile shares, with a profit-taking tendency in evidence as the week wore on. Tobacco shares gained further ground, but did not completely hold it. Breweries gave a mixed display, though the undertone of the market was moderately good. Cables and Wireless reacted, after a rise whose proportions are commented on in a Note on page 774. The Swedish group enjoyed a moderate recovery. Stores shares had a firm undertone, but dealings in provision company issues were quiet. Bank shares were bought, on a steady investment demand, and insurance shares improved.

Oil shares were harder than for some weeks past, American tendencies being more helpful, and the Continent more or less neutral. Prices, however, showed no wide movement. The rubber share market was more active, partly on vague hopes of intervention associated with a change of governorship in the Dutch East Indies, but mainly in sympathy with firmness in other markets. Some of the leading shares hardened, but there was no shortage of available stock and the rise did not go very far. A similar condition tended to limit the dimensions of a potential improvement in the tea share market, though the undertone remained firm on the results of the week's commodity auctions.

The volume of trading in the mining share markets remained restricted. Kafir was steady to firm, but in many quarters there was an indisposition to operate until the question of South Africa's ability to remain on the gold standard had been settled. Rhodesians were steady, with Chartered again a centre of interest. An intermittent inquiry was received for tin shares, but the price of the metal fluctuated irregularly, and share values made little headway. Burma remained steady and San Francisco Mines further improved, despite a fall in the price of silver. Paris was an occasional buyer of Rio Tinto, but the market lacked stamina, and reacted sharply in mid-week.

FOREIGN STOCK EXCHANGES.

NEW YORK.

Although some market commentators professed to discover evidence of more widespread institutional buying, the market showed no disposition to put up prices indiscriminately after a moderate rise in values on Monday.

On the whole, the tone was firmer, but the financial situation was still a subject of keen discussion. The response of some of the interior banks to the appeal for support of the National Credit Corporation was considered disappointing, and there was some measure of support for the view expressed by the Harvard Economic Society that the President's proposals had come too late to have a stimulating effect on autumn business, since the termination of the period of seasonal expansion was at hand. The most important announcement of the week was made by the Interstate Commerce Commission, which declined to grant the 15 per cent. increase in freight rates demanded by the railways, but instead authorised certain increases on specific commodities, which it estimated would produce between \$100,000,000 and \$125,000,000 in revenue, if applied both to State and Inter-State traffic. Railway bonds were weak on the announcement, and common stocks tended to lose ground. The Commission's selection of particular commodities apparently had reference to the avoidance of possible losses of traffic in directions where road competition was already formidable. Considerable criticism centred round the Commission's stipulation that the freight income obtained from the increase was not to accrue to the railroads in receipt of satisfactory revenue, but was to be pooled and used to assist railroads in difficulties. This feature was regarded in some quarters as a further move in the collectivisation of transport. It is believed that a meeting of railway executives to be held next Thursday will decide on acceptance of the terms, but will demand, in addition, a reduction of wages. Whether this could be effected without formidable opposition from labour, which is strongly organised on the railways, remains to be seen. Conferences have begun this week between world copper producers, at which the advisability of a further curtailment in output will be discussed. The fate of such a proposal is uncertain, much depending on the attitude of the delegates of the International Nickel Company. Substantial reports were current of a decision in favour of a "pegged" price of 8 cents, with a comprehensive scheme of curtailment.

(Continued on page 772.)

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

PARIS.

After conspicuous weakness at the end of last week, the Paris markets opened with a much firmer tendency on Monday. An optimistic view was taken of the possibilities of the Washington conversations. Other favourable factors were the success of Dr. Brüning in obtaining a Reichstag majority last week, the strength of sterling, the better tendency of Wall Street, and the results of the French local elections. Rentes strengthened appreciably, and bank shares were harder under the lead of Bank of France. French industrials also recovered the ground lost in the previous week. On Wednesday, while most issues held their gains, sentiment was somewhat damped by a substantial drop in Suez Canal shares, ascribed to fears of a lower dividend as a result of a reduction in the volume of shipping using the Canal. On Thursday, conditions were firm and active, prices closing at the highest levels of the day.

AMSTERDAM.

Political and financial uncertainty continued to restrict investment business, both price fluctuations and the volume of trading remaining small. The rise in discount rates in Amsterdam, New York and Paris passed without exerting any but a minor influence on the Bourse. The Amsterdam money market even showed some relaxation, prolongation rates dropping to 3 per cent. As regards individual issues, the Unilever interim dividend had been fully discounted. Philips were firm, and Ford and A.K.U. were steady. Great disappointment was caused by the "Holland-America Line's failure to meet the interest on its 6 per cent. debentures. Plantation securities were somewhat better. The publication of sugar statistics, envisaging a reduction in European sugar production of 28.5 per cent., had an encouraging effect. At the Sumatra tobacco sales, at Amsterdam, the tobacco offered was of very unsatisfactory quality. The crop to be marketed next year is of better quality, and prices will be higher. The International Viscose Company, a holding company of British Breda Silk, has reported a loss equivalent to £1,159,000. The share capital is to be reduced from 12 million florins to 3 million florins, and 2.4 million any untoward incident. Milan was active at the outset

OTHER CENTRES.

Business in the Canadian centres remained restricted, the announcement of the suspension of gold payments having little effect either way. The undertone, on the whole, showed some improvement. Among the Continental bourses, Brussels was distinctly more cheerful, in sympathy, largely, with Paris. Stockholm showed a certain strength, Kreuger and Toll leading a recovery in industrials. Oslo was steady, but Copenhagen had an unsettled tone, though its reopening passed off without any untoward incident. Milan was active at the outset, but suffered a reaction in mid-week. The German Stock Exchanges remained closed, but unofficial dealings showed little change in leading issues, Dye Trust being "done" at 103.50, Siemens at 123, A.E.G. at 42, and Reichsbank at 103.

INVESTMENT NOTES.

The Rise in Industrial Shares.—At the moment of writing, the industrial share markets are suffering from a slight reaction due to profit-taking, but the undertone of the market remains firm. It is becoming increasingly evident that the restrictions on dealing imposed by the Stock Exchange Committee are creating somewhat abnormal market conditions. The departure from the gold standard caught everyone unawares. In particular, the Stock Exchange dealers in British industrial shares found themselves short of stock and unable to meet even the moderate demand which came from all over the country for British industrial equities. The result has been a rise in share prices out of proportion to the volume of business transacted. Dealers have had no option but to advance prices sharply. But as dealings have been for cash and purchases have been made for the most part by genuine investors, the selling has not materialised. As "short" dealing is prohibited there is no professional activity on the part of "bears," which would normally counter the exaggerated rise. The appreciation which has occurred in market values has been much greater than that justified on even an optimistic prospect of company earnings and dividends. In the textile market, for example, Bleachers Association ordinary shares have enjoyed a rise of 128.6 per cent. and Calico Printers of 116 per cent. In the railway market, London and North Eastern preferred stock has risen by 143 per cent., while Cables and Wireless 5½ per cent. preferred stock has jumped from 40 to 64, a rise of 62.5 per cent. If the return of the National Government stimulates a further buying of British industrial shares on the ground of tariffs or otherwise it is very desirable that the Stock Exchange should immediately restore dealings "for the account." As soon as short selling is permitted the bears may be relied upon to counter any exaggerated rise in industrial share prices as a result of election hysteria. A "House" correspondent's view of the matter is given in a succeeding "Note."

Cash Dealings—A "House" View.—In recent issues we have drawn attention to the effect of the current ban on dealings "for the account." Its connection with recent movements of security values in London, upon which we comment in a preceding Note, has lately been much discussed in Stock Exchange circles. The following views have been contributed by a correspondent in the "House":—"Cash business has been in force for a little over a month. In spite of the fact that a similar rule was operative during the whole period of the war, and for some time afterwards, many members of the Stock Exchange, and a still larger number of their clients, had almost forgotten its effects on the movements of prices. Under a regime of dealings for cash, a seller must be prepared to deliver within two or three days after the bargain is done. This is one reason why prices have recently gone ahead so sharply. In an ordinary Stock Exchange account, running for fourteen days (and succeeded by the days of grace allowed to the seller for delivery of stock after the pay-day has passed), sufficient

time is given to a seller to look round and to wait for shares to come in, if he has sold without having the shares actually on his book, or a firm seller from whom he can get them. In these circumstances a dealer in the Stock Exchange will be willing, as part of his ordinary business, to take such risks as a hundred and fifty years of experience in jobbing has taught the Stock Exchange to consider reasonable. Provided he has room in which to turn round, in case his bargain goes against him for the time being, or if he cannot promptly buy back what he has sold, the dealer will make a price as a matter of course. He may not do so if he is going to be called upon to deliver shares within two or three days of the making of the bargain. If the public is eager to buy the shares, quotations may thus move more abruptly, and clients may sometimes complain of the prices they are called upon to pay. Cash dealings, in short, act as a barrier to free marketability. The Stock Exchange Committee are fully aware of the handicap imposed upon their own members and the disability laid upon the public. But until the financial position is clearer they are unlikely to relax a regulation which they regard, rightly or wrongly, as a safeguard against ill-advised speculation in a delicate period.

German Bonds.—The moderate recovery in German Government bonds which followed upon the favourable vote for Dr. Brüning in the Reichstag has so far been maintained, but the market is anxiously awaiting the result of the discussions between M. Laval and President Hoover in Washington regarding the reparations problem. If payment of reparations could be disregarded altogether or removed from the sphere of practical politics by the extension of the one-year holiday into, say, a five years' moratorium, then the commercial loans of Germany would return to investment favour. It may be recalled that in the first six months of 1931 there was an excess of exports over imports of no less than £50 millions, while the external interest requirements of the 7 per cent. Dawes Loan, the 5½ per cent. Young Loan and the commercial loans of Germany amounted to only £20 millions. The withdrawals of foreign balances have, of course, lessened the external interest requirements. The export surplus balance of £50 millions in the first half of 1931 must not be regarded as normal, seeing that imports have been drastically restricted and exports stimulated, but the "cover" for these Government and commercial loan interest payments could be regarded as adequate if only the reparations burdens were removed. Unless the Hoover-Laval conversations arrive at some settlement of this problem, the conversion of German short-term debts into long-term debts becomes impossible. The six months' "standstill" agreement which was concluded with the bankers at Basle expires in February next, and if the problem of reparations is not settled by that time there is no chance of a long-term loan being raised to meet the short-term obligations. In that event the suspension of interest payments on German bonds might be difficult to avoid. A question regarding Germany's ability to remain on the gold standard may remain, even if a satisfactory solution of the reparations problem is announced from Washington. Under the "standstill" agreement, Germany is required to repay a certain fraction of her short-term obligations and it would appear from the decline in the Reichsbank's holdings of gold and foreign exchange reserves, that even these payments are appreciably affecting the financial position. Obviously the restrictions which have been imposed on foreign exchange dealings have not completely prevented a flight of capital. Exporters by some means or other are not surrendering their foreign currencies to which they become entitled, so that the pressure on the Reichsbank continues in spite of the export surplus. Obviously Germany can make no move away from gold on her own initiative, but if she is forced off the gold standard by the utter exhaustion of her gold and foreign exchange reserves, it seems certain that she will then declare a temporary moratorium on all commercial payments. This is the immediately depressing outlook for the market in German bonds.

Holders will trust that, if the statesmanship of the world is not bankrupt, a solution may be found along lines calculated ultimately to improve the investment status of the German Government and commercial loans.

Brazilian Funding Scheme.—Doubts regarding the Brazilian Government's position *vis-à-vis* its foreign bondholders, to which we recently drew attention, have now been settled by an announcement that interest and sinking fund can no longer be paid in cash, except on the 5 per cent. Funding Loan of 1898 and the 5 per cent. Funding Loan of 1914 (the service of the 1922 7 per cent. Coffee Security Bonds is already provided for). Thus Brazil becomes a defaulter *malgré lui* for the third time in her existence as a republic, and justifies the warning note which we were among the first to sound two and a half years ago. The market, on this occasion, is ready to see in Brazil the victim of *force majeure*, in a crisis of falling prices which has enormously increased the real burdens of debtors throughout the world. In addition, she has disarmed criticism in advance by her acceptance of Sir Otto Niemeyer's recommendations for internal financial reconstruction, and by the terms of the funding scheme, details of which have accompanied her announcement of this week. For the next three years the interest on all loans will be paid in special scrip carrying interest at 5 per cent. The first series of Funding Bonds will be redeemable in twenty years, and will be issued against the following loans:—

1903 5 per cent. Sterling Bonds; 1909 5 per cent. French Franc Bonds; 1921 8 per cent. Gold Dollar Bonds; 1922 7 per cent. Gold Dollar Bonds; 1926 6½ per cent. Gold Dollar Bonds; and 1927 6½ per cent. Sterling and Gold Dollar Bonds.

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

The second series, redeemable in forty years, will be in respect of all other existing Brazilian Federal Government foreign loans. The situation will be reviewed at the end of the first and second years, with a view to the extension of cash payments if circumstances permit. The funding of the interest will be arranged by means of the deposit in an approved Rio de Janeiro bank of equivalent amounts in currency, at 6d. per milreis, and invested either in bills of exchange, to be applied to redemption or drawings of the new scrip, or in bonds of the internal debt, to be held in trust until exchange can be obtained. It will be noted that Brazil does not seek any reduction of the principal of her indebtedness or of the rate of interest payable on any bond. On the contrary, she maintains her intention of meeting all her present obligations when exchange conditions permit. Appreciation of this fact was reflected in the action of the market in putting up the 1898 and 1914 Funding issues some 5½ points on the day following the issue of the official announcement. The latter, incidentally, does not apply to any Brazilian State loans, but covers only Federal obligations.

Outlook for South American Bonds.—The announcement of a Brazilian funding scheme (referred to in the preceding Note) has not been the only South American development of importance this week from the investor's point of view. The Bolivian Government has promulgated a law formally establishing a moratorium of thirty days as regards the settlement of foreign obligations and the payment of debts in foreign currency. The moratorium may be prolonged, entirely at the Government's discretion. Bondholders who have been disquieted by these and other obvious symptoms of severe economic strain in South America will obtain much valuable information, if not a great deal of consolation, from the speech made last Tuesday by Mr R. J. Hose to the shareholders of the Anglo-South American Bank. Mr Hose, who is a foremost authority on South American conditions, traced the origin of present troubles to the altogether calamitous fall in the world price of South America's basic products. Many of these, Mr Hose declared, had fallen not merely to pre-war levels, but to as much as 40 per cent. below that standard. During the first eight months of this year Argentina increased the volume of her export trade by 72 per cent. and received a monetary reward actually 3 per cent. less than in the same months of 1930. To those unfamiliar with the recent course of the great primary commodity markets, these figures may appear almost unbelievable. When account is taken of the fact, further, that few other South American countries have been as fortunate as Argentina, the fall in values having been accompanied in their case by a decline in the volume of exports, a sufficient reason is apparent for their exchange difficulties and debt payment suspensions. Naturally, republics like Bolivia, Brazil, Chile and Peru, which are now in default on their overseas obligations, may have contributed to some extent to their present undoing by heavy past borrowing. If responsibility for this is to be apportioned, however, some share must go to lenders, who poured huge amount of new capital into South America in the years immediately preceding the crisis. Mr Hose calculates that, between 1926 and 1930, South American public long-term loans abroad on behalf of Governments, departments, municipalities, etc., were no less than the equivalent of £300,000,000 sterling. Some £253,000,000 of this total was raised in the three years 1926-1928. Including the service of previously existing loans, the principal South American countries, on Mr Hose's computation, are now required to find an annual amount to meet the service of their public long-term external debts equivalent to something like £50,000,000 sterling at par of exchange. Seeing that the currencies of many of the countries concerned have to-day seriously depreciated, and that the bulk of the 1926-1930 new borrowings were for programmes of economic development which may take years to mature, or have already been offset by the fall in commodity prices, investors may seriously question whether some of the republics will be in a position to resume the service of their entire debt in any

reasonable time, failing a most extensive rise in prices. The possibility may need to be seriously considered of a composition between South American countries and their creditors, having as its object the lightening of a burden whose real weight has been enormously increased by factors outside South America's control, and whose indefinite continuance may be a serious obstacle to the restoration of healthy economic conditions when trade revives.

American Motor Industry.—The motor industry claims, at the moment, to be doing as well as any other American industry, and considerably better than the majority. Production during the first seven months was down by about 25 per cent., but it is thought that by the end of the year the decline will be about 23 per cent. as compared with 1930, and 50 per cent. as compared with the abnormal 1929 figure. The close of 1929 saw dealers heavily stocked and the sudden trade slump that followed left these stocks high and dry. Their total, however, has since been reduced, and the whole industry is in a position to answer to every swing of the trade helm.

U.S.A. AUTOMOTIVE PRODUCTION DURING FIRST SEVEN MONTHS.			
	1929.	1930.	1931.
Passenger	3,182,241	2,117,465	1,497,798
Commercial	526,355	359,684	291,119
Other	17,687	4,762	2,996
Total	3,726,283	2,481,911	1,791,913

Perhaps the most striking feature of the year is the way in which Ford and General Motors have exchanged their respective positions in the industry:—

PERCENTAGE OF TOTAL PRODUCTION.

—Seven Months—		
	1930.	1931.
Ford	43	33
General Motors	33	44
Other	24	23

This reversal can be attributed to one single product of General Motors, the Chevrolet, whose sales during the first eight months of 1931 have been 643,410, compared with approximately 660,000 for Ford. Although employment is said to have regained its usual level at the Ford works at Detroit after the long August shut-down, and although dealers' stocks are said to be on the point of exhaustion, no announcement is expected as regards the rumoured new model before November. The next table shows the net profits reported by representative American motor manufacturers for the first six months of the year, during which some 60 per cent. of the year's business is conducted:—

	Jan.-June, 1930.	Jan.-June, 1931.
Chrysler	\$ 3,408,856	\$ 2,252,035
General Motors	98,355,355	84,122,000
Graham Paige	880,960	835,056 (Loss)
Hudson Essex	3,392,012	526,992
Packard	5,528,837	90,120 (Loss)
Reo	349,398 (Loss)	572,283 (Loss)
Studebaker	2,258,702	2,029,355
Willis Overland	151,704	304,648

The car with which Chrysler has made its bid for the cheap car market, the New Plymouth (see the *Economist*, July 25, 1931), has met with great popular favour, and at once reached third position in the returns of registrations by make. This success is welcome, as the Chrysler Company has done none too well of recent years. United States statistics of exports by value show a drop for the motor industry of 47.8 per cent. during the first-half of the year.

Cables and Wireless.—The market in Cables and Wireless stocks has come to be regarded as a species of barometer of British trade. The directors of Imperial and International Communications have always been at pains to point out in their reports, by graphical illustration, how close is the connection between the message receipts of their company and the foreign trade of Great Britain. At the last general meeting in July, the managing director stated: "The business of the Communications Company

is very sensitive, as is clearly illustrated by the fact that during the present year, when New Zealand suffered from a disastrous earthquake, and more recently when Mr Hoover made his offer to the Powers in connection with the German crisis, the traffic showed an immediate but, of course, only temporary, improvement. There can be no possible doubt that, on the first sign of trade revival, there will be an immediate improvement in the traffics of your undertaking." The falling-off in traffic receipts this year is shown in the following table:—

ESTIMATED TRAFFIC RECEIPTS			
	1930.	1931.	Per cent. Decline.
January	519,485	412,908	— 20.52
February	460,052	390,461	— 15.13
March	492,316*	447,668*	— 9.08
April	456,120*	386,706*	— 15.22
May	466,279	371,704*	— 20.28
June	413,471	374,502*	— 9.42
July	437,220	377,774*	— 13.60
August	411,090	334,326*	— 18.67
September	424,138	...	...

* Approximately £22,500 included in March, £21,500 in April, £22,000 in May, and £21,500 in June, 1931, formerly shared by the Indo-European Telegraph Co., and the Indo-European Telegraph Dept. Similarly £21,000 for July, 1931, and £18,500 for August.

The Stock Exchange was not slow to jump to the conclusion that the stimulus which the departure from gold had given to our export industries would have an immediate effect upon the traffic receipts of the communications subsidiary of Cables and Wireless. A memorandum was prepared by one of the leading dealers, in which it was pointed out that Cables and Wireless was now in a position to compete successfully with the American telegraph companies owing to the fall in the value of the £, and that, where the company operated in countries still on a gold basis, the sterling profits were proportionately greater. It was added that the company at December 30, 1930, held British Government and other securities valued at over £14 millions, whereas the then market value of the three classes of the company's capital was approximately £17 millions, and that the income from investments alone in 1930 amounted to £611,941, which was sufficient to pay a dividend of 2.7 per cent. on the 5½ per cent. preference stock. At the time the memorandum was circulated the preference stock was valued at 51½. As a result of the demand which followed the stock advanced in a few days to 64. The extent of the total appreciation in the market valuation of the Cables and Wireless undertaking since September 21st is shown in the following table:—

	September 19th.	October 21st.
	Market Price.	Market Price.
5½% pref. stk.	40	64
7½% "A" ord. stk.	9½	24
7½% "B" ord. stk.	5½	15½
	11,705,626	21,151,035

An appreciation of £9,445,409, or 80.6 per cent., in the market valuation of Cables and Wireless on a relatively small volume of buying is a striking example of the disproportion between cause and effect in recent market movements.

United Dairies.—This company, which supplies some millions of customers in London and the Home Counties with the necessities of life, shows a substantial increase in net profit this year:—

	1929.	1930.	1931.
Year ended June 30.	£	£	£
Net profit	511,705	518,489	548,739
Preference dividend	194,997	195,000	195,000
No. of times covered	2.62	2.66	2.81
Ordinary dividend:—			
Amount	222,393	222,797	245,300
Earned %	13.01%	14.50%	15.86%
Paid %	10%	10%	11%
Written off investments in subsidiaries	100,000	100,000	79,850
To investment reserve	...	...	10,000
To reserve for pensions	...	...	20,000
To reserve fund	...	...	50,000
Increase or decrease in carry-forward	— 5,685	+ 692	— 51,411

During the year certain subsidiaries were liquidated by reason of centralisation by the parent company. Con-

sequently investments in subsidiaries have fallen by £1,492,205 to £1,160,155. Properties have risen by £784,935 to £2,126,596, and sums due from subsidiaries have risen by £788,674 to £3,331,857. Debtors declined by £14,575 to £36,630 and investments by £105,692 to £213,661. The bank credit rose by £46,391 to £121,002. On the liabilities side, creditors increased by £48,445 to £196,238, and a decline of £108,518 was shown in sums due by subsidiaries. There was a rise of £759,226 to £3,179,503 in the surplus of liquid assets over current liabilities. The entire capital is to be converted into stock if shareholders agree to a proposal at the general meeting on October 30th. At the present price the ordinary shares yield £6 10s. 2d. per cent.

Joseph Lucas, Ltd.—Though a further decline of £24,183 to £208,812 was shown in the net profit for the year ended August 7 last, the earnings of this electrical accessory company have, all things considered, been maintained in encouraging fashion. Although the customary dividend rate of 25 per cent. was more than earned, the directors have taken the precautionary measure of declaring a distribution of only 20 per cent:—

	1929.	1930.	1931.
	£	£	£
Year ended August 7.			
Net profit	245,923	232,996	208,812
Preference dividend	11,080	11,097	10,734
No. of times covered	22.19	20.99	19.55
Ordinary dividend:—			
Amount	163,860	188,943	147,514
Amount %	25%	25%	20%
Paid %	25%	25%	20%
To reserve fund	58,186	50,000	25,702
Superannuation and benefit fund	15,000	10,000	...
Increase or decrease in carry-forward	— 2,203	— 26,855	+ 24,863

The main points of interest in the balance sheet are the increase of £152,808 to £544,213 in land, works and properties and the decline of £274,400 in sums due by subsidiaries, now £31,771. Plant, etc., is £146,741 higher at £414,161, stock has risen by £133,651 at £662,891. The surplus of liquid assets over current liabilities has fallen, however, by £254,669 to £217,159. During the year two subsidiaries, Powell and Hanmer, Ltd., and M-L Magneto Syndicate, were disposed of at a surplus of £104,298, which was added to the reserve fund. At £8 the £1 ordinary shares yield £7 0s. 4d. per cent.

A. W. Gamage Reconstruction.—Though the final clearing up of the position of the ill-fated Gamage (West End) Company is being held up by the delay experienced in the realisation of its Marble Arch building, substantial progress is being made with the examination of the affairs of the parent company, A. W. Gamage, Limited, by a shareholders' committee appointed at the meeting on June 22nd last. This body has issued an interim report, which declares that, while the participation of A. W. Gamage in the West End venture was ill-advised and a grave error of judgment, the trade of the parent concern was undoubtedly affected by depression as well as by the opening of the West End store. Various recommendations of the committee for economies and improved general policy have been put into effect by the board, and in the first six months of the current financial year the number of

customers served has increased by approximately 25 per cent. and the turnover by something over 14 per cent. Sir Charles Gott, the well-known surveyor and valuer, has made a complete valuation of the company's property, and, although no final figure can be arrived at until the company's contingent liability under its guarantees in respect of the West End Company is known, the committee finds, happily, that there will be, in any case, a substantial surplus of assets over liabilities. This should cover debentures, mortgage, bank overdraft, trade creditors, and preference shares, but the necessity of a writing-down of the value of the ordinary shares is being considered. In the committee's view, however, the reduction should not bring the nominal value of the ordinary shares as low as the Stock Exchange quotation, which was 3s. 9d. on the eve of the publication of the report. The shares have since risen to 5s. The company would appear to be earning profits at the rate of about £10,000 a year, after paying expenses and debenture interest, in view of the committee's statement that, apart from any loss in connection with the West End concern, the company has earned its preference dividend for the six months to July 31st. Mr E. M. Gamage has resigned his position as governor and chairman, while remaining managing director, and the chairman of the committee, Mr John T. Greenwood, has become chairman—without remuneration for the present.

Sudan Plantations' Bad Year.—The report for the year to June 30th last makes somewhat unhappy reading for shareholders. In recent years this company has carried out a big development programme which, up to the eve of the world depression, promised encouraging financial results. Between 1922-23 and 1928-29 the issued share capital was increased from £450,000 to £2,250,000 (including a £600,000 capital bonus in 1925), but gross revenue rose from £203,829 to £933,795, and dividends of 25 per cent. to 30 per cent. were regularly paid. In 1929-30 gross revenue declined to £442,007, and in the year just closed to £209,356. Low cotton prices, aggravated by a bad crop yield, have hit the company badly at a time when it would normally have expected to reap the fruits of recent heavy capital expenditure. Last year, for instance, the Gezira cotton area increased by 11 per cent., but the crop showed a decline of as much as 33½ per cent. The capital, rather than the revenue losses of the company, however, revealed in the present report, are the most serious feature from the shareholders' point of view. The directors have deemed it necessary to reserve £279,935 against advances made to tenants in the Gezira area, to write £38,540 off the 1929-30 Gezira Cotton Stock, and to transfer to reserve for depreciation of investments some £101,649 from profit and loss account, and £190,262 from share premium account. As some £65,000, in addition, has been provided for taxation, the balance of profit and loss, which a year ago stood at £486,951, has now been extinguished.

	(Years ended June 30).	1929.	1930.	1931.

* Depreciation, estate reserves, staff bonuses, and directors' remuneration.

† Comprising reserve against advances to tenants, Gezira, £279,935; amount written off 1929-30 Gezira Cotton Stock, £38,540; balance transferred to reserve for depreciation of investments, £101,649.

‡ £190,262 transferred from share premium account to reserve for depreciation of investments.

The chairman, at next Wednesday's meeting, may possibly disclose whether the company expects to have to make further reserves against advances to tenants. Some explanation is also called for of the circumstances which have rendered advisable the writing-down of investments by £291,910 this year. This is a very large sum, in view of the fact that, apart from British Government securities valued at £629,600, the company's investments in other concerns now have a balance-sheet value of no more than £302,050. The companies in which Sudan Plantations is interested are Kassala Cotton (which is inevitably affected by low prices), Cambuhy Coffee and Cotton Estates, Sudan Salt (which will require additional money to bring its plant to the producing stage), and Parana Plantations. The last-named concern does not operate in the Sudan at all, but in Brazil. Its profit-earning prospects will be enhanced next year, when a railway line from San Paulo to a point near the boundary of the company's land will be open for traffic. In the meantime, its capital requirements have been a factor in the depletion of the working capital of Sudan Plantations, which holds £105,700 of its 6 per cent. cumulative participating debentures. Sudan Plantations £1 shares, which touched 90s. 7d. in 1929, now stand at 22s. 6d.

Buenos Aires Western Railway.—Since railways depend wholly upon the prosperity of national industries, both for freight and the travelling capacity of the population they serve, the South American railways are having their full share of the results of current depression. On the B.A. Western Railway, in the year to June 30th last, gross traffic receipts fell by £559,229 (12.7 per cent.) to £3,822,120. This was accompanied, however, by a saving of £298,227 (8.9 per cent.) in expenses, with the result that net earnings were £261,002 lower at £779,654. Income from investments and other sources declined by £193,674 to £263,681, and the exchange loss on remittances rose to £197,038, as compared with £76,531. The results of the past three years are fully shown in the following table:—

	Year ended June 30.	1929.	1930.	1929.
Gross receipts	£	5,275,311	4,381,349	3,822,120

Carried forward	£	235,371	67,711	62,353

Receipts per train kilometre were 8s. 9d., as compared with 10s. 7½d., and costs were 6s. 8d., against 6s. 11½d. The company's freight traffic suffered from the results of seriously damaged crops. The management's efforts at economy have been hindered by labour regulations and agreements, and demands for increased wages. The charge for renewals has been decreased by £125,064. Prospects for the current year, however, are declared to be more favourable. The number of passengers carried was 3,871,406 greater, at 27,429,228, but receipts declined to £1,124,811, as compared with £1,164,730. The freight carried was 277,513 tons, as compared with 342,435, a decline of 18.96 per cent.

Buenos Aires Great Southern Railway.—The fall in the price of Argentine products has been the main cause of the disappointing results shown by this railway. Gross traffic receipts, of all descriptions, fell away by £865,812 to £11,348,750 last year, but compensating economies of £24,262 were effected in working expenses. Losses involved in remittances were £632,559, as compared with £188,838 in 1929-30 and an additional £430,892 has been withdrawn from the general reserve fund to provide for further exchange depreciations. The net profit was £712,307 lower at £1,516,273:—

	Year ended June 30.	1929.	1930.	1931.
Gross receipts	£	13,066,789	12,214,562	11,348,750

Carried forward	£	344,088	309,641	715,914

Passengers carried during the year declined by 992,505 to 9,517,077, while freight fell by 379,078 tons to 7,222,881 tons. Crop prospects are described as good this year, but reduced area has been sown. Capital expenditure has been rigorously reduced and certain improvement and extension schemes have been suspended. No further works of this nature will be contemplated till conditions return to their normal position. The present price of the ordinary stock is 34½.

Gold Fields Rhodesian.—Like other undertakings of the kind, this company suffered severely from the conditions recently prevailing. For the year ended May 31st the net operating profit amounted to only £7,200, against £116,660 in 1929-30. In respect of the latter period, the writings-off totalled £11,370. An interim dividend of 5 per cent. was paid, absorbing £62,860; but in view of the uncertain outlook it was considered necessary to carry forward the balance. Last year a most noteworthy development occurred in the shape of the failure of the Mayfair Mine subsidiary. This necessitated a charge for profit and loss of £143,950, included in an amortisation of £150,200. Thus the credit of £71,800 brought forward is converted into a debit of £72,800. Investments now stand at £902,100, against £928,250, their value (at market price or directors' valuation) being £535,200. At the date of the balance sheet the surplus liquid assets amounted to £128,000—including £72,800 advances and loans. Tariff prospects have lately improved the value of the company's holding of Turner and Newall shares. Fresh acquisitions are in the loan Antelope Copper and the Ashanti Goldfields—both of which have lately been rather in the limelight.

Broken Hill Proprietary.—Almost contemporaneously with the frank announcement that no dividend will be paid for the current half-year comes the full text of the report to May 31st. Despite the stoppage of work at Broken Hill owing to the lowness of metal prices, and the reduced demand for the company's iron and steel products owing to economic conditions in Australia, the

revenue reached the substantial total of £2,358,870. With depreciation on a reduced scale, and only £25,000 set aside for income tax (as against £50,000 previously), the net profit came out at £83,260 in place of £161,890. No distribution was made for either period, the last payment being 1s. in respect of 1928-29. Against the balance of £569,800 now carried forward, the liquid assets amount to £466,600, irrespective of the company's interest in other undertakings. By further drawings the first debentures have been reduced to £138,400 and the second to £677,200. Once again the directors have to complain of burdensome legislation—not only actual but prospective. The company is devoting some attention to the discovery of a gold proposition, the principal object being to obtain a large low-grade formation. So far no tangible results can be reported.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Anglo-South American Bank, Assam Railways, and Trading, Central Argentine Railway, Ste. Madeleine Sugar, Raphael Tuck and Sons, and Cam and Motor Gold Mining. Speaking at the annual meeting of the Ste. Madeleine Sugar Company, Limited, Mr Geo. Moody Stuart said that when prices rose the industry would need the "present preference and additional help" until the day when all countries swept aside protection. He explained the Chadbourne Plan, whereby Continental beet sugar growers and Javan cane growers will unite with Cubans in reducing production. Mr R. J. Hose told shareholders of the Anglo-South American Bank that the prices of export commodities in South America were below pre-war levels. Imports were being restricted to restore credit. Crop anticipations were sanguine and conditions in Chile were improving under the new administration. Further reference to Mr Hose's speech is made in a "Note" on page 774 of this issue.

COMPANY MEETINGS, &c.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

EFFECT OF FALL IN PRICES—EXTERNAL DEBT COMMITMENTS.

MR. R. J. HOSE ON CONDITIONS IN SOUTH AMERICA.

The forty-third annual general meeting of the Anglo-South American Bank, Limited, was held, on the 20th instant, at Winchester House, Old Broad Street, London, Mr R. J. Hose (chairman of the company) presiding.

The Secretary (Mr C. J. Shea) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: As you are all aware, the economic crisis from which the world is suffering is quite unprecedented both in its universality and severity. The phrase, "economic blizzard," has been aptly coined, and I may tell you at once that this blizzard has blown nowhere more fiercely than in the countries where we work, due to the fact that they are producers of primary commodities, the slump in which is at the root of all our troubles.

I would emphasise that the departure of this country from the gold standard on September 21st was principally due to conditions abroad rather than here, the crisis in Central Europe having induced a nervousness in foreign markets which led them to draw their cash balances from London in order to strengthen their own positions.

Great Britain remains fundamentally in a sound position, and, with her unrivalled financial experience and enormous resources, will undoubtedly retain undiminished her monetary predominance.

PRECIPITATE FALL IN PRICES.

Dealing with South America, the fact is hard to realise that prices of its products have continued to fall so precipitately that they are down not merely to pre-war levels, but, in the majority of cases, to as much as 40 per cent. below. Let me give you an example of what this means. During the first eight months of 1931, Argentina actually increased the volume of her export trade by 72 per cent. over that for the same period of 1930, but the total value was some 3 per cent. less. When it is borne in mind that the other South American countries have not been so fortunate as Argentina, inasmuch as a fall in values has been accompanied by a decline in exports, the dire effect upon their economy may well be imagined. To this state of affairs may be directly ascribed the grave exchange difficulties with which practically all the Republics are faced, as well as the default on foreign debt services into which Bolivia, Brazil, Chile and Peru have been driven during the past few months.

In order to restore as far as possible their economic balance, the principal South American countries are restricting imports drastically, so that already a "favourable" balance of merchandise trade is re-emerging in Argentina and Chile. Necessary though this import restriction may be from the point of view of the individual country, it is indicative of the slowing-up of world trade due to the present breakdown in international credit machinery, and is of little comfort to exporting countries such as Great Britain. A further factor now operating strongly to contract export trade with South America—and thereby also banking business—is the official control of exchange established in the principal trading countries there, namely, Argentina, Brazil, Chile and Colombia. The existing difficulty of obtaining return remittances in sterling for exported goods sold in local South American currencies is so obviously discouraging to our overseas trade that I need not comment further upon this additional evidence of the freezing up of international commerce due to present credit conditions, beyond saying that so serious is the position likely to become very soon that an early solution must be forthcoming if the wheels of commerce are not to stop.

INCREASE IN EXTERNAL DEBT COMMITMENTS.

The present difficult position of the South American countries has been aggravated in varying degree by the increase in their external debt commitments at a time when, without foreknowledge by them, world conditions were developing towards a collapse in the markets for primary products which was to result in their income being drastically diminished. During the five years 1926 to 1930, South American public long-term loans abroad on behalf of Governments, departments, municipalities, etc., amounted to no less than the equivalent of 300 million pounds sterling, of which 253 millions were floated in the three years 1926 to 1928. While conditions then ruling in New York—where the bulk of the money was raised—were such as to render extremely facile the placing of foreign bonds, it must be remembered that, so far as the South American borrowers were concerned, the funds were destined

mainly for programmes of economic development, the likely benefits of which, however, have for the present been largely nullified by the fall in prices. If there be included the service of previously-existing loans, the principal South American countries now have to find an annual amount to meet the service of their public long-term external debts of the equivalent of something like 50 million pounds sterling at par of exchange. They can provide for such indebtedness only by shipments of goods or gold, and, with the enormous fall in value of their exports, they have been compelled to part with the greater proportion of their surplus gold holdings. In Argentina, for example, the gold held by the Conversion Office has dropped since October, 1930, by 163 million pesos, and now represents a ratio to the total note circulation of 55 per cent., as compared with 77.5 per cent. In those countries where there had been recently established central banking systems and a gold standard of exchange, the drain of gold naturally resulted in a persistent decline in the ratio of gold holdings to note and deposit liabilities. In the case of Chile, she was ultimately faced with two alternatives, either to continue the heavy payments required for the foreign debt with the certain early exhaustion of the Central Bank's gold reserve and consequent abandonment of exchange stabilisation, or to suspend temporarily the service of the foreign debt and so stem the drain of gold from the country. Wisely, but reluctantly, Chile chose the latter course after having attempted honourably to fulfil her debt obligations until the last possible moment.

To sum up, the situation in South America is that the income of that continent has, through the slump in prices, been reduced to a level quite out of alignment with external obligations. The continent has, therefore, a vital interest in the adjustment and stabilisation of prices and the restoration of international credit, the dislocation of which is now so generally recognised and deplored. Under normal conditions, the foreign indebtedness of Latin-America would have been adjusted by increased shipments of goods plus a continuation of lending from abroad. In fact, however, the supply of loans from New York has quite dried up during the current year, while the decline in commerce with the United States has been particularly marked.

DANGERS OF GOLD STERILISATION

Commenting at some length at our last meeting upon the cause of the slump in world prices and the advantages of the preservation of the gold standard, I referred to the dangers arising from the sterilisation of large gold stocks in certain centres, and this unbalanced state of affairs has since driven many countries off the gold standard. Despite the benefits to export trade which may arise from a depreciated currency no longer linked with gold, these can of their very nature be only temporary and sink into insignificance beside the dangers and disorganisation to world trade resulting from the abandonment of the gold standard and instability in currency values. The truth is that the world was attempting to operate the gold standard under an impossible set of circumstances, among which have to be numbered high tariffs, reparations and war debts, as well as rigid wages and other high production costs. Under a gold standard system the metal is intended to do no more than make up for temporary fluctuations in the international balances of payment. Therefore, any unwieldy and persistent inflow of the metal, which is symptomatic of uneconomic factors upsetting credit equilibrium, should not be regarded for long with complacency even by a large creditor country. When such a country is also the possessor of a large visible trade balance, still more should it ponder carefully its international economic policy—especially in relation to import tariffs.

The Hoover plan for a one-year holiday in war debts was hailed with general relief, and there will undoubtedly be further developments in this respect. While it is admitted that the more recently contracted foreign debt obligations of Latin-America are in a different category to war debts, they are alike inasmuch as they were created at a time of high prices, and, being fixed in gold, represent an increasing burden as commodity prices decline. Present world conditions necessitate an early and definite measure of co-operation between the various nations in an attempt to find a way out of the present credit impasse. That such co-operation will eventuate shortly under the pressure of economic circumstances there is little doubt. In the very universality of the breakdown lies probably the hope of eventual and, maybe, speedy recovery.

REVIEW OF GENERAL CONDITIONS.

I do not propose now to occupy your time by a detailed review of conditions in the countries where we operate. This will be contained in the booklet which will be posted to you with your dividend warrants. The principal points, however, may be summarised as follows:—

The economic situation of Argentina is difficult, the great increase in the volume of her export trade having been nullified by unprecedentedly low prices. Obviously, a betterment in world prices,

October 24, 1931.]

THE ECONOMIST.

779

STE. MADELEINE SUGAR COMPANY, LIMITED.

MR G. MOODY STUART'S INTERESTING REVIEW.

The twelfth annual general meeting of the Ste. Madeleine Sugar Company, Limited, was held, on the 19th instant, at Southern House, Cannon Street, London, Mr Geo. Moody Stuart, C.B.E. (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: You will have seen from these that our crop has been 34,334 tons of sugar and the profit on the year £13,318, the expenditure being £354,024 and the revenue £367,342. After providing for the deficit brought from the previous year and for income tax there remains a credit balance of £2,514. In view of the continued depression in the market and of the number of places that are worse off, I hope the shareholders will feel we have not done badly.

ORIGIN OF OVER-PLANTING.

The long period of unprofitable work, one year making a loss, another year making a profit, but never enough to pay a dividend, is weary work. What started the industry getting into this deplorable state was the continuance of extension of plantations in Cuba after there was no need for them—no outlet for the extra sugar.

The Cuban planters and their New York bankers seem to have been misled by the excessive profits they had made during the war and early post-war years. Possibly they were too optimistic as to increased world's requirements. However that may be, as long as the biggest producing country persisted in working regardless of losses it has been impossible for others to make a profit. Hence all these years of fruitless labour.

CUBAN PLANTERS' CHANGED POLICY.

But now at last the Cuban planters and the New York bankers have seen the necessity of making an entire change in their policy. They formed a committee under the chairmanship of Mr Thomas Chadbourne, which has evolved a plan that goes by the name of the Chadbourne Plan, the object of which was to get the Continental beet sugar and Java cane sugar producers to join with the Cubans in removing the pressure of surplus stocks on the market and in putting an end to over-production. It has now been tried sufficiently to show that it is on sound lines, and it has already shown results more than up to expectations for the first year.

It has brought about a big change in the position of stocks. Cuba has withdrawn from the market 1,300,000 tons, placing that in store, to be released at the rate of one-fifth part yearly for five years, the Cuban Government having arranged for advances to the owners of the sugar meantime. Java has similarly segregated 650,000 tons, and the Continental beet countries, apart from Russia, are all segregating their surplus.

The steps for checking over-production have already brought about drastic reductions in crops. Cuba has this year made 1,500,000 tons less than last year, and the Continental beet crop now being made is estimated at 2,500,000 tons less than last year. These are big figures. Java is to adjust her production to requirements so as to prevent any accumulation of stocks.

PRODUCTION BROUGHT BELOW CONSUMPTION.

The result of all this—and it is a striking result—is that the world production has been brought well below the consumption. So there is no doubt that the surplus stocks will disappear, according to plan. It is difficult to arrive at a close forecast of production and consumption during the season 1931-32, but on present indications it would appear that production may fall below consumption to the extent of about 1,800,000 tons. The world production, excluding Russia, is estimated at 23,800,000 tons, and the consumption at approximately 25,600,000 tons. In the estimated production the figure for Java is based on the estimate of next crop—that is, the crop now growing—the harvesting of which commences next May, for the Chadbourne Plan was brought in too late to affect the crop that has been reaped this year. This reduction in crops enables the annual release from the segregated stocks to be easily absorbed.

Prices have not yet responded to the changed position. One must remember it is a five-years plan, and one could not look for any great improvement before even the first year had been completed, but there is no doubt that if we had not been under this financial crisis we should even now have seen some advance. However, the assured reduction in supplies gives the assurance of better times some day. Meantime we must have patience and allow time for excess stocks to work down.

NEED FOR PREFERENCE.

Even when higher prices are established we will still require our present preference and the additional help, too, which Mr Baldwin indicated some time ago he was prepared to approve of. Germany

however slight, would be of benefit to Argentina proportionately to the increased volume of exports. The political future is dependent upon the General Election, fixed for November 8th; meanwhile, the Provisional Government has devoted praiseworthy attention to the restoration of the national finances. Our Buenos Aires branch cabled on 16th inst. as follows:—

"Reports of the growing crops in the principal zones continue favourable, and the general outlook has materially improved by the recent upward trend of cereal prices. Area sown with wheat smaller than last year, but the linseed area is largest on record. Current interest rates reflect tightness of money. Stock markets have displayed considerable activity in past few days, Gilt-edged being in good demand at rising prices. General conditions expected to continue quiet until after elections and beginning of harvest."

In Chile the remarkable patriotic response of the general community in aid of the Government at the time of the recent Communist agitation in certain naval units is sufficient indication of the fervent adherence of the Chilean nation to constitutional rule and ordered progress. There was a reaction in economic activity last year, and there is now being felt the full effect of the lack of demand for export products, as well as the curtailment of internal activity. The position of the national finances is not satisfactory, but we learn, from a cable from our Santiago branch, dated 16th inst., that the election of Señor Juan Esteban Montero as President of the Republic by a substantial majority has relieved the political situation, and prices of Stock Exchange securities, including industrials, show a general advance. Exchange control, however, is tending to restrict the movement of commerce.

With regard to nitrate, I referred last year to the formation of the Compañía de Salitre de Chile ("Cosach"), which was then in the process of organisation. We take a confident view of the future of this important customer, and we have no reason to doubt its ability to meet its obligations to us.

PERU AND MEXICO.

Peru has suffered exceptionally depressed conditions by reason of continued heavy falls in prices of the two primary products of cotton and sugar, and there have been persistent politico-financial difficulties, as well as a further devaluation of the monetary unit. In Mexico, also, we have, in common with others working there, experienced exceptional difficulties by reason of the demonetisation of gold and adoption of a silver currency system, which has altered the whole basis of monetary contracts, all creditors in gold having automatically suffered considerably by the reduction in the value of their collectable debts. Generally depressed commercial conditions have ruled in Colombia, although the position of the coffee market has been maintained on a fairly firm basis. The recent marked decline in the ratio of gold held by the Central Bank may be ascribed to the internal effect of the recent abnormal developments in the international money markets, and, while remaining on a gold standard of exchange, the Government has decided as a precautionary step, in view of existing world conditions, to introduce a measure of control. The political situation is very satisfactory, the present Government consistently pursuing a statesmanlike policy. (Hear, hear.) The other countries where we work, which are also largely dependent on coffee, and situated in Central America, have naturally experienced adverse conditions, but, generally speaking, the depression is not so marked as in South America. As you are doubtless aware, the City of Managua, the capital of Nicaragua, was completely destroyed by an earthquake and fire which occurred in March last, and I am sure you will join in an expression of sympathy to the Government and people of that Republic in the suffering caused by this catastrophe of the first magnitude. With the practically instantaneous demolition of the capital city, there naturally ensued a period of complete disorganisation and restriction of business throughout the Republic, which, in turn, as will be appreciated, had a very serious adverse effect upon banking business, including that of our institution.

Our net profits for the year are some £30,000 lower, at £461,383. I must, however, point out that since the date of our accounts the difficulties of trading which we have experienced have become even more accentuated. As I have already emphasised, in all the countries where we operate there is, with minor exceptions, official control of exchange, and the restrictions in regard to remittances, etc., add, as will be appreciated, very considerable obstacles to the facile and profitable conduct of business. In addition, there exist official policies of credit restriction, the limitation of imports, as well as generally adverse commercial and political conditions throughout some parts of our territory. These call for the greatest care and prudence and a continuance of a consistently conservative policy, which will, I am certain, have in these times your whole-hearted support.

The resolution was seconded by Mr J. A. Goudge, C.B.E., and carried unanimously.

es a protection at par of exchange of £15 18s. 3d. a ton; France 3 18s. 9d.; the United States £12 5s.; and we get £3 15s. It is marvel that we have been able to carry on even in the way we have been doing. We ought to be given some further help until the y comes when all protection is swept away and we are all on an al footing. The resolution was carried unanimously, and votes of thanks to a chairman, directors and staff terminated the proceedings.

RAPHAEL TUCK AND SONS, LIMITED.

CONTINUED SUCCESS OF VARIOUS DEPARTMENTS.

The thirtieth annual general meeting of Raphael Tuck and Sons, imited, was held, on the 20th instant, at Raphael House, Moor- olds, London.

Mr Gustave Tuck (chairman and managing director) said that i this storm-tossed world it was a good thing to have a safe anchorage. A firm like Raphael Tuck and Sons gave the definite surance that we did not regard ourselves as a nation of aterialists, but as a people imbued with the love of the beautiful nd the artistic. Human life, however prosaic it might seem, had s poetic side; it could and must be illuminated. The company maintained that their productions had tended for a period of any years to introduce this illumination into millions of homes, hether it was the Christmas card, with its greeting of good will, he calendar with its daily reminder, the picture which brightened he wall, or the postcard with its pictorial message, they all tended n one way or another to provide an antidote to the sterner side f human life. The success of their endeavours in this direction ad spread all over the world, for whenever people thought of a hristmas card, or a calender, or children's books, or a postcard, he name of Tuck instinctively arose before them. It was something o have gained this world-wide reputation, and it was so priceless n asset to the company that they were continually evolving new deas and publications to maintain that high repute with which he world acclaimed them.

Reviewing the various departments, the Chairman said that the time-honoured custom of sending good wishes to one's friends all over the world was still growing, and the Christmas and New Year card department had again shown remarkable progress.

The book department, with which he had been personally associated for so many years, showed renewed vigour. The company catered for all tastes, from the child in the nursery to the boy and girl at school. The new generation were now looking for something more than the old style of child story. Children nowadays thought a great deal more for themselves than they used to, consequently the reading matter had to be more engrossing and interesting. Thrilling adventures found ready readers and listeners. The book department gave strong evidence of a fresh and alert vitality in its new publications. With this aim before them they had changed the name of "Father Tuck's Annual" to "Tuck's Annual," and were here ministering to the taste of children of a more advanced age. The number of "annuals" published was legion, but this year "Tuck's Annual," with its remarkable addition of realistic surprise panoramas and "Come to Life" pictures, which charmed the minds of boys and girls, was taking the foremost place which it deserved.

The company's range of calendars continued to grow apace. It embraced over 600 different varieties. The collection itself was practically a Royal Academy. The outstanding calendar of the year was a splendid reproduction of a painting of His Majesty the King by J. A. A. Berrie, which was exhibited in the Royal Academy in 1931. It was finely reproduced in its original colours, and was a veritable little oil painting.

The postcard department still maintained its high reputation for variety and originality. The world-wide reputation of Tuck's picture postcards had never stood higher than it did to-day.

The pictorial advertising department continued in a sound, healthy, and progressive condition. National and other advertisers in increasing numbers throughout the country were proving eager to avail themselves of the striking and original showcards, posters, calendars, catalogues, and other forms of pictorial advertising produced by this enterprising department. He had, while on this subject, an important announcement to make—namely, the inauguration some three weeks ago of a complete advertising agency under the name of The Raphael Tuck Advertising Agency.

Dealing with the accounts, the Chairman said that the profit for the year was £27,766, and after paying a dividend of 5 per cent. for the year on the ordinary shares they were carrying forward £13,521. The reserves, as set out in the balance sheet, totalled £138,484.

The report and accounts were unanimously adopted.

ASSAM RAILWAYS AND TRADING COMPANY, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

The fifty-first ordinary general meeting of the Assam Railways and Trading Company, Limited, was held, on the 21st instant, at Winchester House, London.

Mr James Mackenzie (the chairman) said that they were holding their meeting in times of very great difficulty, and it gave them all the greater satisfaction, therefore, to be able to present accounts which made such a favourable showing. They had been extremely fortunate in that the prevailing depression had not reflected itself in the results of their operations to any marked extent during the year under review. Since the year closed they had felt the effects of the slowing up of trade in a much more marked degree.

The railway showed the best results which they had ever achieved, both the gross earnings and the percentage of profits being a record. Their trading ventures had, on the whole, done quite well, but their dividends on their investments in the tea companies showed a very marked falling off. The balance of the general revenue account was, he hoped it would be agreed, satisfactory.

The board could not hold out any great hope that the next accounts would be as good as the present ones. The depression had now reached their particular activities, and they were so intimately connected with the tea industry that anything that affected that must affect them. Tea had had an extraordinarily bad year in 1930, and consequently tea companies were economising in every possible way, which affected both the sale of coal and the traffic on the railway.

After stating that they considered themselves justified in making a final distribution of 5 per cent. on the "B" stock, he went on to say that it was difficult to speak definitely as to the prospects for the current year. In their trading departments the demand for their products had fallen off, and they were curtailing operations all round. In the railway, general traffics had also fallen off, while the receipts from coal, by reason of the curtailment of output, were substantially reduced. All they could say was that they hoped that the results of the current year would not be altogether unsatisfactory.

The report and accounts were unanimously adopted.

CAM AND MOTOR GOLD MINING COMPANY (1919), LIMITED.

REDUCED COSTS—ENCOURAGING DEVELOPMENTS.

The ordinary general meeting of the Cam and Motor Gold Mining Company (1919), Limited, was held, on the 20th instant, in London.

Mr L. E. B. Homan (the chairman) said that it was his pleasure to comment on the improved financial position of the company at approximately £32,000 over last year, and since June 30th there had been a further improvement, so that his ambition to create a reserve account of £50,000 cash had at last been reached. Costs showed a decrease, due principally to the elimination of the blast furnace and oil flotation plant, which had become possible principally owing to the decrease of antimony in the lever levels of the mine. The costs were 22s. 0.33d., as against 23s. 1.27d., for the period under review, and since June 30th they had been further reduced to 18s. 9.16d. (in spite of 3s. 6d. per ton charged to development redemption), and further reductions were anticipated.

While developments at depth were very encouraging as regards values, they now had between the 19th and 23rd levels three split reefs which entailed extra work, driving on them, as against driving on concentrated large bodies of ore in the upper levels. The value of these split reefs was very high. He would draw attention to the developments on the 21st Level Petrol, which at the time of the report showed 210 ft. of strike of 15 in., valued at 42s., as against 110 ft. over 41 in., valued at 41s., on the 19th level. This reef had now lengthened to 380 ft., the last 65 ft. of which averaged 59s. over 60 in., so that there was not only widening of the reef but a considerable increase in its value. Very good values were also being met with on No. 23 Level Cam Lode. For instance in August 26 ft. driven averaged 112s. 6d. over 27 in., and September 58 ft. were driven, averaging 82s. 6d. over 36 in. Equal important was the development in the 528 ft. winze, which was going down from the 24th to the 25th Level Motor Lode, and now showed 31 ft. sunk, assaying 146s. 3d. over 44 in.

It would please shareholders to know that beyond shaft-sinking there was little capital expenditure in prospect at present. It was under £10,000 for the period under review, and of that £2,641 was for the Madoda Bridge, which was non-recurring. With regard shaft-sinking, it was intended to take the circular shaft to the 24 level, and when it was connected by a drive to the 528 ft. win

on the same level, they would have a greatly improved air position at their lowest level, and work would be carried on under much more pleasant conditions.

Improvements had been made during the year under the heading of "Reclamation"; 9,860 tons of ore had been recovered from pillars in the upper levels, which had been previously written off, and 9.33 per cent. of June's tonnage came from this source. This good work had continued, and they were now extracting an average of 140 tons a day.

The ore reserves of 678,000 tons were given as having a value of 48.1s., as against 875,400 tons, value 50.8s. last year. This difference in value was being counter-balanced by the reduction in working costs. Last year he stated that the ore reserves were three years ahead of the mill, and he hoped he was not overstepping the mark when he said that, after crushing 292,000 tons of ore during the period under review, they were to-day three and a half to four years ahead of the mill, and good developments were continuing all over the mine. This was surely a very sound position for a mining proposition.

Referring to the effect upon the company of this country and Southern Rhodesia going off the gold standard, the chairman said that they would benefit by the gold premium, which at present was at least £1 per ounce, because they were shipping all their gold to the best market, and, as they produced 10,000 oz. of gold a month, the calculation of extra profit was a simple one, governed only by the duration of existing conditions. In addition to this, they had already benefited by the remittance of surplus funds to this country under very favourable exchange conditions. Furthermore, they did not anticipate any material rise in costs.

The report and accounts were unanimously adopted.

CENTRAL ARGENTINE RAILWAY, LIMITED.

AN UNUSUALLY DIFFICULT YEAR.

The ordinary general meeting of the Central Argentine Railway, Limited, was held, on the 22nd instant, at River Plate House, London.

Mr H. A. Vernet, who presided in the absence through illness of the chairman, Lord Forbes, said that he had to place before the shareholders the results of an extremely and unusually difficult year. For 60 long, dreary weeks the receipts had shown regular decreases of varying—sometimes of alarming—intensity. Between the first week of the financial year under review and the week ending December 6, 1930, the aggregate decrease had run up to £1,052,000. Then the tide had turned and increases in traffic had commenced as the new wheat and linseed began to move.

While the increase in the cereal tonnage carried, especially in maize, was satisfactory, the aggregate still fell short of the amounts carried in 1929 and 1928. The combination of poor crops followed by a severe fall in prices had led to the impoverishment of their customers up and down the country, and that was reflected in the reduction in other traffics, particularly general merchandise and passenger traffic.

An interesting and important matter was that during the past year a movement had developed for the construction, on co-operative principles, of a number of grain elevators.

As to the year's working results, gross receipts had decreased by £371,058 and working expenses by £457,951, while net receipts had increased by £86,893. The reduction in gross earnings was largely accounted for by the decrease in passenger earnings. It was hoped that the completion of electrification of the suburban lines would initiate a new period of development and of traffic expansion.

The provision for exchange differences, amounting to the enormous sum of £789,915, was due to the fall in the Argentine exchange. Of that sum, £734,196, equal to more than 2½ per cent. of the company's ordinary stock, arose directly from loss on remittances. The exchange losses also accounted in part for the magnitudes of the bank overdraft, the size of which had been a potent factor in their omission to recommend a final dividend on the ordinary stock. Such a dividend would have been justified by the earnings, and under normal circumstances it would have been paid. As to the action taken by the Executive power in assuming control of the exchange, doubtless that action was dictated by what was deemed to be the pressure of necessity. It was to be hoped that such pressure would shortly be relieved and thus permit the removal of control at an early date.

The report was adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8, Bouverie Street, Fleet Street, London, E.C.4.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended October 17 1931, amounted to £10,897,700 against ordinary expenditure of £13,115,100. After allocating £190,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £414,996, the operations for the week, as shown below, increased the National Debt by £2,822,000 to £7,717,550,000:—

(a) Also distribution of 5 per cent. realised proceeds of capital accretions.

ASSOCIATED DYERS AND CLEANERS LIMITED.—With a view to conserving the resources of the company, and owing to the difficult industrial conditions of the present time, the directors of Associated Dyers and Cleaners Limited have decided to pay no interim dividend on the ordinary share capital of the company. Dividend warrants for the payment of the half yearly dividend on the 6½ per cent. cumulative preference shares, due on October 31, 1931, will be posted on the 30th instant.

CARLTON HOTEL, LTD.—The results of the year ending August 31st last do not, in their opinion, justify the payment of the balance of the preference dividend for the year.

EDGAR ALLEN AND COMPANY, LTD.—Five per Cent. Cumulative Preference Shares.—In the opinion of the directors, the results of the current year's working and the present and prospective trade and financial outlook render it advisable that the company's financial resources shall be conserved so far as possible. In their judgment, it is undesirable that dividends should be distributed at present; payment of the dividend on the cumulative preference shares for the half-year ending September 30, 1931, will be deferred.

P. AND W. MACLELLAN, LTD.—The directors have resolved to defer the consideration of a dividend on the 6 per cent. cumulative preference shares of the company until after the completion of the company's financial year.

TAYLORS (CASH CHEMISTS) LONDON, LTD.—The directors have decided to postpone consideration of the payment of the final dividend on the preference shares due on the 30th instant until they have had an opportunity of considering the accounts for the current year ending on October 3, 1931.

Africa, and steady buying has taken place for the countries of Northern Europe, but trade for South America has not been prominent. Useful orders have been booked in home trade fabrics. A pleasing feature of the week has been the tendency for demand to spread over a wider range of cloths and more outlets abroad have shown increased interest in Lancashire's products. Production in most Lancashire weaving towns is increasing. Rates in American and Egyptian yarns have stiffened and spinners have held firmly to full quotations. A very fair business has been done in home counts. Further buying has taken place in two-folds for China and rather more has been done for India.

THE WOOL TRADE.—Bradford.—A satisfactory demand for wool continues, writes our correspondent. This week several sales have been held in Australia, and in every centre prices have remained firm, there being a good demand from the home trade. The most disappointing section of the market is South Africa, because of the maintenance of the gold standard. All the buying that is now being done seems to be against actual needs or in anticipation of a return of the National Government. It is also recognised that the price of wool at present is at a reasonable level, provided only that the expansion in requirements at home is continued, and is accompanied by similar developments on the Continent. Though the news received from abroad is none too good, this is not exerting any really depressing influence here. Merino and fine crossbred wool is certainly the most popular, and in these the upward tendency in values is most marked at the present time. Nevertheless there is a prospect of medium and low qualities beginning to move better when international trading conditions become more settled. During the week a considerable amount of business has been done in tops by all the leading makers, and these are looking to the future with no small measure of confidence. Prices for merino and fine crossbred qualities are against the buyer, 25d. now being realisable for warp 64's. Medium and low crossbreds are firm without any big turnover. It looks as if these will have to wait some little time longer before beginning to move freely, but on the whole the outlook from the spinning and manufacturing point of view is much better.

THE GRAIN MARKETS.

WHEAT.—The upward movement of wheat prices in terms of gold which began a fortnight ago has continued throughout the past week. It is significant, however, that this advance in prices has not been confined to wheat alone, but has extended to all cereals. It is evident that this upward movement has been brought about by a general improvement in confidence rather than to the factors which usually determine the course of wheat prices. It therefore follows that this improvement cannot be regarded as definite. Nevertheless, the international situation of wheat itself is slightly better and it is almost certain that the production of the past season will not entirely suffice to meet requirements. From the

short-period point of view, the fact that there are scarcely any Russian offers for shipment at the present moment has relieved markets of considerable pressure. Stocks in that country are, however, by no means negligible, and it is expected that Russia will resume the offering of shipments at no distant date. Meanwhile, buying has been active at advancing prices. The principal sellers at this moment are Canada and the United States. Quotations in London, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 31s. per 496 lbs., as compared with 30s. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 28s. 3d., against 27s. 9d.; No. 3 Northern Manitoba, Atlantic, ex ship, 27s., against 26s.; Russian, on sample, 23s. to 27s., against 23s. to 27s.; Australian, ex ship, 27s. to 28s., against 27s. to 28s. a week ago.

WHEAT FLOUR.—The demand for flour, particularly in this country, has been steady during the past week and foreign flour has been dearer. Home-milled qualities remained unchanged. North American shipments, at 194,000 sacks, show a decrease of 89,000 sacks as compared with the previous week. Of this total, 128,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 21s. per sack of 280 lbs., as compared with 21s. last week; delivered London, 20s., against 20s. Manitoba patents, ex store, 24s. 6d. to 28s., against 24s. to 27s.; and Australian, ex store, 19s., against 18s. 6d. to 19s. a week ago.

BARLEY.—The upward movement in barley prices continued this week. On Wednesday "December" futures were quoted at 34½ cents per bushel, against 31 cents per bushel a week ago. Despite this rise, there is still a strong demand, and available supplies appear to be not too heavy. Quotations in London, Wednesday: "English feeding," f.o.r., per 448 lbs., 24s., as compared with 24s.; Russian, landed, 19s. 9d. per 400 lbs., against 18s. 9d. a week ago.

OATS.—The buying movement which set in last week has caught markets short of supplies and higher prices were generally demanded "December" futures, which on Wednesday last week stood at 2½ cents per bushel in Chicago, sold at 23½ cents per bushel on the corresponding day this week. Quotations in London, Wednesday: "Kiver Plate," landed, 18s. 6d. per 320 lbs., as compared with 18s. 6d. last week; "River Plate," ex ship, 17s. 3d. to 17s. 6d., against 17s. 3d. to 17s. 9d.; "Chilean White," landed, 26s. 6d., against 25s. 6d. a week ago.

MAIZE.—Maize on passage from Argentina has again been bought in large quantities, but the recent improvement in prices has been maintained. Quotations in London, Wednesday: "Plate," landed, 18s. per 480 lbs., as compared with 18s. last week; "Plate," ex ship, 16s. 9d., as against 16s. 6d.; "Plate," November-December, 17s., as against 17s. Yellow maize meal, ex wharf, was quoted at £5 10s. per ton, against £5 5s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.

Oct. 18, 1930.....	128,777	411,536	56,509	6 11	9 8	6 2

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Oct. 22, 1930.	Jan. 2, 1931.	Oct. 7, 1931.	Oct. 14, 1931.	Oct. 2, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	74½	56½	52½	55½	59½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	80½	79½	46½	50	53

The visible supply of wheat in Canada, at 45,717,000 bushels, shows a decrease on the week of 1,850,000 bushels. Supplies a year ago stood at 70,067,000 bushels.

OTHER FOODS.

SUGAR.—The buying movement which had kept up raw sugar values recently has suddenly come to an end, giving way to selling pressure, particularly by Cuban interests. Stocks in refiners' hands appear to be ample. It is therefore not surprising to find a considerable decline in raw sugar prices. "December" futures in New York were quoted at 1.27 cents per lb. on Wednesday, against 1.38 cents per lb. a week ago. Sterling prices of raw "futures" declined sharply, but quotations for "British refined"

remained unchanged. Wednesday's sales of "raws" include "December delivery" at 6s. 5d. per cwt., against 6s. 9½d. to 6s. 10½d., and "March," 1932, at 6s. 7d. to 6s. 7½d., against 6s. 11½d. to 7s. 0½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
London	53	414	3,083	1,247	9,657	26,561
Liverpool.....	6,050	18,306	12,745	16,146	32,739	83,525
Total tons	6,103	18,720	15,828	17,393	42,396	110,086

Last week 13,416 18,909 17,122 16,311 52,121 108,759

COFFEE.—Not much interest was taken in coffee at this week's auctions, but prices nevertheless remained steady, particularly for outstanding qualities. Last week's movements of coffee in London were as follows: Brazilian, landed, 272; delivered for home consumption, 239 bags; exported, 98; stocks, 2,039 bags, against 1,328 bags last year. Central American, landed, 4,478 packages; delivered for home consumption, 2,344; exported, 3,118; stocks, 76,734 packages, against 50,614 a year ago. Other kinds, landed, 528 packages; delivered for home consumption, 2,587; exported, 2,526; stocks, 59,960 packages, against 65,307 a year ago.

COCOA.—The recent improvement in the international situation of cocoa has not been maintained and prices declined sharply in New York and London. "December" futures were quoted at 4.44 cents per lb. in New York on Wednesday, against 4.59 cents per lb. on the corresponding day last week. As compared with the corresponding day last week, Wednesday's quotation for Acera, fair fermented, new crop, November-January, at 22s. per cwt. f.o.b. London contract, shows a fall of 3s. Last week's movements of cocoa in London were as follows: Landed, 469 bags; delivered for home consumption, 6,620 bags; exported, 95 bags; stocks, 169,818 bags, as against 179,853 last year.

TEA.—The quantities catalogued for this week's auction comprised 64,793 packages of Indian, 19,394 packages of Ceylon, and 9,232 packages of Java and Sumatra tea. A better tendency characterised this week's auctions, particularly those held at the beginning of the week. Common and medium teas realised slightly higher rates and there was keen competition for good qualities, particularly on Monday. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyassa-land.		Total.
	a. d.	s. d.	a. d.	s. d.	a. d.	s. d.	a. d.	s. d.	a. d.	s. d.	a. d.	s. d.

Oct. 8, "	1 2 43	0 10 43	1 5 65	0 8 39	0 7 44	0 6 67	1 1 96						
Oct. 15, "	1 1 73	0 11 28	1 6 57	0 8 73									

RICE.—The market in rice has again been dull and prices were barely maintained. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 10s. per cwt., shows a fall of 3d. as compared with last week. Movements in London during the past week were as follows: Landed, 122 tons; delivered, 71 tons; stocks, 2,220 tons, as against 2,917 tons last year.

POTATOES.—Despite abundant supplies of potatoes at the principal markets, prices have been slightly higher this week. At the Borough Market, "Best King Edward" sold at from 8s. to 8s. 6d. per cwt., as compared with 7s. to 8s. per cwt. a week ago.

SPICES.—The market in spices has been quiet in the absence of any sustained demand and prices were generally easier. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a fall of ½d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 66 tons; delivered 33 tons; stocks, 599 tons, against 644 tons last year. White, landed, 40 tons; delivered, 54 tons; stocks, 485 tons, against 253 tons a year ago.

MEAT.—Despite heavy supplies of beef at the Smithfield market the recent advance in prices has been maintained. Pork was slightly dearer while lower rates were quoted for mutton. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 4s. 10d. to 5s. 2d. per 8 lbs., against 4s. 6d. to 5s. 2d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 4d. to 3s. 10d., as against 3s. 6d. to 4s. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,486 tons, as compared with 8,994 tons in the corresponding week last year. Imported beef, principally Argentine, formed 85.5 per cent. of the supplies, against 82.5 per cent. a year ago; and imported mutton, mainly New Zealand, formed 67.0 per cent. of the total supply, as against 76.4 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Generally quiet but on the whole fairly steady conditions rule in the markets for oilseeds and their products. Plate linseed is steady and dearer on reports of short supplies from now to the end of the season and an improved exchange, but demand is very poor, current value being around £8 15s. for seed afloat and for shipment. More interest is being taken in the new crop and business to Hull is reported at £8 10s., January-February shipment. Calcutta linseed is quoted £11 for October-November. The quantity of linseed on passage to Europe

is again larger at 147,200 tons, or 6,000 tons more than last week. The estimated balance for shipment to the end of the year is 279,000 tons (South America 96,000 tons, India 183,000 tons), against 243,000 tons actually shipped in the remainder of 1930. The new crop in Argentina is doing well and a record yield is anticipated. Cottonseed has been in more active demand, and for Egyptian on passage to Hull £6 10s. has been paid and rather less for shipment. Vegetable oils are in only slow demand. Linseed oil is erratic and consumers are not interested to any substantial extent. Current value of raw oil, ex Hull mill, is £16, and for delivery to the end of December £16 10s. Cotton oil is quiet and lower, crude Egyptian, ex Hull, offering at £22 5s. and common edible at £25.

HIDE, LEATHER AND ALLIED TRADES.—After several weeks of advancing prices the market for hides and skins from home-slaughtered cattle is now more settled, and at the auctions held in Manchester this week all ox and heifers, together with cows and bulls, were unchanged in value. Calfskins also showed no variation excepting for a slight advance on second lights. Business in regard to imported hides continues to be maintained at a fair level, but here, also, there is nothing to indicate higher prices in the near future. As a matter of fact, for certain descriptions already the tendency is slightly in favour of buyers, but as the advantage is so very small, it cannot be taken as indicating a weaker position. In the South American market business has been done in Argentine ox at the equivalent of 5½d., while second ox have realised 4½d., and bulls 3d. Dry hides have experienced a good sale, with 5½d. paid for B.A. Americanos, 6d. for Montevideo Americanos, and for B.A. Inservibles 3½d. Cape hides are nominal at 7d. and 6d. for first and second dries, and 1d. less for dry-salted, but these prices are considered too dear for the trade of this country, with the result that very little is being done. Rather better business has transpired in regard to Australians, and for some lines slightly lower prices are being mentioned. Quite an appreciable amount of trade is being done in most descriptions of sole leather, but the quantity going into consumption is not so large as has been the case during the last few weeks. In certain weights of English and wet-salted bends the call has fallen away slightly, but the lighter averages continue to meet with a very ready sale. Inquiry for dry hide bends has been rather less active, but at the same time a fair day-to-day trade continues to be done, particularly on lines which consumers are in need of for immediate requirements. Good business has again transpired in pinned bellies and shoulders, but the market for rough offal remains quiet. Shoe manufacturers have not been quite so active in the upper leather market, but steady trade continues to be done all the time at prices which show firmness all round. Regular lines, such as glacé kid and box and willow calf, are moved off in fair-sized parcels, in addition to which frequent calls are made for supplies of patent. Reptile leathers have shown an improving tendency, while sheep leather for lining purposes continues to be asked for. In nearly every direction the outlook for the future remains good, and although slight setbacks are likely to be encountered, the feeling is general that the industry has taken a definite turn for the better.

THE TIMBER TRADE.—The comparatively moderate September receipts of European sawn building and joinery woods, writes our correspondent, assisted in bringing the decline in quantity of these descriptions this year to 153,382 Petrograd standards (of 50 cubic feet) on a total import of 895,220 standards, which shows the care in purchasing by British importers, merchants and consumers. In view of the large supplies still unsold in producing countries, imports last month could have been much heavier, but no doubt fair quantities were not consigned owing to exchange difficulties ruling towards the end of last month. The departure of Finland from the gold standard was inevitable from the timber standpoint, for under that system it was impossible to compete with the Swedish and Russian shipments. Britain is the only large timber-importing country in the world that shows any activity in the wood-buying market this year, so that with still very large supplies available she can choose to her own satisfaction. Stocks of these sawn building and joinery woods, although ample, are not so heavy as a year ago. The trade is more stable, although on a lower level of prices, for last year the Russian wood was coming over to the order of the Soviet, on consignment, whereas this year it is being conducted on more normal, and cheaper, lines. There seems to be little doubt that the country will be well supplied with building and joinery woods before the year is out, by which time trade should be well on the turn, for already, although the building trade is bad, there are signs of improvement in the shipbuilding, colliery, cotton and motor-vehicle industries. The furniture trade usually brightens up about this time, and with the London operatives' strike ended in employers' favour the hardwood trade shows good signs of improving. Although some forward business continues to be done in American lumber, it is obvious that until general supplies of that material are well down, consumers will look around for native and other woods before ordering from the States

on gold standard terms. Incidentally, the United States supplies over 50 per cent. of the United Kingdom's annual requirements of sawn hardwoods. Lumber hardwoods are not in heavy stock, and a better consumption would stiffen spot values still further. Plywood declined in import last month by ten million sq. ft., and the deficit this year is one of over 64 million sq. ft. on an import of 231,596,000 sq. ft. Stocks in the P.L.A. warehouses are very much smaller compared with a year ago. The forward market will improve as the exchange difficulties are surmounted.

RUBBER.—The past week has seen a little more activity in the rubber markets. The expansion in demand which led to a slight hardening of prices, both in terms of gold and in terms of sterling, came mainly from the United States, but there has also been an

increase in buying by the Continent and this country. The statistical situation of rubber is, however, scarcely changed for the better, but negotiations with a view to the restriction of output are believed to be still going on. Wednesday's official closing price for standard ribbed smoked sheet in London, at 3d. per lb., shows a rise of 1/4d. as compared with the corresponding day last week. In forward positions, business has been done at 3 1/4d. to 3 1/2d. for December, against 3 1/4d.; and at 3 1/4d. to 3 1/2d. for January-March, 1932, as against 3 1/4d. to 3 1/2d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,022 tons; delivered, 1,295 tons; stocks at the end of last week, at 134,253 tons, show a decrease of 273 tons, as compared with the preceding week.

cent. and even higher for new money, with $4\frac{1}{2}$ per cent. for renewals. On Tuesday money was again usable, but the following day fresh supplies emerged and the rate for new money eased off finally to 4 per cent. On Thursday money was again easy at $4\frac{1}{2}$ per cent.

Friday of last week witnessed further heavy applications for Treasury bills, their total reaching £64,010,000 for offerings of £40,000,000. Consequently there was an appreciable fall in the average tender rate from £5 10s. 5.56d. to £5 7s. 8.07d. per cent., or to practically $5\frac{3}{4}$ per cent. In addition to the British funds now being attracted into Treasury bills it is believed that there were some foreign applications. The discount market was very quiet over the week-end, with hot Treasury bills quoted at $5\frac{1}{2}$ to $5\frac{3}{4}$ per cent., but by Tuesday a demand for hot Treasuries had sprung up which ultimately forced their rate down to $5\frac{1}{8}$ per cent. The market rate on three months' bank bills was also lower, at $5\frac{3}{4}$ per cent. against $5\frac{1}{2}$ per cent. last week. It is noticeable that this rate is still quoted with a wide margin. December bills were bought by the banks at $4\frac{1}{4}$ and $4\frac{1}{2}$ per cent., but it is believed that this year's maturities have now passed almost entirely into the hands of the banks, so that very few are available in the market.

The Bank return has this week recorded few significant changes. The note circulation has increased by £800,000, and this mainly explains the contraction of £898,142 in the Reserve. The Proportion has fallen by 1 per cent. to 41.9 per cent. There is an increase of £2,075,809 in Other Securities, but the remaining earning assets of the Bank are practically unchanged. Public Deposits are £1,840,195 lower, while Bankers' Deposits have risen by £2,962,246 to the comfortable figure of £63,477,531. The Reserve Ratio of gold to outside liabilities stands at 28 per cent., or practically the same as last week. Next week, Funding Loan and other dividends are payable, so that money is likely to be even easier, once the end-of-the-month turnover of funds is passed.

The announcement of the result of the General Election had very little effect upon sterling, and, after a momentary improvement to \$3.97, the New York rate fell back again. This absence of movement was a little surprising, as a marked recovery had been anticipated. Apparently foreign speculation in sterling had fully discounted in advance the victory of the National Government. Moreover, certain sales of sterling to meet commercial engagements were in evidence, and it is also suggested that further sales may have been made to cover imports of foreign goods in anticipation of a tariff. It may be added that the City is further expressing the hope that the victory of the National Government will not be the prelude to a gradual movement of sterling in the direction of parity. Such an appreciation of the pound would raise several grave problems, and, apart from this, the maintenance of sterling at its natural level is the course of action which has most to recommend it.

Meanwhile no reduction in Bank rate has been announced this week, though now that the uncertainties of the election campaign have been brought to an end, it is possible to make out a case for relieving the country from a burden of a 6 per cent. Bank rate. The authorities, however, have had to watch the position in other centres, and with grave financial uncertainties in many foreign centres and with the possibility of a further increase in the Paris and New York rediscount rates, few can

quarrel with their decision to hold their hand. If tension at home has been relieved, tension abroad still remains, and it would be manifestly undesirable to relax London rates, if the only result were further fluctuations in sterling which might ultimately necessitate the restoration of the present Bank rate. There is no doubt that the authorities are giving full weight both to the needs of British industrial borrowers and to the present cost of Treasury bills, but they cannot be blamed for refusing to take precipitate action, or for insisting that the result of the election has made no difference to the fundamental economic situation.

Call rate in New York has remained at $2\frac{1}{2}$ per cent., but there has been a slight hardening of other rates, for prime commercial paper is quoted at $4\frac{1}{2}$ per cent. against 4 per cent. in the preceding week, and 90-day bankers' acceptances in the open market at $3\frac{1}{2}$ per cent. against $3\frac{1}{4}$ per cent. There was some disposition to look for another increase in the New York rediscount rate this week, especially as it is understood that one outcome of the French conversations is that if French balances are to remain in New York, the American authorities are to take any steps needed to maintain the stability of the dollar. Gold shipments to Europe continue, France having taken \$63,000,000 during the week ended October 28th, Holland \$5.6 millions, Belgium \$2.6 millions, and Italy \$2.1 millions. Imports include \$9.1 millions from the Argentine, \$3.0 millions from Uruguay, and \$500,000 from Canada. Following the formation of the National Credit Corporation, it is believed that currency is beginning to be paid by the public back into the banks.

The Foreign Exchange market was quieter this week, and fluctuations were less wide and not so frequent. Sterling weakened against all the principal currencies for reasons already discussed, to which may be added some French buying of dollars in fairly large amounts. New York went from 3.94 $\frac{1}{2}$ to 3.88 after being $\frac{1}{4}$ lower, and Montreal from 4.44 to 4.33. Paris improved from 100 $\frac{1}{2}$ to 98 $\frac{1}{2}$ and Brussels from 28 $\frac{1}{2}$ to 27 $\frac{1}{2}$. Milan was practically unchanged at 75 $\frac{1}{2}$. Madrid gained a point at 43 $\frac{1}{2}$. Amsterdam was fractionally better at 9.60, and Berlin gained $\frac{1}{2}$ at 16.50. Switzerland went from 20.10 to 19.90, after being lower. The Scandinavian exchanges were not very much changed, but Stockholm weakened from 16.90 to 17.50, whilst Oslo and Copenhagen were quoted at 17.90 and 17.75 respectively. The South American currency quotations remained nominal in view of the prevailing restrictions, Rio being unchanged at 3 $\frac{1}{2}$ d., whilst Buenos Aires was better by $\frac{1}{2}$ d. at 32 $\frac{1}{2}$ d., and Montevideo by 3d. at 24d. In the Far East the rupee was very firm, and at 1s. 6 $\frac{3}{4}$ d. was well above parity. The yen gained $\frac{1}{2}$ d. at 2s. 6d. Forward quotations remained in some cases rather nominal, and Milan and Berlin were practically unquotable. New York was at $\frac{1}{2}$ cent discount for one month's delivery and $1\frac{1}{2}$ cents discount for three. Paris one month was unchanged at $\frac{1}{2}$ franc premium, but three months' delivery narrowed from $\frac{1}{2}$ franc to $\frac{1}{4}$ franc premium. Brussels was round about par for one month, and at $\frac{1}{2}$ franc premium for three. A nominal rate for Milan was given at $\frac{3}{4}$ centesimi and $1\frac{1}{2}$ centesimi discount for the two periods. Three months' Madrid remained at $1\frac{1}{2}$ pesetas discount, but one month's was weaker by $\frac{1}{2}$ at $\frac{3}{4}$ peseta discount. Amsterdam was firmer at par for one month and 3 cents premium for three. Switzerland was unchanged at $\frac{1}{2}$ franc and $\frac{1}{4}$ franc premium. Silver prices rose on India and China buying, cash by $\frac{3}{4}$ d. to 17 $\frac{1}{2}$ d. and forward by $\frac{1}{2}$ d. to 17 $\frac{1}{2}$ d. The China exchanges improved in sympathy, Hong Kong by $\frac{1}{2}$ d. to 1s. 3d. and Shanghai by $\frac{3}{4}$ d. to 1s. 7 $\frac{1}{2}$ d.

THE VOTERS' VERDICT.

TUESDAY, October 27, 1931, will go down to history as the date of the greatest electoral tide in the whole story of British democratic politics. Soon after the election campaign began, it became clear that a substantial majority for the National Government was a big probability, but the actual polling result, which gives the Government over 550 seats, and the Opposition a mere handful of 50 odd, astounded the most optimistic of the Government's supporters. In 1906, after six years of unpopular Conservative rule, the Liberal Party, led by Sir Henry Campbell-Bannerman, won 512 seats out of a total of 670. In the "khaki" election of 1918 the Coalition, led by Mr Lloyd George, with his irresistible prestige as "the man who won the war," obtained 461 seats out of a total of 707. But even these two remarkable spring tides of electoral change failed to touch the high-water mark of the 1931 election. The figures of polling results, which are analysed in a later column, do not tell the whole story. In the average size of the Government candidates' majorities and in the almost complete submergence of all the leading spokesmen of one of the great parties of the State, last Tuesday's election creates a record which has never been approached, and in all human probability will never be equalled again.

What was the primary cause which set this irresistible avalanche in motion? The only intelligible answer is that the public at large were genuinely convinced that they were faced with a crisis comparable with that of the war period. Such cries as "The nation first," "Solveny or bankruptcy," really went home, and a huge majority, genuinely persuaded that wages, savings and, indeed, livelihood, depended upon the establishment of a strong Government, responded to a call, reinforced by every form of patriotic appeal, to vote National and to put country before party. The result is due to the simultaneous operation of fear and patriotism, and if one could coin any one phrase as expressing the objective of the masses who voted for Mr MacDonald and his Government it would be "Safety and the Union Jack." Indeed, there is some parallel between the atmosphere of 1931 and 1914, when the people instinctively called for Kitchener. It is a strange turn of fortune's wheel which has brought the pacifist of 1914 to play the rôle of national hero.

It was inevitable that genuine apprehension should here and there give rise in the heat and emotion of the contest to absurd exaggeration, and things have been said which it will be kinder hereafter to allow to sink into oblivion. The Prime Minister himself, whose personality and prestige have clearly weighed very heavily with the electors, allowed himself to make the people's flesh creep by suggesting that, unless the National Government won a great victory, the pound would become practically worthless. Mr Snowden described the Labour programme, for which until a few months ago he stood himself, as "Bolshevism run mad." Small savers were frightened on the very eve of the poll by a distortion of the facts regarding Post Office indebtedness to the Treasury, sanctioned by three Governments, into a threat that if Labour were returned to power the deposits in the Savings Bank would be lost in the bottomless pit of dole finance. Even bishops took a hand in construing the election as a fight between the State and its enemies, between the forces of righteousness and unrighteousness, and the note of alarm rose day by day in a crescendo until on the eve of the poll a Conservative Minister said to the country, "Tomorrow there will be a new England or no England." But whatever the influences at work to produce that result, the fact stands out clearly that the nation has demanded in the loudest possible tones a strong "safety-first Government." It has condemned the late Labour Government for its dalliance with an approaching financial crisis, and has visited upon the Ministers who refused to stand with Mr MacDonald the dire penalty of wholesale rejection.

The Government of national safety that the country wanted has been installed; will it fulfil the hopes of the electorate? It is difficult to believe that the country

voted consciously for a policy of Protection, yet it finds itself possessed of a House of Commons in which advocates of tariffs and of economic nationalism are in great preponderance. The country has voted for careful husbandry of the national resources and has declared unequivocally against risky or costly experiments. But there is no reason whatever for thinking that it wants or has asked for reactionary policy at home or abroad. Will it get it?

So important is this question and so big the responsibility of the Conservative leaders, that every sign from Mr Baldwin will be eagerly watched, and there is reason for initial satisfaction with his post-election message to the country. "This is no party victory," says Mr Baldwin. "It is an emphatic declaration by the people as a whole in favour of national co-operation." The same note is struck by Mr MacDonald, but in his message is expressed the anxiety which must be exercising many minds. "The very emphasis of the response," says the Prime Minister, "is embarrassing." It is truer perhaps of political majorities than of anything else in life that it is possible to have too much of a good thing. We are reminded, indeed, of the Scottish Minister who, having implored the Almighty to send rain upon the sun-scorched fields, heard a sudden overwhelming deluge descending upon the roof of his Church. "Oh Lord," cried the Minister, "we have prayed for rain, but Thou must know Thyself that this is maest ridiculous." Similarly Britain, having prayed for refreshing rain, has received the deluge, and the deluge has swept away much that might usefully have remained.

The truth is that a Parliament in which there is no effective Opposition can hardly function as a national council chamber in which great problems should be thrashed out from every angle and every viewpoint. A Cabinet does not function at its best when bereft of the inestimable stimulus of formidable criticism. Nor can it be anything less than deplorable that, while vital policies affecting prices, wages and standards of living are being framed, official Labour should be not merely without representation in the Government, but without authoritative spokesmen in the national assembly. Is there not a danger lest organised Labour, swept for the moment from the field of political action, should be inclined to reverse its recent march away from industrial action? These are some of the grave questions raised by the magnitude of the landslide, and that they are fully realised by the Prime Minister is shown by his quick assurance "that our triumph will in no way mean that either the interests or the point of view of the working classes will be overlooked in the performance of the task that is before us."

The election has once more emphasised the desirability of electoral reform. We have always held it to be a postulate of democracy that the nation's representative assembly should as nearly as possible reflect the opinion of the nation. Polling figures, not yet quite complete, suggest that about sixteen million votes have been cast for the Government, and seven millions for the Opposition. On that basis the Government should have a majority in the House of Commons of about 200 instead of 500. Had that result accrued, as it should roughly have accrued under a system of proportionate representation, both the Government and the House of Commons would have been immeasurably stronger and more efficient and the verdict of the country in no way weakened. We imagine that Labour leaders are ruefully regretting their refusal to accept P.R. Instead, we have a Party which polls seven million votes represented at Westminster by a tiny flock without a single practised shepherd.

So ends the most amazing of all elections. The world knows that the people of Britain insist upon their affairs being conducted upon safe and sound lines. It will watch eagerly to see how the country's leaders use the unexampled trust reposed in them. Will they use or abuse their "free hand"? Mr MacDonald has got his Doctor's Mandate. How will he solve the Doctor's Dilemma?

NO PROGRESS AT WASHINGTON.

WHEN it became known that M. Laval intended to make a round trip on the "Ile de France" and that his visit to Washington, after his much-heralded crossing of the Atlantic, was to be confined within the limits of a brief weekend, little hope remained that the conversations between President Hoover and the French Premier would result in any far-reaching agreement. Moreover, it is as true of international conferences as of human relationships, that those who bring nothing to them may expect to take nothing out; and it was fair to assume that M. Laval, adhering consistently to the traditional post-war attitude of France, carried with him in his portfolio of policy too many barren negations for there to be much chance of his reaching any fruitful agreement. Nevertheless, even to those who expected little, the *communiqué*, which we print in full in our "Diary of the Crisis," embodying the results of the weekend's conversations, was bound to come as a disappointment. Faced with a crisis menacing far and wide the stability of currencies, the solvency of banks, and the maintenance of trade and production—to say nothing of the grave political problems in the background—President Hoover and M. Laval have between them not only failed to give any lead in the direction of a solution of the world's problems, but have succeeded—by their assertion that neither country has shifted from its traditional attitude—producing an impression of deadlock which would render those problems more intractable than ever.

Stripped of verbiage, the *communiqué* has little positive to say. Maintenance of the gold standard in France and the United States is to serve "as a major influence" in the restoration of "the normal economic life of the world." This phrase, it may be deduced, represents the statesmen's blessing on the agreement which appears to have been concluded whereby the Bank of France will leave its existing balances in New York in return for American co-operation in a joint policy of higher money rates in New York and Paris. Whether or not this policy will succeed in checking the ominous tendency to hoarding, both in France and the United States, remains to be seen. That the withdrawal of the Bank of France's deposits would have been embarrassing, both directly to the United States and indirectly to France, is open to little doubt; and it is a matter for satisfaction that the disturbing flood of gold eastwards across the Atlantic not to be augmented so far as the Bank of France is concerned. Even so, it is questionable whether this agreement by itself will suffice to restore confidence in the dollar; indeed, the selling of dollars from the Continent which followed last weekend's announcement suggests that in some quarters the readiness of the American banking authorities to fall in with the wishes of the Bank of France may be interpreted, rightly or wrongly, as evidence of consciousness in New York of the weakness of the United States banking position. Moreover, the financial strain and the pressure on currencies which have manifested themselves in the past month are ills which cannot be remedied save in relation to the wider political and economic strain; and it is precisely here that the barrenness of the Laval-Hoover conversations is most patent.

Whether M. Laval entertained real hopes of securing from President Hoover some form of "security pact" as a condition precedent to any political understanding, we do not know; but any illusions he may have cherished on this score were shattered in advance by Senator Borah, who unburdened himself very frankly to a group of French and American journalists on the day of M. Laval's arrival at Washington. Speaking for an influential body of opinion in the United States, Mr Borah declared that while he would advocate absolute cancellation of debts and reparations, any pact of mutual assistance would simply mean nailing down more substantially and completely ties, whose revision was an essential condition of the centri tranquility of Europe and of progress towards disforeigment. In view of this uncomfortably frank in the

Mr Hoover could not succeed in achieving on the issue of security and armaments any more definite approach to common understanding than that described in the official *communiqué* as a declaration of "our joint purpose that the conference for the limitation of armaments will not fail to take advantage of the great opportunity which presents itself." This pious aspiration must serve as best it can to cloak the fact that, in the matter of France's claim not to lower the level of armaments below the point at which she can maintain—with such aid as may be forthcoming from her Central European allies—the "Versailles system" of Europe, M. Laval has given nothing away.

But if President Hoover is entitled, perhaps, to sympathy rather than blame for his inability to achieve even a tiny step forward towards the cause of disarmament, which he has so deeply at heart, the same can hardly be said of his readiness to make what is, in fact, a retreat on the equally vital, but more pressing, question of reparations and debts. In this matter Mr Hoover—for the present at all events—merely throws the ball back to Europe. "In so far as inter-governmental obligations are concerned," the *communiqué* states, "we recognise that prior to the expiration of the Hoover year of postponement some agreement regarding them may be necessary, covering the period of business depression, as to the terms of conditions of which the two Governments make all reservations. The initiative in this matter should be taken at an early date by the European Powers principally concerned within the framework of agreements existing prior to July 1, 1931." With these words, President Hoover has allowed the initiative to pass from his hands. So far as he is concerned, there will, presumably, be no proposal for any extension of the present complete moratorium on inter-governmental payments.

But action must be taken. Only a few short months remain before the "standstill" agreement, covering the greater part of Germany's short-term commercial indebtedness, comes to an end. The revised estimate which the German Government, by means of a financial census carried out under recent decrees, has been able to make of the extent of the country's short-term debts, strongly confirms the patent fact that, to meet the obligations maturing under the present arrangement, at the end of February, is a task completely beyond Germany's capacity. Since a simple declaration of default would have far-reaching untoward repercussions on the banking structure of the creditor countries, some fresh arrangement for the future must obviously be made; and the heroic efforts which Germany has made during the crisis to keep faith with her creditors is an earnest of her willingness to co-operate in any practicable and equitable arrangement that can be devised. But, obviously, no basis for an arrangement regarding this commercial indebtedness can be found except by funding part of the short-term debt, and this cannot be done on the basis of the purely temporary suspension of reparations for which the Young Plan provides.

It is true that, under the Young Plan, Germany has the right, on giving ninety days' notice, to declare a postponement of transfers of the "conditional" part of the reparation annuity, and that upon such a declaration a special advisory committee, convened by the Bank for International Settlements, shall "make a full investigation of Germany's position in regard to her obligations under this Plan" and shall report to the Governments concerned and to the Bank. But it may be doubted if this Committee is the right line of approach. In the first place, it is specifically provided that the committee "shall play no part in connection with the unconditional annuity." The function of the committee is therefore circumscribed in that it can report only on a part of the reparation payment, and would exceed its strict rights in proposing an extension of the present complete moratorium. Again, it can say nothing about other international debts; it could not—unless its formal terms of reference were deliberately extended—be charged with the duty of making proposals regarding the commercial debt position of Germany; and, as the Basle Committee pointed out, the possibility of a funding loan for Germany requires also a settlement of political problems. The whole question, therefore, is one

which calls for radical treatment, beyond the scope of advisory experts and falling definitely within the province of statesmen.

Having regard to the precarious hold which Dr. Brüning has over dangerous forces in Germany, and the deepening gravity of the world's financial paralysis, we confess that we expected a more definite lead from the representatives of the creditor Powers most directly concerned in this key problem. It has generally been assumed that the Washington *communiqué* means that the next step must come from Germany. But it is difficult to see what step Germany can be expected to take. In any approach to the problem America must eventually co-operate, for the matter cannot possibly be settled without very definite action from her side. But to-day, if it be the case that, for reasons of domestic politics, Mr Hoover has to play for time, the immediate responsibility rests upon France; and it may well be that during the conversations at Washington M. Laval assured Mr Hoover that on his return he would be willing to take the initiative either by proposing a conference or by some other action. On the face of it, the French Premier's voyage on the "Ile de France" has been sterile of results; but there are to-day evidences, both in Europe and America, of the stirring of strong elements of sanity and goodwill—illustrated, for example, by the generous words spoken at Naples last Sunday by Signor Mussolini. We look to M. Laval to give a lead to these forces when he sets foot again in Europe this week.

THE LEAGUE AND MANCHURIA.

THE special session of the League Council came to an end last Saturday, October 24th, after the draft resolution of the Council which had been put forward on the 22nd had been endorsed by the votes of all members of the Council with the sole exception of the Japanese representative. Juridically, this single dissentient vote has the effect of making the resolution inoperative, since, up to this point in the Sino-Japanese dispute, the Council has been acting under Article XI. of the Covenant, and action under this article requires a unanimous vote, including the votes of the disputants. It is, of course, open to China now to seize the Council of the question once again under Article XV., under which the votes of the disputants do not have to be counted in order to satisfy the legal requirements of unanimity. Whether this change of legal ground will prove necessary or desirable will depend on what happens between now and November 16th—the date on which the Council is to re-assemble.

As for the terms of the Council's present resolution (quoted in the *Economist* last week), the gist of them is that Japan is called upon to withdraw her troops into her railway zone—and to complete the withdrawal by a specific date, namely, November 16th, before any other action is taken by any party. If and when Japan proceeds to carry out this preliminary measure, China is called upon, in the resolution, to assume responsibility for the safety of Japanese persons and property in the evacuated areas, and is requested to associate the representatives of other Powers with the Chinese authorities for this purpose. The Chinese and Japanese Governments are requested to open direct negotiations with one another on the substantive questions in dispute as soon as the evacuation is completed.

The text of the resolution was communicated to the Chinese and Japanese representatives at Geneva, on the 22nd, and next day they both reported the instructions of their respective Governments. Dr. Sze had been instructed to accept the Council's draft resolution without reservations. Mr Yoshizawa had been instructed to propose amendments which really amounted to an alternative draft. The essence of the Japanese amendments was that on the one hand the direct Sino-Japanese negotiations should be started forthwith, while on the other hand the withdrawal of the Japanese troops should only take place "when spirits had been calmed and the situation relieved

by the realisation of an agreement between the Chinese and Japanese Governments on the fundamental principles governing normal relations." A question from Lord Cecil failed to elicit from Mr Yoshizawa what these fundamental principles were; but the subsequent official statement from Tokyo shows that the reference was to five points which the Japanese Government had communicated to Monsieur Briand on the 21st. The crucial point was that Japan and China should "make arrangements providing for co-operation in the avoidance of ruinous competition between the South Manchurian and other railways," and that China should "give effect to all existing railway treaties."

Monsieur Briand is understood to have suggested a simple formula providing for the mutual implementation of treaty obligations in general. Even this simple formula raises a thorny question, since China maintains that the Sino-Japanese treaty of 1915 regarding Manchuria—which is the treaty now in question—was extorted from China under duress and is therefore not legally binding. At the moment, however, this is not the issue. The issue on which Japan finds herself, since last Saturday, in a minority of one is the question whether—in negotiating with China for the recognition of legitimate Japanese treaty rights, whatever these may turn out to be—Japan is to have the advantage of a military occupation of Chinese territory which she has effected by acts of war in defiance of the Kellogg Pact and the League Covenant alike. If Japan is confident that her treaty rights are unimpeachable, then her proper course is to put herself in the right by completing the withdrawal of her troops before November 16. Then, and not till then, she will be in a position to put China in the wrong, supposing that when the Sino-Japanese negotiations take place under these conditions, the Chinese refuse to recognise any Japanese treaty rights which are palpably valid.

The question of the criterion by which Japanese treaty rights in Manchuria are to be tested is evidently of the highest importance; and, though this point has not yet been reached, its appearance on the horizon, as a possible stumbling-block ahead, is already proving an adverse factor in the present situation. It is highly desirable to do anything that can be done now in advance in order to assure Japan that, when the stage of negotiations on the substantive issue is reached, her treaty rights will not be cavalierly treated. Such an assurance would go far to remove her present motive for retaining her troops beyond the limits of her zone while the question of treaty rights is under discussion, and it would certainly deprive her of any vestige of moral justification which she may plead for persisting in an attitude which has evoked a virtual note of censure from all her colleagues on the Council. On this account, the latest Chinese move is very welcome. Since the Council dispersed on the 24th, Dr. Sze has conveyed in a letter to Monsieur Briand a statement on this treaty question from the Chinese Government. In general, the Chinese Government declare that they consider themselves bound by the Covenant to "scrupulous respect for all treaty obligations." In particular, they declare that China is willing to settle all disputes with Japan concerning treaty interpretation by arbitration or judicial settlement as provided for in Article 13 of the Covenant, and is further willing, for this purpose, to conclude an arbitration treaty with Japan similar to those concluded in increasing numbers by

members of the League in recent years, or that recently concluded between China and the United States.

This would surely give Japan the necessary assurance of a fair interpretation and effective enforcement of the treaty right in Manchuria, about which she is most concerned. This is the right referred to in the fifth point (quoted above) of the five points on which Japan is insisting as the basis for Sino-Japanese negotiations. The Treaty of 1915 binds China not to construct railways or ports in the Manchurian territories under Chinese administration which would wantonly compete with the Manchurian railways and ports which are Japanese property or Japanese leaseholds. During the last sixteen years, there has been a great deal of Chinese railway-building in Manchuria; and most of these new Chinese lines are unobjectionable from the Japanese standpoint. In fact, many of them are useful feeders to the Japanese South Manchuria Railway, and have actually been constructed with the S.M.R.'s financial and technical assistance. There is, however, a Chinese project for building a Chinese line in Chinese territory parallel to the S.M.R. to serve a Chinese port in competition with the Japanese port of Dairen; and this project—whether contrary to treaty or not—is certainly vexatious from the Japanese point of view and is in any case primarily political and not economic in its aim. Hitherto, the Japanese have wisely made little of this Chinese threat, on the ground that the Chinese are unlikely to be able to execute it unless and until the population and trade of Manchuria have developed to such an extent that there will be room for two trunk-railways and two first-class ports to operate profitably side by side. Now, it seems, the Japanese have made up their minds to clear this matter up. They are, of course, entitled to do so; and the Chinese Government's latest offer meets them half way.

The vindication of treaty rights, therefore, does not demand the continued maintenance of Japanese troops beyond the limits of the Japanese zone. Moreover, the Japanese Government itself, in its statement published on the 26th, declares that nothing is further from Japan's thoughts than to bring armed pressure to bear upon China in the course of the forthcoming negotiations. At the same time, this Japanese statement—the Council's resolution notwithstanding—does insist on the continued maintenance of Japanese troops outside the Japanese zone. But it now bases this insistence exclusively on the danger to which Japanese lives and property would be exposed if the troops were withdrawn. Japanese residents, it is argued, would be exposed to the gravest dangers if the troops were withdrawn completely under no better guarantee than Chinese official assurances. This question of local guarantees, then, is the crux of the situation at the moment.

The upshot seems to be this: If the Council is to secure the withdrawal of the Japanese troops by November 16th, it must take effective steps for sending neutral observers or military attachés or even gendarmerie or marines to the spot in order to provide, in co-operation with the Chinese authorities, for the protection of Japanese lives and property in areas from which the Japanese troops are to be withdrawn. This is no doubt a difficult undertaking; but the Council, in their resolution, have envisaged the possibility of it, and the difficulties are not insuperable. For one thing, the Chinese Government is evidently in a reasonable and accommodating frame of mind. For another thing, the areas in question are mostly urban areas of comparatively small extent which are readily accessible by railway. In previous crises of the present kind, Monsieur Briand—seconded by Sir Eric Drummond—has shown himself an adept at making such arrangements efficiently on short notice. We are confident that the chairman of the Council and the Secretary-General, between them, can put through in Manchuria such effective arrangements for supervision as they put through once, half-a-dozen years ago, in Macedonia.

The essential next step is to build a golden bridge for the Japanese army's retreat. If this can be done before November 16, the Council will then find itself in a strong position for completing the formidable task on which it made a creditable beginning last week.

THE DISTURBANCES IN CYPRUS.

On Wednesday, October 21st, the discontent of the Greek Cypriots with the British régime, which has been long familiar to the British Government and long ignored by it, came to a head in a sudden and unexpected outbreak of disorder. That night, a crowd—shouting for union with Greece and singing the Greek National Anthem—surrounded Government House at Nicosia and burnt it to the ground with all its contents (the Governor, Sir Ronald Storrs, and his staff happily escaped from the flames unhurt). Next day there was a similar outbreak at Limassol, and the local District Commissioner's house was burnt down likewise. Meanwhile, warships hastened to the spot and troops were rushed across by air from Egypt—in time to prevent the burning of the District Commissioner's house at Paphos on the 24th. On the 25th, the Union Jack was torn down, and the Greek flag hoisted in its place, over the District Commissioner's house in Kyrenia. There have been minor disturbances in other parts of the Island, so that the upheaval among the Greek population would appear to have been widespread. There have, of course, inevitably been collisions between the rioters and the troops or police; but few casualties are reported, and only three of the wounded rioters have so far died of their wounds. On Saturday, five persons were arrested, including two members of the Legislative Council and the Bishop of Kition. The Bishop of Kyrenia was also arrested next day.

For the moment order appears outwardly to be restored, but psychologically the situation is described as remaining extremely tense—and so it is likely to remain until the causes of the discontent are clearly understood and wisely dealt with. The proximate cause is an Order in Council which has been passed over the heads of the Legislative Council to cover a deficit in the Colonial Budget by an increase in the customs duties. The terms of the Order had been placed before the Legislative Council by the Colonial Government as a Bill, but had been thrown out by thirteen votes to twelve. The majority proposed to balance the budget by economies—particularly on the salaries of British officials. The excessive expensiveness of the British element in the administration is one of the grounds on which the Greek Nationalist Party in Cyprus advocates secession from the British Empire and union with Greece; but the fundamental basis of their claim is the principle of self-determination. Four-fifths of the population of Cyprus are Orthodox Christian Greeks—the remainder being Muslim Turks.

Cyprus was offered to Greece by Great Britain in 1915 in consideration of Greece intervening in the war on the side of the Allies—a condition which was not fulfilled in that year, when King Constantine was still in power at Athens. The island had only been annexed by Great Britain in 1914, upon the outbreak of war with Turkey. Before that it had been a piece of Ottoman territory under British occupation—an occupation which had been brought about by an Anglo-Turkish secret agreement in 1878 and which had been stipulated to last so long as the ex-Ottoman territories of Kers, Ardahan and Batum, in the Caucasus, remained in the hands of Russia. Since 1915 Great Britain has pledged herself not to alienate Cyprus without the consent of France, and British Governments—Conservative and Labour alike—have met Cypriot demands for self-determination with the reply that the political destiny of Cyprus was a closed question. The latest statement to this effect was made by Lord Passfield on November 28, 1929. The British Government's case is that the Turkish minority in Cyprus must be protected, that the leaders of the Nationalist Movement are unrepresentative oppressors of the poor, and that the island is an asset which the British Empire would be rash to part with. The local Greek Nationalists might retort that Great Britain once did give up the Ionian Islands, that the Nationalist Movement in Cyprus is not less genuine than other nationalist movements elsewhere, and that the Turkish minority has little to fear from Greek rule now that there is a Græco-Turkish entente. As for the Greek Government's attitude, it has been scrupulously correct throughout and remains so now. Apparently the Hellenic Consul in Cyprus has behaved less correctly

than the Government which he represents; but the revocation of his exequatur by King George has been anticipated by his recall to Athens by his own principals. As for the future of Cyprus, it is evident that order has to be restored, but it is equally evident that the question of the island's future must be reconsidered with a fair and open mind.

TARIFFS: A SOUTH AFRICAN LESSON.

Now that the heat and fury of the General Election have abated, the country will, we hope, be more inclined to examine dispassionately the merits of various fiscal policies as business, and not political, propositions. New material for the study of the practical effects of Protection in countries where that system is in force accumulates day by day, the latest contribution being an official report* by Mr Elmslie, His Majesty's Senior Trade Commissioner in the Union of South Africa, on the economic conditions in that Dominion. In this document the experience of South Africa since 1925, when a tariff "definitely protective in character" was imposed, is authoritatively and impartially reviewed, and the facts that emerge give serious food for thought to the people of this country at a moment when they are faced with a demand from some quarters that the tariff system should be extended to their own country.

The story as told by Mr Elmslie, in his capacity of official and unbiassed observer, contains nothing that will surprise those who hold that tariffs, while yielding benefits in certain directions, bring grave disadvantages in the form of raising production costs, hampering export, and depressing the standard of living of the worker—disadvantages which, in a country so vitally dependent upon export as is Great Britain, would be nothing short of disastrous. To "certain productive industries," says Mr Elmslie, "the tariff policy has been of immense advantage." The raising of prices has rendered possible the development of the sugar, wheat and dairy industries, and without the tariff many of the secondary industries could not have grown or continued to exist "in face of competition from more highly industrialised countries with lower production costs and larger scale production." Quite so, production costs and larger scale production. But certain producers have derived substantial benefit. But who has paid for this benefit? Not the foreigner, but the exporters and the workers of South Africa. This is how Mr Elmslie, having given due weight to the selective benefits conferred by Protection, paints the other side of the picture:—

"On the other hand it (i.e., tariff policy) has raised the cost of a large range of goods and articles produced in the country or prevented their cost from falling as it would otherwise have done; the consequent increase in cost of living and of production is the consequent increase in handicap the production for export of handicapping or tending to handicap the production for export of goods which the country should produce cheaply. Since the products protected are naturally those for which the internal market is the largest, namely, foodstuffs and articles in common use by the mass of the people, the section of the population most severely affected by the resultant increase in the cost of living is the very poorest, who benefit least from the highly-paid employment afforded by the protected industries."

These results are serious enough in South Africa, but it is beyond question that such consequences, which inevitably follow the imposition of protective tariffs, would be infinitely more serious in Britain, owing to her essential dependence upon export trade. Indeed, Mr Elmslie's report gives us a much needed object lesson from practical current experience, and proves that we can do nothing that would more certainly rob us of the trading advantages accruing from sterling depreciation than to adopt a system of protection.

In the last sentence of the quotation given above the official report speaks of the "highly paid employment" afforded by protected industries. It might be deduced from this phrase that the South African tariff has succeeded in raising the real wage level of industrial workers, but this deduction is one that must be made with the greatest caution. Shortly before his recent lamented death, Professor Freemantle, of Cape Town University,

Assets exceed £21,000,000. General Manager—W.A. Workman, F.I.A.

sent to us the results of his study of this particular angle of South Africa's economic position. In the course of his study he raises very serious doubts as to whether the tariff policy of 1925 can really be credited with any considerable proportion of the industrial expansion that has taken place since, and he is especially illuminating on the question of employment and remuneration. A classification of South African industries and their workers leads him to the conclusion that the increase in employment which took place between 1925 and 1930 was twice as rapid in the worst-paid as in the best-paid industries. Speaking of increased industrial employment, the Professor says:—

"For these results a heavy price has had to be paid. In South Africa an average European wage of £10 a month for Europeans is horrible. It must conceal many cases of girls earning £8 or even £5. This is what we have gained—the luring into our great towns of some thousands of country girls to earn miserable wages of this kind. On the other hand, we obtain this result by forcing our poor white people and our non-European people as they slowly emerge into civilised standards of life, to pay 25 per cent. on their clothing, a cruel exaction, which cannot be foregone lest our clothing industry perish altogether. We may have added a little to our industrial Europeans by our tariff policy, but both our Europeans and our non-Europeans have paid for it. Aceldama! The price of blood!"

As regards the general effect of the tariff on the volume of production and trade, Professor Freemantle sums up as follows:—

"Industry rises and falls with the general prosperity of the country, and it is impossible to detect in the figures any trace of the effects of the tariff of 1925, except that in return for making life hard for the poor we have somewhat swelled the numbers of underpaid industrialists. No doubt also part of the bill has been paid by a certain crippling of the primary industries of agriculture and mining, on which alone, as things now are, our industries depend for their existence."

So we have from two independent, but first-hand, expert observers the same recent conclusions as to the effects of tariff policy in South Africa. They are emphatically not of a kind to encourage us to follow on a path which, by the nature of things, would provoke far greater difficulties for Britain even than those which it has created in the Dominion. The South African object lesson is perhaps not so clear or so overwhelmingly convincing as that of Australia, but it is, to say the least of it, instructive, and its skilled exposition in the Trade Commissioner's Report is timely and useful.

A DIARY OF THE CRISIS.

Friday, October 23rd.

M. Laval at Washington confers with Mr Stimson. Senator Borah, Chairman of Foreign Relations Committee of the Senate, makes important declaration on United States foreign policy.

League Council debates draft resolution for settlement of Manchurian dispute. China accepts League's plan.

Riots in Cyprus suppressed by British troops landed by air from Egypt.

Sterling fractionally lower, closing dollar rate 3.92.

European stock markets: London, quiet, irregular, some profit taking; Paris reacts; Amsterdam, idle, dull.

Wall Street, sharp recovery after weak opening. Gold exports, \$18 millions; gold earmarked, \$5 millions.

Ten small banks in United States close doors.

Saturday, October 24th.

League Council adjourns until November 16th, Japan alone dissenting from resolution embodying terms of settlement.

M. Laval confers with President Hoover.

Further rioting in Cyprus, martial law proclaimed.

Sterling again shade lower, closing dollar rate 3.914.

European stock markets : London, quiet, steady ; Amsterdam, similar.

Wall Street, weak tone after steady opening. Gold exports, \$10 millions ; imports \$10 millions, mainly from the Argentine.

Sunday, October 25th.

Laval-Hoover conversations ; official *communiqué* issued :—

The traditional friendship between the United States and France, the absence of all controversy between our two Governments, a record of many events in collaboration towards the peace of the world, embracing among its recent phases the adoption of the Kellogg-Briand Pact, render it possible and opportune for representatives of our Governments to explore every aspect of the many problems in which we are mutually interested.

Indeed the duty of statesmen is not to overlook any means of practical co-operation for the common good. This is particularly true at a time when the world looks for leadership in relief from the depression which reaches into countless homes in every land. The relations of mutual confidence between Governments have a most important bearing upon speeding the recovery which we seek. We have engaged upon that mission with entire frankness. We have made real progress.

We canvassed the economic situation in the world, and the trends in international relations bearing upon it, problems of the forthcoming conference for the limitation and reduction of armaments, the effect of the depression on payments under inter-Government debts, stabilisation of the international exchanges, and other financial and economic subjects.

Informal and cordial discussion has served to outline with greater precision the nature of the problems. It has not been the purpose of either of us to engage in commitments binding our Governments, but rather through the development of fact to enable each country to act more effectively in its own field.

It is our joint purpose that the Conference for the Limitation of Armaments will not fail to take advantage of the great opportunity which presents itself, and that it will be capable of meeting what is in reality its true mission—that is, the organisation on a firm foundation of permanent peace.

In so far as inter-Governmental obligations are concerned, we recognise that, prior to the expiration of the Hoover year of postponement, some agreement regarding them may be necessary, covering the period of business depression, as to the terms and conditions of which the two Governments make all reservations. The initiative in this matter should be taken at an early date by the European Powers principally concerned, within the framework of agreements existing prior to July 1, 1931.

Our especial emphasis has been upon the more important means through which the efforts of our Governments could be exerted toward the restoration of economic stability and confidence. Particularly we are convinced of the importance of monetary stability as an essential factor in the restoration of the normal economic life in the world, in which the maintenance of the gold standard in France and the United States will serve as a major influence.

It is our intent to continue to study methods for the maintenance of stability in the international exchanges.

While in the short time at our disposal it has not been possible to formulate definite programmes, we find that we view the nature of these financial and economic problems in the same light, and that this understanding on our part should serve to pave the way for helpful action by our respective Governments.

Signor Mussolini at Naples makes important speech regarding reparations and debts. Signor Grandi in Berlin.

Monday, October 26th.

M. Laval leaves Washington for New York.

Signor Grandi's Berlin visit : official *communiqué* announces, "Far-reaching agreement . . . in the appreciation of the situation and its requirements. On both sides in particular conviction has found expression that the effective solution of a crisis like that which is now disturbing the whole world is no longer possible without systematic co-operation of the nations concerned . . . founded upon mutual confidence and mutual respect."

China informs M. Briand, acting President of the League Council, that she is willing to settle all disputes with Japan concerning treaty interpretation by arbitration or judicial settlement, as provided for by Article 13 of the Covenant, and is further willing, for this purpose, to conclude an arbitration treaty with Japan.

Bank of Finland rate reduced from 9 to 8 per cent.

Sterling recovers on foreign selling of dollars ; closing dollar rate 3.93.

European stock markets : London, all-round advance on election optimism ; Paris, Amsterdam, general decline.

Wall Street, heavy tone, but liquidation moderate. Gold exports, \$21 millions ; gold "unarmarked," \$3 millions.

Tuesday, October 27th.

Officially stated Cyprus situation is easier.

Report of Financial Committee of League on situation in Hungary is published in Geneva and Budapest.

British General Election polling day.

Sterling lower, closing dollar rate 3.88½.

European stock markets :—London, bonds irregular, further advance equities ; Paris quiet, undecided ; Amsterdam dull.

Vienna Bourse reopens, but business limited.

Wall Street, general decline. Gold exports \$20 millions ; gold unarmarked \$9 millions.

British General Election early results show sweeping Government majorities.

Wednesday, October 28th.

British General Election, Government gains sweep the country, indicating majority of about 500.

Sterling advances to 3.97, but reacts ; closing dollar rate 3.90½.

European stock markets : London, close uncertain after firm opening ; Paris, weak ; Amsterdam dull.

Wall Street, irregular opening followed by heavy liquidation, weak close. Gold exports \$4 millions ; gold earmarked \$1 million ; gold imports \$3 millions from South America.

Thursday, October 29th.

South African Government announces 10 per cent. export bounty and primage duty of 5 per cent. on imports.

Colonial Office states Cyprus constitution has been abused and must be reconsidered.

Greek Bank rate reduced from 12 per cent. to 11 per cent.

Rhineland Peasants' Bank of Cologne suspends payment.

Sterling lower. Closing dollar rate 3.86½. European stock markets : London, general reaction ; Paris, weak ; Amsterdam, steady, dull ; Wall Street, quiet, irregular ; gold export, \$4 millions.

THE OUTLOOK FOR TEA.

(BY A CORRESPONDENT.)

THE slump in tea is no doubt attributable to the usual causes—the chief of which are over-production or under-consumption, an increasing proportion of common or low-quality tea and the natural inclination of middlemen and distributors to reduce stocks in times of financial stringency. But whatever the cause of the trouble, the effects are obvious and interesting to the traveller in tea-growing districts in India.

Economy and efficiency are the aim of all concerned. Slowly but steadily everybody is contributing to one or both. The main items of expenditure on the gardens are: European supervision, 10 per cent., native supervision, including the manufacturing of tea, 15 per cent., plucking the tea 10 per cent., and cultivation 25 per cent. These figures are very approximate, and only amount to 60 per cent. of the cost; distribution is probably a substantial item in the balance, including the cost of packing and freight. European salaries have generally been reduced by at least 10 per cent., and, where possible, the number employed has been curtailed, but it is usually difficult to effect a reduction in numbers, because supervision is hampered by undulating land or scattered areas which are unsuitable for cultivation and break up the tea. Also, there is a natural reluctance on the part of managers and agents to throw Europeans out of employment. This difficulty does not arise to the same extent with native supervision, and in all grades except the lowest wages have been reduced and there has been a reduction in the number employed. Factory hands who received wages which placed them on the coolie level have had their tasks increased wherever possible. The same statement applies to plucking, but in addition to a greater amount of leaf being required, the actual rate has frequently been reduced.

Cultivation, amounting as it does in many cases to a quarter of the cost of the crop, has been the subject of much scrutiny. In most instances little or no manuring is being sanctioned for the coming cold weather, and the rate for hoeing is likely to be reduced. Under these circumstances a smaller crop can confidently be predicted for 1932. Where funds are low, old areas yielding under 400 lbs. per acre are being abandoned and replanting programmes are either held in suspense or likewise abandoned. New areas that would have been brought into the plucking round are likely to receive less cultivation, and will, therefore, be delayed. But, with all these economies, costs are not likely to be reduced more than 20 per cent., and in most cases the reduction will probably not exceed 15 per cent., especially if account be taken of work which is merely postponed.

Labour has not caused much trouble so far because tea gardens pay in cash, and, although wages have been reduced, the reduction has not been of the same extent as the fall in cost of living for the coolie, which has varied from 20 to 45 per cent. according to local conditions. The estate coolie is provided with a house, free medical attention and medicines, in addition to which he can, in many instances, have enough land to grow half his rice requirements for the year. It should, therefore, be realised that the coolie is probably feeling the slump as little as anybody because his rice costs him less than ever before.

All managers are insisting upon fine plucking, which means that the leaf is picked more frequently, and is, therefore, younger and smaller. The effect of this should be to make smaller crops of better quality tea. So far the shipment figures indicate a substantial reduction in crop. At the same time, experiments and investigations are being scientifically carried out by the Indian Tea Association Experimental Station at Tocklai. They cover all aspects of tea production, from planting and cultivation to fermenting and firing the leaf. Most managers are in close touch with these experiments, following up all suggestions for improving quality at once.

It should be added that a tea garden takes from six to ten years to establish, providing nothing unforeseen occurs. The equipment, with coolie accommodation, manager's bungalow, factory and hospital, is not likely to cost much under £30 per planted acre, in addition to the cost of land, planting and cultivating, which means that good new tea would not cost less than £100 per acre to bring to maturity. Thus it is obvious that tea-producing companies have property in jeopardy which has cost a lot and would take a long time to replace. Every effort is being made to reduce costs, but relief is more likely to come from increased consumption.

World production of tea was 900 million lbs. in 1930, of which the United Kingdom consumed 421 million lbs., or nearly half. The consumption per head in the United Kingdom is approximately 9.2 lbs., which is sufficient to provide five cups of tea per day per person. It can safely be assumed that a good deal is wasted in the tea pot, but, even so, the British public seems to be approaching the saturation point. Therefore, other markets must be found to absorb the increase in crop, which is already in sight. Sumatra alone expects to add 50,000,000 lbs. annually to the world's production for the next five years. The Continent of Europe is mainly coffee drinking, and it has been found that good coffee drinkers are not convertible to tea. The same remarks apply to the United States of America. The Indian Tea Cess Committee have been spending £50,000 a year on advertising tea in America, but there is little to show by way of results. American consumption was:—

	Total Tea. Lbs.	Indian Tea. Lbs.
1928	91,000,000	18,000,000
1929	93,000,000	21,000,000
1930	84,000,000	19,000,000

From these figures it appears that American consumption is not increasing, but that Indian tea forms an increasing percentage of what is consumed. This is poor return for £50,000 a year.

Turning to India, the figures are much more hopeful. The following show the consumption for each year ending March 31st:—

	Lbs.
1920-21	30,000,000
1924-25	44,000,000
1928-29	57,000,000
1930-31	65,000,000

The Indian Tea Cess Committee is spending £45,000 per year on popularising tea in India with considerable success. At all railway stations of any pretensions to size there are tea stalls which transact a lucrative business at a halfpenny a cup. In the poorest quarters of the towns tea is becoming a popular drink, and it only remains for the propaganda to be pushed into the villages and homes before a still greater increase in consumption takes place. Up to the present the women have neither learnt to make tea nor have they acquired a taste for it, but that is probably because the demonstrators are men, and,

therefore, women in their homes are inaccessible. When women demonstrators are employed another huge potential market will be open. At first the Indian was content with the very lowest quality, but now his palate is improving and, although the demand is still for cheap tea, discrimination as to quality is becoming evident.

Tea is a particularly suitable drink for India because all village water is bad, and the boiling required for tea provides the sterilisation which is so necessary. Blenders are now awake to the fact that in India they have a home market of 350 million people for tea that is suitable as regards flavour and price, and they are packaging tea to be retailed at a farthing per bag. Each bag contains one-fifth oz. of tea, and instructions are issued free. Obviously, the present consumption of 65 million lbs. is capable of enormous expansion, and, if the tea industry is to be saved from a disastrous war of attrition, the Indian market is likely to do it.

Notes of the Week.

The Victors and the Vanquished.—Not the least striking feature of the election is the way in which fate treated the leaders of the Parties. Every Cabinet Minister of the National Government was safely returned and the sole casualties in the whole Administration amounted only to three junior Liberal Ministers. On the other side, practically the whole of the late Labour Cabinet was swept away, the only ex-Minister of Cabinet rank to hold his seat being Mr George Lansbury. Defeated ex-Cabinet Ministers included Messrs Henderson, Graham, Alexander, Clynes and Tom Shaw. So extensive were the casualties in the higher ranks of Labour that no less than thirty-four members of Mr MacDonald's Government which resigned in the third week of August find themselves excluded from the House, usually by imposing majorities. Of the personal triumphs yielded by the election, that of the Prime Minister himself at Seaham must be considered the greatest, for he won the day against the full force of the official Labour machine. Almost equally striking, and statistically even more convincing, was the easy return of Mr J. H. Thomas at Derby, where the rank and file of the railwaymen clearly have not lined up behind the trade union officials who so recently excommunicated Mr Thomas. Significant, from a different point of view, was the return of two Liberal Ministers, Sir Herbert Samuel and Sir Donald Maclean, who were both opposed by Conservative as well as Labour candidates, and their victories underline the general impression of the polling results that the electorate has voted on national and not on party lines. Two other incidents catch the eye, namely, the practical extinction of trade union leaders, with the exception of some miners' representatives, and the complete failure of Sir Oswald Mosley and his New Party not only to capture a seat, but even to poll with reasonable heaviness. The small group of Labour members who broke with the Party and followed Mr MacDonald scored a high proportion of victories. In spite of the safe return of Mr MacDonald, Mr Thomas, Mr Baldwin, Mr Lloyd George, Sir John Simon, Mr Churchill and other protagonists in debate, the House will be conscious of important empty places. Mr Snowden did not contest a seat at this election and is expected shortly to enter the House of Lords. Mr Henderson's exclusion is on many grounds deplorable. It is poetic justice, perhaps, that he should suffer in person the force of the national verdict against the Party which he led, but it is unfortunate at this juncture that the man who recently conducted British foreign policy with prestige and success, and had been invited by the League Council to preside over the vital forthcoming Disarmament Conference, should be excluded from the national assembly. The experience of women candidates was on all fours with that of the men. Every Labour woman candidate was defeated, including such old servants of the Labour cause as Miss Bondfield, Miss Susan Lawrence, Miss Jenny Lee, Miss Ellen Wilkinson and Miss Jewson, while thirteen

Conservative women members were elected, of whom ten are new to the House of Commons. The total of the female fourteen is completed by Miss Megan Lloyd George, who, with her father and brother, again received the confidence of the Welsh electors.

Election Figures.—Four records in election statistics have been set up. "Labour gains" stand at nil—surely the first time that a great party has failed to break new ground anywhere; a larger number of candidates than ever before (86 to date) forfeited their deposits; majorities of over 50,000 were recorded in several constituencies; and, as if to afford a little light relief, one candidate (a Communist) failed to receive a single vote. Until the final results are received it is not possible to determine the exact percentage of electors who exercised the franchise, but there are indications that the poll was definitely heavier than in 1929. In that year the total votes cast were 22,639,297. This year it was ascertained that, when 541 results had been declared, the aggregate votes already reached nearly 21½ millions, and allowance must also be made for the fact that the number of unopposed returns was substantially larger than two years ago. It is clear that, when the full total is available, it will exceed that of 1929. But the most striking feature of the election statistics is the way in which our electoral system, which assisted the Labour Party in 1929, worked against it this time. This is clearly shown in the following table compiled from the first 541 returns:—

Party	Total Votes received.	Candidates returned.	Members returned.	Average votes per member.
Conservative	11,862,734	440	422	28,111
Liberal National ...	653,844	22	21	31,135
Liberal	1,635,827	115	37	44,211
National Labour ...	339,721	18	13	26,132
Total, Government	14,492,126	595	493	29,396
Labour	6,639,300	463	45	147,540
New Party	34,355	21	...	...
Communist	70,844	24	...	...
Total, Opposition	6,744,499	508	45	149,878
Independent	165,548	23	3	55,183

The figures show that the Labour Party had to poll 147,540 for each seat obtained, while 28,111 votes won one for the Conservatives. The discrepancy is, indeed, greater than appears at first sight, owing to the fact that an exceptionally large number of Conservatives were allowed a "walk-over." If these seats had been fought, the total Labour poll would have been greater, but the number of Labour members elected would have been unchanged. Even the most confirmed opponent of electoral reform must admit that the present system never works with impartial fairness to all parties. A majority of perhaps 2½ votes to 1 in the country has produced something near an 11 to 1 majority in the House of Commons. The foregoing figures themselves reveal a completely decisive verdict for the National Government, and their exaggerated reflection in Parliamentary representation cannot make that verdict more imposing than it is.

Signor Grandi in Berlin.—The Italian Foreign Minister has now returned the recent visit of the German Ministers to Rome. Signor Grandi arrived in the German capital last Sunday, and the Italo-German discussions which began on that day covered the same ground as the Franco-American discussions which at that moment were coming to a close. There are, in fact, now only two questions that can appear on any international agenda—one being Disarmament and the other Finance—and both questions are really no more than different aspects of one single fundamental question, namely, whether the world can restore its own confidence in its own future and so save itself from collapsing through sheer failure of nerve. The Italo-German conversations, though not of the same importance as the Franco-American conversations, have a significance of their own. They help to give expression to an opinion which is declaring itself with

rapidly growing urgency all over the world: that the situation cannot be saved without a radical revision of the post-war settlement in all its aspects. Senator Borah at Washington and Signor Mussolini at Naples, last Sunday, in their different language, said the same things with equal emphasis. Senator Borah scouted the suggestion of American adherence to any Pact of Mutual Assistance on the ground that "it simply means nailing down more substantially and completely the Treaty of Versailles—making eternal the status quo." Signor Mussolini observed that peace dissociated from justice becomes "a protocol inspired by vendetta, by rancour and by fear." Senator Borah does not believe that "there is going to be any disarmament by Europe until things are changed considerably—so long as certain conditions which arise out of the Treaty of Versailles continue to exist." Signor Mussolini asks: "How is it possible to speak of reconstruction unless there is a modification in certain clauses of certain peace treaties which have driven the world to the brink of material disaster and moral despair?" This union is portentous. And even if Monsieur Laval were inclined to ignore the utterances of the Middle Western Senator and the Romagnol Dictator when they were contradicting one another, he must surely give ear when the two voices fall into harmony.

Canton and Nanking.—The Manchurian crisis has produced at least one happy effect upon the internal politics of China. It has induced the rival Governments at Canton and Nanking to lay aside their weapons and make a serious attempt to come together. In the politics of revolutionary China, this kind of good sense and goodwill is sadly rare and therefore infinitely welcome. The last—if not the sole—example hitherto is the fusion between the rival Governments of Nanking and Hankow which followed the downfall and expulsion of the Kuomintang's Russian Communist adviser, Borodin, in 1927. In the bubbling of the Chinese witches' cauldron, there has been a lamentable rhythm. Again and again, a political movement has bubbled up in Canton, spread by force of arms to the Yangtse, dissipated its energies there, and finally made way for the next bubble to arise in the endlessly eruptive Southern capital. In August last, a "northern expedition" marched out from Canton to give the coup de grâce to Chiang Kai-shek, as Chiang himself once marched out, five Augusts ago, to give the coup de grâce to Wu Pei-fu: the war-lord who reigned then where Chiang reigns to-day. This time, however, the latest Cantonese champions of the Revolution seem to have been sobered by the anarchy and banditry in the South and by the natural disaster of the Yangtse floods and by the international crisis in Manchuria; and last week their delegates received a friendly welcome at Nanking when they arrived there to negotiate for a fusion. It seems to be recognised that Mr T. V. Soong is indispensable at the Ministry of Finance and that President Chiang Kai-shek cannot simply be bundled out of office, though the present range of his powers might reasonably be curtailed. On the other hand, room is presumably to be found again in the Central Government for the left-centre of the Kuomintang. In personal terms, this probably means the return to the Ministry of Foreign Affairs of Mr Eugene Chen, who proved his mettle in 1926-27; and the restoration, to high positions in the Kuomintang organisation, of Messrs Wang Ching-wei and Hu Hui-min, who have both fallen out with President Chiang Kai-shek in recent years. It is too early yet to forecast the prospects of the negotiations on these lines which have now begun. But we hasten to welcome them, in view of the importance of a strong Central Government at Nanking for China herself and, indirectly, for the rest of the world.

The Balkan Conference.—The Balkans have an individuality of their own, and they display it by doing the opposite to whatever the rest of Europe may be doing at the moment. From 1871 to 1914, when Europe as a

whole was unusually peaceful and sensible and respectable, the Balkans were a byword for passion and strife, and they did not rest until they had had a handsome share in bringing about the European War. To-day, when other parts of Europe are still prostrated by the shock of 1914-18, and when European capacities for constructive and co-operative action remain desperately paralysed, the Balkans have elected to set a good example to the rest of the Continent. The miracle of a Græco-Turkish reconciliation was signalled a few days ago by Ismet Pasha's visit to Athens in return for Monsieur Venizelos's visit of last autumn to Angora. And just as the Greek visit to Angora almost coincided with the first meeting of the Balkan Conference at Athens, so the Turkish visit to Athens has been followed up on Monday, October 21st, by the opening of the second session of the Balkan Conference in Constantinople under the auspices of Ismet Pasha himself. This Balkan Conference, which now promises to become a regular institution, belongs to a new type of international organisation (on the borderline between the official and non-official worlds and between politics and private affairs) which has come into existence since the Peace Settlement. The nearest analogue is perhaps the Institute of Pacific Relations—a non-governmental international organisation, representing the principal countries round the shores of the Pacific Ocean, which at this moment is attempting, under great difficulties, to hold its fourth biennial session in China. Like the I.P.R., the Balkan Conference is encouraged by "official circles" without being manipulated by them. Likewise, it does most of its work in committee, and it softens the edges of angular and spikey political questions by handling them in an economic or social or cultural setting. In this respect, the Balkan Conference has an easier task than the Institute of Pacific Relations. For the peoples represented on the I.P.R. are divided not only by differences of national interest and sentiment but also by differences of civilisation. In the Balkan world there is no deep cultural cleft like that which sunders the Chinese and Japanese from the English-speaking peoples. The Balkan peoples—Greeks and Turks, Serbs and Bulgars, Christians and Muslims alike—have a common background of Ottoman and Byzantine civilisation and a common social problem, namely, how to adapt their lives to the exigencies of Western civilisation. This common problem and common tradition are at last drawing the Balkan peoples together again now that the territorial questions over which they have been massacring one another for the past century have been decisively—once not in all cases justly—disposed of. All the old wounds have not yet healed over. The tenderest skins now are Bulgarian. Nevertheless, a genuine co-operation has become possible, and the Balkan Conference is proving itself an effective instrument for the purpose.

Troubles in Austria.—In his letter, which we publish on a later page, our Vienna correspondent describes the serious economic and financial difficulties experienced by Austria. According to an article in the *Neue Freie Presse* of October 27th, the situation has been further complicated by an agitation against the payment of taxes in certain agricultural districts. The gist of the story as told in the *Neue Freie Presse* is as follows:—The disastrous fall in the prices of cereals and livestock, coupled with extremely heavy taxation, has led to disturbances in Salzburg, and, furthermore, in the Tyrol. The efforts to exact the payment of taxes are being resisted by force, and riots are a daily occurrence. Tradesmen in the districts of Pongau and Lungau at a meeting on Monday last demanded the resignation of the Government. According to reports from the mayors of the Eastern Tyrol, the inhabitants of several towns wish to strike immediately against the payment of taxes. They demand strong measures against profiteering, and they insist on a change in agricultural policy, coupled with the reduction in the cost of the administration and the introduction of compulsory military service for the education of young men. The writer urges that the spreading of this unrest should

be prevented by concessions to the farmers, who are suffering severely from a system of high taxation at a time when prices for agricultural produce are steadily declining.

Hungary and Her Creditors.—The report of the Financial Committee of the League of Nations on the situation in Hungary was published in Geneva on Tuesday night. Unfortunately, a copy of this important document did not reach London in time for us to deal with it adequately this week. So far as can be judged from rapid perusal of the text, the Committee reached the opinion that, if the Budget is resolutely balanced, and if the National Bank of Hungary has ample powers to control and limit foreign credit transactions, and to maintain the present control over dealings in foreign exchange, the credit of Hungary can be maintained—always provided that "standstill" agreements to cover commercial short-term indebtedness are concluded for a minimum of six months, that the steps taken by Hungary are received in creditor States in a spirit of co-operation and goodwill, and that arrangements with Hungary's neighbours will lead to mitigation of the hardships involved in restrictions on foreign trade and exchange. Full comment must necessarily be reserved until there has been time to study the report, but at first impression there appear to be a number of large "ifs" in this analysis. A distinctly less reassuring picture of the future is drawn by our Budapest correspondent in a letter which we print on a later page this week.

The International Chamber and the Crisis.—The meeting last week of the International Chamber of Commerce in Paris considered and passed a series of resolutions which had been prepared by a "Committee of Ten" constituted for the purpose of examining memoranda on the world crisis prepared for it by a number of independent experts, including Mr Henry Clay, Dr. Coates, Herr Karl Melchior, and M. Charles Rist. The resolutions which the Chamber adopted deal with various facets of the crisis, and, though they contain no strikingly original matter, they reinforce powerfully the necessity for settlement of many vital issues. With regard to reparations and debts, they emphasise that the temporary nature of various moratorium devices involves the prolongation of an element of instability which tends to preclude the resumption of international lending. The "illusory benefits" of inflation are also stressed, as is the essential need to maintain the balance of budgets. Attention, too, is drawn to the stifling effect of restrictions on exchange dealings, which, as shown by past experience of the post-war period, are "most ineffective as regards their own immediate purpose, whilst acting as a brake on legitimate international trade." The promotion of the efficient functioning of the forward exchange market in all the leading financial centres is rightly emphasised. With regard to the wider international problems which are contributing to the world depression of trade, the Chamber's resolution is worth quoting. There must be, it states, "the adoption of economic policies which, taking into account the temporary requirements of every nation, shall lead ultimately to a freer international movement of goods, capital, persons and services."

Sterling and World Prices.—As measured by the *Economist* index number, the average level of British wholesale prices shows no change on balance during the past week. Figures of our index for October 28th are shown below in comparison with those for the previous week and for September 18th, i.e., immediately before our departure from the gold standard:—

	(1927 = 100)		
	Sept. 18, 1931.	Oct. 21, 1931.	Oct. 28, 1931.
Cereals and meat ...	64.5	70.9	70.2
Other foods ...	62.2	66.8	66.9
Textiles ...	43.7	51.4	52.5
Minerals ...	67.4	73.9	73.7
Miscellaneous ...	65.8	66.2	65.8
Complete Index ...	60.4	65.5	65.5

It will be seen that, since September 18th, the *Economist* index number shows a rise of 8.4 per cent. Our index of gold prices, whose construction was described in our issue of September 26th, has risen this week from 99.4 (September 18th=100) to 101.4. It is evident, however, as we have said in previous weeks, that comparison of this figure with that of the *Economist* index number is somewhat misleading, since the latter not only includes more semi-finished and finished articles, but is also weighted with a large number of commodities (e.g., British cereals) produced at home and not immediately sensitive to changes in the world price. We have accordingly extracted from our index number a list of seventeen commodities of which all but one (namely, pig iron) are imported, and which correspond approximately to the list of commodities forming the basis for our "gold" index. If we may define these two indices as index numbers of sterling and gold "primary" prices, their comparative movements, given below, show that when home produced and the more worked-up articles are excluded, the divergence between sterling and gold prices corresponds much more closely to the depreciation of sterling:—

	September 18.	October 21.	October 18.
Primary Price Indices			
Gold	100	99.4	101.4
Sterling	100	113.7	114.4

In conclusion, we give the following list of foreign index numbers, published in the *Financial Times* of October 26th, and showing the position in the preceding week. The week immediately preceding the suspension of the gold standard is equated to 100 in each case by our contemporary:—

United States (Irving Fisher)	99.3
France (Statistique Générale)	97.3
Italy (Milan Chamber of Commerce)	99.7
Germany (Statistische Reichsamt)	98.6

None of these index numbers, immediately after the British suspension of the gold standard, fell so far as did the *Economist's* gold index shown above. That index touched 94.7 on September 30th, whereas the American figure never fell below 98.7, and the minimum reached was 96.9 recorded for France.

The Volume of Overseas Trade.—Last week's *Board of Trade Journal* contained the usual quarterly article, in which our overseas trade is revealed on the basis of the values in 1924, in order to afford a basis for measuring changes in volume:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS.

Period.	Retained Imports.				Exports of Domestic Produce.			
	De- clared Values.	Index of Average Values.	Values in terms of 1924 Values.	Index of Volume.	De- clared Values.	Index of Average Values.	Values in terms of 1924 Values.	Index of Volume.
1924	Mill. £.	100.	Mill. £.	100.	Mill. £.	100.	Mill. £.	100.
1928 Quarterly av.	284.4	100.0	244.4	100.0	200.2	100.0	200.2	100.0
1929	263.8	87.7	305.5	107.8	180.9	85.3	209.6	104.7
1930	277.8	85.7	324.2	114.0	182.3	84.1	215.9	108.3
1930 1st quarter...	239.5	75.6	316.9	111.4	142.6	80.3	177.6	88.7
1930 2nd quarter...	259.0	80.7	320.8	112.8	164.1	82.0	200.1	99.9
1930 3rd quarter...	235.5	76.3	306.0	107.6	140.7	80.5	174.8	87.4
1930 4th quarter...	225.0	75.8	296.1	104.2	126.3	80.1	170.2	85.0
1931 1st quarter...	240.3	69.6	345.0	121.4	129.4	78.2	165.5	82.7
1931 2nd quarter...	192.5	63.7	302.0	105.2	103.3	74.7	138.5	69.1
1931 3rd quarter...	189.7	61.3	310.0	108.9	95.8	72.7	131.7	65.8
1931 4th quarter...	191.0	59.7	320.2	112.5	95.2	70.9	131.5	65.7

It will be seen that, as a result of the extreme depression of the prices of the primary commodities figuring largely in our purchases from abroad, the divergence between the indices of the average values of retained imports and British exports has been increasing rapidly since the beginning of 1930. As compared with 1924, the index of retained import values has fallen 41.3 per cent. and that for export values only 29.1 per cent. Comparing the past quarter with the April-June period of the current year, it will be noted that there has been a further fall in the indices of average import and export prices. The volume of retained imports shows an increase, while the quantity of British exports has declined further. As revalued at the values of the corresponding quarter in 1924, retained imports of food, drink and tobacco were over 10 per cent.

greater than in the corresponding quarter of 1930, and those of raw materials slightly less. There was, however, an increase of more than 5 per cent. in the category of wholly or mainly manufactured articles. British exports show an all-round decline.

Foreign Exchange Restriction Conference.—The Bank for International Settlements issued this week the following statement:—"At its last meeting, held on October 12, 1931, the Board of Directors of the Bank for International Settlements authorised the management of the Bank to get into contact with the national banks in Central European countries in order to find out whether these banks would be interested in a meeting for the discussion of the existing foreign exchange regulations and practices. It has been found that such a discussion would be of interest, not only to the central banks in countries in which such control has been established, but also to other central banks whose markets are in close commercial relationship with the countries having adopted exchange control. Consequently it has been decided to hold an informal meeting of exchange experts from the central banks interested, together with representatives of the Bank for International Settlements. The meeting will open in Prague on Tuesday morning, November 3, 1931." While the proposed discussions take no account of exchange restrictions in other parts of the world, such as South America, it is all to the good that the Central European *impasse* should be explored, for evidence is accumulating that exchange restrictions are stifling trade. The conclusion of this informal meeting will be awaited with interest.

The German Standstill Agreement.—In the issue of the *Frankfurter Zeitung* of October 27th a writer subjects to strong criticism various aspects of the "Standstill Agreement" which came in to operation on September 1st. Among the clauses in the Agreement which, in the view of the writer, have caused difficulties, is that which provides that the German "credit-taker" shall make every effort to provide the foreign bank creditor with eligible bills for acceptance, i.e., bills customarily rediscountable in the respective foreign creditor countries. The writer criticises particularly the attitude of some of the American banks. During recent years, he states, they have continuously increased the facilities for rediscounting bills. This policy has now been reversed, and banks which formerly accepted bills as long as they were in some way connected with the financing of imports or exports, now accept them only if they are accompanied by bills of lading. Another clause which has led to friction is that under which German banks are obliged to substitute, at the request of a foreign bank, a drawer of good credit-standards for any drawer of bad credit-standards. Contrary to the intention of this clause, some of the foreign banks have assumed the right to control credit by demanding from the German banks special information even about firms of high standing. They have insisted that accounts should be kept in a form specified by them; and all expenses arising from additional work have to be borne by the individual firm. Again, the "tutelage" over credit-takers has been tightened by the clause which gives the right to the foreign bank to demand that individual firms should furnish to their banks collateral for the credit extended to them. These measures have resulted in the contraction of the volume of foreign credit. The writer estimates that the foreign indebtedness of the banks has been reduced by 750 to 1,000 million Rm. since the middle of July, when it was estimated in the Basle Report at 5,100 million Rm. In the case of British credits, the liquidation of a large volume of credit is partly due to the depreciation in the value of the £. But even where obligations had been contracted in terms of other currencies, the volume of repayments has assumed larger proportions than required by the Standstill Agreement, partly because the ultimate "credit-takers" wished to rid themselves of the control exercised by some of the foreign banks. The Reichsbank has been obliged to stop the flow of repayments because of the continued depletion

of its reserves in foreign currencies. Many credit-takers have thus been debarred from repayment. Considerable friction has also been caused by the high rates of interest charged by some of the foreign banks—in some cases twice or even three times as high as that ruling before the Agreement came into force. In this connection particular annoyance has been caused by the attitude of Dutch and Swiss banks, which are charging about 8 per cent. for overdrafts to German banks, while allowing the latter only 4 per cent. on deposits. In the view of the writer, Germany made too many concessions at the recent negotiations in Basle. The writer points out that the scheme has worked to the satisfaction of neither creditors nor debtors, and that a permanent settlement on a different basis will have to be reached on some such lines as advocated in the *Frankfurter Zeitung* of October 21st. In that issue a proposal was made for the repayment of the credits over a period of ten years. Such a plan, however, assumes the previous settlement of the reparation problem, as otherwise the necessary guarantees would not be forthcoming.

Polish Coal Exports.—Our Warsaw correspondent writes:—"Great Britain's release from the gold standard has created a very difficult situation for the Polish coal industry. Subsidised by high coal prices in the domestic market, and low transport rates to the Baltic seaboard, and further strengthened by much lower wage scales than in Great Britain, Polish coal exporters, prior to September 21st, were able to undersell British exporters in the Baltic and Scandinavian markets without any drain on their capital—that is, at an export price of 11s. to 12s. (gold) per metric ton f.o.b. Danzig or Gdynia. Polish coal business with the Northern countries is done exclusively on a sterling basis, and Britain's abandonment of the gold standard found these exporters not only with sterling bills on hand, but with a considerable volume of forward contracts on which a substantial loss is now being taken. Polish coal exporters on September 21st did not anticipate a decline in the value of sterling of anything like 20 per cent. Ten or, perhaps, 15 per cent. was as much as they looked for, and, on this reckoning, they were prompt to announce that there would be no diminution in coal shipments from Poland to the Northern countries. A sterling depreciation of 20 per cent., however, is more than they had bargained for, and more than they are prepared to meet for any length of time. They are, in consequence, now making very strong representations to the Government for diminished taxation, the lowering or temporary elimination of social service charges, the abrogation of the prevailing wage agreement with the miners so that lower wages can be imposed, and a further reduction in transport rates to the Baltic. The Government and organised labour naturally have very strong objections to any and all of these proposals, and conversations are now proceeding between the authorities and the coal exporters (a coal export convention comprises all the exporting companies, so that they act as a unit) in an attempt to find a way out of the *impasse*. What the coal industry would doubtless welcome would be the abandonment forthwith by Poland of the gold standard, especially as this country has had much greater experience than Great Britain in transacting business in unstable currencies. The Government, however, are clearly determined to adhere to the gold standard as long as they can possibly do so.

Idle Shipping.—The return, issued by the Chamber of Shipping, of vessels lying idle in ports of Great Britain and Ireland on October 1, 1931, shows, as might be expected, no improvement over the situation which existed on July 1st. The aggravation of the world financial crisis during the third quarter of the year sufficed effectively to prevent the normal development of seasonal activity in chartering which is usually to be seen from the middle of August onwards. At the beginning of October, the idle shipping in this country amounted to 2,089,443 net tons, as compared with 2,044,092 net tons at the beginning of July and approximately one million net tons a year ago. An interesting analysis shows that

of the present laid-up tonnage approximately half has been idle for over six months. It is too early yet to say how far the depreciation of sterling will lead to increased exports of British coal and so provide greater employment for shipping, but it is evident that the surplus tonnage now out of commission cannot be reabsorbed until there is a general recovery from the present "frozen" condition of international commerce.

Overseas Correspondence.

FRANCE.

Council Elections — M. Laval — Public Works — Money Rates.

(FROM OUR CORRESPONDENT.)

PARIS, October 28.

The second ballots in the *Conseils Généraux* elections last Sunday, which took place in 254 country council electoral districts, whose representation was left undecided by the previous week's contests, have rather upset the conclusions drawn from the results of the majority of the contests in which no second ballot was necessary. The official analysis of the returns, issued by the Minister for the Interior (M. Tardieu), who will at least not be suspected of presenting matters as worse than they are, indicates that the 1,517 contests resulted in gains of 20 seats by the Radical Socialists, 12 by the Socialists, and 10 by the Republican Socialists and Independent Socialists. The Conservatives, or Extreme Right, lost 25 seats; the U.R.D. (Marin Nationalists) 15 seats, and the Communists one of the five seats previously held by them. The full returns, therefore, indicate that, instead of the extremist parties of both the Left and the Right having lost ground to the benefit of the Centre, the real situation is that the anti-Briandist parties have grown weaker to the profit of the Briandists. This modification of the first conclusions drawn has been due almost entirely to the fact that, in the second ballots last Sunday, three-cornered contests were, in most cases, avoided by the Radicals and the Socialists again playing into each other's hands. Socialist candidates were withdrawn in most cases in which the Radicals had enjoyed greater support in the first ballots, and *vice versa*. The actual change in county council election results was only a trifle over 3 per cent., but the fact that this was due to a revival for all practical purposes of the *Cartel des Gauches*, is possibly significant of the outcome to be expected from next spring's Parliamentary elections.

Expectation here ruled high, down to the date of M. Laval's arrival in America, that valuable concrete results were likely to be immediately obtained from the Washington conferences in regard to most, if not all, of the principal international problems awaiting solution. The joint *communiqué* issued by the two Governments, however, suggesting to minds expecting far greater results that only meagre progress had apparently been accomplished, reacted here in the form of sharp disappointment. This was immediately reflected in the somewhat marked setback of Monday's Bourse. During the subsequent 48 hours, however, opinion in general has once more begun to take a more optimistic view. It has argued here that, after all, the Washington and New York interviews have resulted in a practical certainty of close financial co-operation between the two Governments in the future; that both countries are now definitely pledged to the maintenance of the gold standard; that the French demand that any application for an extension of the present moratorium in favour of German reparation payments shall be dealt with in the cadre of the conditions laid down in the Young Plan has been recognised by the United States; that Senator Borah himself has now definitely admitted the right of France to reimbursement for her direct war losses; that an important further step has been taken by the United States in the direction of recognising that Allied debts to America and German reparation payments are

largely bound up together; and that these represent very important advantages.

Confirmation of the assertion that Mr Hoover—in view of the fact that he, like President Wilson, is not his own master *vis à vis* the United States Senate—has now definitely left Europe to settle its own troubles, is thought here to be given by the unofficial, but, so far, uncontradicted, announcement that M. Laval, on his return to Paris, intends to secure authorisation from his colleagues to call a special conference of the nations (including Germany) which are interested in the reparations problem. The object of this conference, it is asserted, will be to consider whether fresh reductions of reparation payments are possible, and to prepare plans to be substituted for the extended moratorium for which Germany is expected to apply in prolongation of the present moratorium, which comes to an end on July 1st next. Current talk here, which should be accepted with all reserve, is that the new conference will take place in Paris towards the end of November or the beginning of December.

It is asserted here that MM. Farnier and Lacour-Gayet, of the Bank of France, during their conversations with the representatives of the Federal Reserve Bank in New York, came to a satisfactory agreement in regard to the Bank's sight and short-term money in New York (reported to total something like \$600,000,000). There was, naturally, some nervousness in New York whether these balances, in view of recent experiences in London, might not be suddenly withdrawn to Paris, to the obvious prejudice of the dollar. The French officials were unable to give any unconditional undertaking that the Bank's gold balances would not be withdrawn, as this would be tantamount to the "freezing" of an important part of the institution's assets. They consented, however, not to complicate the task of the Federal Reserve Board by withdrawing their Bank's deposits, on condition that the American monetary authorities will follow a policy that will effectively defend the dollar, and which will safeguard the Bank of France against further losses similar to those suffered by its sterling balances.

The further portion of the great programme of public works, designed to re-equip the national economic plant, which is to be put into operation as soon as possible, will involve a total expenditure of some 4,700 million francs, of which 3,000 millions will be borne by the State and the balance by the Local Government and other bodies. The State's part in the programme will include 500,000,000 francs for main road development, 500,000,000 francs for port development, 550,000,000 francs for agricultural works, 300,000,000 francs for new schools, 385,000,000 for hospitals, 150,000,000 francs for civil aviation, 100,000,000 francs for country road improvements, 50,000,000 francs for inland waterways, 40,000,000 francs for the reconstruction of the Colonial School, 10,000,000 francs for additional playing fields, etc. The programme of new public works (both State and otherwise) has been specially drawn up with a view to absorbing as much unemployed labour as possible. It is estimated that the total programme about to be put in hand will provide labour for at least a year for 300,000 workers of all kinds (at average daily wages of around 40 francs per head), and should thus contribute largely to extinguish anything like real unemployment throughout the country. In addition to the works already in hand, under previous portions of the Government plan (including housing undertakings, defensive organisation of the frontiers, railway development, etc.), a large amount of public work is also being carried out by the local authorities. Authorisation of the new programme by the Chambers will be applied for when Parliament reassembles, and probably also powers to raise the necessary money by a loan issue.

The cost of money, as might be expected, in view of the recent raising of the Paris discount rate from 2 to 2½ per cent., is again steadily rising. The rate paid on National Defence Bonds was increased from 2½ to 3 per cent. on Monday last. The average rate offered by new bond issues in September was 5 per cent., against 4½ per cent. in August, 4.60 per cent. in June and July, 4.10 per cent. in February, and means of 4.69 per cent. in 1930, 5.36 per cent. in 1929, and 6.03 per cent. in 1928. The

yield from Bourse issues of variable revenue at the end of September was 4½ per cent., as compared with 3.83 per cent. during the first three months of the year, and a highest of 2.24 per cent. in 1929-30, while that from issues of fixed return dropped from a highest of 5.19 per cent. in 1929-30 to 3.78 per cent. during the first quarter of this year, and 3.51 per cent. in August, and stood at the end of September at 3.78 per cent. The Caisse d'Amortissement reports that the total Defence Bonds in circulation at the end of June was 28,236,000,000 francs, as against 28,499,000,000 francs at the end of May, 28,912,000,000 francs in February, and 28,248,000,000 francs at the end of 1930.

GERMANY.

Washington and Laval — An Economic Committee — A Financial Sensation.

(FROM OUR CORRESPONDENT.)

BERLIN, October 28.

GERMAN political circles have not been surprised to learn that the visit of M. Laval to Washington has brought no results. At the time when M. Laval and M. Briand visited Berlin, Germany gained the impression that the leading French statesmen were personally ready to come to an understanding, but that owing to internal political conditions they were unable to take any serious decision in accordance with the good-will inspiring them. The same would naturally apply to the United States. If there really has been a French Plan providing for considerable concessions in respect of reparations and disarmament it must have been (as is assumed here) encumbered with claims on the question of security, regarding which France ought to have known that America would never agree.

All this, of course, does not in any way alter the point that the attitude of America is of vital importance to Germany. Germany is rather indifferent as to how America stands in the question of military guarantees for France, but she is naturally anxious that America should not feel compelled to divorce herself from European negotiations. In view of the fact that the official statement issued by Mr Hoover and M. Laval places on the shoulders of European countries the initiative to be taken on the expiry of the Hoover Plan, Germany is faced with the question whether she herself should take this initiative. Such procedure would involve Germany in grave dangers. It may be that the French elections, next spring, will relieve the tension; but it would be unbearable if the world should have to wait until then in order to know under what conditions it will have to labour after July 1, 1932.

The President of the Reich has now appointed the members of the Economic Privy Council. The appointments clearly show that this is not to be an expert committee in the ordinary sense of the word, nor a political body possessing any power of decision. The list contains five leaders of Socialists and Christian Trade Unions, representative industrialists like Ernst von Borsig, Dr. Silverberg, Albert Vögler, Dr. Schmitz of the I. G. Farbenindustrie, and the former councillor of the Reich, Dr. Cuno, Chairman of the Hapag. No scientists or other independent experts are on the Council. It is evidently not the task of the Council to find new solutions of pending problems. Its deliberations are rather intended to show the Government where the point of least resistance is to be found for the necessary reductions in wages and prices—whether, for instance, legal alterations in wage rates or ordinary reductions of wages with the aid of the existing arbitration system will meet with less resistance, so that it (the Government) may follow up the line indicated through emergency decrees.

Apart from the social political questions and the Cartel problem, the Economic Council has also to consider the question whether the level of German interest rates can be reduced. Reduction in the rates of interest would be very popular, both with industrial workers and the farmers, and also with a large number of industrialists.

But it is not probable that any considerable reduction will be achieved. It will not in any case be possible to reduce the rate for long-term investments, especially the rate of interest on mortgages. In this field investors are very scarce, and hardly any capital is available at present. The price paid for the commodity "capital" corresponds to its scarcity. The Reichsbank's rate of discount is and likewise fixed in accord with currency considerations, and it is already a considerable achievement that the Reichsbank seems to be able to carry on without an increase, although since the German rate of discount was fixed last time at a level of 8 per cent., bank rates have increased in almost all the leading countries abroad. At most it might be possible to reduce the difference between the rates for advances and the rates for deposits adopted by the private banks. But this will in turn touch the earning capacity of the banks, which has been seriously affected after the losses suffered of late.

The position of the Reichsbank, as published on October 23rd, shows only a slight reduction in the gold and foreign currency holdings (6.6 million Reichsmarks), although during the period under review there has been a transfer of 50 million Reichsmarks in accordance with the standstill agreement. In addition, there has been a reduction in the call for credit; the bill holding decreased by about 160 millions, rediscounts by 70 millions, notes in circulation by 154 millions. Obligations on current account were reduced by 67 millions. The gold and foreign currency cover amounts to 29.4 per cent., against 28.6 per cent. during the previous week. The comparatively heavy influx of foreign currencies may partly be due to the Reichsbank having threatened exporters that it will withhold credit if they are tardy in handing over their foreign currency receipts. But the effect of the high foreign trade balance seems to be increasingly reflected in the position of the Reichsbank.

To the list of financial scandals that have occurred during recent years a fresh case has been added in the last few days. There have been rumours in circulation for weeks that something was wrong with the largest brewery concern, the Schultheiss-Patzenhofer A.G. An official statement issued by the company on Saturday last revealed huge losses incurred by the company without the knowledge of the Supervisory Board of Directors (*Aufsichtsrat*) through speculations in its own shares. Since the autumn of 1929 the managing director of the company has arranged the purchase, at an average price of 285, of shares amounting to nominally 14.5 million Reichsmarks, which would represent a loss of more than 26 million Reichsmarks if these shares were treated as having been redeemed at par, in which case the share capital would consequently be reduced to 40 million Reichsmarks. The purchases were financed by the Darmstädter Bank and by the Commerz- and Privatbank, who obtained the company's guarantee covering losses by depreciation. But both Mr Jacob Goldschmidt and Mr Friedrich Reinhart, the managing directors of these two banks, who at the same time belonged to the Supervisory Board of the company, not only failed to inform the other members of the board of this gigantic commitment, but in addition permitted an official Stock Exchange prospectus to be published in the autumn of 1930 in which no indication whatever was given of the commitment. The present Schultheiss-Patzenhofer A.G. was only formed last year by amalgamating the two companies, the Schultheiss Brewery and the Ostwerke A.G., two concerns which had been very closely connected since the inflation period. The managing director of the Ostwerke A.G., which company had already previously acquired a large block of Schultheiss shares, was Mr Ludwig Katzenellenbogen, while the post of managing director of the Schultheiss Brewery was held by Mr Walter Sobernheim, chairman of the Supervisory Board. Conversely, in the Schultheiss Brewery concern, Mr Katzenellenbogen was the chairman of the Supervisory Board. Yet it is said that it was only in the autumn of 1930 that Mr Sobernheim learned of these share commitments and that he likewise did not consider it necessary to inform the board.

The representative of the Deutsche Bank, Mr von Strauss, who is the vice-chairman of the Supervisory Board, only learned of these transactions when they could not be concealed any longer. However, apart from this, there appear to have been a number of serious inaccuracies, and the balance sheet issued in the autumn of 1930, when the merger took place, seems to have been incorrect in important points. Moreover, the company's own shares, which were held by a subsidiary not mentioned in the prospectus, are said to have been shown as assets at banks and so on. At present it is difficult to say how the reorganisation of the Schultheiss concern will be effected under the circumstances. The banks have declared their readiness to postpone until January 1, 1934, the date fixed for taking delivery of the shares purchased. It will, consequently, be possible to wait for some time to see how share quotations will develop. Apart from this, it has been necessary to write off 21 millions from investments, 3 millions from "subsidiaries," and 8 millions from debtors, that is 32 millions in all. In view of the fact that fixed "subsidiaries" according to the Commercial Code need not be written off, these adjustments cover a multitude of doubtful speculative transactions of other kinds regarding which the public has never been officially informed. It is true that the company is sufficiently strong to withstand even such a blow. The Schultheiss concern not only comprises the largest German brewery, with an annual production of about 3 million hectolitres, but also (through the former Ostwerke) is interested in the Silesia Portland Cement Works, in the large Siemens Glassworks (bottles), malt works and yeast factories. Its interests in mills, and in an engineering works which has become insolvent, have either been disposed of or written off. During the last financial year the company still earned 16 million Reichsmarks, and possesses disclosed and secret reserves of 40 to 50 millions. However, this does not minimise the scandal, for the concern was generally regarded as the soundest and wealthiest in Germany, and this makes the case the most regrettable of those that have occurred in recent months. The company itself has already taken action, and Herr Ludwig Katzenellenbogen, who is also on the board of the Commerzbank, has been compelled to relinquish all his posts. It is assumed, moreover, that the Schultheiss scandal will also react on the position of Mr. Jacob Goldschmidt, who has already been involved in the Nordwolle affair, and also on the position of Mr Reinhart, director of the Commerzbank, who has hitherto been counted as one of the close advisers of the Chancellor of the Reich.

AUSTRIA.

Effects of Exchange Control — Budget — General Business.

(FROM OUR CORRESPONDENT.)

VIENNA, October 26.

THE restrictions on foreign exchange, which have now been in force for three weeks, have already caused considerable limitation of trade. Imports have been throttled, thereby reducing the adverse Austrian balance of trade. On the other hand, exports are bound to suffer, for it is now very difficult to get fresh supplies of certain raw materials and semi-manufactured goods. The National Bank is still adhering strictly to the practice of granting only 2 to 3 per cent. of the applications for foreign currencies, even where important articles needed from abroad are concerned. For instance, the import of cotton, wool, certain metals and jute is rendered difficult.

Merchants, on the other hand, are now in a position to dispose of the old stocks they have on hand. Austrian coal output has greatly increased, and it is stated that the domestic mines should be able to deliver about a million and a half tons per year more than heretofore. The price of coal has also increased by 10 per cent. to 15 per cent., and sales of brown coal have gone up. In the course of the last ten days more firewood has been sold than in the whole of the previous three months. Other prices have also risen. It appears certain that the position in the clothing industry will be an awkward one on account of

diminished imports, and there is a lively tussle in progress between sellers of Austrian and foreign automobiles and tyres. Whereas in some factories an improvement is hoped for, in others more workmen and clerks are being laid off. The impossibility of securing foreign means of payment for use at a later date is causing certain circles in industry and commerce to add a gold value clause to their invoices. Others have approached the Government with a view to obtaining prohibition of the gold clause, but this request has been refused. The Government takes the view that the Austrian schilling is perfectly stable and that the gold clause is therefore of purely theoretical significance.

It is understood that France is willing to let the Austrian National Bank have a credit amounting to 60 million schillings through the Bank for International Settlements. Failing such a credit, the means at the National Bank's disposal would not be adequate to repay either the advance made by the Bank of England to the Government or the rediscount credit of the B.I.S., amounting in all to 190 million schillings. The position is still rather tense, for it must not be forgotten that Austria has to pay abroad some 30 million schillings in foreign currencies in connection with commitments of the Federal State, the individual States and on account of the "standstill" agreement of banking and other public commitments. Some relief has been obtained at home through the fact that the banks have either prolonged the bonds, which they issued in foreign currency, or merely redeemed them in schillings under the plea that the Government is allowing no foreign means of payments for this purpose.

The principal items of the Budget, which were given in last week's letter, have been greatly reduced in comparison with last year's estimates, but there still remains the question whether the inevitable drop in customs receipts and in revenue from the merchandise turnover tax, the two sources which constitute the backbone of the Budget, has not been under-estimated. In general, the process of impoverishment is alarmingly rapid. Outstanding taxes, which in spite of the sharpest measures on the part of the tax gatherers, cannot be collected, amount to over 200 million schillings. In view of the wage and salary cuts in the Civil Service and in private concerns, a big reduction of revenue from income tax is also to be expected.

The position of the Credit-Anstalt is still a matter of grave concern, and menaces private trade and the financial affairs of the State. The new Minister of Finance has given notice of dismissal to all the directors, with the exception of the few who were appointed by the Bank after the crash. The former managing directors, Herrn Neurath and Deutsch, have definitely gone, and there is a popular demand for criminal proceedings against Herr Ehrenfest. The losses of the Credit-Anstalt continue to increase, and, doubtless, the proceeds from the sales of securities have been drawn upon to keep current business going. The dismissal of employees, which is now proceeding very rapidly, must also entail large compensation.

Regular business is at a complete standstill, and the opening of the Stock Exchange is not likely to make much difference. There will be little business in Czechoslovakian securities; trade in Hungarian shares is still forbidden; and the most stringent measures are to be taken against "bear" movements. The chief anxiety is lest pressure be brought to bear upon investment securities, and result in a serious fall in quotations. One or two of the banks have kept the value of their shares very high, and adjustments may be necessary. Mortgage business is quite stagnant; the granting of credits against mortgage certificates has been very limited; and deposits at the banks and savings banks are fluctuating widely, though exact figures are not obtainable.

In spite of reduced incomes, the cost of living has not gone down; on the contrary, it is a little higher. The index figure has risen from 58.9 on September 15th to 59 on September 30th, and to 60.6 on October 15th, and the foreign currency restrictions are bound to send prices even higher. The Government is, however, contemplating recourse to the provisions of the Profiteering Act, which are not at present operative, and it hopes by this means to prevent disquiet among consumers. One of the greatest worries is still the question of railway traffic, for in spite

of all the increases in rates which have been imposed, and of the economies which have been practised, there is still a deficit of about 40 million schillings to be carried over to next year's accounts.

HUNGARY.

Financial Committee -- Foreign Trade and Debts -- Transfer Problem.

(FROM OUR CORRESPONDENT.)

BUDAPEST, October 26.

THE Financial Committee of the League of Nations, which has been investigating the position of Hungary at the Hungarian Government's request, has finished its inquiry and has communicated its report and recommendations to the Hungarian Government. With the exception of Mr Royall Tyler, who is to remain here as an adviser on behalf of the League, all the members of the Financial Committee and the League experts have left Budapest. Although nothing has been officially announced so far, the local Press is full of speculations as to the recommendations of the Committee. For anyone familiar with the financial situation it is not difficult to prophesy that the Committee has recommended the strictest economy in order to restore budgetary equilibrium. The cutting down of expenditure of the State and municipal budgets is urgent and imperative in view of the large deficit. The currency situation is such that a suspension of transfer was generally expected on all capital and interest payments, but according to the Press the Hungarian Government did not demand, and the League Financial Committee did not recommend, a transfer moratorium. As the maintenance of the basic financial structure of the country is clearly in the interest of Hungarians and their foreign creditors, it is worth while once more to examine the situation in the light of the latest developments.

Hungary's international balance of payments is determined by two main factors—merchandise trade and the service of foreign debts. The first nine months of 1931 disclose an adverse balance of merchandise trade of 28.5 million pengő, and the best that Hungary can hope is that the last quarter will offset the deficit. The development of the last four years is as follows:—

(In million pengő.)

	Imports.	Exports.	Balance.	Total value of trade.
1927	1182.3	807.6	— 374.7	1989.9
1928	1211.4	826.0	— 385.4	2037.4
1929	1063.7	1038.5	— 25.2	2102.2
1930	832.9	910.4	+ 77.5	1743.3

Imports in the first nine months of 1931 amounted to 429.3 million pengő as against 627.8 million in the corresponding months in 1930 and exports totalled 400.8 million pengő against 664.8 million a year ago. In August and September there was an export surplus of 25 million pengő, according to the official figures of the Statistical Department. Unfortunately the National Bank could not get hold of the total export devisen, and it will be fortunate if more than two-thirds of the export devisen are placed at its disposal in the future. As there is no active invisible item of importance the annual interest and sinking fund payment of Hungary's foreign debts, amounting to some 270 million pengő, cannot be met except by further borrowing. There is little chance of Hungary's obtaining funds abroad, and it is even doubtful whether it would be in her interest in the long run to maintain interest payments from new borrowing.

The total interest and sinking fund service of Hungary's funded debts amounts to 200 million pengő per annum. The interest on short-term debts at 7 per cent. roughly amounts to 70 million pengő, which makes a total of 270 millions. In the next twelve months exports will hardly exceed 500 million pengő in view of (a) the bad harvest, (b) falling prices and marketing difficulties, (c) import restrictions of Hungary's customers to safeguard their own currencies. Supposing that Hungary could restrict her imports to 20 millions per month, that is to say to 240 millions per annum—as against more than 1,200 million pengő in 1928 and 830 millions in 1930—there would

theoretically remain an export surplus of 260 million pengő, which would suffice to meet the service of Hungary's foreign obligations in full. The question, however, still remains: Where can Hungary place her export surplus? The marketing difficulties of the Danish farmers were amply demonstrated in a recent article in the *Economist* (page 749), yet the Hungarian farmers would consider themselves fortunate in their place. Hungary, being an agricultural country with no sea shores, has a very limited export radius. Consequently more than three-quarters of her export goes to the Successor States of the old monarchy and to Germany—countries all faced with the same problems as Hungary, i.e., how to produce a more favourable balance of trade to pay interest on foreign debts, as there are no further foreign loans available.

And yet who is bold enough to suggest that Hungary can restrict her total merchandise imports to one-fifth of 1928 or less than one-third of 1930 without paralysing the whole economic system and jeopardising the efforts to balance the budget which, together with the stability of the currency, are the very basis of the much-needed recovery?

It is not impossible to continue interest and sinking fund payments of the funded foreign debts in the respective currencies, but it is a dangerous experiment. There are 40 million pengő maturities between now and the end of the year, the transfer of which can be effected if there is a sufficient export devisen surplus or other sources such as private holdings of currency, whose surrender is made compulsory by Government Decree. It is obvious, however, that Hungary cannot pay 270 million pengő interest and sinking fund per annum in gold currencies so long as her total exports are scarcely twice that amount. Foreign creditors must realise that the radically changed price level requires readjustments of the payments due to them in the form of scaling down the 7 and 8 per cent. interest rates of the post-war period to 3 or 4 per cent. It is no good stipulating 8 per cent. for the prolongation of the short-term loans, because foreign creditors will be fortunate if Hungary can pay 4 per cent. on her foreign obligations. It should be borne in mind that Hungary has mainly at 7 and 8 per cent. borrowed in the years 1925-28 on the basis of wheat prices of 30 pengő. At present wheat sells at 8-9 pengő, which suffices to explain that even if all loans contracted in the post-war period had been ideally used, Hungary would be unable to transfer 7 and 8 per cent. interest in gold. The fundamental question for the future is Hungary's ability to transfer interest to her creditors. This depends on agricultural prices and marketing conditions abroad. Therefore the creditor nations would do well to use their political influence through the League and endeavour to bring about healthier economic conditions in Central Europe. The working out of a detailed scheme for future transfers could follow the lines provided by the Dawes Plan for Germany in 1924, with special considerations applicable to Hungary. It would perhaps be wise to provide that transfers should be on a sliding scale based on prices and the export surplus.

HOLLAND.

Import Restriction — Foreign Trade — Oslo Treaty — Stock Exchange.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, October 28.

THE Minister of Home Affairs has announced that a Bill for coping with the problems arising in regard to imports is shortly to be introduced into Parliament. The Bill apparently is to provide, by way of an emergency measure, for the taking of certain steps with regard to imports, if such are needed. This will be considered to be the case if the Netherlands market is threatened with a flood of imports from countries who are taking measures against each other. The new Bill differs from the anti-dumping law in that the latter is directed primarily against low prices. The present concern is with quantities. The Bill will naturally not be in contravention of

any existing commercial treaties. The Government has in mind quota systems, such as those being enforced by other countries, who are also committed by commercial treaties. They propose, however, to put these quotas into practice in a less objectionable fashion than is the case in some countries. The intention, apparently, is to preserve our home market as the normal outlet for our own agriculture and industry. Complete prohibition of imports is only to be considered as an extreme measure, and as this is not the primary intention of the Bill the new law is not likely to be regarded as inimical to foreign countries, where it is fully realised to what extent Holland's trade and industry are menaced from all sides under existing conditions.

In the circumstances it is uncertain whether the Netherlands' balance of trade can be maintained at the present level. Taking the figures quarter by quarter, it is obvious that the trade slump continues unabated, and in fact, in the third quarter of 1931, the value of imports and exports was 18 million guilders less than in the second quarter. The total for the first nine months of the year is also lower than in 1930 and 1929. Nevertheless, the situation is not without a hopeful factor, namely, that in the past quarter exports have been developing to a relatively more favourable extent than imports. This tendency in our trade balance at a time when danger may threaten our currency is distinctly a welcome sign. Statistics of imports and exports, for the first three quarters of the year, are shown below:—

	IMPORTS.		EXPORTS.	
	Weight. (Thous. tons.)	Value. (Mn. fl.)	Weight. (Thous. tons.)	Value. (Mn. fl.)
1st quarter, 1931	6,842	494	4,038	343
2nd quarter, 1931	7,423	423	4,235	334
3rd quarter, 1931	8,131	468	4,527	342
Jan.-Sept., 1931	22,396	1,454	12,800	1,019
Jan.-Sept., 1930	23,902	1,874	12,286	1,324

It is a striking feature that exports in the third quarter of 1931 show an increase both in value and in weight as compared with the second quarter.

In view of the depreciation of sterling, some further particulars as to trade between Holland and England may be of interest. Our commerce with England leaves a gradually increasing credit balance, but at the same time the aggregate value of our trade with Britain shows a decline. Our imports from England for the nine months, January to September, totalled 178 million guilders in 1930 and 119 millions in 1931. Exports were 294 millions and 248 millions respectively, leaving a balance of exports over imports of 116 and 129 million guilders respectively.

The Treaty of Oslo was ratified without a division in the Second Chamber last week. In reply to a question, the Minister stated that the English authorities had also been consulted with regard to joining the treaty, but that English legislation precluded England's participation in the convention. As regards Germany, negotiations are still in progress. The treaty provides that the signatories are to respect the interests of all the countries participating, but does not preclude the signatories from the right to levy temporary import duties of a fiscal nature.

As regards financial developments in the Netherlands, sterling has displayed a firm tendency, but pressure on the dollar and franc continues, in consequence of which there have been large importations of gold from America. There was also a shipment from Paris to the Netherlands. The majority of these gold shipments, however, were not for the Netherlands Bank, but on private account.

On the Stock Exchange the drop in the dollar rate of exchange, as well as the fact that dollars for forward delivery are at a considerable discount, has entailed great pressure on dollar bonds. German bonds, on the other hand, were firm owing to optimistic expectations with regard to the Hoover-Laval conversations. On the whole, however, an irresolute tendency has characterised the market, and the rise has not progressed further this week, as the Washington conference failed to yield any tangible results.

BELGIUM.

Banking Position — Stock Markets — Export Trade — Coal Agreement.

(FROM OUR CORRESPONDENT.)

LOUVAIN, October 27

THE crisis in the sterling exchange and the consequent aggravation of general uneasiness throughout the whole world have caused in Belgium real damage, though only on a limited scale. The sterling bills held by the National Bank of Belgium no longer constitute part of the gold reserve, which is now composed solely of gold metal. Losses on account of the previous sterling portion of cover of the note circulation will be very moderate and are to be borne by the State. This provision is all the more equitable since the Treasury has always received the interest on the invested part of the note cover. On the other hand, reduction in indebtedness (expressed in francs) in respect of sterling public loans has retrieved the loss suffered by the Treasury on the sterling portfolio of the National Bank.

The commercial banks have naturally also suffered losses on sterling assets, but, so far as is known, they have been of small amounts, except perhaps in one case. The stability of the Belgian banking system has not been undermined in the least. In the days following "Black Monday" (September 21st) the bankers felt some anxiety and largely increased their cash reserves. But public opinion has remained absolutely calm, and orders for substantial withdrawals have not been given to any bank. The quantity of gold demanded at the National Bank for hoarding purposes has been small, but here as well as in France the note circulation has been increasing largely.

In the present circumstances it may be opportune to recall the "mixed" structure of nearly all the Belgian banks; they deal in commercial discounts, accept deposits and are at present interested in the financing of industrial enterprises. This apparent lack of specialisation, which has been condemned by certain theorists, has not proved now to be a weakness in the Belgian banking system. No bank failures have occurred, nor have there been any disquieting rumours during the present credit pressure, a state of affairs existing in only a few countries at the present time.

General credit pressure has caused the repatriation of a considerable amount of Belgian stocks previously held abroad. America and Switzerland have sold Belgian railway stocks, and Holland has liquidated heavy amounts of Belgian Government securities. This has disturbed temporarily the Government securities market, but the stocks have been largely reabsorbed by purchases by the poorer classes in Belgium, who have transferred their funds from savings deposits. A stock syndicate was created at the end of September to support the industrial market. This plan was open to criticism, but its psychological effect proved successful. One milliard francs were put at the disposal of the syndicate, but up to the time of writing only a very small amount has been involved in the support of the market. By virtue of a special clause this organism may not deal in bank notes.

The depreciation of sterling has seriously disturbed the export industries. The iron and steel market has endeavoured unsuccessfully to maintain quotations in the gold pound, and the fall of sterling has, of course, had a harmful effect on the export of eggs, vegetables and raisins to Great Britain, and the prices of these products are at present abnormally low. On the other hand, the fall of the Danish crown has caused a decrease in the price of butter at a time when there is usually a seasonal advance. In these circumstances, the agricultural class is again beginning to clamour for protection. In spite of strong opposition the Government has refused to raise the price of wheat, but it will probably have to give way in regard to an increase of the butter import duty, which before the war amounted to 20 centimes per kilo., and has remained nominally at the same level in spite of the devaluation of the Belgian currency. It is

anticipated that this duty will be fixed at 1.40 paper francs, or 20 gold centimes. Agriculturists have also insisted upon an increase in the import duty on meat.

In regard to the future prospects of the coal industry, an official agreement has been entered into between German and Belgian pitowners. The Belgian collieries have agreed to a slight reduction of output, while the German concerns are to moderate their dumping practice. The present monetary situation has rendered British competition keener in certain districts of the country, and after much hesitation the Government has issued a decree limiting the import of coal through the establishment of a "licence" regime, to one-half the total tonnage imported in 1930. This measure has met with strong opposition from free traders, who have formed a committee, under the leadership of Professor de Leener, in an endeavour to bring pressure on the Prime Minister. Protest has also arisen against the limiting of imports of azotised manures.

In general, however, Belgium has faced the crisis comparatively well. The situation of the small agriculturist has been bearable, although the few interested in extensive cultivation have felt the depression more acutely. The balancing of the 1932 Budget and the situation of the Exchequer have been the most disquieting topics, and unless there is a very marked improvement in the general situation, a redressing of the budgetary position will be unavoidable.

SWEDEN.

Foreign Exchanges — Prices — Foreign Trade — Employment — Budget.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, October 27.

It is roughly a month ago that Sweden abandoned the gold standard, and a sufficient length of time has elapsed to enable one to form some idea of the effect of this step on the international quotation of the Swedish crown. Happily one can say that after the adjustment in a downward direction of the first few days, our currency has shown an almost surprising stability. Measured on the basis of the New York and Paris rates on Stockholm, the variations are remarkably small. According to the New York quotation, the Swedish crown gradually rose from 86.6 per cent. of the par value to 87.6 per cent., and then declined to 87.1 per cent. last week. Towards the end of last week the tendency took a downward direction, but not to any more marked extent; and it may therefore be stated that the Swedish crown, during the first month after the abandonment of the gold standard, has adjusted itself at a level approximately 13 to 14 per cent. below the old gold parity.

It is hardly to be expected that this factor will fail to make its mark on the level of prices. Has this already happened? It is naturally difficult, in view of the comparatively short period which has elapsed, to express any very definite opinion on this point. It is undeniable, however, that the commencement of a rise in the level of the prices of raw materials has begun to show itself. The only gauge which our country possesses in regard to this is the weekly index of prices of raw materials which is published regularly by the *Svensk Finanstidning*. On the British suspension of the gold standard this automatically reacted in a downward direction, but as soon as Sweden followed England's example there was a swing back in the opposite direction, and the index figure has since slowly but steadily crept upwards. The figure for last week was 93.8 (1913 = 100), as compared with 92.1 at September 17th. This certainly indicates no important rise, but it should be noted that since the beginning of the year the index has fallen consistently from approximately 100.

If these facts are relatively favourable, we have, however, this week had a new and serious reminder of the effect of the general depression on our economic position. The figures of foreign trade during September have now been published, and they show a surplus of imports of no less than 29 million crowns, whilst there is normally

a surplus of exports for the month. The adverse balance in our balance of trade has thereby, as anticipated, risen to the considerable amount of a quarter of a milliard crowns, or, to be exact, 255 million crowns, for the first three quarters of the year. Compared with the same time last year, this signifies a change for the worse of no less than 167 million crowns, as the surplus of imports then went no further than 88 million crowns, which already indicated a marked effect of the depressed state of affairs.

Further statistical data, also published during the week, have contributed to throw these figures into a strong light. According to the September report of the labour market, the average figure for the number of applicants per 100 vacancies certainly fell from 201 to 197. As the first autumn month in the ordinary way usually shows the most favourable figure for the year, this improvement may, however, be regarded as being of a fortuitous nature. It should, for instance, be borne in mind that the corresponding relative figure for one year ago was 146 and for two years ago 127; and it must be noted, above all, that the number of unemployed seeking assistance, as reported to the State Unemployment Commission, amounted at the beginning of September to about 36,000, as compared with 30,500 a month previously and only 6,300 a year before. Even if this is a particularly low figure compared with the majority of other countries, it is impossible, nevertheless, to misunderstand the tendency.

Against the background of this development it is extremely significant to be able to establish that the Swedish State finances have maintained a pronounced soundness. The result of the budget for the year 1930-31, in spite of the not very favourable course of events, was a small surplus which was placed to the so-called "exchequer fund," which was hereby increased to 76 million crowns. It is particularly worthy of note that the total influx of actual income to the State exchequer during the budget year exceeded the corresponding income from the boom period budget for 1929-30. In other words, Swedish national economy has been able to bear a further increased State budget, having recourse solely to the current income for the year. When it is borne in mind that the State budget has shown a great rise during a number of years, the question must, however, be put whether this continually increased demand can in the long run be met without an increased burden of taxation which can certainly scarcely be regarded as compatible with the position of affairs. It should, however, be noted in this connection that the actual income of the last budget amounted to 783 million crowns, whilst the actual expenditure went no further than 734 million crowns. There is, consequently, a surplus here of 49 million crowns, expenditure for capital increase having been financed from current income. It is scarcely necessary to give a reminder that 32 million crowns have been allocated for redemption of the national debt, a figure which can manifestly be reduced. The yield from the productive funds of the State, together with the profit of the State Bank, amounted to 164 million crowns, whilst interest on the national debt absorbed 82 million crowns.

NORWAY.

Trade — Bank Return — Bourse.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, October 26.

THE figures of Norway's foreign trade for September still reflect, to some extent, the consequences of the labour dispute and the general world crisis, although there is some improvement compared with the preceding two or three months. The total value of exports during the month amounts to 35.8 million kroner, against 57 million kroner in September last year, and about 26 million kroner for each of the months May to August this year. The only export items showing a higher value this year than last are metals, fats and oils. The value of imports amounts to 79.8 million kroner, as against 112.3 million

kroner last year, and some 60 million kroner during the months May to August, 1931. The value of ships imported declined by about 19 million kroner, compared with the corresponding month last year. The result of the first nine months' foreign trade this year is an import surplus of about 306 million kroner, which compares with 271 million kroner during the same period last year. Although, as already mentioned, the labour dispute and the crisis of the latter half of the month are responsible for this aggravation of the trade balance, the facts revealed above form the background, against which the call for "rationalisation" of our imports should be considered.

The Bank return as of October 22nd indicates a further conversion into gold of the bank's foreign balances, the item "Gold at free disposal with foreign banks" having increased by about 7 million kroner. On the other hand, there is a reduction in "balances abroad" from 15.54 million to 8.48 million kroner, while the item "foreign securities" remains unaltered. Deposits rose slightly, while there was a contraction of notes in circulation of nearly 2 million kroner. The favourable development already evidenced by the two or three preceding Bank returns thus seems to be continuing.

As far as foreign exchanges is concerned, the salient feature last week was the sharp appreciation of the pound, the quotation rising to 17.90 kroner on October 22nd. Transactions, however, have been on a limited scale only. Government securities continue to attract the interest of investors, and consequently prices have been rather firm, although some slackening was experienced about the middle of the week. Shares, on the other hand, attract little attention, with the exception of whaling and certain industrial stocks, e.g., Borregaard and Norsk Hydro. The latter have risen from about 125 to 145 in a comparatively short time.

SPAIN.

Budget Deficit — Bank Bond Issue — Industrial Conditions — Import Restrictions.

(FROM OUR CORRESPONDENT.)

MADRID, October 21.

THE past month has been marked by events of great political and economic importance. Business on the Bolsa has been practically at a standstill, with a large volume of offers still to be absorbed and quotations maintained at an artificial level by the Stock Exchange Committee. Transactions are, however, being made privately at prices considerably under the official quotations. The Minister of Finance has announced a budgetary deficit of 510,000,000 pesetas, of which 138,000,000 pesetas are on account of the ordinary budget and 372,000,000 pesetas due to expenses in connection with the railways. The former amount is to be covered by taxation and the latter by a loan, as soon as conditions are favourable for a public issue. The State revenues have declined in the past year by some 102,000,000 pesetas, the largest decreases being Customs 73,000,000 pesetas, Stamp Duties 11,500,000 pesetas, and the Tobacco Monopoly 4,300,000 pesetas.

The Bank of Spain has given its approbation to a projected public issue of short-term bonds to be made (under State control) by the Bank of Industrial Credit. These bonds will bear interest at the rate of 4 per cent. per annum for three months, or 4½ per cent. per annum for six months maturities, the total amount of the issue being 250,000,000 pesetas. A novelty is to be introduced in the form of an undertaking that buyers can at any time obtain reimbursement of capital and accrued interest, less 1 per cent., through any bank or banker registered in Spain. The latter will in turn be able to recover their disbursements by handing the bonds over to the Bank of Spain. It is, however, not stated whether the 1 per cent. deduction remains the property of the

private bankers. Public issues have been few and far between for some time past, and have fallen from 2,562,000,000 pesetas in 1929 to 724 millions in 1930, while the figure for the present year is likely to be smaller still. Consequently there is much curiosity as to how the public will receive the projected issue. Bankers do not consider the terms attractive in view of the quotations at present ruling in the market.

The Socialistic tendency of certain articles of the new Constitution, and especially that which gives workmen and employees in firms employing fifty or more men, the right to elect a representative on the board of directors, has caused a further slump in industrial shares, which have reached record low levels in spite of official intervention and restrictions. This effect has been further intensified by the possibility of serious trouble over the recent decisions on the religious problem, involving the separation of the Church from the State, the expulsion of the Jesuits and the eventual suppression of all schools run by religious orders.

A new electro-technical company has been formed in Madrid with a capital of 20,000,000 pesetas, subscribed by the A.E.G. Iberica and the Sociedad Iberica de Construcciones Electricas (SICE) on behalf of the following:—A.E.G. of Berlin, Société de Constructions Electriques et Mécaniques Als. Thom., Cie. Française Thomson-Houston and the International General Electric Co., of New York. The new company will work in close co-operation with the General Electrica Espanola, of Bilbao.

The present situation of the Spanish railways is far from encouraging. The 1931 figures to the end of August show that the gross receipts of the Northern Railway have decreased by 12 million pesetas (4½ millions for passengers and 7½ millions for goods traffic), as compared with last year. The Madrid, Zaragoza and Alicante Railway has earned 18 million pesetas less this year than for the same period in 1930, and the Andaluces-Sur, six millions less. No definite arrangement has yet been arrived at with regard to the future status of the Spanish railways, none of which are able to maintain their previous scale of dividends. With the ever increasing competition of the motor coaches, the effect of the present economic depression is considerably accentuated and future prospects are not very bright. The Government will probably consider the advisability of taking over the whole of the railway system as soon as possible.

Further restrictions have been placed on imports into Spain. It is now necessary to obtain a certificate declaring that the details of the imports have been registered with a special department of Customs, before any foreign currency may be purchased to pay for them. The object of this measure is to prevent foreign currency being purchased and not applied to commercial transactions; all applications will be checked by the Customs against the respective imports.

ROUMANIA.

Sterling Contracts — Future of the Leu — New Banking Law.

(FROM OUR CORRESPONDENT.)

BUCHAREST, October 19.

ONE of the first effects of the abandonment of the gold standard by Great Britain was the severe blow which was dealt thereby to the Roumanian export trade, in so far as existing unfulfilled contracts are concerned. As is well known, the principal export trades, i.e., cereals, petroleum and timber, have mainly been carried on on a sterling basis. To avoid loss caused by the fall of the pound, Roumanian grain exporters have declared that, unless they are paid in gold sterling, they intend to withhold delivery in respect of contracts made before September 20th. This attitude has naturally evoked energetic protests

from buyers. It is at best a one-sided interpretation of the contracts, as it does not take into account that the balance of payments between England and Roumania is against the latter country, and, if Roumanian creditors ask for payment in gold sterling, the same can be demanded from Roumanian debtors. It is not likely, therefore, that the request of the exporters will obtain official support.

The loss caused to the petroleum and timber industries, weakened as they are by the adverse conditions which have prevailed during the last two years, is also very serious. The import trade from England has not yet felt the benefit which might be expected from the changed conditions, as buyers are holding back in view of the uncertain value of sterling. On the whole, the depreciation of the pound has provoked a general feeling of uncertainty very prejudicial to commerce. Dealings in sterling, though temporarily active round the end of September, owing to quarter-day requirements, have dwindled considerably, and the rate is oscillating between 630 and 670.

The first feeling with which the British decision to abandon the gold standard was received was one of general consternation. This, however, did not last long. The National Bank announced that its gold reserve amounted to 31.66 per cent. of its liabilities, i.e., 6.66 per cent. above the legal minimum, and that, without counting its stock of sterling, the total cover in gold and foreign exchange amounted to more than the legal minimum of 35 per cent. This timely declaration did much to calm public excitement, while the shares of the National Bank and the various Government loans, both internal and external, soon regained the loss in price which they had sustained in the first few days of uneasiness. To judge by recent Press comments, it would appear that the Roumanian currency is entirely safe; and this opinion is supported by the intention of the Government, the principal party leaders, and the National Bank, to maintain at all cost the value of the leu. Nevertheless, the situation is not without its dangers, and to an unbiased observer it appears that the guardians of the Roumanian currency will be hard put to it to prevent its depreciation in the near future. In this connection one has only to point to the precarious economic situation of the country, the very narrow margin of the total reserve of the National Bank, the certainty of a heavy budget deficit this year, and the remote possibility of reducing public expenditure next year to such an extent as to bring it within the limits of the necessarily diminished revenue. Leading financial circles are, therefore, looking to the future with great uneasiness, particularly as foreign assistance, on which one had counted in connection with various schemes for ameliorating economic conditions, is not likely to be available for some time to come in the present state of the financial centres of the world.

The plan to regulate banking in Roumania has taken shape in a Bill published by the Minister of Finance and shortly to be placed before Parliament. The severe banking crisis, which came to a head last summer, has caused controlling circles to speed up this measure in order to safeguard the interests of the public. According to statistics now available, banks with an aggregate capital of about 479 million lei, of which 331 millions is paid up, and with deposits amounting to 947 millions, have failed in the years 1925-1930. Others with a capital of 296 millions, of which 228 millions is paid up, and with deposits of 1,212 millions, have made, or are in course of making, arrangements with their creditors. Other failures have only been avoided by the intervention of the National Bank and the State. The Bill fixes the minimum capital for joint stock banks in Bucharest at 80 million lei, and for those in the principal provincial towns at 40 million lei. The banks will be under the supervision of a Council composed of six delegates—one from the Ministry of Finance, one from the Ministry of Justice, one from the National Bank and three from the Roumanian Banking Association. Operations are divided into ordinary banking operations and those that require the special authority of the Council. To the latter belong the issue of deposit books payable to bearer, the issue of debentures, the issue of circular or travelling cheques, and the receipt of deposits at interest. Foreign banks are allowed to carry on banking business in Roumania if they conform to the provisions

of the law. At least one-third of the members of the board of directors (and of the council of auditors) in all banking companies functioning in Roumania must be Roumanian citizens. The Bill has caused widespread discussion and not a little resistance on the ground that it interferes too much in the management of the banks. On the whole, however, the measure has had a good Press. It is felt that some kind of control is necessary as Roumania is at present heavily "over-banked."

TURKEY.

Effects of British Gold Suspension — Foreign Trade.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, October 21.

THE Turkish Government successfully met the crisis caused by the British suspension of the gold standard. It immediately disconnected Turkish currency from sterling and adopted the French franc as the norm at 12.05 francs to the Turkish lira. Though the Turkish lira was not legally stabilised, it had been maintained at a fixed rate for some time by the measures of control exercised by the Consortium of Banks. The only difference made by the new situation is that sterling has depreciated to about 816 piastres to the pound as compared with 1,030 piastres. The Turkish lira has maintained its relative position in regard to other currencies. This is largely due to the fact that Turkish finances are not as greatly involved with sterling as, for instance, are the finances of Greece. The fact that the Republican Government has refrained from taking out new loans has borne its fruit in the comparative immunity of Turkish currency at the present crisis. The successful, if severe, monetary policy which Angora has adopted since the autumn of 1929 has enabled the country to carry on without the difficulties experienced elsewhere.

But there is no doubt that the national wealth has been considerably diminished by the fall of sterling. A very large proportion of the capitalist section of the Turkish population had placed part, if not most, of its liquid capital in sterling, owing to the comparative lack of confidence which was felt in the Turkish lira. But this is a reaction which will become of more importance in the future. Meanwhile, apart from the perturbations and restrictions of the exchange market, the main reaction of the gold standard suspension is that it falls very unfavourably on Turkish exporters, as this period is the principal Turkish exporting season, and contracts have already been made. The chief losers will be the exporters of raisins and cotton, which are for the most part negotiated in sterling. Tobacco, the principal export, will suffer less owing to the fact that sales are conducted in dollars and Dutch florins as well as in sterling. The fig export trade is in the same situation, as the major part of its exports is sent to the United States. But, in spite of these mitigations of the losses, there is no doubt that Turkish exporters are very badly hit. They are looking anxiously for a decision that sterling contracts should be paid in gold, and are urging official action in this direction.

While Britain has been steadily receding from the first place she held in the Turkish market before the war, and has now fallen to third place, Germany and Soviet Russia have been gaining ground. In 1924 Russia's proportion of imports into Turkey was only 3.2 per cent. of the total Turkish imports, but it had risen to nearly 8 per cent. by 1930. The trade balance between Russia and Turkey, however, remains unfavourable to Turkey, and the reports which have been current of large Soviet purchases in Turkey are not justified, but are probably propaganda to cover the campaign of imports into Turkey, where Russia wishes to regain many departments of the market. It appears that it is becoming practically impossible to get any but Soviet goods in the eastern provinces of Anatolian Turkey, where Russian textiles and machinery are sent in

large quantities. Even marine engines, which used to be a British speciality in the Black Sea provincial market, are now offered cheaply by the Soviets, and agricultural machinery is another line which is being strongly pushed all over the country, even to the extent of setting up repair stations and centres for spare parts. Rubber articles and cement are also coming from Russia in considerable volume. With regard to Germany, her imports in 1930 represented over one-fifth of the total imports into this country, and have risen from 9.2 million Turkish pounds in 1923 to 38.9 millions in 1929. These imports consist chiefly of steel and iron products, especially for railways, tramways, bridges and other heavy works of reconstruction. Owing to Swedish and Belgian groups having obtained the railway-building concessions, the material sent into Turkey for these works is mostly German. Germany is also one of Turkey's chief customers, and in 1930 took one-seventh of her total exports, but it is doubtful whether this rate will be maintained, owing to the fact that Soviet Russia last year captured the Turkish tobacco market in Germany. Tobacco has been the principal Turkish export to Germany, and it will be difficult to replace this loss.

There is also considerable anxiety felt on other grounds as to the future of the Turkish export trade. It is recognised that there is an indication of a general loss of markets as well as of discontent with the quality of Turkish goods. To meet this situation, an export office has been created, and is looking for new outlets, and endeavouring to devise means for the standardisation of Turkish export goods. A European packing specialist is to be engaged to modernise the packing system of the fig and raisin trade.

But perhaps the most interesting initiative to meet the new situation is the mission of the ex-Finance Minister, Saradjoglou Shukri Bey, to the United States. He has instructions to get into touch with the heads of the larger American industrial and commercial enterprises, and to consider how to stimulate their contacts with Turkey. The fact is that Turkey is beginning to see that her trade relations need fresh fields if the unfavourable commercial balance is to be corrected, and that these fresh fields are no longer to be found in Europe.

INDIA.

Foreign Trade — Rupee and Sterling — Taxation and Retrenchment — Rural Distress — Railway Deficit.

(FROM OUR CORRESPONDENT.)

CALCUTTA, October 17.

IN HIS voluminous analysis of India's foreign trade in 1930-31 the Director-General of Commercial Intelligence expounds the reactions of "one of the worst industrial and trade depressions in history." Suffice it to recall here that, during this disastrous year, the fall in the value of India's imports of private merchandise, compared with 1929-30, was, roughly, 76 crores, and in the value of her exports just over 90 crores. Exports, indeed, declined approximately to the pre-war average, namely, 220 crores against 219 crores, while imports totalled 165 crores against a pre-war average of 146 crores (pre-war in this calculation signifying the five years 1909-10 to 1913-14). These comparative totals have been quoted in order to underline the significance of the further decline in foreign trade in the current official year 1931-32, the figures at present available covering the five months April to August. In that period imports decreased, compared with last year, by Rs. 20 crores, or 26 per cent., and amounted to Rs. 56 crores, while exports of Indian merchandise dropped by Rs. 39 crores, or 38 per cent., to 64 crores; the grand total of imports, exports and re-exports amounting only to 122 crores, as against 182 crores, a decrease of 60 crores, or 33 per cent., even as compared with a year so unsatisfactory as 1930. The "treasure" figures are of almost equal interest and significance, especially in view of the recent shipments of gold which occasioned so much unnecessary perturbation. In the five months ending

August, India's imports of treasure (Government and private) decreased by 14 crores to 3 crores. Gold bullion fell by 4.60 crores to 45 lakhs, sovereigns and other British gold coin by 4.87 crores to 49 lakhs, and other coined gold by 2.16 crores to Rs. 29,000 only. The value of silver imported declined by 4.45 crores to 2.16 crores; and exports of treasure increased by 2.03 crores to 3.19 crores. It may be added that India's total visible balance of trade fell in these five months to 9.03 crores, against 13.75 crores in the corresponding months last year, and 21.81 crores in the same period in 1929.

The immediate effect of linking the rupee with sterling, following British suspension of the gold standard, has been to stimulate exports, and, in conjunction with the heavy new tariffs imposed in Sir George Schuster's Emergency Budget, to restrict imports. Three advantages are expected to ensue—an increase in the over-sea demand for, and a rise in the rupee price-level of, Indian agricultural produce; an increased demand for Indian industrial products, owing to the exclusion of competitive goods, especially from Japan; and a strengthening of exchange, resulting from the development of a more favourable balance of trade. Criticism of official policy has not been lacking, but has emanated almost exclusively from disappointed exchange speculators or from commercial organisations and political spokesmen amenable to them and anxious to promote their interests. As recognised by the leading financial journals, Indian as well as British, and by the Bengal National Chamber—which, on this issue, has expressed opinions in direct conflict with those broadcast from the Indian Chambers located in or controlled from Bombay—under the new arrangement, India has secured all the advantages of depreciation, for which the industrialists of Bombay and their satellites have been so loudly and persistently clamouring, without the previously-apprehended disadvantages in the form of loss of stability and an increase in the burden of the Home charges. As has been emphasised by so strong an opponent of the 1s. 6d. ratio, and so well-informed a critic as Sir Victor Sassoon, "the only people who would gain by the depreciation of the rupee in terms of sterling are those speculators who, having anticipated a drop in the value of the rupee, turned their rupees into sterling and now find that, although their prognostications have come true, there is no profit for them as sterling has dropped equally, because their profit depends on the difference between sterling and the rupee. What is, therefore, the objective of those who are criticising Government policy to-day? Do they want the rupee to drop to a shilling gold and then be pegged there by Government, or to drop to 9d. gold or 6d. gold, or what?"

To this query the only response forthcoming is the vague suggestion that the rupee should be permitted to "find its own level." One of the British commercial representatives in the Legislative Assembly estimated the amount remitted from India by the exchange speculators, who are now organising and financing anti-Government propaganda, at 40 crores (say, £30 millions); and, like the "cloth boycott," if the manœuvre succeeded, doubtless the money hazarded would prove a very profitable investment. The estimate quoted has not been challenged for the excellent reason that it is approximately correct; nor can it be doubted that, if Government allowed the rupee to drift, the money thus accumulated abroad would be brought back to India, and that the retransfer would leave a considerable profit in the hands of the speculators. If the purpose in view is to adjust the rupee to the lower prices obtainable for primary products, it is clear that a drop to 1s. 4d. (12½ per cent.) would not suffice, inasmuch as the price-level of agricultural staples has fallen 40 per cent. or more, and that, on this basis of reasoning, it would be necessary to depreciate the rupee to about one shilling, subject to any further adjustments necessitated by recent fluctuations alike in prices and in the gold value of sterling. Present conditions are, in any event, manifestly transitional, and this affords an additional reason for deferring final decisions, pending greater stability than at present exists, or than is discernible in the near future. Doubtless the outlook will be clearer when the new Federal Assembly materialises, and begins to function,

and, in that event, there might be a case for leaving the fixation of the ratio, in the light of the situation as it will then have developed, to its unfettered judgment. Although legalised only in 1927, the present ratio has actually been operative since April, 1925, and, up to the end of 1929, coincided with high prices for agricultural produce and great activity in foreign trade.

The effect of the new duties imposed last March having been a decline in Customs revenue of 10 crores, Sir George Schuster has raised the duties still higher in the vain hope of recovering the revenue thus lost. In reality, Customs duties in India have reached the stage whereat they have become subject to the law of diminishing returns. The official analysis of India's foreign trade last year, already mentioned, acknowledges on the one hand that a great portion of the fall in the value of imports was due to the fact that the Indian consumer has been unable to buy the imported commodities because of his depleted purchasing power; and on the other to the equally potent circumstance that the fall in prices in the case of exported articles, which go to pay for the imported articles, has been more than twice as great as the price fall for imported articles. The result of this change in the relative prices of exported and imported articles has been that the ryot could buy only smaller quantities of the imported articles than he could at times when the prices which he realised for his exportable products were more favourable. It seems clear that the progressive increases in the tariff can only accentuate the tendencies thus disclosed. When agricultural products are in many cases selling below cost, when industrial profits are nil or negligible, when salaries are low and income tax high, and when the gap between the price-levels of exports and imports is already so high, the only possible effect of higher tariffs must be to curtail imports to the irreducible minimum. Trade will contract, but official revenues will not expand. Lower tariffs, by stimulating consumption, might increase the income of Government. High tariffs, by cancelling or deferring purchases, will only reduce it.

Evidence has been adduced, from time to time, of the losses inflicted on the Indian cultivator not only by the lower prices of produce, but also by the decline in the gold value of silver, his favourite store of value. A further point, emphasised by the Indian Central Banking Committee, is the extent to which the present price-level has increased the real burden of Indian rural indebtedness. The Committee observe:—"The Punjab Committee have, for example, estimated that the total agricultural debt in the Province has increased from Rs. 90 crores in 1921 to Rs. 135 crores in 1929. The burden of indebtedness has really become much more crushing than can be judged from a comparison of the growth of its volume in rupees, when we take into account the fact that the fall in the price of the crops since 1921 has been roughly 50 per cent. To understand the full effects of this burden, we may state, for instance, that the increase of rural debt in the Punjab from Rs. 90 crores in 1921 to Rs. 135 crores in 1929 really represents a debt of Rs. 270 crores in 1930." As the total rural indebtedness of India is estimated at Rs. 900 crores, the general effect of the lower price-level can be estimated.

If further evidence is required of the slump in the internal, as well as the foreign, trade of India it may be found in the startling decline in railway revenues. Since 1929, the Commerce Member testifies, prospects have gone steadily from bad to worse, and we are passing to-day through a period when the revenue is falling off rapidly, when it seems that the income of the railways will be insufficient to meet their interest charges in full, and when the entire reserve fund, which seemed so substantial 2½ years ago, has been swallowed up; while at the same time the capital programme has been rigorously restricted to the barest essentials, and the strictest economy rigidly enforced in every branch of the administration. The gap cannot be bridged by imposing higher rates and fares, for the sole effect would be to reduce revenue still further.

HONG KONG.

British Gold Suspension — Anti-Japanese Demonstrations — Nanking-Canton Position.

(FROM OUR CORRESPONDENT.)

HONG KONG, October 6.

THE economic crisis in England and the subsequent departure from the gold standard came as an unwelcome shock. Trading interests were resigned to the depreciated dollar and had adjusted prices accordingly, deriving some consolation from the concurrent drop in commodity prices which had considerably offset the decline in exchange. But for some months past the possibility of a sudden rise in exchange had caused no little uneasiness. It was felt that such a contingency would have a most disturbing effect, and this has now been borne out by the course of events since Great Britain went off gold. The reaction of the crisis upon silver led to a hasty covering by exchange speculators, principally in Shanghai, and the rate of the Hong Kong dollar, which for some weeks previously had scarcely moved more than small fractions either side of 11½d., shot up to 1s. 2½d. within a few days, and later, after temporary setbacks, to over 1s. 3d. So marked a rise has naturally upset many calculations, and has created an atmosphere of uncertainty. Ultimately, no doubt, the prices of British manufactured articles will rise in proportion to silver, but, in the meantime, stocks imported at under 1s. are much above replacement cost. On the other hand, the fall in the New York-London cross rate places stocks of American origin in a favourable position, while Continental goods, which are usually purchased on a sterling basis, can only be replaced at prices equivalent to the gold standard sovereign. The home crisis occurred when the buying season for fancy cotton piece goods was practically at an end. There were, however, several offers still on the wires, but as soon as the Chinese dealers saw the way exchange was going they promptly withdrew their offers. This action was disconcerting to those importers who were in a position to close, and led to one or two disputes. The dealers have, however, decided that no further business is to be done, and, through their Piece Goods Guild, have notified importers accordingly. Very wisely the Guild members wish to protect themselves against being undersold by goods purchased on the basis of a higher rate of exchange. The current rate is 25 per cent. above that at which the bulk of the season's transactions have been booked, and, while it is now difficult to ensure shipment in time for the early spring clearances, the Guild's policy has forestalled a scramble which might have resulted in an appreciable quantity of piece goods arriving in time to disturb the market. As regards woollen piece goods, there was some apprehension as to the position of French and Italian manufacturers, whose orders are mainly financed through London. Fortunately, however, practically all the goods for this market had been shipped, and only in a few instances has there been any trouble in regard to payment in depreciated pounds. Apart from trade, the rise in exchange has had a depressing effect on the Stock Exchange. An abundance of money, which for the past two years has been pouring into the Colony, has found its principal outlet in the local share market. Many shares have been run up to a level far beyond their intrinsic value, and, despite the forebodings of the more conservative people here, nothing had occurred hitherto to check the rise. Undoubtedly the whole market was top-heavy, and consequently the stream of selling orders brought about by the rise in exchange has led to an all round sagging, which is likely to continue in view of the lack of buyers.

Interest in the development of the British situation was soon supplanted by events closer at hand. The political clash in Manchuria caused intense excitement in every trading centre in China, but Hong Kong has the unhappy distinction of being the scene of rioting which led to the slaughter of several innocent Japanese. The trouble started through the observance of a Day of Humiliation, when Chinese banks and business houses displayed their national flag at half mast and all entertainments and sports

events fixed for that particular day were somewhat ostentatiously cancelled. In the evening several open-air meetings were held and ended in a brick-bat bombardment of Japanese shops and cafés. The next day individual Japanese were attacked all over the Colony, and further serious riots occurred at night, a repetition of these events taking place on several days following, despite the strenuous efforts of the police. Then, on the fourth night, the mob attacked a Japanese house in an outlying district and caused the death of six of the inmates. This ghastly outrage led to a state of emergency being declared and troops from the garrison, as well as naval ratings, were called on to assist the police in keeping order, and are still being so employed. The presence of this additional force has been quite effective and, so far as can be judged, rioting is at an end. The anti-Japanese feeling is, however, still extremely bitter, and a boycott, which seems likely to last, is now in force. Chinese dealers have repudiated all outstanding contracts with Japanese firms and are refusing to handle any goods of Japanese origin. In fact, many of the Chinese shops retailing Japanese goods suffered very severely at the hands of the rioters, and in several cases the owners witnessed the destruction of their entire stock. Japan has become, during recent years, so indispensable as a supplier of Chinese necessities that it appears hardly possible for a stringent boycott to be maintained for any length of time. The spirit of hostility is, however, burning very fiercely in the breasts of the Chinese, and consequently orders, which formerly went to Japan, have now been diverted to Great Britain. Many lines of British origin which have long since ceased to be of interest to Chinese dealers are now in strong demand, and, thanks to the big jump in exchange coinciding with depressed prices at home, business is resulting, much to the astonishment of British merchants.

Considerable progress has been made towards healing the breach between Nanking and Canton, but complete reunion seems hardly possible so long as Chiang Kai Shek remains at the head of the Central Government. The past few months have shown a mutual desire to avoid civil warfare and both sides have been exerting every effort to come to terms. The Nanking peace delegates appeared willing to sacrifice their leader in order to conciliate the southern party, and reports foreshadowing Chiang's early retirement were circulated to the Press. However, Chiang seems to be firmly established, and, despite the unfortunate loss of Dr. C. T. Wang and the impending resignation of Mr T. V. Soong, the Central Government shows no signs of breaking up. As usual, the people of China carry on regardless of political dissensions, and in the southern provinces business has greatly benefited from the comparatively peaceful conditions which have prevailed during the past twelve months.

Letters to the Editor.

THE BALANCE OF PAYMENTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The great attention which is now being given to the question of this country's balance of international payments, and the big part which payments for commodity imports and exports play in determining that balance, requires that some critical scrutiny should be made of the propriety of using the figures returned by importers and exporters to the Customs authorities as indicative of the payments made by this country or to this country for imports or exports, respectively.

The Customs instructions regarding the value to be returned by importers are (1) "In the case of goods which are invoiced at a quoted price the value to be stated in this entry should be the prime cost with freight and insurance added ('c.i.f.' value)." (2) "When the goods are consigned for sale, the value to be given should be the latest sale value of such goods." In the case of exports, the instruction is simply "The 'f.o.b.' (or free on board) value should be given." There is ample evidence that (overlooking the ambiguity in the definition of "c.i.f. value") the Customs authorities are vigilant in ensuring that these instructions are carried out to the best of the ability of all concerned.

It does not follow, however, that the value stated on the import form is the actual amount which is remitted from this country in respect of the particular transaction, or that the value stated on the export form is the amount actually remitted to this country. Even when exchanges are stable, there may be appreciable discrepancy between the payments made and the Customs returns of value, while when exchanges are unstable, as at present, the discrepancy may be substantial.

There are so many different forms of organisations doing export and import business that it is impossible in a short statement to refer to all the ways in which these discrepancies occur. Foreign trade is not merely passing goods from a firm in one country to a firm in another, and passing an equivalent amount of money in the opposite direction. In the case of a certain commodity produced in South Africa, for example, the organisations dealing with it fall in one or other of four distinct categories: (a) Firms with headquarters on this side and a branch office on the other side; (b) firms with headquarters on the other side and a branch office on this side; (c) firms with headquarters on the other side and an agent on this side; (d) firms with headquarters on this side buying outright from firms with headquarters on the other side. Invoices are invariably passed, and when the firms or their representatives on this side receive the shipping documents for 100 tons of the commodity, valued at, say, £1,000, the same return is made to the Customs in each case, and our import records show an import of £1,000 each time. But in case (a) the amount remitted is what is necessary to cover expenses on the other side. At certain times this is more than the amount received here, and at other times considerably less, according to market conditions. In case (b) the amount remitted is the total received less certain (variable) expenses for the organisation on this side. In case (c) the amount remitted is the total received, less a fixed percentage. In case (d) the total amount involved is remitted. It is impossible to say which type of case is more prevalent. Rubber and mineral products probably fall much more under (a) than any other heading, machinery and capital goods probably fall more under (d). It seems clear, however, that there may be a substantial error involved in assuming that the aggregate of returns made to the Customs authorities is the same as the aggregate of the amounts remitted. Moreover, this would not be a constant error. In times of high prices it would probably be in one direction, and in times of low prices in the other. Within the very limited field with which I am acquainted, I should say that of recent months the Customs returns of imports are lower than the amount remitted abroad, while three years ago the reverse was the case.

In the case of imports consigned to this country, during a time of falling prices the amount actually remitted abroad is frequently below that returned to the Customs; while in a period of rising prices it is probably the reverse. During the past two years, it has frequently been extremely difficult for the firm making the Customs returns to know "the latest sale value of such goods." In a falling market each sale is made at a price lower than the previous one, and although the return made to the Customs is quite bona fide, it does not turn out to be the amount remitted abroad. Cases in which the difference has been as much as 30 per cent. have come to my notice.

During periods of unstable exchanges, however, the discrepancies can become much more serious. Since September 21st this has applied to our trade with many countries, but long before that date it applied to our trade with Argentina and Brazil, where the exchanges frequently moved substantially between the time of entering into a contract and in paying for the goods. The nature and extent of the discrepancy depends upon the particular method by which the contract is carried out, and which side bears the loss (or profit) on exchange. Cases have occurred in which the return, quite properly, made to the Customs has been at £7 per ton, but in respect of which the amount remitted out of this country has been 20 per cent. more.

In the case of goods exported there seems to be no reason to expect discrepancies where sales are made in sterling. An increasing number now, however, are not being made in sterling, and there will probably be many cases in which the amount remitted to this country when transferred to sterling will be less than the amount notified to the Customs when the goods were exported.

It seems impossible to get any idea of the resultant effect of all these factors, and to say whether as a consequence of them the adverse balance shown by the excess of imports over exports as given by the Customs returns is in excess or defect of the balance of remittances sent abroad. It is possible that at some times the resultant effect is in one direction, and at other times in the opposite one. It would certainly appear, however, that a substantial margin of error is possible in inferring from the balance of trade (as given by the Customs returns) what is the balance of foreign payments

in respect of commodities. So long as such a margin of error is possible in the biggest item in the statement of international payments, it hardly seems justifiable to take extreme trouble over the accuracy of some of the small items.

The figures of imports and exports were collected on their present basis long before the question of the balance of international payments was of practical importance. So long as the question of balance of payments was one of academic discussion only, these figures were quite good enough for the purpose. Now that very vital decisions may be taken on the strength of the balance of payments being, say, £10 million in one direction or the other, however, the figures are no longer adequate. There is a tendency among economists to accept without critical examination any data which are in existence which appear to serve their purpose, even though these data may have been collected for a totally different purpose. I think that a warning should, therefore, be given against using the foreign trade figures for any calculation regarding international balance of payments in which accuracy is important.—Yours faithfully,

E. C. SNOW.

THE ADOLESCENCE OF INDUSTRIALISM*.

In the early days of the London School of Economics students were wont to say that the difference between a pass man and an honours man was just this: a pass man was taught that the industrial revolution began in 1760, whereas an honours man was taught that it began in the days of Queen Elizabeth. Mr A. P. Wadsworth and Miss De Lacy Mann have produced a book* on the history of industrial Lancashire between 1600 and 1780, which confirms the honours student's darkest apprehensions. Incidentally, it makes full claim on his honours concentration; for undoubtedly it is a heavy book, packed tightly with the fruits of copious historical research, presented in much detail and closely integrated from chapter to chapter. Indeed, such claim might be regarded as almost merciless in its severity on the general reader were it not for the intimate human contacts with merchants and manufacturers, masters and men, slavers, inventors and company promoters, which are provided through the medium of very free quotation from letters, accounts, indentures, and the like.

The book is important as far as the student of industrial history is concerned, because in reconstructing with such close detail the industrial and commercial developments of the period 1660 to 1780 it helps to redress a certain lack of historical balance which has been caused by the concentration of so much research on the social upheavals of the late eighteenth and early nineteenth centuries. Mr Wadsworth and Miss Mann provide a rude awakening for the inadvertent general reader who may have chosen to assume that industrial, as opposed to commercial, capitalism sprang fully armed into the economic arena in the golden but insanitary age of Richard Arkwright. There is a rude awakening, too—or it may be an element of consolation—for the harassed Lancastrian of to-day who imagines that his present discontents in regard to international wage levels and Indian competition are peculiar to his own generation. For it appears that behind the inspiring expansiveness of the nineteenth century lie two hundred years of industrial growth, during which Lancashire grappled with such complications as "the competition of Holland, where all the poor were believed to work for six days a week cheerfully, and of France, where the people were credited with living on nothing but bread and garlic," not to mention losing battles such as that fought by Lancashire cottons against Indian cottons in the African market between 1751 and 1780. But perhaps the most significant factor

* "The Cotton Trade and Industrial Lancashire, 1600-1780." By A. P. Wadsworth and Julia De Lacy Mann. Manchester University Press. 25s. net. Pp. xi.-539.

which emerges from the book is the complexity of the commercial machinery which took shape at a stage in the history of the textile industry when industrial capitalism and technique were comparatively undeveloped (though less undeveloped than the student of such matters has hitherto been led to suppose). It has been suggested by some modern critics that the horizontal disintegration of processes is a contributory feature in the present decline of the Lancashire cotton industry. If the obstinate survival of a system is to any extent conditioned by its antiquity, the book under review throws light upon present-day industrial organisation, for that disintegration has its roots in the period under review. What one might call the commercial and financial pattern of the industry was, it seems, plotted out more than a century in advance of the mechanical revolution of its technique. And plotted out, as we learn on page 53, in the light of a "high degree of practical individualism," free with the sturdy spirit of Lancashire freedom, from those Elizabethan conceptions of ordered industry to which Stuart policy sought to give a new lease of life. With this thought the reader may well ask himself whether it is not possible that the rationalism of one age may stultify the rationalisation of another.

In conclusion, it should be added that the authors deserve congratulation on the happy manner of their collaboration. Having demarcated their respective spheres, each writes under his or her own name, yet without disturbing contrast of style or breach of continuity.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Onward Industry. By James D. Mooney and Alan C. Reiley. (London) Harper and Bros., 90, Great Russell Street. 21s. net.

A presentation of the history of the principles of organisation in all its aspects, written with a view to providing the key to their more efficient application to industry.

Investment Trusts. By Hans Seischab. (Stuttgart) C. E. Poeschel Verlag, Calwerstrasse, 18. Rm. 8.75.

The author is primarily interested in working out "an economic theory of investment trusts." The bulk of the book is occupied by an analysis of different types of trusts. The text is in German.

Weeds in the Garden of Marriage. By George Pitt-Rivers. With an Introduction by Sir Arthur Keith. (London) Noel Douglas, 38, Great Ormond Street. 3s. 6d.

A study of the problems of race and population, their application to social and political questions and their reactions on religious opinion.

The Economic History of England, 1760-1860. By Arthur Redford. (London) Longmans, Green and Company, Limited, 39, Paternoster Row. 3s. 6d. net.

A useful little book for the student of economics, based largely on monographs published during the last decade.

Essai sur la Nature du Commerce en Général. By Richard Cantillon. Edited with an English Translation by Henry Higgs. (London) Macmillan and Company, Limited, St. Martin's Street. 15s. net.

A reprint of Cantillon's work, interleaved with an English translation and followed by Jevon's article on Cantillon and a chapter by Mr Higgs on the author's life and work.

A Money Market Primer. By George Clare. New and enlarged edition revised by Maurice H. Megrahan. (London) Effingham Wilson, 16, Copthall Avenue. 6s.

An up-to-date edition of a standard textbook.

Crises, Finances and Industry. Crises in Brazil. By Roberto Simonsen. (Sao Paulo) Editora Limitada imprimiu, rua Brigadeiro Tobias, 78-80.

A discussion of some of the economic problems of Brazil.

Some Aspects of Fiscal Reconstruction in India. By Gyan Chand. (London) Oxford University Press, Warwick Square. 4s. 6d. net.

A collection of six lectures on taxation in India, delivered in Patna in 1927.

Denmark, 1931. Compiled and published by the Ministry of Foreign Affairs and the Statistical Department, Copenhagen.

In addition to more general information this year book contains a descriptive account of all aspects of the Danish dairy industry.

The Moral Issue in India. By Robert Stokes. With an introduction by the Rt. Hon. Lord Meston. (London) John Murray, Albemarle Street. 1s. net.

An outspoken statement on British responsibility in India.

Algunos Problemas Actuales de Nuestra Política Bancaria y Monetaria. (Buenos Aires) Instituto de Economía Bancaria.

An essay on Argentine monetary problems.

The Annals of the American Academy of Political and Social Science, September, 1931. (London) P. S. King and Son, Orchard House, Westminster.

This issue is devoted to a consideration from all angles of the American prison system.

Die 40 Stunden-Woche. By Theodor Leipart. (Berlin) Verlagsgesellschaft des Allgemeinen Deutschen Gewerkschaftsbundes, Insetstr. 6a. Rm. 3.60.

A collection of essays, written from the Labour point of view, on the possibility and desirability of reducing working hours in Germany.

Bulletin of the British Library of Political and Economic Science, September, 1931. Edited by B. M. Headcar. (London) London School of Economics, Houghton Street. 6d.

This number of the Bulletin contains a special bibliography of the Five-Year Plan of the Soviet Union.

The Law Relating to Insurance Agents and Brokers. By J. B. Welson. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street. 5s. net.

A textbook for students of accountancy.

Empire Review, October, 1931. (London) Macmillan and Company, Ltd., St. Martin's Street. 2s.

The "Lancet" Commission on Nursing. Second Interim Report. (London) The Lancet, Limited, 7, Adam Street, Adelphi. 6d.

A most valuable source of information on the conditions of the nursing profession.

Economic Investigations in the Hyderabad State, 1929-30.

Vol. I. General Survey. By S. Kesava Iyengar. With an introduction by B. Abdy Collins. (Hyderabad) The Government Central Press. 7s. 6d.

A summary of investigations into the economic conditions of the districts of Mahboobnagar and Nizamabad, Nanded, Warangal, Aurangabad and Raichur.

The Political Quarterly, October-December, 1931. (London) Macmillan and Company, Ltd., St. Martin's Street. 3s. 6d.

Contains a symposium on the present crisis by G. B. Shaw, H. J. Laski, J. H. Hobson, G. Lowes Dickinson, A. Zimmermann and others.

Compte Rendu des Travaux de la Commission de la Dette Publique d'Égypte pendant l'exercice 1930-31. (Cairo) Imprimerie Nationale.

A detailed official record of the Egyptian public debt.

Bulletin de l'Institut International de Statistique. Published by the Institute at The Hague.

The three sections of the Bulletin deal in turn with demographic, economic and social statistics.

International Review of Agriculture, August, 1931. (Rome) Bestetti and Tumminelli, 32, Via Michelangelo Caetani.

Just Published.

THE COURSE OF THE COMING BOOM IN SECURITIES.

by L. L. B. ANGAS

This remarkable publication, appearing the day following the collapse in sterling, and forecasting the stock market movements which have since occurred, will prove invaluable to investors as a guide in the forthcoming months.

Mr. L. L. B. Angas's forecasts of stock market movements have, in the past, shown an uncanny accuracy, as witness his publications "The Coming Rise in Gold Shares" and "The Coming Collapse in Rubber." This latest publication can be equally recommended.

The Stock Exchange.

ARGENTINE RAILWAYS.

SHAREHOLDERS in British enterprises in all new countries must be prepared to take the rough with the smooth. In 1928-29 the leading British-owned railways in the Argentine reached a pinnacle of prosperity after seven years of the most rapid economic development in the history of the country. In 1929-30, however, the first onset of world depression synchronised with a partial crop failure, and reduced railway net earnings below the level of 1922-23. During the year which ended on June 30th last hopes of better crop yields were largely borne out, but a further disastrous fall in prices entirely nullified their effects. Hampered by reduced Argentine purchasing power and, until the revolution of September, 1930, by their relations with an inefficient and comatose Government, the railways cut expenses to the bone, suspended or severely reduced capital expenditure on developments long overdue, and were still unable to pay dividends on their ordinary shares at the end of the year. Though the accounts published this month may conceivably register low-water mark so far as earnings during the present depression are concerned, the absence of an early improvement would leave holders of prior charges by no means in an assured position.

The following table shows how last year's results on the "Big Four" Argentine systems compared with those for 1929-30:—

GENERAL RESULTS, 1929-31.

	B.A. Gt. Southern.	Central Argentine.	B.A. and Pacific.	B.A. Western.
Gross Receipts { 1929-30	£ 12,214,562	£ 11,567,717	£ 7,854,906	£ 4,381,349

* After adding other income and deducting other expenses (interest, &c.) and exchange losses.
† Final dividends on 6 per cent. preference and second preference not paid.

The Great Southern and the Central Argentine just covered, and the Pacific and Western failed to cover their preference dividend requirements last year. The Pacific declared no final dividend on its 6 per cent. preference and second preference stocks, for the first time in ten years. The Great Southern and Central, however, shared the distinct achievement of maintaining their net railway earnings at approximately the level of the previous year, both systems reducing working expenses by a larger percentage than the fall in revenue. The severe reduction in income suffered by their ordinary shareholders was due partly to the sound decision of the boards against any further inroads on cash reserves, but mainly to circumstances totally unconnected with railway working. That the Great Southern earnings available for fixed charges were one-

third and the Central Argentine's one-fourth less than in 1929-30, after both had been approximately "all square" on net railway receipts, is a measure (as will be shown later) of the heavy cost to the railways of the depreciation in the Argentine peso.

The Pacific and the Western made a less satisfactory showing than the Southern and Central. Both suffered a significant reduction in gross receipts, and, being unable to effect proportionate reductions in working expenditure, were left with declines of over 25 per cent. in net railway receipts. In addition to exchange losses, the Western was faced with a drop in receipts from dividends on its investments in the Railway Petroleum Company and heavier interest allowances. The net result was that a 10 per cent. drop in gross receipts was swollen to a 42 per cent. decline in earnings available for fixed charges on the Pacific, and a 13 per cent. drop in receipts to a falling off of nearly 63 per cent. in net earnings on the Western. In both cases receipts for the first sixteen weeks of the present year have run very close to last year's level, and, in the absence of any substantial improvement with the marketing of this season's crops (which so far do not promise a large quantitative increase over last year's figures), the immediate outlook for preference shareholders is not promising.

The troubles of the railways can be traced directly to the shattering effect of world trade depression and low commodity prices on Argentine economy. Though a greater courage in the employment of the national gold reserve might have postponed the depreciation of the peso, no unilateral action by the Government could have prevented it, having regard to the extent of Argentina's external obligations and the collapse in the price of her staple export commodities. The impact of these conditions has affected the railways in two ways. In the first place, they have been compelled to write off formidable losses, not only on money remitted to London for stores, dividends, etc., but also in respect of depreciation of floating assets, which are carried in their accounts at sterling figures. The significance of these losses, from the stockholder's point of view, may be appreciated from the next table:—

EXCHANGE LOSSES.

	B.A. Gt. Southern.	Central Argentine.	B.A. and Pacific.	B.A. Western.
Loss on remittances { 1929-30	£ 188,839	£ 124,905	£ 69,714	£ 76,531
1930-31	632,560	789,915	330,387	197,039
Other exchange differences { 1929-30	£ 430,892	£ ...	£ ...	£ 103,848
(deprec. of floating assets, &c.) 1930-31	...	...	...	...
Total exchange losses { 1929-30	£ 188,839	£ 124,905	£ 69,714	£ 76,531
1930-31	1,063,452	789,915	330,387	300,887
Equivalent percentage on ordinary capital { 1929-30	0.6%	0.4%	0.7%	0.4%
1930-31	3.3%	2.8%	3.3%	1.7%

* Includes all exchange differences.

The Argentine authorities have recently supported the exchange by gold exports, the stock of metal in the Conversion Office and the Argentine Legations abroad having been reduced by \$124 millions—from \$448 millions to \$319 millions—between June 30, 1930, and September 2, 1931. The peso, which a year ago stood at over 38d., has recovered only to 33½d. from the low-water mark of 30½d. touched last August, when sterling was still on the gold standard. The Government's decision this month to go further, and establish official "control" of the exchange, is likely rather to vex and embarrass the railways in making future remittances, than to limit their losses.

A second main cause of the depression in railway earnings has been the straitened economic circumstances of the whole Argentine population. This conclusion is

strongly suggested by the following comparison of last year's receipts with those of 1929-30:—

RECEIPTS, 1930-31.

* Also wine, 543,000 tons, a decrease of 16.3 per cent.

All the railways, except the Pacific, succeeded in approximately maintaining the volume of their passenger traffic, but only at the expense of fare concessions, which considerably reduced total receipts on all lines but the Great Southern. Passenger receipts, however, do not normally account for as much as one-third of the total revenues of the Argentine systems, whose prosperity depends mainly on a large volume of outward traffic in goods, constructional materials, etc. Last year the grain trade was comparatively active, the maize crop being the greatest ever harvested. All the lines carried a higher tonnage of cereals than in 1929-30, particularly the Central Argentine, which is much the most dependent of the four on this class of traffic. Livestock transport was well maintained on the Southern and the Central, though a decline was registered on the Pacific and the Western.

The most serious feature in every case, however, was a widespread falling off in general merchandise receipts. Argentina's success in converting an unfavourable "visible" national trade balance of \$36 millions gold in the first half of 1930 into a favourable one of \$42 millions in the first six months of 1931 was due to lower imports, which declined in value by 25.3 per cent., while exports fell by 5.5 per cent., despite an increase in the value of no less than 71.4 per cent. The improvement in the trade balance was thus achieved at considerable cost to the railways, who were unable adequately to offset their losses on inward traffic, despite their haulage of an increased volume of native-grown agricultural products.

Their success in reducing working expenses was, at first sight, a great achievement. It is necessary, however, to examine the detailed figures somewhat closely in order to discover the main sources of the reductions:—

WORKING EXPENSES, 1930-31.

Total (including other items) ...	7,959	- 9.3	8,182	- 5.3	5,557	- 2.8	3,042	- 8.9

Apart from an increased allowance for permanent-way maintenance on the Pacific Railway, all four companies

achieved their economies in working expenses less by way of lower running expenses than by way of reduced allowances for maintenance. Though part of the latter saving reflected the lower cost of raw materials, and involved no departure from the high physical standard maintained on all four properties, it is clear that the immediate scope for further large-scale economies of this nature is severely limited.

Stock Exchange prices of all Argentine railway stocks have, naturally, fallen heavily during recent months, as our final table shows:—

MARKET QUOTATIONS.

† Based on a 3 per cent. dividend paid for the year 1930-31.

The market at present, paradoxically, views the outlook for the prior securities of all four companies with a certain conservatism, as evidenced by the high dividend yields obtainable at current prices, but maintains the ordinary stocks at prices which discount a considerable recovery in earnings.

What is the outlook for existing stockholders? The position of the four companies is clearly not identical. The Great Southern and the Central Argentine have so far shown greater resilience, in the face of depression, than the Western and the Pacific. The last-named company, in particular, has a large mileage in territories still in the development stage. Since last June the Central Argentine has improved on last year's corresponding gross receipts figure by about 10 per cent., while the figures for the Great Southern have fallen in approximately the same proportion. The crop season is as yet too little advanced to render such comparisons of great practical value, but current indications strongly suggest that even a good crop year cannot be expected to increase the earnings of the railways sufficiently to restore junior stocks to an assured earnings basis, except possibly on the Central Argentine. Nor can the railways hope to gain anything from higher rates and fares in view of the impoverishment of the community they serve. Even if the Argentine elections of November 8th return a strong administration which will continue the energetic policy of the Provisional Government of the last thirteen months, the restoration of prosperity is largely dependent on world factors outside Argentina's control. Low prices and the "bounty" of a depreciated exchange have already stimulated Argentina's export trade to a remarkable extent. Putting on one side, however, such imponderable questions as the possible effect on Argentina of any attempt by a Conservative-National British Government to divert wheat purchases from non-Empire to Empire sources, a substantial enhancement in the value of Argentine external trade and the volume of internal purchasing power is likely to be a slow process in the absence of a considerable rise in world prices. On a long view, the future of the railways, under strong British administration and finance, need cause stockholders no loss of sleep. Their potentialities for immediate expansion; however, have lately received a sharp check, and their securities must necessarily remain in the speculative category pending the revival in general trade, for which stockholders in many other countries besides Argentina are anxiously waiting.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

THE firm tendency of the Gilt-edged and industrial markets continued without check right up to the end of polling day. A steady stream of small orders came from the public, but inside interests showed more concern as to a possible recession after the election. An emphatic Government victory was expected, but the size of the majority took the entire market by surprise, and proved embarrassing to those who had sold "majorities" at prices below 200. The broadcasting of election results into the early hours made the approximate extent of the landslide a matter of public knowledge before the opening of the Stock Exchange on Wednesday, and an early start of business found the majority of stocks marked higher by dealers as a precautionary measure. After a preliminary spurt of orders had been executed, however, it was found that while small investors were still buying, some large interests were potential sellers. Prices immediately receded, and on Thursday profit-taking was much in evidence. Gilt-edged stocks, simultaneously, suffered a setback on Thursday's fall in sterling. Speculative shares failed to advance as a result, mainly, of the irregular tendency of commodity prices.

Steady investment demand kept Gilt-edged prices firm at the beginning of the week, 5 per cent. War Loan going above par before being quoted ex dividend on Tuesday. Victory Bonds were good, but Funding Loan failed to hold an early rise. An all-round marking up of quotations followed the announcement of the result of the election, but a decidedly more reactionary tendency occurred on Thursday, when the pound was sold from the Continent. A rise in India loans was due more to the technical position of the market than to increased business. Australian issues gained further ground on a moderate but intermittent demand.

Though the foreign bond market was never active, dealings continued to broaden, and the range of really "negotiable" stocks was extended. German issues were weaker on the negative results of the Hoover-Laval conversations, but Hungarians strengthened after the issue of a League of Nations' report declaring the ultimate position of the country to be sound. A fair inquiry was received for Greek bonds. South American issues were steady, and Japanese held their ground despite the absence of a positive result to the League of Nations' mediation in the Manchurian dispute.

Interest in the home rail market tended to shift from ordinary stocks to "depressed preferences" and prior charges. The traffic figures showed some improvement on those of the previous week, particularly on the London and North-Eastern, but gave no definite sign of a marked increase in transport activity. The undertone of foreign railway stocks was firmer, but no increase in business resulted. Tentative inquiries for certain prior stocks of the Argentine railways revealed a shortage of supplies, but the cautionary note sounded by the chairmen at the week's meetings restricted movements in ordinary shares, despite the firmness of the peso exchange. American rails had a downward trend, and Canadian Pacifics showed weakness.

Most sections of the industrial market shared in pre-election optimism, except international securities, which were dull in sympathy with America and the Continent. Cables and Wireless were strong on the improved showing made by the September traffic figures, but reacted after the election. Textiles were again in demand early in the week, the unfavourable report of British Celanese (analysed on page 826) making slight impression on the market. Courtaulds, Joshua Hoyle, and Bradford Dyers were bought from the North, but became easier later. Electrical shares were in steady demand, and coal and steel issues continued to attract buyers. Both classes, however, suffered from profit-taking before the end of the week. Motors were irregular, Leyland failing to hold an initial rise. Imperial Chemical ordinary touched par but fell back on profit-taking. Store shares were firmer, but closed below the best. Brewery and tobacco shares had an undecided trend. A steady demand persisted for the

best shipping issues. Insurance shares met a steady investment inquiry, and fractional improvements occurred in bank shares.

The oil share market was depressed, Continental selling, particularly from Amsterdam, affecting prices at the outset, while subsequently the postponement of the Mexican and Canadian Eagle dividends (discussed on page 827) proved an adverse factor. All the leaders were marked down on the news. Signs of activity in the rubber market were barely perceptible, the commodity showing no signs of strength, while the optimists of the industry were subdued by the announcement that the new Governor-General of the Dutch East Indies was unfavourable to Government-controlled restriction. Tea shares, however, were firm, though business remained on a moderate scale.

Business in the mining markets continued to be predominantly professional. Kaffirs had a firm tone, but failed to advance materially in the absence of further news from South Africa regarding the future of the gold standard. Tin shares hardened slightly on purely "sentimental" factors, but copper shares were easier owing to fears that the conference in America would achieve no real measure of agreement. The main factors in the copper position are set out on page 827.

FOREIGN STOCK EXCHANGES.
NEW YORK.

The stock markets remained under the influence of depressed psychology. The *communiqué* summarising the results of the Hoover-Laval talks was interpreted to mean that the President had subscribed to the French view as regards reparations, while refusing any concession to the French thesis of "security." Generally, disappointment was expressed at the negative outcome of the negotiations. German bonds, in particular, being sold. A more immediately depressing influence, however, was the passing by the Illinois Central Railroad of its common dividend for the first time in living memory. Scepticism as to the position of the railroads was confirmed by the published figures of 31 companies for September, which showed a drop of 43 per cent. in net earnings as compared with September, 1930, and of 52 per cent. as compared with September, 1929. The plight of many of the smaller banks throughout the country continued to provoke comment, but the National Credit Corporation was not regarded as having made as much progress as those behind it had hoped. Further reports of wage reductions were discussed, associated with the name of Ford among others. The slightly firmer tendency of commodity prices encouraged a few short-lived attempts at a rally in share values, but the trend of markets as a whole was weak. Reports from various centres showed a slow recession, partly seasonal, in general business. Car

loadings in the week ended October 17th were 762,000, as compared with 764,000 in the previous week and 931,000 in the corresponding week of 1930. The Business Index of the *New York Times* stood at 67.2, against 68.3 in the previous week. Markets enjoyed a firmer tone on Thursday after a poor opening.

* 2-hour session.

PARIS.

Despite the general satisfaction provoked by the overwhelming victory of the British National Government, the general tone on the Paris Bourse was undecided. Suez Canal shares registered a further sharp decline early in the week on rumours of reduced dividends and a cut in the canal tolls. Disappointment at the absence of more positive outcome from the Hoover-Laval conversations induced a wave of liquidation and a general fall in prices, Royal Dutch losing nearly 100 points on rumours that the interim dividend was to be postponed. Gold mining shares proved a more satisfactory feature. Bank shares continued to evince marked weakness, while the uncertain German outlook, the fear of an early British tariff, and the postponement of the "twin" Eagle dividends contributed to a further reaction. At the time of going to press there has been no improvement, and further small losses have been incurred all round.

AMSTERDAM.

The Amsterdam Bourse opened the week in quietly cheerful mood, with German bonds firm and industrial steady. Profit taking, however, soon induced weakness, and sharp declines occurred in Royal Dutch and Philips Lamps. Rubber shares were on offer, and a depressed tone was noticeable in tobacco and shipping shares. Prices continued to sag, with A.K.U. and Amsterdam Trading in the forefront of the decline. The British election results failed to change the listless tone of the markets, or to induce any increase in the volume of business.

OTHER CENTRES.

Other centres presented a mixed appearance, but the general tendency was irregular. Brussels suffered from continued liquidation, while Stockholm and Milan were little better at the outset. Later in the week, however, Swedish business tended slightly to broaden, and Copenhagen was firmer, on balance. The Vienna Bourse reopened on Tuesday, under new regulations providing for the restriction of business hours to 11.30-12.30 each day. Exchange dealings in foreign currency remained under a ban. The reopening was accompanied by no untoward incident, the tone being quiet in the extreme. Unofficial dealings in Berlin showed a further decline in values, Dye Trust being "done" at 97 (against 103.50 a week earlier), Siemens at 117.50 (against 123), A.E.G. at 36 (against 42), and Reichsbank at 97 (against 103).

INVESTMENT NOTES.

The Election and the Markets.—The Stock Exchange may be forgiven its high spirits on Wednesday morning. It had expected the triumphant return of a National Government, but its bewilderment at the astounding results can well be imagined. In the general elation on Wednesday, British Government stocks and British industrial shares were all marked up by dealers in anticipation of a big public demand. But the only prices which held their rise were "majorities" which had jumped from 205 at the close of Tuesday to 485 at the opening on Wednesday. The large public demand for securities did not materialise, and prices came back in every market, although the closing level on Wednesday was above that of the previous day. Thursday morning again brought no increase in the public demand, and in the afternoon prices in the industrial share markets fell sharply. Government stocks were also flat on the reaction in the dollar exchange, which, after a jump to 3.92½ on Wednesday, came back on Thursday evening to 3.86½. It is not difficult to explain the behaviour of markets. The "professional" traders who, on account of cash dealings, have to sell within three days if they wish to avoid taking up the stock and paying stamp duty, were naturally anxious to take profits. In the absence of an inrush of orders this profit-taking brought prices down. But there was no evidence that the in-

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 821.)

vestors who had recently bought British industrial shares for the long-term had at all changed their minds. Anticipations of an improvement in the position of British trade following the devaluation of the pound sterling resulted in a good deal of real investment buying. It may be that, when more is known of the intentions of the National Government, genuine investors will come back into the market. At the moment there is a wise disposition to wait upon political events. The following table gives the fluctuations in prices which occurred in representative stocks on the eve of the election and after:—

	Oct. 27. (Close.)	Oct. 28. (Opening.)	Oct. 29. (Closing.)
Associated Portland Cement, £1	26¼	27½	26½
Babcock and Wilcox, £1	54½	54½	52½
Coats, £1	48½	50½	47½
Courtaulds, £1	2½	2½	1½

Staveley Coal and Iron, £1	29½	29½	28½
Vickers, 6s. 8d.	10½	11½	9½

The Stock Exchange may be congratulated on not taking leave of its senses—as yet. If industrial share prices had risen sensationally, speculators would have been attracted and the wrong type of market activity would have been seen. Now that prices have fallen sharply, real investors may be attracted. There is some reason to believe that the Stock Exchange Committee may restore “dealings for the account” next week, on the assumption that the danger of an inflationary boom is past.

“Majority” Dealings—Heavy Differences. — It is believed that some makers of “books” in election majorities will have to meet differences running into considerable sums on November 10th, which has been agreed on as “Settlement Day.” Although a fair amount of bear selling took place whilst the quotation was under 150, many of these bargains were closed as the figure rose towards 200. The more or less steady increase in the quotation right up to the eve of the election suggested that the market’s obligations to buyers of majorities exceeded those to sellers, and it is known that some large transactions took place on the eve of the poll. Presumably a good deal of “hedging” was done by those concerned, many of whom may have profits on shares, accrued during the last six weeks, to set against their losses on “majorities.” Whether the settlement will be carried through without difficulties remains to be seen, but it would be highly unfortunate if a pure gamble, without rhyme or reason, were to involve such unfortunate consequences. There would be little regret if, in future, election dealings were dropped completely. They do no good to the reputation of the “House.” Those who undertake them have no special facilities for obtaining knowledge of the progress of electoral campaigns, and are at the mercy of those who possess such information. Lord Rothermere, for instance, who was reported to have been a buyer of “majorities” at a high stake at just under 200 on Monday, has an organisation at his disposal for obtaining intelligence of the feeling of the country on the eve of a poll which no Stock Exchange member can hope to rival. The whole business is a species of guesswork with unlimited liability, and, as such, does not deserve the

space accorded it in British and foreign newspapers as a barometer of pre-election feeling, or the expenditure of the time and money of members of the “House.”

Railway Rates in the United States.—Last July, the American railways applied to the Interstate Commerce Commission for a flat increase of 15 per cent. in the level of freight rates. After a series of nation-wide hearings before members of the Commission (as already reported in the *Economist* of September 26th last) the decision was made public on October 20th. The application, in the form presented by the American railways, has been refused absolutely. A flat increase in all rates, such as was permitted during the early post-war period, has not been allowed. On the other hand, the Commission has granted increases on certain commodities which are expected to bring in added revenue amounting to £25,000,000. This compares with £84,000,000, which the railways themselves deemed necessary as a minimum to protect their credit and to preserve the trustee status of their bonds, which are largely held by trust and insurance companies, and by banks. The increased rates are to apply to heavy railway traffics, such as iron, iron ore, coal and so forth, which are unsuitable for diversion to competitive means of transport. They are to be levied on a car-load basis irrespective of distance handled. Preference was expressed in favour of such a basis for increasing revenue by important industrial interests at the Commission’s public hearings. Its application, however, will undoubtedly result in disorganisation of the very fine marginal advantages at present held by competitive producing areas. Further, the granting of the increases is subject to the pooling of the added receipts, so as to assist the weaker lines and enable them to preserve their credit. In view of the refusal of the railways to countenance any such pooling suggestion when it was advocated by the National Industrial Traffic League at the hearings, it was doubtful for some time whether the railways would accept the small increase permitted on such a basis. Subject to an amendment by the Interstate Commerce Commission stipulating that the railways must repay sums obtained from the pool for fixed charges before paying dividends, news received up to the present would seem to suggest that the railways will accept the offer of higher rates after all. The question of pooling receipts is of considerable interest not only from the economic but from the legal side, and many believe that the Interstate Commerce Commission has exceeded its powers in this respect. That the decision has failed to benefit railway credit is clear from the fact that the prices of several stocks have touched new low records for this year since the decision was published. The position is still obscure in some respects. Fuller information as to future policy, however, should be available during the first week in November. In the meantime, a recovery in American railway shares can scarcely be expected. Such events as the passing of interim dividend payments by the Illinois Central, for the first time for nearly eighty years, have not improved the situation.

Uruguay Railway Payments.—The debenture holders and proprietors of the Central Uruguay Railway, of Montevideo, and of those companies worked and controlled by it, have been informed that, for the time being, the remittance of funds for the payment of debenture interest and dividends in foreign countries has been prohibited. The law provides that the equivalent in pesos, which would normally have been used for purchasing exchange, must be deposited in a local bank, and that the funds thus accumulated are to be released for remittance, as to 25 per cent. each month, after January 1st next. The stocks affected are those of the Central Uruguay, Central Uruguay Eastern Extension, Central Uruguay Northern Extension, Midland Uruguay, Midland Uruguay Extension, and Uruguay Northern. The accounts of the Uruguay Northern Railway, though no worse than was to be expected, nevertheless show a decline in net receipts of £2,909, and an exchange loss of £4,497. A debit balance of £2,916 is carried forward.

United Railways of Havana.—Chiefly as a result of the low price of sugar and the restrictions imposed by the Chadbourne plan, the earnings of this once prosperous railway have fallen to the lowest level in its history. Receipts for the year to June 30, 1931, amounted to £1,943,199, compared with £3,207,177 in 1929-30, and £1,895,323, against £2,856,821. The ratio of expenditure to receipts was 97.54 per cent., compared with 89.08 per cent. last year. After debiting the full year’s interest on debentures and other charges, there remains a debit balance amounting to £591,964, leaving a total deficit to be carried forward of £886,958:—

	1929.	Year to June 30, 1930.	1931.
	£	£	£
Railway receipts ...	3,802,998	3,207,177	1,943,199

Debt interest	667,056	663,911	614,884†
Net profit	179,723	Dr. 326,278	Dr. 591,965
Preference dividend	177,713	88,856*	...
Carried forward.....	120,141	Dr. 294,993	Dr. 886,958

* Interim only.
† £51,244 paid and rest accrued and held in suspense under Scheme of Arrangement.

The reserve account stands at £1,199,617, while general renewals reserve account, which now amounts to £17,562, has been debited with £54,585 in respect of special expenditure during the year. With regard to the scheme of arrangement sanctioned by the Court on July 28, 1930, it is reported that no profits were available in cash during the year, and consequently no debenture interest has been paid with the exception of that upon the 4 per cent. debenture stock, which has been regularly met from the proceeds of the dividends received on the shares of the American and Foreign Power Company. The ordinary stock is quoted at 4, against a high level of 107 in 1925.

Labour on the Argentine Railways.—In a leading article on an earlier page we give our reasons for taking a conservative view of the immediate outlook for British-owned railways in the Argentine. The chairmen’s speeches at this week’s annual meetings have reflected a similar attitude, tempered by the mild optimism generally considered appropriate on such occasions. In Argentina itself the managements are taking energetic measures to secure an amelioration of present working conditions. This week’s issue of the *Railway Gazette* contains a letter from an obviously well-informed correspondent in Argentina, declaring that the directors and legal representatives of the foreign-owned railways have now addressed a memorandum to the Director-General of Railways, in which they state that, failing a reduction in salaries and wages, they will be compelled to resort to wholesale dismissals. The matter has been discussed with the two big railwaymen’s unions—Union Ferroviaria and La Fraternidad—who admit the necessity for wage reductions, but insist on concessions in other directions, the refusal of which has brought matters to a deadlock. The railways maintain that labour costs have risen out of proportion to other factors. They point out that the B.A. Western Railway, for example, paid out of every \$100 of revenue some \$36.01 in wages in 1917 and \$61.24 in 1930-31. The percentage increase in gross receipts and in the wage bill respectively on eight foreign-owned lines since 1917 is given as follows:—

	(INCREASE SINCE 1917.)	Receipts (Per cent.)	Wage Bill (Per cent.)
Central Argentine.....	113.40	188.02	190.09
B.A. Gt. Southern	97.93	159.51	116.19
B.A. Western	52.59	99.22	144.77
B.A. and Pacific	59.91	156.72	163.08
Provincial de Santa Fe...	48.55	...	...
Cordoba Central	87.06	...	...
Argentine North-East ...	77.73	...	...
Entre Rios	122.47	...	...

It remains to be seen whether the railways will be able to effect a much-needed reduction in their costs without the occurrence of labour troubles, which would be particularly unfortunate at the present moment.

Gramophone Merger.—Although the first apparent result of the merger of the Gramophone and Columbia companies was the reduction in the price of records, further advantages of the combination are likely to be exercised in favour of the shareholder. It is understood, by those in close touch with the gramophone industry, that the policy adopted by Electric and Musical Industries may actually increase trade competition between the two constituent companies. Both will operate independently, formulating and carrying out their own policies. Data relating to each company will, however, be in the hands of the holding company’s board, which includes the higher executives of each concern and will act as a general headquarters, directing operations from the rear. Production figures, costs, factory output, etc., are all to be overhauled. Should it be found, for example, that two factories are working only at 50 per cent. of capacity on a similar product, one company will cease production of the article in question, and allow the other to operate at 100 per cent. The sales organisations, however, will be left to work independently and competitively, so far as this policy is calculated to lead to greater efficiency and profits. A vigorous sales drive by the Gramophone Company, backed by the biggest advertising campaign on which the company has ever embarked, has just resulted in the Gramophone Company’s announcement that it has taken on nearly 2,500 additional hands at its Hayes factory where, with three shifts, production is kept going day and night the week round. It must not, however, be expected that Electric and Musical Industries will be able to show results at all comparable with those of the two separate companies in the year ending June, 1930, which was the last financial year reported. Although trade in Great Britain has improved, the position in Germany, France, Japan, or America may not be equally good; in the gold standard countries, in fact, it may well show a certain falling off. The capital of Electric and Musical Industries is now £6,266,000, divided into 5,806,000 ordinary shares of £1 and 460,000 6 per cent. preference shares of £1. It is believed that

Thieves, Ancient and Modern

THE CHATWOOD SAFE

Has a strong deep hold upon Bankers and those with treasure to protect.

It gives a feeling of confidence that only work of quality can give.

The protection lies in the strength of the defence, while the design embodies the experience of the past and the knowledge of the present.

What The Chatwood Safe has it holds, for delivery only to the keeper of the key.

It is the cheapest Safe that can be bought having regard to the contented security offered.

J. E. S.

THE CHATWOOD SECURITY

THE CHATWOOD SAFE CO., LTD.,
Bankers' Engineers,
SHREWSBURY, England.

the merger company has £2 of assets for every £1 of issued capital. The preference shares are quoted at 20s. and the ordinary shares at 31s. 10½d., as compared with a low level this year of 18s. 9d.

British Celanese.—Disappointment with the figures of the report for the year to June 30th last is not removed by the board's assurance that the larger volume of orders now in hand should result in substantial profits during the coming year. This may well be, but shareholders, who have heard the same story with depressing iteration in the past, may be excused a certain scepticism. The year's figures cannot be readily compared with those for 1929-30, partly because the last accounts covered a period of sixteen months and partly because writings-off for patent rights, royalties, depreciation, obsolescence, etc.—all items of special importance in a new and rapidly developing industry like artificial silk—have not been identical in the two years. In particular, nothing has been written off commutation of royalties this year, nor has any depreciation been charged, the directors defending the latter decision on the irrelevant plea that only a small part of the plant has been in operation and that the year's results were adverse. We show below a comparison of this year's figures with those of the previous period, re-expressed on a twelve months' basis, and have added a final column showing the approximate extent of the loss for 1930-31 if depreciation had been allowed on the same scale as in 1929-30:—

	1929-30 16 Months. £	1929-30 Proportionate Figures for Twelve Months. £	1930-31 Actual Figures. £	1930-31 Adjusted Figures if Depreciation had been made on 1930-31 scale. £

Net profits, after deducting all above items	514,535	385,901	Dr274,625	Dr474,625

* Auditors' report declares that nothing has been written off Commutation of Royalties for 1930-31. No allowance has been made for this in the re-calculation above. On the last occasion on which the amount was shown separately in the accounts, some £23,754 was allowed.

In 1929-30 the company paid eighteen months' dividends (£166,250) on the first preference shares, and similar dividends, aggregating £378,516, on the second participating preference shares. The first preference received a half-year's dividend for 1930-31, but no final is being paid, the company carrying forward a debit balance of

£99,385. The text of the chairman's speech at the meeting on Friday of this week was not available as we went to press. The present market price of 9s. for the 10s. ordinary shares is difficult to justify, since it would appear that, sooner or later, the question of a fresh reduction of capital must be faced. Undoubtedly, the company has had exceptional difficulties to contend with in recent months. According to a trade correspondent, the depression of the past twelve months has affected acetate yarns more than viscose yarns. Competition and price-cutting have been keener than ever. The weaving plant has had a difficult trading period, marked by a continual decline in stock values. In this respect the trade has frequently complained of the bewildering changes in policy made by the company. The chemical side of the business has, similarly, been depressed, and the labour situation has been disturbed. Employment at the Spondon works has improved recently, but, it is understood, is still below normal, and has certainly not gone far enough as yet to justify extravagant market expectations. Apart from preference dividend arrears, profits would be required to raise £1½ millions above last year's level before the company could pay 10 per cent. on its ordinary shares. But the company is still carrying £3,276,129 of intangible assets (goodwill, commutation of royalties, new issue expenses, etc.) in its balance sheet, and a considerable part of its buildings, plant, etc., valued at £7,003,985, is standing idle.

Insurance Share Index.—In the table which follows we analyse the history of an investment in 1913 of £1,000 in the ordinary shares of each of 25 leading companies. The figures are based on the mean of the highest and lowest prices in each year, except in the case of the last four columns, which relate to the middle market prices on the dates specified. In all cases where an issue of bonus shares has been offered due allowance has been made by assuming that the rights are sold and the proceeds utilised to purchase an additional holding in the original shares:—

During the first quarter of the current year the customary upswing in the index on anticipations as to dividends failed to materialise, and the index fell slightly. During the second three months of the year there was a further and more pronounced fall, but nearly the whole of the depreciation which has occurred this year has been concentrated in the last three months, which, as will be seen, were responsible for a decline of 18 per cent. It was scarcely to be expected that insurance shares could escape the effects of the general Stock Exchange depression, since insurance companies have been hit not only by falling premium incomes but also by depreciation in their securities. Nevertheless, interim dividends for the current year have been universally maintained, and the recent rise in sterling commodity values, along

with the devaluation of the £, must bring prospects of increased business. Compared with the depreciation on industrial shares during the last three months the depreciation in insurance shares appears to have been overdone. According to the Actuaries' Investment Index industrial shares declined during that period by 7 per cent.—less than one-half the decline in insurance share values. The result is that, according to the same authority, the average yield on insurance shares stands for the first time for a very long period at over 6 per cent.

Copper Prospects.—No agreement has yet been reached by the copper producers who are sitting in conference in New York. A premature report that the price of refined copper had been hoisted to 8 cents a pound was not confirmed. The official quotation of the Copper Exporters, Inc., remained at 7½ cents c.i.f. Continent, but smelters in America are still offering electrolytic at 7 cents. The London price of electrolytic has remained this week at £42½ per ton. Since the end of March refined stocks have increased from 354,000 to 480,000 tons. It is estimated that the present rate of world consumption cannot be much greater than 1,000,000 tons per annum, while production so far this year has been at the rate of 1,520,000 tons per annum. The world's total stocks are gradually increasing by about 30,000 tons a month at the present. The unsatisfactory stock position is seen in the following figures:—

	(In thousands of metric tons.)	End Sept., 1930.	End Sept., 1931.
U.S.A. refined	361.1	478.9	
U.S.A. blister	227.0	178.2	
Stocks elsewhere	18.4	46.6	

The problem of restriction is a very real one. Next year the new Rhodesian mines begin to enter the production stage. So far the American producers have borne the full brunt of the restriction, as will be seen from the next table:—

	U.S. Mine Production. Tons.	World Smelter Production. Tons.
Monthly average 1929	75,000	159,000
" " 1930	52,200	136,400
" " 1931	40,600	115,200
January, 1931	43,600	116,800
February, 1931	43,100	117,700
March, 1931	44,200	122,200
April, 1931	42,100	115,600
May, 1931	41,400	117,400
June, 1931	40,300	115,600
July, 1931	35,000	110,800
August, 1931	35,300	111,200

American mine production has been curtailed by 50 per cent. since 1929. World smelter production, if the two may be compared, has declined only by 30 per cent.

Mexican and Canadian Eagle Oil.—The directors of the Mexican and Canadian Eagle Oil companies have announced their decision to postpone dividends on the first preference shares of both companies, payable on October 31, 1931, until information is available regarding the trading results for the year. Under the terms of the mutual guarantees entered into by each company, if one company makes a loss and the other a profit, the company with a profit applies to reserve the amount of the other's loss. It then pays its own first preference share dividends and, if there is a balance available, the dividends of the first preference shares of the company which has made a loss. The same rule applies to the payment of dividends of the participating preference shares. We assume from the directors' statement that Canadian Eagle has been adversely affected by the fall in the price of crude oil, and possibly by the fact that it is operating on a gold basis and selling partly on a sterling basis. If the Mexican Eagle has two differences in exchange to meet, both companies must necessarily wait until the end of the year to ascertain their exact position, since any loss on Mexican Eagle would then be applied to the accounts of Canadian Eagle. We do not suggest

that any such loss has occurred, but the directors, in any case, may prefer, as a precautionary measure, to postpone the decision regarding the payment of dividends on the preference shares until the end of the year. In 1930, the Mexican Eagle, after allowing for depreciation, earned 5,818,114 Mexican gold pesos, which was sufficient to pay the first preference share dividends of 1,153,206 gold pesos and the 8 per cent. participating preference share dividends of 272,000 pesos, and to leave a balance available for the ordinary shares sufficient to pay a dividend of 6 per cent. (3,379,863 pesos) and to increase the carry forward by over 700,000 pesos. The Canadian Eagle, which has a settled business of refining the oil purchased from the Venezuelan Oil Concessions and selling the refined products to the Anglo-Mexican Petroleum Company (apart from its shipping business, carried on by the Eagle Oil Transport), showed a profit of 6,929,905 Canadian dollars. This was sufficient to pay the first preference dividends of \$1,094,953, the participating preference share dividends of \$204,119, a dividend of 12 cents on the ordinary shares (\$1,455,392), and increase the carry forward by \$1,230,000. One cannot, therefore, assume, at this stage, that the preference share dividends of both companies will not be paid at the end of the year. It may be added that both companies are required to operate a sinking fund for the redemption of the preference shares. The market prices of both preference shares dropped on the announcement. Mexican Eagle first preference were dealt in at 6s. 6d. on Wednesday, against 7s. 6d. on Monday, and Canadian Eagle first preference at 9s. 6d., against 10s. 6d.

Wanderer Consolidated.—From the production standpoint, writes our mining correspondent, this reorganised Rhodesian proposition fared considerably better last year than in its initial period. The substantially increased tonnage of 182,650 was crushed, for a slightly higher average yield than before, at the reduced cost ratio of 14s. per ton. The operating profit of £63,000 compared with £20,400. From the balance of £18,800 carried over from 1930, the preliminary expenses of £6,960 were written off. After deduction of administration expenses and income tax a surplus of £67,440 remained, and was carried forward. On June 30th last the liquid cash assets totalled £57,560, and 10s. remained to be called up on 50,000 shares. Creditors stood at £23,800. On the development side, results have not come up to anticipations. Far from being accompanied by expansion in the ore reserves, the performance of a largely increased amount of underground work has entailed reconsideration of the position. The ore bodies display extreme irregularity, and it has been found inadvisable to assume them to be continuous from one level to another.

ESTABLISHED at the most important commercial centres in South America and Portugal, the Bank of London & South America Ltd. is particularly well equipped to carry out modern banking business of every description.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

Accordingly, in the new estimate the ore reserves have been classified into two sections—(A), material immediately available for milling, amounting to 225,000 tons, having a value of approximately 5 dwts., and (B), 257,000 tons of "indicated" ore. This requires further development, and its value cannot be stated. The total falls 148,400 tons short of the 1930 computation. In the light of these facts the projected extension of the treatment plant has been postponed. Presumably, the projected introduction of the shares on the London Stock Exchange has been held up for similar reasons.

COMPANY MEETINGS, &c.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED.

REASONS FOR SETBACK.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Company, Limited, was held, on the 28th instant, at River Plate House, London.

Mr H. C. Allen (chairman of the company), in the course of his speech, said:—Like other apparently impregnable undertakings, we have had to bow to the storm of economic trouble which has overtaken the whole civilised world, and to suffer a decline—I hope only temporary—of our prosperity. The causes of this decline are, broadly speaking, the severe fall in prices of the prime commodities produced in our zone, the consequent commercial depression and reduced spending power of our clients—the public users of the railway—the reduced value of exports, resulting in pronounced weakness in the exchange, and the difficulty of rapidly enforcing economies, particularly in labour costs, to meet the altered conditions.

There was a falling off in receipts under the principal heads of passengers, parcels, goods traffic and miscellaneous, while livestock traffic showed a small increase. In nearly all departments reductions in expenditure were shown. For many years past we have made a practice of charging against maintenance generous allocations to the general renewal fund, which has not been drawn upon to the same extent. This provision has resulted in the accumulation of £7,941,000 at credit of the general renewal fund.

The accounts show that, after charging the loss on exchange, there is still a balance of £715,914 at credit of net revenue, but, although this is equivalent to over 2 per cent. on our ordinary stock, we decided that it would be most unwise to recommend a final distribution. Our duty is to maintain the credit of the company and to avoid risk of jeopardising its financial stability.

The Chairman, having dealt at length with the question of exchange and the steps taken to effect economies, said:—I should like to point out that the Great Southern is now in its seventieth year, and since its incorporation in 1862 it has never in any year failed to pay a dividend on its ordinary stock. Over the last nine years the average distribution has been exactly 7 per cent. per annum.

The report and accounts were unanimously adopted.

BUENOS AYRES WESTERN RAILWAY COMPANY, LIMITED.

BRIGHTER OUTLOOK FOR CURRENT YEAR.

The forty-second ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held, on the 26th instant, at River Plate House, Finsbury Circus, London, Mr Follett Holt (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The past year proved beyond measure distressing and difficult. Two years ago the Western was in calm water; we were able to pay our 7 per cent. dividend and carry forward a large sum. Last year, when our crops failed and exchange began to break, we had only a fair wheat crop and carried a small part of a bumper maize crop, but prices were so low that exchange failed us completely, commerce fell to pieces, and we have had to pass our divi- dends, commerce fell to pieces, and we have had to pass our divi- dends. Comparing our sterling operating profits of three years ago with the year under review, there is the enormous difference of over £1,300,000. The loss of crops in the one year and the low prices in the other impoverished our clients and affected all classes of traffic, and, added to the crash in exchange, played havoc with our revenue.

Up to the point of being a cause of acute disturbance in a somewhat heavily charged political atmosphere, we have done everything within our railway knowledge and ingenuity to meet the adverse factors with which we have been faced.

In London we have all made personal sacrifices, and so have our representatives and headquarters and general staff in Argentina, and progress is being made with the various unions to carry these sacrifices right through the whole of the organisation.

As to this year, as we have some 300,000 tons of grain more on hand to carry than at the same date of last year, and as there is such a marked rise in prices, the general outlook is brighter.

In spite of all difficulties, I am glad to be able to report to you that, with economies and the aid of the heavy maize crop, which is making some amends for the falling off of general traffic, we have secured for the first three months of the current year better sterling results than for the same months of last year, and we hope this progress will continue. But final results must depend largely upon the crop outcome and upon exchange—two factors which remain in the lap of the gods.

The resolution was carried unanimously.

STOCK MARKET LOSSES.

£10·2·1 a month

enables a healthy man aged 40 next birthday to re-create his estate to the extent of

£5,000

(Larger or smaller amounts proportionately)

NOTICES.

The retirement is announced, as from October 31st, of Mr John J. Meagher, Manager in London of Williams Deacon's Bank, Ltd., after forty-seven years' service. Mr C. H. Scott, the present sub-manager, will succeed Mr Meagher as manager at Birchin Lane. Mr Meagher entered the service of the bank in Manchester in 1884 and in 1893 he received an appointment at the West End office of the bank in London, of which he became manager in 1912. He was appointed to the City office as manager in London in 1912. He is well known in London in City and financial circles, has been a member of the Council of the Institute of Bankers for the past nineteen years, and is a director of the Alliance and Dublin Consumers' Gas Company. He is a liveryman of the City of London and a Past Master of the Worshipful Company of Makers of Playing Cards.

Barclays Bank, Ltd., announce the opening of a new branch at Church Lane, Kingsbury Green, N.W.9.

CANADIAN EAGLE OIL.—The directors have decided to postpone a decision regarding the payment of the dividend on the 7 per cent. first preference shares, payable on October 31, 1931, until they have available information regarding the trading results of the year 1931. For 1930 the full dividend was paid on the 1st preference shares, 23.88 cents per share was distributed on the participating preference shares, and the ordinary shares received 12 cents per share.

F. W. WOOLWORTH AND COMPANY.—The directors have declared an interim dividend of 1s. 6d. a share, or 30 per cent., on the ordinary shares of 5s. each, and a dividend at the fixed rate on the six per cent. preference shares for the five months ending November 30th, both payable on December 1st. The company has an issued capital of £8,750,000, of which £5,000,000 is in preference shares and £3,750,000 in ordinary shares. In June last 4,260,000 preference shares and 2,250,000 ordinary shares were offered for sale, the former at par and the latter at £2 a share. The dividend now declared is therefore the first to be announced on those shares. Holders of the shares that were offered for sale are reminded of the provision in the offer that the shares represented by fully paid provisional scrip certificates which are not surrendered to N. M. Rothschild and Sons for registration prior to November 3, 1931, will be registered in the names of N. M. Rothschild and Sons' nominees. Holders of provisional scrip certificates will be entitled to receive transfers of shares 14 days after surrendering the certificates to N. M. Rothschild and Sons, the appropriate transfer duty and any incidental expenses to be payable by the transferee.

MEXICAN EAGLE OIL.—The directors have decided to postpone a decision regarding the payment of the dividend on the 7 per cent. 1st preference shares, payable on October 31, 1931, until they have available information regarding the trading results of the year 1931. The full dividend was paid on these shares last year and, in addition, 8 per cent. was distributed on the participating preference and 6 per cent. on the ordinary shares.

TEXTILES TRADING CORPORATION (BERLIN) (BANK FÜR TEXTILINDUSTRIE A.G.) (20-YEAR TRUST CERTIFICATES).—It is announced that there is available in the hands of the trustees a fund sufficient to admit of a distribution among the holders of the above certificates at the rate of £25 per £100 nominal. In order to participate in the above distribution, certificate holders must lodge their certificates with Messrs Helbert, Wagg and Company, Ltd., 41 Threadneedle Street, E.C.2, from whom listing forms may be obtained. Certificates will be retained three clear days for examination, after which they will be suitably endorsed and returned, together with a cheque for the appropriate amount to the person by whom they are deposited. It is recommended that certificates should be deposited through a London banker, as payment through the post can only be made at the holder's risk.

THE CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO, LTD.; THE CENTRAL URUGUAY NORTHERN EXTENSION RAILWAY; THE CENTRAL URUGUAY EASTERN EXTENSION RAILWAY; THE MIDLAND URUGUAY RAILWAY; THE MIDLAND URUGUAY EXTENSION RAILWAY; THE URUGUAY NORTHERN RAILWAY.—The directors consider it their duty to inform all debenture holders and proprietors of the Central Uruguay Railway and those companies worked and controlled by it, of the receipt of cable advice that a law has been passed in Uruguay prohibiting the payment of dividends in foreign currencies. The law further provides that the equivalent in pesos which otherwise would have been used for purchasing exchange must be deposited in a local bank and that these accumulated funds will be released for remittance, as to 25 per cent. each month, after January 1st next. Full representations have been made to the Uruguayan Government, but in the circumstances it is impossible for the directors to make any forecast as to the ability of the company to meet its obligations at due dates.

UNILEVER.—The boards of Unilever, Ltd., and Unilever N.V., have each declared an interim dividend on their ordinary shares, which in the case of the Dutch company is 40th on every share of 1,000th. The £1 shares of the English company have been taken as equal to 12th each, so that the equivalent dividend on the shares of the English company amounts to 48 Dutch cents per share. This amount, converted into sterling at the rate of exchange ruling, is 1s. per share.

VENESTA, LTD.—As far as can be ascertained at present, the company's trading for the year ended June 30, 1931, will show a small profit, but not sufficient to cover the dividend on the company's 7 per cent. cumulative preference shares. In the circumstances, and in order to strengthen the cash position, the directors have decided not to pay the dividend for the half-year ending September 30th next. The directors regret that this action should be necessary, but in view of the obscure outlook, it is the only course to pursue in the interests of the company. The turnover has been well maintained in bulk, but prices have fallen progressively and considerably during the past year.

WALDORF HOTEL COMPANY, LTD.—In view of the unsettled conditions, the directors have decided to await the result of the full year's trading before considering the question of payment of a dividend on the ordinary shares of the company.
