

The Economist

WEEKLY COMMERCIAL TIMES

Bankers' Gazette and Railway Monitor

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

INDEX TO VOLUME CXIII.

BEING FROM JULY TO DECEMBER, 1931, INCLUSIVE.

THE MONEY MARKET.

THE turn of the half-year was negotiated by the market with less ease than had been anticipated in most quarters a week ago. The usual borrowing on weekly terms from the Bank of England began on Thursday of last week, and, in consequence, advances over the week-end were obtainable readily at 1 per cent.; but up to Monday the amount taken from the Bank appeared to be small. On

GUARANTEED INCOME

You can secure this
 (1) FOR YOUR WIFE AND FAMILY
 By effecting a "FAMILY
 PROVISION" Policy.
 (2) FOR YOURSELF
 By purchasing an Annuity.

EQUITY & LAW
LIFE ASSURANCE SOCIETY
 18 Lincoln's Inn Fields, W.C.2
 Established 1844 Funds £9,300,000

What of the individual
 investor

who during the past year has seen
 the value of his Securities crumble
 to the extent of 20 per cent. or more?

There is only one sure and certain method
 by which the depreciation in the capital value of
 investments can be covered and that is by Life
 Assurance. To restore the value of your Estate
 at an expenditure of a few pounds per cent. is
 surely purchasing peace of mind at a cheap rate.
 Under the Distinctive System of this Institution you can
 obtain at early and middle ages for the same premium
 about £1,500 with right to bonus for £1,000.
 as is charged elsewhere for £1,000.

Particulars and rates on application
The Scottish Provident Institution
 3 Lombard Street, E.C.3
 London (City) Office
 HEAD OFFICE: 6 St. Andrew Square, EDINBURGH
 FUNDS £22,500,000

BANCA COMMERCIALE ITALIANA.

Limited Company Incorporated in Italy.

Established in 1894. Head Office: MILAN.
 Capital 700 million Lira. Reserves 580 million.
 Deposits 8,480 millions.

 industrial importance in Italy; also in London,
 New York, Istanbul (Constantinople), and Izmir
 (Smyrna).

Affiliated and Auxiliary Institutions in France
 (Paris and Riviera), Switzerland, Czecho-
 Slovakia, Poland, Yugoslavia, Austria, Hungary,
 Bulgaria, Roumania, Greece, Egypt, Morocco,
 U.S.A., Brazil, Argentina, Chile, Uruguay, Peru,
 Colombia, Ecuador, etc.

London Office:

32, Threadneedle Street, E.C.2.

A. JOEL, Manager.

Correspondents to the Italian Treasury.

Monday, however, the Clearing Banks called in funds somewhat heavily, and new money until Wednesday commanded up to 3 per cent., while recourse to the Bank was had for a large amount, borrowing extending to eight days. On Tuesday, "window-dressing" operations by the Clearing Banks were heavier than expected; the foreign exchange settlement was large and for outside money overnight $3\frac{1}{2}$ per cent. and more was frequently paid. Further borrowing from the Bank was necessitated, in some cases up to nine days. On Wednesday there was a reversion to conditions of extreme ease, balances being offered down to 1 per cent. The plethora of conditions of short credit were accentuated, of course, by the fact that, since end half-year borrowing from the Bank had begun unusually late, no loans fell to be repaid until Thursday, when day loans were called $1\frac{1}{2}$ per cent.

Last Friday applications for the £40 millions of Treasury bills available amounted to £68 millions, against £58 millions offered for the £35 millions of bills placed a week ago. The average rate of discount worked out at £1 19s. 9.87d., as compared with £2 1s. 11.22d. on the previous Friday. Following this result the market rate of discount weakened fractionally, and on Monday, though $2\frac{1}{2}$ was nominally quoted, the competitive rate was not really better than 2 per cent., while "hot" Treasury bills were dealt in at $1\frac{1}{2}$ per cent. Forward business in full-dated bills for delivery after July 1st was transacted down to $1\frac{3}{4}$ per cent. Since this figure would be anomalous, given the continuance at 2 per cent. of the Clearing Banks' minimum charges to the market for weekly fixtures, the decline reflected somewhat optimistic anticipations that there might be a reduction of Bank rate to 2 per cent. on Thursday of this week.

	June 11, 1931.	June 18, 1931.	June 25, 1931.	July 2, 1931.	Previous Rate and Date Changed.
Bank Rate	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	3 (May 14, '31)
Banks' Deposit Rate..	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Discount / Call	1	1	1	1	$1\frac{1}{2}$ (May 1, '30)
Houses / Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{1}{8}$ - $2\frac{3}{8}$	$2\frac{1}{8}$ - $2\frac{3}{8}$	$2\frac{1}{8}$ - $2\frac{3}{8}$	$1\frac{1}{2}$	...

By Thursday morning the absence of progress in the negotiations at Paris between Mr Mellon and the French Cabinet, and the consequent obscurity of the financial outlook in Central Europe, led to a fairly general feeling that there would be no change in the official rate until the situation was clearer. Thus the "no change" decision on Thursday occasioned little disappointment or surprise. Notwithstanding the Bank's decision, however, the market rate of discount remained weak under pressure of the ample supplies of money, combined with renewed buying of bills by the Clearing Banks, who bid extensively for September and October Treasuries down to $1\frac{1}{2}$ per cent. This quotation led to considerable speculation whether the Clearing Banks, in order to replenish their bill portfolios, would find it necessary to reduce by at least $\frac{1}{4}$ per cent. their charges to the market even were Bank rate not reduced. The week's Bank return, analysed on p. 41, reflects the normal influence of the turn of the half-year. Discounts and advances were up by £24.7 millions, and bankers' deposits by £37.8 millions. The reserve had declined to 46.2 per cent., as compared with 59.1 per cent a week ago.

An event of the week which may become historic as the opening of an era of closer central banking co-operation was the joint extension by the Bank for International Settlements, the Federal Reserve Board, the Bank of England and the Banque de France of rediscount credits of the nature of \$100 millions to the Reichsbank. The timeliness of this co-operative assistance is significantly illustrated by the fact that, in spite of this credit, of which some 60 per cent. appears to have been used over the end of the month, the reichsmark, as described below, failed to hold its initial "Hoover" improvement and

slowly relapsed until on Thursday a quotation of 20.50 $\frac{1}{2}$ was reached, while the daily demand on the Reichsbank for foreign currency continued into July.

Following June's accretion to American gold stocks of some £28 millions, the flow has been continuing this week; but there are definite signs that the Federal Reserve Board are pursuing a deliberate cheap-money policy designed both to check this flow and co-operate with President Hoover's plan of salving the financial position in Central Europe and to stimulate domestic industrial recovery. Although irresponsible rumours that the Federal Reserve Bank of New York might reduce its rediscount rate to 1 per cent. this week were not taken seriously here, no small significance is read into the news that the Federal Reserve Board have for the first time for a number of months been engaged in open-market operations designed to broaden the basis of credit. The adoption of a "cheap-money" policy by the American authorities has a dual significance for Lombard Street. It not only makes the way easier, in the absence of untoward political developments, for a reduction of the Bank of England's discount rate, but also gives promise that the coming seasonal strain on sterling normally exerted by the financing of the import of primary commodities will be lightened, because, in view of the conditions in New York, a greater share than ever of the financing will be handled on the other side of the Atlantic.

The Foreign Exchange market was relatively quiet this week, pending the result of the negotiations with France with regard to the Hoover proposals. Such movements as there were were mostly against sterling, but no sensational changes were recorded. The New York rate went from 4.86 $\frac{1}{2}$ to 4.86 $\frac{3}{4}$, Montreal following suit in improving from 4.89 $\frac{1}{2}$ to 4.88 $\frac{1}{2}$. Paris gained five points at 124.25 and Brussels improved sharply from 24.92 $\frac{1}{2}$ to 34.90 $\frac{1}{2}$. Milan was better at 92.90, against 92.84 last week. Madrid was again rather erratic and reflected the political uncertainty by moving from 50.00 to 49.50 when the elections were known to have passed off without disturbance, only to weaken again to 51.30 against 51.70 last week. Amsterdam moved rather sharply in our favour from 12.08 $\frac{1}{2}$ to 12.09 $\frac{1}{2}$. Berlin was unchanged on balance at 20.50 $\frac{1}{2}$. Switzerland, after touching 25.15 $\frac{1}{2}$, improved to 25.11 $\frac{1}{2}$ against 25.10 in the previous week. In the Scandinavian currencies Stockholm moved from 18.14 $\frac{1}{2}$ to 18.13 $\frac{1}{2}$. Oslo lost $\frac{1}{2}$ at 18.16 $\frac{1}{2}$, whilst Copenhagen was unchanged at 18.16 $\frac{1}{2}$. The South American exchanges were variable, Rio gaining $\frac{1}{2}$ d. at 34 $\frac{1}{2}$ d., Buenos Aires losing $\frac{1}{2}$ d. at 35 $\frac{1}{2}$ d. after being 36 $\frac{1}{2}$ d., whilst Montevideo was weaker by $\frac{1}{2}$ d. at 28 $\frac{1}{2}$ d. The Far Eastern exchanges were generally firm and steady, the rupee remaining at 1s. 5 $\frac{3}{4}$ d. and the yen at 2s. 0 $\frac{3}{4}$ d., but Batavia lost a point at 12.10 $\frac{1}{2}$. In the forward market one month's dollars were in greater demand at $\frac{1}{2}$ cent premium, but three months' delivery weakened by $\frac{1}{2}$ d. to $\frac{3}{4}$ cent premium. Forward Paris was weaker at 7 and 27 cents premium, as was Brussels at $\frac{1}{2}$ centime and 3 centesimi discount, against 10 and 30 last week. Madrid was firmer at $\frac{1}{2}$ peseta discount for one month and $\frac{1}{2}$ peseta discount for three. Amsterdam was fractionally weaker at $\frac{1}{8}$ cent and 1 $\frac{1}{8}$ cents discount for one and three months respectively. Berlin was quoted at par for one month and one pfennig discount for three. Switzerland from par for both deliveries went to $\frac{1}{4}$ centime and 1 centime premium. The silver market was quiet on the whole, but prices advanced by $\frac{1}{2}$ d. to 13 $\frac{1}{2}$ d. for both deliveries as a result of considerable Chinese buying. The Chinese silver exchanges were firm, Hong Kong gaining one penny at 1s. 0 $\frac{1}{2}$ d., whilst Shanghai was unchanged at 1s. 4d.

Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

HOPE DEFERRED.

THE announcement, now nearly a fortnight old, of Mr Hoover's proposal, that there should be a suspension for one year of all inter-Governmental payments, was hailed so ardently with relief and a sense of escape from grave risk of imminent disaster, that the first signs of difficulties raised by France with regard to the application of the moratorium did not dispel the atmosphere of reassurance and renewed confidence which the American President had engendered. Even a week ago it was generally felt that the project for a "year of grace" should be still-born. That feeling has persisted; but as day has succeeded day, without evidence of any close approach to agreement between Paris and Washington, the truth of the old proverb concerning the deferment of hope has been sadly illustrated.

The tale of events may be taken up from Friday, June 27th. On that day the official text of the French reply to President Hoover was read by M. Laval, the Prime Minister, to the French Chamber. The Note began by declaring that France was "in agreement with the lefty sentiments" which inspired the American proposal. The French Government was prepared to propose to the Chamber that France should abstain provisionally, during the period of one year, from retaining any payments from the Reich.

"But in view of the nature of the engagements freely undertaken, and only recently signed, under the Young Plan, and the solemnity with which it recognised the final and non-postponable annuities, by which the necessary permanence of the principle of reparations was shown, there would be a grave risk of shaking confidence in the value of signatures and contracts, and thus of frustrating the end in view, if, in the proposed suspension of payments, the non-postponable annuity were treated in the same way as the conditional annuity."

The French Government, therefore, considered that "a moral interest of the first order" required that payment of the unconditional annuity should in no way be deferred even during the moratorium year.

Moreover, in the opinion of the French Government the dangers at present threatening the economy of Germany and Europe were due notably to restrictions of credits or to withdrawal of foreign funds. The solution, therefore, lay not simply in a diminution of the charges on the Reich budget, but in the extension of credits. The French Government was ready to place at the disposal of the B.I.S. a sum equivalent to one year's French share of the unconditional annuity, with the exception of the funds necessary for the execution of the remainder of the contracts for deliveries in kind now proceeding. The funds paid over to the B.I.S. could be immediately utilised "for the improvement of credit in Germany as well as in the countries of Central Europe . . . [but] it goes without saying that the sums thus employed would become available again on the expiry of the period of one year."

The French Government also considered that all necessary precautions must be taken that these sums, as well as those accruing from the alleviation of the Reich budget, should be utilised only for economic ends. Finally, before the expiry of the moratorium year, there should be an examination of the measures to be taken by France Germany for the resumption of her public debt was desired to recall that the amount of her public debt was about four times that of the debt of the Reich.

It was at once apparent that the attitude of the French Government represented, in several respects, a considerable divergence from the lines of President Hoover's proposal; and the difficulties of the situation thus disclosed were not lessened by the tenor of Friday's debate in the Chamber. Nationalist sentiment ran high; M. Briand significantly effaced himself; and though the Chamber, by 386 votes against 189, approved the terms of the reply to Mr Hoover, and "placed its trust in the Government for assuring the preservation of the unconditional annuity," the Government was saved only by the support of 107 Socialists. The Radicals, led by M. Herriot, joined with the Right in an anti-Government vote.

Meantime, on Saturday, conversations had begun between the French Cabinet and Mr Mellon, who had crossed from London to Paris on Thursday to conduct negotiations on behalf of Mr Hoover's Government. The conversations continued day after day without definite news of tangible results, but it was understood that the American Government took exception to the French proposal that the funds paid by Germany during the moratorium year to the B.I.S. should be utilised for the benefit of Central European countries as well as Germany, and were unable to agree that the reimbursement by Germany of the payments postponed should be carried out within a shorter time-limit than twenty-five years. By Tuesday night a deadlock appeared to have been reached. The French negotiators seem to have been willing to concede the spreading over two to five years of the reimbursement of the suspended payments, but they complicated the issue by introducing the extraneous contention that if, at the end of the moratorium year, Germany had recourse to the Young Plan safeguards and declared a suspension of transfers, France should then be absolved from carrying out her obligation under the Young Plan to make good the guarantee fund with the B.I.S. in respect of the unconditional annuities. Meanwhile, the tone of the French Press was becoming more and more hostile to the United States and the Hoover scheme, and the position of M. Laval was rendered still more difficult by Tuesday's debate in the Senate, where the interpolation of M. Lémery ("courageously combating as always," in the words of the *Journal des Débats*, "la politique de liquidation de la guerre") led to a vote of confidence in the Government by 197 votes to 5, but only after M. Flandin, speaking for the Government, had shown that the Cabinet recognised the strength in the Senate of the opposition to further concessions by France towards meeting Mr Hoover's views.

When the conversations in Paris were resumed on Wednesday afternoon, Mr Mellon presented a Note, or rather *aide-memoire*, from the American Government, reviewing the situation. The gist of the communication was as follows:—

French qualifications appeared to withhold the intended relief to Germany, and not to conform to the spirit of the President's proposal, which contemplated a complete suspension of all payments on inter-governmental debts during a period of one year. The American Government considered that all postponed payments should be funded over a long period of, say, twenty-five years, and should bear interest at the average rate paid by the creditor Governments on their own public debts at the end of the preceding fiscal year. Since the French Government insisted that, as a matter of principle, the unconditional annuities should be paid without interruption, the American Government was willing to agree that the payments should be made to the B.I.S., provided they were immediately reloaned to the German Government.

The French proposal that the sums paid to the B.I.S. should be reloaned to German industrial and financial concerns rather than to the German Government would be incompatible with the President's proposal of relief to governments. The French Government's suggestion that \$25 millions of the unconditional annuities paid into the B.I.S. should be available for loans to Central European countries would be a violation of the broad proposal of the President to suspend all payments of inter-government debts.

The proposal of the French Government that funds paid during the moratorium year by Germany into the B.I.S., and credited to France, should relieve France of any future obligations in respect of The Hague agreement guarantee fund appeared to the American Government to be inconsistent with the French suggestion that the payment by Germany into the B.I.S., during the moratorium year, would be a mere matter of form, in order to assure the continuity of unconditional payments. Moreover, this proposal would involve a modification of the Young Plan itself; and this the American Government, not being a signatory, could not undertake to negotiate.

Failing Mr Hoover's scheme, Germany would unquestionably give notice of postponement of all the conditional annuities. In this event, France would receive, in unconditional payments from Germany, approximately \$105 millions, but would be obliged to pay \$216 millions, including war debt annuities to Great Britain and the United States and her obligations to the guarantee fund.

The terms of this communication revealed only too clearly the extent of the gap which Mr Mellon and M. Laval had still to bridge when they re-assembled once

more on Thursday night, after a meeting of the French Cabinet had been held in the morning; and though we are far from being unsympathetic towards the French point of view (we feel, indeed, that the political difficulties of M. Laval have been perhaps insufficiently appreciated both in Washington and in London), it is impossible not to regret that France, whatever the moral force behind her claims, should have taken on herself the responsibility of creating this prolonged *impasse*, with all its attendant risks of endangering the economy of Europe.

Let us endeavour to do full justice to the French standpoint. France is entitled to argue that, whereas the Hoover Plan (which would impose on the French Treasury a sacrifice heavier than that falling on any other European budget) would give Germany a year's complete remission of payments, it is questionable, at least, whether Germany need find it *economically* impossible to transfer the unconditional 1931-32 annuity. She may arraign gross German blunders of policy—the foolish pocket-battleship programme, the Stahlhelm demonstrations—as justifying her inclination, as a nation with war debts against her own account, to look critically at what she considers to be undue relief to the Reich Treasury. Above all, she may legitimately point out that Mr Hoover has asked her to agree to a step which (let us be frank) would to some extent prejudice the whole future of reparations, but that he has given Europe no guarantee that there will be more than one year's truce for war debts.

But, when all is said, the most sincere friends of France must deplore the position into which deputies and newspapers in Paris have combined to force M. Laval. There have been three cardinal factors in the position which France has ignored. Firstly, at the moment when the American offer was made, Central Europe was heading swiftly for complete financial breakdown. Secondly, from the moment President Hoover made his offer, it became impossible *politically* for the German Government to assent to an arrangement substantially less favourable to Germany without the gravest risk of being driven from office by irresistible revolution; and the resulting chaos would spell "Good-bye to All That" in the sphere of reparations. Thirdly, though there is logic in the French complaint that Mr Hoover, tied by "anti-debt-revisionism" in his own Congress, has asked M. Laval to risk, for the larger future, more than he dare venture himself, French opinion failed to give due weight to the enormous significance of the real departure taken by American opinion when Mr Hoover's proposal, for all its formal denial that permanent debt remission was contemplated, met with a chorus of enthusiasm in the United States. The French insistence that America is thinking solely in terms of her endangered Central European investments is neither generous nor well-founded. There was the beginning of a genuine re-orientation of the American attitude to Europe's economic difficulties; and that vital, promising development France has already gone far to check.

As we go to press, though the eventual upshot of the British proposal of a conference of all Young Plan signatories has yet to be learnt, there is still room for hope that wiser thoughts and wider vision will still prevail in Paris. Appreciating fully, as we do, the moral right of France to legitimate compensation for her ravaged territory, we should lend no support to the proposition that the Young Plan should be incontinently scrapped, and that Germany should henceforth be absolved from every pfennig of reparations. We do not believe that Dr. Brüning's Government would put such a proposition forward. But the worst way to sustain moral rights is to risk an immediate cataclysm by insistence on assurances and safeguards for to-morrow. France would have done better for the world and herself had she met America's gesture with unqualified readiness to contribute generously to the rehabilitation of Europe which is ultimately vital to her own well-being. The surest safeguard for the future, had France but seen it, lay in the welcome willingness to take the lead in common sacrifice and co-operation which Mr Hoover's offer revealed on the part of the American nation.

DISARMAMENT OR RE-ARMAMENT?

The lesson of history is that after every great war the world enjoys immunity from a recurrence of a general state of warfare for a limited number of years. This being so, it is a matter for sober reflection that the political and psychological phenomena, in this matter of armaments and war, have not been different in kind during this present "post-war period" from the phenomena which have characterised the similar post-war periods in the past; for example, the interlude of peace after the Napoleonic Wars which ended in the wars of 1848-71, or the interlude of peace after the wars of Louis XIV. which ended (in spite of Walpole's efforts) in the wars of 1739-63. Is the Great War of 1914-18 to be followed, after the present lull, by another crop of wars, ending perhaps in the downfall of Western civilisation?

"Unthinkable!" we are tempted to protest. A society so civilised as ours will never commit social suicide with its eyes open. This time we are on our guard. As proof that we are on the alert and have been up and doing there are the solid results of our labours during the past dozen years: the League of Nations; the Kellogg Pact; the Naval Limitation Treaties of Washington and London; and the work of the Preparatory Commission which has made the convening of next year's Disarmament Conference possible. Surely we are entitled to congratulate ourselves? Surely, this time, we have got the evil under control?

Yet, before we congratulate ourselves, we should perhaps pause. If either John Bright or Sir Robert Walpole could have returned to earth to listen to the debate in the House of Commons at Westminster on this last Monday, June 29, 1931, he might well have exclaimed, either mournfully or cynically: "I recognise these accents. These are echoes of speeches that once fell, in St. Stephen's, from my own lips. Even so did I hope and pray in my day. My hopes were disappointed and my prayers unanswered." The fact is that, if we look our present situation in the face, it is not yet really different in kind from the corresponding situation on the morrow of great wars in the past. Then, too, there was the same immediate revulsion against war in the hearts and minds of a generation which had directly experienced its horrors; and there was the same immediate pause in the competition of armaments between Powers that had just overtaken their resources in the last bout of belligerency. There were even schemes, less systematic and less energetically pushed, but not very different in character and not different at all in intention, from our own post-war schemes, for a rational, organised, co-operative perpetuation of peace. Now, on these previous occasions, the forces that worked together for peace on the morrow of a great war proved ineffective for the preservation of peace as soon as the direct psychological and material effects of the last war had worn off. As soon as a generation that had never yet fought had grown to manhood, and as soon as the public finances of the late belligerents had recuperated, the peace movement collapsed and the Powers went to war with one another again.

What is the destiny of our own peace movement to-day? Have we, in our generation, the will and the wisdom and the ability to do what our forefathers each time failed to do—that is, to continue our advance when the tide that flowed with us in the first stage of our advance is ebbing? Can we implant the will to peace in a rising generation that has not known war? Can we prevent the Governments from spending their resources, as these gradually recuperate after we emerge from our inevitable series of post-war depressions, in first accumulating and eventually utilising fresh armaments?

Thus we are approaching the crisis of the peace-or-war question of our time. Next year's Disarmament Conference will show whether the temporary lull of the last dozen years is to be converted into a lasting state of disarmament and security or is to be followed by a new bout of competitive arming which will culminate in further warfare. There is no possibility that *vis inertiae* will do our business for us by automatically maintaining the post-

war *status quo*. We have either to achieve something much better or else to resign ourselves to relapsing into something much worse.

This, at least, can be said: the comprehensive limitation, on an agreed ratio, of the navies of the three Oceanic Naval Powers, offers a framework within which the rest of the disarmament picture could assuredly be filled in next year. But, unfortunately, this Anglo-Japanese-American understanding has one weak spot; for one of the parties, the British Commonwealth, has to take account not only of the Japanese and American Navies, but of the French and Italian Navies; and "the escalator clause" in Part III. of the London Naval Treaty of 1930 expressly provides for the tragic possibility that the Anglo-Japanese-American agreement might have to be thrown back into the melting-pot if, for example, the maximum tonnage for destroyers which the British Commonwealth has accepted *vis-à-vis* America and Japan were to become unacceptable to us *vis-à-vis* France through the increase in the tonnage of the French submarine flotilla.

Thus the achievement of a comprehensive naval limitation between the three Oceanic Powers will not be fully assured until it is supplemented by a similarly comprehensive naval limitation, on an agreed ratio, between the British Commonwealth, France and Italy. We failed to achieve this supplementary agreement in London last year. Then we thought, for a moment, that we had achieved it last March—only to be disappointed again. Why cannot France agree in this matter with us? Because she cannot agree with Italy. And why cannot France and Italy agree with one another? Because the French and Italian navies in the Mediterranean are adjuncts to their land forces on the European Continent. And so we came to the obstacle of Continental European armaments—the obstacle which at present is preventing progress, and which may defeat the movement for disarmament and security altogether unless we secure a substantial first instalment of reduction in Continental European land armaments (beyond those which were singled out for limitation in the peace treaties) at the World Disarmament Conference next year.

The crux is this: the state of affairs set up by the four European peace treaties has been maintained so far not by the consent of the vanquished, and not by the machinery of the League of Nations, but by the combined military supremacy, on the Continent, of France and her allies—Poland, the Little Entente and Belgium. We may assume that this attempt to preserve *ad infinitum*, without revision, the strict terms of a particular peace settlement, by the sanction of superior military force, will prove just as impracticable this time, when France has embarked upon it, as it proved when Germany tried it after 1871 or when Austria tried it after 1815. The peace settlement of 1918-20 is bound, like all the European peace settlements that have gone before, to pass away sooner or later, by one means or another. Either the recent Continental victors will renounce their temporary

superiority of armaments, and will take the initiative in a pacific revision of the treaties in friendly agreement with the rest of the world; or (as history shows) they will eventually be confronted with a counter-coalition which will gradually outstrip them in number and in strength as, with the passage of time, the iron boots of the *status quo* pinch more and more nations' feet. Here, staring us in the face, if things go wrong next year, is the road to a fresh competition in armaments leading towards another Great War.

In the light of this, what is the significance of the debate in the House of Commons last Monday? The rather surprising unanimity of all speakers (apart from Mr Churchill's inevitable solo) gives food for thought, both to ourselves and to our Continental neighbours. The debate showed that there is an agreement among all parties in Great Britain (and we believe that there is the same feeling, *mutatis mutandis*, in the Dominions, in Japan, and in the United States) that, in one sense, the anticipatory unilateral disarmament which has been carried out by the Oceanic Naval Powers is nearing its furthest possible limits. The feeling of the House was summed up by Sir Herbert Samuel. "He thought they were all agreed that disarmament could not be merely one-sided. There might be all sorts of risks we could not at present foresee . . . If these risks were realised, and we, trusting all would be well, had disarmed while others remained armed, we might be leading our country into an appalling catastrophe . . ." The moral is clear. Though unilateral disarmament may be impracticable, neither we nor other nations can rest content with the progress towards reduction of fighting forces so far achieved. Neither we nor our neighbours can afford to allow the World Disarmament Conference of 1932 to be anything short of a striking success.

THE MONETARY HALF-YEAR.

FROM the history of the London money market during the first half of 1931 there emerge two distinct phases, although the usual elements of prolonged economic depression in the shape of idle funds and generally low money rates were common to both. The first phase lasted from the middle of January until the beginning of May, and was characterised by the steps which the Bank of England was constrained to take, through the exercise of its indirect influence over the market, to correct the persistent underlying weakness of sterling and to check the drain on its gold holdings. The second phase, inaugurated by the relaxation of market control and the reduction of Bank rate to the lowest point reached since October, 1909, was one in which the dominant factor was no longer the quotation for sterling on Paris and New York, but the growing financial crisis in Central Europe the decline in the value of the Reichsmark, and the out

flow from Germany of disquietingly large sums in gold both to London and other centres.

In the following table we show, at fortnightly intervals, the course of the three leading exchange rates, of the Bank of England Issue Department gold stocks, and of Bank rate and market rate during the past six months. Ignoring day-to-day fluctuations, the figures give a clear picture of the trend:—

MONETARY INDICATORS.

	Dollar.	Franc.	Mark.	Bank England Issue Dept. Gold.	Bank Rate.	Market Rate.
December 31, 1930 ...	4.85½	123.66	20.38½	£ Mn.	%	%
January 15, 1931 ...	4.85½	123.83	20.42½	147.6	3	2½
January 29, 1931 ...	4.85½	123.91	20.43½	144.5	3	2½
February 12, 1931 ...	4.86	123.95	20.44½	139.5	3	2½
February 26, 1931 ...	4.85½	123.98	20.43½	140.5	3	2½
March 12, 1931 ...	4.85½	124.16	20.41	140.8	3	2½
March 26, 1931 ...	4.85½	124.21	20.39	140.9	3	2½
April 9, 1931 ...	4.85½	124.25	20.40	143.6	3	2½
April 23, 1931 ...	4.86½	124.44	20.42½	145.3	3	2½
May 7, 1931 ...	4.86½	124.24	20.41½	146.3	3	2½
May 21, 1931 ...	4.86½	124.27	20.47½	149.0	2½	2
June 4, 1931 ...	4.86½	124.25	20.50	151.0	2½	2
June 18, 1931 ...	4.86½	124.25	20.50	160.9	2½	2
July 2, 1931 ...	4.86½	124.23	20.50½	163.3	2½	1½

The year began with the influence of post-Oustrie repatriations of French balances held abroad still operative on sterling, and, notwithstanding the reduction of the Banque de France rate to 2 per cent. on January 2nd, gold continued steadily to leave the Bank of England for Paris at an average rate of about £300,000 per working day during the first fortnight of January. The daily rate of withdrawal was then limited by the capacity of refiners to deal with the standard gold delivered by the Bank of England; but on January 14 it became known that the Banque de France was making arrangements henceforward to accept standard gold, as well as fine gold, against its purchases. This change, which came into effect from January 16th, resulted in the immediate disappearance of the premium on fine gold in London and the raising of the franc quotation to 123.83; but it took several days before the franc rose to the gold point of 123.89 thus re-established. The removal of the physical limitation upon daily withdrawals led, meanwhile, to a further rapid loss of nearly £4 millions in gold from the Bank of England. In addition, as January went on, the weakness of sterling against the dollar became accentuated by considerable withdrawals of American money from the Continent through London. Under these circumstances, with the gold holding in the Issue Department below £140 millions the Bank decided to intervene, and, during the last week of January, sold bills heavily in the open market at 2½ per cent.

Although the normal contraction in the volume of outstanding Treasury bills at this season of the year was an obvious obstacle to the effectiveness of the Bank's intervention (comparative Floating Debt figures will be found in a Note of the Week), the policy of the authorities, although somewhat unpalatable to the market, was successful in the early attainment of its immediate objectives. As will be seen from the table above, the dollar and the franc responded quickly to the increase brought about in the market rate of discount, and the loss of gold was stopped. Apart from a few arrivals of South African sovereigns, the Bank did not, for some time, succeed in adding to its gold stocks by purchases in the weekly market, and the necessity to continue the "pegging" of market discount at a rate substantially above those existing in New York and Paris was emphasised by the steady discount on the £ in terms of forward francs and dollars. On March 17, however, by which time a sufficient amount of French short money had been attracted to London, and retained there, to bring the franc quotation to 124.20, the Bank succeeded, for the first occasion since March 25, 1930, in securing the bulk of the weekly shipment of bar gold from South Africa; and further acquisitions of Cape gold in the course of the next six weeks, supplemented by arrivals from the Argentine and other quarters, enabled the Bank to view the position with greater assurance. At the same time there was always the risk that, should there be a substantial diminution in the margin painfully established between London rates and those in Paris and

New York, the proceeds of sterling bills bought on French and American account earlier in the year might be withdrawn on their maturity, and, although the normal seasonal expansion in the offerings of Treasury bills after the end of the revenue year lessened the need for positive "hidden hand" operations in the market, the influence of the Bank continued, up to the end of April, to be exercised steadily against any relaxation in the "pegged" rate of 2½ per cent. for three-months' bills, especially since gains by way of Cape gold were offset to some extent by "ear-marking" on Argentine account. At the end of April, however, the New York Federal Reserve Bank reduced its buying rate for bankers' acceptances to the low figure of 1½ per cent., and, on May 7th, following a further reduction to 1¼ per cent. in the bankers' acceptances rate, the rediscount rate in New York was reduced from 2 per cent. to 1½ per cent. The lead from New York was swiftly followed in London. On May 8th, market rate was "unpegged," and fell at once to 2½ per cent., and on May 14th Bank rate was reduced from 3 per cent. to 2½ per cent.

Following this reduction, notwithstanding the fact that the Clearing Banks decided to adhere to 2 per cent. as their charge for weekly loans, market rate rapidly fell away by the end of May to 2 per cent., the influences behind the reduction being the greater ease of money, the further reduction in rates in New York, and the fact that the Bank of England's gold stocks were now comfortably over the conventional "datum" level of £150 millions. The cheapening of money rates, however, was not destined to bring tranquillity to the world's principal financial centres, and though the repercussions of the Central European crisis which developed in June had no marked effects directly on discount market conditions in London, the foreign exchanges became the subject of anxious attention, while the whole question of short credits abroad gave rise to natural uneasiness. By June 6th, following the disclosure of the difficulties of the Credit-Anstalt, reichsmarks, under pressure of steady sales, had depreciated to 20.49½, while the rise, from similar causes, in the quotation for Swiss francs enabled Switzerland to acquire a large portion of that week's Cape gold in London. By June 8th, the inflow of bar gold from Germany to the Bank of England had begun; withdrawals of foreign credits from Germany, accompanied by signs of a domestic flight from the mark, gained in volume daily, and the Bank of England return on June 11, by which time the reichsmark had fallen to 20.52½, showed that the Bank had added £5.4 millions on the week to its gold stocks, of which over £4 millions represented sales by the Reichsbank. The history of the Central European crisis during the remainder of the month—a crisis illustrated by the raising of the Reichsbank rate from 5 per cent. to 7 per cent. on June 13th, while Bank rate in Austria and Hungary rose to 7½ per cent. and 7 per cent. respectively—has been told at length in these columns and need not be repeated here. To this extent it directly affected the London discount market in that, despite the pressure of superabundant funds seeking employment, market rate was maintained at 2½-2¾ per cent. until the closing days of June, when anticipations that Bank rate would be reduced on Thursday, July 2nd, led to business in bills for July, delivery being done round 1½ per cent.

In the following table we give our usual calculations of daily average rates during the half-year:—

DAILY AVERAGE FOR FIRST HALF-YEAR.

	1927.	1928.	1929.	1930.	1931.
Bank rate	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Market rate (3 months)	4 16 0	4 10 0	5 5 1½	3 16 9	2 17 2
Margin	4 3 3	4 1 0	5 1 5	3 0 0	2 8 0
Short loans	0 12 9	0 9 0	0 4 6	0 16 9	0 9 2
Deposit rate	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Margin	3 17 6	3 13 0	4 8 2	2 19 9	2 1 8
	2 16 0	2 10 0	3 5 11	1 16 9	1 0 0
	1 1 6	1 3 0	1 2 3	1 3 0	1 1 8

It will be seen that the margin between the short-loan rate and market rate of discount was 6s. 4d. per cent. as compared with only 3d. per cent. in the first half of 1930, while the margin between market rate and Bank rate

narrowed from 16s. 9d. to 9s. 2d. per cent. The period, however, during which market rate was "pegged" represented for brokers a considerable contraction in the volume of business, and having regard to the fact that profits arising from the capital appreciation of bills were substantially less than a year ago the six months under review were not generally profitable for the market. On the other hand, the increase in the margin between the deposit rate allowed by the banks and the minimum rate charged for the bulk of their advances should have done something to compensate the banks for diminished profits in other branches of their business.

Regarded, however, from a wider standpoint than that of the internal conditions of the London money market, the first half of 1931 must be judged as a period in which disequilibrium in the world's monetary situation was seriously accentuated. In the final table we give a fuller list of the movements on balance of the principal foreign exchanges:—

Centre.	Method of quoting.	Par Level.	Rate, June 30, 1930.	Rate, Jan. 1, 1931.	Rate, June 30, 1931.
Paris	Francs to £1	124.21	123.72	123.66½	124.25½
Berlin	Marks to £1	20.43	20.39	20.38½	20.49½
Vienna	Schillings to £1	34.58½	34.42	34.48½	34.62½
Amsterdam	Florins to £1	12.107	12.09½	12.09½	12.09
Copenhagen	Kroner to £1	18.159	18.16½	18.16½	18.16½
Milan	Lire to £1	92.46	92.79	92.74	92.94
Switzerland	Francs to £1	25.22½	25.07½	25.04½	25.11½
Madrid	Pescetas to £1	25.22½	44.45	46.30½	50.50
Lisbon	Pence to escudo	4.50	108½	108½	110
New York	Dollars to £	4.86½	4.85½	4.85½	4.86½
Buenos Aires	Pence to dollars	47.58	39½	35½	36½
Rio de Janeiro	Pence to dollars	18	5½	4½	3½
Monte Video	Pence to dollars	51	42½	35½	28½
Valparaiso	Dollars to £	40	39.95	39.89	39.95
Calcutta	Pence to rupee	10	1/5½	1/5½	1/5½
Hong Kong	Ster. to dollar	...	1/6½	1/5	1/4½
Shanghai	Ster. to taels	...	2/0½	2/0½	2/0½
Kobe	Ster. to yen	24.58	2/0½	2/0½	2/0½

Apart from the depreciation of the Reichsmark, outstanding features are the decline in the value of the peseta as the result of uncertainty regarding the political future of post-revolutionary Spain, and the failure so far of plans projected for the revalorisation of the currency to materialise; the weakness of the Far Eastern exchange rates; and the heavy depreciation in South American currencies. The last-named movement, arising from the acute economic depression in countries largely dependent on exports of agricultural and pastoral products, was unfortunately paralleled in January by a serious widening in the discount on the Australian pound, and since the beginning of February the official Australian rate on London has stood at over Aus. £130. As a result, more-over, of the untoward strain on the exchanges, caused first by the difficulties of primary producing countries and secondly by the "confidence crisis" in Central Europe, the mal-distribution of gold during the past six months has been intensified. The latest returns of central banks available indicate that during the first 25 weeks of 1931 the United States gained on balance £95 millions and France £24 millions of gold, whereas Germany lost £39 millions, and the Argentine, up to the end of April, had lost £17 millions. In addition, at the end of June Australia was in process of shipping a further £5 millions from her depleted gold reserves to cover the repayment of her Treasury Bills held in the London market and maturing at the end of the half-year. The only solid satisfaction to be derived from the monetary history of the past six months is that recognition of the gravity of the June crisis led not merely to Mr Hoover's historic moratorium offer, but to clear evidence that the principal central banks of the world were determined, in joint consultation, to take as effective steps as possible to prevent a monetary cataclysm. The timely assistance afforded by the Bank of England to the Austrian National Bank, followed by the agreement whereby the Bank of England, the Banque de France, the New York Federal Reserve Bank, and the B.I.S. undertook to re-discount the Reichsbank's bills in order to enable that institution to surmount end-June demands without being forced either to restrict credit to a damaging extent or, alternatively, to allow its reserve to fall below the legal minimum, is of good augury for the future.

THE BRITISH BEET SUGAR INDUSTRY.

At a time when commodity prices have an almost unprecedented news value by reason of their spectacular downward movements, and when schemes for restriction of output are under discussion on all sides, it may seem on the face of it remarkable that the British Government should be paying sugar factories to produce one of the foods of which the stocks are already particularly excessive. The appearance this week of a most comprehensive report* on the sugar beet industry offers a timely opportunity for examining the situation in respect of the sugar subsidy.

Attempts were made to establish sugar beet cultivation in Great Britain as early as the beginning of the nineteenth century, but a hundred years passed before the movement gained much impetus. In 1913 a small Government grant was made to the Sugar Beet Growers' Society, but the industry failed to establish itself. Renewed efforts were made after the war, partly with the object of making the country more self-sufficing, partly on general grounds of encouraging an industry which appeared suited to the country and might be expected to employ labour and mitigate the agricultural depression, and partly for the technical reason that sugar beet is a very beneficial crop for ground which is subsequently to be sown to cereals.

In 1922 the industry, still in an embryonic stage and by no means financially successful, secured the remission of the Excise duty, and in that year, for the first time, one factory made a profit. In 1924 the Government's intention of providing a subsidy was announced, and by the British Sugar (Subsidy) Act of March, 1925, a subsidy was granted for ten years, from and including the 1924-25 season, at the rate of 19s. 6d. per cwt. of sugar produced during the first four years, 13s. for the next three years, and 6s. 6d. for the last three years. The subsidy was coupled with a minimum price of 44s. per ton of beet of 15½ per cent. sugar content, to be paid to farmers for the first four years.

As a result there is not a county in England and Wales where this crop has not been successfully grown, though the bulk of it is grown in East Anglia. The number of growers has increased from 4,039 in 1924 to 40,415 in 1930, and over the same period the acreage has increased from 22,637 to 348,920 and the number of factories in operation from 3 to 18. The output of sugar has risen from 13 thousand tons in 1923 to 420 thousand in 1930. It is estimated in the report that beet growing gave 60,000 man-years of employment in the years 1924-29 and provided over £5½ millions in wages on field work alone. A further £3 millions were paid in wages at the factories. About 70 per cent. of the employment afforded is necessarily of a seasonal character, but the factories tend to employ the same men year after year, and it is hoped that as the industry progresses it may be practicable to evolve a system of agreements between factories and farmers which will tend to eliminate the casual character of much of the work.

Much information is given in the report as to the comparative efficiency of the industry in this and other countries. The yield of beet per acre has risen from 8.1 to 8.8 tons between 1924-30 and the yield of sucrose from 3.027 to 3.288 lbs. On the average of 1925-29 both were substantially lower than in any of the other producing countries, and it is admitted in the report that during the earlier years of the subsidy the high prices induced many farmers to grow beet on unsuitable land. The wide range of results obtained in different areas shows how great is the room for improvement, and suggests that the subsidy is maintaining in operation growers who are unsuitable. Net costs per ton at the farm have fallen, and are now lower than in France and the United States, though higher than in Belgium, Holland, Czechoslovakia or Germany.

The hoped-for effect of beet growing in improving the yield of cereal crops has, so far as can be ascertained, been realised where cereal crops are still grown, but un-

* Report on the Sugar Beet Industry at Home and Abroad. H.M. Stationery Office, 6d. net.

fortunately the extent of this advantage has been somewhat curtailed by a tendency among farmers to give up not only the cultivation of other root crops but also cereal growing, in favour of beet cultivation. For this same reason, the amount of employment afforded by the industry can, as Sir Herbert Samuel recently pointed out in the House, by no means be regarded as a net contribution to the solution of the unemployment problem. This reservation has to be borne in mind in considering the statement in the report that every acre under beet provides $7\frac{1}{2}$ man-years of agricultural employment and $1\frac{1}{2}$ man-years of factory employment.

Such brief extracts do less than justice to a very thorough and illuminating report, but so far as they go they suggest that the sugar beet industry is establishing itself, though somewhat slowly; that it has still some long way to go before it will be on a competitive footing; and that its development has not been free from those wastes which inevitably attend the artificial promotion of any branch of economic activity. Its contribution to the nation's food supply in an era of peace cannot be taken very seriously with the sugar market in its present condition, its net contribution to employment is small, and though any contribution would be welcome were it obtained at a reasonable cost, that, of course, is a vital condition. What, in fact, has been the cost? The table below shows the burden on the Exchequer for each year of the subsidy:—

ESTIMATED REVENUE ABATEMENTS AND STATE ASSISTANCE TO THE BRITISH SUGAR BEET INDUSTRY.

	1924-25	1925-26	1926-27	1927-28	1928-29	1929-30	1930-31	Total
Home-grown sugar produced in each manufacturing campaign (in terms of white sugar)	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
	23,885	51,574	153,296	189,149	193,644	288,324	418,000	1,318,052
Revenue, if charged full duty (11/8)†	£ ml.	£ ml.	£ ml.	£ ml.	£ ml.	£ ml.	£ ml.	£ ml.
Excise duty actually chargeable	0-28	0-60	1-79	2-21	2-26	3-36	4-95	15-45

Subsidy‡	0-05	0-22	0-66	0-81	1-17	1-77	2-67	7-35
Total assistance retained by sugar beet industry	0-51	1-12	3-32	4-21	2-82	4-23	6-14	22-36
Passed on to consumer	0-56	1-34	3-98	5-02	3-99	6-00	8-81	29-71
	0-56	1-34	3-98	5-02	3-54	5-33	7-83	27-61
	...	...	...	...	0-45	0-67	0-98	2-10

* Provisional during year. † Based on actual output, not on quantities on which duty paid. ‡ Includes subsidy on molasses.

Thus nearly £30 millions has in effect been paid to the industry by the State, of which just over £2 millions have been recovered by the taxpayer in his capacity of consumer. This represents a payment of about 2½d. per lb. for sugar produced—a payment equal to the average retail price of refined sugar in 1930. The expensiveness of this proceeding was well illustrated by Sir Herbert Samuel who, basing his calculation on figures which are largely corroborated by the report, stated in the House some three weeks ago that for every additional man brought into employment the expenditure was about 25s. per working day.

The dividend figures for one group of companies given in a note in our Stock Exchange section suggests that the beet sugar companies are profiting considerably at the expense of the taxpayer. Certainly, according to the table of combined accounts published in the report, they did very well last year. The eighteen factories combined earned, on a share capital of £4,658,140, a trading profit of £1,738,936, of which they distributed £481,408 in dividends. Yet the gap between the price which the factories were prepared to pay for beet in 1931 and the price which the farmers could accept was so wide, in view of the reduction of the subsidy to its final stage of 6s. 6d., that a compromise has had to be effected, subject to parliamentary approval, upon the basis of an advance of 1s. 3d. per cwt. by the Government, to be repaid if the price rises above 7s. 9d. and to be diminished by the amount of any rise in

price above 6s. 6d. The advance, which is to be limited to 300,000 cwt. per factory, is to be conditional upon the guarantee of a fixed price to farmers for all beet offered, up to factory capacity. All the factories except the five comprising the Anglo-Dutch group and one other have accepted these terms. The Anglo-Dutch factories have arranged instead to operate without provision for dividends, reserves or depreciation, and to pay the whole net proceeds of manufacture to the growers.

This new agreement further increases the cost of the subsidy, for it is difficult to anticipate such a rise in sugar prices as would lead to the repayment of the whole advance. In view of the profits being made by the factory companies, combined with the fact that, to quote the report verbatim, "up to 31st March, 1930, in order to enable the factories to pay the farmers £18 millions for their beets, at a price, incidentally, which is roughly double that paid in Continental countries, £16 millions had been paid by the State in subsidy apart from the benefit the industry has derived from the preferential rate of excise duty," it is high time to consider very seriously whether the country can afford this agreeable but costly hobby.

PRICES: THE HALF-YEAR REVIEWED.

THE immediate stimulus to confidence—reflected less in an actual increase of purchases for consumption than in the rapid closing of "short" positions—given to markets by Mr Hoover's moratorium offer of June 20th, resulted in a sharp recovery in the price of a number of leading commodities. Non-ferrous metals were most affected by the "bullish" movement, but cotton, cocoa and linseed oil were also prominent in the advance. The closing days of the month, however, witnessed a sharp reaction occasioned partly by the slow progress made in the Franco-American negotiations with regard to the application of the Hoover Plan, and partly by the clearer recognition that the moratorium itself would only be one step on what is bound, in any case, to be a long upward road towards trade recovery. Moreover, the influence of the "Hoover markets" by no means extended to all commodities; significantly it had little effect on the grain market. In the event, as the following table shows, the net result of Mr Hoover's announcement by June 30th had been no more than to arrest the renewed decline in prices disclosed by our Index Number during the course of the second quarter of the year:—

1927 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	114.2	106.7	136.8	119.4	105.6	115.7
" 1929	96.9	85.8	92.2	95.6	90.5	92.4
" 1930	81.0	77.2	64.4	83.6	81.6	77.6
End June, 1930	82.2	77.8	66.5	82.8	84.1	78.8
" Dec., 1930	70.0	71.0	51.4	78.0	75.2	68.7
" Jan., 1931	67.4	69.5	49.2	75.3	72.6	66.3
" Feb., 1931	66.4	68.0	50.6	76.9	72.7	66.5
" Mar., 1931	66.9	67.0	53.7	74.5	69.9	66.2
" Apr., 1931	70.0	66.6	50.8	72.0	68.6	65.4
" May, 1931	69.0	63.5	48.2	69.5	68.2	63.6
" June, 1931	68.8	60.2	48.4	72.4	68.7	63.6

The changes in the index figure of each of the five groups as compared with the position a month ago, at the end of March, and at the close of 1930, can be seen more clearly from the following summary:—

INCREASE (+) OR DECREASE (−) PER CENT. COMPARED WITH				
	Month ago.	End March, 1931.	End December, 1930.	
Cereals and meat	− 0.3	+ 2.8	− 1.7	
Other foods	− 5.2	+ 10.1	− 15.2	
Textiles	+ 0.4	− 9.9	− 5.8	
Minerals	+ 4.2	− 2.8	− 7.2	
Miscellaneous	+ 0.7	− 1.7	− 8.6	
Complete index	...	− 3.9	− 7.4	

In the cereals and meat group during June declines in the price of English barley and oats, and of beef, English mutton, and Danish bacon more than offset slight rises in the case of wheat, maize, potatoes and imported mutton. Among "other" foods, a marked recovery in the price of cocoa was outweighed by heavy falls in those of tea and coconut oil. In the textile group the reaction

from the initial optimism following the moratorium proposal still left cotton prices on a higher level than a month ago, but wool was cheaper. Among the minerals, non-ferrous metals still held, on balance, a fair part of the ground gained, and in the miscellaneous group, higher prices for linseed oil and rubber counterbalanced cheaper leather and tallow. Details of the month's, and of the half-year's changes, are given below:—

	Inc. (+) or Dec. (−) per cent. compared with			Inc. (+) or Dec. (−) per cent. compared with

Reviewing the half-year as a whole it will be seen that the only commodities to show an appreciable recovery are English oats and potatoes. A small upward movement on balance is to be seen in the case of imported wheat, refined sugar, Egyptian cotton, and jute; but in many leading commodities the decline, following the catastrophic fall already witnessed in 1930, has attained serious dimensions.

To illustrate the position further we show below a list of the cash quotations for a number of typical commodities at the end of the past five half-years:—

	1929.		1930.		1931.
	End June.	End December.	End June.	End December.	End June.
Wheat, Canadian, per qr.	48/3	55/6	39/−	24/6	26/−
Beef, English sides, per 8 lbs.	6/−	5/8	5/8	5/3	5/2

The extent of the fall which has taken place in the average level of wholesale prices (it should be borne in mind that the prices on which the *Economist* Index is based are largely those of primary products) can be, perhaps, more readily appreciated from the following summary of aggregate movement related to the average of 1924. The decline in wholesale food is calculated by taking a weighted average of the two food groups in our index number, and the corresponding movements in the

July 1, 1931	45.1	17.1*	41.2	25.4*

* June 1st.

The fall in retail food and in the cost-of-living index during the first five months of 1931 (the figure for the end of June is not yet available) has happily shown signs of acceleration, but the divergence of movement between wholesale and retail prices during the past six and a half years is still very marked.

In the concluding table we show the course of our index number since March, 1931, expressed as a percentage of the average for 1913.

1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.

The question whether greater confidence, resulting from the successful negotiation of even the first steps towards cutting through the tangle of international indebtedness, can succeed in bringing about a substantial or permanent recovery in prices, or whether other action, concerted internationally, to this end (e.g., by the world's principal central banks) will be required, is one which is likely increasingly to attract attention in all countries. As matters stand, the depression of primary prices to an average level of 12½ per cent. below that which existed in 1913 is putting a strain on the world's economy whose ultimate consequence, if no recovery takes place at an early date, cannot lightly be contemplated.

AGRICULTURAL MORTGAGE CREDITS.

DESCRIBING in last week's issue of the *Economist* the course of the discussions at the May session of the Commission of Enquiry for European Union, we referred to the suggestion of the French delegate that the economic difficulties of the Eastern European grain-growing countries should be met in part by recourse to the International Agricultural Mortgage Credit Company. The genesis of the International Company, the form in which its structure and methods of operation have been approved, and its potentialities and limitations, merit consideration; and the Secretariat of the League has now published the relevant documents*—the Convention

* Official Number, C.375, M.155.

whereby the Company is created, its Charter and its Statutes—assembled in handy form.

The question of the better organisation of agricultural credits arose first last year at the Preliminary Conference with a View to Concerted Economic Action, and was referred by the Council of the League to the Financial Committee. In its first report to the Council, dated January 27, 1931, the Financial Committee expressed the view that

"the obstacles which have, so far, impeded a flow of capital to Eastern Europe are not only, or even mainly, of such a character that they can be made to disappear by technical financial measures only. It is undoubtedly, in the first place, considerations of a political nature which at present keep capital away from that part of Europe. . . . Further, the position of agriculture is only one facet of a general depression affecting the raising of capital for all purposes, and cannot be effectively treated in isolation and apart from general measures of financial consolidation and reconstruction."

Nevertheless, the Committee was of opinion that improvements in the machinery available for international agricultural credits should be devised, and advocated the creation of a special international institute which would borrow on its own credit in the international markets, and would lend on first mortgage security (for the most part in the form of long-term credits) the money so obtained, utilising national or local institutes as intermediaries. The task of working out the details of such an institution was entrusted to a special Delegation of the Committee. The Delegation, whose Chairman was M. ter Meulen and the British representative, Sir Henry Strakosch, functioned with commendable rapidity, so that on May 11th the Financial Committee was enabled to present to the Council of the League a complete scheme. This was examined and endorsed by the Commission of Enquiry for European Union at its third session, and formally adopted by the Council on May 21st.

The scheme provides for the foundation of an International Mortgage Credit Company with headquarters located at Geneva, and whose objects are:—

"1. To make long-term loans with amortisation, or medium-term loans with or without amortisation, to mortgage or agricultural credit companies or institutions which, either directly or through other companies having their registered offices in the same country, make loans upon first mortgages on immovable property which is the subject of agricultural cultivation or used for the purposes of such cultivation.

"2. To create and negotiate bonds the sums repayable on which may not exceed the amount of the debts due from the national companies to the International Company and secured by first mortgages registered in the name of the national companies, belonging to them or held by them as security."

The authorised capital of the International Company is fixed, in the first instance, at 250 million gold Swiss francs in shares of 2,500 francs, of which ten thousand are to be A shares (carrying one vote per share at general meetings), and 90,000 B shares, carrying one vote for every 15 shares. Transfers of A shares are to be subject to the approval of the Board.

In order to furnish the International Company from the outset with a reserve which should command the confidence of investors in its bonds, Article 5 of the Convention provides that the contracting Governments shall advance between them (in proportions corresponding to their normal League contributions) the sum of 25 million gold Swiss francs, to be gradually repaid by the Company. The 10,000 A shares, which are to be issued at once, will be offered for subscription in each of the countries whose Governments are parties to the Convention, in proportion to the amounts contributed by the several Governments to the aforesaid advances. The B shares are to be offered, in due course, as and when the Board thinks fit. Preference will be given to subscriptions for A shares from mortgage or agricultural credit companies.

The Board of the International Company is to consist of a President and Vice-President, appointed by the Council of the League, together with 16 directors, of whom one is to be appointed by the International Institute of Agriculture, and one by the B.I.S. Nine directors are to be appointed to start with by the Organisation Committee, charged by the League Council with the task of establishing the Company, and subsequently are to be elected by the general meeting. These directors are to be chosen from among officers of loan, mortgage, or agricultural credit companies, or from among persons with special knowledge and experience of banking; the remaining five directors are to be co-opted by the Board. Where there is not upon the Board any national of a country which has contributed to the original advances, that country may appoint an assessor to take part in Board meetings in an advisory capacity. All the directors must ordinarily be resident in Europe, and the Board is to appoint an Executive Committee consisting of the President and either five or seven directors, subject to the proviso that not more than two-fifths (or alternatively three-sevenths) of the Executive Committee may be nationals of

countries in which national agricultural credit companies have been approved by the International Company for the receipt of loans.

The International Company may issue bonds (registered or bearer) up to a total amount not exceeding ten times the total nominal amount of the paid-up capital and the special reserve fund of 25 million francs. The interest payable on the bonds and their maximum period of redemption is to be at the discretion of the Board. From the proceeds of the bonds issued by it, the International Company will accord to national companies approved by it loans repayable by annual amortisation within not more than 30 years. The national companies must formally undertake to use the sums lent them exclusively for loans secured by first mortgages on real property forming part of an agricultural undertaking, and such loans may not exceed 50 per cent. of the estimated value of the property offered as security. The interest and capital of the bonds issued by the International Company shall be guaranteed by a sole charge on the interest and capital of the bonds which are issued by the national companies, as aforesaid, and delivered to the International Company.

The Board of the International Company will appoint representatives to examine and supervise the operations of the national companies. It may require that the Governments of countries whose national companies desire loans shall take particular legislative measures to render more effective the mortgage security; and it may also require a guarantee by the Government of the borrowing country in respect to the bonds given by the national company. These bonds must be expressed in a currency having a parity with gold fixed by law. The maximum margin between the rate of interest at which a national company borrows from the International Company, and the rate of interest at which the national company, in its turn, lends out the sums received, must be agreed by the International Company. In addition, the International Company may make to a national company medium-term loans with or without amortisation.

The accounts of the International Company are to be audited by auditors appointed by the Financial Committee of the League, and thereafter are to be presented to the Council of the League. The treatment of the International Company's profits is to be as follows:—

(1) The first charge on net profits, after providing for amortisation, is to be the repayment of the special advances originally given by the Governments, i.e., the special reserve fund is to be maintained at 25 million gold Swiss francs by allocations to make good withdrawals.

(2) 5 per cent. of the remaining net profits are to be used to build up a legal reserve fund, until that fund is equal to 10 per cent. of the issued capital.

(3) Thereafter, a dividend of 6 per cent. shall be paid on the shares of the company.

(4) From the residue, 75 per cent. shall be allocated to the redemption of the Government advances (including a 5 per cent. bonus), and after the advances have been completely repaid, the said 75 per cent. of the profits shall be placed to reserve. The remaining 25 per cent. may be used at the discretion of the Board to bring the dividend on the company's shares up to 10 per cent., until the advances of the Governments have been entirely repaid, and thereafter up to a maximum of 12 per cent.

By Article 2 of the Convention the Swiss Government undertakes to grant the International Company a constituent charter much on the lines of that granted to the B.I.S., and providing somewhat similar safeguards with reference to amendment of the Company's statutes. By Articles 7 and 8, the contracting Governments undertake that no tax on income or profits, turnover or capital, shall be imposed on the International Company, and that the holders of the shares and bonds issued by the International Company shall not be taxed by reason of the receipt of dividends or interest, when taxes. The operations of the International Company, from first to last, are to be exempt from stamp duties, etc.

The Convention is open to signature by European Governments until September 30, 1931, and it is to come into force as soon as the amount of the Government advances paid up has reached the sum of 25 million francs. At the request of half of the contracting Governments, the Council of the League may call a conference with a view to revising the Convention, but such revision would require unanimous agreement. Otherwise, after 30 years, there may be revision by a majority vote.

The scheme thus evolved appears to have considerable merits. Inasmuch as the International Company will be, in large measure, under the control of the League, it should be less exposed to possible criticisms which might be levelled against a similar institution established by private enterprise—e.g., favouritism of particular countries or discrimination influenced by political prejudices. In the second place, though even 25 million gold francs is a not negligible sum for the contracting Governments to have to find at a moment when national Budgets are already strained, the Financial Committee were undoubtedly right in emphasising that the first years of a mortgage credit company are usually the most difficult, and that if the company is to obtain resources of sufficient magnitude, and with sufficient speed, to enable it to give timely assistance to the hard-pressed agricultural countries of Europe, the establishment, from the outset, of

this special reserve is a necessary substitute for "good-will," which otherwise would take many years to establish. Moreover, the mere fact of Government generally contributing to the initial resources of the International Company is itself a psychologically useful symbol of readiness to co-operate internationally in reconstruction.

It may be well not to lose sight of two elements of risk in the whole plan. The first, viz., the danger lest agriculturalists should utilise the credits which they obtain in holding up stocks, is perhaps not very substantial; for, though the International Company cannot exercise any close control over the use to which the ultimate borrowers put the funds obtained, agriculturalists would not be very likely to utilise, for this undesirable purpose, money obtained on long-term first mortgages. The second risk is more serious. As the Commission of Enquiry for European Union has recognised in its report* of May 20, it would be very regrettable if the effect of the establishment of the International Company were to encourage "an injudicious increase of agricultural production." The great need is to bring about not simply increased agricultural production, but an essential change in the character of production. Output requires to be more diversified; higher value agricultural products, such as meat, milk, fruit, etc., should be substituted for those crops of which there is, at present, a serious excess. Here, however, it may pertinently be argued that one of the serious obstacles which stand in the way of greater diversification of agricultural production is lack of capital—a lack which, it is hoped, the International Company will help to make good. Upon the extent to which the International Company can bring about greater variety in Eastern European agriculturalists' output, partly by alleviating the present heavy burden of interest charges and partly by the supervision which it will exercise over the operations of the national agricultural credit companies, will depend the success of this interesting experiment in international co-operation.

Notes of the Week.

A Liberal Secession.—Sir John Simon, who some months ago openly dissociated himself from Mr Lloyd George's policy of maintaining the Government in office on terms, has now taken the further step of writing to the chief Liberal Whip asking that the official whip should be no longer sent to him. In taking this step Sir John, who has retired to the Liberal back benches in the House of Commons, has been joined by two other prominent Liberals, Sir Robert Hutchinson, the late Whip, and Mr Ernest Brown, and is likely to be followed by a small group of Liberal members. At the same time, Lord Allendale has resigned the treasurership of the Liberal Party. The various letters, in which these Liberals explain the step that they are taking, emphasise in a variety of phraseology that they can no longer tolerate Mr Lloyd George's policy towards the Labour Government. For Sir John, who calls the position "humiliating," the last straw was apparently the compromise over the land tax, by which Mr Snowden was enabled to save at least the principle of double taxation. But this, we imagine, was not so much in itself a vital cause for withdrawal as an awaited occasion for making definite the breach on general policy which has been steadily widening. It remains to be seen what body of followers, in the House and in the country, Sir John will carry with him into his position of independent Liberalism. If the proceedings at the recent meeting of the National Liberal Federation at Buxton be a true guide he will find no very great army of Liberals ranging itself behind him; for the feature of that meeting was the surprisingly overwhelming support forthcoming for Mr Lloyd George's leadership and policy. Whether the land tax compromise has influenced the views of the rank and

file of Liberals as strongly as it has those of Sir John Simon remains to be seen. Meanwhile the Liberal secessionists do not promise to be sufficiently numerous to imperil seriously the life of the Government. It must, however, be recognised that profound dissatisfaction has been caused among Liberals at Westminster and elsewhere by the extremely and unnecessarily truculent attitude adopted towards them by Mr Snowden, and their chagrin will not be wholly soothed by their success in their object of securing exemption for playing fields and recreation grounds.

Comparative Armament Expenditures.—In the debate on disarmament in the House of Commons on Monday, June 29th, to which reference is made in an article on a previous page, the Prime Minister, in the course of a forceful *exposé* of British policy and achievement in the field of armament reduction, gave some striking figures to illustrate his argument. From them we have compiled the following table of comparative naval expenditure of the chief Powers at various dates:—

NAVAL EXPENDITURE.

(In £ millions.)

	1914.*	1924.	1930.
United Kingdom	51.5 (76.6)	56.0	52.4
United States	30.0 (42.0)	70.0	78.0
France	26.7 (29.2)	13.8	24.3
Italy	13.3 (18.2)	9.8	16.9
Japan.....	8.5 (15.4)	23.0	26.0

The figures in brackets represent the present currency value of the actual 1914 expenditure.

figures of comparative budgetary expenditure on armaments are tricky things; but the Prime Minister went on to point out that in 1914 Britain possessed 89 capital ships, 131 cruisers, and 298 destroyers (excluding 70 torpedo boats); while to-day she has only 15 capital ships, 59 cruisers and 120 destroyers; her submarines number 40 less than in 1914; and her naval personnel has been reduced from 151,000 in 1914 to 99,453 in 1924 and 93,630 to-day. Turning to Britain's Army expenditure, Mr MacDonald gave a figure of £28.8 millions in 1914 (equivalent to £40 millions at to-day's price level), of £45 millions in 1924, and £40 millions in the current budget; while Army "strength" has declined from 186,240 in 1914 to 161,600 in 1924 and 148,800 in 1931. While the last seven years has seen a fall of £5 millions in Britain, the Army expenditures of France, Italy and the United States have risen since 1925 by £20.8 millions, £15.4 millions and £15.7 millions respectively. Air Force comparisons present difficulties, but the Prime Minister claimed that while our Air expenditure was only £2 millions higher than ten years ago, America was now spending £20 millions more than in 1922, and France £4 millions more than in 1929. "My attention," said the Prime Minister, "has been drawn to a poster—not published in this country—declaring that, in disarmament, again, Great Britain is just the old perfidious diplomatist. That is absolutely and maliciously untrue." Provided the figures given above possess the rough accuracy which the Prime

Minister vehemently claimed for them, they explain the feeling expressed by all parties in the House of Commons that in the matter of reduction Britain cannot go very much further, unless and until general reduction by international agreement is undertaken. It would be regretted, however, if this led to the feeling that we have only to sit back and wait for others to act.

Mr MacDonald and India's Credit.—The Prime Minister surprised and intrigued both the House of Commons and the City last Friday by making a statement which was construed to mean that under certain circumstances the British Government would come to the support of the credit of the Government of India. "It will not be possible," said Mr MacDonald, "to introduce the proposed constitutional changes if financial stability is not assured, and His Majesty's Government are determined not to allow a state of affairs to arise which might jeopardise the financial stability and good government of India." In the event, therefore, of need arising, the Government would, apply to Parliament for authority to enable them to give financial support under suitable conditions to the Indian Government "for the purpose of maintaining the credit of the country pending the settlement of the constitutional problem and the formulation of provisions which will ensure the maintenance of India's credit in the future." Doubts as to the precise meaning of this statement led to a crop of questions in the House of Commons on Wednesday, when the Prime Minister, while not explaining the precise nature of any possible steps which he may have in mind, allayed exaggerated interpretations by insisting that the contingency might never arise, and that in any case, if action in support of Indian credit proved desirable, Parliament would be consulted. We may take it, then, that the Prime Minister has not pledged the Government to any definite commitments, but has merely taken the opportunity to let it be known that, so far as lies within the power of the British Government, the success of the Round Table Conference will not be allowed to be jeopardised by the recurrence, during the course of the negotiations, of doubts regarding India's credit and financial stability. If that is the limited meaning of Mr MacDonald's statement, it will meet with general approval. If a deeper meaning lies behind, it would be well for a full explanation to be given without delay.

The Quarter's Revenue.—It cannot be said that Mr Snowden's current budgetary year has started auspiciously. The Revenue return for the three months ended June 30th shows that total income amounted to £145.6 millions, against £153.3 millions in the corresponding quarter last year; whereas total expenditure amounted to £233.7 millions, against £234.7 millions a year ago. Thus the deficiency which is normally recorded in the first quarter of the Revenue year amounts, up to date, to £88.1 millions, against £81.4 millions last year. In addition, the quarter's loans to the Unemployment Fund amounted to £12.6 millions, or £8.6 millions more than in the corresponding quarter of 1930. Figures relating to the first quarter of the fiscal year do not provide safe data for confident deductions as to the eventual results of the twelve months, but an examination of tax revenue, as shown in greater detail below, is not very reassuring:—

Tax Revenue (excluding self-balancing accounts.) (Million £.)

	Year's Receipts.			Three Months' Receipts.		
	Actual 1930-31.	Estimated 1931-32.	Estimated Inc. (+) or Dec. (-)	To June 30, 1930.	To June 30, 1931.	Inc. (+) or Dec. (-)
Customs	121.4	125.7	+4.3	29.3	28.9	-0.4
Excise	124.0	119.8	-4.2	29.1	27.3	-1.8
Motor Duties	4.9	5.0	+0.1	0.8	0.8	...
Income Tax	256.1	258.0	+1.9	22.1	19.8	-2.3
Sur-Tax	67.8	72.0	+4.2	10.0	11.2	+1.2
Estate, &c., Duties	82.6	90.0	+7.4	22.9	19.6	-3.3
Stamps	20.7	24.0	+3.3	3.9	2.6	-1.3
Tax	5.0	2.2	-2.8	...	...	...
Land Tax, &c.	0.8	0.8	...	0.1	0.1	...
Total Tax Revenue...	681.3	697.5	+16.2	118.2	110.3	-7.9

Such a small proportion of the year's income and surtax is paid in the June quarter that receipts to date have little significance. It is noteworthy, however, that Estate duties, from which Mr Snowden anticipated an increase of £7.4 millions, have so far yielded £3.3 millions less than a year ago. Still more ominous is the fact that Customs are £450,000 down, instead of displaying any of the expected tendency towards better performance; while of the estimated decline of £4.2 millions in the year's yield from Excise, £1.8 millions has already been realised. Finally, Stamps, in regard to which Mr Snowden showed a far from warranted optimism, are down by £1.3 millions. Unless there is a remarkable recovery in trade and in financial turnover, Mr Snowden's chances of having his anticipations of revenue realised look more precarious than ever; while, on the other side of the account, though there may be some saving in the budgetary provision for the Debt charge, the Chancellor has yet to provide for an additional expenditure of some £5 millions on transitional benefit, in consequence of its prolongation for a further six months beyond next October. When account is taken of anticipated losses in respect of reparations and war debts, the position is not such as to justify complacency.

The Floating Debt.—During the past half-year movements in the Floating Debt have followed their normal seasonal tendency—i.e., the volume of Treasury bills outstanding fell substantially between the end of December and the close of the revenue year, while the June quarter witnessed the usual expansion of debt to cover deficiency of Revenue. Comparative figures are given below:—

	FLOATING DEBT. (000's omitted.)			
	June 30, 1930.	Dec. 31, 1930.	Mar. 31, 1931.	June 30, 1931.
Bank of England Advances	12,920	26,250	Nil	14,290
Public Debt Advances	63,770	50,700	24,500	45,700
Treasury Bills outstanding	614,590	690,235	569,425	616,905
	691,280	767,185	594,825	676,895

In the first half of 1930, the proceeds of the 4½ per cent. Conversion Loan issue were utilised in part to redeem Treasury bills. During the March quarter of this year, there was no similar operation, and the shrinkage in the outstanding total of Treasury bills between December 31st and March 31st amounted to only £121 millions, as compared with £191 millions a year ago. On the other hand, as the result partly of an increase in the Revenue deficiency, and partly on account of Treasury borrowing to finance the Unemployment Insurance Fund, the increase in the volume of bills between March 31st and June 30th was over £47 millions, in comparison with less than £26 millions in the second quarter of 1930.

The Indian Labour Report.—So completely have the Simon Commission's Report, and the Round Table discussions, filled the Anglo-Indian picture, that the work of another important Royal Commission on Indian labour conditions had practically escaped public notice. But the publication of its Report*, on Thursday, is a sharp reminder that the constitutional is not the only problem awaiting solution in India. The Report runs to 580 pages, and the summary of recommendations is given under 353 headings. Both the survey and the proposals cover so vast a field of social, industrial and economic conditions, that comment must of necessity await fuller opportunity for study. Suffice it for the moment to say that the Report is a document, which, for many reasons, possesses profound importance. The composition of the Royal Commission is such as to lend weight to its conclusions. Under the chairmanship of Mr J. H. Whitley, late Speaker of the House of Commons, was assembled a body consisting of four Englishmen and one English woman and six Indians, among the latter being Mr Srinivasa Sastri and Sir Ibrahim Rahimtoola, now President of the Legislative

* Cmd. 3883. H.M. Stationery Office. 4s. 6d.

Assembly. Some light is thrown upon the extent of the Commission's labours by the mere facts that 1,000 witnesses were examined, and 16,000 miles covered in the course of first-hand investigations into labour conditions. Recommendations touch the life of the Indian worker at many vital points. They affect factory and housing conditions, child and woman labour, wages, transport, health, labour organisation and representation, and, not least, the great problem of the stranglehold of the moneylender. The Report, indeed, constitutes a vast charter of social reforms, and however much some may sympathise with the caveat entered by Sir Victor Sassoon as to the essential differences between Eastern and Western conditions, it is a thorough, painstaking and comprehensive survey, which must command the earnest attention both of the British and of the Indian Government.

Spain at the Polls.—The general election for the Spanish Constituent Assembly was duly held last Sunday, June 28th, and the Republican Government is to be congratulated on the orderliness with which, on the whole, the proceedings were conducted. It is true that violent encounters, resulting in injuries and even in a few deaths, are reported from here and there—particularly from Barcelona, a city in whose streets political violence is unhappily traditional. Yet these incidents were few and insignificant in comparison with the strength and vehemence of the political antagonisms which the Spanish Revolution has let loose: the issues of Republicanism versus Monarchism, Syndicalism versus Capitalism, and Laicism versus Clericalism. The most serious threat to the internal peace of Spain was a plot organised by Major Franco, who, not content with his share in the late revolution of Madrid, planned to start a new revolution on election day in Seville, with the intention of declaring a Syndicalist Republic in Andalusia, and then marching—or flying—upon the capital. Once again, in Major Franco's scheme, the Air Force was to give the lead. But, perhaps fortunately for himself, as well as for his country, Major Franco broke his leg in a flying accident on the eve of the polling; and his scheme petered out when the police removed him from his bed at the local aerodrome, where he was planning operations by telephone, to a bed in a hospital. The people of Seville showed their lack of inclination to convert the bourgeois into a syndicalist republic by voting, by an overwhelming majority, for the parties represented in the present Republican Government. Indeed, the Government parties, i.e. the Republican Conservatives and the Moderate Socialists have won decisive victories throughout Spain—with the notable exception of Catalonia, where Colonel Marcial's followers have practically swept the board. Thus Catalonia has declared her wish for the maximum possible measure of Catalan national self-government within an all-Spanish Federal Republic; and when the Catalan deputies meet their colleagues in the Constituent Assembly, it is to be hoped that this question will be settled with wisdom and good-will on both sides. Evidently Catalan nationalism is not to be denied. Since the establishment of the Irish Free State the Catalans have found themselves the last nationality in Europe whose national existence still lacks political and territorial expression. (Even the Ukrainians have a state of their own within the framework of the U.S.S.R.) They will assuredly demand something in the nature of dominion status, and their Castilian neighbours will be well advised to grant it with a good grace—the more so as there will be one restraining factor in Catalan minds: that is, the desire to retain a privileged position for Catalan manufactures in the Spanish market.

The Rumanian and Bulgarian Elections.—The recent elections in Rumania and in Bulgaria have followed noticeably different courses. In Rumania, where the first free and uncorrupt elections in the national history were held under the auspices of the National Peasant Party in 1928, there has been a disappointing relapse to the electoral methods of the old regime—methods, that is, of intimidation and chicanery. Even so, in spite of the

manful efforts of Monsieur Argetoianu, who is "the strong man" standing behind Professor Jorga's Prime Ministerial chair, and also in spite of a constitution which gives four-fifths of the seats in the chamber to a coalition which has polled less than half the elector's votes, the Government have secured only a bare majority for their own personal supporters, and will, therefore, have to depend, for an assured majority, upon their allies the Liberals. The Liberals were the creators of the old corrupt regime, and for decades they were its sole beneficiaries. Moreover, they have retained a strong and effective party organisation, whereas the present Government's political following is as haphazard a team as the Government are themselves. Accordingly, in this partnership under the sign of the old regime restored, the Liberals may be expected to gain the upper hand. But this prospect holds out no promise of political progress or even stability. For the country, having once had a taste of better things, will not permanently tolerate a return to the old state of affairs. The eclipse of the National Peasant Party is a double misfortune for Rumania—not only because this party was sound and healthy in itself, but because its failure to hold its own at Bucharest may have, for its eventual consequence, the return of some more radical party by some revolutionary process. Meanwhile, in Bulgaria, a general election has led to the replacement of Monsieur Liapchev's Government by a new Ministry, under the Prime Ministership of Monsieur Malinov, representing the parties of the Left, which form the so-called National Bloc. The Ministries of Agriculture, Education and Public Works in the new Cabinet are held by members of the Agrarian Party (the followers of the late Monsieur Stambulisky), which thus returns to office for the first time since the Stambulisky regime was overthrown by force. The one post which has not changed hands is the Ministry of War, which is still held by General Kisiov—who is said to have received, and to have rejected, a suggestion that the parties of the Left should be prevented, by a military *coup d'état*, from reaping the fruits of the elections. Thus, in Bulgaria, the principles of constitutionalism and democracy have secured a victory at a moment when they have suffered a setback in the neighbouring country on the other side of the Danube. It will be interesting to watch the effect upon the respective fortunes of these two Balkan peoples.

Mr Baldwin on a Steel Tariff.—If the two qualities of confused thought and *non sequitur* be adopted as the test of merit, we are inclined to give to Mr Baldwin the prize for 1931 for the best speech among all those delivered by platform Protectionists. He has earned it fairly and squarely by his speech last Saturday at Himley Park, which he devoted mainly to the urgent need of the steel trade for Protection. Columns of space would be required to follow Mr Baldwin through his welter of fallacies, and we will confine ourselves to pointing out some of his more glaring sins of omission and commission. In ascribing our steel trade's difficulties to Free Trade, he neglected to mention that the corresponding trades of the Protectionist producing countries were as hardly hit by the decline in world demand; and he ignored the large proportion of our imports which represents semi-raw materials. In inveighing against "cheapness" and its effect on unemployment, he apparently forgot that the number of workers employed in the chief steel-using industries outnumber perhaps seven-fold the number in the steel trade itself. Nor did he explain that wages in the steel trades in other countries which enjoy the "blessings" of Protection were lower than those paid in Britain. So much as a sample of Mr Baldwin's notable, if convenient, omissions. What he did say is equally remarkable. "Cheap goods," remarked Mr Baldwin, "mean cheap men." A neat aphorism, no doubt, but one which contrasts strangely with the Protectionist's "mass-production" argument that cheap goods and high wages can be jointly secured. Again, if competing finished imports are shut out, as Mr Baldwin promises to shut them out if he is given power, their transference to foreign markets would make the task of our

[July 4, 1931.]

exporters proportionately more difficult. Apart from these numerous plunges into commonplace fallacy, Mr Baldwin's speech was also noteworthy for a renewed attempt to explain away the present economic depression of high-Protectionist countries by the thinnest of thin pleas that the slump developed here earlier than abroad. If Mr Baldwin's advisers can supply him with no more cogent arguments for a tariff, he would be wise to cancel the remaining engagements in his nation-wide speaking campaign.

The Coal-mining Parleys.—Had not the centre of the stage been fully occupied by the drama of the Homeric contest between Washington and Paris, public attention would have been absorbed by the critical eleventh-hour negotiations that have been taking place this week in London to decide the question of peace or war in the British coalfields, when the Act of 1926 expires on July 8th, and, failing legislation to the contrary, the legal maximum working hours are due to revert to seven per day. The industry has an ill-starred tradition of deadlock protracted to the ultimate verge of disaster, and up to a late hour on Thursday the issue between the owners and the men remained in the balance. There is but little to add to the description of the attitude of the two parties, which, in anticipation of this week's discussions, we outlined a week ago. Apart from the special difficulty involved in the Scottish spreadover, and the fact that the Yorkshire miners derived no benefit from the hours provision of the 1930 Act, the main point in dispute lay in the insistence of the Miners' Federation that the future of the level of wages should be the subject of national negotiations between the M.F.G.B. and the Mining Association after the expiry of the period of twelve months for which the owners had eventually agreed to guarantee the stabilisation of wages provided there were no shortening of working hours below 7½ per day. The mineowners appear to have conceded this much to the miners, that they have agreed to meet them nationally and discuss generally the industry's economic problems; but the question is still in dispute whether the discussions are to include directly the national negotiation of wage levels. On Thursday evening it was officially stated that the owners and men had failed to agree, and that the Premier had informed the Miners' Executive that there was no other course open to the Government but to proceed with legislation.

Coal Costs and Proceeds.—The statistical summary published by the Mines Department for the first quarter of this year shows that, while there has been a slight fall in the amount of coal raised for commercial disposal, as compared with the preceding quarter, profits per ton were 3d. higher, though, as the following table shows, both tonnage and profits were far below the level of the first quarter of 1930:—

Period.	Tonnage Disposed (Mill.)	Costs per Ton.		Proceeds per Ton.	Profit per Ton.	Output per Man-shift.	Earnings per Man-shift.
		Wages.	Total.				
1st quarter 1930.	60 6	s. d.	s. d.	s. d.	s. d.	cwts.	9 3
2nd "	51 6	9 2	13 4	14 5	1 1	21-94	9 3
3rd "	50 1	9 5	14 1	13 11½	-0 2½	21-32	9 3
4th "	52 6	9 3	14 0	13 9	-0 2	21-34	9 4
1st quarter 1931.	52 2	9 2	13 6	14 3	0 9	21-78	9 2

The downward movement in wages costs which began in the second quarter of 1930 continued. The improvement in output per man-shift, on the other hand, was checked, and earnings consequently declined. The increase in profits per ton was shared by all districts, except Northumberland, South Wales and Yorkshire, but in Scotland, Durham and the Western district they are still very much below the average of the coalfields as a whole.

Cotton Trade and More Looms.—Our Manchester correspondent writes:—The general question of working more looms to an operative in the Lancashire cotton industry was discussed by representatives of the employers and

operatives at a meeting in Manchester on Tuesday. Both the Cotton Manufacturers' Association and the Operative Weavers' Amalgamation had their leading officials present, and, in an official statement after the meeting, Mr John Grey, the Chairman of the Manufacturers' Association, said that they had been discussing in a quite informal way and without prejudice the general question of an endeavour to seek a reduction in the costs of production and, more particularly, the lines of possible economies to be affected by running more looms to a weaver, and the circumstances and conditions which would govern the adoption of any of these methods. Mr Grey pointed out that the whole discussion had ranged round the subject in a general way and in a friendly atmosphere. Neither side committed itself to anything definite, "but on the whole," said Mr Grey, "you may take it that the whole question has been approached by both sides in the knowledge that the industry is in a serious condition and that whatever can be done in a friendly co-operative spirit to improve matters will receive the sympathetic consideration of both sides." It was decided to hold further meetings on the subject, but no dates have been fixed.

International Cotton Decisions.—A number of important resolutions on cotton matters were passed at the International Cotton Congress held in Paris last week. The Congress, which represented more than twenty nations engaged in the spinning and manufacturing of cotton, gave consideration, writes a correspondent, to the situation arising from the fact that approximately 3,000,000 bales of American cotton were controlled by the United States Government and the Cotton Co-operative Association, and the Conference appealed to the Farm Board that, as a corrective measure to recent intervention, it should announce a definite programme whereby the cotton would be sold outright daily in stated amounts that would not be large enough to disturb the market. Moreover, it was the considered opinion of the Congress that no fixed price should be set, and that the cotton should be sold daily in fixed amounts which would give the various Co-operative Associations the average price for the period during which the cotton is to be marketed. A resolution was passed expressing the Conference's satisfaction with the measures taken by the Indian Government, in conjunction with the Indian Central Cotton Committee, for the improvement of Indian cotton. With regard to cotton propaganda, a small committee was appointed, consisting of three representatives from England, one each from France, Germany, Italy and Switzerland, and three from the remaining European countries for the purpose of considering the subject in all its aspects and to report to the International Cotton Committee at its next meeting.

Germany's Balance of Payments.—According to the provisional figures of Germany's balance of foreign payments for 1930, published in the June issue of *Wirtschaft und Statistik*, her passive balance on current items was lower than in any year since 1926. Figures for the last five years are shown below:—

GERMAN BALANCE OF PAYMENTS. (In millions of marks.)					
	1926.	1927.	1928.	1929.	1930.
Merchandise, including reparations in kind	+ 793	- 2,960	- 1,285	- 44	+ 1,555
Shipping, insurance and other services	+ 403	+ 307	+ 305	+ 325	+ 201*
Services in connection with reparations	+ 83	+ 205	+ 175	+ 188	-
Interest	+ 175	+ 345	+ 563	+ 800	-
Reparations payments	- 1,191	- 1,584	- 1,999	- 2,501	- 1,694
Total of current items	- 85	- 4,377	- 2,367	- 2,432	- 763
Gold and foreign exchange movements	- 568	+ 452	- 933	+ 165	+ 120
Long-term loans and credits	+ 1,376	+ 1,210	+ 1,268	+ 229	+ 967
Movement of securities	-	+ 555	+ 430	+ 185	- 162
Other movements of foreign investments in Germany	-	-	- 43	- 10	-
Other movements of German investments abroad	-	- 57	-	-	-
Short-term movements of capital	+ 147	+ 1,779	+ 1,535	+ 256	+ 737
Capital movements unaccounted for	- 870	+ 443	+ 1,175	+ 915	- 923
Total of capital movements	+ 85	+ 4,377	+ 3,567	+ 2,832	+ 763

* Partly estimated.

Net increase ...

* Includes £49,000 the proceeds of which were not carried to the Exchequer within the period of the account.

Treasury, June 30, 1931.

This reduction in the passive balance was due partly to the drastic contraction of imports, which very much more than balanced the sharp fall in exports, and partly to the reduction in reparation payments which was brought about by the adoption of the Young Plan. Shipping, on the other hand, yielded a net income less than half that of any of the preceding four years, largely owing to the slump in freights. The passive balance on account of interest payment again rose slightly, though not nearly so much as in the years immediately preceding; the rise was due entirely to the increase in long-term foreign loans, and there was a slight diminution, owing to the low money rates prevalent abroad, in the payment of short-term interest. The net balance of these items was a debit figure of 763 millions on current account. Of this only Rm. 120 millions was met by the export of gold and foreign exchange. Long-term loans, notably the Young loan, the Swedish Match loan, and the Siemens loan, accounted for a net import of Rm. 967 millions. German sales of securities abroad amounted to 1,013 millions, and purchases to 1,175 millions, so that there was, on balance, an outward movement, the first since these figures began to be compiled in 1927. The figure of 737 millions for net inward movements of German capital from abroad is composed of 800 millions compensation for German property sequestered in the United States, less a payment of 63 million marks to the B.I.S. The decline in the net import of short-term capital was due to the heavy withdrawals of short-term money last autumn. Whereas in 1929, 1,575 millions of short-term money were imported, and only 483 millions exported, last year 1,191 millions were imported and 1,167 millions exported. When those capital movements which are known, or can be estimated, are set off against each other, there remains an outward movement of capital of 923 millions unaccounted for. *Wirtschaft und Statistik* utters a warning against construing this figure as an indication of the dimensions of the "1930 flight of capital," for in it are comprised all the errors and omissions under the other headings, while, on the other hand, part of the flight of capital is already accounted for under the headings of short-term movements of capital, and purchases and sales of securities.

European Union and Unemployment.—Among the various documents which have been laid before the Commission of Enquiry for European Union, writes a correspondent, one which has attracted little public attention is the report of the Unemployment Committee of the International Labour Office on the possibilities of international action in connection with unemployment in Europe. Many of the Committee's recommendations follow familiar lines: the need for international collaboration in organising the labour market and promoting the international movement of labour; the desirability of developing existing systems of insurance and relief, and so on, but it also advances an interesting proposal which is less familiar. The idea that public works, contemplated by individual municipalities and governments, should, as far as possible, be held back in times of boom and be proceeded with in times of unemployment, in order in some degree to equalise the labour market, has long been advocated by economists, but the I.L.O. now puts forward the suggestion that governments should collaborate to promote works of an international character which would not only provide employment in times of depression, but would be of permanent benefit to all the countries concerned. Possible schemes of this character would be the development of a co-ordinated network of trans-European arterial roads; the co-ordination of the various local waterways into a European system; the substitution of automatic for screw coupling on all European railways, and a system of international electric power supply. Such developments would, while promoting the political and economic solidarity of Europe, at the same time help to create that demand for raw materials which would be an almost indispensable complement to any purely monetary action which might be taken in an endeavour to raise "primary" prices on the world's markets.

Sir Arthur Salter and Silver.—In a recent address to the Academy of Political Science, Sir Arthur Salter discussed the project for calling an international conference to discuss remedies for the fall in the value of silver. Examining, first, the causes of the fall, he attributed it less to increased production than to the change-over, in one silver-using country after another, to a gold standard and to the substitution in European countries of paper and base metal for silver token coins. Adjustment of production to this diminished demand is, as Sir Arthur Salter pointed out, difficult, if not impossible, because some three-quarters of the output of new silver is a by-product of other metals. The consequences of the depreciation of silver to the persons most immediately concerned are undeniable; people who receive their incomes in terms of silver are having their purchasing power severely reduced; the trade of silver-using countries, notably China, is dislocated by fluctuations in the gold-silver exchange; savings, in countries where silver is the customary medium for storing value, are greatly reduced; and producers of silver are suffering heavy losses. As to the world in general, however, Sir Arthur Salter expressed the view that the importance of the part played by the depreciation of silver in bringing about or perpetuating the present depression has been exaggerated. Though China includes some 20 per cent. of the world's population she only imported, before the depression, about 2½ per cent. of the world's exports. Moreover, the silver-using countries have not on the whole reduced their imports to any greater extent than the gold-using countries, and Sir Arthur Salter gave further figures on similar lines in support of his contention that, though the fall in the price of silver has undoubtedly reduced the purchasing power of silver-using countries, it has not done so to anything like the extent that some people suppose. On the proposal for a world conference on silver, he suggested that such conferences do a disservice to the cause of international co-operation if they are held without adequate preparation and reasonable prospects of result, and, after examining the proposals which would probably be laid before such a conference, as, for example, agreements to restrict sales of silver, or to increase its use for currency purposes, reached the conclusion that even if the countries involved could be convinced that such schemes were in their own interest, the effect might not be the one desired. As Sir Arthur Salter pointed out, most of such proposals put the cart before the horse; the suggestion for the adoption of a bi-metallic currency, for example, is inspired, not by a belief that bi-metallicism is the system most conducive to prosperity, but by a desire to find employment for silver; and Sir Arthur advanced the very sound suggestion that if the causes of the depression were tackled first the recovery of silver would be incidentally promoted.

The Credit Anstalt.—Further steps by the Austrian Government for the support of the Credit Anstalt were announced last Saturday. The Government has now undertaken to guarantee to Austria, in addition to its existing commitments (which solely concerned foreign creditors) all the sums deposited on current account with the bank, together with savings deposits and savings certificates. So far as can be judged, the total foreign debts of the Credit Anstalt are as follows:—

Due to:—	£
Great Britain	27,000,000
United States	24,000,000
France	6,000,000
Holland	6,000,000
Switzerland	6,000,000
Germany	5,000,000
Other countries	2,000,000
Total	76,000,000

It seems possible that part, at least, of the amount owing to Switzerland represents credits given indirectly on American account. The figures are interesting as showing the enormous preponderance of British and American money which has been absorbed in financing Central Europe. The Government have decided to appoint a

governing committee, to be presided over by their representative, Dr. Spitzmuller, and they have further instructed Dr. Spitzmuller to take steps towards the reduction of salaries and certain pension rights. If necessary, alterations will be made by a special Act of Parliament.

New Franco-Irish Commercial Agreement.—The new commercial and shipping agreement which was signed between the French and the Irish Free State Governments last week, writes our Paris correspondent, is the direct outcome of sharp protests raised by the French rather over a year ago, when proposals were laid before the Free State Parliament for increasing import duties on French wines to prohibitive levels. The new agreement gives both countries the status of the most-favoured-nation. Special clauses are included eliminating the play of the M.F.N. clause so far as Imperial Preference privileges are enjoyed by Ireland as a member of the British Empire, and in respect of the special arrangements existing in connection with trade between France and her protectorates and colonies. Under the new agreement Free State products enter France and her colonies under minimum tariff duties. The new convention incorporates and applies to the commercial relations of the two countries the essential dispositions of the conventions signed at Barcelona and Geneva concerning freedom of transit and simplification of Customs formalities (certificates of origin, commercial travellers, etc.). It also effectively ensures protection of marks of origin for Irish products. The agreement will especially benefit French exports of wines and brandies to Ireland and Irish exports of ham, bacon, lace and whisky to France.

UNITED STATES.

Market Rise on Hoover Proposal — Prices — Capital Issues — Revenue — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, June 23.

THE enthusiasm with which the markets received President Hoover's proposals for a year's postponement of debt payments was an agreeable surprise to everyone. Sharply rising prices for securities and commodities have, of course, strengthened the position of those favouring the plan. The country's eyes have been opened to the importance of matters which have hitherto been largely ignored. It is likely that opposition to the plan here will be half-hearted, as opponents are now in the position of defence against forces making for rising markets.

In some quarters there is a tendency to demand proof as to how many dollars in foreign trade this country can expect in return for postponement of a year in collection of the \$245,000,000 which would be paid by foreign Governments on the debts, but the markets have paid slight attention to this aspect of the situation. They have correctly caught the more important psychological factor involved. The view that debt postponement will not only be a constructive step in working the world out of the business depression, but will remove the danger of economic and political collapse in Germany and possibly other countries, is the prevailing one among business and financial leaders and politicians.

It is unlikely that President Hoover will call a special session of Congress to act on debt remission; Congress will have convened in regular session before the next payments would be made. Congressional leaders are likely to give their support to the plan, and Wall Street in particular feels that France will swing round. At any rate, sympathy with the French opposition is rather low at the moment.

No credit* has yet been granted by the Federal Reserve Bank to the Reichsbank, although they have stood ready to lend. With the arrival this week of \$14,600,000 in gold from Germany and the rise in the mark above the gold

point, bankers look for no further shipments. Releases of gold from earmark at the Reserve since the first of the month total \$89,556,000, part of it Bank of France gold, but all for the account of the Reichsbank. These releases grew progressively smaller last week, amounting to but little over \$1,000,000 last Saturday. None is reported for this week.

Bankers here expect that Germany will require credits over the mid-year settlements* and that the Reichsbank probably will ask for a credit at the Reserve Bank this week. It would, of course, be granted. The amount of \$300,000,000 mentioned in cables from Germany is considered larger than will be needed, but it is believed something additional may be put on for effect. Commercial and private banks also are ready to join a credit if necessary.

While it is recognised that no real change in trade conditions has taken place, sentiment has been greatly heartened by firmer commodity prices. This is especially true of the cotton, grain, silver and copper markets, though wheat has had a setback on advice that the Farm Board will continue to dispose of its huge supplies. Last week most of the commodity price indices advanced for the first time in several months. The fall in May was as severe as for any preceding month. The Bureau of Labour Statistics index dropped 2½ per cent. to 71.3. A year ago it was 89.1. The farm products group again was the hardest hit, and declined 4½ per cent. Wholesale commodity price changes by groups follow:—

	(1926 = 100.0.)	May, 1930.	April, 1931.	May, 1931.
All commodities	89.1	73.3	71.3	71.3
Farm products	93.0	70.1	67.1	67.1
Foodstuffs	92.0	75.6	72.9	72.9
Hides and leather products ..	102.6	87.3	87.3	87.3
Textile products	84.6	67.6	66.3	66.3
Fuel and lighting materials ...	78.0	61.6	60.9	60.9
Metals and metal products ...	96.8	88.7	87.8	87.8
Building materials	92.9	80.9	78.4	78.4
Chemicals and drugs	89.9	80.1	79.1	79.1
House-furnishing goods	96.2	90.8	89.2	89.2
Miscellaneous	77.5	63.9	62.8	62.8
Raw materials	87.8	68.3	66.5	66.5
Semi-manufactured articles ...	83.5	71.1	68.9	68.9
Finished products	91.0	77.1	75.1	75.1

Improvement in the bond market is reflected in new security issues. A large public utility loan is announced for this week, and if the market holds several new offerings will be made. Government bonds are slightly easier on sales by banks which over-subscribed the recent long-term issue and in anticipation of firmer money rates around the mid-year. While no one expected that the rapid pace in the share market could be maintained, the feeling is fairly strong that prices will maintain a permanently better level than they held during the extremes of pessimism. The psychological effect of the sharp rise in markets here and abroad has been tremendous.

Income-tax collections for the second quarter are running nearly as well as estimated—somewhat under \$300,000,000—and it is now thought the Treasury deficit for the fiscal year ended June 30th will be between \$850,000,000 and \$900,000,000. Some headway has been made in expense cutting. Tax collections for the year to date are \$1,819,289,000, against \$2,355,262,000 last year, and Customs receipts have fallen from \$574,814,000 last year to \$367,586,000. The Treasury is, of course, facing knotty problems next year, with the probable loss of \$245,000,000 in foreign debt principal and interest payments, the prospect for smaller income-tax collections, short-term issues to refund and \$1,933,000,000 of First Liberty Loan bonds callable. However, the market will be able to absorb a large amount of long-term financing, and if trade begins to improve Government financing problems will be solved without trouble.

Business news is rather meagre, and under the surface no great change has taken place. The steel and motor industries have receded a little farther, and railroad traffic is not doing much better than holding its own. Wheat

* The subsequent co-operation of the Federal Reserve Bank with the Bank for International Settlements and the Bank of England is referred to elsewhere in this issue. [Ed. Econ.]

[July 4, 1931.]

harvest is progressing in the south-west, but the outlook is only fair in the north-west. Crops in the main portions of last year's drought sections are excellent, and that is perhaps the most encouraging factor in the situation. Bank suspensions increased in May, numbering 87 against 64 in April, but they were mostly small institutions. The Chicago failures this month have been followed by scattered casualties in the West, but no alarm need be felt over that aspect of the situation.

The anticipated reduction in savings bank deposit rates is taking place. Four of the leading New York institutions have announced reductions to $3\frac{1}{2}$ per cent. for the quarter beginning with July, against the former rate of 4 per cent. Other doubtless will follow, and the trend is downward throughout the country.

FRANCE.

Mr Hoover's Proposal — Coal Output — Coal Prices and Foreign Competition.

(FROM OUR CORRESPONDENT.)

PARIS, July 1.

The Franco-American negotiations in regard to the Hoover moratorium offer are still continuing, at the moment of writing, but it is clear that there is no prospect of the Washington proposal being accepted by this country, unless it is substantially modified to meet French needs. Early last Saturday, after an all-night debate, the Chamber of Deputies, by a majority of 386 to 189, approved the French reply to Washington (intimating acceptance of the offer in principle, subject to safeguards for the future), and insisted as a condition precedent that the intangibility of the unconditional annuities provided for in the Hague agreement must be assured. Yesterday this attitude was confirmed by the Senate by 191 votes against three (the Radicals abstaining in the Upper House after voting against the Government in the Chamber for a reason still obscure). The resolutions were based in each case on the principle of "respect for treaties as the only solid basis of international relations." M. Laval's declaration, therefore, that if Mr Hoover has entrenched himself behind his Congress, the French Ministry is entrenched behind its Chambers, is incontestably confirmed and would seem to be a complete answer to foreign criticism of "French intransigence." The line adopted by M. Laval during the negotiations has undoubtedly the support of French opinion of all shades, with the exception of a negligible minority (whose chief objection appears to be that the official opposition to acceptance of Mr Hoover's "ultimatum," as it is called here, should have been more emphatic still). The French Press, both in Paris and the provinces, is equally unanimous.

Rightly or wrongly, French opinion is convinced that a Hoover moratorium, void of all safeguards as to future compliance of Germany with her obligations, would be merely the immediate prelude to a total and final tearing up of both the Young Plan and the Hague agreement, and would soon be followed by the abrogation of the whole Versailles Treaty. Now that the far-reaching effects that would attend merely the application of the Hoover "offer," in its original crude form, are being realised, French opinion is becoming more and more convinced that the American proposal was born of an astute utilisation by the German leaders of American anxiety to protect the large amount of capital invested by the United States in Germany. That this anxiety is well founded nobody here doubts. The repeated threats by Dr. Schacht that Germany will avoid the bankruptcy, if necessary, have sunk deeply into the French mind, and this, rightly or wrongly, is one of the underlying factors of the present situation. At the same time, it is widely felt here that a second German collapse would probably affect France less than any other leading nation, while its effects on Germany

herself would be much more serious than the previous financial débâcle. This in itself, it is pointed out, would probably cause the leaders of the Reich to hesitate a long time before again resorting to such a doubtful step. It is held, further, that the outcome of another German collapse would be so deadly to American interests that there is little fear that no other way out will be found. The suggestions in the American Press that, in the event of France failing to accept the Hoover offer, her credit would be seriously prejudiced if she suspended her debt payment to the United States simultaneously with the granting of a Young Plan moratorium to Germany, are not regarded seriously here; nor is the spectre of a possible Russo-German Bolshevik alliance.

Mr Hoover hinted, when the French Ministers first officially asked Mr Mellon that Germany should be required to pledge herself to resume reparation payments after the Hoover moratorium year, that this was a matter that concerned France and Germany alone. The suggestion was immediately acted upon. M. Briand last week formally invited MM. Brüning and Curtius to come to Paris for a conversation on Chequers lines with a view to a general betterment of Franco-German relations. The German Ministers' reception of the overtures from the Quai d'Orsay is regarded as scarcely in accordance with the spirit of the invitation. Their reply appears to have been that they are prepared to come to Paris after the present Franco-American negotiations have been brought to a successful conclusion.

The Belgian reply to Washington, demanding the qualification of the Hoover offer by similar safeguards to those asked for by France, has evidently encouraged the French leaders. The French Budget for 1931-32 provides for a total sum of 1,959,500,000 francs to come from sources due to the execution of the peace treaties, after deducting from the total of 4,643,800,000 francs due to France (from Germany, Roumania, Yugoslavia and Greece) the debt payments due by this country to the United States and Great Britain, and other adjustments. On this basis of calculation the acceptance of the original Hoover offer would involve the French Government in the necessity of imposing some £16,000,000 of additional taxation to meet the deficit in the current year's budget under this heading alone.

Adjustment by the Chambers this week of Supplementary Credits authorised during the past financial year, after the passage of the budget, and dealt with during the first quarter of the current year (down to June 30th), shows that, after deducting various annulments of unexpended credits, a further 943,615,284 francs should be added to the expenditure effected during 1930-31. This will bring the net deficit for the past year to 2,800,000,000 francs.

Coal production figures for May, which were made known yesterday, show that the total output of the French collieries was 4,095,245 tons. Labour engaged was 288,377 units, against 291,187 in April and 297,345 in May last year. The average daily output in May was 900 tons more than in April, but 3,330 tons less than in May, 1930. The output of metallurgical coke by the colliery plants was 399,000 tons, or 27,000 tons less than a year ago.

Officially, French coal selling prices remain at the reduced level to which they were brought three months ago, simultaneously with the last cut in wages. These official prices, however, in no way rule in areas where competition with foreign imported combustibles exists. Theoretically, French selling prices are now 6 per cent lower than in the first quarter of the year. In reality, they are even larger. Dutch and Belgian coal cuts average at least 15 per cent., and in some of them now being offered here at over 30 francs a ton below local French rates, and in many cases the difference is as much as 50 francs a ton. So far as the Dutch and Belgian collieries are concerned, this policy appears to be proving successful, inasmuch as the volume of output continues unchanged in those countries, whereas in all others it is substantially diminished. The Northern Miners' Federa-

July 4, 1931.]

THE ECONOMIST.

19

tion is insisting that the coalowners shall cut profit rates immediately, and is appealing to the Government, "which can and must enable unemployment among the miners and its repercussions to be avoided." As short time, even in the worst cases, is still limited to two days a fortnight, the alarm of the miners' unions appears to be exaggerated.

GERMANY.

Hoover Proposal — Condition of Reichsbank — Roumanian Treaty — Banking Conference.

(FROM OUR CORRESPONDENT.)

BERLIN, June 30.

The negotiations between Washington and Paris are being followed here with great anxiety and little satisfaction, for, whatever the outcome, the discussion has already robbed Mr Hoover's offer of much of its original force as a stimulus to recovery. Germany has done everything in her power to remove the psychological difficulties in the way of France's agreeing to the scheme. Dr. Brüning's impromptu speech over the wireless on Tuesday night, in which he suggested a Franco-German Chequers, has not been appreciated at its true value. The offer was made with especial emphasis and with the greatest warmth, but that did not prevent M. Laval from telling the Chamber what line he meant to take with the Chancellor, from making it clear, in fact, that the friendly, informal discussions for which the British Government had set the pattern at Chequers were to be turned into a higgling over demands and counter-demands.

The first result of this method may well be the postponement of the visit to Paris of the German Ministers until the end of July, after the return visit of Mr MacDonald and Mr Henderson to Berlin. The Paris visit will, on the other hand, be immediately followed by a visit of the two German Ministers to Rome. The Government of the Reich does not wish to concentrate European co-operation in any one particular direction.

Meanwhile the German Government, contrary, apparently, to French wishes, is holding completely aloof from the direct negotiations between Washington and Paris. This is the only possible attitude. France and America know that certain modifications in accordance with French wishes are acceptable to Germany, but Germany shares the American view that every material encroachment on the Hoover Plan, as applied to herself, would seriously damage its economic and psychological value. America, too, must be aware how greatly the effect of its action would be weakened by compromise.

The German foreign exchange market has not yet quite recovered its equilibrium. The symptoms of panic have completely disappeared, but the demand for foreign exchange has not yet quite ceased, still less is there any question, in spite of the restriction of credit, which certainly was very mildly exercised, of appreciable quantities of foreign exchange returning to the Reichsbank. On Saturday the bank again had to part with 50 millions, and on Monday some further 20 millions are believed to have been withdrawn. These are not very large sums, but they make a serious difference, in the present strained conditions of the Reichsbank.

The cause of the further withdrawals is not quite clear, but in all probability they have been mainly due to end-of-month requirements. The bank is fortified against end-of-June withdrawals by the rediscount credit of 100 million dollars which the Bank of England, the Federal Reserve Bank, the Bank of France and the B.I.S. placed at its disposal. (It is assumed that the Bank of France is also temporarily financing the 25 per cent. quota of the B.I.S.) The credit only runs until July 16th, as it is assumed that by then the Hoover Plan will be in force, and also that end-of-month money will by then to a large extent have returned to the Reichsbank. It means, however, that the Reichsbank can increase its note issue for the month-end by a milliard without going below the 40 per cent.

minimum, to which the reserve has nearly fallen according to the return of June 23rd. This last return showed the devastating effects of the crisis in their full extent. The total losses of gold and foreign exchange since June 1st amounted to 1,250 millions, and must since have risen to over 1,300 millions.

The Germano-Roumanian trade treaty was initialled in Geneva on June 18th. It is the first German trade treaty to provide for preferential duties: Germany grants preferential rates on specified quotas of Roumanian fodder barley and maize without receiving any industrial preferences in return, but the practical value of the preference on maize is diminished by the fact that Germany already has an import monopoly, so that the duty is not as decisive in determining the origin of purchases as it would be under private enterprise. None the less, Germany has taken her stand in this treaty on the platform laid down at the League of Nations conference of November, 1930, for the benefit of the south-eastern agricultural States. The treaty can only come into force in its present form if no other parties to treaties with Germany object to it on the basis of most-favoured-nation clauses. If they did, Germany and Roumania would have to get to work all over again to frame a new treaty without preferences. The November resolutions are thus being tested, and it will now be seen whether they were just a cheap form of consolation to the small agricultural States of South-East Europe or whether they were inspired by a genuine will to help.

Dr. Brüning and the President of the Reichsbank, Dr. Luther, both spoke at the meeting of the Central Association of German banks. Dr. Brüning referred to Mr Hoover's intervention as an act of rescue and a public recognition of economic interdependence. The mutual recommitments of State and private economy must give place to co-operation for the removal of evils, and in this, too, he saw a model worthy of emulation in America. "The simple formula of increasing productivity by wage reductions and yet further wage reductions offers no solution. The purchasing power of the population would be more and more contracted by such a process, and productivity most seriously damaged, unless spontaneous help were forthcoming at the same time, in the shape of really important measures in which the banks would co-operate."

Dr. Brüning also uttered a warning against allowing too great an expansion of short-term credits in the future. Undertakings which German economy could not finance itself must be met by long-term loans. Dr. Luther emphasised the determination of the Reichsbank to protect the mark in all circumstances, without regard to any other considerations, and declared that the withdrawals of gold and foreign exchange during the spring had shown that the Reichsbank was in a position to fulfil this task in any conditions. The meeting was wholeheartedly in accord with the Chancellor's view that Germany must never again receive a large volume of short-term foreign credit.

HOLLAND.

Depression — Note Circulation — Rubber and Tin Restrictions — Capital Issues — Foreign Trade.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, June 14.

The annual reports of our large exporting companies, such as Phillips Lamp Works, show that the world-wide depression has been a very severe impediment to the sale of their goods, while the low selling prices have seriously encroached upon the profits. There have been substantial reductions in the rates of dividends, and, as a result of this, among other factors, the revenue from income tax threatens to suffer a pronounced setback. The State revenue for the first four months of the year was 1,775,846 guilders in arrears of estimates, and amounts to

14,880,812 guilders less than in the corresponding four months of 1930.

No signs of trade improvement are yet forthcoming. The number of unemployed at the end of March was 116,259 men and 6,045 women. Prices are falling continuously. The index for wholesale prices was 102 in April, as compared with 122 for April, 1930. It is remarkable that the note circulation of the Netherlands Bank does not show a corresponding decrease, but, on the contrary, a further increase. At the beginning of this month the bank-note circulation was 885.7 million guilders, as compared with 846.5 at the beginning of June last year. This high circulation of bank notes has, however, failed to arrest the decline of prices.

The Dutch Minister of the Colonies has once more nominated a commission to investigate the rubber problem and to formulate a practicable and efficient plan for ameliorating the distress of the rubber planters. The commission is said to have submitted a scheme for the consideration of the Minister. The opposition in rubber circles appears to have subsided somewhat, so that it is not altogether out of the question that co-operation from the Government may indeed be secured. Apart from the opposition of several large planters, another complication is the attitude of American rubber planters in Sumatra who produce for use in their own factories and who accordingly could not be expected to join readily in a restriction scheme. Many Dutch rubber producers are working at a loss of 1d. to 2d. per lb., but are continuing operations in the hope that they will be able to realise at a higher price the stocks they are accumulating if a rubber restriction scheme does come into force.

While the plans for rubber restriction are thus still pending, tin restriction is in full operation. So far, however, this has only been of slight benefit to prices. For this reason a new international tin conference was held at the Hague this month, at which it was decided to propose to the various governments concerned that further restriction of production by an additional 20,000 tons be recommended, and also that the possibility of utilising tin for new purposes be explored.

Great liquidity has continued to characterise the Amsterdam money market, apart from a slight tightening of rates towards the end of last month. On the capital market there was a decided increase in demand in May, but it was met without any rise in rates. The securities market accordingly proved to have a much bigger absorption capacity than could have been assumed from the operations during the first four months of the year. The high total of flotations in May was solely due to very considerable demands for account of municipal and other public bodies. In May, issues to a total of 173 million guilders were offered for subscription here; conversions are not included in this amount, so that this represents the net figure.

Activity in conversions was also very large. The nominal amount was over 330 million guilders, including a Netherlands State Loan of 277.6 million guilders and the conversion of shares in the "State" railroad and the "Holland" railroad into debentures for a total amount of 40.5 million guilders. In addition, the 7 per cent. loans of the Société Hydro-Electrique de la Cère were converted.

Last month's net total of over 173 million guilders new issues brings the aggregate for this year so far to 253½ million guilders, so that the flotations of this year are now not much behind the figure for the corresponding period last year. The following table sets forth the amounts issued in the first five months of recent years (in thousands of guilders):—

	(Thousands of Guilders.)			
	1928.	1929.	1930.	1931.
January	34,737	68,209	51,037	10,444
February	55,116	101,588	55,485	14,200
March	92,688	25,820	74,664	32,473
April	38,734	16,762	55,700	22,769
May	77,433	57,547	34,826	173,653
Totals	298,708	269,926	271,712	253,539

There has been very little change in the proportion between issues of shares and of bonds, as shown below:—

	(Thousands of Guilders.)		
1931.	Shares.	Bonds.	Total.
January	...	10,444	10,444
February	240	13,960	14,200
March	1,020	31,453	32,473
April	1,068	21,701	22,769
May	5,067	168,586	173,653
Totals	7,395	246,144	253,539

The balance of trade in the Netherlands still presents a gloomy aspect, though April was not as unsatisfactory as the preceding month. In comparison with April, 1930, the value of imports declined by 35 million guilders and the value of exports by 23 millions. The value of imports in the first four months of the year was 188 million guilders less than in the corresponding period of 1930, while exports declined by 132 millions for the same period. The balance of imports over exports was lower, however, having declined from 257 million guilders in January-April, 1930, to 201 millions in 1931. Comparative figures are shown below:—

	(In thousand tons.)		(In million guilders.)	
	Imports.	Exports.	Imports.	Exports.
April, 1930	2,441	1,303	204	142
March, 1931	2,259	1,440	167	116
April, 1931	2,336	1,415	169	119
January-April, 1930 ...	10,136	5,330	852	594
January-April, 1931 ...	9,189	5,452	664	462

In terms of quantity the imports of manufactured articles decreased, while the exports increased, but the value was 100,000 guilders lower in both cases, so that exports suffered by the decline in prices more than imports.

ROUMANIA.

Parliament — Report of Mr Auboin — Proposed Banking Law — Harvest Prospects.

(FROM OUR CORRESPONDENT.)

BUCHAREST, June 19.

THE newly-elected Parliament was opened on June 15th. The leaders of the various parties have made their public declarations outlining the policy they intend to adopt. In consequence it is possible to see a little more clearly with regard to the immediate development of the political situation. The coalition formed by the Government with the help of the Liberal Party and a few other small groups has now come to an end and each group resumes its entire freedom of action. The result is that the Government has a small but definite majority over all the other parties combined. The Liberals, as the next strongest party, will form the nucleus of the Opposition. It is not expected that it is their intention to cause the Government any embarrassment, at any rate in the near future; but their leader, Mr Duca, has made it very clear that he is a factor that the Government has to take seriously into account. The National Peasant Party is a declared enemy of the present regime, and will let no opportunity slip by of heckling the Government on any question that may arise. The Government will not be on a bed of roses, and will require no mean skill to keep their ship afloat. For the moment their immediate fate seems to depend greatly upon how they tackle the grave financial problems which confront them.

The royal message to Parliament contains nothing unexpected, its main points having been alluded to in various election speeches and declarations made by the Government candidates. It touches on the necessity of economy, foreshadowing the revision of the budget; from information which has been received through various channels, it appears that a reduction of some two to three

thousand million lei is aimed at. These economies, however, are in no way to affect the organisation and development of the national defence. A short but important passage is devoted to the agricultural situation: measures are to be devised to lighten the burden of indebtedness and taxation which weighs upon agriculture, to facilitate the sale of agricultural produce, even if this should involve substantial sacrifice on the part of the State, and finally to provide new and modern machinery and cheap credit.

The Government is to introduce legislation to encourage the creation in industry of organisations which will pave the way towards rationalisation and exercise an effective control over prices of industrial products. The message further states that it is intended to modify at an early date the existing law affecting commercial credit. The important problem of road improvement and transport is also mentioned. With a view to securing markets for Roumanian produce, the system of commercial conventions is to be completed. The message, of course, deals with the great problems of the day only in a very general way. Events will show whether the Government will be capable of attacking these problems efficiently enough to raise the country out of the present state of economical depression.

The ninth quarterly report of Mr R. Auboin, technical adviser of the National Bank, gives, as usual, a comprehensive account of the economic situation of Roumania. It emphasises the fact that the stabilisation of the currency is satisfactorily maintained, as is shown by the very moderate fluctuations in the proportion of the bank's reserves to its liabilities. On the other hand, the report reveals the difficult situation of the Treasury by stating that the major part of the recent foreign loan of the Monopoly Institute was utilised as cover for the foreign commitments of the State. In the remarks concerning the general situation, the report points to the favourable trade balance of last year, and, at the same time, it states that to a great extent the difficulties from which the country is suffering are due not so much to the agricultural crisis as to the delay in the measures taken by Roumania for the improvement of its finances and the modernisation of its credit system. The budget deficit for 1930, concerning which so much has been said to the detriment of Roumanian credit abroad, is stated to amount to little more than 2,000 millions, but the budget for 1931 is considered too optimistic, especially in view of the small Treasury receipts for the first quarter of this year.

According to recent Paris reports on the progress of the new banking law, which is in course of preparation, it appears that it is intended to create a special Council which is to exercise a general supervision over the banks. Banking business is only to be carried on by companies which must be inscribed in a special register of banks and which must have the special authority of the Council of supervision. Foreign banks established in Roumania will have to conform to the law; at least a third of the members of the Board and their accredited auditors must be Roumanian citizens. The law provides the establishment of a minimum capital, according to the town or district, ranging from 10 millions for Bucharest, 8 millions for towns next in importance, to 2 millions in rural districts. The proposed law in its present form is a panicky measure and as such is heartily condemned by most people of judgment. It is more than probable that it will be amended in many essential respects before it is submitted to Parliament.

Rough estimates of the area sown this year compared with that of 1930 and the average for 1925 to 1929 are given in the following table:—

	Average.		
	1925-29.	1930.	1931.
	Hectares.	Hectares.	Hectares.
Wheat	279,970	274,605	280,601
Rye	24,107	21,887	25,932
Barley	1,662,720	1,855,596	1,569,859
Oats	1,130,365	1,087,057	884,978
Maize	4,292,016	4,426,089	4,176,551

The harvest prospects are on the whole good.

SWEDEN.

Stock Exchange — Foreign Trade — Prices — Production.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, June 13.

THE closing of accounts for April showed the blackest Stock Exchange month since the great collapse at the beginning of the crisis. Although developments, broadly speaking, were more tranquil in May, the continued depression forced down the level of prices even more than in April. On the decline of "A" list shares by 316,000,000 kronor in April, there followed in May a decline of 319,000,000 kronor. Since the beginning of the year the fall up to the end of May amounted to 478 million kronor, a figure which is in striking contrast to the rise last year of 440 million kronor in the period from January to May.

It might have appeared as though the decline had thereby reached bottom, but there followed upon this heavy and unexpected decline a new and still more serious unloading in the first days of June, an unloading which in its dimensions considerably exceeded that of the collapse at the beginning of the great crisis in 1929. On two days alone, June 1st and 2nd, there occurred a fall in prices so catastrophic in extent that the value of the "A" list shares sank by a further 243 million kronor. This pessimism was in a high degree a reflection of developments on the foreign Stock Exchanges, as the Stockholm Stock Exchange is now feeling fully the effects of the intimate relations with leading foreign exchanges which it has created of recent years. It is, however, also to a considerable extent an effect of domestic economic developments and the domestic outlook of the prospects of the immediate future.

The effects of the depression have become considerably worse of recent months. It appears most clearly, perhaps, in the figures for foreign trade, which for April (the last available figures) showed an unusually depressing result. Not only were shipments of our leading exports considerably reduced, but the volume of imports indicated that employment in industry was declining. Shipments of timber were 57 per cent., of pulp 53 per cent., of newsprint 42 per cent., and of iron ore 55 per cent. of last year's shipments. Exports of matches were reduced 53 per cent., pig iron 39 per cent., electrical machinery, motors and separators 45 per cent., and ball bearings 57 per cent. Telephones and bacon were two rare exceptions, and showed an increase of 30 per cent. and 40 per cent. respectively. Exports of butter, on the other hand, were still slightly below those of last year. For the first four months of the year the passive balance amounted to 147 million kronor, a figure which of recent years has only been exceeded in 1928, the year of the great strike. During the same period last year the passive balance was 96 million kronor, and two years ago 73 million kronor. A consequence of this development is that the balance of payment has become considerably more unfavourable than is usual at this time of the year, though the continued rise in exports of capital has contributed to this result.

Prices, after showing for some months a steadier tendency, have again begun to fall. *Svensk Finanstidning's* weekly price index (1913 = 100), which only included raw materials, showed only a slightly falling tendency from December to April. In May the fall became more marked, and the index number this week fell to 97. Nevertheless, the production figures for the most important branches of industry maintained higher levels than might have been expected, though a progressive slowing down of production was clearly visible. As a rule, *Svensk Finanstidning's* index number is unchanged in April, and in favourable years it even rises. Last year, for example, it remained at 149, as in March. In 1929 it rose from 135 to 146. This year, on the other hand, it declined from 122 to 120.

The cause of the decline in April is to be found primarily in the decreased production of pulp. The unfortunate developments shown in the timber market this year, not only in greatly reduced sales, but also in the catastrophic fall in prices, have naturally involved a still further cur-

tailment of sawing. For April the figure was only 96 per cent. of 1923-24 (the basis of the production index number), whereas a year ago the figure was 133 per cent. As regards the pulp industry, the reduction in output concerning which agreement was reached in the autumn was seriously begun in the month of April. This explains why the volume of production sank to only 41 per cent. of the 1923-24 figure, as against 196 per cent. a year ago. The effect of this curtailment would have been still more apparent but for the fact that, at the same time, the iron industry was able to increase its output to some extent, and since January gradually increasing employment has been found in this industry. Output in April rose from 90.97 per cent. of the 1923-24 figure to 119 per cent. Employment in the metal industry is active, owing, no doubt, to the large railway electrification plan for which the Riksdag has granted the means.

ARGENTINA.

Political Situation — Foreign Trade — Cereals —
Exchange — Money Market.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, June 2.

CURRENT Argentine conditions at the beginning of June, though undoubtedly difficult, suggest that, in the matter of finance, the worst has been passed, although general opinion has by now realised that recovery will be both slow and painful. In the first place the political uncertainty is giving place to a more reasoned view of the position. Reorganisation of the two main party groups, the Radicals and the Conservatives, is being taken in hand on normal lines, and meanwhile the Provisional Government pursues a diplomatic course of action, merely emphasising its firm intention of using whatever influence it possesses to prevent a return to the abuses of the Irigoyenist regime. In this it has the full support of all men of goodwill, and, meanwhile, continuous efforts are made to meet the financial difficulties incidental to falling exchange and the detrimental effect caused in foreign markets by sensational Press reports of current business conditions. These reports have been officially and emphatically contradicted, not only by Ministerial speeches, but also through a formal message addressed to the exchanges of London, Paris, Berlin and New York by the President of the Buenos Aires Bolsa de Comercio.

Figures covering Argentina's foreign trade for 1930 have recently been published and are distinctly unsatisfactory, the unfavourable trade balance for that year amounting to \$125,078,564 gold, with a total decrease of some \$300,000,000 gold in the value of exports and \$120,000,000 gold for imports, both in comparison with the 1929 figures. For the first four months of 1931, however, comparison with the corresponding period of 1930 is more favourable, the figures reading as follows:—

	First Four Months.	
	1930.	1931.
	\$ Gold.	\$ Gold.
Imports.....	267,294,282	208,745,436
Exports.....	251,416,253	219,445,626
Trade Balance.....	- 15,878,029	+ 10,700,190

The trouble is that, under the existing fiscal system, reduction of imports perforce spells diminished revenues, and one of the chief preoccupations of the Government at the present time concerns the manner in which liabilities due in July and September are to be met. Presumably, renewal will be possible, though at enhanced rates, and, meanwhile, severe economy is being exercised in every department of state. This course will be continued when the Budget for the current year is finally drafted and approved.

Exports of cereals continue to be heavy, and 2,660,000 tons of maize, over 2,000,000 tons of wheat, and close upon 1,000,000 tons of linseed, have been shipped during the current year. As there are available for future export at least two and a half million tons of wheat, seven and

a half million tons of maize, and half a million tons of linseed, to say nothing of the exports of meat and general produce, there is every reason to expect an improvement in the exchange during the latter half of the year, the more so since the reduction of imports is likely to be cumulative. Unfortunately, there is little probability of any marked improvement in cereal prices, which, at the month-end, in Buenos Aires, were \$5.60 for spot wheat, \$3.90 for maize, and \$10.55 for linseed, all per 100 kilos. Weather conditions have been excellent for the shipment of maize, and, at the same time, the substantial rebate in railway freights conceded by the companies, together with the special credit facilities granted by the Banco de La Nacion, have done much to put heart into the Argentine farmer, who now sees himself in a position to harvest and dispose of his maize without loss, even at its present quotation.

The weakness of exchange, which at the month-end was quoted at 34½d. on London and \$144.60 on New York, banks' cable drawing rates, has not had a proportional upward effect on cereal prices, whereas it naturally handicaps importers and adds to the depression in quotations for Argentine national bonds held abroad. In New York first-class Argentine securities have been marked down to an unreasonable extent, and the same may be said of current quotations for Argentine railway shares in London. The drop in open charter rates for spot steamers amounts to more or less 2s. per ton, but several fixtures on the San Lorenzo range for boats to load during the latter half of June have been booked round about 18s. Last, but not least, the tension on the local money market is now somewhat less, although great care is being taken not to abuse the faculty of rediscount. At the close of May this item stood at \$106,311,523 paper, and, although further operations are bound to take place in June it is evident that the greatest care will be used by the Banco de La Nacion when availing itself of this facility.

Letters to the Editor.

THE WORLD CRISIS: AN INDUSTRIAL DIAGNOSIS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Both prior to Great Britain's return to the gold standard in 1925, and in the crisis year of 1929, grave apprehensions were officially expressed by industry regarding the trend of world monetary affairs. The somewhat striking confirmation which predictions made on those two occasions has received in subsequent events suggests that an analysis of the events of the post-war period from an industrial angle may possibly throw light on the conflict between the two economic schools of thought at present contending regarding the part played by monetary policy. The industrial approach to the problem differs fundamentally from the economic in that industrialists are unable to regard "stability," whether of money or prices, as the ideal to be aimed at. Just as we cannot be said to enjoy physical peace until we are physically dead, so it is true that an industrial system cannot in a practical sense enjoy the blessing of economic stability unless it is economically-speaking dead. For so long as progress is going on the price-level can never be truly stable. There must always be forces pulling it—and keeping it—out of adjustment.

The best that we can hope to secure is that the pull of progress is not too violent or uneven; but pull there must be if industrial evolution is to go on. Similarly, saving and investment must never exactly balance. Investment must always be moving a little ahead.

The trouble is that these two things tend to get too far out of adjustment, with the result that, sooner or later, the march of progress is brought up with a jerk by the banking system, which performs the useful function of stopping the process before it gets to the point beyond which recovery is impossible, as used to happen before the modern gold standard came into being.

Industry's ideal is orderly progress, not stability. Business experience shows that orderly progress whether of an individual firm or an industry, is only possible if there is, working ahead of current operations, a production plan and a marketing programme preparing the way for future expansion. I may instance the American Telephone and Telegraph Company, which is reputed to work upon a twenty-year plan of future

developments, with the first five years of the twenty definitely budgeted for.

Now, while at first sight it may seem bizarre to suggest that, before the war, the finance houses and investment institutions of the City of London were in essence engaged in operating a similar sort of plan—though on a grander scale—an examination of the detailed working of the pre-war system of international trade does, I suggest, reveal something closely approximating to it.

The gold standard was the vital link assisting to keep the balance between production and consumption in the main world commodity markets at all stages of the plan, and preventing long-term development in any one direction getting too far ahead. On this view the difficulties of our post-war situation are attributable to the circumstances that (1) the war destroyed the pre-war plan of orderly progress so completely that it has proved impossible to restore it; and (2) that the temporary handing over of the sceptre of financial authority to the U.S.A. since the war has meant that the gold standard has been, in part, diverted to foster a development plan along American lines instead of being recombined in furtherance of a common international plan.

I may interrupt to observe that I have singled out the U.S.A., not because hers is the sole responsibility, but because—owing to her enormous internal market—she has been uniquely able to superimpose on the international plan a local internal plan of her own. This is confirmed by the circumstance that, even before the war, the United States enjoyed independent local secondary business cycles at intervals roughly midway between the major international movements: a failure to appreciate this may possibly account for underestimates of the duration of the present depression by American forecasters.

British Free Trade policy contributed to the orderly working of the pre-war plan by assisting prices to conform to certain basic essentials of long-term progress. (1) Orderly production and marketing of consumption goods over a period of years is only possible if these are marketed at prices which are gradually falling over the period. Naturally, if prices generally are rising, due to some common monetary cause, then this fall need be a relative one only. The short explanation of the need for this fall is that wages and incomes change but slowly over a period of years, and consequently they can only be made to buy more goods if those goods are sold at cheaper prices.

If at any period during the plan we interfere by temporarily increasing the purchasing power of consumers by, say, over-extension of instalment finance, the first thing that will happen is that producers who have been budgeting for falling prices at that stage will make larger profits than they anticipated. If this continues, other producers will come into the field, and this will push costs of production up till ultimately the margin this will push costs of production up till ultimately the margin of profit may be almost destroyed. The final result is general over-production coupled with prices which are unremunerative to producers and beyond the capacity to pay of consumers, once the temporary inflation of their purchasing power ceases. An important secondary effect is that preparations in process for making goods at still more economical prices at a later stage—an essential feature of a long-range production plan—will be interrupted, if not abandoned.

(2) The second essential relates to capital development, i.e., the starting of new industries, the exploitation of new inventions and the development of new markets. The rule here is that this work also must be planned over a period of years in such a manner that the products to which it gives rise can be marketed, either at gradually falling prices, or in such a way as to displace in more or less orderly manner existing goods, as to inventions and markets which become obsolescent. The short explanation in this case is that, as the total purchasing power changes but slowly (except during periods of inflation), "new" products can only be sold in growing quantity if they are substituted for "old," or if both are sold at correspondingly lower prices.

A temporary inflation of credit during any year of this part of the plan leads to over-development of equipment of the type proper to that stage of the plan, to the detriment both of orderly progress during subsequent years and the maintenance of current stability. Having regard both to the fact that such movements, once started, tend to grow cumulatively, and that the aggregate fund of money is more or less limited, periodic crises resulting in the hold up of the long-range plan of development are not surprising. The extent of the hold-up will depend on the circumstances in each case. The effect of money inflation on such a plan is to encourage extension forward of planning, while money deflation leads to a contraction. Inflation, also, has what may be termed the "static" effect of facilitating the liquidation of past debts and mistakes; this accounts, in the main, for its popularity as a nostrum.

On the above view the first remedy for a depression is to prune off the excessive growth of the previous boom and allow the time for the correction of maladjustment. To encourage new investment before this has been done merely bolsters up

the status quo, and postpones a fall in rates of interest to the level appropriate to a resumption of orderly progression in the next stage of the long-term plan. If maladjustment has gone so far that recovery is impossible, then, to judge by past experience, a resort to inflation may avert collapse.

But inflation is not always as simple in operation or speedy in result as is commonly supposed. Taking the period 1890-6, when conditions were in many respects very similar to those of the present day, I find that the inflation, which began with the expansion of the gold holding of the Bank of England in 1893-96, took some two years to produce a material effect on rates of interest, home investment and the prices of constructional materials, and a further two years before that effect reached its maximum intensity via a domestic building boom and the South African War. And it took nearly twenty years for this effect to work itself out in general prices and international investment; while the inflation responsible for the present breakdown of consumption industries in the U.S.A. was set going some five to ten years ago.—Yours, etc.,

Federation of British Industries,
21, Tothill Street, S.W. 1.

SOVIET DUMPING.*

THE problem of Soviet "dumping" is among the main irritants of current controversy. Its political repercussions are out of all proportion to its economic consequences. It is but one of a score of inter-related factors by which the world's trading equilibrium has been disturbed. Yet the attention it is receiving rests, undoubtedly, on an intelligible basis. For it is not what this "dumping" is now, but what it threatens to become, that startles the imagination. If the Five-Year Plan succeeds, and the Ten-Year Plan which is to follow it, the distortion of commercial relationships will be infinitely greater than it is now. The question may then well arise whether the plan-economy of Russia and the capitalist economy of Western Europe can co-exist in amity.

To the ordinary student of affairs, two separate questions pose themselves. What is dumping? And what are the facts as regards Russia? Dr. Eliacheff faces them both, in his clearly-argued, if definitely tendentious, book. He admits, quite frankly, that it is not possible to find water-tight economic criteria which apply, without qualification, to the facts of the present case. If by "dumping" is merely meant the under-selling of a competitor—though it be on a spectacular scale—there is nowhere in the realm of foreign trade where one can definitely draw the line. On this basis, Japan "dumps" her toys and Czechoslovakia her boots. If, on the other hand, one's definition has reference to cost of production and the price of the product in the home market, how can one apply it to Russia? With production and distribution everywhere controlled, the internal price-level loses all significance. This is what has happened in Russia. Her means of production are collectively-owned and her supplies universally rationed. Under such conditions the relationship between effort and its reward becomes purely arbitrary. So that Dr. Eliacheff truly says:—

"One must first of all get it into one's head that it is impossible to determine, with any sort of precision, what the cost of production in the U.S.S.R. is, in the technical and quantitative sense in which one uses that term in other countries."

He is thrown back, therefore, upon other tests, which he brings to bear in the course of an elaborate statistical argument. These have reference, not to cost of production, but to selling price.

"We have been able to establish"—runs his conclusion—"on the evidence of Soviet documents, two undeniable facts: the one, that goods are sold in Russia at a price sensibly higher than in Europe or

* "Le Dumping Soviétique." By Boris Eliacheff. With a preface by M. Etienne Fougère. Paris. Marcel Giard. 220 pp. 15 francs.

losses of associated companies had been provided for and that profits from which "Shell" dividends were payable were the result of trading operations and not reserve appropriations was a confession of the complete mysteriousness of the "Shell" accounts.

The second method is less common, but it will be found that some of the big insurance companies and banks which have fully-owned undertakings carried on as separate companies, publish the accounts of these undertakings separately. Unless some essential detail is given showing the financial relation between the holding company and its subsidiaries, including the nominal amount of shares held in the subsidiaries and their cost of acquisition, the shareholders can have no idea from this form of accounts of the real financial position of the group as whole.

The third method is an advance on the second, but from the shareholders' point of view still makes unintelligible reading, for it may happen that one of the subsidiaries holds some of the parent company's shares which appear in the statement of the subsidiaries as an asset. In a consolidated balance sheet of the whole undertaking, the holding by subsidiaries of the parent company's shares would be deducted from the issued capital of the holding company. Further, this third method does not always show separately the amount of the minority or outside shareholders' interest, as would be shown clearly in a consolidated balance sheet.

The presentation, with the "legal" balance sheet, of a consolidated balance sheet and consolidated profit and loss account raises many accounting problems—for example, the liabilities and assets in the consolidated balance sheet will have to be computed on the same basis, and the accounts of the subsidiaries will have to be made up to the same date, which is not always practicable, especially when the subsidiary companies are trading in widely different fields of business—but if this method has been successfully adopted in America for many years, the British companies and their accountants can hardly claim that it is impracticable in Great Britain. To quote Sir Gilbert Garnsey, the consolidated account enables the shareholders

"to see at a glance the total interest (capital and revenue) accruing to minority or outside shareholders in the subsidiary concerns and what perhaps is most important of all, what surplus is available for the shareholders of the parent institution for dividend purposes. Further, it also shows what assets are available against the investments and how much, if any, is represented by goodwill or even losses. There is also an advantage in the fact that inter-company indebtedness, shares, purchases, sales and dividends are eliminated and the figures shown on a net basis, while all profits and losses are automatically taken up. Without some such consolidated statement it is extremely difficult to follow the figures from a mere perusal of the separate balance sheets, especially if the position is complicated by one of the subsidiary concerns being also a holding company."

An illustration of the uninformative nature of a holding company's accounts, which do not follow the method of the consolidated balance sheet, and profit and loss account, which may be found in the accounts of the Unilever group, which publishes the accounts of its five principal subsidiaries in addition to the parent holding companies, Unilever Limited, and Unilever N.V. A shareholder, if he desired to know the exact position of the group as regards its holding of stocks of raw materials last year, would have been utterly bewildered. No stocks appear in the parent companies' balance sheets, and the amount of stocks in the balance sheet of Lever Brothers, which itself is a holding company, is the inconsiderable amount of £1,421,867. And yet we know from the directors' report of the previous year that, at December 31, 1929, their stock-in-trade amounted to approximately £16 millions, so that a decline of 33 per cent. in the value of raw materials would have involved an inventory loss of over £5 millions. Nevertheless, nothing is said in the report of the two parent companies as to the basis on which stocks have been valued. We do not suggest that the consolidated balance sheet and consolidated income account are practicable in the case of the Unilever colossus, but it serves to illustrate the need for directors to supplement the "legal" balance sheets with some form of consolidated statement of assets and income.

The accounts of the Imperial Chemical Industries, to take another example, show how shareholders and in-

vestors may be made suspicious by uninformative accounting. The belief was strongly held at one time last year that Imperial Chemical Industries had brought a capital profit, obtained by the sale of some of its investments, into their own trading profit and loss account. This was denied by Sir Harry McGowan at the general meeting in April, when he clearly explained that the profits realised on investments had been applied to assets in the balance sheet and had not been brought into the profit and loss account. If a consolidated balance sheet and profit and loss account had been published, this rumour could never have become current, nor, we think, would the shares of the parent company have been subjected to such persistent "bear" selling.

On account of the case pending against Lord Kylsant and Mr Moreland, we cannot deal with the position of the Royal Mail Company's accounts, but it will suffice to say that companies incorporated by Royal Charter are not even subject to the Companies Act, and can avoid even the inadequate requirements of the "legal" balance sheet as revised in the Companies Act, 1928. Up to quite recently, it was the practice of shipping companies incorporated by Royal Charter to show the whole of their assets in one meaningless item of many millions of pounds in the balance sheet.

The slump in company earnings and values to-day makes the question of intelligible accounting a matter urgent enough for the House of Commons to deal with. Sir William McIntock, in an address to the Birmingham Chartered Accountants Students Society this year, dealt with the question of the valuation of "assets," and remarked that the Companies Act of 1928 had gone a little way towards remedying this position, but only a little way. "Company directors," he said, "are, perhaps naturally, inclined to take advantage of this situation to hide unpleasant facts from shareholders, but the auditors will not escape their share, and more, of the blame when any troubles come to light. Unfortunately, the auditors have very little discretion in such cases, except by taking an extra-legal view of their duties, and it may be that the time has come for a new kind of professional etiquette in such matters which might be observed by members of the various accountant bodies." If Parliament will not act, then chartered accountants as a body will have to lead the way.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
July 8.	July 9.

THE uncertainty regarding the outcome of the French negotiations over the Hoover proposals had a sobering effect upon a market which only a week before had been buoyant with new hopes, and the general tendency was to mark time and await events. Nevertheless, public interest increased somewhat, and this kept prices steady when professional profit-taking might have resulted in a set-back.

The gilt-edged market was in cheerful mood, and several Home Government stocks hardened under the lead of 5 per cent. War Loan. At first the appearance was subdued, owing to the uncertainty of the world outlook, and renewed rumours regarding an impending Conversion operation, but these influences were counteracted by the influx of gold, and talk of a Bank rate reduction which did not, however, materialise. As a result of the Prime Minister's recent statements, in the House of Commons, to which reference is made in a Note of the Week, inquiries were forthcoming for Indian stocks, and the Australian stocks showed to advantage, under the lead of the Commonwealth 5 per cents.

In the foreign market, German bonds came on offer at first owing to the protracted Paris bargaining and the continued strain on the Reichsbank; while other European stocks were hesitant. Several South American stocks gained ground on anticipations of the result of the conference between the United States Treasury and bankers regarding Latin-American short-dated credits

Argentine stocks firmed on an improvement in the peso, but later sagged slightly. Chilean bonds were uncertain, but Brazilian firmed up later in the week under the lead of the Funding Loan.

Home rail stocks received little attention during the week, but prior charges were firm. Ordinary shares gathered a few points, but were generally listless, though no appreciable decline followed the publication of unfavourable traffic figures. The week opened with a good trade in Argentine rails, but the weakening of the peso had its effect, and these stocks afterwards lost ground. Other foreign rails showed little tendency to alter.

The undertone in the industrial market was less steady than last week. On Monday shares were fairly quickly absorbed, but later showed signs of awaiting a definite lead. International stocks were generally firm, and gained strength on buying orders from New York. Brazil Tracings were an especially good feature. After initial eases, Swedish Match firmed slightly, but were mostly inactive, dealers preferring to await European developments. Electrical supply shares were satisfactory, Bournemouth and Poole strengthening on news that the Bournemouth Corporation had granted an extension of the company's rights. Henley's were not affected by the report, but Callenders and Associated failed to hold the improvement which they showed earlier in the week. Iron and steel shares were dull, but N.C. Metal met with inquiries. After giving a mixed display, Textiles and Rayons strengthened under the lead of Courtaulds. Motors lost ground, and breweries were irregular. Tobaccos eased slightly, but shipping shares received inquiries, as did some insurance shares. Records were good, and Dunlops and Imperial Chemicals improved.

Satisfactory advices from New York caused oil shares to hold most of the ground they had gained during the previous week. Later, Royal Dutch, Burmahs and Mexican Eagles had a healthier appearance, Paris coming in as a buyer. The reduction in the United Kingdom rubber stocks increased the public interest and caused rubber shares to rise, and prices were maintained despite a diminution in activity later in the week. Tea shares became slightly irregular after a period of animation during which a substantial increase occurred in the volume of transactions.

The mining market was generally listless, attention being mainly given to speculative counters. Kafirs were not active, and moved in narrow confines, a few only finding higher levels on encouraging advices from Johannesburg. Paris showed little interest in the London market, and consequently price movements were few. "Johnnies" were in demand, but later receded. General Mining were unchanged, but Rand Mines were bought.

FOREIGN STOCK EXCHANGES.

NEW YORK.

After the exciting events of last week, the tone of the New York Stock markets appeared hesitant, and the bears made tentative advances on selected stocks. Prices rose and fell with the conflicting rumours regarding the progress of the Hoover Plan, but by mid-week much of the original confidence which the scheme inspired had been dissipated by the reserved attitude of France. The opinion strengthened that while the acceptance of the moratorium should provide a much needed stimulus to market activity, its effects had already been sufficiently discounted in view of underlying economic conditions. The approaching publication of the second quarter's earnings figures restrained the more ardent spirits, while rails continued in a depressed condition, despite the satisfactory dividend announcement of the Atchafalaya and Santa Fé. The market was unfavourably affected by the announcement of the Interstate Commerce Commission that opposition to the proposed freight rate increase will not be heard until August 31st. Elsewhere there were a number of soft spots. Copper issues declined despite an increase in the price of the commodity, for it was recognised that at prevailing prices few companies could expect to make adequate profits. Oil shares were firmer, the figures for the daily average production showing a decline.

INVESTMENT NOTES.

Sugar-Beet Company Finance.—Elsewhere in this issue we discuss certain important aspects of the beet sugar industry in the light of the report issued on Tuesday by H.M. Stationery Office. In the table which we print below, the comparative results of the Anglo-Dutch group of companies, which operates factories at Cantley, Kelham, Ely, Ipswich, and King's Lynn, are shown for the past two years. The sharp decline in world sugar prices has brought about a reduction of profits in each case, the aggregate decline being in the neighbourhood of 29 per cent.:

Name of Company.	Net Profit, 1929.	Ordinary.		Net Profit, 1930.	Ordinary.	
		Earned.	Paid.		Earned.	Paid.
Ely Beet Sugar.....	£ 131,490	29.2	12.5*	£ 61,241	13.6	12.5*
English Beet Sugar.....	155,318	31.1	25.0*	124,090	24.8	20.0*
Ipswich Beet Sugar.....	66,396	16.6	12.5*	62,047	15.5	12.5*
King's Lynn Beet Sugar.....	56,787	12.6	10.0*	45,487	10.1	10.0*

* Tax free.

It will be seen that the dividends ranging from 10 per cent., free of tax, to 20 per cent., free of tax, have been maintained in all cases. Last year 61 per cent. of the aggregate net earnings was distributed to shareholders, while for the year to March 31st last the proportion was raised to 85 per cent. At the same time, the aggregate amount placed to reserves and development account declined from £158,741 to £51,615. In view of the fact that the industry is being heavily subsidised and cannot be regarded as having outgrown the experimental stage, the directors' policy of distributing so large a proportion of earnings in a critical year may seem unduly liberal. It is noteworthy, however, that during the current year the group is operating its factories on the basis of applying the whole of the net profits, after providing depreciation, in payment to farmers for beets delivered. Another report which has recently been issued is that of the Lincolnshire Sugar Company, which was incorporated as recently as 1927 and has not paid a preference share dividend since its first operating year. Trading profits declined from £76,000 to £67,800 in 1930 and net profits from £48,800 to £21,300, though the net profit of a subsidiary, the Second Lincolnshire Sugar Company, rose from £9,100 to £24,500, enabling that company to write off the whole of its preliminary expenses, totalling £14,500.

MEMBER, INVESTMENT STUDENT,
WOULD BE INTERESTED TO LEARN
OF SUITABLE APPOINTMENT.

Box 98, The Economist Office, 8, Boulevard St., London, E.C. 4.

Half-year Railway Traffic.—A review of the traffic receipts of the "Big Four" railways for the past twenty-six weeks can hardly be other than gloomy. The aggregate takings of the four lines show a decline of £7,947,000 compared with the similar period of 1930, although the first half of last year revealed in its turn a drop of £3,124,000 as compared with 1929. "Passengers" and "merchandise" both account for a greater proportion of the half-year's decline than in 1930, while "coal and coke" accounts for only 14 per cent. of the £7,659,000, against 29 per cent. of the decline last year. Declines in total receipts of a little over 11 per cent. are shown by the London and North Eastern and Great Western, while Midland and Scottish receipts have fallen off 8.9 per cent., and those of the Southern 5 per cent. The latter company actually shows an increase of £57,000 in its coal and coke receipts, a reflection, no doubt, of Kent coalfield developments.

	HALF-YEAR TRAFFIC. (£'000 omitted.)				Total.
	L.M.S.	L.N.E.R.	G.W.R.	S.R.	
1930, compared with 1929.					
Passengers.....	511	153	131	21	816
Merchandise.....	613	470	291	25	1,399
Coal and coke.....	503	206	110	90	909
Total.....	1,627	829	532	136	3,124
1931, compared with 1930.					
Passengers.....	828	759	460	411	2,458
Merchandise.....	1,991	1,523	657	171	4,342
Coal and coke.....	146	584	474	57	1,147
Total.....	2,965	2,866	1,591	525	7,947

That shareholders have little confidence in the ability of the railways to balance their traffic losses by "economies" is indicated by the severe slump in quotations from the highest of last year:—

	1930.		1931.		Present Price.
	High.	Low.	High.	Low.	
L.M.S.R. Ord.....	57½	31	34	15½	18½
L.N.E.R. Def.....	13½	5½	6½	2½	4
G.W.R. Ord.....	94	62½	69½	41½	50½
S.R. Def.....	32½	21½	23½	11½	16

Though in all cases prices stand above the lowest of the year, the improvement is probably due rather to the better tone of the markets generally, under the benign influence of the Hoover plan, than to any optimism with regard to the immediate earning power of the railways. Actually, London Midland and Scottish and London and North Eastern are not expected to earn their second preference dividend requirements.

Chilean Bonds.—It is announced that the Chilean Government is arranging for a delegation of British and American banking experts to visit Chile for the purpose of investigating the country's financial position and devising ways and means of providing for the Government's external obligations. It is understood that funds are in hand for the debt service of July 1st, but that the Government is without the requisite foreign exchange to meet the additional payments which fall due in August. Recently Chilean bonds have been a reactionary market in anticipation of a temporary default, although present prices are above the worst. The following table shows the highest and lowest prices recorded this year for the principal dollar and sterling issues, and the current prices together with the running and redemption yields:—

		1931.		Present	Yield %
		High.	Low.	Price.	Red.
Sterling.					
Chile 5% 1909.....	1955	84½	61	73	7 0 8
Chile 7½% 1922.....	1956	104½	80	90	8 12 5
Chile 6% 1928.....	1961	94	63½	72	8 10 2
Dollar.					
Chile 6%	1961	86	62	62	9 13 6
Chile 6%	1963	87	63	63	9 10 6
Chile Mortgage Bk. (Guaranteed)	1962	85	60	60	10 0 0

A report has been prepared by the National City Company which, while not disguising the serious condition of Chilean Government finances, affords some grounds for confidence in the outcome of the experts' investigations. In 1930 there was an unfavourable trade balance of approximately \$8,500,000—this for the first time since 1919. For the first three months of 1931 exports again declined

on account of the lower sales and lower prices of copper and nitrate, but by restriction of imports the country managed to secure a favourable trade balance of just over \$1,000,000. The external debt service of the Chilean Government, however, requires approximately \$40,000,000 a year. It is, therefore, clear that the balance of international payment is heavily against Chile. The Central Bank has been obliged to draw deeply on its gold reserves abroad to meet the current demand for foreign exchange bills. The gold holdings in the Bank of Chile have now been reduced to \$28,000,000, and it is considered inadvisable to meet debt charges by further gold shipments. By way of protection, the Central Bank has increased its rediscount rates to 9 per cent. to member banks and 10 per cent. to the public. The national budget has been upset, not only by the fall in revenues, but by the fact that, in the hope of obtaining permanent finance, the Government attempted to carry both the ordinary and extraordinary budget out of its ordinary receipts in the first few months of this year. As the prospects of permanent financing failed to materialise, the Government became faced with a substantial cash deficit. How these difficulties are to be solved it will be the task of the banking experts to discover, but the fact that Chile is the only one of the South American Republics which has never defaulted in its obligations to foreign bondholders entitles her to the utmost consideration.

The "Cosach" Announcements.—The news that the directors of "Cosach," the company recently formed under the aegis of the Chilean Government to unite the nitrate interests of the country, have decided to defer the payment of the dividend due on July 1st in respect of the company's 7 per cent. cumulative preferred shares, and that the Lautaro Nitrate Company is proposing to follow its example with regard to its 7 per cent. £5 cumulative preferred shares, came as an unpleasant reminder to the market that all is not yet plain sailing in the nitrate world. The *raison d'être* of the postponement would appear to be the short time which has elapsed since the formation of the merger company and the consequent necessity of conserving cash resources. Few voices will be found at this juncture to criticise this action. The directors reiterate their utmost confidence in the eventual ability of the company to set the industry and itself on permanently stable foundations. Shareholders are informed that the company is participating in the nitrogen conference now being held to allocate markets outside the United States, and substantial progress is stated to have been made towards an agreement restoring the Chilean industry to its proper position in the European nitrogen market. At the same time, the Lautaro directors announce that the company's new plant, which was intended to be in complete operation by July 1, 1932, is already producing with most satisfactory results, the output for June having reached 17,000 tons. It is anticipated that production will be increased to approximately 30,000 tons this month and that the plant will be quickly brought to full capacity. In view of the fact that the potential world production of the commodity is considerably in excess of demand, particularly in a period of agricultural crisis, it is clearly essential that producers should proceed along lines of "planned" rather than competitive distribution. Though the International Nitrate Conference at Scheveningen has to overcome important obstacles before a further satisfactory arrangement is concluded, the alternative to agreement would be so disastrous for all concerned that no fear need be felt as to the ultimate outcome. The price and production convention, which expired this week, has been provisionally extended pending a more permanent solution of outstanding problems.

London Transport Merger.—The proposed terms which were published this week for the exchange of Central London Railway "guaranteed assented" stocks for stocks of the London Passenger Transport Board should prove very acceptable to the holders. These "assented"

stocks of the Central London Railway were guaranteed a 4 per cent. dividend by the Underground Electric Railways Company of London and the right to 40 per cent. of the amount paid in dividends in excess of 4 per cent. on the nominal amount of the deposited stocks (ordinary, preferred ordinary and deferred ordinary). The total dividends received by the "assented" stockholders in respect of 1929 and 1930 were at the rate of £4 8s. 2d. per cent. on their guaranteed assented stocks. Under the proposed terms of exchange, the existing assented stocks will be converted into the like nominal amounts of a single similar Guaranteed Assented stock issued against and secured by the Transport C stock, which will be issued at the rate of 92½ per cent. for each £100 of the deposited ordinary, preferred ordinary and deferred ordinary Central London stocks. The new Guaranteed Assented stock will carry fixed interest at 4 per cent. per annum guaranteed by the new Transport Board, this guarantee ranking as a charge on the Board's revenues next after the interest on the B stock and in priority to the interest on the C stock. In addition to the guaranteed dividend, the Guaranteed Assented stockholders will be entitled to receive 40 per cent. of the excess over 4 per cent., if any, of the income received by the trustees in respect of the Central London ordinary, preferred ordinary or deferred ordinary stocks deposited. In addition, holders of the new Guaranteed Assented stock will be given an option of surrendering their holding of such stock to the trustees and receiving in exchange Transport C stock at the rate of £92 10s. for every £100 Guaranteed Assented stock surrendered. As regards income, the effect of these proposed terms is that a holder of £100 of the new Guaranteed Assented stock will receive £4 5s. during the next two years (while the interest on the Transport C stock is at the rate of 5 per cent.), and in subsequent years a minimum of £4 8s. 8d. and a maximum of £4 12s. 5d., according as the Transport C stock is receiving 5½ per cent. or 6 per cent. He has, in addition, a valuable option, which he did not

possess before, of exchanging into Transport C stock which would increase his income to £4 12s. 1d. for the first two years, and to a minimum of £5 1s. 6d. or a maximum of £5 11s. in subsequent years. It is announced that the holders of the 4½ per cent. first mortgage and the 5 per cent. "A" debenture stock of the London and Suburban Traction Company have agreed to the proposed terms of exchange, but the meetings to confirm the terms for holders of Metropolitan District Railway 3½ per cent. assented first preference stock and Underground Electric Railways income debenture stock have had to be adjourned in the absence of a quorum. For convenience we give the following table showing the terms of the exchange of these stocks:—

Company.	Existing Stock.	Transport Stock.	Earliest Redemption Year.	Return.
London & Suburban Traction.....	4½% 1st Mort. 1950.	£100 "A"	1985	£4 10 0
Ditto	5% "A" Deb. 1934.	£100 "B"	1965	£5 0 0
Underground Electric	6% 1st Inc. Deb. 1945	£60 "B" £55 "C"	1965	£3 0 0 £2 15 0 £3 6 0
Metropolitan Dist.	3½% Assented 1st pref.	£75 "B"	1965	£3 15 0

Details of the terms of exchange of other stocks of the Underground appeared in the *Economist* of June 27th and May 9th.

International Tea Company's Stores.—There is nothing depressing about the latest accounts of this increasingly prosperous company. For the period May 5, 1930, to May 2, 1931, a record profit of £820,164 is announced, exceeding the total for last year by £64,805. After deduction of the usual charges, the net profit stands at £656,806, as against £591,597. The preference dividend, on a capital augmented by an issue of "A" shares in April, 1930, requires £130,771, while the ordinary dividend of 30 per cent. paid for the last two years is maintained, being amply covered by earnings. The sum of £150,000 is again placed to reserve account, and £123,504 is carried forward, against £132,297 brought in.

	Year to April 30,		
	1929.	1930.	1931.
Profit	£ 675,920	£ 755,359	£ 820,164
Fees	6,000	6,000	6,288
Depreciation	50,000	72,500	75,000
Interest	47,202	29,537	9,102
Insurance, &c.	26,082	30,725	32,968
Taxes	25,000	25,000	40,000
Net profit	521,636	591,597	656,806
Brought forward	131,120	131,756	132,297
Preference divs.	71,000	81,300	130,771
No. of times covered	7.3	7.3	5.0
Ordinary dividend:—			
Amount	300,000	359,756	374,828
Earned %	48.8	46.2	42.1
Paid %	30	30	30
Reserve	150,000	150,000	150,000
Carried forward	131,756	132,297	133,504

In the following table the percentage earnings and dividends on the company's ordinary capital are set out for the past ten years.

ORDINARY CAPITAL.					
Year to	Earned	Paid	Year to	Earned	Paid
Apr. 30.	%	%	Apr. 30.	%	%
1922	24.8	16	1927	40.8	22
1923	31.2	18	1928	45.2	25
1924	33.4	19	1929	48.8	30
1925	31.9	20	1930	46.2	30
1926	35.2	20	1931	42.1	30

The balance sheet reveals a high degree of liquidity and reserves totalling £772,568. At their present price of 22s. 6d. the 5s. ordinary shares give a yield of about 7 per cent., allowing for the final dividend.

W. T. Henley's Telegraph Works.—In view of the world depression the accounts of this old-established company will be considered very satisfactory. For the year to March 31st last net profit, after deduction of the usual fixed charges, including an amount provided for obsolescence of lead presses, totals £248,556, compared with £241,350 for 1929 and £263,980 for 1928. Dividend on the 4½ per cent. preference capital is nearly 28 times covered, and the company is able to repeat its dividend of 30 per cent. on the ordinary capital with a comfortable margin to spare. The sum of £50,000 is again placed to reserve account, while £567,286 is carried forward, against £572,630 brought in:—

	Year to March 31,		
	1929.	1930.	1931.

This report states that the depreciation in the value of the materials which the company uses has been met out of reserves previously established for such an eventuality, while a reserve has also been made in the accounts to provide for possible losses in connection with considerable sums of money which the company holds at its overseas branches. The company's subsidiary—Henley's Tyre and Rubber Company—is stated to have made a satisfactory profit, which, however, has not been brought into the accounts of the parent company. The balance sheet reveals a strong liquid position and reflects the conservative financial policy of past years. At their present price of 5½ the £1 ordinary shares give a yield of 5½ per cent., allowing for the final dividend and cash bonus of 4s. 6d. per share.

Pease and Partners.—The accounts of this northern iron and steel combine for the year to March 31st last show a further falling off in earning power, and emphasise the need of an early capital reconstruction. The 1930 trading profit of £29,829 has given place to a trading loss of £134,584; while, after deduction of interest and debenture charges, the net loss is no less than £276,622, as compared with a deficit of £95,148 in 1929. The results for the past three years are shown in the following table:—

	Year ended March 31,		
	1929.	1930.	1931.
Trading loss	£ 100,286	Cr. 29,829	£ 134,584
Interest	86,324	85,293	84,493
Depreciation	36,005	39,684	57,545
Net loss	222,615	95,148	276,622
Dr. balance of profit and loss account	1,060,634	1,155,782	1,432,404

In September last an advisory committee was appointed to consider what steps should be taken to secure the financial and commercial rehabilitation of the company. A scheme of arrangement granting a moratorium to the company in respect of certain secured and unsecured creditors' claims has since been completed, and received the sanction of the court on June 23rd. The balance sheet does not, of course, disclose a liquid position. The overdraft with Barclays Bank remains at £1,250,000, and there are secured loans (from banks and the Royal Exchange Assurance) of £517,100. It will be seen that the loss carried forward amounts to £1,432,404. The ordinary shares have at present a market price of 1s. per share.

John Brown and Company.—The accounts of this shipbuilding and steel company once again reflect the severe decline of the heavy industries. Net profit for the year to March 31st last fell by £13,653 to £10,532, which sum was carried forward. No dividend was declared on any class of shares. With certain modifications, the scheme of arrangement submitted to debenture-holders and shareholders in June of last year, has been carried into effect. The company's heavy steel interests have been amalgamated, the Sheffield and Scunthorpe interests being transferred to Thos. Firth and Sons, now known as Thos. Firth and John Brown, 85 per cent. of whose ordinary capital is held by John Brown. This step is expected to make possible the introduction of very important economies. The shipbuilding and colliery activities of the company are still far from satisfactory. During the year, however, two destroyers were delivered to the Admiralty and the Canadian Pacific steamer "Empress of Britain" was completed, and has since been delivered. The company has secured the order of the Cunard Company for the new giant Atlantic liner. As a result of the rationalisation scheme the balance sheet shows important changes. Land, buildings and machinery have been reduced by £1,555,378 to £1,692,100, but the formation of Thos. Firth and John Brown and Company has accounted for an increase of £735,247 in investments in subsidiaries, now standing at £2,138,516. Other investments have been written down from £2,125,000 to £459,000. At the general meeting on Wednesday of this week, Lord Aberconway described the present dearth of orders in the shipbuilding industry as unparalleled in the history of this country. The amount of new tonnage ordered from British shipyards during the past six months was 45,850 tons. The average for the same six months for the five preceding years was 522,230 tons. The British percentage of the merchant shipping of the world was now barely 30 per cent., as compared with 42 per cent. in 1914. He added that the National Shipbuilders Security, Ltd., continued its activities, but that its resources were limited, and that it could not be expected to have any material effect on the general situation. Lord Aberconway saw no immediate prospect of improvement in the iron and steel trades.

Industrial Profits—Second Quarter.—In the *Economist* of June 6th we indicated that the 217 reports received by us during April showed a decline of 10.49 per cent. in profits, and the 211 reports received during May a decline of 23.2 per cent. During the month of June 192 reports came to hand, showing a decline in profits of 21.93 per cent. From the following table it will be seen that the comparative net profit figures of the 620 companies whose reports have been received during the second quarter of this year show a decline in profits of 19.34 per cent. Some 338 relate to the last calendar year.

Group.	Number of Companies.	Net Profit (after payment of Debenture Interest). Reports received during April, May and June, 1931.		Increase or Decrease.

Other companies.....	157			
Total.....	620	79,390,653	64,051,136	- 19.34

The only important groups which show an improvement in profits are gas and telegraphs. Some of the heaviest declines are recorded by the oil companies, Anglo-Persian, Shell Transport and Burmah Oil all announcing greatly

reduced profits, though Lobitos enjoyed a small advance. J. and P. Coats, in the textile section, suffered a considerable decline in earnings.

Rhodesia Railways.—Although the amount of traffic carried by this important railway was heavier during the year ended September 30th last than for the preceding twelve months, there was a decrease in gross revenue of £19,270, as a result of the general reductions in goods and mineral rates made in October, 1929, and January, 1930, under the terms of the Railway Acts. The report states that of the 10 per cent. increase in working expenditure, amounting to £165,099, £52,603 was due to extra contributions to the pension fund, while the remainder was attributable to the additional tonnage carried. The net earnings of £878,842 were £184,369 lower than in 1929. The sum of £377,467, against £609,872, is earned for ordinary dividend, which absorbs £192,000 as compared with £197,000. After bringing in a reserve of £207,732 no longer required, there is transferred to reserve account £380,120, against £363,782.

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

The gross revenue of the Mashonaland Railway Company fell from £1,780,732 to £1,675,691, while working expenses rose from £1,077,391 to £1,254,122. The surplus consequently declined by £281,772 to £421,569. The net revenue account reveals a debit balance of £80,132, which is charged to reserve and reduces that item to £548,328.

New Capital Issues in June.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in June, and in recent years:—

	(000's omitted)				
Monthly Average.	United Kingdom.		British Possessions.	Foreign Countries.	Total.

June, 1930	750	4,656	3,410	11,625	20,441
June, 1931	1,100	12,107	4,983	2,850	21,040

Issues of new capital in June, though few, were mostly of an important character. Purchases of National Savings Certificates exceeded encashments by £1,100,000. The only other Government to raise money was that of New Zealand, which offered £5,000,000 in 5 per cent. bonds at £99. The Middlesex County Council issued £2,500,000 in 4½ per cent. stock at £101, and £3,000,000 5½ per cent. debentures at £95 were offered by the Buenos Aires Great Southern Railway. The largest offer of the month was made by Woolworths, with £4,860,000 in £1 preference shares at par and 2,250,000 5s. shares at £2 per share.

Anglo-Oriental Mining Corporation.—The slump in the tin industry will have prepared the shareholders of the Anglo-Oriental Mining Corporation for an unpleasant report, but it will probably come as a shock to find that the net profits have fallen from £96,465 to £34,379. The payment of preference dividends, which require nearly £60,000 net per annum, was therefore passed in the second half of last year. The balance sheet will give the shareholders a further shock, for investments stand (at cost) at £1,570,673, whereas the market value is less than £945,000. Even after deducting investment reserves (£125,000) and the balance at the credit of the appropriation account, the depreciation on these investments would amount to about £400,000. The trading results for the past two years compare as follows:—

	Year to Feb. 1930.	Year to Feb. 1931.
Net profits	96,466	34,379
Taxation reserve	10,000	...
Investment reserve	15,000	2,500
Earned for dividends	71,466	31,879
7½ per cent. pref. dividends paid	60,000	29,063*
Earned for further pref. dividend	2,866	...
Extra pref. dividend paid	3,229	...
Earned on ord., per cent.	4.4	Nil
Paid per cent.	5	Nil
Carried forward	82,043	84,859

* For half year, to 31 Aug., 1930.

The Anglo-Oriental Mining Corporation now holds approximately 30 per cent. of the total issued ordinary capital of the London Tin Corporation, its principal asset. It also holds the entire issued capital of Anglo-Oriental (Malaya), which acts as technical manager to companies owning 37 tin dredges, and of the Anglo-Oriental and General Investment Trust. Through the latter it holds 70 per cent. of Anglo-Oriental India, Limited, which is concerned primarily with the management of the business of D. Waldie and Company (manufacturers in India of red lead and other chemical products) and the marketing of the products of the Indian Copper Corporation. As a result of the substantial interest acquired in the Anglo-Oriental Mining Corporation by New Consolidated Goldfields, Mr Oliver Hoare has joined the board of directors. At the general meeting on Tuesday of this week, Mr Howeson expressed confidence in the outcome of the drastic measure of output restriction imposed under the International Tin Agreement concluded in April. He stated that the unrestricted output of Malaya, Bolivia, the Dutch East Indies and Nigeria was approximately 162,000 tons of metal in 1929, and that the output of these countries had now been reduced to a yearly rate of 106,000 tons, so that whatever individual companies had produced in the first three months, these countries, as a whole, would have to cut their 1931 output by 56,000 tons a year. This does not promise well for the companies which took advantage of the delay in the introduction of the tin restriction scheme by increasing their output in the first three months of this year. While the immediate outlook is far from encouraging, Mr Howeson looks for an improvement in tin prices as soon as the International Agreement has had time to make its restrictions felt. The first signs of world trade recovery, if we are to believe the hopeful directors of the Anglo-Oriental, may be shown in the tin industry. The £1 7½ per cent. participating preference shares of the Anglo-Oriental Mining Corporation are at present quoted at 8s., and the 5s. ordinary shares at 5s. 6d., as compared with high levels of 12s. and 8s. 3d. respectively this year.

Tin Dredging Results.—Our mining correspondent writes:—The effects of the fall in tin prices with restriction of output are vividly reflected in the tin company reports lately issued. In the case of the Idris Hydraulic, the net profit amounted to only £7,430, as against £38,840. One dividend of 2½ per cent. was paid, in place of 20 per cent. Kinta earned £8,440, against £34,800, and the shareholders received 5 per cent., as compared with 20 per cent. The operating report showed an increase in the yardage treated, with a substantial decline in both the average yield and the average costs. In the case of the Tanjong, also, the dividend was cut by three-quarters to 5 per cent., the net profit being £5,000, against £15,400 in 1929. With this company there was an appreciable falling off in the quantity of ground treated, an improvement in the yield per cubic yard and some expansion in the cost ratio. With an additional dredge running for the whole of the period, Bangrin Tin Dredging produced 854 tons, or 155 tons more than in 1929, but owing to the fall in the metal the profit amounted to no more than £14,500—insufficient to provide the normal allowance for depreciation, which was £24,200 in 1929. Last year a substantial economy was effected in the working cost ratio. The parent company, the Siamese Tin Syndicate, fared rather better than its subsidiary. The accounts showed a profit of £21,900, as against £51,900, but the latter figure was arrived at after deduction of £22,300 for depreciation, whereas any allowance of the kind for 1930 is considered by the directors to be unnecessary. A balance dividend is declared of 5 per cent., making 10 per cent. for the year. The net cash assets, irrespective of the 40,000 Bangrin shares held, amount to £64,000—equivalent to about 2s. per share. As a result of the suspension of operations for three months, the output, at 1,298 tons, fell 368 tons short of the 1929 total; nevertheless, an appreciable economy was effected in the expenses per cubic yard dredged.

Zinc Corporation.—So great was the fall in metal prices last year that the mining operations of this company resulted in a loss of £41,900. Consequently the shareholders would probably have gone without a dividend but for the receipts in the shape of dividends, interest and the like. These totalled £113,800—a small reduction from the 1929 amount. The net surplus amounted to £68,400. Of this the fixed dividend (20 per cent.) on the preference shares absorbed £49,140, and by drawing to same extent upon the carry-forward, as well as by reducing the plant appropriation, the directors were able to pay a further 3½ per cent. on the preference capital and 7½ per cent. on the ordinary. Our usual table follows:—

	Years ending December 31.		
	1928.	1929.	1930.
Net profit	255,534	246,050	68,380
Brought forward	42,103	45,022	60,130
Unexpended appropriations for new plant	76,289	75,490	50,920
Dividends	228,900	206,430	82,840
Total on preference ... %	40	37½	23½
Total on ordinary ... %	40	35	7½
Appropriation for mine development	100,000	100,000	70,000
To general reserve	...	21,655	...
Carried forward	45,022	38,474	26,590

It should be noted that the operating results have been arrived at after allowing over £146,000 to reduce the lead on hand to £11 per ton, zinc to £10, and silver to 1s. per oz. These prices, of course, are substantially below those at present ruling, although in the meantime values have been lower. Of the sum named, £102,000 was debited to revenue account, the balance being taken from reserves for contingencies not now required. A further substantial reduction was effected in working costs, the rate for the year being 29s. 8d., as against 31s. 11d. for 1929; in April last the ratio was only 23s. 8d., although the mine is shut down for one week out of four. Material changes are shown in the portfolio. Holdings in associated companies (at cost less amounts written off) now figure at £579,800 against £357,500; investments stand at £421,300 in place of £564,800. The market value of the investments is stated to exceed the book value. At 2,880,000 tons the ore reserves on the lead lode show a further moderate increase. The fixed dividend on the preference shares for the current half-year has been declared, but naturally there is no interim distribution on the ordinary. The company, however, will have a different tale to tell for 1931 should the present recovery in metals be sustained.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Athens, Globe Telegraph and Trust, Whitehall Electric Investments, Trust Company of London and Scotland, African and European Investment, General Electric, John Brown and Company, Barclay Perkins and Company, Anglo-Oriental Mining, Ohlsson's Cape Breweries, Estates Control, and Spiers and Pond. At the annual meeting of the General Electric Company Sir Hugo Hirst said that they had used the period of depression for further technical research and development, and as a result, they had been successful in getting important contracts for the further development of the grid, which in some way compensated them for the outfall in orders in turbines and turbo-generators. Presiding at the annual meeting of John Brown and Company, Lord Aberconway said that, before the contract could be completed for the new Cunard steamer, arrangements had had to be made with the Government for the insurance of the ship and with the Southern Railway Company for the provision of a new dry dock at Southampton, and also arrangements for safe launching from their building berth and her passage down the Clyde into open waters. Excellent progress was being made with this vessel, which would be the

COMPANY MEETINGS, &c.

GENERAL ELECTRIC COMPANY, LIMITED.

GRATIFYING RESULTS.

The annual general meeting of the General Electric Co., Ltd., was held, on the 30th ultimo, at Magnet House, Kingsway, London, Sir Hugo Hirst, Bart. (chairman and managing director), presiding.

The Chairman, in the course of his speech, said: I regret that I cannot, as on previous occasions, point to the year's result as another record, though it is the best year in our history, with the exception of last year. Our total net profits are down by some £57,000, or about 4½ per cent. Considering, however, the economic conditions in the world under which we have been working, I feel that the result is none the less gratifying.

We have used the present period of depression in the search for new fields to conquer. Equally so, we have used the period under review for further technical research and development, and, as a result, we have been successful in getting important contracts for the further development of the grid, which in some way compensated us for the outfall in orders in turbines and turbo-generators.

We have made progress in the construction of turbo-alternators; in the electrification of ships; and, after years of experiment, in developing highly satisfactory mercury rectifiers. Equally so, progress has been made in the construction of transformers. We have also supplied fifty-six motor coaches for the Buenos Aires Central Terminal Railways, and the electrification of the Altrincham line—the first suburban railway to be operated at 1,500 volts d.c.—has been an outstanding success. We have made further progress in the telephone field, in radio, in cables, and in lighting, and we have made further progress in the development of new alloys for heating elements, in industrial domestic water-heating and industrial electric furnaces; in short, in every branch of the electrical industry. All this progress brings new hope for new and useful activities of our company.

Our efforts in export have been unabated, although we have to admit to a considerable set-back in volume during the last year. The fall in prices of primary products has reduced the purchasing power of all overseas countries. In consequence a depreciation in exchange has taken place which aggravated the position, and so still further curtailed the amount available for the purchase of imports. Added to this are the difficulties which have been created by political troubles in South American States, in India and China, and, finally, our chief market—Australia—has for the time practically closed her door to our products by prohibitive tariffs and by her desire to produce certain electrical commodities. As I indicated last year, we have taken advantage of this desire by interesting ourselves jointly with others in a lamp factory and by having acquired an interest in the Hecla Company, to which I have referred previously. This depression, however, has not made us less active. We have sent personal representatives to a number of countries where we are not directly represented, with a view to opening trade. We have even ventured to do trade on the Continent in certain specialties, not without success, and we have been prominent amongst the manufacturers of this country to make a dignified display in the Buenos Aires Exhibition, to the success of which H.R.H. the Prince of Wales contributed so much, and from which we have every reason to hope for better results in the Argentine in the future.

Generally speaking, I am sure you will admit that the report of our activities during the year is not at all bad, and inspires us with new hope for the future. Whilst we deplore the poor state of trade to-day many of us do not realise that, in spite of it, we are employing more people in industry to-day than we did in 1924, the best post-war year for employment. We are not down and out; we are depressed through heavy taxation; we are depressed by the effects of free imports; we suffer from the apathy and depression which permeates the whole world at the present moment, but things are not irreparable.

On the whole, we can compare favourably to-day with any country in the world. An effort of greater economy, abolition of abuse of the dole, security of our home market, would enable us to balance things at home; and if something were to happen to give new hope to this dispirited world, enterprise would get a fillip, we might even march on the road to prosperity—perhaps the Hoover Declaration will prove such a fillip. But whatever happens, we electrical people have no reason to be downhearted. Electricity has ceased to be a luxury; current and commodities are getting cheaper, and the electrical industry can even gather strength in times of depression when the world looks for cheaper means of production and application. If the industry aims at cheap electricity supply, the manufacturers aim at standardisation and mass production. Our field for a generation or two is inexhaustible.

The report and accounts were unanimously adopted.

TRUST OF LONDON AND SCOTLAND, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The second annual general meeting of the Trust Company of London and Scotland, Limited, was held, on the 29th ultimo, at 25-31 Moorgate, London.

The Secretary (Mr H. J. Vennils) having read the notice convening the meeting, and Sir John Mann, representing the auditors, Messrs Mann, Judd, Gordon and Company, having read the certificate of his firm,

Mr W. W. Paine (the chairman) said that the net revenue for the year amounted to £39,651. The corresponding figure for the 16 months to May 31, 1930, was £39,902, but, in making any comparison it must be borne in mind that only three-fifths of the capital was paid up to March 15, 1929, and that the revenue for the first 16 months, therefore, represented the return on three-fifths of the capital for 16 months, and on the whole capital for 12 months. The accounts showed that there was a considerable reduction in the expenses of management for the year ended May 31, 1931, as compared with the previous account. He thought that, in present conditions, they might consider a reduction of only about £250 in net revenue as not unsatisfactory, but nevertheless, in view of the many cases in which companies of all classes were finding it necessary to pass or to reduce their dividends—a feature which was likely to be accentuated during the current year—the directors had felt it prudent to adopt a conservative policy; and recommended a dividend for the year at the rate of 3 per cent. (less tax) upon the ordinary stock.

VALUATION OF HOLDINGS.

Since the date of the last balance sheet, which, after the heavy fall in the autumn of 1929, showed a depreciation in their securities of about 9 per cent., there had been a steady world-wide and continuous fall in the price of practically every class of security, except those known as "gilt-edged." Valuations of the Trust's securities were made on November 21, 1930, and on March 11, 1931. Since the former date—that is, in a period of six months—there had been a fall of 14 per cent., of which no less than 10 per cent. had occurred since March 11th last. It had been impossible, in face of such a universal and catastrophic fall in the price of all securities (other than gilt-edged) to avoid a heavy depreciation in a company like theirs, which was formed at the date of almost the top level of prices, and was presenting its accounts at the date of about the lowest level of prices since the war. The depreciation had also been accentuated in their case by the fact that, in accordance with the policy declared in the prospectus, they had invested about 50 per cent. of their funds in ordinary shares. Market values at the present time were largely a reflection of the state of business and sentiment on the Stock Exchange, and were affected by conditions quite unconnected with the intrinsic value of the securities themselves. It was satisfactory to know that since the date of the report there had been a considerable improvement in the market value of their securities.

THE OUTLOOK.

The directors felt that, with a return to normal conditions, a large part of such depreciation should be recovered, for their investments were carefully chosen and were widely spread both geographically and in regard to the nature of the various undertakings in which the funds were invested.

Sooner or later there must be a recovery from the present depressing conditions, but whether or not this country would participate in that recovery seemed to depend upon our own people, and especially upon our own Government.

The directors had created a first issue of £250,000 debenture stock, bearing interest at 5½ per cent. per annum, repayable at 101 per cent. on June 1, 1970, or, at the option of the company, at the same price on or after June 1, 1960, on three months' notice. They had already placed £103,080 of that issue at a net price to the company of 99 per cent. Further stock would be sold as opportunity offered.

There seemed to be a very favourable prospect of securing a return of from 6 to 6½ per cent. on a very carefully selected list of securities, and as they did not propose, under present conditions, that this should involve any increase in the cost of management, the difference between those rates and the 5½ per cent. which they should have to pay on the debenture stock, would add to their net income for the benefit of the ordinary stock.

Mr Alfred Shepherd seconded the motion, which was carried unanimously, without question or comment.

The retiring director, Mr Alfred Shepherd, and the auditors, Messrs. Mann, Judd, Gordon and Company, having been re-elected, a hearty vote of thanks to the chairman and directors closed the meeting.

AFRICAN AND EUROPEAN INVESTMENT COMPANY, LIMITED.

POTENTIALITIES OF THE COMPANY'S HOLDINGS.

The twenty-sixth ordinary general meeting of African and European Investment Company, Limited, was held, on the 26th ultimo, at the Cannon Street Hotel, London, Mr C. F. Rowsell (chairman of the London Board) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the past year and the conditions which had continued up to to-day had been times of unprecedented difficulty owing to the almost catastrophic fall in the price of all commodities. The trade of the whole world had been put out of gear, and a period of depression of exceptional length had occurred. Whether they had now reached the lowest point of the depression and might look forward to improving times he was not sufficiently courageous to prophesy, but he looked forward to a recovery within a reasonable time. He anticipated that this country would certainly lead the way, and that South Africa would be ready to take advantage of any improvement, probably more quickly than any other of the Dominions.

Having regard to the very exceptional conditions, the accounts certainly made a very fair showing. The profit for the year was 100,382, as against £124,769 last year. The earnings of the year justified a dividend of 5 per cent., but in view of the exceptional times the directors had considered it best in the interests of the company to defer the question of dividend until they could see their way more clearly.

The outstanding feature this year was their interest on the Far Eastern Rand; anyone who had watched developments there would realise the great potentialities of the company's various holdings.

DEVELOPMENT OF GROOTVLEI.

With regard to the Grootvlei Proprietary Mines, Limited, in view of the enormous expense involved in the development of deep-level properties, the present area was not in itself sufficient, and an arrangement had been come to with the Government by which a further 2,500 claims would be granted to the company. The Government required very substantial guarantees, and, if they had developed that property independently, that further risk would have had to be taken. Following on negotiations started about two years ago with Sir Henry Strakosch, of the Union Corporation, Limited, who controlled the Geduld property and the East Geduld Mine, with a view to coming to some arrangement by which the development of the Grootvlei mine could be undertaken from the Irives from the East Geduld property, a very satisfactory arrangement had been made with the Union Corporation, Limited, and East Geduld, under which the immediate development of the Grootvlei property was secured. He was convinced that this company would make from their interests in the Grootvlei Proprietary Mines very large profits in the future.

COAL AND STEEL INTERESTS.

He had on many occasions dealt with the ever-improving prospects of the Vereeniging Estates, Limited. It now controlled the coal output of upwards of 3,000,000 tons per annum. Its prosperity arose from substantial contracts extending over many years, the principal one of which was with the Victoria Falls and Transvaal Power Company, Limited. The Vereeniging Estates had successfully equipped its property to meet all the demands of the company without at any time failing in its regular supply of coal. All the many and valuable interests of the company were progressing satisfactorily, including the coal companies controlled by it. He had every confidence that the estimates which they had given of the Vereeniging Estates would be more than fulfilled in the future.

He was glad to be able to strike a pleasant and hopeful note with reference to the Union Steel Corporation (of South Africa), Limited. After long negotiations, arrangements had been come to between that company and the South African Iron and Steel Industrial Corporation, Limited, by which they would in future work together harmoniously. The results were already evident, and they had made a profit of £3,700 for the first quarter of the current year, after making all administrative expenses and debenture interest. He charged all administrative expenses and debenture interest. He felt that they were justified in anticipating a prosperous future for that company and a great increase in the value of their interest in it.

With regard to their great landed interests, they owned nearly 3,000,000 English acres of land spread over the whole of South Africa, and it was almost impossible for any discovery to be made in South Africa which did not, directly or indirectly, affect their interests.

The report and accounts were adopted.

JOHN BROWN AND COMPANY, LIMITED.

LORD ABERCONWAY'S REVIEW OF A DIFFICULT YEAR.

The ordinary general meeting of John Brown and Company, Limited, was held, on the 1st instant, at the Central Hall, Princes Street, Westminster, London, the Rt. Hon. Lord Aberconway, P.C. (chairman of the company), presiding.

The Secretary (Mr J. F. Bridge) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—During the past twelve months the amalgamation scheme, which was approved by all concerned and sanctioned by the High Court on August 7, 1930, has been carried into effect, and the whole of our steel manufacturing assets at Sheffield and Scunthorpe have been transferred to Thos. Firth and Sons, Limited, under the changed name of Thos. Firth and John Brown, Limited. The position now is that, except as shareholders in Thos. Firth and John Brown, Limited, John Brown and Company, Limited, no longer have any direct interests at Sheffield.

By this scheme a measure of true rationalisation is being carried into effect under the most favourable conditions. Substantial economies have already been effected, without any loss of efficiency, and these economies will be reflected in the profits earned when a revival of trade takes place, and our company should then benefit materially, since, as the result of the amalgamation, we now own 1,300,125 out of the 1,450,000 ordinary shares issued by Thos. Firth and John Brown, Limited.

Turning to our shipbuilding trade, this has been suffering, like all the heavy industries in the country, from shortage of orders, a position greatly accentuated during the past year. The present dearth of orders is unparalleled in the history of the country. This is mainly due to the economic depression that has set in like a pall over the whole world. There are already more than enough ships to deal with the existing passenger and cargo traffic in its reduced volume. We are suffering more than foreign countries. Nationalist sentiment in developing Continental shipyards has greatly increased competition for any new warship work for the lesser Powers.

THE NEW CUNARD.

For these reasons we have during the year secured no order beyond the very important order for the new steamer for the Cunard Company's express Atlantic services. Before the contract could be completed, arrangements had to be made with the Government for the insurance of the ship, and with the Southern Railway Company for the provision of a new dry dock at Southampton, and also arrangements for safe launching from our building berth and for passage down the Clyde into open waters. Excellent progress is being made at Clydebank with this magnificent ship, which, when completed, will be the largest vessel afloat.

During the year we delivered to the Admiralty two destroyers and also, to her owner, a fine yacht. In addition, we have completed the 42,500 tons "Empress of Britain" for the Canadian Pacific Steamships, Limited.

COAL, IRON AND STEEL TRADES.

The coal position throughout the year has been affected by the quota system, which limits the output of each colliery for the purpose of avoiding an excess over the amount of coal that can be absorbed in the country and by the limited opportunities for export, owing to the large production in Westphalia and in Poland. The effect has been to maintain prices, but at the same time, since the financial results of a colliery depend upon working full time in order to provide for fixed charges, in this respect the trade is suffering from enforced restriction. The balance of advantage is, however, undoubtedly on the side of the new statutory conditions, when they become fully operative. The immediate prospects of the coal trade, however, cannot be regarded as favourable. In the depressed condition of our industries, the production of coal is in excess of the country's requirements, and, as regards export tonnage from Yorkshire, we are faced by heavy export charges to the coast and heavy railway rates to London and the south, as compared with Durham and Northumberland.

There is no immediate prospect of improvement in the iron and steel trades. The depression in the shipbuilding industry has direct influence on orders for high-class forgings and castings required for hulls, machinery and equipment as well as armour. There has also been a marked shortage of orders placed by home and foreign railways, and every department of our general trade is suffering from the unrestricted foreign competition to which the steel trades are subjected. This results in forcing down prices. To make the position worse, we find that India and our Colonies, tempted by lower prices, give large orders for railway material and steel products to our Continental competitors.

Reviewing the past year, I can only say that the conditions under which we are now working are entirely beyond the control of our company or of anyone associated with it.

The report and accounts were adopted.

WHITEHALL ELECTRIC INVESTMENTS, LIMITED.

STRONG POSITION DISCLOSED.

The ninth ordinary general meeting of the Whitehall Electric Investments, Limited, was held, on the 2nd instant, at Winchester House, Old Broad Street, London, E.C.

The Hon. Clive Pearson (the chairman), in the course of his speech, said: The net revenue for the year, after charging debenture interest and providing for income tax, amounts to £443,143. The preference dividend absorbs £187,500, and the dividend on the ordinary shares, at 5 per cent., requires £250,000. This results in a balance of £5,643, which, with the amount brought forward from last year, leaves the carry-forward at £118,426.

The investments of your company and of the subsidiary companies—Hallminster Investments, Limited, and Whitehall Canada, Limited, have a total cost of £12,831,894.

These investments may be analysed as follows:—

Temporary investments, including British funds and short-term credits	£ 3,100,000
Foreign Corporation and Foreign Government stocks...	1,990,000
Commercial and industrial securities	1,680,000
Investments in electrical undertakings, including our associated undertakings in Athens, in Spain, and in the West of England	6,060,000

In the matter of valuation, our investments in associated companies have been taken at cost, and our remaining securities have been taken at market prices. The quoted investments have not escaped the effect of the world-wide depression of the last twelve months, and at the date of the balance sheet depreciation thereon amounted to £850,000. In times such as those through which the world is passing, it seems to me that, in distinction to the prices at which securities may be appraised by a nervous market, the more practical and a true test, from the point of view of an investment company, is whether and to what extent there arises a reduction in income. Applying this test to our own investments, we find that we are suffering by an amount equal to less than 3 per cent. of the company's total income.

In regard to the electrical companies in Devon and Somerset, the necessary statutory orders have now been obtained. The area covered embraces the towns of Bideford, Minehead, Sidmouth, Exmouth, Teignmouth and Paignton, and the population served amounts to some 200,000.

Good progress has been made in the change-over of the distribution systems from direct current to alternating current, and generally in increasing the capacity of the mains. Considerable advance has also been made towards the provision of supplies to the rural areas, and in the inter-connection of the various companies. A bulk supply of power from Exeter Corporation is now being taken; the main sub-station designed for an eventual capacity of 9,000 k.w. has been completed and approximately 60 miles of 33,000-volt transmission line has been built. A two-part tariff has been introduced, and the hire-purchase of electrical appliances is being made available.

The present income from these West of England companies is small, inasmuch as the enterprises are in the development stage, but there are good prospects that, in due course, we should obtain a satisfactory yield upon our investment.

In Athens the past year has been one of study and reorganisation, and, as a result, there has been drawn up a comprehensive scheme of development, the main features of which are the transfer to the company's supply of a large number of consumers hitherto served by private distributors, and the reinforcement and extension of the transmission and distribution systems. The provision of these new works will call for further capital, and a financial scheme has been prepared whereunder your investment in this undertaking will be substantially increased.

The company has acquired a substantial interest in a company which operates in an extensive area in the South of Spain, having a population of about 350,000. This company owns two hydro-electric plants with a capacity of 6,200 h.p., and a thermic plant of 2,300 h.p. To meet the growing demand, a new hydro-electric plant of 14,000 h.p. is under construction, which it is hoped will be ready for service early next year. An extensive irrigation scheme is now being studied, which will call for the use of a considerable amount of electric power.

Generally in regard to our prospects, your directors regard the position of the company as a strong one, and I would reiterate what I have said upon other occasions, that I have the fullest confidence in the future of your company.

The Chairman concluded by moving the adoption of the report and accounts, which was seconded by Sir Clarendon G. Hyde and carried unanimously.

The payment of the dividend on the preference shares was confirmed, and a dividend of 5 per cent. for the year was declared on the ordinary share capital.

ANGLO-ORIENTAL MINING CORPORATION, LIMITED.

INTERNATIONAL QUOTA AGREEMENT.

EFFECT OF STATUTORY RATIONALISATION.

The third ordinary general meeting of Anglo-Oriental Mining Corporation, Limited, was held, on the 30th ultimo, at the Institute of Chartered Accountants, Moorgate, London, E.C.

Mr John Howeson (the chairman), who presided, said it had been a year of unrelieved misfortune for the producers of nearly all basic commodities, arising in the main from causes altogether beyond their control. In non-technical terms the kernel of the trouble, as he saw it, was the sterilisation of more than 60 per cent. of the existing supplies of gold by the United States and France, with a resultant unexampled commodity slump, and forced sellers of practically everything but gold. The tin industry, in particular, had been unduly handicapped at the beginning of the débâcle by the excessive weight of stocks accumulated during two such successive years of over-production. Nevertheless, tin had led the way with concerted measures to meet, by voluntary curtailment of output, conditions which were constantly deteriorating. Those determined efforts on the part of the industry had made possible the statutory rationalisation which happily was now an accomplished fact. That four separate Governments, representing the producers of 86 per cent. of the world's normal output of tin, should have come to complete agreement was sufficiently momentous, but it should be noted that, unlike voluntary agreements, there could be no defaulting and no backing out in this case, and unsaleable tin could be prevented from coming on the market. That there should have been a certain amount of organised opposition to Government intervention was not in the least surprising, but it was exceedingly unfortunate that it should have been the means of delaying the starting of the quota scheme, a delay which has proved very costly to producers.

WORKING OF THE INTERNATIONAL AGREEMENT.

In considering the working up to date of the international regulation of the production and export of tin, it had to be understood that individual mining enterprises in Malaya had not been restricted as to the amount they produced in the first controlled quarter to the end of May, because the individual quotas had not been issued within that period. But they were definitely prohibited from producing and exporting more than their quotas during the first six months. It must also be borne in mind that the unrestricted output of Malaya, Bolivia, the Netherlands East Indies and Nigeria was approximately 162,000 tons of metal in 1929, and the output of those countries had now been reduced to a yearly rate of 106,000 tons, so that the signatories as a whole would cut their 1929 output by 56,000 tons a year, and there would be that much less metallic tin coming on the market. It was not easy to compute the current rate of consumption, but for the first five months of this year deliveries had averaged approximately 10,000 tons a month, so that, with even the present very depressed state of the world's industries, the rate of absorption must, in fact, be greater than the restricted production.

At the same time, they must not depend solely on the natural growth of industry for their markets; they must try to foster old and create new uses for their product; the one aspect of the tin situation on which all the leaders of the industry were agreed was the necessity of research for the preservation of existing and the discovery of new markets.

THE ACCOUNTS.

As to their accounts, the net revenue of £48,399 represented less than half the earnings of the preceding year, due entirely to the very heavy falling off in the dividends received during the period. It was with reluctance that the directors recommended the shareholders to deny themselves any immediate return, but they were not yet out of the trough of an unexampled depression, and, although it would only require some £29,000 to pay the preference dividend for the second half-year, the directors felt it would be most inadvisable to deplete the corporation's resources even to this extent. They were, however, hoping that conditions might before very long improve, and the carry-forward of £84,859 was sufficient to meet that liability as well as practically the whole of the dividends payable in respect to the preference shares up to the end of the current financial year.

As to the prospects of an improvement, President Hoover's dramatic gesture had already inspired throughout the world a change of sentiment which had given fresh hope to the most hardened pessimist; in the case of their own particular industry it should accelerate the effects of the quota agreement by encouraging consumers to restock and even to buy well ahead of their more immediate requirements.

The report and accounts were unanimously adopted.

BANK OF ATHENS.

FINANCIAL AND ECONOMIC CONDITIONS.

At the annual general meeting of the Bank of Athens, held on March 28, 1931, the report of the directors for the year 1930 was submitted to the shareholders, and was substantially as follows:—

The past year, from the point of view of politics, both home and foreign, and the national finances, has witnessed satisfactory conditions—an atmosphere of calm and safety has continued; the balancing of the Budget has been fully assured; the trade balance has considerably improved; the cover for money in circulation has been duly maintained; progress has been made as regards "productive works," and the establishing of refugees—and the head of the Government has been able to come to satisfactory agreements with neighbouring nations, which one may hope will result in profitable relations and at the same time stop the armament rivalry which has been the cause of such heavy expenditure and the deflection of so much precious energy from its normal course.

On the other hand, economic uncertainty has considerably increased, extending to all forms of social activity and weakening private fortunes, the basis of public wealth. Greece has not escaped the effects of this exceptional crisis. Our country, however, let us point out, is among those which, up to the present, have felt it least, but her commerce, industry and agriculture have nevertheless felt deep perturbations, the effects of which are too evident to need stressing here.

In view of these conditions we have had to exercise extreme prudence in all our dealings, and business has necessarily shown some falling off. Every effort, however, has been made to cut down general expenses, and a saving of Drs. 10,917,000 has already been accomplished under this heading. As you will see from the report, the amount available for distribution in respect of the year 1930, after deducting general expenses and other primary charges, amounts to Drs. 54,110,000, including the balance carried forward from last year, and we propose to pay, in addition to the interim dividend of Drs. 5 already distributed, a final dividend of Drs. 30. The amount carried forward to next year's account amounts to Drs. 4,125,906.

In conclusion, we would say that we have absolute confidence in the future of our bank and feel sure that it is well equipped to take its part in the economic revival which we hope is not far distant.

ESTATES CONTROL, LIMITED.

NEW SERVICE ARRANGEMENTS WITH BOVRIL, LIMITED.

Lord Luke, presiding at the twenty-seventh annual general meeting of Estates Control, Limited, held on the 30th ultimo, at 152 Old Street, London, said the investments and stock of raw material had increased from £779,618 to £805,509; otherwise the balance sheet showed little change.

Investments now stood at approximately £600,000, the larger part of which consisted of shares and debentures in companies with which Bovril, Limited, had business relations inclusive of their holdings in Argentine Estates of Bovril and Bovril Australian Estates.

As regards the profit and loss account, some comment had been occasioned by the fact that although this was a company in the successful Bovril group, profits should apparently have been reduced from £78,000 to £69,000 and then to £52,000.

In the first place, he had to point out that whilst the £78,000 covered a period of sixteen months, the £69,000 was earned in only twelve months, ending March, 1930.

SMALLER PROFIT EXPLAINED.

The reason why they only showed a profit of £52,000 for these last twelve months was quite easily explained. Their profits, apart from investment income, were to a considerable extent derived from the services rendered by the company to Bovril, Limited. These had not been curtailed, but as a matter of policy it had been decided to charge less for them. For while they had been anxious to avoid raising their ordinary dividend beyond 75 per cent., their profits had year by year exceeded the amount required, and the simplest way to avoid this was to reduce the charges to Bovril, Limited (with their 16,000 stockholders), who were the sole owners of the equity after dividends on the preference and preferred ordinary shares had been met.

During the last 23 months, interests, including those of Estates Control and Bovril, Limited, had taken him round the world. He had been in Canada, New Zealand, Australia, South America, and had recently back to North America. In each and every place the prevalent idea was that they had more than their share of the world's troubles.

The report and accounts were adopted.

BARCLAY, PERKINS AND COMPANY, LIMITED.

BURDEN OF PROPOSED LAND TAX.

MR E. W. GIFFARD'S STATEMENT.

The thirty-sixth ordinary general meeting of Barclay, Perkins and Company, Limited, was held, on the 29th ultimo, at the Cannon Street Hotel, London. Mr Edward W. Giffard (chairman and managing director) presided.

The Secretary (Mr. E. P. Pullan, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said that the profits for the year amounted to £407,879, and they proposed to pay a dividend of 7 per cent., less tax, on the ordinary shares, making 11 per cent. for the year.

Continuing, he said: As foreshadowed in my speech last year, considerable expenditure has been, and is still being, incurred in enlarging our bottling plant to cope with the London trade of our associated companies which we have taken over, and for our new larger brewery. The issue of £150,000 of debenture stock was made largely to meet this expenditure. We are continuing our policy, as and when opportunity offers, of improving our houses.

We still await the report of the Royal Commission on Licensing, which, there are reasons to believe, will not be issued until the autumn. I shall not attempt to forecast the future. For the year under review our sales show a slight decrease, and unless there is a revival of trade we cannot look for any great improvement in sales. As far as can be seen, the cost of materials will be slightly higher than last year, but still very reasonable.

THE LAND TAX PROPOSALS.

There is one thing on which I should like to say a few words, because I do not think it is appreciated by the public, and that is the seriousness of the proposed new Land Tax. The Budget statement this year did not disclose any new special taxation on our industry, as some had feared, but a new impost, affecting us in common with other owners of land, has been brought forward in the new Land Tax proposals embodied in the Finance Bill. The proposal, as introduced in the House of Commons, was to levy a tax at the rate of 1d. in the £ on what is called the "land value," i.e., the capital value of all land, with certain exceptions which, I need hardly say, do not include us. This land value tax will hit us by inflicting additional taxation upon the sites of our brewery and of the associated companies' breweries, and upon the sites of every single licensed house, whether tied or free, in which we and they are interested.

CONFISCATION BY INSTALMENTS.

Schedule "A" tax is already being paid in respect of each one of these properties at the crushing rate of 4s. 6d. in the £, and schedule "A" is a land tax. To impose a further tax under the guise of "Land Value Tax," as now proposed, can appropriately be termed "confiscation by instalments." The Budget proposals really amount to a double taxation of landed property.

There may be modifications of the proposal as introduced in the House of Commons, and others may follow before the proposal finally reaches the Statute Book, but modifications can only mitigate the evil; they cannot eradicate it. If the proposal is inequitable, modifications can only vary the extent of the damage to follow.

All one can say, therefore, at the moment is that, owing to the tax, our profits are bound to be adversely affected to an extent unknown, and this must ultimately react on the prosperity of the trade in general. The impost, however, will not come into operation until 1934.

A VICIOUS KIND OF TAX.

To my mind it is a further tax upon industry, and one of the most vicious kind, because the amount of the tax will not be dependent on the ability to pay. Once the tax is instituted, there is nothing to prevent future Governments increasing it in the same way as the income tax has been increased, and property owners will be taxed out of existence. Another direction in which we shall suffer will be that foreign countries, which are doing all they can to reduce taxation, will find it still easier to compete with us in export markets, where competition is already very keen. I have dealt at some length with this question, as I do not believe the seriousness of it is fully appreciated by the general public, and the more it is ventilated the better. (Hear, hear.)

I now move: "That the report and statement of accounts for the year ending March 31, 1931, as now submitted, be received and adopted."

Lieutenant-Colonel H. F. Barclay seconded the resolution.

The resolution was carried unanimously, the formal business was transacted, and a cordial vote of thanks was passed to the staff and employees.

GLOBE TELEGRAPH AND TRUST COMPANY, LIMITED.

GOVERNMENT ATTITUDE TOWARDS THE MERGER.

LORD MIDLETON ON BURDEN OF TAXATION.

The fifty-eighth ordinary general meeting of the Globe Telegraph and Trust Company, Limited, was held, on the 29th ultimo, at Winchester House, Old Broad Street, London.

The Rt. Hon. the Earl of Middleton, K.P. (the chairman), who presided, said that the final dividend of 3s. 6d. per share net now proposed, making a total of 8½ per cent. net for the year, represented a return on the ordinary shares of £10 19s. 4d. per cent. gross. The £70,000 paid in income tax was the equivalent of 3 per cent. net on the ordinary shares, and, in view of the present unparalleled expenditure of the country, and the absence of any consensus of parties to reduce the crushing burden of income tax, the directors felt it right to warn the shareholders that the question of paying future dividends less tax might have to be considered seriously. The prosperity of the company had been built up on the large holdings in the old cable companies, and still depended on the income received from Cables and Wireless, Limited, into which those holdings had been converted. For two years past, however, the merger had unfortunately been faced by an unexampled slump in trade, and an experience of fifty years of growing traffic and prosperity had been replaced by a fall in traffic of unexampled severity. Their experience was not singular; all of their greatest competitors had suffered similar falls, and the returns of one of the largest showed that they had operated at an actual loss for the first three months of this year. The Governments of the Empire had been inclined to treat the merger as if it were a gold mine, and possibly the universal fall in receipts from the communications might induce a more sympathetic attitude than had been the case in the last two years. The present time was not without anxiety for many old-established concerns which had seen their hardly-earned prosperity affected by this world-wide depression. Cable receipts had notoriously been an index of trade, and they could only do all possible to modify the present setback, and ensure a return as early as possible to the conditions which had enabled them to maintain such satisfactory dividends in the past.

The report and accounts were adopted.

SPIERS AND POND, LIMITED.

STRONG FINANCIAL POSITION.

The forty-seventh ordinary general meeting of Spiers and Pond, Limited, were held on the 1st instant, Mr J. Douglas Broad (the chairman) presiding.

The secretary (Mr J. P. Pearson, A.C.A.), having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said the profit for the year was £96,439, as compared with £108,438, a reduction of £12,000, not unexpected having regard to the state of trade during the year. As shareholders would readily realise, the period under review had been one of extreme difficulty. Trade generally had been bad and they had had the added difficulty of closing down an important (important certainly in the sense of magnitude) branch of their business, with its necessary departmental reorganisation—the Southern Railway contract. That contract expired at the end of December, and, though they had not even yet finally settled the account, he was glad to say there was not now much outstanding.

The prospects for this year were not bright, the world depression still continued, and also the habits of the people were changing more and more with the increased facilities for travel, especially by road. The tendency was to take no heed for the morrow, but to wait and see what the morrow brought forth. This tendency created increased chance-trade as against previous bookings of accommodation, which meant increased cost, as it was necessary to prepare against the possibility of that all too rare occurrence, fine weather.

However, the company's hotels were all in good fettle. The improvements foreshadowed at the last meeting with regard to South Kensington Hotel had been carried out and the increase in the business of that property fully justified the outlay. They were anxious to carry out similar improvements to some of their other properties, but they felt that it was desirable to go slow until the future looked brighter. Personally, he was, he said, no pessimist, but until confidence was restored in the markets of the world it was advisable for trading companies of the nature such as their own to carefully guard and maintain their cash resources. He was glad to say that their financial position remained strong.

The report and accounts were unanimously adopted.

The retiring directors were re-elected and the auditors reappointed.

OHLSSON'S CAPE BREWERIES, LIMITED.

DIVIDEND MAINTAINED.

The ordinary general meeting of Ohlsson's Cape Breweries, Limited, was held, on the 2nd instant, at 6, Bloomsbury Square, Holborn, London.

Mr W. D. Buxton (the Chairman), in the course of his speech, said: I do not anticipate that you, or any of our shareholders—impressed as they must have been by what we have heard since we met last year about the all-round depression in trade—could expect to find that our business was not to some extent affected by it. It has been, as the profit on trading and rentals for the year amounted to £153,098, as against £172,658 last year. Though the effects of the fall in the price of commodities have been less pronounced in South Africa than in many other countries, I think that the following statistics of overseas trade for the calendar years 1929 and 1930, which have been supplied to me by our general manager, sufficiently show how its prosperity has been impaired.

The exports of merchandise and of diamonds in money value were down 25 per cent. and 54 per cent. respectively, while, to indicate the drop in the value of imports, I take as typical the case of motor vehicles and accessories, which declined from approximately 7 millions in 1929 to 3 millions in 1930. The reduced spending power of the community has had its effect upon our business. So far, however, as the actual profit on the sale of beer is concerned, we were almost abreast of the previous year's figures. The fall in values has, however, reacted upon retailers, and, in many cases, has recoiled in turn upon our own business, and the losses incurred in that respect approximate very closely to the amount by which this year's profits fall short of those of the previous year.

I think we may consider ourselves fortunate that we are not only able to maintain the rate of dividend on our ordinary shares, but have, in addition, a balance of profit which we have applied to the strengthening of our business.

The quality of the beers is excellent, as we can ourselves test from time to time by samples which are regularly sent over to us from each of the brewing centres. The reports we receive from our own managers are not encouraging with regard to the immediate future, though we hear from other quarters that there is some sign of improvement in general conditions of trade. If, and when, it does come, we are equipped in every respect to take full advantage of it. The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the eight days ended June 30, 1931, amounted to £8,827,300 against ordinary expenditure of £14,132,700. After allocating £2,046,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £21,603, the operations for the eight days, as shown below, increased the National Debt by £7,373,000 to £7,630,649,000*.

Barclays Bank, Ltd., announce the opening of a new sub-branch at 1 Chester Street, Saltney, Cheshire.

The Westminster Bank announces the opening of a new branch at 211 New North Road, N.I.

The Midland Bank announces the opening of new offices as follows: Clapton branch, 95 Lower Clapton Road, London, E.5; Worcester Park branch, 16 Station Parade, Chooam Common Road, Worcester Park, Surrey. An office of the Midland Bank will be open in the grounds of the Royal Agricultural Show at Warwick from 10 a.m. to 6 p.m. daily, from July 7th to July 11th, inclusive. This office will be under the supervision of the manager of the Warwick branch.

The board of directors of the Bank of London and South America, Ltd., announce that Mr Leonard D. Curllife, in the desire to curtail his City activities, has tendered his resignation of his seat on the board, which has been accepted with regret. Mr Gerald MacTier Sheppard, of Messrs. Knowles and Foster, and Mr Francis Adams Beane, a chief general manager of Lloyds Bank, Ltd., have been elected directors.

BULLION.

The following statistics of imports and exports of gold for week ended July 2, 1931, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	Exported from Great Britain and Northern Ireland.
From:	To:
Germany	Germany
Netherlands	Netherlands
France	France
Venezuela	Switzerland
Argentina Republic	Czechoslovakia

Canada	
Other countries	
Total declared value of imports	Total declared value of exports

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1931.	ARRIVALS.	1931.	WITHDRAWALS.
June 26 Bars bought	30,500	June 26 Bars sold	2,000
Sovs. from abroad	9,500	27 Bars sold	6,995
27	Nil	Sovs. for export	4,000
29	Nil	29 Sovs. for export	7,000
30 Bars bought	602,594	30 Sovs. set aside	750,000
Foreign coin bought	11	Sovs. for export	4,000
July 1 Sovs. released	500,000	July 1 Sovs. for export	6,000
2 Foreign coin bought	54	2 Bars sold	47,204
Sovs. from abroad	72,000	Sovs. from export	13,000
Total	1,214,659	Total	840,199

Net arrivals, £374,460.

Messrs Samuel Montagu and Company write as follows on July 1, 1931:—

GOLD.

The Bank of England gold reserve against notes amounted to £162,894,416 on the 24th ultimo (as compared with £160,926,376 on the previous Wednesday), and represents an increase of £15,268,794 since December 31, 1930. In the open market yesterday bar gold was available to the value of about £691,000, of which £575,000 was from South Africa, £84,000 from the Straits Settlements, £17,000 from Australia, and £15,000 from New Zealand. There was little demand, and the price was fixed at 84s. 9½d. per fine ounce, at which £81,000 was taken for the Continental trade and £5,000 for the Home trade. The Bank of England secured about £603,000 at the statutory buying price. Movements of gold at the Bank of England during the week have resulted in a net influx of £362,417. Receipts totalled £1,146,412, of which £636,901 was in bar gold and £500,000 in sovereigns "released," whilst withdrawals consisted of £750,000 in sovereigns "set aside," £27,000 in sovereigns taken for export, and £6,995 in bar gold.

SILVER.

The week under review has been quieter, although prices have shown some fluctuation. The most important move was a rise of ½d., which carried quotations to 13½d. for both cash and two months' delivery on the 27th ultimo. This followed the Prime Minister's statement regarding Indian finances, which may have influenced the Eastern markets, as the rates from those quarters showed substantial improvement and bear covering orders were received, principally from China. The rise proved overdone and prices have since eased, yesterday's fall of ½d., owing to the absence of buying, bringing quotations down to 13½d., but a slight recovery to 13½d. ensued to-day. America has again offered freely, particularly at the higher rates, showing, however, some reluctance at yesterday's decline; but the Indian Bazaars have, on the whole, been inactive. Whilst it is not anticipated that there will be any important setback in prices, the market must still be considered as dependent to a large extent on the outcome of the political negotiations.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 2nd ultimo to mid-day on the 29th ultimo:—

IMPORTS.	£	EXPORTS.	£
U.S.A.	10,558	British India	23,650
Other countries	8,083	Other countries	6,111
	18,641		29,761

NOTICES.

An extension is announced of the safe deposit facilities at the head office building of the Midland Bank in Poultry, London, E.C.2.

The London office of the Bank of New South Wales has received a cable from head office in Sydney, advising that Mr James Burns has been appointed director in place of Sir Alexander MacCormick resigned.

A branch office of Dominick and Dominick, of New York, members of the New York Stock Exchange, has been opened at Pinner's Hall, Austin Friars, London, E.C.2. The office is under the direction of the Hon. Michael S. Scott and Mr Frank Smith, acting as joint managers.

Mr S. Sloan Colt, formerly vice-president of the Bankers' Trust Company, has been elected president in succession to Mr Henry J. Cochran, who now becomes vice-chairman of the board of Bankers' Trust Company. Three executives who have preceded Mr Colt in the presidency of the company will participate with him in the active management. They are Mr Cochran, Mr Seward Prosser (who has been elected to the newly created position of chairman of the managing committee), and Mr A. A. Tilney, who becomes chairman of the board. Important additions to the directorate are also announced. These include Mr S. Parker Gilbert (partner of J. P. Morgan and Company, and former Agent-General for Reparations), Mr Charles D. Hilles (New York representative of the Employers' Liability Assurance Corporation of London, and director of various American railway, industrial and insurance companies), and Mr Alfred L. Loomis (of Bonbright and Company, Inc., who is a director of many of the country's leading public utility corporations).

GOVERNMENT, &c.

KINGDOM OF BULGARIA 7% SETTLEMENT LOAN, 1926.—Statement showing the amounts received from the revenue assigned to the service of the loan under Chapters 15, 16 and 21 of the Budget:—

Period.	Chap. 15. Alcohol.	Chap. 16. Salt, &c.	Chap. 21. Matches.	Totals.
April-March, 1927-28	£ 63,256	£ 409,051	£ 155,167	£ 627,474
April-March, 1928-29	75,721	467,895	155,767	699,383
April-March, 1929-30	85,836	512,879	164,255	762,970
April-March, 1930-31	68,885	505,994	152,281	727,160

The amount required annually for the service of the loan is approximately £250,000. For the purpose of conversion the levy has been taken at 675 to the £1.

NORWEGIAN 6 PER CENT. LOAN OF 1921.—We are informed that the amount of bonds of the above loan which bondholders have deposited with Hambros Bank, Ltd., and Barclays Bank, Ltd., in respect of the option given to them to retain their bonds at the reduced interest rate of 4½ per cent. per annum amounts to £3,187,160, out of a total of £3,749,320 nominal bonds outstanding.

BANKS.

BARCLAYS BANK LIMITED.—Mr Anthony William Tuke, a local director of the bank at Luton, and Mr Norman Shillingford Jones, an assistant general manager of the bank, have been appointed additional general managers.

MISCELLANEOUS.

THE AMALGAMATED DENTAL COMPANY, LIMITED.—Results of 1930 trading show (subject to completion of audit) profits £208,420, against £212,649 in 1929. The directors recommend payment of balance dividend of 4 per cent. (making 8 per cent. for the year) on the preference ordinary shares, and 3d. per share free of tax (being at the rate of 6.4516 per cent. gross), on the deferred ordinary shares; £15,000 placed to reserve, against £20,000.

SANGERS, LTD.—The second annual report and accounts of Sangers, Ltd., shows a trading profit for the year ended March 31, 1931, of £74,874, i.e., a slight reduction of £1,518 on last year's figure of £76,392. Deducting directors' fees and income tax and adding the amount brought forward, there is a balance of £88,196, of which preference dividends to January 31, 1931, absorb £14,531.

PLAYER'S

NAVY MIXTURE or NAVY CUT TOBACCO

In the calm contemplation of a pipe of good tobacco new hopes are born and life's little problems are viewed in their true perspective.

110½
PER OUNCE

N.C.T. 2.

and the 7½ per cent. interim dividend on the ordinary shares £14,531, leaving £59,133. £5,000 has been written off goodwill (last year £614 in addition to £15,385 from share premium account). Since the incorporation of the company in 1929, goodwill has been written down by £71,000. It is proposed to pay a final dividend on the ordinary shares of 10 per cent., making 17½ per cent. for the year (last year same), leaving to be carried forward (subject to two months' accrued preference dividend) £34,758 (last year, £30,872). Meeting at Holborn Restaurant on July 8th, at noon.

THE GRAMOPHONE MERGER.—The directors of Electric and Musical Industries, Ltd., which was the company formed to acquire the shares of the Gramophone Company, Ltd., and Columbia Graphophone Company, Ltd., have declared that the offer made to the shareholders of the two companies respectively on April 30 last is now binding, thus making the amalgamation of the two companies effective. The response to the offer, it is stated, has been very satisfactory, and figures are promised shortly. Shareholders who have not yet accepted the offer may still do so, but the special register which was opened in connection with the merger will be closed on July 14. Those who do not accept before that date will receive instead of a certificate of registration a receipt issued by Messrs. Morgan, Grenfell and Company, who were appointed registrars in connection with the merger, and this receipt can be exchanged in due course for share certificates of the new company. The directors of Electric and Musical Industries, Ltd., will proceed to the first allotment of shares of the company on July 15, and share certificates will be ready for issue within seven days thereafter.

Commercial Reports.

MARKET SUMMARY.

Following upon the almost general improvement last week, the tendency of prices in the principal commodity markets has been irregular. Whereas in some cases there has been a slight reaction, in others the upward movement continued. On the whole, however, prices are on a definitely higher level than a fortnight ago. No improvement has become noticeable in the coal trade. In Germany, the members of the old Ruhr coal syndicate, at their meeting at Essen on June 30th, decided, with the exception of one, to extend the syndicate until 1942. The iron and steel industries continue depressed, but an encouraging feature is the increase in inquiries, particularly from abroad, and the hardening of Continental prices. Non-ferrous metals continued to advance until last Monday, when a reaction became noticeable. Tin is now well above the low level of recent weeks, but copper was cheaper than last Wednesday. Among textile raw materials, cotton continued to advance, and the demand for piece-goods has broadened. The downward movement of wool has been arrested, but business in finished goods shows little improvement. Rayon piece-goods have been in better demand. Hemp shows some improvement, but jute prices are lower. Among cereals, wheat has been slightly easier on the week, but in most other foodstuffs the recent advance has been maintained. Among miscellaneous commodities, rubber has been firmer and hides were dearer.

THE COAL TRADE.

SHEFFIELD.—Export business for steam coal continues depressed, sales having steadily shrunk since the subsidy under the five counties plan ceased. South Yorkshire coal is being under-quoted by other districts. Demand for industrial fuels is severely restricted and does not expand. There is over-production of secondary coals and blast furnace coke. Tempted by the lower prices a good many householders have been getting in stocks of coal. Best steams are quoted at 17s. 6d. and 18s. f.o.b., best ordinary house at 18s. 6d. to 20s. at pits and blast furnace coke at from 10s. to 11s. 6d. at ovens.

GLASGOW.—As a result of the continued restriction of outputs, the supply of coal is now more in line with demands, and the market is now a good deal steadier on the whole. There has, however, not been a great deal of improvement so far as business is concerned, although within the past week some covering purchases, prompted by the possibility of fresh trouble over the wages and hours question, has given the market a fairly busy appearance at times. Washed nuts are now strongly held in all districts, with singles and pearls scarce in one or two quarters. Among round coals, Fifeshire steams are fairly well stemmed, but Lothian steams are in need of business, and the same may be said of most qualities of Lanarkshire coals. Current prices for the shipping trade are approximately as follows (f.o.b. district ports): LANARKSHIRE.—Ell best, 14s.; splint best, 16s.; splint second, 14s. 6d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 11s. 6d.-12s.; doubles, 11s.-11s. 6d.; singles, 10s.; pearls, 9s. 3d.; dross, 9s. FIFESHIRE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s.; third-class steam, 10s. 3d.-10s. 6d.; trebles, 11s. 6d.-13s.; doubles, 10s. 9d.-11s.; singles, 10s.; pearls, 9s. 3d. LOTHIAN.—Prima steam, 10s. 9d.-11s.; secondary steam, 10s. 3d.-10s. 6d.; trebles, 12s.; doubles, 11s.; singles, 10s.; pearls, 8s. 9d. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 12s.; trebles, 11s. 6d.; doubles, 11s. 3d.; singles, 10s.; pearls, 9s. 3d.-9s. 6d.; dross, 9s. 6d.

CARDIFF.—There has been no improvement this week in the state of business in the South Wales coalfield. Shipments are being fairly well maintained on the recent reduced basis, but current inquiries are extremely scarce and prices for all grades are at the minimum schedule figures. The output continues in

excess of the demand, and stocks are heavier than ever. Tenders for the supply of 100,000 to 200,000 tons of locomotive coal for the Egyptian State Railways during the three months ended October next were opened in Cairo on Tuesday, when it was announced that the lowest offers were those of T. Beynon and Company, Ltd., Cardiff, who quoted 24s. 1d. c.i.f. and 17s. 8d. f.o.b. for supplies of 100,000 tons. The c.i.f. price is the lowest tendered since the war, and compares with 25s. 5d. obtained for a contract for 100,000 tons delivered between May and September this year. The following are the current approximate quotations: Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 6d. to 17s. 9d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; best small steams, 13s. 6d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s. 6d.; patent fuel, 19s. 6d. to 20s. 6d.; foundry coke, 27s. 6d. to 34s.; pitwood, ex ship, 21s. 6d. to 22s.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron continues depressed, and transactions are on a smaller scale than ever. Local makers still adhere to the official prices that have ruled so long, with the result that Midland iron is coming into the district in increased quantities and Continental iron threatens to become a serious competitor as it was during the second half of last year. Export business in Cleveland iron is reduced to very small dimensions, the quantity shipped abroad during June being 3,601 tons against 4,031 tons the previous month. Tuesday's weekly market was only poorly attended, and business was confined to small lots for early delivery, no one being inclined to discuss forward contracts. Official prices remain: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s., f.o.b. or f.o.t. In hematite a fair trade is passing for early delivery, mostly to home consumers, but a few lots have also been sold for export. Prices are steadier, and 62s. 6d. is now the ruling figure for ordinary mixed numbers for delivery over a month or two, and 62s. 9d. to 63s. for further ahead. In the finished trades new business of importance is not coming forward freely, but some improvement in demand is looked for after the meeting of the British steel makers in London on July 10th, when prices are expected to be reduced. Local sheet mills are only indifferently employed notwithstanding recent price cuts. 24-gauge galvanised corrugated steels are obtainable at £9 15s. to £10, and 24-gauge black sheets at £8 for home and export. The ore market continues almost idle. The present rate of exchange favours shippers, but consumers are unable to take advantage of spot cargoes which are offered from time to time at very low prices. The Best Bilbao rubio is nominally 15s. c.i.f. for early delivery, and the rate of freight, Bilbao-Middlesbrough, for prompt tonnage is 4s. 3d. Coke continues to be freely offered at 15s. delivered works for good blast-furnace qualities for early delivery. The number of furnaces in blast in the district is unchanged at 22.

SHEFFIELD.—Business in a few special lines of steel and engineering is brisker, and there is a more confident tone about, but the situation as a whole has undergone no marked change for the better. Production continues at a very low level, and unemployment remains at previous high figures. Makers of rust-resisting and high-speed tool steels are experiencing severe competition from France and Scandinavia, but a reduced tonnage of special constructional steels is coming into this country from foreign sources. Home prices of such steels have been brought down considerably. Demand continues poor for acid and basic steels in crude forms. Exports of most kinds of manufactured steel have shrunk further. All cases of improvement relate to home trade. Indian pig-iron continues in evidence and competes with British material in England, America and Italy. Several large steelworks have resumed after a stoppage for stocktaking with the same output as before. A revision of controlled prices is under consideration. Costs of production at steel and iron works is appreciably lower than a year ago, and the benefits of derating are not operating fully. The departments concerned with shipbuilding and railways are extremely short of work. Demand from the automobile industry is disappointing.

GLASGOW.—Business remains very quiet in West of Scotland iron and steel circles, and steelmakers in particular are finding it increasingly difficult to obtain enough work to keep employed such plants as are at present in operation. Makers of semis are also badly off for work, but are finding Continental competition less keen than a few weeks ago, Continental prices being firmer and makers disinclined to quote for forward delivery. Sheetmakers are not able to keep all mills running, but the export demand for black has been rather better during the present week and the home demand both in black and galvanised is satisfactory. It has been announced that a large firm of tube makers in Coatbridge have received an order for piping from the Coatbridge and Airdrie Electricity Department, the value of which is estimated at approximately £100,000.

CARDIFF.—The position in the South Wales tinplate trade has undergone no material change during the past week. Prices of tinplates have hardened slightly and have been quoted up to 14s. per basis box compared with 13s. 6d. a week or two ago, but this increase in price is due chiefly to the rise in the price of tin. Inquiries from South America, South Africa, and Canada are fairly active, though business continues very restricted, but German competition on the Continent is increasing and exports from that country in the five months ended May were 6,000 tons, or 37 per cent. greater than those in the corresponding period last year. Galvanised sheets are unchanged at £9 15s., while local steel bars have been quoted at £4 17s. 6d. and foreign bars at £3 15s.

OTHER METALS.

TIN.—Non-ferrous metals continued to advance at the end of last week, reaching their highest level on Monday, when tin (standard cash) was quoted at £118 5s. to £118 10s. per ton. Later in the week, however, the metal receded from this level, which was hardly justified by actual conditions. According to the London Metal Exchange, the world's visible supply at the end of June (excluding "carry-over in Straits"), at 51,626 tons, shows an increase of 395 tons on the month, and the "carry-over in Straits" at 7,200 tons was 332 tons higher. Wednesday's official closing quotation for "standard cash," at £113 2s. 6d. to £113 5s. per ton, compares with £107 17s. 6d. to £108 on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 32,192 tons, show an increase of 298 tons on the week.

COPPER.—Since Monday, when "standard cash" copper was quoted at £40 7s. 6d. to £40 10s. per ton, there has been a sharp reaction in prices at the London Metal Exchange and, in contrast to tin, on Wednesday's quotations were lower than on the corresponding day last week. Last Monday, Copper Exporters, Inc., again raised its minimum price for "electrolytic," c.i.f., Continent, from 8.775 cents per lb. to 9.275 cents per lb. Wednesday's official closing price for "standard cash" in London, at £36 to £36 2s. 6d., compares with £37 12s. 6d. to £37 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 16,241 tons, show an increase of 557 tons, while stocks of rough copper, at 1,235 tons, were 1 ton smaller. According to the Metallgesellschaft A.G., the daily average smelter output of copper in May at 3,787 metric tons shows a decline of 66 tons as compared with that of the previous month.

LEAD.—Lead has been slightly firmer. Wednesday's official closing quotation for "soft foreign" in London, at £13 to £13 17s. 6d., compares with £12 15s. to £13 2s. 6d. on the corresponding day last week. In New York prices advanced further, and "spot" at 4.40 cents per lb. shows a rise of 0.15 cents on the week.

SPELTER.—In sympathy with other metals spelter was strong at the beginning of the week, but following heavy liquidation, prices declined. Wednesday's official closing quotation in London for "good ordinary brands," at £12 11s. 3d. to £13 2s. 6d., compares with £12 16s. 3d. to £13 on the corresponding day last week.

OTHER NON-FERROUS METALS.—Aluminium, antimony, nickel and quicksilver show no improvement. The quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, remained unchanged. Antimony again changed hands at £23 to £23 10s. per ton for "foreign," while quicksilver remained unchanged at £17 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Spot sales for the week June 25th to July 1st (inclusive) are 32,000 bales, of which 16,090 are American, 1,850 Brazilian, 1,100 Argentine, 4,250 Peruvian, 5,500 Egyptian, 1,350 African, 950 East Indian, 680 Russian, and 230 sundries. Imports for the same period are 42,284 bales, of which 6,325 are American, 4,625 Peruvian, 4,900 Egyptian, 533 African, 25,004 East Indian, and 897 sundries. Quotations, July 1st: American Middling, 5.40; Egyptian F.G.F. Sakel, 8.35; F.G.F. Uppers, 6.52; Brazil Fair, 5.45; Peru G.F. Smooth, 5.85; West African Middling, 5.45; and East African G.F., 6.45.

Manchester.—The Manchester market has continued to present a more active appearance. The higher level of raw cotton prices has been maintained and although many operators have acted cautiously, the demand for piece-goods has broadened and for several markets there has been a better turnover. There has been more inquiry in light bleaching fabrics for India and useful sales have taken place. Transactions have also been mentioned in dhooties and prints. A feature of interest has been the increased demand for China and freer buying has been recorded in a wide

Trade with South America

The Bank of London & South America Ltd. offers a complete banking service to commercial houses which are engaged in trade with the Latin-American countries. With branches at every strategic point, the Bank is singularly well equipped to supply the very latest

information on local markets and trade conditions, to help and advise, and to undertake banking business of every description. For the convenience of its clients a Monthly Review of Market Information is issued free on application and Status Reports on S. American firms are supplied on request.

from 1d. to 1d. per lb. was made in the price of cows. Calfskins sold at last week's figures. The tone at the Leeds auctions was stronger than that at Manchester; practically all classes and weights in ox and heifers were from 1d. to 1d. per lb. dearer, while cows were from 1d. to 1d. per lb. up. Calfskins also made higher figures. The sheepskin market remains quiet, with low prices being realised. More activity has been displayed in the imported hide market, and with a better feeling apparent amongst buyers moderate advances have been made on most descriptions. In the South American market the United States and Europe have been interested in wetsalted hides, and sales of Argentine ox have been made at 5 1/2 d., with light ox and cows changing hands at 5d. Considerable advances have been recorded on sales of dry River Plates, B.A. Americanos having realised up to 6d., with Inservibles changing hands at just under 4d. There is a better tone in the market for African hides, and although dealings have not been on the same scale as those for other descriptions, a fair amount of business has been transacted. In Capes, 6d. and 5d. has been paid for drysalted 20-30 lbs., firsts and seconds, and a penny more for drys. The improvement in the market is also reflected in the position of Australian hides, better business having been done at

rather higher figures. Although the turnover in regard to sole leather has not shown any large improvement on that of the preceding week, a fair quantity has gone into consumption. A noticeable feature of the inquiry has been the better call for medium weights in dry hide bonds. These have been a rather poor sale for several weeks past, but of late some quite decent-sized parcels have changed hands, although there has been no improvement in the sale of light and heavy weights. English and wetsalted bonds are also wanted in medium selections, in addition to which there is a dropping sale for certain of the heavier selections. No headway is made in regard to offal; pinned shoulders have received a fair amount of attention, but other classes of this stock are a very poor market. Medium-sized parcels of upper leathers are changing hands all the time and, generally speaking, the turnover is up to the average of recent weeks. Glace kid and willow calf continue to be the mainstay of the market, in addition to which sales of patent are made fairly regularly. Slightly more attention has been paid to suede, in addition to which small sales have been made of white leathers for shoe purposes. Fancy upper leathers, however, are not a good market, as business in regard to most descriptions is restricted to very small quantities. Heavy upper stock also is on the quiet side; orders are scarce and usually for limited supplies.

RUBBER.—Last week's advance in prices has been maintained. Production is now on a lower level and the outlook is a little more encouraging. Wednesday's official closing price for standard ribbed smoked sheet, at 3 1/2 d. per lb., shows a rise of 1/4 d. as compared with the corresponding day last week. In forward positions, business has been done at 3 1/2 d. to 3 3/4 d. for July; at 3 1/2 d. to 3 3/4 d. for October-December, against 3 1/2 d. to 3 3/4 d.; at 3 1/2 d. to 3 3/4 d. for January-March, 1932, against 3 1/2 d.; and at 3 1/2 d. to 3 3/4 d. for April-June, as against 3 1/2 d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,992 tons; delivered, 2,806 tons; stocks at the end of last week, at 136,527 tons, show a decrease of 814 tons, as compared with the preceding week.

The position on Tuesday and Wednesday was similar, but on Thursday day-to-day money was generally obtainable at $1\frac{1}{2}$ - $1\frac{3}{4}$ per cent., old day-to-day loans from lenders other than the clearing banks being renewed at the lower figure. So far there have been no indications of an alteration of clearing bank policy in regard to weekly loans, for which the charge of 2 per cent. (somewhat anomalous in existing circumstances) continues to be made.

The discount rate has been subject to the conflicting influences, firstly, of the expectation that Bank rate would be reduced as soon as relaxation in the tension of the Central European situation warranted such a step, and, secondly, the growing recognition that that tension is as yet far from being relaxed. Last Friday's applications for the £40 millions of Treasury bills available totalled nearly £71 millions, and the whole of the bills were allotted at an average rate of discount of £1 18s. 3.45d., as compared with £1 19s. 9.87d. a week before. On the following day hopes of a successful conclusion to the Paris conversations were reflected in the weakening of the rate on 90-day bank drafts to $1\frac{1}{2}$ - $\frac{7}{8}$ per cent., while business in the new Treasury bills for next week's delivery was reported at a fraction over $1\frac{1}{2}$ per cent. On Monday and Tuesday the clearing banks were buying August maturities at $1\frac{1}{2}$ per cent., but on Wednesday uneasiness as to the German situation, in view of the continued drain on the Reichsbank's foreign exchange resources, led to most dealers quoting a full $1\frac{1}{2}$ per cent. for 90-day bills, and by Thursday afternoon a rate of $1\frac{1}{2}$ per cent. was generally effective. Thus the position of a week ago was approximately restored.

	June 18, 1931.	June 25, 1931.	July 2, 1931.	July 9, 1931.	Previous Rate and Date Changed.
Bank Rate	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	3 (May 14, '31)
Banks' Deposit Rate..	1	1	1	1	1 (May 1, '30)
Discount of Call	1	1	1	1	1 (May 1, '30)
Houses' Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Market rate (3 months' bills)	$2\frac{1}{2}$ - $3\frac{1}{2}$	$2\frac{1}{2}$ - $3\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ - $1\frac{3}{4}$	...

Although on Tuesday the Bank of England secured £797,000 in bar gold at its statutory minimum price, the remainder being taken for the home and continental trades, earlier expectations that Thursday might witness a reduction in Bank rate were checked, partly by the continued weakness of the Reichsmark, which touched momentarily on Wednesday 20.52 $\frac{1}{2}$, recovering on Thursday to 20.50 $\frac{1}{2}$, and partly by the adverse movement of the French franc, which moved sharply against London on Wednesday to 124.08, closing at 124.12. The rate was steadier on Thursday, but it was suggested that in a few cases bills maturing in London were not being renewed by French holders. Thus, with or without justification, some degree of uneasiness was revived lest the franc exchange might again be subject to operations influenced by political considerations. It was, however, by no means certain that the appreciation in the franc reflected anything more than withdrawals through London of French balances in Germany.

The Reichsbank return, published on Thursday, made a favourable showing inasmuch as the cover for the note circulation in gold and foreign exchange amounted to 43.6 per cent., as compared with 40.1 per cent. a week before, when the end-June pressure of circulation demands was at its height. The improvement, however, in the ratio reflected partly the normal return of notes after the end of the half-year, and partly the temporary assistance given by other central banks.

The Bank of England's return, as at July 8th, revealed the usual large movements consequent on the market's repayment of end-June borrowings from the Bank. Thus, discounts and advances were £27.2 millions lower, while other securities showed a decline of nearly £2 millions.

On the other side of the account, public deposits were up by £4.2 millions and bankers' deposits £34.9 millions down. As the result of an increase of £1.4 millions in gold stocks, the reserve proportion worked out at 57 $\frac{1}{2}$ per cent., as compared with 46 $\frac{1}{2}$ per cent. a week ago, notwithstanding a further expansion of £1.8 millions in the note circulation, which is now £6.4 millions higher than the level at which it stood on June 24th, when the proportion was 59 $\frac{3}{4}$ per cent. The fact that, as compared with a fortnight ago, the Bank's holdings of "other securities" in both departments shows little alteration, while advances are £2.6 millions lower, would appear to suggest that the rediscount credits given in favour of the Austrian National Bank and the Reichsbank have been operated through the medium of the Bank of England's deposits with the Bank for International Settlement.

There has been little change in money market conditions in New York during the past week, call rate ruling steady at $1\frac{1}{2}$ per cent. and market discount rate at $\frac{7}{8}$ to 1 per cent. Gold movements have been limited to receipts of \$4.2 millions from the Argentine and \$1 million from Canada. During the week ended July 1st brokers' loans showed an increase of \$73 millions, but the net movement during the month of June was a decrease of \$43.4 millions.

The Foreign Exchange market was overshadowed by the War Debt negotiations in Paris, fluctuations being numerous and frequent, but no great business was transacted. New York moved in our favour from 4.86 $\frac{1}{2}$ to 4.86 $\frac{1}{4}$. Montreal improved by $\frac{1}{4}$ to 4.87 $\frac{1}{4}$. Paris, after touching 124.28 $\frac{1}{2}$ and 124.08, gained 10 points on balance at 124.12. Brussels moved sharply against us from 34.90 $\frac{1}{2}$ to 34.84 $\frac{1}{2}$. Milan lost four points at 92.94. Madrid was erratic but rather better on balance at 51.25. Amsterdam improved sharply from 12.09 $\frac{1}{2}$ to 12.08. Berlin was irregular, and after touching 20.52 $\frac{1}{2}$, was finally a little weaker on balance at 20.50 $\frac{1}{2}$. Switzerland fluctuated sharply, touching 25.05 and 25.14, finally gaining three points at 25.08 $\frac{1}{2}$. Of the Scandinavian exchanges, Oslo improved by $\frac{1}{2}$ to 18.16 $\frac{1}{2}$, as did Copenhagen at 18.16 $\frac{1}{2}$. Stockholm moved sharply against us from 18.15 $\frac{1}{2}$ to 18.14 $\frac{1}{2}$. The South American currencies were irregular, Rio and Buenos Aires losing $\frac{1}{2}$ d. at 3 $\frac{1}{2}$ d. and 3 $\frac{1}{2}$ d. respectively. Montevideo improved by the same margin to 28 $\frac{1}{2}$ d. In the Far East, the rupee was better at 1s. 5 $\frac{1}{2}$ d., whilst the yen was unchanged at 2s. 0 $\frac{3}{4}$ d. Batavia improved from 12.10 $\frac{1}{2}$ to 12.08 $\frac{1}{2}$. In the forward market dollars were in better demand at premiums of $\frac{1}{4}$ cent and $\frac{1}{2}$ cent. Paris was rather weaker at 6 and 16 centimes premium, against 7 and 27 centimes last week. Brussels declined from $\frac{1}{4}$ and 3 centimes premium to par for both deliveries. Milan lost two points for one month's delivery at a quotation of 8 centesimi discount, but was better by the same margin at 22 centesimi discount for three months. Madrid was rather better at $\frac{1}{8}$ peseta discount for one month and $\frac{1}{4}$ peseta discount for three. Amsterdam fell away from $\frac{1}{8}$ cent to $1\frac{1}{8}$ cents premium to $\frac{3}{4}$ cent and $1\frac{1}{4}$ cents premium for one and three months respectively. Berlin was at one pfennig and four pfennigs discount, whilst Switzerland weakened from $\frac{1}{2}$ centime and one centime premium to par and $\frac{1}{2}$ centime premium. The silver market was very quiet, and prices eased off by $\frac{1}{8}$ d. to 18 $\frac{1}{2}$ d. for both cash and forward. The China silver exchanges weakened in sympathy, Hongkong losing $\frac{1}{2}$ d. at 1s. 0 $\frac{1}{2}$ d. and Shanghai $\frac{1}{2}$ d. at 1s. 3 $\frac{1}{2}$ d.

INSURANCE SUPPLEMENT.

With this issue of the *Economist* is published our Annual Insurance Supplement, surveying the results of 1930 in the Insurance world.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

HOPE REVIVED?

LATE on Monday night, after a week-end of contradictory reports of settlement and disagreement, the protracted Franco-American conversations in Paris reached a definite conclusion. Certainly subsidiary points remain subject to negotiations which may or may not elicit the existence of serious difficulties still to be resolved; and the three weeks which have elapsed since Mr Hoover made his original offer have done much to dissipate the atmosphere of somewhat sanguine optimism which the proposal of a year's moratorium at first engendered. Nevertheless, though certain features of the principles of settlement finally achieved are such as to invite criticism, it is at any rate a matter for solid satisfaction that the gap between the divergent views of Washington and Paris has at last been bridged and an accord reached between the statesmen.

The story of the *dénouement* of the Laval-Mellon conversations is worth recording. After an unexpected postponement of twenty-four hours, the negotiations were resumed last Friday evening, and shortly after midnight a *communiqué* was issued stating that Mr Mellon "confirmed" that the United States Government had decided to accept the maintenance of the principle that payment by Germany of the unconditional annuity under the Young Plan should continue; that other divergences in the views of the two countries had been removed; and that agreement on the technical and financial side of the negotiations seemed, under reserve of the adhesion of the other interested parties, likely to be reached in the very near future. This *communiqué* was at first interpreted as being tantamount to virtual agreement, but the terms of the accord had still to be submitted to the Government at Washington. On Saturday night, following further conversations between the negotiators, the text of the accord was finally agreed and transmitted by cable direct to President Hoover, who had gone to his summer camp on the Rapidan. The response was at first unfavourable. President Hoover considered particularly that the position at which the negotiators had arrived in respect of the continuance of deliveries in kind did not conform to the spirit of his proposals. On Monday, however, an acceptable formula was at length reached, as follows:—

Following the exchange of views which has taken place, the French Government intimates that it is in agreement with the Government of the United States on the essential principles of President Hoover's proposal, and on the following arrangements (*dispositions*) for its application:—

(1) The payment of inter-governmental debts is to be suspended from July 1, 1931, to June 30, 1932.

(2) The German Government is to continue the payment of the unconditional annuity; but the French Government agrees in so far as it is concerned that the payments thus made by Germany shall be invested by the Bank for International Settlement in guaranteed bonds of the German railways.

(3) The suspended payments are to bear interest in accordance with the terms suggested by the American Government, and are to be repayable in ten annuities starting from July 1, 1933. The same conditions are to apply to bonds issued by the German railways.

On three points, in respect of which it recognises that the American Government is not directly concerned, the French Government makes the following declaration:—

(a) Concerted action by the principal central banks, with the B.I.S. as intermediary, shall be organised for the benefit of the European countries which would be particularly affected by the proposed suspension of payments.

(b) There shall be a previous agreement between France and the B.I.S. to the effect that France is not to make good the Guarantee Fund, provided for in the case of a Young Plan moratorium, except by equal monthly payments at the demand of the B.I.S. and following the effective transfer of payments made by Germany.

(c) The question of reparations in kind and the various technical adjustments entailed by the application of the American proposal and the present agreement shall be studied by a Committee of Experts appointed by the interested Powers and charged with the task of reconciling actual needs (*nécessités de fait*) with the spirit of President Hoover's proposal.

France reserves to herself the right to call upon the German Government for the requisite guarantees (*assurances indispensables*) that the savings thus effected in the budget of the Reich will be devoted exclusively to economic purposes.

On the assumption, which seems to be fully justified by the terms of the *communiqué*, that French acceptance of the four main "*dispositions*" is unqualified, i.e., is not conditional on future agreement in regard to the three "*declarations*" and the reservation as to assurances, the accord certainly conforms to the cardinal principle which President Hoover insisted on upholding—that Germany should have a complete relief from the burden of reparations for twelve months. M. Laval has waived his original counter-proposal that a proportion of the sum representing the unconditional annuity in the moratorium year should be made available for financing Central European countries other than Germany; the unconditional annuity payment is simply to be maintained in principle by the acceptance of Reichsbahn I.O.U.s; and there is no longer any question of Germany having to find, on July 1, 1922, the whole of the suspended unconditional annuity. Had M. Laval not succeeded in "*rusticating*" his uncompromising Chamber of weary but critical Deputies last Friday night, it seems doubtful whether he would have been able to make these concessions, whose substance we are by no means disposed to minimise.

Nor are we without hope that when the Conference of Treasury Experts meets on July 17 (an earlier date would surely have been preferable, in order that uncertainties might be sooner ended) the questions raised by the French "*declarations*" will prove amenable to settlement. While British opinion, led notably by the Chancellor of the Exchequer, would probably be reluctant to assent at this stage to any radical alteration in France's favour of the principles embodied in the Young Plan with regard to priority of reparations payments, the modified proposal by France that her Guarantee Fund obligations should be implemented by monthly instalments *pari passu* with resumed payment by Germany of the unconditional annuity (we assume this to be the intention) should not meet with insurmountable opposition. Moreover, how to mobilise assistance for Central Europe generally is already very much the pre-occupation of central banks, not least of the Bank of England. Finally, it is generally recognised that current contracts in respect to deliveries in kind could not be brusquely interrupted without causing needless economic dislocation; and in this matter it should not surpass the ingenuity of the experts to find means of preserving continuity of works in hand, while conforming to the spirit of the Hoover Plan.

There remains the question of the assurances which France seeks to obtain from Germany. Last Sunday, Dr. Brüning made a specific pledge to the United States Government that in the moratorium year there would be no increase in the Reich's appropriations for naval and military expenditure, and that "the aggregate alleviations accruing to Germany from the Hoover Plan are required, and will be used, in their entirety, to cover deficits in revenue which are to be expected, to consolidate the financial conditions, and to save German economic life." Comprehensible, if not convincing, consideration of *amour propre* doubtless made it easier for the German Chancellor to make this declaration to the United States than *vis-à-vis* France, but we are glad to note that on Wednesday the German Ambassador in Paris formally handed to M. Laval a copy of Dr. Brüning's statement to America, and we are confident that the Chancellor, in his forthcoming visit to Paris, will take steps to confirm, for the further reassurance of French opinion, this satisfactory undertaking on Germany's behalf.

Thus far, then, we welcome the accord and find in it the promise of hopes revived. The point which must necessarily raise doubts is the proviso that repayments, with interest, shall begin from July 1, 1933, instead of being deferred to the end of the Young Plan annuity series, i.e., 1939, or at least to 1936, when the reduced annuity scale becomes operative. Here the relevant considerations seem to us to be as follows:—Germany has proved this year to be incapable of meeting the specified charge of approximately \$75 millions (i.e., excluding the

service of the Dawes and Young Loans). Under the Young Plan that charge amounts to nearly £81 millions in 1933-34, and rises to £99½ millions in 1943-44. In view of the present necessity for a moratorium, is it conceivable (save in the event of a huge rise in the price level) that the burden, increased by over £9 millions annually (i.e., repayments plus interest) can be sustained after 1933? As we see it, French insistence on early reimbursement of the suspended payments is a major factor rendering the revision of the whole Young Plan the more inevitable, and accentuating, meantime, the obscurity of Germany's future.

This, however, is a problem which the statesmen, given this year's breathing-space, have the opportunity, as well as the obligation, to tackle. For the immediate present, now that the Paris Accord of July 6th has been concluded, the problem is financial rather than political. *La main passe à MM. les banquiers.* For the hopes raised, checked and again revived by the course of the Hoover Plan negotiations have not availed to arrest the rapid deterioration of the financial position of Germany and the greater part of Central Europe. In Austria, it is true, following the Government's wise decision (noted in last week's *Economist*) to guarantee the schilling domestic deposits of the Credit Anstalt, the immediate strain on the National Bank's devised holdings appears to have been somewhat lessened, while the situation in Hungary, where the position of the General Creditbank had been arousing uneasiness, has been temporarily relieved by the successful placing abroad of £4 millions out of a total issue of £5 million of eighteen months' Treasury bonds. In Germany, however, conditions still remain a matter for serious anxiety.

The story of the week's major developments is told in a Note on page 61. As it stands, the situation is critical, but—given goodwill and forbearance from panic decisions—not yet unmanageable. It is evident that the \$100 millions foreign rediscount credit, due for repayment on July 16th, will have to be prolonged; and, though the talk prevalent as early as Wednesday of a substantial enlargement of that credit appeared to be fathered prematurely by the wish, there seems no reason to doubt but that central banking assistance to Germany will be forthcoming to the limits of practicability. It is obvious, however, that the safeguarding of the immediate position ultimately depends upon the policy followed by Germany's private creditors abroad, particularly in the United States. Unless there is considerable forbearance in the matter of prolongation of short credits and willingness to leave floating balances in Germany, concerted action by the central banks can scarcely succeed in averting a disastrous collapse. We feel confident that this will be recognised by the principal institutions in all foreign countries to which Germany is indebted, though the organisation of joint action by creditors obviously involves much greater difficulties than were entailed in the action taken in the case of the Credit Anstalt.

On the other hand, a caveat should perhaps be entered. There are evident limits beyond which the process of organised assistance to debtors cannot be carried with prudence or advantage. It would not conduce ultimately to the restoration of better conditions in Europe were a policy to be adopted, either by central banks or other creditors, of prolonging and extending credit indiscriminately without reference to the intrinsic merits of the debtor undertakings or institutions. While wise prolongation and extension of credits is a vital necessity, nothing would be gained by an indefinite process of mutual self-help which resulted simply in the gradual extension of the area of "non-liquidity," and the success of rescue efforts will be conditioned largely by the degree in which international finance applies to Central Europe a far-sighted policy of selective assistance. It is also clear that, though for the moment the fate of Europe is in the hands of the financiers, the hope of recovery in the long run depends upon the statesmen. Capital will not return to Europe, nor will she recover confidence in herself unless it is clear that the road is clear of political obstacles to her peaceful evolution, and that a sane international system will replace economic warfare between her thirty or forty States.

A YEAR'S TRUCE IN THE COALFIELDS.

A PLAY can only stand one hero or one villain; and the modern democratic popular daily newspaper can only carry one serious subject as a front-page headline feature. Therefore, since the Hoover Plan and the discussions thereon have rightly and properly attracted the limelight, it may be doubted whether one British citizen in a thousand realised that the catastrophe of a general coal stoppage was within an ace of being superimposed this week upon the already grave and complicated difficulties of the present economic situation. Wednesday, July 8th, was, in fact, in the absence of quick action on the part of the Government, zero hour for the new war in the coalfields.

The story of the trouble which was threatening is familiar to readers of the *Economist*. It starts 23 years ago. In 1908 an Act was passed providing that the working day in the British coal mines should consist of eight hours. An Act passed in 1919 reduced the hours from eight to seven. Seven years later, in 1926—following, and partly as a result of, the long and disastrous stoppage of that spring and summer—Parliament in another Act decreed that the seven-hour day should, at the option of the owners and men, become an eight-hour day, and, economic forces being an all-powerful ally of the owners, the eight-hour day became the rule. That Act was given a currency of five years, and although the present Government, soon after assuming office in 1929, passed a new Act changing the law to a seven and a half hour day with "spread-over" provisions permissible, it was the expiry of the 1926 Act this week which created the critical position in the industry, which weeks of negotiations between owners and miners failed to avert. Agreement between the two parties was only narrowly missed. The owners were willing to fix a seven and a half hour day with present wage rates guaranteed for one year only. The miners, if we may accept the Prime Minister's interpretation of the rather complicated negotiations, would have accepted a seven and a half hour day pending new legislation to implement the Geneva Hours Convention, provided that existing wages were guaranteed in the interim, and that the owners agreed, also, in the interval to establish effective national negotiating machinery. Be that as it may, the negotiations proved abortive, and the Government were faced with the alternative either of allowing a coal stoppage to take place or of introducing emergency legislation to provide a breathing space in which the industry might be given one more chance to settle its own affairs amicably.

The Government, bowing to Fate, chose the latter course. They introduced an emergency Bill in the House of Commons on Monday, and it was merely because all parties in both Houses preferred a truce on debatable terms to a war under any conditions that the new Coal Mines Bill passed all its stages, and in 48 hours was entered on the Statute Book. The new Act has as its two main provisions the suspension for twelve months of the coming into force of the seven-hour day, and, as a condition of this suspension, the continuance of the present subsistence wage rates in every district and of the present minimum percentage additions to basic rates. The other substantial point is that the "spread-over" is abolished. In most of the coalfields this scheme, while wholly acceptable neither to owners nor men, does, as the Prime Minister remarked, give both "enough to go on with," and, of course, its chief merit—indeed, its only *raison d'être*—is that it allows a breathing space of one year during which the industry may make one more effort to settle its own affairs. But in two districts, Scotland and Cumberland, special difficulties remain; for these, no have been fixed the provisions of the new Act cannot be implemented. In North Wales, where a similar state of affairs existed up to Wednesday last, an agreement has now been reached; but a new series of negotiations in the Scottish fields have apparently been abortive, and it has been agreed that, pending the signature of a new agreement, present conditions, including the provision for spread-over, shall continue. Thus, once again, we have the anomalous position of one of the principal coalfields

working under conditions not conforming to those laid down by statute. Let us hope that the Prime Minister's optimism is justified, and that a Scottish district agreement will "certainly be fixed very shortly."

The debates in the House of Commons on Monday and Tuesday showed very clearly that the Bill would have met with substantial criticism and opposition had time not been so pressing. It was not overlooked that, at a time when prices are still falling and there is a possibility that we may have to face a general reduction of money wages, salaries, etc., a highly dangerous precedent was being set by reason of the fact that for the first time Parliament has legislated to fix rigid scales of wages throughout one of the major industries. Sir Herbert Samuel was by no means alone in expressing the fear lest on future occasions other industries should come to Parliament in times of difficulty and say: "In July, 1931, you were able to safeguard the rates of pay of the miners by Act of Parliament. Why should you not safeguard the wages of the steel workers or the railwaymen by another Act of Parliament?" And significant, indeed, was the retort of "Certainly" with which Sir Herbert's remark was greeted from the Labour benches. Nevertheless, from no quarter of the House of Commons came any suggestion that the Government had any better course now open to them. The only visible alternative was a national coal stoppage, and had the Government allowed the situation to drift into that disaster, they would have earned and received national condemnation.

So, with reluctance, the measure was allowed to pass, because any truce was better than war. But it is only a truce. It no more settles the future of the coal industry than the Hoover debt holiday settles the future of international governmental obligations. Unless owners and miners can reach a settlement which has so far baffled them, the crucial position which arose this week will recur in July, 1932. May we hope that before this year of grace is ended, progressive reorganisation in the coalfields and some degree of recovery in the demand for the product of the pits, will combine to remove some of the difficulties which at present obstruct a lasting agreement.

THE NEW PAPAL ENCYCICAL.

THE present conflict between the Pope and the Duce may be looked at in various lights: for instance, as a personal encounter between two strong-willed Italians, an imperious Romagnol and an inflexible Milanese; or as a new campaign in the chronic warfare between two Italian States, the Papal State, which has shrunk into the City of the Vatican, and the Kingdom of Piedmont-Sardinia, which has swelled into the Kingdom of Italy. Yet, as the conflict has drawn itself out and increased in intensity, it has also grown in significance for the world at large. In their exchange of words—note answered by broadcast, and broadcast by encyclical—the protagonists have been revealing, piecemeal and as it were in spite of themselves, the gravity of the underlying issue. At last, in the Papal Encyclical issued last Sunday, July 4th, this issue is defined with uncompromising precision.

"An ideology which openly amounts to a regular and veritable pagan worship of the State" is portrayed as asserting itself "in complete conflict with the natural right of the family" as well as "with the supernatural right of the Church." Such are the belligerents in the battle which the Pope describes, and he also delineates the battlefield. It is nothing less than the field of education. "Everything points to the existence of an intention to monopolise young people from earliest childhood up to adult age to the complete and exclusive advantage of a Party." This is how the Pope interprets the Duce's indictment of the Azione Cattolica. "These charges are merely pretexts for getting the young people out of the reach of the Church"—as is witnessed by the action of the Fascist Government in dissolving all the young people's associations that had worked under the ægis of the Azione Cattolica society, including associations which, on the face of them, were so utterly remote from politics as the oratories or as the Congregation of the Daughters of Mary.

Enquiries invited.

In this remarkable document the claim of the modern Sovereign Independent National State to the entire and exclusive allegiance, soul and body, of the human beings who are officially its subjects or citizens is roundly challenged; and the challenge is made in the names of two parties, not one. The deliverer of the challenge is the head of a Church which, for more than four centuries now, has perpetually contested the pretensions of the State, but has ever been compelled to yield ground as these pretensions, and the power to assert them, have steadily increased. But in the present campaign the Pope is clearly feeling himself strong enough to venture upon something very like a counter-attack; and (if we may read between the lines) he feels himself strong now because he believes that he has enlisted a mighty ally. This ally is the family, the indestructible cell of social life which represents not thrones and principalities and powers but men and women and children.

In the previous round of the conflict between Religion, embodied in the Roman Church, and the Sovereign State, embodied in the Kingdom of Italy, the Sovereign State won because the family, the men and women and children, the people, were on the Sovereign State's side. In the Risorgimento, the Italian people felt that the House of Savoy, the Kingdom of Sardinia, had put itself at the service of their cause. They gave it their whole-hearted allegiance and bore it to victory. That was an alliance against which no Pontiff could stand; but if Pius XI. is right in believing that the sympathies and desires and hopes of the people are now on the other side, is it not possible that when, with this new alignment of forces, the battle is joined again, the alliance to which the people is a party may once more show itself irresistible? Pope and people, in unison, may prove stronger than the Sovereign State, than Fascism, than Mussolini.

The spectacle is profoundly interesting to the rest of us because this shifting relation between Church and State and People in Italy stands, in an accentuated form, for a relation which is latent, more or less, in most countries in the world. The Italian Risorgimento was simply the most dramatic example of an alliance between State and People which gave the State its late supremacy. This supremacy received its first, but profound, shock in the Great War. The Pope's challenge to the Fascist State is part of a world-wide movement of revolt against the State's pretensions which, since the war, has been on foot among private people everywhere, and this largely under the banner of religion, though it is only in the hierarchically organised Roman Church that the leadership is vested in so conspicuous a figure. In the present duel at Rome between the head of a Church which claims universality, and the head of a State which professes the pagan cult of Nationalism in its most militant form, one of the great social issues of our generation is being fought out symbolically. The fortunes of this momentous combat are very much more than a purely Italian concern.

What are the odds? At first glance it might seem as though the Duce disposed of the big battalions. What can the Vatican City do against the Kingdom of Italy—especially under the Fascist regime, which obviously has a sharper beak and longer talons than its Liberal predecessors? Will the Fascist Government succeed in Italy, as the Soviet Government has apparently succeeded in

Russia, in driving the Church off the field of education and off all other fields of practical social activity and in confining its action "to the external practice of religion" (i.e., ritual and liturgy)? If once a Church is confined within these limits, its doom is certainly sealed. It is out off from life, and life will thenceforth pass it by and leave it stranded. Will this happen to the Roman Church in its present struggle with the State in Italy?

Conceivably it might happen if the field of conflict were limited to the frontiers of the Italian Kingdom. The Pope has now called upon all Italian Catholics either to refuse the oath which the Fascist State demands of them or else to take it "with a mental reservation, safeguarding the laws of God and the Church"—a reservation which, "if necessary, must be openly admitted." Now in this pitched battle over the formal allegiance of Italian Catholics, it is very possible that the Pope may be defeated. The spirit is willing but the flesh is weak. Within the Italian frontiers, Fascism is all-powerful and ruthless. It may prove strong enough to exact external allegiance from Italian Catholics by force, though its own authority may be strained to the uttermost in doing so. What happens in Italy, however, will not be decisive, because the Pope has other ground which is beyond Mussolini's reach and other followers over whom Mussolini can exercise no coercion. While Mussolini's dictatorship is confined to Italy, the Pope is the head of a Church which extends through all the world. And, on this particular issue, he may have the support, not only of Roman Catholics, but of millions of people of other religions, or of no religion at all, who may nevertheless rally to him now that he is leading a crusade against "the pagan worship of the State."

The truth is that, all over the world, there has been a profound revulsion of feeling against the pretensions of the Sovereign State within the last twenty years. In the age which ended in 1914, the State was regarded by mankind on the whole as a beneficent institution which had an unquestionable claim to the private citizen's loyalty and obedience. Since 1914, however, the State has made tremendous drafts upon the individual's goodwill. It has demanded from him unheard of sacrifices. It has conscripted him and sent him to die in battle; it has taxed him to the bone; it has hampered his trade with rising tariffs and checked his very movement by migration restrictions. In all these ways the State has been doing its best to make itself odious to Man. Possibly the Church has chosen the psychological moment in bidding now, once more, for the first place in Man's affections and esteem.

INDUSTRIAL PROFITS.

DURING the past twelve months the profit and loss accounts of 2,053 British industrial joint-stock undertakings have been analysed in our columns. The following table shows that aggregate net earnings have declined by £32,223,449, or 14.7 per cent. This fall contrasts with an increase of 3.7 per cent. recorded in the twelve months ended June 30, 1930:—

NET PROFIT (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

	No. of Companies.	Reports Published in		Increase (+) or Decrease (-).	
		1929.	1930.		
Third quarter	329	£ 25,232,486	£ 23,626,502	- 1,605,984	- 6.4
Fourth quarter	509	39,272,377	32,174,677	- 7,097,700	- 18.1
1930.					
First quarter	596	75,816,474	67,736,226	- 8,080,248	- 10.6
Second quarter	619	79,490,653	64,051,136	- 15,439,517	- 19.4
Total	2,053	21,981,190	18,758,541	- 32,223,449	- 14.7

The next table shows quarterly fluctuations in net earnings since the beginning of 1925. The results for the past quarter, in which a decrease amounting to 19.4 per cent. is revealed, compare unfavourably with those of the first quarter of 1931, and, as indicated in last week's *Economist* (page 38), the reports which came to hand in

May and June showed a decline in profits appreciably exceeding 20 per cent. It may, however, be recalled that during the course of the depression of 1921-22, the quarterly fall in net earnings, after an initial recession of 8.4 per cent., which compares with 6.4 per cent. in the third quarter of 1930, amounted in the three following quarters to 42.4, 52.9 and 43.4 per cent., so that the decline now disclosed is much less severe than that produced by the collapse of the inflationary post-Armistice boom:—

	1925.	1926.	1927.	1928.	1929.	1930.	1931.
First quarter	+ 9.1	+ 7.6	- 4.0	+ 15.2	+ 1.5	+ 1.9	- 10.6
Second quarter	+ 11.1	+ 8.3	- 5.7	+ 1.3	- 0.7	+ 8.6	- 19.4
Third quarter	+ 4.8	+ 2.8	+ 2.4	+ 9.7	- 3.0	- 6.4	...
Fourth quarter	+ 6.4	+ 3.8	+ 0.3	+ 3.1	+ 1.4	- 18.1	...
Year	+ 8.7	+ 6.3	- 3.0	+ 7.2	+ 0.0	- 0.6	...

During the past quarter all the groups into which we divide the list of industrial undertakings showed a setback in net earnings, with the exception of canals and docks, gas, and telegraph and telephone companies. The heaviest percentage decline was that recorded in the case of rubber companies, but there were large reductions in the earnings of textiles, oil, iron, coal and steel, and motor and cycle undertakings, while the miscellaneous group, embracing a wide range of enterprises, showed a fall of nearly 11 per cent.

Proceeding now, in accordance with our usual plan each summer, to review the results ascertained during the past twelve months as a whole, we give below a detailed analysis of the reports of the 2,053 companies which we have received:—

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, &c.).

Group.	No. of Companies.	Reports Published in		Increase.	Decrease.
		1930.	1931.		
Breweries	108	£ 18,438,918	£ 18,735,009	296,091	1.6
Canals	7	639,515	491,698	...	147,817
Electric lighting and power	44	7,062,558	7,522,723	460,165	6.5
Financial, land and investment	92	6,575,002	4,738,485	...	1,836,517
Hotels, restaurants, &c.	52	4,429,981	4,643,011	213,030	4.8
Iron, coal and steel	38	2,386,596	2,318,146	...	68,450
Motor and cycle	134	10,537,323	8,679,817	...	1,857,506
Nitrate	3	4,755,615	3,649,932	...	1,105,683
Oil	23	845,588	35,535	...	810,055
Rubber, &c.	340	19,094,588	15,714,914	...	3,379,674
Shipping	42	8,295,195	3,639,805	...	4,655,390
Shops and stores	69	10,431,966	9,729,182	...	1,655,390
Tea	106	3,067,527	2,201,084	...	702,784
Textiles, &c.	12	1,849,303	1,827,709	...	856,443
Tramways	59	11,519,631	4,914,069	...	21,594
Trust	125	1,610,641	1,629,666	19,025	1.2
Waterworks	193	14,844,563	14,201,478	...	643,085
Miscellaneous	635	1,189,703	1,180,762	...	8,941
Total	2,053	219,811,990	187,588,541	...	32,223,449

Of the four groups showing an increase in net profits, breweries displayed much smaller progress than a year ago, when the increase amounted to 3.9 per cent. The improvement of 6.5 per cent. in the electric lighting and power group compares with 5.2 per cent. last year, and the relative prosperity of gas undertakings is illustrated by the fact that the rise of £213,030 in net earnings compares with an increase of only £33,334 shown at this time last year. On the other hand, the rate of advance in the net earnings of tramways was reduced from 11.5 to 1.2 per cent. As regards the groups (and these are the great majority) in which a decrease in net profits is revealed, the fall of 53.7 per cent. in the case of textiles follows a decline of 30.5 per cent. a year ago, and the recession of 24.5 per cent. last year. A year ago the iron, coal and steel group, which now records a fall of 17.6 per cent., had an increase of 46.7 per cent. to its credit, and 41.5 per cent. has now been turned into a drop of 17.7 per cent. The enormous setback in the earnings of rubber companies follows a decline of only 2.2 per cent. last year. The fortunes of the large miscellaneous group are fairly

indicative of the general trend. Whereas in July, 1928, an expansion of 9.6 per cent. in net earnings was recorded, a year later this figure had fallen to 4.3 per cent., and the present decrease of 10.4 per cent. follows an increase of only 3.3 per cent. noted at this time last year.

In the next table we set out the distribution of profits in the past four quarters, together with the total for the year ended June 30th:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1930.				
Third quarter	£ 23,626,502	£ 14,830,457	62.8	4,469,225
Fourth quarter	32,174,677	20,766,299	64.5	6,564,790
1931.				
First quarter	67,736,226	42,043,943	62.1	14,731,666
Second quarter	64,051,136	37,090,515	57.9	17,512,738
Total	187,588,541	114,731,214	61.2	43,278,419

After a slight improvement in the first quarter of 1931 the proportion placed to reserve fell again during the past quarter to an unsatisfactorily low level. The percentage "put back into the business" during the past twelve months, 15.7 per cent., compares unfavourably with the figure of 18.6 per cent. ascertained for the twelve months ended June 30, 1930, and still more so with an average of fractionally over 20 per cent. in the two previous years. The apportionment of earnings of the individual groups during the past twelve months is set forth below:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
Breweries	£ 18,735,009	£ 12,226,464	65.2	2,297,125
Canals	491,698	211,928	43.1	244,577
Electric light and power	7,522,723	3,246,735	43.2	1,341,031
Financial land & investment	4,738,485	3,162,000	66.7	1,409,160
Gas	4,643,011	3,800,878	81.9	368,457
Hotels, restaurants, &c.	2,318,146	1,145,163	49.4	744,732
Iron, coal & steel	8,679,817	4,235,547	48.8	2,121,922
Motor and cycle	3,649,932	1,756,192	48.1	920,733
Nitrate	35,535	...	...	280,000
Oil	15,714,914	9,866,783	63.3	2,007,434
Rubber, &c.	936,010	785,674	83.9	27,710
Shipping	3,639,805	1,797,415	49.4	1,073,396
Shops and stores	9,729,182	5,423,520	55.8	2,503,711
Tea	2,201,084	1,594,757	72.5	271,873
Textiles, &c.	1,827,709	1,435,040	78.5	230,705
Tramways	4,914,069	5,130,192	104.4	242,423
Trust	1,629,666	836,647	51.5	4,018,157
Waterworks	14,201,478	7,836,794	55.2	270,257
Miscellaneous	1,180,762	761,089	64.5	20,725,922
Total	187,588,541	114,731,214	61.2	43,278,419

The least encouraging feature disclosed above is the fact that the textile group actually paid out in ordinary dividends, apart from distribution on the preference shares, 4.4 per cent. more than the net earnings. The amount allocated to reserve in the case of the financial, land and investment group has also fallen to a level open to criticism in a period of considerable economic strain, but breweries, electric light and power, iron, coal and steel, motor and cycle, oil, shipping companies and shops and stores still display conservative principles in the matter of distribution of earnings. We now come to the ratio to total ordinary and preference capital of net profits and of reserve allocations:—

	Total Ordinary and Preference Capital.	Net Profits.	Carried to Reserve, &c.
1930.			
Third quarter	£ 288,078,042	£ 23,626,502	8.2
Fourth quarter	392,547,450	32,174,677	8.2
1931.			
First quarter	756,871,719	67,736,226	8.9
Second quarter	745,477,186	64,051,136	8.6
Total	2,162,974,397	187,588,541	8.7

A year ago the ratio of net profits to capital was 10.6 per cent., and that of amounts reserved to capital 1.9 per cent. Two years ago, when the earnings ratio was 10.7 per

41 Leabury, London, E.C.2

cent., the ratio reserved was 2.1 per cent. Thus the progressive diminution in the earnings of capital has been paralleled by a decline in the proportion withheld from the proprietors.

Our next table summarises for each quarter since the beginning of 1928 the average rates of interest and dividend paid on debenture, preference and ordinary share capital.

AVERAGE RATES PAID

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1928.	1929.	1930.	1931.	1928.	1929.	1930.	1931.	1928.	1929.	1930.	1931.
1st quarter	4.78	4.89	4.89	4.82	5.3	5.4	5.8	5.6	11.3	10.9	10.0	8.5
2nd "	5.43	5.10	4.94	4.96	6.0	5.9	6.3	5.8	10.0	9.8	10.3	8.3
3rd "	4.90	4.88	5.36	...	5.4	6.0	5.0	...	10.7	10.3	8.3	...
4th "	5.04	5.29	5.19	...	4.9	4.7	4.5	...	10.3	10.6	8.4	...
Year ...	5.02	5.15	5.39	...	5.4	5.5	5.7	...	10.6	10.5	9.5	...

For the past twelve months the average rate of ordinary dividend works out at 8.4 per cent., as compared with 10.8 per cent. a year ago and 10.5 per cent. in the twelve months ended June 30, 1929. Details of the various groups are given in the final table:—

	Debiture Capital.	Rate of Int.	Preference Capital.	Rate of Int.	Ordinary Capital.	Rate of Div.	Rate of Div. % Year Ago.
Breweries	£ 54,080,883	4.8	£ 55,513,489	4.2	£ 73,749,408	16.6	16.4
Canals	2,815,903	4.8	6,054,310	4.0	8,670,846	2.4	4.3
Electric Lighting & Power	38,075,996	5.1	23,776,177	5.6	44,952,659	7.2	7.4
Financial Land and Investment	40,987,109	5.1	32,660,125	4.3	68,933,326	4.6	7.9
Gas	24,875,510	4.3	9,062,972	4.2	60,385,792	6.3	6.3
Hotels, Restaurants, &c.	6,281,927	5.0	13,296,389	5.6	11,148,765	10.3	10.9
Iron, Coal and Steel	55,104,401	5.3	75,750,311	2.8	143,229,424	3.0	3.9
Motor and Cycle	1,414,750	7.1	10,964,781	8.4	20,874,981	8.4	11.8
Nitrate	8,751,293	6.1	8,000,000	3.5	3,958,750	...	3.2
Oil	9,830,834	5.3	30,365,322	6.6	78,171,194	12.7	19.6
Rubber, &c.	4,210,329	6.6	964,645	2.9	62,960,970	1.2	6.8
Shipping	22,764,866	5.0	19,571,010	5.5	40,152,362	4.5	6.8
Shops and Stores	16,243,119	5.3	38,632,257	6.5	40,108,278	13.5	13.8
Tea	1,086,639	7.6	5,437,423	5.0	15,032,760	10.6	14.3
Textiles, &c.	855,319	6.1	4,498,054	5.1	16,515,672	8.7	9.3
Tramways	19,286,747	4.9	45,569,933	4.8	81,480,733	6.3	7.3
Trust	7,000,744	4.5	6,158,978	3.9	11,344,592	7.4	8.0
Waterworks	95,497,403	4.5	96,312,236	5.4	102,877,794	7.6	8.2
Miscellaneous	6,925,101	4.7	5,014,206	5.4	11,046,547	6.9	7.3
Total	506,583,458	5.0	795,948,391	5.4	1,367,036,006	8.4	10.3

As has been shown, the maintenance of the average rate of ordinary dividend, even at the somewhat reduced level now disclosed, has entailed an appreciable reduction in industry's reserve allocations. Investors would do well to bear in mind that in the absence of an early trade recovery this is a process which cannot prudently be long continued

POPULATION CHANGES.

THE preliminary report of the recent census contains figures which afford evidence of certain very significant changes in the growth and distribution of the population of England and Wales; for, in spite of their provisional character, experience has shown that they are not likely to be substantially changed in the final result. To those students of the report to whom it does not come as a surprise to learn that the areal density of this country, 685 persons per square mile, is the highest in any country, with the possible exception of Belgium, of which we have record, it may come as a relief to find that the percentage increase in the population does not exceed half of that in any preceding decennium, except that which included the war years. In spite of the fact that the marriage rate has been well maintained, the birth rate has fallen during the decennial period to 16.3 per cent., which is less than half the rate which obtained before 1890 and less than two-thirds of the pre-war rate. The birth rate in this country is now lower than that in any other except Sweden, and is definitely too low to maintain a stationary population in the future.

So far the decline has been partly balanced by the reduction of 10 per cent. in the death rate, which, when allowance is made for the increasing numbers and age of the population exposed to risk represents a reduction in crude mortality of something like 20 per cent. as compared with the period 1911-21 (exclusive of deaths on active service). The table below shows the numerical movement in recent decades and in each of the last ten years:—

BIRTHS, DEATHS, AND BALANCE OF MIGRATION SINCE 1871.
(In thousands.)

Period.	Births Registered.	Deaths Registered.	Excess of Births over Deaths.	Outward Balance of Migration.	Inter-annual Increase.
1871-1881	8,604	5,178	3,426	164	3,262
1881-1891	8,894	5,265	3,629	601	3,028
1891-1901	9,157	5,563	3,594	69	3,525
1901-1911	9,290	5,246	4,044	501	3,543
1911-1921	8,281	5,268	3,013	1,197*	1,816
1921-1931	6,930	4,692	2,238	177	2,061
1922 (2nd half) ...	414	221	193	34	...
1922	780	487	293	60	...
1923	758	445	313	99	...
1924	730	473	257	58	...
1925	711	475	236	49	...
1926	695	454	241	63	...
1927	654	485	169	53	...
1928	660	460	200	41	...
1929	644	532	112	43	...
1930	649	455	194	5	...
1931 (1st quarter) ..	160	162	- 2	- 3	...

* Includes the deaths of non-civilians of England and Wales which occurred abroad at the various theatres of war (estimated at 97,000).

Satisfactory as this improvement in the death rate is, it clearly cannot continue at the same rate, and the Registrar-General calculated recently that a current birth rate of about 19½ per thousand would be necessary to avoid a future decline in population. In the report the prospect of an actual decline in the population is spoken of with misgiving; we ourselves do not regard our record of population density as one which we desire to maintain unbroken. As long as the decline in the birth rate is due to deliberate regard for economic exigencies and not to any physical deterioration of the population, it represents an adjustment which we hold to be desirable.

The figures which relate to the comparative rates of growth in various districts bring out some striking tendencies. The most remarkable of these, to which we have had occasion to refer from time to time in the *Economist*, is the marked change in the comparative rates of increase in the South East, the North East and South Wales. Whereas the population of England and Wales as a whole increased by 5 per cent. in 1911-21 and by 5.4 per cent. in 1921-31, the corresponding figures for Greater London were 3.9 and 8.8 per cent. respectively, and for the South East as a whole 4.2 and 10.5 per cent.; whereas the rate of increase in Durham and Northumberland fell from 8.3 to 0.2 per cent. and that in South Wales from an increase of 13.3 per cent. to a decrease of 3.6 per cent. The other northern areas and the West Midlands showed increases below the average; while the rate of increase in East Anglia, though still below the average, rose from

1.8 to 3.3 per cent. In the extreme south-west there was an increase of 5 per cent., compared with a decrease of 1.2 in the preceding decennium. These changes are associated with the depression in the coalfields and in the northern industrial areas, and are due to migration. Many of the areas in which the rate of increase has fallen thus significantly have relatively high birth rates.

A further increase in the percentage of urban population is recorded, and only 20 per cent. is now rural, against 28 per cent. in 1891, 21.9 in 1911 and 20.7 in 1921. The recent increases in urbanisation, unlike those of the nineteenth century, which were largely due to the rural exodus to the towns, represent little more than the natural increase of the urban areas themselves. The line, however, between urban and rural population is becoming blurred, owing in part to the tendency of new industries to establish themselves in the country, and in part to the overflow of town population outside the administrative boundaries.

Further light is thrown on the distribution of the urban population by the table below:—

DISTRIBUTION OF TOWN POPULATION ACCORDING TO SIZE.

	No. of Districts.	Aggregate Population, 1931.	Aggregate Population of same Areas, 1921.	Mean % Increase or Decrease, 1921-31.
Over 1,000,000	2*	5,399,234	5,406,690	-0.1
500,000 and under 1,000,000	3	2,153,614	2,052,516	+4.0
250,000 "	8	2,513,765	2,527,965	+3.4
150,000 "	13	2,589,947	2,474,366	+4.7

* Administrative County of London here reckoned as one district.

From this it appears that one quarter of the population is contained in the thirteen largest towns, with populations exceeding a quarter of a million, and one half of the population in towns exceeding 50,000. It also shows that much larger rates of increase were recorded in towns of populations ranging from 15,000 to 100,000 than either above or below these limits. It is possible that this distribution, which follows a trend that had already appeared in previous censuses, reflects the determination with which small boroughs on the outskirts of large towns resist administrative absorption long after they have been economically merged into the larger units.

RUSSIA'S COSTS PROBLEM.

[The vital importance of reduced costs of production as a factor in the realisation of the Five-Year Plan has constantly been emphasised by the Soviet leaders. M. Stalin, in a recent speech to Soviet economists, is reported to have advocated, inter alia, the development of the principle of differential wages for skilled and unskilled workers, the creation of a new "productive technical intelligentsia," and the greater concentration of industrial authority in the hands of individual directors as necessary steps in the rationalisation of production. In the following article a correspondent deals with this problem of "cost reduction" from the financial standpoint.]

During the past two and a half years the Five-Year Plan programme has been carried out on the whole, though in the production of foodstuffs and of commodities for immediate consumption—two branches of production which have not been achieved. A particularly troublesome aspect, however, of the economic system of the Soviet Union is represented to-day by the problem of the costs of production, and especially the failure to carry out the planned lowering of these costs. The result has been discrepancies and difficulties in finance and in the circulation of money. The quantity of currency in circulation

has swollen enormously. According to the Five-Year Plan (i.e., for the years 1927/28 to 1932/33 inclusive) 1,250 million roubles were to have been issued. In fact, however, the quantity of currency in circulation increased last year alone from 2,642 million roubles to 4,264 million roubles, an increase of 1,622 million roubles, or in one year an amount over 25 per cent. greater than the estimated emission for five years.

The causes of the enormous emission of currency and its results are, in fact, little different from a typical budgetary inflation. Such a large emission was necessary because the State industries worked too expensively and failed to reduce their productive costs. A further cause was the fact that State and co-operative trading was not conducted according to the established plan for commodity distribution according to sorts and districts. The result of this was that very considerable quantities of commodities began to pile up in the warehouses, and that, despite the commodity shortage, it was impossible to dispose of these supplies, or at least, their disposal proceeded far too slowly. Further, the general policy governing capital investment in the building industry and in the industries creating the means of production considerably aggravated the crisis. The expenditure on wages, etc., increased without these sums returning to the State treasury.

In the special quarter October-December, 1930, an attempt was made to solve the difficulties from the monetary side, and a clearly defined policy of deflation was followed. During these three months the finance authorities actually succeeded in preventing all further emissions, but only by adopting draconic measures—the postponement of wage payments even in the factories; extreme efforts in the collection of subscriptions to State loans; and other drastic measures. The management of the State undertakings in trade and industry, however, remained wasteful, "bureaucratic" and extravagant. The credit reform of the beginning of 1930 granted all undertakings their credits from the State Bank according to the Plan irrespective of whether they fulfilled their productive programme. At the cost of excessive emissions and currency this reform caused a reduction of pressure on the industrial finances, but this relief was not of a healthy nature.

In the meantime the authorities realised that a radical shaking up of the State industries is necessary unless currency and finance difficulties are to cause the hindering of productive development. The results of production and the state of building operations in industry in the first quarter of 1931 openly revealed the crisis which had developed in the planning activities. Total industrial production during these three months reached only 75.3 per cent. of the Plan figures, while production in the most important branches of the heavy and engineering industries, including the industries supplying the means of production, reached only 65 per cent. to 70 per cent. of the Plan programme. At the same time the costs of production in many cases did not fall, but rose. Instead of forming a reserve fund as provided for by the "Uniform Finance Plan," totalling 500 million roubles for the quarter, the authorities were compelled to resume the emission of currency, which had been temporarily interrupted, to the extent of 150 million roubles.

However, during the last few months, and particularly during the last few weeks, efforts are being made to restore financial discipline in the State undertakings. In January of this year and on March 20th last supplementary provisions to last year's credit reform were issued. The credit reform, declared these supplementary provisions, had been misunderstood and wrongly applied. The present provisions reorganise the credit system into what is practically a new form of normal business accountancy. Credit is now granted only for definite contracted business operations in accordance with the carrying out of the Plan. Everything in the new provisions is based on the revived "Hosrastehot" (business accountancy) of the NEP and on the principle of "controlling the State undertakings with the rouble." By April 25th undertakings and industrial organisations had to conclude agreements between each other and thus

calculate exactly their further programme of production. The State Bank may grant credits and finance new operations only on this basis.

Nevertheless, the old bureaucratic methods of working have secured such a footing that the new policy is meeting with considerable passive resistance in industrial circles. In connection with the introduction of the new methods it was found that in certain undertakings planning existed only on paper and not in practice, and that in most cases the costs of production were not previously estimated at all. The fear of taking responsibility had also played a great rôle; managers and engineers had been apprehensive of unpleasantness in connection with wrongly calculated contracts, or feared even that they might be charged with "sabotage." Now, however, energetic measures are being taken in order to carry out the principle of business accountancy and secure a reduction of productive costs. The State Bank has been given the right to order a compulsory disposal of commodities in those undertakings, including State undertakings, which do not comply with the new provisions. In some cases this has already been done. Special courts of arbitration have been established for the settlement of all differences in the carrying out of contracts. Everything is to be subordinated to "finance discipline"; all branches of production down to the individual worker are to be "controlled with the rouble." The voices of those who protested a little while ago against business accountancy and against financial control, as they protested during the period of War Communism, have now become silent. The success of this policy will undoubtedly form one of the most important conditions for the carrying out of the Five-Year Plan without experiencing a crisis.

Notes of the Week.

A Week of Crisis Continued.—In a leading article we have reviewed the situation of Germany and Central Europe as matters stood three weeks after the first announcement of President Hoover's moratorium plan. The history of the past eventful week merits recounting in greater detail. Thanks to the rediscount credit of \$100 millions provided by the central banks of England, France and the United States, in conjunction with the B.I.S., the Reichsbank published, a week ago, a return, dated June 30th, showing a 40.1 per cent. cover in gold and foreign exchange for its notes, notwithstanding an increase of Rm. 616 millions in the circulation. But even at that date three-fourths of the rediscount credit appeared to have been drawn upon; and hopes which had been entertained, that after the end of the half-year the pressure on the Reichsbank for foreign exchange might be delayed, were unhappily not fulfilled. The demand for foreign currency continued; the meeting of the General Advisory Committee of the Reichsbank, called on Sunday last, was interpreted in Berlin as a reflection of the gravity of the position; and the Bourse repeated on Monday the weakness which it had displayed towards the end of the previous week. On that day foreign exchange withdrawals were reported to have exceeded £2 millions, and it became known that the Reichsbank was about to draw upon the old \$50 millions credit allocated to the Deutsche Golddiskontbank by an American banking consortium headed by the International Acceptance Bank. On Tuesday the Reichsbank was compelled to sell a further £3 millions in foreign currency, notwithstanding the conclusion of the Paris Accord. The difficulties of the North German Wool Combining Company, whose indebtedness to creditors was estimated at £12 millions, were giving rise to damaging rumours as to possible repercussions on at least one of the D. Banks, and withdrawals of foreign balances from Germany continued at a scarcely diminished rate. On Wednesday, when the Reichsbank's foreign exchange loss was estimated to amount to a further £2 millions, and Paris appeared to be a substantial seller of reichsmarks, a dramatic effort was made in Germany to restore confidence by mobilising a joint guarantee on the part of German banking and indus-

trial enterprises in favour of the Deutsche Golddiskontbank, and, following a voluntary offer to this effect from the leading German industrialists, an emergency presidential decree was issued providing that all undertakings whose capital exceeds £250,000 should be required jointly to guarantee £25 millions "in the case of a default in the credit operations to be undertaken by the Deutsche Golddiskontbank in the interests of the upholding of Germany's foreign credits." This measure, however, did not avail to arrest the continued weakness of the Berlin Bourse, and on Thursday, not only did security values decline further, but foreign currency withdrawals, despite a fractional recovery in the reichsmark and a better Reichsbank return, again amounted to £3 millions. Though there was reason to believe that Germany's British creditors were ready to follow any well-concerted lead in the matter of short-term credits, the attitude of creditors in France and the United States was less reassuring; and in these circumstances Dr. Luther on Thursday crossed to London, whence he proceeded to Paris. His visit, and the atmosphere of newspaper drama with which his movements and those of Mr. Montagu Norman (who saw Dr. Luther en route, himself, for Basle) were surrounded, gave rise to absurd rumours of an immediate credit of astronomical proportions in Germany's favour. Matters clearly could not be so rapidly settled; but, though the private creditors of Germany hold the ultimate key to the situation, it is reassuring that the heads of the various central banks should at least be in close contact.

The "Anomalies" Bill.—The Unemployment Insurance (No. 3) Bill, designed to deal with certain anomalies disclosed by the Report of the Royal Commission, was given a second reading in the House of Commons on Wednesday by 231 votes to 19. The minority consisted of Mosleyites and Left Wing Labour members, while the main body of the Conservatives and many Liberals abstained from voting. The provisions of the Bill were discussed in an article in our issue of June 27th, and neither Miss Bondfield's introductory speech nor the subsequent debate added much knowledge as to the range of effect which the passage of the Bill will produce. Miss Bondfield gave a "rough and ready" estimate of £5 millions as the likely total of savings, but declared that the principle was more important than the money involved, and the strong wording of a passage in her speech in which she dealt with the case of married women suggested that the Bill was not, as one Conservative member suggested, a "smoke-screen," but that the Minister means business. In fact, Miss Bondfield's speech was far more satisfactory in tone than that which she delivered a fortnight ago. Moreover, she succeeded in making out a strong case, on the grounds of the need for elasticity in dealing with a wide variety of cases, for the machinery of the Advisory Committee. The Conservatives found themselves somewhat divided in view, Major Elliott deeming the Bill "an experiment of a sweeping kind," while Major Stanley could not make up his mind whether it meant little or a great deal. But both, from different angles, were willing to give the Bill its second reading—a policy in which most of their colleagues silently acquiesced. Sir Donald Maclean gave a qualified Liberal blessing, and the only active hostility came from the New Party and the Labour back benches. Sir Oswald Mosley, making his *début* on the opposition side of the House, criticised the Government for putting people out of benefit instead of putting them into jobs; Mr. Buchanan regarded the Bill as a measure to starve the poor in order that the rich might escape heavier taxation; while Mr. Maxton, in moving the rejection of the Bill, seized an obvious opportunity to lecture the Cabinet on the meaning of Socialism. On the whole, we derive from the debate some confidence that Miss Bondfield means to use the powers accorded by the Bill to some purpose in removing "anomalies" in connection with casual and short-time workers, seasonal workers, intermittent workers and married women. If so, some tangible contribution will be made both to the cause of economy and sound finance and also to the cause of public morality.

East Greenland and Gran Chaco.—While the Pope, in an encyclical on which we comment elsewhere, is denouncing "the pagan worship of the State," the mania for territorial sovereignty, which is so widespread to-day, has been illustrated by two minor international disputes over the possession of territory. The two disputed territories in question lie far apart—East Greenland on the Arctic Circle, the Gran Chaco on the Tropic of Capricorn. The one is a rocky ice-bound coast, the other is a swampy plain in the heart of a continent. Yet, differ though they do in latitude, climate, soil and all the other elements of physical geography, the two regions have one feature—and this is a very pertinent feature—in common. They are both almost hopelessly unfit for human habitation. In East Greenland there is no permanent population at all, but only a floating population (in the literal sense) of whalers and fishermen who just manage to stand the rigours of the climate in the least inclement season. In West Greenland there was a settled population of Norsemen for a time in the Middle Ages; but even in West Greenland, which is a paradise compared to East Greenland, the climate was too much for humanity, and the settlers died out; and anyhow, to-day, West Greenland is not in dispute. As for the Gran Chaco, such settlers as exist are outnumbered by the soldiers whom the Paraguayan and Bolivian Governments maintain in this death-trap in order to ensure that the lion's share of the dying shall be done under their respective flags; and, in fact, these poor marooned soldiers are in considerably greater danger from the fevers that haunt these tropical swamps than from one another's rifles and machine-guns and bayonets. All the same, three years ago, there was an outbreak of fighting between the Paraguayan and Bolivian forces in this most undesirable residence; and it needed strenuous concurrent efforts on the part of the Council of the League of Nations and a Pan American Conference on Conciliation and Arbitration to prevent the "incident" from blossoming out into a full-dress war, which might conceivably have involved half South America before it was over. The war was prevented, but it passed the wit of the mediators to settle the territorial dispute. It still drags on, and the other day it was announced that, once again, the Governments at Asuncion and La Paz had broken off diplomatic relations with one another because of it. Almost at the same moment it was announced that five Norwegian skippers had hoisted their country's flag in East Greenland at Myggbukta ("Midge Bight"), and had taken possession of a considerable slice of coast in the name of His Majesty King Haakon VII. Of course there is no danger that Norway, who maintains that this coast is a no-man's-land, will find herself at war with Denmark, who claims it for her own. On occasions which make impetuous Scandinavians look forward gloomily to a lawsuit. All the same, this correctly conducted Dano-Norwegian controversy over the wilderness of East Greenland is disconcerting in its way. For, if our hyper-civilised Scandinavians squabble when a question of sovereignty is raised, what nation in the world can be expected to keep its head?

The Seventeenth Zionist Congress.—The Seventeenth Zionist Congress, which opened at Basle on Tuesday, June 30th, and is still in session, has so far been perhaps the most controversial and unhappy meeting of the kind since the foundation of the Zionist Movement. The recrudescence of the conflict between Jews and Arabs in Palestine two years ago, which created so sharp a division of opinion—cutting across all ordinary party allegiances—in this country on the question of British policy under the Mandate, has naturally produced a still greater upheaval in Jewry. At Basle, last week, these Jewish divergencies of view and clashes of feeling came into public light in the course of the Congress's deliberations. The text for the debate was given by Dr. Weismann's report on the work of the Zionist Executive (which was incorporated, in 1929, into an enlarged Jewish Agency in which the representatives of Zionism were reinforced by

those of the non-Zionist Jews, particularly the community in the United States). Dr. Weismann began by confirming his resignation of the chairmanship—a resignation which was first announced when "the Passfield White Paper" was published last October, and which was not withdrawn when "the MacDonald Letter" was published a few months later. It will be remembered that, whereas His Majesty's Government maintain that "the MacDonald Letter" is merely a clarification of the White Paper of 1930, which is an amplification of the White Paper of 1922, which is an interpretation of the Mandate, which embraces the Balfour Declaration, the Zionist Executive do not agree with this British thesis that all these documents are fully consistent with one another. The Zionist Executive have accepted the 1922 White Paper; they have rejected the 1930 White Paper as being inconsistent with its predecessor and with the Mandate and as making co-operation between themselves and the Mandatory Power impossible; and finally they have accepted Mr. MacDonald's letter as restoring the possibility of co-operation. It was Dr. Weismann's review and defence of the Zionist Executive's policy, *vis-à-vis* the British Government, which raised the storm last week at Basle. Dr. Weismann and his colleagues have indeed had a narrow and difficult path to follow—a path beset by threats and pitfalls on either flank. Having pinned their faith to a certain British interpretation of the British Mandate, they have had to be on guard lest this interpretation should be whittled away by its makers, and at the same time they have had to face an out-and-out hostility to the Mandate from two extremes: from the Arabs, who reject it because it involves a Jewish National Home in Palestine; and from the Zionist Revisionists, who reject it with almost equal hostility because it precludes the establishment in Palestine of a Jewish State. The ominous feature of the present Congress at Basle has been the strength of the Revisionists' attack on the official Zionist policy. This attack was opened on Thursday, July 2nd, by a fighting speech from the Revisionist leader, Mr. Jabotinsky; and a reply from a moderate spokesman, who likened the Zionist Revisionists to the German Hitlerites, produced an uproar which ended in a physical combat and in the suspension of the sitting. In the eyes of the Zionist Revisionists, "the MacDonald Letter" is no improvement on "the Passfield White Paper." They agree with His Majesty's Government that the two documents are all of a piece. On the other hand, the Palestine Arab Executive agree with Dr. Weismann in holding that "the Passfield White Paper" was a departure from, and "the MacDonald Letter" a reversion to, the White Paper of 1922, though their respective judgments on the three papers are naturally the exact inverse of Dr. Weismann's. Here is a pretty kettle of fish! Without undue harshness, a cold critic might lay some of the blame at the British Government's door. He might say, with some force, that, from 1917 to this day, Great Britain, in respect of Palestine, has pursued a policy of sheer opportunism which has first sown dissension between the Jews and the Arabs and has now set the Jews themselves by the ears. But it must be remembered that successive British Governments, no less than Dr. Weismann, have found their feet placed upon an exceedingly narrow and difficult path.

The Wheat Outlook.—At this time of the year the wheat markets are largely under the influence of crop reports from the principal growing areas. The season is, however, already far enough advanced to permit a tentative survey of the situation. According to Mr. G. Broomhall, the world's visible supply of wheat, including flour in terms of wheat, amounted to 490 million bushels at the beginning of June, 1931, as compared with 412 million bushels on the corresponding date in 1930 and 470 million bushels in 1929. Of the increase of 78 million bushels on last year, the United States alone accounts for over 64 million bushels. The low level of exports from that country reflects mainly the intervention of the Federal Farm Board through its subsidiary, the Grain Stabilisation Corporation, which, until June last,

kept prices about 25 per cent. above world parity. In addition to the large visible supply in the United States, the Farm Board is believed to hold well over 200 million bushels. Fears that the Board might try to market its holdings over a short period have been allayed by an announcement by the Federal Farm Board a week ago that it would limit its wheat sales to 5 million bushels a month for one year commencing on July 1st. The new crop in the United States has been estimated by Messrs. G. E. Bennet and Company at 880 million bushels, which shows an increase of roughly 30 million bushels on that of the last season. The Canadian crop, which amounted to 398 million bushels last year, has been damaged by continuous drought, and this year's yield has been estimated at about 200 million bushels only. In Argentina and Australia the acreage sown this year has been considerably reduced. The actual reduction has been estimated at about 15 per cent. in the former and at roughly 25 per cent. in the latter country. The supply of the cereal from Canada, Argentina and Australia will therefore probably be smaller than last year, but this is partly counterbalanced by the increased quantity available in the United States. A survey would, however, be incomplete without taking into consideration the situation in Russia and in the principal importing countries. The probable yield of the Russian crop is still unknown, and it will depend largely on weather conditions during the next two months. It appears, however, that crop conditions are still satisfactory, and the fact that considerable tonnage has already been chartered suggests that Russian authorities expect a large yield. Weather conditions in the principal European importing countries have recently been very favourable and the crops of Italy, France and Germany are expected to be considerably above those of last year, which will partly offset the smaller crops in Canada and in the Southern Hemisphere. Although it is as yet impossible to estimate accurately the probable world supply and demand during the new season, the outlook appears to be a little more encouraging provided that the Federal Farm Board adheres to its policy of limiting sales. Since the beginning of the year prices have been maintained at about 60 cents per bushel (No. 1 Manitoba, Winnipeg), but in the light of the international wheat situation a marked advance seems improbable in the near future.

Commodity Price Developments.—Movements adverse to holders of securities in the stock markets this week have been paralleled by a substantial setback in the prices of many of the leading commodities. In the following table we show a range of typical prices at the end of May, on the eve of the first announcement of the Hoover Plan, and at the end of the three following weeks:—

Date.	Wheat	Cotton	Tin	Copper	Rubber
	Liverpool futures "July" per 100 lbs.	American Midling "July" per lb.	"Standard Cash" per ton	"Standard Cash" per ton	"Smoked sheet" per lb.
May 29th.....	s. d. 4 3½	* d. 4-67	£ s. d. 100 13 9	£ s. d. 36 3 1½	d. 3½
June 19th.....	4 0½	4-62	104 11 3	33 10 7½	3
" 25th.....	4 2½	5-33	111 8 9	39 0 0	3½
July 3rd.....	4 0½	5-43	117 3 9	37 0 0	3½
" 9th.....	4 0½	5-03	113 1 3	34 0 7½	3½

It will be seen that wheat is now lower than when President Hoover issued his original proposal, and that the other commodities listed, although still higher than the level of June 19th, have lost a substantial part of their initial rise.

The Economic Situation in Germany.—The story told by the report of the *Institut für Konjunkturforschung*, discussed in the *Economist* a fortnight ago, and covering the situation in Germany up to the end of the first quarter, has now been brought more nearly up to date by a report on German economic conditions during the past half-year, just published by the Reichskredit-Gesellschaft. As the statistics and indices contained in this report are in many cases not on the same basis as those in the *Institut's* report they cannot be used to continue the series we published, but many of them are on sufficiently similar lines to show

how the trend has continued in the second quarter. Up to the middle of June, the downward trend of the unemployment figure was still continuing, and as this was by no means all due to improvement in the seasonal industries, it was regarded as betokening a slowing down in the progress of the depression. The index of production in May showed an increase which was not wholly due to seasonal influences; but as there is a time lag between the withdrawal of foreign capital and the appearance of its effect on industry, this improvement is not likely to be maintained. Railway goods traffic, which was falling in the new year, showed a sharp seasonal increase in March and a small decline in April. Foreign trade declined further in May; but as the fall in imports exceeded that in exports, the active balance was greater. Wholesale prices fell in May and again in June, but there was a fractional rise in the cost of living in May. The value of postal cheques used in April showed a more than seasonal increase. The events of the last few weeks have brought such rapid changes in the money market and stock exchange as to render otiose any reference to that section of the report; nor does space allow of any discussion of the very interesting collection of international statistics which the report includes. So far as the indices which reflect German trade and industry during the first five months of the year are concerned, the impression they leave is that before the present financial crisis the industrial situation was already very serious, but that the decline was apparently slackening.

New Government in Bulgaria.—Our Sofia correspondent writes:—Although a large increase of Agrarian, Democrat and Labour (Communist) votes was generally anticipated, M. Liapcheff's heavy defeat at the elections on June 21st was a surprise to everybody. The final returns were:—Government coalition (Sgovor and Right Wing Liberals) 78, M. Malinoff's coalition (Democrats, Agrarians, Left Wing Liberals and Radicals) 152, Labour (Communists) 31, other parties 13. A new Cabinet was formed on June 29th, with M. Malinoff as Prime Minister. Foreign Affairs, Finances and Home Office are entrusted to Democrats; Agriculture and Public Works to Agrarians; Justice and Trade and Industry to Liberals; Railways to a Radical; the War Office to a neutral Army officer. It is generally believed that the psychological effect of the change will be to allay, to a considerable extent, the bitterness and uneasy feeling the late Government had to face, especially in recent months, almost everywhere in the country. As to the actual measures to be undertaken and carried out by M. Malinoff and his friends for strengthening the position of the Treasury and bringing about even partial remedies to the economic difficulties, the task will no doubt be very arduous, requiring much determination, steadiness of purpose and, before anything else, an unrestrained support by a large majority in Parliament. There are apprehensions in some quarters lest the Agrarians, relying on their unexpected victory, might attempt to get rid of their allies and, after monopolising power to themselves, indulge in a policy of retaliation and extremist experiments. If examined impartially, the situation does not appear to give serious grounds for fears of this kind, at least not at this stage. The combined votes of the so-called moderate parties in Parliament will easily defeat any such attempt, even if the 82 Agrarians are to work in close touch with the 31 Communists. If the lesson is to bring any fruit to the parties of the Right, and if the moral advantages of the change are properly utilised in a spirit of willingness to co-operate and to sacrifice petty interests, the new Government may prove a reasonably good solution of Bulgaria's political troubles both at home and abroad.

American Cotton Crop.—On Wednesday last the Agricultural Department of the United States Government published an estimate of the area planted for cotton for the season 1931-32, the amount given being 41,491,000 acres. As the acreage for the previous season was 46,078,000 acres, the forecast represents a decline of 10 per cent. The statement, writes our Manchester correspondent, was about equal to expectations; but prices in

New York and Liverpool gave way slightly when the figures became known. The probable yield is very uncertain and will depend upon the weather in the belt during the next couple of months. It is anticipated that the production per acre will be adversely affected by the reduced sales of fertilisers, as it is understood that these have been nearly 30 per cent. less than a year ago. On the whole there does not seem to be much likelihood of higher values just at present, and future prices are dependent upon an increased consumption. It is too early at the moment for any reliable forecast of the growth to be published, but as things stand at present there is an indication of a crop of about 12,500,000 bales. As the carry-over at the end of this season will be about 9,000,000 bales, plentiful supplies of raw material for cotton spinners seem to be assured.

Cotton Trade Production Costs.—It is understood, writes our Manchester correspondent, that the Federation of Master Cotton Spinners' Association has recently had under consideration the question of production costs in the cotton industry. The District Associations have been asked to discuss the matter and make suggestions as to how overhead charges can be reduced. On Tuesday last there was a special meeting of the General Committee of the Masters' Federation in Manchester, when the replies were considered. It is reported that arising out of this question there was a discussion of hours and wages, and it was asserted by several employers that there was little probability of any material reduction in production costs without changes in hours and wages. Some difference of opinion was expressed with regard to future action, and it was decided to refer the matter to the Executive Committee. If the Federation ultimately decides to press a claim of this kind, it is probable that the support of other sections of the industry will be sought. It has recently been pointed out that with regard to the weaving branch in pre-war years the labour cost per loom per week or standard cloths was 6s. to 6s. 6d., and the sheds there worked 55½ hours per week. The cost to-day, however, is from 10s. to 10s. 6d. per loom per week, and the hours have been reduced to 48 per week. It is also contended that, in relation to the cost of living, list rates of wages are decidedly high, although it is admitted that the operatives during the last few years have suffered considerably as a result of the large amount of unemployment and short-time working. Should it be decided by the employers to make an application for a reduction in wages and an increase in working hours, it is doubtful whether there will be complete unity, and it may be taken for granted that a demand of this kind will be very thoroughly resisted by the trade unions.

Ready-Made Clothing.—Our Bradford correspondent writes:—Since the war mass production and distribution of clothing has grown rapidly. The necessity for more than one retail establishment seems to have been grasped even by the smallest of the firms now engaged in this business. Nearly every town tailor who is attempting to obtain middle and lower class custom operates a minimum of three or four shops and the big retail clothiers count their shops by the dozen and the score. During the last three years several middle-class men's shops, which previously undertook bespoke tailoring only, have opened various lines of ready-made suits and advertised them widely. A large proportion of the goods sold as made-to-measure are ready-made stock sizes, altered slightly at the factory to suit the individual purchaser. The system has spread even to remote country market towns, where small outfitters take measurements and send these to the clothing factory in Leeds or Manchester; the nearest stock size is altered as required and the farm hand receives his "made-to-measure" suit a week or two later. Even among the more well-to-do classes there is a growing demand for the ready-made, or partly ready-made, suit, as opposed to the purely made-to-measure article. Undoubtedly a very influential factor in bringing this about has been the knowledge that while cloths during the last six months

have been available at from 5 to 20 per cent. more than in pre-war days, suits are costing 80 per cent. more. The tailor's charges amount to 52s. 3d. for a suit which he would have made for 21s. 10½d. before the war, these figures being exclusive of cutting or overheads. The bespoke and semi-bespoke tailors seem unable to reduce their costs, whereas the mill owners of this country, as of France and Germany, have secured reductions of wages during the last three years at the cost of bitter strikes. True, conditions are not quite the same for the tailors as for the mills. Their trade, while it has its seasons, is more level than that of the mills. They cannot make many finished garments to stock, while a mill can produce both yarn and cloth to stock, with less risk of its going out of fashion or depreciating. There are, moreover, too many tailors for the trade available. They are not strongly united so as to be able to force acceptance of lower wages by a lockout if necessary. The result, therefore, is that the character of men's tailoring and to a great extent of women's also is altering, the tendency being definitely away from made-to-measure to the multiple shop.

Shipping Freight Index Number.—The market for whole-cargo tonnage was characterised by extreme weakness in June, following the relative stability of recent months; and our index number of freights, at 90.9, shows a decline, as compared with May, of 4.5 per cent. The latest figure, however, is still 3.2 per cent. above the level of a year ago. The following table summarises recent movements of the various group indices:—

AVERAGE 1898-1913=100.					
	Average, 1913.	June, 1930.	Apr., 1931.	May, 1931.	June, 1931.
European Waters	110.0	91.3	86.0	85.0	82.4
North America	113.1	85.2	95.0	96.6	89.6
South America	125.4	90.7	94.4	94.7	89.8
India	106.3	95.7	94.0	94.8	91.8
Far East and Pacific	117.4	74.6	91.4	96.0	93.0
Australia	127.9	90.8	103.3	104.1	98.8
Total	116.3	88.1	94.0	95.2	90.9

Outward coal freights generally continued to decline, and the volume of chartering for grain underwent a sharp contraction, as a result partly of nervousness regarding the Central European outlook and partly of uncertainty in respect to the quantity likely to be shipped this year from Russia. The North American grain rates are particularly depressed, and the Plate market also fell away. The announcement of the Hoover Plan did little to improve quotations. Individual changes recorded by the various sections of the index number are given below:—

AVERAGE 1898-1913=100.					
	Index Number	Inc. or Dec. Points.		Index Number	Inc. or Dec. Points.
Home Trade	71.8	- 3.0	South America—outwards	71.5	- 1.5
Bay—outwards	95.4	- 1.8	South America—homewards	108.1	- 8.3
Bay—homewards	82.3	...	India—outwards	90.9	- 1.0
Mediterranean—outwards	92.1	- 5.1	India—homewards	92.7	- 5.0
Mediterranean—homewards	81.1	- 2.6	Far East, &c.	93.0	- 3.0
North America	89.6	- 7.0	Australia	98.8	- 5.3

Expressed as a percentage of the average for 1913, the total figure of our index number for June works out at 78.1, compared with 81.8 in May and 75.7 a year ago.

Co-operative Trade Returns.—A correspondent writes:—Although the directors of the Co-operative Wholesale Society regard the lower prices for the various main commodities as the chief cause of the decrease of 11½ per cent. in the sales for the quarter which ended on April 11th, the continued depression in the industrial areas is also a contributory factor. The turnover for the thirteen weeks was £19,203,227, a decrease of £2,507,463, half of which occurred in the distributive departments associated with Lancashire and Yorkshire. From the C.W.S. works the supplies dropped by £1,262,524 to £5,892,262—a decrease of 17½ per cent. The society's

eight flour mills had an output of £1,543,597, a decrease of over 30 per cent., but there was an increase of 1 per cent. in the flour milled and of 10 per cent. in the offals, etc.—confirming the view of the directors as to the lower value and higher volume of some of the commodities with which they deal. While the home market has dropped there was a welcome advance in the export business, which rose by £37,148 to £350,621—all with co-operative organisations in other countries. The general depression is reflected in the return of the banking department, the deposits and withdrawals being £178,046,661, compared with £190,551,249 in the corresponding period of last year. No fewer than 8,762 branches of trade unions bank with the C.W.S. and these figures reflect the condition of their finances as well as the resources of the distributive co-operative societies. There are now 21,088 employees in the C.W.S. pensions and death benefits scheme, the amount standing to their credit being £582,010, while £1,787,587 has been credited to the 25,035 members of the society's employees' thrift fund. Land and buildings to the amount of £16,000 are being purchased at Manchester and a five acres sports ground is being provided in connection with the Huthwaite hosiery works. At the delegates' meetings to be held on July 18th and 25th annual donations totalling 3,355 guineas will be recommended by the directors and contributions of £1,000 to the Co-operative Party, £300 to the International Co-operative Alliance and 400 guineas to various co-operative convalescent funds.

Greek Finance.—Our Athens correspondent writes (on June 25th):—General satisfaction was felt here at the news of the war debts moratorium proposed by President Hoover. The news had a favourable reaction on the Stock Exchange. The effect, on the other hand, on the budgetary situation of the condition that reparation payments shall also be remitted, cannot be known before it is made clear whether German reparation instalments alone are meant, or reparation payments by all the ex-enemy countries. Though the attitude of the authorities is not yet officially known, it is intimated that Greece shall accept the proposal, provided the moratorium shall be extended also to certain financial obligations of the Greek State which are the legacy of the war. Otherwise, it is stated, the public Treasury would sustain a loss of 200 million drachmas, and the equilibrium of the Budget would be disturbed; an eventuality which is contrary to the aim of the American President's purpose of facilitating the financial recovery of Europe. A Bill has been laid before Parliament ratifying an agreement between the Government and the Bank of Greece concerning the commercialisation of a part or of the whole of the State debt in drachmas to the bank. The Bank of Greece is authorised to ask for Treasury bills, not bearing interest, of 3, 6, 9 and/or 12 months' date, to be issued and handed over to it, against this

debt. The bills shall be payable to order or to the bearer, shall be of a minimum amount of Drs. 50,000 each, and shall be renewable. By placing these bills abroad, the bank shall have the faculty of raising funds whenever required, chiefly through the Bank for International Settlements, and increasing its reserve in foreign exchange. The balance of the debt in question amounted on June 15th to Drs. 3,289 millions. Another Bill provides for the gradual sale by the Government of bonds of the unissued portion of the 5 per cent. 1914 loan of Frs. 500,000,000. This portion is represented by 329,852 bonds of 500 gold francs each, making a total nominal value of gold Frs. 164,926,000, or £6,500,000 in round figures. These bonds are listed also on the London Stock Exchange, and their present quotation is 80 per cent. of the nominal value. Though no limit is placed on the amount which may be thus sold, the larger part of these bonds is at present pledged as security for advances obtained by the Government against the Productive Works Loan. Some 75,000 bonds only remain free, representing, at present prices, a net value of about £1,150,000. The purpose of this measure is to withdraw from circulation an equivalent amount of bonds of internal loans of the 8 per cent. type and thus make a small economy in Government expenditure. So far as these bonds were disposed of abroad, their sale would actually constitute a conversion of internal into external loan, and would also increase temporarily the foreign exchange reserve of the issuing bank.

United States New Capital Issues.—Through the courtesy of the *Journal of Commerce* of New York, we are able to supplement our statistics of British capital issues during the preceding half-year with a comparative table for the United States:—

	1928.	1929.	1930.	1931.
	\$	\$	\$	\$
Foreign—				
Government	590,117,000	48,667,000	44,661,000	148,612,200
Corporate	573,973,482	194,148,347	336,510,000	126,150,000
Domestic—				
Municipal	564,438,935	465,792,051	505,099,283	750,728,400
Railroad	511,351,510	353,670,700	793,763,070	318,636,000
Public utility	1,435,790,941	759,340,090	1,348,309,922	1,170,309,100
Industrial	1,202,770,396	1,637,813,291	747,071,164	256,015,700
Others	802,116,638	1,379,279,682	351,707,238	72,855,000
Total	5,680,558,902	4,838,711,161	4,127,121,677	2,843,306,000

Striking features are the reduction in foreign "corporate" borrowing, and the further diminution in issues on account of domestic industrial undertakings.

Conditions in Japan.—Writing on June 11th our Tokyo correspondent says:—As the result of united opposition from officials of all the departments, the Government's scheme for the reduction of salaries was appreciably modified, and the rates of reduction, ranging from 3 per cent. to 20 per cent., were made applicable to annual salaries of over 1,200 yen instead of those over 600 yen. The change is effective as from June 1st. The saving to be made by these cuts amounts to only 6 million yen this year and 8 million yen in a full year, whereas the saving expected in the original plan was 20 million yen. The Government's attempt to reduce the prospective budgetary deficit has thus been largely unsuccessful. Meanwhile, it has become evident that national revenue will dwindle more rapidly than the Finance Minister anticipated. The current year's deficit, as far as can now be estimated, will amount to some 80 million yen. This year's income-tax returns have just revealed that the yield from this tax will fall by 20 million yen short of the original estimates. There also will be a deficiency of 20 millions in *sake* duty, and another 20 millions in Customs and Excise, while the receipts from State monopolies, the Post Office, and other Government enterprises will fall short of the estimated figures by nearly 20 millions. The "axe" committee will be appointed in a few weeks, but, as there are few cupboards left to raid, it must be a very difficult task for the committee to devise any effective programme for dealing with the prospective deficit. Commodity prices underwent a violent recession

last month. The wholesale index number for May of the Bank of Japan registered a drop of 2.5 per cent. on the month, reducing the total to 154.0, as against 157.9 in April. This is the largest monthly change since October last. The fall from January to April was only 1.8 per cent. Thirty-eight articles out of fifty-six participated in the decline. Timber, coal and textile goods recorded the most pronounced fall. The May trade returns are not disappointing, as far as exports in recent months are concerned. In comparison with the corresponding month of last year, exports fell by only 12,963,000 yen, or 11.2 per cent., while imports decreased by 27,686,000 yen, or 17.8 per cent. The percentage change in exports, as compared with May, 1930, is substantially lower than the corresponding percentages in the last few months, and not a few items in leading exports show an improvement upon last year. Exports of raw silk, rayon products, hats and caps, rice, and tea are considerably higher than last year, while cotton manufactures and silk piece-goods are lower. On the import side, however, no improvement has taken place. There is a general decline in all the principal imports, except raw wool and woollen and worsted yarns. The shrinkage is most conspicuous in iron and steel, machinery, and raw cotton. The spring cocoon crops are arriving at the markets. They are quoted at 2.70-2.80 yen per kamme, as against a mean of 4.06 yen a year ago and of 7.56 yen two years ago. The prices are more than disappointing. Agriculture is in a parlous state. The Government has decided to assist in carrying stock by means of low interest credits of 45 million yen, but not much can be expected from the measure, as it has proved ineffective on many previous occasions.

Government Scientists.—Although it is a commonplace that the well-being of modern civilisation depends largely upon science, and although the increasing range of Governmental activities brings the State ever more closely into contact with science in one or other of its manifold aspects, nevertheless, writes a correspondent, most people would probably be astonished by the volume and extent of scientific work actually carried on in the Departments. The principal centre of official scientific work is, of course, the Department of Scientific and Industrial Research (with which is associated the National Physical Laboratory), but extensive and important scientific activities are also carried on by the War Office, the Admiralty and the Air Ministry, as well as by the Meteorological Office, the Government Chemist, and the Geological Survey and Museum. To a considerable extent these branches of scientific work are a post-war development—though even before the war important investigations were carried out, particularly in the fighting services—and the conditions of employment in what has necessarily been a piecemeal growth vary considerably from branch to branch, are far from satisfactory, and have given rise to much criticism. Particular interest, therefore, attaches to the recent Report of the Committee on the Staffs of Government Scientific Establishments (H.M. Stationery Office. Price 9d. net), whose Chairman was Professor H. C. H. Carpenter, and whose members included, amongst others, the Government Chemist, the head of the D.S.I.R., and the Directors of Scientific Research in the Admiralty and the Air Ministry. This Committee found that, though some of the charges levied against the conditions of service in Government Scientific Establishments were not entirely founded, nevertheless, "it is open to question whether the State services are at present attracting a fair proportion of the best recruits. In any case . . . the present supply is neither so large nor so good as it might be if the conditions of employment were made more attractive." Apart from the general terms of remuneration, etc., the Committee found "the inadequacy of the prospects offered by the higher posts a serious obstacle." They truly observe that "it is essential that recruits to the State service should include a due proportion of the young men whose qualities already mark them out as potential leaders of the future. What matters in this respect is the ultimate reward open to exceptional merit." One of the principal difficulties with

which the State service has to meet is the competition of industrial firms in certain fields, and it is highly significant that during the last financial year, out of 35 junior chemists, all with from two to four years' service, no fewer than 21 resigned. The Carpenter Committee made fairly far-reaching recommendations for a regrading of scientific workers and for improving their conditions of employment. It is very much to be hoped that these changes, in so far as they do not impose a serious financial burden, will be carried out at the earliest moment possible. Difficult as are our present circumstances, it would be the height of shortsighted folly to continue a policy towards scientific workers which would starve the community of their best efforts.

(FROM OUR CORRESPONDENT.)

Debt Question — Budget — Foreign Loans — Treasury Operations — Money Market — Trade.

New York, June 29.

FINANCIAL markets have lost some of the stimulating effects of the Hoover debt plan, but hope of an agreement with France runs high and the plan retains much of its effectiveness as a confidence restorative. It is none the less realised that the immediate economic effects in this country will not be very great, and there is little tendency to blink the prospect of several more months of unsatisfactory trade. Still, sentiment throughout the country is on a definitely higher level, and retail trade here and there has already begun to feel mild effects of it.

No great difficulty is expected in securing approval by Congress of the debt suspension proposals, since among the more influential leaders of both parties there is a willingness to treat it as a non-political measure. Sharp disagreement in Congress may, however, arise over other measures which are likely to be washed up by the debt suspension wave. Already the Middle West and South are clamouring for the re-entry of the Farm Board into the commodity markets, and President Hoover has given the hint to the Board members, by asking them to state their policy. The Board has used up nearly all its original appropriation of \$500,000,000, and it could not give much market support without further Congressional sanction. It can at least stop selling, either in this or foreign markets, and that it will probably do at once.

Another proposal which is bound to come up in the next Congress and which will be difficult to sidetrack is the demand of ex-Service men's organisations for remission of interest on loans under the adjusted Compensation Act. That would, of course, make the loans of the past year, totalling around \$1,000,000,000, outright gifts and also would ensure a fresh rush to borrow. The greatest obstacle to further Congressional appropriations for soldiers' bonuses, Farm Board wheat and cotton purchases, and other money-spending schemes will be the prospect of a deficit for the fiscal year 1932 even larger than that for the year ending with this month.

A very small amount of the soldiers' loans counted in this year's expenditure, since the Veterans' Bureau, which paid out the money, had a Treasury book account to its credit of about \$850,000,000. The Treasury deficit for the current fiscal year will be made good by bond issues and it is fairly certain that borrowing will be resorted to in the coming year rather than increases in the income tax rates. It is improbable that in the next ten years the public debt will be reduced so rapidly as it was in the past ten. The rate, which was nearly \$1,000,000,000 a year, was met without much difficulty in prosperous years, but it is considered too high at present.

Most of the talk about credits for South American countries is exaggerated or inaccurate. Contrary to reports, the Federal Government is not contemplating

any action, nor have the Federal Reserve Banks been approached in the matter. They stand ready to aid if help is needed under proper conditions, but financial arrangements will continue to be made through private banks. The banks have for the past year provided numerous credits for South American borrowers. They are able to furnish all the accommodation which it is advisable to supply, but there is no tendency to take matters off a strictly business basis.

An Argentine dollar loan matures on October 1st and there have been some conversations with a view to its refunding. The difficulty is the date for the next elections, which take place after the loan maturity. Bankers here prefer to see a regular constitutional government elected before they float bonds, and if the election date be advanced about two months the issue may be brought out. There has been talk of a possible default by Chile on July 1st, but the banks may provide credits sufficient to carry over this interest date. It is understood here that Argentina has shipped gold to London to meet maturities there on July 1st.

Much satisfaction was felt over the successful sale last week by J. P. Morgan and Company of a loan for \$14,000,000, guaranteed by the Japanese Government, for use of the Taiwan Electric Company, operating in Formosa. The bonds were quickly taken and sold at a premium. The issue itself was not of first-rate importance, but it marked the first foreign financing in this country in a little over a year, save for Canadian borrowing and South American credits. The sale of the bonds had a good effect on the investment market, as indicating that confidence in foreign government obligations was not entirely gone. Japan was, of course, a good subject for the initial offering. Additional foreign issues are not expected in large volume at any early date.

Altogether, new financing last week amounted to \$175,000,000, the highest weekly total since early in April. For several preceding weeks offerings had been small or almost non-existent. Public utility borrowing accounted for the bulk of the offerings. Gilt-edged investment markets have suffered a slight setback, due to bank window dressing for the mid-year reports, expectation of slightly firmer money and the turning of attention to speculative markets. Investment demand will be stimulated this week by dividend and interest disbursements of approximately \$850,000,000 by corporations, banks, Federal and municipal agencies. The Treasury will sell a \$100,000,000 discount bill issue on July 1st, to retire two issues of the same aggregate amount.

Time money for the longer maturities is turning slightly firmer, a seasonal development. Call funds held at 1½ per cent. on the Stock Exchange throughout June, though loans were easily made in the "outside" market at from 1 to 1½ per cent. A firmer tone next week is in prospect. For a longer period any hardness in the money market is believed to be out of the question until a considerable improvement takes place in business. This week the Federal Reserve system appeared as a buyer of Government bonds, adding \$20,000,000 to its portfolio. This was the first week since August of last year that the Reserve has used this arm of its credit-regulating power. Its Government bond holdings have remained stationary at around \$600,000,000, though it has bought bills from time to time and steadily forced down the bill market, finally cutting the discount rate. The new move in the Government bond market is probably not the forerunner of a further cut in the discount rate, but it is designed to maintain cheap money, help gilt-edged bonds and force down interest rates throughout the country, as well as provide assistance to other central banks which wish to cut discount rates or to stop gold exports. Incidentally, of course, support to the bond market will facilitate the heavy Treasury refunding and new borrowing operations of the next few months.

This week's Federal Reserve system statement shows, as part of the increase in credit outstanding of \$47,000,000, advances on gold for foreign account of \$16,000,000. This item covers gold in transit from Germany. At the beginning of this week, in contrast

to the recent heavy releases, the New York bank reported an addition to stock of earmarked gold of \$9,000,000. The net gain in gold for June was in excess of \$150,000,000. Actual shipments included \$26,000,000 from Germany, \$7,000,000 from Canada and \$4,000,000 from China.

Changes in trade conditions have been uninspiring, except for a spurt in commodity prices. Most of the metals have risen along with farm products, but some of the buying has been of a speculative nature. The rapid rise in copper from 7½ to 9 cents a pound in about a week was faster than most of the trade desired, and it is hoped that the market will turn more stable.

Operations of the steel mills have receded further, to around 36 per cent. of capacity, and railroad car loadings have dropped slightly. Railroad earnings for May ran about 34 per cent. under a year ago in net and over 20 per cent. less in gross earnings. The matter of a freight rate increase is now in the hands of the Interstate Commerce Commission. Approval is more than likely, but even with expedition it is scarcely probable that new schedules could take effect before September or October.

FRANCE.

Acceptance of Hoover Offer — French Attitude — Question of Smaller Powers — Prorogation.

(FROM OUR CORRESPONDENT.)

PARIS, July 8.

FRANCE has accepted the Hoover moratorium offer, not only without enthusiasm, but with a dull resignation and gloomy forebodings that Mr Hoover's effort to bring prosperity back to the United States and Europe is foredoomed to prove inadequate. The attitude of M. Pierre Laval, the French Premier, when he read out the terms of the settlement on Monday night was that of a man who has been forced to choose between two almost equally disastrous alternatives, and this attitude has so far been reflected by French opinion as a whole. For the French, Germany and not the United States holds the key to the whole situation. It was to this that M. Laval alluded in his declaration after agreement had been reached: "This decision," he very soberly stated, "involves a heavy sacrifice for our country. If the new accord brings about a rebirth of confidence throughout the world, our *geste* will not have been in vain, and if Germany realises the extent and meaning of our benevolent attitude a new era lies before our two peoples." From the French point of view everything depends upon whether Germany will realise that, if she is prepared effectively to muzzle her Hitlerites and co-operate sincerely with France for the common good, this country is more than prepared to meet her half-way. More than one French newspaper has been quick to see that, with the signing of the Hoover agreement, Germany stands once more at the parting of the ways. M. Briand has invited Dr. Brüning and M. Curtius to come to Paris for a conference on the question of Franco-German relations, and it is evident to the most superficial observer that such a conference is the one imperative necessity of the moment, not only in regard to the Hoover agreement and all that it involves, but to the whole future of Europe. With France and Germany in sincere accord, the question of European disarmament would be capable of solution; without these two nations in agreement, no effective solution is possible.

In the French financial and industrial world scepticism is general as to the adequacy of the Hoover plan to meet the case. The real dominant factor in the German situation, it is argued, is not the inability of the country to find the money to meet Young Plan obligations, but the entire lack of confidence, both of German capitalists in their own country and of all other countries in Germany. The French view may be summarised as follows:—When a similar situation prevailed here, France resolutely sacrificed four-fifths of the nation's accumulated capital and imposed a mass of additional taxation in order to restore

financial stability, leaving everything else to wait for better times. Germany, on the contrary, has relied on foreign aid for the restoration of the mark, and, while carefully limiting the amount of additional taxation necessary, squandered recklessly on enormous and unnecessary public works, artificial expansion of trade and clandestine or other illegal forms of military and naval armament, money that should have been devoted to reparation payments, and all this, it is alleged here, with the deliberate aim of bringing about a situation in face of which a demand for a moratorium might be regarded as justified by the book figures.

The difference between the two policies appears to the French eye to be so enormous that, even now the Franco-American agreement has been signed, the average Frenchman still fails to understand why Mr Hoover's offer in its original form was not indignantly rejected. The only satisfaction felt here in regard to the partial agreement so far reached is that the French Ministers succeeded in securing the incorporation of safeguarding clauses ensuring (at least on paper) the continuity of the Young Plan, and recognising that, when Germany, at the end of next June applies for a Young Plan moratorium (as it is universally agreed here she will do), France shall not be compelled to pay down in a lump the \$440,000,000 representing her share in the guarantee fund to be constituted in such an event.

Mr Hoover's insistence that reparation payments in kind shall also be suspended, simultaneously with cash payments, proved one of the greatest obstacles to agreement and more than once brought the whole negotiations to within an inch of fiasco. Neither French industry nor the French political leaders have ever accepted reparations payment in kind except as a *pis aller*, and both France and Germany welcomed the inclusion in the Hague agreement of the clause stipulating that this form of payment shall come to an end within ten years. So far, payments in kind have to some extent artificially swollen German exports to this country, but a substantial portion of the merchandise at present entering in this form will undoubtedly in any case continue to come in, and certainly that taking the form of coal. The practical difficulty in the way of satisfying Mr Hoover's demands on this point lies in the fact that a large proportion of the 700,000,000 francs of this year's reparation payments in kind is to be utilised in regard to running contracts in connection with the execution of the Tardieu plan for the development of the country's economic plant. This plan, which the French, relying on the apparent inviolability of the Young Plan, assumed they might now carry out in part with the aid of reparation payments in kind, involves extensive port, electrical and other public works, for which large supplies of machinery and other products are required, and deliveries of which have been arranged for several months ahead. Obviously, the problem of overcoming the difficulty is merely one of detail, and its solution will deprive German industry, in some directions, of the curiously privileged position it has enjoyed, as regards British and other exporters, in connection with reparation payments in kind, while it should also benefit French production.

No serious difficulty is expected to arise in connection with the clause providing for some kind of loan arrangement by the central banks for the benefit of the smaller European countries which will suffer directly by the proposed suspension of inter-Governmental payments. The spectre of Mr Snowden and his so-called intransigence at the Hague Conference has already been recalled in regard to any attempt that may be made again to utilise "the British milch cow" at the proposed further international conference in London—both in connection with the question of helping the weaker countries and with that of relieving the French to some extent from their guarantee fund obligation. In responsible quarters here, however, there is every confidence that (as the negotiations with Mr Hoover have shown) even apparently insuperable obstacles can be overcome, given the necessary patience and tact.

The Chambers were prorogued with almost dramatic suddenness shortly after two o'clock on Saturday morning,

and will not meet again, according to present arrangements, until the end of October or the beginning of November. This step was not altogether unexpected, although it had not been anticipated that Ministers would actually prorogue until the end of the current week, in accordance with the unwritten rule to release politicians immediately before the annual July 14th national fête. M. Laval's hand was forced, however. Deputies were clamouring for the House to be kept sitting until at least the conclusion of "Mr Hoover's poker party with France," as *boursiers* have been dubbing the Franco-American negotiations, was over. The temper of the Chamber, nevertheless, was such that to accord such a request threatened to bring about a general upheaval, of which a new Ministerial crisis would almost certainly be a feature, with all likelihood of ratification of any agreement that might be come to by the negotiators rendered impossible. In these circumstances, M. Laval, within a couple of hours after Mr Hoover's telephoned acceptance of the agreement came to shortly before midnight on Saturday on the five principal points at issue, and after a remarkable scene, in which M. Franklin besought him not to do so, suddenly drew from his pocket the already signed Presidential decree proroguing the House and formally read it to the excited Deputies. This has left unsettled the Renten conversion plan, the Government Bill for raising railway passenger fares to wipe out the deficit on the lines, the still more urgent measures necessary to reorganise the Compagnie Générale Transatlantique and several other pressing measures on which it had been hoped decisions would be come to before the holidays. So far as the Hoover moratorium is concerned, probably no great difficulty will result. Mr Hoover may possibly have to call a special session of his Senate to ratify the Franco-American agreement, if this becomes necessary before the normal reassembly of the United States Upper House in November, in which case M. Laval has pledged himself to take a similar course.

GERMANY.

Hoover Agreement — Condition of Reichsbank — Wollkammerei Failure — Government Appeal to Public — Effects of Agreement.

(FROM OUR CORRESPONDENT.)

July 7.

At 10.30 on the night of Monday, July 6, the Government received the news that agreement had been reached in Paris. This announcement had been hourly awaited by the whole country, and the point had been reached at which a further delay might have brought incalculable disaster to Germany. The effects of the credit crisis which began in Vienna had long ceased to be confined, however, to Germany and Central Europe; symptoms were already appearing which gave London and New York some inkling of what they too might suffer if the collapse of Germany was not staved off.

The preceding days had kept those responsible for the negotiations in the utmost state of tension. For the fourth or fifth time within three weeks they were gazing directly into the abyss, but this time proved to be the last. The Reichsbank had survived the end of June with the aid of the rediscount credit of the three foreign central banks and the B.I.S., but the return for the end of June showed that the bank had been obliged to draw upon three-quarters of this credit in order to maintain the 40 per cent. cover, and, contrary to all hopes, the drain of foreign bills did not come to an end with the turn of the month, but continued undiminished.

The most disturbing circumstance in this connection was the fact that the demand for exchange came to an increasing extent, not from foreign credit withdrawals, but from within the country. In various parts of the Reich a tendency to hoard notes, or even foreign means of payment, was steadily spreading. An irresponsible Press propaganda of political origin intensified this lack

of confidence by depicting the situation in most pessimistic terms, and its first result was probably to involve several of the savings banks in difficulties. The effect on the Reichsbank appeared not only in the continuance of the demand for foreign exchange, but especially in the complete absence of the customary return flow of bills after the turn of the month. This return flow had been counted on when the maturity of the 100 million dollar rediscount credit was fixed for July 16th.

As the Reichsbank has been restricting credit for more than a fortnight, this failure of bills to return is not surprising, for as nobody can any longer count upon being able to fall back upon the Reichsbank as a last reserve, banks and industrial firms are endeavouring to procure themselves the greatest possible reserves of cash before they reduce their bill obligations at the Reichsbank. The position of the Reichsbank was in consequence growing daily more precarious. Another rise in the rate of discount would have been pointless, and the bank therefore had to consider whether more severe measures of restriction would not have to be introduced, but the difficulty here was that credit restriction might bring about most serious failures. The analogy with the Stinnes crisis of 1925 was close, but the present situation differed in three essential points: first, in 1925 there were Budget surpluses well over a milliard, whereas public finance at present is in a state of the greatest embarrassment. The latest emergency decree still leaves a deficit in the budgets of states and communes. Any measure of credit restriction must have regard to the possibility that many of the communes may thereby be deprived of their last source of credit, and so rendered unable to continue the payment of relief to the unemployed. Many have already had to cut down their payments, with consequent displays of violence by the Communists. In the second place, the Reichsbank in 1925 was in a strong position, and stood ready to come to the rescue. Without such intervention the peaceful liquidation of the Stinnes crisis would have been impossible. In 1931, on the other hand, the Reichsbank was at the end of its resources and unable to grant further credit. Lastly, in 1925 Germany had no short-term foreign debt worth mentioning; only just over a year had elapsed since the stabilisation of the mark, and foreign confidence in Germany was only just beginning to revive. Now, on the other hand, short-term debt, from a fetter hampering Germany's economic freedom, has become a noose round her neck which is threatening to strangle her.

This question of further credit restriction confronted the Reichsbank at the end of last week. On Friday the situation was rendered more acute by the failure of the largest textile concern, the Norddeutsche Wollkammerei Bremen, and a new wave of uneasiness broke over Germany when a bank in the west was known to be in difficulties. The lack of liquidity of the Norddeutsche Wollkammerei had long been known, but only after a complicated inquiry did the fact emerge that with a share capital of 75 millions and open reserves of 22½ millions the debts amounted to 240 millions, while the assets, including all the offspring companies, amounted at most to 140 millions. That meant a loss of practically 200 millions, or, in addition to the loss of the share capital and reserves, the failure to meet nearly half the credits. How these immense losses arose is not yet clear, but it seems that heavy speculation by the directors is responsible, which, as it was carried on through a Dutch subsidiary with overseas connections, did not come to the knowledge of the supervisory council.

The chief victims of these losses are several German and foreign banks, and the failures therefore constituted a fresh and dangerous source of disquietude. As the Paris negotiations were still going on in the meantime, the Reichsbank had to provide for all contingencies. A meeting of the General Council was called for Sunday evening, and the fact of this meeting, which was, of course, to be kept from the public, was blazoned forth in all the Sunday morning papers and produced the greatest sensation. Contrary to expectation, however, the General Council made no definite decisions, and in particular they refrained from exercising their legal right of empowering the directors of the bank to reduce the 40 per cent

minimum cover for the note circulation. On Monday, therefore, the news from Paris was eagerly awaited. It was known that President Hoover had cut short his week-end and returned to Washington, and during the day the decision was made.

The Government of the Reich celebrated the Paris agreement by a solemn appeal to the public. The exhortation referred to the far-sighted and statesmanlike initiative of President Hoover, to the profound relief and the hope of economic recovery. Above all, it solemnly emphasised once more that "the whole of the relief which the Hoover Plan will bring to Germany will be used without reservation for the consolidation of the public finances. The consequent relief to the money and credit market is bound to benefit the German economy." In order to forestall any political pressure, the Government has already announced that "the raising of any payments made by the Reich in any direction whatsoever during the postponement year is impossible. The Chancellor has given the American Government unequivocal assurances on this point.

The Stock Exchange, which had again relapsed badly during the preceding days, showed a decided recovery on Tuesday under the influence of the news from Paris, but the more urgently needed effect on the foreign exchange market was not forthcoming. Even on Tuesday the Reichsbank had to part with almost 50 million marks. This is having a very depressing effect on economic conditions. The Paris agreement is a first step of immense importance, but rapid and decisive steps must follow if the situation in Germany is to be saved. It will not be easy to make good the delay caused during the last two weeks by the incomprehensible resistance of France.

HUNGARY.

General Elections — Public Finance — Credit and Foreign Loans — Banking Position.

(FROM OUR CORRESPONDENT.)

BUDAPEST, July 6.

THE general elections, which were held on June 28th and 29th, brought an overwhelming victory to the Government. Out of 245 seats more than 160 were secured by the Party of Count Bethlen and 33 by the Christian Economic Party, which is supporting the Government. The Social Democrats obtained 14 seats, the Independent Farmers 10, and the Liberals 9; the rest are distributed between independent members belonging to no party. The strength of the parties in the new House of Deputies is practically the same as it was in the previous Parliament. It is well for the country that Count Bethlen has been returned to power with a safe working majority, because whatever the critics may say of his ten years' administration, the present time is certainly not the moment for new political experiments in Hungary. The economic depression and the financial crisis so conspicuous in Hungary require a stable Government, and Count Bethlen has proved more than once in the past that he can act with courage and foresight. The dissolution of the old Parliament six months before its term expired was fully justified, because the heavy sacrifices which must be asked from the new Parliament would not have been voted from members whose main preoccupation was how to secure re-election.

With the new Parliament, which is summoned for July 20th, Count Bethlen must settle down to business. Urgent financial and economic problems await solution. The Austrian Creditanstalt affair and the German reparation crisis have considerably aggravated the economic crisis, which has manifested itself chiefly in the withdrawals of foreign short-term credits. Hungary, as a borrowing country, was naturally affected by the sudden withdrawal of foreign funds, and the National Bank was compelled to raise its discount rate on June 15th from 5½ per cent. to 7 per cent. Thanks to the wholehearted co-operation between the Bank for International Settlements and the Hungarian National Bank, the most

important central banks have successfully assisted Hungary in the present crisis, and there is every reason to believe that they will give similar assistance in the future if necessary.

The official announcement that a syndicate formed by the most important Hungarian banks will take over £5 millions Treasury bonds, of which the placement of £4 millions is already secured abroad, and the £1 million will be distributed among the banks themselves, has favourably impressed the market, and will go a long way to improve the precarious situation of the Treasury. The bonds will be issued for a period of eighteen months. The proceeds will be used, according to a statement of Dr. Popovics, the President of the National Bank, whose international prestige is the greatest asset of Hungarian credit abroad, to meet the current expenditure of the Treasury.

The most urgent business of Parliament will be to safeguard the equilibrium of the Budget. In common with those of the rest of the world, Hungary's revenue returns are at present not sufficient to meet the current expenditure of the State. Certain taxes which have been reduced since 1924, when the League of Nations reconstruction scheme began to operate, must be increased, and retrenchment in the civil services, the pay of which has twice been increased since 1924, must also be effected. The sooner this painful and unpopular legislation is passed the better, because it is absolutely necessary. The last report of the Finance Minister shows that the total revenue for the first ten months of the financial year amounts to 698.7 million pengő only, as against 755.8 million pengő in the corresponding months of 1929-30. Expenditure amounted in the same period to 780.8 million, as against 802.7 million, so that there is a deficiency of 87.7 million pengő. In view of the receipts of the Treasury in May and June and of the loan operation referred to above, the budgetary deficit will probably be covered and leave a margin to be carried forward to the new financial year, which began on July 1st.

The Hoover Note does not affect to any appreciable extent the finances of Hungary, as reparation payments totalling 9.9 million pengő and relief credit repayments to the United States of 400,000 pengő amount to little more than 1 per cent. of the total expenditure. Nevertheless, the psychological effect of the Hoover Note was very wholesome, and it came at the moment when moral support was most needed.

What Hungary wants is a long-term loan, which was promised at The Hague in January, 1930, but was postponed owing to the unfavourable conditions prevailing on the world markets. In the absence of long-term loans, both the State and private enterprises of Hungary borrowed on short term, and the evil effects of the uncertainty of these credits could only be discontinued by their consolidation into long-term loans. It is hoped here that Hungary will be assisted by the creditor nations to raise a long-term State Loan of £10-15 millions, with which to consolidate the £3,200,000 Treasury bills due in November, 1931, and the £5,000,000 Treasury bonds which will be issued now, together with some other minor debts. It should be remembered that Hungary has not issued any long-term loan since the League of Nations Reconstruction Loan, raised in 1924, amounting to £10,000,000 (250 million gold kronen). On the other hand, the Treasury has been able to pay off more than 300 million pengő (£11 million) of the National Debt since 1925.

Banking half-yearly balance sheets are expected in the second half of July, and are awaited with great interest. According to the last report of the Commercial Bank of Pest, the total short-term credit commitments of the eleven foremost financial institutions amounted to 353 million pengő (£12,500,000) on December 31, 1930. But since the collapse of the Austrian Creditanstalt a considerable portion of these credits was withdrawn and actually repaid. The withdrawals of foreign short-term loans have mostly affected the Hungarian General Creditbank. This institution, being the banker of a great number of industrial undertakings, had resorted to a considerable extent to acceptance credits. It would be, however, a great mistake to compare the industrial interests

f the Hungarian General Creditbank with those of the Austrian Creditanstalt, because a great many of the Hungarian undertakings are profitable concerns enjoying a protected domestic market. On the other hand, there is little doubt that the credit crisis will contribute in the end to the weeding out of inefficient industries artificially maintained by foreign credits and high tariffs, and inflicting an unnecessary burden on the agricultural population.

FINLAND.

Money Market — Prices — Foreign Trade — Public Finance.

(FROM OUR CORRESPONDENT.)

HELSINGFORS, June 19.

THE money market was quiet throughout the spring. Whereas the demand for credit is usually large at this time of year, the general depression has this year caused the credits granted by the banks to fall off month by month. The credits of the joint-stock banks were reduced between March and May from 9,248 to 9,120 million marks. It is true that their deposits also fell from 7,806 to 7,778 million marks, but the position of the joint-stock banks was somewhat easier, a fact that is also indicated by the smaller amount of bills re-discounted at the Bank of Finland.

The total credits of the Bank of Finland also decreased during January-April, but grew again in May by 42 million marks to 798 millions at the end of May, compared with 903 millions last year and 1,515 millions two years ago. The bank's balances with its foreign correspondents changed little, but the tendency is downward, and this term has dropped gradually from 813 million marks at the end of last year to 676 millions on June 15th. The note circulation is also reduced, as is usual in times of depression, and amounted to 1,257 millions at the end of May, compared with 1,392 millions in May, 1930, and 1,576 millions on the same date in 1928, when the boom reached its height. The note reserve has likewise tended slightly downwards. In May it sank by 52.4 million marks, only to rise again by 1.8 millions to 677.1 millions on June 15th. The ordinary cover for the note issue thus constituted 82.2 per cent. of all liabilities payable on demand on the last day of May in comparison with 80.3 per cent. in 1930, but only 51.6 per cent. in 1929, when the financial crisis was at its worst.

Although the money market has, consequently, not grown easier, rates of interest have displayed a downward tendency. It deserves special mention that all the private financial institutions have concluded an agreement to lower their rates on deposits to 5½ per cent.-6 per cent. on actual deposits and 8½ per cent.-4 per cent. on current accounts. At the same time, rates on credits will also drop. The Post Office Savings Bank has also decided to lower its rate from 6 per cent. to 5½ per cent. from July 1st.

Prices are still falling. The wholesale price index dropped one point in May to 84, and was 18.4 per cent. lower than in the summer of 1928. It is significant that the cost-of-living index, which is based on retail prices, has also fallen 14.1 per cent. since May, 1928. The drop in May this year was 18 points to 1,087.

Foreign trade bears distinct traces of the depression. For January-May the total trade amounted to no more than 2,555 million marks, as against 3,560 millions for the same months in 1930 and 4,271 millions in 1929. The reduction is due, to a considerable extent, to the fall in prices, but the quantities of goods have also decreased appreciably, especially in the case of imports. An important change should also be noted in that, while the balance of trade for these months in 1929 and 1930 showed a considerable surplus of imports of 1,164 and 265 million marks respectively, the value of exports this year has so far proved 29 millions larger than the value of imports. The unusually favourable balance of trade is due, to a great extent, to the exceptionally heavy imports at the end of last year occasioned by higher rates of duty.

It was only in May that imports of sugar, coffee, wheat, rye and tobacco again began to approach the normal quantities.

The Government accounts for 1930 have now been completed. According to these the total revenue amounted to 4,398 million marks, compared with 4,342 millions in 1929. While the increase in revenue was thus very slight, expenditure grew from 4,508 millions in 1929 to 4,739 millions last year. Expenditure consequently exceeded total revenue by 341 million marks, the deficit being covered by funds saved during better years. As in all previous years, however, the amount of ordinary revenue, 4,275 million marks, considerably exceeded the ordinary expenditure, 3,834 millions. The result for 1930 was appreciably worse than for the preceding years, and this was mainly due to the fact that the yield from most of the important sources of revenue fell short of the estimated sums on account of the general depression. This adverse tendency has continued during the present year, and has forced the Minister of Finance to take special steps to reduce Government expenditure. A special commission has worked out proposals for cutting down the expenditure of the State for 1932 very considerably. It is hoped that, by these measures, the balance of the State finances will be re-established.

CANADA.

Crop Conditions — Business — Foreign Trade — Budget Debate — Hoover Plan — Prices.

(FROM OUR CORRESPONDENT.)

OTTAWA, June 23.

THE latest crop survey published by the Bureau of Statistics under date of June 19th gives a very gloomy account of the situation in the prairie provinces. It declares that a progressive deterioration as the result of drought, high winds and insect plagues has reduced the western wheat crop to a very low level of condition. Ten days ago there were general rains in the prairie country, but while they were heavy enough in the more northerly areas to bring great benefit to the crops, they were insufficient to give any real relief to the drought-stricken areas in the south, where something well below an average crop is the best that can be hoped for now, while the problem of securing feed for livestock is becoming serious. In the more northerly areas of the prairies, however, there is the promise of at least an average crop, and conditions in the eastern provinces have been very favourable for the farmers, with good yields almost assured.

The May exports of Canadian wheat were practically double those of May, 1930, but the export demand slackened off in June, and the heavy American crop of winter wheat keeps prices from rising appreciably. On June 12th the stocks of Canadian wheat in store were placed at 125,744,678 bushels, which was roughly 6 million bushels below the figure recorded on the parallel date of 1930. The Manitoba wheat pool has released its members from their contracts, so they will be able to get full cash price for wheat in the open market, and a demand for a similar concession has developed in Saskatchewan. But there is strong support among the western grain growers for the revival of the Wheat Board system, and this week the three prairie Premiers are coming to Ottawa to confer with the Bennett Ministry on the wheat marketing problem; they will ask for the re-establishment of the Wheat Board, but it is not likely that the Government will accede to their request.

There is no real improvement to record in general business conditions; retail trade in summer seasonal goods has been quickened by the advent of warm weather, but the volume of sales is still below normal, and even price cutting does not avail much when the purchasing power of a large body of the community remains low through unemployment and agricultural depression. The car-loading figure for the week ending June 13th, placed at 52,141 cars, showed a gain of 2,204 cars over the figure for the previous week, but it was 12,501 cars below the figure for the corresponding week of 1930. The building trades are

poorly employed, and the value of building permits issued in May for 61 cities, placed at \$11,868,171, was 13.9 per cent. below the figure for April and 41.6 below the figure for May, 1930. The primary manufacturing industries are also having a difficult time; the Canadian production of pig iron during May was estimated at 50,511 long tons, as compared with 53,792 tons in April and 80,505 tons in May, 1930, and the output of steel at 75,235 tons was 20 per cent. below the April figure and 18 per cent. below the figure for May, 1930. Nor are the secondary manufacturers in any better plight, and most of them are working on short time, with their warehouses full of goods for which there is no profitable market in sight. However, May showed a welcome gain in the exports of newsprint, which were valued at \$10,357,869, as compared with \$8,502,770 in April; but the mills are still working far below capacity, and even this improved May figure for exports was more than three million dollars below the value of the exports for May, 1930. In the mining industry the gold mines are maintaining a good output, but the low price of other minerals continues to have a depressing effect.

The foreign trade returns continue their progressive decline, and exports for May were valued at \$59,833,000, as compared with a value of \$77,261,000 in May, 1930; while imports had shrunk from \$101,549,817 to \$73,457,404. The problem of finding foreign markets for dairy produce is exercising the Ministry of Agriculture, and an extraordinary situation has developed in regard to butter. This spring has witnessed a great increase in butter production; but, although the price has now come to an export basis, the exports are negligible. For the time being the British market has been virtually lost, and exports of butter during the twelve months ending May 31st were only valued at \$429,440, as compared with a value of \$8,770,000 in the parallel period of five years ago. Consequently, on June 1st there were 8½ million pounds of creamery butter in cold storage in the Dominion, which is three and a half million pounds above the average for the past five years, and stocks are still piling up, while the dairymen complain that they cannot make their costs of production. An almost parallel situation prevails in regard to eggs, of which 18½ million dozen were in storage on June 1st.

The debate on the Budget concluded on June 18th with three divisions. First a Progressive sub-amendment, which, among other reforms, urged an immediate abandonment of the gold standard, was voted down by 165 to 15; then a Liberal amendment, which criticised the protectionist features of the Budget and took issue with other provisions, was defeated by 109 to 70; and then the main Budget resolution was carried by 30; all the Opposition groups voted against the Budget, and the Government had its normal majority. The committee stage begins this week, and as the Opposition intend to put up a stiff fight and press for modifications of many of the tariff changes, it may be prolonged.

The move of the Hoover administration in regard to war debts and reparations, if carried out, will cost Canada's Treasury four million dollars, which is her annual share of German reparations, and will promise no direct benefit; but, despite this, it is being generally welcomed through the hope of the indirect benefits which will accrue from the revival of business confidence and international trade. Canada is owed by Roumania \$23,900,000 and by Greece \$6,600,000 on account of loans made after the war to encourage the purchase of Canadian produce; both loans have been funded and yield annual interest totalling together \$1,299,000, and there is some divergence of opinion whether these loans would come under any moratorium which might be arranged. There has been no expression of regret anywhere in Canada at the postponement of the Imperial Economic Conference, as under existing circumstances no intelligent person expected any profitable results from it.

Commodity prices continue to fall, and the wholesale index number of the Bureau of Statistics for May was 73, as compared with 74.5 in April. Fifty-six quotations were higher, 121 were lower, while 325 remained unchanged. The most serious fall was in "animals and their pro-

ducts," for which the index declined from 78.0 to 72.7. Retail prices, whose rate of decline lagged seriously behind the pace of the wholesale fall, are now more than keeping pace with the wholesale decline, and the retail index for May was 90.4, as compared with 91.7 for April. The greatest decline was in the food index, which fell from 80.5 to 77.7.

Letters to the Editor.

LATVIA AND HER MINORITIES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The article "Latvia and Her Minorities" in the *Economist* of June 27th presents very one-sided information about the position of minorities in Latvia. It can never be said that there is a campaign against them. At present there is a tendency against the Polish minority, which, in a section of Latvia near the Polish border, had commenced "to polonize" the local population under the leadership of Polish priests and teachers, many of whom were not even Latvian subjects. A Parliamentary Commission was appointed to investigate the matter, and some of the Poles are to be expelled. The reasons for this are obvious: complete ignorance of the Latvian language at school, teaching children that Latvia is, or soon will be, a Polish province, a continuously hostile attitude towards the authorities, disobedience to the orders of higher educational officials, etc.

A grievance against the German minority was brought about by the authorities of the Riga cathedral, who refused to let the cathedral be used for garrison services, although legally the cathedral is at the disposal of the Latvian Bishop of the Evangelical-Lutheran Church. Regarding the distribution of land to ex-soldiers, the land available was given to every ex-serviceman irrespective of nationality. Only one group of ex-soldiers (local Germans) did not receive land because their behaviour during the War of Independence, 1918-1920, showed too clearly that their ideal of government was different from that now existing.

At present all minorities enjoy full rights as Latvian citizens. They have their own schools, theatres, etc., and no complaint whatever has been heard from such minorities as Russians and Jews. If there is a grievance against minorities, then they themselves are to blame because as yet they have enjoyed very fair treatment. It is only just that, whatever steps the Latvian Government takes, the welfare of the whole country should be considered first, and not the increasing wants of a single minority.—Yours, etc.,

24, Greencroft Gardens, N.W. 6.
July 2, 1931.

[Our contributor writes:—"Mr Cirulio's letter merely confirms the facts stated in the *Economist* of June 27th. He admits that German ex-soldiers were discriminated against on the redistribution of land to ex-soldiers. He admits that there is 'a tendency against the Polish Minority,' though he fails to state that the Parliamentary Commission of Enquiry has refused minority members of the Latvian Parliament their statutory right of appointing one member to the Commission, and has even barred all minority members of Parliament from attendance at the Commission's proceedings. He fails to point out that the German Lutherans made very conciliatory proposals with regard to the use of the Riga Cathedral, and he does not state that, a Bill on the subject having been rejected by Parliament, a campaign is now raging (just as a similar campaign raged with regard to the participation of German ex-soldiers in the redistribution of land) in order to secure enough signatures in a referendum to expropriate the Riga Cathedral against the wishes of the German minority. In view of these facts, which constitute a Chauvinist reversal of the former Latvian policy towards minorities, it is difficult to see how 'the welfare of the whole country' is being considered."—Ed., *Econ.*]

FASCISM AT HOME.

TO THE EDITOR OF THE ECONOMIST.

SIR,—"Historicus," the writer of a letter published in the *Economist* of June 13, 1931, noticed during a two hours' wait in Turin between trains that, despite pouring rain, "the streets were almost roofed over by the umbrellas of the other foot-passengers," and that the whole of the population was en promenade, determined to enjoy itself in spite of the weather; he reflects that "such a merry and vivacious crowd are not to be seen on wet Sunday afternoons in Hyde Park or Kew

Gardens," and concludes that, "if the Fascist regime does weigh heavily upon Italians, it is what is called in military terminology an invisible occupation."

"Historicus" would want to find the whole population of Turin dressed in deep mourning, wailing loudly in the streets before he would feel convinced that in Italy there exists a dictatorship of a pretty burdensome type. Were Sir Oswald Mosley, Mr Winston Churchill or Mr G. Bernard Shaw to set up a Mussolinian dictatorship in England, "Historicus" would expect the crowds in Hyde Park and Kew Gardens to be less jolly than of yore, especially on rainy days. Were "Historicus" to-day to make a round of the picture houses of a Lancashire town and find the audience enjoying themselves as much, if less noisily, than Italians, he would doubtless conclude that there are no workless millions in this country. Had he stopped at Bologna in the afternoon of May 14, 1931, he might have viewed the street procession of Fascists rejoicing after beating Signor Toscanini and would have deduced from it that the Fascist regime does not weigh heavily on the citizens of Bologna. Toscanini need only wipe the blood from his face and the blows become "invisible."

If before drawing his conclusions "Historicus" had applied a few rudiments of historical method, he might have learnt such facts about Turin as the following. On December 18, 1922, twenty-four people were murdered in the town by Fascists without a single assailant being arrested, let alone tried or condemned. From 1923 to 1925 the distinguished young scholar Piero Gobetti was repeatedly bludgeoned by order of Mussolini, until in 1925 he fled to Paris, where he died of heart trouble brought on by the ill-treatment, leaving a young widow and a new-born baby. In June, 1924, the Fascists broke into and sacked the home of the editor of *La Stampa* (one of the leading daily papers), Senator Frassati, and in December, 1926, Signor Frassati was forced to give up the editorship of this Liberal organ to a henchman of Mussolini. In May, 1928, a group of students who dared to applaud the well-known anti-Fascist Senator Ruffini were savagely bludgeoned by Fascists who invaded the university. In May, 1929, Signor Umberto Cosmo, the author of some excellent studies on Italian literature, was condemned to internment on a penal island for having collected signatures of sympathisers after the philosopher Signor Benedetto Croce had spoken in the Senate against the Lateran agreement. In the spring of 1930 a group of students, among whom was the son of Senator Einaudi, were imprisoned on a charge of conspiracy against the regime. So much for the "invisible occupation" in Turin.

If "Historicus" had glanced at the economic life of the city he would have found that on April 30, 1931, there were in Turin 39,654 unemployed workpeople out of a total of 200,031, i.e., a fifth of the whole working population. Wages in Turin from 1927 to 1931 have gone down by an average of 30 per cent. (figures given by Signor Malusardi, secretary of the Fascist unions of the Province of Turin, in a speech of May 11, 1931, *Stampa*, May 12, 1931). The general economic depression is shown by the drop of 1,697,000 passengers in the trams for March, 1931, as compared with March, 1930. In February, 1931, the consumption of electric power was 10,581,000 kw.h. less than in February, 1930. Meat sales fell from 322,552 quintals in 1929 to 272,577 in 1930, and the drop is still heavier in 1931. Buildings under construction fell from 36,700 rooms in 1929, to 24,455 in 1930 and to 2,200 in the first quarter of 1931, which for the whole year would yield a total of hardly more than 8,000 (official figures given by the "Podestà" of Turin, *Stampa*, May 29, 1931). "Historicus" is not to blame if, having only two hours at his disposal between trains in the rain under an umbrella, he did not discover these and many similar facts and figures. But one who signs himself "Historicus" should know that, if he means to discover whether the Fascist dictatorship is burdensome and whether the population of Turin is happy or not, he must have recourse to less childish methods.

Having thus envied the jolliness of the umbrella-carrying Turinese, "Historicus" boards his train once more and sees that near Genoa, "at a wayside station, an army of young men and women" invade the train "coming home from a day's outing in the mountains"; he is cheered by "the laughter and singing, the simplicity without affectation, the high spirits without vulgarity of the young people," and concludes: "I cannot believe that this spirit is indigenous to Italy, but evidently it has been well acclimatised." By whom? "Historicus" does not say. But the reader is left to understand that the merit rests with Mussolini. "Historicus" presumably imagines the Italian Alpine Club, with its record of half a century, to have been founded by Mussolini, and that the youth of Italy learned from his bared teeth and rolling eye to behave itself "without affectation and without vulgarity." The songs and laughter of these young people, what else do they prove than that the Fascist regime is mild and gentle?

I do not doubt that the travels of "Historicus" continued to be rich in discoveries and conclusions of the same kind. He

is like the traveller who landed in Hamburg, had his luggage carried by a one-eyed porter and wrote in his diary that all German porters are one-eyed. "Historicus" enunciates that the Italy of to-day is "worth studying without prepossessions and prejudices." I heartily endorse this opinion, even though it is not strikingly original. But I should like to mention that it is not enough for a head to be void of "prepossessions and prejudices"; it must be filled with a little brains.—I am, Sir, your obedient servant,

St. Germain en Laye.

Books and Publications.

HUDSON'S BAY.*

THIS is a book that ought to be read by every holder of Hudson's Bay shares and could be studied with advantage by everyone interested in the science of investment. The work of an author writing under the pen-name of "Inkyo," whose personal knowledge of the company seems to go back nearly fifty years, it tells the history of the Hudson's Bay Company from its birth to the present day, but looks at it from the point of view of the ordinary shareholder and traces as well as may be the ups and downs of the shareholder's income over a long period of time. On the whole the author seems to think that the shareholder has not done badly, but it might well be argued against him that a corporation which has lived through two and a half centuries, seen the North American continent develop from an unmapped waste into a country that holds in its hands the fate of the world, stood by while Canada was covered with railroads and watched the wealth of her tillage grow out of the worthless prairie—such a corporation might be expected to-day to be one of the world's dominating influences, one of its richest and most stable institutions. Perhaps a benevolent Providence has willed the contrary.

It was in 1670 that the Governor and Company of Adventurers received from Charles II. their charter for the discovery of a passage to the South Seas and "for the finding some trade for Furs Minerells and other considerable Commodities," and it was in 1863 that the International Finance Society floated the new Hudson's Bay Company with a capital of £2,000,000, a flotation described at the time by the *Economist* in an article that "Inkyo" quotes as "one of the most remarkable financial events that the world has ever seen." Starting his calculations from that date "Inkyo" has worked out the return that a proprietor has had on his shares under the rule of successive governors and the various fluctuations of world trade. From 4½ per cent. in the first half-dozen years it dropped to 3½ and then to 2½ per cent. With the distribution of money from land sales it rose in the eighties to 6½ per cent., climbed under the long rule of Lord Strathcona to an average of 11½ per cent., and then, after a strange interlude in which a short-lived marriage was arranged between Hudson's Bay and Harrods Stores, to an average that "Inkyo" estimates at about 16 per cent.—an average that, unfortunately for the shareholders, has not been maintained.

When it comes to the recent history of the company the book deals at some length with the complaints of shareholders (pertinaciously expressed by Mr Nordon), and broadens into a general survey of the respective rights of directors and proprietors of limited companies. There can be no doubt that some of the episodes in the history of the company since 1914 are unsatisfactory. When, for example, an issue of shares was made at such a price as made its success certain a commission was paid to firms closely connected with the directorate for underwriting the shares, and a committee of investigation, while absolving the directors from any charge of bad faith, expressed its opinion that on the ground of non-disclosure to shareholders the company had a claim against one of the directors for his share of the profits made out of the underwriting. Similarly, there was the unfortunate incident of the Merchant Trading Company

* "The Reflections of Inkyo on the Great Company." London General Press. 8s. 6d.

shares. So long as shareholders are many and ignorant while directors are few and well-informed, the only protection against such employment of corporate funds is a higher sense of responsibility and trusteeship in the board room.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The Federal Trust Policy. By John D. Clark. (London) Oxford University Press, Warwick Square. 12s. 6d. net.

A well-documented study which leads to conclusions highly favourable to the Sherman Act.

International Migrations. Vol II. Edited by Walter F. Willcox. (New York) National Bureau of Economic Research, Inc.

A series of monographs by specialists, interpreting the statistics which were collected in Volume I.

Newspaper Finance Annual, 1931. Edited by Roy Hopkins. (London) World's Press News, 110, Fleet Street, and the London General Press, 6 Bouverie Street. 7s. 6d. net.

In addition to full details of all newspapers, printing and publishing, printing machinery and pulp and paper companies, with tabulated balance sheet particulars of the principal groups, there is a most interesting foreword by the editor on the Press in 1931.

The Crisis in Australian Finance, 1929-31. With an Introduction by E. O. G. Shann and D. B. Copland. (Sydney) Angus and Robertson, Ltd., 89, Castlereagh Street. 5s. net.

A most interesting collection of documents.

Redgrave's Factory Acts. By Joseph Owner. Fourteenth Edition. (London) Butterworth and Company (Publishers), Ltd., Bell Yard, and Shaw and Sons, Ltd., 7-9, Fetter Lane.

A most convenient book of reference on the Factory Acts. Those provisions of other Acts, as, for example, the truck, shops, education and public health Acts, which directly affect persons in industrial employment, are also included.

Monthly Crop Report and Agricultural Statistics, May, 1931. (Rome) Bestetti and Tumminelli S.A., 32, Via Michelangelo Caetani. 5 lire.

A monthly bulletin of the International Institute of Agriculture, containing the latest available crop reports and agricultural statistics of all countries.

The Mortgage Bank. By Joseph L. Cohen. (London) Sir Isaac Pitman and Sons, Ltd. 10s. 6d.

An account of the principles and practice of mortgage banking, with a comparative study of the systems in various countries.

The Law of Negotiable Instruments. By F. Raleigh Batt. (London) Longmans, Green and Company, Ltd., 39, Paternoster Row. 5s. net.

A concise, well-documented little book, in which the law is not merely stated, but expounded and discussed.

The Manufacturing Industries of the British Empire Overseas. Part IV., New Zealand. (London) Erlangers, Ltd., 4, Moorgate. 2s. 6d.

Continues the useful series, other volumes in which have been from time to time noted in these columns.

The Economic Journal, June, 1931. (London) Macmillan and Company, Ltd. 6s.

Includes, *inter alia*, articles on "The Relation of Home Investment and Unemployment," by R. F. Kahn, and "A Study of Occupational Mobility," by C. T. Saunders.

The International Labour Review, June, 1931. (London) Allen and Unwin. 2s. 6d.

Includes an article by Dr. Attilio Oblath on Italian emigration and colonisation policy.

The Bankers' Magazine, July, 1931. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Includes an historical and statistical survey of British savings banks.

The Hibbert Journal, July, 1931. (London) Constable and Company, Ltd., Orange Street. 2s. 6d. net.

Includes an article on "Population and World Politics" by W. Watkin Davies.

The China Year Book, 1931. Edited by H. G. W. Woodhead. (London) Simpkin Marshall, Ltd., Stationers' Hall Court. 42s. net.

A well-stocked volume of statistical and other information on China and Manchuria.

Atkin's Manual, 1931. (London) Geo. D. Atkin and Company, 1, Drapers' Gardens.

A compilation, of recognised standing, of financial information on leading electricity and tramway companies.

Selected Documents on the Distribution of Gold submitted to the Gold Delegation of the Financial Committee of the League of Nations. (London) Allen and Unwin, 40, Museum Street. 2s.

The Countryman, July-September. Edited and published by J. W. Robertson Scott, at Idbury, Kingham, Oxfordshire. 2s. 6d.

The current issue of this unique and fascinating little periodical is particularly good. We recommend our readers to keep it handy for odd moments of interrupted reading.

Regioni e Stati d'Europa. By Luigi De-Marchi and Ferdinando Milone. (Padova) Casa Editrice dott. Antonio Milani, Già Litotipo.

A brief survey of the economic geography of the principal regions of Europe.

La Macédoine Economique. By D. Iaranoff. (Sofia) Imprimerie P. Glouchcoff.

A descriptive account of the economic resources and organisation of Macedonia.

Greece and the Greek Refugees. By Charles B. Eddy. (London) Allen and Unwin. 12s. 6d.

A very full history and discussion of the Greek refugee problem.

Wirtschafts Wende. By Robert Friedlaender-Precht. (Leipzig) Paul List Verlag. 5.50 mks.

A serious discussion of the world unemployment problem, which the author believes can only be solved by a radical change in social and economic organisation.

Equality of Trading Rights. By Gaganvihari L. Mehta. Obtainable from the author at 7, Clarke Street, Calcutta.

A short essay on equality of trading rights between British and Indian nationals in India.

Mahatma Gandhi and British Trade. By I. M. Khan. Foreword by Professor J. H. Richardson. (Leeds) Macmillan Fitzgerald, Queen Square Chambers. 1s. net.

An essay by an Indian student at Leeds University.

Insurance Companies in Canada, 1930. (Ottawa) F. A. Acland. 50 cents.

An immense collection of tabulated official statistics.

La Population du Japon. By A. Andréadès. (Brussels) Goemaere, 21, rue de la Limite.

An historical study.

The Stock Exchange.

THE ARGENTINE RAILWAY OUTLOOK.

THE market valuation of the ordinary stocks of the four largest railways in the Argentine, which fell from a "peak" figure of £92½ millions in 1929 to £60 millions by the end of 1930, declined a further £25 millions, to a low level of £35 millions, in the first six months of 1931. This was scarcely surprising, for though the market may move against a fall in the peso exchange if traffics are improving, or against a fall in traffics if the peso is improving, it cannot rise against a decline in both exchange and traffics, such as has occurred during the last few months.

At the beginning of this year the Argentine peso (par value 47.619d.) was being "protected" by the use of the gold reserves of the Banco de la Nacion. From a low point of 33½d. in January it rose to a high point of 39½d. in March. In April, however, the Banco de la Nacion decided to suspend its support and allow the exchange to find its own level, with the result that the peso touched 35½d. in that month, 33½d. in May and 33½d. in June. At the moment of writing the rate has improved to 35½d. As regards the decline in railway traffics, it must be remembered that the figures for 1930-31 afford comparison with those for a year (1929-30) unhappily distinguished by a bad wheat crop, the loss of half the maize crop, and the onset of general trade depression. The Buenos Ayres Great Southern Railway published gross traffic figures for 1929-30 showing a decline of 6½ per cent. as compared with 1928-29, the Central Argentine a decline of 19 per cent., the Buenos Ayres and Pacific of 14 per cent., and the Buenos Ayres Western of 17 per cent. The extent of the further decline in the year ended June 30th is indicated below:—

	GROSS TRAFFIC RECEIPTS.*				Decline in 1930-31 compared with 1929-30	
	Miles open.	1928-29.	1929-30.	1930-31.	Amt. £	%
B.A. Gt. Southern ...	5,076	13,067	12,215	11,162	1,053	8.62
Central Argentine ...	3,442	14,252	11,568	11,085	483	4.17
B.A. and Pacific	2,806	9,134	7,855	7,021	834	10.62
B.A. Western	1,926	5,275	4,381	3,784	597	13.63

* Published weekly in sterling at current rate of exchange.

This season some of the companies, particularly the Central Argentine, have been helped by the exceptionally large maize crop, the marketing of which has now been almost completed. In a normal year maize accounts for about 13½ per cent. of the total gross receipts of the Central Argentine, and for about 7 per cent., 5½ per cent. and 1 per cent. of those of the Pacific, Western and Southern respectively. None of the companies obtains much more than 12½ per cent. of its total gross receipts from the wheat traffic. The Pacific is dependent for over 20 per cent. of its receipts on the wine trade, and the Western for nearly 20 per cent. on the livestock traffic. Passengers, parcels traffic and livestock accounted in 1929-30 for the following percentages of total gross receipts:—Southern, 41.7; Central, 37.3; Pacific, 29.5; and Western, 43.9.

Assuming that the ratio of operating expenditure to gross traffics was the same in 1930-31 as in the previous year, the net traffic receipts for the four railways would appear as follows:—

	NET TRAFFIC RECEIPTS.				Decline on 1929-30.	
	1929-30.	Est. 1930-31.	Amt. of surplus brought forward	Decline on 1929-30.	£	%
B.A. Gt. Southern ...	3,431,662	3,136,522	295,140	0.92	309,643	
Central Argentine ...	2,927,861	2,805,614	122,247	0.42	285,232	
B.A. and Pacific ...	2,138,940	1,982,028	156,912	1.56	586,396	
B.A. Western	1,040,656	925,188	115,468	0.67	67,711	

The 1930-31 declines in net receipts, expressed as percentages of the ordinary capital, do not appear very alarming, but it must be borne in mind that dividends have to be paid in sterling and that the peso at the moment is at a discount of nearly 25 per cent. It was no doubt the severe depreciation in the exchange which caused the companies to pass or pay nominal interim dividends in March. Further, as none of the lines fully earned the dividends distributed in respect of 1929-30 a conservative dividend policy this year is the more necessary. The earnings and dividends paid in the previous year and the interim dividends declared this year are shown in the next table, together with an estimate of the final dividends which might be paid on the basis of the percentage decline in net receipts and in the rate of exchange:—

	EARNINGS AND DIVIDENDS ON ORDINARY CAPITAL.				1930-31. Estimated possible Final Divs.	
	1929-30. Earnings.	1929-30. Dividends.	Interim Divs.	Final Divs.		
B.A. Gt. Southern ...	4.4	3	3	1	1½	
Central Argentine ...	4.5	2½	2½	1	2½	
B.A. and Pacific	5.2	3	4	Nil	2½	
B.A. Western	3.7	2½	2½	Nil	2½	

The estimates of maximum final dividends, which are based on cold and crude mathematical possibilities, make no attempt to forecast the future course of the exchange or the psychology of the directors. In some quarters in the market it is held that no final dividends should be paid. This would appear to be an unduly pessimistic view, at variance with the facts disclosed in the statement of the Buenos Ayres Great Southern relative to its recent issue of 5½ per cent. debenture stock. In this document the directors of this company declared that the balance of profits in the year ending June 30th last would be sufficient to cover the interest on debenture stocks as well as the annuity, rent charges and other payments under working agreements more than twice over. These payments in 1929-30 amounted to about £1,390,000, the implication thus being that earnings in 1930-31 would amount to nearly 2 per cent. on the ordinary stock.

It may be of interest to consider the dividend yields obtainable at present market prices, on the basis of the estimated maximum final dividends, according to our estimates. These are shown in the next table, together with the highest and lowest prices recorded last year and in the first half of 1931:—

	1930.		1931.		Present Final Divs.		Div. yield % on estimated	
	High.	Low.	High.	Low.	Price.	£ s. d.		
B.A. Gt. Southern ...	100½	64	71½	43½	53	4 14 4		
Central Argentine ...	89½	51	65	42½	51½	6 6 3		
B.A. and Pacific	90½	44½	53½	34½	42	5 19 1		
B.A. Western	83½	46	55	29½	34½	6 10 6		

On the most favourable view it would seem that the present market valuation of the stocks is generous, and, indeed, discounts a not unsubstantial recovery in trading conditions or in the exchange in the relatively near future. What grounds has the market for this optimism? A recent statement by the Argentine Minister of Finance, which has been published by Messrs. Baring Brothers, has been of a moderately reassuring character. Argentine trade in the first five months of this year has shown a "favourable" balance of \$20,000,000 gold against a deficit of \$28,000,000 gold for the corresponding period of last year. Exports have been swelled by the abnormally large maize crop. The farming community has been compelled to accept low prices for its produce, but, according to the Minister of Finance, costs of production have been

reduced, the principal item, rent, having been brought down by 30 per cent. It is therefore contended that "the agrarian *malaise* is less intense in Argentina than in other producing countries . . . and that the economic readjustment necessitated by the world trade depression is taking in Argentina a very satisfactory course." However this may be, the country certainly possesses large gold reserves, which should be invaluable when the Government takes seriously in hand the task of rehabilitating the exchange position of the peso. Recently, however, the policy of the Ministry of Finance would appear to have been rather to prevent any immediate appreciation of the currency such as might encourage imports and reduce the "premium on exports." It may be, therefore, that the Government's policy will be mainly determined by the future course of prices for cereals, Argentina's staple exports. In other words, the immediate outlook for the equity stocks of the Argentine railways, on this argument, will depend, as it has always done, on the course of the primary commodity markets.

If one looks to the more distant future, when Argentina will have participated in a general trade recovery, one cannot assume that earnings of the British-owned railways, though they will naturally reflect the improvement in the Argentine national income, will necessarily and immediately be restored to the level ruling before the trade slump. The goodwill of the Argentine authorities towards the railways is not questioned, but in all countries with a developing nationalistic sense the tendency to increase rather than reduce the burdens imposed upon foreign capital is a psychological factor with which investors would be unwise not to reckon. Under the so-called Mitre Law the Great Southern and Central Argentine have already been compelled to cut their charges (as from October, 1928), and it is significant that a road construction scheme for the relief of the present unemployment has been financed by a petrol tax and a contribution by the railways to the funds created by the Mitre Law. All recent chairmen's speeches, again, have laid stress on the implications of increasing road competition, especially in the neighbourhood of the larger centres of population. On the other hand, the railways, on the restoration of more normal trade conditions, have undoubted scope for very large extensions into relatively "new" territory, which will provide opportunities for further development—and, incidentally, require considerable sums of new capital—for a number of years to come. These facts will doubtless continue to govern the policy of the trust companies and other large financial institutions whose pre-war investment policy had so much to do with the building up of the British railway position in the Argentine.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
July 22.

ACCOUNT.
July 23.

THE first few days of the new account witnessed wide fluctuations in market sentiment. The initial effects of the Hoover pronouncement had worn somewhat thin by last week-end, while the Paris negotiations dragged on. On Monday, consequently, dealers were disinclined to increase their commitments, but the news that the debt negotiations had reached a final settlement induced a slight activity on Tuesday, when many quotations scored appreciable advances. Following hard upon this "boomlet," however, came the news of overnight declines in Wall Street, together with further evidence on the unsatisfactory nature of the German financial position, and prices reacted sharply.

Gilt-edged securities shared in the general tendency. A weak opening was followed by a marked improvement, encouraged by a fair-sized gold influx and the strength of sterling, but the Conversion issues, Consols, and Funding Loan all suffered in mid-week. Long-dated India loans were in demand at first, but receded on profit-taking.

Australians were relatively firm, aided by the prospect of a debt relief mission to this country. New Zealand bonds strengthened. German bonds reflected the international situation, the advances scored on Tuesday as a result of Continental buying being lost on Wednesday following liquidation from the same quarter. Hungarian issues improved when it became known that steps were being taken to relieve financial stringency by placing a large bond issue in international markets. Brazilians were well supported at one time, but losses of a point or so were common on Wednesday. San Paulo Coffee Bonds made some headway, and Argentines were inclined to harden, though again the advances were not held. Peruvians were a satisfactory feature.

Home Rails resumed their downward trend this week, quotations obtaining little assistance from the latest "traffic" figures, which, though better, still left much to be desired. Among Foreign Rails, Argentines tended to follow the peso in a rather irregular course, in which Antofagastas and Leopoldinas shared.

The Industrial market attracted less public interest, but the bears who on Monday were responsible for marked weakness hastened to cover on Tuesday, when the international situation seemed easier. Shares with an international or transatlantic quotation recorded the sharpest movements, while Cables and Wireless were depressed on the proximity of the report, and the Swedish issues reflected the lack of confidence in the stability of the European system. Electric and Musical Industries, christened "Emmies," were dealt in at better levels. Tate and Lyle and United Molasses advanced on the improvement in the outlook for sugar, while Distillers (whose accounts are discussed on page 82), African Breweries and Tamplins all rose on their reports. The moderately satisfactory English Sewing Cotton results (outlined on page 83) induced support for textiles. Swan Hunter, in the iron and steel group, gained 1s. 6d. on the maintenance of the interim dividend, while among stores John Barker attracted attention. Bank shares hardened after the initial weakness which accompanied the dividend announcements.

Professional support was forthcoming for the oil leaders on Tuesday, but the usual reaction was intensified by liquidation in New York and an increase in the United States crude oil output. Rubber shares were as dull as the commodity, Trusts, Sua Betongs and Anglo-Dutch losing in mid-week what they gained at the start. No expansion of business was recorded in tea shares, such small movements as occurred being of an irregular nature.

In the mining market, Kaffirs derived initial assistance from the favourable operating returns, but the indifference of Paris and the Cape intensified in later sessions. Randfontein suffered from profit-taking after a sharp advance, while Gold Fields and Rand Mines receded. Small declines were general among Rhodesians, though "Chartered" enjoyed a bright interval. Tin shares were in request, especially Tronoh and Southern Perak, but the fall in the commodity brought a decline later. Ashantis were a good feature, but Tintos drooped through lack of support.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The concord between Washington and Paris on the question of debt postponement was a signal, paradoxically, for a short and sharp burst of selling, responsibility for which was ascribed to market staleness following the protracted negotiations, to liquidation by banking interests, and to a general desire to "cash in" profits as quickly as possible by professional interests who had previously held their hand in order not to embarrass the American Government during the course of the negotiations. Those who endeavoured to look at the matter in a clearer perspective declared, however, that the reaction was the natural outcome of a preceding fortnight's rise, which, whatever its immediate cause, had been overdone, and professed the view that the next few weeks would witness many broadly similar rises and falls, representing the very first stage on the long road to Stock Exchange recovery. The volume of business fluctuated considerably from day to day, the number of shares dealt in rising from one million on Monday to three millions on Tuesday and falling the next day to 2,400,000. The weakness of base metals and the announcement that Standard Oil of New Jersey had again reduced its gasoline prices were further unfavourable factors. Slightly more optimistic views, however, continued to be expressed regarding the trade outlook. Though iron and steel operations last month were on the lowest scale for nine years, the output of electricity expanded and representative chain stores reported an increase of 1½ per cent. in sales, as compared with a year earlier. The second quarter earnings' statements of the large companies are expected to make an unfavourable showing, but the opinion is gaining ground that numerous concerns which have been considering the question of reducing dividends may decide to defer action until the dimensions of a possible autumnal trade up-turn can be ascertained. U.S. Steel Corporation suffered particularly during the liquidation of the first half of the week, the market generally looking for a further decrease in the June figures of unfilled orders. General Motors, however, stood out against the prevailing tendency, last month's figures of sales by dealers unexpectedly showing a rise at 111,668 units, as compared with 97,440 units in June, 1930.

PARIS.

During the first three weeks of June a heavy tone prevailed on the Paris bourse. The liquidation of international securities and periodical bear raids depressed a market already weighed down by the economic crisis and political uncertainty. Many shares registered declines, which, if the devaluation of the franc is taken into account, took prices to levels below those of 1913. President Hoover's now famous proposals for the suspension of debt payments had the effect of raising average values by as much as 15 per cent., while certain securities like Rio Tinto, Boléo and Vieille Montagne rose in a week by even larger percentages. Later, however, the feeling that the proposals could not be translated into practice without some difficulty brought renewed irregularity. The end-of-month settlement, which was accomplished with less difficulty than might have been expected, showed that the bear position had not been liquidated, and the carry-over rate was fixed at ½ per cent. Prices on July 6th were, in numerous cases, at much the same levels as those of a month earlier.

BERLIN.

With few exceptions, the prices of the most important German shares at the beginning of July showed little difference from the level at the beginning of June, and a comparison of prices at these two dates gives no idea of the stormy Stock Exchange movements or of the important political and economic events of the intervening period. Up to July 20, the declines were extraordinarily heavy in spite of the very low level from which they started. This was due in the first place to the unfavourable reception of the emergency decree, and later to the foreign exchange situation. That the declines were not even greater is attributable rather to the very extensive unloading which occurred in the preceding month than to

(Continued on page 80.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 77.)

any favourable circumstances. With the publication of the Hoover Plan the situation suddenly changed. The first impression made by the proposals of the American Government, which came as a complete surprise to Germany, was favourable beyond all expectation. The demand for foreign exchange ceased, and the sudden expectation of a recovery in world trade gave rise to a widespread demand for securities. Even in the succeeding weeks, when German economy lingered in an acutely critical condition and nervousness was daily increased by unfavourable announcements, the Stock Exchange tendency remained firm. Not all the gains of July 22nd were maintained, it is true, but in essentials the level at the beginning of July was the same as at the beginning of June. The Stock Exchange index, which in the first three weeks of June fell from 83 to 75 is now 83. Substantial gains over the previous month's level were recorded by artificial silk shares, and by Siemens and Lindström. Those shares which were especially hit by the crisis, however—Nordstern, Karstadt, Nordwolle, and especially the Danatbank—suffered a more severe fall. The other bank shares maintained their level of about 100. Danat shares, which previously had been very much higher, owing to the low capitalisation of the bank, fell to about 100. The rente market has had a particularly unfavourable month. The exports of gold led to a rise in the rate of discount and to a stringency in the money market which was almost unexampled in its suddenness. As the rates for one month and for day-to-day money rose in a single month from 6 to over 10 per cent., it is not surprising that the average yield on first-class German loans rose in the same period from 8 to well over 9 per cent. The Reichsbahn 7 per cent. preference shares, which fell in the first half of the month from 84½ to 80½, have recovered to 83, but the recovery in other loans has not been so great. In the last few days the Bourse has shown signs of further weakness on the rumoured difficulties of a large textile firm, Reichsbank shares being offered on an appreciable scale.

INVESTMENT NOTES.

Markets and the Hoover Agreement.—The announcement of Franco-American agreement on the "Hoover Plan," the details of which are discussed in an earlier column, failed to rouse the stock markets to any fresh enthusiasm. During the fortnight's delay between the first issue and the final acceptance of the proposals, the markets had had ample time to digest their possibilities as a bull point. Their deferred acceptance found many large investors more anxious regarding the economic state of Germany than reassured by a formal announcement, which, in spite of all difficulties, they had tended increasingly to regard as inevitable. Though the London Stock Exchange was firm for some time on Tuesday, operators were clearly waiting to see which way the cat would jump—the cat in this case being New York. When it was discovered that Wall Street was weak, profit-taking in London quickly tended to become general, merging, in some instances, into a partial recrudescence of organised bear activity. In a few stocks, like International Nickel, where pool operations had previously been suspected, a quite respectable "shake-out" occurred under joint Wall Street and London influences, the movement being intensified by the weakness of base-metal prices. Between Monday and Thursday the cash price of tin in London declined from £118 5s. to £113 2s. 6d. per ton, and copper from £37 1s. 3d. to £34 1s. 3d. per ton. The following table shows the extent of the rise in numerous active stocks after the first publication of the Hoover proposals, and of this week's decline:—

x = ex dividend.

The decline, it will be seen, though uneven, was general, extending from gilt-edged stocks to mining shares. German stocks were weak, partly on Continental selling, the "Young Bonds" being especially affected. The undertone of the markets generally, however, has changed less than the figures, taken by themselves, suggest, and though the markets may choose to follow a "wait-and-see" policy for the next week or two, any marked recurrence of the falling tendency in values of the earlier months of this year would come as an unpleasant surprise to many people.

Ebbw Vale.—Rather more than 18 months ago Sir John Beynon, on taking over the chairmanship of Ebbw Vale, determined to cut the company's losses by closing down the steel side of the works and concentrating on the coal side. Accordingly, the whole of the collieries directly or indirectly owned were reopened, with one exception. A few months later, unfortunately, the state of the coal trade, instead of improving, began to deteriorate, so that during the last financial year (to March 31, 1931) a number of the pits have been able to work only intermittently, great difficulty has been experienced in disposing of small coal, and (to make matters worse) a fortnight's strike occurred throughout the South Wales coalfield in January. The result is that the loss incurred by the company and its subsidiaries was nearly as great as in the previous year, the figures being £817,491 in 1930-31, compared with £344,717 in 1929-30. As the turnover was distinctly

smaller, the loss per unit of output actually increased. The total loss includes in each case some £150,000 of interest and provision for redemption premium on Ebbw Vale 8 per cent. notes held outside the subsidiary companies, which is debited in the accounts but not actually paid. On the other hand, again no depreciation has apparently been written off, and the report frankly states that the book values of the properties, etc., as set forth in the consolidated balance sheet (£7,992,647 out of a total of gross assets of £10,255,481), "are largely in excess of the value of those properties at the present time." The only significant changes in this consolidated balance sheet are a drop in stocks and debtors together from £576,913 to £418,266, a natural consequence of the closing of the steel-works and the diminished turnover, and on the other side a rise of over £100,000 in the bank loans, now swollen to the significant total of £1,896,297. This slightly exceeds the present debit on profit and loss account, which, including last year's loss, amounts to £1,828,842. The long-delayed capital reconstruction, when it comes, must inevitably be drastic. Holders of the 6 per cent. debentures, whose interest has been duly met to date, can probably regard their capital as moderately secure, but to the 8 per cent. note-holders the chairman at the last annual meeting gave a clear warning that their position would be found to be less satisfactory. As regards the £3,700,000 of preference and ordinary shares, it is to be feared that unless trade takes a startling turn for the better these can hardly be represented by earning assets at all. In plain fact, the steelworks and blast furnaces, situated far from the coast, are scarcely likely to be reopened. The hope for Ebbw Vale would seem to lie rather in the planned development of its colliery properties on the most economic lines, so as to take advantage of every revival in the trade. If this policy demands fresh resources, the writing off of lost capital will be an indispensable first step, which will be the more useful the more expeditiously it is undertaken.

Bank Interim Dividends.—The announcements by the joint-stock banks of their dividends for the first half of 1931 were followed by a weakening in share quotations, suggesting that the possibility of reductions had not been fully discounted. Of the four "Big Five" banks which have so far made statements, only Barclays proposes to maintain its usual interim dividend of 7 per cent. The Midland Bank dividend is cut from 9 per cent. to 8 per cent., as is also that of the National Provincial. The Westminster Bank interim is "cut" by 1 per cent. to 9 per cent. At the time of going to press Lloyds Bank has not announced its decision:—

* Based on dividend for 1930.

According to the half-yearly statements which have so far appeared, deposits and advances both show considerable declines. It is inevitable that in a period of prolonged business stagnation the earnings of the banks should reflect the general trend to some extent. In view, however, of the traditionally strong reserve position of all these institutions, it may be surmised that their policy on this occasion has been determined, also, by reference to well-known canons of British banking practice as regards the conservation of internal resources.

Coal Company Results.—The profits of the larger coal-producing companies which have been declared since the beginning of this year reflect both the general unsettlement of the industry and the divergent conditions which prevail in different districts. Of the twelve major companies whose profits are tabulated below, only three reveal an increase in net receipts compared with the previous year, while in four cases the ordinary dividend has been reduced. No less than seven companies failed to pay a dividend on their ordinary capital during their latest year:—

Name of Company.	Net Profit, 1929.	Ordinary.		Net Profit, 1930.	Ordinary.	
		Earned.	Paid.		Earned.	Paid.

† On "A," "D," and "E" shares.

‡ On "B" shares.

* Tax free.

The aggregate profits for the twelve companies total £1,264,955, compared with £1,354,292 for 1929, a decline of 6.6 per cent. This figure may be considered in relation to the decline of 14.2 per cent. in the aggregate profits of 597 miscellaneous companies which reported in the first quarter of this year, and of 19.3 per cent. in the aggregate profits of 620 companies which reported during the second quarter. In view of the fact that the coal trade has been required not merely to cope with the normal difficulties of a trade depression, but to carry through prolonged and delicate negotiations on the labour side, the results of a breakdown of which at any stage would have been disastrous, the figures may be accounted not unsatisfactory.

A MEASURE OF PUBLIC SERVICE

Last year the Sun of Canada's new business in the British Isles exceeded that of 1929 by 15 per cent.

£12,000,000 Life Assurance and Annuities were issued by the Sun of Canada in 1930 to residents in the British Isles.

An appreciation of the liberality of the Company's contracts, which include guaranteed cash values, and of the Company's unexcelled service.

SUN LIFE ASSURANCE COMPANY OF CANADA

(Incorporated in Canada in 1865 as a Limited Company).

Assets £120,000,000

H. O. LEACH (General Manager),
2, 3 & 4, COCKSPUR STREET, LONDON, S.W.1.

Distillers.—The latest report of this large concern, which in addition to selling and distributing whisky and gin, supplies a considerable portion of the yeast and industrial spirit in the British Isles, suggests that its prosperous career has not been seriously affected by the trade depression. Gross profit is down from £2,545,693 to £2,445,741, a decline of only 4 per cent., while, after payment of all expenses, net income stands at £2,272,915, compared with £2,322,740 for the previous twelve months. Preference dividend absorbs £102,300, and the customary distribution of 20 per cent. is maintained on the ordinary capital, being well covered by earnings.

	1929.	Year to May 15, 1930.	1931.
Net profit	£ 2,312,412	£ 2,322,740	£ 2,272,915
Brought forward	212,533	227,991	269,636
Preference dividend.....	105,600	103,950	102,300
No. of times covered	23.7	23.8	23.7
Ordinary dividend—			
Amount	1,691,354	1,677,145	1,657,099

Reserves	500,000	500,000	500,000
Carried forward	227,991	269,636	283,152

The sum of £250,000 is placed to reserve account, bringing that item to £2,500,000, while £250,000 is used to establish a dividend equalisation reserve. The directors report that additions to properties and plants have been made during the year to the extent of £91,679, while at the same time the sum of £136,676 has been written off these items for depreciation. In the case of investments and inventories, also, values have been revised and provision made for any depreciation which has taken place. The £1 ordinary shares are at present quoted at 57s., to yield £7 7s. 3d. per cent., after allowing for the final dividend of 12½ per cent.

Vocalion's Unfavourable Experience.—A sharp fall in profits for the year to March 31, 1930, and the announcement last October that the board was being reconstituted, following a special investigation of the company's position, had prepared shareholders in the Vocalion Gramophone Company for an unfavourable report for 1930-31. In this respect at least they have not been disappointed. The year's profits, in fact, after providing for depreciation, amortisation and bad and doubtful debts, were £22,065, but the directors deemed it necessary to write-off £59,000 against depreciation of the company's investments. This appropriation, with minor allocations for income tax, etc., has resulted in a debit on the year's operations of £47,235, reducing the balance brought forward from £65,953 to £18,728. Results for the last three years are shown:—

Years to March 31.	1929.	1930.	1931.

Inc. or dec. in carry-forward + 15,437 + 27,310 - 47,235
 * Includes provision for depreciation of investments, £59,000; written off stamp duty on increased capital, £1,000; advances in suspense written off, £570.

The company's difficulties have been due partly to intensified competition in the gramophone industry in a period of reduced public purchasing power, and partly to internal conditions, regarding which a full explanation should certainly be given at next Tuesday's meeting. The year has been one of severe price-cutting in the record trade, particularly since last December. Shareholders will be

partially reassured by the board's statement that the demand for "Broadcast" records has been well maintained, and that recording for the film industry has continued to show a "satisfactory increase and profit." Sales of the "Broadcast Twelve" record, indeed, have again increased. The position as regards foreign trading, however, would appear to be much less satisfactory, and the board has reduced the minimum royalty payable by its foreign subsidiary from £10,000 to £2,500 per annum. Last October the directors announced that, in their opinion, Mr C. K. Sugden had failed in his duty as managing director, and his appointment was terminated. It may be early as yet to pronounce on the success of the policy adopted by the reconstituted board, particularly in view of the exceptional factors which have affected last year's figures. Disappointment with the company's failure to fulfil the bright promise of three years ago, however, has been reflected in a fall of the value of the 10s. shares from a maximum of 95s. 7d. in 1928 to 4s. 9d. to-day.

International Telephone and Kreuger and Toll.—An exchange of shares which was recently reported between the International Telephone and Telegraph and the Kreuger and Toll interests does not appear to have attracted the attention it deserves. The deal was arranged on Mr Ivar Kreuger's recent visit to New York. Kreuger and Toll has acquired an interest in the International Telephone and Telegraph, Mr Kreuger joining the board of directors, and the latter has acquired a holding in the Ericsson Telephone Company, control of which still remains with Kreuger and Toll, who acquired it last year. Details of the amounts of money involved have not been disclosed. It was explained in a leading article on the Kreuger and Toll group, which appeared in the *Economist* of May 9, 1931, that the telephone and telegraph industry was likely to provide Kreuger and Toll with opportunities of finance as important as those which it had found in the match industry in the past and that the control of Ericsson Telephone would bring it into world-wide competition with the International Telephone and Telegraph, both companies being in the field for Government telephone concessions. It has, however, always been Mr Kreuger's policy to make terms with trade rivals rather than to declare war. The exchange of shares which followed upon his visit to New York implies that these two powerful groups will in future co-operate not only in the working of Government telephone concessions but in the manufacture of telephone and telegraph equipment, an industry in which each has important subsidiary companies operating throughout the world. Both groups have no doubt been forced by the trade depression to give up a policy of independent expansion. The report of the International Telephone and Telegraph for the first quarter of 1931, which was issued last month, showed that earnings had dropped by 15½ per cent. as compared with the first quarter of 1930, and did not cover the quarterly dividend of 50 cents per share. The full report for 1930 was discussed in the *Economist* of May 30th last.

International Sleeping Car.—The position of the shareholders of the International Sleeping Car Trust, whose £1 shares are now quoted at about 4s., is becoming deplorable. The trust acquired 30,000 preference shares and 495,000 ordinary shares of 100 francs in the Compagnie Internationale des Wagons-Lits, the ordinary shares being obtained at an average price of £10 per share. These holdings stand in the books of the Trust at cost, namely, £5,250,000. With the Wagons-Lits ordinary shares selling at about 35s., the present market value of the trust's investments is about £888,500, a depreciation of over 80 per cent. Last year the Trust's income from its holding in Wagons-Lits was only £857 2s. 10d., representing the net amount received in respect of the statutory dividend on its holding of 30,000 preference shares of Wagons-Lits, no dividend having been declared in respect of the ordinary shares. After deducting the debit of £1,504 on the past year's working, there is a balance of £10,538 to the credit of profit and loss to be carried forward. The results of the

Trust for the past three years are shown in the following statement:—

Year to May 31.	1929.	1930.	1931.
Dividends received	£ 60,069	£ 60,258	£ 857
Total income	61,710	61,641	2,004
Net income (after tax and expenses) ...	54,825	55,623	Dr. 1,504
Earned %	1	1	Nil
Paid %	1	1	Nil
Carried forward	8,919	12,042	10,538

As for the Wagons-Lits, this purveyor of luxurious travel is suffering, first of all, from the trade depression, which has affected traffics generally and the work of the agencies (including Thomas Cook) in particular, and from the extremely heavy depreciation which has to be written off its rolling stock each year. The results for the past three years compare as follows:—

(In thousands of francs.)	1928.	1929.	1930.

* Including 2,643,000 frs. profit on realisation of investments.
 † No dividend on ordinary; represents by 5 per cent. statutory fixed dividend on pref.

In the light of subsequent events it is clear that the International Sleeping Car Trust was greatly over-capitalised at the outset. A reduction of capital would appear inevitable.

English Sewing Cotton.—In a preliminary statement issued this week the directors announce that for the financial year ended March 31st last net profits amounted to £221,522, compared with £339,439 for the previous twelve months, a decline of nearly 35 per cent. Preference dividend again requires £50,000, while the ordinary dividend, reduced from 12½ per cent. to 10 per cent., is not fully covered by earnings. The sum of £81,430 is carried forward, against £109,908 brought in.

1924	28.9	20	1929	21.8	15
1925	19.4	20	1930	15.0	12½
1926	10.9	20	1931	8.5	10

The last balance sheet showed a strong reserve position and a big surplus of liquid assets. At their present price of 41½ the £1 ordinary shares give a yield of about 46 18s. per cent., allowing for the final dividend.

Preliminary Notice.

PETER JONES LIMITED

(Incorporated under the Companies Acts, 1908 and 1913.)

DEPARTMENTAL STORES OF SLOANE SQUARE

Issue at 97½ per cent. of £350,000

6% Guaranteed First Mortgage
 Debenture Stock

Guaranteed as to Principal, Premium and Interest
 by

JOHN LEWIS & COMPANY, LIMITED

The Prospectus will show *inter alia* that:

Both companies carry on the business of departmental stores, selling drapery, millinery, costumes and piece-goods, china and glass.

The Combined Net Assets of the two companies amount to £1,780,264 covering the amount of the Debenture Stock OVER 5 TIMES.

Nothing is included in these figures for the valuable goodwill.

The Combined Average Yearly Profits for the past three years, ending January 31st, amount to £99,533

covering the annual interest requirements of the present issue approximately 4½ TIMES.

The Profits of the businesses for the present year should be at least equal to those of the past year.

Redemption at the price of 101 per cent. will be effected by a 1 per cent. Cumulative Sinking Fund commencing 1933.

The issue is unconditionally guaranteed as to Capital, Interest and Repayment by JOHN LEWIS & CO., LTD.

Copies of the Prospectus and Forms of Application can be obtained from:

THE BANKERS. Midland Bank, Ltd., Poultry, London, E.C.2, & branches.

National Provincial Bank, Ltd., 15 Bishopsgate, London, E.C.2, and branches.

THE BRITISH, FOREIGN AND COLONIAL CORPORATION, LIMITED,

B.F.C. House, Gresham Street, London, E.C.2.

Italian Gas Company Scandal.—Our Italian correspondent writes:—The last shareholders' meeting of the Italian Gas Company (Società Italiana per il Gas), held in Turin on June 12, 1931, will be long remembered for the ruthless denunciation by the new chairman of the company, Senator Frassati, of the follies of the company promotion mania of past years. The Italian Gas Company was a holding company in control of several producing gas companies, with a total gas sale in 1930 of 203,121,865 cubic metres. If the company had confined itself to its business its 260 million lire capital would not have been put in jeopardy. But the group, headed by the last chairman, Signor Panzarasa, now in custody, was not content with so modest an undertaking as the sale of gas. They determined, first, to extend the company's activity to industries, especially the chemical industry, which had nothing to do with gas making, and therefore acquired large controlling interests in the Argenteria, Aena, Marengo, and Schiapparelli companies. Secondly, they created various financial companies, through which they carried on Stock Exchange and credit transactions, enabling them to maintain shares at artificially high levels and to distribute imaginary dividends. The Sagacia Company was created on June 30, 1928, to buy 418,534 shares of the Italian Gas Company, the property of directors, at prices of 320 and 371 lire. After two years the company ended its career with a debt toward the Italian Gas Company of 155 million lire and with other debts, guaranteed by the mother company, of 25 million lire. On October 30, 1928, another financial bubble was blown in the shape of the Sapi Company. In two years the Sapi's 10 million lire share capital, 5 million lire debentures, and 4 million lire loan from the Italian Gas Company had entirely disappeared. As to the industrial affiliated companies, the Argenteria, a concern which from 1924-25 to 1926-27 showed nominal profits, after putting to capital accounts sums amounting to millions of lire which were really current expenses, was bought at inflated prices by the Italian Gas Company, and finally presented its parent with a 46 million lire loss. The Schiapparelli (Chemical) Company in 1929 distributed in dividends 1,600,000 lire of so-called profits; in 1930 a 14 million lire loss was disclosed instead. Another chemical company, the Aena, closed its various adventures with a debt of 313.5 million lire toward the Italian Gas Company, of which 115 millions were an absolute loss and the rest a very dubious asset. Finally, on May 17, 1930, the Gas Company bought the Marengo Company, whose capital was increased, in August, 1930, from 15 to 30 million lire. To-day its capital is entirely lost. After disaster had overtaken the Panzarasa group the task of cleaning up was begun in earnest, under the efforts of Senator Frassati and his colleagues. For almost a century gas shares have been regarded in Italy as virtually a gift-edged investment, and many families have been ruined by the fall of the gigantic combine which had absorbed almost all the private Italian gas companies. During 1930 the company suffered an operating loss of 73.9 million lire, which more than wiped out all its reserves (67.9 million lire). As to capital losses, only further months of thorough inquiry will reveal the whole truth.

Tronoh Group Results.—The issue of the annual report of the Tronoh Mines was heralded by a sharp advance in the price of the shares. Actually, although the showing is relatively good, all things considered, it scarcely justifies the movement in the share market. The net profit amounted to £36,900, as against £138,900 in 1929, the former sum including £9,400 from realisation of investments and the latter £40,000. The dividends, which totalled 12½ per cent. in place of 32½ per cent., absorbed slightly more than the year's working surplus. In respect of 1929, depreciation to the amount of £37,500 was written off the fixed assets. Some £89,400 has been transferred from share premium account, reducing the book value of the whole of the property and plant in the East to the almost nominal figure of £100,000. This creates a very strong position; but had depreciation been allowed out of the 1930 earnings, no dividends could have been

distributed. The company, of course, is a holding as well as a producing concern. In the latest balance sheet the share investments figure at £378,050, or £49,150 more than twelve months previously, while cash has been reduced from £105,050 to £10,050. With only four dredges running the output totalled 834 tons, in place of 1,324 tons. Two dredges have been held up under the restriction scheme. The subsidiary, Southern Tronoh Company, worked its two dredges for ten months and produced 567 tons of ore. After providing for depreciation, a profit of £14,300 was realised, as compared with a loss of £1,700 in 1929, when an initial seven months' work was covered. The surplus now available is practically absorbed by the dividend of 2½ per cent. paid, together with the debit balance brought forward and the preliminary expenses. The profit of the Sungei Besi totalled £5,160, as against £17,400, and one dividend of 2½ per cent. was paid in place of an aggregate of 12½ per cent., leaving the somewhat enhanced balance of £32,050 to go forward. With this company also an appropriate was made from share premium account for the purpose of writing down the fixed assets, the sum involved being £21,950. In all three cases, of course, the effects of curtailment of output were accentuated by the fall in the price of the metal.

Anglo-Dutch Plantations.—The accounts of this important plantation company for the year 1930 show that the sharp decline in the market value of its commodities has had a serious effect on profits. Dividends and interest received from the Java operating company total only £102,708, compared with £453,916 last year, while net profit, after deduction of all charges, has fallen from £310,472 to £28,942. No distribution is made on the £2,350,350 of ordinary capital:—

Year to December 31.	1928.	1929.	1930.
Gross receipts	£ 345,713	£ 451,956	£ 136,152

Earned %	12.1	14.1	1.2
Paid %	10	10	Nil
Reserve	50,000	50,000	...
Carried forward	119,651	145,088	174,030

* After bringing in £11,309 from taxation account.

The informative report provides all the explanation necessary as to the cause of the decline. Though the rubber crop increased from 13,129,158 lbs. in 1929 to 13,211,630 lbs. in 1930, and the average cost declined from 6½d. to 5½d. per lb., the net selling price fell from 9.54d. per lb. to 5½d. per lb. The coffee crop was unfavourably affected by the drought of 1929, while the tea output was restricted in conjunction with that of other estates. The balance sheet reveals substantial reserves and a satisfactorily liquid position. The company should be in a position to take immediate advantage of any upward trend in commodity prices. The £1 ordinary shares are quoted at 16s. 8d., against a high level for the year of 19s. 1½d. and a low level of 14s.

Rhodesian Anglo-American.—In the initial period of about sixteen months to March 31, 1930, this undertaking made from share dealings and other sources a profit of £712,700. Income tax absorbed £144,200 and preliminary expenses £27,100; while £217,800 was transferred to reserve, leaving £323,600 to go forward. Last year the surplus amounted to only £83,600. Income tax required £22,300 and stamp duty on increase of capital £30,000.

Debenture issue expenses swallowed up £72,500, and a further transfer of £158,400 was made to reserve. These appropriations reduced the amount carried forward to £124,000. By the appropriation of £158,400, plus £655,900 premium on shares issued during the year, the reserve was raised to £4,314,300. From this total £2,914,300 was devoted to writing off depreciation on investments. Thus, despite acquisition during the period, the investments now stand at £4,048,900 in place of £5,662,400 on March 31, 1930. The policy of making full provision for depreciation has been followed in order that corresponding advantage may be taken of future recoveries in price. In the past accounting period 182,200 shares were placed at 32s. 6d. and 600,000 were offered to the members at 30s. Those who subscribed have since seen the price of the shares well below par (10s.), and even now it is not much better. This year an issue of about £1,500,000 7½ per cent. debentures has been made to enable the company to apply for its proportion of the 7 per cent. debentures of the Rhokana Company. The future of the Rhodesian Anglo-American is, of course, bound up with the fortunes of the Rhodesian copper industry. To those interested a sustained rally in the metal is a matter of primary importance.

Aramayo.—Given a drop of 30½ per cent. in the average price of tin, and of 31½ per cent. in that of silver, it is no matter for surprise that last year's operations on the part of the Compagnie Aramayo de Mines en Bolivie should have resulted in a loss. The deficit on actual working was quite small; but after allowing for the difference between mine and market valuation of metals on hand, loss on exchange, etc., the debit amounted to £30,200, reducing the credit balance to £122,600. Naturally, no dividends were paid, although at the annual meeting, held at Geneva, the chairman hinted that in the event of there being a considerable improvement in metal markets during the current year, the question of a bonus would receive the consideration of the board. In respect of 1929 the distributions totalled 25 per cent. During the past session the output of tin was

restricted, and will be reduced in a more marked degree this year. Sales of silver showed a small increase; of copper, a substantially larger tonnage was realised, but at a reduced price. The Chocaya ore reserves total 165,300 tons, against 203,600 tons twelve months previously. The production of silver being unremunerative at the present level, the management is concentrating upon an improvement in the recovery of tin, and to this end a flotation plant is to be installed. Much depends upon the effects of the restriction now being enforced in the four principal tin-producing countries.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Imperial Bank of Persia, Grange Trust, Rhodesian Anglo-American, Zinc Corporation, Amalgamated Dental, and International Tea Company's Stores. Presiding at the annual meeting of the Imperial Bank of Persia, Sir Hugh Barnes said that the object of the Persian Government's restrictions on the importation of foreign goods was to create a favourable trade balance which would tend to prevent a further fall in the value of the ryal. Unless complete freedom of exchange were restored in due course, and the Government was prepared, either through a Currency Commission or the banks, to use its funds in Europe to maintain parity of exchange, there was a serious risk that the ryal might depreciate as the ryal had done. At the annual meeting of Amalgamated Dental, the chairman said that dentistry had long out-lived the period when it was commonly regarded as a luxury, and people everywhere were becoming increasingly "teeth conscious."

CAPITAL ISSUES.

The *Tanganyika Government Loan* of £3,000,000, giving a running yield of £4 4s. 8d. per cent. and a redemption yield, on the latest date, of £4 5s. 8d. per cent., was, naturally, well received in the market. The stock was not merely a trustee investment. Its principal and interest being guaranteed by the British Treasury, it was tantamount to a British Government security, offered at a price three points below Funding Loan. Possibly for "Treasury" reasons, the prospectus did not entirely make clear that the loan, like similar issues for Crown Colonies or mandated territories, was free of income tax to residents abroad. The issue was heavily over-subscribed, applicants receiving on the average allotments of about 12 per cent., and market dealings opened at a quarter premium. Signs of slightly increasing activity in the new capital market generally, before the advent of the summer "close season," are increasingly in evidence. As we go to press underwriting has been arranged for an issue of £350,000 6 per cent. guaranteed first mortgage debenture stock, at 97½, of Peter Jones, Limited, the well-known London drapers, guaranteed by John Lewis and Company, of Oxford Street. Another pending issue comprises 300,000 7 per cent. cumulative preference shares of £1 and 400,000 ordinary shares of 5s. (at 20s.) in Great Universal Stores, Limited, a mail-order business established in 1900.

COMPANY MEETINGS, &c.

GRANGE TRUST, LIMITED.

INVESTMENTS WELL SPREAD.

The fifth ordinary general meeting of the Grange Trust, Limited, was held at 71, Queen Street, E.C., Sir William McLintock, G.B.E., C.V.O., presiding.

The representative of the Secretaries (Messrs. Thomson McLintock and Company) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said:—It will be observed from the balance sheet that the book said at the date of the balance sheet was 261, representing an average at the date of the balance sheet was 261, representing an average holding of approximately £3,500 in each security. Of these securities approximately 36 per cent. consists of bonds, loans and debentures, 26 per cent. of preference stocks and shares and the balance of 38 per cent. of ordinary stocks and shares.

EFFECT OF FINANCIAL DEPRESSION.

The financial depression, of which we were already beginning to feel during the past year, and has affected every country in the world. A study of the trend of security values reveals the fact that the contraction in the value of securities as a whole prevailed throughout the year with the exception of a slight check in September, 1930, and again in March, 1931. From March until May the rate of fall was, if anything, accelerated, the securities indices published by the *Investors' Chronicle* showing a drop of over 10 per cent. in April and May alone to the lowest level reached in recent years. In these circumstances it is not surprising that the value of the company's investments at the date of the balance sheet showed a depreciation of approximately 27 per cent. on the book value, or, after taking into account the amount at credit of general reserve and the balance of undistributed profit carried forward, a net depreciation of approximately 22 per cent.

In view of the wide spread of its securities, the company will participate fully in any general improvement in security values which may occur when the present period of depression ceases. In this connection I would point out that our borrowings are comparatively small, and we are, therefore, in a favourable position to make additions to the company's portfolio whenever we think there are definite signs of an improvement in world conditions.

REVENUE AND DIVIDEND.

The net revenue for the year, after charging expenses of management, interest and income tax, amounted to £36,305, as compared with the net revenue for the preceding year of £38,334. The reduction in this amount was in part attributable to the increase in the standard rate of income tax from 4s. to 4s. 6d. in the £, but a further factor has been the reduction in the amount of income received from our holdings, particularly in the case of equities.

There is at the present time little or no prospect of any immediate change in conditions, and it is possible, therefore, that the effect of the trade depression upon our investment income may be accentuated during the coming year. Having this possibility in mind, the directors consider that it would be prudent to restrict the final dividend on the ordinary stock to 2½ per cent., which, with the interim dividend of 2½ per cent. paid in December last, will make a total distribution for the year of 5 per cent. As the balance brought forward from the preceding year amounted to £1,814, the total amount available for distribution is £38,119, out of which there has been deducted the dividend on the preference stock for the year amounting to £14,639, and the interim dividend on the ordinary stock of 2½ per cent. actual paid in December, 1930, amounting to £7,268, leaving a balance of £16,214 now to be dealt with. The final dividend of 2½ per cent., less tax at 4s. 3d. in the £, now recommended by the directors to be declared payable on the ordinary stock will absorb £7,373, leaving a balance of £8,841, which they propose should be carried forward to the ensuing year.

The rate of income tax to be deducted from the foregoing dividend is calculated by reference to the standard rate of 4s. 6d. in the £ under deduction of an amount of 2½d. in the £, representing Dominion income-tax relief due to be refunded to the shareholders. A corresponding adjustment has been made on the payment of the preference dividend for the half-year ended on May 31st last.

The increase in the amount of the carry-forward represents an amount approximately equal

THE AMALGAMATED DENTAL COMPANY, LIMITED.

SUCCESSFUL RESULTS.

The twenty-six annual general meeting of the Amalgamated Dental Company, Limited (formerly Claudius Ash, Sons and Company, Limited, and De Trey and Company, Limited), was held, on the 6th instant, at the Holborn Restaurant, London.

Mr E. Russell Polden (the chairman) said that the economic depression at home had become worldwide, and, even allowing for the special nature of their trade, that had had its effect. It might be said, however, that so far it had suffered in a less degree than was the case in many other spheres of endeavour, and they had succeeded in maintaining a sound trading position which should enable them to secure such benefits as any improvement in affairs might make possible.

The volume of business throughout their organisation had somewhat diminished during the year, but the resulting profits had been reasonably maintained. Profits from trading were £218,444, which was £4,387 less than for the previous year. They recommended a dividend of 3d. per share, free of income tax, on the deferred ordinary shares, the same as in the previous two years.

The possibilities of the dental industry might be better understood when consideration was given to the relation which its activities might be said directly to have on the good health and good appearance of the masses. Dentistry had long out-lived the period when it was commonly regarded as a luxury, and no one could gainsay that sound, healthy, clean teeth were an essential and vital part of good appearance. There was little doubt that people everywhere were becoming increasingly "teeth conscious."

Their company was engaged in a business which was devoted exclusively to the manufacture and supply of essential commodities to one of the most progressive professions existing at the present time. It enjoyed the collaboration of eminent professional men in its research and in the technical development of many of its high-grade products, which had a world-wide reputation and sale.

On the commercial side the activities of the company were supported by a highly organised technical service devoted to the development of new and better materials and appliances. They deemed it their duty to continue to exert every possible effort towards the production of the highest grade material and appliances, and they did so in the confidence that the professional man would fairly discriminate between the relative importance of price and quality. In such an industry as theirs the factor of quality was paramount.

The report and accounts were unanimously adopted.

ZINC CORPORATION, LIMITED.

EFFECT OF MR. HOOVER'S DEBT PLAN.

The twentieth ordinary general meeting of the Zinc Corporation, Limited, was held, on the 8th instant, at River Plate House, London, the Right Hon. Sir Robert Horne, M.P. (the chairman), presiding.

The Chairman, after referring to the adverse effect of the catastrophic fall in metal prices upon the company's revenue, continued: We are not alone in this kind of experience, nor are the producers of metals the only sufferers. All commodities have shared the same fate.

Prices fell disastrously, and it required a much greater volume of goods to pay debts estimated in gold, while the cost of producing them could not be reduced sufficiently to conform to the decrease in price. On all debtor nations the burden became very severe, and in the case of some too great to be borne.

To a Europe staggering towards disaster there came the announcement that a respite was to be proclaimed for payment of war debts; and immediately a change for the better occurred. The first effects were doubtless mainly psychological, but there is a material core to these subjective signs. Mr Hoover's declaration is the first check to the increasing evil of the maldistribution of gold, and gives commodities a chance to be restored to a more favourable level of prices. It gives ground for hope that the stock of gold in the hands of the United States of America, and also of France, will now be used as a basis for long-term loans which will not only help to rehabilitate straitened countries, but enable them to develop new enterprises and stimulate the trade of the world.

A year ago I referred at length to the position of Australia and the causes of the grave problems with which she was so suddenly confronted. The intervening period has been one of surpassing difficulty in the Commonwealth, but I am happy to be able to say that improvement can now be detected, and the outlook there is more encouraging than it has been for some time past. We are confident of her resolution and the ability of the majority of her people to carry through all the necessary adjustments demanded by the changed economic situation.

Before concluding my address to you, I must refer to the outlook for the commodities which we are engaged in producing. I believe

this to be brighter than for some time past. Consumption of lead is increasing—slowly, it is true, but the movement is gaining force, and I am hopeful that ere long stocks will be reduced to more comfortable proportions and the output of the mines now at work fully absorbed. Zinc has been down to prices unparalleled in the history of the industry, and unprofitable to every producer. An adjustment long overdue is now taking place, and I think that a further improvement should follow. We have, as I think, passed through the worst crisis of the lead and zinc industries, and those properties which enjoy natural and geographical advantages, combined with skilled and industrious operation, should from now onwards have much more favourable prospects.

The report and accounts were adopted.

RHODESIAN ANGLO-AMERICAN, LIMITED.

IMPORTANT COPPER INTERESTS.

The second ordinary general meeting of the Rhodesian Anglo-American, Limited, was held, on the 9th ultimo, at Winchester House, London.

Sir Edmund Davis (deputy chairman) said that since March 31, 1930, they had created a debenture debt of £1,500,000, carrying interest at the rate of 7½ per cent., in order to place the company in a position to apply for its proportion of Rhokana Corporation, Limited, 7 per cent. 20-year convertible debentures in respect of its shareholding not only in that Corporation but also in the Bwana M'Kubwa Copper Mining Company, Limited, and to underwrite a proportion of the issue.

The Rhodesian Anglo-American Company's principal interest, in which they had embarked a very large amount of capital, was in the copper propositions now being developed and equipped in Northern Rhodesia. He had previously stated that their policy was to retain their interests in their various Northern Rhodesian holdings, and ever since the date of their last ordinary general meeting they had gradually increased those interests and were satisfied that those investments should in the course of time prove profitable. There might be some delay before they could take full advantage of the expected improvement, a delay in no way occasioned by anything connected either with the development or with the equipment of the properties, but by the general world depression, and, in particular, the present state of the copper market, Northern Rhodesian mines were expected to produce when in full operation at a cost well below the lowest of the figures of United States-owned copper mines.

The Rhokana, Roan and Mufulira companies had entered into a 13 years' contract from October 1st next with the Rhodesian railways, under which, in consideration of the mining companies undertaking to send the whole of their output and import the whole of their supplies on the Rhodesian system, the railway companies reduced their maximum rates charged to the mining companies on copper, coal, general goods, plant and machinery. There was thus an immediate and substantial reduction in expenditure on railway freights.

In reference to fuel supplies, the mining companies had also entered into a 13 years' contract with the Wankie Colliery Company for the supply of all their coal requirements, which meant a supply of excellent coal at fair rates for the mines as well as additional secured traffic for the Rhodesian railways.

He referred to the remarks of Sir Herbert Oppenheimer at the meeting of the Anglo-American Corporation of South Africa, in which it was stated that the initial capacity of the plant now being erected by the Rhokana Corporation would be 7,000 tons of ore per day, which was estimated to be ready to be produced towards the end of 1931. Nothing had so far happened to lead to an alteration of those views.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To: Publisher, "Economist Newspaper Ltd.,"

8, Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

INTERNATIONAL TEA COMPANY'S STORES, LIMITED.

ANOTHER RECORD YEAR.

The annual general meeting of the International Tea Company's Stores, Limited, was held, on the 7th instant, at Winchester House, London.

Mr Guy Collier (chairman, and one of the joint managing directors), who was received with applause, said that it was very gratifying to him to be able to announce another record year. They had gone from success to success ever since the ordinary shares of the company were placed on the market early in 1928. The profit in 1927 were £796,089; in 1928, £579,553; in 1929, £675,919; in 1930, £755,359; and in 1931 the trading profit was increased to £820,163, a very satisfactory result of four years' good, sound solid work.

It was proposed to pay a final dividend on the ordinary shares of 18 per cent., making 30 per cent. for the year. With regard to the reserves, they had made a new departure by placing £50,000 to the general reserve, and £100,000 to a reserve for the equalisation of dividends, the directors feeling that shareholders would like to be confident that, whatever the vicissitudes in other companies and industries, a safeguard existed in the case of the International against so unfortunate a contingency as the passing of a dividend.

With regard to the negotiations last year for amalgamation of the business of the company with others, the board had ultimately formed the definite conclusion that it was better in the interests of the shareholders, that the company should retain its independence, and that the amalgamation should not proceed; so it had been dropped. The results which had been achieved during the past year were a satisfactory vindication of their action.

He was very hopeful that last year's progress would be maintained. They continued to expand, and they had quite a lot of useful irons in the fire which should add materially to the revenues of the company. He moved the adoption of the report and accounts.

Mr Colin Cooper (vice-chairman, and one of the joint managing directors), in seconding the motion, said that they had seen suggestions that retailers had not handed on to the consuming public the reduction of prices. So far as this company was concerned, the price reductions had greatly increased their turnover. They had made a smaller percentage of profit on more produce, and a great deal of their success had been due to the rapidity with which they had handed on reductions of price to the consumers.

The resolution was carried unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the four days ended July 4, 1931, amounted to £8,435,800 against ordinary expenditure of £16,512,300. There was no allocation to Sinking Fund, but after having allowed for an increase in Exchequer Balances of £80,924, the operations for the four days, as shown below, increased the National Debt by £8,157,000 to £7,638,806,000:—

(000's omitted.)	
Treasury Bills	+25,661
National Savings Certificates	+ 350

THE NATIONAL CITY BANK OF NEW YORK.—The total resources of the National City Bank of New York as at June 30, 1931, amounted to \$1,973,140,000, as compared with \$1,842,885,000 on March 25, 1931, and \$2,078,337,000 on June 30, 1930; while deposits totalled \$1,460,557,000 as at June 30, 1931, against \$1,339,611,000 on March 25, 1931, and \$1,560,268,000 on June 30, 1930.

MISCELLANEOUS.

BRITISH COLUMBIA POWER CORPORATION, LTD.—The British Empire Trust Company, Ltd., announce that the Board of Inland Revenue have allowed relief from United Kingdom income tax in connection with dividends paid during the years 1928-29 and 1929-30 to shareholders of the British Columbia Power Corporation, Ltd., in respect of the payment of Dominion income taxes by the company at the rate of 2s. 4d. in the £, or one-half of the shareholders' "appropriate rate of United Kingdom income tax" for each year. Shareholders desiring to claim the relief should apply to the local inspector of taxes, enclosing the relevant certificates of deduction of income tax. Copies of circulars setting out particulars may be obtained on application to the British Empire Trust Company, Ltd., Stafford House, 14-20 King William Street, London, E.C.4.

CONSETT IRON COMPANY, LIMITED.—The profit for year ended March 31, 1931, amounted to £286,467, comparing with a profit of £468,011 in preceding year. Interest on debenture stock absorbs £150,000 as before. This leaves £136,467, to which is added £101,266 brought in, making £237,733, which is carried forward. No dividend is paid on preference or ordinary shares. In preceding year one year's preference dividend was paid on January 1, 1930 on account of arrears. The directors add that "the outlook for trade at the moment shows no signs of improvement anywhere. The coal situation as regards this company's operations has so far not been helped by the Coal Mines Act, and the shipbuilding industry, on which the company chiefly depends as regards iron and steel, is more depressed than it has been for very many years." Stocks have risen from £662,564 to £961,852. Debtors are lower at £349,962 compared with £468,890. Investments are at £230,262 compared with £275,262. Bank overdraft is £440,650 against £347,228.

DUNLOP RUBBER COMPANY, LTD.—The directors of the Dunlop Rubber Company, Ltd., announce that for the purpose of assisting holders of their ordinary stock whose holding is not an exact multiple of £1 to adjust the holding by disposing of the odd fraction of 6s. 8d. or 13s. 4d., or acquiring the necessary additional fraction, they are prepared to waive the registration fee of 2s. 6d. on transfers of such fractions presented to them for registration up to December 31st next.

IMPERIAL AND INTERNATIONAL COMMUNICATIONS, LTD.—The following are the estimated traffic receipts for five months ended May 31, 1930 and 1931:—

	1930.	1931.	Rise or Fall.
	£	£	£
January	519,485	412,908	- 106,577
February	460,052	390,461	- 69,591
March	492,516	447,668	- 44,848
April	456,120	386,706	- 69,414
May	466,279	371,704*	- 94,575

Aggregate for five months,

January-May, 1930 and 1931... 2,394,252 2,009,447† - 384,805

* The sum of £22,000 must be deducted from the message receipts for May, 1931, in making a comparison with May, 1930, owing to changed conditions of sharing traffic.

† In comparing aggregates, regard must be had to the notes issued with the March and April traffics.

Imperial and International Communications, Ltd., announce that as from July 1, 1931, arrangements have been made for the introduction of a night letter telegram service with Ecuador. The rates from Great Britain are: Night letter telegrams to Ecuador—minimum for 20 words, 16s. 8d.; each additional word, 10d.

CANADIAN PACIFIC.—On October 2 the Canadian Pacific liner "Empress of Australia," a magnificent oil-burning vessel of 22,000 tons, will leave Southampton on a delightful three weeks' cruise to the Mediterranean. An interesting itinerary has been arranged, visits will be made to Ceuta, Palma, Ajaccio, Susa, Monte Carlo, Barcelona, Algiers, Casablanca, &c. The "Empress of Australia," popularly known as the "Dreamship of Cruises," is famous the world over for her steadiness and comfort. She has a Pompeian swimming pool, ballroom, sports deck, gymnasium, &c. Full particulars may be obtained from the Cruise Department, Canadian Pacific, 62-65 Charing Cross, London, S.W.1.

Commercial Reports.

MARKET SUMMARY.

The general situation in the commodity markets has been unsettled. In some cases no recovery took place from the reaction last week, while in others prices advanced sharply on Monday only to fall back again later in the week. Although the passing by Parliament of the Government's Coal-Mines Bill, imposing a uniform 7½ hour day in all the coalfields of the country, and guaranteeing existing minimum wages for a period of twelve months has removed fears of a stoppage, there has been no improvement in the situation of the coal trade. In the iron and steel industries the slight improvement resulting from the advance in Continental prices has

been maintained, but the total volume of transactions remains small. The sharp advance in non-ferrous metals reaching its highest level on Monday was lost by the subsequent reaction. Among textile raw materials, cotton was easier and at the opening of the fourth series of sales in Coleman Street, wool was from 5 per cent. to 15 per cent. cheaper than at the close of the last auctions. Jute advanced on the publication of this year's acreage in India, which is only about 55 per cent. of that of last year. Among cereals wheat has been easier, but food prices generally have been maintained. Rubber has been dull, but hides were a little dearer and vegetable oils and oilseeds remained steady.

THE COAL TRADE.

SHEFFIELD.—There has been no improvement in forward buying of steam coal for export, although best qualities are the reverse of plentiful. Export merchants have been holding off owing to the uncertainty of the position of the industry and possibilities of a stoppage. Demand for industrial fuel continues weak and the house-coal trade is extremely quiet except for the very best qualities, which command good prices. Blast-furnace coke is neglected and there is an excess of production with further easing of prices. Current quotations are: Best steams, 17s. 6d.-18s. f.o.b.; best ordinary house, 18s. 6d.-20s. at pits; and blast-furnace coke, 10s.-11s. at ovens.

GLASGOW.—The Scottish market has been unsettled by the developments in connection with the miners' hours and wages. These have had the effect, on the one hand, of prompting some covering purchases and, on the other, of causing many other buyers to curtail their purchases. Generally, both the collieries and merchants have been acting very cautiously, but so far as prices are concerned the tendency has been upward, although the movement has not so far gone very far. Supplies of most qualities of large coal are plentiful, but one or two sizes of nuts show some scarcity. Market quotations for the shipping trade are nominally round the following (f.o.b. district ports):—LANARKSHIRE.—El best, 14s.; splint best, 16s.; splint second, 14s. 6d.; navigation 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 12s.; doubles, 11s. 6d.; singles, 10s. 6d.-10s. 9d.; pearls, 9s. 6d.; dross, 9s. FIRE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 6d.; third-class steam, 10s. 6d.; trebles, 11s. 6d. to 13s.; doubles, 11s.-11s. 6d.; singles, 10s. 9d.; pearls, 9s. 3d. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 6d.; trebles, 12s.; doubles, 12s.; singles, 10s. 6d.-10s. 9d.; pearls, 9s. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 12s. 9d.; trebles, 12s.; doubles, 11s. 6d.-11s. 9d.; singles, 10s. 9d.; pearls, 9s. 3d.-9s. 6d.; dross, 9s. 6d.

CARDIFF.—The acceptance by Parliament of the Government's new Coal Mines Bill, imposing a uniform 7½-hour day in all the coalfields of the country, and guaranteeing existing minimum wages, for a period of 12 months, has removed all fears of a stoppage, but the position on the Cardiff coal market is otherwise unchanged. Current inquiries continue extremely scarce, contractors are delaying shipments owing to accumulating stocks abroad, particularly in France; colliery owners are finding it difficult to find outlets even for their reduced quotas; and for all grades prices are being maintained only on the strength of the marketing provisions of Part I of last year's Coal Mines Act. The decision of the Egyptian State Railways on the tenders for the September quarter deliveries has not yet been announced. Total foreign coal shipments from the South Wales ports in June were unexpectedly favourable, showing increases both on May and on June, 1931. Market quotations are unaltered.

IRON AND STEEL.

MIDDLESBROUGH.—There is no change in the position in regard to Cleveland iron. Sales are on a low level and almost confined to early delivery, and this is likely to continue so long as makers adhere to the present official prices. Official prices were announced as unchanged by the local makers at Tuesday's weekly market, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t., and very little business was transacted. Hematite iron exhibited a firmer tone and although no large deals are being put through producers are making a stand against any further cuts in prices and now generally quote 62s. 6d. for ordinary mixed numbers for early delivery and 62s. 9d. to 63s. a few months ahead. A fair number of orders are coming to hand on home account and occasional sales are being made for export, but they are lots of only moderate size and for early delivery, buyers still hesitating about entering into forward purchases. In the finished departments very little new business is being booked, but Dorman Long and Company, Ltd., have secured an order said to be valued at about £80,000 for structural steel material for the new offices of the Somerset County Council at Taunton. It is also a refreshing experience to hear that two shipbuilding orders have been placed recently, Messrs. Swan, Hunter having secured a contract for a moderate-sized steamer to be built at their Southwick yard on the Wear, and William Gray and Company, Ltd., of West Hartlepool, an order for a 9,000-ton cargo steamer for Sir Robert Ropner and Company of that port, for the ore and coal-carrying trade in Canada. Prices for steel materials are unchanged, but the result of the steel makers' meeting in London on Friday is awaited with interest. It is generally expected that some reductions will be made. The ore market continues idle, and Bilbao rubio is nominally unchanged at 15s. c.i.f. for early delivery, and the rate of freight Bilbao/Middlesbrough is 4s. 3d. Coke is in abundant supply for early delivery at 15s. per ton delivered for good blast furnace qualities, and this price might be shaded for a specially prompt order. The number of furnaces in blast in the district is unchanged at 22.

SHEFFIELD.—International action with regard to war debts has had an unsettling effect upon trade, while inspiring confidence in the future. The iron and steel branches continue dull and lifeless, with production at a low level in all departments. Controlled prices have been renewed this week in all cases. Competition is keen or the orders for railway steel in connection with the Boxer fund, and extremely low prices have been tendered. The volume and value of this work is much less than had been expected and Sheffield's share will be confined to axles, tyres and springs and forgings and castings for locomotives and machinery. The con- tracts include eight locomotives, 20 carriages and 10,000 tons of steel sleepers. Demand for shipbuilding steel has never been so poor. The same may be said of foreign railway work. The largest buyers of stainless iron and steel are the chemical manu- facturers, who use this material extensively in the equipment of their works. In the erection of one large chemical works recently nearly 1,000 tons of stainless steel were used. In the finished branches of local trade permanent magnets is the only active line. Prior to the war this trade was entirely in German hands. A few Russian orders are about.

GLASGOW.—In the West of Scotland markets are generally firmer and on the whole the tone is brighter. Plants are still only partially employed, and although there has been more activity at some of the works it has been caused chiefly by the necessity of pushing on to complete orders before closing down for the annual holidays. Within the past week a further small order for loco- motives has been placed with a Glasgow firm, and the placing of an order for a ferry steamer with Messrs. Harland and Wolff by the Wallacey Council will give considerable employment to Govan workers, the cost of the ferry being over £45,000. The demand for black sheets for overseas continues to show improvement and there is also a somewhat better demand for galvanised. Prices, however, both for black and galvanised are keenly cut.

CARDIFF.—A more hopeful tone has featured this week's market for South Wales tinplate. A larger volume of business was reported on the Swansea Metal Exchange on Tuesday, and prices were fairly firm at from 13s. 6d. to 14s. per basis box. South Wales steel bars are unchanged at £4 12s. 6d. per ton delivered. The market for galvanised sheets remains very depressed, with prices ruling at £9 15s. per ton.

OTHER METALS.

TIN.—The sharp advance at the end of last week culminating on Monday when £119 to £119 2s. 6d. was paid for "standard cash" per ton was not maintained. On Tuesday, the metal began to decline under heavy liquidation. Wednesday's official closing quotation for "standard cash," at £113 5s. to £113 7s. 6d. per ton, compares with £113 2s. 6d. to £113 5s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 32,076 tons, show a decrease of 116 tons on the week.

COPPER.—The recent advance in copper prices in the United States has not been maintained. Copper Exporters, Inc., reduced its minimum price for "electrolytic," c.i.f. Continent from 9.275 cents per lb. to 8.775 cents per lb., this leaving it only 0.25 cents above the low level reached early in June. The reaction in cents above the low level reached early in June. The reaction in New York weakened the market in London, and Wednesday's official closing price for "standard cash" in London, at £35 to £35 2s. 6d., compares with £36 to £36 2s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 16,280 tons, show a decrease of 131 tons, while stocks of rough copper, at 1,161 tons, were 74 tons smaller.

LEAD.—Although until Wednesday quotations in New York remained unchanged at 4.40 cents per lb. for "spot," the metal weakened in London later in the week under selling pressure. Wednesday's official closing quotation for "soft foreign" in London, at £12 16s. 3d. to £13 2s. 6d., compares with £13 to £13 7s. 6d. on the corresponding day last week.

SPELTER.—Spelter benefited by the general rise in metals on Monday, but quotations declined on Tuesday and Wednesday, supplies being in excess of requirements. Wednesday's official closing quotation in London for "good ordinary brands," at £12 2s. 6d. to £12 15s., compares with £12 11s. 3d. to £13 2s. 6d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. Antimony again changed hands at £23 to £23 10s. per ton for "foreign," while quicksilver remained unchanged at the recently reduced price of £17 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Spot sales for the week July 2nd to July 8th (inclusive) are 21,000 bales, of which 14,000 bales are American, 1,200 Brazilian, 800 Argentine, 3,100 Peruvian, 2,880 Egyptian, 2,150 African, 300 East Indian, 1,180 Russian and 980 sundries. Imports for the same period are 17,869 bales, of which 1,443 are American, 599 Brazilian, 3,578 Argentine, 4,502 Peruvian, 6,178 Egyptian, 1,058 African, 105 East Indian and 406 sundries. Quotations, July 8th: American Middling, 5.36; Egyptian F.G.F. Sakel, 8.25; F.G.F. Uppers, 6.47; Brazil Fair, 5.41; Peruvian G.F. Smooth, 5.71; West African Middling, 5.41; and East African G.F., 6.41. Values at our close to-night are some 21 points lower than those ruling at the close on Wednesday last week. The U.S. Government this evening estimated acreage planted at 41,491,000 acres, which shows a reduction of 10 per cent.

Manchester.—The tone of the market has continued rather better and most spinners and manufacturers have again met with

a considerable inquiry. In numerous instances, however, the prices put forward by buyers have been impracticable. On the whole there is rather less expectation of lower values. Trade in piece-goods for India is still slow to expand, but offers have been reported for larger quantities of light fabrics for Calcutta and Karachi and some very fair lots have been sold. A little more activity has shown itself in prints for Bombay. The political situation, however, remains adverse. The latest news with regard to the auction sales in China has been discouraging, but a few more cables have been received making offers for bleached shirtings and poplins, most of the buying being for Hong Kong. White goods have attracted rather more attention for Singapore. Only occasional sales have been arranged for Egypt and the Near East. Makers of printing and finishing styles have done rather better for East and West Africa and South America. Useful orders have been booked from day to day in home-trade fabrics. Trade prospects in some Lancashire towns appear to be rather brighter. Quotations in American and Egyptian yarns have been firmer, and although sales of importance have been few and far between, the turnover continues rather larger. It is still very difficult for spinners to improve prices.

THE WOOL TRADE.—Bradford.—The event of the week is the opening of the fourth series of London sales. Generally speaking, writes our correspondent, greasy combing merinos, of which the supply probably does not exceed requirements, lost about 5 per cent., greasy fine halfbreds about 7½ per cent., while other crossbreds were down 10 to 15 per cent. compared with the close of the previous series. It is safe to say that but for the Hoover moratorium proposals the declines would have been more, and the whole trade looks upon the acceptance of the terms by France as being indicative of some return to confidence among buyers of wool. The gradual settlement of the eight weeks' strike among textile workers in

to-day money has remained comparatively comfortable throughout the week. On Monday and Tuesday $1\frac{1}{2}$ per cent. was generally quoted for day loans, and on Wednesday and Thursday, though up to $1\frac{1}{2}$ per cent. was paid for further advances over the night, "old" money from lenders other than the clearing banks was reasonably plentiful and renewed mostly at $1\frac{1}{2}$ per cent.

The course of the market rate of discount reflected, but only gradually, the development of the crisis. Last Friday's applications for the £40 millions of Treasury bills offered amounted to less than £57 millions, as compared with £71 millions a week before, and the whole of the bills were allotted at an average rate of discount of £2 0s. 2.67d. per cent., or slightly more than $\frac{3}{4}$ per cent. above last week's rate. On Saturday, despite the normal ease of week-end money, the effective rate for three months' bank bills was $2\frac{1}{8}$ per cent., and on Monday the continued appreciation of the franc, to which further reference is made below, was reflected in a further rise in the bill rate to $2\frac{3}{8}$ per cent. This quotation remained effective throughout Tuesday, but on Wednesday the chaotic movements in the foreign exchange market led to most houses quoting fully $2\frac{5}{8}$ per cent. for three months' drafts, and on Thursday the rate was called $2\frac{3}{4}$ to $\frac{7}{8}$ per cent. Comparative figures for the past four weeks are given in the following table:—

	June 25, 1931.	July 2, 1931.	July 9, 1931.	July 16, 1931.	Previous Rate and Date Changed.
Bank Rate	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	$\frac{3}{4}$ (May 14, '31)
Banks' Deposit Rate...	1	1	1	1	$1\frac{1}{4}$ (May 1, '30)
Discount (Call)	1	1	1	1	$1\frac{1}{4}$ (May 1, '30)
Houses' Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$ (May 1, '30)
Market rate (3 months' bills)	2-2 $\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	$2\frac{1}{8}$	...

During business hours on Thursday the tendency of the market was to expect that the Treasury bills on the following day would go at over $2\frac{1}{8}$ per cent.

After a collapse to 30 on Monday, following the closing of the Danat Bank, the quotation for the reichsmark, as the result of the imposition of foreign exchange control in Germany, has been more or less nominal. By Tuesday, though the Paris market was still closed, the franc fluctuated between 123.80 and 123.75. The whole of the week's consignment of Cape and Straits Settlement gold, totalling £883,000, was taken by Continental purchasers after trade requirements had been satisfied, and £881,000 in bars was withdrawn from the Bank of England, apparently on French and Belgian account. This loss, however, was offset by the release of 300,000 "earmarked" sovereigns and the purchase from an undisclosed source of £657,000 in bars. On Wednesday the gold drain increased. A further £864,000 bar gold was withdrawn, while two million sovereigns were set aside. On the other hand, one million sovereigns were returned as having been received from an undisclosed source. On Thursday £3,140,691 in bar gold was sold, the destination being understood to be France, Belgium and Holland, while two million sovereigns (believed to be on Swiss account) were set aside.

This week's Bank of England return showed relatively small changes in the various items. The gold holding was £611,000 lower, but circulation showed a fall of £344,000 and the reserve proportion was maintained at a high figure of $57\frac{1}{2}$ per cent. Against a decline of £1,977,000 in Government securities, "other" securities in the Banking Department were £2,500,000 higher and, on the other side of the account, bankers' deposits were up by £1,886,000, while "other" accounts showed a fall of £1,282,000.

Various meetings of the leaders of acceptance houses and other interests were held during the week to concert common policy in the face of a situation of difficulty unprecedented except in the case of war. On Wednesday, it was decided that no German bills dated after July 11th should be considered eligible for acceptance in London,

but the general disposition of the London market was to refrain from any action calculated unnecessarily to add to Germany's embarrassments. The decision of the Bank of England authorities on Thursday to make no alteration in Bank rate was regarded as reassuring, and the policy of the Bank in giving this evidence of its own strength was welcomed and generally endorsed in the City. On Thursday, despite the large gold movements, the quieter tendency of the foreign exchange market suggested that the previous day's panicky scramble to repatriate balances to the Continent was, at least, not becoming accentuated. The situation in Germany, following the reopening of the banks, was less unmanageable than might have been feared; and the Conference of Ministers summoned for Monday in London had temporarily steadied psychology throughout the world. Thus, on the news of the day, the Bank undoubtedly acted with wisdom; and, in the event of adverse developments, it ran little risk, since there are precedents for its taking action equivalent to an increase in Bank rate on other days than Thursday.

In New York the effects of the European crisis were not reflected in any change in market rates, call money remaining steady at $1\frac{1}{4}$ per cent., with $\frac{1}{4}$ to 1 per cent. quoted for three months' bank bills. Brokers' loans as on July 9th were \$34 millions down at \$1,455 millions. Freight-car loading for the week to July 4th totalled 667,000, a fall of 124,000 as compared with a year ago. The hearing of the Inter-State Commerce Convention on the proposed 15 per cent. freight rate increase began on Wednesday. On that day July wheat and copper both dropped to a new low record. In its daily report the Federal Reserve Bank announced earmarking of \$10 millions of gold which was believed to be on French account.

After comparative steadiness on Monday and Tuesday the Foreign Exchange market was thrown into a state of complete chaos with the reopening of the Paris Bourse on Wednesday, when an apparent loss of nerve in that centre led to the heavy withdrawal of funds from London with devastating results on sterling. Even on Thursday many quotations were merely nominal, and the turnover of business was quite incommensurate with the extent of the fluctuations. New York, after 4.83 $\frac{1}{2}$, moved to 4.84. Montreal improved to 4.87. Paris, after 122 $\frac{1}{2}$, went to 123.40. Brussels, partly as a result of repatriation of funds for the Internal Loan, but later, probably as a result of the general selling of sterling, went to 34.81. Milan moved in our favour from 92.94 to 93.00. Madrid was steady most of the week at 50.70, but fell away at the close to 51.75. Amsterdam, after 12.01, stood at 12.03. Berlin, after 30.00, was at a purely nominal quotation of 21. Switzerland, after being very much lower, was at 24.97 $\frac{1}{2}$. Of the Scandinavian Exchanges, Stockholm and Oslo were unchanged at 18.14 $\frac{1}{2}$ and 18.16 $\frac{1}{2}$ respectively. Copenhagen lost $\frac{1}{4}$ at 18.16 $\frac{1}{2}$. The South American currencies were erratic and inclined to weakness, Rio losing $\frac{1}{2}$ d. to 34 $\frac{1}{2}$ d., Buenos Aires declining from 35 $\frac{1}{2}$ d. to 34 $\frac{1}{2}$ d. and Montevideo from 28 $\frac{1}{2}$ d. to 27 $\frac{1}{2}$ d. In the Far East the rupee was firm at 1s. 5 $\frac{1}{2}$ d., as was the yen at 2s. 0 $\frac{1}{2}$ d. Batavia improved from 12.08 $\frac{1}{2}$ to 12.09 $\frac{1}{2}$. In the forward market no quotations were available for Paris, Brussels, Berlin, Amsterdam and Geneva. Dollars were at $\frac{1}{8}$ cent and $\frac{1}{4}$ cent premium for one and three months respectively. Milan was at considerably wider discounts of 15 and 40 centesimi, and Madrid was also weaker at $\frac{1}{4}$ peseta discount for one month and $\frac{1}{2}$ peseta discount for three. Silver prices fell away by $\frac{1}{2}$ d. to 18 $\frac{1}{2}$ d. for cash and by $\frac{1}{2}$ d. to 18 $\frac{1}{2}$ d. for forward as a result of bear operations in a quiet market. Of the China silver exchanges Hong Kong was unmoved at 1s. 0 $\frac{1}{2}$ d., but Shanghai lost $\frac{1}{2}$ d. at 1s. 8 $\frac{1}{2}$ d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

COMING TO GRIPS.

In its drama and its gravity the financial story of the past week bade fair to challenge comparison with the monetary events at least of the early days of August, 1914. Following Dr. Luther's failure, first in London and Paris and then at Basle, to secure a further large rediscount credit which would enable Germany to carry on for yet another week or two, the German Government, faced with the suspension of payments of the Danat Bank on Monday, averted a disastrous run on the other German banks by decreeing, except in the case of the Reichsbank, a "bank holiday." Finally, late on Wednesday, the inevitable step was taken of proclaiming a partial moratorium. The actual word itself was not indeed used, but the measures taken with regard to debt payments and the control of foreign exchanges meant in fact little less. Meanwhile, minor bank failures were occurring in other European centres, and recognition of the fact that even a partial moratorium must have the effect of throwing back on other markets the demand for foreign currency which was beyond Germany's capacity to satisfy, led on Wednesday, when business in Paris was resumed after the *Fête Nationale*, to heavy sales of sterling. French banks, and to some extent financial institutions in other countries, sought to strengthen their liquidity, in view of the critical outlook, by repatriating balances held abroad, particularly in London, and the pound suffered heavily.

Fortunately, Thursday brought at any rate an emotional betterment of the situation. In Germany the vigorous control assumed by the Government over a wide field of the country's economic life temporarily steadied public confidence; fears of panic runs on the banks when they reopened were happily falsified; withdrawals by depositors were kept within reasonable limits; and in other centres outside Germany the movements of foreign exchanges and security values both reflected some alleviation of the acute nervousness of the preceding day. In material essentials the crisis remained unaltered, but apprehension of the unknown tends often in the financial world to be more damaging than the realised event. Moreover, not only did German morale appear to be standing up satisfactorily to conditions of acute tension and difficulty, but a new element of hope was imported into the situation by the announcement, made in the early hours of Thursday morning, that the British Government had invited the Ministers of the European Powers to attend a conference in London on Monday, July 20th—an announcement which was followed by the news that Dr. Brüning would go forthwith to Paris for interviews with M. Laval in advance of Monday's conference.

To the difficulties which attend that conference we refer later, but we welcome none the less Mr MacDonald's decision to summon it. For the outstanding feature of the events of this week is the fact that the situation, which a few days ago could have been handled by a comparatively modest credit to Germany, has passed beyond the realm of pure finance into regions where only the Heads of States can act effectively. This was reflected in the decision at Basle; and it was emphasised from New York, when the American bankers made it clear that no extension of credit could be given to Germany unless there were evidence of a Franco-German *rapprochement* sufficiently intimate to make it possible for France also to share in the credit. What are these political difficulties? France denies to-day that she made the suspension of work on Germany's "pocket-battleship," or the withdrawal of the Customs Union project or other "safeguards" the conditions of financial assistance to Germany. She claims that she did no more than suggest to Mr Henderson and Mr Hoover that it might be put to Germany in a friendly way that if she made some advance on these vexed political matters, it would make it easier for her to respond. Be that as it may, the important fact remains that a large part of French public opinion believes Germany to be guilty of bad faith and to have exploited and exaggerated her difficulties for the purpose of getting out of her obligations, and that Germany firmly believes that France is deliberately using her economic financial difficulties to rivet still further upon her the restrictions and injustices perpetrated in the Treaty of Versailles.

This misunderstanding is but the last of a series of incidents which have illustrated the disastrous pitfalls which lie in the way of international co-operation. Indeed, the whole history of the past few years is strewn with incidents—some of them of comparatively minor importance in themselves—which, if handled differently, would have given a different course to history. The last few months have been particularly rich in examples of these things that "might have been." If Germany had had the wisdom to take other countries into her confidence at an earlier date with regard to the Customs Union instead of springing a *fait accompli* and thus fatally undermining the position of M. Briand in France; if M. Briand himself had not stood for the Presidency; if Mr Hoover had given France a little more time to adjust her ideas to the new situation created by his amazing *volte face* instead of offering her two or three hours only in which to take the initiative; if after recovering from the shock France had had the far-sighted leadership to seize a golden opportunity by an act of friendship placing Germany under a debt of gratitude; if . . .

But it is idle to prolong the list, for behind these incidents of yesterday lies a ten years' history, the lesson of which is the heavy penalty that has to be paid for procrastination. Often during these years France has done the right thing towards Germany, but she has usually been too late. She has concurred in reduction after reduction of the reparations debt, but delayed so long that when the action was taken it had lost all its grace. She quitted the Rhineland years before the Treaty date, but did it so hesitatingly that it looked almost like an affront. Yet the whole future of Europe turns upon the ability of France to woo and retain the confidence of Germany. It cannot be done by bargaining; it cannot be done by a show of strength; it cannot be done by making dilatory concessions to world opinion; it must be done on the initiative of France herself. Has her public opinion been stirred sufficiently to enable her to make so great a contribution towards world peace, and, if she does so, will German opinion at this date respond?

This brings us to the fateful Conference of Monday next—the calling of which has already had a steadying effect on the markets of the world. To clear up all the political issues that have contributed to the present disorder is a vast undertaking which inevitably goes back to the problems created by the Peace Treaties of 1919. Take, for example, the question of the Customs Union. The present crisis has been precipitated by the failure of the Credit Anstalt. But that was in no sense a purely banking failure. This old and renowned institution had been compelled to absorb one after another of the banks of Vienna to save them from ruin, and finally came to embrace 75 per cent. of Austria's banking business; it thus became the owner of the greater part of Austria's industries. But under the territorial arrangements of 1919, and the tariff system that has grown up from them, these Austrian industries, which formerly supplied a large Eastern European market, have now no adequate outlet—and therefore no sound economic basis. The French alternative to the Customs Union put forward at Geneva in May afforded no real relief for the industries of Austria and Germany. It is thus no solution of the present problem for Germany merely to renounce the Customs Union. It must be replaced by a larger and more far-reaching alternative. The same is true of the "pocket battleship" question. For Germany alone to suspend building would be merely to emphasise once again the lop-sided character of the present armaments situation in Europe. It is true that no one will lend money to Germany if the result is to make it easier for her to rebuild her military strength. But she cannot be expected to renounce her ambitions unless the rest of Europe is ready to make a substantial reduction in its armaments. Other questions, such as that of the Eastern frontier, are even more difficult; but if any progress is to be made it must be frankly recognised that confidence in Europe cannot now be restored by unilateral political concessions on the part of Germany.

The agenda for Monday next must, therefore, cover a

very wide field, and it is difficult to see how quick decisions are to be reached. But every Prime Minister will be under the strongest inducement to settle. The fear of inflation in Germany, the knowledge in France that even if she herself might escape the worst of the storm her friends in Central Europe are in imminent danger of being swept away by the flood, and for the rest of us, the knowledge that the spreading of the German disorder would exert a paralysing effect on the world's economic life—all are powerful inducements. These are days in which opinion and action are capable of moving very rapidly. The world expects its statesmen to find a solution of the seemingly intractable problems for the all-sufficient reason that they cannot afford to fail.

A DIARY OF THE CRISIS.

Thursday, July 9th.

Dr. Luther, President of the Reichsbank, flies to London, en route with Mr. Norman at Victoria, former going to Paris, latter to Basle. Reichsbank return referring to position on Saturday, July 4th, reveals improvement in reserve ratio to 43.6 per cent. Day's withdrawals of foreign withdrawals from Reichsbank: Rm. 50 millions. Paris Bourse steady; Berlin weak but business restricted; Wall Street firmer. Closing rates: reichsmark 20.50½, franc 124.10, dollar 4.86½. Mr. Stimson, U.S. Secretary of State, in Rome.

Friday, July 10th.

Dr. Luther in Paris negotiating for loan. British Government formally advises B.I.S. that it does not demand from Germany July 15th annuity. British Government invites Treasury experts of countries involved in Hoover Plan to conference in London on July 17th. Private meeting of London acceptance and banking houses discusses means of checking withdrawals of credit from Germany. The \$50,000,000 credit granted to Gold Discount Bank reported exhausted. Day's withdrawals of foreign exchange from Reichsbank: Rm. 50 millions. Paris Bourse quiet, dull; Berlin again weak; Wall Street undecided. Reichsmark 20.51½, franc 123.95, dollar 4.86½.

Saturday, July 11th.

Dr. Luther returns to Berlin. Reports of French political conditions for participation in a loan. German Government cables Washington through United States Ambassador, emphasising gravity of German position. Day's demand, foreign exchange, Reichsmark: Rm. 100 millions. Banque de Genève closes doors. Reichsmark 20.53½, franc 123.86, dollar 4.86½.

Sunday, July 12th.

German Cabinet in continuous session; issues late night communiqué that since no definite prospect of foreign credit Government will guarantee liabilities of two leading "D" banks.

Monday, July 13th.

Central Bank chiefs meet at Basle, whither Dr. Luther flies from Berlin. At midnight a communiqué issued declaring that "the German Government having approached various Governments with a view to obtaining financial assistance on their various markets, the B.I.S. is prepared to collaborate . . . and to strengthen the assistance [to Germany] by all the means at the disposal of the Central Banks." Absence of figure of any new credit correctly interpreted to mean that Central Bankers, finding the situation too much involved with politics, hand back the problem to the Governments concerned, but B.I.S. authorised to prolong the rediscount credit to the Reichsbank, repayable July 16th. London Stock Exchange marks down prices but no substantial volume liquidation. Darmstädter und Nationalbank closes its doors. German Government guarantees its deposits; total liabilities stated to be Rm. 1,500 millions, whereof 450 millions foreign obligations. Moderate run other German banks which limit withdrawals to 5 to 20 per cent. of deposits. Informal rationing foreign exchange demands. Government closes Berlin Bourse. Paris Bourse closed, holidays. Wall Street dull, restricted volume. London similar. Reichsmark 22.50 (after 31.00), franc 123.73½, dollar 4.85½.

Tuesday, July 14th.

All banks and savings banks closed in Germany by Government decree. Berlin and Buda-Pest Bourses closed. Three days bank holiday declared in Hungary. The Mercus Bank of Vienna, Banca Dacia of Jassy, Roumania, and two Latvian banks fail. Banks in Danzig paying out maximum 10 per cent. of deposits. Federal Reserve Board decides to participate in prolongation of the rediscount credit of Reichsbank, following disturbing rumours of a contrary decision. Mr. Norman returns to London. Mr. Henderson in Paris. Reported that Paris communicates new and unacceptable terms to Berlin as condition of participation in financial assistance. Run on food supplies in Berlin. London stock market again calm, little liquidation. Paris Bourse still closed, holidays. Wall Street irregular, narrower movements. Reichsmark 22.25 nominal, franc 123.90, dollar 4.85½.

Wednesday, July 15th.

Reichsbank announces cover for note circulation below 40 per cent. with authorisation General Council. Reichsbank rate raised from 7 to 10 per cent, and "Lombard" rate from 8 to 15 per cent. Government decrees issued restricting bank payments July 16-18 to sums essential for wages, unemployment insurance, municipal relief and taxes. All foreign exchange transactions to be subject to Reichsbank control. All Danzig banks closed until July 17th. Mr. Stimson arrives Paris. Discussions between Messrs. Henderson, Laval, Briand and Stimson. London Foreign Office late-night communiqué that H.M. Government have invited Ministers of chief European Powers to attend a Conference in London, July 20th. Germany pays unconditional annuity, which B.I.S. immediately re-loans to Germany. Official announcement Washington that United States will not become involved in any political situation connected with economic help for Germany and Federal Reserve Board will give no credit to Germany except in conjunction with all Central Banks, including Banque de France. Paris Bourse re-opens; heavy liquidation. Considerable repatriation French sterling balances held London. Wall Street, sharp break values, heavy sales. London similar, but liquidation limited. Bank of England reports withdrawal £900,000 bar gold and 2,000,000 sovereigns set aside, but 1,000,000 sovereigns received. London acceptance houses decide not to accept German bills dated after July 11th. Reichsmark 22½ nominal, franc 122.90, dollar 4.83½.

Thursday, July 16th.

Projected visit of Messrs. MacDonald and Henderson to Berlin cancelled. Instead, Dr. Brüning and Herr Curtius to go to Paris on Saturday for discussions with French Cabinet, en route for Monday's London Conference. Berlin banks re-open under restrictions mentioned above, and public demand for currency does not exceed manageable proportions. Bank of England rate unchanged; gold withdrawals and "ear-markings" for Continent £5,141,000. Stock exchanges London, Paris, New York steadier, minor recoveries. Reichsmark 21.00 nominal, franc 123.45, dollar 4.84½.

A GERMAN ECONOMIST'S VIEW.

As a contribution towards the better understanding of the essentials of the German situation, we print below the following statement which we have obtained from Dr. M. J. Bonn, the distinguished German economist.

THERE is no doubt that right at the bottom of the causes of the present crisis in Germany lies the inflation of 1919-23. The result of that inflation was to deprive Germany of practically all her liquid working capital. In consequence of this she has been compelled to borrow abroad. Some of the funds she acquired were long-term funds; but a great deal of the capital her banks borrowed abroad for the use of their customers was short-term money. Most thinking people realised the danger of short-term money; but if you need cash badly and cannot get it on long term you have to take it on short term. One of the reasons why Germany got money on short term only was the disinclination of the lenders to invest their money permanently in a country which had gone through inflation. The result of this has been that, whenever there is a panic, money is withdrawn—sometimes for political reasons arising abroad, as in May, 1929; sometimes because there is a political crisis in Germany, as in September, 1930, after the last election; sometimes merely because of the general feeling of uneasiness and suspicion and the fear of another inflation.

This is just what has been going on since the downfall of the Austrian Credit Anstalt. President Hoover's action stopped this crisis, but for a few days only; for the wrangling about it destroyed the psychological basis of mutual confidence. I am quite willing to acknowledge that some Germans have not always been very wise in their political utterances, and I am even quite prepared to admit that German Governments, like other Governments, occasionally commit mistakes. But it seems to me we have every right to be foolish and hysterical occasionally; that is a privilege of a nation which has lost a war, while it is the obligation of the victors to be reasonable patient and wise. From that point of view the ways of French public opinion and the methods of French policy are sadly lacking. The French have often accused the Americans of playing the part of Shylock. To the average German, even to those Germans who greatly desire an understanding with France, her ways of using her financial preponderance make Shylock look a generous philanthropist.

July 18, 1931.]

I am not arguing whether France is right or not in her political demands on Germany. Even if I were to assume for argument's sake that she is right, her way of going about it is certainly wrong. You cannot make the Germans love disarmament if you force them to do it under financial pressure. This being the attitude even of those reasonable Germans who oppose military parades and the building of battle cruisers—I am not speaking of the "Hitlerites"—the mixing up of political issues (the settlement of which will take a long time, anyhow) with extremely urgent measures of technical and financial relief, has been very unfortunate. There is a feeling amongst many people that Germany is to be crushed anyhow. Again, I am not arguing whether this is really the case, but as this widespread feeling exists, it must be taken into account. You cannot cure the patient without having regard for his feelings, however irritating they may be to the doctor.

But there is something more than mere sentiment. Germany would be quite capable of dealing with the banking crisis by herself as far as the consequences at home are concerned. True enough, one of the big banks has broken down, and the other banks had to be closed for two days because a run was expected. The raising of the discount rate by the Reichsbank, which makes loans extremely expensive, the partial moratorium which has been decreed, and other emergency measures which could be easily devised would be sufficient to stop the panic if there were no withdrawals of credit from abroad. The German people are so terrified of inflation that they would stand any remedial measures, however hard they might be, to avoid it. The finances of the Government are sound, especially after President Hoover's action. The run on the banks and the hoarding of money, combined with the high discount rate, would quickly spend itself, in so far as a scarcity of money would force people to sell the foreign exchange they might have hoarded and to get rid of their stocks even at a heavy loss; but the crux of the question is the foreign withdrawals.

Theoretically, it is even possible that the Reichsbank might lose its entire gold stock and not be able any longer to issue any notes. No purely German measure can prevent this apart from a moratorium on foreign payments. Such a moratorium would be a very heavy blow to Germany's credit, but apart from that it would deal very unfairly with Germany's creditors. It would let off scot free the foreign creditors who originated the panic by withdrawing their capital, and would catch those creditors who trusted to Germany up to the last moment by not withdrawing their credit. Germany ought to do everything to put her house in order and to prevent gambling in foreign exchange by German citizens; she is doing this at present, but it is quite beyond her power to pay off all foreign credits and keep enough gold, or to get new credits, or to get prolongations. In this direction the only thing which can really help is voluntary prolongation by the foreign interests concerned, now that Germany has shown her willingness to go to any length as far as the home market is concerned—for there is not the slightest doubt that the new severe measures will bring about a great deal of very undesirable economic and financial pressure. These dislocations are much more serious in Germany than in other countries.

For the moment the fear of inflation and the will to avoid it at any price overshadows everything else in the public mind. But even if these shadows were to pass, financial restriction does not diminish unemployment and bankruptcy, and increased unemployment and bankruptcy are fertile seed beds for radical movements. National Socialism and Communism are not the outcome of prosperity, but the fruit of prolonged depression and political humiliation. Neither Communists nor National Socialists are bearers of capitalism. The present Government can face, and has faced successfully, the Nationalist and Communist danger so far. It has stood for financial reform, not in theory only, but in practice too, by carrying out restriction and increasing taxation with an unheard of severity. If it can fight inflation well and good. No Government, however, is strong enough to hold up the present economic system financially and economically against the radicalism of national Socialism and Communism if the system stops functioning.

DISARMAMENT OR WAR?

If the present world crisis were either purely financial and economic or purely political it would lend itself to far easier solution than is possible under the circumstances. It was mainly because political influences were inextricably interwoven with financial that the bank chiefs, who assembled this week at Basle with the object of staving off the German collapse, found that they were, in the absence of co-ordinated support of the leading Governments, comparatively impotent. Nor is there anything surprising in this. For where political concord is lacking, the psychology of fear flourishes; and when apprehension and distrust become rampant, financial crisis is always a possibility. For in the long run the world credit system is based on trust and confidence; and when distrust develops far enough, the strongest of financial institutions must bow before the storm.

And of all the causes of political distrust, which has so grievously precipitated the present financial crisis, the deepest seated of all is the failure of the great nations to reduce their armaments. Peace is sought, ensued and preached at Geneva. Anti-war pledges and treaties are signed by statesmen, but budgets wax bigger with the costs of war preparations. Europe, indeed, is caught in the orbit of a vicious circle. The absence of security increases armaments, and the increase of armaments aggravates insecurity. Everyone knows that unless that vicious circle is broken the world will drift helplessly to another war. So, even when the present crisis is past, and even if, after all these fierce alarms and excursions, the Hoover Plan is allowed to operate, as it was intended, to give the world a year's breath-space, there can be no real peace and security; and therefore no real economic recovery, until the rising tide of armament expenditure is not merely checked, but rolled back.

We do not believe that the war of 1914-18 is as yet so lost to mind that the mass of the people of any country wish for another, or that they would not rejoice if their statesmen succeeded in establishing effective safeguards against such a catastrophe. But the difficulty is to mobilise positive anti-war opinion, and harness it securely to the chariot of diplomacy; and that is why a demonstration like that held at the Albert Hall last Saturday is of real importance. Its significance lay not merely in the phenomenon of the leaders of the three parties in the State speaking words of common warning and common hope, but in the undoubted fact that Mr. MacDonald, Mr. Baldwin and Mr. Lloyd George were on this occasion the true and faithful interpreters of the overwhelming public opinion of Great Britain. The British people wish to perpetuate peace; but, while they rally behind our Government's efforts to disarm, they realise clearly the limits of further action in this direction until the lip-service of some other governments to the cause of peace is translated into concrete policy. "Sentiment and piety," as Mr. MacDonald said, "are not enough now. . . . Geneva must give results"; and it is all to the good that both the Prime Minister and Mr. Baldwin faced up squarely to the formidable difficulties which will face the Disarmament Conference next spring.

Figures alone do not tell the full story either of the urgency or of the difficulty of the problem. Yet they are sufficiently formidable. The compilation of comparable figures of international armament expenditure over a period of years is notoriously difficult, and, as was the case with Mr. MacDonald's recent speech in the House of Commons (see *Economist* of July 4th), every essay by statesmen in armament arithmetic arouses controversy. Nevertheless, it is possible to present an approximate picture, and we do not expect that at least the general truth of the following table will be seriously challenged. Even when full allowance is made for changes in the purchasing power of money, the record of the position twelve years after the allied and associated nations solemnly pledged themselves to disarm, and after the solemn renunciation of war in the Kellogg Pact, is a sorry one indeed. Britain, it is true, comes out with at least as good a record as any other of the Great Powers who are free to determine their own policy. But to boast of our own achievement and to emphasise the blacker record of other governments is less helpful than to face frankly

THE MACMILLAN REPORT: SUMMARY.

THE report of the Committee on Finance and Industry, which was appointed on November 5, 1929, "to inquire into banking, finance and credit . . . and to make recommendations calculated to enable these agencies to promote the development of trade and commerce," is signed by Lord Macmillan, the chairman, and by all the thirteen other members, with the exception of Lord Bradbury, who signs a memorandum of dissent. There are, however, various addenda and reservations. The report is divided into two parts: (1) Historical and descriptive; (2) Conclusions and recommendations.

Gold Standard Principles.

Part I begins with a brief sketch of the development of monetary systems in general and the functions which Central Banks have gradually evolved. Next come certain observations with regard to the international gold standard, whose re-establishment was the avowed aim of currency policy for a period of six or seven years after the war. The primary object of that standard is to maintain a parity of the foreign exchanges within narrow limits; this has the effect of securing a certain measure of correspondence in the levels of prices ruling all over the gold standard area. To preserve a reasonable stability of international prices may be considered a secondary object; but, though the international gold standard can, under appropriate conditions, enable both exchange stability and a considerable degree of price stability to be attained simultaneously over a wide area, this result is not automatic unless the "rules of the game" are observed. These "rules" cannot be precisely defined, but the Committee considers that the following principles would be generally accepted:—

- (1) The international gold standard system involves a common agreement as to the ends for which it exists.
- (2) It should be an object of policy to secure that the international gold standard should bring with it stability of prices as well as that it should guarantee stability of exchange.
- (3) Action by individual Central Banks which, by repercussions on the policy of the others, imperils the stability of the price level, should, as far as possible, be avoided.

Our Monetary System.

The Committee then describes the monetary system of Great Britain and the relations between the Central Bank, the discount market and the commercial banks. Having explained the mechanism whereby the Bank of England can influence the credit position, i.e. (a) by altering the bank rate, and (b) by buying or selling securities, the report shows that the joint-stock banks adhere somewhat closely to a conventional distribution of their assets, keeping a total cash reserve of about 9.5 per cent. over all, together with money at call or short notice, 7.8 per cent.; bills, 13.15 per cent.; and investments, about 16 per cent. of deposits. The proportion of deposit accounts to total deposits has risen since 1924 as follows:—

	1924.	1928.	1929.	1930.
Total deposits (£ Mn.)	1,615.7	1,708.9	1,738.0	1,740.8
Deposit accounts (%) ...	41.2	44.2	45.9	47.1

Advances since 1924 have fluctuated between 51.3 and 55.5 per cent. of deposits. In general the ability of the commercial banks to grant loans ultimately depends upon the provision of the necessary cash base by the Bank of England.

With regard to the discount market and acceptance business, the Committee notes that the resources employed include substantial sums of foreign money held in London. The position at various dates is given below:—

I.—DEPOSITS AND STERLING BILLS HELD IN LONDON ON FOREIGN ACCOUNT.

	Dec. 31, 1927.	Dec. 31, 1928.	Dec. 31, 1929.	Dec. 31, 1930.	Mar. 31, 1931.
(£ mlls.)					
Held through Bank of England, Clearing and Scottish Banks:—					
Deposits	116.8	139.4	118.3	164.6	146.2
Sterling bills ...	161.6	195.3	200.2	144.7	136.8
Held through Accepting Houses, &c.:—					
Deposits	89.3	104.3	79.2	82.1	81.0
Sterling bills ...	13.1	16.9	19.4	8.0	7.4
Advances to discount market by certain foreign banks, &c.:—					
Advances	38.4	47.0	34.0	35.1	35.7
Aggregate of deposits, bills, &c.	419.2	502.9	451.1	434.5	407.1

II.—STERLING BILLS ACCEPTED ON FOREIGN ACCOUNT.

	Dec. 31, 1927.	Dec. 31, 1928.	Dec. 31, 1929.	Dec. 31, 1930.	Mar. 31, 1931.
By Clearing and Scottish Banks	31.7	51.3	40.0	35.7	32.3
By Accepting Houses, &c.	108.0	149.2	135.7	125.3	120.6
Total	139.7	200.5	175.7	161.0	152.9

The survey ends with the observation that, by its control over the cash base, the Bank of England is in a position to regulate the volume of bank deposits so long as the joint-stock

banks adhere to their normal practices in regard to the distribution of their assets. The volume of deposits in turn is the approximate measure of the amount which the commercial banks are prepared to employ in various ways, and more particularly the amount which they are ready to lend to trade and industry. The link between the Bank and the commercial banks is the discount market, which is the first outlet of any surplus funds held by the clearing banks and from which funds are withdrawn when those banks find it necessary to replenish their reserves. If the withdrawal causes a shortage of funds in the market, the market borrows in one form or another from the Bank and the accommodation given provides the means of replenishing the cash resources of the commercial banks.

Britain's Difficulties.

The Committee then turns to the special problems of Great Britain, and observes that whereas before the war we managed to combine a higher standard of living with a flourishing export trade (we had been first in the field and we were large lenders abroad), we have suffered since the war from heavy continuous unemployment and a diminishing volume of exports. This change in our situation took place before the present world depression of trade. In addition to the difficulty of readapting war-distended industries to peace-time conditions in this country, we have suffered from certain general changes in world economic conditions, e.g., the development of the cotton industry in the East, the substitution of oil and hydro-electric power for coal, political disorganisation of trade with China and India, currency disorders in various European countries followed by stabilisation on a basis giving a considerable temporary stimulus to exports competing with our own, the growth of tariffs, and the great development of nationalism. Moreover, after the war our currency policy was directed to the reduction of the inflated price level. It is probable that equilibrium had not been achieved even before the return to gold. This itself required the reduction of sterling prices and seriously accentuated the disequilibrium between costs and prices. Since 1924, money wages in this country have remained practically unchanged and the situation has been aggravated by the recent heavy fall in prices.

Examining from a world standpoint the course of the past five years, the Committee detects two sharply divergent phases, the first ending with 1928, the second conditioned by the Wall Street boom of 1929. In the first phase the circumstances and the technique employed in working the gold standard were on balance favourable to economic progress, for though prices were declining the fall was not at such a rate as seriously to impair equilibrium at a time when rationalisation was reducing costs. Production, however, both of industry and agriculture, was expanding rapidly and a situation of some danger had been created even before the depression of 1929-30. When that depression arrived, the position of the raw material producing countries became extraordinarily difficult. High prices during and immediately after the war had stimulated production and made it easy to obtain capital loans, and this situation encouraged the consumption of additional imports and a postponement of the pressure on the national economy of interest payments on capital loans. The partial or complete failure of various schemes designed to prevent a fall in prices forced prices still lower and, by discouraging capital imports, increased the pressure towards a forced sale of exports to meet external payments.

Gold Mal-distribution.

The Report then proceeds to consider the question of the supply and distribution of gold. With regard to the sufficiency in the long run of the absolute output of new gold, the Committee considers that the available figures serve as a warning that, unless definite steps are taken to avoid the danger, a fall of prices on this account will occur, but that, given goodwill and understanding on the part of monetary authorities, the danger is not of immediate importance. On the other hand, a large measure of responsibility for the heavy fall in prices in recent years is to be attributed to the present mal-distribution of gold. This mal-distribution is due to the instability of post-war international finances, which in turn has the following outstanding causes:—(a) The burden of war debts which has forced Germany to meet her obligations by short and long borrowings from abroad; (b) the non-productive character of many of the loans incurred since the war; (c) the accumulation of capital in the form of liquid balances in place of the fixed investments; and (d) the absence of what used to be considered the "normal effect of gold movements" on the domestic credit policy of certain countries, notably France and the United States.

There follows a detailed account of the sequence of monetary events since 1925. The outstanding factor is diagnosed as being the development of the situation in the United States, now a great creditor country, and, up to 1928, a large investor not only in stock of the United States had reached a figure of \$4,700 millions. The policy of the Federal Reserve authorities had been to regard expansion of credit in the United States as would necessitate the retention of the whole stock as a permanent reserve. In 1927, the moment seemed to have arrived when low money rates met the needs both of the United States and of the outside world. Credit was cheapened and gold flowed strongly out; but the

resulting domestic boom affected adversely the foreign bond market in New York, and, finally, the efforts of the Reserve Board to check the flood of speculation by cutting off the supply of call-money at the source simply led to a mass of short money being thereby attracted from Europe, with a general stiffening of open market rates in the European money market.

A further factor was the influence of French monetary policy. A French boom, resulting from the stabilisation of the franc at a level which left French prices below those of the outside world, was accompanied by an increased *per capita* demand for currency. The result, because of the provisions of the Banque de France, was a "passive" attitude of the Banque de France, was a large flow of gold to France from 1927 onwards. The burden of this gold movement fell on London and New York, but the strain on London was particularly severe. The policy of the Bank of England was to endeavour to prevent the full rigour of gold movement from affecting the volume of credit except in so far as it might be directly influenced by a rising Bank rate (i.e., gold losses were offset by purchases of securities); and the rise in Bank rate was a really deterrent level was long postponed. At the same time the influence of the Bank (e.g., unofficial embargoes on the flotation of new issues) had at times a considerable influence upon the movement of business. The conclusion is that, in the working of the post-war gold standard, the forces making for disequilibrium are very powerful, and mechanical application of empirical rules derived from pre-war experience could easily lead to grave results.

The troubles of the world have been accentuated by substantial variations in recent years in the volume of international investment, and especially by its abrupt reduction in 1929-30. This reduction, in the case of raw material producing countries, has coincided, as it usually does, with a period of lower prices for their products. Formerly it was assumed that the debtor countries could re-establish equilibrium by gold exports, but to-day their position is apt to deteriorate as a result of their having to export gold; for it is usually beyond their power to adjust their balance of payments so rapidly and completely as to permit an entire cessation of borrowing, while their gold losses impair their credit as borrowers. Thus they are forced off the gold standard and their difficulties contribute to the depression of prices.

The Price Fall —

Having examined the extent of the fall in commodity prices which has occurred since 1924, and particularly since 1929, the Committee notes the following consequences:—

- (i) All incomes fixed in terms of money, such as interest on the National Debt, debentures and other fixed-interest securities, remain unaltered.
- (ii) Many other incomes are fixed by custom or by statute, for instance, many classes of pensions and unemployment relief.
- (iii) The proportion of the national output which can be purchased by these classes of recipients being increased, the amount left for distribution between the remaining sections of the community is reduced, with the result that so long as salaries and wages are unchanged the final residue available for profits is inadequate.
- (iv) The attempt to effect an adjustment sets in train a series of consequences making for acute trade depression and unemployment.
- (v) In the sphere of international debts also a large fall of prices greatly increases the real burden falling upon the debtor nations.

The *entrepreneur* seeks to reduce his costs; ultimately he endeavours to reduce wages; the process of adjustment involves great friction; and business, being unprofitable, is depressed, output reduced and unemployment severe. Moreover, falling profits spell falling share values and increased difficulty in financing new enterprises by the issue of equity shares. Budgets are adversely affected, since a high proportion of State expenditure is contractual, while the yield of taxation falls. Still more serious are the social consequences. A study of history leads to the view that it is in the changes of the level of prices and in the consequential alteration in the position of

debtors and creditors, *entrepreneurs* and workers, peasants and the tax gatherer, that the main secret of social trouble is to be found.

— and Monetary Policy.

The question arises whether the fall of prices is primarily due to monetary causes. Having observed that its witnesses were divided in their opinion, but that a diversity of view might arise from the fact that those who emphasised monetary causes merely believed that the monetary machine *could* have adjusted itself to non-monetary changes, while those who emphasised non-monetary causes considered that such adjustment of the monetary machine was not feasible, the Committee states that in its opinion the economic difficulties of the post-war decade are primarily due not to any wanton misbehaviour on the part of the monetary factors themselves but to unusually large and rapid changes on the part of what are rightly described as non-monetary phenomena, e.g., instability in the demand for capital, changed relationships between debtor and creditor countries, shifting character of demand, rigidity of wage rates, growth of tariffs, etc. In short, the recent world-wide fall of prices is best described as a monetary phenomenon which has occurred as a result of the monetary system failing to solve successfully a problem of unprecedented difficulty set it by a conjunction of highly intractable non-monetary phenomena. Whether the international monetary system *could* have solved its problem is a matter on which the Committee hesitates to express a dogmatic opinion. For the future the objective should be to increase the power to exercise deliberate control over the price level with the further development of suitable machinery for regular international co-operation.

The means at the disposal of the banking system are then considered. "Bank rate policy" is a necessity for the sound management of a monetary system, but is subject to certain limitations. The business world may be unable to determine whether a change of Bank rate is an effort to correct a temporary mal-adjustment in the international short-loan position or whether it is the beginning of a contraction designed to produce a necessary curtailment of business expansion. Moreover, a policy which waits upon movements of gold may be too tardy, while Bank rate policy guided by gold is a means of maintaining the stability of the exchange rather than the stability of business. This emphasises the importance of the need for international co-operation.

With regard to the influence of the banking system on investment, the Committee observes that when conditions of extreme depression have developed a mere change in the cost of short-term credit will not be sufficient in itself to attract borrowers. Some of the Committee are of opinion, however, that open market policy (provided it were adopted by Central Banks generally) aimed at an expansion of the volume of banking credit would be the most hopeful form of attack on the existing depression. It is, however, emphasised that action must be international.

Part II.—Conclusions and Recommendations.

The anticipations of those who were responsible for our return to the gold standard in 1925 have to a large extent not been fulfilled; the advantages of international price stability have not accrued; but, even if a mistake was made in 1925, it by no means follows that the consequences can be repaired by a reversal of policy in 1931. The working, since 1925, of the gold standard has been attended by two sets of difficulties. Firstly, gold parity was established by Great Britain at a level which—failing reduction of incomes and costs—handicapped exports, while the converse was the case with France and Belgium. Secondly, lending power has been transferred from Great Britain to France and the United States, who have used it only spasmodically, and have required payment of a large part of the annual surplus accruing to them as creditor countries either in actual gold or in short-term liquid claims. Should this be a permanent phenomenon, we can scarcely expect the international gold standard to survive in its present form.

Superimposed on these difficulties the present slump has prompted the question: may adherence to an international standard involve too heavy a price in the shape of domestic instability? The Com-

mittee considers that for Great Britain the advantages of an international gold standard prevail. Apart from our gains in income from international banking services, the benefits to industry from a fluctuating exchange would be inadequate to compensate the losses in other directions. It would often mean merely substituting one form of instability for another. Moreover, the larger world problem conditions our domestic problem, and there can be little or no hope of progress at an early date for the monetary system of the world as a whole, except as the result of a process of evolution starting from the historic gold standard. The next phase of monetary policy must consist of a wholehearted attempt to make the existing international standard work more satisfactorily. It would be unwise for us, who have so much to gain by it, to give up the attempt to secure a sound international currency.

The suggestion that the pound sterling might be devalued by, say, 10 per cent. is rejected without hesitation. Such a sensational measure would destroy confidence and create crisis and distress. The countries liable to be forced off the gold standard are the debtor countries. Great Britain's position as a creditor country remains immensely strong. London's net liability to foreigners (see table on page 108) in March, 1931, was only £254 millions, and it is probable that of recent years the whole of our net purchases of foreign securities have been paid for out of our current (though reduced) surplus on income account.

Prices Must be Raised —

The Committee proceeds to consider the question of the international price level. It is emphatically of the opinion that, even if a further fall of wholesale prices be avoided, their stabilisation at approximately the present level would be a serious disaster for all countries of the world alike; and that the avoidance of such an event should be a prime object of international statesmanship. Otherwise, money costs and incomes must somehow be lowered, with the risk of resistance and social unrest, and the certainty that the problem of domestic and international indebtedness would be accentuated. A failure by the Central Banks of the world to attempt to redress the fall of prices, says the report, would endanger the principles on which modern economic society is founded, namely, the dependence of the productive process on the expectation of normal profit to individual concerns, and the sanctity of contract.

At the present time, the objective of raising the international price level would probably command widespread, though not universal, approval. When, however, it begins to rise again, a more widespread difference of opinion will soon emerge as to how far the recovery should be allowed to go. Beyond saying that a large rise towards the price level of 1928 is greatly to be desired, it is difficult at the present date to be very precise, because the exact answer will depend on the course of events in the meantime.

— and Stabilised.

A point will eventually come when, taking the world as a whole, international prices will have been restored to a level which is appropriate to the then existing levels of salaries and wages and to the order of monetary indebtedness. When this point has been reached, monetary policy directed towards raising the price level further must, of course, cease, and there must be substituted for it a policy which has as its objective the stability of the international price level. The attainment of these objectives is feasible, but only if the Central Banks of the chief creditor countries work together with this end in view. The Committee, endorsing the views of the League's Gold Delegation, hopes that the following principles will be adopted by Central Banks generally:—

- (i) All gold standard countries should agree that they will not allow gold to pass into active circulation, whether in the form of coins or of gold certificates;
- (ii) Central Banks should give collective consideration from time to time to the question whether it would be in the general interest at the legal requirements in force in different countries as to gold reserves should be relaxed or tightened up, and should undertake to use their influence with their Governments to secure changes along the lines indicated, so far as is compatible with their domestic situations;
- (iii) Central Banks should be permitted by the laws of their respective countries to reckon balances with the Central Banks of other gold standard countries, or with the Bank for International Settlements, as the equivalent of gold for all the purposes of the law;
- (iv) Central Banks should not be unduly limited in their power to expand their deposits otherwise than against a corresponding increase in their holdings of gold or the equivalent of gold. Similarly, they should lie within the power of a Central Bank to restrict the volume of its deposits otherwise than by decreasing its holdings of gold.

Central Bank Policy.

But, even though gold be eliminated as a cause of instability, complementary action is necessary on lines of co-operative "management" of currency systems. The Committee's suggestions are:—

- (i) That Central Banks should so regulate the volume and terms of bank credit as to maintain as much stability as possible in the face of new investment and enterprise, both at home and abroad.
- (ii) That the Central Banks should confer together at frequent intervals to decide whether the general tendency of their individual policies should be towards a relaxation or a tightening of the conditions of credit. This form of joint policy should be consistent with a full measure of autonomy for each national institution.
- (iii) Each Central Bank should undertake to do its best to avoid the importation of unwanted and unnecessary gold merely as a result of leaving natural forces to work themselves out unchecked, e.g., repercussions abroad of a contraction of credit to meet

domestic needs might be mitigated by the Central Bank in question increasing its own foreign short-term assets.)

(iv) Central Banks should consider the rate of long-term investment as well as short-term investment as falling within their purview, and should take whatever steps may lie within their power, and are suited to their local circumstances, to counteract any tendency which their own nationals may show either to keep their investible resources excessively liquid or to undertake excessive long-term commitments.

To meet the present emergency (illustrated by the fact that in the two years ended January 31, 1931, gold held in creditor countries rose from £1,277 millions to £1,564 millions, while that in debtor countries fell from £680 millions to £531 millions) there should be a concerted policy between the Central Banks and issuing houses of Great Britain, France and the United States with a view to maintaining an abundance of cheap credit in their domestic money markets, and encouraging foreign investment. Loans need not be to the weaker debtor countries. To finance any new productive enterprise would help to alleviate *pro tanto* the world strain. The difficulty is that the vicious circle of low prices and lack of profit has created a shortage of sound borrowers.

The Bank of England.

From the international field of policy the Committee then turns to the domestic. Having traced the origin of the present system of a fixed fiduciary issue, the Report remarks that since the exclusion of gold coin from circulation that system has lost its original meaning. The dominating factor is now the Bank of England's deposits. The principle of the fixed fiduciary issue is open to criticism in that it associates the amount of the gold which the Bank should hold immobilised and unavailable for export with the amount of the active note circulation. Formerly, when gold was held partly to meet an external and partly an internal drain, it may have been reasonable to earmark a substantial part for the latter purpose. But now that the second purpose has disappeared, and has in fact been abolished by law, the effect is to forbid the Bank to use by far the greater part of its gold for the only purpose for which it is held or could be used.

Under present circumstances, the Committee suggests:—

- (i) If it is thought unnecessary to fetter the discretion of the Bank in regard to the volume of its deposits, now the significant and operative factor, there can be no good reason for fettering very narrowly its power to issue notes.
- (ii) There are great advantages in a high degree of mobility for the gold reserves of Central Banks. For the task of reconciling international exchange stability with domestic credit stability will be made easier if the Central Bank is free on occasion to allow wider fluctuations in the proportion of its total assets which is made up of gold and comparable items. It is also desirable that the public should become accustomed not to attach undue importance to fluctuations which the Bank has deliberately permitted.
- (iii) In present circumstances it is highly desirable that throughout the world the disadvantages of the immobility of gold, and of laws whereby a very high proportion of the world's total stock of gold is rendered sterile, should be modified, and we should not maintain any legislation which conflicts with this aim.
- (iv) Nevertheless, it is not unreasonable to regard some part of a country's gold reserve as not belonging to the Central Bank's *masse de manœuvre* for normal daily use, but as an ultimate reserve, to be kept for use only on grave national occasions and after special deliberation between the Government and the Bank.
- (v) The proper amount of this ultimate reserve cannot be reached as a fixed proportion of the note circulation (the usual principle abroad) or as the excess of the note circulation over a fixed figure (the principle of the British fiduciary issue). For it depends on quite different factors from those which determine the note issue.
- (vi) Just as the amount of gold held by the Bank should be settled independently of the volume of the note issue, so any precautionary limits to its power of note issue should be settled independently of the amount of gold which it is required to hold.

Reform Proposals.

Accordingly, the following recommendations are made:—

- (a) Parliament should give the Bank power to put into circulation notes to an amount exceeding by a moderate figure the normal circulation. Thus, if the seasonal maximum be taken at £380 millions, the absolute maximum might be set at £400 millions, subject to modification by law from time to time. Provision should also be made for additional temporary elasticity by permission of the Treasury, as in the Act of 1928. (A further recommendation is that the joint stock banks, whose holding of some £105 millions of notes, or 6 per cent. of their deposits, artificially inflates the "circulation" and gives them an undesirable power to affect the Bank's "reserve," should be given increased facilities for obtaining notes quickly. This should enable them to pay, say, £40 millions in notes into the Bank. In this case some lower figure than £400 millions maximum circulation might be fixed.)
- (b) The Bank should by law not be permitted to allow its gold reserve to fall below, say, £7 millions, except temporarily by permission of the Treasury. (The Committee adds that it does not contemplate that in any ordinary circumstances the Bank would allow this statutory minimum to be reached; nor is it in favour of a reduction in the Bank's normal stock of gold.)
- (c) The Issue Department and the Banking Department of the Bank of England should be amalgamated, and a consolidated weekly return published.
- (d) Subject to concurrent similar action by other Central Banks, the Bank of England should be allowed to reckon balances with the B.I.S. as the equivalent of gold.

In addition, the Committee draws attention to the fact that, in contrast to the pre-war position, London's gross liabilities on short-term greatly exceed her claims in respect of acceptances. Not only is London conducting a larger business than formerly as a depository of international liquid funds, but so also—and on a still greater scale—is New York. This means that there is a substantial quantity of such funds ready to move from one money market to another, according to the attractions of the rate offered. It follows that changes in the short-term rate of interest in London relative to New York are even more potent than before the war in regulating the net position of our international balance sheet. Our position is less liquid than before, and (having regard to the danger of borrowing "short" to lend "long") a rise in the Bank rate may undesirably increase our short-term liabilities by its potency in attracting foreign funds.

Greater Elasticity.

The Committee therefore concludes that the Bank's liquid assets ought to be increased at the first opportunity to a substantially higher figure and maintained thereafter at this figure. There should be some increase in the proportion of the joint-stock banks' balances with the Bank of England (the average figure to be subject to the Bank's advice) and the Bank's own capital should be increased. At the same time we should be prepared to see without concern the very wide fluctuations in the aggregate of the Bank's assets. The instrument of Bank rate should be used sparingly when the objective is merely to balance moderate changes in the short-term position by attracting foreign funds and not to affect the domestic situation. On the other hand, the Bank must not be tempted into meeting by exports of gold an adverse position of a character for which Bank rate and a contraction of credit is the appropriate remedy, e.g., boom conditions or rising prices at home.

Having found little to criticise in the Bank's day-to-day operations or its relations with discount and issuing houses, the Committee suggests that there might be closer contact between the Bank and the joint-stock banks. In their case the recommendation is made that "window-dressing" be discontinued, as being a practice not creditable to our banking system; that the clearing banks' monthly statements should be clarified, and that their representatives should be taken more into the confidence of the Bank of England with regard to the intentions of the Bank's policy.

The Capital Market.

The Report then proceeds to consider the capital market for home investment. Having noted the divergence between the development of banking in Great Britain, Germany and the United States, the Committee is of opinion that there would be advantages in a closer connection between British industry and the City of London. Partly as a result of the historical organisation of British industry, the City is in some respects more highly organised to provide capital to foreign markets than to British industry. The value of the impregnable liquidity of the British joint-stock banks is emphasised, and no change is proposed in the character of present banking practice with regard to industry; but it is suggested that the leading private institutions and the big banks should co-operate in creating one or more concerns to act as issuing houses and financial advisers for British industry. The Bankers' Industrial Development Company should be separated entirely from the Bank of England.

Statistical Recommendations.

Finally, the Committee makes a number of recommendations designed to secure better statistical information, partly monetary, partly economic. It is proposed:—

- (a) That the monthly returns of the Clearing Banks should be amplified to include fuller particulars, e.g., of distribution of money at call and short notice, sterling and foreign bills, current and deposit accounts, etc.;
- (b) That banks should make a quarterly, or at least annual, return giving a classification of their total loans and overdrafts;
- (c) That facilities should be given for the Bank of England to collect data showing foreign balances in London and the aggregate of sterling acceptances outstanding;
- (d) That the clearing-house returns should be amplified by total turnover figures, i.e., including transactions settled internally between customers of a single bank;
- (e) That the estimate of the balance of trade should be placed on a more exact basis;
- (f) That the Census of Production should be at least biennial;
- (g) That the Ministry of Labour should make its returns of wages paid cover the whole field of salaried workers;
- (h) That the Economist's analysis of industrial profits should be extended by the Board of Inland Revenue;
- (i) That statistics should be compiled of the value of contracts completed and on hand;
- (j) That generally there should be better co-ordination between the statistical branches of Government departments.

The report concludes with the note that certain members of the Committee, feeling that exploration of the problem must be extended into non-monetary ground, have contributed addenda.

Addendum I.

This is signed by Sir Thomas Allen and Messrs Bevin, Keynes, McKenna, Frater Taylor and Tulloch, with reservations by the two first named. The chief points are as follows:—The main trouble to-day is not a limitation of the amount of available bank credit, but the reluctance of acceptable borrowers to come forward. To give the necessary impetus to employment there must be either (1) an increase of exports, (2) the substitution of home-produced goods for

BANKING

Orders on Sweden are executed
with the least possible delay.

Göteborg 718.20 Phone: Stockholm 0101 Malmö 8210

SKANDINAVISKA KREDITAKTIEBOLAGET

imports, or (3) an increase of investment at home. Consequently the practical courses open are either (a) a reduction of salaries and wages, (b) control of imports and aids to exports, or (c) domestic enterprise assisted by State action or subsidies to private investments at home.

Reduction of salaries and wages, without sacrifices by the *rentier*, has grave difficulties and disadvantages; the change must be general. Devaluation would not be practicable for Great Britain; but a tariff of the same percentage on all imports, together with an equal subsidy of all exports, would leave sterling international obligations unchanged in terms of gold, but would reduce the level of domestic incomes. Restriction of imports and aids to exports might be supplemented by schemes of capital development, e.g., the re-equipment of industry, rebuilding, electrification, etc. The signatories pin all their hopes on a recovery of world prices, and suggest that all efforts should be strained to secure it.

The chief reservation made by Sir Thomas Allen and Mr Bevin is that organised planning should be undertaken by the State, precedent to any tariff.

Addendum II.

This is signed by Mr Brand, who considers that if it proves impossible to achieve the necessary diminution of costs through (a) greater efficiency and (b) direct reduction of money incomes, it might become necessary to take steps to restrict imports; but this would have the disadvantage of not helping exports, which are essential for the livelihood of a large proportion of the population.

Greatly increased capital expenditure by the Government or other public authorities is not a solution of our difficulties. The scope for large remunerative schemes is limited, and unremunerative schemes would add to the burden on the Budget.

The difficulty of achieving a general readjustment of money incomes, including contractual incomes, is so great that a rise of world prices is essential to any normal solution of our difficulties. The wiping out of reparations and inter-Allied debts would be the greatest single step towards recovery.

Addendum III.

This is signed by Professor Gregory, who considers that no solution is to be found through tariff policy. A reduction of costs is not necessarily tantamount to a reduction of money incomes. What is required is a reduction of costs per unit of output. In so far as this cannot be achieved by increased efficiency, it may be legitimate to defer action with regard to incomes so long as the present degree of uncertainty with regard to the future of prices prevails. But action must not be deferred because we are afraid to act. Reduction of salaried incomes would be accompanied automatically by an increase in taxation falling upon the *rentier*.

Addendum IV.

Mr Lee emphasises the necessity of better industrial organisation, including methods of selling and distribution.

Reservations.

Reservations to the main report are appended as follows:—

- (a) Sir Thomas Allen and Mr Bevin. Insufficient emphasis is laid on the need to scale down the national debt. Large measures of State planning should be adopted; the Bank of England and the issuing institutions contemplated by the Committee should be placed under public control.
- (b) Mr Lubbock. His signature is appended to the Report with the reservation that it would not be proper for him, as a director of the Bank of England, to be a party to any conclusions referring to the Bank. He does not fully share the hopefulness indicated by some passages of the Report that positive monetary action would be effective in relieving the present economic depression.
- (c) Mr Newbold. The causes of the crisis are not in the main monetary, but are "the inevitable consequence of the operation of principles whose final irreconcilable character has [now] been made visible." The tendency in the world is towards some or other form of planned economy. In advance of tariffs or wage reductions there should be a nation-wide stock-taking of what individually we can afford. The proposal in the main report to reform the note issue is inadvisable.
- (d) Sir Walter Raine. The root of the trouble has been the redivision of Europe as a result of the Treaty of Versailles. Protection for British industry is essential. There is no need for the fuller statistical data desired by the Committee.

Memorandum of Dissent.

This memorandum is signed by Lord Bradbury, who disagrees with most of the conclusions of the Committee. He finds the main causes of the economic troubles of Great Britain to have been (1) the burden of unproductive debt; (2) over-lavish State expenditure; (3) excessive sheltered costs; (4) attempts to cling to a generally unwarrantable standard of living. The malady is too deep-seated to be removed by the manipulation of currency or credit. The Committee's conception of the aims of international banking policy are too ambitious in conception and too nebulous in application. Stability of average prices is not necessarily desirable. Suppose food and raw materials to rise, must there be a reduction of manufacturing prices as an offset? In any case, the attitude and powers of the Central Banks in France and most of the Continental countries make the Committee's recommendations bear little relation to the real facts of the actual world. Expansion and contraction of banking credit would lead to fluctuations in security values, militating against motives to save.

With regard to the domestic sphere, the recommendations with regard to the Bank of England's currency and other powers would place a private corporation in an impossible position and lead in a democratic community to the risk of undesirable Government control. The signatory's conclusions are that:—

(1) It is to the best interest of this country to continue to adhere to the international gold standard at the existing parity, but efforts should be made to secure by international agreement a better working of that standard.

(2) Our existing domestic currency system should be maintained, reform being directed to removing the obstacles which have interfered with its efficient working and not to fundamental alterations in the system itself.

(3) The banking system discharges adequately and efficiently its proper function of providing short-date credit. It is not advisable that its functions should be extended, but a closer touch with industry in certain respects would be advantageous.

(4) Better machinery than at present exists should be devised for providing domestic industry, through institutions other than the ordinary banks, with long-date credit and permanent capital.

(5) The best contribution which the State can make to assist industry and promote employment is strict economy in public expenditure and lightening the burden of debt by prudent financial administration. Attempts to give positive assistance by diverting international trade from its natural channels, the State-financing of enterprises other than the ordinary public services, or the artificial cheapening by State guarantees of the supply of capital to particular undertakings are more likely to retard than to accelerate the restoration of a healthy and progressive national economy.

Notes of the Week.

The "Anomalies" Bill in Committee.—Miss Bondfield's way with the extremist Labour members on Wednesday night confirms the hope we expressed last week that such attenuated powers for dealing with Unemployment Insurance abuses as the Bill provides are to be used with some firmness. An I.L.P. amendment for the deletion of the clause providing for consultation by the Minister with an advisory committee was defeated by 226 votes to 18. Mr Wise then moved an amendment to provide that the proposed regulations should have no effect unless approved by a resolution of both Houses, but this also was rejected. A proposal to exempt persons whose annual income, earnings and benefit combined, did not exceed £250, from the restrictions imposed by the Bill was the occasion for several somewhat reiterative speeches, which show how blurred the distinction between earnings and maintenance is becoming in the minds of many Labour members, but a terse contribution to the opposition to the amendment, coming also from the Labour benches, left no doubt of the existence of a strong under-current of commonsense, and the amendment was lost by 205 votes to 16. The Minister's conciliatory but adamant attitude in respect of workers earning high wages for two or three days a week secured the rejection, after a due display of Clydeside fireworks, of a motion for the exclusion of casual workers from the scope of the Bill, and after similar battles royal at intervals throughout the night, the Bill was safely steered through the committee stage.

The Lords and Electoral Reform.—Without encouragement from their leaders in the Upper House the rank and file of Conservative peers have acted upon the suggestion made by Mr Churchill in the House of Commons and have driven a coach and four through the Government's

electoral reform Bill. Having previously passed an amendment restricting the operation of the Alternative Vote system to London boroughs and towns of over 200,000 inhabitants, the Lords proceeded on Thursday of last week to remove from the Bill three other of its principal provisions contained in the clauses abolishing plural voting and the business premises vote, and restricting the use of motor cars at elections. By this wholesale slaughter the Lords have antagonised the Liberals even more than the Labour Party in the House of Commons, and there is no chance that the Lower House will acquiesce in the wreckage of the measure. It is noteworthy that the Conservative leader in the House of Lords, Lord Hailsham, took no part in the massacre. This is the second occasion within a short time on which the House of Lords has declared war on the Government in respect of a major legislative proposal, for they recently emasculated the Land Bill. Presumably the Government will invoke the machinery of the Parliament Act, and hope to retain office long enough to force both measures on to the Statute Book. A few more clashes of this nature and the Peers will run the risk of finding the whole question of their powers a live topic at the next general election.

Spain and Catalonia.—At the time of the meeting of the Constituent Assembly this week there seemed reason to hope that, on the whole, things in Spain were not going badly. The strikes which have been breaking out at various points and in various places since last week—for the most part, apparently, under the direction of the Sindicato Unico—have neither dislocated the ordinary life of the country nor led to serious encounters between the strikers and the authorities. The movement began on Monday, the 6th, with a general telephone strike, but this seems to have been ineffective, though it still continues. It was followed by a strike of dock labourers and of public utility workers (gas, water and electricity) at Barcelona. This was dangerous, since Barcelona is not only the chief industrial city of Spain, but a place with a tradition of violence. The public utilities strike, however, was called off on July 8th, owing to the concession, on the employers' part, of the men's main conditions: a 10 per cent. increase in wages, a recognition of the Sindicato Unico, and the reinstatement of men who were dismissed on the occasion of the last big strike in Barcelona several years ago. In the political field, the Republican Government's position has been strengthened by several events. One of these was a ceremonial payment of homage to the Republic by the garrison of Madrid last Sunday, July 12th. Another was the decision, taken by the Socialist Congress on the same date, that, in order to consolidate the Republic, the three Socialist Ministers in the present Cabinet shall retain their portfolios until the new Constitution has been promulgated. (This was a rider to a decision in principle that Socialists shall not collaborate in any bourgeois government: a decision which brings the parliamentary tactics of Spanish Socialism into line with the established policy of French Socialism, on which Spanish Socialism is modelled.) The best news of all, however, for the Government at Madrid is the remarkable moderation of the "State Charter" for Catalonia, which was laid before the Catalan Assembly on Monday of this week. Possibly the Charter—which is disappointing to Catalan extremists—might have met with more opposition in Catalonia than it has done if it had not been sponsored by so popular a personality, of such unimpeachable nationalist ardour, as the head of the Catalan Provisional Government, Colonel Macia. The colonel has proved himself a statesman, for this is a charter which the Constituent Assembly at Madrid will find itself able to approve—and if Madrid were to find itself unable to accept Catalonia's demands, the position would become exceedingly serious. Though the charter styles Catalonia an independent state within the Spanish Republic, the fall very far short of dominion status. Foreign affairs, army, declaration of war, post office, indirect taxation and customs are all to be left to the Central Government; while the Catalan Government is to deal with education, justice, public works, railways, merchant marine, police,

civil aviation, banking and stock exchange. This is certainly moderate, and the question of customs provides the key: Catalonia cannot afford to lose the Spanish market.

Riots in Korea.—The sudden anti-Chinese outbreak in Korea last week seems now to have been effectively checked by the Japanese authorities—but this not until 99 Chinese residents in Korea had been killed and 34 Japanese policemen injured in attempting to maintain order. The outbreak is not only deplorable, but also remarkable in several ways. It is surprising that, under the firm and sometimes heavy hand of the Japanese Administration, the Koreans, who are reputed to be rather mild, helpless, pathetic people, should have been able to create to these disturbances at all. It is also surprising (and to the Japanese no doubt disconcerting) that the outbreak should have been so well organised, so thorough-going and so difficult to suppress. But the most surprising feature of all is that it should not have been directed against the Japanese rulers of Korea, but against the Chinese commercial colony. Considering the acuteness of Korean resentment against Japanese rule in Korea and of Chinese resentment against the special position which the Japanese have held in the Chinese provinces in Manchuria, it might have been expected that the Koreans and the Chinese would feel a brotherly sympathy with one another. As a rule, in international affairs, there is no bond so strong as common hostility to a common enemy. And, indeed, the Chinese and the Koreans would doubtless be fraternising, in anti-Japanese terms, to-day if only there were no Chinese in Korea and no Koreans in Manchuria. Actually, all three peoples—Koreans, Chinese, Japanese—find themselves check by jowl in both these countries; and thus it is that their relations, instead of taking the form of a Sino-Korean anti-Japanese entente, have developed into a "three-cornered duel." The root of the trouble is the immigration of Koreans into the new country at their common doors, Manchuria—an immigration which is small compared with that of the Chinese, but large compared with that of the Koreans' Japanese masters. The Japanese have smiled upon it for two reasons: first, it reduces the Korean population at home and so opens the way for Japanese colonisation in Korea; second, it increases Japan's hold over Manchuria, since the Koreans enter this Chinese territory as Japanese subjects. The Chinese resent the Korean influx into Manchuria—partly for this very reason that it gives Japan an additional ground for intervention in Manchurian affairs, and partly for a reason which is not political but economic. The Koreans, unlike the Japanese, have a low enough standard of living to compete not unsuccessfully with the Chinese in Manchuria as agricultural settlers. On the other hand, the Chinese settlers in Korea are business men who form a community apart, more prosperous than the native Koreans and more on a par with the Japanese and the Europeans. This explains why the Koreans are disliked by the Chinese in Manchuria and the Chinese by the Koreans in Korea. The anti-Chinese outbreak in Korea last week seems to have been a reply to an anti-Korean outbreak in Manchuria a few days earlier.

Indian Developments.—The German crisis has robbed the past week's Indian news of a prominence which under ordinary circumstances it would have received. On July 9th the House of Commons once again debated the Indian problem, and the discussions, apart from the usual attack by Mr Churchill upon both the British and Indian Governments, were conducted with responsibility and restraint. Both Mr Wedgwood Benn and Sir John Simon contributed reasoned pleas for calm thinking, but it was quite clear that the Cawnpore riots had made a deep impression on the House, and earnest demands were made for the provision of security for Moslem minorities. Meanwhile in India, pending the announcement of Round Table delegates' names, which is expected shortly, attention has been concentrated on Mr Gandhi's much-advertised visit to Simla. Before his arrival there, which took place quietly on Wednesday, the air had been cleared

THE BOOKLET
EDUCATION

The booklet "EDUCATION" outlines two plans to ensure a complete Education for your children. High fees and early enrolment are factors which demand a settled sum of money being available for the Educational period. The plans described show how this can be accomplished.

Legal & General Assurance Society Limited
10 Fleet Street, London, E.C.4
Assets exceed £21,000,000. General Manager—W.A. Workman, F.I.A.

of many rumours concerning the object of his visit, and it is believed that his conversations with the Viceroy, of which no news is available as we write, are to be devoted largely to discussing the operation of the Irwin-Gandhi agreement and the communal problem. Mr Gandhi remains non-committal on the question whether or not he will visit London in person, but the Maharajah of Patiala returns to the limelight with a denial of the rumour that he is abandoning the examination of Federal schemes alternative to that adumbrated by the Round Table Conference. Meanwhile a Committee appointed by Congress has introduced an element of humour by producing a report claiming huge sums from the British Government in compensation for British rule. Much remains to be done before adequate spade-work has been completed and before the right atmosphere is established for a successful re-assembly of the Round Table; and Mr Benn's admonition on the need for "speed and sincerity" is certainly not out of place.

War Debts Due to Britain.—In a written reply to a question in the House of Commons on Tuesday the Chancellor of the Exchequer gave the following statement of "inter-governmental debts due to the United Kingdom in the year July 1, 1931, to June 30, 1932":—

Country.	Amount. £'000.
Germany (Reparation)	14,442
France (War Debt and Hague Annuity)	13,314
Italy (War Debt and Hague Annuity)	4,471
Belgium (Hague Annuity and Reconstruction Loans)	1,042
Roumania (War Debt, Relief Debt and Repatriation of Prisoners of War)	469
Portugal (War Debt)	350
Jugoslavia (War Debt and Relief Debt)	459
Greece (War Debt and Loan for stores)	361
Poland (Relief Debt, Repatriation of Prisoners of War and cost of occupation of Upper Silesia Plebiscite area)	600
Estonia (Relief Debt and Loan for stores)	70
Austria (Relief Debt)	107
Latvia (Loan for stores, and Repatriation of Prisoners of War)	75
Lithuania (Loan for stores, and cost of occupation of Plebiscite area)	33
Czechoslovakia (Repatriation of Prisoners of War)	106
Australia (War Debt)	*3,920
New Zealand (War Debt)	1,746
South Africa (War Debt)	†337
Newfoundland (War Debt)	21
Trinidad (War Debt)	28
Jamaica (War Debt)	3
India (War Contribution)	836
	42,790

* Not including £1,628,000 previously postponed in respect of the principal of the Australian Debt.

† South Africa has expressed the wish to make this payment as usual.

Mr Snowden added that it was not possible to state which debts would actually be suspended, since this "will depend on the acceptance of President Hoover's proposal by the other Governments concerned and the arrangements finally made to give effect to that proposal."

The Australian Budget.—The Budget for 1931-32, presented last week, shows signs that Australia is beginning to take real steps to face the need for economy. The working deficit of £10,756,899 for 1930-31, £3 millions less than had been anticipated, brings the total accumulated deficit as of June 30th to £21,050,000, of which £3,834,000 was incurred in respect of interest payments on behalf of New South Wales. Owing to the uncertainty as to the application of the Hoover Plan, the new Budget had been framed without regard to the saving which would result if the Plan were put into operation, and on this basis a deficit of £5,176,300 is allowed for; this will be reduced to £1,148,300 if the Hoover Plan is put into effect. The Budget provides for a revenue of £54,135,000. Of this, revenue from indirect taxation is to be £37,100,000, an increase of £5,332,074. The sales tax is to be raised from 2½ to 6 per cent., bringing in an extra yield of £4 millions and the new rates of primage duty are expected to yield £4,300,000. In spite of increases in the income tax and in the super tax on property which, together with a substantial reduction in the exemption limit, are expected to yield an additional £1½ millions, the estimated yield of direct taxation at £13,200,000 shows a decrease on 1930-31 of £5,452,179, owing principally to the effect of the depression upon taxable incomes. Estimated expenditure, at £59,311,000, shows a reduction of £8½ millions. £250,000 is to be saved on defence; £230,000 on bounties and administrative expenditure; £1,800,000 on wages and salaries; £230,000 on maternity allowances; £1,825,000 on invalidity and old-age pensions; £1,300,000 on war pensions and repatriation benefit and £2,470,000 on debt charges. South Australia is to receive a special grant of £1,000,000, and the grants to West Australia and Tasmania are to be continued. The total unfunded debt of the Commonwealth and States at June 30th was £38,075,000. The gross public debt of the Commonwealth increased during the year by £13,637,132, to £386,594,494, of which £211,999,970 was domiciled in Australia, £157,438,806 in London, and £17,155,718 in New York. There was an increase during the year of £53,313,669 (of which £51,395,000 was short-term borrowing) in the debt of Commonwealth and States, which amounted at June 30th to £1,153,910,867.

New Clearing Bank Statistics.—In an Appendix to their Report the Macmillan Committee give an analysis of the main items of the monthly returns of the London Clearing Banks in a form (which they recommend for future adoption) differing from the monthly published returns. In particular, cash in hand and balance at the Bank of England are shown separately; money at call and short notice is sub-divided; Treasury and commercial bills are distinguished; and deposits are shown under the two heads of current and deposit accounts. Monthly averages for the past twelve years and the figures for January-March, 1931, are given below:—

LONDON CLEARING BANKS. SUMMARY OF MONTHLY AVERAGES (12 MONTHS).
(£ Millions.)

Year.	Cash in Hand.	Balance at Bank of England.	Money at Call.	Money at Short Notice.		Treasury Bills Discounted.	Commercial Bills Discounted.	Investments.	Advances (i.e., Loans and Overdrafts).	Current Accounts.	Deposit Accounts.	Total Deposits.	Acceptances outstanding.
				To the Money Market.	To the Stock Exchange.

1930.....	103.6	84.5	33.1	80.1	28.5	128.6	127.2	281.5	933.4	920.8	820.0	1,740.8	73.6
1931—													
Jan. ...	102.7	84.2	37.5	86.9	22.0	197.1	121.8	326.3	891.9	962.0	842.1	1,804.1	50.2
Feb. ...	101.7	82.9	30.0	62.3	19.8	167.0	112.2	333.7	899.6	912.7	829.6	1,742.3	49.4
March	99.8	63.4	25.2	67.8	22.3	128.8	95.4	334.6	915.4	895.2	798.0	1,693.2	47.4

Interesting features which emerge as the result of the trade depression are (a) the rise in the proportion of deposit accounts, and (b) the fall in loans to the Stock Exchange. The volume of acceptances reached a high point at £86.5 millions in January, 1929 (against £54.2 millions in January, 1928), and has since steadily declined.

An Analysis of Bank Advances.—Appended to the Macmillan Report is the following interesting analysis of Bank advances as they stood on various dates during the winter of 1929-30:—

	London Clearing Banks. £	Scottish Banks. £
1. Textiles (cotton, wool, silk, linen, jute)	81,632,371	4,977,214
2. Heavy industries (iron, steel, engineering and shipbuilding)	62,962,675	7,658,164
3. Agriculture and fishing	68,630,471	7,623,448
4. Mining and quarrying (including coal)	30,003,440	2,382,899
5. Food, drink and tobacco	63,177,889	5,967,176
6. Leather, rubber and chemicals	21,969,950	1,507,903
7. Shipping and transport (including railways)	25,176,565	3,487,859
8. Building trades	47,824,549	1,578,970
9. Miscellaneous trades (including retail trades)	146,496,288	9,009,182
10. Local government authorities and public utility companies (excluding railways)	52,384,672	6,675,757
11. Amusements, clubs, churches, charities, &c.	26,502,720	770,399
12. Financial (including banks and discount houses, stock exchange and building societies)	142,547,506	24,989,966
13. Other advances	218,402,248	28,550,094
	987,711,344	105,179,031

It will be seen that the outstanding advances to three groups of severely depressed industries—textiles, the heavy industries and mining—amount to nearly £200 millions.

Coal Industry Reorganisation.—The anomalous position in the Scottish coalfields has apparently not yet been resolved, but it was reported at the end of last week that the Ministry of Mines was collecting evidence of illegal working of the "spreadover" with a view to taking action against the organisations involved. Meanwhile, a welcome sign of life has been given by the Coal Mines Reorganisation Commission, in the shape of a speech by its chairman at last Monday's meeting of the Coal Trade Luncheon Club. Sir Ernest Gowers spoke emphatically of the need for large-scale amalgamations in the coal industry, and stated that the Commission had now made a preliminary survey of their task and were ready to settle down to it. He suggested that the present excess of the industry's productive capacity over demand could not be far short of a hundred million tons a year, and pointed out

that, with 1,500 independent concerns producing coal, there was inevitably a continuous dissipation of effort, with the result that prices were kept unnecessarily low, while costs were swollen owing to the inability of individual collieries to work to their full capacity. The quota and minimum price system clearly did not remedy this situation, but tended to stereotype it. What was needed was financial fusion of interests over wide areas, with a single sales policy and central allocation of production to the most suitable units, but with the retention of separate technical management. Sir Ernest Gowers laid stress on the desirability that such amalgamations should be gradual. A beginning is to be made by the circulation to the colliery-owners in each district of a general statement of the principles the Commission hope to adopt, to serve as a basis of discussion. This evidence of proposed activity on the part of the Commission is very welcome. Meanwhile the Mines Department has issued a report (Cmd. 3905) on the working during the first quarter of this year of schemes under Part I of the Coal Mines Act, 1930, from which it appears that, while regulation of output has been in force since January 1st, most districts had not completed the determination of minimum prices by the end of the quarter though they were well on the way to doing so by May. Though certain hitches occurred in the working of the quota system, no major difficulties were encountered and the coalowners appear to have endeavoured to work the Act as satisfactorily as possible.

Iron and Steel Production.—There are still no signs of any improvement in the production of iron and steel, judging from the figures for June, just issued by the National Federation of Iron and Steel Manufacturers. Not only was the production of pig iron (323,800 tons) less by 2 per cent. than the 346,500 tons recorded for May, allowing for the one day's less production, but there was a net decline of four in the number of furnaces in blast, reducing the number blowing to 76, which presages a further decline of output in July. Steel production fell from 435,100 tons in May to 428,900 tons, but as no public holidays occurred in June to interfere with production, while production in May was affected by Whitsun, the decline in the rate of production was somewhat greater than appears. Since the season of the year is now at hand when conditions are usually quiet in the iron and steel trade, there is little likelihood of any improvement until the autumn. The June production brings the production of pig iron for the half-year to 2,006,000 tons, compared with 3,720,100 tons in the first half of 1930, a reduction of 46 per cent., and of steel to 2,650,100 tons, compared with 4,361,700 tons, a reduction of 39 per cent. Imports of iron and steel in June amounted to 246,300 tons, and were the highest this year; for the tenth month in succession imports exceeded exports, and since exports further fell to 162,600 tons (from 167,500 tons in May) the excess of imports over exports at 83,700 tons was the highest of any month this year. It is significant of the lack of demand that, in spite of exceptionally low prices quoted for Continental material, imports in the first half of 1931 (1,276,900 tons) are some 17 per cent. below the corresponding period last year (1,533,000 tons) and whereas last year imports, though higher, were exceeded by exports, this year the reverse is the case, and exports at 999,200 tons for the first six months, are 272,700 tons lower than imports. Exports in the first six months of 1931 were 798,300 tons, or 44 per cent. lower than in the corresponding period of 1930.

The Crisis in Shipbuilding.—Lloyd's Register shipbuilding returns for the second quarter point to a further marked deterioration in the situation of British yards. At the end of June, work in hand totalled only 555,603 gross tons, a figure which is 138,211 tons lower than at the end of March and 836,460 tons less than the work under construction a year ago. Not since December, 1887, has tonnage under construction fallen to such a low level. During the past quarter launchings in this country totalled 170,100 tons, while work begun amounted to only 23,359

tons, comprising twenty-five vessels, all presumably of small capacity. Of the work in hand, 68,000 tons represent vessels on which work has been suspended and 243,000 tons are uncompleted tankers—the balance outstanding of orders placed during the 1929-30 boom in the construction of this class of vessel. When work on these is finished the outlook for the yards must necessarily give rise to grave anxiety. Abroad the position is not so depressed. Vessels under construction totalled 1,270,384 tons, and, though launchings at 302,000 tons considerably exceeded the tonnage of work begun, commencements nevertheless amounted to 211,000 tons, or nine times the amount of work put in hand in this country.

The Lancashire Cotton Trade.—In the second quarter of the year, writes our Manchester correspondent, Lancashire cotton spinners and manufacturers have not met with any relief, and speaking generally, the depression is as acute as ever. At the beginning of April the spot price of American cotton in Liverpool was nearly 6d. per lb., but at the end of that month there had been a decline to 5½d., with a further fall to 5d. before the end of May. Early in June there was a drop to 4½d. The Hoover proposal, which was announced in the middle of that month, brought a smart advance to over 5½d. early in July. The new crop in the United States has recently made steady progress, as there has been some improvement in the climatic conditions in the belt. The Government has estimated the acreage for 1931-32 at 41,491,000 acres, against 46,078,000 acres last year, or a reduction of 10 per cent. The probable yield is at present estimated at about 12,750,000 bales. As the carryover at the end of this season was about 9,000,000 bales, prospective supplies are abundant, for world consumption at the moment is only on a basis of about 11,000,000 bales per annum. Egyptian Sakel cotton in Liverpool at the beginning of April was at about 9½d. per lb., and there was a decline to 7½d. early in June. The war debts proposal from America affected values, and early in July the price was over 8½d. The new crop in Egypt is reported to be doing fairly well, and substantial stocks are available throughout the world. Trade with India has again been seriously checked by the political situation and the continuance of the boycott. The rise in raw cotton rates during June stimulated demand to some extent, and rather more buying occurred in light fabrics, but Manchester merchants are still being advised of the difficulties experienced in moving goods from the bazaars. To some extent cloth business in India is being adversely affected by the poverty of the natives, which arises from the low prices ruling for agricultural produce. Operations for China have not been of any importance, though now and again rather more activity has shown itself in fancies such as poplins. Offers in standard makes, such as bleached shirtings, remain very poor. During the last week or two the auction news from Shanghai has been very unsatisfactory. For the minor outlets a miscellaneous business has been put through, chiefly for West Africa and South America. Rather discouraging reports have been received from Egypt and the Near East. The home trade has done fairly well, and is healthier than the export section. Weaving production shows very little change as compared with three months ago, and it is still estimated that output is only about 50 per cent. of full capacity. Most users of American and Egyptian yarns have purchased from hand to mouth. In April last the Joint Committee of Cotton Trade Organisations issued a manifesto on the question of redundant machinery in Lancashire. It was urged that the existence of this surplus capacity prevents profitable working, and that considerable elimination was necessary before reorganisation can be effected. The constituent organisations were asked to consider the proposals, and in May the scheme was unanimously adopted. It was resolved, however, that the information required for formulating plans to eliminate surplus plants should be supplied on a voluntary basis, instead of being obtained by statutory powers. Numerous meetings have recently been held of the Joint Committee of American and Egyptian spinners, which is dealing with the scheme for fixing marginal rates for yarn and regulating production. The

proposals have now been definitely formulated, and the scheme is about to be considered by the General Committee of the Master Spinners' Federation. The employers in the weaving branch of the industry have not yet given up all hope of establishing the more-looms-per-weaver system, and there are indications of some of the trades union leaders being more prepared to consider favourably this revised system of working. An informal meeting of employers and operatives was held in Manchester at the end of June, and it is believed that some progress is likely to be achieved at an early date. At the time of writing the industry is being adversely affected by the financial crisis in Germany, and all confidence is destroyed. Buyers of yarn and cloth are holding aloof pending a clearer outlook in world politics, and there is more uncertainty with regard to future values.

International Cotton Loom Statistics.—The International Federation of Master Cotton Spinners' and Manufacturers' Associations has conducted a census of the world's cotton power looms as on December 31st last. The returns now available show that the estimated number of looms in all countries, based on actual returns, is 2,335,296 ordinary looms, 661,023 automatic looms and 53,459 automatic attachments, giving a total of 3,049,778. Some of the countries, chiefly Japan, China and Russia, did not make any returns, and the figures for these countries were obtained from other sources. The United States of America and Great Britain easily head the list of looms, the aggregate total in each country being 698,955 in the United States and 692,899 in Great Britain. Germany has 224,077, France 200,100, Russia 159,100, Italy 146,500 and Czechoslovakia 125,000. In Asiatic countries, India possesses 179,682 looms and China 29,582. It is estimated that there are 10,063 looms in course of erection throughout the world. With regard to the average hours worked per week, the estimates are based solely on actual returns, and the percentage of normal full time worked during the year for the principal countries was as follows:—Great Britain, 56.9; U.S.A., 73.8; Germany, 77; Italy, 67.5; Holland, 79.1; and Switzerland, 68.1. No returns were received from Japan, China or India.

British Motor Tyre Production.—The following estimate of British production and home consumption of motor tyres, made by a correspondent, suggests that activity in this section of rubber manufacture has been well maintained during the past year:—

	Outer Covers.		Solid Tyres.	
	Production.	British Consumption.	Production.	British Consumption.
1924 (a)	1,927,100	2,220,100	397,700	407,600
1925	2,500,000	2,667,000	405,600	414,000
1926	2,700,000	2,883,000	480,000	476,000
1927	3,480,000	3,486,000	490,000	472,000
1928	4,805,000	4,124,000	461,500	444,000
1929	5,356,000	4,194,000	427,500	420,000
1930	5,369,000	4,080,000	356,500	350,000

(a) According to Census of Production.

The above table excludes inner tubes. As the length of life of a tube, however, roughly equals that of a casing, the number produced and consumed in this country closely approximates to that of outer covers. In the United States, on the other hand, production in 1930 shows a sharp decline as compared with the previous year. The figures for the United States, calculated by the Rubber Association of America, are set out below:—

	(Production).		
	Outer Covers.	Inner Tubes.	Solid Tyres.
1928	73,000,000	75,000,000	630,000
1929	68,000,000	69,000,000	510,000
1930	51,000,000	52,000,000	260,000

It should be noted that the decrease in the production of "solids" both in this country and in America is partly ascribed to the fact that commercial vehicles are increasingly fitted with pneumatic tyres.

U.S.A. Wheat.—The Crop Reporting Board of the Bureau of Statistics of the United States Department of Agriculture has now issued its July estimates of the wheat crop. The figures are shown below, with comparative statistics for past years:—

Season	(Million bushels).		
(June-July).	Winter Wheat.	Spring Wheat.	Total.
1926-27	552	325	877
1927-28	578	336	914
1928-29	576	228	804
1929-30	604	246	850
1930-31	713	156	869

It will be seen that the yield of the winter crop exceeded that of the past four years, while the spring crop, which was damaged by drought, shows a considerably smaller yield. Meanwhile it is reported that the ruinous fall in the farm price of wheat in Kansas and the South-West is leading to agitation that the Washington Administration should extend financial assistance to farmers, through the Federal Farm Board or otherwise.

The Position in New Zealand.—The annual review of economic conditions in New Zealand, delivered at the meeting of the National Bank of New Zealand in London on Tuesday by Mr Pember Reeves, attracted more than usual attention in view of the state of affairs in Australasia. The review was of a rather strikingly reassuring nature. The large Budget deficit, the exchange depreciation, the steep fall in the price of the products which New Zealand sells, and the growing burden of taxation are interwoven facts in the situation which are generally recognised. But Mr Pember Reeves was very definite in his opinion that the Government and Parliament "are facing the position with resolution," and that they are supported in their efforts by the greater part of the taxpaying public. Among the estimates given by Mr Reeves were that the current budget threatened a deficit of £5½ millions, that the burden of rates and taxes had risen to £17 per head of population, and that the national income of New Zealand had fallen in two years by 25 per cent. After referring to the negotiations leading up to the general 10 per cent. cut in wages, Mr Reeves went on to refer to an illuminating incident in Dominion tariff history. The new Canadian tariff, he explained, quadrupled the duties on imports of New Zealand butter, and in the eight months ending March 31st the butter export to Canada fell to less than one-twelfth of its size in the corresponding period of the previous year. The New Zealand Government retaliated by depriving Canadian imports of the preferences accorded to Empire products. There the tariff war stands at the moment. The net profits of the Bank showed a fall of £50,000, and the dividend is reduced from 12 to 10 per cent.—a record which is by no means disappointing in a period marked not merely by the acute development of economic depression but also by a severe earthquake.

North Atlantic Passenger Fares.—The North Atlantic Shipping Conference, which was in session most of last week in Paris, has adjourned until July 28th, apparently without reaching any definite conclusions. The problem which the Conference is facing lies in the severe contraction of first-class passenger traffic between New York and Europe in consequence of the depression. The line of policy advocated, it seems, by the British members of the Conference is that an endeavour should be made by a reduction of first-class fares on "Express" ships to stimulate a recovery of traffic. The view, however, seems to have been held by other members, notably the German lines, that the demand for this class of accommodation is comparatively inelastic, and cuts would simply accentuate existing difficulties for the companies. The whole question, which has been referred to a small committee of the Conference for further study, is complicated by the consideration that a reduction in first-class fares would almost inevitably be followed by cuts in the rates charged for "cabin" and other more economical accommodation; and these rates are regarded

by the companies as being at the minimum justified by running costs. It is, however, evident that if the depression be prolonged and if a downward adjustment of money incomes makes further progress, it will be impossible ultimately for North Atlantic first-class fares to be maintained at the level of recent years.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal during June amounted to 897,750 ounces of fine gold, as compared with 910,279 ounces produced during May and 882,337 ounces in April. In June, 1930, the output amounted to 887,867 ounces. The following table shows the monthly output since the beginning of 1925:—

Months of	1925.	1926.	1927.	1928.	1929.	1930.	1931.
	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.	Fine Oza.
January	823,692	796,270	839,782	843,857	876,452	882,801	914,576
February	753,925	753,924	779,339	816,133	815,284	818,188	839,937
March	825,479	834,340	860,611	877,380	866,529	889,370	910,998
April	787,519	803,303	824,014	825,907	872,123	868,606	882,337
May	813,249	849,214	859,479	886,186	897,598	916,213	910,279
June	780,251	852,145	855,154	862,363	856,029	887,867	897,750
July	818,202	860,134	851,861	867,211	889,480	912,652	...

September	797,247	839,939	842,118	857,731	888,690	926,561	...
October	812,832	853,296	855,743	897,720	861,593	884,753	...
November	787,633	840,276	848,059	872,484	851,134	908,492	...
December	791,455	836,157	851,225	859,761	...	...	...
Total..	9,599,702	9,962,852	10,130,630	10,358,596	10,414,066	10,719,760	5,355,811

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	Oct. 1930.	Nov. 1930.	Dec. 1930.	Jan. 1931.	Feb. 1931.	Mar. 1931.	Apr. 1931.	May 1931.	June 1931.
Gold mines	206,778	205,030	203,473	209,442	209,777	207,239	206,770	207,109	207,209
Coal mines	14,462	13,973	13,763	13,865	13,740	13,436	13,242	13,305	13,286
Diamond mines	5,032	4,748	4,607	4,325	4,333	4,106	4,030	3,689	3,345
Total	226,272	223,751	221,843	227,632	227,850	224,781	224,042	224,103	223,840

The number of natives employed during the month of June showed little change.

UNITED STATES.

Hoover Plan — Railroad Rates — Prices — Bank Results — Public Finance — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 8.

DELAY at Paris in negotiating agreement on details of the debt postponement plan took much of the bloom off so far as the security markets were concerned. Wall Street is nevertheless confident that world trade will be stimulated by the debt accord, and holds that it was a necessary step in the circumstances. At the same time, there is a feeling in some quarters that a different course might have been pursued by Germany which would have made a moratorium unnecessary.

It is argued that the heavy withdrawals of short-term credits, which began when it was seen that an earnest push would be made for debt suspension, will hamper German industry more than reparations relief will aid it, for the time being at least, and that the damage abroad to German credit cannot be quickly repaired. Talk of any long-term German financing in this country is, of course, decidedly premature. The Federal Reserve Bank and private institutions stand ready to grant further credits. It is felt that the first request for only \$100,000,000 by the Reichsbank represented a mistaken estimate of the situation and that it would have been better to ask for an initial credit of at least twice that amount.

For the past three weeks markets have paid little attention to trade developments, which have anyhow not been remarkable. Company earning statements for the second quarter and the first half-year are just beginning to appear. There has not been much indication of improvement for the third quarter, but crops are moving in large volume and hope is held for at least a mild trade recovery in the autumn.

The dates fixed by the Interstate Commerce Commission for hearing the railroad application on higher freight tariffs make it certain that no relief is possible before October 1st. Little doubt is felt that the Commission will grant at least the major portion of the 15 per cent. increase sought. Railroad gross earnings in the first five months dropped 19.1 per cent., and their net railway operating income was at the rate of only 2.1 per cent. on their property investment, compared with 3.5 per cent. earned in the same period of 1930. In May gross revenues declined 20.3 per cent. and net revenues over 40 per cent.

The rise in commodity prices over the past three or four weeks has been a distinct help to sentiment. The Dun's index of wholesale prices for June rose by one-half per cent. and Bradstreet's by 1½ per cent. In the past few days a backward swing has taken place. Wheat has touched a new low record, cotton has weakened, and copper, which had been pushed up to 9 cents a pound, has come back to 8½ cents. Acting on President Hoover's hint, the Federal Farm Board first announced that it would limit its sales of wheat to 5,000,000 bushels monthly. Later, after being waited upon by a delegation of Western Senators, it agreed to suspend all sales for the time being. That promise, made or implied, has not satisfied the wheat country, and an appeal to President Hoover will be made, probably for re-entry into the market by the Farm Board as a purchaser.

Efforts to extend the copper curtailment agreement have met with difficulties, but they have not been abandoned. The last conference broke up over the refusal of one of the important Canadian producers to curtail further. It is understood that refusal was based on the belief that the restriction proposals did not go far enough. Resumption of curtailment negotiations is expected in the autumn.

Banks have reported on their condition as of June 30th, in response to national and State calls. A varied but rather indifferent showing is made. For the New York banks the rise in deposits between March and the end of June was around \$700,000,000, which was no more than seasonal. The practice of setting aside heavy reserves from surplus or undivided profits, begun last September by one of the largest banks, which wrote off \$20,000,000, has become more extensive. In the past nine months it appears that New York banks have had to write off an aggregate of around \$150,000,000, partly to cover bad loans, but principally to meet depreciation in securities held by investment affiliates.

In the six months ended June 30th few of the banks covered dividends paid by a wide margin. Many fell slightly under dividend requirements, but dividend reductions, while extensive over the country, have been scarce in Wall Street. In view of the low rates received for money on Wall Street loans and the shrinkage in the average rate received for customers' loans (in the case of large banks now under 4 per cent.), bank earnings in the strict sense, before the write-offs on security depreciation, were fairly good. Write-offs among the larger banks ranged from \$3,000,000 to \$34,000,000. Two of the leading banks reported increases in deposits of over \$120,000,000 each.

Federal Reserve Bank authorities are prosecuting with vigour their plan to force interest rates down through purchase of Government securities. They succeeded in preventing the slightest rise in call funds over the mid-year settlements. The Stock Exchange pegged rate is 1½ per cent., but private banks and others not a party to the pegged rate agreement are finding it difficult to place much money even at 1 per cent. The addition of \$20,000,000 in Government securities to holdings made by the Reserve system two weeks ago was followed last

week by purchases of \$45,000,000. This enabled the banks to cut discounts by \$47,000,000, much of that being in the nature of window-dressing in anticipation of the June 30th bank call. Last week brought a reversal in brokers' loan deflation, which had been uninterrupted for eleven weeks. The rise of \$73,000,000 was perhaps due less to public interest in a rising share market than to a spurt in new capital flotations. These jumped to about \$250,000,000. This week new offerings have been held off pending settlement of the debt negotiations, but no great activity is anticipated.

Government accounts for the fiscal year ended June 30th show a deficit of \$903,000,000 and an increase in the public debt of \$616,000,000. This was the first deficit in ten years. Ordinary expenditures were \$226,000,000 larger than last year, while Treasury receipts were \$861,000,000 smaller. The year ended with gross debt at \$16,801,000,000. The deficit compares with the Treasury estimate made last December of \$180,000,000, generally regarded at the time as optimistic. Income-tax collections reveal a drop of \$226,000,000 taken from companies and of \$330,000,000 taken from individuals. Customs collections fell by nearly 40 per cent.

In spite of this heavy deficit, in financial circles it is still believed unlikely that the next Congress, which meets in December, will vote an income-tax increase. There is considerable sentiment over the country in favour of raising rates in the higher income classes, if any increase is made; but Treasury borrowing will probably be adopted as the easiest way out, at least until after the 1932 elections. The country has been considerably taken aback by the huge size of the deficit, but the feeling is general that the rate of debt reduction (nearly \$1,000,000,000 annually) over the past ten years was too high, except for an unusually prosperous period.

Confidence in some of the leading industries is rising in spite of declining production. The steel trade is now down to about 33 per cent. of capacity, but the minimum is believed to be near. Pig-iron output in June dropped 18 per cent. from May, and was the smallest since February, 1922. Steel-ingot output was the lowest monthly rate since 1924, and for the first six months the smallest since 1922. The June production was 17 per cent. lower than in May. The very severity of the decline encourages the hope that the bottom has been touched.

FRANCE.

French Attitude to German Crisis — Disarmament — Effect on Budget — Industry.

(FROM OUR CORRESPONDENT.)

PARIS, July 15.

FRANCE, who considers she has at least given proofs of her ability, since the German onslaught of 1914, successfully to utilise her military, financial and economic resources for her own salvation, is contemplating with somewhat mixed feelings what she is inclined to regard as not very commendable efforts on the part of Germany to mobilise the rest of the world to enable her to evade the treaty obligations to which she gave her signature at Versailles and The Hague. There are still many who think that the gravity of the German financial situation has not only been grossly exaggerated, for the purpose of impressing the United States and Great Britain, but has also been deliberately brought about with the object of getting rid of reparation payments. Current events in Berlin, it is held, are apparently confirming the soundness of the French view on the first-mentioned point, for the inference is drawn here that Germany does not lack means, if she will only apply them, to right her financial situation by her own unaided efforts, as France herself did in 1926. Recent history, French opinion insists, amply confirms the truth of the accusation that Germany's present financial condition has been deliberately brought about, even if the repeated declarations of Dr. Schacht, both before The Hague Conference

and since, to the effect that Germany would evade reparation payments "even at the cost of a second bankruptcy," be ignored. Finally, with the exception of M. Léon Blum and a large section of his followers, every Frenchman is convinced that Germany has now, by her own policy, brought matters to such a pass that a golden opportunity—and probably the last—has arisen, if only France stands firm, to bring about real general disarmament, and prevent the beginning of a fresh world-wide armament race that must inevitably keep Europe in a state of poverty and incessantly provoke other wars. The French bankers are perhaps the most ruthless in the world in driving a hard bargain, but in this case French capital sees much larger profit possibilities in a disarmed, laborious and co-operating Europe than any that could be secured from merely temporary loans to a needy Germany; which latter, France is convinced, would certainly be utilised, unless east-iron safeguards were forthcoming, to increase Germany's military strength and foster German aspirations to the commercial and financial hegemony of Europe.

This was the motive influencing the French negotiators in the long duel over the Hoover moratorium plan; and it should not be overlooked that French acceptance of the American proposals, as the text of the agreement shows, depends directly on Germany's acceptance of the condition that none of the money saved by her through the application of the Hoover moratorium shall be spent on other than economic objects. Fortunately, there are indications to-day that, in view of the dogged French attitude, Germany is showing signs of being willing to suspend battleship building "if other countries will make similar concessions." What effect the application of this important suggestion would have on French plans for the construction of the proposed new 23,000-ton battleship, as a reply to the completion of the *Deutschland* and the pending laying down of several other German pocket-battleships, will be shown by the subsequent negotiations which seem inevitable, if to-day's reports of a German offer to suspend construction prove to be well-founded.

Meanwhile, there is every indication that this country is determined to persevere in its insistence on a suspension of German armaments as the price of French financial aid. So far this attitude of the French has apparently had the direct results of causing the American banks to refuse President Hoover's request to them to help Germany out of her immediate troubles, and of sending Dr. Luther back from London, Paris and Basle with empty hands. Mr Henderson's arrival here to-day is welcomed by the French leaders, who regard him as a friendly intermediary from whose efforts subsequently in Berlin much good may come in the way of convincing Germany that French financial co-operation depends almost solely on Germany undergoing a change of heart on the armaments question. The whole controversy, so far as France is concerned, has now been transferred from the financial to the political plane, and is practically certain to remain there until a solution satisfactory to France is reached.

All parties freely recognise that M. Laval has handled the French case with indisputable skill, and each step in the development of the policy adopted by the Government is being received with stronger approval daily. Press and public alike appear to be supporting the Cabinet with extraordinary unanimity. The anger expressed by a large section of the Opposition at M. Laval's bold step in proroguing (*anglicé*: suppressing) the Chambers, at a moment in the Franco-American negotiations when deputies threatened to be a serious danger to the *pour*-Premier France has ever possessed. Repeated threats that all his efforts may be undone when the Chambers reassemble have been received by M. Laval with silent indifference. The delicate situation is being firmly handled from day to day by the "Inner Cabinet," consisting of the Premier, the Financial Minister (M. Flandin), Mr. Briand, the Minister for the Budget (M. Pietri), and the War Minister (M. Maginot), in close co-operation with the Bank of France and the private financial institutions.

July 18, 1931.]

GERMANY.

Industrial Guarantees — Golddiskontbank — Danat Suspension — Run on Other Banks — Credit Restriction.

(FROM OUR CORRESPONDENT.)

BERLIN, July 14.

ALL the banking events of this week—the suspension of payments by the Danatbank, the runs on banks and savings banks, the institution of bank holidays to check the runs, bringing with it many of the ill consequences of a moratorium—all these had been hanging over the heads of the Government and the Reichsbank for weeks as an imminent danger. The efforts of German credit policy during the past week had been directed to one end, the prevention of the need for a suspension of payment by the bank whose position was most in danger, and the avoidance of measures of a moratorium character. This policy failed because international support for German credit was not forthcoming quickly enough. Immediately after official agreement on the Hoover Plan was reached, it became evident that, after the long-drawn-out negotiations with France, the moral effects of this agreement no longer sufficed to check the withdrawal of foreign exchange from Germany.

The Reichsbank procured itself a short breathing space at the beginning of last week by using the 50 million Golddiskontbank credit, which had long been at its disposal, to improve its reserve ratio. The withdrawals nevertheless continued, and were not even checked when, on the Tuesday, a large number of German industrial firms ranged themselves alongside the Golddiskontbank by offering a credit guarantee of 500 million "in order to strengthen the effectiveness of the Golddiskontbank," and thereby to make it easier for the Reichsbank directors, "in co-operation with the central banks of other countries, to procure us the necessary relief for the German industrial and credit system, with the assistance of the banking world abroad."

This step has repeatedly been misinterpreted abroad. Here and there it has been mistakenly construed as a kind of support for the Golddiskontbank. The Golddiskontbank, which was founded for the promotion of export, and whose development was advanced by the emergency decree of December, is practically under the administration of the Reichsbank. It has always pursued a particularly cautious policy, and its balance sheet is exceedingly liquid. In particular, it has no debts of any kind which can be called in. It therefore seemed in many respects peculiarly qualified to raise a large, long-term credit for German economy, but its capital, including reserves, only amounts to 250 millions, and this did not seem a sufficiently broad basis for taking up a large loan. It was therefore desired to extend the basis by the guarantee of industry and trade, which was to cover a further 500 millions. Furthermore, it was hoped that such a gesture of solidarity would produce a favourable moral effect.

The effect, however, did not materialise, nor did Dr. Luther's journey to London and Paris produce the urgently needed credit. Dr. Luther's failure to obtain immediate financial assistance rendered the lack of confidence even more acute, intensified the foreign exchange drain on the Reichsbank, and increased the nervousness of German depositors. The Reichsbank, which again lost over 100 millions on Saturday, decided upon more severe measures of restriction, and on Sunday night the Darmstädter und Nationalbank, by far the weakest of the big banks, informed the Government that it had not the liquid resources to continue to meet withdrawals, and that it would be obliged to close its doors on Monday in the interests of its remaining creditors. An attempt was made during the night to secure co-operative action by the other big banks for the rescue of the Danat, but one or more of them very understandably refused to weaken their relatively strong position in order to maintain the Danatbank.

Why was the Danatbank singled out for this fate? The directors have announced that from the time when its foreign holdings were at their maximum in 1930 until July 11, 1931, about a milliard of deposits, mostly those of foreign creditors, were withdrawn. Since May with-

M. Maginot's rôle will become an important one if the disarmament question becomes a leading issue. No hint has been allowed to escape as to the line this country would adopt if no satisfactory understanding is reached. But too great importance need not be attached to the talk in one or two Paris papers of a possible reoccupation of the Rhineland. In two of them the reoccupation of the Mainz district has been specifically alluded to, "as a means of bringing Germany to reason." Without the occupation of the Ruhr district, it is argued, there would have been no Dawes Plan, therefore another similar cutting of the Gordian knot, in the interest of removing the only real difficulty in the way of European disarmament, might possibly be the only means of solving the problem.

Opponents of the Hoover moratorium plan base their objections to some extent on the practical certainty that its application would lead to a huge deficit in the current year's Budget. M. Franklin-Bouillon, the leader of the opposition to the Hoover proposals in the Chamber, estimates that the sacrifices of revenue which France will be called on to support through suspension of German reparation payments during the present year will bring the expected deficit by March 31st to something like 8,000,000,000 francs (say, £64,000,000). This total M. Franklin-Bouillon arrives at very roughly, as follows:—

	Francs
Deficit already forecast for the Budget.....	2,000,000,000
Deficit directly due to suspension of Young Plan	2,000,000,000
Deficit due to postponement of financial reform plan for railways (about 200,000,000 francs per month)	2,400,000,000
Deficit to be met through refloating of Compagnie Générale Transatlantique by State aid.....	1,000,000,000
Loss resulting through postponement of Rente conversion plan	600,000,000
	8,000,000,000

M. Franklin-Bouillon's figures are undoubtedly exaggerated, as it would be within the bounds of possibility for the Bill affecting the railways to be adopted long before March 31st, while the Rente conversion plan at no time foreshadowed an immediate saving of as much as 600,000,000 francs a year forthwith. At the same time M. Franklin-Bouillon's figures do not include the amount France will have to pay into the B.I.S. guarantee fund, in the event of a German moratorium, or the loss this country will suffer in the event of a suspension of reparation payments in kind. The total amount of the latter payments forecast for the present year, by the way, should amount to about 306,000,000 marks (and not about 700,000,000 francs," as repeatedly stated here recently, both in Parliament and elsewhere). Of this total 45,000,000 marks (or about 270,000,000 francs) would represent coal deliveries. Suspension of these German coal deliveries, in view of the present serious effect of foreign coal competition in this country, would probably be a blessing in disguise to the French coalfields, which are suffering from under-consumption and large pithead stocks.

The revenue for June shows a yield of 114,000,000 francs above Budget estimates, thus transforming the deficit on the first two months of the financial year into a surplus of 67,000,000 francs net. The industrial production index figure for May is returned this week as 129 (a drop of two points on the month). Output is thus still 29 per cent. above the 1913 level and two per cent. above the 1928 average. The combined figure for iron, steel, coal and other "extractive industries" is 106 for June, or 7 points lower than in April and May, and 17 below the 1930 average. Pig-iron output in May was 725,000 tons, against 901,000 tons in May, 1930, and crude-steel production was 674,000 tons, against 855,000 tons in May last year.

drawals have amounted to 650 million marks. As Germany parted with about two milliard marks in gold and foreign exchange between May and the middle of July, about a third of the loss has fallen upon the Danatbank alone. That is out of proportion to the internal strength of the Danat as compared with that of the other big banks. The Danatbank, under Herr Jacob Goldschmidt, whose leadership is able but inclined to excessive activity has been more light-hearted both in the acceptance of foreign short-term money and in the granting of industrial credits than the other banks, and was, therefore, bound to be more severely hit than they by the withdrawal of deposits, and to have more difficulty in obtaining the means of repayment from its industrial customers. In addition, it had a stroke of especial ill-luck in the collapse of the Nordwolle, which may have cost the Danatbank as much as 50 million Reichsmarks, a very considerable loss in view of the fact that its capital is only 60 millions, whereas those of the Dresdener Bank, the Commerz- und Privatbank, the Deutsche Bank und Diskonto-Gesellschaft amount to 100 millions, 75 millions and 285 millions respectively.

It was less the actual loss from the Nordwolle failure than its psychological consequences which were fatal to the Danatbank. People began to talk about it, and the tendency to gossip was encouraged by the personality of Herr Jacob Goldschmidt, whose reputation as a City man who loves economic risks and has no hesitation in seeking opportunities for them, could not but exacerbate the anti-capitalistic instincts of the general public. Communist and Nationalist papers were the first to drop hints as to the unsatisfactory position of the Danat, and thus to spread mistrust in ever widening circles. Whatever mistakes may have been made in the management of the Danat, no bank in existence could long withstand such a kindling of mistrust.

As soon as the suspension of payments by the Danatbank became a certainty, the Government undertook the guarantee of all its debts, and during Monday its action was put on a legal basis by an emergency decree of the President. This guarantee was a foregone conclusion, as the Reich was obliged to prevent any depositor in one of the German big banks from suffering permanent loss. It was also required by the measures which the Government took for the protection of the bank. The bank was granted a moratorium until July 31st, during which time bankruptcy proceedings cannot be taken against it. As the Government deprived the bank's customers of the legal means of taking action against it, they were obliged at least to protect the customers' claims by a guarantee. This guarantee does not come into effect until July 31st, and the period could, of course, be extended by another decree. The bank's "creditors" amount at the moment to over 1,400 millions, and it is impossible to say at present how much the corresponding assets will be worth, and to what extent the guarantee will involve the Reich finances. It certainly will not lead to any intolerable fiscal consequences.

As soon as the notices appeared outside the Danatbank on Monday morning, informing depositors that they could not withdraw their money, there began a run upon the other banks and on the savings banks. At first, payment was made in full, but later a severe system of rationing was universally adopted. The savings banks, which receive principally working-class and lower middle-class deposits, and have invested partly in not very liquid credits to the communes, are the most sensitive branch of the German credit organism, as they are liable in times like the present to be exposed to the full brunt of a panic without having the faintest chance of meeting the pressure, even to a moderate extent. Although almost all the savings banks from midday onwards paid no more than 100 marks to any individual depositor, regardless of the total of his account, there cannot have been much cash left by evening. In order to give the savings banks time to procure the means at least for limited payments, and to insure all credit institutions having on hand the wherewithal to meet wage payment withdrawals at the end of the week, the Government issued a new emergency decree, closing the banks on Tuesday and Wednesday.

That, of course, means an interruption to the circulation of credit which may have very serious consequences in individual cases.

The restriction, which is now being prosecuted with the greatest strictness by the Reichsbank, will lead to a scarcity of marks. The panic withdrawals from the banks and savings banks have the same tendency, in so far as the money withdrawn is hoarded, as is to a great extent the case. That causes a reduction in the velocity of circulation of money which, from a purely theoretical point of view, is temporarily advantageous as it places the mark exchange out of danger. But the restriction of credit and the shortage of ready money, which will grow more acute until the end of the week, unless a solution is found to the crisis in the meantime, involve devastating effects on economic activity, as no transactions involving payment can be concluded. It is impossible to say how long the situation can be endured. Just as the closing of the banks has already been imitated by other European countries, so would a moratorium; and no country in the world would remain undisturbed by such an economic breakdown. There is still time to bring about a relaxation of the acute credit crisis. The means to that end are well known: what is needed is a large loan to Germany which would make it possible for the Reichsbank to satisfy the most urgent credit requirements, and to put an end to the foreign exchange drain by inspiring confidence through uninterrupted payments. But the very last possible moment for such a step has already arrived.

SWEDEN.

Production — Foreign Trade — Balance of Payments — Stock Exchange.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, July 5.

UNTIL last May the leading Swedish industries were only slightly affected by the general deepening of the depression. The statistics of production now available for May show, on the other hand, a considerable decline in production. The index number (1923-24 = 100) for the month is 93, whereas in previous months it had remained in the neighbourhood of 120. This figure reveals the deterioration of the position in the chief export markets of the country. The gradually increasing stocks accumulated during the immediately preceding months partially explains the high figures in those months and the sudden decline in May; a contributory factor, however, is the circumstance that Whitsun this year fell in May. With the exception of 1928, the year of the labour disputes, the index number has not hitherto been below the level of 1923-24. The index, however, does not give a very clear indication of the general position, because it only includes, in a minor degree the branches of industry working for domestic consumption, which are still comparatively well engaged. It is primarily the great staple industries of iron, steel, timber and pulp which are affected by the depression.

Whereas under normal circumstances the Swedish balance of trade in May becomes active as a result of the opening of the shipping season, last May there was an excess of imports, amounting to Kr. 26 millions. The decline as compared with the same month last year, which showed an excess of imports amounting to Kr. 6 millions, is greater than any other month this year. The excess of imports for the first five months of the year was Kr. 180 millions, or almost double the amount of the corresponding period last year. Paper and pulp, as well as pig iron, unlike practically all other commodities of any real importance, show a seasonal increase in the quantities exported. Whereas in the two immediately preceding months exports of pulp were about 50 per cent. below the level of last year, the decline in May was only 12 per cent. Owing to the strike last year paper shows a very considerable increase in the quantities shipped, but even compared with the 1929 figure it is very favourable and shows

some increase; whereas the figure for pulp is 32 per cent. lower. Exports of pig iron have risen considerably, by 39 per cent. A catastrophic decline is shown in shipments of timber, in so far as they amount to only about 30 per cent. of those of last year.

Exports of iron ore were about 55 per cent. below those of last year, exports of matches 42 per cent. of iron and steel (not including pig iron) 25 per cent. Figures in the mechanical engineering industry are also unsatisfactory. The decline in the export of motors was 58 per cent., ball bearings 41 per cent., electrical machinery 30 per cent., separators 36 per cent.; telephones, which have hitherto achieved larger exports than last year, show a figure which is 28 per cent. lower than in the corresponding month last year. Industrial raw materials have been marketed in considerably less quantities, with one or two exceptions. Imports of cotton increased by 40 per cent. and of rubber 3 per cent. Wool imports were 10 per cent. lower than in May last year; the corresponding decline for hides was 35 per cent., of pig iron 33 per cent. and for plates 52 per cent. In fuels there was a great decrease; of coal and coke it amounted to 15 per cent., of benzine 20 per cent., and other mineral oils 35 per cent. Imports of sugar show a remarkable increase.

This unfavourable development in the balance of trade, combined with an increased export of capital as a result of the earlier decline on the Stock Exchange, had a considerable effect on the balance of payment. Our net claims abroad—those of the commercial banks and the Riksbank—fell by no less than Kr. 72 millions in May.

Whereas usually in that month there is a decline in the monthly passive account as compared with the preceding four months, the above figure shows an increase. Since the New Year our balance of payment has declined by no less than Kr. 253 millions, a figure greater than that of the year of labour conflicts in 1928, when the decline for the corresponding period was Kr. 199 millions.

Owing to the close connection of the Swedish Stock Exchange with the great foreign stock exchanges the violent fluctuations due to political causes have also affected the Stockholm Stock Exchange. The Hoover proposals caused during the five last days of June an increase of the value of the "A" list shares amounting to Kr. 500 millions. The month had begun, however, with a collapse which showed a loss of Kr. 243 million during two days, but this was followed by a recovery in the next two days amounting to Kr. 197 millions. As a result of the German crisis, however, the three first weeks of the month showed a loss in the above-mentioned "A" list shares of Kr. 165 millions, and the recovery for the whole month was Kr. 332 millions. The losses since the beginning of the year have thereby been reduced to Kr. 145 million. The purely domestic stocks have sunk by Kr. 158 millions, of which Kr. 57 millions are bank stock. Since the Stock Exchange collapse in October, 1929, the value of the "A" list shares has fallen by one and a half milliard kronor to four milliard kronor. In the June recovery Kr. 271 millions related to stocks quoted abroad and Kr. 61 millions to domestic stocks. The banks, however, suffered a further decline of Kr. 10 millions.

IRISH FREE STATE.

Politics — Electricity Supply — Population —
Agriculture — Banks.

(FROM OUR CORRESPONDENT.)

DUBLIN, July 11.

THE result of the bye-election in County Kildare, in which the Government candidate was defeated by a very small majority, is generally regarded with complacency. It is a remarkable tribute to the strength of the Government in the country that it should be able to secure practically half the votes in the constituency after ten years of power, during which no concessions have been made for the sake of popularity; and the prospects of a return to office after the general election, which must take place next year and may take place much sooner, are distinctly brighter than they were a year ago. The most interesting thing revealed during the bye-election campaign was the intense mutual antipathy of the Fianna Fail and Labour parties, who disagreed most violently on every possible occasion. For example, while the Fianna Fail party favours more and higher tariffs, the Labour Party has stated that the existing tariffs have failed to produce any tangible results and that Irish industry can never be revived by a policy of mere protection unaccompanied by other measures. A coalition between these parties after the general election now appears exceedingly improbable.

The revelations of the Minister of Industry and Commerce concerning the financial administration of the Electricity Supply Board have given rise to some anxiety. It appears that the Board—the principal members of which have recently resigned—has overstepped its allowance of £2,500,000 by the sum of £600,000, and had undertaken further commitments of £250,000. Moreover, the accounts of the Board are in a hopeless condition of chaos; money was spent so rapidly that no account of its expenditure could be kept; and the whole financial situation of the Shannon Scheme is plunged in obscurity. The Board has now been reconstituted, and the control of the Government over expenditure has been increased. The sum of £2,000,000 has been voted for the completion of the project, the expenditure on which already amounts to £9,000,000.

It must be clearly understood that the unfortunate muddle that has arisen in the financial affairs of the Electricity Supply Board does not in the slightest degree imperil the success of the Shannon Scheme. In the recent debate on the subject in the Dail all parties were agreed that the technical success of the undertaking had already been proved, and that its financial success in the future was equally certain. The Minister for Industry and Commerce stated that the prospects of the scheme were never brighter than they are to-day, and this opinion is shared by all who are in a position to judge. One of the most encouraging factors in the situation is the favourable report which has been issued regarding the Drumm battery, which appears to be standing the test of prolonged experiments with complete success.

For the first time in the history of the Free State, the population of the country has increased. The population in June of this year is estimated at 2,952,000, an increase of 6,000 over the figure for last year. This long-awaited and thoroughly acceptable change in the direction of the population movement is, of course, the result of reduced emigration. In the first four months of the present year the total number of emigrants amounted to 512, of whom 284 went to the United States, whereas during the same period last year the number of emigrants was 5,824, of whom 5,346 were bound for "the States." The total emigration during 1930 amounted to 15,966, and it is clear that the number will be substantially less this year. While the decrease in emigration is the result to some extent of the depression in America, it is unquestionably also the reflection of improved conditions at home.

The salvation of Irish agriculture during the slump has been found in the comparatively steady price of live stock products, especially high-grade meat. The review of the world agricultural situation, recently published by the

International Institute of Agriculture, shows clearly the terrible plight of countries relying for their income on cereal cultivation, and the relatively favourable position of areas producing meat. There is every reason to think that the price of cereal products will remain depressed indefinitely owing to the changes in conditions of supply and demand that have taken place since the war, and it is difficult to understand why anybody should wish to encourage the cultivation of such obviously undesirable crops. Nevertheless, the official opposition party still adheres to its determination to grant a subsidy on wheat growing if it is returned to power, thus flying in the face of all the most enlightened agricultural opinion of the day.

The following statistics, published by the Currency Commission, show the course of Irish banking last year.

	In Irish Free State. £	Outside Irish Free State. £	Total. £
Deposits and current accounts:—			
December 31, 1929...	124,145,775	40,559,851	164,705,626
December 31, 1930...	122,504,586	40,553,435	163,040,021
Bills discounted and advances:—			
December 31, 1929...	55,999,959	34,168,475	90,168,434
December 31, 1930...	52,795,256	30,882,313	83,677,569

The figures refer to the eight banks holding shares in the Currency Commission.

SOUTH AFRICA.

Maize Growers' Difficulties — Education — Control —
Native Vote — Iron and Steel Works.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, June 3.

PARLIAMENT has now but a few days to sit. From weariness and a desire on the part of the members to reach homes and businesses which in some cases are days distant, the atmosphere of the last days of the session is apt to be one of impatience. At present, this is complicated by a measure of anxiety for the future. The Minister of Finance has, as usual at the end of the session, introduced short formal measures to implement changes of which the principles were approved when the House debated the Budget in April. The Minister was constrained to admit that at that time he had been unduly optimistic. The prospects of the moment are indicative of taxation and retrenchment in the years immediately ahead. One of the main difficulties is the position of the maize growers, who form a large section of the rural population. At present prices, the grower receives about seven shillings and sixpence per bag of 200 lbs. for the ordinary quality of maize in the local market. The effective price to the grower for exported maize is not much more than half this; production costs this season were nearer seven shillings than five shillings per bag. (Production costs vary from season to season between these figures.) Thus, a class of men who are not as a rule good business men will be hard hit, and this position in so important a local industry is an awkward problem for a small country.

In an effort to meet the position to some extent, the Government has sponsored the Mealie Control Bill, the purpose of which, broadly speaking, is to spread the loss on exported mealies equally over the producers by fixing a quota which every holder of mealies must export. It is thus hoped to restrict competition in the home market and sustain the internal price. In an announcement at the recent Maize Conference at Pretoria, the Minister of Agriculture advised the growers that the success of the scheme would depend on the restriction of production so that there should not be too great an export surplus, and on effective co-operation so that there should be no undercutting in an over-stocked local market. Both growers far the Minister's well-meant advice will be accepted. The Agricultural Department advises the feeding of maize to various manufactures.

The opposition, and many of the farmers, are severely critical of the measure and doubt how far it will achieve its object. The main difficulty is that of securing co-operation among the producers. In the meantime the Government are guaranteeing the advance to approved co-operative societies with unlimited liability of seven shillings per bag from the Land Bank. The bank's own limit at present is five shillings and ninepence. The advance can hardly command the approval of financial critics, but there seems to be some force in the Government's contention that further misfortune would send many mealie farmers off the land for ever.

Legislation in South Africa is noticeable for the frequency of the principle of control of numerous activities which liberal thought would incline to leave as free as possible. The path of the citizen from the cradle to the grave is becoming more and more marked by walls and direction-posts, erected by politicians and strengthened by bureaucrats who dislike seeing a man going his own harmless though possibly eccentric way. The Higher Education Control Bill proposes to place the effective control even of details of university organisation in the hands of the Minister of Education by empowering him to withhold grants-in-aid from institutions whose financial proposals fail to meet with his approval. From the tone of the speeches from the Government benches it was all too plain that the possibilities of the proposal are very fully appreciated. We may yet see university professorships—as we have seen important posts in the public service—awarded for reasons quite unconnected with the applicants' professional ability and knowledge of their subjects.

The Act of Union provided statutory protection for the native vote in the Cape Province, on terms which practically secured it—namely, that any restriction of the old law of that Province should be agreed to by not less than two-thirds of the members of both Houses sitting together. The Government are about to secure the elimination of a number of native and coloured voters by providing that in the Cape any voter to whom objection has been lodged must appear in person to support his vote. As the natives with votes are, in a large number of cases, workmen for wages, the device is a neat one. This scheme, coupled with the very wide female vote (for white women only) may easily provide the Nationalists with several extra seats in the Cape country districts.

The Government has armed itself with powers to take up the B shares in the South African Iron and Steel Corporation—evidently anticipating that the public may be shy of doing so. The Government's estimate of the final cost of the works is £5,500,000, and their estimate of the output 140,000 to 150,000 tons of finished steel products per year. They say further that the manufacturing costs will be the lowest in the world. The opposition disagreed with the figures, and with the lack of detail in their presentation. Sir R. N. Kotze, M.P.—the former Government mining engineer—pointed out that the smallest private concern had to provide more information to prospective subscribers. In time, no doubt, steel will be made and sold locally behind a high tariff.

NEW ZEALAND.

(FROM OUR CORRESPONDENT.)

Trade — Banking — Depression — Wages — Politics.

CHRISTCHURCH, May 30.

As the export season nears its end the effect of low produce prices on the Dominion's overseas trade is being seen more clearly. Comparing years ending with March, in 1928-29 exports were valued at £57 millions, in 1929-30 £49 millions, and in 1930-31 £38½ millions. April figures bring a further drop of nearly £1½ millions, and it is anticipated that the value of exports for the year ended June 30th will be about £36 millions. For the March quarter of 1931 exports were 49½ per cent. and imports 87 per cent. below the values recorded in 1929. The decline in the year's imports has been less than in the

case of exports, largely because the balance of visible trade was abnormally favourable in 1928 and 1929, but imports for the year ending with March fell to £38½ million. Compared with last year there was an increase of 18½ per cent. in the quantity of lamb exported during the March quarter, while other principal exports were about the same as in 1930. Heavy declines were general among import items, the most severe being in motor vehicles, the number of which decreased by 52 per cent., from 4,455 to 2,131. Imports of motor spirit fell by 20 per cent., while apparel, boots and shoes, cotton goods, electrical equipment and hardware declined heavily. The balance of trade still remains favourable, but further declines in imports appear inevitable, as the present balance is insufficient to cover the country's net debit on account of invisible items. The contraction of imports will be greater if, as appears likely, New Zealand is unable to borrow overseas to the usual extent this year.

The reduction in the excess of exports over imports has been reflected in banking figures, and deposits, which exceeded advances by £12 millions in March, 1929, have declined from £58 millions then to £54 millions in 1931, while advances have increased from £46 millions to £54 millions and now slightly exceed deposits. These figures are, however, subject to marked seasonal variations, and as the financing of production calls for increasing advances and effects decreases in deposits during the second half of the year, the position is likely to be much less favourable before deposits are again increased and advances reduced from the proceeds of the sale of next season's produce.

Other banking figures indicate very plainly a substantial decline in the volume of internal business transacted. Bank debits (excluding debits to Government accounts) averaged for the March quarter 35 per cent. below their levels for the same quarter of 1929, and free deposits, which in March, 1926, were 58 per cent. of total deposits, were in March, 1931, only 38 per cent. of the total deposits. Moreover, both the rate at which deposits circulate, estimated from comparison of bank deposits and bank debits, and the average volume of bank debits appear to be about 30 per cent. below the level of 1929. Such figures indicate a substantial decline in banking business, and reflect closely changes in the volume of commercial financial transactions. It appears though that the decline has been greatest in financial business. Mortgages registered and discharged and land transfers have declined by more than half, average share prices by about a third, and the volume of share transactions very substantially, since 1929. Unemployment, though heavy for New Zealand, is much less severe than in some countries. No reliable or official figure of the proportion of workers unemployed is published, but the numbers registered are under 40,000, and the proportion out of work is unlikely to be greater than 12 per cent.

So far the effects of the depression in prices have been felt most severely by the pastoral industries producing for export. Average export prices for the March quarter, 1931, were about 10 per cent. below 1914 levels, while wool prices were about 45 per cent. below that level. Consequently the wool farmers have been hardest hit. There is some indication, however, that reserves were built up during the good years, 1928 and 1929, and that these reserves are being drawn on to tide over present difficulties. In addition, there have been for some years past substantial increases in sheep carried, lamb, and dairy produce and other exports. These have been the result largely of improved farming methods, of top dressing, pasture management, herd testing and breeding, etc., and it is probable that unit costs of production in the pastoral industries have been lowered appreciably by such developments, and that those industries are therefore in a better position to meet lower prices. But the export industries form so large a part of the local market that their depression or prosperity is always passed on in some measure to the more sheltered industries, through changes in their demand for local goods and services. Hence the purely domestic industries are also suffering depression, though in a degree less than the farmers, and

the view that costs must be reduced to meet the present situation has become fairly general. During the recent special session of Parliament legislation was passed empowering the Arbitration Court to make a general order amending all wage awards, and the employers' organisations responded quickly by applying for an all-round reduction of 20 per cent. in award rates. The reasons submitted for this application were the heavy fall in export prices, the inability of industry to employ all workers available at current rates, as shown by the prevailing unemployment and the general conditions of depression and reduced national income. The workers' advocates agreed that wages should not be reduced, as such reduction would reduce purchasing power and increase depression, that if they were reduced the reductions might not be passed on in lower prices, and that the cost of living, at present 50 per cent. above 1914 levels, should fall before wages were reduced. The Court's decision was reserved.

The triennial general election is to be held about the end of the year, and the political situation is already becoming interesting. The United Party, at present in power, gained its present position at the last election largely as the result of most extravagant promises regarding public borrowing and expenditure. The Right Hon. G. W. Forbes, now leader of the party and Prime Minister, has, during the last year, greatly enhanced his prestige by reason of his courage in facing the difficult financial situation, which has resulted from lavish public expenditure over the last ten years, and drastic reductions in the national income during the last year. He adopted and forced through some very unpleasant but highly necessary measures of economy during the special session of Parliament this year, and at the end of the session made a generous offer of fusion to the more numerous Reform Party, which had supported his economy measures. He suggested that all members of the United Cabinet should resign their portfolios, and a new Cabinet be selected from the United and Reform Parties combined. The Reform Party, however, rejected the offer on the ground that there was no agreement between the parties regarding permanent principles.

Many prominent people consider that the situation called for some form of combination between United and Reform, that the Prime Minister is entitled to greater security and stronger support in carrying out economies and adjustments which are unpopular but necessary in the present difficult times, and that the Reform Party has lost support by its rejection of the offer of fusion. But the Hauriki by-election on May 26th resulted in a majority for the Reform candidate, with a gain in votes over the last election and a heavy loss in votes for the United candidate. Parliament is due to meet again about the end of June and the session may not be all smooth sailing. It is significant at least that all parties are preparing for the election to come, and that the opinion has been expressed freely by Labour members that it may be much earlier than is generally expected.

Letters to the Editor.

THE EGYPTIAN GOVERNMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Through the enterprise of a vernacular newspaper there has been published here a summary of your Note of June 27th on the Speech from the Throne to the new Egyptian Parliament. The tone of your Note seems to call for an immediate protest, not so much in defence of Sidky Pasha—he is quite capable of looking after his own defence—as because it wants that element of fairplay that is the characteristic of Englishmen, of English law and of English journalism. The summary makes you state that the position of the Government is—in the eyes of the British—no more truly parliamentary now than it was before the elections, and that Sidky Pasha is mistaken if he thinks that English statesmen do not see farther than the figures adduced to show his majority in the

new Chamber. This is a direct impugment of the figures of the votes cast in the first polls, which gave some 62 per cent. of the electoral roll as having voted. Before taking this step, you have no doubt assured yourself that the official statistics are erroneous—at least, materially so. In that case you have been more fortunate than the Opposition, if a party that refuses to play any longer can be called an opposition. Some 23,000 agents were responsible for the conduct of the polls, including a very large proportion of officials and professional men. Is it seriously maintained that Sidky Pasha entered into a vast conspiracy with these officials to falsify the results? The Opposition claims that the whole country is behind them. Yet their best efforts have—so far—not succeeded in unearthing an atom of clear evidence of the alleged conspiracy. The first "proof" of irregularities was put out of court by the fact that the minutes of the meeting at which they were supposed to have occurred bore no mention of them, but yet were signed as correct by the informant himself. The latest "proof" has been the production of a forged letter. A party reduced to reliance on "evidence" of this description is in the last straits; is, indeed, so avid of proof that its lack of support for its accusations is itself proof of their falsity. At least, it is a warning that the accused, the Sidky Government, is not to be adjudged guilty without evidence and before trial.

On the question of a Treaty, who is to be the English judge whether or not Sidky Pasha represents a majority of his countrymen? The present Labour Government? It represented some 38 per cent. of its own countrymen at the issue of the general election, and probably does not represent more than 30 per cent. to-day. What guarantee has the Egyptian Government that, if it did conclude a treaty with the Labour Government, the agreement would not be repudiated by a Conservative Cabinet before there was time for ratification? In any case, what claim can the existing British Cabinet make to speak for a majority of the electorate? Your contemporary, *The Manchester Guardian*, has recommended the Egyptian Premier to devote his attention to home affairs and not attempt the negotiation of any treaty till he has given proof of his firmness in the saddle. Perhaps that journal is correct, but not for the reason underlying its advice.

The opinions I have expressed above are not mine alone: they are shared by the two only English newspapers, both of high local standing, by nearly all Englishmen, and by almost all foreigners to whom I have spoken on the political situation here, and foreign newspapers. The Englishmen are a fair sample of the fair-minded Briton, not meddling in local politics, but watching them very closely, and drawing their own conclusions. They are probably more progressive than conservative, and the oldest English journal is certainly so. It is unreasonable to think that their opinion, formed red-hot, on the spot, should be entirely wrong. It seems, therefore, to me that the opinions expressed by the *Economist* have been formed on a partial knowledge of the facts, and that they should be reconsidered in that light. Your reputation for impartiality, and the great influence of a financial journal call for at least that justice.—Yours, etc.,

Cairo,

June 30, 1931.

OBSERVER.

[In our "Note of the Week," on which our correspondent comments, we made two points: we cast doubt on the representativeness of the new Egyptian Parliament, and we suggested that the British Government neither would nor should be more ready to enter into negotiations for an Anglo-Egyptian Treaty after the recent Egyptian elections than it was before they were held. As for the election results, we still remain sceptical—remembering that Sidky Pasha did not hold these elections until he had remodelled the Egyptian Constitution and the Electoral Law by Royal Decree. Nor, in our opinion, are the Wafd and the Liberal Party put out of court by the fact that they boycotted the polls on this occasion. We seem to remember that, once upon a time, Sinn Fein boycotted some elections to the Parliament at Westminster, and the Young Czechs some elections to the Parliament at Vienna. Yet their "refusal to play" was followed, before long, by the establishment of the Irish Free State and the Czechoslovak Republic. We hold no brief for the Wafd. We do not regard either a single-party oligarchy or a government of "the King's Friends" as being a good government for any country to live under. We believe, however, that process of "Westernisation" to-day, these are at present the two alternative types of government in the field; and the parallels indicate that when these two types of government come into conflict, it is the Party and not the Dynasty that is likely to win. To put it bluntly, we believe that King Fu'ad is playing with fire. He is preparing for the House of Muhammed Ali in Egypt the fate that has overtaken the Ottoman Dynasty in Turkey and the Qajar Dynasty in Persia and the Manchu Dynasty in China. Sidky Pasha is

the third "King's Friend" who has been brought into office by the King's personal intervention within the last half-dozen years. The British Government "backed the wrong horse" in Turkey from 1919 to 1920, when they supported the Sultan-Caliph, whose Ministers of the day were commended by local British residents at the time in just such terms as our correspondent uses of Sidky Pasha. We do not imagine that His Majesty's Government will be so blind as to repeat their Turkish blunder in Egypt now.—Ed., *Econ.*]

EAST GREENLAND.

TO THE EDITOR OF THE ECONOMIST.

SIR,—While entirely agreeing with the spirit of your editorial remarks on the mania for sovereignty, I think you do less than justice to Denmark in implying that there is little to choose between the two parties to the East Greenland squabble.

Your argument appears to hang on the statement that "in East Greenland there is no permanent population at all, but only a floating population . . . of whalers and fishermen who just manage to stand the rigours of the climate in the least inclement season." This statement, of course, is incorrect. At the 1923 census there were 709 permanent inhabitants on the east coast, mostly at Angmagssalik, and since then with the colonisation of Scoresby the number has gone up considerably. To appreciate the significance of this figure it must be remembered that all Greenland only holds some 15,000 people. Moreover, the east coast holds almost the only considerable pure Eskimo population surviving, and great efforts are being made by Denmark to keep it unmixed and to retain its characteristic hunting livelihood. This objective absolutely demands freedom from outside disturbance (a) because strangers bring disease highly lethal to the aborigines, and (b) because strangers, and especially Norwegians, make disastrous inroads into the limited resources of animal life on which existence depends. The drain on seal supplies is especially alarming, since their decline is threatening food, fuel and clothing resources simultaneously.

Your statement that the Norse population of West Greenland was wiped out by the climate raises too complex and controversial points to deal with here, but having frequently bathed in lakes in West Greenland, eaten ripe bilberries in quantity and caught butterflies on the site of Norse ruins among luxuriant willow growth, I do not easily accept it.

To keep to the question of sovereignty, however, it is worth bearing in mind that Norway, since the War, has adopted a frankly imperialist policy, securing Spitsbergen (Svalbard), Jan Mayen and even seizing Bouvet Island and land on the Antarctic continent. Denmark, on the other hand, evacuated the West Indies by selling her possessions to U.S.A., and has given self-government to Iceland: her administration of Greenland renounces all profit from the country, and compares favourably with, at any rate, most mandates in operation.

Let me assure you that I have no interest of any sort in furthering the Danish claim, but having had the opportunity of seeing on the spot how Greenland is administered, I feel certain that any fair-minded observer must count it a major calamity if the integrity of Danish control over the complete unit of Greenland should be lost.

A STUDY OF UNEMPLOYMENT INSURANCE.*

It is altogether desirable that the history of this vast experiment, the British unemployment insurance system, should be made clearly known in foreign countries, not only as a corrective to misplaced use of the word "dole," but as a positive and negative guide to other experimenters, above all to America as she stands at the parting of the ways. Miss Gilson, an American herself and writing under the auspices of an American research institutions, has attempted the great thing, a full-dress history and survey of organised provision against unemployment in this country (especially since the first Insurance Act of 1911)—the central structure, the appendages, and all the inherent or accidental stresses and

* "Unemployment Insurance in Great Britain: the National System and Additional Benefit Plans." By Mary Barnett Gilson. (London). George Allen and Unwin. 21s.

reactions. She has gone to high authorities, and has had the statistical data checked in the Ministry of Labour.

It would be pleasant to be able to give such a book unstinted praise. The effort of compilation deserves it. Moreover, the detailed particulars here collected relating to voluntary insurance schemes carried on by individual firms or trades unions represent a real contribution to the stock of knowledge. But in regard to the main theme, the national system of compulsory unemployment insurance and its frankly kaleidoscopic development, a vast mass of material is presented with insufficient discrimination. Every piece of the mosaic is here, culled from every Ministry of Labour report or sample inquiry and every outside study, theoretic or concrete (but not from the minutes of evidence before the recent Royal Commission, which most unfortunately had not become available at the time the book was completed). The pieces are grouped under headings, but are given no relative value, and the reader is granted the assistance of no pattern, no explained background of principle, to help him to thread his way through or encourage him to try to fit the pieces together for himself. The inexpert may find the task desperately hard; the student familiar with the subject already will turn in preference, for all matters connected with the State scheme, to the volumes of evidence given before the Blanesburgh Committee and the Royal Commission.

Miss Gilson's book could so easily have been made into a classic work of reference by judicious editing that it is a thousand pities it was not read throughout in manuscript by some knowledgeable authority in this country, who would have protested against (for instance) the history of the "waiting period" being recounted without any indication of its importance to the finance of the scheme or any mention of its significant though temporary reduction by the Labour Government in 1924, and against the bare recording of the transference of the burden of transitional benefit from the Unemployment Fund to the Exchequer in 1930 without sign of recognition that a fundamental break of principle was involved. When Miss Gilson is found writing in the same context that "it is possible that the repeated extensions of the transitional provisions account for most of the deficit of the unemployment insurance fund," the reader is influenced against giving her the benefit of the doubt in numerous other questionable passages. To assert that the Act of 1927 made "all benefits standard without limit of time" is as indefensible as to interpolate suggestively that in Great Britain "in 1929 the sum of £540,000,000 was spent on past wars and in preparing for future wars" without qualification or explanation. The sort of error of fact that has passed undetected can be illustrated from page 12:—"Although only 63.8 per cent. of insured workers in this industry" (cotton, referring to the winter of 1929-30) "are women, they constitute 90 per cent. of the unemployed. Furthermore, 70 per cent. of all the unemployed women in Great Britain are in the cotton industry." Both these sentences are entirely incorrect, the first resulting from a simple misreading of a statistical table in the *Ministry of Labour Gazette*, the second being an uncritical transcript of a mistaken statement by a private member in the House of Commons. Again, it is hardly fair (page 501) to cite alone an obviously political manifesto of the F.B.I. as proof that British industry "gives little promise of taking constructive and large-scale measures toward the solution of economic problems."

These are serious criticisms. But the book, provided only that it is not read undiscerningly, has very much that is of value nevertheless. Chapters on "Mobility of Labour," on "Training," and on "Proposed Changes in the System" collect together many relevant and some oft-forgotten facts, and show the breadth of the field Miss Gilson has set herself to cover. Most readers should turn to the final chapter "Summary and Conclusions" first, where almost too late we come on a consecutive sketch of the history and a thoughtful statement of some underlying or emergent considerations. These justify the book. Miss Gilson has not succeeded in providing the best extant survey of the development of the national system since 1911—that is to be found in the first 27 pages of last

a steady share tends to maintain a higher average value than a security subject to wide changes of price. Leaving on one side, however, the difficult position of banks and other institutions, which are dependent not merely for their share market status, but their very existence, on the maintenance of their credit at high-water mark, it may be gravely questioned whether directors are justified in "doctoring" any company's figures to support the market value of its shares.

There is no room here to dwell upon the handicaps imposed by secret reserves on the measurement of true industrial profits as a factor in the national financial position, to which attention has been drawn in the Macmillan Report this week. From the individual shareholder's point of view, a more serious objection is the possibility that, by successive raids on internal reserves, a board may withhold all knowledge of a fundamental change for the worse in a company's position until matters have gone too far for effective action. The most conscientious of directors, being human, tend to regard the first ravages of a mortal disease as merely temporary fluctuations, and any practice which provides fuel for such optimism is, *ipso facto*, dangerous.

In the long run the interests of investors will best be served by a policy of maximum publicity in company affairs. If a company's reserve position is strong, all shareholders have a right to knowledge of the fact. If prudence in estimating for contingencies, foreseen and unforeseen, results in the accumulation of large internal reserves because, *e.g.*, assets are carried in the books below true value, there is no reason why an up-to-date expert valuation should not be made from time to time and disclosed to the proprietors, though the assets should remain in the balance sheet at their written-down figure. Reserves against remoter contingencies, and those representing the "ploughing back" of earnings into the business, should be set aside openly, and sanctioned by shareholders acting with full knowledge and responsibility. Finally, whenever it is necessary to draw on reserves, internal or external, to make the fat years pay for the lean, the extent and the source of the "windfall" should be disclosed. The extraordinary assumption that shareholders are irresponsible, and cannot appreciate the mysteries of high finance, may otherwise be made an excuse for obscurantism which, in the long run, may cost the investors dear.

THE TIN POSITION.

(BY A CORRESPONDENT.)

ONE of the chief sources of potential danger to the scheme for controlling the output of tin has now been removed by the adherence of Siam. This accession is subject to certain reservations, some of which have not been disclosed, but the chief of which appears to be that the quota shall not be less than 10,000 tons. The output of Siam, as measured by the ores sent to the Straits for smelting, amounted to 9,939 tons in 1929, which is the year taken as basis for the allocation of quotas. Since then, however, Siamese output has expanded while that from other quarters has declined; 11,124 tons were imported to the Straits from Siam in 1930, and during the first half of 1931 the imports were at the rate of 12,600 tons per annum. Thus Siam's adherence, although it will not add substantially to the apparent curtailment, may be expected to result in a slight further recession in the current rate of output. It lends the scheme an additional strength, inasmuch as Siam was the only remaining producer likely to increase output in any marked degree. More than nine-tenths of the world's production is now to a greater or less extent under control; the quotas, as amended to include the Siamese output, will presumably read as follows:—

Malaya	45,355 tons, restriction 34.6 per cent.
Netherlands East Indies ..	25,159 " " 29.5 "
Bolivia	28,818 " " 37.8 "
Nigeria	6,512 " " 37.4 "
Siam	10,000 " " Nil.
	115,844

This, in addition to outside production—apparently allowed for at the rate of 6,160 tons per annum in the Inter-Governmental Committee's figures—allows world production to be estimated at 122,000 tons in a full year's working of the current quotas.

Taking the recognised output statistics, and allowing for the movement in world stocks, the course of production and consumption in the past thirty months has been approximately as follows:—

	Production (Long tons).	Consumption (Long tons).
1929 January-June	91,057	92,149
July-December	91,377	84,243
1930 January-June	87,699	74,437
July-December	77,722	75,819
1931 January-June	73,292	64,002

On this basis it would appear that consumption is at the rate of about 128,000 tons per annum; and that, provided there is no further decline in industrial demand, a full year's operation of the scheme would reduce stocks by about 6,000 tons. Malaya, on the other hand, has produced somewhat in excess of her quota; and the rectification of this position may lead to a rather more rapid decline in stocks during the next two months.

Even allowing for this, however, it is difficult to see how the deadweight of stocks is to be substantially lightened. At present, world stocks, including ore and metal in the East, amount to nearly 60,000 tons, as compared with a "normal" trading reserve of about 20,000 tons. The maintenance of consumption, in the face of continued depression, during the latter part of 1930, suggests that it may be dangerous to budget for extensive buying against future industrial needs. It is possible that some benefit might accrue through the organisation of a pool, if finance could be found, to remove surplus stocks from the market. Mr John Howeson, indeed, in his recent speech as chairman of the Anglo-Oriental Mining Corporation, let fall a very decided hint that such a pool was actually contemplated. It is impossible to prejudice the effects of such action, since much must necessarily depend upon the manner in which the pool is organised and upon the use to which the stocks are put.

Even without such intervention, however, the tin market would seem to be in a healthier position than has been the case for some time. The present price-level is definitely unremunerative; and, now that the danger of further accumulation is reduced, if not eliminated, producers may legitimately look forward to more satisfactory prices. In these circumstances, the recent rise to about £118 per ton was by no means unexpected. Under the influence of international conditions, much of the improvement has been lost, and the reaction has shaken out many of the weak bull positions which had been taken up during the rise in values.

The market position is, therefore, tolerably strong, and, with any favourable turn in the European situation, improved prices would be a reasonable aspiration. This does not necessarily, or even probably, imply a proportionate movement in the shares of tin-producing companies. Apart from certain old-established mines, few are able to produce their full output below £60 per ton ore, which is equivalent to £100 per ton metal. Most of the costs of production remain constant, despite the curtailment in output, and costs of £100 per ton metal of full production represent present costs, under the Malayan quota, of about £140 per ton. The great generality of tin shares would, therefore, be dear at zero until this level is passed; and shareholders will do well to be cautious in expecting any substantial appreciation of metal. This applies with added force to the shares of finance companies. There is now an embargo upon the issue of new mining leases in Malaya; and the excess production, which subsisted even during the boom of 1929, suggests that fresh developments are not likely to be needed for some time.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
July 22.	July 23.

THE stock markets were overshadowed by the German crisis. The Stock Exchange hoped to the last moment that a Franco-German arrangement would be possible, and the sequence of events following the closing of the Darmstädter und Nationalbank on Monday caused grave anxiety. Business was reduced to a minimum, all markets choosing to wait on events. The most critical phase was on Wednesday, when a heavy fall in sterling provoked a sharp marking down of gilt-edged stocks and foreign bonds. On Thursday, however, the news of fresh Franco-German developments, offering a prospect of a satisfactory settlement, perceptibly eased the tension. After the correction of a mistaken impression that Bank rate had been raised (due to an unfortunate mis-functioning of the electrical recording apparatus on the "House"), an appreciably firmer tendency spread to all markets.

The main brunt of liquidation of gilt-edged stocks was borne by short-term issues and securities, such as Funding Loan, with a large foreign holding. India loans were lower in the earlier part of the week, but subsequently became comparatively steady. Australians held their ground, and showed improvement on Thursday.

The foreign bond market, though depressed, revealed few signs of panic selling. German bonds, and, to a less extent, Austrian and Hungarian bonds, naturally fared worse, though at the lower price levels support was forthcoming, and sharp rallies occurred on Thursday. South Americans were sold from New York, but improved later in the week.

Home rails were idle, the traffic figures making a poor showing. Great Westerns were the worst sufferers from a moderate marking down of values. Foreign rails were featureless, and lost further ground, partly owing to selling on account of a deceased estate. American rails reacted and Canadian Pacifics were dull on unfavourable crop advices.

Though the industrial share market was thoroughly unsettled, little real selling pressure developed. Numerous international counters were affected by Continental liquidation without the benefit of New York support. Among "investment" shares, electricals failed to resist prevailing influences, and tobaccos tended to sag after initial support. Brewery shares, however, showed greater resilience. Motors were heavy, Fords relapsing on American sales. Among textiles, Courtaulds discounted the reduced interim dividend (2 per cent., tax free, against 3 per cent.), and J. and P. Coats weakened after news of a wage cut. Electrical and Musical Industries reflected the unsettled mood of New York. Cables and Wireless showed relatively little variation on the eve of the issue of a report which, it was hoped, would contain no unpleasant "revelations." Newspaper shares remained on the down grade. The reduction of the Furness Withy dividend (as described on page 134), produced a downward readjustment of shipping share values generally. The depreciation in Swedish issues, before Thursday's recovery, was regarded as disproportionate to the volume of actual selling. The bad Hudson's Bay report (criticised on page 134), had been fully discounted, and the shares rose slightly on its publication. British bank shares held their ground, but those of overseas institutions were more irregular. Insurance shares trended downwards, but relatively little selling occurred.

Despite the holiday closure of Paris on Monday and Tuesday, conditions in the oil share market were difficult. News of an appreciable increase in crude-oil production in the United States caused fair selling in an unwilling market, though firmer conditions supervened. The rubber market was idle and dull, the commodity falling below 3d. per pound, and tea shares showed a further recession.

The international financial situation caused a widespread drying up of business in the mining market. Paris, on Wednesday's opening, was a more modest seller of Kafirs than had been expected, but "Chartered"

showed weakness and Rio Tinto fell sharply, with a partial recovery on Thursday. Although a more hopeful view was taken of the outlook for tin (for reasons discussed in a leading article this week), the shares were completely neglected.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The New York Stock Exchange, at the beginning of the week, took a favourable view of the European position, an early settlement of the German difficulties being generally expected. Later on, however, pessimism became more pronounced, and prices, after holding relatively steady at slightly below the previous week's levels, took a downward course on an increased volume of selling on Wednesday. The worst showing was made by foreign bonds, particularly Europeans and South Americans, though the "Dawes" and the "Young" issues, which are held in fair quantities by numerous American institutions, were held to be outside the scope of any possible German provisions for a general moratorium. Railroad shares were influenced by the opening of hearings at Washington in regard to an application for a 15 per cent. freight rate advance, an initially firm tendency being checked by the announcement that coal and coke would be excepted from such a rise. Short selling was renewed among domestic industrials, prominent issues losing from 1 to 8 points before covering operations caused a slight recovery. Trade advices remained indecisive, car loadings figures showing a decline, while steel operations were returned at 82 per cent. of capacity, against 83 per cent. in the previous week, though holiday influences were partially responsible for the falling off in both cases. The more hopeful interpretation of European news, however, produced a better feeling in the markets in the latter part of the week. Leading shares showed a measurable recovery on Thursday, but the volume of dealings was of less than normal dimensions.

PARIS.

The Paris Bourse was closed on Monday and Tuesday in connection with the National Fête. Wednesday's reopening witnessed heavy selling, partly from domestic and partly from German, Swiss and other foreign sources. Quotations were marked down at the outset from 10 to 15 per cent., and large parcels of stock subsequently came on offer. Though German issues, naturally, suffered heavily, all markets were weak. Renten lost a full franc, with the exception of Redeemable 3 per Cents. Banque de France were liquidated, but received special support later, while losses of 100 to 500 francs were the rule among industrials. The mid-monthly settlement in the official market, inevitably, was marked by heavy sales, but otherwise passed off without incident, money for carry-over purposes being abundant at an average rate of ½ per cent. against ¼ per cent. a fortnight earlier and ¼ in mid-June. The more favourable politico-financial developments of Thursday, however, which were held to hold out hope of an early and satisfactory settlement of German difficulties, induced an appreciable change for the better in all markets, prices in many cases showing a gratifying recovery.

BERLIN.

Under orders from the German Government, the Berlin Bourse was closed from Monday onwards.

AMSTERDAM.

Over the past month, as soon as the initial period of "Hoover" excitement had died away, trading on the Amsterdam market assumed small proportions. Rubber and sugar stocks managed to free themselves completely from the influences of the international stock market tendencies, and fluctuated in sympathy with the prices of the products. Generally speaking, quotations were on a fairly high level at first, the fact that the V.I.S.P. had raised the limit for ordinary sugar having a beneficial effect. In addition, large quantities of superior sugar were disposed of at 8.25 fls. The satisfactory report of Amsterdam Rubber had a stimulating influence on rubber shares. The annual report stated that considerable areas had been planted with highly cultivated stocks of improved strain, as a result of which far larger yields per acre were anticipated, with a corresponding reduction in the cost price. In spite of the prevailing rubber crisis, the company has been able to close the year 1930 with a profit. The shares advanced fully 20 per cent., almost to par. Shipping shares were neglected. On the bond market, German loans in particular, under the lead of the reparations loan, were very weak, in consequence of the financial complications in Germany. On Monday last the situation became more acute. Depression set in early as a result of the Danat-bank crisis, quotations of German bonds and shares being forbidden till two o'clock in the afternoon. Subsequently, however, no panic developed, the public choosing to hold its hand pending definite news. A.K.U. were sold on the German situation, and prices generally were heavy, with a firmer tendency on Thursday.

INVESTMENT NOTES.

The Stock Exchange and the Crisis.—Faced on Monday with a situation which the "House" regarded as comparable in its potentialities with such historic crises as those of 1907 or even 1914, the London Stock Exchange showed more than its traditional fortitude. Individual members, without inside information as to the course of events or the mind of the authorities, were left to improvise a policy from hour to hour. As a "House" correspondent of long standing points out in a Note below, the instinctive reaction of the markets to bad news

was not a wild throwing overboard of stock, but a "freezing up" of business. It was expected that, though the first onset of the inevitable withdrawals of foreign reserves from London would fall upon the money market, numerous foreign holders of securities were likely to come for cash to one of the few centres where an open market continued to exist in theory and in fact. On Monday an initial marking down of stocks, followed by a fair but not excessive volume of selling, was succeeded by a comparative lull during which prices showed some recovery. On Tuesday much the same sequence of events occurred. The open position was nowhere very large, and many large holders of gilt-edged stocks, and other securities which had previously appreciated in value, refrained from intensifying a difficult situation by attempting to take profits. On Wednesday, with the reopening of the Paris Bourse after the *Fête Nationale*, foreign influences became more marked, and the fall in the pound against the dollar, the franc and other Continental currencies was reflected—though less than proportionately—in a decline in gilt-edged and other securities, particularly in stocks like Funding Loan with large foreign holdings. On Thursday, however, the news from the Continent took on a much more reassuring aspect; and, after the announcement of the decision of the Bank of England to maintain its rate unchanged, prices showed a firmer tendency in all markets. The following table sets out the present values of representative securities, as compared with those prevailing after the announcement of the Hoover plan and at the end of last week:—

	June 19, 1931.	July 7, 1931.	July 10, 1931.	July 16, 1931.

Short-term British Government stocks, being "money market securities," were naturally liquidated extensively. A moderate liquidation also occurred of "international securities" with a wide European *clientèle*, such as Kreuger and Toll.

The "House" in Time of Trial.—A member of the Stock Exchange sends us the following description of conditions inside the "House" this week. "The London Stock Exchange has long lost its capacity for panic. For days of real excitement during a slump it is necessary to go back before the war. To-day bad news produces, not scenes of wild excitement, but a tendency for markets to 'freeze up.' Wide prices are quoted, jobbers frankly acknowledging that they would prefer not to deal, and asking that, instead, they shall be given an order which they will do their best to execute for a small 'turn.' This is not jobbing in the Stock Exchange sense of the word. It is simply a makeshift at times of acute difficulty. The Stock Exchange Managers have recently inaugurated the small square blackboards, upon which are exhibited the rates of foreign exchange. Around each of these, during the past few days, gathered a crowd of members more inquisitive than anxious, more cynical than grave, each asking his neighbour's view of the situation, well knowing

that the immediate future was little more than guesswork. The string of falls appearing every afternoon in the prices showing on the Stock Exchange boards attracted general notice, but at no time was there any indication of panic or of semi-panic. Excitement that once was active had become passive. Men to whom the issue of the crisis was fraught with the gravest consequences were content to pass the period of suspense in the discussion of cricket or the solution of mental acrostics."

The Macmillan Report.—Stock Exchange Impressions.

—The Stock Exchange generally was pleasantly surprised by the contents of the Report of the Macmillan Committee. The "House," conservative by temperament and tradition, was not over-enchanted of the Committee's original appointment, which it regarded as having been made under pressure from the Labour Party's Left Wing. In the event, though the staunch refusal of Lord Bradbury to abate one jot or tittle of old-standing dogmas found some supporters, the Stock Exchange as a whole welcomed the main report as a vindication, in essentials, of the existing order. Slight qualms were felt regarding the drift of some of the recommendations as regards "elasticity" and the price level, but it was recognised that the Report required more prolonged consideration than was possible during a week of international crisis. Naturally, the Stock Exchange was most interested in the chapter discussing the capital market for home investment. Members have long recognised that the absence of such close relations between British finance and British industry (as distinct from British commerce), as exist in Germany and America, has not been altogether fortunate either for industry or investors. The Stock Exchange plays an essential rôle not only in the marketing but the creation of securities (its part in the latter process being probably more important than the Macmillan Committee is willing to admit), and the evils of the practice of leaving the midwifery of home industrial capital issues, in the main, to the irresponsible small promoter, are more adequately realised to-day than they were three or four years ago. The fact that, as the Committee showed, 106 out of 284 companies which obtained capital in 1928 have subsequently come to grief, and that of £117 millions subscribed some £66 millions has been lost, is, *prima facie*, evidence of a faulty and wasteful system. The Stock Exchange shares the Committee's lack of sympathy with the idea that the joint stock banks should in any way manage industry, but would be prepared to welcome any reform under which issuing institutions of first-class strength and repute would vouch to the investor for the intrinsic soundness of industrial issues. The Committee's outline of the constitution and probable profit-earning position of such finance concerns—as distinct from its analysis of their functions—was, however, regarded as somewhat sketchy. The Committee's figures of advances at short notice by the London clearing banks and the Scottish banks to the Stock Exchange from January,

Loss of foreign markets is the price Britain is paying for the linguistic ignorance of her salesmen.

FOREIGN LANGUAGES

is the only popular language magazine which aims at popularising and facilitating the study of foreign languages.

1919, to March, 1931, excited considerable interest. The average figures for each year are shown below:—

Monthly Averages (excluding June and December), of Loans at Short Notice to the Stock Exchange.
(000's omitted).

Year.	London Clearing Banks.	Six Scottish Banks.	Year.	London Clearing Banks.	Six Scottish Banks.
1919	£ 17,444	£ 227	1926	£ 31,690	£ 992
1920	22,484	602	1927	38,617	1,362
1921	17,818	739	1928	47,659	1,434
1922	23,242	939	1929 Jan.*	46,989	1,706
1923	24,070	710	1929 year....	44,055	1,423
1924	22,230	545	1930	28,582	839
1925	30,039	955	1931 March	22,259	581

* Peak point of Stock Exchange boom.

Between 1924 and the top of the boom, at the beginning of 1929, British security values, on the average, rose by about 30 per cent., according to *The Investors' Chronicle* index. The average short-term advances by the London clearing banks to the Stock Exchange increased during the same period by nearly 100 per cent. In the subsequent depression, security values generally, according to the same index, have declined by 38 per cent., while the clearing bank advances to the Stock Exchange have fallen by 45 to 50 per cent. The continuance of the figures, on the lines suggested by the Macmillan Committee, would be of the greatest service to investors as a body.

Hudson's Bay Report.—When the Hudson's Bay Company changed its Governor and certain of the members of its board, following an agitation headed by Mr C. L. Nordon and the appointment and report of a Special Committee, it was evident that the company had got into an unfortunate trading position, and would require more than average skill and determination to restore it to a profit-earning stage. The report published this week shows that, after allowing for the results of the fur trade department for the year to May 1, 1930, and the results of other Canadian departments for the year to January 31, 1931, and making provision for the losses of subsidiary companies, the total trading loss amounted to £746,335. In addition, the board has written off a net loss of £28,222 on land account (after bringing in £19,200) by a transfer from an appropriate reserve, and has decided to make provision for certain heavy losses of a capital character. Some £476,921 is provided against depreciation in the company's interests in subsidiaries, and £165,898 is allowed for depreciation of merchandise and doubtful debts. Finally, in order to put the buildings sinking fund on a flat rate basis, and obviate an increasing charge in future years, a special allowance of £296,960 is made—which is not, of course, to be regarded in any way as a "loss." Altogether, therefore, excluding this item, the company's losses on revenue and capital account amount to £1,417,375. The magnitude of this figure reflects, in part, the determination of the present board to clean up the whole position. It is sufficient, nevertheless, to call for the frankest possible explanation from those who now control the company's fortunes. The report lays stress on the disastrous results of the depression in Canada and in the world's fur trade, of which the company's fur business, its land department and its stores have all borne the brunt. Fortunately for the proprietors, the company has been able to write off its losses, partly from dividend equalisation account but mainly from the share premiums account resulting from capital issues at premiums of 50s. to 70s. per share, made between 1926 and 1929. No question of a reduction of capital, therefore, immediately arises, and as the company has current assets of £3,826,293 against liabilities and specific reserves of £2,300,061, and has no debentures or other general charges on fixed assets valued at £6,952,661, its financial position can be regarded as reasonably satisfactory. The reconstituted board, under Mr Patrick Ashley Cooper (recommended for the position by the Governor of the Bank of England), has had so short a time in which to consider

the recommendations of the Special Committee (discussed in the *Economist* of January 3rd last), and to put into force measures of reorganisation, that it would appear that Mr Nordon's agitation for further directorial changes is ill-timed and unfortunate—the more so as Mr Nordon, who now puts forward his own name, with those of five other gentlemen, as a candidate for directorship, refused to accept office six months ago. As the so-called Proprietors' Consultative Council formed by Mr Nordon and his supporters is now alleged to include only a small number of proprietors holding 22,000 shares, it may be presumed that, at the General Court on July 29th, a majority of the proprietors will support the present board. Mr Vivian Hugh Smith and Sir Hewitt Skinner, Bart., who have shared in the responsibility of piloting the company at a difficult juncture, are now retiring. The names of their proposed successors, Sir George May and Mr E. R. Peacock, are such as to promote the proprietors' confidence in the new board.

Furness Withy.—The report of Furness Withy for the year to April 30th last dots the i's and crosses the t's of the contentions of our leading article, on an earlier page, regarding secret reserves. Earnings have fallen, but by what amount shareholders are entirely unable to discover, since the £402,691 returned as profit for the year (against £595,276 for 1929-30), includes a "transfer from reserves" of undisclosed extent. As the general reserve still stands at the figure of twelve months ago, £2,000,000, the transfer in question has evidently been made from internal reserves. Shareholders, therefore, while returning thanks for a dividend of 7½ per cent. which, though less than the 10 per cent. paid for 1929-30, is a highly satisfactory return in the present conditions of the shipping trade, will remain in the dark as to how much of it was earned, not in 1930-31, but in some earlier period:—

	1929.	1930.	1931.
Profits*	£ 653,393	£ 595,276	£ 402,691†
Depreciation	250,000	250,000	150,000

Inc. or dec. in carry-forward

* After providing for taxation.

† After transfer (of unstated amount) from reserves.

That the company—which has large interests outside shipping proper—is in a far happier position than many of its compeers is demonstrated by the note appended to the profit and loss account that "there have not been any losses made by subsidiary companies." The reduction in the depreciation allowance to £150,000 from the £250,000 set aside in each of the last two years, must be regarded, like the transfer from internal reserves, as primarily a matter of managerial policy in a company which has always carried its assets at a very conservative valuation. The item has consistently included something in the nature of a reserve for contingencies. Two years ago, when it was raised from £200,000 to £250,000, it was disclosed that the extra amount was regarded as a reserve against shipping depression. Though the trade's difficulties, in every part of the world, are more rather than less acute to-day than in either of the last two years, it speaks much for the strength of Furness Withy that a world depression which has brought some large shipping concerns into dire financial straits and caused others to pass their dividends, has been reflected in nothing more than a reduction of 2½ per cent. in the ordinary distribution and a "cut" in the depreciation-contingencies allowance. The fall in the ordinary shares from 27s. 6d. to 28s. on the issue of the report was mainly a market adjustment to the new dividend rate. At this price the shares yield £6 13s. per cent.

The Horne Story—and the Epilogue.—The resignation of Mr H. S. Horne from the board of British Cement Products in November, 1929, brought to an end a financial career of a meteoric character. Mr Horne's formula was attractive. Given adequately financed trusts, directorates of keen and fearless industrial thinkers, and adequate raw material in the shape of unrationalised industry, what should prevent the creation of high-efficiency industrial units? Cement and newspapers were Mr Horne's "spheres of influence." British Cement Products and Associated Anglo-Atlantic Corporation undertook the amalgamation and financing of the "Red Triangle" group of cement manufacturing companies, under the aegis of Allied Cement Manufacturers. Carmelite Trust was registered in January, 1929, and Anglo-Foreign Newspapers early in 1929, and between them they proceeded to offer similar co-ordinating services to the newspaper industry. Nothing seemed to go well with either project. The Berry-Rothermere newspaper war upset public confidence, and share values failed to reflect Mr Horne's optimism. At the same time, a price-cutting war between the "Red Triangle" cement group and the "Blue Circle" group, together with other members of the Cement Makers' Federation, left the Horne companies with depleted resources. The "Red Triangle" group never recovered from the blow, and a receiver was appointed for Allied Cement Manufacturers in January last. The general depression of share values, following the crash of 1929, spelt the failure of the Horne ventures. Despite the fact that, on March 7, 1929, the directors of Associated Anglo-Atlantic stated that "varying sums" had been expended in young but growing industrial concerns... whose valuation in the books was materially below their present worth," by February 11, 1930, it was regretfully announced that it had been decided to present a petition for winding-up, "owing to the severe depreciation which had taken place in the company's investments." Attempts were made to salvage British Cement products, but following an investigation by an eminent accountant it was announced that an inspector would be appointed by the Board of Trade, and on May 12th last an order was made for the winding-up of the company. This month, by a large majority, the shareholders of Carmelite Trust have decided to go into voluntary liquidation. Sir J. P. Newman stated at an extraordinary meeting that as a result of unexpected pressure put upon the company by one of their bankers, and of the necessity of implementing a guarantee given on behalf of Allied Cement Manufacturers in the sum of £80,000, they had had to acquiesce in the sale of a very large proportion of their newspaper investments at sacrificial prices, the loss on realisation being approximately £766,741. An offer of roughly £2½ millions in cash for the entire assets of the "Red Triangle" group had been tentatively accepted, but the board were quite unable to say what return, if any, was likely to be received from the ordinary shares of Allied Cement Manufacturers, on which the prospects of the Carmelite Trust shareholders must chiefly depend. A remaining ex-Horne company, Anglo-Foreign Newspapers, is wrestling with problems of reconstruction and rehabilitation, and its report is slightly overdue.

South American Railway Results.—While a variety of causes have contributed to the unsatisfactory nature of South American railway traffic returns, the depression in the markets for that continent's most important commodities must certainly be given first place. In the case of Nitrate Railways, for instance, the closing of certain oficinas is sufficient explanation of a decline in nearly 50 per cent. in revenue, while the Antofagasta Railway likewise suffered from the fact that the nitrate industry is passing through a period of depression and technical reorganisation at the same time. The San Paulo line, while showing a decline of 24 per cent. in its gross receipts, was able to cut its expenses by a similar percentage, and maintain its ordinary dividend with a reduced earnings cover. The six companies whose results are tabulated below show declines in gross receipts and net profits in

all cases, while in four cases ordinary dividend has been reduced.

Name of Company.	Gross Receipts, 1929.	Net Profit after Deb. Int.	Ordinary Dividend.	Gross Receipts, 1930.	Net Profit after Deb. Int.	Ordinary Dividend.

† Free of tax.

The passing of all dividends on the Leopoldina shares came as no surprise to the market. Gross receipts declined by over 33 per cent. for the year, while expenditure was reduced by only 21 per cent., giving barely sufficient surplus to cover the debenture charges and the amount of £40,902 required under the guarantee of the Leopoldina Terminal Company's debentures. No credit has been taken in the accounts for the amount due from the Minas Government as indemnity for the occupation of the company's lines during the revolution in October. Prospects for the current year are not regarded as favourable.

Distillers and Industrial Alcohol.—At the annual meeting of the Distillers Company, held on Wednesday last, Mr W. H. Ross made some interesting references to the difficulties with which the industry is faced, and defended the much-discussed arrangement with the United Molasses Company. Mr Ross pointed out that the duty on their main product had increased from 14s. 9d. to

FIGURES OF ASSURANCE A.M.P.

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low. Bonuses high and policies, as befits the largest British Mutual Life Office, world-wide. Assets £83,000,000. Annual Income £11,800,000. Full particulars on application.

MUTUAL AUSTRALIAN PROVIDENT SOCIETY
73-76 King William St., London, E.C.4
D. E. WALKER, Manager for the United Kingdom.

COMPANY MEETINGS, &c.

P. AND O. BANKING CORPORATION, LIMITED.

GOOD RESULTS IN A DIFFICULT YEAR.

CONTRACTION OF EASTERN TRADE.

LORD INCHEAPE ON CONDITIONS IN INDIA.

The Earl of Inchcape, chairman of the P. & O. Banking Corporation, Limited, presided at the corporation's eleventh ordinary meeting, held, on the 13th instant, at 122, Leadenhall Street, London. The report and accounts were taken as read.

PHENOMENAL TRADE DEPRESSION.

His Lordship said: I referred last year to the instability in all markets and the great difficulties of the economic conditions under which trading throughout the whole world had to be carried on. I am sorry to say that the year under review saw no improvement; on the contrary, every difficulty has been aggravated. Commodity prices have fallen still further, particularly the prices of primary products, in which naturally we, as trading in the East, are very directly interested. The index number of all commodities fell in 1930 by 17 per cent., and between December, 1930, and March, 1931, there was a further fall of 14 per cent. from the level of December, 1930. This severe contraction in values has been accompanied by a great contraction in the quantities of goods moved. Taking jute and jute manufactures, for instance, the actual quantities exported from India represented respectively 70 per cent. and 84 per cent. of the quantities exported in 1928-29, and the value per ton decreased by 50 per cent. in the case of raw jute, and 66 per cent. in that of jute manufactures. Rubber, cotton and tin have declined in value to a far greater extent. The consequent contraction in the volume of trade to and from the East has been severe and is reflected in the figures of our balance sheet, bills receivable having fallen from just under £6,000,000 to under £3,500,000.

THE BANK'S IMPROVED RESULTS.

In these conditions that we should be able to show a better result than in the preceding year is fairly satisfactory. (Hear, hear.) I am sure that you will wish that our cordial thanks should be extended to our managers at home and abroad and to all our staff, to whom we are greatly indebted for the work they have done in a very difficult year. (Hear, hear.)

THE INVESTMENTS.

With the contraction in trade we have naturally had to turn to other sources for the employment of our funds. You will see that our investments, which at March 31, 1930, stood at £1,970,000, have been increased to nearly £4,500,000, the bulk of the increase occurring in our holding of Indian Government securities. Of the latter, you will be interested to know that over £1,750,000 will be maturing in 1932, and none of our investments in Indian Government securities have a longer life than 1938, the bulk of them indeed maturing between 1932 and 1936.

Our deposits stand at very slightly below last year's figures, while our loans have been further increased by another £1,000,000.

THE ALLAHABAD BANK.

Our affiliated institution, the Allahabad Bank, has again made good progress, though for reasons explained in my speech last year, it has been adversely affected by the sharp fall in the price of rupee investments, but by far the greater portion of the investments mature within the next few years, and the provision for the written-down depreciation on these securities should come back within that period.

PROSPECTS OF TRADE RECOVERY.

As to the general outlook for the coming year, the whole position of the world's trading is wrapped up in the arrangements which may be made for a postponement of war debts and reparations. I hope that this will be arranged. The whole world, I consider, is indebted to Mr Hoover for his proposal. (Hear, hear.) So long as the enterprise of the individual, already sufficiently hampered by the regulations and taxations of Governments, has no opportunity and no scope for play, the psychological result is to create a feeling of hopelessness and a lack of desire to undertake trading or commercial operations designed to expand and develop the resources of the world.

EVENTS IN INDIA.

The whole business community in India is greatly worried by the events of the past year, and awaits with much anxiety the

result of the next few months. Millions of pounds have been invested in India by Great Britain, in banks, jute mills, cotton mills, woollen mills, paper mills, rice mills, coal mines, tea gardens, coffee plantations, shipping and many other enterprises. Enormous sums have also been invested in house and office property all over the country.

I went to India seven-and-forty years ago and resided there for many years. I have frequently visited it since I gave up residence there. I served for a number of years on the Legislative Council of the Viceroy and was a member of the Council of the Secretary of State for 15 years and am closely associated with India still. The European community has always worked in the most amicable and friendly way with their Indian fellow-subjects.

I will endeavour to speak moderately, but this I will say: there is no country in the world which has been more peaceful, where over 300 millions of people of vastly different religions and ideas have received absolute and impartial justice without discrimination between the various sects or between Europeans and Indians.

CALL FOR FIRM GOVERNMENT.

Some two or three years ago the Government to a great extent ceased to function and pandered to a wretched, seditious fanatic, whom they released from gaol after he had been imprisoned for preaching civil disobedience. On getting his freedom he set himself up to turn the Europeans out of the country and to usurp the place of the Viceroy, the representative of His Most Gracious Majesty the Emperor of India. Let us hope that the Government of India will now revert to its previous position and continue to govern with a firm hand and keep law and order in the country, which is the brightest gem in the British Crown. If they do not, disaster will follow, and it will be the break up of the British Empire.

I am not a politician, but I feel certain that the British Parliament, no matter which party is in power, will never give up India or agree to that most unfortunate suggestion of Dominion status. (Applause.)

I shall be happy to answer to the best of my ability any questions which the shareholders may desire to put to me.

I now beg to move: "That the directors' report and statement of accounts for the twelve months ended 31st March, 1931, be and the same are hereby adopted."

Mr W. E. Preston (deputy-chairman) seconded the resolution, which, in the absence of questions, was carried unanimously.

On the motion of the Chairman, seconded by Sir Montagu Cornish Turner, a dividend of 5 per cent. per annum, less income tax at 4s. 2.29d., was declared payable on July 17, 1931.

The retiring directors were re-elected, and the auditors having been reappointed, a hearty vote of thanks was accorded to the chairman, directors and the officials and staff for the way in which they had looked after the affairs of the company during the past year.

The proceedings then terminated.

THE AILSA INVESTMENT TRUST, LIMITED.

INCREASED NET REVENUE.

MR DUNCAN ON SECURITY VALUES.

The fourth ordinary general meeting of the members of the Ailsa Investment Trust, Limited, was held in Glasgow on Tuesday, July 14, 1931.

Mr. John Duncan, C.A., who presided, said: Gentlemen,—Copies of the report and accounts for the year ended May 31, 1931, which arise for consideration to-day, have been circulated to all the members, and with your permission I propose, therefore, to take them as read. (Agreed.)

It will be observed from the balance sheet that the book cost of the investments held at May 31, 1931, was £863,189. A detailed list and analysis of these investments is attached to the report, from which it is seen that they are widely distributed both as regards geographical situation and the nature of the undertakings.

EFFECT OF FINANCIAL DEPRESSION ON SECURITY VALUES.

The financial depression, of which we were already beginning to feel the effect during the previous financial year, has been intensified during the past year, and has affected every country in the world. A study of the trend of security values reveals the fact that the contraction in the value of securities as a whole prevailed throughout the year, with the exception of a slight check in September, 1930, and again in March, 1931. Since March the rate of fall has, if anything, accelerated, the securities indices, published by *The Investors' Chronicle*, showing a drop of over 10 per cent. in April

THE NATIONAL BANK OF NEW ZEALAND, LIMITED.

STRONG AND LIQUID POSITION.

The fifty-ninth ordinary general meeting of the National Bank of New Zealand, Limited, was held, on the 14th instant, at 17, Moor-gate, London, E.C.

Mr Arthur Willis (secretary and London manager) read the notice convening the meeting and the auditors' report.

The Hon. Wm. Pember Reeves (chairman of the company), in moving the adoption of the report and accounts, said:—The balance sheet, I think you will agree, discloses a strong and liquid position. Gross profits, after providing for bad and doubtful debts, are £646,000, or £50,000 down on last year's figures, and the net profits have decreased by £74,600, as compared with March 31, 1930, and, in view of the severe and universal depression of trade and business, you have probably not been greatly surprised by our proposal to reduce the 12 per cent. distribution of last year by 2 per cent. Our reasons for taking this unwelcome step are all traceable to the serious position in New Zealand. There, to the effects of heavy falls in the price of almost every important article of export, have been added those of a disastrous earthquake, a demoralised rate of exchange, and the exaction of further taxation by an embarrassed Government. The resulting sharp contraction of trade has brought down imports and exports by many millions, and depressed every branch of internal commerce. These conditions have been reflected in our turnover, added to which the rates of exchange between New Zealand and London and New Zealand and Australia have complicated business and have been a source of much trouble and some anxiety. I am glad to say that we have been able to supply all our customers' exchange requirements, and have at present no reason to suppose we shall not be able to continue to do so.

Prudence in face of the plight of the country forced us to restrict advances; indeed, the marked shrinking in the free deposits of all the banks would alone have dictated this course. The widespread difficulties with which our clients, in common with other New Zealanders, are contending have made concessions to many of them needful, and obliged us to take precautions in the face of a very uncertain outlook.

You may call this a pessimistic recital. It is not. It is a plain list of hard facts. You will admit, I think, that they justify a policy of more than ordinary caution. We are still paying our dividend free of tax, in spite of the increased rate of taxation, and this year New Zealand shareholders will be paid in the equivalent of sterling, which will mean a handsome addition to their dividend.

You will have seen a note on our report mentioning that at the exchange rates current on March 31, 1931, our capital employed in New Zealand and Australia showed a depreciation of approximately £269,000. This was appended for public information, but it need not disturb you. It can only have any practical effect if the bank were to go into liquidation and our assets at the Antipodes had, therefore, to be realised and brought to London, and if at that time—say, a few centuries hence—the exchange rate was still standing at 10 per cent. The state of the exchanges in New Zealand has led to a depreciation—in theory at any rate—in the New Zealand pound as compared with the value of sterling in London. When I say that this depreciation is largely theoretical, what I mean is that the purchasing power of the New Zealand pound for internal business in the Dominion has not depreciated. On the contrary, it has become distinctly greater there during the last eighteen months.

The financial troubles of the New Zealand Treasury led the Government last year to make serious increases in taxation. A very heavy hand was laid on the banks, and when I tell you that the rates and taxes paid by us in New Zealand amounted this year to £137,553, you will comprehend the thorough-going fashion in which authority at the Antipodes is applying the thumbscrew.

I told you last year that the outlook of the Dominion's public finance was not good, but I should doubt whether anyone could have expected the position to be quite as bad as it has turned out to be. Whereas the Government anticipated a surplus of about £250,000, the Prime Minister was obliged early this year to warn the country that a deficit of £1,250,000 was to be expected. At such a pace did the revenue shrink that by the end of the official year the deficit had become £1,640,000. Bad as this was, his estimate for the coming year showed that, unless steps were taken to counteract a further fall in revenue and increase in expenditure, the accounts next year might show the unprecedented deficit of £5,500,000. As you are aware, the Government and Parliament, forced by sheer necessity, are facing the position with resolution. Whatever their extravagance may have been during the past twenty years, a majority of the House of Representatives are showing themselves determined to balance the Budget, at whatever sacrifice, and for that they are entitled to credit. So far as I can judge, their action is receiving general support from the greater part of the taxpaying community, by whom these sacrifices have to be made.

Sir Austin E. Harris, K.B.E., seconded the resolution, which was carried unanimously.

YEAR'S RESULTS.

Turning to a consideration of the results disclosed by the revenue account, it will be seen that the net revenue for the year, after charging expenses of management, interest and income tax, amounted to £32,985, as compared with the net revenue for the preceding year of £30,691. This increase is, however, more apparent than real, as it must be remembered that the increase in the capital which took place in July, 1929, did not produce a full year's revenue in the year to May 31, 1930. In comparison with the year to May 31, 1931, the revenue has suffered both from the increase in the standard rate of income tax from 4s. to 4s. 6d. in the £ and from a reduction in the income received from our holdings, particularly in the case of ordinary stocks.

BOARD'S SOUND DIVIDEND POLICY.

It is possible that the effect of the trade depression upon our investment income may be accentuated during the coming year. Having this possibility in mind, the directors consider that it would be prudent to restrict the final dividend on the ordinary stock to be 2½ per cent., which, with the interim dividend of 2½ per cent. paid in December last, will make a total distribution for the year of 5 per cent. As the balance brought forward from the preceding year amounted to 2,241, the total amount available for distribution is £35,226, out of which there has been deducted the dividend on the preference stock for the year, amounting to £17,578, and the interim dividend on the ordinary stock of 2½ per cent. actually paid in December, 1930, amounting to £5,875, leaving a balance of £11,773 now to be dealt with. The final dividend of 2½ per cent., less tax at 4s. 6d. in the £, now recommended by the directors to be less than the ordinary stock will absorb £5,844, leaving a balance of £5,929, which they propose should be carried forward to the ensuing year.

The amount of the carry-forward represents approximately an additional 2½ per cent. on the amount of the ordinary stock.

The report and accounts and payment of dividend recommended therein were adopted.

The retiring directors were re-elected, and the auditors, Messrs Kerr, MacLeod and Macfarlan, re-appointed.

A vote of thanks to the chairman concluded the proceedings.

THE DISTILLERS COMPANY, LIMITED.

DIVIDEND MAINTAINED IN YEAR OF UNEXAMPLED DEPRESSION.

MR W. H. ROSS ADVOCATES MODIFIED PROTECTION AND PERMANENT
TARIFF BOARD.

The fifty-fourth annual general meeting of the Distillers Company, Limited, was held within the North British Station Hotel, Edinburgh, on Wednesday, July 15th, when Mr William H. Ross, chairman of the company, presided.

The Chairman said:—

My lord, ladies and gentlemen,—Six years ago I had the privilege of moving that the annual dividend on the ordinary shares of the company should be increased from 10 per cent. per annum, free of tax, at which it had stood for over twenty years, to 20 per cent. per annum, less tax, and at that time I ventured to say that I hoped we would be able to maintain the increased rate of dividend for many years to come. A year ago I sounded a note of warning to those who were inclined to think that the time had arrived for the distribution of our reserve fund and a bonus issue of shares to our shareholders. I took the view then, as I do now, that the maintenance of a steady dividend was of more importance to the shareholders than a bonus which might or might not affect the maintenance of a regular dividend. It is with these two thoughts in mind that your directors have now great pleasure in coming before you with a report which in a year of unexampled depression recommends the maintenance for the seventh year in succession of a dividend at the rate of 20 per cent. per annum, less tax. In doing so, I would not have you believe that our company has not been affected by the depression which has ruled throughout the world. Our distributing trade has, indeed, suffered a drop in profits owing to the reduced consumption of spirits both at home and abroad, and our Australian trade has been faced with the position that not only have the exports to that country been compulsorily reduced to 50 per cent. of the previous year's trade but we have had to contend with the adverse rate of exchange on any monies brought home to this country.

PROFITS MAINTAINED BY ECONOMIES.

Fortunately, some other sections of our trade have helped to level up our profits, including a dividend for the first time from our Canadian investment, but I should say that the principal savings we have effected by which the profits have been maintained are due to economies brought about through rationalisation and the liberal depreciations written off in previous years, which has rendered similar depreciations unnecessary at this juncture. It must not be overlooked also that the growth of our reserve funds has placed more money at our disposal for the development of our business without the necessity for paying out any dividend on this extra capital. The payment of a 20 per cent. dividend looks to be a large distribution, but I will put the matter in this way, that the capital employed in our business may be divided into three parts of roughly equal proportions. The first part consists of reserves and provisions for contingencies which may or may not arise, but on which we are not called upon to pay any dividend whatever. The second part consists of debentures and preference shares with varying rates of interest or dividends from $4\frac{1}{2}$ per cent. to $7\frac{1}{2}$ per cent., or an average of not more than $6\frac{1}{2}$ per cent. Thirdly, we have the ordinary share capital which receives its 20 per cent. of dividend. Taking these three groups together, the average dividend paid on the total capital employed is therefore under 9 per cent.—surely not an exorbitant profit to earn in an industrial company.

CAPITAL FULLY PROTECTED.

Of even greater importance to the shareholders than the maintenance of a steady dividend is the knowledge that their capital is fully protected, and in the absence of a consolidated balance sheet I propose to give the main lines upon which the balance sheets of not only the parent but subsidiary companies have been framed. First of all, I wish to repeat that all goodwill, patents and trademarks, which have cost the company probably millions to establish, have been almost entirely written off. Where any balance under these headings still appears in one or two of our subsidiary companies, provision has been made against such in our estimation of the value of our investments, so that all items under these important headings may be taken to be absolutely eliminated as assets of our company.

PROPERTIES AND PLANTS WRITTEN DOWN.

As regards properties and plants, these have been written down in the case of operating plants to values greatly below their present worth, while in the case of redundant properties which have been

thrown out of use the values at which these formerly stood in the balance sheets have either been entirely written off or have been taken in at nominal amounts. I may instance only one example of how we have dealt with properties no longer in operation. In Ireland, between the parent and subsidiary companies we own in all five large distilleries which were valued in our books in 1922 at £475,000. Two of these distilleries, situated in the Free State, have now been entirely written off, while the other three, situated in Ulster, have been written down in our estimate of values to a total figure of £25,000.

Provision has been fully made for all bad and doubtful debts so far as known, while monies lying in Australia and New Zealand awaiting the opportunity for remitting home have been discounted in our books to the extent of the difference in exchange value.

Stocks of spirits, which form an important and probably the most important item in the assets of our subsidiary companies, are taken at original cost to these companies without any addition being made for interest and current charges in maturing these goods. Moreover, any profit attaching to the parent company in the sale of goods to its own subsidiaries or between one branch of the company and another, is written back to a suspense account, and not assumed as profit until the goods have been brought into use by the purchasing companies concerned. The amount of these reservations at the present time is approximately £1,000,000. The stocks of grain and molasses have been taken at cost or market value, whichever is the lower.

Provision for all known liabilities has, of course, been made in the current year's accounts, as well as for income tax due on the profits of the year under review, which income tax does not become a liability until January, 1932. We consider this an important provision to make, as the liability is one which will have to be met whether or not any profits are made in the year now running.

VALUE OF THE INVESTMENTS.

This leaves only the various investments whose values are put down in the aggregate at about £15,500,000. All these investments are taken originally at cost price, but large sums have from time to time been put to a reserve to meet any depreciations which may come along, and the amounts stated in the balance sheet are the net cost after depreciation has been written off. A fresh estimate has been made of the value of these investments as they stand to-day. In the case of sundry investments, some of which are quoted on the Stock Exchange, these have been taken at the market value or less, but in the case of our own subsidiary and associated companies, we have taken out the value of the investments as written down in accordance with the methods previously indicated, and the net result of these investigations shows that our fresh valuation gives a surplus margin of over £650,000 beyond the book value in the balance sheet. As evidence that our revised valuation is by no means an extravagant one, I may state that the revenue from these investments for the past year worked out at about 14 per cent. free of tax on the amount of such fresh valuation.

THE UNITED MOLASSES DEAL.

Having now dealt with the method of framing our various balance sheets, may I say a word in explanation of the new purchase of shares referred to in the directors' report? Some criticism has been levelled at the action of the directors in acquiring a large block of shares in the United Molasses Company which, since the date of that purchase, has depreciated so much in value. Those of you who have followed closely the history of our company during the last ten years may remember that at one time there was more than a possibility that a petrol shortage might have to be faced in the world's market, and we were strongly advised even by the oil companies themselves to be prepared with a substitute fuel if such an eventuality arose. We made extensive experiments in the production of an alcohol fuel, and proved that it was a marketable commodity, but our main difficulty from the start was in satisfying ourselves that there was sufficient suitable raw material from which this fuel could be produced, even if the demand should come to one-half of what was predicted. The cheapest form of material for our purpose was undoubtedly molasses, but the supply of same was definitely restricted to the production of sugar and to the facilities provided for the collection of the molasses from the sugar works. Feeling that even at best the supply of molasses might be precarious on which to build a large trade in industrial alcohol, we sent various delegations to different parts of the world to discover if possible a

substitute from which cheap alcohol might be produced. These investigations extended over several years, but unfortunately were unsuccessful. We were again thrown back upon the position of molasses. In the interval the United Molasses Company had been formed, and by a vigorous and forward policy they had established depots in various parts of the world where molasses could be collected with advantage. About the same time America became a more important buying competitor, and threatened to appropriate the world's supplies of molasses.

ENSURING MOLASSES SUPPLIES.

Even for our own industrial alcohol trade we felt therefore that something must be done to insure our source of supply of raw materials, and in the summer of 1929 I approached Mr. Kielberg, Chairman of the United Molasses Company, with a proposal that as we were important users of molasses, and were indeed his best customer in this country, a closer affiliation of our two companies might be of mutual advantage. I suggested that a contract of sale in the ordinary sense would hardly be sufficient to insure the friendly relations which are required between buyer and seller where large amounts are involved, and I proposed that an exchange of shares between our two companies which would not give to either more than a friendly interest in the other company, would be a desirable object to attain. At that time the shares of the Molasses Company, before being watered down, were standing in the neighbourhood of £8 per share, while our shares were round about 65s. to 70s. I made it clear, however, that any basis for negotiation would have to be strictly according to the earning value of each company, and not according to the value placed upon the shares on the Stock Exchange. Our approaches were received in a friendly way, but Mr. Kielberg asked that further negotiations should be postponed for a year, as certain additional businesses had been acquired by his company in the United States, the profits upon which would not be apparent until the end of his next financial year. So it came about that the negotiations were resumed in July/August of 1930, when the balance sheets of our respective companies were placed in the hands of the auditors for the two companies for examination. As a result of this investigation the parties concerned came to an agreement that a fair basis of exchange would be two ordinary shares of United Molasses Company for one ordinary share of The Distillers Company, and this was finally agreed to, with this provision that as we had a considerable amount of cash on deposit we elected to pay for the shares acquired in cash, and with this cash we made it a condition that the United Molasses Company should acquire the requisite number of our shares from existing holders.

THE AMERICAN SLUMP.

Within a fortnight after this agreement being entered into, Mr. Kielberg came to me to express his regret that on account of the default of two of his largest buyers in the United States and also the slump which had taken place in the use of molasses in that country, he thought it right to advise me of the facts and he generously offered to relieve us of our bargain if we felt so disposed. I replied that I was quite sure my colleagues would agree with me that the bargain having been made in good faith by both parties, we would prefer to honour it as it stood. You will observe from this recital that the object of the transaction was not to obtain an investment but really to secure a better position for our company in the supply of raw material, of which our demand was growing rapidly. If we consider that the cash paid for the 400,000 shares in the United Molasses Company amounted to £610,000 and the interest upon the same, even at 5 per cent., only amounts to £30,500, it will be appreciated that this was not a large premium to pay for the security we so much required.

OTHER NEW INVESTMENTS.

Coming next to the investment in Solvent Products, Limited this is a concern situate at Dagenham, Kent, which had come into existence a few years earlier and had affected our profits in industrial spirits considerably. The United Molasses Company were offered and accepted the opportunity of acquiring the whole shares in that company and at once came to the Distillers Company with the offer that we should take over 50 per cent. of the purchase at cost price. This we agreed to do and thereby converted an active belligerent into a faithful ally in the industrial spirit trade. This transaction ended the fight which had been in progress for two years, with consequent loss of profit to us, and by the modest increase of a penny per gallon on our general production of industrial spirits we more than compensated ourselves for the loss we are temporarily sustaining through the failure of the United Molasses Company to pay a dividend on our holding of their shares.

The other new investment noted in the report is that of the United Distillers (Proprietary), Limited, of Melbourne, Australia.

You may remember that this transaction was reported to you at our last annual meeting and the shares have since been allotted and paid for by us and included in the present year's accounts.

This closes my review of the balance-sheet figures, and now I would like, if I may, to discuss some matters of more general interest and a subject which is not usually discussed at these meetings. I am afraid I must apologise to my colleagues for raising what might be called contentious matters, and you must not, therefore, hold them as agreeing with my views, which are entirely personal.

PESSIMISM NOT JUSTIFIED.

The present year has been stamped with the word "depression" writ very large. This has produced a race of pessimists who, if they do not argue that the end of the world has come, are never so happy as when they urge that this country has seen its best days and will undoubtedly sink to a third-rate Power. I am not of that opinion. I think the grit and determination which carried us through the Great War to a successful conclusion will also see us through the commercial war which is now raging throughout the world. In my humble opinion, we are partly responsible for the present condition of matters. We have lost the old spirit of independence and self-assertion which was the pride of our Scottish forefathers, and are too much inclined to rely upon others instead of exerting ourselves and altering our methods to present-day requirements. The workman of to-day is taught to believe that if he cannot obtain work easily he will be provided for by a benevolent Government. The manufacturer, in place of looking around and adapting himself to new conditions, cries out for Protection or some other panacea to help him out of his present difficulties. If there is one industry more than another which is justified in being depressed, surely that industry is ours. We have seen the duty on our main product increased from 14s. 9d. to 72s. 6d. per gallon; we have seen the consumption of spirits in this country reduced from about 29,000,000 proof gallons to little more than one-third of that quantity since the war; we are seeing distilleries closed by the score in isolated districts of Scotland where no other industry is possible or practicable to take its place; and yet we receive no consideration from any Government, no matter what its political complexion. Nevertheless, this company has not sat down under these reverses, but has endeavoured to meet the circumstances as they occur. By a system of rationalisation, which I explained fully to you a year ago, we have endeavoured to reduce our expenses to the minimum. By entering more largely into the industrial spirit market, through introducing products which require alcohol as their base, we have developed certain of our distilleries to a degree never previously contemplated. When countries like Canada and Australia have attempted to exclude our goods from their markets without the least protest from our own Government, we have accepted the situation and entered these markets to preserve our own position.

MODIFIED PROTECTION SUGGESTED.

I have mentioned the word "Protection" as being the hope of certain manufacturers to reinstate their industries in their former position. I may say that I was brought up a staunch Free Trader, and would gladly be a Free Trader still if the conditions of the country were the same as they were when Free Trade brought us such unbounded prosperity. The conditions, however, have entirely altered since these days. We are no longer the only workshop of the world drawing our supplies of raw material at the cheapest rate and exporting them to other countries in the form of manufactured goods at high prices. We have no longer free trade in labour which is controlled in a way that is the envy of all manufacturers who would gladly see their products protected in similar manner, and yet I hesitate to pin my faith to undiluted protection such as is advocated in some quarters. Those of us who know something of the working of tariffs in other countries know of the wire pulling which takes place whenever an election occurs in order to get this or that industry placed in a more advantageous position. We in this country would not like to see tariffs made the sport of Parties, and that on each change of Government it would mean pulling down a tariff which its predecessor had set up, or vice versa. The worst thing which could happen to manufacturers of this country is a continual change of tariffs to suit the political creed of the party in power. Is it not, therefore, possible to so provide a modified protection for the manufacturers of this country which would be satisfactory to all three political parties? Could we not possibly agree that the natural products of any country might be brought into this country free of duty for the benefit of our people generally? In the case, however, of products supported by artificial advantages, the situation might be met by a duty to compensate the home manufacturer for the extra burden which he has to bear in the shape either of wages or taxation. On the other hand, if it is found that other countries

are giving a bounty or dumping their products into this country at a price below which they are selling the same goods in their own country, that surely is a matter for a protective duty. The object of my proposal is to place home manufacturers in as favourable a position as the manufacturers of other countries without in any way stifling healthy competition. To do more would be to put a premium upon inefficiency.

SUGGESTED PERMANENT TARIFF BOARD.

I fully realise that a tariff policy based on such lines could not be lightly entered into, but I suggest that in place of leaving it to the Government of the day to inquire into this or that condition of affairs, a permanent tariff board should be set up to investigate all matters of such a nature, and to advise the Government of the products which require to be protected and to what extent. This Tariff Board should be appointed by agreement amongst all three political parties, with the right of each to nominate the same number of members, but with the conditions that the members of the Tariff Board should, as far as possible, be expert economists with no political bias, and should be free from removal on a change of Government. I may give only one example to show the danger of instituting a tariff without due consideration of its effect upon the industries concerned. I refer to the proposal put forward by the Farming Associations and accepted as a principle to be adopted by Mr. Baldwin as soon as his party comes into power, namely, a duty upon imported malting barley. That the term malting barley is a misnomer for the article suggested to be taxed is shown by the fact that all barley when sound in quality is capable of being germinated, but the duty proposed to be levied is defined for use in breweries and distilleries; and, that there should be no mistake as to the object in view, it has been explained that barley, even if unmaltered but used in a distillery, would be liable to pay duty. The tax should therefore be more correctly termed a brewers' and distillers' sur-tax. I have explained the tremendous duty which has already been imposed upon the manufactured article, and now this tax suggests that an additional duty should be placed upon the raw material from which whisky is produced. This is a concrete example of what would be double taxation which Conservatives and Liberals alike have condemned in principle in the case of the Land Tax proposals of the present Government.

HIGH SPIRIT DUTY CLOSING DISTILLERIES

I have shown that the present high duty has been largely responsible for reducing the consumption of whisky in the British market, and the result is shown by the number of silent distilleries now dotted over the whole of the Scottish Highlands. While distillers have appealed to successive Chancellors of the Exchequer to ameliorate the conditions and so save the industry from further decline, farmers have hitherto refused to second our efforts, even although such would have been in their own interest. They have preferred to put forward this proposal for a further burden upon the industry in the hope that they might secure the small percentage of orders which are now placed for foreign barley. Surely, there could be no better example of Nero fiddling while Rome is burning. I suggest for Mr. Baldwin's consideration whether this proposal should not be dropped entirely in favour of a reduction in the present high rate of whisky duty which would benefit distillers and farmers alike, as well as the consumers.

I fear that I may have wearied you by this digression, but I consider it the duty of commercial men to submit their views on a question which may become of vital interest to their particular industry.

DEPRESSION MAY ENDURE A LITTLE LONGER

To sum up the present position of our company, I am of opinion that the existing depression is likely to endure for some little time longer. Against this, however, I have shown that the directors have taken all reasonable precautions to strengthen the position of the company so as to bear such a strain, while shareholders will doubtless view with satisfaction the special provision made in this year's accounts by the establishment of a reserve for the equalisation of dividends which will be available for such a purpose if the current year's profits render this necessary. As regards the industrial spirit trade, it is certainly the case that the trade depression has had its effect upon this branch of our business just as with all other sections, but the tone of the industry is now much more healthy, and as soon as the present clouds disperse we should be in a position to take full advantage of any improvement in trade which comes along.

Before closing, I would ask you to join with the directors in expressing their appreciation to the various staffs of the companies, both at home and abroad, for the faithful services rendered by them

during the past year. Without such loyalty and co-operation, it would be impossible for the directors to present, year by year, the same satisfactory results.

And now I have much pleasure in moving the adoption of the report which recommends the payment of the usual dividend on the preference shares and for a final dividend on the ordinary shares of 12½ per cent., less tax, which, with the interim already paid, makes a total dividend for the year of 20 per cent., less tax, and leaves a sum of £283,151 12s. to carry forward to the current year.

The resolution was unanimously adopted.

TAQUAH AND ABOSSO MINES, LIMITED.

DIVIDEND OF 12½ PER CENT.

The ordinary general meeting of Taquah and Aboosso Mines, Limited, was held on July 16th at Winchester House, London.

Mr T. F. Dalglish (the chairman), in the course of his speech, said: When we met last year I ventured to suggest the possibility of paying an interim dividend before the end of 1930. I am glad to think that this was no rash venture, and it has not only been fulfilled, but we can now recommend the payment of a final dividend of similar amount, making together a total of 12½ per cent. per annum on the issued capital of the company.

With regard to the balance sheet, mine development, at £52,594, represents an estimated tonnage of 284,290 of developed ore at a cost, including expenditure on internal and auxiliary shafts, of 3s. 9d. per ton. The corresponding item last year was £46,914 representing 234,572 tons at 4s. per ton. The ore reserves have thus been increased by about 50,000 tons, and the cost reduced by 3d. per ton. On the other hand, the estimated value of the gold contents was 2s. per ton higher in the previous year. Additional reserves estimated at 42,330 tons are mentioned, valued at 24s. 5d. per ton, which can now be dealt with profitably owing to the reduced working costs and also the fact that the cost having been previously written off, there is no redemption to be charged. Taking our liquid assets represented by stores and materials, debtors, &c., and gold and cash in hand, making a total of £40,408, and placing against them our liabilities of £17,859, we have a surplus of £22,549, after having paid off the loan of £8,000 and distributed £9,040 by way of interim dividend. I think you will agree that this is a satisfactory financial position.

Turning now to the profit and loss account, the tonnage of ore treated was 17,799 more than in the previous year, and the amount of gold recovery was £191,022, an increase of £22,464. The recovery was 32.21s. per ton as against 33s. 5.3d. in the year 1929-30. On the other hand, working costs, including development redemption, were 24s. 4.71d. per ton against 29s. 1.2d., a reduction of 4s. 8.49d. The first three months of the current year, in spite of some adverse circumstances, show a further reduction of 1s. 5.4d.

After deducting depreciation of plant and buildings and sundry items set out in the account, there remains a credit balance of £28,877 14s. 6d., which has been carried to the balance sheet. Adding the small balance of £267 18s. brought forward from the previous year, the total amount at the credit of profit and loss account is £29,145 12s. 6d. Out of this sum shareholders have received an interim dividend of 3d. per share, less income tax, amounting to £9,040 13s. 3d. It is now recommended that a final dividend be paid at the same rate, absorbing £9,159 19s. 8d., leaving a balance of £10,944 19s. 7d. to be carried forward, subject to the directors' additional remuneration.

Since the close of our financial year the reef has been cut again in a crosscut from the internal shaft at 1,047 feet, and is being driven at No. 19 level. The assay value here at the deepest point reached in the mine, is 40s. 6d. over 42 inches, and is distinctly encouraging. The gradual increase in the efficiency of the jackhammers has been remarkable during the year, and had finally brought down our working costs to about 19s. per ton. Since the end of our financial year we have treated 10,310 tons of ore in April, giving a working profit of £4,510, 10,050 tons in May, giving £4,002, and 9,770 tons in June, giving £3,414, in all cases including the charge for development. In May the return was affected by the temporary stoppage of work in three stopes by a fall of rock, and in June by an unusual amount of seasonal sickness among the native employees, and the consequent displacement of 40 per cent. of our skilled machine boys by learners. Work is being pushed in the lower levels to open up more working faces to replace two of the main reef stopes which have gone out of pay ore. Until these are brought into operation it may be difficult to maintain full tonnage during the next few months, although every effort will be made to keep it up to average. I think, however, I may again venture to promise another interim dividend in the autumn.

The report and accounts were unanimously adopted.

W. T. HENLEY'S TELEGRAPH WORKS COMPANY, LIMITED.

COMPANY'S SHARE OF TRADE WELL MAINTAINED.

The fifty-second ordinary general meeting of W. T. Henley's Telegraph Works Company, Limited, was held, on the 10th instant, at the Great Eastern Hotel, London, E.C., Sir George Sutton, Bart., M.I.E.E. (the chairman of the company), presiding.

The Secretary (Mr A. H. M. Jacob) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, called attention to some of the more important figures on the balance sheet. Notably there was a very special provision of £20,000 for obsolescence of lead presses. These formed a very important part of cable-making machinery. In the course of the last five or six years the board had expended about £20,000 in experimenting, and had succeeded in producing a press far and away superior to any lead press hitherto made. The press had been patented throughout the world, but the capital account had not been debited with anything for the value of the patents or the cost of experiments.

Although the cash resources of the company might appear to be large, they were not larger than the board considered the progress and maintenance of the business might need. Provision had been made for losses which might be made in transmission of money from overseas. The fall in the prices of materials which the company used had been met by reserves previously made for such an eventuality.

The Tyre and Rubber Company was making satisfactory progress. He thought he might say that the works had been fully employed all the year, and they had added to its original purpose some new classes of manufacture.

SALES AND OUTPUT.

The company's sales for the year in money value had been lower than they were for the previous year, which, he thought, were the highest the company had ever had. In quantity the output was very little different from the previous year, and the lower profit the year's work had realised was due to the lower cost of raw material, and, consequently, a less money yield by a normal percentage addition to cost. The board kept very closely in touch with the world trade in their industry in money turnover, and were satisfied that there was no falling off in the share of the trade the company was doing, compared with its competitors. The actual statistics showed that the percentage of the company's total output exported overseas was the same as in the previous year, but the money value was lower.

So far as export trade was concerned, their records showed that British cables had a larger export demand than one-half of the total export of this and four other principal exporting countries. The establishment of a cable factory overseas, to which he referred last year as a joint enterprise with other cable houses, had been postponed until conditions were more favourable than at present.

THE FUTURE.

As regarded the year in front of them, it was very difficult to make an accurate forecast. They had brought into the year more orders than they did the previous year, but many of them were not so profit-yielding as last year's; neither was the business received during the last few months an indication that trade was going to boom. But, after all, it was not reasonable to bank on increasing output every year. Their business had year by year for half a century gone on increasing its output and profit, and might yet continue to do so, but the financial difficulties of the world, the exercise of economy, and the low level of prices must have its effect on the British cable trade as well as on most other industries. That was, of course, taking a short view, a one-year view, but looking further ahead, they could see that the growth of the demand for electricity would go on. Even in the trying period of 1930-31 the electricity generated in this country for the five months ending May 31, 1931, had been 140,000,000 units more than the same period a year earlier, and, large as that figure was, it represented an increase of only 3 per cent. That would enable the shareholders to realise that hope for increasing demand for cables was well justified.

The report was unanimously adopted, and a final dividend on the ordinary shares of 2s. 6d. per share, making 4s. (less income tax) for the year, together with a cash bonus of 2s. per share (less income tax) was declared.

Mr J. Lamont, in moving a hearty vote of thanks to the chairman, as directors and staff, said that this was in a way a unique occasion, as they were able to congratulate their chairman on fifty years of service to the company. Fifty-two years ago the company was, so to speak, on the rocks, and Sir George, then Mr George Sutton, a young man of great determination, came forward and endeavoured to put it on a good footing. To-day they were able to congratulate him on the position to which he had brought this company.

The vote of thanks was accorded by acclamation.

BANK OF ROUMANIA, LIMITED.

ADVERSE CONDITIONS.

The ordinary annual general meeting of the Bank of Roumania, Limited, was held, on the 15th instant, at 26 Throgmorton Street, London.

General the Hon. Sir H. A. Lawrence, G.C.B., who presided, in moving the adoption of the report and accounts, said that Roumania, like other countries, had during the past year suffered from the general fall in commodity prices, and this bank, in common with other institutions, had to show diminished profits on the year's working. For the period to December 31st last a balance of £5,742 was shown after paying all expenses, income tax, &c. Provision had, however, to be made for doubtful debts, depreciation of investments and contingencies. For this purpose £50,000 had been transferred from the reserve account, and the total of £55,742 was available. He wished to make it perfectly clear that in the opinion of the directors the whole of this amount might not be required. Under the conditions which obtained in Roumania it was quite impossible to say definitely what the value of certain assets and liabilities might be, and until the situation was clearer it was wise to make provision.

Little fluctuation occurred in the rate of exchange during 1930. Despite the unfavourable factors which prevailed, the National Bank of Roumania maintained its percentage of cover to liabilities well above the requisite minimum of 35 per cent. and provided all currency demanded, including that required for State debts paid abroad. The discount rate remained unchanged at 9 per cent., being retained at that figure to reduce the risk of capital being exported. Deposit rates were lowered, the earning capacity of placements being also reduced. At the end of last year discounted bills held by the main institution reflected the decline in banking business, and notes in circulation were approximately 1½ milliards of lei less than in December, 1929.

With the economies projected by the Government, the formation of the Banque d'Agriculture Roumaine to assist cereal cultivators, and a more rational exploitation of her natural wealth, it could only be hoped that Roumania, following a betterment in international conditions, would experience a steady improvement in her economic life.

The report and accounts were unanimously adopted.

SOUTH AFRICAN BREWERIES, LIMITED.

CONTINUED PROGRESS.

The 36th ordinary general meeting of the South African Breweries, Limited, was held, on the 14th instant, at Winchester House, London.

Mr John Stroyan, J.P., D.L. (the chairman), said that the company had, over a considerable span of time, grown into a very large and important corporation, and one which had not only done well for its shareholders, but had, at the same time, done much to benefit the country in which they traded. The accounts showed that the cash position was again a strong and sound one. He felt that the shareholders would be fully satisfied with the results for the year, and the directors had no hesitation in recommending the same dividend as last year.

A feature of the past year had been the erection and the equipment of two thoroughly up-to-date maltings. Their Woodstock maltings had been in full work for over a month and were working to their full satisfaction. Their new Rhodesian maltings at Salisbury were approaching completion. It was very desirable that they should have maltings at Salisbury, which was the centre of an excellent agricultural district well suited to barley growing. Theirs was the only brewery and theirs the only maltings in that vast country.

With regard to the country in which they traded, South Africa itself, apart from outside complications, was sound enough, and had little cause to be gloomy. In her former markets she found demand much contracted and prices greatly reduced, but to counter-balance agricultural and other short-falls she still had advantages over many other countries. Her gold mines to-day, most fortunately, were at the highest point of production they had yet reached. Those mines were at the present time of supreme value not only to South Africa, but to the world, and would continue to be so for many years to come. South Africa had much in her favour that would make the present difficulties bear more lightly on her than would be the case elsewhere. The company had a great and valuable business and one that had proved its value in the past. It was far flung, and it catered for vast areas from Cape Town to the Zambesi River, and in different directions beyond. Their breweries, machinery and all appliances were of the best and up to date. He was more than optimistic as to the continuance of the success and steady progress of the company, and he hoped that all the shareholders shared his optimism.

The report was unanimously adopted.

EDMUNDSONS' ELECTRICITY CORPORATION.

INCREASED OUTPUT AND REVENUE.

The thirty-fourth ordinary general meeting of Edmundsons' Electricity Corporation, Limited, was held, on the 14th instant, at Broad Sanctuary Chambers, Tothill Street, Westminster, London.

Mr F. Massingberd Rogers (chairman of the corporation), who presided, in the course of his speech said:—

The accounts show that the company's business for the year is satisfactory. During the year £1,380,000 5 per cent. debenture stock was issued. Part of the proceeds have been applied to the redemption of temporary loans, the balance being applied to the general development of the business. The investments in subsidiary and other companies and undertakings have increased from £3,067,150 to £3,679,857, and the income from investments has increased from £169,292 to £217,931. The undertakings with which the company is connected have again increased the output and gross revenue. The number of units sold during the year 1930 was over 89,000,000, and the income from the sale of electricity, &c., was £1,181,600.

The balance shown in the profit and loss account, before provision for income tax, debenture stock interest, &c., is £274,199, which compares with £216,706 for the previous year. The net balance of the profit and loss account is, however, only £220,281, compared to £204,777. The reason the increase is not greater is that provision had to be made for debenture stock interest and redemption of £45,759, whereas the previous year no debenture stock interest and redemption were chargeable.

The debenture stock interest and redemption charges are only in respect of a portion of the year, and next year such charges against the profit and loss account will amount to approximately £82,800.

After providing for income tax, debenture stock interest and debenture stock redemption, the net profit amounts to £220,281 6s. With the balance of £20,663 11s. 4d. brought forward from the last account, after deduction of the additional directors' fees voted at the general meeting, the total profit is £240,944 17s. 4d. Deducting therefrom the interim dividends of 3½ per cent. paid upon the cumulative preference shares and 3½ per cent. upon the ordinary shares, there remains a balance of £144,344 17s. 4d., which the directors recommend should be applied as indicated in the report.

I should like to express on behalf of the whole of the shareholders our appreciation to the staff of the company and its subsidiary and associated companies under the able direction of Mr Rye, the managing director, and Mr Jones, the secretary.

The report and accounts were unanimously adopted, and the final dividend of 3½ per cent., less tax, on the ordinary shares, making 7 per cent. for the year, was approved.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended July 11, 1931, amounted to £10,863,900 against ordinary expenditure of £9,916,200. After allocating £699,620 to Sinking Fund and after having allowed for an increase in Exchequer Balances of £87,094, the operations for the week, as shown below, decreased the National Debt by £161,000 to £7,638,645,000:—

(000's omitted.)

Treasury Bills	£ 184	Road Fund	£ 45
National Savings Certificates	+ 100	Telegraph Money	400
	+ 284		445

A complete analysis of the National Debt at March 31st, 1931, was printed in the *Economist* of April 4th.

REPORTS AND NOTICES.

BANKS.

BANK OF MONTREAL.—The Bank of Montreal, London, has received a cable from its head office in Montreal regarding the bank's statement for the half-year ended April 30, 1931, from which the following information is available: The total assets are \$786,000,000, as compared with \$826,000,000 at October 31, 1930. The liquid assets are equal to 55.72 per cent. of the liabilities to the public and cash holdings 11.16 per cent. Holdings of Dominion and Provincial Government securities amount to \$149,000,000, compared with \$131,000,000, and Canadian municipal securities, &c., are \$58,000,000, as against \$46,000,000, making the increase in high-grade securities over \$30,000,000. Current loans are now \$278,000,000, compared with \$290,000,000. Call and short loans have decreased to \$11,000,000 in Canada and \$34,000,000 outside. Total deposits show a decrease, standing at \$665,000,000, compared with \$697,000,000. The profits amount to \$2,771,753. After allowing for dividends, Government taxes and bank premises, \$131,753 remains to be added to profit and loss carried forward.

THE BANK OF NEW ZEALAND.—The profits for the year ended March 31, 1931, after providing for the expenses of management and all necessary appropriations, are £867,013; from this has to be deducted interest on guaranteed stock, £21,199; leaving balance of profit for the year, £845,814; to which has to be added, balance brought forward from last year, £623,150; and from which there has been paid dividend on preference "A" shares, £50,000; interim dividend, £316,276; leaving available for distribution, £1,102,694. This the directors propose should be disposed of as follows: Dividend on "C" long-term mortgage shares at 6 per cent. per annum, £7,031; dividend on "D" long-term mortgage shares at 7½ per cent. per annum, £17,578; dividend on preference "B" shares, £120,833 (making £162,500 for the year); bonus on preference "B" shares, £18,750; dividend on ordinary shares, 1s. 4d. per share, £250,000 (making 2s. 8d. per share for the year); bonus of 1 per cent. on ordinary shares, £37,500; transfer to reserve fund, £25,000 (making reserve fund £3,575,000); balance carried forward, £628,002.

IMPERIAL BANK OF INDIA.—The following shows statement of profits for the latest half-year compared with the half-year ended June 30, 1930.

	Half-year, June 30, 1930.	Half-year, June 30, 1931.
Net profits for past half-year ...	65,58,900	54,53,900
Brought forward from previous half-year ...	15,26,200	12,56,100
Total ...	80,85,100	67,10,000
Dividend of 12 per cent. per annum, free of income tax absorbing ...	45,00,000	33,75,000
Transferred to reserve fund (16½ per an.) ...	5,00,000	2,50,000
Transferred to pension fund ...	3,36,000	2,50,000
Transferred to premises account ...	Nil	Nil
Carried forward ...	27,49,100	28,34,200
Total ...	80,85,100	67,10,000

OVER ONE HUNDRED YEARS OF SERVICE.
SCOTTISH UNION & NATIONAL
 INSURANCE COMPANY.
ASSETS EXCEED - £15,600,000
FIRE. LIFE. ACCIDENT. MARINE.
 Edinburgh: 35, St. Andrew Square.
 London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1

for the previous year and 15 per cent. for the nine preceding years. The carry-forward is £90,010, against £86,991 brought in. The sum of £1,500,000 is being taken from reserve account to form a special reserve against depreciation in the Australian and New Zealand currencies. The meeting will be held at 71 Cornhill, London, on July 27, at 1 o'clock.

MISCELLANEOUS.

H.M.V.-COLUMBIA MERGER.—Electric and Musical Industries, Ltd., announce that holders of over 90 per cent. of each class of shares, preference and ordinary, of the Gramophone Company, Ltd., and Columbia Graphophone Company, Ltd., have agreed to exchange their shares for shares of Electric and Musical Industries, Ltd. Altogether over 94 per cent. of the total issued shares have been assented.

Commercial Reports.

MARKET SUMMARY.

The commodity markets have been adversely affected by the financial crisis in Germany, which caused an almost general decline in prices. The situation in the coal trade remains depressed, but quotations remain unchanged. The decision of the British Steel Makers' Association not to lower prices has resulted in a temporary increase in buying to satisfy early requirements which had been delayed in the hope of a reduction in quotations. There has been a sharp decline in non-ferrous metals, the only exception being spelter, which has been maintained following the decision of producers to renew the spelter cartel. Among textile raw materials, cotton declined sharply, but wool has not lost further ground at the auctions in Coleman Street. Jute has been dull, but hemp has been maintained. Among cereals, there has been a sharp decline in wheat prices, and food prices generally were easier. Rubber has again been dull, and there was a setback in oils and oilseeds, but hides and leather have so far maintained their recent advance.

THE COAL TRADE.

SHEFFIELD.—The demand for South Yorkshire steams continues quiet. There is no considerable export sale; nevertheless, the price of best qualities is being maintained at 17s. 6d. to 18s. f.o.b. Exporters are abstaining from contracting. The call for industrial fuel of all descriptions continues on a disappointing scale, and there is great over-production of small and secondary qualities. Best ordinary house coal is quoted at from 18s. to 20s., and comparatively little is being called for. Furnace coke continues weak, and prices at the lowest point since the war.

GLASGOW.—At the time of writing no settlement has yet been reached in the dispute over the miners' hours and wages. It is understood that both the owners and miners have now abandoned the spread-over, and are practically agreed on the principle of a seven-and-a-half hours' day as the basis of a new agreement. The question of wages, however, remains a stumbling-block in the negotiations. Some thousands of the miners are now on strike, but as the leaders of the main union of the men are against striking, it is not expected that the movement will spread seriously. Business in the market is more or less at a standstill, and the prices quoted are largely nominal. There has, however, been no rush for coal, and despite the fact that supplies have been curtailed by collieries' enforced closing owing to their workers striking, and also by the holidays in Lothians, buyers have no difficulty in arranging business. Conditions may become stringent, however, if a settlement of the dispute is not reached soon, because the Lanarkshire and Fifeshire pits go on holiday this month, and this will mean a fresh curtailment of supplies. The market rates for the shipping trade are approximately as follows: (f.o.b. district ports).—LANARKSHIRE.—Ell best, 14s.; splint best, 16s.; splint second, 14s. 6d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 12s.; doubles, 11s. 6d.; singles, 10s. 6d.-10s. 9d.; pearls, 9s. 6d.; dross, 9s. FIFE.—Screened navigation, 16s. 6d.-17s. 6d.; first-class steam, 12s. 6d.; third-class steam, 10s. 6d.; trebles, 12s.-13s.; doubles, 11s. 6d.; singles, 10s. 9d.; pearls, 9s. 3d. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 6d.; trebles, 12s.; doubles, 12s.; singles, 10s. 6d.-11s.; pearls, 9s. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 12s. 9d.; trebles, 12s.; doubles, 11s. 6d.-11s. 9d.; singles, 10s. 9d.; pearls, 9s. 3d.-9s. 6d.; dross, 9s. 6d.

CARDIFF.—Information has been received at Cardiff this week that the Egyptian State Railways have accepted the tender of T. Benyon and Company, Limited, Cardiff, for the supply of 100,000 tons of Monmouthshire coals on the basis of 24s. 1d. c.i.f. Alexandria, and that negotiations are in progress for the supply of an additional quantity. Otherwise the market has been featureless. There has been no alleviation of the depressed conditions which have charac-

terised the market for practically all grades of coal during the past few months. On the contrary, inquiries are, if possible, less active, and some anxiety is felt concerning the effects of the contemplated issue in France of a decree limiting the imports of coal from foreign countries. Most of the Admiralty collieries are working very irregularly; in some cases the current commitments are far below the authorised production under the reduced quota for the September quarter. Minimum prices are ruling practically throughout the market, and there is a suggestion that the existing schedule should be revised so as to secure a greater measure of elasticity in quotations for foreign orders. Shipments are declining, and last week they totalled only 396,900 tons, compared with 483,000 tons in the previous week, and 510,230 tons in the corresponding week last year. The most recent of the weekly output figures give a total for South Wales of only 798,200 tons, compared with 924,100 tons a year ago. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best dries, 18s. 6d. to 18s. 9d.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine made cobbles, 40s. to 45s.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 6d. to 9s.; foundry coke, 25s. to 34s.; patent fuel, 19s. to 20s. 6d.; pitwood, ex ship, 21s. 6d. to 21s. 9d.

IRON AND STEEL.

MIDDLESBROUGH.—The market for Cleveland iron, writes our correspondent, remains dull and featureless, and local makers are disinclined to lower prices. Local users are only buying what Cleveland iron they actually require for early delivery, and are taking increased quantities from Midland furnaces at lower prices. At Tuesday's weekly market official prices were announced unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s., f.o.b. or f.o.t., and very little business was transacted. In hematite iron there is more business doing with home consumers for early delivery and a few prompt lots have also been sold to the Continent, but forward business is still difficult to secure, although there are more inquiries about, due, no doubt, to the firmer attitude recently adopted by makers in regard to prices. For ordinary mixed numbers 62s. 6d. was being obtained last week for early delivery, but the troubles in Germany have since caused weakness, and now 62s. has been accepted, while for delivery a few months ahead a premium of 3d. to 6d. per ton is quoted. In the finished trades little new business of importance is coming to hand. Buyers of steel in the north-eastern area are disappointed at the decision arrived at at the meeting of the British Steel Makers' Association in London on Friday last not to make any alteration in prices, as a reduction was generally expected. No doubt some business has been held up pending the result of this meeting and this may not now be placed. The idea prevails that some of the signatories to the rebate scheme arrangement will secede from the agreement so as to obtain a free hand to purchase British or foreign material as best suits them, particularly as there is a much wider difference in prices now than when the rebate agreement was arrived at. Meantime prices under the latter remain: Plates, £8 15s.; angles, &c., £8 7s. 6d.; joists, £8 15s. Other quotations are: Heavy steel rails, £8 10s.; iron crown bars, £10; 24-gauge black sheets, £8; and 24-gauge galvanised corrugated sheets, £9 15s. per ton, all for home use. The ore market shows no change and there is practically no new business doing. Best Bilbao rubio is nominally 15s. c.i.f. for early delivery, and the rate of freight Bilbao/Middlesbrough for prompt boats is 4s. 3d. Coke of good blast-furnace qualities is offering at 15s. delivered consumers' works, but there is a very poor demand. The number of furnaces in blast on the North-East Coast is unchanged at 22.

SHEFFIELD.—The overseas returns for June indicate increased import of basic pig iron and an increased export of foundry iron. Indian foundry pig figures substantially in the returns. The position of the local steel industry is no better on the whole, although the call for semi-material is a little brisker at the moment. Makers have decided to continue existing prices of iron and steel material. The scrap market is rather weaker, nevertheless exports tend to increase and imports to decline. Demand for tool and special steels continues quiet but is no worse. Exports are still declining, especially to the Continent. The tool trades keep steady, but the depression in silverware, electro-plate and cutlery continues as acute as ever.

GLASGOW.—Works close down for the annual Fair holidays to-morrow (Thursday), and during the present week there has been a little more activity in some establishments in order to have orders completed before closing. Work at the Clyde shipyards is at a very low level, and also at the steel plants, and in many cases the holiday will be of fully a fortnight's duration. Machinery makers and several branches of the engineering trade are better placed, and in these trades the holiday will last for about ten days. On the whole the situation is unchanged and in the steel-making and re-rolling trades orders placed are as a rule for comparatively small lots for early delivery. Tube makers also are still unable to keep plants running at full capacity. There are no signs of improvement in the wrought iron business either. Prices generally are unchanged.

CARDIFF.—In the South Wales iron and steel trade the general position is practically unchanged. The recent improvement in prices has been maintained and factories are a little more active than they were a month ago. Foreign steel bars are dearer at £3 15s. to £4 per ton, but Welsh bars are unaltered at £4 12s. 6d. Galvanised sheets are still a very quiet market with prices a shade lower at £19 10s. per ton.

OTHER METALS.

TIN.—The metal declined sharply this week in view of the serious international situation brought about by the financial and political difficulties in Germany. An encouraging feature is the decision of Siam to adopt the restriction plan. According to a statement issued early this week by the International Tin Committee, Siam's adoption of the restriction scheme will have the effect of bringing the tin production now under Government control up to 92 per cent. of the world's total resources. Of the non-participating countries, Siam, it is stated, was the only one capable of increasing its production in the industry. Output of tin in Siam in 1929 amounted to 9,939 tons, in 1930 to 11,124 tons, and this year it has been at the rate of 13,000 tons per annum. The remaining sources of tin supplies not under control, i.e., Cornwall, Australia, Indo-China, not only have not been increasing production, but have been obliged to curtail at a rate even greater than the rate of curtailment proceeding in the countries participating in the scheme. The net reduction in world output resulting from Siam's adherence to the international scheme is expected to amount to approximately 3,000 tons. Wednesday's official closing quotation for "standard cash," at £107 15s. to £107 17s. 6d. per ton, compares with £113 5s. cash, at £113 7s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,941 tons, show a decrease of 135 tons on the week.

COPPER.—The market has been depressed during the past week. Copper Exporters, Inc., again reduced its minimum price for "electrolytic," c.i.f. Continent, from 8.775 cents per lb. to 8.275 cents per lb. The reaction in New York weakened the market in London, and Wednesday's official closing price for "standard cash" in London, at £33 5s. to £33 7s. 6d., compares with £35 to cash a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 1,161 tons, were of 304 tons, while stocks of rough copper, at the June approximate unchanged. According to the Metal Exchange the June approximate copper figures for North and South America are as follows:—

	June.	May.
Tons.	Tons.	Tons.
Refined stocks	368,750	356,250
Blister stocks	167,302	170,156
Foreign deliveries, refined	29,464	24,107
Domestic deliveries, refined	44,643	40,179
Refined production	87,500	91,964
Mine production	40,179	41,071

LEAD.—The market in lead was dull, but as the metal was only sparingly offered the decline in prices was not so sharp as in the case of tin and copper. Wednesday's official closing quotation for "soft foreign" in London, at £12 5s. to £12 10s., compares with £12 16s. 3d. to £13 2s. 6d. on the corresponding day last week.

SPELTER.—In view of the fact that the recent negotiations held at Ostend for the re-establishment of the zinc cartel have been successful, this metal remained steady during the week. The agreement provides for a reduction of output by 45 per cent. as from August 1st. The amount of output will be calculated for each factory according to its production in the three best months of the last three years. Strict control of the position and disposal of stocks is provided for. The term of the agreement is at least three years, but will be automatically extended if not denounced at least three months before December 31st in any year. Wednesday's official closing quotation in London for "good ordinary brands," at £12 7s. 6d. to £12 10s., compares with £12 2s. 6d. to £12 15s. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained and at last week's level. Antimony again changed hands at £23 to £23 10s. per ton for "foreign," while quicksilver remained unchanged at the recently reduced price of £17 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—The spot sales for the week July 10th to 15th (inclusive) are 24,000 bales, of which 10,750 are American; 1,700 Brazilian; 500 Argentine; 4,250 Peruvian; 2,500 Egyptian; 2,500 African; 550 East Indian; 820 Russian and 430 sundries. Imports for the same period are 24,873 bales, of which 7,873 are American; 2,889 Argentine; and 461 sundries. Egyptian; 1,660 African; 542 East Indian, and 491 Egypt F.G.F., Quotations, July 15th: American Middling, 4.91; Egypt F.G.F., 7.60; Uppers, 5.91; Brazil Fair, 4.96; Pere G.F. Smooth, 5.26; West African Middling, 4.96, and East African G.F. 5.96.

Manchester.—Demand in the cloth market has met with a setback, and there is much less inclination to place orders than a week ago. The sharp decline in raw cotton prices has disorganised business and numerous buyers of yarn and cloth have withdrawn offers. There is a disposition in all quarters to act with caution, and until the political outlook on the Continent is clearer, there is little probability of increased activity. Although no definite information is available, the news from India has been rather better, and a few days ago fair lines were booked in dhooties and other light fabrics. Auction advices from Shanghai have been very disappointing. Cables report that the poor demand is attributed to the low commodity prices. A certain amount of inquiry is still being experienced for Hong Kong and the Dutch East Indies. Operations for most of the minor outlets both East and West have fallen off. There are indications of manufacturers losing ground. The yarn market has

A JOURNEY TO CENTRAL ASIA AND TURKSIB

INTOURIST has planned a special Five-Weeks' Tour into Central Asia and Turksib (the new Turkestan-Siberian Railway). It will carry the traveller into countries renowned for splendid climate, ancient cities and architectural monuments, a great diversity of races, a mingling of cultures and new forms of social organization. The following is the itinerary:

Leningrad (3 days) to Moscow (5 days), then east and south, passing the Volga and Ural Mountains, and the great Ural Steppes dotted with the camps of nomad Kazaks and stretching to the shores of the Aral Sea. The route is then by Alma-Ata, and north along the Turksib for 300 kilometres, then south to Tashkent and the Fergan Valley. After Tashkent will come Samarkand and Bokhara, Merv and Askabad, followed by a journey across Turkmenistan to Krasnovodsk on the Caspian Sea, by steamer to Baku, and special train to Kiev and Shepetovka (Polish frontier).

Date of starting from Leningrad is August 25, and the cost from Leningrad to Shepetovka is £202. (London—Leningrad and Shepetovka—London approximately £25-30).

INTOURIST

(State Tourist Agency of the U.S.S.R.)

BUSH HOUSE, ALDWYCH, LONDON, W.C.2

THE WOOL TRADE.—Bradford.—It has been decided to close the current series of sales next Wednesday, curtailing them by two selling days. To a very large extent, writes our correspondent, this is caused by the German financial crisis, though it has been rumoured that a few firms would rather put marks into wool than hold them. Germany, however, has continued to operate more extensively than anyone might have expected, but there has been a distinct slackening in the competition of French buyers. There are many business relationships between large Roubaix buying brokers and German spinners and manufacturers, and until the outlook clears only a very limited turnover can be expected. The sales this week have gone off well. Good combing greasy merino wools have continued to move freely at the highest point of the series. There have been some good offerings from Queensland, while the competition for good shafly speculators' wools has been very creditable. But for the German crisis we think that merinos would have definitely moved to a level of values equal to the close of the May sales. The big offerings of crossbreds have also moved as well as anyone could reasonably expect. There is not much change compared with last week, good combing greasy fleece wools selling fairly well, though half-breds have hardly moved on the opening level. The important business which Bradford export houses do with German firms has for the time being been brought to a standstill, the immense losses of the Bremen wool firm having a serious effect upon everyone. The threatened strike is also influencing the general course of trade. Spinners have called for the delivery of considerable weights of tops fearing a

stoppage at the wool combing end of the trade. The threatened trouble among mill operatives is very much to be regretted, but all sections of the trade realise that overhead costs will have to be sensibly reduced if export trade is to be regained. In the meantime markets are unchanged on the week, but new business is exceedingly limited.

THE GRAIN MARKETS.

WHEAT.—The official July estimate of the United States wheat crop shows a total yield of 869 million bushels, as compared with 850 million bushels a year ago. Crop conditions in Canada have been stated in an official report to be as follows:—

	July 1, 1930.	June 1, 1931.	July 1, 1931.
Spring wheat	Per cent. 91	Per cent. 80	Per cent. 56
Winter wheat	91	97	96

In Australia weather conditions appear to be favourable, but a week of excessive rain has done some damage to European crops. The German crop is officially estimated at 168 million bushels, against 136 million bushels a year ago. In Russia, where the acreage under wheat exceeds by 5 million acres that of last year, conditions appear to be still satisfactory. Meanwhile, prices on the principal markets have fallen sharply during the week, which is partly ascribed to the prevailing financial crisis. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 25s. 6d. per 496 lbs., as compared with 26s. 9d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 24s. 3d., against 25s. 6d.; No. 3 Northern Manitoba, Atlantic, ex ship, 23s. 3d., against 24s. 3d.; Rosaf, ex ship, 21s., against 21s. 3d.; Australian, ex ship, 23s. to 24s., against 23s. 9d. to 25s. a week ago.

WHEAT FLOUR.—In sympathy with wheat, quotations for flour showed a declining tendency during the past week. North American shipments, at 171,000 sacks, show a decline of 9,000 sacks, as compared with those of the previous week. It is noteworthy that of this total 122,000 sacks were consigned to non-European countries. Quotations: Straight run, delivered country, 22s. 6d. per sack of 280 lbs., as compared with 23s. 6d. last week; delivered London, 21s. 6d., against 22s. 6d. Manitoba patents, ex store, 21s. to 24s., against 22s. 3d. to 25s.; and Australian, ex store, 17s. 6d. to 18s. 6d., against 17s. 9d. to 18s. 6d. a week ago.

BARLEY.—The demand for barley has been on a small scale, with the result that lower prices were realised. Quotations: "English malting," f.o.b., 30s. to 35s. per 448 lbs., against 30s. to 35s. last week; "English feeding," f.o.b., 20s. to 22s., as compared with 20s. to 22s. Californian sold at from 36s. to 40s., as compared with 36s. to 40s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

Money Market Review

THIS WEEK.

The Investors' Chronicle may be obtained at all bookstalls and newsagents throughout the country, price 6d., or from

The Publisher:
"THE INVESTORS' CHRONICLE"
20 BISHOPSGATE, LONDON, E.C.2.

OATS.—There has been an improvement in buying during the past week, but owing to heavy supplies, prices were slightly easier. Quotations: "River Plate," landed, 12s. per 320 lbs., as compared with 12s. 6d. last week; "River Plate," ex ship, 10s. 9d. to 11s., against 11s. 3d.; "Chilean Tawny," landed, 13s. 6d., against 13s. 6d.; English white, per 336 lbs., 20s. to 21s., against 20s. to 21s. a week ago.

MAIZE.—Argentina continues to ship maize in large quantities which exercises a depressing influence on prices. The Crop Reporting Board of the United States Department of Agriculture has estimated the yield in that country at 2,068 million bushels, against 2,068 million bushels a year ago. Quotations: "Plate," landed, 16s. 6d. per 480 lbs., as compared with 16s. 6d. last week; Plate, ex ship, 15s. 3d., as against 15s. 3d.; Plate, June-July, new, 15s. 3d., as against 15s. 3d. Yellow maize meal, ex wharf, was quoted at 25s. as against 25s. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.
Estimated sales of home-grown wheat—				
1 week to July 11	Owts. 27,686	Owts. 57,152	Owts. 49,083	Owts. 86,632

Chicago (No. 2 Winter) —Cents per 60 lb.	130½	87½	79½	57½	54½	51½

OTHER FOODS.

SUGAR.—In the absence of support the market in raw sugar was dull, but as there was hardly any selling pressure, prices were maintained. "British refined" was reduced 3d. per cwt. at the end of last week, which resulted in increased buying. Wednesday's sales included "August delivery," at 6s. 4½d. to 6s. 5½d. per cwt., against 6s. 5d. to 6s. 5½d., and "December," at 6s. 8½d. to 6s. 9d., against 6s. 8½d. to 6s. 8½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
London	Tons. 451	Tons. 548	Tons. 1,323	Tons. 2,066	Tons. 28,008	Tons. 29,081
Liverpool	11,308	7,872	3,348	18,030	74,171	75,568
Total	11,759	8,420	4,671	20,096	102,179	104,649
Last week ...	13,451	31,506	16,387	18,085	95,091	116,325

COFFEE.—At this week's auctions most qualities met with a slow demand and prices were barely steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 41 bags; delivered for home consumption, 228 bags; exported, nil; stocks, 2,582 bags, against 1,653 bags last year. Central American, landed, 3,236 packages; delivered for home consumption, 3,999; exported, 1,932; stocks, 111,185 packages, against 107,236 a year ago. Other kinds, landed, 3,163 packages; delivered for home consumption, 2,760; exported, 1,328; stocks, 85,715 packages, against 122,652 a year ago.

COCOA.—At this week's auctions cocoa has again been dull and lower prices were the rule. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, mid-crop, July-August, at 20s. per cwt. f.o.b. London contract, shows a fall of 1s. 6d. per cwt. Last week's movements of cocoa in London were as follows: Landed, 4,408 bags; delivered for home consumption, 4,725 bags; exported, nil; stocks, 227,044 bags, against 202,481 last year.

TEA.—The quantities catalogued for this week's auction comprised 27,739 packages of Indian, 41,921 packages of Ceylon, and 12,026 packages of Java and Sumatra tea. There was an improvement in the demand for tea this week and almost all grades realised higher prices. The following table shows the average prices

OVERSEAS TRADE RETURNS.

RICE.—The market in rice has been steady. Wednesday's quotation for Burma No. 2, cleaned, July-August, in singles to the Continent, and to the United Kingdom, at 7s. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 8 tons; delivered, 29 tons; stocks, 539 tons, against 2,007 last year.

POTATOES.—Owing to the increase in the supply of new potatoes prices declined sharply. At the Borough Market, new English potatoes were sold at 8s. to 10s. per cwt., as against 13s. to 14s. a week ago.

SPICES.—The spot pepper market has been easier this week. Wednesday's quotation for "Black Singapore," at 5½d. per lb., shows a decline of ¼d. on the week. Movements of pepper in London during the past week were as follows: Black, landed, 21; delivered, 10 tons; stocks, 631 tons, against 913 tons last year. White, landed, 10 tons; delivered, 32 tons; stocks, 675 tons, against 535 tons a year ago.

HIDE, LEATHER AND ALLIED TRADES.—Although for the time being prices for hides and skins from home-slaughtered cattle show a firm to upward tendency, the feeling is gaining ground that this course cannot be maintained for any length of time in view of the state of the leather industry. At the Manchester sales this week, most weights in first clear ox and heifers again made $\frac{1}{4}$ d. per lb. more money, but it was noticed that other classes were only able to realise last week's figures. The only other advance recorded in regard to hides was $\frac{1}{4}$ d. per lb. on all weights in cows. Calfskins generally made last prices. Business in regard to imported hides is very unsettled, and although values show no marked change one way or the other, the tendency is inclined to be downward. In the South American market, sales during the past week have been mainly on account of the U.S.A., parcels of Argentine ox having changed hands at $\frac{5}{4}$ d. A limited amount of business has also been done in dry South American hides, B.A. Americanos realising $\frac{5}{4}$ d., and M.V. Americanos $\frac{6}{4}$ d. A weaker tendency is noticeable in connection with African hides, and although the majority of quotations are unchanged, first and second dry Capes have been sold 7d. and 6d., with 6d. and 5d. accepted for dry-salted 20/30 lbs. A fair turnover has been done in Australians, but here again the tendency is towards a lower basis. Trade in sole leather has been up to the average of the previous week, with a steady call experienced from the repairing section for English and wet-salted bends. Medium weights in these descriptions are the best market at the moment, but at the same time there is a dropping sale for light and heavy weights. In the dry hide section, shoe manufacturers will only buy for immediate needs, and these for the time being seem to be centred on the heavier weights. This section of the industry, however, has been a better customer of certain classes of offal, and some very good business has been done in both pinned market, sales only being made at low prices. Consumption of upper leathers remains steady. Calf and kid are the best market, and there is no change in the colour vogue, which continues to be for black and the darker shades of brown. Rather more inquiry has

been experienced for patent, but sales of reptile skins and novelty leathers remain small. Semi-chrome upper stock is only moved with difficulty, as is also the case with most descriptions of curried leathers.

RUBBER.—The market in rubber has been dull, and prices showed a declining tendency. Wednesday's official closing price for standard ribbed smoked sheet, at $\frac{3}{4}$ d. per lb., shows a fall of $\frac{1}{4}$ d. as compared with the corresponding day last week. In forward positions, business has been done at $\frac{3}{4}$ d. to $\frac{3}{4}$ d. for October-December, against $\frac{3}{4}$ d.; and at $\frac{3}{4}$ d. for April-June, 1932, as against $\frac{3}{4}$ d. to $\frac{3}{4}$ d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,166 tons; delivered, 1,335 tons; stocks at the end of last week, at 136,523 tons, show a decrease of 169 tons, as compared with the preceding week.

as naturally end in a Bank rate increase. Gold shipments and the continued withdrawal of foreign funds had by Monday tightened money very considerably, and had raised the three-months' market discount rate to 2½ per cent. As the week wore on, with its heavy gold withdrawals each day, and as the foreign exchanges remained obstinately below the gold point, discount rates continued to harden, until on Wednesday 2½ per cent. was the common working rate.

A rate only ¼ per cent. below Bank rate clearly left both the Bank and the market very little room for manœuvre. Early in the week the Bank tried to relieve the position by open market purchases of bills, mainly Septembers, at a rate of 2½ per cent., and the increase shown in the Bank return of £5.4 millions in Government securities suggests that buying took place upon a substantial scale. Once this had failed to widen the margin between market rate and Bank rate, there was a possibility of a position developing similar to that of September, 1929, when the Bank found it increasingly difficult to place each week's offerings of Treasury bills. This was clearly a factor which influenced Thursday's decision.

As usual, the market on Thursday afternoon took some time to settle down under the new conditions. The clearing banks quickly decided to increase their rate for weekly fixtures by only ¼ per cent. This brought the rate to 2½ per cent., or to one point below Bank rate, thereby restoring the normal margin that existed prior to the last Bank rate reduction. Market rate was called 3½ per cent., or a rise of nearly one full point, but this rate was not fully tested on Thursday afternoon. Short money outside the clearing banks was obtainable at 2½ per cent., so that the first effect of the change has been to give the discount market a more generous margin than they have lately experienced. Sterling rallied a little after the Bank rate announcement, but how far the new Bank rate will bring about a permanent improvement in the foreign exchanges remains to be seen.

	July 2, 1931.	July 9, 1931.	July 16, 1931.	July 23, 1931.	Previous Rate and Date Changed.
Bank Rate	2½	2½	2½	3½	2½ (July 23, '31)
Bankers' Deposit Rate ..	1	1	1	1½	1 (July 23, '31)
Discount (Call)	1	1	1	1½	1 (July 23, '31)
Houses (Notice) ...	1½	1½	1½	1½	1½ (July 23, '31)
Market rate (3 months' bills)	1½	1½	2½	3½	...

The Bank return reveals many wide changes. As previously stated, the week's gold losses amounted to £15.2 millions, this figure excluding, of course, Thursday's heavy withdrawals of a net £5.1 millions. The note circulation was reduced by £2.8 millions, so that the reserve fell by £12.3 millions, and this brought the Proportion down from 57.2 to 49.3 per cent. The contraction in the Reserve was partly neutralised by the increase of £5.4 millions in Government securities, due to the open market operations of the Bank. Even so, Bankers' Deposits have fallen by £6.2 to £60.2 millions. The position is thus one of comfort, if not of extreme ease. The Bank still possesses a wide margin out of which to meet further gold losses, and foreign withdrawals to date have still left the money market reasonably well supplied with funds.

The June averages of the nine English clearing banks were, to a limited extent, affected by the preparations for the half-yearly balance sheets at the end of the month. This probably helps to explain the increase of £13.5 millions in cash. Deposits have risen by £44.6 millions on the month, but are still £43.7 millions below their level of a year ago. There has been a further decline in advances, and in default of more remunerative ways of employing their funds, the banks have added £41.8 millions to their bill portfolios. The contraction in acceptances appears to have been arrested, at any rate for the time being.

	June, 1930.	March, 1931.	April, 1931.	May, 1931.	June, 1931.

In the United States, stock, bond and commodity markets have alike reacted to the changes in the international situation. The project of a new German loan, as mooted a week ago, was not received with enthusiasm in banking circles, as it was felt that the majority of banks were already carrying sufficient German obligations. This week it was officially estimated by Washington that outstanding German short-term credits totalled \$1,200,000,000, of which \$600,000,000 were owed to the United States. It is also stated on Wall Street that nearly a fortnight ago eleven of the principal banks agreed not to withdraw their German credits, but some bankers are not certain how prudent it is to renew German credits indefinitely. Call money remains steady at 1½ per cent. Imports for the first half of 1931 are returned at \$1,109,000,000, against \$1,735,000,000 in the first half of 1930. The corresponding export figures are \$1,315,000,000 for 1931 and \$2,075,000,000 for 1930. Gold stocks on July 13th amounted to \$4,965,000,000, or a new high record.

The Foreign Exchange market was again very disturbed, and, although little business was done, fluctuations were wide and irregular, especially in the franc, as a result of the general uncertainty as to the results of the London Conference. The rise in the Bank rate on Thursday checked to a considerable extent the general unfavourable tendency towards sterling. New York, after 4.83½, steadied to 4.84½, a loss to sterling of 1½ on the week. Montreal improved to 4.86½. Paris, after 122.80, went from 123.40 last week to 123.65. Brussels gained 4 points at 34.77. Milan improved from 93.00 to 92.65. Madrid was again erratic, and weakened from 51.75 to 53.25. Amsterdam was unchanged on balance at 12.03. The Berlin quotation was purely nominal round about 20½. Switzerland was better by ½ at 24.87. Of the Scandinavian exchanges, Stockholm gained ½ at 18.14½, Oslo ½ at 18.16½, but Copenhagen was unchanged at the same quotation. Helsingfors improved to 192.75. The South American currencies were again weak, Rio losing ½d. at 3½d., and Buenos Aires ½d. at 34d., whilst Monte Video fell from 27½d. to 25½d. In the Far East the rupee was firm at 1s. 5½d. The yen gained ½d. at 2s. 0½d., but Batavia depreciated from 12.03½ to 12.05½. In the forward market all quotations were nominal, dollars standing at 1½ and 1½ cents premium and francs at par to ½ discount for both periods. Brussels was 2 centimes discount for both one and three months. Milan 13 and 50 centesimi discount, and Madrid at discounts of ½ peseta and one peseta. Amsterdam was at ½ cent and ½ cent discount, and Switzerland at one centime discount for one month and 2 centimes discount for three. Berlin was unquotable. The silver market was dull, and prices fell by ½d. to 13d. for cash and by the same to 12½d. for forward. The China silver exchanges weakened in sympathy, Hong Kong by ½d. to 1s. 0½d. and Shanghai by the same margin to 1s. 3½d.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

THE CONFERENCE AND THE CRISIS.

THE meeting of the most representative and influential body of world statesmen that has assembled since the war has come and gone. It met in the hope of checking the widening circle of distrust and financial difficulty that commenced to spread through Europe with the failure of the Credit Anstalt, and, if possible, of setting the world on the road towards recovery. Its first and most urgent task was, therefore, to take measures against the further deterioration of the German situation and to prevent its effects spreading to other countries. The essential condition for this is that sufficient confidence should be restored to stop both the external drain on Germany and the internal flight from the mark. Within comparatively narrow limits the effects of a drain of withdrawals can be balanced by central banking or other credits, and, if distrust has not gone too far, such action may in itself be sufficient to stop the drain and tide over the crisis. But if the world loses confidence in the inherent soundness of the German economic system or in her political stability, such measures would be powerless to stem the tide. Behind the immediate financial problem, therefore, lie economic and political questions of a very far-reaching character. Before it can be said that Germany is out of the wood, we need to see a reasonable prospect of the economic recovery of Europe, in which Germany plays so large a rôle, and also to be assured that Germany's political relations with her neighbours are such as to make it possible to avoid political upheaval at home.

How far can it be said that the Conference has fulfilled the hopes that were entertained of it? So far as the immediate financial problem is concerned, the Conference has had some definite results. A threefold problem presented itself:—(1) To ensure the renewal of the central banking credit of £20 millions granted immediately after the announcement of the Hoover Plan; (2) to prevent as far as possible the early withdrawal of other credits; and (3) to endeavour to find the means of obtaining further credits that might be needed in replacement to some extent of those which had already been withdrawn. As regards the first of these points, about which the bankers at Basle had doubts because of the political uncertainty, prolongation now seems reasonably assured in view of the resolution of the Conference. No Government guarantee is offered to the central banks by any of the countries concerned, but in urging their bankers to take this step the Governments have, in fact, assumed a considerable moral obligation.

As regards the maintenance of the other existing credits, Mr Stimson appears to have spoken very definitely for the United States. Considerable doubts have, in fact, been raised as to whether in any country it would be possible to get the necessary unanimity of action; but, even though the undertaking may be only unofficial, it appears that the American banks are indeed acting in effective co-operation and that the British banks will do the same. This step is clearly of the first importance; but let us add, in case any one should imagine this is a quixotic action on the part of hard-headed business men, that this restraint is really a measure of self-protection for the great money markets of the world, since, if they were to precipitate further collapse and panic, they would themselves be involved in widespread disaster.

There remains the question of further credits. It is, however, important not to get a distorted view of this aspect of the matter. Very large figures indeed have been given of the amounts which have already been withdrawn from Germany. Many of our readers who recall the figures given by us in June of the foreign holdings of the great German banks will appreciate that, whereas foreigners held enormous short-term claims against Germany, these were to a large extent balanced by foreign assets which the German banks themselves held. The drain has undoubtedly been met in large measure from these resources, supplemented by the foreign holdings of the Reichsbank, and has thus not been a net withdrawal from Germany.

Germany's actual need of fresh foreign borrowing is, therefore, not really as great as at first sight might be supposed, especially when account is taken of the relief that will accrue from the reparations moratorium. The steps taken to restrict credit in Germany, together with concerted restraint on the part of her foreign creditors, should be sufficient to ward off disaster pending any action that may be recommended by the committee of banking experts which is to visit Germany, investigate her further credit needs and study the possibilities of funding some portion of her short-term indebtedness.

Mr Snowden appears to have suggested to the Conference that some permanent readjustments should now be made in the Young Plan. The opinion was, however, and we think quite rightly, that this could not be done now. To-day is hardly the moment to make a fresh guess as to what Germany can pay in the long run, and to attempt to do so in present circumstances would have led to a maximum of bickering without producing a prompt improvement in the German financial situation. Indeed, though this appears to have been the only definite suggestion relating to the long-range situation of Germany, it was not to be expected that any appreciable headway could be made in a three days' Conference in solving any of the general underlying problems of the economic condition of Europe. The far-reaching problem of the future level of prices and of world recovery is here involved. But even confining ourselves to Europe, much work clearly needs to be done if the international economic relations of Europe are to be reorganised.

Political security must, however, take precedence of either economic or financial problems. In this direction the Conference cannot be said to have gone very far. The holding of the Conference itself has, however, in spite of French misgivings, proved to be a favourable point. Very great importance attaches to the fact that the French and German Prime Ministers have met and established friendly relations. Both Governments are weak and very vulnerable to an uneasy public opinion at home. Both Prime Ministers have shown, however, that they are not afraid to act. M. Laval felt himself strong enough to bring the session of his Chamber to a premature end and thus free himself to give his undivided attention to those discussions, while Dr Brüning has also been able to postpone the meeting of the Reichstag. M. Laval has also given assurance of his peaceful intentions in undertaking to postpone the building of his 23,000-ton cruiser which, if it had been proceeded with, would have unsettled the basis of the Anglo-American-Japanese naval accord.

The month has been one of considerable irritation and of ragged nerves in both France and Germany. The former, doubting the genuineness of German difficulties, felt the Hoover Plan as a severe rebuff, while the latter, though facing the present situation with admirable restraint, is in the grip of an acute crisis which threatens to produce increased unemployment and fresh hardships in the coming months, and is disposed to regard France as an obstacle to measures of assistance. Even the steps taken to summon this improvised and ill-prepared Conference were a minor cause of irritation. We believe, however, that most of the public in both countries profoundly desire peace. On the whole, the meeting has tended to improve the political atmosphere and by so doing has contributed towards the restoration of confidence.

It must be recognised that the Conference has made no very dramatic or definite contribution towards the solution of the very grave difficulties which beset us all. What it has done is to give us a further breathing space. It is clearly urgent that between now and the meeting of the League in September unremitting efforts must be made to deal with the underlying causes in both the political and economic sphere.

A DIARY OF THE CRISIS.—(continued.)

Friday, July 17th.

Conference at Paris; Messrs Henderson and Stimson meet M. Laval, who communicates to them proposals endorsed by French Cabinet previous day. Unofficially reported France proposes short-term Central Banking credit of \$500,000,000 for Germany, to be replaced eventually by an international loan of a similar amount redeemable in ten years, subject to following conditions:—(1) German customs revenue to be pledged; (2) undertaking by Germany to resume Young Plan annuities in 1932; and (3) maintenance of a "political moratorium" for ten years.

Meeting of Experts Committee in London considers preliminary questions of procedure and adjourns.

Reichsbank statement shows gold and foreign exchange cover at 35.8 per cent. Danat Bank resumes business under severe restrictions. Two directors of Nordwolle arrested.

Hungarian decrees relating to bank re-opening as follows:—Withdrawals limited to 5 per cent. of deposits, with maximum 1,000 pengős, except for wage payments. Tax payments by cheque only. Foreign exchange Commissioner appointed, authorised to suspend at discretion all foreign payments until July 24.

Bank of Danzig raises discount rate from 6 to 7 per cent. and Lombard rate from 7 to 10 per cent.

Stock markets: London steady, Paris firm, Wall Street early gains not held. Gold withdrawals from Bank of England, £1,554,393. Dollar 4.84½, franc 123½, reichsmark nominal 20½.

Saturday, July 18th.

Dr. Brüning, Herr Curtius and Mr Mellon arrive Paris. German statesmen first confer with MM. Laval and Briand, then with Messrs. Mellon and Stimson. Unofficially reported Mr Stimson informs M. Laval America considers French terms impracticable, and in any case is critical of long-term loan proposals. Signor Grandi and M. Hymans arrive Paris.

New decrees in Germany:—(1) All persons liable to property tax must declare to Reichsbank the amount of their holdings in Germany and abroad of foreign *valuta* and claims; except where such holdings are for legitimate business purposes, Reichsbank may exercise right of compulsory purchase for marks. (2) Withdrawals from banks authorised up to 5 per cent. of deposits with maximum 20 marks from savings accounts and 100 marks from current accounts; cheque payments allowed up to 50 per cent. of accounts with a maximum of 2,000 marks. (3) Passport fee of 100 marks required from Germans proceeding abroad. (4) Rigorous Press control established. Forty-five leading banks form *Überweisungsverband*, or clearing house, for mutual co-operation. Rhenish Landesbank unable to meet liabilities.

Further £1,155,836 gold withdrawn from Bank of England. Wall Street quiet, irregular. Dollar 4.84½; franc 123½; reichsmark nominal 20½.

Sunday, July 19th.

General conference Paris, morning. *Communiqué* issued that, at request of M. Laval, unanimously agreed London Conference should be strictly limited to an examination of Germany's financial and economic situation. Messrs. Henderson, Stimson and Mellon leave for London. Announced that French delegation will attend London Conference. Further afternoon conference between French and German delegates. *Communiqué* issued that French Government "realising the gravity of this crisis, declare that, under reserve of certain financial guarantees and measures of political appeasement, they would be ready to discuss later the terms of financial co-operation in an international framework."

Monday, July 20th.

Announcement temporary suspension of J. F. Schroeder Bank of Bremen. Hague Court begins proceedings to determine whether Austro-German Customs Union contravenes Treaties. Mr Stimson visits Mr MacDonald. Preliminary meeting, 6 p.m., Seven-Power Conference.

Jugoslavian Bank rate raised from 6½ to 7½ per cent.

Stock Markets: London, Paris, Wall Street subdued. Gold withdrawn, £1,984,561 from Bank of England. Dollar 4.84½, franc 123½, mark nominal 20½.

Tuesday, July 21st.

Seven-Power Conference, London; full session 10 a.m. to 1 p.m.; *communiqué* issued that meeting considered "methods of financial co-operation whereby confidence in Germany's economic stability may be restored in the immediate future as a preliminary to an examination of further measures which may be necessary to effect a permanent restoration of Germany's financial situation." Lengthy afternoon meeting committee of Finance Ministers. Results not disclosed.

Washington publishes nature proposals which U.S. delegation authorised to make during negotiations. Main features: (1) German Government should continue enforcement complete control of foreign exchange; (2) Germany's private creditors on short-term abroad should agree to maintain present volume of credit; (3) international committee, created through B.I.S. or otherwise, should co-operate with bankers in providing for (2) above, in examining Germany's immediate further credit needs, and in developing plans during following six or eight months for funding some proportion of Germany's short-term credits.

Leaders German Nationalist organisations telegraph Dr. Brüning manifesto denouncing in advance any assumption by

Germany of fresh obligations. New decrees Germany:—(1) tax payments in arrears to be increased fortnightly by 6 per cent.; (2) public authorities to pay on due date 50 per cent. of wages, pensions, unemployment benefits, etc., and 50 per cent. ten days later; private employers given same right at discretion; (3) legal circulation currently increased to 30 reichsmarks *per capita* of population, i.e., about Rs. 1,900 million.

Prussian Communists send "ultimatum" to Prussian Government demanding withdrawal of recent restrictive measures regarding the Press, unemployment benefit, savings banks' deposits, and the raising of ban on "Communist Fighting Front."

Stock markets, London, Paris, Wall Street, idle, steady. Gold withdrawals Bank of England £2,829,499. Dollar 4.84½, franc 123½, reichsmark nominal 20½.

Wednesday, July 22nd.

Seven-Power Conference: Morning session considers further methods of restoring confidence in German financial stability by concerted international co-operation on basis of statement by Committee of Finance Ministers. Certain technical questions referred back to the latter and considered at afternoon meeting.

Prussian Minister of Interior replies to Communists that the "Government refuses to make measures for the protection of public security and order the object of political barter."

Austrian Bank rate raised from 7½ to 10 per cent.

Gold withdrawals from Bank of England £3,455,634.

Stock markets: London, heavy tone, business small; Paris, depressed; New York, weak. Dollar, 4.84½; franc, 123½; reichsmark, nominal, 20½.

Thursday, July 23rd.

Seven-Power Conference ends: Recommends for consideration of financial institutions in respective countries that (1) the £20 millions credit to Reichsbank should be renewed at due date for a further three months; (2) concerted measures should be taken by financial institutions to maintain present credits; (3) B.I.S. should be invited to set up committee to inquire into Germany's immediate further credit needs and to study possibility of converting portion of short-term credits into long-term. Official *communiqué* adds that lack of confidence in Germany "is not justified by the economic and budgetary situation," and that the above measures, if carried through, "will form a basis for more permanent action to follow."

Bank of England raises rate from 2½ to 3½ per cent. Stock markets: London weak; Paris, Wall Street dull. Gold withdrawn from Bank of England, £5,232,311. Dollar, 4.84½; franc, 123.65; reichsmark, nominal, 20½.

INDIA'S FUTURE PROLETARIAT.

OF RECENT weeks the gravity of Europe's financial crisis has tended inevitably to overshadow less-pressing considerations, irrespective of the importance which they would have assumed in more normal conditions. Among the questions thus undeservedly eclipsed is that of the future of Indian labour—a question brought to the forefront by the findings of the Whitley Commission, to whose voluminous report we could do no more than give brief notice when it was published a month ago, but whose findings and recommendations merit fuller examination.

Charged, on their appointment in July, 1929, with wide terms of reference, and faced at the outset with a grave shortage of available statistical data, the Commissioners displayed a commendable energy and devotion in the accomplishment of their task; spending two entire winters in India, they travelled 16,000 miles over the sub-continent and took oral evidence from no less than 837 witnesses. The result is a report—great both in its physical magnitude and in its far-reaching scope—whose recommendations alone are summarised in an Appendix under 357 heads; and whose evident intention is that its conclusions should serve as the basis of a veritable Labour Charter in India's future development.

We cannot attempt here to follow the Commission's findings in any detail; indeed, except from the special view-point of those directly responsible for India's administration, the details are of minor interest in comparison with the general lines of policy which the Report recommends for adoption. This may be summed up in one sentence: industrialisation must be prevented from repeating in India (on a scale intensified by the poverty and illiteracy of the general population) the sorry tale of squalor and exploitation which disfigured the early record of the industrial revolution in the West.

The picture of existing conditions which the Commissioners paint is not agreeable to contemplate, nor will any readers who have had first-hand experience of the industrial conditions of Bombay, Calcutta, or the coal-mining areas be disposed to regard it as exaggerated. Low wages

THE BANKING HALF-YEAR.

At the annual bank meetings held at the beginning of this year the bank Chairmen issued a general warning that the banks could not remain immune from the continuance of the trade depression. One of the "big five" banks reduced its final dividend for 1930 as a precautionary measure, and the Chairman of a second advised his shareholders that the existing rate of dividend could not be maintained unless an early improvement in trade took place. It is notorious that in many respects trade is worse to-day even than it was six months ago; while the crisis in Central Europe has supervened as a command to all those occupied in the world of finance to conserve their resources and to maintain them in a liquid form against any sudden emergency. Thus it is not surprising that most of the leading British banks have thought fit to announce small reductions in their July interim dividends.

On previous occasions during the trade depression, when the time came to comment upon the bank's half-yearly accounts, it was found that the banks' total resources as measured by their deposits had held their ground, and that the trade depression was reflected in a steady decline in advances. Consequently, the banks had had to divert a greater proportion of their resources into the less remunerative channels of discounts and investments, and the decline in their earnings was partly due to this diversion. The present accounts, however, when compared with those of twelve months ago, tell a different and rather more serious story; for, as the following table relating to the "big five" alone shows, there has been a decrease in deposits. Hence, regardless of the way in which the banks have been able to employ their resources, they have had to work upon a smaller turnover.

(Million £'s.)

	June 30, 1931.	June 30, 1930.	June 30, 1929.
Paid-up capital	64.7	+ 0.1	+ 0.8
Reserves	53.3	+ 0.2	+ 0.8
Acceptances	109.3	— 4.5	— 74.1
Deposits (including undivided profits)	1,617.1	— 29.0	— 10.3
Coin, notes, balances at Bank of England and with other banks, and cheques in course of collection	238.4	— 6.0	— 6.9
Ratio to deposits	14.8	...	— 0.3
Money at call and short notice ...	112.0	— 11.5	— 11.7
Investments	262.4	+ 38.2	+ 30.2
Discounts	251.2	+ 0.4	+ 52.7
Loans and advances	828.5	— 46.3	— 75.4

The result is that, despite contraction in cash and call money, the decline of £46.3 millions in bank advances has not been wholly offset by the increase of £38.2 millions in investments; while discounts, with their increase of only £0.4 million, have done practically nothing to improve the banks' position. Compared with two years ago, the situation to-day is more encouraging, for the combined expansion of £82.9 millions in discounts and investments more than equals the contraction of £75.4 millions in advances. Even so, the earning power of the banks is less to-day than it was two years ago, when the big intervening fall in money rates, the change over from advances to discounts and investments, and the contraction in other forms of remunerative business such as acceptances are all considered.

The decline in bank deposits is not a little disconcerting when the amount of funds left idle by the trade depression is taken into account. Competition from savings banks, building societies, etc., may be a partial explanation; but, when regard is also had to the contraction in bank cash, it begins to look as if the fall in commodity prices and the contraction in trade are at last being accompanied by a contraction in the national credit fund. The decline in bank cash, however, is apparently confined to balances with other banks and cheques in course of collection, and this last item, representing as it does money actually being turned over at the moment the banks strike their balances,

and long hours; ill-ventilated factories and insanitary, crowded dwellings; spoliation by the *sardars*, or "jobbers" who act as intermediaries between employer and employed; perennial indebtedness to the money-lenders who pander to the human craving of the underpaid for the city's fleshly allurements—such are the dominant features of the life which capitalist industry has created for the tiny fraction of India's vast population which it has, so far, embraced in its orbit. There might well be Luddites in India to-day who would have the country turn its back on this aspect of material Westernisation and revert wholly to the peasant industry of the village craftsman. Yet, in view of the growing pressure of population, it is clear that if the desirable aim is to be achieved of raising appreciably the general standard of living in India from its present low level, then wealth must be produced by other means than those available to the *ryot* and the rural artisan. What, therefore, is to be done?

The answer, says the Commission, is that employers of labour must realise that poorly-paid, ill-fed, badly-housed workers are the least economical labour force in the long run. If labour in India is productively inefficient, the reason is, in large part, that efficiency cannot be maintained under the conditions which Indian labour endures. To improve those conditions the Report makes a lengthy series of recommendations—ranging from statutory minimum wage-fixing machinery to Joint Industrial Councils, from legislation to relieve labour from the exactions of the *sardars* and the usurer to ambitious schemes of workers' welfare, from great extensions of Factory Acts safeguards to minimum legal standards of dwelling space and compulsory education of adolescents—whose far-reaching nature constrained one of the Commissioners, Sir Victor Sassoon, to append a reservation to the effect that for the immediate future India could not afford this Utopia. But though some of the Commission's proposals, notably those in relation to dismissals from the railway service, are obviously impracticable, while others represent ideals not attainable to-morrow, the great bulk of their findings point to lines of policy which could well be laid down without delay.

For, apart altogether from the ethical aspects of the question of capitalist exploitation of ill-used labour (and let it be clearly understood that it is by no means the British capitalist particularly who is here in the dock), there is a dangerous element in the existing situation, which the Commission does well to emphasise, from the standpoint of practical politics. Unlike his "opposite number" in the West, the Indian industrial worker has never become (or at least only in a small percentage of cases) a really urbanised proletarian. Not necessarily, or even in the majority of instances, an agriculturalist by traditional calling, he is nevertheless essentially a villager "pushed, not pulled, to the city" by force of economic circumstances. With his heart in his village, whither he aspires to return to live, or at any rate to die, he acquires no sense of instinctive, permanent connection with his industry or his employer. He becomes, instead, an irresponsible unit of a labour force without roots of its own, whose migratory, shiftless propensities are encouraged by the *sardar* for his own profit in the harvest of engagement-commissions.

The first step, therefore, in the amelioration of labour conditions in India is rightly defined by the Commission as the elimination of the "jobber." The functions of engagement and dismissal of labour should be exercised by a staff manager subordinate only to the general manager of the factory. In the second place, no attempt should be made to break the factory worker's link with his village, but continuity of employment and a resulting sense of greater responsibility and interest in the occupation should be encouraged by regularising the introduction of leave, enabling the worker to visit his home with the certainty of subsequent re-engagement. If these two proposals alone are adopted, a great step forward will have been taken; and while many of the wider and costlier legislative recommendations of the Commission will doubtless have to await more prosperous times and the establishment of the future Indian Constitution, an avenue is here disclosed for action which need not be delayed.

is obviously correlated with the general price-level and volume of business activity.

The truth is that, as the Macmillan Committee recognised, the abbreviated form taken by the majority of bank balance sheets imposes definite limits upon the amount of information that can be safely deduced from them, and it is to be hoped that the banks will consider carefully the advisability of recasting their balance sheets on the lines of the first table given in Appendix I. of the Macmillan Report. Were they to do this, we should know how the banks' cash was divided between currency and their balances at the Bank; how short money was divided between the money market and the Stock Exchange; and how discounts were divided between Treasury and commercial bills. We should know, too, how much money was lodged on current and how much on deposit account, and so should have a clearer idea as to the liquidity required of the banks.

Still, even the accounts in their present form make clear one main cause of the diminution in the banks' earnings, namely, the contraction in their advances. This is emphasised in the following table, dealing individually with each of the "big five":—

RATIO OF ADVANCES TO DEPOSIT LIABILITIES.

	June 30, 1914.	June 30, 1926.	June 30, 1927.	June 30, 1928.	June 30, 1929.	June 30, 1930.	June 30, 1931.
	%	%	%	%	%	%	%
Barclays	45.0	51.2	52.5	53.7	52.5	51.4	50.7
Lloyds	52.7	56.4	57.2	53.8	55.3	52.7	49.4
Midland	56.9	56.9	55.7	56.6	58.6	53.6	52.8
Nat. Provincial	45.0*	53.4	56.1	62.6	57.2	56.4	55.4
Westminster	48.1	48.9	50.8	47.9	54.0	48.8	47.4
	50.7	53.7	54.6	53.6	55.6	53.1	51.3

* Union of London and Smiths.

Every one of the "big five" is this year employing a smaller proportion of its resources in advances than it could a year ago, and the fact that the declines in most of the percentages are relatively small only reflects the coincidence this year of a decline in deposits with that of advances—a somewhat mournful conclusion.

The accounts of the Lancashire banks reveal much heavier contractions in their advance ratios than do those of the "big five." This is natural, as these banks lend mainly for industrial purposes and serve an area where the trade depression is very acute. In so far as the fall in advances represents the liquidation of old loans, it is a sign of strength.

	Cash Ratio. June 30, 1930.	Ratio of Advances to Deposits. June 30, 1930.
District	12.0	12.4
Manchester and County	18.4*	16.1
Martins	15.1	13.2
Williams Deacon's ...	13.2	14.5
	60.1	51.4

* Cash here includes call money.

In view of the bank dividend reductions after so many years of absolute stability, it is right that this survey should have concentrated mainly upon bank earnings, and it only remains to add that no improvement can be expected under present business and economic conditions. At the same time, the stability of the British banks remains unquestioned, even in these days of crisis abroad. Bad trade may make inroads into earning power, while depressed industries at home and German difficulties abroad may temporarily immobilise part of the banks' resources and inflict upon them losses which could not have been foreseen. Yet it is part of the banker's profession to maintain ample margin out of which to meet just such risks as these, and to-day British bankers will be doing so more zealously than ever. The true strength of the British banks does not appear wholly in their accounts, though cash ratios are in some cases as high as they were a year ago. It is to be found in the traditions, training and experience of those who in good and bad times alike are responsible for the management of the banks.

THE WORLD'S MERCHANT FLEETS.

THE latest shipbuilding returns, on which we commented in last week's issue of the *Economist*, pointed to such an acute state of depression, particularly in this country, that it is opportune to examine the statistical tables accompanying the new edition, published this week, of Lloyd's Register Book in order to see what light is thrown on the position by the available data in respect to existing supplies of tonnage. For though the shipbuilding slump is a natural result of the immediate crisis, the prospects of recovery, from a slightly more distant point of view, depend on the answer to the question: has there been an unwarrantable expansion of tonnage during recent years?

In the first of the following tables we show the volume of steam and motor tonnage at the present day in comparison with the figures for 1914 and 1897:—

STEAM AND MOTOR TONNAGE. (Million gross tons.)			
Owned in—	1897.	1914.	1931.
United Kingdom	10.2	18.9	20.2
Other countries	8.4	26.5	48.5
World Total	18.6	45.4	68.7

The above as indices—			
	100	185	198
United Kingdom	100	315	577
Other Countries	100	244	369
World total	100	244	369
British percentage	55	42	29

To-day the tonnage of sail amounts to little more than one million gross tons and is a negligible factor in international trade; but, in considering the foregoing table, it should be remembered that in 1897 sailing vessels amounted to 7.3 million tons, and that in the two seventeen-year periods following that date this class of tonnage decreased by 3.7 million and 2.2 million tons respectively. With this qualification in mind, it will be seen that between 1897 and 1914 the net increase in the world's steam and motor tonnage was 144 per cent., whereas in the corresponding seventeen years following 1914 the net increase has been only 51 per cent. Even so, the addition since the pre-war year of 23.3 million tons to the world's carrying space was probably as large as would have been economically warranted had the curve of international trade continued to move upwards at the average rate attained between, say, 1923 and 1928. Thus the depression, which began to develop in the autumn of 1929, found the shipping industry in a somewhat vulnerable position and the price of post-war expansion has had to be paid in the laying up of an enormous volume of tonnage during the past year.

So far as the supply of tonnage is concerned, the post-war period falls into three fairly well defined phases. Between the Armistice and 1923 the world's merchant fleet increased rapidly to a total (excluding sail) of 82.8 million tons. Between 1923 and 1926 there was a lull in the expansion. Developments since then are shown in the following table, from which we have excluded, as being irrelevant to international competition, the tonnage of lake vessels in the United States and Canada, all sailing vessels and wood and composite steam and motor ships:—

STEEL AND IRON STEAMERS AND MOTOR SHIPS, EXCLUDING LAKE VESSELS.

Country.	1926.	1927.	1928.	1929.	1930.	1931.
U.K.	19.2	19.2	19.7	20.0	20.3	20.2
U.S.A.	11.1	10.9	10.9	10.7	10.4	10.1
Italy	3.1	3.4	3.3	3.2	3.3	3.3
Germany ...	3.0	3.3	3.7	4.0	4.2	4.2
France	3.3	3.4	3.3	3.3	3.4	3.5
Holland	2.6	2.6	2.8	2.9	3.1	3.1
Scandinavia*	5.0	5.1	5.4	5.6	6.2	6.8
Japan	3.8	3.9	4.0	4.1	4.2	4.2
Others	8.0	7.8	8.5	9.1	9.4	9.8
World Total	59.1	59.6	61.6	62.9	64.5	65.2

* Norway, Sweden and Denmark combined.

In comparison with the rate of increase in the five years 1909-14, the expansion of tonnage since 1926 has been small, i.e., an annual increment of under 2 per cent.

the last quinquennium compares with a yearly growth of nearly 5 per cent. in the pre-war period. Nevertheless, the average yearly addition of approximately one million gross tons to the supply of tonnage was bound to strain the absorbing capacity of markets in the event of any marked recession in trade taking place.

It has, of course, to be remembered that a considerable part of the net increment of tonnage since 1926 is represented by vessels solely engaged in the carriage of bulk oil. The figures of tanker tonnage, excluding ships of under 1,000 tons gross, are given below:—

TANKERS OF 1,000 TONS AND UPWARDS.

	(Million gross tons.)	1926.	1929.	1931.
U.K.	1.84	2.17	2.35	
U.S.A.	2.32	2.37	2.51	
Norway	0.34	0.78	1.45	
World	5.60	6.99	8.55	

From this table, which reveals the tremendous progress made by Norway in the construction of tankers since 1926, it will be seen that approximately 3 million tons require to be deducted from the aggregate increase of 3 million tons, since 1926, in order to arrive at the actual expansion of tonnage available for the carriage of passengers and general cargo. This deduction, however, cannot be made without qualification; the growth of bulk oil traffic has naturally been accompanied by a diminution in the volume of coal cargoes, and a reminder of the extent to which shipping is ceasing to be dependent on coal for fuel is to be found in figures contained in the Register Book, which show that between 1926 and 1931 the percentage of coal-fired steamers has fallen from 63 to 56, while the proportion of the world's fleet represented by motor ships has risen from 5.5 to 13.5 per cent.

Eliminating tankers, lake vessels, ships of less than 5,000 tons gross, and tonnage over twenty-five years old, we are left in 1931 with 27 millions of large efficient ocean-going tonnage available for all trades except that of bulk oil. An analysis of this figure by nationalities is shown below, together with the corresponding totals for the previous four years:—

LARGE OCEAN-GOING TONNAGE.

	(In millions.)	1927.	1928.	1929.	1930.	1931.
United Kingdom ...	9.3	9.7	10.1	10.4	10.4	
U.S.A.	5.5	5.5	5.5	5.4	5.1	
Italy	1.7	1.6	1.5	1.5	1.5	
Germany	1.5	1.8	2.1	2.2	2.1	
France	1.5	1.5	1.5	1.6	1.6	
Japan	1.5	1.5	1.6	1.7	1.8	
Holland	1.4	1.5	1.6	1.7	1.7	
Other countries.....	2.4	2.4	2.5	2.6	2.8	
World Total	24.8	25.5	26.4	27.1	27.0	

It is satisfactory to note that over 38 per cent. of the more efficient ocean-going tonnage of the above categories belongs to Great Britain. On the other hand, it is fairly evident that there must be a very considerable revival of trade before the world can make economic use of over 2 million gross tons more shipping of these classes than it employed in 1927.

There is, indeed, only one feature which the Register Book discloses of substantial reassurance to shipbuilders. The following figures compare tonnage launched with wastage during the past five years:—

	(Million gross tons.)	Tonnage Launched.	Wastage.
		Lost.	Scrapped.
1926	1.67	0.43	0.80
1927	2.29	0.45	0.40
1928	2.70	0.48	0.74
1929	2.79	0.52	0.94
1930	2.89	0.38	0.85

It will be seen that the steady increase in launchings between 1926 and 1930 has not been paralleled by any consistent acceleration in the rate of scrapping. This has had a somewhat striking effect on the age composition of

The MERCANTILE BANK of INDIA

LIMITED.

Branches and Agencies throughout the East.

FIXED DEPOSIT ACCOUNTS.

Rates will be quoted on application.

the world's fleet, the tonnage under five years and over twenty-five years of which is shown below:—

	Tonnage aged—					
	Under 5 Years.			25 Years and over.		
	1926.	1929.	1931.	1926.	1929.	1931.
U.K.	4.6	4.5	4.5	1.7	1.7	1.7
U.S.A. (sea) ...	0.4	0.4	0.6	0.6	0.7	0.7
World	10.4	10.4	11.9	8.8	10.3	11.7

Whereas the rate of shipbuilding, stimulated by keen national rivalry and assisted in many cases by State subsidies, has rather more than maintained during the past five years the volume of the most up-to-date tonnage, there has been an increase of no less than 3 million tons in the amount of tonnage in the category which, for the most part, represents obsolete vessels, whose competitive efficiency, except where there are special advantages in the way of cheaper labour costs, is not high. The best hope for shipbuilders is that pressure of economic circumstances will result in the rapid liquidation of many of these survivors of launchings which took place in 1905 and earlier.

UNEMPLOYMENT IN THE UNITED STATES.

THE natural tendency of the human mind to see cause and effect whenever two phenomena are frequently found together makes the study of unemployment in a single country a difficult task. Unemployment, having manifested itself during the post-war years perhaps more consistently and obtrusively in Great Britain than in other countries, has come to be regarded, at any rate in this country, as a disease to which the British system is peculiarly subject, and to be explained largely by reference to British conditions and characteristics. No better resolute of this comparison of thought could be found than an unemployment study relating to a country which is commonly credited with qualities the precise opposite of those on which the blame for the state of affairs in Britain is often cast.

Owing to the absence of official unemployment statistics in the United States, there has been much conjecture, well or ill-informed in varying degrees, as to the numbers without work in that country. Under the auspices of the International Labour Office, Mr H. B. Butler has co-ordinated the most trustworthy calculations which have been made on that point, and has proceeded to an analysis* of the causes of the considerable degree of unemployment thereby revealed, an analysis which is of particular interest to British readers because it forces them to approach the question unhampered by those prejudices which insist in obtruding themselves when British conditions are under consideration.

Careful estimates lead to the tentative conclusion that in normal or fairly good periods of trade there are always not far short of two million unemployed in the United States. These are the people who at any given moment are changing their employment, or are out of work for seasonal reasons or because of changes in the particular industry or firms to which they are attached. Starting from the point of departure that before the Stock Exchange collapse there were thus two million unem-

* "Unemployment Problems in the United States." By H. B. Butler. F. S. King and Sons. 2s. 6d.

ployed, Mr Butler arrives, after examination of all the available data and the most authentic previous estimates, at the following figures for unemployment in July, 1930:

Unemployment in United States.	
"Normally" unemployed, July, 1929.....	2,000,000
Lost employment between July, 1929, and July, 1930:	
Manufacture	1,200,000
Railways	172,000
Mining, &c.	100,000
Building	500,000
Commercial and miscellaneous	1,000,000
	4,972,000

By the end of 1930 the figure had probably risen to over six millions, plus a further two millions partially or temporarily unemployed.

The failure to keep production and consumption in equilibrium, which is the immediate cause of unemployment, was due in this instance to very substantial changes on both sides of the scale. The decline in consumption which followed the Wall Street collapse is attributable partly to the inflationary conditions, due to over-speculation, which had preceded it, partly to the high degree to which purchasing power had been anticipated under the system of instalment purchasing, partly to lack of confidence, and lastly to the decline in aggregate earnings on the one hand and in farm prices on the other, which greatly reduced the purchasing power of two large sections of the population. To these causes of decline in the purchases of the home consumer was added the fall in exports due to the decline in purchasing power abroad, a phenomenon which became so marked during 1930 as to give rise in the minds of United States citizens to a doubt as to the possibility of maintaining their high standard of living in contrast to those of the rest of the world.

On the supply side, while Mr Butler accepts the doctrine of the classical economists that the introduction of labour-saving machinery increases employment in the long run, he suggests that the keen rapidity with which technical inventions have succeeded each other of recent years, simultaneously in all branches of production, must have increased the rapidity and the diffusion of displacement, so that the reabsorption process has become slower and more painful. In illustration of this contention he adduces very striking figures showing how the great increase of production of recent years has been accompanied in most branches of industry by an actual decline in the numbers employed. The table below, for example, shows the number of workers and the value of output in 1924-26 as a percentage of those in 1918-20:—

Increase in Productivity. (1918-20 = 100).			
	Workers Employed 1924-26.	Output 1924-26.	Output per Worker 1924-26.
Agriculture	95.0	114.0	120.5
Mining	100.0	127.0	127.0
Manufacture	92.5	122.5	134.5
Railways	91.5	100.0	109.0
Average	93.0	118.0	127.0

The increase in output per worker, though substantial in all four branches, is most marked in the manufacturing group. That it cannot be attributed to the low level of productive capacity immediately after the war is shown by the development of the succeeding years, in which the value added by manufacture expanded very rapidly, while the labour force remained almost stationary, as the following table shows:—

Manufacturing Industry.		
	Average Number of Wage Earners.	Value added by Manufacture. Thousand dollars.
1923	8,776,646	25,845,659
1925	8,381,511	26,771,373
1927	8,349,755	27,585,210
1929	8,742,761	31,687,061

This development is very remarkable, in view of the expansion, during the period, of the motor, electrical and rayon industries, and of the progressive shortening of working hours. The same trend was shown in mining and railways.

The causes of this reduction in employment simultaneously with a great expansion of output are well known: technical inventions of a most far-reaching character; scientific management; and economies in managerial, clerical and sales staffs resulting from mergers have been among the most important. To the numbers thus displaced from manufacturing, railway and mining industry were added farm labourers and farmers driven from the land by the mechanisation of agriculture and by the decline in agricultural incomes due to the depression.

To some extent this reduction in the demand for industrial labour was accompanied by an expansion in other fields of employment, as, for example, domestic and personal service, garages and petrol stations, entertainments, sports, hotels and restaurants, housing and the distributive trades, and it is to these that most of the persons displaced have turned. It seems, however, evident that this expansion has so far been by no means sufficient to absorb the entire volume of displaced labour, and such studies as have been made tend to show that the majority of persons thus thrown out of employment take several months to find work, and a large proportion only find it at lower wages than they had previously received.

Unemployment always creates a vicious circle, by causing a reduction in purchasing power and therefore a further reduction in demand. In the United States at present this is particularly marked because a large part has been played in the industry of that country of recent years by the demand for the kind of goods which highly paid wage-earners buy with that part of their income which represents a surplus over necessities. Radios, cheap motor cars, and machine-made articles for household use have bulked increasingly large in the industry of the United States, and whether unemployment is met by wage cuts or not, the fact either that fewer people are employed at wages allowing a margin for such purchases, or that the same number of people are employed without such a margin, means a serious disturbance to the equilibrium of the industrial structure. On the question of the policy of reducing wages, Mr Butler puts forward the contention that although it may be argued that what is saved in wages is available for consumption by recipients of profits, this class would not spend these increments of income on the mass-produced goods for the production of which American industry is now organised, but, in so far as they spent them at all, on more varied goods and services affording a much less stable demand. For this reason the question of wealth distribution is of vital importance to the maintenance of the industrial structure of the United States.

The relief of this large volume of unemployment was originally, in accordance with a deeply-rooted American principle, left largely to private charity, but of late the problem has reached such dimensions that the municipalities have had to expend very large sums on relief. Programmes of public works have been pushed forward by the Federal, State and municipal authorities, and last February a great step forward in the systematising of such expenditure was made in the establishment of an Employment Stabilisation Board. The Board has authority to supervise the advance planning of Federal expenditure on public works, and it is hoped that State and local governments and public utility organisations will co-operate. The establishment of public employment agencies, and the introduction of various voluntary schemes of insurance have helped to mitigate hardship, but the most distinctive contribution to the prevention of unemployment has been the attention which many leading American firms have devoted, often in co-operation with the trade unions, to the spreading of seasonal employment.

Technological unemployment, however, presents a tougher problem, and progress scarcely appears to have gone beyond the point of enumerating some of the factors which have to be considered in attacking the unemployment brought about both by technological and by cyclical causes. Mr Butler's report, however, concludes on a constructive note, by stressing the imperative need for international action in this matter. The industrialisation of new

areas, the slump in food and raw material prices, artificial barriers to international trade, and the problems raised by changes in the value and distribution of the precious metals, all these are important causes of the world's present difficulties which can only be handled by international action. "One of the principal lessons of the present crisis appears to be that, whatever its political, racial and geographical divisions, the world's material prosperity or adversity is now in a large measure the common lot of its whole population."

Notes of the Week.

The Bank Rate Increase.—Little surprise need be felt at the decision of the Bank of England authorities to raise their discount rate from 2½ to 3½ per cent. During the week ended July 22nd the Bank had lost £15.2 millions of gold, reducing the gold in the Issue Department from £164.0 to £148.8 millions. The drain of foreign funds from London, inspired by the desire of foreign banks to strengthen their home cash resources, continued steadily, and the leading foreign exchanges still remained obstinately below the export gold point. In Lombard Street, the discount market was already exercised over the international position and the gold drain; and in spite of substantial open market purchases of bills by the Bank earlier in the current week, the market discount rate had kept right up to Bank rate, thereby suggesting that with Bank rate at 2½ per cent. there might before long have been a falling off in the demand for the weekly offering of Treasury bills. Thus, on technical grounds, there was every justification for an increase in Bank rate, and no surprise or alarm should be felt at the decision of the authorities to deal with a technically familiar situation in the customary manner. So long as the London Conference was still to meet, and while, as was the case last week, foreign centres were in an acute state of tension, the Bank of England was eminently wise to hold its hand. By last Thursday, however, the situation had developed: the London Conference had at least decided upon definite temporary recommendations, and fears of flagrant disagreement had been allayed. Hence the Bank was fully warranted in taking action calculated to steady the foreign exchanges. The only question that arises is whether a 3½ per cent. Bank rate will avail to check gold withdrawals due to a desire to increase liquidity in exceptional times. This desire may prove so strong that 3½ per cent. may be insufficient, even though London rates will now stand high in comparison with New York, Paris and Amsterdam. On the other hand, the move will have a psychological effect; for it is tangible evidence of the determination of the Bank to protect itself by the ordinary method, and if need arises will doubtless be followed by further action to put a brake on excessive movements of the capital. In any case, the results will be seen in the next few days. Meanwhile, there is ground for confidence in the close collaboration which now exists between central bank authorities.

Knave-Proof Protection.—Mr Baldwin has made a great discovery. He has found out that there may be drawbacks and objections to the workings of a tariff system, and, obviously believing his discovery to be of first-rate importance, he devoted the whole of a speech at Hull on Friday, July 17th, to outlining his proposals for securing that these drawbacks and disadvantages should not accrue under the system which he proposes to introduce into Great Britain in the event of his being returned to power at the next General Election. The one of the thousand objections to Protection of which Mr Baldwin has become aware is the danger of corruption—a very real and universal danger, as tariff countries have found to their costs. How does Mr Baldwin propose to avert this danger and to secure that this country shall not be "a profiteers' Paradise" or the British Legislature "a crooks' corner"? His method is delightfully simple. If and when they are returned to power,

he and his colleagues will have, ready-made, an emergency tariff which will be put into operation right away. But since the politicians who have devised the tariff are not to be trusted to work it (although why they should be trusted to devise it if they cannot be trusted to work it, passes our comprehension), the new-born emergency tariff is to be handed over for all future modifications and changes to a permanent Tariff Commission consisting of non-political experts. By this means Mr Baldwin appears to hope that tariff questions would be lifted far above the realm of polemic politics. Unfortunately, this system has been tried before in other countries. America has its non-political Tariff Commission; India its impartial Tariff Board. Does Mr Baldwin suppose that there is no log-rolling at Washington, or that the Bombay mill-owners have never exerted one ounce of pressure in the consideration of Indian cotton duties? The naïveté of Mr Baldwin's belief in the efficacy of a Tariff Commission is only equalled by the phrase "knave-proof" which he uses to describe his plan for attempting to remove tariff problems from the reach of politicians. For the rest, Mr Baldwin's Hull speech is notable for two things. Firstly, for his choice of a time when Europe's difficulties, to which, as he admitted, high tariffs have so greatly contributed, are acutely critical, to develop his own plans for adding to the number of those tariff walls; secondly, for his insistence for the hundredth time on the necessity for having a tariff for bargaining purposes. "Until this country puts itself upon an equality with other countries in the world in her fiscal system, it will not be possible for her to begin that bargaining which I firmly believe will end in an easing of tariff duties throughout the world." Perhaps the best short answer to Mr Baldwin is given by Mr T. W. Page, who was himself Chairman of the American Tariff Commission. In his well-known, "Making the Tariff in the United States,"* he tells us that "a study of experience" led the American Tariff Commission to "disapprove the use of the tariff for bargaining purposes." Mr Baldwin's belief that by adding to the number of fierce combatants in the present tariff war he is likely to lower tariffs rather than to heighten them, is pathetically out of tune with the teaching of history.

Miss Bondfield's Surrender.—The Parliamentary week has been notable for the untiring efforts of a handful of "Left-wing" Socialists to embarrass the Government and prevent effective measures being taken to remove dole anomalies. Through an all-night sitting on Monday Miss Bondfield stood her ground tenaciously, but on Tuesday she was induced to make a vital concession. The Unemployment Insurance (No. 3) Bill, it will be remembered, contented itself with dealing with anomalies in connection with married women, workers on short time, seasonal workers, and regular part-time workers. The effect of an amendment moved by the Minister on Tuesday is to remove workers on short time (as distinct from the habitual part-time workers) from the purview of the Bill. Even in its amended form the Bill may enable the Minister to deal with isolated cases where a man earns more than a normal week's wage for two or three days' work and yet draws benefit. But it does not touch the huge field of short-time work, in which, as the Royal Commission's report showed, an extremely unsatisfactory state of affairs exists. It will still remain possible, as Sir Donald Maclean pointed out, for employers to employ to operate the unemployment insurance system as a subsidy for wages. After the sturdy speech with which Miss Bondfield introduced the Bill, this backsliding is a grave disappointment; and it is even more serious than it looks at first sight. The position is this. The Government, having decided to shelve for the present the main recommendations of the Royal Commission, made a minimum concession to necessity by promising immediate legislation to deal with glaring anomalies. Now even this measure is being emasculated under Left-wing pressure, and the lesson of Tuesday's surrender is that all hope of a really effective attempt by the present Government to overhaul the system has passed away. A Government

* "London and New York." McGraw Hill.

Imports were thus 10.2 per cent. greater during the past half-year than in the first half of 1924, domestic exports 31.3 per cent. lower, and re-exports 26.8 per cent. lower. As revalued at the values of the corresponding quarter of 1924, retained imports of food, drink and tobacco last quarter were very much larger than in the second quarter of 1930, and those of raw materials slightly less. The average values of imported raw materials were 27.8 per cent. below the level of the corresponding quarter last year. There was a small reduction in the quantity of imported manufactures as compared with last year, but an increase of nearly 38 per cent. on the second quarter of 1924. Average values in this class were 36.7 per cent. lower than in 1924 and 17.4 per cent. below the 1930 level.

Exports declined all round, and in the manufactured class the fall was 27.3 per cent. as compared with the second quarter of last year and 36.4 per cent. as compared with the corresponding period of 1924. All the groups, except rubber manufacturers, show a decline in volume as compared with last year, and in the case of iron and steel, machinery, and vehicles the decline was well over one-third. These revaluations were made on the basis of the average values in the corresponding quarters of 1924; when the trade is revalued according to the average values of the whole year 1924, the following indices of volume result:—

VARIATIONS IN VOLUME OF IMPORTS AND EXPORTS OF GREAT BRITAIN AND NORTHERN IRELAND (Averages of Year 1924 = 100.)				
Period.	Total Imports.	Exports of Merchandise.	Net Imports.	British Exports.
1924:				
January-March	95.7	116.5	93.2	97.7
April-June	93.9	100.0	93.2	98.6
July-September	98.0	82.6	99.9	100.1
October-December...	112.4	100.9	113.8	103.5
Year	100.0	100.0	100.0	100.0
1930:				
January-March	109.6	83.5	112.8	99.9
April-June	105.6	89.5	107.6	87.4
July-September	100.4	69.9	104.2	85.0
October-December...	117.0	81.3	121.4	82.7
Year	108.1	81.1	111.4	88.7
1931:				
January-March	102.9	76.8	106.2	69.1*
April-June	106.1	83.6	108.9	65.8

* Revised figure.

The corresponding figures for 1913, in which the trade of what is now the Irish Free State is included, are:—Imports, 96.1; re-exports, 113.1; net imports, 94.2; British exports, 131.4. A similar table showing variations in average values brings out strikingly the growing divergence between the values of imports and exports.

Cotton Production Costs.—Representatives of the Master Spinners' Federation and the Cotton Spinners' and Manufacturers' Association met in Manchester on Tuesday to discuss the general situation in the cotton industry. Although no actual mention of the phrase "hours and wages" was made in the official report after the meeting, this subject was, writes our Manchester correspondent, undoubtedly discussed and eventually "further consideration of the matters under review was adjourned." It should be pointed out that the Master Spinners' Federation Committee recently held a discussion on methods whereby production costs could be reduced, and the proposal for working longer hours in the mills and a reduction in the wages of the operatives was considered. The opinion is growing on the Manchester Royal Exchange that the situation in the industry as a whole is becoming so serious that something will have to be done at an early date. The leaders of the trade are fully aware of all the facts, but the difficulty is to decide upon action. With regard to the working hours in the mills these were reduced from 55½ to 48 in 1919, and the operatives at that time were compensated for the reduced earnings by an increase in wages equal to 30 per cent. on the piece price list rates. The 48-hour week, however, is not really effective, for cleaning time is allowed, which is equal to about 3½ hours per week. On Thursday next there will be a full meeting of the Joint Committee of Cotton Trade Organisations, when it is probable that the subject of hours and wages will be introduced, for each constituent organisation has been asked to send an official statement as to what should be done to reduce production costs. Although the replies have not been made public it is understood that very definite views on the question of hours and wages have been expressed by the leading employers' associations. The more looms to a weaver question has also been to the fore, and an agreement has now been reached between a well-known firm in Nelson and the local operatives' trade union, whereby the workers are to receive 58s. a week

for working eight looms engaged on plain cotton cloths, and 60s. a week for weaving silk and artificial silk goods. This firm produces speciality cloths and it would not be possible to pay the same rates of wages to the operatives engaged on ordinary standard cloths such as shirtings and sheetings. The working of the agreement, however, which is for an experimental period, will be watched with interest.

Bakers and Prices.—The Food Council, as appeared from its letter to the Board of Trade a few weeks ago, has still not reached a satisfactory *modus vivendi* with the bakers. The Food Council demands balance sheets and profit and loss accounts; the bakers decline to furnish them on the ground that they do not make clear the loss or gain attributable to the buying of flour, and that it is becoming increasingly difficult to separate the bread-baking results from those accruing from the cake-baking and other departments. The two bakers' societies contend that they have shown readiness to provide all the information reasonably asked for, but this assertion would be more convincing if reductions followed as promptly upon falls in the price of flour as increases do upon flour price advances. Once more the loaf is to come down to 6½d., but not until next Monday, whereas the fall in flour to 21s. 6d. per sack, which is the cause of this reduction, took place on July 13th. The two previous periods this year in which a 6½d. loaf was enjoyed lasted only two and three weeks respectively, and were abruptly terminated when the price of flour recovered. This one-sided alacrity cannot but make the consumer doubt whether the somewhat petulant note of injured innocence in the bakers' letter to the President of the Board of Trade last Tuesday has any justification.

Employment and the Cost of Living in June.—Unemployment again showed a substantial increase during June. According to the *Ministry of Labour Gazette*, among the workers insured against unemployment in Great Britain and Northern Ireland the percentage unemployed at June 22nd was 21.8 per cent., as compared with 20.8 per cent. at May 18th and 15.4 per cent. a year ago. It is estimated that at June 22nd there were approximately 9,271,100 insured persons in employment in Great Britain. This was 109,600 less than a month before and 578,300 less than a year before. The number of persons registered as wholly unemployed on June 22nd was 1,851,421, as compared with 1,840,562 on May 18th and 1,160,905 at the end of June, 1930. Those temporarily without work on June 22nd numbered 662,141, as compared with 590,907 a month ago and 562,134 a year ago, while of those normally in casual employment 113,824 were unemployed, 1,644 less than a month before, but 21,551 more than a year before. The latest return of the Ministry states that at July 13th the total number of registered unemployed had risen to 2,642,689, of whom 1,858,512 were wholly unemployed, 672,590 temporarily stopped, and 111,587 usually in casual employment. With regard to the cost of living, the index number of the Ministry of Labour at July 1st stood at 47 per cent. above the level of July, 1914, as compared with 45 per cent. on June 1st and 55 per cent. a year ago. The rise of two points in June is of no real significance, being mainly due to the substitution of new for old potatoes. For food alone the corresponding figures were 30, 27 and 41 per cent. respectively.

Brazilian Financial Reforms.—The first official announcement of the results of Sir Otto Niemeyer's visit was published in Rio de Janeiro on July 22nd. It states:—"Important developments effected recently under the supervision of Senhor Jose Maria Whitcheer, the Minister of Finance, and Sir Otto Niemeyer, have already resulted in a plan for the financial reorganisation of the Treasury and the Ministry of Finance. This plan, which is closely connected with the creation of a central bank of issue and rediscount, is in the hands of the Provisional

Government for consideration, and will probably be introduced in September. The capital of the central bank will be in gold, and will be subscribed by a foreign loan and by British capital. Besides normal banking transactions, the central bank will undertake the centralisation and collection of the Federal taxes and the payment of all administrative expenses now made through the National Treasury and 'delegacias fiscaes.' Only payments of less than a conto of reis will continue to be made over the counters of the Federal Treasuries. Bigger amounts will be made by cheques on the central bank and its agencies throughout Brazil. The departments of the Ministry of Finance will have charge only of payments for administrative purposes. The system adopted is similar to that of the Italian Treasury. The plan does not affect the organisation of the Bank of Brazil except in relation to its current account with the National Treasury and to exchange transactions which affect the Treasury; these will pass through the central bank. The Bank of Brazil will function under conditions similar to those of any other Brazilian credit establishment." This announcement only represents the first stage in the reforms obviously set in train as a result of Sir Otto Niemeyer's visit, and so must not be regarded as complete. Moreover, it is understood that this plan is subject to amendments on points of detail. It makes it clear, however, that a thorough modernisation of Brazil's financial system is contemplated in accordance with modern ideas. London will, therefore, watch further developments with interest, though possibly with the caveat that under present conditions London's power to provide capital for financial reconstruction abroad possesses somewhat narrower limits than her willingness to render all possible assistance.

The Canadian Wheat Pools.—The fortunes of the embarrassed Western wheat pools have been occupying the attention of the Federal Ministry and the interested provincial Governments, writes our Ottawa correspondent, and as the result of conferences held last week at Ottawa, at which representatives of the banks were present, several important decisions were reached. The banks have been pressing for a liquidation of the debts due to them by the three prairie Governments on account of their guarantees given in the spring of 1930 in connection with advances to the pools, and the Governments have now agreed to make a special bond issue to raise the 22 million dollars to which they are committed on this account. The sum is divided as follows between the three provinces:—Manitoba 4 million dollars, Saskatchewan 12, and Alberta six. Now the provinces hold the elevator systems and other properties of the pools as a security for these debts, and it has been virtually decided that they will take them over in the near future and run them as co-operative elevator systems on the lines of the old Saskatchewan Co-operative Elevator Company, which was absorbed by the provincial pool. Moreover, the officials of the pools have discovered that they cannot get financial support for the marketing of the crop of 1931, either from the banks or the Federal or the provincial Governments, and so it seems probable that in the near future they will go into voluntary liquidation. Their physical properties will be conserved for the members by the action planned by the provincial authorities, but there would be a complete cessation of pooling operations and the co-operative elevators would be run on the normal principles of the grain trade. There is thus in prospect the end of an interesting experiment which at one time had the promise of being a very successful adventure in agrarian selfhelp.

National Provident Institution.—In the table in our recent Insurance Supplement, referring to the last two valuation periods of this company, the dates at the head of the two columns were inadvertently reversed, while in the headline of the preceding table referring to rates of reversionary bonus, the heading of the second column should read "Duration 18 years or more" instead of "Duration 18 years or less."

Views on German Situation — Oil and Copper Markets —
Wheat — Building — Company Earnings.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 15.

SECURITY and commodity markets have swayed to the changing winds from Germany and other parts of Europe. While in good quarters in the financial district the situation is regarded as considerably improved, the backwash is still being felt. The prevailing view here is that Germany overstated the case for her financial and economic difficulties, and that much of the advantage derived from the debt moratorium was lost because of the blow to German credit standing given by the Germans themselves.

The attitude of bankers and of Federal Reserve Bank officials is one of desire to help, but of insistence that Germany realise she cannot obtain credit merely for the asking and most especially not by declaring herself bankrupt. A good impression has been made by the steps already taken by Germany for checking the flight of German capital, rationing credit and combating the notion that this country will go to any lengths to prevent a German financial collapse. It is hoped that Germany will consult her hopes rather than her fears and take further constructive measures meriting the confidence of this and other nations. In that case this Government would probably give such help as it could. In a nutshell, bankers here are not yet ready to "write off" Germany.

Leading American banks have for some time made no appreciable withdrawals of short-term loans from Germany, but most of them have refused to increase the amount of these loans, and are disinclined to do so until they become more firmly convinced of Germany's determination to make them good.

Little attention has been paid to anything but the changes in the German position, the markets recognising the primary importance to American trade in the near future of settled conditions in Europe. Business continues rather stagnant, but it does not seem to have receded more than seasonally in the past two or three weeks. The rate of operations in the steel trade is not much in excess of 30 per cent. of capacity, but mill owners are still hopeful of some slight improvement in the autumn. Affairs have taken a turn for the worse in the oil industry. For some time the flood of oil in the East Texas field has been demoralising the market. Leading purchasing companies this week posted prices for crude ranging as low as 10 cents a barrel, and the same schedule

was later applied to the Oklahoma fields. Oil has been sold as low as 5 cents a barrel in Texas.

The Governor of Texas has called a special session of the legislature in the hope that the law might be amended to make oil output restriction real. At the same time hundreds of small wells in Oklahoma have shut down. Production for the past week, nevertheless, showed a further large increase. Meanwhile the leading oil-importing companies—Shell, Standard of New Jersey, Pan American (a subsidiary of Standard Oil of Indiana) and Gulf Oil—have agreed with the Secretary of Commerce to extend their 25 per cent. cut in imports indefinitely. The Pan American will probably increase its imports somewhat, but the spirit of the agreement will be adhered to. Import restriction in the present state of demoralised domestic prices does not, of course, work much hardship on most of the companies involved, nor does it help home producers to any appreciable extent.

Under the weight of another increase in stocks of refined copper in June, amounting to 14,800 tons, copper has fallen back to 7½ cents a pound, the level from which the rise to 9 cents started on the Hoover debt plan statement. In the copper trade it is believed that negotiations for further curtailment of output will begin again in the next two or three months.

Cotton consumption in June fell 5 per cent. from May, the usual seasonal decline. It was about 25 per cent. greater than in June of last year. It is expected that a further seasonal decline, estimated at 8 per cent., will take place this month. Cotton exports also were down considerably, probably foreshadowing another drop in all merchandise exports for last month.

Continued weakness in agricultural commodity prices is causing some concern. The wheat harvest is one of the best for years, in some States unparalleled, but prices on the farms are not much over 20 to 30 cents a bushel, which is under cost of production in most cases. Cotton also has fallen below 10 cents a pound, but the South has probably reduced its costs to show a profit at that level. Unfortunate as the drop in farm prices is, as widening the gap between the things which the farmer has to sell and those which he has to buy, it is not believed that President Hoover's public denunciation of short sellers in the wheat market will accomplish much. Among many who strongly defend free trading and short selling, it is felt that however commendable the aims of the Administration in the matter are, the root of the trouble does not lie in bear operations on the Chicago and other grain markets.

A more than seasonal slump was shown by the building industry in June, as reflected in building permits. According to the Bradstreet calculation, permits were 27 per cent. lower than in May and 40 per cent. below the level of June last year. They were in fact the smallest in value for any month since January, 1921. Railroad traffic is fairly well maintained at low levels. Hearings began this week before the Inter-State Commerce Commission on the freight rate increase application of all the railroads. While some opposition has developed among the agricultural States, increased by the recent slump in agricultural products, the insurance companies, savings banks, trust companies and other large holders of railroad bonds have entered a strong plea for the railroads. It is likely that such exceptions will be made to farm commodities as will satisfy the rural communities and that the higher fares will be granted.

Company reports for the second quarter and first six months are beginning to appear. In nearly all cases earnings prove to have been lower than a year ago, as was expected, but some companies show seasonal gains over the first quarter. The third quarter holds little promise of gain, and dividend reductions continue, although at a diminished rate. The United States Steel Corporation directors will meet to decide their quarterly dividend on July 28th. Wall Street is looking for a reduction in the 7 per cent. rate, probably to 5 per cent. The corporation failed to cover its common share dividend requirement in the fourth quarter of last year, though the full twelve months' earnings were well over the annual

rate. In the first quarter of this year 5 cents a share was shown on the common, but in the second quarter probably nothing was earned for the common and only a small amount for the preferred, coming from interest allocated from tax refund money. The Steel Corporation has an enormous surplus, but most of it is in physical property. Cash on hand in Government bonds also is large, but not far enough above current needs to justify indefinite payment of unearned common share dividends.

FRANCE.

German Situation — Revenue — Unemployment — Prices — Foreign Trade.

(FROM OUR CORRESPONDENT.)

PARIS, July 22.

A WAVE of disappointment swept over France when it was realised on Monday morning, from the text of the official *communiqué* issued late the previous night, that the German Ministers had refused to give M. Laval the political guarantees required in exchange for French participation in the proposed long-term international loan of \$500,000,000 for the purpose of putting Germany on her financial feet. None of the flowery and eloquent phrases as to the "frankness" and "cordiality" of the German leaders could conceal the fact that the guarantees which French opinion regarded as the sole factor of vital importance had not been given, and the statement that they had been left to be considered later (*ultérieurement*) was equivalent to a certainty that, for all practical purposes, the prolongation of the international conversations in London would result in nothing permanently effective being done.

French dislike of the Hoover proposals, as far as international participation in a large short-term loan to Germany was concerned, was based on the view that they were merely a badly concealed attempt to enable a substantial proportion of American money already at risk in Germany to be replaced by French capital, and French opinion has abundantly shown that it had no intention of being left to "hold the baby." The strength of the French situation, it is universally recognised here, is that France possesses an abundance of capital available with which to help Germany, that her present commitments in Germany are enormously less important than those of Great Britain or the United States, and that she stands less risk of direct loss than any other Power from another complete German collapse.

With these cards in her hands, it is held, this country can safely insist on demanding from the would-be borrower at least as good security for her money as any ordinary lender would insist upon in a similar affair between private parties. In any case, without guarantees from Germany on something like the lines discussed between M. Laval and Dr. Brüning here on Sunday, any attempt to launch any portion of the proposed international loan on the French market would be foredoomed in advance to a complete fiasco. Young Plan 5½ per cent. bonds, which were issued here at 988, dropped to a heavy discount when the Hitlerites became aggressive, and were to-day quoted at 680. Bourse opinion is absolutely sceptical as to the effective value to Germany of any application of the latest American proposal for maintaining the present short-term credits or even supplementing them by an extension of further short-term aid. The suggestion, as reported from London, that Germany can be effectively helped without French aid, has been received here with both irritation and scorn.

At bottom the French view is that Germany has repeatedly proved herself incapable of managing her own affairs, and that in her own interest, and much more so in the interest of the rest of Europe, it is necessary she should be placed, as far as necessary, under a kind of guardianship. "Germany," recently wrote M. Caillaux, whom it is not customary to accuse of being anti-German, "has been wallowing in prodigality and cannot pay her debts. The elementary course to take in the case of a prodigal before paying his debts is to place him under a

conseil judiciaire. If this is not done there is grave danger of those who try to help going down with the one who is in need of saving."

The revenue returns for June show a distinct improvement in the yield from taxation. The total recoveries from all Budget sources (that is, exclusive of the yield from the tobacco monopoly and taxes diverted to the Caisse d'Amortissement) was 3,199,227,000 francs, of which "normal and permanent resources" produced 3,167,336,000 francs, against 3,093,348,000 francs in June, 1930, and 4,002,660,000 francs in 1929. The drop since June, 1929, is to be largely accounted for by the heavy remissions of taxation since that year. The yield from these sources for the month was 114,600,000 francs more than Budget estimates, and will leave, after allowing for the deficiencies in the yield in April and May, a net surplus on the first quarter of the financial year amounting to 67,483,000 francs (against a deficit on the corresponding period of last year totalling 599,499,900 francs).

The tax on turnover produced 603,577,000 francs during the month, or about 7 per cent. less than had been budgeted for, and 82,486,000 francs less than in June last year (since when this tax has been slightly lightened). The tax on Bourse operations, another useful gauge of the real situation of business, yielded only 9,024,000 francs during the month, or only 35 per cent. of the 26,000,000 francs expected. Customs, owing to recent increases in many of the tariff schedules, showed a yield of 605,215,000 francs, and thus replaced the turnover taxes as the category of imposts showing the largest yield, the recoveries for the month being 359,000,000 francs (or nearly 150 per cent.) more than Budget estimates. Recent tariff tinkering alone, it will be noted, enabled a deficit on the quarter to be avoided.

Unemployment remains practically at a standstill. The number of workless in receipt of unemployment allowances on July 11th was 35,830 throughout the whole country, or about 500 more than in the previous week, 330 of the increase being in Paris. On the other hand, the number of applicants for work whom the labour bureaux were unable to satisfy was 47,978, or 2,237 fewer than in the previous week.

Price levels at the end of the half-year registered little change. The *Statistique Générale* index of wholesale prices is 478 (1913 = 100), against 480 at the end of May, 494 at the end of April, and 498 last December. French products showed a drop of 13 points on the month, whereas the figure of imported products represents a rise of no fewer than 16 points. The rise in wholesale prices of foreign-produced goods in France during the month was due to tariff revisions upwards, which are still being applied.

The foreign trade returns for June show a slight improvement in both exports and imports, but were still, with the exception of those for May, the smallest in value since the franc approached its present level. Exports, which were 3,376,776,000 francs in June last year, totalled 2,512,623,000 francs (or 74,000,000 francs more than in May), while imports were 3,914,815,000 francs, or 340,000,000 francs more than in the previous month, against 4,160,253,000 francs in June, 1930. The month's exchanges resulted in an unfavourable balance of 1,401,692,000 francs, which is the highest recorded in any month. The foreign trade for the first half of the current year showed the following detailed results:—

	First Six Months of 1930.	1931.	Difference in 1931.
Imports.			
Foodstuffs.....	5,919,978,000f	7,067,083,000f	+ 1,147,105,000f
Raw materials	16,017,508,000f	11,242,944,000f	- 4,774,564,000f
Manufactured goods.....	5,794,235,000f	4,891,837,000f	- 902,398,000f
Totals	27,731,721,000f	23,201,864,000f	- 3,629,857,000f
Exports.			
Foodstuffs.....	3,149,454,000f	2,175,075,000f	- 974,379,000f
Raw materials	5,351,847,000f	3,896,015,000f	- 1,455,832,000f
Manufactured goods.....	14,125,922,000f	10,163,922,000f	- 3,962,000,000f
Totals	22,627,223,000f	16,235,012,000f	- 6,392,211,000f

The total deficit for the six months amounted to 6,967,000,000 francs (equivalent to about 30 per cent. of the total imports), against one of 4,004,500,000 francs during the corresponding period of last year. The adverse balance in 1913 was roughly 20½ per cent. of the total imports. In tonnage, the drop on the six months was 418,450 tons in imports and 3,855,259,000 francs in exports. Exports of manufactured goods were over 28 per cent. less in value than in the first half of last year. The increase of 2,047,000,000 francs in imported foodstuffs was, of course, almost entirely due to last year's bad French harvest. Imports of foreign coal and coke were 1,973,055,000 francs and 14,833,960 tons, against 2,365,607,000 francs (15,924,523 tons) in 1930.

GERMANY.

Working of Partial Moratorium — Schröder Failure — Provincial Bank Difficulties — New Clearing Association — Reichsbank.

(FROM OUR CORRESPONDENT.)

BERLIN, July 22.

FOR more than a week now, Germany has been passing through an experience which has never before been heard of in a capitalist country with a sound currency, except in the days immediately following the outbreak of war—an almost complete cessation of payments. No complete moratorium has been decreed. The ordinances which have been issued since the two bank holidays of July 14th and 15th only relieved banks, and in a limited degree bank customers, from the necessity of making payments; means had to be found for meeting wage and salary payments, and, from the beginning of this week, also for small withdrawals up to 100 marks from the banks and 20 marks from the savings banks. Last week small transfers between banks were allowed, and at the beginning of this week the regulations were further relaxed, though up to Thursday, the end of the period of validity of the last decree, even the customers of the largest credit institutions which have joined together in the new "clearing union" (*Überweisungsverband*) were not allowed to transfer more than 15,000 marks a day, and customers of the other banks not more than 2,000 marks in three days.

The fact that, in spite of these exceptions, the suspension of payments has had a more profound effect than, in all probability, any earlier moratorium, is presumably due mainly to its compulsory character. Whereas on other occasions debtors have merely been allowed to refuse payments, this time even the thoroughly liquid institutions were forbidden, in pursuance of the Government's object of rationing the means of payment, to make payments or transfers for any other purposes than those specified in the decree.

The effect of the suspension is further intensified by the closing of the Stock Exchange, which is to last at least until the end of July. This is exceedingly embarrassing to bankers who have been in the habit of employing their liquid reserves as day-to-day money on the Stock Exchange, as, according to German custom, such money can only be repaid on Stock Exchange business days, and in any case could hardly be refunded if the Stock Exchange were not functioning, as the borrowers have for the most part used it for the purchase of securities, which must be sold before it can be paid back.

A certain relaxation of the prohibition of payments is automatically brought about by the exemption from restriction of all money paid into the banks since July 15th. Last week's wage and salary payments, which were made in full out of old accounts, are now presumably returning to the banks through the medium of retail trade, and these newly deposited funds can be used without restriction. This automatic relaxation is, however, far from being enough, and the Government will be obliged to make further modifications in the regulations after Thursday, if production is not to be paralysed. That will be possible without danger if the London Conference

is sufficiently successful to renew confidence. Otherwise there is a danger of a renewed run, or at least of heavy withdrawals from those institutions which public opinion, rightly or wrongly, believes to be the weakest. This would involve the danger of further bank failures.

The protection of the emergency decree has already proved insufficient for one important bank. The J. F. Schröder Company, the big private banking house in Bremen, with substantial interests in shipbuilding (Deschimag), shipping (Hansa), and in various branches of industry, was obliged to put up its shutters on Monday. The bank also had a not inconsiderable holding of North German Lloyd shares. The Government of Bremen intends to take steps to support the bank, but it is doubtful whether this will be practicable. The Schröder bank, which has no connection or business association with the London firm, has risen to a prominent position in Bremen during the last ten years, chiefly through the energy of its principal partner, J. F. Schröder, a self-made man who has concentrated his interest upon his native city. It has a capital of 30 millions, half share capital and half reserves, and it appears that the losses exceed this. "Creditors" amount to 200 millions. The bank has long been the subject of talk, as it was known to have sustained heavy losses, particularly in respect of Deschimag (Deutsche Schiffbau und Maschinen A.G.), and also from the shipbuilding depression in general, as the Schröder bank has been active of recent years in the promotion of shipyard concentration.

The crisis was, however, brought to a head by the Nordwolle failure. Schröder was involved with this firm both as a shareholder and as a creditor. The bank has received a certain degree of support for some time from its connection with the Berliner Handelsgesellschaft, which has a 12 per cent. share, amounting to 1.8 million, in Schröder; but the Handelsgesellschaft announces that its credits to Schröder are fully covered by first-class security. The collapse of the Schröder Bank following on that of Nordwolle is a very severe blow to Bremen, especially as the finances of the Free City are in a very strained condition, with a quantity of short-term foreign debt.

The Provincial Bank of the Rhine Province is also in difficulties. The total assets of this bank amount to a round milliard, of which 400 millions consist of mortgages financed by mortgage bonds. The provincial banks of the Prussian provinces are communal credit institutions and clearing houses at the same time, and in this capacity they deal with the clearings of the communal savings banks. The acute difficulties arise primarily from the fact that short-term foreign credits of the big Rhenish savings banks which are associated with the Provincial Bank have not been prolonged, so that the Provincial Bank has been forced to draw upon its entire liquid reserve. This has made it impossible for it to come to the rescue of the savings banks, which were in need of cash, and to repay the balances as they fell due. There is no question of losses in the case of provincial banks, as the province, and in the last resort the Prussian Government, guarantees their debts. In order to meet their difficulties, the Reichsbank has granted a Lombard credit of 100 million marks to the Deutsche Girozentrale, the central clearing institution of the provincial banks. The largest Rhine communes have placed 40 millions of securities at the disposal of the Rheinische Landesbank.

The relaxation of the restrictions on transfers would have been impossible, even in the very modest degree to which it has so far been conceded, but for the fact that the big banks, the principal private banks, and a number of other institutions, including provincial clearing houses and labour banks, have joined in the formation of a new clearing organisation, the Überweisungsverband E.V. This association aims at doing away with the difficulties which arise from the differences in financial strength between the different institutions. The object is to prevent lack of confidence in individual banks from leading to a transfer of balances to stronger banks. The clearing association, which constitutes a guarantee of solidarity among all the important German banks, is to make such transfers innocuous by enabling the stronger banks to credit such transferred balances to the banks

from which they are withdrawn. The new organisation, therefore, demands a surety in bills or securities from every member, and the debit balance of each individual bank may not exceed 100 million on any one day. This provides support for the weaker institutions, as a bank which is fundamentally sound can in this way practically obtain a credit of 100 million marks from the others. A 5 millions guarantee fund is contemplated. Losses in excess of this amount will be shared among the member banks in a specified proportion.

On July 16th the Reichsbank raised its discount rate from 7 to 10 per cent., and the Lombard rate, which at the moment is particularly important, to 15 per cent. The general demand was for a much greater increase, but the Reichsbank was reluctant to concede it for fear of imposing an intolerable burden on industry. It is, however, maintaining the restriction of credit, though in a less stringent form. The much greater severity of the increase in the Lombard rate is explained principally by the fact that the Lombard rate is particularly important for the savings banks and communes, which have no commercial bills, but only securities on which to procure credit. Whether the Reichsbank will get through with the 10 per cent. discount rate or will be forced to a further increase will depend on the developments of the next few days. The private banks are only paying 8 per cent. for both old and new deposits.

One of the recent emergency decrees appoints the Reichsbank as a clearing house for foreign exchange. Every holder of foreign currency or of claims on foreign countries is obliged, until July 31, to offer such holdings to the Reichsbank at the official rate, and to sell them if required to do so. They may only be retained on proof that they are required for "economically justified purposes." No foreign means of payment may be bought or sold otherwise than by or through the Reichsbank. The Reichsbank has, however, authorised all the larger banks to act as its agents in this business.

The same decree requires holdings in foreign companies to be notified where not more than five persons jointly own more than half. This regulation, together with those relating to foreign exchange, is intended not only to protect the mark, but to prevent the flight of capital, and, in particular, to protect the revenue. In order to facilitate the return of capital which has been exported to evade taxation, a tax amnesty has been decreed. Very severe penalties are provided for in case of contravention of the ordinances, with a maximum of confiscation of property and ten years' penal servitude.

The issue of this decree meets a demand which was being pressed upon the Government with increasing urgency, both from abroad and at home, but actually these measures can achieve very little. The decree expressly exempts foreign securities acquired before July 12th from the regulation requiring them to be offered to the Reichsbank. This was inevitable, or the decree would have brought about a liquidation of all German holdings in foreign companies, but this exception frustrates the most important purpose of the provision. The activities of foreign companies in which Germans hold shares cannot be controlled, and the German Government will be able to do little to prevent such companies from extending their property abroad for account of the domestic shareholder, though this in practice achieves the purpose of exporting capital. This does not at all mean that the precautions which the Government is taking can do nothing to check the flight of capital, but the effective weapon is not the special decree expressly directed to that end, but the restriction and discount policy of the Reichsbank. The Reichsbank is expected to take up, in the course of the next few days, all the foreign holdings reported to it in excess of a given level, probably 20,000 marks. It anticipates a consequent strengthening of its exchange reserves of some hundreds of millions.

Everybody in Germany knows that the emergency measures can only be maintained for a short time longer. All eyes are, therefore, fixed upon the international negotiations, and in the unhappy event of their being unsuccessful, the emergency bridges which have been constructed with such an expenditure of activity and juristic acumen would soon collapse.

HOLLAND.

Course of Depression — Money Market — Oslo Treaty — Capital Issues — Revenue — Foreign Trade.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, July 14.

IN view of the intimate financial and economic relationship between the Netherlands and Germany, it is only natural that over here all attention has been concentrated during the past month on the moratorium question. The situation was already regarded as very gloomy, owing to the precarious financial state of affairs in Austria, in which Dutch banking interests were also very closely involved. Then came the drastic rise in the discount rate of the Reichsbank from 5 per cent. to 7 per cent., and the final *dénouement* of the crisis in Germany. The *débâcle* of the Nordwolle, in which a large block of shares were marketed in the Netherlands, was an unpleasant shock. The psychological effect of the Hoover proposal was enormous, but was of short duration. The immediate economic prospects are not yet encouraging, and reports from business circles are anything but cheerful. News of reductions in dividends and of dividends being passed altogether continue to be the order of the day.

In his recently published annual report of the Netherlands Bank, Dr. Vissering expressed the view that Holland has displayed a remarkable degree of resistance, and that the retrograde movement in trade here became evident later and less severely than elsewhere. This Dr. Vissering attributes to the economic structure of the country. Holland draws her income from a wide variety of sources, while as a capital-exporting country she can always rely upon a substantial regular asset in her balance of payments. The fact that Holland has so far persisted in her adherence to the principles of free trade, he stated, has also certainly been of advantage. Thanks to these beneficial factors, unemployment, for instance, has not reached anything like such proportions in Holland as in other countries, though, of course, the number of unemployed has grown considerably on account of the depression. Reliable figures as to the volume of unemployment are not available in this country, but it is estimated to be 200,000 at the very most. With this figure, which moreover applies to a time when seasonal influences were most adverse, Holland makes a favourable showing as compared with most other countries. The relatively small number of bankruptcies in this country is also reassuring. The total in 1930 was, indeed, higher than for 1929, but one has to go back to 1921 to find such a small number of failures as were recorded in the two years referred to.

The liquidity which has characterised our money market throughout this period of depression became even more marked during the last month, and both prolongation money and private discount rates dropped to below 1 per cent., which is a new low record unprecedented in modern times. Discount rates in Amsterdam have almost continuously been lower than the quotations in London and New York. Partly for this reason, acceptance business in Amsterdam is continuing to develop satisfactorily, considering the unfavourable economic situation. The aggregate of the amounts of discountable bank acceptances notified to the Netherlands Bank accruing from trade in or with foreign countries did decline considerably in 1930, but the decline was not nearly as large as had generally been expected in view of the prevailing trade situation. In comparing the figures, it must not be overlooked, either, that wholesale prices have undergone a great decline, as a result of which a given quantity of merchandise can now be financed with far less credit than was necessary when prices were at a considerably higher level.

A Bill has been introduced into the Dutch Parliament for the ratification of the Treaty of Oslo providing for the commercial rapprochement between five countries. The Lower House has signified its satisfaction at the successful conclusion of this treaty. This is a first step in the right direction. Co-operation between five minor powers, which together are capable of developing significant economic force, can undeniably be of benefit from many different standpoints. Some members of Parliament considered it

fortunate that Belgium was among the signatories, and in this connection it was asked whether the Government had formed an opinion on the idea repeatedly brought forward of an entire or partial customs union between the two countries.

The Amsterdam new issues market was again extremely quiet. Even including the conversions to an aggregate of 49.5 million guilders, the total amount of issues in June was low, and did not reach 60 million guilders; only 10 million guilders of new funds were accordingly absorbed. In view of the big State loan and the East Indies loan, which were floated the month before, comparison with that month would be misleading. A comparison of the issues of the first half-year with the two preceding years distinctly shows the signs of the crisis in an increase in the issues of Government and public bodies, and a very steep decline in the amounts issued for others, as will be seen below:—

FIRST SIX MONTHS.

	Government and Public Bodies.	Private Issues.	Total Issues.
	(In million guilders.)		
1929	34.9	242.0	276.9
1930	194.9	177.8	372.7
1931	179.8	39.0	218.8

Another symptom of depression is the predominance of loan issues as compared with share issues, as is manifested very distinctly in the following figures for the first six months of 1931:—

	Domestic.	Foreign.	Total.
Shares	1,976,000	5,515,000	7,491,000
Loans	183,070,855	28,251,767	211,322,622
Total	185,046,855	33,766,767	218,813,622

State revenue from January to May, 1931, amounted to 198,072,018 guilders, as compared with 220,014,357 guilders in 1930, representing a drop of 21,942,339 guilders. Foreign trade returns show a further decline, and with the exception of February, the figures for May are the lowest of the year so far:—

(In thousands of guilders.)

	Imports.	Exports.
May, 1930	223,817	150,789
May, 1931	161,061	112,302
January-May, 1930	1,074,804	745,225
January-May, 1931	824,527	574,414

Exports of industrial products amounted to 288,955,000 guilders in January-May, 1931, against 340,842,000 guilders in the same period of 1930. This decline has principally been due to the lower prices, for in terms of quantity the merchandise exported shows an advance from 1,202,047 tons to 1,210,947 tons.

ITALY.

Low Agricultural Prices — Quota for Foreign Wheat — Flour Duty — Aid for Mineral Industry — Tax Changes.

(FROM OUR CORRESPONDENT.)

TURIN, July 19.

PUBLIC attention is at present focussed upon such sensational affairs as the Hoover Plan, the collapse of German credit and the Pope's encyclical. Internal economic problems, however, though somewhat in the background, are giving rise, as usual, to a whole crop of legislative interventions. The first sales of the new wheat brought very disappointing prices. As the price per ton of foreign dutiable wheat is about 400-500 lire, and the customs duty is 610 lire, the price of internal wheat should have been about from 1,000 to 1,100 lire. As was shown by Professor Mortara (*Prospettive Economiche*, 1931), the wheat duty is in the yearly average operative for only three-fourths of its amount, but for the months from July to October the excess of internal over foreign wheat prices is very much less, the duty in 1930 being operative for only a fourth part of its amount. This year the Government had come to the rescue in two ways, first by raising the duty from 521 to 610 lire per ton; second by fixing a quota of 95 per cent. of internal wheat to be milled. The

aim was clearly to create a monopoly of the internal market, at least for a certain period, to the benefit of national producers. The monopoly cannot be maintained for the whole year, as in the last four years the average production was 603 million tons and the average imports 207 million tons; but it was hoped that it would aid agriculturists in the most critical period of hurried sales, which always follows harvesting. Predictions were falsified by events, at least in the beginning. Millers were taken by surprise by the quota. The biggest of them, hoping for a rapid reversal of the new policy and worried by the necessity of milling soft or different grades instead of the well-known hard or soft foreign qualities, abstained from purchases. Prices went sharply down; in some places, such as Padova and Rovigo, down to 700 lire per ton. Strong words and sometimes blows were exchanged between middlemen and farmers; carabinieri had to be called in. In a Trentino village the local Fascist secretary obliged purchasers to refund the difference between the price paid and the "just" price. To give millers an interest in buying national wheat, the duty on foreign flour was increased as from July 8th by about 6 per cent. to 929 lire per ton.

The Sardinian mineral industry is also in a serious condition owing to the decline in prices. In the past year duties on spelter were increased; and in June last the duty on lead was also raised from 110 to 220 lire per ton on ingots, and from 275 to 405 for sheets, wires and tubes. As protection was not deemed sufficient to keep the industry going, a grant of 7,000,000 lire was made from the public exchequer for the period from May 1, 1931, to June 30, 1932, to lead and spelter mines companies, on condition that the prices of spelter and lead should not exceed £16 per British ton, and that the number of miners and other hands employed should not fall below that on April 16, 1931. Grants, within the limit of seven million lire, can also be made to mines of antimony and lignite. The Minister can exempt from the obligation of employing a fixed number of people should the price of lead or spelter fall below £10 per British ton, and in other cases of proven necessity. In this case the grant will be proportionately reduced. The big Montepioni and Montevecchio mining companies are bound to profit by such grants.

The difficulties of the wine industry have been taken into account by a decree of July 11, reducing the tax by 25 lire to from 23 to 50 lire per hectolitre, according to the size of the municipality into which the wine is introduced. The reduction will cost the Exchequer 390 million lire. Further losses of 80 and 150 million lire will be occasioned by the reduction of the tax on cattle and of the local agricultural rates; with a total tax reduction of about 620 million lire. On the other hand: (1) The sales tax, which had been recently increased from 0.50 per cent. to 1.50 per cent., is further increased to 2.50 per cent. This expedient was deemed preferable to taxes on flour or textiles, on account of its more general character. Industry and trade observe that the tax will be particularly burdensome in times of economic crisis. The increase of yield is estimated at about 600 millions. (2) The municipalities are authorised to re-establish under the name of consumption taxes the old duties on wild game, fresh fish, sweets, chemical powders for mineral waters, furniture, perfumes, fine soaps, cheese, furs, up to 5 to 10 per cent. *ad valorem*. The yield is estimated at 150 million lire. (3) Road taxes are extended and increased, with a further yield of 25 millions. (4) In the municipalities of less than 25,000 inhabitants the family tax, a sort of graduated income tax, is reintroduced, with an expected yield of 18 millions. (5) In other towns the house occupiers' tax is modified and extended, the rate being fixed at from 5 to 9 per cent. of the rent paid, with an estimated yield of 600 millions. The result seems to be a shifting of taxation from the agricultural classes to the general consuming public and to the cities, with total burdens very heavily increasing.

Whether the hoped-for increase of yield will be realised only events can tell. In the eleven months from July, 1930, to May, 1931 (as against the corresponding period of the previous year), there was an increase in the sales tax yield from 392.2 to 392.9 million lire, in customs duties from 2,101.7 to 2,649.8 millions, and in the tobacco

tax from 2,174.0 to 2,341.7 million lire. But the sales tax had been increased in the meantime from 0.50 to 1.50 per cent., the price of tobacco by 23 per cent., and the yield from the wheat duty had increased sharply owing to the bad 1930 harvest. Total ordinary revenue, however, increased only from 15,682.3 to 16,183.0 million lire, more than half of the above said particular increases being eaten up by decreases in other fields. It is to be feared that, pending the economic crisis, the same experience will be repeated again. Certainly, and fortunately, the Customs duty on wheat will yield less, as the present harvest promises to be vastly better than that of 1930.

AUSTRIA.

Banking Situation — Mercurbank Failure —
Unemployment — Foreign Trade — Public Finance.

(FROM OUR CORRESPONDENT.)

VIENNA, July 18.

RECENT events show that the outbreak of the Credit-Anstalt crisis in May was in one sense a blessing in disguise for Austria, for it became possible to raise, for the protection of the currency, credits from the B.I.S. to an extent of 200 million schillings; in addition, the Bank of England put at the disposal of the Austrian National Bank 150 million schillings. This start in advance of the other debtor countries has proved very advantageous to Austria in view of the credit requirements of Germany and Hungary. In spite of all the demands, the percentage of cover at the National Bank is still 51 per cent. At the same time, the National Bank has again been obliged to surrender a certain amount of foreign exchange, less, however, on account of sales of schillings by Austrians than of purchases of dollars in Vienna by foreign interests. This was specially noticeable, as the bank was finally obliged to limit its purchases of German marks and, more particularly, of Polish zloty.

In the first week of July the bill portfolio diminished for the first time during the past eight weeks; it sank by 17 million schillings to 511 millions; in the middle of July it was, however, again at 530 millions. This is the highest level for many years. The confidence which the bank feels in itself is illustrated by the fact that at a board meeting convoked immediately after the German discount rate had been raised from 7 per cent. to 10 per cent. it was decided to make no change in the Austrian bank rate.

It is also very significant that in Austria banking and stock exchange business has been continued in spite of its suspension in neighbouring States. In view of the partial moratorium in Germany and in Hungary, this continuance of monetary transactions proves that financial tranquillity has been restored in Austria. It must not be forgotten that the Hungarian market in particular is in close contact with Vienna, and use is naturally made of this circumstance to raise in Vienna money which cannot be had on the domestic market on account of the closing of the banks in Buda-Pest.

There have, however, been direct repercussions of events in Germany. The Mercurbank, a small institution with a share capital of 20 million schillings, was obliged to close on account of heavy withdrawals. These withdrawals are due exclusively to the fact that 92 per cent. of the shares of this little bank were held by the bankrupt Danat Bank in Berlin, and the Mercurbank is therefore an innocent victim of the loss of confidence. Its last balance sheet showed a total of 138 million schillings. At the end of June the deposits amounted to about 20 million schillings. As the bank had to pay out 10 million schillings on a single day and got no credits from the State, it was obliged to close down for the time being. Its application to the Government for a moratorium of three months has been refused. This attitude does not meet with the complete approval of the public, as in such stirring times a serious banking house should not be left to its fate. No effect has been observable on the Stock Exchange from the closing of the Mercurbank, whose

shares were last quoted at their nominal price of 20 schillings and are not being traded in at all for the present.

A fact which was of much more importance to the Stock Exchange, namely, the cancellation of the very considerable trade in Hungarian securities owing to the closing of the exchange in Buda-Pest, caused no special depression, and the market proved to be astonishingly resistant. Fluctuations were not very great and turnover remained slight. The declines in quotations since the middle of June took place before the events in Germany.

Since the middle of June the number of unemployed in receipt of benefit in Vienna has been rising, and in the middle of July was 86,472, which is 13,800 higher than last year; this rise is unprecedented. In the provinces the seasonal improvement is unsatisfactory, for there are more unemployed than last year. Recently there have been several big insolvencies in business. For instance, important firms of the textile, fur and furniture branches have stopped payments and admit considerable liabilities. The Astra Film Company, an English concern working exclusively in Vienna, has gone bankrupt with liabilities of one million schillings. Business life is stagnant. This year the foreign tourist traffic has shown no special animation and has been especially disturbed by the events in Germany, for many of the German visitors who had flocked to the Austrian Alps went back in panic in the middle of their holidays. Furthermore, business is rendered more difficult through the uncertainty in regard to the new Customs duties. Parliament has decided to increase the Customs tariffs on a number of articles; for instance, the duty on grain is increased fivefold, that on flour nearly fourfold. The duty on lard has been raised from 3.80 to 30 gold kronen. Numerous industrial articles, such as textiles, glass, iron goods and chemicals are to enjoy considerable tariff protection. Traders complain not only that duties have been increased, and the cost of living raised in such difficult times, but that it was very disturbing to be able to ascertain nothing definite in regard to the imposition of these important duties until the day on which they actually came into force.

Partly on this account foreign trade is unsatisfactory. In May imports amounted to 191 million schillings and exports to 118 million schillings. In the former case this means a decline of about one million and in the latter case of about 4.7 million schillings as compared with the preceding month. The deficit of 73.4 million schillings is large in view of the slight volume of business done, and it is also relatively greater than last year. During the first weeks it is possible that imports increased owing to the anticipated imposition of the new duties. This fact is also very important in regard to State finances, because revenue from Customs plays a big part in the Budget. In May the position of the Federal finances was not unsatisfactory. Total revenue, it is true, was 9.5 millions less than last year; on the other hand, 10 million schillings was saved on expenses, but this saving was of a non-recurrent character.

CANADA.

Crop Disaster — Relief Plans — Business — Prices — Parliament.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 7.

A crop disaster of major dimensions has befallen the prairie region of Canada. Rains which came in the last week of June were too late to repair the damage which had been wrought over a wide area by a prolonged drought and the concomitant dust-storms and soil drifting. From Brandon, in Manitoba, westward to the irrigated belt in Southern Alberta, and from the international boundary northward to the Assiniboine and Qu'Appelle Valleys, there is a devastated area in which practically no grain crop of merchantable value will be harvested this year; the wheat is already headed out on straw eighteen inches or

two feet high, and the farmers will simply turn their stock into it, as it will not be worth cutting.

On Dominion Day, July 1st, the House of Commons had to listen to a very grave statement from Premier Bennett about this calamity. He confirmed the accuracy of the pessimistic reports which had been coming from the West, and described the situation as "tremendously serious" and "perhaps the greatest national calamity which has ever overtaken this country." He estimated the completely ruined area at 5,000,000 acres, and said that preliminary reports of surveys of condition under taken by the Prairie Governments forecasted that at least 100,000 farmers would require public relief this winter. Furthermore, the disaster is not confined to the grain crops, for the hayfields and pastures are burnt up, and in some districts livestock have been dying for lack of water. The recent rains have somewhat eased this particular stress for the time being, but there will be a great shortage of winter feed for livestock. Mr Bennett promised that before Parliament adjourned special measures would be submitted for dealing with this grave emergency and the correlated unemployment problem, which will undoubtedly be aggravated by it. He invited the co-operation of the other political parties, which was immediately pledged. During this discussion Mr Bourassa said conditions in Montreal were almost as serious, and that every week hundreds of people were invading the city from the West and the rural districts of Quebec in the vain hope of finding work. In most places the municipal and provincial authorities upon whom the primary responsibility for relieving distress rests are at the end of their resources, so that the Federal Treasury is faced with the prospect of having to spend many millions of dollars on relief during the coming autumn and winter.

Fortunately the crops in the northerly regions of the prairie provinces, where there has been more moisture, promise to give an average yield; but at the best it is not expected that the western wheat crop will amount to more than 200 million bushels, which would be about half the average crop of recent years. Grain prices have now begun to rise, and one comforting feature of the outlook is that by the end of the next crop year the carry-over, which has been such a depressing factor in prices, should be reduced to small dimensions. Eastern Canada has in the past week been suffering from the severest heat wave of recent years; but, with good reserves of soil moisture in most localities, the crops have been faring well, and a better than average yield is now anticipated.

General business conditions remain very unsatisfactory, and in view of the crop disaster in the West a further contraction is now anticipated during the second half of the year. The warm weather has helped retail sales of seasonal summer goods, but generally speaking business is suffering severely from the widespread curtailment of purchasing power throughout the country, as the result of rural poverty and of wage cuts and unemployment in the urban areas. The primary iron and steel industries, as well as the railway equipment and machinery firms, are now feeling the pinch as the railways and other public utility corporations are unable to place extensive orders and the majority of factories are working on short time; probably the textile mills are proportionately busier than others, thanks to the additional protection they have secured, but many of them have their warehouses filled with unsold goods, and will have to cut down their output in the near future. The latest business survey of the Bureau of Statistics gives the following weighted indices for seasonal variation:—

(1919-24 = 100.)

	May, 1930.	April, 1931.	May, 1931.
Forestry	210.4	177.2	165.8
Mining	164.2	146.1	149.7
Construction	160.0	92.0	120.1
Manufacturing	188.1	145.9	163.6
Employment in trade ..	140.2	137.5	...
Imports	161.5	120.6	143.5
Exports	132.1	107.6	124.5
Car loadings	134.0	114.2	103.5
Shares traded	430.0	188.5	336.1
Bank debits	144.4	139.1	145.0

The employment index of the Bureau of Statistics for June was 103.6, as compared with 102.2 in the preceding month, and with 116.5, 112.2 and 113.8 on June 1, 1930, 1929, and 1928. Substantial advances were registered in construction and transportation and trade services; but, on the other hand, there was a curtailment in manufacturing, logging and mining.

The fall in commodity prices still continues, and the Bureau of Statistics wholesale index for June was 72.2, as compared with a figure of 72.0 for May. Sixty-eight quotations were higher, 94 were lower, while 340 remained unchanged. Another bulletin for the Bureau of Statistics shows that the cost-of-living index has been less sensitive to basic price changes than its wholesale counterpart and influenced more by seasonal factors. After moving gradually upward from midsummer, 1929, to a level of 102 in January, 1930 (1926 = 100) it has from that point declined steadily to 90.4 in May, 1931. This May figure represents a fall of 27.2 per cent. from the average level in 1920, but is still 38.2 per cent. higher than the average for 1913.

The Federal Parliament is still in session, and although, owing to the excessive heat, members are sighing for their homes, prorogation will probably not be possible before July 20th. The Government has found it necessary to make substantial concessions in its budget proposals and its delayed discussion of the tariff items until it is in a position to make public the terms of the trade treaty with Australia, concerning which some hitches have arisen. The preference it has given to Australian wines by the treaty has aroused strong protests from the grapegrowers and winemakers of the Niagara Peninsula.

Letters to the Editor.

FASCISM AT HOME.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Professor Salvemini, in his letter in your issue of July 11th, in trying to contradict the remarks made by "Historicus" on Fascist Italy, gloats over the alleged sufferings of the Italian people in the hope that they will affect Fascism unfavourably. But he appears not to be an assiduous reader of your esteemed paper, nor, indeed, of any other; if he were, he would realise that there is a little thing called the world economic crisis going on, and that practically every country is suffering from it. The measures enacted by the Fascist Government have attenuated the effects of that crisis in Italy, as, if wages have inevitably declined, so have prices. Anyone who has visited several countries during the past years cannot fail to realise that the consequences of the crisis have been no worse in Italy than elsewhere—in fact, they appear to be less intense and more equitably distributed in Italy than in many other countries.

The writer stresses the unemployment figures for the city of Turin. But the total unemployment figures for the whole of Italy on June 30th amounted to 573,693; when compared with the many millions of unemployed in Germany, Great Britain, the United States and other countries, even if the differences of population are taken into account, the Italian percentage compares very favourably with that of the countries mentioned. Moreover, during the past few months the number of unemployed in Italy has been steadily diminishing; the figure for May 31st was 61,386 more than that for June 30th, and in the earlier months the number was still larger, although they never even approached those of the other countries. In the pre-Fascist period, long before the world crisis, not only were the Italian unemployment figures (with a somewhat smaller population) as high as or higher than those of to-day, but there was, in addition, a far larger number of emigrants and vast numbers of men thrown out of work on account of strikes and lockouts, which now no longer occur. The percentage of Italians employed in Italy was consequently much smaller. It should be noted that the diminution of emigration is due almost entirely to the restrictive measures imposed by foreign countries and to the diminished power of absorption of immigrant labour in foreign countries.—I am, Sir, yours faithfully.

LUTIG VILLARI.

The Stock Exchange.

GERMANY AND THE BRITISH INVESTOR.

THE statesmen of seven nations have been at grips this week with the problem of finding ways and means to end an intolerable situation in Germany. Provided that the German financial machinery, which last week threatened complete "seizure," can be restarted by a judicious use of the international lubricant, the end of the stage of acute crisis will leave the way clear for the discovery of practicable means of preventing its recurrence. Investors have a beneficial interest in German solvency, partly because a trouble in any major nation quickly comes to roost in London, partly because there can be no recovery from world depression without a restoration of confidence, but mainly in view of the considerable amounts of German "paper" absorbed here and elsewhere in recent years.

The signature of the Hague Agreement last year was triumphantly acclaimed as marking the final removal of the Reparation question from the political sphere. The Hague statesmen, unfortunately, reckoned without their host. Germany's borrowing policy, trade depression, falling prices, and the attitude of the largest Reparations creditor—have all combined to upset optimistic prognostications. Since the inflation period, which culminated in 1923-24, Germany, faced with an acute shortage of capital, has been borrowing abroad, heavily and continuously. She has borrowed on long-term account whenever possible, but in view of the world's cautious appraisal of her credit status, her loans have tended to assume, recently, an increasingly short-term character. Thus she has been called upon to provide, year by year, for the service not only of her "political" annuities, but of a growing "commercial" debt. What means has she adopted to cope with this situation? The answer is given by the estimates of her balance of international payments for the last six years, published by the Statistical Office of the Reich, which are shown at the head of the next column.

The conclusions suggested by these figures can be briefly summarised. First, in only two of the last six years has Germany had an "active" visible trading balance. Secondly, the growth in her annual Reparation liability from 1925 to 1929 was accompanied by a steady increase in the interest requirements on her "commercial" obligations. Thirdly, Germany has borrowed abroad far more than her Reparation annuities. Her net payments under the latter head, in the last six years, have aggregated approximately £470,000,000, whereas, according to the German Statistical Office's estimates, she has borrowed abroad about £750,000,000, of which £370,000,000 is definitely traceable on long-term account, and £220,000,000 on short-term account, while £160,000,000 is not readily classifiable under either category.

The vulnerability of her position is clear. Even at the end of 1929, her external "commercial" indebtedness

GERMANY'S BALANCE OF INTERNATIONAL PAYMENTS, 1925-30.

	Year 1925		1926	1927	1928	1929	1930

was put at over £400,000,000 on long-term, and £300,000,000 on short-term account. This extensive borrowing might have been vindicated, eventually, if its fruits in the way of an enhanced national output had been sufficient to enable the new capital not only to "pay for its keep," but to provide an adequate margin for Reparation liabilities. Actually, Germany has not, as yet, been given time to prove her potentialities in this respect. Market conditions were moving against her even in 1929, when Wall Street was a magnet for the world's surplus funds, and new loans were becoming increasingly difficult to obtain. In 1930, they shrank to small dimensions, and only strenuous efforts to maintain Germany's merchandise exports, coupled with the reduction of her purchases from abroad to a minimum (with an opportune lowering of the earlier annuities under the Young Plan), prevented a serious crisis before the year was out.

In the first half of 1931, capital was leaving, not entering, the country. According to the Statistical Office, Germany's "active" current overseas trading balance may have covered, with a little to spare, her Reparations payments of about £43 millions, but has left over less than half of the £20 millions required for interest payments abroad. Altogether, she has succeeded in borrowing abroad, approximately, a further £32 millions gross, including £14 millions on long-term, £8 millions on short-term, and £10 millions on "miscellaneous" account. But withdrawals of foreign balances, on a large scale, have been reflected in the loss, by the Reichsbank, to the end of June, of nearly £60 millions in gold and foreign exchange. Dr. Ernst Wagemann, of the Institut für Konjunkturforschung, has estimated that, at least an

equal amount has been exported from the large commercial banks. Altogether, he estimates the total capital which has left Germany during this period (including foreign withdrawals and remittances by German capitalists flying from the Mark), is put at from £150 millions to £200 millions. In other words, anything up to half the short-term loans previously extended to Germany may now have been withdrawn.

British investors, however, are concerned rather with the position of Germany's long-term loans. On the preceding page we have given a list of the most important German issues dealt in on the London Stock Exchange.

Apart from small holdings of pre-war German loans (such as the 3 per cent. Imperial Loan), in which business is occasionally done at "rubbish" prices, the British investor's holdings of direct German Government obligations are only two, viz., the "Dawes Loan" and the "Young Loan." The first-named was part of an issue of £21,680,000 in Europe (of which London took £12,000,000) and \$110,000,000 in the United States; while the "Young Loan" was issued a year ago, under the Hague Agreement, London taking £12,000,000 and New York \$98,250,000 out of a total of approximately \$300,000,000 (say £60,000,000), the remainder being subscribed in Belgium, France, Holland, Italy, Switzerland and Sweden.

Both loans were intended to be as secure as human foresight could make them. The Dawes Loan is a direct and unconditional obligation of the German Government, chargeable on all its assets and revenues, with a specific first charge on all Reparation annuities (postponable or non-postponable), and a first charge by way of collateral security on gross Government revenues from Customs and certain taxes, in relation to which no further charge may be created ranking in priority to or *pari passu* with the charge under the loan. The Young Loan represented, as to two-thirds, the capitalisation of a portion of the non-postponable ("unconditional") Reparation annuities payable by Germany under the Young Plan (the proceeds being paid over to the creditor powers concerned), while the remaining one-third was utilised for the requirements of the German railway company and the German post office and telegraphs. The ultimate security for the Young Loan is the "full faith and credit of the German Government" in the matter of its Reparation obligations. The Government has fixed an annual direct tax of Rm. 660,000,000 on the German railways for 37 years and has undertaken to reserve free from charge (without prejudice to the Dawes Loan) the proceeds of the Customs tobacco, beer and alcohol duties. These undertakings, however, are strictly applicable to the service of the "unconditional" Reparation annuities, and not to the Young Bonds.

The Dawes Loan is repayable at par by October, 1949, by a sinking fund applied to the purchase or drawing of bonds, and approximately 11 per cent. of the original principal of the loan has, in fact, been now paid off. The Young Loan is repayable by 1965 by a cumulative annual sinking fund, applied to either purchase or drawings, but the German Government has the right after 1935 to redeem at par the whole of the loan or any multiple of \$80,000,000.

The position of the Dawes Bonds, as regards security, is clearly superior to that of the Young Bonds. The service of the former, averaging approximately £3,800,000 a year, is unconditional, and would automatically rank in front of any further pledging of German assets in connection, say, with any future national long-term loan arising out of the present crisis. Its legal status would be entirely unaffected by any revision of the Hague Reparations Settlement, whereas the latter event might call for the provision of fresh security for the Young Loan. No further issue of Dawes Bonds, or of bonds ranking *pari passu* with them, can ever be made, whereas further Young Bonds may be issued either for "the internal conversion of the National Debt of a Creditor Power" under the Reparation Plan, or on the authority of the Bank for International Settlements, as trustee for the creditor powers if the bank deems an issue opportune. As the market is quoting the Young Loan, to-day, to yield

nearly $\frac{3}{4}$ per cent. more than the Dawes Loan, the difference in the status of the two issues has not been overlooked.

The ultimate position of other stocks held by British investor is even more directly bound up with the restoration and maintenance of social conditions in the German body politic, though the service of individual issues might be temporarily affected if a continuance or recurrence of the present crisis interrupted the normal operation of the machinery for effecting remittances, or if continued "rationing" of foreign exchange were found necessary. The British investor, generally speaking, has steered clear of long-term loans in German industry, apart from the Potash Loan, which is a direct obligation on every owner of a potash mine in Germany, secured by a first charge on the proceeds of all sales of potash to countries outside Germany and further backed by guarantees and mortgages on potash properties and manufacturing plant. Given the normal working of exchange machinery, the potash bonds can be regarded as satisfactorily secured. Indirectly British holders of Kreuger and Toll and Swedish Match securities have a substantial stake in Germany, in view of the loan of \$125 millions at 6 per cent. made to the German Government by this group in connection with the match monopoly. The latter loan, however, carries no special form of security.

The chief long-term debtors to the British investor, outside the German Government, are the municipalities of certain of the large towns, which borrowed with some freedom on the security of their municipal properties three or four years ago. The proceeds may not always have been used in their entirety for direct "productive" purposes, and as considerable issues were made at the same period in other markets (particularly in the United States and Switzerland) the resources of the borrowers may be, in certain cases, heavily pledged, particularly in view of the increase in the "real" burden of all loans as a result of the increased purchasing power of money since the dates at which the debts were contracted. The majority of these loans, incidentally, are in sterling or gold currencies and not in reichsmarks.

Fortunately or unfortunately, the largest stake in Germany is held, not by Great Britain, but by other countries, particularly America, to whose capital market German municipalities, banks, public utilities and industrial concerns resorted in large measure before the Wall Street slump. In 1928 alone, £70 millions of German securities were offered to the American public, while in 1929, though the pre-slump Wall Street fever partially checked the movement by making bonds much less saleable, a further £20 millions of long-term securities was taken up. America's interest in the maintenance of German solvency is thus substantial, and it may be expected that her support will continue to be forthcoming for all measures calculated to restore German credit.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
August 12.	August 13.

The markets, being entirely in the dark as regards the proceedings at the Seven-Power Conference, again declined to take any risks, and the volume of business was reduced even below last week's attenuated level. All members, however, were painfully aware of the speed at which gold was leaving the country, and Thursday's weakness, particularly in gilt-edged, was, in fact, temporarily checked by the news of the rise in Bank rate, though doubts were expressed in some quarters as to whether the increase would be sufficient to redress the situation. The concrete results of the political Conference were deemed meagre. Though fears of an immediate collapse in Germany were removed,

the possibility was envisaged of a fairly prolonged period of credit restriction in Western Europe.

After fluctuating, with an improving tendency, on Tuesday, gilt-edged stocks encountered selling on Wednesday, and declined all along the lines on Thursday, the rise in Bank rate being accurately discounted. Funding Loan again showed particular weakness. India loans were lower, partly in sympathy with British stocks, and partly on the news of an attempt on the life of the Acting-Governor of Bombay. Australians tended slowly to improve at the beginning of the week, on hopes that Mr Lang would agree to toe the line in the matter of admission of debt liabilities.

Foreign bonds were heavy, though the week's chief losses were confined to German issues, which were marked down several points, with dealings at times largely nominal on Thursday. South American issues were weak, particularly Chileans, the resignation of the Government causing some uneasiness. The position of Chilean bonds is discussed in a "Note" on page 183.

Home rails were put down in sympathy with the general trend of values. The traffic figures revealed a stagnant situation, and the interim announcements were looked forward to without enthusiasm. The Metropolitan dividend of 1 per cent. against $1\frac{1}{2}$ per cent. was in accordance with market expectation. Southern preferred ordinary were lower on the cutting of the interim dividend from $2\frac{1}{2}$ per cent. to $1\frac{1}{2}$ per cent. A further setback in the peso and a mixed bag of traffic returns were reflected in a fresh irregular decline in Argentine rails, though business was on a somewhat larger scale. American rails registered numerous improvements, but Canadian Pacific were unable to hold a slight rise on more encouraging crop news.

The industrial markets opened an unpopular "three weeks' holiday" account with a determination to go slow. There were no really heavy falls, but numerous issues sagged, and in some cases business dried up almost completely. Electrical shares showed a better tendency, a few investment orders coming in on the maintenance of the interim dividends by the Metropolitan, County of London and South London companies. Motors were irregular, Fords receding, and steel shares dull. The Marconi report (dealt with on page 184) was neither better nor worse than expectation, and caused little change in quotations for Cables and Wireless stocks, the market having expected that the 1930 preference dividend would be more or less covered, while reserving less assurance for the position as regards the current year. Courtaulds were a better market, in accordance with the somewhat more helpful views of the rayon position summarised on a later page. Breweries were irregular, but tobacco on a later page. Gaumont British were in shares remained fairly steady. The forecast of improved sporadic demand on the board's forecast of improved earnings. The Continent was a seller of Kreuger and Toll and other Swedish issues. The appearance of a few buyers was sufficient to maintain quotations for bank shares, and a firmer tone pervaded the insurance share market.

Oil shares fluctuated within lower limits than last week. The American situation was disturbed despite the further reduction in the stock figures. Last week's drop of one penny in British prices (discussed on page 185), had been discounted. Paris did very little, but Amsterdam was a consistent seller of Royal Dutch. Rubber shares showed no signs of life, only a very few issues being dealt in at all, at prices showing little quotable variation. Despite a slight improvement in prices at the tea auctions, which few could explain, tea shares showed little change.

Dealings in mining shares shrunk to significantly small proportions, though the undertone remained relatively steady, even after the rise in Bank rate. Paris showed little interest in Kafirs, but the quarterly reports were generally favourable, and quotations were little changed. New Modderfontein were exceptionally weak. Rhodesians were entirely neglected. Tin shares receded further, the commodity again showing weakness, while the remarks of a prominent producer at a company meeting were a reminder of the lack of unity within the industry on

restriction. All copper shares were dull, Tintos falling sharply on Thursday after a firmer tendency in mid-week.

FOREIGN STOCK EXCHANGES.

NEW YORK.

New York was inclined, at the outset, to take a favourable view of the prospects for the London Conference. On Monday and Tuesday markets were quietly firm, but trading was severely restricted, Monday's turnover of 700,000 shares being the lowest for a very considerable time. The publication of the so-called "Hoover Terms" for dealing with the German situation caused scarcely a ripple on the surface. By Wednesday fears began to develop that the outcome of the London Conference would be indecisive, and disappointment was reflected in a sharp reaction in German bonds, though little credence was given to suggestions that if the present exchange restrictions proved inadequate, the German authorities might suspend the transfer of exchange for the service of foreign bonds generally. A more definitely depressed feeling followed Thursday's publication of the Conference decisions, and the rise in the English Bank rate. U.S. Steel, Bethlehem, General Electric, American Can, and other leaders which had shown moderate improvement declined sharply. The market was influenced by the view that, however successful the endeavours of America and Great Britain to prevent a further withdrawal of credits from Germany, the settlement of the latter's difficulties was likely to be a long-drawn-out affair. In the meantime, higher money rates were believed to be inevitable. Prominent steel producers like the President of Bethlehem Steel, Mr Grace, continued to talk of a possible seasonal improvement in the autumn, but general business remained sluggish.

(Continued on page 182.)

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption, where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

The Stock Exchange, Bank Rate and the London Conference.—Although the Stock Exchange was at no time optimistic as to the probability of dramatic action by the London "Seven-Power Conference," its members apparently decided that, so long as the outcome of the discussions was in doubt, masterly inactivity was the least expensive policy. During the first three days of the week, therefore, business was reduced to a minimum, the number of bargains marked in the lists being, in fact, the lowest for many months. Though some quotations showed a tendency to sag, prices on the whole were relatively well maintained. On Thursday, however, the markets tended to interpret the official news of the outcome of the Conference as evidence that an early solution of Germany's difficulties along "political" lines could scarcely be looked for. The week's further large gold withdrawals had provoked fears of a pending rise in Bank rate, which were confirmed by the announcement, at noon on Thursday, that the rate had been increased from 2½ per cent. to 3½ per cent. A more noticeable volume of selling developed, in the course of which gilt-edged stocks lost further ground and dealings in German issues were at times nominal. A small Stock Exchange firm was "hammered" on Thursday morning, but no importance was attached to the failure. The following table shows

the course of representative prices over the past troubled fortnight:—

	July 7.	July 16.	July 22.	July 23.

On the whole, the conservative attitude of the Stock Exchange throughout the recent difficulties has been an invaluable steadying influence, at a time when the effects of headlong action might have been regrettable and far-reaching. Though it is conceivable that situations of some delicacy may arise before the position created by Germany's difficulties can be completely cleared up, it may be hoped that investors at home and abroad will continue to support the Stock Exchange in maintaining the steadfast attitude which has proved so helpful up to the present.

Stock Exchange Reform.—A pamphlet on "Financial and Stock Exchange Reform," by Messrs P. E. Gourju and Hargreaves Parkinson, published this week, deals with this highly contentious subject from the investor's point of view, and makes a number of proposals with which most investors will heartily agree. On the question of increased publicity, the authors suggest that the Stock Exchange Committee should make quotation of a company's shares in the Official List contingent upon the publication of regular quarterly earnings' statements, that they should require holding companies to issue consolidated accounts, and that they should insist on the transmission to every shareholder of a verbatim shorthand report of the proceedings at every company meeting. Of the first two reforms the *Economist* has been a consistent advocate. As regards internal Stock Exchange procedure, the pamphlet may conceivably strengthen the hands of the reformers, of whom there are not a few inside the "House." The absence of a Mutual Guarantee Fund to protect investors against possible losses on account of brokers' defaults has long been a defect of Stock Exchange machinery, although in the case of the Hatry crisis a special fund was quickly created and the good name of the Stock Exchange preserved. The minimum amount of the fund, in the opinion of the authors, should be £2,000,000, which they think could be accumulated by moderate contributions from each member over a period of years. In the opinion of some other reformers, the Stock Exchange might attain the same end by applying some of its profits to a Guarantee Fund Reserve. On the question of control of capital issues, the authors tread much more difficult ground. There is no doubt that Stock Exchange booms lead to the promotion of undesirable companies, but we doubt very much whether an official committee consisting of members appointed by the British Governments, chambers of commerce, the London Stock Exchange, provincial stock exchanges, and joint-stock banks and insurance companies is, as the authors suggest, the right body to fix its *imprimatur* to capital issues. Even if such a committee were able to certify in the case of each new issue that its auspices were *bona fide* and that it was a reasonable speculative proposition,

* "London General Press," 6, Bouverie Street, E.C. 4. 2s.

it would not advance matters very far. Every issue made under the auspices of Clarence Hatry was, in fact, considered *bona fide* and a reasonable speculative proposition, at the time, by prominent authorities in the City. The Stock Exchange already has the power to refuse to deal in cases where it thinks that a new issue is not a fair proposition to the investor. In certain cases this power has already been exercised, and we do not see why a special committee should be better qualified to exercise it than the Stock Exchange Committee. The amount of dishonest or unreasonable issues is, however, a relatively small proportion of the total raised for industrial purposes at home and abroad. The real harmfulness of unsound or unscrupulous new issues lies in the damage done to prosperous industries by the introduction of unnecessary capital and plant. This is not apparently an issue which would be decided by such a committee as is proposed in this pamphlet. The matters raised in this work, however, may be commended to the serious attention of all interested in vital Stock Exchange reforms, which sooner or later must receive the attention of the authorities.

Chilean Bonds.—In the *Economist* of July 4th, referring to the financial difficulties of Chile, we stated that the Government was without the requisite foreign exchange to meet the payments on its external debt falling due after July 1st. It has now been announced by the Chilean Minister of Finance that in order to maintain the stability of the currency and to protect the gold reserves of the Banco Central, which have been considerably diminished, the Government has decided to pay the service of the consolidated debt during the present month by depositing its value in legal currency in a special account at the Banco Central in Chile. The Minister stated that the Government was studying various economies which would be put into practice immediately and would enable it to carry out the payments monthly as from August 1st. Prices of Chilean loans on this announcement fell further in the market and present quotations are very nominal, with margins of 5 to 10 points:

	Red. Date.	Highest. 1931.	Present Price.	Yield %
4½% 1895	1941	88½	77½	5.81
5% 1909	1955	84½	55	9.09
7½% 1922	1956	105	85	8.83
6% 1926	1970	92½	52½	11.41
6% 1928	1961	94	52½	11.41
6% 1929	1962	94	52½	11.41
		Dollar Bonds.		
7%	1942	100	56½	12.44
6%	1960	86	43½	13.88
6%	1961	86	46½	12.98
6%	1962	86	42½	14.04

It is understood that a delegation of British and American banking experts has gone to Chile for the purpose of investigating the country's financial position and advising ways and means for providing for the external obligations. Whether a solution can be found by August 1st seems very doubtful, as it is not the effecting of Government economies but the obtaining of foreign exchange which is the problem before the country. Bondholders should, therefore, keep an open mind until it is known whether the American banking interests are likely to come to the help of Chile with a further loan. So far the stability of the Chilean peso has been maintained only with the help of short-term American credits, which at present amount to over \$52,000,000. We understand that the representative of the Federal Reserve Bank of New York, who was to have accompanied the experts, has cancelled his visit, which may possibly be taken to imply that the Federal Reserve authorities do not consider themselves interested in extending help to Chile by way of a loan.

Lord Kylsant's Trial—Royal Mail Position.—The trial of Lord Kylsant and Mr H. J. Morland, on charges connected with the affairs of the Royal Mail Steam Packet Company, opened at the Old Bailey on Monday. The evidence followed the general lines of that given at the Guildhall. In opening the case, Sir William Jowitt, the Attorney-General, declared that while secret reserves

might be used for smoothing out the ups and downs of business, their "continued and deliberate and excessive utilisation" was calculated to present an untrue view of a company's prospects. On the prospectus charge, he submitted that the inference for the investor from a statement that "the average annual balance available" in the past ten years had reached a certain level, was that what had taken place in the past would happen in the future. Lord Plender, in the witness box, narrated the circumstances leading to Sir William McIntock's appointment to investigate the Royal Mail group's affairs, and Sir William McIntock dealt with the detailed finances of the Royal Mail Company and its six "100 per cent." subsidiaries, both witnesses being closely questioned by defending counsel as to their views on the propriety of internal reserve appropriations. Mr A. T. Cason, formerly chief accountant of the Royal Mail Company, gave evidence regarding the preparation of certain accounts, and was cross-examined regarding the tax reserve. Evidence was also given by representatives of some of the subsidiary companies and by Mr C. G. Matthew, the assistant accountant of the parent company. The Crown case was closed on Thursday, and Mr Morland's counsel submitted that, as regards his client, there was no case to go to the jury. The trial was still proceeding as we went to press. Meanwhile, the petition of the Royal Mail Company to the Court this week, for a further six months' moratorium on the company's debts, produced a statement by the company's counsel that, although the cash position had improved, there had been no trading profit, if allowance were made for depreciation and payment of interest. Mr Justice Maugham, however, observed that according to an affidavit sworn by Lord St. Davids, the undertaking on paper was £627,724 worse off than at the beginning of the year. His Lordship believed, however, that a receiver, if appointed, would not be able to show any better results, and sanctioned the continuance of the moratorium to the end of the year on condition that the company gave security to the debenture holders. From the statement of the counsel for the Prudential Assurance Company, it would appear that the first debenture holders are seeking to obtain specific security on the company's buildings.

Furness Withy's Accounts.—In the *Economist* of last week (page 184), we commented on the inability of shareholders to ascertain the real earnings of Furness Withy for the year to April 30th last, as a result of the action of the directors in withdrawing an undisclosed amount from reserves. At the meeting on Wednesday this week, Sir Frederick W. Lewis, Bt., revealed that the total transfer amounted to £111,000, of which £100,000 came from taxation reserves and £11,000 from a previous allocation in the accounts of a branch office, which was no longer required. The total earnings for the year, before depreciation, were, therefore, £291,691, and the earnings on the ordinary, after taxation, depreciation at £150,000, and preference dividend, were 2.1 per cent. Even this apparently meagre result represents a definite achievement under the conditions which obtained in the world's shipping trade last year, which were accentuated by the differential treatment accorded by certain countries to their own ships—a matter on which the feeling of the chairman, with that of many other large shipowners, is

SECURITY FIRST

Total Funds :

LIVERPOOL and LONDON.

strong. As the company, however, is shown to have more than paid its way in a year of extreme depression, shareholders will ask why the information disclosed at the meeting should not have been inserted in its appropriate place—namely, the year's report and accounts.

Elder Dempster.—This member of the Royal Mail group has not enjoyed a successful year. The 1929 net profit, which was less than half that of 1928, has been succeeded by a loss of £148,442. Profit at head office and branches was £14,959 and income from investments £106,696, against which ranked debenture and other interest £170,162, directors' fees £3,000, loss on sale of properties £12,791, and losses of subsidiaries before charging depreciation £83,144. After bringing in £127,217 from last year, a debit balance of £20,225 remains in the profit and loss account. The past three years' results are compared in the following table:—

	Years ended December 31,		
	1928.	1929.	1930.
	£	£	£
Net profit	447,106	201,504	Dr. 148,442
Preference dividend	410,875	217,125	...
No. of times covered	1.09	0.93	...
Ordinary:—			
Dividend	57,920	Nil	Nil
Earned %	2.5%	Nil	Nil
Paid %	4%	Nil	Nil
Reserve fund	Dr. 25,000	...	...
Inc. or dec. in carry-forward	+ 3,311	- 15,621	- 148,442

It is stated by the auditors that the balance-sheet value of shares in subsidiaries and associated companies, £12,195,812, is in excess of their present value. Other investments total £525,869. Against investments, as a whole, there is a reserve of £416,042. Quoted securities valued at £2,700,303 are declared to show a shrinkage of £1,888,667 on the basis of market quotations at December 31, 1930. The extent of a "very substantial shrinkage" in the value of the unquoted investments the auditors have found it impossible to determine. Current liabilities, at December 31, 1930, exceeded liquid assets by £2,174,392, as compared with £1,566,023 a year earlier.

Courtaulds and the Rayon Position.—An interim dividend of 2 per cent (free of tax) has been declared by Courtaulds, against 3 per cent. a year ago and 4 per cent. in 1929. The position in the rayon industry (writes a trade correspondent) is less unsatisfactory than has been stated in some quarters. Though much machinery is still idle, consumption is certainly not decreasing, and stocks in almost all countries are being reduced. The outlook, therefore, for a strong company such as Courtaulds is much better than twelve months ago. The internal position of the industry is healthier, following the elimination of the worst forms of competition, production is slightly less than sales, and further economies in working costs have been effected. There is, therefore, increased confidence that so soon as world conditions improve profit margins will be restored to a more satisfactory level. In the United States, where Courtaulds have large interests, the position in the industry is incomparably healthier than at the beginning of the year, though financial stringency continues to put a brake on progress. The Courtauld connections on the European Continent have also put their domestic affairs in order to a large extent, and, given a favourable settlement of the Central European crisis, their future developments should be satisfactory. On the other hand, pending an improvement in world conditions, little tangible progress can be expected in the export markets. In Great Britain, again, it is not yet clear how trade will develop in the next season, though present tendencies are not unpromising.

Marconi's Wireless Telegraph.—The chief interest of the report of the directors of Marconi's Wireless Telegraph Company lies in the statement that the profits of Imperial and International Communications, Ltd., for the year ending December, 1930, amounted to £326,248 (equivalent to 1.09 per cent. on that company's share capital), to which there has been added a sum of £200,000 transferred from general reserve, making a total of £526,248. The Communications Company is paying a dividend of £525,000 (1.75 per cent.), the proportion receivable by the Marconi Company being £77,206. The Marconi Company's business, apart from the collection of royalties, is now exclusively concerned with the non-traffic side of wireless service—with the supply of telephones and telegraphs and of broadcasting stations to customers at home and abroad. The accounts show that the profits from the manufacturing business and royalties amounted to £72,627 and dividends from trade investments to £86,169. After allowing £23,731 for depreciation the total profit of the Marconi Company came to £212,336, of which £194,836, or 9.6 per cent., is available for the ordinary share capital. As the company has declared a dividend of 10 per cent., as against 15 per cent. in the previous year, it is paying out more than it has earned—which is all to the benefit of the preference stockholders of Cables and Wireless, Ltd. The results for the past three years compare as follows:—

	Two years to Dec. 30, 1929.		Year to Dec. 30, 1930.
	£		£
Net profits from sales, royalties, etc.....	420,469		72,627
Dividends from investments	466,649		163,439
Total profit	887,118		236,066
Net profit after expenses, tax, depreciation and debenture interest	794,735		212,336
Preference dividend amount	{ 42,500 30,000 404,027 303,020 }		17,500
Ordinary dividend	{ 20 & 15 17.87 p.a. }		202,013
Paid %	20 & 15		10
Earned %	17.87 p.a.		9.64
Carry-forward	38,966		31,788

The balance sheet shows a liquid position, current assets exceeding current liabilities by £1,400,268. On account of a satisfactory settlement of income-tax liabilities of previous years, a sum of £275,000 has been transferred from income-tax account to the general reserve, bringing the total reserves up to £1,469,152. The disclosure of the profits of Imperial and International Communications, Ltd., enables the following estimate to be made of the earnings of Cables and Wireless, Ltd.:—

	£
I. and I.C. divs. to cable companies.....	approx. 448,000
Cable companies' net investment revenue	465,500
Marconi dividend.....	215,000
	£1,128,500

The item for Cable Companies' net investment revenue is arrived at on the basis of 1930 revenue after deducting debenture interest and preference dividends. If we allow overhead expenditure and tax at £50,000, there would be £1,078,500 available for dividend purposes. The dividend on the 5½ per cent. cumulative preference stock of Cables and Wireless required £1,263,053 last year. The report of Cables and Wireless, which appears as we go to press, largely confirms these estimates. The net available profits of the group companies are £1,011,019, but as some subsidiaries overdistributed their earnings, the net revenue accruing to Cables and Wireless is £1,276,490. The accounts will be examined in detail in our next issue.

Waring and Gillow.—The report of Waring and Gillow for the year ended January 31st last suggests that the directors have taken drastic action to clear up the position since Lord Waring resigned his chairmanship last October and the board was reconstituted to include Mr J. C. Sanderson as chairman, Mr E. J. Jennings as deputy-

chairman, Mr J. R. Brackenridge as managing director, Mr A. D. Campbell and Mr S. H. Gillett, F.C.A. (representing the creditors). The balance sheet, after their clean-up, shows an adverse balance on profit and loss account of £519,951, made up as follows:—

	£
(1) Loss on trading for the year, after charging all working expenses, normal depreciation, directors' and auditors' fees and trustees' remuneration ...	96,284
(2) Provision for bad and doubtful debts	240,585
(3) Provision for debt due by the late chairman	108,100
(4) Abnormal stock depreciation	131,000
(5) Writing off assets to which no value is now attached and costs relating to the re-organisation of the business	182,337
(6) Provision for trading loss for year in subsidiary companies	7,811
There has also to be provided:—	
Debenture interest for year to January 31, 1931.....	56,202
Transfer to reserve for amortisation of leases.....	16,448
Making a total of	838,768

From this total the following amounts fall to be deducted:—

	£
Balance at credit on profit and loss, January 31, 1930, less half-year's preference dividend to that date	57,253
Available portion of reserve against realisation of Princess Theatre site	149,000
General reserve	50,000
Capital reserve	62,565
Leaving an adverse balance on profit and loss of	519,951

The report gives detailed information regarding the main items, from which it appears that, although sales showed a falling off, the greater part of the trading loss was incurred by exceptionally high overhead charges. Some £165,938 of the total allocation for bad and doubtful debts was due to the company's inability to obtain payment in respect of certain hotel work executed abroad in 1929. The late chairman's indebtedness is secured by charges on certain assets which may ultimately be realisable at figures sufficient to enable the company to recover the whole outstanding amount, but in the present position of trade this possibility is doubtful, the more so as other charges on these assets rank prior to the company's claim. Obviously, in writing off the whole of the amount the board is taking an extremely conservative view of possibilities. The provision for abnormal stock depreciation reflects the directors' opinion that certain stocks were in the past overvalued. The company's creditors have so far received 10s. in the £ in two instalments. Altogether, to meet its liabilities and obtain working capital, the company will require about £350,000 in the spring of 1932. The directors are considering schemes for "adequate permanent financial arrangements," and expect to submit recommendations to shareholders in three or four months' time. Meanwhile, reorganisation of the business is proceeding and savings at the rate of over £150,000 per annum have been in operation since the beginning of the current financial year. Though the directors have been somewhat ruthless in their treatment of assets, the report clearly shows that the position when they took over was worse than had been generally realised. An old-established business with a world-wide reputation was, in fact, rapidly drifting towards a condition of insolvency, and the effort to grapple with its problems came none too soon.

Union Cold Storage.—There has been little variation in the earnings of this company during the last four years. Last year's net profit of £825,667 was only £4,523 more than that for 1929:—

	1928.	1929.	1930.
Year ended Dec. 31.	£	£	£
Net profit (before deprec. reserve).....	928,361	946,144	950,667
Preference dividend.....	720,000	720,000	720,000
No. of times covered	1.29	1.31	1.32
Ordinary dividend:—			
Amount	100,000	100,000	100,000
Earned %	20.83	22.61	23.06
Paid %	10	10	10
Depreciation reserve	103,041	125,000	125,000
Increase in carry-forward..	5,320	1,144	5,667

The outstanding feature of the balance sheet is the reduction of £3,686,162 in sums owing by subsidiaries, which now stand at £648,710. The company has paid £3,304,227 to subsidiaries, reducing its indebtedness in this respect to £36,812. A further £393,000 has been invested in subsidiaries and general investments have been increased by £66,030. Debtors rose by £173,623 to £2,517,462, while creditors were reduced by £768,298 to £2,506,146. Mortgages totalling a further £505,156 were issued during the year, and as a result the bank overdraft has been reduced by £458,209 to £1,786,273. Stocks have been considerably reduced, being some £566,542 less than in 1929. The general reserve fund of £200,000 has been transferred to the depreciation reserve, and after writing off £925,660 this fund now stands at £2,000,000, including the sum transferred from the 1930 profits.

Crosse and Blackwell, Ltd.—Despite the introduction of new capital in the form of 6½ per cent. debenture stock, this company's net profit showed a decline last year to £82,136, and did not cover preference dividend requirements. The results of the past three years are compared in the following table:—

	Years ended December 31,		
	1928.	1929.	1930.

Inc. or dec. in carry-forward	+ 8,331	- 7,546	- 39,097

* In past years the preference dividend has been shown as a gross amount. This year it is given after tax. Had the previous procedure been followed, the net profit would have been shown as £120,105.

During the year a further £333,809 was invested in subsidiaries, and £8,408 was invested in subsidiary debentures. Loans to subsidiary and associated companies were £69,831 greater at £806,926, and £54,740 was spent in "establishing an overseas business." Stocks showed a large growth of £159,222 to £181,747, while debtors and cash rose respectively by £25,085 and £51,318. At £215,449 creditors showed an increase of £114,077 and bankers advanced £186,225 during the year, while commitments to subsidiaries were £38,674 lower at £57,556. Consequently liquid assets exceeded current liabilities by £507,194, as compared with £617,724 in 1929. In the report it is stated that extreme difficulties have been encountered as regards commodity prices and fluctuating rates of exchange. The introduction of a new sales system necessitated extensive advertising, the cost of which, £82,388, was charged to the reserve fund. A sum of £175,000 was transferred from the reserve fund to provide a specific reserve against losses in France and Canada. Since the completion of the year, preference shareholders have been notified that the preference dividend for the first half of 1931 will not be paid.

Another Penny Off Petrol.—Shareholders of the leading oil combines are becoming unpleasantly aware that something very like a petrol war is in progress in Great Britain. For the second time since the Budget was opened, the

price of petrol has been cut by 1d. per gallon, making the present retail price 1s. 2½d. in England and Wales. In other words, the consumer is now paying the same price as he did before Mr Snowden increased the petrol tax from 4d. to 6d. in April last. The following table shows the changes in the price of petrol since the petrol tax was first introduced:—

Date of Change.	Price per gal.*	Date of Change.	Price per gal.*
April 1, 1928	1 0½	March 3, 1931	1 2½
April 28, 1928	1 4½	April 28, 1931	1 4½**
March 1, 1929	1 7½	May 22, 1931	1 3½**
November, 1929	1 6½	July 18, 1931	1 2½**
Sept. 23, 1930	1 4½		

* These prices refer to the London and Home Counties area, except as regards this year, when London and Home Counties prices were made applicable to the whole of England and Wales.

† Including 4d. tax and ½d. collection charge.

‡ Including 4d. tax.

** Including 6d. tax.

The reasons for the present cut must be found in market conditions partly in America and partly in this country. In June, three reductions were made in the export price of petrol at the Gulf ports of America, and on July 9 a further cut brought the price down to 2.96 cents per gallon, which was a new low record for all time. This was the result of the export of cheap crude oil from the new oil-field in East Texas which has not yet been brought into the restriction line. On July 18th a recovery in the export price to over 3 cents per gallon was seen. In California, where restriction of oil output has been legally enforced, prices of gasoline and crude oil have been advanced, and there is some expectation that, if the Texas Legislature passes the Bill which it is considering for the prevention of the waste of crude oil and gas, there will be a similar rise in gasoline prices in Texas and the Mid-Continent districts. It is now possible to import American gasoline into Great Britain and Europe at a cost of not more than 2½d. per gallon. This allows, in the British market, a fair margin of profit with the retail price at 1s. 2½d. per gallon. With tax at 6d., cost of raw material 2½d., expenses or delivery, say, 2½d., commission to retailers 2d., a total cost of 1s. 1d. per gallon allows the combine companies a profit of about 1½d. per gallon. Competition, however, has arisen from an independent and powerful source, namely, the Petroleum Storage and Finance Corporation, which is marketing petrol under contract with the Standard Oil Company of Indiana. This company's petrol is retailed at not more than 1½d. per gallon. How any profit can be made at this price is not clear, but as long as this company can draw on the Standard Oil Company of Indiana for its supplies to the full extent of its marketing facilities, the combine companies have a serious competition to meet which may induce them temporarily to reduce their slender margin of profit.

Chrysler and the American Motor Industry.—The decision of the Chrysler Motor Corporation to introduce a new cheap model, announcement of which was made by a £700,000 advertising campaign recently opened throughout the United States, indicates a divergence of opinion among the leading motor manufacturers regarding the present trends of the world's motor market and the best means towards individual recovery. Chrysler ranks third in the American motor industry and second among manufacturers of six-cylinder cars. Besides the Chrysler Six and Eight, the company also manufactures the Dodge, de Soto and Plymouth cars and Dodge trucks. The production of all makes for 1929 totalled 450,543, of which 16 per cent. were exported. The 1930 sales figures showed a drop of about 17 per cent., while those of production for 1931 suggest that by the end of the year all divisions of Chrysler will be shown well on the way to "normal." Recent balance sheets of the Chrysler Corporation have not been very favourable and the present action suggests that a company which has scored its reputation in the luxury market feels that the golden eggs are to be found in the cheaper market. However, at the same time as Chrysler announce a four-

cylinder car, the biggest manufacturer of the four-cylinder, finding his hitherto unassailed position seriously threatened, is almost certainly on the point of entering the multi-cylinder market. There have long been rumours of a Ford Eight, but the unusual activity now being observed at the Ford factory at Detroit, together with the large sums of cash (\$400,000,000) which Mr Ford is known to have at hand, and the fact that, for the first time in motor history, Ford sales figures have been surpassed for the last few months by those of the Chevrolet, a product of General Motors—a six-cylinder and slightly more expensive car—make it almost inevitable that Mr Ford is about to take some revolutionary step. In some quarters it is thought that Mr Ford will continue with the present "A" model and that the new model (expected to be an eight-cylinder vehicle and to be called the Edison) will serve to fill the gap between the Ford and the Lincoln, Mr Ford's luxury product. In either case, both companies are at least agreed in the desirability of having eggs in each of the differently priced baskets. Chrysler is said to have invested \$10,000,000 in manufacturing and sales preparations for the new model, which is to be a product of the Plymouth division. Chrysler employees have increased from 4,500 in May to nearly 10,000. The announcement of the new model seems to have been favourably received on the Stock Exchange, where Chrysler shares have recovered from a low level of 12½ to 22½.

Victoria Falls and Transvaal Power.—A fresh although moderate expansion occurred in last year's net earnings, a small decline in revenue being rather more than offset by reduction in charges—especially under the heading of interest and premium on debentures. Once again £50,000 is placed to reserve, and after the payment of 15 per cent. on the ordinary and the maximum of 10 per cent. on the participating preference, the increased balance of £194,460 remains to go forward. The fixed assets have been written down, though not on quite so substantial a scale as in respect of 1929. Changes in the company's holdings of British Government securities leave the total somewhat higher than before at £2,080,500. Cash balances now figure at £228,500, against £673,500, the latter amount including £475,000 Treasury Bills. In place of these the 1930 accounts show £585,000 loans against security—since repaid. The first debenture issue has been reduced by £158,000 to £1,026,200, and the second by £89,600 to £660,900. On the basis of the dividends for the past six years, the ordinary shares yield about 6½ per cent. and the preference slightly under 6 per cent. The 5 per cent. first debentures are quoted at 110 and the 5½ per cent. second at 105.

Krumat Pulai.—Unlike other Eastern tin-dredging enterprises, writes our mining correspondent, this company's dividend total for 1930 records an increase, the balance of 2½ per cent. now declared making a total of 20 per cent., as against 17½ per cent. The explanation consists in the fact that the property contains also a deposit of scheelite, or wolfram. Last year a recovery occurred in the market value of this product, and the sales realised £46,450, comparing with £9,750 from tin. In respect of 1929 the figures were £11,580 and £28,100 respectively. Importance, therefore, attaches to the position as regards scheelite. The general manager states that "developments continue satisfactory, and on a conservative basis it is estimated that this deposit has a further life of at least eighteen years." Before the scheelite becomes exhausted the production of tin will—it may reasonably be hoped—rest on a more profitable basis than has existed for some time past.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Provincial Bank of Ireland, Standard Bank of South Africa, United Dominions Trust, Furness Withy and Company, Anglo-Dutch Plantations of Java, Nirmala

(Java) Plantations and Land, and Victoria Falls and Transvaal Power. The chairman of the Provincial Bank of Ireland, describing conditions in the Free State, said that despite unsettled weather in early June, harvest conditions were considered to be promising. It was hoped that prices would eventually prove remunerative for the farmers. Presiding at the meeting of the Standard Bank of South Africa, Mr E. Clifton Brown declared that it was entirely on account of the gold-mining industry that South Africa had so far come through the period of severe depression better than almost any other country in the world. Colonel Sir Robert Williams, discussing the tea situation at the Anglo-Dutch Plantations of Java meeting, declared that the demand for the cheaper packet teas in England had greatly encouraged the output of native leaf, but the company had substantially reduced its costs. The speech of Sir Frederick Lewis, Bart., at the Furness Withy meeting is discussed in an "Investment Note" on page 183.

City of Sydney.—Offer of conversion of £1,000,000 City of Sydney 6½ per cent. debentures, 1931, in part, or whole into an equivalent nominal amount of 6½ per cent. debentures, 1936, at £98. The stock will be redeemable in London on August 1, 1936. Holders converting will receive fully-paid scrip certificates, together with £2 per cent., representing the difference between the nominal value of the expiring debentures and the issue price of the new debentures. Interest will be payable on February 1st and August 1st, and will not be subject to New South Wales taxation, duties and levies, if held by persons not domiciled within the State. Any debentures not converted will be repaid at the Commonwealth Bank of Australia, London, on August 1, 1931.

East Surrey Water Company.—Issue of £132,500 East Surrey Water Company 4½ per cent. debenture stock, 1965, at par, in amounts and multiples of £1. Interest will be payable on March 1st and September 1st, and the stock will be redeemable on September 1, 1965, or on any date after September 1, 1955, after six months' notice to holders. The proceeds of this issue will be used to redeem the 6 per cent. debentures 1931-41 on September 1, 1931. This issue has been already placed and is not being offered for public subscription.

[Other Stock Exchange information, including the latest summary of balance sheets, dividend announcements, weekly traffic returns and profit and loss accounts, will be found on page 197 under the heading "Company News."]

REPORTS AND NOTICES.

ASSURANCE.

EQUITY AND LAW LIFE ASSURANCE SOCIETY.—In view of the inability, owing to ill-health, of Mr L. W. North Hickley to continue the Chairmanship of the Equity and Law Life Assurance Society, the Directors have appointed Sir Dennis Herbert, K.B.E., M.P., to be Chairman and Sir Bernard Bircham, K.C.V.O., to be Deputy-Chairman of the Society.

MISCELLANEOUS.

BARROW HAEMATITE STEEL COMPANY, LTD.—An extraordinary general meeting of the Barrow Haematite Steel Company, Ltd., was held on June 9th in London at which special resolutions comprising alterations of the articles of association consequent on the "extension of time" scheme approved at meetings of the debenture stockholders, the interest certificate holders and of the shareholders of the company, held on May 29th last, were carried unanimously.

MANCHESTER SHIP CANAL COMPANY.—The traffic receipts for the month of June, 1931, amounted to £100,485, against £121,568 in June last year, a decrease of £21,083. The traffic receipts for the half-year ended June 30, 1931, amounted to £592,886, as compared with £683,809 for the corresponding period of last year, a decrease of £90,923. The net revenue of the whole of the undertaking for the half-year (after providing for interest and fixed charges) was £75,335 less than the corresponding half-year in 1930.

MILLARS' TIMBER AND TRADING COMPANY, LIMITED.—The report for 1930 shows that the share capital remains the same at £1,700,000. The amount brought forward from the end of 1929 was £203,437. For the first time since the company was formed in 1902, the trading account shows a loss. The preference dividend paid July 1, 1930, absorbed £25,500. The loss on trading account for 1930 was £53,546, which compared with a profit of £79,705 for 1929. Directors' fees again absorbed £3,750. The sum of £60,000 is transferred to depreciation and reserve account against £35,000 in preceding year. The sum of £60,641 is carried forward to next account. The depreciation and reserve account now stands at £954,855. Total assets are £3,429,979. Cash is reduced from £49,082 to £26,670. Stocks are at £733,433, as against £754,118. Debtors are reduced from £301,602 to £193,557. Bank loan is at £357,183, as compared with £354,754. Creditors stand at £234,220, against £235,214. Bills payable are reduced from £189,669 to £123,080. It is pointed out that as in former accounts the figures of Australian assets and liabilities are stated in British sterling, without reference to exchange values. The meeting will be held at Winchester House, London, on July 28th at 12 o'clock noon.

COMPANY MEETINGS, &c.

PROVINCIAL BANK OF IRELAND, LIMITED.

SUCCESSFUL RESULTS—DIVIDEND MAINTAINED.

CHAIRMAN AND DEPRESSION IN TRADE.

The half-yearly general meeting of the Provincial Bank of Ireland, Limited, was held at the offices, 5, College Street, Dublin, on the 22nd instant, Mr Richard Durant Trotter, chairman, presiding, and the other directors present being Messrs J. M. Carroll, R. A. Gradwell, E. R. D. Hoare, A. B. Leslie-Melville, J. H. Pim, F.C.A., and Captain G. L. Poe, R.N. (retired).

Moving the adoption of the report and statement of accounts, the Chairman said:

"The position we are able to place before you, and covering the half-year to 30th ultimo, I feel you will regard as quite satisfactory, for despite the general depression in trade circles, which unfortunately continues, necessitating, as you will have seen, reduction in the rate of interim dividends by the majority of large English institutions, we are in the happy position of being able to pay the usual return at the rate of 14½ per cent. per annum, less income tax."

NET PROFIT.

They would observe that they dealt on this occasion with a net profit of £55,135, after providing for all bad and doubtful debts, and other charges—an increase of over £2,000 on the figures of a year ago. This, I am confident, you will consider satisfactory, bearing in mind, as mentioned to you on a previous occasion, that the value of the bank's circulation is considerably lessened, following on the changes made in the currency in the Free State.

They placed £10,000 to reserve fund, which now stood at £670,000, being £130,000 more than the paid-up capital of the bank. £10,000 is placed to contingencies fund, and £5,000 to bank premises, which appeared in the balance sheet at £200,925, and at this total the board considered the bank's property was very conservatively valued.

With regard to the bank's liabilities to the public, the amount due to depositors stood at £14,679,000. Note circulation at £872,000 showed an increase on the figures at December 31 last, being due in large part to the further amount of consolidated notes placed in the hands of the public.

On the other side of the balance sheet, advances to customers against securities stood at £5,737,000, bills discounted £1,039,000, and the proportion of liquid assets to liabilities was represented by the high percentage of 63.

UNDER CURRENCY ACT.

They would have noticed a reference to securities lodged with the Currency Commission as security for consolidated notes. This now appeared for the first time, in compliance with a requirement under Section 52 (4) of the Currency Act, 1927, and in common with the other Irish banks of issue they had lodged with the Currency Commission sufficient cover for their note issue. Dividends on these particular stocks continued to be payable to the bank and forms portion of the profits.

Conditions in the Free State continued favourable, and the prospects of the harvest, despite unsettled weather in the earlier part of last month, were considered by the Board of Agriculture to be promising; and it is hoped that prices eventually will prove remunerative for the farmers.

In Northern Ireland and its manufacturing centres, industry had suffered by the world conditions, and any marked progress had been retarded. The Belfast shipyards, large employers of labour, were fairly well supplied with work for some time, but the prospects of a continuance of activity were not too reassuring. As to the linen trade, we learn that for the past half year the majority of the spinners and weavers in Northern Ireland have been more fully occupied with work than for the corresponding period of 1930.

NEW BRANCH.

The Chairman mentioned that they had opened a branch at Stormont, Belfast, to provide facilities for the Northern Government.

"Some of you may have seen an article on the subject of economic conditions at the present time by Sir William Dampier-Whetham," he continued. "This article contains some very interesting points, to which I now propose to allude. When confidence is lacking, savings remain idle or on deposit in banks, and the reduced demand for goods leads to a smaller trade and a fall in prices. The price level depends partly on the cost of production, and if processes of

manufacture improve, as they have done in recent years, prices fall, leading to over-production and unemployment in some trades.

"But if prices are rising faster than costs, fixed charges become less onerous, profits are made, enterprise is encouraged, and wealth increased.

"PROFITS INTO LOSSES."

"If, however, prices fall owing to a scarcity of money—that is, if the value of money grows greater—the effects of rising prices are reversed. People with fixed incomes from bonds or sheltered wages gain as prices fall; but the farmer, the manufacturer and other active producers find the market always against them; costs lag behind prices, fixed charges turn profits into losses, enterprise is checked and unemployment becomes rife.

"The gold standard, supposed to be a safeguard in dangerous times, was abandoned in 1924 as the first of war measures. Plentiful bank money was created, and wages and other incomes rose fast. Hence prices moved upward.

"The immediate cause of our want of resilience from 1923 onwards was not in doubt," he said. "It was due to a failure to lower costs of production into conformity with the new level of prices set by world deflation. If charges remained constant while the prices of products continually fall, those charges must inevitably in the end absorb all profits, and the wheels of industry must stop.

The present dislocation between the wholesale and retail prices and wages showed that wages in the sheltered trades were too high, and a reduction of these was necessary. The cost of living would come down and increased purchasing power improve trade.

WAR DEBTS.

The present unequal distribution of gold might be cured by cancelling or reducing war debts, or if the large holders of gold would lend freely abroad. When the Young Plan was concluded for Germany in January, 1930, it was intended to be a final settlement of the German reparations question, and contained provisions for the postponement of payments to the creditors of Germany under certain eventualities; it was not expected that these difficulties would arise so soon. Since the war Germany had largely depended for working capital on short-term advances.

These funds appeared to have been chiefly for housing schemes, etc., instead of for producing goods for export. Following the failure of the Austrian Credit Anstalt and the consequent general uncertainty of the financial position of Central Europe, these short-term loans began to be called in, and a strong demand also set in for foreign currencies, with the result that between May 30th and June 15th the gold and currency reserves of the Reichsbank were practically reduced by half, and even the raising of the German Bank rate to 7 per cent. on June 13th failed to stop the outflow. On June 21st President Hoover's proposal temporarily relieved the strain, but when a fortnight passed over it was known that all the creditor countries would accept the proposal of a moratorium for one year, the outflow from Germany began once more.

The central banks then joined together and made available a credit of £20,000,000 to cover the settlements at the end of the month, but much of this sum also was withdrawn to repay credits. On Monday, July 13th, the present crisis began with the closing of one of the largest German banks and the Berlin Stock Exchange. The German Chancellor and the President of the Reichsbank urged assistance from the Bank of International Settlements, but so far nothing had been settled at Basle. As they were aware, there was a Conference of all the Powers interested sitting in London, which they hoped and believed would arrive at a satisfactory solution.

In conclusion, the chairman welcomed Mr James M. Carroll, of Dundalk, to the directorate of the board, and referred to the duties carried out by the secretary, chief officer, managers and staff of the bank. During the period under review, banking had not been easy, and he felt sure they would agree that their officials were deserving of warmest thanks.

Captain Poe seconded and the motion was carried unanimously.

VOTE OF THANKS.

Alderman Hubbard Clarke, moving a vote of thanks to the chairman, directors and staff, said there was a popular belief that the profession of banking was easy, that the maintenance of profits

STANDARD BANK OF SOUTH AFRICA, LIMITED.

SATISFACTORY RESULTS DESPITE ADVERSE TRADE CONDITIONS.

MR E. CLIFTON-BROWN'S REVIEW.

The one hundred and eighteenth ordinary meeting of the Standard Bank of South Africa, Limited, was held, on the 22nd instant, at the Cannon Street Hotel, London, E.C.

The Secretary (Mr T. D. Williams) having read the notice convening the meeting and the auditors' report,

Mr E. Clifton-Brown, who presided, said that the bank's deposits and current accounts had increased by £2,368,170 to £51,934,061. An increase of that nature was an inevitable feature in periods of trade depression, when the public lost confidence in investments of an industrial nature, but did not necessarily of itself add to the profits of the bank. This growth of resources, however, helped to consolidate the bank's general position and placed it on a strong footing to extend favourable consideration to legitimate demands for banking facilities which were sure to follow a renewal of trade activity whenever it might come.

Investments showed an increase over last year's figure. It was thought advisable to extend somewhat their holding of British and South African Government securities, and since the close of the year they had invested further sums in such securities. The item of "bills of exchange" showed a reduction of £1,500,000, solely due to the contraction of the external trade of the country. Bills discounted and advances had increased by over £3,800,000, and now stood at £37,500,000, but that did not mean an increase in advances to their customers. Indeed, owing to the diminished demand for facilities in consequence of bad trade, those had actually declined, and it had been necessary to employ their surplus funds, which would normally be lent in trade, in other directions that unfortunately did not give them the same remunerative rates of interest.

YEAR'S PROFIT.

They had not escaped the effects of the prevailing trade depression, and he did not think he need make any apology for the profit figures showing a reduction of about 13 per cent. on those for the previous year.

In arriving at the figure of profit for the year, namely, £567,620, they had made provision for bad and doubtful debts out of contingencies account. After appropriating £75,000 to writing down bank premises account the directors recommended that £100,000 be added to the pension fund, and that a final dividend of 7s. per share, together with a bonus of 1s. per share, be paid, leaving £142,622 to be carried forward. In view of the very unfavourable conditions that had ruled during the period under review, he was sure shareholders would agree that the figures were not unsatisfactory.

The problems of the current year were not less serious—they might be even more serious—than those of last year, and, unless there was some material improvement in the prices of primary products and other raw materials which South Africa produced, the earning capacity of most businesses must be adversely affected.

The financial stringency evidenced in 1929, and throughout the first half of 1930, was followed by a sharp and general decline in business activity. Economic conditions in South Africa reflected in most respects those obtaining elsewhere, and, with falling prices, the year was a difficult one in all departments of trade, industry and finance. It was entirely on account of the gold mining industry that South Africa had so far come through the period of severe depression better than almost any other country in the world. The continued stability and progress of that industry was undoubtedly the mainstay of the country at the present time.

TRADE OF SOUTH AFRICA.

While climatic conditions on the whole had not been unfavourable, the downward tendency in world prices had been accelerated, with the result that, despite a large increase in the quantity of produce exported, the total value had decreased considerably. The total value of exports of farm products in 1930 was £20,000,000, as compared with £26,500,000 in 1929 and £32,000,000 in 1928. The value of the overseas trade of the Union for 1930 showed a decrease of £33,000,000 as compared with the figures for 1929, exports falling by over £14,000,000 and imports by nearly £19,000,000.

He wished to express a word of congratulation to the Union on the success of their recent loan, and everyone who took any interest in South Africa was, he was sure, justly proud of the Union Government's decision not to take advantage under the Hoover proposals of the British Government's offer for the postponement of war debts. The report was unanimously adopted.

The retiring directors and the auditors were re-appointed, and the proceedings terminated with a hearty vote of thanks to the chairman, directors and staff.

was a simple matter, and amongst those who held that belief there was never any trail of worry when things were going well. When profits showed signs of falling off, however, these were the people who always wanted to know the reason. They had never any reason to complain of the Provincial Bank in this respect.

The Provincial had been not only of great value to Ireland as a whole, but particularly to the Free State through its large advances to customers during the industrial depression. He knew that the people of the country appreciated that.

He congratulated Mr Francis S. Forde, secretary, on his promotion. Mr McCullagh seconded, and the vote was passed.

CHAIRMAN'S REPLY.

The Chairman, returning thanks, said that last year conditions in banking had not been easy, and the last few weeks had been a most difficult period. The staff and managers had come through very well indeed. Before they were out of the wood things were going to be difficult for some time, but they knew they could rely on the co-operation of the staffs.

The Secretary also returned thanks.

The two retiring directors, Sir William H. Goschen, K.B.E., and Captain Poe, were re-elected, and the selection of Mr J. M. Carroll was confirmed.

NIRMALA (JAVA) PLANTATION AND LANDS COMPANY, LIMITED.

MR W. HILLIERS' REVIEW.

The annual ordinary general meeting of the Nirmala (Java) Plantation and Lands Company, Limited, was held, on the 16th instant, at the registered office, 5, Fenchurch Street, London. Mr Walter Hilliers, the chairman, presided.

The representative of the secretaries (Messrs. Rowley, Davies and Company, Limited) read the notice convening the meeting and the auditors' report.

The Chairman said: The gross profit for the year was £8,578, and, after deduction of depreciations and staff commissions, £4,136 remains. Adding difference in exchange, the amount transferred from income-tax reserve, not wanted, and the balance from the previous year, while deducting the debenture interest and trustee fees and also the preference dividend paid to December 31, 1930, we carry forward a credit balance of £339.

The year was most difficult and trying, especially in the case of a company like this, which owns four estates, some in Java and some in Sumatra. While doing everything possible to avoid any permanent harm to the various estates, drastic economies have been introduced. Such a procedure cannot be accomplished at a moment's notice, but much useful work has been done. The Sumatra estate, working with coolies whose wages and repatriation conditions are fixed by Government contract and which so far have not been reduced, entails a somewhat higher cost than would have otherwise been the case. Even so, a fairly low cost has been reached. The other two rubber estates are now being worked at quite ½d. per pound less.

The same policy of retrenchment has been followed on our two tea estates, and though costs have been substantially reduced the same drastic measures in the case of tea are not possible without damage to the future of the gardens.

Our financial position is, in view of the general situation, satisfactory, but we must all wish for a speedy improvement in the tea and rubber industries, as no company can stand such strain as under the present conditions for too long a time.

The report and accounts were adopted.

OFFER TO NEW READERS.

FURNESS, WITHY AND COMPANY, LIMITED.

STRONG FINANCIAL POSITION.
YEAR OF ACCENTUATED DEPRESSION.

The fortieth annual general meeting of Furness, Withy and Company, Ltd., was held, on the 22nd instant, at Furness House, Leadenhall Street, London, E.C.

Sir Frederick W. Lewis, Bt., presided, and in the course of his speech said: It is a matter of regret to your directors that the results are not more satisfactory. No doubt, however, you have long since been prepared for a reduction in profits, having regard to the universal depression which has prevailed during the past year. In fact I think we may congratulate ourselves that we have done as well as we have done—(hear, hear)—and I hope that any disappointment that may be felt in regard to the figures in the profit and loss account, will be more than counter-balanced by the satisfactory figures of the balance sheet.

The amount due to subsidiary companies, viz., £887,567, compares with the figure of £1,003,990 in the previous year's balance sheet, whilst the item of sundry creditors, etc., £2,400,867, compares with £1,922,652 in 1930. Shipping property stands at an increased figure, even after allocating to this account the whole of this year's depreciation appropriation. This increase is due entirely to the inclusion of payments made to Messrs. Vickers-Armstrong on account of the "Monarch of Bermuda" now under construction.

PROFIT FOR THE YEAR.

Turning now to the profit and loss account, we have an available balance of £638,861, which includes £236,171, brought forward from the previous year. This is our fortieth annual meeting; I personally have been associated with the company during the whole of that period, and I can say without fear of contradiction that the past year has been the most difficult within my experience so far as shipowning is concerned. The net profit for the year, after crediting dividends received, is £402,690, and, as shown in the account, includes a transfer from reserves. In this connection I would like to say that the transfer from reserves is represented by a small amount of £11,000 odd, previously set aside in the accounts of one of our branch offices and now no longer required, and £100,000 transferred from our taxation reserves, but shareholders will, I think, learn with satisfaction that even after making this transfer, these reserves amount to quite a substantial sum. The year's results would undoubtedly have been infinitely less satisfactory but for our varied and widespread ramifications which have yielded considerable revenue, notwithstanding a year of the most accentuated depression.

THE DIVIDEND.

We now propose to transfer £150,000 to depreciation account; to declare a final dividend of 2½ per cent., making 7½ per cent. for the year, and to carry forward the balance of £198,236. I am glad to be able to reiterate what I have stated on previous occasions, that your company's assets in the aggregate are worth not merely more than the figures at which they stand in the balance sheet, but substantially more; this notwithstanding the heavy depreciation suffered by practically every form of property during the past twelve months. I attribute this fact to our past conservative policy and to our good fortune in making investments at opportune times, and it will be obvious to any shrewd observer that our investments have been a veritable sheet anchor during these difficult times.

Having regard to the general situation, your directors have felt that it is in the best interests of the company to reduce the total dividend to 7½ per cent., a decision which involves some sacrifice on the part of the shareholders, and I should like to add that both as a measure of economy, and as contributing to the general sacrifices, we have put into effect a reduced scale of remuneration, varying up to 10 per cent., applicable to the whole organisation, other than those serving afloat, both of this company and its subsidiary and associated companies, and, of course, including the directors and managers.

The quadruple turbo-electric vessel "Monarch of Bermuda" is the only vessel which we, or any of the subsidiary or associated companies, at present have under construction. Shareholders will no doubt have seen references to this vessel in the press, and as her name implies she will be employed in the passenger trade to Bermuda from New York. The propelling machinery is of the turbo-electric type, and will give the vessel a service speed of close upon 20 knots. The "Monarch of Bermuda" will be the largest vessel in our fleet, and when she comes into commission in November this year we hope it will be the commencement of a long period of successful trading. (Hear, hear.) She will carry about 850 first-class passengers, and nothing in the way of luxurious

appointments will be lacking to make her an exceedingly popular ship.

I sometimes wish I were engaged in any other occupation than shipowning. It is obviously a most fascinating occupation, but at times the variety of problems with which it is beset becomes so bewildering that I verily believe a shipowner needs to know more than any other type of business man. We, and our associated and subsidiary companies, operate vessels on something like twenty-five different regular trade routes. Consequently we are, from time to time, apt to be concerned in the national and international affairs of almost every country in the world.

SURPLUS TONNAGE.

There is scarcely a trade in which we are engaged that is not supplied with tonnage in excess of requirements, in such cases we have withdrawn vessels and laid them up in an endeavour to bring about a businesslike rationalisation of the supply of tonnage to the demand for space. In this way have we avoided heavy losses, although it will be appreciated that we have had to bear the expense of laying up a number of vessels, and also that the smaller quantity of cargo handled during the year has considerably affected the earnings of our branch offices.

As regards the general question of the surplus of tonnage, various expedients for improving the position have been suggested from time to time. One of these suggestions was the granting of special facilities for the disposal of old and obsolete ships and their replacement by new, and I had the honour to serve upon a Committee appointed by the Government to consider this matter. I ought to say that one of the terms of reference excluded from the Committee's consideration any proposal involving a grant from public funds. The Committee came to the conclusion that it would be neither desirable, nor practicable, to adopt any artificial scheme for dealing with this problem. There was ample evidence to show that when the proper time arrives there is sufficient enterprise in the shipping industry itself to provide all the tonnage that is required.

The effect upon the shipowning industry of encouraging the building of unrequired ships by means of special credit facilities is apparent in the excessive amount of tonnage now afloat. So far, however, this nation's purse has not been seriously affected, but in other countries where ships have either been operated for Government account, or where heavy subsidies have been granted to private owners conditional upon their building further ships, the taxpayer has had to bear a heavy burden, and in spite of that burden the goods of those countries have been carried no better, or cheaper, than would have been the case without the imposition of the burden.

MR HOOVER'S PROPOSALS.

The depression from which we are suffering has no single cause, and similarly has no single remedy. We read a great variety of theories, some of them so expert that they are almost incomprehensible to the lay mind, that the depression is due to a mal-distribution of gold; to the depreciation of silver; to tariffs or to lack of tariffs; to political interference in commercial matters; to the burden of war debts and reparation payments, etc. To my mind our troubles can largely be solved by confidence, in the same way as they are largely due to lack of confidence. It is lack of confidence which causes a flight from one currency to another; the same thing causes the hoarding of gold in the country to which it flies, viz., lack of confidence to lend it again. With confidence restored, the wheels of commerce would again commence to revolve and would gain impetus. Consequently Mr Hoover's proposals are a most welcome gesture, as I think it is generally recognised that the making of huge payments, without receiving real value in goods or services in exchange, creates an impossible position—impossible for the payer, who gets nothing for his money, and impossible for the receiver, who is not called upon to manufacture goods or render services in exchange.

Whatever may be the ultimate solution of the present economic difficulties which are affecting practically the whole world, there is one cardinal principle which I sincerely hope will never be lost sight of, and that is that nothing should be done which will interfere with individual enterprise, which has always been the backbone of British industry. (Hear, hear.) The rewards of enterprise are already interfered with, almost to the point of destruction, both during life and on death, and it is sufficiently disheartening that industry has to bear the heavy burdens already imposed upon it. National economy is now a somewhat threadbare topic, but the need has never been greater than now.

The report was unanimously adopted.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED.

A DIFFICULT YEAR—BURDEN OF TAXATION.

COL. SIR ROBERT WILLIAMS ON THE OUTLOOK FOR RUBBER AND TEA.

The twenty-first ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 17th instant, at the Cannon Street Hotel, E.C., Colonel Sir Robert Williams (chairman of the company) presiding.

Mr Percy H. Bradford, representing the secretaries (Messrs. Francis Peek and Company, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said: Our company comes of age in very difficult times. When I had the pleasure of addressing you last year the shadow of the present depression was already over us, and you will remember for that reason, although our profits for the year 1929 were distinctly larger than for the previous year, we did not increase our dividend so that we might conserve our resources. Necessary as this was a year ago, it is far more so now. The tide of prosperity has continuously receded, and for the first time in the history of our company the spread of our interests over many different commodities has not aided us.

It is easy to realise what is meant by the phrase "crushing burden of taxation" when it is considered that our company pays 12½ per cent. of its profits in Java income tax, and, after that, 4s. 6d. in the £ British taxation on its balance sheet profits, and not only that but a similar rate on approximately two-thirds of its yearly depreciations. It is not surprising that many companies, however reluctantly, may be considering whether it is possible to continue their British registration when it imposes such a handicap, additionally crushing under such circumstances as exist to-day.

I now turn to the local Java balance sheet. The profit which for the most part determines our income for the year amounted to £103,253, against £442,304 for the previous year. This clearly reflects the decline in values of our various products.

TEA.

We have 26,453 acres planted, of which 376 acres were opened last year for the development of our Tjiater estate. This, the latest of our tea estates, is situated at an elevation of from 3,500 to 4,500 feet, and we have great hopes of good yields combined with quality. Apart from this, we have still some 1,900 acres young gardens not in production, while from the producing acreage we obtained 12,156,089 lb. of tea, or an approximate yield of 504 lb. per acre. Our total tea crop amounted to 12,902,277 lb. of tea, of which 746,188 lb. consisted of leaf purchased from native gardens. This latter showed a distinct reduction compared with the previous year, when 1,173,230 lb. were brought, while this in turn was a big decrease on former years. The yield of 504 lb., compared with 592 lb. for 1929, is accounted for by the agreement to restrict, which was general throughout the tea-producing world with the exception of China and Japan. We agreed to a material reduction against our 1929 crop, and, as an actual result, the total we obtained showed 10 per cent. less than 1929, notwithstanding considerable allowances in respect of young areas, and the fact that 1,600 acres were brought during the year on to revenue account, although we claimed a very small allowance in respect of these. Thanks mainly to our forward contract of half our crop at 1s. 3d. landed London, and also to improved quality, the actual price obtained for our tea is highly satisfactory, the net price f.o.b. Java being 11.33d. against 11.3d. in 1929 and 11.65d. in 1928.

CURRENT YEAR'S PROSPECTS.

• What are the prospects for the current year? Strenuous efforts were made to renew the restriction scheme for a further period, but the scheme of 1930 had one unexpected result. Java producers, in accordance with their agreement, considerably curtailed their purchases of native leaf. Unfortunately, owing to a large extent to the demand for the cheaper packet teas in England, there proved to be a ready market for this type of tea. This induced the erection of Chinese factories uncontrolled by the agreement of the European producers, with the consequence that the Java production, instead of falling the 10 million pounds anticipated by the agreement, showed only a reduction of about a million pounds, the curtailment of the majority of European producers having been practically nullified owing to the purchase of leaf by those who kept outside the agreement, and to this manufacture through new channels.

On full production, and with favourable climatic conditions, we estimated, as given in our January circular, a production of

17,500,000 lbs. for the current year. We now estimate an output for the year of 15,000,000 lbs. Working on these lines, while generally maintaining quality, we have been able to make a most satisfactory and substantial reduction in our cost price. Thus the cash cost at the end of June was approximately 5d. per lb. f.o.b. Java, while the selling price of our free tea has averaged so far this year about 7½d., which still shows us a small margin of profit, without taking into consideration the very satisfactory profit from the contract half.

RUBBER.

Our rubber areas extend to 31,910 acres, 529 of these were planted during the last year mainly in rounding off two of our existing estates. The whole of the new area has been planted from our own supplies of selected seed and bud grafts. Including the small addition we have still 4,244 acres not in production. The rubber output amounted to 13,211,630 lb., showing a very small increase on the previous year. The company, in general agreement with other companies throughout the Dutch East Indies, Malaya and Ceylon, ceased tapping during the month of May, and in addition from the end of September we closed down those areas the latex from which is not manufactured in sprayed form and therefore is outside the contract with the General Rubber Company of New York. The net selling price for the year showed a decline compared with the previous year of 4½d. per lb., the price realised being 5½d., compared with practically 9½d. in 1929. The cost price showed a fall of ¾d. per lb., from 6½d. in 1929 to 5¾d. in 1930. This covers every possible charge, including London expenses, and in addition includes 1-15d. per lb. on account of depreciation. The melancholy fact remains that the gross profit fell from £285,000 to £77,000, which means a small net loss.

The company has been a strong supporter of the Rubber Growers' Association in their efforts to bring about compulsory restriction under Government control in all rubber-growing countries. It is possible that by this method the future prosperity of the industry may be assured.

QUESTION OF TAPPING.

If or when the price reaches a sufficiently low figure, cessation of tapping will become universal, and, great though the hardship will be by the time this position is reached, the result will, at any rate for a time, be efficacious. In my opinion even this price factor will never be a satisfactory permanent cure. As soon as, owing to the general cessation of tapping, the price commences to rise again, tapping will be recommenced with a production probably larger than ever, owing to the enforced rest the trees will have enjoyed. Permanently settled conditions can only be obtained under a system which has the effect of regulating supply, and however unwilling Governments may be to shoulder the responsibility, sooner or later they may have to do so, or face a permanently unsettled industry. Piece-meal restriction with every company doing as little or as much as it likes is, in my view, doomed to failure.

Your directors are convinced that the best course is to continue normal production, while holding themselves ready at all times to support any scheme universally adopted which will be for the permanent good of rubber producers.

Our estimate for this year on an unrestricted basis is 15,289,000 lb., which is over 560 lb. an acre, an excellent average over such an extensive acreage, especially as practically two-thirds of it was planted before selected seed became available. There is no doubt our red lowland soils are peculiarly suitable for rubber. The cost price had been reduced at the end of June to under 3½d. f.o.b., which covers everything and includes ¾d. per lb. depreciation. This is a fine achievement, and those responsible in Java are to be congratulated.

The Chairman then dealt with their interests in coffee, cinchona, rice, kapok, sisal, and tapioca, and, referring to the Sumatra estates, said it was certain that the present condition of over-production in almost all Eastern commodities had put the clock back very considerably as far as the development of Sumatra was concerned, and the optimistic hopes engendered by the conditions existing six years ago had vanished.

The Chairman concluded by moving the adoption of the report and accounts.

Mr W. H. Daukes (managing director) seconded the resolution, which was carried unanimously, and the formal business having been transacted, cordial votes of thanks to the chairman, directors, and staff at home and abroad terminated the proceedings.

THE VICTORIA FALLS AND TRANSVAAL POWER COMPANY, LIMITED.

RECORD PROFITS.

LARGE EXTENSIONS IN HAND.

Mr Arthur E. Hadley, C.B.E., presiding at the general meeting of shareholders, held on July 23rd, in London, presented a satisfactory account of the company's business for the year 1930. The profit for the year, after providing for taxation and all other requirements, amounted to £381,416, the highest figure yet reached. This had enabled the board to pay the maximum dividend of 10 per cent. on the preference shares, and to repeat the dividend of 15 per cent. on the ordinary shares. A sum of £50,000 was again added to the reserve fund, bringing that fund up to £650,000. £22,500 was placed to the staff fund, and the amount of £194,463 carried forward to the current year. During the year a further £243,260 of the company's debentures had been purchased or drawn for redemption.

In the course of his remarks, Mr. Hadley touched on the subject of tariffs. It had always been the endeavour of the company to charge the lowest price and to meet the special requirements of its consumers. As from the beginning of 1930, a modification had been made in computing the rebate in prices enjoyed by the consumers under their supply contracts, which had the effect of accelerating the annual reduction in price which would normally have taken place during the next four years. The object of this was to stabilise and expand the business, and to assist the mining industry to prolong the life of the reef.

The electrical demand now amounted to 216,000 k.w., and the demand for compressed air to 48,000 k.w.

INCREASING DEMAND FOR POWER

During the period under review, the load and additional orders for power still required increased considerably, and came on faster than was anticipated, and there were further probable demands which were likely to become definite requirements in the future. To meet this additional business further large extensions were in hand, involving the purchase of two large generating sets, boilers, transformers, switchgear, &c., all of which would be supplied by British manufacturers. Mr Hadley indicated that the maximum demand would not be reached for some years, but the company would be supplying a load at least equal to the present supply for many years to come. The cost of these extensions would absorb a large part of the cash resources of the company.

From the beginning of the current year a staff pension and insurance scheme, guaranteed by the Legal and General Assurance Society, Ltd., had been inaugurated. All eligible members of the company's staff had joined the scheme, which would be on a contributory basis for future service.

POSITION OF GOLD-MINING INDUSTRY

The world-wide economic depression had affected South Africa in many ways, but, in view of the steady market and ever-increasing demand for gold, the mining industry had escaped the slump which had damaged nearly every other form of enterprise. The gold production in the Union for 1930 was a record and, being concerned with the supply of power to the gold mines, the company had been fortunate in continuing its expansion, and there was no occasion to anticipate any sudden setback.

During the year, Lord Winchester had left the board, and Mr Bernard Price, the general manager in South Africa, had been elected a director.

Mr Hadley concluded by expressing, on behalf of the board and the shareholders, their appreciation of the valuable and loyal manner in which the staff so successfully carried out the duties entrusted to them.

The report and accounts were unanimously adopted, and the retiring directors—Lord Brabourne, Mr F. Astley Cooper and Mr Bernard Price—were re-elected. The auditors, Messrs Cooper Brothers and Company, were also re-elected.

UNITED DOMINIONS TRUST, LIMITED.

A RECORD YEAR.

MR J. GIBSON JARVIE AND CREDITS FOR INDUSTRIAL
DEVELOPMENT.

The ninth annual general meeting of United Dominions Trust, Limited, was held, on 21st instant, at Winchester House, London, Mr J. Gibson Jarvie, the chairman, presiding.

Summarising the main features of a record year, Mr Gibson Jarvie said that the paid-up capital remained the same at £500,000, made up of 250,000 "A" shares of £1 each fully paid and 250,000 "B" shares of £2 each (£1 paid), the latter issued to and still held by the Bank of England. The general reserve, to which £35,000 had been transferred as against £15,000 last year—now stood at £200,000, all accumulated from earned profits. The profits for the year amounted to £94,815, which did not include the profits earned by the subsidiary companies.

COMPANY'S STRONG LIQUID POSITION.

The absence of an investment in Government securities was a notable change in the balance sheet, the board believing that it was no part of their duty to hold any stocks, Government or otherwise, on a speculative market, but the liquidity of the company's position had been maintained by a substantial increase in cash in hand, which amounted to £270,966. The chairman emphasised that cash in hand, plus normal collections for 8½ months, would be sufficient to pay off all the company's liabilities to other than shareholders.

Having pointed out that separate balance sheets had been issued for the subsidiary companies so that shareholders should know the exact position, Mr Jarvie drew their attention to the substantial reserves in both balance sheets under the heading "Rebate of Interest" and also to the insurance fund accumulated by Continental Guaranty Corporation of over £10,000.

FINANCING NEW EQUIPMENT.

"The parent company," the chairman added, "continues to offer its facilities to the engineering, motor and allied trades, facilities which will enable those who have suitable merchandise to sell to extend credit to their customers on what is virtually a cash basis to themselves, the company providing the necessary credit to enable the merchant or manufacturer to extend the appropriate term of credit to his customer. The seller receives cash at once, the buyer has a more or less long period in which to pay for it. In many cases the classes of equipment financed earn their own price while they are being paid for."

Mr Jarvie stated that the company was now offering facilities to builders and contractors enabling them to extend credit to their customers and clients for the renovation or modernisation of existing buildings, private or commercial. The subsidiary electric company was organised to finance the installation of all kinds of electrical equipment, from the wiring of the humblest cottage to plant for the largest factory.

For every £1,000,000 the company had been privileged to provide for industry in the past year, if the possibilities of medium and long-term credit, including instalment selling and buying, had been properly recognised, it could and should have provided more than ten times that amount.

MODERN MACHINERY ESSENTIAL FOR EFFICIENT PRODUCTION.

The Chairman realised that manufacturers and traders were hampered by Governmental extravagance and complete misapprehension of the needs of the times, but unless credit, developed along scientific lines for distributive purposes, was readily accepted by those who had suitable merchandise to sell, the great advances in productive capacity during the last twenty years would be rendered useless. In view of the facilities available, there could be no excuse for any established or sound concern persisting in the use of inefficient methods of production through the lack of modern machinery.

The report was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended July 18, 1931, amounted to £12,831,800 against ordinary expenditure of £11,834,900. After allocating £600,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £101,952 the operations for the week, as shown below, decreased the National Debt by £295,000 to £7,638,350,000 :-

(000's omitted.)

Public Dept. Advances.....	£ 950	Treasury Bills	£ 1,645

SUMMARY OF COMPANY PROFIT AND LOSS ACCOUNTS.

||
||
||

almost every day, but the owners' latest offer of a minimum wage rate of 7s. 10½d., which compares with the existing minimum of 8s. 4½d., does not appear to be acceptable to the miners, and for the moment a deadlock seems to have been reached. Market prices for the shipping trade are firm, round about the following levels, but they are largely nominal in the absence of business of weight. The quotations are f.o.b. district ports. LANARKSHIRE.—Ell best, 14s.; splint best, 16s.; splint second, 14s. 6d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 6d.; trebles, 12s.; doubles, 11s. 6d.; singles, 10s. 6d.-10s. 9d.; pearls, 9s. 6d.; dross, 9s. FIFE.—Screened navigation, 16s. 6d.; 17s. 6d.; first-class steam, 12s. 6d.; third-class steam, 10s. 6d.; trebles, 12s.-13s. 6d.; doubles, 11s. 6d.-12s.; singles, 10s. 9d.; pearls, 9s. 3d. LOTHIAN.—Prime steam, 11s.; secondary steam, 10s. 6d.; trebles, 12s.; doubles, 12s.; singles, 10s. 6d.-11s.; pearls, 9s. AYRSHIRE.—Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 13s. 6d.; trebles, 12s. 6d.; doubles, 11s. 9d.; singles, 10s. 9d.; pearls, 9s. 3d.-9s. 6d.; dross, 9s. 6d.

CARDIFF.—The situation in the South Wales coal trade is getting from bad to worse. This week approximately only about half the tips at the docks have been employed, and so exceptionally small is the current volume both of contract and day-to-day business that in some parts of the coalfield the collieries are working at less than 30 per cent. of their capacity. There is a fairly good market for anthracite, and for dry smalls, but there is a glut of all other descriptions. The Executive Committee of the Marketing Association has turned down a request that there should be a reclassification of some of the coals and a downward revision of the minimum schedule. A contract for the supply of 60,000 tons, consisting of two-thirds large and one-third small, has been placed with a Cardiff firm for South Wales coals. An unfavourable development has been the inauguration of a coal import licensing system in France. It is to be operative on sea-borne coal from July 27th next and the basis of the restriction is 20 per cent. below the average quantities imported in the three years 1928-1930. Normally, South Wales supplies 56 per cent. of the coal exported to France from the United Kingdom, so that it is the South Wales coalfield that will have to bear the brunt of the curtailment in the future deliveries of British coals. The following are the current approximate quotations:—Best Admiralties, 20s.; seconds, 18s. 9d. to 19s. 9d.; best drys, 18s. 6d. to 18s. 9d.; Western Valleys, 17s. 9d. to 18s.; Black Veins, 18s. 3d. to 18s. 6d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best large, 36s. to 37s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; French nuts, 43s. to 46s.; stove nuts, 39s. 6d. to 43s. 6d.; rubble culm, 8s. 6d. to 9s.; foundry coke, 25s. to 34s.; patent fuel, 19s. to 20s.; pitwood, ex ship, 21s. 6d. to 22s.

IRON AND STEEL.

MIDDLESBROUGH.—Conditions remain unaltered on the market for Cleveland iron. New business is on a very small scale. Stocks in the hands of producers are growing, and these are likely to be further augmented owing to the suspension of deliveries to Scotland, where consuming works will be idle for about a fortnight for the annual holidays which commenced last week-end. The whole market position is unsatisfactory, writes our correspondent, and it would seem that a reduction of prices is the only thing likely to improve matters by helping to regain the local consumers' trade that has recently gone to other districts, particularly to the Midlands. Makers, however, are averse to follow this course, and on Tuesday announced prices unchanged, viz.: No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s., f.o.b. or f.a.c. The hematite market shows a somewhat brighter aspect than Cleveland, and orders are coming to hand fairly regularly from home consumers for early delivery, while occasional sales are being made for export. The quantities are not large, but inspire hope of better trade to follow, and prices have now reached a level that any further reductions of importance cannot reasonably be expected. Up to now, there has been a total disinclination on the part of consumers to enter into forward purchases, but any favourable turn of current events might easily cause a quick reversal of this attitude. Ordinary mixed numbers have been obtainable during the week at 62s. per ton, and makers are still prepared to accept this figure for early delivery, but premiums are asked for forward. In the finished departments new business is disappointing, and it is likely that the steel makers' decision to adhere to the old prices under the rebate scheme will cause withdrawals from the agreement by some important consumers. It is understood that a special offer has been made to the shipbuilding section, which is considered far from meeting their views under present conditions of this particular industry. The ore market continues practically idle. Best Bilbao rubio is nominally 15s. c.i.f. for early delivery, and the rate of freight, Bilbao-Middlesbrough, remains at 4s. 3d. The supply of coke is much in excess of requirements. Good blast-furnace sorts are freely offering at 15s. per ton delivered consumers' works, and slightly less has been accepted for very prompt delivery. The number of furnaces in blast in the district is unchanged at 22.

SHEFFIELD.—The "dead" season in the iron and steel industry is now at hand, and there will be stocktaking at many works during the August holiday. Already consumers are beginning to cancel or curtail deliveries of material, and buying and selling are tapering off. At present signs of reviving overseas business are lacking. The home trade is also lifeless, except in certain special lines. Several of the great engineering works are busy on important contracts. The engineering trade as a whole, however, is quiet. The position of open-hearth steel in Sheffield and North Lincolnshire is no better, but production remains at former level. Makers of tool steels are very short of work, alike on home and export account, and the resulting competition is accompanied by much price cutting. Further batches of clerks and managers at the large works have been

discharged or placed under notice this week. Railway steel is slightly more active, but the demand from the shipyards is at the lowest level ever recorded. Hand tools are in moderate request, and some classes of farm and garden tools have sold well. More British lawn mowers have been disposed of than in any former season. Conditions could scarcely be worse in the plate and cutlery branches.

GLASGOW.—Business in the West of Scotland is very quiet this week. Buyers are inclined to deal only in very small quantities for home trade, and export business is still unsatisfactory. In the sheet trade there is some improvement in the demand from overseas, but prices are very keenly cut. In Glasgow and district practically all works engaged in the iron and steel industries are at a standstill on account of the annual holidays, and operations will not be resumed until some time next week. It has been announced that Messrs Babcock and Wilcox, of Renfrew, have received a contract for boilers for the Victoria Falls Power Station, South Africa, which will provide them with work for many months.

CARDIFF.—Business in the tinplate trade is suffering from the repercussions of the German financial crisis. Enquiries on Continental account are scarce, and exports to French, Belgian, Italian and other European markets are showing a declining tendency. There has been no material change in the condition of trade with other countries. Prices are steady at from 13s. 6d. to 14s. per basis box. Galvanised sheets are unaltered at from £9 7s. 6d. to £9 10s. per ton; Welsh steel bars at £4 12s. 6d.; and foreign bars at £4. At a meeting at Swansea on Tuesday, leading manufacturers strongly advocated restriction on foreign imports which latterly have again been increasing. The local Customs returns show for the past week total imports of pig iron, blooms and billets, bars and other semi-products of 27,306 tons, compared with 13,929 tons in the previous week, and 12,684 tons in the corresponding week last year.

OTHER METALS.

TIN.—Although the consumption of tin has not yet improved, confidence in the success of the restriction scheme is increasing. Prices appear to have definitely recovered from the low level reached a month ago. Wednesday's official closing quotation for "standard cash," at £110 7s. 6d. to £110 10s. per ton, compares with £107 15s. to £107 17s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,845 tons, show a decrease of 96 tons on the week.

COPPER.—The market in copper has been quiet, but prices show some improvement on the week. Wednesday's official closing price for "standard cash" in London, at £34 2s. 6d. to £34 5s., compares with £33 5s. to £33 7s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 17,769 tons, show an increase of 1,175 tons, while stocks of rough copper, at 1,086 tons, were 75 tons smaller.

LEAD.—Lead was in poor demand, but sellers maintained an attitude of reserve, and on the week prices show a slight improvement. Wednesday's official closing quotation for "soft foreign" in London, at £12 10s. 3d. to £12 17s. 6d., compares with £12 5s. to £12 10s. 6d. on the corresponding day last week.

SPELTER.—Little interest was taken in spelter during the week, but prices remained steady. Wednesday's official closing quotation in London for "good ordinary brands," at £12 6s. 3d. to £12 16s. 3d., compares with £12 7s. 6d. to £12 10s. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. Antimony again changed hands at £23 to £23 10s. per ton for "foreign," while quicksilver remained unchanged at the recently reduced price of £17 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—The prices are about some 20 points higher than those of a week ago, largely due to the more optimistic outlook at the early part of the week of the French-German negotiations. The crop is reported to be making excellent progress, though recent rains in the cotton belt have brought fears of the Boll weevil, but in some parts so far the damage can only be slight. The consumption in U.S.A. during June is estimated to be 455,000 bales, against 466,000 bales for May, and 405,000 bales for June last year. There are still no signs here of any trade improvement. Spot sales for the week 16th to 22nd (inclusive) are 34,000 Argentine, 6,000 Peruvian, 3,100 Egyptian, 1,650 Brazilian, 850 East Indian, 1,350 Russian, and 500 sundries. Imports for the same period are 22,719 bales, of which 4,885 bales are American, 7,502 Argentine, 2,446 Peruvian, 6,828 Egyptian, 162 African, 896 Egyptian Sakel, 7-45; Uppers, 5-97; Brazil Fair, 5-16; Peru 6-16.

Manchester.—The upward movement in raw cotton prices has had very little effect upon the attitude of buyers of manufactured goods. The market has, of course, been overshadowed by the financial crisis in Germany, and traders recognise that no real progress from a business point of view can be made until the financial problems on the Continent have been solved. There has been a fairly persistent demand in piece-goods, but the majority of the offers have been quite unworkable. The turnover for India has been rather better than recently. Most attention has again been given to light bleaching cloths and fancies. Although in some respects the political situation is not quite so acute as

boycott movement remains effective. Demand for China is very slow in broadening, and only retail sales have taken place. There has been a little more activity for Egypt, and certain West African outlets, but bulk lines have been scarce. Business for the home trade has been fairly well maintained. Business of weight in yarns has not been mentioned. Most of the trade in American qualities has been in small lots for quick delivery. There has been rather more demand in Egyptian numbers, and some spinners have healthier order books.

THE WOOL TRADE.—Bradford.—The fourth series of London sales which finished last Wednesday, writes our correspondent, have provided a striking example of the stability of wool values. After a quiet opening the sales showed an improvement in tone, and the two sales abandoned might very well have been held, for another 18,000 bales could have been taken off the market by buyers. The next series will not commence until September 15, and probably before then a few firms will be needing combing merino wool. At the moment it is difficult to see that any further recovery in values can come about, for the state of trade in the West Riding and on the Continent is far from being satisfactory. The recovery in wool values indicates that stocks in consuming centres are not heavy, and Merinos and greasy fine crossbreds have sold at better prices, and even slight crossbred lambs have appreciated, a good deal of the opening losses having been recovered. Scoured medium wools which sold at 2d. below the May level, have fared worst. The close of the series leaves good greasy merinos no more than five per cent. decline in other classes of merinos is no more than five per cent. Good greasy fine crossbreds are par to five per cent. cheaper, other classes being five to 7½ per cent. down. At one time shipes were 15 per cent. cheaper, but the decline may now be put at five to ten per cent. A big quantity of wool is being carried over for the next series. The improved demand in London has reacted upon Bradford. No big amount of business is being done in tops, but quotations are slightly firmer. A big volume of business could be done immediately if topmakers and spinners were prepared to sell at the prices current a fortnight ago. A good ½d. more is being asked for tops, but this does not mean that it is possible to realise more than 24d. for warp 64's, and even then this description, as well as crossbreds, is fully 1d. below what it should be realising.

THE JUTE TRADE.—Dundee.—Though conditions in the jute trade continue dull, there is a steady undertone in all sections of the market. Sellers of the fibre are adhering to their prices, and in most cases they are above the lowest points touched this season. For instance, Daisee assortment was sold down to £14 15s., but sellers are now not keen even to accept £15 5s. for October-November shipment. Mitsui Daisee assortment, which was sold the other day at £15 and £15 5s., has been raised to £15 10s. Offers of white jute are more freely made, and good First Marks are quoted at £18 15s. and Lightnings at from £16 up to £17, according to mark, August-September. Hearts are quoted at £15 to £15 15s., which seems to Motilal Tossa assortment can be bought at £16 15s., which seems to be about the value of the full group, though there are very few sellers of this quality so far. When the Director of Agriculture confirmed the figures given under the district returns, and stated that heavy rains had affected the crop in Mymensingh, which is the largest jute growing district, and parts of Faridpur, Northern Bengal and Assam, but that in other districts conditions were favourable. In Bengal stocks of old crop are large, but they are limited in Behar, Orissa and Assam. It could only be expected that stocks of old crop would be large, as there was a considerable carry forward from previous seasons to the one just finished, while last season only about ten million bales were imported into Calcutta and Chittagong, compared with the forecast of 11,231,000 bales. The Indian Jute Mills have done nothing definite in regard to further curtailment of jute goods, but the market for goods at Calcutta has become stronger again this week, owing to an improved business with Australia in both hessians and corn sacks. Prices touched 16s. for 10 oz. 40-in. and 13s. 9d. respectively for July-sellers are now quoting 17s. and 13s. 9d. respectively for July-September shipment. Dundee goods are still very quiet, and any slight increase in business which was noticeable on account of the buyers requiring delivery before the holidays has evaporated. The works in Dundee will practically all be closed for two weeks from the end of this week on account of holidays, and business will be almost suspended next week. Prices are quotably unchanged at from 2½d. for 10½ oz. 40-in., and from 1½d. for 8 oz. Linoleum hessians are quiet, and heavy goods are slow. The yarn market is inactive. Spinners cannot afford to accept less than 1s. 10½d. for common 8 lb. cops, and 1s. 11½d. for 8 lb. spools, but with orders for decent quantities less might be possible. All other yarns are more or less nominally unchanged in value.

THE GRAIN MARKETS.

WHEAT.—According to various reports it appears that some damage has probably been suffered by the wheat crop in Central Russia through excessive heat. Conditions in Canada have shown some improvement as a result of beneficial rains, and harvesting in the United States is proceeding under favourable conditions. Prices have slightly recovered from the low level to which they had fallen last week, mainly because of adverse crop reports from Central Russia. Meanwhile the restriction in Continental buying caused by satisfactory crops and high import duties is having a depressing influence on prices. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 25s. 6d. per 496 lbs., as compared with 25s. 6d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 24s. 3d., against 24s. 3d.; No. 3 Northern Manitoba, Atlantic, ex ship, 23s., against 23s. 3d.; Rosafé, ex ship, 21s., against 21s.; Australian, ex ship, 22s. 6d. to 24s., against 23s. to 24s. a week ago.

WHEAT FLOUR.—Wheat flour has been steady at the lower prices. North American shipments, at 192,000 sacks, show an increase of 25,000 sacks, as compared with those of the previous week. Quotations: Straight run, delivered country, 22s. 6d. per sack of 280 lbs., as compared with 22s. 6d. last week; delivered London, 21s. 6d., against 21s. 6d. Manitoba patents, ex store, 21s. to 24s., against 21s. to 24s.; and Australian, ex store, 17s. 6d. to 18s. 6d., against 17s. 6d. to 18s. 6d. a week ago.

BARLEY.—The Canadian barley crop has recently improved under favourable weather conditions. Seeding barley has been firmer in price, but other qualities are scarcely changed on the week. Quotations: "English feeding," f.o.r., per 448 lbs., 20s. to 22s., as compared with 20s. to 22s. Californian sold at from 36s. to 40s., as compared with 36s. to 40s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—The recent improvement in the demand for oats has not been maintained and the tendency of prices is still downwards. Quotations: "River Plate," landed, 11s. per 320 lbs., as compared with 12s. last week; "River Plate," ex ship, 10s., against 10s. 9d. to 11s.; "Chilean Tawny," landed, 13s., against 13s. 6d.; English white, per 336 lbs., 20s. to 21s., against 20s. to 21s. a week ago.

MAIZE.—Despite the large shipments from the Argentine, prices have not declined further, which is mainly due to an improvement in demand. Quotations: "Plate," landed, 16s. 6d. per 480 lbs., as compared with 16s. 6d. last week; Plate, ex ship, 15s. 3d., as against 15s. 3d.; Plate, July-August, new, 15s. 3d., as against 15s. 3d. Yellow maize meal, ex wharf, was quoted at £5 2s. 6d., as against £5 per ton a week ago.

The "Berliner Börsen-Courier"

The greatest financial newspaper of Germany, the European economic newspaper of standing

is now obtainable from London bookstalls.
(Price 4d. for morning and evening editions.)

The "Berliner Börsen-Courier" contains the most accurate daily report of movements in the stock-exchange and of economic transactions in Germany, and gives a survey of the economic problems of Europe.

Subscription rate: £1.5.0 quarterly, including postage. Orders through Messrs. W. H. Smith & Son, Ltd., London, W.C. 2, or direct from the Publishers

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	July 23, 1930.	Jan. 2, 1931.	July 8, 1931.	July 15, 1931.	July 22, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	97½	56½	60½	56½	57½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	88½	79½	54½	51½	54

The visible supply of wheat in Canada at 60,382,000 bushels shows an increase on the week of 1,713,000 bushels. Supplies a year ago stood at 60,857,000 bushels.

OTHER FOODS.

SUGAR.—The recent increase in sales of refined sugar in the United States has led to considerable buying of "raws" at steady prices. During the past week prices of raw sugar have been maintained, but "British refined" was again reduced 3d. per cwt. at the end of last week. Wednesday's sales of "raws" included "August delivery," at 6s. 5½d. to 6s. 5½d. per cwt., against 6s. 4½d. to 6s. 5½d., and "December," at 6s. 9½d. to 6s. 10d., against 6s. 8½d. to 6s. 9d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1931.	1930.
Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London.....	—	2,306	1,109	985	26,899	30,401
Liverpool ...	12,651	14,607	14,106	14,794	72,626	75,381
Total tons...	12,651	16,912	15,215	15,779	99,525	105,782
Last week...	11,759	8,420	4,671	20,096	102,179	104,649

COFFEE.—The demand at this week's auctions was again slow and prices were slightly easier. Last week's movements of coffee in London were as follows:—Brazilian, landed, nil; delivered for home consumption, 34 bags; exported, nil; stocks, 2,548 bags, against 1,533 bags last year. Central American, landed, 1,710 packages; delivered for home consumption, 5,255; exported, 1,596; stocks, 106,044 packages, against 101,162 a year ago. Other kinds, landed, 3,774 packages; delivered for home consumption, 2,220; exported, 2,114; stocks, 85,125 packages, against 113,636 a year ago.

COCOA.—Little interest was shown in cocoa at the auctions, and prices again declined. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, mid-crop, July-August, at 19s. 3d. per cwt. f.o.b. London contract, shows a fall of 9d. per cwt. Last week's movements of cocoa in London were as follows:—Landed, 608 bags; delivered for home consumption 3,832 bags; exported, 250 bags; stocks, 223,570 bags, against 200,821 last year.

TEA.—The quantities catalogued for this week's auction comprised 27,873 packages of Indian, 41,224 packages of Ceylon, and 14,260 packages of Java and Sumatra tea. This week there has been a further improvement in the demand at the auctions, and substantially higher prices were realised for fine varieties. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	
July 17, 1930	0 11-98	1 2-03	1 5-01	0 10-01	0 11-45	0 9-58	1 1-49						
June 25, 1931	0 7-79	0 8-15	0 11-17	0 5-79	0 5-80	0 4-04	0 8-63						
July 2, "	0 7-73	0 7-45	0 10-75	0 6-10	0 6-96	NH	0 8-57						
July 9, "	0 7-58	0 7-99	0 10-28	0 6-20	0 6-25	0 4-87	0 8-52						
July 16, "	0 7-90	0 8-48	0 11-42	0 6-35	0 6-68	0 5-18	0 9-48						

RICE.—The market for rice has shown some improvement in demand, and prices have considerably recovered from the low level reached recently. Wednesday's quotation for Burma No. 2, cleaned, July-August, in singles to the Continent and to the United Kingdom, at 7s. 9d. per cwt., shows a rise of 9d. as compared with last week. Movements in London during the past week were as follows:—Landed, 5 tons; delivered, 20 tons; stocks, 524 tons, as against 1,909 last year.

POTATOES.—In view of the ample supplies of new potatoes now on offer at the markets prices have declined from the scarcity level reached during the last few weeks. At the Borough market "Eclipse" sold at from £8 to £9 for first quality.

SPICES.—The spot pepper market was quiet, but prices ruled steady, largely because of the attitude of reserve of sellers. Wednesday's quotation for "Black Singapore," at 5½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows:—Black, landed, 15; delivered, 33 tons; stocks, 614 tons, against 867 tons last year. White, landed 31 tons; delivered, 57 tons; stocks, 549 tons, against 534 tons a year ago.

MEAT.—Prices at the Smithfield market have generally been maintained this week, and Argentine beef was dearer. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 4s. 9d. to 5s. per 8 lbs., against 3s. 10d. to 4s. 6d. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 4d. to 3s. 10d., as against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,753 tons, as compared with 8,581 tons in the corresponding week last year. Imported beef, principally Argentine, formed 87.4 per cent. of the supplies, as against 83.8 per cent. a year ago; and imported mutton, mainly New Zealand, formed 86.9 per cent. of the total supply, as against 82.6 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Markets are depressed and adversely affected by the unsettled financial situation abroad. Lower Argentine exchange rates and options, coupled with a poor demand, have sent down linseed prices. Seed afloat to Europe is still in the region of 150,000 tons, and, with some pressure to sell, plate on passage to Hull has been done at £8 15s., and October shipment at £9 5s. current value in these positions now being £8 17s. 6d. and £9 3s. 9d. Indian linseed is firmly held, current value of Calcutta to London being around £10 15s. Cottonseed is more or less neglected, and only a small business in black Egyptian is reported, August loading being done at £5 2s. 6d. and September at £5 3s. 9d., with sellers now asking £5 5s. Vegetable oils are in slow demand and generally easier. Linseed oil has been very irregular, raw oil on spot, ex Hull mill, now quoting around £18, and delivery to December £17 10s. Cotton oil is quiet. Egyptian crude, ex Hull, offering at £19 5s., and common edible at £22 5s. Other seed oils are in most cases 10s. per ton lower. Oilcakes and meals move off slowly, and prices are inclined easier.

HIDE, LEATHER AND ALLIED TRADES.—Although English market hides still show a slight upward tendency, advances during the past week have not been so marked as has been the case of late. At the auctions held in the North, several weights in the two classes of ox and heifers and cows were unchanged in value; while, where any alteration in price did occur, it was limited to an advance of ½d. per lb. Calveskins also are inclined to be more steady, and this in spite of the fact that supplies are small. The sheepskin market remains poor, as although shearlings continue to make satisfactory figures the prices being realised for lambs are low. Trade in imported hides has fallen away considerably when compared with three weeks ago, but in spite of this the position of prices remains fairly steady, apart from a weakening tendency for certain descriptions. In the South American market frigorifics are generally unchanged in value, in view of the support accorded them by tanners in the United States. For Montevideo ox 5½d. has been paid, while Argentine ox have changed hands at 5½d. Dry South Americans are perhaps slightly lower in price, although 5½d. is still being asked for B.A. Americanos, and 6½d. for M.V. Americanos. In the Cape market, sales of dry-salted, 20/30 lbs., have been made on the basis of 6d. and 5d. for firsts and seconds, with one penny more paid for those of the past fortnight, and, all things considered, a steady trade takes place most part of the time. The repairing section has again been in the market for English and wet-salted bends, and some moderate sales have been effected of the light and medium weights. Heavy descriptions, however, are a quiet market, but it would seem that even so the inquiry is such as to keep stocks within reasonable compass. For dry hide bends, there has been a renewal of inquiry on the part of shoe manufacturers for light and medium weights, but little business is being done in heavier averages. In the upper leather market a fairly satisfactory trade continues to be taken in patent.

THE TIMBER TRADE.—Imports of European building and joinery sawn woods last month amounted to 392,959 loads (of 50 cubic feet), 115,570 loads less than for June last year, and for the half year were 998,148 loads, a shortage of 455,370 loads. The principal reason for such heavy declines in receipts this year, writes our correspondent, is that importers, more than ever before, are buying from hand to mouth, and seem determined to continue to do so whilst the future trend of volume of supplies and prices is at

Bank of New Zealand

Incorporated with Limited Liability in New Zealand by Act of General Assembly, 29th July, 1881.

BANKERS TO THE GOVERNMENT OF NEW ZEALAND.

REPORT OF THE DIRECTORS

Presented at the Ordinary General Meeting of the Proprietors, held at the Head Office of the Bank, Lambton Quay, Wellington, on FRIDAY, 19th June, 1931, at 11 o'clock a.m.

The Directors submit herewith the Balance-sheet and Profit and Loss Statement of the Bank for the year ended March 31st last. The profits, after providing for expenses of management, all bad and doubtful debts, and other contingencies, and after making provision for the annual donation to the Provident Fund, also for Bonus to Staff, are—

From this last to be deducted:—	
Interest on Guaranteed Stock	21,199 9 2
Leaving Balance of Profit for the year	845,813 14 10
To which has to be added:—	
Balance brought forward from last year	623,156 13 3
1,468,970 8 1	

From which has been paid:—	
Dividend on Preference A Shares	£50,000 0 0
Interim Dividend on C Long-Term Mortgage Shares	7,031 5 0
Interim Dividend on D Long-Term Mortgage Shares	17,578 2 6
Interim Dividend on Preference B Shares	41,666 13 4
Interim Dividend on Ordinary Shares	250,000 0 0
366,276 0 10	
Leaving available for distribution	1,102,694 7 3

This the Directors propose should be disposed of as follows:—

Dividend on C Long-Term Mortgage Shares at 6 per cent. per annum	£7,031 5 0
Dividend on D Long-Term Mortgage Shares at 7½ per cent. per annum	17,578 2 6
Dividend on Preference B Shares (making £162,500 for the year)	120,833 6 8
Bonus on Preference B Shares	18,750 0 0
Dividend of one shilling and fourpence per share on Ordinary Shares (making £500,000 for the year, equal to two shillings and eightpence per share)	250,000 0 0
Bonus of 1 per cent. on Ordinary Shares	37,500 0 0
Transfer to Reserve Fund (making £3,575,000)	25,000 0 0
Leaving Balance to be carried forward	626,001 13 1
£1,102,694 7 3	

Such dividends and bonus to be paid in the following manner:—

- In respect of shares on the New Zealand Register, at Head Office, Wellington, or at any Branch of the Bank in the Dominion, free of exchange.
- In respect of shares on the London Register, at the Branch in the City of London free of exchange.
- In respect of shares on the Australian Registers, at Sydney or Melbourne Branches free of exchange.

During the year a Branch has been established at Omakau. The Branches at Paparua and Port Chalmers have been closed. A daily agency is being conducted at Port Chalmers. Agencies at Arisa, Cust, Matawai, Motu, New Brighton, and Ruawai were also closed.

WM. WATSON, Chairman.

uncertain. In spite of smaller imports this year, metropolitan dock stocks of the deal, batten and scantling sizes are still some 6,000 standards in advance of last year, but in June deliveries of these descriptions increased by over 200 standards. For the other specialties, sawn boards, floorings, slating battens, and plasterers' laths, stocks compared with the demand are in favour of sellers. The soft wood market as a whole, however, is weak, owing to the enticing offers that are made by those foreign shipping countries competing intensely with the Russian productions, and importers are perforce bound to await the outcome before committing themselves in purchasing too freely, and particularly too far ahead. That is affecting all shipping countries except Poland, for, up to the end of last month, receipts, in 000's of loads (with last year in parentheses) were as follows:—Russia, 209 (247); Finland, 177 (276); Sweden, 136 (276); Latvia, 119 (197); Poland, 128 (82). The demand also is unsatisfactory on the Continent, where Germany is usually the largest consumer. Spot selling is handicapped by the poor state of the building trade, the best customer of the timber merchant, and the depressing conditions in coal, shipbuilding and other basic industries have their effect. Hardwood logs are also in poor request, but that section of the trade is better managed than the softwoods, fresh supplies being kept more in ratio with demand. Imports of such logs this year have been very light, especially of mahogany and teak. A deficiency of over two million cubic feet of American lumber on a six months' import of 7,187,300 cubic feet from the U.S.A. does not appear to have been sufficient to strengthen the market for furniture and cabinet sawn woods. The pitwood market is dull, but here again shipments to the U.K. are being curtailed severely. The plywood market is the only one that can record increasing shipments in June, but that only after a long series of deficits, leaving a decrease compared with the first half of last year of nearly 54 million square feet.

RUBBER.—The report of the Dutch Committee which has now been published, shows that four members are for, and an equal number against, compulsory restriction. In the view of the four

members who are against restriction, plantations which are now tapping at a loss would quickly cease to do so, if they knew definitely that no compulsory scheme of restriction would be applied. Meanwhile, the market in rubber has again been dull and neglected. Wednesday's official closing price for standard ribbed smoked sheet, at 3d. per lb., shows a fall of 1/4d. as compared with the corresponding day last week. In forward positions, business has been done at 3 1/4d. for October-December, against 3 1/2d. to 3 3/4d.; and at 3 1/4d. for January-March, 1932, as against 3 1/2d. to 3 3/4d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,555 tons; delivered, 1,615 tons; stocks at the end of last week, at 138,463 tons, show a decrease of 60 tons, as compared with the preceding week.

DEATH DUTIES

Seventy Million Pounds are taken out of capital each year to meet Estate Duties alone.

The only satisfactory method of meeting the capital loss is by LIFE ASSURANCE.

Write for special booklet "Provision for Death Duties at Minimum Rates."

EQUITY & LAW
LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W.C.2.

Established 1844

Funds £9,300,000

The years when a man is making his way are critical ones for his Dependents.

He may be earning an income which maintains his wife and family in comfort, but he has not had time to save. Should he die, such life assurance as he has been able to afford will yield but a fraction of the income to which his family has been accustomed. The "Adequate Income" plan supplements the ordinary Life Assurance Policy and enables provision to be made for a larger income for dependants during the critical period than can be secured by other means.

Particulars of the "Adequate Income" plan will be sent on application.

THE MONEY MARKET.

FOUR-AND-A-HALF PER CENT.

A FURTHER increase of one point in Bank rate was announced this week, bringing the rate to 4 1/2 per cent. Although the outflow of gold was partly checked last week-end, the Bank in all lost practically another £20.0 millions during the course of the week ended July 29th, and a rise in Bank rate was the natural and inevitable

response. By Thursday afternoon, when the market had had time to settle down, short bills were quoted at $4\frac{1}{2}$ per cent., and four and six months' bills at $4\frac{3}{4}$ per cent. The "market" rate on three months' bank bills was $4\frac{1}{2}$ per cent. This is a wider margin below Bank rate than had been current earlier in the week, when Bank rate was $3\frac{1}{2}$ per cent. and market rate $3\frac{7}{8}$ per cent., but it is understood that a market rate of $4\frac{1}{2}$ per cent. should be high enough to meet current needs.

The wider aspects of the gold outflow which has called for both the increases in Bank rate are discussed on a subsequent page, but there are several technical reasons, affecting the London market alone, which also made a higher Bank rate advisable. First, there was the position of the Bank itself. Since July 8th the Bank's gold stocks have been reduced from £164.6 to £131.5 millions (allowing for the net £500,000 withdrawn on July 29th), while holiday demands have caused the note circulation to expand during the past week by £3.3 millions, and may be expected to cause a further expansion of some £4.0 millions before the peak is reached on August 3rd. The result is that the Reserve, which on July 8th stood at £66.6 millions, had by July 22nd been reduced to £33.9 millions, while the expansion in the note circulation alone can be expected to cause a further reduction of £4.0 millions during the current week. During the same fortnight the Proportion had fallen from 57 to under 33 per cent., and while the Bank had still an adequate margin in hand, so rapid a reduction in its resources clearly required definite action.

The money market in its turn was beginning to feel the pinch, for the banks' cash resources were reduced on the one side by currency withdrawals by the public for use during the holidays and on the other side by the rapid withdrawal of foreign balances. Evidence of this was found in the shrinkage in bankers' deposits from £64.5 millions on July 8th to £55.8 millions a fortnight later. This would have created considerable stringency in the money market had not the Bank of England bought bills heavily both this week and last. The extent of the Bank's open market operations is proved by the increase of £29.5 millions in Government Securities during that fortnight. Even operations on this scale proved barely sufficient, for on Wednesday of this week a trifling amount had to be borrowed at the Bank.

	July 9, 1931.	July 16, 1931.	July 23, 1931.	July 30, 1931.	Previous Rate and Date Changed.
Bank Rate	$2\frac{1}{2}$	$2\frac{1}{2}$	$3\frac{1}{4}$	$4\frac{1}{2}$	$3\frac{1}{4}$ (July 30, '31)
Banks' Deposit Rate..	1	1	1	2	$1\frac{1}{2}$ (July 30, '31)
Discount (Call)	1	1	1	2	$1\frac{1}{2}$ (July 30, '31)
Houses' Notice	$1\frac{1}{2}$	$1\frac{1}{2}$	$1\frac{1}{2}$	2	$1\frac{1}{2}$ (July 30, '31)
Market rate (3 months' bills)	$1\frac{1}{2}$ — $1\frac{3}{4}$	$2\frac{1}{4}$ — $2\frac{3}{4}$	$3\frac{1}{4}$ — $3\frac{1}{2}$	$4\frac{1}{2}$ — $4\frac{3}{4}$	...

Thus technical reasons alone both justify and require a sharp rise in Bank rate, and on the whole it may be said that the double increase is having the desired effect. The dollar exchange responded in a very satisfactory manner, the rate rising during Thursday from \$4.85 $\frac{1}{2}$ to just over \$4.86. The improvement in the Amsterdam rate from Fl. 12.05 to Fl. 12.06 was equally satisfactory, for it brought this rate above the export gold point of Fl. 12.05 $\frac{1}{2}$. Paris only improved fractionally to Frs. 123.91, but this rate is inside the gold point, and so there is no need for undue anxiety. The Swiss rate was less reassuring, for it only responded to a limited degree and is still well below the gold point. Internally the outlook is also more hopeful. Government dividend payments due on Saturday will give some relief to the money market, while next week the holiday notes will begin to return from circulation and so strengthen the Bank's position. Thus the situation appears to be well in hand; and, while it is hardly prudent to make definite forecasts in the present international situation, there is some ground for believing that London is emerging from its period of greatest strain.

Meanwhile the increase in Bank rate from $2\frac{1}{2}$ to $4\frac{1}{2}$ per cent. in a fortnight has changed the whole banking outlook. The joint-stock banks are no longer losing money on their country deposits, for the normal rate of $2\frac{1}{2}$ per cent. paid on them is now on a parity with their other rates, and, in particular, gives them a margin of a point on their short-loan rates to the market, which now stand at $3\frac{1}{2}$ per cent. The rate on advances to customers—normally one point above Bank rate, with a minimum of 5 per cent.—is also affected by this week's increase in Bank rate. The banks will make transient profits upon fixed deposits arranged before the Bank rate increases and still running, though against this must be set their loss on bills and securities bought before the increases. Still, on balance, banking profits should be improved by the recent change in the monetary situation.

Money has remained steady in New York. Call money is available at $1\frac{1}{2}$ per cent., while at the end of last week prime commercial paper was quoted at $1\frac{1}{2}$ — 2 per cent. Gold continues to arrive, \$4,000,000 having come from the Argentine and \$2,000,000 from Peru. Wall Street is following the London monetary situation very closely, and there is a general impression that New York is ready to join, if required, in any arrangement made between London and Paris. While no definite evidence has yet been forthcoming, there is some ground for believing that the wide margin now current between London and New York money rates is leading to transfers from dollars into sterling.

The Foreign Exchange market was again unstable and most currencies underwent violent and irregular fluctuations during the early part of last week, but greater stability set in towards the close. With the change in the Bank rate the tendency of sterling was, of course, favourable. New York, after remaining steady nearly all the week at 4.85 $\frac{1}{2}$, against 4.84 $\frac{1}{2}$ last week, improved to over 4.86. Montreal rose from 4.86 $\frac{1}{2}$ to 4.87 $\frac{1}{2}$. Paris after considerable fluctuation, weakened from 123.70 to 123.91, and Brussels lost 2 $\frac{1}{2}$ points at 34.79 $\frac{1}{2}$. Milan was very much weaker at 92.85, or a loss of 20 points on the week. Madrid was again erratic and weaker at 53.85. Berlin moved from a purely nominal rate of 20 $\frac{1}{2}$ last week to an actual quotation of 20.46. Amsterdam, after opening firm, lost 2 points at 12.05, and on Thursday's rise in Bank rate rose further to 12.06. Switzerland was a little weaker at 24.90. Of the Scandinavian exchanges Oslo and Copenhagen were unchanged at 18.16 $\frac{1}{2}$, but Stockholm lost 1 $\frac{1}{2}$ points at 18.15 $\frac{1}{2}$. The South American currencies were erratic and weak except Rio, which gained $\frac{1}{4}$ d. at 3 $\frac{1}{4}$ d. Buenos Aires lost $\frac{1}{4}$ d. at 33 $\frac{1}{4}$ d., and Montevideo 3d. at 22 $\frac{1}{4}$ d.. In the Far East the rupee weakened a little to 1s. 5 $\frac{3}{4}$ d., and the yen lost $\frac{1}{4}$ d. at 2s. 0 $\frac{1}{4}$ d. Batavia was considerably weaker at 12.09. Forward quotations were rather more stable. New York improved to one cent and 2 $\frac{1}{2}$ cents premium for the two periods. Paris, from par to $\frac{1}{4}$ franc premium for both periods, went to 7 and 22 centimes premium. Brussels, from 2 centimes discount for both periods, went to $\frac{1}{4}$ centime and 1 centime premium. Milan was rather better at 10 and 35 centesimi discount. Madrid again weakened to $\frac{1}{4}$ peseta discount for one month and one peseta discount for three. Amsterdam, from discount quotations for both periods, improved to $\frac{1}{4}$ cent premium and one cent premium. Switzerland was quoted at $\frac{1}{4}$ centime and one centime discount. Silver, after falling to 12 $\frac{1}{4}$ d. for both cash and forward, recovered to 12 $\frac{1}{2}$ d., being unchanged for cash, and $\frac{1}{4}$ d. better for forward. The China silver exchanges were inclined to be weak. Hong Kong lost $\frac{1}{4}$ d. at 1s., but Shanghai was unchanged on balance at 1s. 8 $\frac{1}{4}$ d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Boulevard Street, London, E.C.4.

AT THE CROSS ROADS.

In the speech with which the British Prime Minister opened the London Conference on Monday, July 20th, Mr MacDonald declared: "The present moment may be one of the turning-points in the history of the world for good or ill. If we cannot find a solution of the present crisis, no one can foretell the political and financial dangers which will ensue." What is this critical issue? It is brought out in the contrast between another passage in Mr MacDonald's same speech and a speech which was delivered on the previous day by M. Maginot, the French Minister for War. "We are not here," said Mr MacDonald to his foreign colleagues, "to enforce or to defeat or to humiliate; we are here to understand, to consider our problems objectively, to remember how closely in essentials we depend upon each other, and therefore to accommodate and to agree to something which each of us can take to our various Parliaments, explain, and get accepted as an agreement." Contrast with this the words which M. Maginot is reported to have used on the 19th: "We are not a conquered people, but conquerors. Let the bellicose countries be silent. No capitulation to Germany. Let us defend our gold. As for our military power, I answer for it!"

As we in this country know to our cost, every nation has its hotheads; but to the world at large such expressions reveal a complete misconception of the central fact of the great world conflict. France was not the victor in the war. Her armies fought magnificently and were nobly supported on the home front; but if France had fought alone she would certainly have been crushed. She was, however, enabled to survive the ordeal for one reason, and one reason only. If the war ended with the victory on her side, it was because the world believed her quarrel just. It would be fatal for the hopes of world peace if ever any nation were to forget that simple fact.

If such sentiments as those attributed to M. Maginot now represent the mind of France, it would mean that we are face to face with a most serious dilemma and a conflict between two incompatible views of world international relations. Are civilised nations in the future to regulate their affairs by the system of voluntary give and take and peaceful co-operation which is represented by the Covenant of the League of Nations and by the Kellogg Pact? Or are they to regulate them by a system of military and naval compulsion? It is one of the disturbing paradoxes of the last dozen years that the progress which has been made in the world towards achieving disarmament and the adjustment of treaties by agreement—two of the most vital provisions of the League Covenant—has all been made outside the framework of the League, and likewise outside the boundaries of Continental Europe and our great achievement in reduction of armaments so far has been the comprehensive naval limitation agreement between the British Commonwealth, Japan and the United States, achieved a year ago. Our great achievements in the revision of treaties have actually been made in China of all places. In the midst of the Chinese chaos, we have seen international miracles like the Japanese withdrawal from Shantung (a territorial revision of the Versailles Treaty accomplished in 1922!); the rendition of the British concession at Hankow and the leased territory at Wei-wei; the liberation of China from the treaty restriction on her tariff autonomy; and even a fair measure of progress towards an abolition, by mutual consent, of extra-territoriality. Meanwhile, within the ambit of the League and within the geographical limits of Continental Europe, we have achieved nothing of the kind.

Why cannot Europe follow the same road? The answer is that France is still convinced that her security depends on maintaining the present "system of Europe" with its various alliances, which assures her a position of military predominance. This point of view is clearly

expressed in the statement of policy accompanying the armament statistics that have been prepared for the Disarmament Conference. The substance of her statement is that she must maintain a decisive superiority over Germany on land and over Italy on the sea, and that the forthcoming conference must exclude from its purview any consideration of the revision of treaties.

Now, this seems to lead to something very like a deadlock. But those who are inclined to condemn the apparent drift of French opinion, during the last year, away from the Briand policy of understanding must not forget the series of events which have given a shock to that system, beginning with the election results in Germany last year and the frank renunciation by those who support the largest single party in the Reichstag of the whole system of reparations and recognition of the Peace Treaty. The "Hitler" election was followed by the episode of the Austro-German Customs Union, an episode which indeed marked a new era for Germany. Finally, there came the Hoover scheme—a sudden volte face on the part of America for which France was certainly not prepared, and one, moreover, which led her to feel that in maintaining her claim for reparations she had lost support from every quarter in the globe.

But even if such events explain a hardening of French opinion, it remains true that the present "military equilibrium" of Europe cannot possibly lead to permanent peace, and because it is not a possible basis for political appeasement it is equally a fatal stumbling block to the restoration of economic prosperity.

If this were all that is to be said, the outlook would indeed be gloomy. Fortunately, there are many indications pointing in a quite opposite direction. It goes without saying that it is a serious handicap to France that the rest of the world so often judges her by the Paris Press, which all too frequently exaggerates the aggressive aspect of her policy and the outlook of her people. The Ministers of France have met the Ministers of Germany and established friendly relations with them. In spite of the Press talk on both sides, the French Government have not yet formulated political terms as a condition of financial help. Nor is there any definite evidence whatever that any design has been shown in bringing pressure to bear on London through the means of the large foreign balances she holds here. France is well aware that any such act would be fatal to future collaboration between the two countries. The world will make no headway if it always mistakes France's nervousness for bad faith.

The suspicion, however, can be exorcised by France herself, and by France alone. What is needed is that she should take the initiative in coming to an understanding with Germany, and that this understanding should be negotiated as between equals. Obviously, such an understanding, which must cover economic as well as political matters, cannot be made to the exclusion by either party of other friendships, but must be the cornerstone of the new political and economic unity of Europe. It is sad evidence of the lack of understanding that certain circles in France should be able to believe that Britain tried last week to block the way to a Franco-German rapprochement. There is nothing that could conduce more to the welfare of the whole world than that France should seize the opportunity of making a friend of Germany by freely helping her in her time of need.

But there still remains the problem of military domination and of disarmament. Fortunately, in this direction also the French programme has a positive as well as a negative side. For instance, the French Memorandum declares that the problem of the general limitation of armaments is much more political than technical; that it cannot be solved by measures of arbitrary percentages for reduction nor by empirical adjustments; that the reduction of armaments implies

confidence; that the conception of neutrality has been rendered obsolete by the League Covenant and by the Kellogg Pact; and that the Disarmament Conference ought not to let slip the opportunity which presents itself of resolving the real problem—that of organising peace. Here is a very important point which offers us at least a gleam of hope. The French Government themselves suggest that the scope of the forthcoming conference be enlarged to cover the whole field of the problem, that is, disarmament and security in conjunction.

It is on this terrain that the deadlock may, perhaps, be resolved. A substantial reduction of armaments is the surest way to quieten the restless elements in Europe, and France may be prepared to embark upon such a policy if she can be assured that effective means exist for giving effect—as effect was given in the Great War—to the public opinion of the world.

LEAN HARVEST.

THE gathering of the European storm in recent months has done the British Government one service. It has almost completely diverted public attention from the rather barren record in domestic affairs of the Parliamentary Session which has now reached its summer break. So far as their handling of the grave international issues with which they have been confronted is concerned, both the Prime Minister and Mr Henderson have maintained their reputation for untiring work for the cause of co-operation and international appeasement. But, however necessary it is to attend to the ills of one's neighbours, it is also essential sometimes to remember that charity begins at home, and the Government's laudable efforts in the international sphere cannot be allowed to hide or excuse an attitude of indecision and timidity towards the very grave problems which faced our own country at the beginning of the session, and which, unfortunately, face it still. When the session began, there existed by common consent two main problems demanding boldness and vision on the part of the Cabinet of the day. These were, of course, the problem of large-scale and growing unemployment and the state of the national finances. Wrapped up with the Budget question was the urgent need for overhauling the unemployment insurance system and doing something to stop up the holes through which public money was running away. Looking back over the session one remembers chiefly a repetition of the old indecisive debates on unemployment, the avowedly makeshift Budget of Mr Snowden, the shelving of the question of the dole by handing it to a Royal Commission and then a refusal to act upon the urgent recommendations of that Commission.

Two facts which cannot be gainsaid are, first, that the steady increase in unemployment, now rising towards the dangerous figure of three millions, has been accompanied by no vigorous plan to check it by concentrating upon the planning of works of definite national importance. The second is that the double failure either to attempt general measures of economy, or to stem the flow of dole expenditure falling directly upon the Treasury, has left the position of the national finances substantially less satisfactory than when the session began. In the Budget, which he introduced in April, Mr Snowden gambled upon a recovery of trade and the possibility of effecting major economies. World affairs have cheated him in his first hope, and the hesitations of his own Cabinet in the second. With the second quarter of the financial year well on its way, the taxpayer's hope that he may be relieved of the fear of a substantially increased taxation in the next Budget—a hope held out to him by the Chancellor of the Exchequer—is fading day by day, and, indeed, giving place to gloomy foreboding as to the size of the new requirements which will face Mr Snowden next Eastertide. As Parliament rises for its summer recess there appears the Report of the Special Committee on Economy, appointed at the instance of the Liberal Party last February. In this Report, which is not available as we write, grave insist-

ence, we understand, is laid upon the Budget position and sweeping recommendations are made for all-round retrenchment. If the Government will act upon them when the House reassembles in October, they will, to a large extent, have redeemed the domestic failure which has marked the session up to date. Will the stern warning delivered by the Chancellor of the Exchequer to the House of Commons on Thursday move his colleagues at last to action?

Nor do we think that even the Government themselves can look back with satisfaction upon their record of actual legislative achievement. The parliamentary ground was sown thick with Bills, but the harvest of Acts, in quality, if not in quantity, is lean. The first legislative *contretemps* arose over the Trade Disputes Bill, which was introduced in conformity with a definite election pledge to revise the Conservative Act, passed in a moment of heat after the General Strike of 1926. A parliamentary majority could have been secured for a just revision acceptable to public opinion, but since the Trade Unions wanted the whole Bill or nothing, and both Opposition Parties insisted upon substantial amendments, the Bill was dropped. Hardly less chequered has been the career of the Electoral Reform Bill, designed at the instance of the Liberal Party to introduce the system of the alternative vote. It has not yet been dropped, but since the House of Lords has introduced unacceptable amendments, on which no compromise has yet been reached, the fate of the Bill still hangs in the balance. The other main topic of the session was the Land Tax Section of the Finance Bill, which, introduced with fervour by the Chancellor, received tepidly by his supporters, fought tenaciously by the Conservatives, trenchantly criticised by the Liberals, will reach the Statute Book in a form very different from that which its author designed. Of other legislative efforts the most notable perhaps was the Emergency Coal Mines Act, which passed through all its stages in both Houses in twenty-four hours, being accepted reluctantly as a measure necessary to avert an immediate upheaval in all the coalfields of the country. The Bill to remove anomalies from the unemployment insurance system can only be regarded as a pitifully tiny result of the great labours of the Royal Commission, and the opposition of the Lords has again been roused over the Agricultural Land Utilisation Bill, under which the Government sought powers for large-scale experimental farming. Among other Bills produced the Consumers' Council Bill, the Town and Country Planning Bill, and one or two minor measures, have a long journey before they become the law of the land. Numerically, the new Acts of Parliament may look impressive. But in fact the expenditure of so much parliamentary time and energy has seldom produced so little concrete result.

What, after all this, is the Government's position and its prospect of continued existence? On the one hand, the arrangement of an unofficial *modus vivendi* with the major section of a divided Liberal Party renders its position in the House of Commons more secure than in February, while the development of a grave international situation, the approach of the Round Table Conference, and the increasing importance attaching to next February's Disarmament Conference, renders a change of Government in the near future undesirable if it can reasonably be avoided. In the other hand, the attacks from those who were Government supporters at the beginning of the session are growing in vigour, even although the assailants do not grow in numbers, while the cessation of the anti-Baldwin campaign of the Press Lords has ostensibly closed the Conservative ranks and made the prospect of a General Election at least a little less abhorrent to that Party. In the autumn session, as throughout the year, the key to the position will remain in the hands of the Liberals and the test which they, in common with a large section of the country, will be likely to apply in deciding whether the present Government should be maintained in office will be whether Mr MacDonald and his colleagues will at long last take any action which can be regarded as adequate, in the circumstances, on the two main urgent questions of public retrenchment and the overhaul of unemployment insurance.

AMERICA'S BALANCE OF PAYMENTS.

THE summary character of our own official estimate of the British balance of payments, to which the Macmillan Committee called attention, is thrown into relief by comparison with the elaborate calculations published by the U.S. Department of Commerce on the same subject in relation to the United States. While statistical perfection in the estimation of figures in which "imponderables" and "invisibles" play so large a part has admittedly yet to be reached, the task of compiling and analysing the available data has been undertaken in America with a thoroughness and energy by no means paralleled on this side of the Atlantic.

The Ninth Annual Report* now published is of particular interest in that it is the first of these yearly surveys to be made in a period of intense depression. The sharp controversy, however, between Dr. Ray Hall, who has largely been responsible for the systematic development of this important analysis (who maintains that imports were over-valued in 1930 and that the net export of capital now given for the year is over \$100 millions too high), and the Department of Commerce, as a result of which the former refused to take responsibility for the present figures serves to emphasise the uncertain basis of many of these estimations. They must, therefore, be accepted as first approximations only. In the following table we show in summary forms the chief debit and credit items in America's account with foreign countries last year, in comparison with the (revised) figures for 1929:—

CHIEF ITEMS IN INTERNATIONAL BALANCE OF PAYMENTS OF U.S.A. IN 1929 AND 1930.*

Debits	\$ Mn.		Credits	\$ Mn.	
	1929.	1930.		1929.	1930.
Freight payments (net)	66	96	Surplus of merchandise exports	648	758
Tourist expenditure (net)	638	591	Interest on private investments (net)	565	594
Immigrants' remittances	223	166	War-debt receipts	207	241
Net imports of gold	120	258†	Other items‡	25	251
Other items§	92	...			
Balance, representing net export of capital	306	733			
	1,445	1,844		1,445	1,844

* Unrevised.
† Adjusted for "earmarkings" and export of paper \$.
‡ Allowing for net discrepancy on account of inaccuracies a figure of \$49 millions, which affects equally the item "Balance."
§ Allowing for net discrepancy on account of inaccuracies a figure of \$374 millions, which affects equally the contra-item "Balance."

In 1930 merchandise exports amounted to \$4,097 millions and imports to \$3,339 millions, as compared with \$5,447 millions and \$4,799 millions a year ago. The visible

* "Trade Investment Bulletin, No. 761." (U.S. Department of Commerce.) 10 cents.

export surplus (arrived at after various adjustments for bunkers, shipping repairs, etc.), is \$110 millions larger than in 1929, but \$92 millions smaller than the corresponding figure for 1928. Interest on American private funds abroad (long and short term) shows, at \$904 millions, a decrease of \$75 millions in comparison with a year ago. This is the first decrease to be recorded since the surveys were begun in 1922. On the other side of the account the interest on foreign funds in the United States has, however, fallen by \$104 millions, a reversal again of the steady trend of the previous eight years. Thus, on balance, the net sum payable to America under this head increased in 1930 by \$29 millions, while war-debt receipts also rose by \$34 millions. The remaining item on the credit side of the ledger shows in 1930 an enormous increase, but the figure of \$251 millions net includes a "net discrepancy" of \$374 millions, as compared with a discrepancy of only \$49 millions allowed for in the revised estimate for 1929. Commenting on this feature, the compilers of the report point out that the sudden swing from one extreme level of the business cycle to the other has made it particularly difficult to measure precisely the changes in the flow of the ordinary currents of international transactions. It is hoped, however, that more detailed information will be available before the revised figures for 1930 are published.

On the other side of the account, a number of improvements have been made in methods of estimation. A remarkable feature is the maintenance at such a high estimated figure of expenditure by American tourists. Net imports of gold, including a small adjustment for "earmarking" and the export of paper dollars, rose by no less than \$138 millions, while the balance, representing net export of capital, increased from \$306 millions to \$733 millions. This figure compares with \$944 millions in 1928, \$695 millions in 1927 and \$181 millions in 1926. In view, however, of the large net discrepancy in the "other items" figure on the credit side of the account, it should be appreciated that the provisional estimate of net export of capital in 1930 is necessarily open to considerable revision.

In the next table we show details of the long-term capital transactions of the United States during the past three years:—

	\$ Mn.				\$ Mn.		
	1928.	1929.	1930.		1928.	1929.	1930.
New American investments abroad—				New foreign investments in U.S.A. ...	1,573	1,616	960
Public loans*	1,124	635	834	Bond-redemption and resale to foreigners of foreign securities	862	783	1,107
Other purchases ...	934	913	613	Net long-term foreign investment by America	708	319	290
Redemption, through repurchase, of foreign holdings in U.S.A. ...	1,085	1,170	910				
	3,143	2,718	2,357		3,143	2,718	2,357

* After deduction of refunding operations, underwriting commissions, &c.

It will be seen that on the one side of the account there was an increase of nearly \$200 millions in American subscriptions to flotations of foreign securities in that country, whereas "other" purchases (i.e., "direct" investments

abroad by Americans and purchases from foreigners of foreign stocks and bonds) showed a decrease of \$300 millions. There was also a decrease of \$260 millions in the amount representing reductions of previous foreign investments in the United States. On the other side of the account, though new foreign investments in the United States fell from \$1,616 millions to \$960 millions, there was a marked increase of no less than \$324 millions in the repurchase by foreigners of foreign securities previously held in America. The Report draws attention to "the unparalleled use made of the 1930 opportunity by foreign debtors . . . to repay, at discounts, obligations held here." Thus, as the result on balance of these changes, the net outward movement of long-term foreign capital from America fell in 1930 to the comparatively low figure of \$290 millions, or less than half the total of 1928.

It remains to reconcile this figure of \$290 millions net long-term foreign investment with the estimate in the previous table that the total net export of capital was \$733 millions. The explanation is to be found in the movement of short-term funds. The salient figures are summarised below:—

SHORT-TERM CAPITAL ACCOUNT.

	(Million \$.)		
	End 1929.	End 1930.	Difference.
Due from foreigners	1,566	1,725	+ 159
Due to foreigners	3,077	2,794	- 284
Net indebtedness to foreigners	1,511	1,068	- 443

In the total due to foreigners the chief changes were a reduction of \$164 millions in foreign funds "put out" in American acceptances and a fall of \$119 millions in foreign funds employed by way of brokers' loans. The net reduction of \$433 millions in America's short-term indebtedness to foreigners, when added to the \$290 millions of net long-term foreign investment by Americans, makes up the \$733 millions estimated net export of capital on all accounts.

From this summary the central feature which emerges is that in 1930, notwithstanding a larger outward flow of short-term funds from America and the relatively small decline from the record tourist expenditure of the previous year, the further contraction in long-term foreign investment by Americans resulted in America's debtors being unable to settle their accounts with her except by making a heavy addition to the enormous stock of gold already held in the United States.

For the rest, students of international trade will find much interest in the concluding passages in which the fluctuations from year to year in various items of the international balance sheet are studied over a considerable period. From this study two conclusions are drawn, the first, that "There is a strong relationship between merchandise exports and imports. They usually rise together or fall together. The year-to-year fluctuations are rather inconclusive probably because trade channels are relatively fixed and cannot be altered quickly. Over longer periods (with skip-year comparisons) the relationship established itself in six-sevenths of the comparisons; before the war, for the eleven years ended with 1913, the corresponding fraction was forty-one forty-fifths." The second is that, whereas in recent years the net lending of the United States fluctuated very considerably, in only a few comparisons did the trade balance fluctuate so much, and that, in far the larger number of comparisons, a relationship was established between capital and gold movements.

BRAZIL'S FINANCIAL PRESCRIPTION.

As was to be expected, Sir Otto Niemeyer's report on the economic ailments of Brazil, and the remedies to be applied, is a model of concise lucidity. In twenty-one pages, covered with very large print, he tells us what is the matter with the patient and indicates the appropriate cure, in so far as cure is possible, through improvements in financial machinery.

Most of the causes of Brazil's discomforts are shared by her with the rest of the world, and especially with

those other countries that depend for paying their debts on the prices of food and materials and have also been accustomed to import capital on a large scale by raising loans abroad. The two outstanding features of the financial history of the last few years have been a catastrophic fall in prices and the closing of the international capital market. All countries have suffered more or less from the result of these events, and most of all the debtor-borrowers. In the case of Brazil, the degree of suffering has been intensified, in Sir Otto's opinion, by the consequences of her internal financial policy, though she has by no means had a monopoly of the mistakes that he enumerates—undue reliance on issues of notes, expensive borrowing abroad for purposes of doubtful economic value and excessive public expenditure. Brazil is distinguished by the fact that she has consulted a first-rate authority concerning remedies and seems inclined, though it is too early for confidence on this point, to carry out his advice.

This advice may be boiled down into a sentence—"balance your Budget and stabilise your currency." Budget equilibrium has to be secured by rigid economy and a continuous watch over the expenditure of the Federal Government and of all public authorities, and by book-keeping reforms which shall enable the public to see clearly how much the various objects on which public money is spent are actually costing; currency stabilisation, by the establishment of a central bank, on "orthodox" lines, free from political influence, and backed by a loan to provide it with a stock of foreign currency, to enable it to start its task of maintaining the milreis at the point to be chosen when the time comes.

These two essential reforms react on one another. As Sir Otto points out, "So long as public expenditure is met by the artificial increase, directly or indirectly, of the means of payment, whether through the issue of notes or of paper securities not taken by the investing public, it will be impossible to prevent those economic disturbances which result from variations in nominal values, including variations in the rate of foreign exchange. On the other hand, if the currency is not stabilised, Budget equilibrium will be constantly upset by changes in the level of public expenditure, and in particular in that part of public expenditure which depends on external prices."

In one respect the path of public economy is easy in Brazil. No Finance Minister there could put his critics into a difficulty by asking them where economy was to begin. The two principal Government undertakings are post and telegraph services and State railways. Both these forms of enterprise are profitable in other countries, and even in Brazil railways can be managed by private enterprise with results highly favourable, in normal times, to stockholders; but in Brazil they involve the State in very heavy losses, in spite of a book-keeping system which makes no allowance in the case of the Post Office, for the Ministry of Transport's postal services, depreciation, or interest on capital sunk in telegraphs; and in that of railways, for the cost of inspection, depreciation, and service (except to a very small extent) of capital invested. As to the Post Office, Sir Otto points out that the results achieved by Peru, where an annual deficit was quickly converted into a substantial profit, suggest that a very considerable saving could be secured by Brazil, and as to the railways, on which the high working costs and the number of officials give scope for reform, he suggests an independent autonomous administration free from political control, with full powers including the fixing of rates, to manage the undertakings on business lines. On the revenue side, the very high proportion of indirect taxation—over 80 per cent.—is noted as a matter to be remedied both by the Federal Government and by the States, and he urges a reduction of the Customs tariff at the earliest possible moment. It is satisfactory to note that Budget reform had already, when Sir Otto signed his report, made good progress. The Government has introduced economies in expenditure estimated to amount to about 90,000 contos in 1931 and to 142,000 contos in a full year, and increased taxation

(including income tax) to produce about 215,000 contos in 1931 and 300,000 contos thereafter. "Thanks to these measures, the 1931 Budget should now balance and future Budgets be met without undue difficulty so long as expenditure is strictly controlled."

In order to provide Brazil with an orthodox central bank Sir Otto recommends the creation of an entirely new institution, removing from the Bank of Brazil those central banking functions that it now exercises and leaving to it the commercial business that it has successfully developed. The new bank, as he plans it, will conduct all the financial business of the Government, have the sole right of note issue, and will act as banker to the commercial banks, which will be expected to subscribe for half of its capital and to maintain with it a balance proportionate to their demand liabilities in Brazil. They will have the right to elect two members of its board. It will be autonomous, its capital of 60,000 contos being subscribed by the public and the commercial banks and its board elected by the shareholders, though the election of the president and vice-president, who will give their whole time to the bank and hold no other positions, will be subject to confirmation by the President of the Republic. It will acquire the existing note issues of the Government and of the Bank of Brazil, and from the Rediscout Office the functions of providing rediscount facilities for genuine commercial bills. Its note issue will, when stabilisation is effected, be convertible into the foreign exchange at a fixed rate and be subject to the maintenance of a minimum cover in such exchange of 80 per cent. of notes and sight liabilities. In the first year or so of its existence, it is suggested that it should utilise the services of an expert counsellor, experienced in central banking practice in other countries. As to the rate at which the gold content of the milreis should be fixed, Sir Otto emphatically deprecates any attempt to fix a rate greatly differing from that current at the moment.

To enable the Reserve Bank to do its work it will have to be provided with foreign exchange assets by means of a loan sufficient to furnish it with a net cash amount of not less than £16 millions, and Sir Otto shows that there is a substantial margin, from the duties already charged, to provide specific security for such an issue. On the subject of Brazil's normally unfavourable balance of payments, he shows that there is nothing alarming in this situation, which is usual with all developing countries, including, until lately, the United States. In order to continue the development of which she is capable, Brazil must depend on capital from abroad, the receipt of which implies what is commonly called an adverse balance. At the same time, since the stabilisation plan will depend for the success on carefully regulated borrowing not only by the Federal Government, but also by the States, and on the satisfactory development of the country's resources, Sir Otto urges that the Federal Government should exercise control over the foreign borrowing of the States and municipalities and any public undertakings conducted by them; that arrangements should be made for dealing with the debts of defaulting States; that efforts should be made to free Brazil from the disproportionate rôle played by coffee in her exports; and that no further steps should be taken which involve governmental responsibility for the price of coffee or interfere with the natural adjustments and transfer to other forms of production.

Brazil and all who are interested in her fortunes must thank Sir Otto for providing her with a sound and practical scheme of financial reform. If she carries it out—and it has been shown that she has already made a good start on the all-important matter of the Budget—"no country," to quote the last words of his report, "would better repay sound financial administration or is more worth every attempt to keep even in difficult times to high financial traditions; and no country is likely to profit more by the effort if successfully made." Will she make the effort? Or will Sir Otto's report share the fate of that of the Montagu Mission, published in 1924, of which so many of his recommendations are an echo? Adversity is teaching all countries some hard lessons, and it may be hoped that Brazil will lead the way in reform.

THE KYLSANT CASE.

AFTER a long and tedious trial, the jury at the Old Bailey have acquitted Lord Kysant on the charge of issuing false balance sheets, but found him guilty on the charge of publishing a false prospectus, while Mr Morland, the auditor of the R.M.S.P., has been acquitted on the only charge preferred against him. In view of the evidence given by accountants of the highest standing that in Mr Morland's position they would have done what Mr Morland did, it is difficult to see how the jury could in respect to Mr Morland have come to any other conclusion, and the advisers of the Crown, in our opinion, committed an error in ever launching the prosecution against him. The case of Lord Kysant was more difficult, because he was responsible not only for the balance sheets which the auditor certified, but for the debenture prospectus, which based its appeal on an average figure without disclosing the decline in profits.

The case against the two defendants was based on a series of profit and loss accounts, the wording of which altered from year to year, and on the debenture prospectus. Following are figures taken from the relevant reports and the prospectus:—

PROFIT AND LOSS ACCOUNTS.

	£
1918. Profit for the year	579,399
1919. " " " "	774,905
1920. " " " "	837,653
1921. " " " "	668,400
1922. " " " "	725,315
1923. Balance for the year	779,114
1924. " " " "	772,829
1925. Balance for the year, including adjustment of taxation reserve	731,103
1926. Balance for the year, including adjustment of taxation reserves	439,212
1927. Ditto	697,456
1928. Balance for one year after crediting income tax reserves not required	687,714
1929. Balance for the year after crediting excess reserve for income tax not required	570,541

The prospectus issued in 1928 contained the following words:—"The audited accounts of the company show that during the past ten years the average balance available, after providing for depreciation and interest on existing debenture stocks, has been sufficient to pay the interest on the present issue more than five times over."

The case for the Crown was that these profit and loss accounts were false because the figures included large sums drawn from internal reserves, while the plain unimpaired man, the person that Scripture calls the way-faring man, and the Attorney-General describes as the common or garden investor, would naturally assume that they were profits earned during the year to which they were related in the printed accounts. In seven years, said the Crown, some £5,500,000 were drawn from reserves and inserted into the profit and loss account without adequate warning that instead of being freshly gathered they had come out of cold storage. If, as Mr Justice Wright observed, the shareholders had been told that this company had no earnings, surely they might have taken steps as has been done in other cases. To this contention Lord Kysant replied that from 1923 onwards he never claimed the balances as profits of any particular year; that from 1925 onwards he gave an indication in every profit and loss account of the sources which had contributed to the balance, and that shareholders cannot expect to receive from their directors a

detailed chart of all the tributaries flowing into the main stream of the company's revenue. As regards the prospectus, Lord Kylsant argued that he was justified in taking the average of ten years' balances, in so much as shipping is a trade of cycles, and every investor must have known that the profits of 1918-20 were considerably higher than those of later years.

Even at the end of this long and searching trial it is extraordinarily difficult for anyone who has to rely on the published reports to get a clear idea of all the relevant figures, but the jury appear to have been influenced by the argument that much of the money which was alleged to have been transferred from reserve was actually brought into profit and loss as soon as it was freed. Indeed, it was agreed by a recent chief accountant of the Royal Mail that large sums which had been described as coming from secret reserves had actually arisen during the year in respect of which they were distributed, and could not have been distributed before. They were freed by the ascertainment of the company's liability for taxation, and being so freed were at once brought into account and paid out in dividends to the shareholders. The effect of this submission was considerable, and when he came to cross-examine Lord Kylsant, the Attorney-General seemed to have been driven to a certain change of front, for his main attack was apparently directed not to the improper use of secret reserves, but to the inclusion without explanation of non-recurring items of revenue. He seemed, in fact, almost to argue that it is the duty of directors to tell the world what percentage of a year's profits is of a non-recurring kind—an argument that would carry disclosure to a point never before hinted at, and would surely make the position of the directors of some companies intolerable. If every published profit and loss account must carry with it a commentary so full as to show what revenue is not likely to be repeated in future years, and of the penalty for failing to provide such a commentary is a criminal trial at the Old Bailey, what sensible man would consent to grace the board of a public company?

So far we have been considering this case in the gloomy light of the Old Bailey, applying Old Bailey tests, remembering that the liberty and reputation of two men were at stake in the trial, and analysing evidence for the men's alleged crime, not for the men's imprudence. When we get away from the unpleasant atmosphere of criminal law and try to make up our minds, not whether a man of standing and character should be branded as a criminal, but whether the course he took with his shareholders was sound and reasonable, the task is less distasteful and it is easier to give free play to one's judgment. There can, we think, be no doubt that Lord Kylsant and his fellow directors took too narrow a view of their duty and underestimated both their own responsibility and the responsibility of their shareholders. From the facts that emerged in the trial, we take three points:—

(1) The members of the board, other than Lord Kylsant, took too little interest in the finance of the company and left far too much to the chairman. It was submitted by the prosecution that in matters of finance Lord Kylsant was the company, and that the rest of the board had its eyes bandaged and its mouth shut. How far this contention was true may be a matter of dispute, but no evidence to the contrary was brought forward by the defence, and it is not unfair to assume that on the stage at Royal Mail House there were very few speaking parts.

(2) Lord Kylsant's agreement with the company would have been very much less open to criticism if it had been simply based on the profits earned. To pay a commission on the turnover was bad. To make it dependent on a 5 per cent. dividend was worse. Whether the chairman in his handling of the profits was or was not influenced by this agreement, it was a vicious arrangement, and the Lord Kylsant must in the light of his agreement wear an unfortunate aspect.

(3) The board did not sufficiently trust the shareholders. In this respect the R.M.S.P. probably differs but little from the majority of joint-stock companies, and this trial will have a salutary effect if it leads to a much greater display of confidence on the part of company directors. It is far too common for boards to assume

that shareholders, either because they are ignorant and rapacious, or because they are irresponsible, or because they do not understand their own interests, or because they are spies from a competitive camp, or in general because they are a necessary nuisance, should be put off with the minimum of information. The attitude of mind which says "keep them quiet with a reasonable dividend and carry on" is utterly wrong, and unfortunately it is most common in the boards of the most prosperous companies. There is no need to cite examples, for every intelligent investor has them at his finger ends, and most thinking investors will agree that there lies one of the grave dangers of modern business. Directors must realise that their shareholders are not schoolboys whom they are appointed to discipline, but fellow proprietors entitled to confidence and a proper share in the control of their own destiny.

THE GERMAN CRISIS: AN AMERICAN VIEW.

A fortnight ago we published a commentary on the crisis from the distinguished German economist, Professor Moritz Bonn. Below we publish an article written from the American angle, the author of which is Professor Ernest Minor Patterson, President of the American Society of Political and Social Science.

ONLY those who have been looking at the more superficial aspects of the German financial situation could have expected much from the recent London Conference. Its value, if any, lay only in the fact that it permitted a breathing space, during which an appraisal of the emergency was possible and arrangements made for an extension of existing credits, and for a check on further withdrawals of balances. It is too soon to be confident that even these results have been accomplished.

This leaves the real issues still to be faced—an impossible economic situation, with its consequent state of political tension within Germany and throughout the world. The immediate crisis has been due to the withdrawal of large balances held in Germany, caused by a growing realisation that the German burdens are impossibly heavy, and that the strain within Germany is acute. The fact that advances had been made on sight or short notice is not the basic trouble, but is merely a form of borrowing that made so sudden a crisis possible.

Ignoring details, this mass of credits is due to a shortage of working capital which has been attracted from abroad by the high rates offered for it, while this shortage is in turn caused by the necessity for continuing heavy external payments both on reparation and on other accounts at a time of business depression. These conditions, which would be serious at the best, and would ultimately have compelled readjustments, have been aggravated by the fall of prices during the last eighteen months and by the existence of so many trade barriers. A more immediate influence has been the over-extension of some of the German banks, presumably due in part to unwise direction, but in part to the large volume of funds borrowed from foreign lenders who have failed to realise the impossible condition they were helping to create.

Recriminations are useless. The immediate task is to carry on for a time by the extension of short credits and by the funding of at least a part of them into longer time obligations. But it is imperative to realise that this is only a temporary palliative. The Young Plan left the reparations burden too heavy even for the conditions of 1929. These must be further reduced and, if possible, eliminated—which, of course, involves the conversion of the Hoover Moratorium into a cancellation of all the inter-governmental debts. A modification of trade barriers will come, if at all, too slowly to give any significant relief.

But under the circumstances this will be far from adequate. In Germany and elsewhere both short- and long-time obligations have risen to an aggregate that cannot be carried with prices at their present level. Conversions will be difficult in the face of the political and economic uncertainties, and this may hasten trouble. Certainly much funding could be carried out only with government or other guarantees that will be refused. More

defaults and moratoria are in order, with little to be done but to ease the strain as much as possible.

In this awkward state of affairs the attitude of the United States is important. Public opinion has moved rapidly there in the last year—in fact, surprisingly so. A modification of the tariff, at least by a return to the levels of 1929, is not impossible. Probably a downward revision of the debt settlements can be managed; conceivably a cancellation.

Unfortunately a connection has now been established in the public mind between the debts and disarmament. The relation between these two matters is an extremely dubious one, but it has been established partly by the Americans themselves, but in part by European visitors who have at times encouraged the view. A generous treatment of the debts and a willingness to make even legitimate loans abroad in the near future will be effected by the real or at least apparent progress toward disarmament in Europe. (The fact that American armament may bear no close relation to the ideal set up by Americans for Europe unfortunately is beside the immediate point.) How near Europe may be to this action Europeans can best judge, but to the lay observer from America there are meagre signs of real progress.

The upshot of it all is that a considerable number of losses must be taken both by American and by European lenders, and further large advances from America cannot be easily secured. In fact, it is not clear that they should be until a large amount of liquidation has taken place. The mistakes have been made and many of the consequences cannot be avoided.

Perhaps we may hope that the bankers both in Europe and in America will apply in the international field more than in the past a few of the principles they have long adhered to in private lending and even to a degree in public loans within their own countries. Advances are made ordinarily for productive as distinct from non-productive uses; they are properly made for a period of time that is no longer than that of the transaction for which the funds are to be used, and the borrower must be able to show a statement of assets and liabilities that will indicate his probable ability to meet his obligations promptly when they are due.

These commonplaces have been flagrantly ignored in the international field during the post-war years. If they are applied in the immediate future, there will enter in the other element: the importance at times of making further loans in order to protect previous ones. But this should be done only if an appropriate rearrangement of the business has been imposed. Applied to the case at hand it means first the elimination of all the inter-government obligations. This may be adequate in connection with government debts. It will not be enough in other directions, and investors will do well to look over their holdings and begin to write off their losses.

A DIARY OF THE CRISIS.—(continued.)

Friday, July 24th.

French and German delegations to Seven-Power Conference leave London. Mr MacDonald receives telegram from Mr Gates MacGarrah stating that the B.I.S. is "proceeding without any delay to examine the best and most expeditious methods of giving effect to those recommendations of the (London) Conference which fall within its power and sphere of action."

Unofficially reported that three foreign banking experts have been invited to proceed to Berlin to watch progress of remedial measures and advise German Government.

Experts' Committee on Hoover Plan holds second meeting in London.

Bremen Officials' Bank closes doors. Hungarian Finance Minister introduces Bill (1) confirming recent decrees, (2) authorising Government to issue further decrees if necessary, and (3) providing for prosecution of persons spreading alarmist news.

£5,280,950 bar gold withdrawn from Bank of England in addition to 127,000 sovereigns for export and 250,000 sovereigns earmarked. £1,050,000 received from Australia and 300,000 sovereigns released. £45 millions Treasury bills allotted at average price of £3 18s. 11.61d. Stock markets: London dull, hardening slightly; Paris quiet, New York weak. Dollar, 4.84½, franc 123.85, reichsmark nominal 20½.

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital and Reserve Funds, £3,600,000.

Head Office: 38, St. Andrew Square, Edinburgh

OVER 200 BRANCHES IN SCOTLAND

LONDON OFFICE: 38, Threadneedle St., E.C.2

Every description of Banking Business transacted.

Saturday, July 25th.

German Cabinet meets to discuss Chancellor's report of Seven-Power Conference. Mr Stimson reaches Berlin, and has conversations with Chancellor and Foreign Minister.

Reich Government and 11 German Banks decide to form Acceptance and Guarantee Bank with share capital of £10 millions (two-fifths to be found by Reich) to provide funds for smooth working of payments, and to take over State security for the Danat Bank.

Reichsbank return referring to July 23 published, showing cover to note circulation at 36.1 per cent.

Sir Robert Kindersley, a director of the Bank of England, interviews M. Moret, governor of the Banque de France, in Paris.

Gold withdrawals from Bank of England £3,773,250 bars and 48,000 sovereigns. New York stock market weak. Dollar 4.85½, franc 123.95, reichsmark nominal 20½.

Sunday, July 26th.

Messrs MacDonald and Henderson leave for Berlin.

Monday, July 27th.

Mr Stimson has audience with President Hindenburg, and later leaves for London. Messrs MacDonald and Henderson arrive in Berlin and dine with Chancellor.

German decree issued providing for registration of all debts due to foreign creditors in excess of £25,000 within ten days from July 28th.

Foreign banking experts in Berlin. Messrs Tiarks and Gannon in Berlin to negotiate on maintenance of present volume of British and American credits in Germany.

Merger of Saxon State Bank and the Allgemeine Deutsche Creditanstalt announced.

Gold withdrawals from Bank of England, £1,977,803. Stock markets: London quietly firm; Paris, New York dull. Dollar 4.85½, franc 123.90, reichsmark nominal 20½.

Tuesday, July 28th.

Messrs. MacDonald and Henderson received by President Hindenburg; also confer with Dr. Brüning and Herr Curtius on (1) best methods of giving effect to London Conference decisions; (2) general trade situation; (3) convention for uniform hours in mining industry, and (4) preparations for Disarmament Conference.

Mr Henderson leaves Berlin.

Officially stated that owing to end-of-month payments German banks will not open for satisfaction of all demands this week. Savings bank depositors allowed to withdraw 30 marks, and holders of current accounts to increase withdrawals to 300 marks.

Acceptance and Guarantee Bank holds first meeting at Reichsbank.

Bank of Danzig raises discount rate from 7 to 10 per cent., and Lombard rate from 10 to 12 per cent.

Gold withdrawals from Bank of England: £949,653 bars sold, 129,000 sovereigns exported, 250,000 sovereigns set aside, 200,000 sovereigns released. Stock markets: London, quiet; Paris, improving; New York, dull, but firm. Dollar 4.85½, franc 123.90, reichsmark, nominal, 20½.

Wednesday, July 29th.

Messrs. MacDonald and Henderson arrive in London.

German Finance Minister announces revenue from Customs and taxation in April-June quarter amounted to 1,808,000,000 marks—433,000,000 marks less than estimate.

Nomination of various representatives on Committee to inquire into Germany's credit needs announced.

Gold withdrawals from Bank of England £307,740 bars and 126,000 sovereigns. Stock markets: London, nervous; Paris, weak; New York, irregular. Dollar 4.85½, franc 123.90, reichsmark, nominal, 20½.

Thursday, July 30th.

Bank of England raises rate from 3½ to 4½ per cent.

Gold withdrawals from Bank of England £582,173 bars, and 39,000 sovereigns for export; 98,000 sovereigns received. Stock markets: London, Paris, quiet; New York, steady. Dollar 4.86, franc 123.89½, reichsmark, nominal, 20½.

Notes of the Week.

The Premier in Berlin.—So much turbulent water has run under the bridges since Dr. Brüning and Herr Curtius visited Chequers in June that the return visit of Mr MacDonald and Mr Henderson to Berlin—arranged then and postponed for one week owing to the Seven-Power London Conference—was invested with an importance which could not have been foreseen seven weeks ago. As things turned out, the Chequers conversations proved to be the first of a series of statesmen's chatauquas in the capitals of Europe, and the Berlin conversations of this week will not be the last. But it is probably not through any particular development of policy arising out of his latest talks with Dr. Brüning that Mr MacDonald's visit derives its real importance. All observers appear to agree that the presence of the British Prime Minister in Berlin—the first to visit that city officially since Lord Beaconsfield—and his speech at Monday's banquet have imparted a much-needed degree of steadiness to German public psychology. In proclaiming his belief that, through resolute German action, together with the external co-operation now beginning to take shape, the situation would be saved, Mr. MacDonald struck exactly the right note. As Dr. Moritz Bonn pointed out in these columns recently, one of Germany's most formidable difficulties lies in the growth among Germans themselves of the "defeatist" feeling that Germany will be crushed in any case. Mr MacDonald's re-affirmation of belief in Germany's power to save herself by her own efforts (with goodwill and co-operation from outside) was just what was needed to combat this growing despair. Of good omen, too, were the hopeful references to the Franco-German conversations opened in Paris and London; while, incidentally, Mr MacDonald did the cause of his own country no harm by vigorously rebutting the idea that Britain is "down and out," and by affirming that "safe as the Bank of England" is a phrase that has not yet lost its meaning.

Mr Baldwin and Agriculture.—It is unfortunate that, at a time of national emergency such as the present, the British public should have to rest content with little or no guidance regarding their own affairs from the leaders of the three political parties. While the Lobbies at Westminster buzz with "irresponsible" rumours of an early re-assembly of Parliament and the formation of a national Government, with a national policy of retrenchment and dole reform, the Prime Minister is inevitably and properly immersed in the European situation, while Mr Lloyd George is laid low with a severe illness, from which the whole nation, irrespective of political views, will sincerely wish him a full and speedy recovery. There remains Mr Baldwin, but he, though the opportunity of a pre-arranged speaking tour is presented to him, makes no more hopeful contribution towards increasing the flow of trade and production than to reiterate week by week his belief in a policy of trade restrictions. Having, as we have noted in previous issues, preached the gospel of industrial protection in manufacturing centres, Mr Baldwin found himself last Saturday facing an agricultural audience at Knole. Here the theme of industrial protection was clearly out of place, for farmers, hard hit enough already by the fall in the price of their products, know that Protection for industry would add to their burdens. So Mr Baldwin, naturally enough, preached Protection for Agriculture, and asked, vaguely enough, "for a free hand to employ the quota system, prohibition, or duties in industries like agriculture." Without pausing to ask what are the other industries that are "like agriculture," we turn to the rest of his speech, and find three points insisted upon. The quota, in Mr Baldwin's view, is the "best and quickest" method of achieving his object of helping the farmer. A weapon against dumping must be forged. And, lastly, although it was impossible to give any details about quota percentages or the nature of guaranteed prices "until the Party could form a Government," the Conservative Party was ready with its proposals. We are not

surprise at his vagueness, for any possible scheme of Protection or subsidy which he can produce will menace the consumer or the taxpayer, or both, with burdens which will not be shouldered with alacrity in these hard times. But surely Mr Baldwin must realise that the country will not give him a blank cheque or spare him details until he is in office. "We can see our way clearly. We know the path," says Mr Baldwin. We know, too, the path on which Mr Baldwin wishes to lead Britain. It is the same path along which the nations of Europe have hurried in these post-war years, and looking around Europe to-day even the blindest can see where it leads.

Seville and Madrid.—Last Saturday, July 25th, at Madrid, the Constituent Assembly cleared off the last business arising from disputed election results, and thus set themselves free to deal with the substantive business for which they have been assembled. It is evident that Monarchism *versus* Republicanism will not be a living issue, since the Spanish electorate has only returned one solitary Monarchist in the person of Count Romanones. The issue of Catholicism *versus* Anti-clericalism will be more serious—especially in view of the recent popular outbreaks, which the Provisional Government failed to avert, against ecclesiastical institutions and property. More serious still will be the issue of Centralism *versus* Regionalism; for the draft constitution which is to be laid before the Assembly by the Provisional Government provides for a unitary state, whereas the Catalans demand a measure of home rule which presupposes federalism, though it does not go to the length of Dominion status. Out of the 462 deputies now assembled at Madrid, the Catalan group numbers no more than 42. But the Catalan demands will set the standard for the Galicians and the Basques, and the three regional groups combined are eighty deputies strong. At the moment, however, the Provisional Government can count on the support of Monarchists, Catholics and Regionalists, besides its own supporters, the Radicals and Socialists, in combating the danger of a Syndicalist Revolution, which has flared up for the second time at Seville. The Syndicalists have chosen Andalusia for their field of action because it is the most backward part of Spain—a countryside of great estates with absentee landlords and a land-hungry peasantry. The armed attack on the Government's authority which was opened last week in the city of Seville seems to have been carefully organised. It was carried on by gunmen sniping from roofs and windows—the most difficult form of disorder for authority to cope with. Fortunately, the Government's armed forces on the spot have proved loyal and efficient, and the Government themselves have not hesitated to take strong measures. The gunmen appear to have been successfully dislodged from their lairs after some sharp house-to-house fighting—though not without bringing artillery into action, and not without loss of life among peaceful civilians. This Syndicalist outbreak at Seville, and the energy shown by Madrid in suppressing it, may set up some strange cross-currents in Spanish politics. What, for instance, will be the attitude of the Catalan Regionalists if a similar emergency arises in Barcelona? The Catalans, like so many other nationalists, are bourgeois to a degree. Will their nationalism lead them to insist upon keeping order in Barcelona without assistance from Madrid? Or will their bourgeois anxieties incline them to follow the golden rule of "safety first"? We may expect to see interesting developments in the Spanish political situation in the near future.

The Revolution in Chile.—Last Sunday, July 26th, Señor Ibañez, the President of the Chilean Republic, resigned office and handed over the Government to a provisional junta. He has since left the country for the Argentine. His resignation followed upon disturbances in the capital which had been afoot for several days. The university students had virtually fortified the university buildings and had defied the Government troops. The force on the Government's behalf; but the Government's prestige was shaken by the students' defiance of it

authority, and its fate appears to have been decided by the defection of a regiment in the provinces. In Chile, as in so many parts of the world where there is political anarchy to-day, the trouble can be traced to economic causes. In fact, the present revolution in Chile is as clearly an effect of the worldwide economic depression as was the crop of revolutions which sprang up all over South America this time last year. In that wave of unrest, to which even Argentina succumbed, Chile was everlastingly shaken. There was a military conspiracy against the Chilean Government of the day; but on that occasion Chile—being one of the most stable States of the continent—managed to escape the political *bouleversement* which verted so many of her neighbours. This week the political stability of the Chilean Republic has at last collapsed under the cumulative effect of twelve months' more of economic and financial pressure. The revolution seems to have been precipitated by certain attempts at remedial action which the late Government made last April, when measures were introduced for cutting down public expenditure and increasing the rates of both direct and indirect taxation. The result was to produce a financial scare which led to a run on a private bank—the Banco Nacional—whose principal clients are the farmers, and, in consequence, the agrarian situation, which was already serious, became critical. This agrarian crisis was perhaps the underlying cause of the political upheaval in the capital, in which the effervescence among the students was the most conspicuous superficial symptoms. If this diagnosis is correct, the new Provisional Government may have given ex-President Ibañez the best of the bargain in relieving him of his responsibilities. They may succeed in persuading the students to return to their books, but they will not find it so easy to pacify the farmers, which they can only do by obtaining better prices for Chilean agricultural produce. If the new rulers at Santiago de Chile can get the better of the world slump they will be wizards indeed! It will be a long step to that from the four days' commercial moratorium which they declared last Monday.

The Bank Rate Increase.—While the outflow of gold has continued, though at a greatly diminished rate, and the Bank of England has thought it necessary to raise its discount rate again, bringing the rate to 4½ per cent., in some respects the monetary outlook seems a little clearer; for there is no doubt that the leading central banks are now in close and helpful contact with each other. Early this week it became known that Sir Robert Kindersley was on a visit to Paris, where, on behalf of the Bank of England, he was engaged in informal consultation with M. Moret, the Governor of the Banque de France. Hence it was not surprising that the impression should have gained ground, both in London and Paris, that definite measures had been concerted between the two central banks. It was freely suggested that the precedent of 1907, when the Banque de France made a direct gold loan of £3,000,000 to the Bank of England, was being explored, and there were also rumours that a £20,000,000 credit was being arranged for London by a group of French banks, such credit to take the form of purchases of sterling bills which would be made eligible for rediscount at the Banque de France. So far it may be assumed that no arrangements of this kind have actually been concluded. Had the gold drain from London continued on last week's unprecedented scale, the Bank of England might by the end of this week have found itself temporarily short of funds, as, in addition to its gold losses, it is having to meet the normal August holiday increase in the note circulation; and in such circumstances it is legitimate to assume that co-operation both from the Banque de France and from the New York Reserve Bank would have been forthcoming. As matters turned out, sterling received fresh support early this week before any such action became advisable, and therefore, in point of fact, such action has not been taken. The source of this support is not known, and it is a pure matter of speculation whether it lies in Basle or New York, or perhaps in other centres. One thing, however, is perfectly clear: the German crisis has drawn the leading central banks into still closer co-operation with

each other, and it may be assumed that any passing emergency in any financial centre will be dealt with by joint action, if and when the occasion arises. So far as London is concerned, it has not arisen.

The Flow of Gold to France.—Hitherto it has been generally assumed that the heavy gold shipments to France, amounting during the past few weeks to nearly £25,000,000 (the bulk of which were made direct from the Bank of England), were due to the German crisis and to a natural desire on the part of the French banks to strengthen their cash resources at the expense of their foreign balances. In one sense this is a correct view to take, for since the end of June, private deposits at the Banque de France have expanded from Frs. 11.4 to Frs. 12.5 milliards, the increase being equivalent to approximately £8,000,000. This, however, is by no means the whole of the story, for quite apart from the crisis there is reason to suppose that the influx of gold into France experienced during the latter half of 1929 and 1930 would have been repeated during the current year. This year, as in previous years, the French Treasury and the Caisse d'Amortissement are beginning to draw funds off the Paris market, leaving a void which can only be replaced by the repatriation of short money from abroad, and while any estimate of the size of this void must be very speculative, it may not be unreasonable to suggest a figure of Frs. 7 milliards, or £56,000,000. Against this must be set the heavy increase in France's adverse visible trade balance, the decline in such invisible earnings as tourist traffic receipts, and also due allowance for the net effect upon her external balance of payments of the reparations and debt moratorium. On the other hand, despite the recent additions to the total cash resources of all the leading commercial banks, certain banks are still working on a narrow cash basis and narrow ratio of cash to deposits; and these may have to make further drafts upon their foreign short-term assets. Weighing all these factors against each other, it would not have been surprising if, had the international situation remained normal, France had imported during the last half of 1931 some £30,000,000 of gold. This places her recent heavy imports in a new light, for it suggests that the real effect of the crisis has been to accelerate and compress within a few weeks the bulk of gold imports that normally would have been spread over as many months. It also suggests that the flow of gold to France may not have finally ended for the year. Taking a broader view, there seems some ground for believing that the gold movements to France over the past few years are working out their natural cure. The fall in world prices has masked a very significant fact, namely, that the spread between the wholesale prices of French and imported products is steadily widening to the growing disadvantage of France. In other words, relative to world prices French internal prices are rising, and there is, in fact, a very close correlation between the widening of this price spread and the increase in the French adverse trade balance. If this process continues, the time will eventually come when France's ability to import gold by drawing on her short-term balances abroad will be offset by an actual deficit upon her current trading account.

German Banking Developments.—Though preparations are already in hand designed to permit of the relaxation of the present controls over German banking activity, it has been decided that the banks will not be opened this week for the satisfaction of all demands. To protect the banks from the full incidence of the normal month-end demands upon their resources, holders of savings bank deposits are this week only being allowed to draw an extra 30 marks, while permitted withdrawals against current accounts have for this week been raised only from 20 marks to 350 marks. It is planned, however, to resume "normal payment conditions" next week, and as a necessary preliminary a new institution, called the "Acceptance and Guarantee Bank" has been formed. Its share capital is 200,000,000 marks, and the

participants in its formation are the Government of the Reich and eleven of the chief Berlin banks, including the Deutsche Golddiskontobank. The Reich is to hold two-fifths of the capital. The function of the new bank is to even out the strain as between the big banks, and to neutralise any displacements of funds of a magnitude sufficient to cause any danger or inconvenience to a particular bank. It will also discount the bills of the smaller banks outside the group, and will possess the right to take them to the Reichsbank for rediscount. The whole object is clearly to provide adequate safeguards against a run on any single bank, and to enable the banks to support each other in such an emergency. To permit of quick and decisive action the size of the board has been strictly limited. Meanwhile Dr. Sprague and M. Wallenberg, two of the three members of the committee of foreign economic experts appointed by the German Government, have arrived in Berlin, and Mr Gannon, of the Chase National Bank, and Mr Tiarks, of Messrs J. Henry Schroeder, are also in Berlin representing American and English banking interests. These last two have been in touch with Dr. Luther with the object of carrying out the detail work arising out of the second London recommendation urging the maintenance of foreign credits already extended to Germany. Their task is not an easy one, as they have to win the active support of bankers in other financial centres besides those that they represent. Indeed, the recital of all these recent developments illustrates clearly the complexity of the work of freeing and restoring the German financial machine.

The Hungarian Situation.—Our Budapest correspondent writes on July 29th:—At last earnest measures are being taken by the Government to deal with the unsatisfactory state of the national finances. A Bill was introduced into Parliament to enable the Government to restore budgetary equilibrium during the summer recess by emergency decrees. In view of the fact that more than 100 million pengös are needed to that end it is highly important that action should be taken at once after the Bill is passed. The sound principles of the League of Nations Reconstruction Scheme applied with so great a success in 1924 should be once more resorted to. Taxes such as the House Tax, Turnover Tax, Sugar and Petrol Tax, Death Duties, Dues, etc., which have been considerably reduced since 1925, must be re-increased so as to yield an additional revenue of 70-80 million pengös; and personal services must be cut so as to effect an immediate saving of at least 40-50 million pengös. As there is little doubt that the Emergency Bill will be passed this week, there is no reason why the above-mentioned measures should not be effected before September 1st. The partial moratorium is still in force, and in all probability it will be extended until the middle of August. It is hoped, however, that the successful conclusion of the negotiation of Dr. Walko, late Foreign Minister, to place £6 millions Treasury bonds abroad will permit some relaxation of the severe moratorium. It was semi-officially stated that a French banking syndicate under the leadership of the Banque Union Parisienne has promised to take over 40 per cent., that is to say, £2½ millions of the Treasury bonds, in the event of American and English financial houses participating. It is believed here that the negotiations may be concluded within the next few days. As to the renewal of the short-term credits of the Hungarian banks, nothing definite is known as yet, but it is hoped that with the assistance of the Central Corporation of Banking Institutions acting as trustee, an agreement will soon be made. The Hungarian General Creditbank will issue its half-yearly balance sheet this week, and it is hoped that full publicity will be given to the measures proposed by the directors to overcome the crisis caused by the withdrawals of foreign credits. Other Hungarian banks will likewise publish soon their half-yearly accounts. The Hungarian National Bank increased its discount rate from 7 to 9 per cent. on July 23rd, and it is likely that another increase will take place very soon up to 12 per cent. The increase of the Bank rate was absolutely necessary as the National Bank, being the only source of credit, must defend itself

against excessive demands. Owing to the partial moratorium, business is at a very low ebb, especially foreign trade, which naturally feels the restrictions both on deposits and on foreign exchanges. But all legitimate demands, both for domestic credits and foreign exchanges, are promptly met by the National Bank, whose excellent management is the safest foundation of Hungarian credit, both at home and abroad.

World Gold Distribution.—The wide gold movements provoked by the German crisis render it advisable to bring up to date a table, last published in the *Economist* at the beginning of this year, showing the distribution of the world's monetary gold. With the object of bringing the effects of the crisis into relief, the table divides the current year into two separate portions, one running up to June 1st, and the other covering those subsequent weeks which witnessed the rapid development of the crisis:—

GOLD HOLDINGS OF CENTRAL BANKS AND TREASURIES. (Millions of £'s.)						
	End 1930.	June 1, 1931.	Change during first five months, 1931.	July, 1931.	Change since June 1, 1931.	Change during 1931 to date.
United States*	868	913	+ 45	†945 (July 15)	+ 32	+ 77
France	431	448	+ 17	466 (July 24)	+ 18	+ 35

Canada	23	20	- 3	Not available	...	...

* Excluding gold in circulation.

† Estimated.

The chief movements of the first five months were the continued gold absorptions of the United States, mainly from South America and the Far East; the further increase in the French gold stocks, due to the continuation into January of the gold movement to France at the end of 1930; and the heavy losses of the Argentine, mostly to the United States. According to the table, Germany added £9,000,000 to her metallic gold stocks, but it is necessary to add that simultaneously the Reichsbank lost £14,000,000 in Devisen, making a net reduction in the legal reserve of £5,000,000. It is important to realise that the drain of funds from Germany had been taking place at a modified rate for several months before the crisis. Coming now to the crisis months, Germany lost £51,000,000 of gold, to which should be added £1,300,000 of Devisen. Part of this gold originally went to London, and the remainder to many other centres. London, in its turn, has lost gold heavily during the past fortnight, mainly to Paris, but also to other Continental centres. The final result to date has been that since June 1st the Bank of England's gold stocks have been reduced by a net £20,000,000. French gold stocks have been heavily increased owing to acquisitions first from Germany and then from London, while the outflow of gold from Germany is also reflected in the appreciable increases in Dutch and Swiss gold holdings. Finally, the United States, despite the reluctance of American banks to draw gold from Europe, has acquired since June 1st a further £32,000,000, and her stocks have now attained record dimensions.

The Civil Service Report.—The Royal Commission on the Civil Service has produced a report which constitutes an admirable survey of the organisation of the service. Among its recommendations, which are too numerous to summarise, perhaps the most important are those which deal with the remuneration of civil servants. The Commission are satisfied that the general standard of remuneration is reasonable; they reject the proposal for a minimum wage, and though they are of opinion that the salaries of the highest administrative grades are not in proportion to those of similar posts outside the Service, they do not

consider that the present time is opportune for revision. The principal change which they recommend is the abolition of the cost-of-living sliding scale and the consolidation of the present bonus with the salary on a scale which they outline in detail; but they do not say how their scale is to be modified if the price level varies as it has been doing in recent years. A suggestion which is economically sounder is the recommendation that a special committee of inquiry be appointed to examine the organisation of the Post Office. The Commission incline to the view that the Post Office is organised too much on the lines of an administrative department, without allowance for the fact that it is primarily a trading concern. The public will heartily endorse this view, and the vision of a telephone service organised on business principles may reconcile the taxpayer to meeting the expenses of yet another committee. On the position of women the recommendations are redolent of compromise. The Commission were so equally divided on the question of equal pay that they made no recommendation at all, and this difference of opinion possibly also underlies such cautious passages as the following: "It was represented to us that it would be undesirable that women should be appointed to posts in the Colonial and Dominions offices. We recommend that women should be eligible to be employed in the latter Department." On the whole the Commission recommend that women should be eligible to compete for most posts on their merits, but that certain specified posts should be reserved to men. On the question of the marriage bar the Commission were also divided, but agreed that if a discretionary power were retained it should be, in fact, exercised. Several recommendations, designed to keep temporary employment within as narrow limits as possible, will, if acted upon, remove another undesirable legacy of the war. Most of these major recommendations, together with many minor recommendations, as, for example, the reduction to 21 of the minimum age of admission to examination for the administrative grades, seem little likely to arouse serious opposition, and it is to be hoped that they will be put into effect without undue delay.

Rent Decontrol.—The Inter-Departmental Committee on the Rent Restrictions Acts has not seen its way to recommend the abolition, within any specified period, of the control of all houses. In their Report (Cmd. 3911) published last week, the Committee estimate, roughly, that the total number of houses in England and Wales is about 9 millions, of which 7½ millions are pre-war. Of these pre-war houses probably about 6½ millions are still controlled. Since the war there have been built over 1½ million new houses, but of these only some 600,000 are available for letting, forming an increase of only about 10 per cent. in the accommodation available for the poorest classes, whereas the supply of houses available for people who can afford to buy has increased by about 50 per cent. The housing problem thus remains essentially a problem of supplying houses for rent at a figure which the less well-paid members of the working classes can afford to pay, and the Committee point out that the process of upward filtration, which had been relied upon to free the cheapest houses and so supplement the provision of new rentable houses, has not taken place. This they attribute largely to the system of gradual decontrol inaugurated by the Act of 1923, which, by providing for decontrol of any house of which the landlord obtained vacant possession, directly discouraged working-class tenants from moving. Moreover, they consider control of the cheapest houses indispensable as long as the shortage lasts, and definitely do not subscribe to the view that it is a check to the building of new houses. On the other hand, the more expensive houses have already for the most part ceased to be controlled, either because they are occupied by their owners or by virtue of certain agreements between landlord and tenant which the Act of 1923 admits as grounds for decontrol. The continuance of control over the remainder is, in the opinion of the Committee, "to the detriment of the majority in that it artificially restricts the amount, and so raises the price, of the accommoda-

tion in the market"—a view which accords oddly with the conviction expressed in connection with the lower-priced houses: that "We do not consider that to-day the artificial restriction of rent is preventing the erection of new houses on any appreciable scale." For houses of the intermediate class the Committee find that the system of gradual decontrol is working very well. They, therefore, divide all houses into three classes: Class A, with a rateable value of £45 or over in the Metropolitan Police District and in Scotland, and £35 in the rest of England and Wales; Class B, with rateable value of £20-£45 in the Metropolitan Police District, £13-£35 in the rest of England and Wales, and £26 5s. to £45 in Scotland; and Class C, corresponding, roughly, to the limits of compulsory composition of rates, with rateable values below the minimum limits of Class B. They recommend that Class A houses be decontrolled; that Class B houses continue to be subject to the decontrolling provisions of the Act of 1923; and that Class C houses cease to be subject to those provisions. Other recommendations are: the decontrol of public houses; the continuance of mortgage control as long as the mortgaged properties are controlled; and certain extensions in the definition of alternative accommodation. On the whole, the net result of the Report, if it be embodied in legislation, will be to retard the release of the housing industry from the operation of a measure which has its origin in war-time conditions. This being so, it seems regrettable that the Committee did not argue more fully in the Report the question of the effect of control upon the supply of new houses.

Idle Shipping.—Yet another testimony to the extent to which the shipping industry has been depressed by the slump is afforded by the recently published figures of laid-up tonnage in British ports at the end of the second quarter of the year. According to the returns of the Chamber of Shipping, the total idle net tonnage in British ports at July 1st was 2,044,092, representing 752 vessels. Thus the laid-up tonnage during the quarter had increased by 124,306 net tons, although the number of vessels had fallen by 26. Of this total idle British shipping amounted to 2,018,255 net tons, as compared with 1,896,804 net tons at April 1st, though again the number of ships had declined from 766 to 743. During the twelve months ended July 1, 1931, British idle tonnage in British ports has increased by 120 per cent., from a figure of 917,368 net tons at the end of the second quarter of 1930. Scottish ports have fared worst in the past quarter, laid-up tonnage there having increased in three months by 75,494 tons, or 34.7 per cent. Changes in the distribution of idle shipping is further illustrated by large increases at Gareloch, the River Fal, Dartmouth, Southampton, Sunderland and Swansea, which are only partially offset by decreases at Liverpool, Cardiff, Middlesbrough, Hartlepool and Newcastle.

Cotton Trade Reorganisation.—In the middle of last May, writes our Manchester correspondent, the Joint Committee of Cotton Trade Organisations requested the executive to investigate the actual production and potential capacity of the industry. The information already obtained covers more than 80 per cent. of the spinning section, about 70 per cent. of the weaving section, nearly 90 per cent. of the bleaching capacity, 98 per cent. of calico printing, and an undetermined but obviously high proportion of the yarn and piece-goods dyeing sections. The preliminary report shows that at least 16 per cent. of all spindles in the industry are in mills which have been completely closed down. Mills still in operation are working less than two-thirds of their normal capacity. In the weaving section about one-sixth of the looms are standing idle in mills which are completely stopped, apart from the large number of idle looms contained in mills which are still running. Active mills are working only 60 per cent. of their normal capacity. Returns for the finishing sections show that the percentage of normal capacity worked in 1930 was:—Yarn processing 46.6; piece-goods bleaching 38.1; calico printing 57; piece-goods dyeing and finishing 55.3. The Committee have

published a special statement giving their conclusions. It is pointed out that the cotton industry is suffering from the low level of its consumers' purchasing power. In other words, its costs of production are relatively too high. Its distress has been aggravated by the increase in productive capacity which has taken place since 1914. New machinery has generally been capable of a high rate of production or able to produce at lower costs than the older machinery. The increase has been largely in the lower qualities, and is therefore out of proportion to the increase in spindles and looms and has occurred in countries where long working hours and double shifts prevail. The proposed remedies are as follows:—

(1) The first step towards renewed confidence and reconstruction is the reduction of surplus capacity and the concentration of trade into a quantity of plant which will permit of more economical working.

(2) The formation of larger and stronger units in the spinning and weaving section.

(3) The organisation and development of distributive organisations whose main object would be the marketing of cheap standard cloth produced in Lancashire.

(4) The development of machinery for the maintenance of co-operation between units in different sections and between different sections as a whole.

(5) The encouragement of the scientific study of technique with a view to establishing, irrespective of tradition, the most efficient methods of production and the most equitable basis of remuneration for labour, having regard to the skill and effort involved.

(6) The development of greater uniformity in customs of the trade and of clearer and more authoritative definitions of trade terms, with a view to reducing costs and avoiding commercial and industrial disputes.

(7) The institution of comprehensive and regular statistics of production, sales and deliveries of yarn and cloth, and of the quantity of yarn or cloth finished.

(8) The maintenance of special Cotton Trade Commissioners in the principal overseas markets.

(9) The development of new outlets for cotton goods and the more effective linking up of present outlets, such as knitting, making up, etc., with the preliminary processes.

(10) Co-operative propaganda at home and abroad.

The Committee states that not all these remedies would produce immediate benefits, and some of them would require careful negotiation. It is believed, however, that success in these negotiations would be brought appreciably nearer by the adoption of a definite plan for dealing with the first problem mentioned, that of concentrating production. The establishment of machinery, however, to deal with excess capacity would involve much greater co-ordination of policy than has hitherto been possible in the industry.

A Spinners' Scheme.—Our Manchester correspondent writes:—Particulars have been published this week of the proposed Cotton Spinners' Scheme, 1931. Last April the General Committee of the Federation of Master Cotton Spinners' Associations appointed a Committee to prepare and submit a scheme designed to incorporate the principles of the Egyptian Spinners' Convention Scheme and the Cotton Spinners' Scheme 1931 (American section). The Committee has now completed its work, and the General Committee of the Federation has approved the scheme, which is now being considered by the District Associations, the ultimate object being to take a ballot of all spinning employers. At the outset it is pointed out that the scheme should be made applicable by means of legislation to the whole of spinners of cotton yarn in Great Britain and Northern Ireland. It is urged that the present excessive and uneconomic internal competition should be avoided by each spinner being required to observe, in arriving at his selling price of yarn, certain costs of production based on the average costs of reasonably financed and efficient mills working on full-time production. It is not suggested that any attempt should be made to fix the selling price of yarn, but when the scheme comes into operation marginal rates to be added to the cost of cleaned cotton will be fixed on the basis indicated and will require to be observed under monetary penalties. It is provided that production should be regulated automatically to demand, through the operation of separate pools of spindle hours run for the American and Egyptian sections respectively. The Report states:—"The Com-

mittee are satisfied that should the scheme now submitted receive the approval and support of a majority of the spindleage concerned it would be difficult for the Government to resist the appeal for legislative action." The Committee regretted that in view of the position of the industry to-day it is in their opinion impossible at present to secure the objects of the scheme without legislative action.

United States Deficit.—The United States has now been added to the already long list of countries with a realised deficit at the end of the fiscal year 1930-31. The preliminary results for the year ended June 30, 1931, show an apparent deficit of \$903,000,000, as compared with a surplus of \$184,000,000 in the previous year, and an increase in the outstanding public debt of \$616,000,000. Deducting sinking fund payments during the year, the net excess of expenditure over receipts is reduced to \$516,000,000, as against a net surplus of \$572,000,000 on June 30, 1930. The total ordinary receipts at \$3,317,000,000 show a decline of \$861,000,000, while ordinary expenditure, excluding public debt retirements chargeable against ordinary receipts, at \$3,780,000,000, exceeds by \$340,000,000 those of the previous year. The decline in income is mainly ascribed to the falling off in Customs receipts, which at \$378,000,000 yielded \$109,000,000 less than during 1929-30, and to the sharp decline in income tax payments, which at \$1,860,000,000 show a decrease of \$551,000,000. Of the total income tax collected, \$1,026,000,000 was contributed by corporations and \$834,000,000 by individuals, against \$1,263,000,000 and \$1,147,000 respectively in the previous year. An interesting feature is the large proportion of the total receipts from income tax paid by the State of New York, which, during the past year, accounted for no less than 25 per cent. Receipts during the second half of the financial year have been considerably below those of the July-December period of 1930, and at the present rate the income for the current year will fall far short of that of the year 1930-31. Imports have been declining rapidly since the beginning of the year, and income tax collections in June last, at \$296,000,000, show a decline of \$230,000,000, as compared with June 1930. As income tax to be collected in September and December is fixed by the returns on incomes earned in the calendar year 1930, it is evident that no improvement can be expected during the first half of the current financial year. In a recent statement, Mr Mills, Acting Secretary to the Treasury, pointed out that the decline in ordinary receipts reflected for the most part the effect of the depression, while the increase in expenditure was largely a result of the rising demand for agricultural aid and relief, for additional benefits to war veterans and for the accelerated Governmental construction activities, which more than offset other reductions. The forecast of a deficit of \$180,000,000 made by Mr Mellon, Secretary to the Treasury, in his annual report to Congress last December has thus proved to be sadly optimistic.

Railway Electrification.—At the annual luncheon of the National Gas Council this week both the chairman, Sir David Milne-Watson, and Sir Arthur Duckham made speeches in which they vigorously attacked the report of the Weir Committee on Main Line Railway Electrification. The gist of both speeches was that the scheme involved excessive expenditure for a very problematic return. Sir David Milne-Watson pointed out that the estimates, both of the cost of the national electricity grid and of the growth in consumption of electricity, contained in the report, which recommended the establishment of the grid, have not proved accurate, and suggests that it is, therefore, unsafe to rely upon the estimates in the Weir Report. Further, he considers that while electrification will cause additional unemployment among coal miners and railway employees, it will not yield any substantial improvements in the facilities of transport or reduction in industrial costs of production. Sir Arthur Duckham was

principally impressed with the vastness of the capital to be expended, and urged that if public money were to be expended at all at this difficult time, there were many directions in which much smaller sums could be spent to much greater advantage. He, too, was at pains to minimise the economic advantages which might be expected from electrification. Both speakers, indeed, showed a certain lack of imagination in envisaging the possibilities of the scheme, and neither seemed to appreciate the fact that as the expenditure is to be spread over twenty years, there is no question of the immediate outlay of any vast sum. The experience of those countries which have already introduced main line electrifications is far from bearing out the incredulity of these two speakers as to its economic advantages.

UNITED STATES.

Views on German Situation — Trade and Prices — Profits — Railroad Results.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 22.

In good quarters in Wall Street there is no tendency to swing to the extreme of minimisation of the dangers inherent in Germany's financial, economic and political position. At the same time, banking and business leaders here, including many of those of international standing, take the view that the problem is principally a European one and that a solution largely depends on Germany. Wall Street feels that a German loan here is quite out of the question for some time to come, no matter if a new bond issue were secured by customs receipts or railway revenues. First and second liens on these receipts are held by the Dawes and Young Plan loans, which are selling at a heavy discount. In any event, the market is not receptive to foreign financing, except that of a gilt-edged variety.

New short-term credits, whether from private banks or the Federal Reserve banks, are also looked upon with a good deal of disfavour. Some time ago the commercial banks decided not to withdraw their still outstanding credits, and most of the important institutions have not done so. A few may be willing to increase credit, but to no great extent. The Federal Reserve Bank is discounting German bills, but it is doubtful if the central bank authorities are very favourable to Reserve Bank help on a large scale. For one thing, the general banking view is strong that short-term credits are not what Germany needs.

It is believed here that Germany has not yet done all that she can do to improve her situation. This view is not expressed with any lack of desire to be helpful, for the contrary is the case, and a good deal of hopefulness for the contrary is the case, and a good deal of hopefulness for a satisfactory outcome is felt on all sides. In its general principles the second proposal of President Hoover, published this week, meets with approval. Washington apparently sees as one with Wall Street on such matters as the impracticability of long-term loans at this time, the need for re-establishment of confidence in German credit and strict control by Germany of her own situation. In so far as the President's plan hints at definite freezing of existing bank credit for an agreed period, it is not acceptable to bankers. They do not wish to bind themselves to any such agreement, although individually and of their free will they are sitting quietly. Leaders in Wall Street feel, however, that new proposals should originate on the other side of the water.

Trade is dragging along without much change, and the lack of a clear view ahead, along with moderate confidence that the worst is over, is making for steady but extremely dull security markets. Commodity prices have been rather shaky again, but a few industries are feeling better. Sugar, leather and rubber companies report better busi-

ness at firm prices, while steel, motors, oils and coppers are dull. Railroad traffic is showing little change. Commodity prices in June, according to the Bureau of Labour statistics, fell $1\frac{1}{2}$ per cent. The greatest loss was in farm products, which fell $2\frac{1}{2}$ per cent.

The index numbers of wholesale prices by groups of commodities (1926 = 100) follow:—

Groups.	June, 1930.	May, 1931.	June, 1931.
All commodities	86.8	71.3	70.0
Farm products	88.9	67.1	65.4
Foods	90.5	72.9	72.4
Hides and leather products	102.4	87.3	87.8
Textile products	82.2	66.3	65.4
Fuel and lighting materials	76.4	60.9	58.1
Metals and metal products	95.4	87.8	87.4
Building materials	90.0	78.4	77.5
Chemicals and drugs	88.9	79.1	77.9
House furnishing goods	96.2	89.2	88.6
Miscellaneous	74.5	62.8	61.8
Raw materials	84.8	66.5	64.7
Semi-manufactured articles	82.0	68.9	68.5
Finished products	88.9	75.1	74.0
Non-agricultural commodities	86.3	72.6	71.4
All commodities, less farm products and foods	85.7	73.2	71.9

Business activity receded to a lower level in June as shown by the National Industrial Conference Board's index, the drop being more than seasonal. Further slackness has come this month, but apart from the foreign disturbance and anxiety over adverse conditions in the wheat belt caused by the low prices for grain the feeling is still one of hopefulness. No one deludes himself into expecting an early end to the depression, but at least some seasonal improvement in the autumn is anticipated.

Foreign trade figures for June revealed a further decline in trade. Exports, at \$187,000,000, were the smallest since 1914, and imports, at \$176,000,000, were the lowest since 1915. Wage-cut discussions are on the increase, and, apparently in an attempt to head them off, President Green, of the American Federation of Labour, in estimating unemployment at this time at 6,000,000, is exhorting organised labour to fight attempts to reduce wages. It may be said that no large concern will cut wages without long and careful consideration, but a continuance of low earnings for much longer may lead to action. Considerably reduced living costs are, of course, an influence for wage reductions. Food costs declined about 2 per cent. last month.

Against rather sombre statistical evidence of a general nature on trade, the second quarter and six months' earnings statements of industrial companies are making rather a good impression. About a hundred companies so far have published their reports, and while the large majority show declines as compared with last year, the decrease is proving to be smaller than was generally expected. For the companies now on record the six months' net income is about 9 per cent. under last year. In the first quarter a computation of earnings for about 300 industrial and mercantile companies, made by the Federal Reserve Bank, showed a drop of 56 per cent. from last year.

Railroad companies in June lost about as much net income as for the five preceding months, that is, between 35 and 40 per cent. It is unlikely that much improvement will be shown for July. Hearings on the application for freight rate increases have begun before the Interstate Commerce Commission. Witnesses are being questioned at length, and while it is now clear that the asked-for increase will not be granted hastily a strong case is being made out. In fact, the friends of the railroads may be a trifle too zealous, their picture of affairs serving to give some alarm among ordinary investors. A large number of roads may fail to earn enough to cover fixed charges with enough margin or to maintain a large enough dividend to keep their bonds on the New York State legal list. However, insurance companies and savings banks, while they may not buy a bond not on the list, are not necessarily obliged to sell bonds which are removed. In any case, if matters came to a pinch, the State would probably suspend temporarily the working of the regulation, as it did during the post-war depression.

sion. Railroad shares and bonds are just now finding a firmer market.

Some anxiety is felt over the weakness in sterling and the loss of gold by the Bank of England, but great confidence is felt in the ability of Governor Norman to handle the situation. Meanwhile the banks here are loyally refraining from bringing in gold, though they could now do so at a good profit.

FRANCE.

Political Situation — Industry — Franco-German Rapprochement — Negotiations with Bank of England — Family Allowances.

(FROM OUR CORRESPONDENT.)

PARIS, July 29.

THE political situation is undoubtedly calmer than it has been for many months. The Chambers are in recess until the end of October, and deputies and senators are practically all absent in their constituencies gleaning the real opinion of their electors. These, so far as all indications suggest, are absolutely behind the Laval Cabinet in support of the recent policy of refusing further concessions to Germany, except in exchange for concrete guarantees. "This is the first time since the war," it was insisted last week, "that a French Minister has returned from an international conference without being accused of having made concessions to the detriment of France." The fact has deeply impressed public opinion and appreciably improved the stability of the Cabinet. Much less has been heard of the demands of a few weeks ago that the Chambers be specially convoked to discuss the policy of the Ministry in regard to the Hoover Moratorium and the efforts to bring about a *rapprochement* with Germany, and the prospects of the present majority, in regard to next spring's elections, have distinctly strengthened.

The economic situation continues to cause some nervousness, but analysis of the facts suggests that the French have still appreciably less to complain of than practically all other nations. Unemployment figures have shown only small fractional changes either way for some weeks, and appear for the time being to be stationary. The only serious labour trouble for many months—that in the textile industry—was brought to an end on Monday, when all the strikers, after 11 weeks' absence, returned to work on practically the old terms, except that in future the employers will no longer pay their workers' contributions to the national insurance fund, as well as their own. The adverse foreign trade balance continues slowly to increase, but not unduly so, in view of the sharp drop in purchasing power in practically all other countries.

Apparently all that is needed to bring back a fair measure of prosperity is a successful issue of the effort already begun by this country to bring about better relations with Germany. There is abundant evidence that, in spite of the apparent failure of the Franco-German conversations in Paris, the idea of a sincere *rapprochement* between the two countries has only been scotched and by no means killed. What is interpreted here as British aloofness, and an apparent desire to work hand-in-hand with the United States, to the detriment of France, has undoubtedly helped to turn French eyes regretfully towards Germany as an alternative to Great Britain.

The visit of Sir Robert Kindersley to Paris, accompanied by officials of the Bank of England, for the purpose of negotiating with the Bank of France in regard to plans to prevent a recurrence of the recent enormous gold movements from London to Paris—and, it is presumed, *vice versa*—has excited extraordinary interest here. The proposals discussed during the conferences, which occupied the whole of Saturday and Monday, and in which the heads of the great Paris banks took part, have been kept strictly private. It is believed here, however, that two main proposals were discussed. One of these was the extension by the Bank of France of credits for the benefit of the Bank of England up to a total which is stated variously as anything between £20,000,000 and

£35,000,000. The other proposal was that the Bank of France should give the British market rediscounting facilities in Paris to a sufficient total to meet the London requirements. At the same time, it is asserted, the French were asked to agree not to withdraw any further portions of their balances from London. Similar rediscounting facilities, it may be remembered, were extended to the Bank of England, in a somewhat similar period of stringency in 1907.

Opinion in reliable French circles inclines to the view that, although such measures would undoubtedly relieve London from its more pressing difficulties, they cannot, in their very nature, prove more than palliative, and will not materially aid in solving the problem of liberating the huge amounts of British and American short-term capital locked up in Germany. The negotiations are reported to have been hampered to some extent by the French view of the fact that a good deal of money lent by the Paris banks in the London market has been re-lent at much higher interest rates to German and other Central European borrowers; and, further, that repatriation of these funds in present circumstances would be attended with considerable difficulty.

The annual report of Comité Central des Allocations Familiales indicates that at the end of 1930 the number of wage earners enjoying the benefit of supplementary allowances in addition to their pay, based on the number of their children, was 1,850,000, as against 1,820,000 at the end of 1929. The total number of beneficiaries at one time in the year rose, as a matter of fact, to 1,880,000, but subsequently declined by 30,000 units, owing to the economic slump. The increase in the total expenditure by the employers belonging to the various associations during the year was 38,000,000 francs. (Taking into account the public administrations and other organisations outside the Central Committee, the total amount now being distributed in France in the form of these allocations *familiales* is now about 1,700,000,000 francs (£13,600,000) a year, among a total population of 4,300,000.)

As is known, the supplementary wages allowances paid in respect of each child form only one aspect of the work of these purely voluntary organisations, founded and supported by employers, who support the whole cost of them. They also comprise a long list of maternity, sickness, convalescence and other benefits. The national insurance plan, which came into operation last July, includes maternity benefit in the case of women who are wage earners and thus contributors towards compulsory insurance. The associations granting these allocations *familiales* base maternity benefit on the child alone, no matter whether the father or the mother is a wage earner. Many of the associations continue to make maternity allowances, independent of whether the beneficiary is insured or not. Over 7,000 children needing "cures" in seaside, country or mountain air, were given this benefit during the year. These and other social benefits granted during the year involved additional expenditure, apart from cash allowances, of over 10,000,000 francs, or 3,000,000 francs more than in 1929. The birth-rate in families enjoying these extra allowances in 1930 worked out at 46½ per 1,000, as against a mean for the whole of France of 28.6 per 1,000.

GERMANY.

Gradual Relaxation of Restrictions — New Guarantee Bank — Discount Rate — Stock Exchange Regulations — Harvest Credit — Bank Balance Sheets.

(FROM OUR CORRESPONDENT.)

BERLIN, July 29.

THE outcome of the London Conference was received in Germany with profound disappointment. This was partly the result of the inability of public opinion to realise that credit in the immense volume which would have been necessary to bring about an immediate and perceptible relaxation of the crisis in Germany cannot be raised overnight, even when statesmen are unanimous in the matter. As, however, the result left unfulfilled not only unjustified

hopes, but also very sober expectations, nobody can effectively combat this sense of disappointment.

Germany, therefore, feels herself thrown on her own resources. Two tasks lie before her: to bring about a return to the normal system of payments, and to secure the soundness of the currency. Further progress was made last week and at the beginning of this week with the gradual removal of the restrictions on payments which were imposed by the emergency decrees. From July 24th-28th cash payments from bank accounts for unprivileged purposes were allowed up to 200 Rms., provided they did not exceed 10 per cent. of the account, whereas from July 20th-23rd the limit had been 100 Rms. and 5 per cent. The restrictions on transfers have also been further relaxed, and in this connection the clearing association of the big credit institutions, whose activities are expressly exempted from the restrictions of the emergency decrees, and which is already making possible transfers up to 50,000 Rms. per customer daily, has been very useful.

In the course of this week the restrictions on payments will presumably be for the most part removed. It is to be hoped that the first condition for such a relaxation will in the meantime be created—an agreement by all foreign creditors to refrain from calling in their balances. Germany cannot raise the moratorium as long as she knows that her action would result in the immediate withdrawal of the four milliards of short-term credit which the German banks still owe abroad, for the German banks are not in a position to recover even a substantial part of this sum from their own customers; nor could the Reichsbank, whose gold and foreign exchange amount to about 1½ milliards, provide enough foreign exchange to meet the payments. The Reichsbank will, however, of course, see that the service of the long-term loans is provided for in full.

The second condition for the resumption of normal payments has been provided by the creation, jointly by the Reich and the big banks, of a new institution, the Akzept- und Garantiebanc A.G. The readiness of the Reichsbank to provide the necessary means of payment for a full resumption of banking business would have been of no use to many institutions, because they did not possess a sufficient supply of bills suitable for discount. The new bank, partly by endorsing and partly by itself discounting bills not suitable for discount elsewhere, will enable the Reichsbank to direct the stream of means of payment in those directions in which it is needed.

The capital of the Akzept- und Garantiebanc is 200 millions, of which the Reich has taken over 80 millions and the banks the remainder. The participating banks are far fewer than in the case of the Clearing Association; they do not include, for example, the clearing houses, and of the big private banks only Mendelssohn is participating. Big banking institutions of public corporations figure, however, among the shareholders (Reichscreditgesellschaft, Preussische Staatsbank, Deutsche Verkehrskreditbank, Rentenbankkreditanstalt, Golddiskontbank) and bank, and indirect Government participation in consequence amounts to more than half the share capital. As the Bank für deutsche Industrieobligationen is among the proprietors, industry also will participate in the guaranteeing of bills. The savings banks are planning a similar institution on their own account, as they are anxious to restore full payments as soon as possible in order not to lose prestige as compared with the banks.

The question is much discussed in the Press whether the present Reichsbank discount rate will be sufficient, when complete freedom of payments is restored, to keep claims on the Reichsbank within the necessary limits. The President, Dr. Luther, refused to raise it to begin with until he saw on what scale claims are likely to be made. A further rise in the rate of interest would, of course, mean a further contraction of business, increased unemployment and further burdens on public finance, but these consequences would equally ensue if the Reichsbank, as would otherwise be inevitable, were to enforce a corresponding result by more severe restriction of credit. Dear credit has, however, this advantage over compulsory credit restriction, that the contraction is brought about at those

points where business is least profitable. Circumstances may therefore force the Reichsbank very soon to a further rise in its discount rate.

An attempt has been made, by a new emergency decree, to resolve the confusion which the prolonged closing of the Exchanges has brought about in the business relations of everybody connected with them. No claim for delivery may be made in respect of forward transactions in goods outstanding at the end of July. Only the difference between the purchase price and an officially determined price is to be paid. As to the principles upon which this "liquidation" price is to be fixed, the decree only says that regard is to be had to the state of the market prior to the closing of the exchanges. The issue of regulations as to outstanding forward sales of securities for July delivery is entrusted to the Stock Exchange committees, which have already postponed the date of delivery until the end of August. Forward transactions for later dates are not being altered for the time being. Loans falling due, which normally, according to German custom, would only be repayable on days when the Exchanges were open, are to be repaid on the agreed date even if this be a Stock Exchange holiday. This benefits the banks, which have placed their liquid reserves as short-term money. The regulation does not, however, apply where the money, according to express or tacit agreement, was to be used for the purchase of securities, as the debtor in this case, in the absence of the possibility of sale, cannot as a rule recover the money. The regulation of these cases also was committed by the decree to the Stock Exchange committees, and they have decided that where more than one day's notice was agreed upon these loans shall not fall due until the end of August. Day-to-day money is to fall due at noon on the third Stock Exchange day after the reopening of the Exchange. The debtor may repay the loan before the due date, and receives an inducement to do so in that the rate of interest for August is to be 50 per cent. higher than that agreed on for July.

The emergency regulations for the prevention of the flight of capital have been made stricter. The obligation to notify claims in foreign currency and the Reichsbank's right to commandeer them now applies to balances on foreign exchange account held with inland banks. All foreign liabilities must also be notified. This regulation will make possible the collection of statistics which it is hoped to use in the negotiations for an agreement to suspend foreign claims.

The extraordinary scarcity of credit which has resulted from the restriction measures is involving German agriculture in particular difficulties. An abundant harvest is expected shortly, and the farmers will, for the most part, be forced to sell their grain as quickly as possible in order to procure ready money. The financial position of the grain trade has been undermined by the indirect effects of the agricultural crisis, and in order to move the crops from the farmers to the mills the Reichsbank will have to provide special credits. That will be done by the agricultural societies presenting their bills to the Reichsbank with the endorsement of their central institution. The farmers are trying to extend the financing of the harvest into a kind of valorisation credit, but though the severe fall in grain prices during the last few days has given an impetus to these efforts, the shortage of available funds is likely to prevent their being effective.

The bank balance sheets for the end of June have been awaited with great eagerness. The May statements already showed a considerable contraction, and June brought the sharp decline which led to catastrophe in the first half of July. It will not be possible to measure the volume of money withdrawn in consequence of the crisis until the July balance sheets appear. In June the "creditors" and acceptances of all the credit banks declined by a full milliard from 13.55 to 12.53 milliards. The position of the six big banks (DD bank, Dresdnerbank, Danatbank, Commerzbank, Reichskredit A.G. and Berliner Handelsgesellschaft) is particularly significant. Between the end of May and the end of June their "creditors" declined from 10,395 millions to 9,277 millions, and their acceptance liabilities rose from 582 to 816 millions. As the confi-

dence crisis in Germany began with the dissolution of the Reichstag in July, 1930, the June figures show the results of a year of credit crisis in Germany. In this one year the "creditors" alone of the six big banks have fallen from 12,297 to 9,277; that is to say, these six banks alone have paid back 3 milliards to creditors. How have they accomplished this enormous payment, which was further substantially increased in July? The table below shows the changes in the most important assets during the past year:—

	June 30, 1930.	June 30, 1931.	Increase or Decrease.
Bills of exchange	3,256	1,914	— 1,342
Balances with other banks	1,113	686	— 427
Advances against goods	1,855	1,748	— 107
Contangos and Lombards	542	283	— 259
Debtors	6,191	5,668	— 523
Liabilities in respect of endorsements	764	1,515	+ 751

This shows that the repayment has been mainly achieved by mobilising the bills of exchange, together with a severe contraction in balances with other banks, and only to a very small extent by reducing "debtors." This is one of the problems of German banking policy to which close attention will have to be devoted at a more settled time. In individual items the June balance sheets already show a considerable difference between the individual banks. While the DD bank and the Commerzbank have only lost 8 per cent. of their "debtors" in the last month, the decline in the case of the Danatbank was already 17 per cent.

BELGIUM.

Public Finance — Government Loan — Industry — Recent Concentration Schemes.

(FROM OUR CORRESPONDENT.)

LOUVAIN, July 19.

THERE is as yet no noteworthy improvement in public finance. Taxation receipts are not more than about 5 per cent. below the estimates, but this financial year will close with a substantial deficit mainly owing to the heavy reduction in receipts which Belgium will suffer by the adoption of the Hoover Plan. Parliament has recently decided to impose certain new taxes and to increase the rates of others. Taxation revenue will thereby be increased by 1,300 million francs in a full year, according to the present estimate, and by 700 million francs in 1931. This increase may prove insufficient to meet the swollen estimates, and a new effort is likely to be inevitable. Only a few of these recent tax regulations have already come into force. Meanwhile the Government has ventured to contract a one milliard franc loan to replenish the balance in hand, which was until recently substantial, but has been depleted by the repayment of the balance of an American post-war loan, the financing of public works, and by the deficit on the ordinary budget. This loan, in the form of 5 per cents. free of tax and redeemable in 75 years, was conveyed to a syndicate of Belgian banks at 93 per cent. to be offered for public subscription at 96 per cent. from July 10th.

This financial operation has been exposed to vehement criticism. It has been emphasised that the selling rate for public subscription offered too large a yield and could certainly have been fixed at 98. It has also been pointed out that the allowance granted to the bankers was excessive, and that the Government might have offered the securities directly for public subscription, thus borrowing without the backing of the banks. The success which the subscription has met both at home and abroad suggests that these criticisms are justified. The loan was quoted at a premium in the stock market the day before it was opened to public subscription.

The general situation has remained stationary, though a slight improvement has appeared in the labour market. At the end of May unemployment showed a larger decline than is explainable by the incidence of seasonal factors. The number of totally unemployed workmen, which was 80,000 in the beginning of this year, has decreased to 56,000, while the figure of those partially unemployed declined from 126,000 to 97,000. Nevertheless, it must be

stressed that the position of the collieries has been becoming daily worse; they are said to be losing one shilling per ton at present. The possibility of closing down has been seriously considered by certain coal companies of the South. The position of the textile industry, on the other hand, has continued to improve, and this has led to a perceptible reduction of unemployment, but unemployment relief still costs the State 30 million francs a month, which constitutes a relatively heavy burden on the Belgian tax-payer.

One of the most important recent financial events has been the announcement of the proposed amalgamation of the Banque de Bruxelles with its Belgian local subsidiary banks (which total 20). This merger plan has come as a surprise to those familiar with the history and practice of the Banque de Bruxelles, which has always left a great deal of freedom to the affiliated regional banking organisations. Though the position of this bank is strong and the proportion of liquid assets high, its policy is open to criticism as suffering from a lack of coherence. Opinions upon this proposed amalgamation differ. The general view is that the situation of certain affiliated banks had to be stabilised. The Banque de Bruxelles proposes to improve its own balance sheet and to reduce the valuation of its investment portfolio in order to allow for the decline in the value of certain shares, but opinion is not unanimous as to the necessity for this step.

The steadily progressing trust movement in the glass and plate-glass industry has recently advanced further. Thirteen companies working the Fourcault process for the preparation of window glass merged last autumn, and the industrial papers now report the imminent amalgamation of the plate-glass factories of Charleroy, Moustier and Floreffe; the company holding the Libbey-Owens patent for the manufacture of flat-drawn glass is also contemplating entering into the merger. The subscribed capital of the trust would amount at its incorporation to 250 million francs. The remaining Belgian plate-glass producing companies, four in all, are likely to join the above-mentioned combine.

The news which has been spread about fusion among other banks and among metallurgical enterprises is believed to be without foundation. The standing of the Belgian banks remains sound. Though some of the outstanding advances may not be immediately recoverable at the moment, the ratio of liquid assets to liabilities has remained sufficient. Moreover, the Belgian banks do not seem to have suffered losses on account of the recent failures of the Oesterreichisches Kredit-Anstalt and the Norddeutsche Wollkaemmerei. It has been ascertained in financial quarters that there was very little Belgian capital in Germany or Austria when the crisis broke out.

SWITZERLAND.

Foreign Trade — Unemployment — Tourist Industries — Banking Difficulties.

(FROM OUR CORRESPONDENT.)

GENEVA, July 17.

SWITZERLAND is now in the grip of the general economic crisis, which seems to grow worse every week. Its effects are reflected by the foreign trade returns, which are very unsatisfactory. During the first half-year, imports reached a value of £44,351,181, as against £51,459,918 during the corresponding period of 1930, a drop of about 13 per cent. All categories of imports, and particularly raw materials, were affected. Exports aggregated £28,892,950, compared with £36,927,729 last year, a decrease of nearly 22 per cent. The adverse balance will be difficult to make good by means of invisible exports, as the value of these is likely to be much lower than usual.

The monthly export figures had dropped to £4,556,228 in January, but they rose to £5,234,408 in March; since then they have progressively decreased from £4,804,503 in April to £4,407,968 in June, the lowest monthly total recorded for the past six years. All the exporting industries are hit by the slump, but especially the watchmaking,

silk, cotton and machines industries, whose sales abroad were the following (in millions of £) compared with 1930:—

	First Quarter.		Second Quarter.	
	1930.	1931.	1930.	1931.
Watchmaking...	1.8	1.0	2.5	1.2
Silk	2.5	2.1	2.5	2.0
Cotton	2.0	1.5	1.7	1.4
Machines	2.3	1.5	2.2	1.6
	8.6	6.1	8.9	6.2

The situation is pretty bad in the watchmaking industry, which had already been handicapped last year by the increase in United States customs duties. Many factories have been compelled to close down, nearly all the others have reduced the number of working hours and dismissed a great part of their employees, so that the number of unemployed is over 2,500 in that branch of industry out of a total of 17,000.

Commercial exchanges with Great Britain were less active than last year: imports from her aggregated £1,972,602, as against £3,159,369 during the corresponding period of 1930, and exports to her reached £4,573,548 compared with £5,185,919 last year. Exchanges with the five principal clients of Switzerland were as follows during the first half-year:—

	Imports from		Exports to	
	(£'s million.)		(£'s million.)	
	1930.	1931.	1930.	1931.
Germany	13.4	11.9	5.8	4.3
France	9.4	7.1	3.5	3.0
Italy	2.9	3.4	2.3	1.7
Great Britain	2.8	1.9	5.0	4.5
U.S.A.	3.9	3.1	3.0	1.9

Great Britain holds the fifth place among countries selling to the Swiss market, and the first place, formerly held by Germany, among Switzerland's customers.

The number of unemployed, which reached 27,000 in January, was reduced to 16,000 in April, mainly owing to seasonal causes, but it has not changed much since then, and at present the number of registered unemployed is about double that at the same time last year. The Government has been compelled to grant subsidies to the unemployment insurance funds, but so far the unemployment situation is not so severe as it was ten years ago.

The earnings of the hotel industry, which generally make good about one-fifth of the foreign trade adverse balance, will be considerably reduced, as the summer season began under unfavourable auspices. German and United States tourists are few, British tourists are less numerous than usual, and that decrease is not compensated by a rise in the number of French and Italian visitors. Retail trade and transport undertakings will also suffer from the lack of foreign visitors, unless the German financial crisis is solved in the near future.

The financial situation of Germany is causing grave anxiety here, as it is estimated that the amount of Swiss funds invested in Germany reaches nearly one milliard marks. Meanwhile the export of German capital to Switzerland has again increased during the past weeks, and the Swiss banks have again lowered their rates on short- and long-term deposits owing to the abundance of money. Nevertheless, two Swiss banks are now in a difficult position. As a result of losses in France and of the economic crisis, the Banque de Genève, a private bank of which the Geneva State is a shareholder, has been forced into liquidation. As the Geneva Cantonal Parliament has refused to lend £500,000 to that bank, it has been closed down. Liabilities are expected to exceed £1,000,000, while the capital and reserves hardly reach £1,000,000 altogether. The bank was a commercial one, and its failure might have involved the failure of many commercial undertakings, but the Court wisely appointed a committee which will take the necessary steps for the winding up of the bank within the coming three months; this will make it possible to recover many claims and thereby reduce the losses. The closing down of the Banque de Genève created some difficulties to the Basler Privatbank Paravicini, Christ and Company, which had big interests in the Geneva bank; it has asked for a reprieve, but it is stated that the assets of the Basle bank exceed its liabilities. Apart from these two cases, the situation of the Swiss banks remains on the whole very sound.

JUGOSLAVIA.

New Bank Statement — State Trading in Grain — Reception of Hoover Plan — Foreign Trade — Public Finance — Building.

(FROM OUR CORRESPONDENT.)

BELGRADE, July 17.

THE first statement of the Yugoslav National Bank under the new booking system, which embodies the changes consequent upon stabilisation and part-repayment of the State debt, makes interesting reading. Thanks to the repayment of 1,400 million dinars, instead of the expected 1,000 millions, and the gain of 800 million dinars from the revalorisation of the cover, the State debt has been reduced from 4,020 million dinars (£14,700,000) to 1,825 million dinars (£6,600,000). The cover in gold and foreign bills is 2,291 million dinars (£8,000,000), in addition to another 245 million dinars which have not been entered as cover as they represent merely temporary holdings. The actual note circulation is only 4,564 million dinars (£16,000,000), but as the new law requires that sight obligations should also be covered, and these obligations amount to 1,011 million dinars, the cover is 41.10 per cent., of which 27.63 per cent. is in gold. The legal cover is 35 per cent., of which 25 per cent. is gold. The discount rate has been raised from 5½ per cent. to 6½ per cent. It was last changed exactly a year ago, when it was lowered from 6 per cent. to 5½ per cent., the policy of the National Bank then being to assist the general lowering of the inland interest rate. Now, however, that the National Bank cannot act any more as an inland regulator, but is in its turn made dependent on the international flow of gold, the reverse policy has to be adopted.

The introduction of the export and import monopoly of wheat, wheat-flour and rye, as well as the fixing of the wheat price at 160 dinars (11s. 6d.) per quintal, was not an entirely unexpected measure. The change, as favoured by the Government, from agriculture to stock-raising, is proceeding slowly, and in the meantime it was found necessary to give some protection to the corn-grower if only to prevent grave economic and social consequences. For the Government this will mean a loss of about 7,000 dinars per truck, or about 200 million dinars (£760,000) if the entire surplus of 35,000 trucks is exported. In addition to this measure a privileged company for silos and warehouses has been formed in pursuance of the Government policy of obtaining complete control over the country's foreign trade in agricultural produce. The company is similar in structure to that of the Privileged Export Society, i.e., it is a joint-stock company with the State as the principal shareholder. State control and a minimum dividend of 6 per cent. for the private shareholders are stipulated. Hitherto there have been but few silos and storehouses in the country, which has been a distinct disadvantage in trade, and the new company, in addition to storing agricultural produce, will issue warrants and lombard loans on goods deposited for export.

The Hoover Plan received but a mixed reception in Yugoslavia, the expectation of gain being wiped out by the feeling that the Yugoslav share in the sacrifice is too heavy. Speculators, too, played havoc with the war reparation bonds, declaring that "no reparations" meant no service on these bonds, until the Government issued a statement that these two factors were entirely independent, as the Yugoslav Government had made these bonds an internal affair between itself and the citizens concerned and had guaranteed the payment of interest.

Trade continues poor and is considerably below last year's figures, imports for the first five months being worth 2,197 million dinars, as against 2,973 millions in 1930, while exports for the same period were 1,966 millions, against 2,854 millions in 1930. The fall thus amounts to 26 per cent. in imports and 32 per cent. in exports, while the trade deficit is 231 million dinars, as against 120 in 1930 (but 602 millions in 1929).

Government receipts, on the other hand, assessed on the basis of a better year and rigorously collected, con-

tinue excellent. Receipts for the twelve months April, 1930, to March, 1931, were 12,396 million dinars (£45,000,000), as against 12,228 millions at the same date last year.

Building also is doing well, both at Belgrade and in the big towns in the country. The reason for this is that the return on houses has once again become more profitable now that the banks pay an average of 5 per cent. on deposits, and that deposits have grown to 14,170 million dinars (£52,500,000), as against 13,890 millions at the end of 1930, or 12,000 millions at the end of 1929.

ARGENTINA.

Public Finance — Politics — Loans — Foreign Trade.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, July 7.

ARGENTINA'S position at the beginning of the second half of 1931 is in many respects decidedly better than it was six months ago. Nevertheless, the diminution in national revenue, which is chiefly brought about by the smaller volume and value of imports, makes it exceedingly difficult to carry through a constructive financial policy, even when that policy is based upon strict economy and reduced expenditure in all departments of the State. Revenue in the Buenos Aires Customs House at the half-year amounted to \$134,661,069 paper, a reduction compared with last year's figures for the same period of \$18,401,146 paper. Though such a reduction is not necessarily proportional throughout the year, it would probably be idle to hope for any marked improvement between now and the end of December. All the more importance, therefore, attaches to the wholehearted efforts made by the present Government to bring about effective reforms in official expenditure throughout the State Departments. For a variety of reasons, systematic opposition to economy, passive though it may be in its nature, has been successful in many instances in checking perfectly feasible plans for permanent reduction of Government outlay. For this attitude the political situation is undoubtedly chiefly responsible. The Radical Party, which does not necessarily mean the Irigoyenist Party, is largely in the majority throughout the Republic, and will return to power when the next elections take place. The effect of this possibility is felt in many ways at the present time; in financial and commercial affairs it almost unconsciously promotes an atmosphere of uncertainty which, if it grows in the near future, will undoubtedly be detrimental to business as a whole. It is generally agreed that a return of the Radicals to power would not mean a repetition of the shameless abuses coupled with gross incompetency that the revolution of September 6th exposed. The Provisional Government tacitly takes the same view, and is quite ready to hand over its very heavy responsibilities to legally appointed popular representatives; provided always that they can give reasonable assurance that future government will be conducted constitutionally and economically. To that end important reforms in the existing Constitution have been drafted. If adopted they will cut the ground from under many abuses of parliamentary privileges which have latterly been employed for the lowest party ends.

In the meantime administration must be carried on and recurrent obligations punctually met. Debt services are steadily complied with, and on July 1st repayment was made of £2,500,000 due in London and repayable in specie at need. The necessary gold is released from the Conversion Fund through the intermediary, the Banco de La Nacion Argentina, and it is interesting to note that in the Government decree authorising the operation it is expressly stated that the specie required is to be replaced as soon as the external floating debt has been consolidated. Three months from now a sum of \$50,000,000 United States falls due, which was granted by Messrs. Brown Bros. and Company, of New York, and it is quite possible that before October 1st, the due date of the aforementioned amount, a concrete proposal concerning consolidation will have been brought forward and discussed. The Argentine

Government were quick to refute officially the irresponsible suggestion, emanating from New York a couple of days after President Hoover's proposal, to the effect that the United States moratorium might well be extended to loans to South American Republics. It is unnecessary to repeat the emphatic official announcement which, though dignified, was as severe as diplomatic courtesy would permit. And it may be said without the least exaggeration that Argentina has never for one moment envisaged, much less discussed, any such possibility.

The mercantile situation in general has improved, even although values of exports continue remarkably low. Wheat is still \$5.50 paper per 100 kilos, and maize \$3.80, spot prices practically the same as those ruling a month ago. Though linseed has undergone a sharp improvement to \$12.20, the amount still exportable is only approximately 200,000 tons, against 5,000,000 tons of maize and over 1,000,000 tons of wheat. As the area sown to wheat is estimated to be at least 30 per cent. below that cultivated last season, it may be hoped that some of this latter will eventually be sold at better prices, but meanwhile these conditions react unfavourably, and sharply, upon the import trade, more especially on up-country dealers in direct contact with agricultural interests, and on the large importers of agricultural plant in general. Many farmers have this year found it cheaper to plough with horses and leave their tractors in the shed. Indeed, there has been a semi-official propaganda in favour of so doing. It means less money spent on fuel and spare parts, and to that extent helps to redress an unfavourable balance of payments.

For the first five months of this year imports were valued at \$251,799,170 gold, and exports at \$272,043,917 gold, exclusive of specie, \$89,020,674 gold, so that there is a favourable trade balance of \$20,244,747 gold as against an unfavourable balance at the end of May, 1930, of \$28,760,790 gold. The gold holding of the Conversion Office on July 4th amounted to \$320,463,660 gold, and the total note circulation stood at \$1,228,406,548 paper, the percentage guarantee being 65.78 per cent. Despite heavy chartering, freight rates are easier on the basis of 18s. 6d. San Lorenzo loading o.c. terms mid-July cancelling. Exchange, which improved to 36½d. in sympathy with the general feeling of relief when it appeared probable that France would fall in with the Hoover proposal, has since fallen away again to close at the moment of writing at 35½ London, 138.45 New York, banks' cable drawing rates. Local quotations for national bonds and the cedulas of the National Mortgage Bank are steady and sustained in the neighbourhood of 93½ per cent. for 6 per cent. interest securities.

Letters to the Editor.

EXPORTS AND EMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of May 2nd, in an article entitled "Exports and Employment," certain criticisms were made on a paper on "The Relative Importance of Export Trade" which I had read before the Royal Statistical Society a short time previous. This article appeared to require a reply from me, but it was desirable to postpone that reply until the paper was published. As the Journal containing the paper has recently been issued there is no reason for delaying the reply further.

A number of points referred to in the article are dealt with in the reply to the discussion on the paper, published in the Journal, and I need not, therefore, discuss them fully here. The writer of the article was in error in attributing to me an estimate of £2,250 millions for the wages bill of the country based upon the estimate I gave of wages plus salaries. I dealt separately with (a) industry and agriculture, and (b) other remunerative employment. Estimates were given for the aggregate of wages plus salaries for both (a) and (b). I took salaries at 10 per cent., and was influenced in this by Professor Bowley's calculations (*Economist*, February 9, 1929) of the numbers of wage earners and salaried workers. The data for a sound estimate of this proportion do not yet exist,

and I consider that a higher figure could be justified, but taking the round figure did not affect appreciably the conclusions reached in the paper. The writer of the article (and other people) took the same percentage for (b), but this is certainly wrong, as the percentage of salaries in the "services" group of occupations must be quite high. I am accordingly in no way responsible for "Dr. Snow's wages bill of £2,250 millions," and there can be no doubt whatever that this figure is some hundreds of millions above the truth. I consider, however, that the figure of £1,600 millions frequently quoted is below the truth.

It may be worth mentioning here that, in my opinion, the data do not at present exist for giving a reliable estimate of the wages bill for the whole country. Some reliable figures are available for a considerable proportion of those engaged in industry, but until something in the nature of a national census is taken of our distributive, etc., activities we shall be lacking in the data necessary to make with confidence separate estimates for wages and salaries for the whole country. Even the estimates which have been made for the national income as a whole have not yet been established beyond the realm of criticism, and I have given elsewhere reasons for the view that the estimate associated with the honoured names of Bowley and Stamp is too low. (It is of interest that the report of the Macmillan Committee, after describing the inadequacy of the data available regarding the national pay-roll, accepts without query the figure of £1,600 millions for the wage-bill and expresses the opinion that salaries are "perhaps nearly half of the wage-bill.")

The article referred to "the fallacy of inferring that the proportion of the population engaged in export is the same as the proportion of the wages and salaries bill paid in connection with exports." There are two questions which arise in the consideration of this point. In the first place, our working population is not constituted in two more or less watertight compartments for "home" and "export" goods separately. In many industries it would be extremely difficult to say if the work of a particular man was for "home" or "export," and it is necessary, therefore, to have some unit of measurement other than "numbers of persons engaged," and the natural unit is the value of their work as indicated by the value of the goods exported. In the second place, and this is the point stressed by your contributor in referring to sheltered and unsheltered wages, rates of wages in trades exporting a large proportion of their production are less than in some other trades catering entirely for home demand. This may be so, but it does not alter the position. If export trade employs N people and produces £X in salaries and wages, while an equal amount of capital with N persons engaged on home trade produces £(X + Y), it seems more reasonable to measure the importance of the export trade by the ratio of X to (X + Y) than to say that it is equally important as the home trade because it employs the same number of people. But the point is mainly one of the definition we adopt for "importance."

On the subject of the criticism in the article regarding the method of estimating the amount of imported materials contained in the articles exported from this country, it is true that the calculations did not go into great detail. Without that the knowledge which is available only to those personally acquainted with individual industries it was hardly possible to take every factor into account. In the instance quoted, the cotton textile industry, I have made subsequent calculations in which the part played by bleachers, dyers and finishers, as distinct from that of the spinners and weavers, was taken into account, but no appreciable alteration in the final result was produced by this greater refinement. It is also true that I did not make an estimate of the "value contributed by the services of 'British merchant seamen'" in the calculation of the value of the imported materials contained in the articles exported, but a speaker in the discussion, well qualified to express an opinion on the subject, emphasised the very small payments made for transporting goods by sea in comparison with internal distribution charges.

The question of duplication raised in the article has been dealt with in the reply to the discussion on the paper. Some duplication certainly exists, but so far there is no evidence to justify the statement in the article that "the net output as given in the Census reports already includes the proceeds of a large part" of "the other occupational groups." A detailed examination of all the material is necessary in forming an opinion on the subject, but my opinion is that the "part" played by duplication in this matter is relatively small. The existence of doubt on the subject, however, is further argument for the need of a distributive census in this country.

There are one or two items of fact in the article in which the writer is in error, but these are unimportant and need take no space. The appellation "frivolous" used in the

article to "Dr. Snow's invitation to the country which of all the countries of the world is the most dependent on export trade to abandon a large part of the trade" would certainly be justified if there were anything in the nature of such an invitation in the paper. The latter would have to be read through very distorted spectacles for such an invitation to be found, though it did put forward the view that a more reasonable perspective as to the relative position of foreign and home trade was desirable. Why should we look upon the loss of a customer in the South of England of, say, a British boot manufacturer to a foreign manufacturer as a matter quite different from the loss of a customer in South Africa? The underlying cause is probably the same in each case, but in the latter we are urged (by a Government Department as well as the Press) that we must "recapture the lost market," but the former loss we are told that we can view with equanimity because somebody else in this country performs some service to pay for the article imported.—Yours faithfully,

"Thornhill," Kenley.

E. C. SNOW.

July 25, 1931.

[We agree with Dr. Snow that the ratio of salaries must be higher than 10 per cent. in the service group of occupations, but as the only indication he gave in his paper of the ratio upon which he was working was his statement, *à propos* of the groups covered by the census of production, that he took salaries at 10 per cent., we had no choice but to suppose him to have used that ratio throughout. On the question of sheltered and unsheltered wages our point was merely one of arithmetic. If the wages of persons employed upon the production of goods for export are as a whole below the average of wages over all occupations—and this can be asserted without assuming the possibility of classifying each individual worker as "working for export" or otherwise—the fact that, say, 13 per cent. of wages and salaries were derived from production for export would mean that more than 13 per cent. of the population were so occupied. Finally, we still think that the general tone of Dr. Snow's paper suggests an exhortation to something much more drastic than "a more reasonable perspective as to the relative position of home and foreign trade."—Ed., *Econ.*]

FASCISM AND CATHOLICISM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I agree very heartily with your strong words against the foolish act of putting explosive bombs inside the Basilica of Saint Peter; as I also do with your approbation of the skilful way in which the matter has been handled both by the Vatican and the Italian Government. All Italians hope that the air will be cleared from such perturbing and vicious incidents. But the moral you draw from such piece of history is not justified. Shall we hope that an inward as well as a juridical reconciliation between Italy and the Papacy will be the consequence of this abortive crime? I say that such a consequence would be both logically absurd and morally mischievous.

Absurd, because the Catholic Church and Fascism are both exclusive and totalitarian churches. They aim at the conquest of the whole man, body and soul. Catholicism cannot renounce its divine right of educating the youth and of moulding the soul of man so as to render him worthy of salvation. Fascists appear to have discovered, to their amazement, only after the issue of the Pope's Encyclical on the Catholic Action, that the Church will not restrict its action to the inside of the temples, to Mass, and to the explanation of the words of Christ. The words of Christ and the catechism are rules of life; they exercise a profound influence on the moral, family, social and political behaviour of man. The Pope is right when he says that if Catholicism should restrict itself to external practices it will cease to be Catholicism. Therefore the Catholic Church cannot and never will renounce its right to say its word in all problems touching the life of man.

In its turn, Fascism is also a faith. A secular faith, but a totalitarian one. Fascism also requests the obedience of the whole man, body and soul. It aims at moulding the life, the inward life of man, from birth to death. Man is to be subservient to the State; an instrument in the hands of the governing chief to the realisation of the State's aims. This is what the Pope calls paganism, intolerable intrusion into the spiritual life of man, which belongs to himself and to God. There may be truce between Church and Fascism; there cannot be true peace. Peace is a sheer absurdity between two such exclusive faiths.

Peace, or a long truce, will be, if reached, very dangerous for Italy. Given your great liberal traditions, how can you throw away the only existing hope of some liberty for the Italian people? The Catholic Church is the only remaining

organised force, juridically recognised by the laws of the land, and in which Italians can seek refuge against the oppression of an overpowering State.

The refuge is spiritual, ethereal, but it is something worth while to a people sick of the tyranny of a totalitarian State. We have no Parliament freely elected, no freedom of the Press, no liberty of teaching. Boys are taught in the elementary schools by means of only one book, a State book. The corporative system has rendered the whole economic mechanism part and parcel of the giant State. Employees' and employers' associations are a façade; the inner truth is that they are branches of the State administration; their presidents and secretaries are appointed by Ministerial and Royal decrees, and are removable at will. Men cannot obtain jobs without being Fascists or adherents to Fascist syndicates. Employers are more and more becoming State employees. I do not criticise the system. It may be that it will appear to somebody an anticipation of future social transformations. I say that the system is such that man is nothing and the State is all. Year by year, month by month, by little imperceptible advances, Fascism has destroyed all organisations, all social forces, all associations which were independent from its sway. There are now in Italy only 41 million atoms, called men, and the Fascist State, with its numberless ramifications. Provinces, municipalities, local and social bodies no longer draw their force from some independent sources; the source of force, of appointments, of election, is the State, the State only.

The only extant independent body is the Catholic Church. The great mistake of Fascism was the Concordat with the Vatican. By the Concordat it recognised juridically in the Church a force, an independent force, free from its supervision. Bishops and parish priests are nominated by the Pope, not by the Government. They have a status within the State. They are morally bound to make use of their power. They preach and they educate. They cannot preach the gospel of the Fascist State, but the gospel of God; they educate men not toward attaining the aggrandisement of the State, but towards perfecting the spiritual life of the individual. War is bound to be waged between the Church and Fascism. In this struggle is the only present chance for Italians of hearing a word different from the usual one of annihilation in the omnipotent State. Liberalism, liberty of speech and of thought, have taken refuge in the Church. This sounds like a paradox, and a paradox truly it is in a modern State; but it is the tragic truth of present-day Italy. Surely the struggle between Fascism and the Catholic Church does not interest men who are busy only with their acquisitive worldly life. It is the business of the thinking part of the people. But even its non-thinking part is more and more interested in the struggle, because they have come to see that even the acquisition of bread and butter is dependent more and more upon the omnipresence of the State. Instinctively they aim at securing some dose of independence, and very soon they will all come to see that there is only one force left free in Italy to-day—the Catholic Church.—I am, Sir, etc.,

Rome, July 27th.

OBSERVER.

TO THE EDITOR OF THE ECONOMIST.

SIR,—As one who has devoted a great deal of special study to such matters, I have read with deep interest your article (July 11th) on the Papal Encyclical against some recent actions of the Italian Fascists. I would suggest that, both in regard to that Encyclical and in regard to the preceding one—on Social Problems—there seems to exist in the public mind a serious misunderstanding. It is true that the Pope condemns, in the latest Encyclical, "a pagan worship of the State," and many of us will agree with such censure, to that extent. However, it must be realised that the Pope's condemnation is from a Papal, not a modern Liberal, viewpoint. Similarly, in the encyclical on Social Problems, the Pope did far more than condemn a few political theories such as Communism and Socialism. The daily press has entirely failed to quote the first paragraph of that Encyclical; yet that paragraph is of the greatest importance. The first paragraph of the Encyclical says:—

"The way for this remarkable document of pastoral solicitude [i.e., Leo XIII's Encyclical *Rerum Novarum*, issued in 1891], it is true, had been in a measure prepared by other pronouncements of our predecessor. His letters on the foundation of human society, the family, and the Holy Sacrament of matrimony, on the origin of the civil power and its proper co-ordination with the Church, on the chief duties of Christian citizens, against the tenets of Socialism and the false notions of human liberty—these and others of the kind had unmistakably revealed the mind of Leo XIII." In footnotes, the reader of *Quadragesimo* is referred to these encyclicals of Leo XIII:—*Arcanum* (issued in 1880), *Immortale* (1885), *Sapientie* (1890),

and *Libertas* (1888). Thus, *Quadragesimo* reaffirms, and makes its own, those encyclicals, and the meaning of the new Encyclical cannot be understood apart from those others.

In *Immortale* it is declared that "the authority of the Church is the most exalted of all authority, and cannot be looked upon as inferior to the civil power, or as in any way dependent upon it." In *Arcanum* it is laid down that, "as the Founder of the Church willed her sacred power to be distinct from the civil power, and each power to be free and unshackled in its own sphere, so there is, however, this condition—a condition good for both, and of advantage to all men—that union and concord should be maintained between them, and that on those questions which are, though in different ways, of common right and authority, the power to which secular matters have been entrusted should happily and becomingly depend on the other power which has in its charge the interests of heaven." *Sapientie* declares that, "if the laws of the State are manifestly at variance with the Divine Law, containing enactments hurtful to the Church, or conveying injunctions adverse to the duties imposed by religion, or if they violate, in the person of the Supreme Pontiff, the authority of Jesus Christ, then truly it is a positive duty to resist, a crime to obey"; also, that the duty of Catholics is not merely to accept revealed doctrine and teachings proximate thereto, but also "to allow themselves to be ruled and directed by the authority and leadership of bishops, and particularly of the Apostolic See." In *Libertas* it is laid down that it is wrong for the State to allow equal rights to "various religions (as they call them)," but that the State "must profess" Roman Catholicism; also, that toleration in the State must be "strictly limited," and must be mainly a means of avoiding worse ills; and, finally, that, "although, in the extraordinary condition of these times, the Church usually acquiesces in certain modern liberties, she does so not as preferring them in themselves, but as judging it expedient to permit them until, in happier times, she can exercise her own liberty."

To appreciate the significance of the above it is needful to remember that, by "the Church," the Pope meant only and always the Roman Catholic Church, as the sole power on earth "having charge of heavenly things"; that, by "religious duties," he meant only what that Church asserts as such; and that, by "variance from the Divine Law," he meant variance from what that Church teaches as such. Thus it will be seen that Leo's teaching was that the Roman Church—itsself in no wise dependent on the State—demands obedience from the State; that States should profess Roman Catholicism and tolerate other cults, if at all, then as little as possible; and that the Roman Church would repudiate modern liberties opposed to its own exclusive claims, should better days enable her to do so.

All Leo's maxims have been reaffirmed by the first paragraph of the recent Encyclical, *Quadragesimo*, on Social Problems; and other Encyclicals, including the one against the Fascists, must be understood in the light of that fact. It will be seen that the Papal attitude has nothing in common with "love of liberty" as generally understood.—Yours faithfully,

J. W. POYNTER.

Books and Publications.

CIVILISATION ON TRIAL.*

DR. DELISLE BURNS holds the mirror up to modern civilisation. His mirror is his own alert, well-informed, widely-ranging but unsatisfied intelligence, and he shows us pictures continually dissolving and forming again, presenting new scenes. They are always moving, while his sometimes disturbing comments flow with them. The modern civilisation, which, according to Dr. Burns, is on trial, has developed in the last twenty years in Western Europe and in North America. Its characteristics are motor cars, aeroplanes, cinemas and radio, the use of tinned food and of electricity for household services, mechanisation of production and standardisation of taste, resort to new methods in education and in government. In contrast are the mediæval conditions exemplified most clearly in China and India and the primitive type of social life which exists in tropical Africa. All three types trade with each other, and the new industrial revolution of to-day is affect-

* "Modern Civilisation on Trial." By C. Delisle Burns. (London). Allen and Unwin, Ltd. 1931. 10s. 6d. net.

ing the whole world. "As industrialisation proceeds," says Dr. Burns, "the needs of the modern world press more heavily upon the peoples of tropical areas." His two more chapters on the relations between modern civilisation and Africa and Asia must be passed over here, but readers of the book will not skip them. Industrialisation, having developed rapidly among Europeans in America, is now reacting upon Europe itself; but America, Dr. Burns observes, lacks the sense of direction which comes from the past. As between America and Europe, "the defects of each may be amended by the co-operation of both."

After thus looking round, Dr. Burns settles down "to analyse in their native homes the political, economic, and cultural tendencies which combine to make modern civilisation," examining first the phenomenon of post-war dictatorships. These, he points out, have come into existence in countries of peasant population, where birth and death rates are high, the percentage of illiteracy great, and where the people have lived under authoritarian religions. In such countries highly-organised groups, suppressing criticism and exercising power dictatorially, have in some instances brought about improved conditions, but their very success may be bringing their regime to an end.

In the world of modern civilisation, changes in transport and production, in people's tastes and habits, have changed government itself, both in its national and international functions. There have been extensions of the franchise and an increase in voluntary organisations for the public good; but Dr. Burns writes depressingly of existing conditions in which the drift towards new war becomes daily more dangerous. This strengthens as each nation's defences become more alarming to its neighbours. Tendencies towards co-operation are the more hopeful sign, but this outspoken part of the book raises the most serious doubts. "Whether war is to be made more destructive or peace made possible," says Dr. Burns, "probably depends most of all in the near future upon the modernisation of the economic system."

He passes on to examine modern methods of production, the standardisation of taste, education, the sciences and the arts, dwelling strongly on what may be accomplished by social co-operation. Dr. Burns looks most hopefully for progress to the efforts of groups of persons, rather than to what may be done by individuals. His analysis of the situation is, he says, intended as a basis for action, but the whole picture is complex. There are many cross-currents, and he leaves us trying to think it all out—perhaps wondering whether, after all, there are not even deeper things than are dealt with even in Dr. Burns' philosophy.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

The British Year Book of International Law, 1931. (London) Oxford University Press, Warwick Square. 16s. net.

This volume includes, among other contributions, articles on "The Future of Codification," by Professor Brierly; "The Unification of the Law of Bills of Exchange," by Dr. H. C. Gutteridge; and notes on "British Reservations to the General Act," "The Imperial Conference, 1930, on Arbitration," "The Status of the Mandatory Power," and other subjects of current international interest. There is also a record of decisions of international and national tribunals.

Studies in Indian Currency and Exchange. By H. L. Chabiani. (London) Oxford University Press, Warwick Square. 9s. net.

A clear and timely discussion of the Indian currency question.

The Delusion of Protection. By George H. Winder and Cluny MacPherson. With an introduction by the Hon. Sir Hal Colebatch. (London) The Australian Book Company, 16, Farringdon Avenue. 4s. 6d.

A severe and interesting criticism of the cost and effects of the Australian tariff.

Kapital und Kapitalismus. (Berlin) Reimar Hobbing. Two vols. Rm. 25.

A series of lectures by German economists, given under the auspices of the Vereinigung für Staatswissenschaftliche Fortbildung. They cover a wide range of subjects, grouped under the main headings "Capital in the Capitalist Economic System," "Capital Accumulation," "The Capital Market," "The Use of Capital," "The Wearing Out and Destruction of Capital," and "Capital Policy and Transformation of the Capitalist System."

A Short History of Political Economy in England. By L. L. Price. (London) Methuen and Co., Ltd., 36, Essex Street. 6s. net.

This revised edition adds forty years to the period covered by former editions, and brings the history to the death of Marshall. These later authors are grouped under the three headings of economic history, statistics and economic theory.

L'Allemagne et les Démocraties occidentales. Les conditions générales des relations franco-allemandes. By Edmond Vermeil. (Paris) Publications de la Conciliation Internationale, 173, Boulevard Saint-Germain.

The short essay on Franco-German relations appears at a very appropriate moment.

Les Paradoxes Economiques de l'Allemagne Moderne. 1918-1931. By Max Hermant. (Paris) Librairie Armand Colin, 103, Boulevard Saint-Michel. 20 fr.

A French study of the main basis of German economic development since the war.

Foreign Affairs, July, 1931. (New York) Council of Foreign Relations, 45, East 65th Street. \$1.25.

This quarter's issue includes, among other interesting contributions, articles by Sir Austen Chamberlain on "The Permanent Bases of British Foreign Policy"; and by A. M. Carr-Saunders on "Fallacies about Over-population."

Building Societies Year Book, 1931. Compiled and edited by George E. Franey. (London) Reed and Co., 37, Cursitor Street.

Contains an alphabetical list of the principal societies, with extracts from the latest balance sheets, and the names of directors and managers; a series of articles by experts; and a great deal of miscellaneous relevant information.

The Political Quarterly, July-September. (London) Macmillan and Co., Ltd., St. Martin's Street. 3s. 6d.

This number includes, *inter alia*, articles on "Disarmament and French Public Opinion," by Pierre Cot; "Defects and Reforms of Parliament," by Sir Herbert Samuel, and "Prohibition's Challenge to America," by Oswald Garrison Villard.

The China Stock and Share Handbook, 1931. Compiled by C. R. Maguire. (Shanghai) North China Daily News and Herald, Ltd.

Contains full particulars of the leading Chinese securities, together with useful tables of silver statistics and exchange movements.

CABLES AND WIRELESS.

IN a prolonged world trade depression there is no past error of financial judgment in a company's affairs which can remain hid. Wise directors face the realities, admit past miscalculations, however serious, and take steps to put them right. It is, therefore, satisfactory to find the directors of Cables and Wireless, Ltd., bluntly admitting that their great organisation, formed with governmental approval, is working on an unsound capitalisation. Their report is almost brutal in its frankness, but stockholders in these days should be grateful for frankness on the part of their directors, even if this frankness takes the form of the voluntary retirement (with compensation) of redundant directors.

The company's operating subsidiary, Imperial and International Communications, Ltd., was formed (it may be recalled) with a capital of £30,000,000 to acquire the communication assets of the Eastern Cable group (Eastern, Eastern Extension and Western) and Marconi's Wireless Telegraph, to take over the Pacific Cable Board's cables, with its West Indian cable and wireless system, and to lease the Post Office beam services. The standard revenue of the company was fixed by the Imperial Wireless and Cable Conference at £1,865,000, or approximately 6 per cent. on its capital. The revenue account for the twenty-one months to December, 1929, disclosed a profit of £2,023,155, which was at the rate of £1,156,088 per annum, or approximately 3.85 per cent. on the capital. The failure to earn the standard revenue was even then attributed "almost entirely to bad world trade." The accounts for the twelve months ending December 31, 1930, showed a net profit of £326,429 (incidentally the directors in July, 1930, estimated that the profits would be £800,000). A comparison of the last two revenue accounts follows:—

	21 months to Dec. 31, 1929. £	Equivalent for 12 months. £	12 months to Dec. 31, 1930. £
Message receipts, less payments to Governments for taxes.....	10,716,040	6,123,452	5,185,010
Income from shares in subsidiary companies and investments...	473,422	270,526	352,886
Charter of ships and other receipts.....	191,800	109,600	101,873
Total.....	11,381,262	6,503,578	5,639,770
Working expenses, interest, taxes, and reserve for cable renewals	9,358,107	5,347,490	5,313,521
Net profits	2,023,155	1,156,088	326,249

It will be seen that the message receipts have declined by 15.3 per cent. and the total net profits by no less than 71.8 per cent. We do not wish to over-emphasise the gravity of these figures. The fall in the operating revenue is serious, but, as the directors affirm, "is not more serious than that in most other industries and undertakings." A graph which the directors publish with the report illustrates the close dependence of the traffic receipts on the external trade of Great Britain. The company has done its best to meet the decline in traffics by effecting operating economies. The expenses of working at stations show a reduction at the rate of £195,000 a year, expenses of maintenance of cables a reduction of £91,000 a year and operation of ships a reduction of £90,000 a year, while other expenses show a saving of £37,000 per annum; a total of £413,000. General administrative charges are also lower, and non-recurrent expenses of £78,541 were charged against revenue last year. The reduction of personnel has continued, the estimated decline in salary and allowance commitments since the formation of the company amounting to nearly £375,000 per annum.

The economies which have been effected are lasting. The results are at present overshadowed by the fall in the receipts, but they will be felt increasingly as the receipts recover with the first lifting of the trade depression. Nevertheless, when all due allowance has been made for these favourable factors, it appears from the directors' report that the company has been operating at a loss since the end of May, 1930, that reductions in rates have had to be made to meet the pressure of competition both of business and Government interests as well as to effect assimilation with wireless rates; that these reductions in rates have resulted in a decrease in revenue, which the company cannot hope to make up until there is a recovery in trade, if then; and that there is evidence of an over-development of the means of communication throughout the world, which can only result in all companies engaged in the communications industry operating at a loss. These grave issues have been put before the Advisory Committee set up by the Imperial Wireless and Cable Conference, and a committee has been appointed to inquire into the position, "including the causes and consequences of the great discrepancy between the standard earnings and the present earnings." The committee has an exceptionally strong personnel, comprising Mr Wilfrid Greene, K.C., Lord Ashfield, and Mr L. Durning Holt. We trust that, when the relations between the company and the Government are considered, the exorbitant rental which the company has to pay for the lease of the Post Office beam services will not be left out of review. To quote from the directors' report:—"It is clear that the communication services of the Empire cannot continue indefinitely to be conducted not merely with little or no return on the large capital employed, as in 1930, but at a loss, with outgoings exceeding incomings, as on the basis of present traffics seems to be the probable outcome of the year 1931." These gloomy remarks have been emphasised by the statement issued this week of the estimated traffic receipts for the six months ending June 30th, which compare with those of the corresponding period of 1930 as follows:—

	1930. £	1931. £	% Decline
January	519,485	412,908	20.5
February	460,052	390,461	15.2
March	492,316	447,668	9.9
April	456,120	386,706	15.2
May	466,279	371,704	20.3
June.....	413,471	374,502	9.4
Aggregate.....	2,807,723	2,383,949	15.0

The daily average traffic receipts for June, 1931, were the lowest yet touched, being 22.9 per cent. below those of June, 1930.

Let us now turn to the position of the holding company, Cables and Wireless. The dividends of Imperial and International Communications, Ltd., are paid to the three cable companies and to the Marconi Company in respect of the communication assets which it acquired from them. These companies have outside investments—the Marconi Company has also a manufacturing and royalty business—and after meeting their debenture interest and preference dividends, they pay dividends to Cables and Wireless, Ltd., and to their few remaining non-assenting stockholders. The dividends thus received by Cables and Wireless, Ltd., last year amounted to £1,386,875, which was equivalent to only 2.6 per cent. on the cost of its shareholdings in these companies (£52,561,249). Allowance must, however, be made for the fact that the dividend paid by Imperial and International Communications, Ltd., included a transfer of £200,000 from reserve, while credit was taken in the profits of other subsidiaries for £129,500, being part of the sum written off losses on sales of investments in 1929, which were more than covered by profits

in 1930. Thus Cables and Wireless received a return of only 2.06 per cent. on the cost of its shareholdings. The revenue accounts and distribution of profits of Cables and Wireless for the past two years compare as follows:—

	1929. £	1930. £
From £4,979,320 stock in Eastern Telegraph	383,570	348,552
£3,987,990 stock in Eastern Extension		
Telegraph	425,276	494,511
£3,108,390 stock in Western Telegraph.....	336,384	341,923
232,098 pref. shares of £1.....		
267,062 ord. shares of £1.....	300,745	201,889
5,178,722 ord. shares of 10s. } in Marconi		
Transfer fees and miscellaneous.....	3,129	16,339*
	1,449,104	1,403,214
Less general expenses and interest	41,484	54,567
Directors' fees	19,519	26,348
Income tax	60,792	19,915
Balance	1,372,309	1,302,385
Dividend on 5½ per cent. pref. stock of Cables and Wireless	1,263,053	1,273,840
	64,256	66,907†

* Includes £13,759 dividends from subsidiary companies in respect of 1929 on account of stock of Cables and Wireless allotted during 1930.

† Carry forward is loss £10,787, being dividend for 1929 on preference stock issued since December, 1929, and £15,108 written off formation expenses.

It will be seen that last year the company only earned its 5½ per cent. preference stock dividends with the help of its subsidiaries' transfers of £329,500 from its reserves, and that it showed no earnings at all on its ordinary stock. "A" ordinary stock or £8,655,977 £20,636,854 7½ per cent. "B" ordinary stock. If the Communications subsidiary "B" ordinary stock. If the Communications subsidiary is unable to pay a dividend this year, Cables and Wireless will only be able to show earnings, if expenses remain the same, of approximately £777,000, which represents only 3.35 per cent. on its preference stock.

These figures are convincing evidence of the necessity for the writing-down of the capital of Cables and Wireless. Whether the directors consider it prudent to wait for a recovery in trade in order to ascertain the real earnings position of the company before formulating a reconstruction scheme is a matter which should be discussed frankly with the stockholders. The depreciation in market values suffered by the stockholders of Cables and Wireless has already been appalling, and a reconstruction scheme would hardly come as any further shock to the market. The next table shows the highest prices recorded in 1929, 1930, and 1931, and the present market valuation of the various stocks this week:—

	Par Value (approx.) £ 000	Highest Prices 1929. 1930. 1931.	Present Valua- tion. Price. £ 000
5½% pref. stk.	23,161	99 100 78	48 11,117.3
7½% A ord. stk.	20,687	90½ 77 26½	13½ 2,792.7
8% B ord. stk.	8,656	104 39½ 14½	7 602.9

The market capitalisation of this grandiose merger company has fallen £39 millions below the par valuation, and £35 millions below the figure reached at the "peak" of 1929. If this combine had been promoted under less august auspices we should be inclined to regard this depreciation as evidence of another scandal in public company administration. Everyone knows, of course, that in the negotiations which led to the amalgamation of the Eastern cable group and Marconi's, each side was naturally seeking to make its assets appear in the most valuable light. The resulting over-capitalisation of the merger company was an intelligible, if costly, mistake. But that does not excuse the present directors from taking early action to put the matter right. This is the least they can do. Looking further ahead, they may ask themselves whether the advance of wireless services and this over-development of world communications are not bound to cause all capital invested in the cable side of the industry to become sooner or later unremunerative.

There remains another serious issue—whether the company, even when the revival in trade does come, will be able to operate on a profit-earning basis if it has to continue the intensive fight for business with its powerful

foreign competitors. The competition in the communications industry is not only commercial but Governmental. The directors already declare that the opening by Governments of direct wireless services will become a serious matter if it continues unabated. The world over-development of the means of communication can only bring the competing commercial interests to ruin or to amalgamation. If salvation is sought in amalgamation, will the British Government allow Cables and Wireless to divide control of Empire communications with a foreign group such as International Telephone and Telegraph or Ericsson Telephone? If not, will it subsidise Cables and Wireless in order to keep British control of Empire communications commercially alive? In a significant passage the directors allege that "inter-imperial and international traffic cannot, even in times of returning prosperity, be developed to an unlimited extent on any basis of economic charges for its transmission." (The italics are ours.) Are we to infer that the directors of Cables and Wireless want a subsidy here and now? It would seem a fitting gesture first to put their commercial house in order by giving notice of a reconstruction scheme.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
August 12.	August 13.

The Stock Exchange was inclined at first to hope that friendly co-operation between the Bank of France and the Bank of England, as a result of the informal discussions between Sir Robert Kindersley and M. Moret in Paris, might avert a change in Bank rate. A more uneasy feeling, however, became noticeable in mid-week, when gilt-edged stocks were depressed and more speculative securities were affected by the weakness of Wall Street. A further sharp fall followed the announcement of the Bank's decision, with evidence of some forced selling. If the stock markets were inclined, a few days ago, to under-estimate the difficulties of the financial position, there is certainly a full realisation of their significance now, and all members will closely watch the behaviour of money rates after the holiday.

After being better at the outset, gilt-edged lost ground appreciably on Wednesday. They declined a further 1½ to 2 points after Thursday's rise in Bank rate, though a partial rally followed the first onset of selling. All long-dated issues were affected, particularly Four per Cent. "Consols." and Three-and-a-Half per Cent. Conversion Loan. India loans came on offer and were quoted with wider margins, and Australians failed to derive substantial benefit from Mr Lang's decision to rejoin the Loan Council.

The foreign bond market was dull and depressed. A few Brazilian issues were slightly firmer on the Federal Government's acceptance of the Niemeyer Report, but other South American stocks were sold from New York. The financial situation was again a bear point for German issues, which were sharply marked down. Other European bonds, and even Far Easterns, shared in the prevailing tendency.

The railway interim dividend and earnings' statements, which are discussed on page 233, brought out a moderate amount of selling, which was not checked by the uninspiring traffic figures. The volume of dealings in foreign rails was neglected, but Argentines continued to lose ground, the latest B.A. Great Southern figures being considered particularly disappointing.

Although the industrial market was helped by a batch of dividends—Imperial Tobacco, Watney Combe and Arthur Guinness—of a relatively satisfactory character, trading remained quiet, with a downward trend. The unfavourable effect of the U.S. Steel Corporation dividend cut (dealt with on page 232) on Wall Street sentiment, was felt by all "international" counters. Among so-called "investment" issues, electricals were

(Continued on page 232.)

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

(Continued from page 229.)

dull, very moderate selling bringing down quotations in the absence of normal demand. Textiles were lower where changed. Anxiety over the Cables and Wireless report (discussed in an article on a previous page) was accentuated rather than allayed by the announcement of a committee to consider the whole communications position. Provincial selling of Imperial Chemical was attributed to fears of the possible passing of the interim dividend. Watney deferred came on offer, though the dividend was regarded as satisfactory, and tobaccos were fractionally lower all round. Dunlops declined sharply under bear pressure. Bank shares sagged on scattered selling, and insurance shares were irregular.

A modest increase in business in oil shares, early in the week, was not maintained, a steady stream of small sales reducing prices fractionally. Paris showed little interest, and Amsterdam, on the whole, was a seller. An easier tendency in rubber shares followed the decline in the price of the commodity to a new low record figure, though actual business was of the smallest possible dimensions. Tea shares were steady, but showed no disposition to rally on the continuance of an improved demand for the commodity at the week's auctions.

Interest in mining shares remained at a low ebb, with movements for the most part insignificant. Kaffirs presented a firmer appearance, Johannesburg being inclined to pick up one or two favourites, though Paris gave little help. "Chartered" fluctuated irregularly, with a downward trend. An intermittent selective demand for tin shares found the market's supplies somewhat limited. Rio Tintos suffered a further relapse on reports of increased political unrest in the company's area, necessitating the presence of military guards.

We are officially informed that George Derenburg and Ernest William Kettle, trading as George Derenburg and Co., were declared defaulters upon the Stock Exchange on July 23, 1931.

FOREIGN STOCK EXCHANGES.

NEW YORK.

New York was occupied less than in recent weeks with foreign and more with domestic possibilities, which were found anything but reassuring. At the beginning of the week business was exceptionally quiet, only 600,000 shares being dealt in on Monday and 700,000 on Tuesday. Much interest was centred on the railroad position. Though New York Central were in demand at one time, the June earnings statements of the leading roads were not regarded with favour. Many operators feared that further dividend cuts might be necessary before relief could be expected, even in the event of a favourable decision by the Interstate Commerce Commission on the application for higher rates. It was also learned that railroad labour would oppose any effort to reduce wages. On Wednesday the whole market was shaken by the Steel Corporation's decision to cut the common stock dividend to a \$4 annual rate, and the revelation that ordinary stock trading earnings in the second quarter were non-existent. The shares were heavily sold, the decline spreading to other leading issues. Steel Corporation fell 7 1/2 points on the day, Bethlehem 6 1/2, American Telephone 4 1/2, American Can 5, and New York Central 5 1/2. Operations in the steel industry were estimated at 33 per cent. of capacity, against 31 per cent. in the previous week. There was a general belief that wage cuts were under serious discussion in the steel industry, despite the known view of the administration that reductions should be avoided where possible. Contrary to expectation, the Steel Corporation made no announcement on the point, though one is expected shortly. Sufficient proxies have been received to assure the completion of the merger of the Vacuum Oil Company with Standard Oil of New York.

* 2-hour session.

CANADA.

The Canadian stock markets drifted along aimlessly, with a meagre volume of trading, until they were brought to life by President Hoover's war debts offer. Stock quotations thereupon moved sharply upward, and the bond market materially strengthened. Considerable profit-taking followed, and when "political" difficulties developed, the enthusiasm of speculators cooled. On the definite settlement, the Canadian markets sold off and, in view of the critical situation which arose in Germany, remained in a highly nervous condition, with a disposition to sag. The Canadian business situation does not justify optimism, and the confirmation of adverse news about the Western wheat crop (which banishes any hope of a real business revival this year) has had a depressing effect. The plan for the reorganisation of the Canada Power and Paper Company is encountering serious obstacles, and newsprint stocks are still under a cloud, although they may be helped slightly by the new preference accorded by the trade treaty with Australia. The mining market also remains dull, and even gold stocks have failed to rally appreciably. The general public is indisposed to come into the market, and trading on the Montreal Stock Exchange is now at its lowest ebb for the whole year.

INVESTMENT NOTES.

Stock Exchange Quotations.—The conditions which surround the granting of quotations by the Stock Exchange Committee have always been a subject of provocative interest, writes a "House" correspondent. As recently as last week, Mr. Kelly, the Labour M.P. for Rochdale, asked the Chancellor of the Exchequer whether, if a committee were set up to amend the Companies Act, 1929, a departmental commission would be added to examine the methods of the London Stock Exchange. Mr. Kelly's view was that in an amended Companies Act there should be embodied recommendations which would bring the granting of Stock Exchange quotations under the control of the Act. Mr. Pethick-Lawrence, replying on behalf of Mr. Snowden, said that the Chancellor of the Exchequer was not altogether satisfied as to the need for such an inquiry, but would bear the point in mind. The rules governing the granting of quotations are, in fact, under the continual supervision of the Stock Exchange Committee, who, within the past few weeks, have introduced material changes into the daily Lists issued under their authority, designed for the better information of the public as well as of Stock Exchange members. A Royal Commission appointed by Parliament fifty-four years ago dealt at some length with the matter. The Commissioners declared their strong opinion that the List should be made as perfect as possible, for the dissipation of unjust suspicions and the preservation of the confidence of clients in their brokers. The Commissioners regarded as serious the fact that the closing quotations in the Official List were under no official sanction at all, and recommended the formation of a "List Committee" to supervise these closing prices. The Commissioners maintained that the publication of official and unofficial figures in juxtaposition "could not fail to mislead careless people—that is to say, the majority of the community." The mildly ironical conclusion probably caused much amusement in the Stock Exchange at the time. It would appear from Mr. Pethick-

Lawrence's answers that Mr. Snowden sees little practical benefit in the setting-up of a fresh commission, or committee, to go over the same ground. During the interval of 54 years the Stock Exchange Committee have reorganised the Lists and the requirements which must be satisfied before shares can be admitted to quotation. To-day's result, while still far from being perfect, represents a great advance upon the Official List of 1877. Safeguards for public protection have been introduced which could not have entered the minds of Stock Exchange members in that period, and many of the recommendations made by the Royal Commission have been adopted by the Stock Exchange Committee. The Stock Exchange, however, has not seen fit to apply for the Charter of Incorporation suggested by the Commission of 1877.

Home Railway Interims.—The home railway market has sustained a good deal of buffeting in its time, but seldom has depression been deeper or more persistent than to-day. The earnings of the great British railways have fallen off in smaller proportion than those of the major American railroads, but, unfortunately, the British companies have a capital structure and a legal position which does not enable them to withstand even a moderate recession in revenue without the danger of embarrassing consequences. Even in good times (in the post-war sense of the term) the margin of earnings over and above fixed-interest requirements is small, particularly on the two "heavy" group lines, while in depressed periods the margin may shrink so rapidly as to put the trustee status of certain prior stocks (even under the "Chancery Rules") into jeopardy. As the railways declare gross earnings weekly, but have refused, despite repeated requests, to give estimates of net revenue at more than half-yearly intervals, the market is subject to a maximum of uncertainty.

COMMERCIAL SERVICE.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial interest.

The results for the first half of this year, now published, are rather better as regards earnings and rather worse as regards dividends than had been expected. The London and North Eastern, as usual, is postponing consideration of a dividend on its second preference stock until the end of the year, but the payments on the first preference and 5 per cent. redeemable preference (which rank equally) involve, "for the time being," a transfer from general reserve. A total decrease of £3,130,000 in gross receipts has been recouped as to £2,140,000 by reductions in expenditure. The Midland and Scottish is paying its preference dividends in full, but deferring the question of an ordinary payment until the end of the year. Traffic receipts fell by approximately £3,000,000, but there was a reduction of £2,400,000 in expenditure. The Southern recouped £300,000 of a total decrease of £500,000 in railway receipts, but as total net revenue was about £15,000 below 1930, and £3,000,000 additional guaranteed preference stock ranks for dividend, the directors have prudently reduced the interim payment on the preferred ordinary from 2½ to 1½ per cent. The Great Western dividend was not available as we went to press. The prevailing uncertainty has depressed market quotations not merely for ordinary stocks, but even for senior fixed-interest securities which in some cases are on a yield basis which would normally be associated with "speculative" issues.

During the second half of this year the railways will reap further economies from the operation of the National Wages Board award, which became effective only on March 26th last. The approximate dimensions of these economies were indicated in an Investment Note on page 573 of the *Economist* for March 14, 1931. Though no close computation of the probable position at the end of this year can be made at this stage, it has been estimated that if allowance is made for further economies under the National Wages Board, and the railways succeed in reducing expenses other than wages to the same proportionate expenditure as in 1930, the decline in net railway earnings for the whole of 1931 will be of the order of £1½ millions on the L.M.S., £1½ millions on the L.N.E.R., £1½ millions on the Great Western and about £100,000 on the Southern.

The Story of Mr Lang.—According to a Sydney message, Mr Scullin, the Federal Premier of Australia, has agreed to come to the rescue of the empty treasury of Mr Lang, Premier of New South Wales, by an issue of Treasury bills, provided Mr Lang accepts responsibility for the public debts of New South Wales, rejoins the Australian Loan Council, and puts the Prime Ministers' Economy Plan into operation. As Mr Lang is reported to have telegraphed accepting all these conditions, it may be that an unedifying episode in New South Wales' history will close with the vindication of sound financial principles. Our readers may be interested in the following sketch by an Australian correspondent of the career of one of the leading protagonists in the tragedy:—

"Born on December 21, 1876, John Thomas Lang has been the stormy petrel of the New South Wales Parliamentary Labour Party since his election to the Legislative Assembly in 1913. Mr Lang has been Treasurer in 1920-22, in 1925-27 and since the last N.S.W. election. During 1925-27 he was also Premier, having been elected leader of the State Parliamentary Labour Party in 1923 in succession to Mr James Dooley. Since his first assumption of the office of Premier in 1925 his activities have received full public attention. Always a member of the extreme Left-Wing of the Labour Party, he immediately introduced, on becoming Premier of N.S.W., a measure which became known as the Child Endowment Tax, which imposed a tax of 1 per cent. on all wages and salaries, payment of which was to be made entirely by the employer, the proceeds being given to the workers receiving under a certain weekly sum in the proportion of 5s. for each child in their families. Mr Lang then introduced a Workers' Compensation Act, which compelled all employers to take out policies covering injuries received by workers, not merely at work, but while travelling to and fro. Next came Mr Lang's historic conflict with the Governor of New South Wales, Sir Dudley de Chair. Mr Lang, being strongly opposed in the Legislative Council (whose members are appointed for life), drew up a long list of names, sufficient to give him a majority. As Sir Dudley did not completely fall in with Mr Lang's suggestion, the latter petitioned the Imperial Government for his recall, also without success. He then introduced a Bill to abolish the 'Upper House,' which passed the 'Lower House' (an elected body) in all its stages, but was rejected by the 'Upper House' after an exciting attempt at a snap division. Mr Lang resigned, was defeated in the election which followed, and remained in robust opposition till last year, when his generous promises, at a time of economic depression, again secured his return. His subsequent financial measures are familiar to British investors. His renewed efforts to abolish the 'Upper House' have again involved him in difficulties with the N.S.W. Governor, and also with the Australian Courts, and it will be interesting to see if the matter goes before the Privy Council, a body disliked by the Labour Party in the State."

U.S. Steel Corporation.—A reduction in the dividend of the U.S. Steel Corporation was generally expected, but the drastic nature of the cut—from a \$7 to a \$4 annual basis—and the negligible earnings shown in the quarterly account to June 30th came as a decided shock to sentiment and induced reactionary markets throughout the New York Stock Exchange. The earnings statement, showing that not even a quarterly dividend of \$1 was being earned, made the market realise that optimism for the near future was out of the question. While the directors of the Corporation have not yet recommended an "adjustment" in wages it is thought that this action is only a matter of time. These considerations prompted bear selling in the leading industrial issues, and U.S. Steel fell on Wednesday from 92½ to 84½. The operations of the Corporation, the largest manufacturer of iron and steel in the world, are rightly regarded as a barometer of industrial activity in the United States. In the 1928-29 boom its plant was operating at more than 100 per cent. on its capacity. With the deepening of the present trade depression, its operations have persistently dropped off till they are now only 33 per cent. of capacity. The following shows the steady reduction in the unfilled orders since March this year:—

Unfilled Orders.	1930. Tons.	1931. Tons.
January 31	4,132,351	4,468,710
February 28	3,965,194	4,479,744
March 31	3,995,330	4,570,653
April 30	3,897,729	4,354,220
May 30	3,620,452	4,059,227
June 30	3,479,323	3,968,064

No plant as scientifically designed for mass production as that of the U.S. Steel Corporation can hope to make a living with its operations at about a third of capacity. The next table gives the consolidated income account and earnings per share for the first two quarters of the year:—

	1931. 1st Quarter.	1931. 2nd Quarter.
Net earnings*	19,464,836	13,817,000
Depreciation, depletion, &c.	11,325,302	12,212,000
Interest	1,374,477	1,376,000
Net income	6,765,057	230,000
Special income	...	7,160,000
Preferred dividends	6,304,919	6,304,919
Available for common	460,138	1,086,436
Earned per common share	0.05†	0.12‡

* After deducting operating expenses, ordinary repairs and maintenance, and Federal tax reserve.

† Based on 8,696,859 common shares.

‡ Nil if special income is excluded.

It will be seen that in the first quarter the corporation covered its preferred dividends with a margin of only 5 cents per share on the common, while in the second quarter it made a profit of only \$230,000 on its operations, so that if a special income of \$7,161,000 from the sale of a public utility property had not been brought in, there would have been earnings of only 6 cents per share on the preferred and a heavy loss on the ordinary shares. The present level of earnings may be compared with the "boom" period, when the Corporation earned \$12½ per share in 1928 and \$21.19 per share in 1929. The Corporation is now paying its quarterly dividends out of its reserves. The balance sheet at December 31, 1930, showed current assets of \$578,373,097, as compared with current liabilities of \$108,873,454. Cash at that date amounted to \$117,203,288 and marketable securities to \$71,066,206. The outlook for the Corporation this autumn is not encouraging. There is no doubt that the depression in the United States deepened in June, the Federal Reserve Board index of industrial production falling to 86 per cent. of the 1928-29 figure, against 89 in May. As long as the New York Stock Exchange persists in ignoring current earnings and in valuing its common stocks on a low dividend-yield basis, even when dividends are not being earned, markets must remain particularly vulnerable to any change in business sentiment.

Brazilian Stocks and the Niemeyer Report.—A slight strengthening of quotations for Brazilian stocks followed the announcement that the Brazilian Government intended to carry out the reforms suggested in the Niemeyer Report (a discussion of which will be found on page 210). The recovery, however, was of no more than modest dimensions, the market realising that the carrying of good resolutions into effect is more difficult than the making of them:—

	Dec. 31.	July 23.	July 27.	July 29.
Brazil 4½%, 1888 ...	48	52½	52½	54
Brazil 5%, 1895 ...	52½	51	50	50
Brazil 4% Rescued ...	46½	46	45	46
Brazil 5%, 1903 ...	69½	71	72	72
Brazil 4%, 1910 ...	39½	36	37	36
Brazil 4%, 1911 ...	52½	62	62	62
Brazil 5%, 1913 ...	48	46	47½	48
Brazil 5%, 1914 ...	65½	66	66½	66
Brazil 6½% ...	64½	60	63½	66
Rio State 7% ...	70½	53	50	50
San Paulo 7½% ...	66½	68½	67½	68½
San Paulo 7% ...	71½	65	65	65
San Paulo 6% ...	50	45	45	45
Leopoldina Railway	20½	14½	14½	14½
San Paulo Railway	140½	133	133	133
Brazil Traction ...	\$21½	19½	19½	19½

Though many prices have not altered, the margins at which they are quoted have been considerably reduced. No movement has taken place in the State loans, the Niemeyer Report being considered to bear more closely on Federal than on State finances.

Waring and Gillow Meeting.—The affairs of this large West-End furnishing house were dealt with in some detail by the new chairman, Mr Ivan C. Sanderson, at the annual meeting on July 24th. Mr Sanderson commenced by thanking Lord Brentford and Sir Harry Peat for completing the necessary financial arrangements during the year, thereby saving the company from liquidation. The new board, appointed in November last, were certain, he declared, that the business was essentially sound. Past administrative extravagance had been responsible for the company's financial difficulties. Expenses had increased far more, proportionately, than sales of recent years, and to meet the increase large amounts of prior-charge stocks had been issued, while bonus distributions of shares had been made without resulting in new finance for the company. During the first five months of the present year the new directors had reduced overhead expenses by £75,000 "without sacrifice of efficiency or reduction in salaries or wages." The second debentures, raised to meet existing creditors, realised £360,000, and the third payment of 5s. in the £ was to be paid on July 31st. On January 31st next a final payment will be made. In April, 1931, the second debentures will be due for redemption, and a further £350,000 will have to be found to "reimburse a London finance house for the cash provided for a hotel company abroad." Stocks have been written down to what is considered a fair and reasonable basis, the heavy depreciation provision being necessary, mainly, owing to the lack of conservative policy in past years. The major part of the total for bad debts represents sums due by the late chairman, and legal proceedings have been entered. The board did not hold out any hope to shareholders for a dividend on any class of shares for some years to come. Old customers, however, were returning and new customers being attracted, the company's factories being on overtime. It was hoped, therefore, to cover the first debenture charges during the present year. The meeting decided that a committee of shareholders should be appointed to confer with the board.

Hudson's Bay—Board's Policy Endorsed.—The general court of the Hudson's Bay Company, held on Wednesday last, endorsed, as was expected, the recommendations put forward by the new board in the last report. The review of the position by the new governor, Mr. P. Ashley Cooper, was commendably frank. He showed that, apart from other difficulties, the company had had to contend with an altogether catastrophic fall in the values of furs. Taking 100 as a base figure representing the prices realised at the winter sale of 1919-20, Mr Ashley Cooper showed that the corresponding index numbers for the last four years were: 1927-28, 49; 1928-29, 52; 1929-30, 86; 1930-31, 23. Sales of farmland during the last year had totalled only 54,000 acres against 235,000 acres in the preceding year, and in view of the impaired prospects of Canada, as a result of drought this year in many areas of the prairie provinces, and the company's liability for heavy taxation on its unsold lands, it had been decided to take further advantage of an agreement of 1924 with the Dominion Government, and to surrender certain areas to the authorities. On the much-discussed question of the future of the company's stores in Canada, the chairman declared that, the policy of expansion having been completed for the time being, the board would take no decisive step pending a visit to Canada by the chairman and some of the directors. The present position in Western Canada was undoubtedly disquieting, though the country had a rich and prolific soil and one of the sturdiest peoples of the earth. The chairman declared his conviction that the company's shares before the war were definitely over-valued, since their quotations could only be justified on the assumption that the extraordinary prosperity and high land values created by the large pre-war immigration into Canada could be maintained indefinitely. Mr C. L. Nordon criticised the accounts as being uninformative inasmuch as they did not disclose to the proprietors the actual loss incurred on trading, the receipts from rents and dividends, or the loss on the subsidiary companies, these amounts being all included in a single loss item of £700,000. The governor replied that the directors would be prepared to disclose fuller par-

ticalars " if they found later on that they could do it without more damage to the company's interest." To many proprietors, however, the chairman's suggestion that any further request for fuller disclosure should be construed as a reflection on the board may have appeared a somewhat unfortunate remark in an otherwise lucid and straightforward exposition. Proxies representing some 59 per cent. of the total votes of the company, it was declared, have been sent in in favour of the board, and only 8½ per cent. in favour of the alternative policy proposed by Mr Nordon. At the meeting Mr Cooper was re-elected governor, and Sir Edward Hilton-Young, Lieut.-Col. J. B. P. Karslake and Capt. V. A. Cazelet were confirmed in office, while Sir George May, Bart., and Mr E. R. Peacock were also elected members of the committee. The reconstituted board, therefore, will now have a free hand to proceed with the arduous task of rehabilitating the company's fortunes—a task which, it is clear, has been undertaken none too soon.

Industrial Profits in July.—The published reports of British companies, now being issued, show that the effects of trade depression are being reflected with increasing severity in a falling trend of industrial earnings. During the month of April last the reports of 217 companies which were forwarded to us showed an average decline in profits, as compared with the previous reports of the same concerns, of 10.49 per cent. In May the accounts of a further 211 companies showed a decline of 22.3 per cent. In June the number of reports was 192, and the decline 21.93 per cent., whilst in the month just closed 185 reports showed an average drop in profits of no less than 39.46 per cent. In the following table the July reports are analysed.

Group.	No. of Cos.	Net Profit (after Payment of Debenture Interest).			Increase or Decrease.
		Reports received during July, 1931.	1929-30.	1930-31.

Other Companies	37	2,590,575	1,867,741	—	27.90
Total	185	14,330,879	8,674,807	—	39.46

Five groups showed a net loss—steel, motors, oil, rubber and shops, although in the case of motors, oil and shops, the groups are too small to be really representative. A very heavy decline occurred in the "financial land and investment" group, due mainly to the heavy loss shown by the Hudson Bay Company.

Flour Millers' Results.—At the annual meeting of Spillers, Ltd., held in May last, Sir Malcolm Robertson struck a note of cautious optimism with regard to prevailing conditions in the milling trade. Whereas at one time competitive costs had all but absorbed any possible profits the establishment of the Millers' Mutual Association had led to a considerable measure of rationalisation, including the shutting down of redundant mills, the results of which had more than offset the decline in prices. In consequence it was possible for Spillers to announce a net profit of £272,444, against a previous loss of £221,511. Subsequently, the report of Associated London Flour Millers suggested that the recovery had been fairly general throughout the trade. All its subsidiaries have made a profit, the total income being £85,821, compared with

£873 a year ago. Dividends have been paid on the 5 per cent. prior preference shares at the rate of 13½ per cent. for the twelve months to March 31, 1931, and on the 7½ per cent. prior preference shares at the rate of 20½ per cent. The 7½ per cent. preference shares have received arrears of dividend for the year to March 31, 1928. The sum of £9,328 is written off various expenses, and, after crediting £7,500 being a reserve written back, there remains £21,463 to go forward, against £354 brought in.

	Years to March 31,		
	1929.	1930.	1931.

* Accumulated dividends on £5,310 7½ per cent. pref. shares issued during year.

† For 12 months to March 31, 1928.

‡ Including £7,500 reserve for losses of subsidiaries, written back.

The report states that, having in view the profits earned since March 28, 1931, the directors have declared a dividend of 7½ per cent. on the preference shares for the year ended March 31, 1929.

Mitchells and Butlers.—This prosperous Birmingham brewery has just completed what may be considered a very satisfactory year under prevailing conditions. The net profit fell by £69,877 to £626,994, which sufficed to maintain the usual tax-free dividend on the ordinary capital after the payment to preference shareholders:—

	Year ended June 30.		
	1929.	1930.	1931.
Net profit	641,903	696,871	626,994

Earned %	22.07%	21.92%	19.61%
Paid %	15%*	15%*	15%*

7% Maximum dividends	15,071	29,670	29,199
Reserve fund	126,838	125,000	100,000

Increase in carry-forward

* Paid free of income tax.

Land, buildings, plant, etc., are shown at £6,861,340, an increase of £325,825 over the 1930 figures. The surplus of liquid assets over current liabilities is £188,503 lower at £298,634. The preference capital is secured by net tangible assets, at book values, of £6 19s. 8d. per £1 6 per cent. preference share fully paid. At 50s. the ordinary shares yield £6 5s. per cent.

Tanganyika and Zambesia Companies.—The reports of the Zambesia Exploration Company and of the Tanganyika Concessions for the year 1930 disclose varying results. The Zambesian company shows a net profit of £39,167, as compared with £106,502 for the year ended December 31, 1929, while the Tanganyika company's total of £232,865 compares with £473,154. Neither company paid any dividend, the Zambesian concern carrying the full profit forward, while Tanganyika Concessions, Ltd., reduced their carry-forward after setting aside £179,000 for taxation, writing investments down by £50,000 and transferring £100,000 to the reserve fund. The Tanganyika company states that the Union Minière du Haut Katanga suffered severely from the decline in the price of copper. The output of copper for 1930 showed an increase of 1,957 tons at 138,949 tons. The River Musonoie has been dammed to divert its stream, thereby enabling the Kolwezi deposit to be worked. The Benguela Railway has been completed, connecting the system with those of the Belgian Congo and of South Africa. The Zambesian company reports that the Angola company,

by acquiring the title to four blocks of land, has now an area of approximately 600,000 square miles. The Angola company's ranching operations are being successfully conducted. Operations in the Uganda concessions have been curtailed, work being confined to the Ruwenzori area. The work of sisal planting on the Benguela estates is progressing satisfactorily, 3,000 acres having been planted. Experiments with tobacco have proved satisfactory, but operations have been temporarily discontinued owing to the fall in the price of native tobacco.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Union Bank of Australia, Hudson's Bay Company, British Steamship Investment, Anglo-Spanish Construction, Cables and Wireless, Covent Garden Properties, Tanganyika Concessions, Threlfall's Brewery, Millar's Timber and Trading, and Waring and Gillow. The chairman of the Anglo-Spanish Construction Co., Ltd., drew attention to a sum of Pes. 105,000,000 owing by the Spanish Government, which has not been paid, despite its being long overdue. The Waring and Gillow meeting is discussed on page 235. The chairman of the Union Bank of Australia, Limited, explained to shareholders the position as it, at present, exists in Australia. The Hudson's Bay meeting is dealt with in a "Note" on page 235. An increased net profit was shown by the Covent Garden Properties Co., Ltd. During the year the Princess Theatre, in Oxford Street, and Africa House, in Kingsway, were purchased.

COMPANY MEETINGS, &c.

HUDSON'S BAY COMPANY, LIMITED.

DIFFICULT TRADING CONDITIONS.

THE NEW DIRECTORATE—BOARD'S PROPOSALS ADOPTED.

MR P. ASHLEY COOPER'S REVIEW.

A general court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held on the 29th ultimo in the Fur Trade Sale Room, Beaver House, London, E.C.

Mr. P. Ashley Cooper (the Governor) presided.

The Governor said:—My first duty is to announce the result of the proxies which we hold. Proxies to the amount of 59 per cent. of the total votes of the company have been sent in in favour of the board, and 8½ per cent. in favour of Mr Nordon. That is to say, that the shareholders as a body have signified their adherence to our proposals by seven to one. I now call on the secretary to read the notice convening the meeting and the auditors' report.

The secretary (Mr J. Chadwick Brooks) read the notice and the report of the auditors.

Proceeding, the Governor, in moving the adoption of the report and accounts, said that it was barely six weeks since the board did him the honour of electing him to one of the most honoured commercial positions in the British Empire—that of Governor of the Hudson's Bay Company. He had heard some shareholders ask why he was not a whole-time governor. That was a very fair question to ask. The reason was that he was not invited to be a whole-time governor, and if he had been, he should have regretfully declined. They had had a whole-time governor, and the board decided to return to the previous practice. He believed that decision was right. He thought there was confusion in some people's minds between management and direction. A whole-time governor meant a governor and managing director. But the governor must be a critic of the management, and if he was a manager he could not well criticise himself. (Hear, hear.) His duty was to place around him first-class whole-time managers whom he and his board directed.

A DIFFICULT TASK.

He realised only too clearly how great and how difficult was his task in the blizzard conditions of to-day. It was a task which he fancied few would ask for. Therefore, he had made arrangements to relieve himself of much of his other work, for he fully appreciated that he was responsible to them for seeing that the organisation functioned properly. (Hear, hear.) In times like these, sacrifices were demanded of all of them. Although he had only just come to the company, he had decided for the present to reduce his fees by 10 per cent., and his co-directors were going to do the same. In the short time during which he had held that position he had done three important things. He had put his name, on behalf of the board, to the report submitted. That report referred to a period for which he and the new directors could take no responsibility, but before it was signed they left no stone unturned to ensure that in it and in the attached accounts the true state of affairs was disclosed so far as they in London had been able to ascertain it. He had made all arrangements to visit Canada and to make a thorough examination of the company's affairs on the spot—(hear, hear)—and he had been able to persuade two most experienced directors with valuable connections to help them to resuscitate the company. The directors recommended the election of Sir George May and Mr E. R. Peacock to fill the vacancies caused by the resignations of Mr Vivian Hugh Smith and Sir Hewitt Skinner.

PAST YEAR'S RESULTS.

From the profit and loss account it would be seen that, after making full provision for the loss on trading, administration, the company's share of the losses in subsidiary companies and for all other current expenses, the past year's operations had resulted in a loss of £746,335, to which loss both the fur trade and the stores department had contributed. From this figure they had deducted the dividend equalisation account and the amount brought in, leaving a balance of £444,866 to be dealt with. In the special provisions which had been made they had had to take into consideration the very serious financial and commercial condition of the areas in which they operated. These special provisions totalled £939,779, and adding the balance of the trading loss there was a total of £1,384,644.

Dealing with the trading and other activities of the company, the Governor, referring to the fur trade, said that the total collections showed a considerable decrease compared with the previous year, and, in addition, the decline in fur values had continued. In the land department the results had been most disappointing, the returns being seriously affected by the continued decline in the price of wheat and by the general commercial depression, which

had affected not only Canada, but the whole of the world. In these circumstances it was not surprising that there had been little or no demand for the company's lands; indeed, the farmers in many instances had found it impossible to meet their obligations in regard to payment of instalments and interest on land previously purchased. The sales of farm lands in the past year totalled only 54,000 acres, compared with 235,000 acres in the previous year. Until conditions improved, they could not expect to sell much land, nor could they expect much revenue from the land department, and they must be prepared to continue the traditional policy of the company, giving sympathetic consideration to the circumstances of their debtors in connection with the purchase of lands.

POSITION IN WESTERN CANADA.

With regard to the position in Western Canada generally he wished to pay a tribute to the magnificent spirit of courage with which all members of the community were meeting a situation of almost unparalleled difficulty, and to stress the great powers of resistance to prolonged depression which were so often shown by an agricultural population. The big land-holding concerns from which many of the farmers had acquired their properties were undoubtedly treating them with great consideration so far as outstanding instalments of purchase price and interest were concerned. As regarded the Hudson's Bay Company this was most certainly the case. Therefore, if the farmers cut down their outside expenditure to a minimum, many would be able to keep going for a surprisingly long period and would be able to take advantage of the return to more normal conditions.

The situation, however, was really serious, for it appeared to be quite certain that last year the great majority of the Prairie farmers failed to make ends meet, and had as the situation was in 1930 it was likely to be worse in 1931 owing to the poor wheat harvest which was expected in the Prairie Provinces.

In this hour of trouble, however, they must remember that Western Canada had a rich and prolific soil. But she had more; she possessed one of the sturdiest, most virile peoples on the face of the earth. That was why he was confident of the future and if they all pulled together and no unforeseen calamity occurred, he was sure that the economic structure of that wonderful region would be sufficiently strong to withstand the strain.

Referring to what he described as the attitude adopted by a small section of proprietors, the Governor said that Mr Nordon had proposed six nominations for election to the board, and two other resolutions, relating to amendments to the charter and bye-laws. He would not deal with these in detail, but might say that he proposed to have the charters studied; they had been modified from time to time, and he wanted to be sure that they were adapted to modern practice. There were, however, many far more urgent matters, and these must be dealt with first (Hear, hear.)

THE CIRCULAR.

Shareholders had recently received a circular signed by Sir Robert Horne—whom they had appointed Arbitrator—by all the members of the Special Committee, whose report they had adopted, and also by Mr W. M. Cazalet and Commander Bellairs, who, up to the General Court of January last, had supported Mr Nordon. This circular gave an account of the steps which had been taken to implement the mandate which the proprietors had given to their representatives. It also expressed the hope that Mr Nordon would adhere to the pledge he gave to give the new board a chance before embarking on further agitation. Shorn of all its complexities, the question which they must decide was whether they wished their affairs conducted by Sir George May, Mr E. R. Peacock, Sir Edward Hilton Young, Colonel Karslake, Captain Cazalet, and by himself (the Governor), or by Mr Nordon and his associates. All sorts of side issues were being dragged into these discussions, but this was a plain decision before the proprietors, and they must decide now. (Hear, hear.) Some of them thought the directors were there to whitewash the past. That was not true; but were they to devote themselves to searching in the past or to building for the future? If they allowed this agitation to go on they would be damaging their interests seriously and perhaps permanently.

So far as he could see, it would be some time before world conditions in general, and the situation of their own company in particular, could show any marked improvement. The new directors had taken office at a time when prospects might well dismay the stoutest heart; but having set their hands to the plough, they were going to see the matter through. (Hear, hear.)

After a lengthy discussion the report and accounts were adopted by an overwhelming majority. The election of the new directors was confirmed, and the election of Sir George May and Mr E. R. Peacock to the board was approved, and the proceedings closed with a vote of thanks to the Governor, directors, and staff.

CABLES AND WIRELESS, LIMITED

DRASTIC ECONOMIES.

COMMITTEE TO CONSIDER REMEDIAL MEASURES.

The second ordinary general meeting of Cables and Wireless, Limited, was held, on the 30th ultimo, at Southern House, Cannon Street, London, E.C.

Mr John C. Denison-Pender, governor and managing director of the company, presided, and, in moving the adoption of the report and accounts, said that since the last meeting practically every industry had had to record an unhappy experience, and they met to-day in a situation unparalleled in fifty years' experience of industry. It was not surprising, therefore, that the telegraphic business of the world, which was so closely dependent on the activity of trade and industry, should still show disappointing results.

At the last meeting he had endeavoured to place all the facts clearly before the stockholders, and he did not disguise the disappointment of the directors that in the early stages of the history of the company they had not been able to produce better results.

Dealing with the sources from which the revenue of Cables and Wireless, Limited, was obtained, the chairman said that in the year 1930 they had derived £525,000 from the telegraphic business of the Communications Company, £741,441 from the net income on the investments of the cable companies, and £142,307 from the manufacturing and other profits of the Marconi Company, making a total of £1,408,748; deducting the amount of dividends paid to the dissenting shareholders of the cable companies and the Marconi Company—£21,873—there remained £1,386,875. The amount received from the Communications Company included £200,000 set aside last year as reserve. The profits of that company for 1930 were £326,238, compared with profits at the rate of £1,156,088 per annum shown in the last accounts, a decline of £829,840 per annum. That was due to three causes—trade conditions, competition of direct services and reduction in rates.

THE PREFERENCE DIVIDEND.

Shareholders would expect a statement from him about the payment of the preference dividend. Under normal conditions, to pay the full dividend, it was necessary that the profits of the Communications Company should be about £600,000. In the year under review the Communications Company paid dividends amounting to £525,000, but to do that it had absorbed the whole of the £200,000 reserve accumulated in the preceding year. At the time of the last general meeting it had not been anticipated that there would be so heavy a fall in the traffic receipts of the Communications Company in the last half of 1930, or that it would be so greatly accelerated in the present year. For the first six months of this year, after making necessary adjustments, the traffic receipts of that company had dropped over £500,000, and although there were profits from the investments of the cable companies and from the manufacturing interests of the Marconi Company, the full interim dividend on the 5½ per cent. preference stock had obviously not been earned, and the directors had no alternative but to await the financial result of the year before committing themselves to any payment on account of the preference dividend of the year; the directors, of course, fully appreciated that the dividend was cumulative.

The main disability from which they were suffering was the failure of the Communications Company—the telegraphic side of the business—to earn the substantial profits which the combined undertakings were earning at the time the merger was consummated. The disappointing result was due to two main causes—trade conditions and the establishment of direct wireless services between one country and another, which absorbed traffic previously transmitted over the lines of these companies. There was, even under normal trade conditions, only a limited amount of telegraphic traffic. If new services were established to an unlimited extent, they could not be operated on an economic basis without increasing present rates.

How sensitive the business of the Communications Company was, could be clearly illustrated by the fact that during the present year, when New Zealand suffered from a disastrous earthquake, and more recently when Mr Hoover made his offer to the Powers in connection with the German crisis, traffic had shown an immediate, but, of course, only temporary improvement.

AN IMMENSE SYSTEM.

There could be no possible doubt that on the first signs of trade revival there would be an immediate improvement in the traffics of their undertaking. The map attached to the Communications Company's report enabled shareholders to visualise the immense system which they owned, and which to-day was able to carry many times the present traffic without any material increase in cost.

The directors and the management were doing all that was humanly possible to meet and overcome the varied difficulties with which they were faced. They were unable to alter or to control the course of trade, but by a drastic and far-reaching policy of economy, consistently and continuously pursued, they might claim

to have done much to temper the severity of its effects, without damaging the structure or the efficiency of the undertaking committed to their care. Apart from that source of relief, the only avenue open to the board to improve the revenue which was within their control was the investment income of the company. In such matters of finance, figures were more eloquent than words, and he thought he might fairly claim that the figures demonstrated a successful management of the resources entrusted to them.

A NATIONAL ASSET.

He could not believe that, even in these days of great depression, he and his colleagues, with the sympathy and help of the Government of this country and those of the Dominions and Colonies, would not be able to find some way to keep as a national asset the communications complete and efficient. That was a task which he personally, at least, had always looked upon as having been left to them by their pioneers as a sacred trust. It was clear that the communications services of the Empire could not continue indefinitely to be conducted not merely with little or no return on the large capital employed as in 1930, but at a loss, as on the basis of present traffic seemed to be the probable outcome of 1931. The court of directors of Imperial and International Communications, Limited, had examined every possible remedy for that disastrous situation, and had come to the conclusion that nothing short of very drastic measures could permanently restore health to the communications system.

A committee of three distinguished gentlemen, whose names would inspire confidence throughout the Empire, had been set up to inquire into the position and to suggest measures which would remedy the present situation.

The report and accounts were unanimously adopted.

TANGANYIKA CONCESSIONS, LIMITED.

RECORD OUTPUT BY UNION MINIERE.

The ordinary general meeting of Tanganyika Concessions, Limited, was held on the 30th ultimo, at River Plate House, London, E.C.

The chairman, Sir Reginald Wingate, said that the price of copper had touched a low record never before known, and the words used last year, that the position had "necessitated the greatest caution," were not exaggerated.

Sir Robert Williams said that the reserve had been increased by £100,000 to £2,100,000. The liquid assets amounted to £487,017, as against £370,507 for the previous year. In spite of the severe depression, the market value of the quoted securities alone, at December 31st last, was considerably in excess of the figure at which the whole of the shares and debentures of subsidiary and other companies stood in the books at that date.

The copper output of the Union Minière du Haut Katanga for the year 1930 again exceeded all previous figures, viz., 138,949 tons, against 136,992 tons in 1929—incidentally, the highest production of any individual copper enterprise in the world. That figure could easily have been increased had it been good policy to do so, but during the year the world's copper consumption showed a considerable falling off, as indeed was the case with other metals and raw materials of every kind. Consequently, in view of the rapid accumulation of stocks, the principal copper producers had agreed to make substantial reductions in their outputs; the Union Minière, for their part, agreed to limit their production to 10,000 tons of fine copper per month.

With regard to the Benguela Railway, the first shipment of copper from Katanga to Lobito Bay had left that port for Antwerp on June 25th. Preliminary arrangements had already been entered into with the Union Minière for 4,000 tons of copper and matte to be shipped monthly through Lobito Bay. The Benguela route saved from three to six weeks in the time taken by the shipments of copper from the mines to Europe as compared with the other routes available.

The work done by the Rhodesia-Katanga Company during the past year had shown that a large body of ore had been definitely proved to be exploitable by open cast methods. That ore body, a large proportion of which was above the general surface level, would assure for at least the first five years of its life that Kansanshi would be comparable more with the Katanga than with the Rhodesian mines in having very low mining costs.

Owing to the financial depression, which had been steadily increasing since the beginning of last year, and to the substantial ore reserves already indicated, it had been considered advisable to curtail expenses as far as possible. Underground development had accordingly been stopped and only a drilling programme was now in progress. The plans of the reduction plant were being proceeded with, so that, when once the railway connection had been decided on and the price of copper warranted it, those could be rapidly completed and orders placed. The engineer at the mine, in his report just to hand, stated: "Even with the present low price of copper (£35), were there a railway and plant at Kansanshi

with similarity to the Union Minière conditions of working, calculations show that copper could be produced at a profit on any ores over 4 per cent. copper by open cast working and treatment by segregation."

With regard to the Kilembe Mine, in the Ruwenzori Concession, this property was opening up well, and Mr Bayne wrote: "I think we have in Kilembe the most promising prospect that the company has had for some time." Under normal conditions the Union Minière would now have been producing at the rate of 200,000 tons per annum, and the proportion of the profits of that company would be about £300,000 per annum; the Benguela Railway would be carrying about 100,000 tons more copper, besides general traffic, and earning about £500,000 more; and Kansanshi Mine would also be on the eve of producing 50,000 tons per annum, with an estimated profit of about half a million sterling. That was what they had worked for and had expected at the present date, and they hoped and trusted those results would not be too long delayed.

The report and accounts were unanimously adopted.

COVENT GARDEN PROPERTIES COMPANY, LIMITED.

INCREASE IN INCOME.

The seventh ordinary general meeting of the Covent Garden Properties Company, Limited, was held on the 29th ultimo, at the Hotel Victoria, Northumberland Avenue, London, Mr Philip E. Hill, the Chairman of the company, presiding.

The Secretary (Mr H. M. Draper), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the report showed that the company's total income was a little more than that of the previous year, that the 6 per cent. mortgage debentures had been replaced by debentures at 5 per cent. interest, and that a subsidiary property company had been formed.

Pending the upshot of the negotiations with the Minister of Agriculture as to the future of Covent Garden Market, the board had thought it undesirable to deal with the site of the Tavistock Hotel, with the result that, at the moment, they were not getting anything like an adequate return from that property. The leases of the Opera House and of the Arlington Street properties, however, fell into possession in 1933, when increased revenue from that source was anticipated.

The total sales of property made by the company and its subsidiary, the 1930 Property Company, Limited, during the year had amounted to about a quarter of a million. The total purchases were approximately £1,400,000, and included the freehold site of the old Princess Theatre in Oxford Street (on which were being erected new premises for Woolworths and Waring and Gillows) and Africa House in Kingsway, which was one of the principal banking and office buildings in that area.

Those transactions and others had been carried through at reasonable prices, and whether disposed of or retained as permanent investments, the result should be satisfactorily remunerative.

The directors aimed at making the Covent Garden Properties Company, Limited, one of the most important in the country, and he felt confident that so long as the business was conducted wisely and prudently, the board would continue to retain the support of the shareholders and the confidence of the investing public generally.

Mr Louis Nicholas seconded the resolution, which was carried unanimously.

Established 1889.

BRITISH STEAMSHIP INVESTMENT TRUST, LIMITED.

SATISFACTORY RESULTS.

The forty-fourth annual general meeting of the British Steamship Investment Trust, Limited, was held, on the 28th ultimo, at the Cannon Street Hotel, London.

Sir Austin E. Harris, K.B.E. (the chairman), in the course of his speech, said: The balance sheet shows under fifteen headings total investments amounting to £4,873,000, being an increase of £55,000 over last year. The percentages of the denominations of these investments on the valuation figures as at June 30th are: bonds and debentures, 37½ per cent.; preference shares and stocks, 24 per cent.; and ordinary shares and stocks, 38½ per cent.

Since the turn of the year we have been able to dispose of an investment of £30,000 in shipping ordinary shares practically without loss, which is gratifying in these times.

The investments are widely distributed, and the numbers continue to increase and are now 614, as against 593 last year.

The valuation of investments shows a depreciation of 14.53 per cent., which should be considered satisfactory under the present circumstances.

The total income is £248,470, against £272,594, which, after deduction of debenture interest and other charges, leaves sufficient to pay 10 per cent. on the deferred stock, while adding £334 to the carry-forward, making it £292,567. The amount of our investments in German securities is slightly under 6½ per cent. of the valuation, and none of them are in arrears with interest.

In view of all the depressing factors and of the heavy clouds which have hung over the investment market for so long, I think that you will agree that the figures which we have been able to put before you are not unsatisfactory.

With reference to the future, there are very few encouraging indications to-day to cheer us up, but it should only require a period of rest and a small return of confidence to put a better complexion on markets. It is extremely difficult under present conditions to make any accurate forecast of the revenue likely to be received from our investments. I may, however, remind you that we have a large carry-forward on which, if the outlook were satisfactory, we should always be able to draw, if necessary, to help the dividend position.

The report was unanimously adopted.

THRELFALL'S BREWERY COMPANY, LIMITED.

PROGRESS AND IMPROVEMENT MAINTAINED.

The forty-fourth annual general meeting of this company was held on the 29th ultimo, at the Cannon Street Hotel, London.

Major Charles M. Threlfall, J.P. (the chairman), who presided, said:—Your board have to report a profit not quite as large as last year, but they feel that the result is quite satisfactory in view of the difficult and troublesome times through which we have passed and are still passing. One of the outstanding factors which has contributed very largely towards the decrease in our profits is the vast amount of unemployment in Lancashire, one of the most adversely affected areas in the country, and where our business is principally centred.

In addition, we have had to pay a full year's charge of the extra impost of 3s. per barrel levied in the Budget of 1930. This increased taxation has amounted to a very considerable sum, no part of which was recoverable by us from our customers, as the assurances which were given by the trade to the Chancellor of the Exchequer have been observed.

I am, however, pleased to report that our reduced profit has not necessitated any slackening in our policy of progress and improvement; consequently many of the company's properties have been modernised and extended during the past year in order to bring them up to that state of efficiency and comfort which it is always our aim to provide. New premises, conforming to the latest standard of improved public-houses, have been erected and are in the course of erection.

I am pleased to add that the trading results of our subsidiary—the West Cheshire Brewery Company, Limited, of Birkenhead—continue to be very gratifying to your board, and it will interest you to know that considerable improvements have been carried out and are still being effected on its properties.

The gross profit for the year is £416,198 15s. 4d., and a net profit of £318,680 9s. 6d. for the year, which, together with the carry-forward from last year, makes a total of £847,748 11s. 9d.

I now beg to move the adoption of the report and accounts, and that a dividend be paid at the rate of 6 per cent. per annum on the preference shares, and a dividend at the rate of 20 per cent. per annum on the ordinary shares for the half-year ended June 30, 1931, which, with the interim dividends, make 6 per cent. on the preference, and 20 per cent. on the ordinary shares for the year.

The resolution was carried unanimously.

UNION BANK OF AUSTRALIA, LIMITED.

A DIFFICULT YEAR.

The annual general meeting of the Union Bank of Australia, Limited, was held, on the 27th ultimo, at 71, Cornhill, London.

The Hon. Edmund W. Parker (the chairman) said that all who had followed the trend of events in Australia and New Zealand would have been prepared for a meagre result of the past year's operations. It had been a most trying and anxious twelve months, and had given the board an abnormal amount of work and care and anxiety. After making provision for all bad and doubtful debts, the profit amounted to £283,018, and, adding £86,991 brought forward, there was a total of £370,010, or £241,981 less than the previous year. The board were declaring a dividend of 2 per cent. for the half-year, making 7 per cent. for the year, free of United Kingdom income tax, and were carrying forward £90,010.

The decline of £247,000 in gross profits was almost entirely due to the falling-off in exchange, which in turn was due to the decrease in the volume of exports and imports from and to Australia and New Zealand. In order to provide for the heavy fall that had taken place in the Australian and New Zealand currencies, the directors had set aside £1,500,000 to a special reserve, thus reducing the main reserve fund from £4,850,000 to £3,350,000. It did not follow, however, that this amount would be ultimately lost.

Exports and imports of Australia for the eleven months just ended showed a drop in imports—reckoned in British currency—as much as £66,000,000, while her exports for the same period—reckoned in Australian currency—showed a fall of £25,000,000. The Commonwealth Deputy Statistician estimated the excess of exports over imports at £27,000,000 in Australian currency, or £22,200,000 in British currency. For the twelve months ended December 31, 1929, there was an excess of imports of £11,000,000. The remarkable improvement in the balance of trade thus revealed by these figures was a considerable achievement.

With regard to seasonal conditions generally, the latest news, as cabled by the general manager, was as follows:—"Excessive winter rains Victoria and Southern New South Wales have interfered with cropping operations with consequent reduction likely in area sown. Also some damage from flood conditions. North Queensland droughty, otherwise conditions satisfactory all States. In New Zealand weather normal and conditions generally satisfactory."

The directors had given special attention to the question of expenses, with the result that they had effected a saving of £19,000 overseas and of £3,000 in London office.

The report and accounts were unanimously adopted.

WARING AND GILLOW, LIMITED.

CAPITAL REORGANISATION FORESHADOWED.

The annual meeting of Waring and Gillow, Limited, was held, on the 24th ultimo, at the company's premises, Oxford Street, London, Mr I. C. Sanderson presiding.

The Chairman, in the course of his speech, said: At the last annual meeting it was reported that endeavour was being made to raise funds temporarily by the issue of second debentures. The arrangement for this issue was duly completed. It was entirely due to the efforts of Lord Brentford and Sir Harry Peat that the necessary financial arrangements were ultimately completed.

Your present directors took office in November 1st last. After making a careful survey of the business they were confirmed in their opinion that it was essentially sound. Whilst the sale increased in recent years, the administrative expenses increased in larger ratio to the increased gross profits. The company is also saddled with heavy prior charges. The debentures and preference capital are together three times the nominal value of the issued ordinary share capital, which was issued in the form of bonus shares and brought no money into the business. It is now apparent how sorely the company needs reserves.

On assuming office your directors at once applied themselves to the problem of economy in the running and administration of the business. It was abundantly clear that the business could not, and should not, bear the expenses which were then current. By the beginning of the current financial year such alterations had been made in the administration as have resulted in the overhead charges for the first five months of the financial year being reduced by no less a sum than £75,000, or at the rate of £180,000 per annum.

It is of paramount importance to the business that clients with large contracts to place should have full confidence in our financial stability. Your directors hope to place before you a scheme for the reorganisation of the capital of the company and for the provision of finance with as little delay as possible.

Whatever may be the value of the assets, two things are clear: (1) that a serious trading loss was made last year, and (2) that the company's finances have been so depleted that it will be years before any dividends can be paid on any of the classes of shares. In your board's opinion the only possible method of securing the finance required for the company is by the issue of second debentures.

After discussion the report and accounts were adopted.

THE ANGLO-SPANISH CONSTRUCTION COMPANY, LIMITED.

OBLIGATIONS OF THE SPANISH GOVERNMENT.

The sixth ordinary general meeting of the Anglo-Spanish Construction Company, Limited, was held, on the 28th ultimo, at No. 1, London Wall Buildings, London, E.C., Sir Evelyn Wallers, K.B.E. (the chairman), presiding.

The Chairman, after briefly referring to the accounts, stated that the arbitrary treatment experienced at the hands of the Spanish Government in the matter of the very substantial sums due under its contract had caused the board great anxiety. Although they had exerted all possible influence, payment had not yet been received. Including various amounts for interest, taxes incorrectly deducted or overpaid, there was due a total of about Ptas. 105,000,000. In respect of a portion of this indebtedness the Government, in January last, nearly a year after the payments were due, had lodged Government securities of a market value of Ptas. 52,500,000, but arbitrarily blocked until after December 31st next. The balance of the outstanding amount will still be unpaid. As it had become apparent that the company would be unable to redeem its debenture issue, maturing on September 30th next, a meeting of debenture holders had, therefore, been held recently, at which resolutions were passed postponing the date of repayment of the debentures until September 30, 1933, and waiving payment of interest in the interim.

SATISFACTORY SETTLEMENT ESSENTIAL FOR NATION'S CREDIT.

The political situation in Spain would remain uncertain until after the Constitution was voted. Meanwhile, the present Government was making a determined attempt to preserve law and order, and fully realised the supreme importance of maintaining the exchange rate of their currency. They were under no delusions as to the damage which their credit had suffered abroad through the delay in making the payments outstanding. That they should meet their obligations was vital to their credit, and he, therefore, hoped that the negotiations now being undertaken with the Government would be successful. A satisfactory arrangement would have an immediate effect on the attitude of foreign bankers and capitalists towards the Spanish peseta, since the position of the company and the treatment it had received from the late Spanish Government were thoroughly appreciated in financial circles, both in London and in Paris.

The report and accounts were unanimously adopted.

MILLARS' TIMBER AND TRADING COMPANY, LIMITED.

COMPANY'S STRONG LIQUID POSITION.

The annual general meeting of Millars' Timber and Trading Company, Limited, was held, on the 28th ultimo, at Winchester House, Old Broad Street, London, Mr James White, LL.D. (the chairman of the company), presiding.

The Chairman first referred, at length, to the reasons which had decided the directors and auditors to state the figures of the Australian assets and liabilities in sterling without reference to exchange values.

Continuing, he said:—Last year I told you at great length what was the nature of the company's business in Australia, and I ventured on some sort of forecast—not a prophecy—of what was likely to be the position at the end of 1930. What I said at the last meeting has unfortunately proved true. Conditions in the last half of the year of 1930 in Australia became somewhat worse than they were in the earlier half. Speaking to-day, one may possibly say that the outlook is somewhat better. The Australian Government has settled to work on what I venture to suggest to you are the right lines for any Government which finds itself in difficulties, whether it be Australian or British—that is to say, that it must set to work to adjust its expenditure according to its income, and for that purpose cut down as far as possible every unnecessary governmental expense until such times as world trade improves.

My belief is that Australia is likely to recover from her financial difficulties rather more quickly than any European Power and possibly any American Power. And that is what we must all hope and believe.

Now, I want to call your attention to the liquid position of the company. We had, according to computations made by responsible officers of the company, at the end of 1930, a surplus of circulating assets over circulating liabilities of £864,603; we had, if our estimates are correct, all our capital assets intact and covered by the depreciation which we have set aside. In estimating the surplus of circulating assets we took stock into account, and the stock held by our combined companies at the end of 1930 was over £1,000,000. If that stock were truly circulating in the ordinary sense of the word—that is to say, coming in and going out; producing one

month and selling the next—we should not be here talking about our difficulties. Unfortunately the circulation of some three-fourths of our assets is less rapid than that, and how that is to be expedited remains to be seen. Governments are trying to revive trade, but the real trouble seems to be the fear—almost panic—on the part of capitalists as to where they shall put their money or what they shall do with it.

The report and accounts were unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended July 25, 1931, amounted to £2,776,000 against ordinary expenditure of £10,888,400. After allocating £912,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £152,648, the operations for the week, as shown below, decreased the National Debt by £3,177,000 to £7,641,527,000:—

(000's omitted.)	
Bank of England Advances ...	£ 500
Public Dept. Advances ...	+ 750
National Savings Certificate ...	+ 400
Treasury Bills ...	+ 2,364
	+ 4,014
	— 837

A complete analysis of the National Debt at March 31st, 1931, was printed in the *Economist* of April 4th.

			Sovs. set aside..... 129,000
			29 Bars sold..... 307,740
			Sovs. for export..... 126,000
			30 Bars sold..... 582,152
			Sovs. for export..... 39,000
Total.....	1,648,003	Total.....	13,882,568
Net withdrawals.....	£12,234,565		

Messrs Samuel Montagu and Company write on July 29, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £148,773,846 on the 22nd inst. (as compared with £163,991,026 on the previous Wednesday), and represents an increase of £1,48,224 since December 31, 1930. On the 23rd inst. the Bank of England raised its rate of discount from 2½ per cent. to 3½ per cent. consequent upon the heavy shipments of gold. The shipment of bar gold which arrived from South Africa this week amounted to about £534,000, nearly all of which had been engaged for France prior to arrival; there was, therefore, only a very small amount available in the open market yesterday. The heavy withdrawals from the Bank of England for France, Holland and, to a lesser extent Belgium and other Continental destinations, continued and the net efflux for the week under review amounted to £16,841,704. Towards the end of the week, however, the demand for France ceased following a recovery in the exchange, but that for other quarters still continues. The receipts at the Bank included £1,000,000 in sovereigns from Australia and £600,000 in sovereigns "released," whilst withdrawals consisted of £500,000 in sovereigns "set aside," £531,000 in sovereigns taken for export and £17,260,707 in bar gold.

SILVER.

Prices have shown considerable fluctuations and although buying by Indian Bazaar and China bears absorbed offerings for the first two days of the week, it was selling from the same quarters that forced prices down to 12½d. for both deliveries on the 25th inst. There was a sharp recovery of ½d. on the 27th inst. (the next working day) to 13½d., Indian and China buying orders coming on a poorly supplied market. At this level the market proved overstrained and the reaction to 12½d. which followed was not unexpected. There has been no improvement in offtake and the premium on silver for cash delivery has disappeared, prices having been quoted level since the 25th inst. News was received on the 27th inst. of a reform in the Mexican monetary law, a Presidential decree approved by both Houses of Congress removing gold pesos from circulation and leaving only silver pesos. Whilst it is possible that this may have influenced in some measure the sharp rise in silver prices seen here on the same day, the ultimate effect is doubtful, and further details are awaited, especially as to whether any important coinage of silver will be involved.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 20th inst. to mid-day on the 27th inst.:—

IMPORTS.	Exports.
Mexico..... 135,975	China..... 33,100
British West Africa..... 6,128	British India..... 35,400
Other countries..... 7,205	Other countries..... 4,961

NOTICES.

The Midland Bank announces the opening of new offices at 184 Kettering Road, Northampton, and at 67 Harborough Road, Kingsthorpe, near Northampton. The announcement is also made that the business heretofore conducted at 159 Tottenham Court Road, London, has been transferred to new and larger premises at 140 Tottenham Court Road, W.1. The opening of a new branch 17 High Street, Chesham, Bucks, is also announced.

Company News.

REPORTS AND NOTICES.

Mr. Arthur Dorman has been elected vice chairman of Messrs. Dorman Long and Company, Ltd.

It is announced that Marchese Marconi has been appointed a director of Electric and Musical Industries, Ltd.

Mr. Lambert William Middleton, Lowood, Melrose, has been appointed a director of The National Bank of Scotland, Ltd.

Mr F. H. James has been elected to a seat on the board of Imperial Continental Gas Association. He will continue to fulfil the duties of general manager.

Sir John Sandeman Allen, M.P., and Major W. M. Crowdy have been re-elected chairman and vice chairman of Joint East African Board for the ensuing year.

The Right Hon. Lord Irwin, G.C.S.I., of Garrowby Hall, Yorks., has been elected to a seat on the head office board of The Yorkshire Insurance Company, Ltd.

Sir Herbert Cook, owing to ill health, has resigned the chairmanship of Cook, Son & Company (St. Pauls), Ltd., and the board have elected Mr. R. M. Cook to be chairman.

General Sir John P. Du Cane, G.C.B., Mr Leslie Arthur Pollak and Mr Stanley Shelbourne Taylor, C.M.G., D.S.O., have been elected directors of De Beers Consolidated Mines, Ltd.

The London committee of Companhia de Mocambique state that the Customs receipts for the Port of Beira during May amounted to £23,732, as compared with £29,392 for the corresponding period of 1930.

GOVERNMENT, &c.

PARAGUAY (EXTERNAL DEBT OF).—Tenders of bonds of the loans of 1886, 1896 and 1915, and of the arrears coupon certificates issued in respect of the 1886 and 1896 bonds for amortisation were opened on July 7th at the offices of the Council of Foreign Bondholders. Tenders were accepted as under:—Bonds of 1886 and 1896: Tenders under £50 10s. per cent. were accepted in full, and those at that price to the extent of 86 per cent. Bonds of 1915: Tenders under £52 per cent. were accepted in full, and those at that price to the extent of 61 per cent. Arrear Coupon Certificates: Tenders at and under £99 19s. 9d. per cent. were accepted in full. The council still have a balance in hand for the redemption of the arrears coupon certificates and are prepared to receive offer of the same.

RAILWAYS.

THE CORDOBA CENTRAL RAILWAY COMPANY, LTD.—At the adjourned meetings of the various classes of stockholders, held on June 20th and 26th, the scheme of arrangement, as amended, providing for a further twelve months' extension of the moratorium from July 1, 1931, as regards the interest on its 5 per cent. debenture stock, and for the creation of £1,200,000 6 per cent. debenture stock, was duly sanctioned.

BANKS.

AUSTRALIAN BANK OF COMMERCE, LIMITED.—The net profit for year ended June 30, 1931, amounted to £84,904, as compared with £180,693 for year ended June 30, 1930, and £218,545 for year ended June 30, 1929. The ordinary dividend is 4 per cent., absorbing £88,320. This compares with 7 per cent. for preceding year, absorbing £154,580. For the year ended June 30, 1929, the ordinary dividend was 8 per cent., absorbing £176,640. Nothing has been put to reserve, against £25,000 a year ago, and £40,000 for year

† Free of Income Tax.

ended June 30, 1929. The carry-forward is reduced from £29,803 to £26,387.

COMMERCIAL BANK OF AUSTRALIA, LIMITED.—A preliminary statement issued by the Commercial Bank of Australia, Limited, shows that for the year to June 30, 1931, net profits amounted to £308,450, compared with £389,841 a year ago. A final dividend at the rate of 10 per cent. per annum, making 11½ per cent. actual for the year, is proposed, against 15 per cent. distributed in the year to June 30, 1930. The reserve fund is brought up to £2,250,000 by the transfer from revenue account of £13,399 (last year £22,851) and £76,601, being premiums received on new shares. After reducing bank premises by £20,000, there remains £65,336 to go forward against £95,549 brought in.

THE COMMERCIAL BANKING COMPANY OF SYDNEY, LIMITED.—The profit for year ended June 30, 1931, was £441,815, as compared with £637,619 a year ago. The ordinary dividend is 8½ per cent., against 10 per cent. Nothing is put to reserves. In preceding year £100,000 was allocated to reserve and £50,000 to bank premises account. The carry-forward is increased from £85,226 to £124,226. Deposits of £44,014,105 show a contraction of some £5,000,000 compared with a year ago, while, among assets, Government stocks and other securities are down from £6,106,620 to £5,019,119, and bills receivable from £3,062,926 to £1,774,309.

MISCELLANEOUS.

CALLENDER'S CABLE AND CONSTRUCTION COMPANY, LTD.—At a luncheon at the Waldorf Hotel on July 27th, Mr Theodor Petersen, M.I.E.E., was presented with his portrait and an album containing 801 names of subscribers. The occasion was in commemoration of his appointment as assistant managing director of Messrs. Callender's Cable and Construction Company, Ltd., and director of the Anchor Cable Company, Ltd. Mr Petersen has been with Messrs. Callender's Cable and Construction Company, Ltd., for thirty-six years.

IMPERIAL AND INTERNATIONAL COMMUNICATIONS, LIMITED.—The following are the estimated traffic receipts for six months ended June 30, 1930 and 1931:—

	1930.	1931.	Rise or fall
January.....	519,485	412,908	— 106,577
February.....	460,052	390,461	— 69,591
March.....	492,316	447,668	— 44,648
April.....	456,120	386,706	— 69,414
May.....	466,279	371,704	— 94,575
June.....	413,471	374,502*	— 38,969

Aggregate for six months, January to June, 1930 and 1931..... 2,807,723 2,383,949† — 423,774

* The sum of £21,500 must be deducted from the message receipts for June, 1931, in making a comparison with June, 1930, owing to changed conditions of sharing traffic.

† In comparing aggregates, regard must be had to the notes issued with the March, April and May traffics.

HUNTINGTON, HEBERLEIN AND COMPANY, LIMITED.—The British Metal Corporation group has recently acquired control of Huntington, Heberlein and Company, Ltd., Equitable House, King William Street, London, E.C.4, who specialise in mechanical roasting furnaces, Dwight-Lloyd sintering machines, coal-washing plants, drying and screening plants, sulphuric and hydrochloric acid plants, and general engineering equipment for chemical and metallurgical works. Huntington, Heberlein and Company, Ltd., since its establishment in 1908, has designed and constructed equipment for many plants and mines in the British Empire, and the company's engineers have had considerable experience in roasting, sintering and washing problems. It is felt that the company's operations will be materially assisted by its association with the British Metal Corporation group.

 London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1

GLASGOW.—Business is still quiet in the West of Scotland. At many of the engineering works, &c., a re-start has been made during the present week, but a general resumption at the shipyards and at the steel-making plants will not take place till the beginning of next week. The blast furnaces have not yet been re-lit. During the past week or two, there has been an improved demand for black sheets for export, and this has been maintained and the tonnage of thin sheets booked during the present week is quite considerable. There has been less business for galvanised sheets for export, although there are a number of inquiries on the market. In both cases, prices are very keenly cut. It is announced that a large order for mineral wagons has been placed with Messrs. R. Y. Pickering and Company, Ltd., of Wishaw, which will give considerable employment to workers in that district. Things continue quiet in the tube trade.

CARDIFF.—General conditions in the South Wales tinplate trade are unchanged. Business continues on a restricted character, but the output per mill has improved, and is now averaging about 60 per cent. of capacity. Prices are competitive, and are ruling between 13s. 3d. and 13s. 9d. per basis box. Steel bar prices are unaltered at £4 12s. 6d. for local make, and at £3 15s. per ton for foreign. Galvanised sheets continue a dull market at £9 7s. 6d. per ton f.o.b.

OTHER METALS.

TIN.—Tin has been slightly cheaper than last week, but, in the absence of selling pressure, the market remained steady at the lower level. Wednesday's official closing quotation for "standard cash," at £108 10s. to £108 12s. 6d. per ton, compares with £110 7s. 6d. to £110 10s. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 31,799 tons, show a decrease of 46 tons on the week.

COPPER.—The turnover of copper in the United States has been small and the reduction of the "domestic" price for "electrolytic" from 8 cents per lb. to 7.75 cents per lb. had little effect on the market. Wednesday's official closing price for "standard cash" in London, at £33 1s. 3d. to £33 3s. 9d., compares with £34 2s. 6d. to £34 5s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 18,566 tons, show an increase of 797 tons, while stocks of rough copper, at 1,136 tons, were 50 tons larger.

LEAD.—Little interest was taken in lead this week and prices show a decline on the week. Wednesday's official closing quotation for "soft foreign" in London, at £12 8s. 9d. to £12 11s. 3d., compares with £12 16s. 3d. to £12 17s. 6d. on the corresponding day last week.

SPELTER.—Despite the recent re-establishment of the Zinc Cartel, prices have not been maintained at the higher level recently established. Wednesday's official closing quotation in London for "good ordinary brands," at £11 16s. 3d. to £12 5s., compares with £12 6s. 3d. to £12 16s. 3d. on the corresponding day last week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £85 per ton, and at £170 to £175 per ton respectively, have been maintained at last week's level. Antimony again changed hands at £23 to £23 10s. per ton for "foreign," while quicksilver remained unchanged at the recently reduced price of £17 per bottle.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Spot sales for the week 23rd to 29th (inclusive) are 20,000 bales, of which 8,490 bales are American, 700 bales Brazilian, 500 Argentine, 4,250 Peruvian, 2,360 Egyptian, 1,200 African, 650 East Indian, 1,500 Russian and 350 sundries. Imports for the same period are 18,703 bales, of which 2,908 bales are American, 2,731 Peruvian, 8,892 Egyptian, 1,349 African, 2,679 East Indian and 146 sundries. Quotations, July 29th: American Middling, 4.72; Egyptian Sakel, 7.10; Uppers, 5.52; Brazil Fair, 4.77; Peru G.F. Smooth, 5.07; West African Middling, 4.77 and East African G.F., 5.77.

Manchester.—The market during the past week has been uncertain and an expansion of business has been checked by the downward movement in values and some nervousness relating to finance. Nothing is happening at the moment to encourage enterprise and buyers seem determined to operate as sparingly as possible. A fair amount of inquiry has come through in cloth for abroad. The few offers mentioned for India have been very low and only isolated sales have taken place. A more hopeful feeling prevails with regard to China and rather more business has been about in fancies, but an expansion in the turnover is dependent upon a rise in the price of silver. Nothing worth mentioning has been done for the several minor outlets east and west, but some producers of cloths suitable for printing and dyeing manage to scrape together an assortment of orders from day to day. There has not been much life in home trade fabrics. Reports from weaving districts rather tend to become worse and there are rumours of more sheds closing down for an indefinite period. Prices in American and Egyptian yarns have favoured buyers. Only a limited turnover has taken place in home counts and export numbers.

Cotton Prices.

39-in. ditto, 37 yds., 16 by 15, 8 lb.	11 0	10 9	10 10	10 9	15 1	12 7
	9 11	9 8	9 9	9 7	13 6	11 4

THE WOOL TRADE.—Bradford.—The quantities of wool taken by the home trade, the Continent and America at the last series of sales and at corresponding series of previous years are shown below:—

	Home trade.	Continent.	America.	Total.
	Bales.	Bales.	Bales.	Bales.
1923 ...	45,000	51,500	1,500	98,000
1924 ...	33,500	28,000	...	61,500
1925 ...	41,000	72,000	2,000	115,000
1926 ...	43,500	53,000	1,000	97,500
1927 ...	56,700	49,600	2,000	108,300
1928 ...	26,500	42,500	...	69,000
1929 ...	31,000	43,500	...	74,500
1930 ...	31,000	50,500	1,000	82,500
1931 ...	43,000	34,500	3,000	80,500

The 3,000 bales taken for the United States is noteworthy, but the carry-over of 146,000 bales means that another three weeks' auctions could begin any time if buyers were prepared to assemble in Coleman Street for the purpose. Next series will commence on September 15th, and a big offering will then be made to get rid of the large quantity which will no doubt be available. The Importers' Committee and the selling brokers may consider holding a four weeks' series. Several firms in the West Riding have very little merino wool, and the happenings during the interval will help to decide a programme. The holiday period has commenced in Yorkshire. Many mills outside Bradford are already closed down. It is a legal enactment for mills to close at least a week, but in many cases machinery will stand eight to ten working days, some even a fortnight. There is very little to indicate development at the piece-goods end. Prices for tops, yarns, &c., remain firm but there is plenty of scope for augmented turnover.

THE GRAIN MARKETS.

WHEAT.—Trading in wheat has been on a small scale during the past week and prices declined sharply. There has been further damage done to the Canadian and United States spring wheat crops by drought, but conditions on the Continent are relatively satisfactory, and the Russian crop seems not so far to have suffered great damage by the hot weather. In view of the satisfactory yield of the French, German and Italian crops, the import quotas have been fixed at a very low rate. The reorganisation of the Canadian grain pools to form an inter-provincial trading corporation which would replace the pool's central selling agency is progressing, and Mr Bennet appears to have promised the financial backing of the Federal Government to the trading corporation. Quotations: No. 1 Northern Manitoba, Atlantic, ex ship, 24s. 3d. per 496 lbs., as compared with 25s. 6d. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 23s. 3d., against 24s. 3d.; No. 3 Northern Manitoba, Atlantic, ex ship, 21s. 6d., against 23s.; Rosale, ex ship, 20s. 6d., against 21s.; Australian, ex ship, 21s. 6d. to 23s. 6d., against 22s. 6d. to 24s. a week ago.

WHEAT FLOUR.—In sympathy with the cereal, wheat flour prices declined this week. North American shipments, at 223,000 sacks, show an increase of 31,000 sacks, as compared with those of the previous week. Quotations: Straight run, delivered week; delivered London, 21s., against 21s. 6d. Manitoba patents, ex store, 21s. to 24s., against 21s. to 24s.; and Australian, ex store, 17s. to 18s., against 17s. 6d. to 18s. 6d. a week ago.

BARLEY.—The market in barley has been steady and prices were generally maintained despite considerable offerings from Russia. Quotations: "English feeding," f.o.r., per 448 lbs., from 36s. to 40s., as compared with 36s. to 40s. last week; "Australian Chevalier" changed hands at 28s. to 32s., against 28s. to 32s. a week ago.

OATS.—There has been a declining tendency in the demand for foreign oats in this country, and prices, though higher than had then fallen. Quotations: "River Plate," landed, 11s. 3d. ex ship, 10s. 3d., against 10s.; "Chilean Tawny," landed, 12s. 9d., against 13s.; English white, per 336 lbs., 20s., against 20s. to 21s. a week ago.

MAIZE.—Argentina continues to ship large quantities of maize to Europe, but, in view of the cheapness of the grain as compared with other feeding cereals, these shipments find a ready market. Prices have been steady. Quotations: "Plate," landed, 16s. 6d. per 480 lbs., as compared with 16s. 6d. last week; Plate, ex ship, as against 16s. 3d.; Plate, July-August, new, 15s. 3d., as against 15s. 3d. Yellow maize meal, ex wharf, was quoted at £5 2s. 6d., as against £5 2s. 6d. per ton a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1930-31, 1929-30, 1928-29, 1927-28:—

	1930-1931.	1929-1930.	1928-1929.	1927-1928.

Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	87½	56½	56½	57½	54½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	83½	79½	51½	54	51½

The visible supply of wheat in Canada at 60,814,000 bushels shows an increase on the week of 432,000 bushels. Supplies a year ago stood at 58,034,000 bushels.

OTHER FOODS.

SUGAR.—Since the coming into operation of the Chadbourne scheme, raw sugar values have on the whole been well maintained. The lower prices quoted this week are mainly the result of a slackening off of buying by United States refiners and of temporary selling pressure in certain quarters. Wednesday's sales of "raws" included "August delivery," at 6s. 3½d. to 6s. 3½d. per cwt., against 6s. 5½d. to 6s. 5½d., and "December," at 6s. 7½d. to 6s. 8½d., against 6s. 9½d. to 6s. 10d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
London	1931.	1930.	1931.	1930.	1931.	1930.
Liverpool.....	282	371	948	1,268	26,233	20,504

Total ...	4,932	18,388	14,153	18,981	90,394	105,729
Last week	12,851	16,912	15,215	15,779	99,525	105,782

COFFEE.—In the absence of auctions which will be recommended on August 11th, the spot market has remained quiet but steady. Last week's movements of coffee in London were as follows: Brazilian, landed, 44; delivered for home consumption, 69 bags; exported, nil; stocks, 2,523 bags, against 1,577 bags last year. Central American, landed, 1,724 packages; delivered for home consumption, 2,808; exported, 1,050; stocks, 103,910 packages, against 96,325 a year ago. Other kinds, landed, 1,912 packages; delivered for home consumption, 2,034; exported, 1,613; stocks, 83,390 packages, against 106,475 a year ago.

COCOA.—At this week's auctions cocoa was in slow demand, and last week's prices were not maintained. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, mid-crop, August-September, at 17s. 9d. per cwt. f.o.b. London contract, shows a further fall. Last week's movements of cocoa in London were as follows:—Landed, 2,589 bags; delivered for home consumption 3,875 bags; exported, 15 bags; stocks, 222,269 bags, against 198,133 last year.

TEA.—The quantities catalogued for this week's auction comprised 24,968 packages of Indian, 45,471 packages of Ceylon, and 10,622 packages of Java and Sumatra tea. At Monday's auctions Indian tea was sold at firm prices, which were maintained at Tuesday's and Ceylon sales. On Wednesday, however, the demand fell off, and prices were barely maintained. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	Northern India.		Southern India.		Ceylon.		Java.		Sumatra.		Nyasaland.		Total.

RICE.—The recent improvement in the price of rice has been maintained during the week. Wednesday's quotation for Burma No. 2, cleaned, August-September, in singles to the Continent and

to the United Kingdom, at 7s. 9½d. per cwt., shows a rise of ½d. as compared with last week. Movements in London during the past week were as follows:—Landed, 80 tons; delivered, 22 tons; stocks, 579 tons, as against 1,830 last year.

POTATOES.—Supplies of new potatoes are now more than sufficient to satisfy requirements, and prices therefore declined further. At the Borough market, "Eclipse" sold at from £6 to £7 for first quality, against £8 to £9 a week ago.

SPICES.—The spot pepper market was steady and prices remained unchanged. Wednesday's quotation for "Black Singapore," at 5½d. per lb., shows no change on the week. Movements of pepper in London during the past week were as follows:—Black, landed, 32; delivered, 39 tons; stocks, 607 tons, against 859 tons last year. White, landed, 5 tons; delivered, 34 tons; stocks, 520 tons, against 497 tons a year ago.

MEAT.—The market in meat has been steady, and the recent rise in the price of Argentine beef has been maintained. On Wednesday, Argentine beef (chilled, hindquarters) was sold at 4s. 8d. to 5s. per 8 lbs., against 4s. 9d. to 5s. on the corresponding day last week, while New Zealand frozen mutton realised 3s. 4d. to 3s. 10d., as against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 8,491 tons, as compared with 8,446 tons in the corresponding week last year. Imported beef, principally Argentine, formed 87.1 per cent. of the supplies, as against 83.5 per cent. a year ago; and imported mutton, mainly New Zealand, formed 83.7 per cent. of the total supply, as against 85.6 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Extremely quiet conditions prevail in all sections, and very little business appears possible in the present uncertainty. Buyers of linseed are very reserved in view of good supplies on hand and the large quantity afloat. Plate first arrived at Hull has been done at as low as £8 12s. 6d., and Calcutta to London June-July shipment at £10 10s., since when, however, a steadier tone has shown itself, current value on spot and afloat being around £8 17s. 6d., and shipment to October £8 17s. 6d. to £9 2s. 6d., according to date. A transaction in the new Argentine crop, January-February, is recorded at £9 2s. 6d. There has been a further increase in the linseed afloat for Europe, which now stands at 168,900 tons, or 21,500 tons more than last week. Cotton seed is neglected, and values are about unchanged, with black Egyptian, July and August loadings, quoted £5. All descriptions of vegetable oils are in very poor demand, and values are difficult to maintain. Raw linseed oil on spot is around £17 10s., and September-December delivery £17, ex Hull. Cotton oil is lower, crude Egyptian quoting £18 10s., and common edible £21 5s., ex Hull. Oilseeds are in moderate demand and easy.

HIDE, LEATHER AND ALLIED TRADES.—Ox and heifer hides were again firmer at the auctions held in Manchester this week, when several weights in both clear and warbled classes made ½d. per lb. more money. First cows in both classes advanced ½d. per lb. while other descriptions, together with calfskins, were unchanged from the previous week. There is a slightly improved tone in the market for sheepskins, but prices generally are unchanged. With less business passing in foreign hides the tendency of values is lower, and the uncertainty regarding the future is such that the possibility of further reductions cannot be ruled out. In South American wet salted hides Argentine ox have changed hands at 5½d., with 5½d. reduced figures, B.A. Americas having been sold at just over 5½d., Cuyabano at 4½d., and B.A. Inservibles at 3½d. A very restricted business is passing in most descriptions of African hides with Capes quoted at 6½d. and 5½d. for the first two selections in drys, and 1d. less for dry salted. Australians have received a certain amount of enquiry, but prices are in favour of buyers. A steady demand has again been experienced for sole leather, and although enquiry for the

Trade with South America

The Bank of London & South America Ltd. offers a complete banking service to commercial houses which are engaged in trade with the Latin American countries. With branches at every strategic point, the Bank is singularly well equipped to supply the very latest

information on local markets and trade conditions, to help and advise, and to undertake banking business of every description. For the convenience of its clients a Monthly Review of Market Information is issued free on application and Status Reports on S. American firms are supplied on request.

most part is confined to definite lines, business generally covers all descriptions. In dry hide bends for manufacturing purposes 7/10 lb. weights are in most request, with only a very limited call for others. Medium weights in English and wet salted are also selling fairly well, in addition to which there is a dropping sale for lights and heavies. Pinned offal has been moved off in quite reasonable quantities, the enquiry covering both bellies and shoulders. There has also been slightly more interest taken in rough shoulders, but generally speaking rough offal is quiet. The position of upper leathers remains much about the same as last week; regular enquiry comes to hand for supplies of willow calf and black and brown glacé kid, which have been the two staple selling lines for some considerable time past. In addition, there has been some improvement in sales of patent leather, while reptile and fancy shoe upper leathers continue in moderate request. Carriers appear to be doing a slightly better business, but at the same time trade in this section of the industry is still a long way from good.

RUBBER.—The market in rubber has been dull, and prices declined further. There have been no signs of an increase in consumption,

and production has so far been practically maintained at last year's level. Shipments from the Dutch East Indies during the first six months actually show a slight increase on the January-June period, 1930. Wednesday's official closing price for standard ribbed smoked sheet, at 2 1/2 d. per lb., shows a fall of 1/4 d. as compared with the corresponding day last week. In forward positions, business has been done at 2 1/2 d. to 2 3/4 d. for October-December, against 3 1/4 d.; and at 3 1/4 d. to 3 3/4 d. for January-March, 1932, as against 3 1/4 d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,186 tons; delivered, 2,210 tons; stocks at the end of last week, at 135,439 tons, show a decrease of 1,024 tons, as compared with the preceding week.

THE MONEY MARKET.

THE chief developments of the week were the opening of the Paris and New York credits, each of the equivalent in their respective currencies of £25,000,000, in favour of the Bank of England; and the raising of the fiduciary note issue from £260,000,000 to £275,000,000. Their wider aspects are dealt with on a subsequent page. Money has been none too plentiful, partly as a result of hold-

Limited Company Incorporated in Italy.

Capital fully-paid Lire 500,000,000
Reserve Lire 300,000,000

currency withdrawals by the public. On one occasion early in the week a small amount had to be borrowed from the Bank of England, and though on Thursday afternoon the current rate for short money was $3\frac{1}{2}$ per cent., money was not easily obtained. Three months' bills were quoted on the same day at $4\frac{1}{2}$ per cent., and hot Treasuries changed hands at $4\frac{1}{2}$ per cent. September bills were quoted at $4\frac{1}{8}$ per cent., four months' at $4\frac{1}{4}$ per cent. and six months' at 5 per cent.

Early in the week the market was hoping that the opening of the credits would steady the exchanges and prevent further gold losses, but on Wednesday there was a sudden slump in the pound originating in Paris to Frs. 123.30 and \$4.84 $\frac{1}{2}$. This slump only lasted a short time, for a few hours later sterling recovered to more reasonable levels, though still remaining below the gold point against all important currencies except the dollar. It is not easy to find an adequate explanation of this flurry, to which too much importance should not be attached. At the beginning of last week sterling was receiving special support. It appears that, following upon the opening of the credits, it was thought expedient to withdraw this support, and the flurry began when it became known in Paris that the Banque de France had ceased to support the pound. This gave rise to the mistaken idea that a hitch had occurred in the arrangements for the credit, and a drive against sterling followed, but was suddenly checked as soon as support was forthcoming. The amount of business that passed during this period of nervousness was inconsiderable.

It may be taken for granted that both the opening of the foreign credits and the expansion of the fiduciary note issue were not hurried measures required by an immediate emergency, but were precautions taken well in advance of any situation they were intended to meet. In particular, there is no reason to suppose that they were intended to check at once the outflow of gold; they were rather intended to give the Bank room for manœuvre in case the outflow was prolonged. The increase in the fiduciary note issue is the more immediate measure of the two, for it is obviously designed as an offset against the holiday expansion of the note circulation which will persist to a limited extent during the remainder of the month. The credits are capable of dealing with the outflow of funds abroad, which experience has taught us may last, in the direction of both Paris and New York, well into the autumn. There is no reason to believe that the credits have yet been drawn upon; in fact, it would be folly to fritter them away in meeting every passing pressure upon sterling.

This week's Bank return includes the increase in the fiduciary note issue, which now stands at £275,000,000. As a result of the change, the Banking Department's Reserve has risen by £10,628,895, although a small net gold influx of £1,518,092 has been more than neutralised by the holiday increase of £5,889,697 in the note circulation. The Proportion stands at $41\frac{1}{8}$ per cent., against $32\frac{1}{2}$ per cent. a week ago. Apart from this, all that the increase has entailed is the transfer of £15,000,000 of securities from the Banking to the Issue Department. Reference to the table on page 298 will show that when a single return is compiled for both departments, the effects of the change completely disappear. The week's expansion of £7,638,553 in the Bankers' Deposits is due not to the increase in the fiduciary note issue, but to the open market policy of the Bank, which this week took the form of sub-

stantial purchases of September bills, and is reflected in the expansion of £14,820,569 in Government securities.

Mainly owing to releases of sovereigns amounting to £1,870,000, the Bank had a net gold influx during the week ended August 5th of £1,478,167. This included an unexpected arrival of £475,000 of bar gold from France last Wednesday, on the same day as the slump in sterling occurred. This shipment was in direct contravention of the accepted theory of the exchanges, but a possible explanation is that it represented Cape gold bought forward on French account and shipped to Paris the previous day. The improvement in the exchange early in the week may have caused this shipment to have been cancelled, and it is suggested that the news of the cancellation came too late to prevent it actually going. Hence, as the cancellation had to stand, there was no alternative but to bring it back to London. On Thursday just over £2,500,000 of gold was withdrawn from the Bank. £1,500,000 of this was believed to be destined for France, £200,000 for Belgium and the balance for Holland.

Wall Street opinion welcomed the news of the Bank of England credits, but in some quarters surprise was felt that the whole of the credit had not been opened in Paris, from where the pressure on London's gold stocks was mainly coming. Money remains steady and easy, call rate being $1\frac{1}{2}$ per cent. and commercial paper $1\frac{1}{2}$ to 2 per cent for prime names. Open-market discount rates on Wednesday were $1\frac{1}{2}$ per cent. for 90-day bank bills and $1\frac{1}{2}$ - $1\frac{3}{4}$ per cent. for six months' bills.

A somewhat uncertain atmosphere prevailed in the Foreign Exchange market during the past week, and although erratic movements took place in some exchanges the volume of turnover was not comparable to the violent fluctuations witnessed. Interest centred chiefly in the New York and French exchanges. Following the rise in Bank rate to $4\frac{1}{2}$ per cent. a week ago and the announcement of the credits made available to the Bank of England in New York and Paris a more favourable feeling seemed imminent, but on Wednesday, when it was observed in Paris that the Banque de France was no longer purchasing sterling, a certain nervous apprehension was revealed which culminated in Paris dealers rushing to buy francs and dollars against sterling, with the result that from their previous levels of 4.86 and 123.92 respectively the New York rate fell to 4.84 $\frac{1}{2}$ and the Paris rate to 123.30. Later during that day a saner view prevailed, and rates became more stable at a fraction below their former levels. The close was at 3.85 $\frac{1}{4}$ and 123.80 respectively. Similar movements were observed in a somewhat smaller degree in several other exchanges, Brussels falling nominally to 34.78 and closing at 34.81, while Amsterdam, after touching 12.02 $\frac{1}{2}$, closed at 12.03 $\frac{1}{2}$, against 12.06 a week ago. Milan fluctuated between 92.88 and 92.75, to close at 92.85, and Switzerland closed at 24.95 against 24.90 last week, after touching 24.80. No violent movements took place in the Scandinavian exchanges, but Spain was again heavily offered and closed at 55.90, or a depreciation of 2 pesetas on the week. Berlin was steady between 20 $\frac{1}{2}$ to 20 $\frac{3}{4}$, dealings being restricted to a minimum. Among the Eastern Exchanges the rupee was slightly stronger at 1s. 5 $\frac{1}{2}$ d., while Japan was unchanged at 2s. 0 $\frac{1}{2}$ d. South American exchanges were generally weaker. Buenos Aires closing at 31 $\frac{1}{2}$ d. as against 33 $\frac{1}{2}$ d., Montevideo at 20d. against 22 $\frac{1}{2}$ d., and Rio at 3 $\frac{1}{2}$ d., compared with 3 $\frac{1}{4}$ d. Forward quotations were erratic, varying with movements in spot exchange. New York closed at premiums of $\frac{1}{2}$ and $1\frac{1}{2}$ cents for the one and three months' periods. Paris was at wider premiums of 15 and 35 centimes respectively. Brussels forwards were in better demand at premiums of $\frac{1}{2}$ and 4 centimes, as also were forward guilders at $\frac{1}{2}$ cents and 2 $\frac{1}{2}$ cents. Milan forwards were at a discount of 10 centesimi for one month and 30 centesimi for three months, while forward Switzerland was 1 centime premium for one and 2 centimes premium for three months. There are no quotations for forward Reichsmarks at present. Silver was firmer on a quiet market, closing at 13 $\frac{1}{2}$ d. for both spot and forward positions. Hong Kong was 1s. and Shanghai 1s. 8 $\frac{1}{2}$ d.

A NEW AXE.

WHEN four years after the war Sir Eric Geddes and his colleagues sharpened their economy axe, their eyes may well have gloated over the spreading branches of war-time expenditure ready and waiting for extensive lopping. The prospect which Sir George May and his colleagues this year faced on the Committee on National Expenditure, which has just reported,* was very different. The only obvious and substantial excrescences inviting their attention were those created by the recent extravagant policies of the last two Governments—policies from which radical departure would be extremely controversial and unpalatable to large sections of the population. Before the Committee was appointed in March the Chancellor of the Exchequer himself regarded the field for economy as so limited that he told the House of Commons that he could write the Report himself in advance. It is something of a surprise, therefore, to find the Majority of the Committee recommend immediate cuts in expenditure affecting the next Budget amounting to nearly £100 millions, and also frame a network of proposals designed to safeguard future Budgets from their natural tendency to swell.

As was almost inevitable, there is a Minority as well as a Majority Report. The latter, which is signed by the Chairman and four colleagues, opens sensationally with a calculation suggesting that, even without allowing for the £11 millions cost to the Treasury of the application of the Hoover moratorium, the Chancellor of the Exchequer will be faced next April with a prospective deficit of nearly £120 millions. The need for radical retrenchment is so urgent that we sympathise with the obvious aim of the Committee to make the public's flesh creep. Nevertheless, for the sake of those who are not closely conversant with financial statistics, it is necessary to point out that this suggested figure of £120 millions deficit rather seriously overpaints the gloom of the immediate budgetary prospect. The casual reader might deduce that actual national expenditure threatens to exceed actual national revenue by £120 millions in 1932-33. Happily the position is not anything like as bad as that. For, accepting the Committee's own figures, £50 millions of the threatened deficit is accounted for by sinking fund applications and £40 millions by borrowings for the Unemployed Insurance Fund, which the Committee—in profound disagreement on this point with the Chancellor of the Exchequer—insist upon regarding as equivalent to Treasury borrowings for current expenditure.

The gap, then, which the Committee set out to bridge is £120 millions, and they suggest means of saving £96 millions. Details of the method by which they reach this figure will be found in a summary of the Report given on later pages of this issue. Over two-thirds of the whole of these economies they seek to achieve in the realm of unemployment insurance. Travelling far beyond the interim recommendations of the Royal Commission, which is still sitting, they recommend the raising of contributions, the wholesale application of means tests for transitional beneficiaries, and the extension of the scheme to bring in new classes of insured. Next in size among the projected cuts comes a figure of £13.6 millions to be saved by a reduction of 20 per cent. in teachers' salaries, while nearly £8 millions is to be saved by postponement and slowing down of road schemes and maintenance. The Majority would cut police pay by 12 $\frac{1}{2}$ per cent.; Development expenditure is to be slowed down; Civil Servants' leave shortened; capitation payments to doctors under the National Health Insurance Act reduced; and among a host of other minor recommendations are the abolition of the Empire Marketing Board and a cut in the State grant to the British Broadcasting Corporation.

The signatories of the Minority Report, Mr Arthur Pugh and Mr Latham, recognise the need for economy, concede the justice of a cut of, say, 12 $\frac{1}{2}$ per cent. in teachers' salaries, and accept various minor recommendations of the

Majority, but they join issue with the Main Report both with regard to its conception of the whole problem of economy and with the principle of what they appear to regard as indiscriminate lopping. The line of thought running through the Majority Report is that, while general equality of sacrifice is desirable, the immediate problem of planning the next Budget cannot be delayed, and that, therefore, it is necessary to lop off as much expenditure as is justly possible and fill up any remaining gap by taxation. The Minority argue, on the other hand, that, if the situation is as serious as is made out, it calls for general sacrifices, and in such sacrifices the whole community must share, including the *rentier*. With the general principle that in times of national emergency demanding sacrifice, such sacrifice should be planned so as to be shared in proper proportions by all forms of income, no one, we think, will quarrel, and, although the *rentiers*—especially those with the higher incomes—may retort that they have already been called upon to sacrifice much through higher taxation and the collapse of income from what were hitherto regarded as steady fixed-interest securities, the principle of common sacrifice is one that must, in one form or another, be ultimately achieved. Just so far we have considerable sympathy with the signatories of the Minority Report, but the awkward fact remains that no one has yet devised—and the Majority of the Economy Committee apparently regard it as outside their mandate to devise—efficient machinery for ensuring general equality of sacrifice, and, meanwhile, the difficult Budget position has got to be faced without delay. It is in the light of that fact that the proposals of the Majority must be examined, and, in passing, we may say that too much importance should not be attached to the argument of the Minority that the reduction of benefits and wages reduces the purchasing power of the public and thereby contributes to trade depression. This view is a popular one on the Socialist benches to-day, but it does not take into account the fact that unjustifiable expenditure of the taxpayers' money merely represents an unjustifiable transfer of purchasing power, not a diminution, and, further, that what we may call "anomaly" expenditure tends to aggravate the unemployment problem, and, in so far as it is curtailed, the situation may be proportionately improved.

The Report was issued on the eve of the summer recess, and it is, therefore, difficult to estimate its political effects and its chances of becoming a basis for action. With the Report in his hands, the Chancellor of the Exchequer gave a grave warning as to the Budget position to the House of Commons on July 30th. While pointing out with justice that our own Budget position is better than that of most other countries, Mr Snowden said, "I tell the House quite frankly that the outlook for the Budget of next year, unless very considerable economies can be effected, is a very serious prospect indeed," and later he went on to say, "It is, of course, absolutely essential for the maintenance of the credit of this country that there should be a balanced Budget." These phrases, falling from the lips of a Chancellor who has already stated his view that any increase in the tax burden on industry would be "the last straw," must be taken to mean a determination to effect all possible economies. Another favourable omen is the Prime Minister's immediate acceptance of the recommendation of the Main Report that financial control should be strengthened by the formation of a Cabinet Finance Committee on the lines of the Committee of Imperial Defence. But when one looks calmly at the facts, hopes of reduced expenditure on anything like the scale proposed by the Committee begin to fade rapidly. The bulk of it depends upon the Government's willingness to accept unemployment insurance reforms twice as drastic as those proposed by a Commission upon whose urgent advice they have, in the main, refused to act. With this aspect of the situation in their minds, the Members of Parliament broke up for their holidays in an atmosphere of rumour. It was freely suggested that Parliament would

be reassembled at an early date and that a National Government would be formed to tackle the economy problem. We can see no grounds for thinking that events are shaping in that direction. It is impossible to form a National Government, which means a coalition of all parties, so long as there exists a profound and radical cleavage of opinion as to the methods by which the emergency should be solved. So long as Mr Baldwin continues to lay overwhelming stress on tariffs as the only means of salvation, and the other parties stoutly maintain an opposite view, the formation of a National Government lies right outside the realm of practical politics. Nevertheless, we can hardly believe that the effects of the publication of this drastic report will be nugatory. Public opinion has been aroused to the facts in their darkest possible aspect, and, as the weeks pass by, the shadow of the next Budget will begin to creep across the country. The Report cannot be pigeon-holed. But precisely the course which events will take cannot be seen until the reassembly of Parliament.

THE EXCHANGE CRISIS.

ON Saturday the Bank of England made the following official announcement:—"The Bank of France and the Federal Reserve Bank of New York have each placed at the disposal of the Bank of England a credit in their respective currencies for the equivalent of £25 millions, making a total equivalent of £50 millions. On the application of the Bank of England, the Treasury has issued a Minute in accordance with the procedure laid down in the Currency and Bank Notes Act, 1928, authorising an increase of £15 millions in the fiduciary note issue for a period of three weeks, thus raising the total of the authorised fiduciary issue to £275 millions." This news put an end to the crop of rumours of the previous week, some of which received notice in the *Economist* of August 1st, and led to an immediate improvement in the foreign exchanges.

The increase in the fiduciary note issue can be dealt with very shortly. Gold withdrawals and the holiday expansion in the note circulation would, according to this week's Bank return, have reduced the Reserve to £29.6 millions and the proportion to 27½ per cent. had it not been for the increase. Such figures would have been adequate, but might have left little margin in hand for future emergencies. The expansion in the note circulation is purely seasonal and temporary and the recent gold losses are largely due to special and, it is to be hoped, non-recurrent causes. It was to meet, first, such an emergency as this that the relevant clause was inserted in the 1928 Act, and it will be recalled that the powers contained in this clause were intended to be used whenever advisable, and that their application was not to be regarded as evidence of a major financial crisis akin to the suspension of the Bank Act in pre-war days. It may be said at once that, had these powers not been made use of in the circumstances of last week-end, the Bank and Treasury authorities would have been open to criticism.

Nor is it unprecedented for the Bank of England to obtain help from abroad. In 1925, to go no further back, the Bank, on the re-establishment of the gold standard, obtained a \$200,000,000 credit from the New York Reserve Bank, which was buttressed by the option on a further credit secured from Messrs J. P. Morgan and Company by the Treasury. It is perhaps to-day a happy omen that it was never necessary to draw upon these credits. The size of the credits need not arouse any surprise or misgivings. If such credits are to be opened at all, it is best that they are able to give the protection they promise. As our experience of 1925 showed, the bigger such credits are the less is the likelihood that they will have to be used.

There is some confusion of thought over the causes of the necessity for the present credits. These are closely associated with abnormal relations between the chief money markets of the world which have been developing in the last two or three years. The growing maladjust-

ment of the world's gold stocks, their concentration in a few countries (against the will of those countries themselves), the plethora of short money and the lack of long-term capital are all symptoms of monetary disequilibrium. London, as the world's banker and financial centre, is peculiarly exposed in such circumstances to abnormal demands, and this is by no means the first occasion in recent years in which there has been an exceptional call upon London's gold.

Superimposed upon this general instability has now come the special strain arising out of the German crisis, with the widespread impairment of confidence. It was inevitable that bankers in all centres should think it their duty to strengthen their cash resources at home by drawing on their balances abroad, and London, as the chief repository of such balances, was, after Berlin, inevitably the greatest sufferer. It is evident that the magnitude of the claims upon London and the very exceptional drain of gold that took place in July even gave rise to doubts as to the ability of Great Britain to maintain the value of sterling.

Between the situation of London and Berlin, however, there is a fundamental difference. Germany, with her post-war burdens, has been consistently a debtor nation: she was one even in the relatively good years of 1926-28. To-day Germany possesses very few foreign assets, and, even if she had no reparations liability, her balance of external payments would be so uncertain and achieved at the price of such serious adjustment of internal costs as to render it extremely doubtful if she could accumulate foreign assets sufficient to set against her existing foreign commercial liabilities.

Contrast the situation in England. The Macmillan Report has just placed it on record that "the underlying financial facts are more favourable than had been supposed, and Great Britain's position as a creditor country remains immensely strong." Elsewhere the Report cites figures which show that so far as it can be determined the net short-term liability of London—obtained by deducting sterling bills accepted on foreign account from deposits and sterling bills held in London on foreign account—had fallen from £302,000,000 at the end of 1928 to £254,000,000 at the end of 1930. Against this short-term indebtedness of London, which has decreased in size during the past two years—thereby reducing the vulnerability of London to a sudden and prolonged call—can be set an indeterminable mass of foreign balances and bills held by London houses in all parts of the world. Finally comes the huge quantity of British long-term capital invested abroad, estimated by the *Economist* at £4,000,000,000. Some of this has seriously depreciated as a result of the world's crisis, some of it could not be realised except at a severe loss; but an immense amount still remains—which could in case of need be mobilised as were our dollar securities mobilised during the war. It is thus a potential and very strong safeguard of London's stability.

It should also be pointed out that, regrettable though the fall in prices of raw products has been in its general effect on trade, it has had one compensation from the British point of view. By reducing the value of our imports *pari passu* with our exports we have been able to maintain the volume of our food imports in spite of the heavy slump in our export trade without increasing the adverse visible balance of trade. For the first half of 1930 the balance was £187.6 millions, but for the first half of 1931 it was only £188.0 millions.

In spite of the recent improvement in our short-term position, it may be argued that London has deliberately placed herself in too vulnerable a position. The answer to any such criticism is that banking is one of our staple and most remunerative industries; and, just as it is the first duty of a banker to seek deposits from his customers, it is London's business to encourage the influx of foreign money, which we employ to our advantage. It is conceivable, though far from certain, that of recent years we have prosecuted this side of our business to excess, having regard to the economic uncertainty of the world; its conduct upon reasonable lines, however, is not only one of our chief sources of income, but also has immensely facilitated the carrying on of world trade.

Present circumstances are, indeed, unusual, for it is doubtful if there has ever been a situation, since the great commercial centres of the world have been linked to one another by financial ties, in which such a large amount of short-time obligations were outstanding between the different nations or the basis of international business in the near future so uncertain. The position of this country as a creditor nation makes her ability to meet all obligations in the long run immensely strong and her liquid position is such as to give her ample resources to meet all ordinary emergencies. But in view of the world situation the display of strength implied in the joining of forces by New York, Paris and London—in spite of this week's somewhat violent exchange movements described on page 254—is a most valuable re-assurance. The help so extended to the Bank of England, even if not made use of, is the clearest possible evidence of the growing spirit of solidarity and co-operation in the financial world. It must not be forgotten that France and the United States are the two countries to which post-war economic disequilibrium has been persistently diverting the world's supplies of monetary gold, and the action of these central banks is clear proof that the arrival of new gold week by week is of no assistance to them and that the steady inflation of their gold stocks throws upon them a responsibility towards the whole of the world. It is not too much to say that in their decision to stand by the side of the Bank of England the central banks of France and the United States have very happily united self-interest and their desire to render the utmost possible aid to the world in its days of financial strain.

Nor should we under-estimate the closer contact now in being between the leaders of the world's central banks, largely brought about by the foundation of the Bank for International Settlements. In these days speed of action is just as essential as the will to action, and while it does not appear that Basle has played a direct part in the recent negotiations, it has undoubtedly done much to create the atmosphere in which alone such negotiations could be quickly brought to fruition. Nor must due tribute be left unpaid to those personally responsible, and here should be mentioned the work undertaken jointly by Sir Robert Kindersley and M. Moret in Paris, and the contributions made by telephone by Mr Harrison. The financial world has given proof of its unity and of the close friendship between its various members. It has equally given proof of its power to act wholeheartedly and decisively in a major financial and economic emergency. We would like to regard this as a good augury for the difficult international negotiations still to be carried to fruition in the political sphere.

THE AGRICULTURAL DEPRESSION.

Looking back over the post-war years, it is possible to see that agriculture in most countries showed a marked improvement in its position during 1924 and 1925, but so profound was the depression which preceded that short-lived recovery, and so general is the depression now, that the general impression left by the last twelve years is one of continuous agricultural gloom. The causes of this state of affairs are, for the most part, generally familiar, but there was, none the less, room for a comprehensive account of them, with separate notes on the state of each product and each country, drawn up in the light of discussion with a representative body of experts. This service has now been rendered by the Economic Committee of the League of Nations,* in a report consisting partly of their own observations and recommendations and partly of a series of memoranda, by national experts, on the position in individual countries.

The essence of the crisis, the Committee state, is the disproportionately low level of the prices of agricultural products, greatly aggravated by their instability, which has been steadily increased since 1927. This disproportion means, on the one hand, that the proceeds of the farmers' output buy less and less of the goods they consume, and on the other, that the margin between cost of

FIRE WILL BE EVER PRESENT

while there is property upon which it can feed, but insurance provides the means of indemnifying the unfortunate. If you arrange your Fire Insurances through the Legal & General you can be content in the knowledge that the Security is unquestionable, claims will be promptly and equitably settled and the premium rates moderate. Cover given immediately by phone.

production and selling price is steadily reduced. None of the elements in cost, except fertilisers and fodder, have fallen as fast as selling prices: wages have been fairly steady, fiscal burdens have increased and interest, already very much higher than before the war, grows more burdensome as the purchasing power of money increases.

The causes of this state of affairs are to be found on the side both of consumption and of production. Many agricultural commodities supply a demand which increases little more rapidly than the population, owing to what Adam Smith expressively designated "the narrow capacity of the human stomach." The expansion of the consumption of foodstuffs is further restricted by the invention of methods of preservation and of more complete utilisation. Both foods and agricultural materials have been affected by changes in taste: the introduction of rayon, for example, has affected the demand for cotton and silk, and wine is giving place to some extent to tea, coffee and "soft drinks." On the other hand some changes in consumption, consequent in part upon dietetic propaganda and in part upon improvement in standards of living, redound to the advantage of the producers of meat, dairy products, fruit and vegetables. The general industrial depression, however, by reducing purchasing power, has largely counterbalanced the effects of this tendency.

On the production side, the two main influences making for over-expansion have been the great strides made in agricultural technique, which have brought about an increasing use of machinery and a great improvement in the use of fertilisers, in the process of plant selection, and in cultivation methods generally, and, secondly, political conditions. The war led inevitably to a great expansion of production in the non-belligerent countries, and so left the world with an excess of cereal-producing capacity just as it left it with an excess of iron and steel equipment, and it also bred a sentiment, very slow to die in many European countries, that a high degree of self-sufficiency in food production should in future be aimed at at all costs. This sentiment has been reinforced by the growth of Communism; the small agriculturist is maintained in many countries largely as a bulwark against too rapid social changes. Thus an excessive producing area continues to be kept in existence by all manner of protective devices.

From these general observations the Committee turn to a brief survey of the market in each of the principal agricultural products, which shows in how very varying degrees they have been affected by the general depression. Meat has suffered less and for a shorter time than cereals; the position of cotton seems far more fundamentally unsound than that of flax, wool or silk; there is an exceptionally serious lack of equilibrium between producing and consuming capacity in the case of wine. But though some branches of agriculture do not appear to be in a state of lasting disequilibrium, all were more or less depressed by the end of last year.

The last section of the report proper is devoted to discussion of possible lines of international action for the amelioration of the depression. The Committee strike a very pessimistic note concerning the possibility for the time being of any movement towards a more liberal policy in the matter of tariffs, nor do they appear to attach much hope of alleviation to anything that may be attempted in the way of preferential Customs agreements. Attempts

* "The Agricultural Crisis." Volume I. Allen and Unwin. 7s. 6d.

to curtail production by international agreement bristle with difficulties, and even if such curtailment were practicable, it is by no means certain that it would be desirable. The best that can be hoped for in this direction is a spontaneous reduction in productive area, possibly encouraged by propaganda, as the natural result of the unprofitableness of cultivation.

The Committee see a more hopeful line of attack in increasing consumption. The sales of animal products would be automatically stimulated if employment improved, and a reduced cost of production would, in the opinion of the Committee, increase the consumption of certain products. Greater concentration on quality of production, and the adaptation of production to changes in taste, and to the increasing demand for luxury goods, should also offer a useful outlet. The principal line of attack recommended in the Report is, however, the international organisation of markets. The Committee are at pains to stress the pivotal part played in the problem by the existence of surpluses, and their main concern is that "forms of commercial organisation have to be found which will make it possible to a certain extent to render these surpluses innocuous and to distribute them while leaving prices at a fair level." In this section the first note of real enthusiasm is sounded by the Committee; though they admit that weighty objections against national organisations, probably with State co-operation, have been laid before them, they evidently see in such organisations a welcome nucleus of an international co-operation which, though admittedly a very difficult task, they regard as by no means unattainable. In particular, the Committee review in some detail the recent rapid development in the movement towards concentration in the wheat trade, and in the course of that review occurs the following very definite pronouncement of opinion:—

"One may wonder whether it would really be chimerical for the two parties concerned, namely, the overseas countries on the one hand and the Eastern European countries on the other, to endeavour to arrive at an understanding permitting the former to continue to supply Europe, while at the same time enabling the latter to market the comparatively small surpluses of their production. It would seem that the two groups of producing countries must get together, consult each other, and, if possible, seek an agreement. Even some of those experts who have maintained free-trade views have not been against such agreements if freely concluded. Only organisations of the market can put an end to the crisis."

Recent experience of market organisation has bred a very natural distrust of its dangers. There has been too much ill-advised restriction of sales, and the dangers are always present of over-restriction of production on the one hand, and of intensifying the ultimate damage wrought by surpluses on the other. Still, the fact that a system is capable of abuse, or goes wrong when imperfectly handled, is not *per se* an argument against its adoption, and so emphatic and positive a recommendation from a Committee of this standing must carry weight. We should have liked to see more stress laid upon the possibilities of reduction in production costs, but we welcome a report which adds to its value as an authoritative source of information the great virtue of constructiveness.

UNEMPLOYMENT IN FRANCE.

(BY A CORRESPONDENT.)

At a time when the unemployment statistics of the chief industrial countries have been running into as much as seven figures, the official French returns may well occasion some surprise. The number of workers in receipt of relief, for example, at the end of April was only 49,958 in France, as compared with 2,594,000 in Great Britain. This difference is partly due, however, to the method of compiling the statistics. Unlike this country and Germany, France has no compulsory State insurance against unemployment; consequently there do not exist the same means of counting the numbers out of work.

In France there are four sources of unemployment statistics. First, there are the unemployment relief funds administered by the Departments, Communes and trade unions or mutual benefit societies, and subsidised by the State. Actually, the members of the trade unions concerned amount to only about 170,000 persons, out of a

working population of some 20 millions, and as these funds function only in a crisis, the statistics do not give anything approaching a complete picture:—

NUMBER OF UNEMPLOYED IN RECEIPT OF RELIEF AT THE END OF MONTH.

1928	Average	5,067
1929	"	909
1930	"	2,433
1931	January	28,536
"	February	40,766
"	March	50,815
"	April	49,958

The second source consists of the Labour Exchanges which exist in all Departments and in towns of over 10,000 inhabitants. These offices are bound to receive requests for work and to endeavour to place unemployed persons. Their scope is rather more comprehensive than that of the unemployment relief funds because, in addition to those merely seeking jobs, everyone who wishes to draw relief must produce a certificate of having tried to obtain work at the Exchange. Nevertheless, these statistics are again very limited, because workers prefer to find employment for themselves, just as they dislike the "stigma" of relief. The statistics published by these organisations are as follows:—

Monthly Averages.	Weekly Placings in Work		Unsatis. demands for Work.	Unsatis. offers of Work.
	Permanently.	Temporarily or for a Day.		
1928	14,454	12,112	15,962	13,545
1929	16,683	14,473	10,192	19,228
1930	16,243	12,965	13,330	14,423
1931—January	10,228	12,371	37,478	7,086
February	11,136	11,353	55,723	7,718
March	12,316	12,750	68,064	8,369

Thirdly, figures of those out of work may be obtained from the population censuses which are held every five years. This is by far the most complete type of return available, since it includes the whole population, and those filling in the form must state whether they are unemployed or not. Unfortunately, however, besides being carried out at periods a long time apart, the results are only available about three years afterwards. Moreover, the returns include those who are out of work by reason of passing from one employment to another. This set of figures, therefore, is also of very limited use, but the results of the last two censuses are given below, since they provide interesting comparisons with the statistics set out above:—

CENSUS FIGURE OF UNEMPLOYED.

1921	537,150
1926	243,420

The Census results demonstrate very clearly the incompleteness of the data derived from the returns of the unemployment relief funds and Labour Exchanges. In order to obtain more reliable statistics, the French Ministry of Labour has ordered the labour and mines inspectors to obtain figures of employment in industries under their supervision. These cover only private establishments employing 100 persons or over and exclude agriculture and domestic service, so that the returns are again comparatively incomplete; but they are probably the most representative current figures of French employment that we have. The results, which cover about 43 per cent. of the employees under the supervision of the inspectors and about 14 per cent. of the total working population, give the number employed in the current responding month of the current year as compared with the corresponding month of the previous year. Thus, the May, 1931, returns show 2,688,895 employed, against 2,862,010 in May, 1930—a diminution in employment of 6.05 per cent. Including previous months, the trend of 1931 has been as follows:—

Decline in Employment as compared with 1930.	
	Per Cent.
January, 1931	3.7
February "	4.7
March "	5.4
April "	5.8
May "	6.0

If the numbers employed, according to the Labour Inspectors' returns, in May, 1930, may be taken as representing the normal state of employment, then the difference between this figure and that of May, 1931, represents the totally unemployed covered by these investigations; short-time workers are separately distinguished.

When we exclude agriculture, domestic service and the public services from the total working population, we are left with about 10½ millions of occupied persons. This total, which corresponds fairly nearly with the number of British workers insured against unemployment, represents roughly those French workers susceptible to changes in employment by reason of the state of trade. (Amongst the groups excluded unemployment is known to be small.) As the Labour Inspectors' returns cover about 29 per cent. of these 10½ million persons, they may be taken as being a good sample of that portion of French industry liable to cyclical fluctuations in employment. Applying, therefore, the 6 per cent. proportion, obtained above, to the 10½ million workers, we obtain a figure of, say, 630,000 persons totally unemployed as a result of the depression. This calculation assumes that there was no unemployment in the basic month of May, 1930; but, while this is obviously not strictly correct, it is known that unemployment only became really important in France in the beginning of 1931.

A further result derived from the labour inspectors' returns is a figure relating to short time. This is based on the percentage of workers occupied for less than a normal week of 48 hours:—

PERCENTAGE OF WORKERS OCCUPIED LESS THAN 48 HOURS PER WEEK

	1930.	1931.
January	3.8	16.7
February	4.5	24.2
March	2.1	32.0
April	2.5	40.6
May	3.4	31.9

By dividing the number of hours lost by the hours of the normal week, a figure may be obtained expressing short-time workers in their equivalent totally unemployed:—

EQUIVALENT OF SHORT-TIME WORKERS AS TOTALLY UNEMPLOYED.

	1930.	1931.
January	1.0	2.0
February	0.4	3.4
March	0.2	4.3
April	0.3	4.3

Translating the April, 1931, percentage into actual numbers, by applying it to the 10½ million working population, we get a (theoretic) figure for unemployment of about 450,000. Whilst this total possibly represents a real loss of employment in French industry, it does not enable a comparison to be made with the English statistics. In the beginning of May, 1931, 5.16 per cent. were unemployed for more than one day, but only 1.18 per cent. for more than two days. Taking this last percentage, as corresponding more closely with British insured persons seeking benefits, we get a figure of only 34,000.

Finally, in addition to those totally unemployed as a result of the depression and those on short time, there is always, in the normal state of affairs, a permanent though inter-changing body of unemployed. This has been put for France at about 250,000, amounting to 2 per cent. of the 10½ million working population, which (though probably somewhat too low) roughly corresponds with the accepted idea of the "labour reserve."

The results of the foregoing estimates may now be summarised:—

Totally unemployed as a result of the depression	630,000
Short-timers unemployed for more than two days	34,000
Labour Reserve	250,000
Total	914,000

This total is perhaps the most comparable with the official figures for Great Britain. Ignoring, however, the requirements of comparison, and substituting for the figure of short-timers given above the total calculated equivalent of those unemployed under that heading (450,000) we obtain a gross total of 1,380,000. In round figures, and

bearing in mind the limitations of the available statistics, which probably result in the above estimates being minimum figures, it may be said that there are between one million and 1½ million unemployed in France at the present time.

OUR INDEX NUMBER.

The improvement of a number of leading commodity prices in the latter half of June, which followed upon the Hoover debt moratorium proposal, was unfortunately short-lived, and the downward movement was resumed in July, our total index figure falling from 63.6 at the end of June to 62.5 at the end of July:—

AVERAGE, 1927 = 100.

	July, 1930.	Apr., 1931.	May, 1931.	June, 1931.	July, 1931.
Cereals and meat	84.2	70.0	69.0	68.8	68.5
Other foods	76.3	66.6	63.5	60.2	60.0
Textiles	63.6	50.8	48.2	48.4	47.1
Minerals	82.1	72.0	69.5	72.4	69.7
Miscellaneous	81.5	68.6	68.2	68.7	67.6
Complete Index	77.6	65.4	63.6	63.6	62.5

It will be seen from the next table that each of the five groups contributed to the decline, which was most severe in the case of minerals, copper in particular registering another sharp fall. In the miscellaneous group, in which rubber is again notable for a fall to new low levels, a substantial increase in the price of hides goes far to balance the general relapse in other items:—

	Inc. (+) or Dec. (−) per cent. compared with			Inc. (+) or Dec. (−) per cent. compared with	
	Month ago.	Year ago.		Month ago.	Year ago.
Wheat, Foreign	−10.6	−39.2	Flax	+3.0	−38.4

Coconut oil	...	−6.7			
Tobacco	−0.3	−21.4			
Other foods	−14.9	−36.5			
Cotton A.	−15.8	−43.0			
Cotton B.	−5.6	−24.4			
Cotton yarn	−2.5	−15.4			
Cotton cloth	+14.3	−27.3			
Wool, English	−4.8	−20.0			
Wool, Australian	+6.8	−11.3			
Wool tops	+5.4	−25.0			
Silk	...	...			

The next table gives the figures of our index number recalculated as a percentage of the average for 1913:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	159.9	169.9	210.6	145.2	131.5	159.3
" 1928	146.0	149.4	161.7	111.9	119.3	135.1
" 1929	135.6	136.8	141.9	116.2	112.7	127.2
" 1930	113.4	122.9	99.1	101.6	101.5	106.8
End July, 1930	117.9	121.5	97.9	99.8	101.5	106.9
" June, 1931	96.3	95.9	74.5	88.0	85.6	87.5
" July, 1931	95.9	95.6	72.5	84.7	84.2	86.0

If 1924 (instead of 1913) be taken as 100, the current figure of our index number works out at 54, as compared with 55 at the end of June and 67.1 a year ago. It will be seen that the fall compared with July, 1930, is no less than 19.5 per cent.

THE ECONOMY COMMITTEE REPORT: SUMMARY.

THE Committee on National Expenditure were appointed on March 17, 1931, following an overwhelming vote in the House of Commons on February 11th, favouring the establishment of an inquiry into the Budget position. They were instructed "to make recommendations to the Chancellor of the Exchequer for effecting forthwith all possible reductions in the national expenditure on Supply Services, having regard especially to the present and prospective position of the Revenue." The result of their labours, published on July 31st, is seen in a Majority Report signed by Sir George May, Mr Ashley Cooper, Sir Mark Welster Jenkinson (who makes a brief reservation on the subject of parliamentary control of finance), Lord Plender and Sir Thomas Royden, and a Minority Report signed by Messrs Charles Latham and Arthur Pugh.

The Prospective Deficit.

The Main Report opens with an attempt to estimate the Budget position as it will face the Chancellor of the Exchequer next April. Having surveyed the increase in expenditure in the past few years and expenditure commitments for the future, the Main Report turns straight to the question of unemployment insurance and concludes that borrowings for the Unemployment Insurance Fund "is in reality adding to the National Debt to relieve the current revenue charges and is opposed to the principles of sound finance hitherto accepted without question in this country." Probable borrowings for this purpose are placed at £40 millions in 1932 and are described as "an irrecoverable advance." Including this £40 millions and estimated Road Fund borrowings of £10 millions, and £12 millions for prospective expenditure over and above current estimates (of which £5 millions is for Transitional Benefit), a figure of £62 millions is reached for the increase in expenditure in the next Budget. It is then calculated that there is a prospective loss of revenue in 1932 of £57 millions, of which non-recurring items account for £37 millions, and a drop in Income Tax receipts for £20 millions. In this way is built up an estimated deficit for next year of £119 millions. (A footnote is appended saying that no account has been taken of adjustments necessitated by the war debt moratorium which, as the Chancellor of the Exchequer has stated in the House of Commons, will cost the British Treasury £11 millions.)

The Widening Gap.

"For the present purpose," proceeds the Report, "one of the most important conclusions to be drawn from our diagnosis of the financial situation is that this gap of £120 millions is not a transient feature to be bridged by temporary expedients." Emphasis is laid on the fact that under several important heads, including especially pensions, the burden resulting from past commitments is a growing one. "We fear," is the conclusion, "that the country must face the disagreeable fact that its public expenditure—and in this we include local as well as national expenditure—is too high and that it must be brought down to a lower level." A survey of comparative expenditure in 1924 and 1931 reveals the following position: (1) Nationally administered services: A rise of £54.6 millions, under the heading of Old Age and Widows' Pensions and Health and Unemployment Insurance, overshadows a total decline of £38.1 millions in other Government expenses, leaving a net increase of £16.5 millions. (2) Grant Services: The increase between the two years has been £70.8 millions, the largest item being Exchequer contributions to local revenues (+ £33.7 millions), and Roads (+ £17.9 millions). Taking the nationally administered services and the grant services together, the increase reaches £87.3 millions. The Majority Report, having reached the figure of £120 millions as the prospective deficit for next year, and having emphasised the threatened widening of the gap, offers recommendations divided into two classes, the first affecting immediate reductions in the forthcoming Budget, and the second devoted to limiting future increases in expenditure.

SUMMARY OF RECOMMENDATIONS.

Immediate Saving.

PAY AND PENSIONS.

	Saving to Exchequer in a full Year.
Abolition of preferential bonus paid to Government industrial employees in the dockyards and ordnance factories	325,000
Introduction of 1925 rates of pay for all personnel of the fighting services	2,199,000
Introduction of revised cost of living deduction for officers of the fighting services	400,000
Reduction of pay of police by 12½ per cent., less rateable deductions towards cost of pension. Exchequer share	925,000
Reduction of pay of teachers by 20 per cent. The saving from this reduction is incorporated below under education grants	—
Introduction of revised cost of living deduction from pensions of officers of the fighting services	190,000
Abolition of grant of marriage gratuities in the Civil Service	167,000

DEFENCE.

GENERAL:—	
Reduction of expenditure on research and technical development by 12½ per cent.	300,000
Reduction of Education Votes by 10 per cent.	150,000
Reduction of inspection costs by 10 per cent.	100,000
Stabilisation of Works Votes over a period of years	150,000
Reduction of clothing allowances by 10 per cent.	154,000
NAVY:—	
Further saving to be obtained from the introduction of Royal Marine Police at Dockyards	50,000
ARMY:—	
Discontinuance of subsidies for mechanical transport	20,000
Discontinuance of light horse breeding scheme	30,000
AIR FORCE:—	
Abandonment of new programme of research in civil aircraft (second year's instalment of a total of £40,000)	25,000

DEVELOPMENT.

ROAD FUND.—Postponement and slowing down of schemes and lowering of the present very high standard of maintenance	7,865,000
MINISTRY OF AGRICULTURE AND FISHERIES.—Reduction of agricultural education grants to 50 per cent., limitation of grants for research, expenditure on livestock improvement to be recovered or discontinued, reduction of land drainage grants, cessation of "foreground" publicity, involving in all reduction of the gross forecasted expenditure for 1932 by...	500,000
DEPARTMENT OF AGRICULTURE, SCOTLAND.—Reduction on lines similar to proposals as regards England and Wales and modification of Scottish Land Drainage Act	75,000
FORESTRY COMMISSION.—Cessation of land acquisition and restriction of planting and provision of forest workers' holdings	478,000
EMPIRE MARKETING BOARD.—To be abolished, involving a saving, in addition to savings already allowed for on the gross votes for the Department of Overseas Trade and the Agriculture and Fisheries Departments of	400,000
COLONIAL DEVELOPMENT FUND.—Limitation of annual grant to £750,000	250,000

SOCIAL SERVICES.

UNEMPLOYMENT INSURANCE.—Reductions of benefits by 20 per cent., increase of weekly contributions to 10d. each for workers, employers, and the State in the case of men, extension of scheme to include certain classes now outside it, application of needs test by public assistance authorities to all applicants who have exhausted their insurance rights, but are still within the industrial field. Reductions of State liability less Government grant to local authorities	66,500,000
NATIONAL HEALTH INSURANCE.—Reduction of the capitation payments to doctors, National Health Insurance (Prolongation of Insurance) Act, not to be extended, revival of State grant to the Central Fund to be avoided by a greater measure of pooling among approved societies	1,000,000
EDUCATION.—Abolition of 50 per cent. minimum limit of grant, reduction of teachers' salaries by 20 per cent. and of the grant in respect of teachers' salaries from 60 per cent. to 50 per cent., reduction of grants for higher education in consequence of 20 per cent. reduction in teachers' salaries and increase of school fees, reduction of growth of education expenditure in 1932, and proportionate reduction for Scotland	13,600,000
Reduction in grants to universities and colleges	250,000

MISCELLANEOUS.

BRITISH BROADCASTING CORPORATION.—Reduction of percentages of wireless licence receipts paid to the B.B.C.	475,000
Total	£96,578,000

Future Savings.

PAY AND PENSIONS.

An age limit for voluntary retirement in the police forces to be imposed.
The whole subject of police pensions to be reviewed to determine conditions of service for new entrants which will effect a saving in the present high non-effective cost.
The 1930 scales of pension to be applied in the Fighting Services on re-engagement or re-enlistment to all men now serving.
The whole scheme of pensions of officers in the Fighting Services to be immediately examined in the light of its extremely expensive character. All age limits for retirement under 60 in the non-executive branches to be raised by five years, pending such inquiry.

DEFENCE.

The distribution of the burden of Empire Defence to be examined when the financial situation of the Empire is more favourable.

Before the next Naval Conference the Government to appoint a representative Committee to inquire into the whole subject of naval design, and to consider whether any modifications might be adopted, either with or without international agreement, which would lessen the cost of naval defence without endangering national security.

The establishment of the ordnance factories to be reviewed and the question whether orders should be placed in excess of the amount required to keep the nucleus establishment fully employed, and if so, in what proportion such orders should be distributed between the trade and the factories to be considered in the light of respective costs.

The Air Ministry to consider whether some reduction of the present number of firms competing for the supply of aircraft is not possible.

The Air Ministry to consider the practicability of a reduction in the number of different types of aeroplane and engine in daily use. The organisation of the Air Ministry to be examined on lines similar to the inquiry made in 1923 into the Admiralty and War Office establishments.

DEVELOPMENT.

ROAD FUND.—To be abolished, the proceeds of all motor taxation being left in the Exchequer and all grants being provided on annual Parliamentary Votes. Reconsideration of expensive London schemes necessary.

DEPARTMENT OF OVERSEAS TRADE.—A policy of recovering the cost of the department from those who benefit to be steadily pursued.

AGRICULTURE.—The provision of small-holdings under the Agricultural Land (Utilisation) Bill to be restricted to careful and judicious experiment on a scale wide enough to give reliable results. Centralisation of administrative responsibility in the hands of the Government is to be deprecated. The acquisition of land for reconditioning or reclamation to be restricted to cases where there is clear evidence that the land can subsequently be sold without loss.

UNEMPLOYMENT GRANTS COMMITTEE AND DEVELOPMENT (PUBLIC UTILITY) ADVISORY COMMITTEE.—The scale of grants towards works put in hand to relieve unemployment to be restricted to 25 per cent. of the cost and in the case of revenue producing works not to exceed the extra cost of putting capital works in hand before the normal date if less than 25 per cent.

SOCIAL SERVICES.

MATERNITY SCHEME.—The contemplated development of the maternity service at a cost to the State of £1,500,000 not to proceed. Improvements to be sought without any extra State grant.

HOUSING.—The aim of re-establishing economic housing for the working classes to be kept steadily in view; as a first step, sub-sidies in England and Wales and Scotland under the Act of 1924, both in urban and in rural areas, to be reduced by £2 10s. per annum for houses completed after April 30, 1932; corresponding reductions to be made in subsidies under the Act of 1930. Subsidies in Scotland to be brought down to English rates after October 1, 1932.

EDUCATION.—The number of education authorities to be reduced and educational functions concentrated as far as local authorities are concerned in the hands of county and county borough councils; this step to be followed by the introduction of a block grant for all educational services.

Unemployment Insurance.

It will be seen that out of the £96 millions of savings recommended, no less than £66 millions come under the head of Unemployment Insurance. The Majority approach this question "from a somewhat different angle" from the Royal Commission. "After giving full consideration to the views of the Commission, we regret that we cannot regard their recommendations as adequate to meet the situation. In our view a large reduction in borrowing for their charge, as well as the practical elimination of borrowing for this service, are essential." They argue that "a rate of benefit of 14s. 4d. a week at the present time would have the same purchasing power in terms of commodities as the benefit of 22s. a week actually paid in 1922. In the light of these figures we do not regard an average reduction, during the continuance of existing conditions, of 20 per cent. . . . as excessive."

As regards transitional benefit, while the recommendations of the Royal Commission include the introduction of a means test for certain special categories, the Majority of the Economy Committee "are of the opinion that this condition should apply to all applicants for a benefit who have exhausted their insurance rights." They believe that "the imposition of a needs test under efficient local administration would probably reduce the cost of benefit to the present traditional benefit class to approximately one-half the present cost."

The Majority then propose to bring within the scope of unemployment insurance (a) the Banking and Insurance Industry; (b) certain classes of workers now excepted, e.g., State and municipal workers (including school teachers), and employees of public utility companies, especially the railways; and (c) non-manual workers with incomes between £250 and £350 or £400 per annum.

The result of these proposed changes, together with the raising of the contribution to 10d. (for men) for each of the three parties—

the State, the employer and the worker—they estimate as follows:—

	From.	To.	Reduction.
Budget charge	£ 50,000,000	£ 22,500,000	£ 27,500,000
Loan charge	40,000,000	1,000,000	39,000,000
	£90,000,000	£23,500,000	£66,500,000

"To leave all the rates of contributions unchanged would reduce our estimated revenue by no less than £17,000,000, and we must dismiss this possibility as fundamentally unsound."

General Principles.

The Majority outline as follows the three general principles which have guided them to their recommendations:—

- (1) That the rise in the value of money in recent years provides a strong *prima facie* case for the revision of money obligations fixed under other conditions. In considering the emoluments of public servants, we have also had regard to the principle of "fair wages."
- (2) That existing financial difficulties make it necessary for the nation, like the private individual, to consider seriously what it can afford and not merely what is desirable. Reviewed from this standpoint much expenditure is unwarrantable at the present time, which, under more favourable conditions, we should deem justifiable and even a wise investment of the national resources.
- (3) That only by the strictest regard to economy and efficiency over a long period can the trade of the country be restored to its pre-war prosperity and any substantial number of the unemployed be reabsorbed into industry.

They proceed to make it clear that, in their view, a common national sacrifice is required as the alternative to the present position, in which "the nation can continue as at present borrowing to meet current requirements and deluding itself that, by still showing a sinking fund item in the national accounts, it is not only meeting its liabilities but actually paying off debt. This course will lead inevitably to an intensification of the financial difficulties until the day comes when far greater sacrifices than those we suggest are forced upon the country." But the Committee have not found means for distributing sacrifices universally. "If in view of the present economic position it were possible to arrange that all classes of the community should suffer an all-round reduction of income, whether derived from earnings, in order to bring costs of production down to a lower level, or investments, we should have no hesitation in proposing that all public servants and pensioners, municipal as well as State, of whatever grade or kind, old age pensioners, widows and war pensioners, should share in the reduction, including those whose pay had already been reduced in accordance with our recommendations. We cannot, however, justify the singling out of public servants from the rest of the community for special sacrifice."

Failing economy from all-round reduction of incomes, the Majority consider that the gap still left between revenue and expenditure, even if all their recommendations are adopted, must be filled by some additional taxation. They do not favour the imposition of any further burden on productive industry (beyond the small increase recommended in the contributions for unemployment insurance, which they defend on the ground that it is only an offset against the alleviation recently enjoyed by industry from rating relief), but they are "not without hope that the sum required can be found by revisions of general taxation which are free from this objection."

Political Control.

"Our chief concern," says the Majority Report, "is for the future. If action is limited to these adjustments of expenditure or income, experience since the war does not allow us to hope for that sustained effort for national economy which we regard as essential to the restoration of prosperity. Some further action is needed if retrenchment is not soon to give way once more to expansion, as has happened twice in the short period since the war." It is further recommended that it would be of definite advantage if a comprehensive review of the financial position could be given to Parliament, and, through it, to the nation, more frequently than once a year in the Budget statement. These reviews should cover not merely the current financial year, but should take account of the next few years and give full information also as to the growth of long-term commitments. It is further recommended that the hands of the Chancellor of the Exchequer should be strengthened by the formation of a Finance Committee of the Cabinet, which, like the Committee of Imperial Defence, should be elastic enough in its constitution to permit the calling into council of any advisers it thought fit. It is recommended that the Committee should normally consist of the Prime Minister and the Chancellor of the Exchequer and a small number of Ministers selected not so much by reason of the office they hold, as of their aptitude for financial criticism.

Democracy and Economy.

Finally, the Majority Report faces the problem that "the best devised machinery of financial control will be of little avail if the will to control be absent. . . . The electoral programme of each successive Party in power, particularly where it was formerly in opposition, has usually been prepared with more regard to attracting electoral support than to a careful balancing of national interests. When the time comes to put that programme into force, matters which had formerly appeared easy and attractive are found to involve

such grave questions as whether the proposals are administratively possible, whether they will have the desired results, whether the country can bear the cost; whether, in short, they are really in the national interest. It is almost inevitable that a new Cabinet should find itself driven to the conclusion that many of its promised reforms ought not to proceed, but it has a difficult course to steer before it can persuade its supporters in the House to recognise this in view of their pledges so freely given to the electorate. The problem is a serious one, and it is hardly for us to suggest a solution: yet a solution has to be found if democracy is not to suffer shipwreck on the hard rock of finance."

THE MINORITY REPORT.

The Minority begin by disagreeing with their colleagues' views on political and social aspects of the expenditure problem. "So far as their strictures concern the principle of ultimate financial responsibility, what they regard as 'undesirable' we view as consistent with the right and proper course of democratic Government and progress." Again, "public expenditure has ample justification when it rests primarily upon the necessity for re-adjusting the use of the national income in such manner as to transfer expenditure from less essential or desirable channels into those which are designed to mitigate social injustices, or those which improve the economic structure of the nation. The growth of social services is a natural corollary to the development of industry and commerce, and it cannot be denied that these have profited materially from services often narrowly regarded as amenities. . . . The existing social services have been slowly built up with the general approval of all citizens of goodwill and vision, and their essential value is perhaps most clearly demonstrated in the fact that their existence has materially assisted this country to withstand the shock of unparalleled economic depression, better, perhaps, than any other country in the world. . . . We can see no special reason why a period of economic difficulty should necessarily be required to bear its own financial burden at the price of scaling down social services. In any event, we are satisfied that as a principle of sound national economy, before any sacrifice can be called for in a reduction of the social services which represent absolute necessities to the workless citizen, the sick and infirm and the aged, before any action is taken to curtail the provision of decent housing conditions for the people or to retard the educational progress of the children of the nation, there is ample field of exploration for taxation, and for restriction of expenditure in other less justifiable directions."

The conclusion of a review of the general arguments of the Majority Report is phrased as follows:—"Thus our dissent from the general point of view expressed by our colleagues in their Report rests upon a conviction that, taking the long view, their recommendations in many respects would not, if carried into effect, achieve real economy, although they might for the time being secure an actual reduction of expenditure."

There follows a review of the recent increases in expenditure, leading to the conclusion that, taking the proportion of expenditure to national income, the rise since 1913 has been of the order of 7.06 per cent. for debt interest and management, 0.87 per cent. for sinking fund, 1.36 per cent. for war pensions, and 1.41 per cent. for social services. They conclude from this that there has been no excessive increase in the proportion of the national income applied to social services and education. Turning to the detailed recommendations, the Minority agree that "a fair examination of the whole position with due regard to the 'fair wages' principle would appear to justify consideration of an adjustment of teachers' salaries in the region of 12½ per cent." On the general question of development policy, they disagree with the Majority and argue that "it is especially the time when, as now, much of the resources of the nation both of money and of man power is compulsorily idle by reason of the disequilibrium in world industry and commerce, that the nation should utilise both money and men for the purpose of renewing its capital equipment and of improving its industrial and social structure." They recommend, however, a greater measure of co-ordination of the many activities of the State, particularly those relating to development. They do not concur in the recommendation that the Road Fund should cease to be treated as a separate self-contained fund, but agree that a slowing down of road expenditure might take place without serious disadvantage; they reject the idea of discontinuing the separate entity of the Department of Overseas Trade, but agree in the comments and the hope of their colleagues that the costly beet sugar subsidy will be fully and exhaustively examined. The housing provisions of the Main Report are rejected, and it is stated that "the lessened housing activities of local authorities which would inevitably result from any reductions would be deplorable, and would prove, in the very short run, not to be wise economy." Under this head the conclusion is that the 1924 and 1930 Housing Acts should remain undisturbed until the review which is due to take place after October 1, 1933, has been made. Apart from conceding the cut mentioned in teachers' salaries they "profoundly disagree with the Majority recommendations" for a further range of educational economies, nor do they concur with the Main Report's proposals regarding the British Broadcasting Corporation, but accept the recommendation that the Empire Marketing Board should be abolished.

On the vital question of unemployment insurance, their reference is brief and consists mainly of the view that the problem should be left to the Royal Commission now sitting. They state, however, in terms, their disagreement with the Main Report's recommendations and with many of the statements upon which they are based. With regard to National Health Insurance, the Main Report's recommendations are also rejected.

The Minority "have been no less impressed with the need for wise economy" than their colleagues. They do not, however,

agree "that the kind of economy contemplated would be conducive to a restoration of trade or increased employment." Moreover, they consider that many of the Main Report's recommendations would "impose an unfair measure of sacrifice upon certain large sections of the community, many of whom are already feeling with considerable and growing severity the effects of what has graphically been described as an 'economic blizzard,' but would fail to lay under any comparable contribution others more favourably situated, many of whom are enjoying, to the extent of their fixed income, effortless benefits from the increased value of money due to falling prices." If sacrifices must be called for "then such sacrifices should be made by all sections of the community, with proper regard to the relativities of capacity to make and to bear." Having attributed much of the present financial industrial difficulty to the policy of deflation and the return to the gold standard, Mr Pugh and Mr Latham recognise the difficulty of tackling the burden of external debt, but they continue:—"To the extent, however, of the internal debt and of the fixed-interest-bearing investments or other like money claims of those resident in this country, the problem is well capable of equitable treatment within the existing system of taxation, and whilst we do not favour imposing any further burdens upon productive industry, we should, were the matter one falling within the purview of the Committee, feel fully justified in submitting that there is ample scope for securing such additional revenue as would enable budgetary stability to be maintained, by the adjustment of taxation in relation to the unconvened benefits now being received by the holders of fixed incomes."

Notes of the Week.

Parliament Adjourns.—Recognition of the existence of a European crisis was reflected in the terms of the motion for the adjournment of the House of Commons on Friday, July 31st. The Prime Minister had previously announced that the House would reassemble on October 20th, but, when he came to move the appropriate motion, words were inserted empowering the Speaker to order a re-assembly at an earlier date at his own discretion. Mr Baldwin laid emphasis upon this provision in a timely and appropriate speech delivered at Bewdley last Saturday. In so far as he spoke as a Party leader he once again put forward a tariff as an *open sesame* to the door of salvation. This intransigent insistence on the infallibility of tariffs is, as we point out elsewhere, a complete frustration of the idea of an emergency national Government to tackle the most urgent domestic problems. But for the greater part of his address Mr Baldwin was speaking with the authority and from the angle of the past—and possibly future—Prime Minister of this country. "At a time like this," he said, "we have all to stand together." He continued with wise advice:—

People sometimes write as though we were doing something unpatriotic in trying to help Germany on her feet. The man must have very little experience of the trade and finance of the world who fails to realise what in these days the financial break-up of any Great Power would mean to every other Great Power. If any Power or group of Powers is in financial difficulty, until the time of that difficulty is past the sickness of that Power or group of Powers will infect the whole of the rest of the world. That is the source of our anxiety to-day.

To this he added the excellent slogan: "Do not adopt a defeatist attitude and talk as if this country were done for, because it is not by a very long way." This led Mr Baldwin to the following reference to the Economy Committee's report:—"If His Majesty's Government are determined to make a great effort to restore financial equilibrium at home, they will then have the support of His Majesty's Opposition, but the responsibility is the Government's." We gladly interpret this obviously carefully chosen phrase as pledging the Conservative Party to such a degree of public retrenchment as the financial position of the country demands.

The Round Table Programme.—Following the publication at Simla a fortnight ago of the names of the British India delegation to the Round Table Conference, the India Office on Tuesday issued a complete list of the *personnel*, together with the composition of the Federal Structure Committee and the Minorities Sub-Committee. The numerical strength of the Conference has been increased from 89 to 108, made up as follows:—British Delegation 19, composed of nine Cabinet Ministers, five Conservatives and five Liberals; Indian States Delegations 19,

British India Delegation 57. The time-table of the Conference is beginning to take shape. Delegates appointed to the Federal Structure Committee are due to arrive in London on September 5th, and discussions will be resumed as soon after that date as possible. The members of the Minorities Sub-Committee are due in London on September 26th, and the Committee's operations will start in the second week of October, while some indication of the date at which it is hoped to reassemble the full Conference is given by the invitations to members who are not acting on either of these Committees to be in London by the end of October. Mr Gandhi still refrains from announcing his decision to participate, but his recent remarks to the Indian Press at Bombay, where the Working Committee of Congress is sitting, are generally interpreted to mean that he will sail for England on August 15th with the other Indian delegates. Meanwhile the Indian atmosphere does not grow calmer, the indignation aroused by the attempted murder of the Acting Governor of Bombay, Sir E. Hotson, was increased by the murders of Lieutenant Hext and Mr Garlick. The spread of terrorism in Bengal has caused the Bengal Legislature to pass a grant of 515,000 rupees for strengthening the police force; while in Burma an edict amounting to something approaching martial law has been proclaimed, and further military reinforcements have been sent to Rangoon.

The Prussian Referendum.—The referendum of the Prussian electorate, which is to be taken this coming Sunday, August 9th, is a piece of mischief-making which can achieve no immediate constitutional result but might do a great deal of political and psychological damage. Even if a majority of the electorate does vote for a dissolution of the Prussian Diet, the process of verifying the returns and holding the new elections is likely to take so long that the new Diet will meet a few months earlier, at most, than the regular statutory date for the next elections, which fall in May, 1932. On the other hand, the apprehension which will be aroused—and this not only in Prussia and in the rest of Germany but in France as well—if the referendum turns out on Sunday as its promoters wish, might produce really serious and untoward political consequences long before the earliest date at which another Prussian Diet can meet. These apprehensions are very natural because Prussia has hitherto been—and this not less after the Revolution of 1918 than before it—the solid core of the German Reich. In Imperial Germany Prussia was the mainstay of a militarist, autocratically inclined regime; in Republican Germany, since 1918, she has been the mainstay of democracy and constitutionalism. For ten years, now, Prussia has enjoyed political stability under a coalition Government representing a combination of three moderate parties: the Social Democrats, the Democrats, and the Centre. Considering that Prussia is two-thirds of Germany, and that she contains an even larger proportion of the German industrial areas, the value of this Prussian political stability, as ballast, in the political permutations and combinations of the Reich, can well be imagined. The Prussian Government has remained a fixed point in the welter of post-war German politics, and its overthrow must be the aim of any person or party who wishes to make chaos prevail. This is almost avowedly the object with which the present referendum was originally sponsored by an aggressive Nationalist organisation, the Stahlhelm, and has since been taken up by the men of violence at the opposite extreme—the Communists. Since the Stahlhelm have been supported in this move from the beginning by the two parties of the extreme Right, the Hitlerite Nazis and the Hugenberg Nationalists, while the People's Party (that is, the late Herr Stresemann's followers) have now imitated the Communists in taking the same side, the voting is likely to be close. The strange assortment of parties now supporting the referendum possess—on the basis of the voting at the last Reichstag elections—a voting strength in Prussia of 12,421,000 out of a total Prussian electorate of 26,868,000. Since they include in their ranks both the Nazis and the Communists—the two

parties which nowadays are gaining rapidly—it is not at all unlikely that they will succeed, on Sunday, in increasing their strength by the 763,000 votes which they require in order to reach the winning figure of 13,184,000. Anxiety is somewhat lessened by the calmness exhibited by the German public on the reopening of the Banks and by the reception of the confident broadcast of the Chancellor on Tuesday.

The Plebiscite in Catalonia.—Last Sunday, August 2nd, there was held, throughout Catalonia, a plebiscite on the new constitution for the Catalan State which is being submitted by the Catalan Provisional Government to the All-Spanish Constituent Assembly at Madrid. The vote in favour of the new constitution seems everywhere to have been overwhelming, and most of all in Barcelona, where 172,000 votes are reported to have been cast in the constitution's favour as against only 3,000 to the contrary. This virtual unanimity among the inhabitants of Catalonia is significant for, though Barcelona is the capital of Catalonia, it is by no means a wholly Catalan city. Its industrial population is drawn from far and wide in the peninsula, and there are large sections of it which think in terms of class rather than of nationality. The solid vote of Barcelona is to be accounted for by the wise moderation of the leaders of the Catalan national movement, who have so drawn their local constitution as to avoid its involving any disastrous cleavage between Catalonia and the rest of Spain. Above all, they have refrained from claiming tariff autonomy—a political luxury which would have spelled economic ruin for Catalan industry. They have now won their reward in receiving this striking testimony of support from their countrymen; and the decisiveness of this plebiscite in Catalonia ought to make the situation clearer and simpler at Madrid when, in due course, the Catalan constitution, with this local endorsement, comes up for the consideration of the All-Spanish Constituent Assembly. The Assembly can have no doubt about the document being representative of the genuine political aspirations of the people concerned. On that point the plebiscite is conclusive. And when they examine the substance of the document, they will find in it nothing that is incompatible with the genuine well-being of Spain as a whole. The liquidation of the Catalan question is proceeding far more smoothly and sensibly than a foreign observer would have ventured to forecast, in the light of the troubled history of the past two centuries. And if there are certain symptoms of restiveness on both sides, the only wonder is that they are not more serious than they actually appear, so far, to be. It is true that the Catalan Group in the Constituent Assembly at Madrid has not joined the other groups in their vote of confidence in the All-Spanish Provisional Government. It is true, on the other side, that there has been a tendency in Castile to

boycott Catalan manufactures and to accuse Colonel Macia, the head of the Catalan Government, of having contracted an unholy alliance with the Barcelona Syndicalists. We record these gestures of annoyance and suspicion without taking them very tragically. We believe that, under the surface, Castile and Catalonia are really well on the way towards coming to a good understanding which will provide the foundation for a lasting partnership in a new federal union. Though the Catalan bourgeois nationalist Government may coquette with the Barcelona Syndicalists so long as the status of Catalonia in Spain remains unsettled, the Catalan bourgeoisie, in their factories and counting-houses, can hardly be burning with righteous patriotic indignation at Madrid's insistence upon keeping labour questions in its hands and imposing compulsory arbitration in industrial disputes. Catalonia needs Castile's help to keep Barcelona's unruly population in order, as well as to keep her industries supplied with markets. Catalan statesmen know this very well, and the balance of national and social considerations in their minds will assuredly work out in a political compromise acceptable to all parties.

The Situation in China.—During recent years there has been a sinister kind of symmetry between the calamities that have been inflicted by human and by natural forces upon the long-suffering Chinese people. Whenever floods have subsided and famines abated, civil war and brigandage have warmed to their work, lest China should rest for a season unchastised. The scourge of flood, unhappily, has descended again this week. An exceptionally high rise in the lakes which discharge into the Yangtse above Hankow has burst the dams and submerged Hankow—a commercial city which ranks only second to Shanghai itself. Yet, even in this affliction, Hankow can congratulate herself on no longer having the Reds or the Kwangsi armies at her gates. All over China, at this moment, the Central Government of the Republic at Nanking is more than holding its own. The military revolt in Honan is a small affair compared to Feng Yu-Hsiang and Yen Hsi-shan's joint effort last year; moreover, it is being rapidly suppressed by a converging movement of Nanking forces from the Yangtse Valley and Manchurian forces from Peking. Still more important is the news that the Government forces have at last gained the upper hand over the "Communists" who, for several years past, have been masters of great tracts of mountainous country—as yet untraversed by railway or road—which lie athwart the watershed between the Yangtse Valley and the rivers that descend to Canton on the southern coast. It may be doubted whether these "Communists" are properly instructed disciples of Lenin and Marx. They seem rather to be the spontaneous product of distress and despair—men whose hand is against every other man's because they have received nothing but evil from war-lords and nationalists, brigands and soldiers, during the past twenty years. Yet the maladies of revolution cannot be cured by running amok, and it is expedient for China that these desperadoes should at last be dislodged from their strongholds. After nearly a year of fitful campaigning on the part of Marshal Chiang Kai-shek, this consummation seems now to be in sight. And if and when the Communists are swept away, the road will then be clear for a settlement between Nanking and Canton—the mother-city of the Kuomintang and the home of successive dissident local governments. The dissident Cantonese Government of the moment, in which Mr Eugene Chen is occupying the post of Minister for Foreign Affairs, has been doing its best to embarrass the Government at Nanking. It has followed the usual practice of impounding the bulk of the local customs receipts; and it has sent its Foreign Minister to Tokyo to confer with Baron Shidehara. The Japanese Foreign Minister has been carefully correct and discreet, yet Nanking cannot hear of these conversations with pleasure. The fact is that Canton will continue to hamper the achievement of Chinese unity by going her own way so long as she is separated geographically from the rest of China by an impassable hinterland and can only com-

municate, as at present, by the sea route (a three days' voyage) between Canton and Shanghai. The opening up of effective land-communications between Canton and the Yangtse is perhaps the most urgent political and economic need of China to-day. The eradication of the Communists, who have hitherto occupied the intervening zone, is the first step. The next is the construction of the long-projected railway.

The German Credits Committee.—In response to the third recommendation of the London Conference of July, 1931, "that the Bank for International Settlements should be invited to set up without delay a committee of representatives nominated by the Governors of the Central Banks interested to inquire into the immediate further credit needs of Germany and to study the possibilities of converting a portion of the short-term credits into long-term credits," the B.I.S. has announced that the committee has been duly appointed, and consists of the ten following members:—Sig. Alberto Beneduce, Presidente del Consorzio di Credito per le Opere Pubbliche, Roma; Dr. R. G. Bindschedler, Vice-President of the Board of Directors, Crédit Suisse, Zurich; Mr P. Holstede De Groot, Managing Director, Amsterdamsche Bank, Amsterdam; M. Emile Franquai, Vice-Governor of the Société Générale de Belgique, Brussels; Sir Walter T. Layton, C.H., C.B.E., Editor of the *Economist*, London; Dr. Carl Melchior, partner of M. M. Warburg and Co., Hamburg; M. Emile Moreau, President of the Board of Directors, Banque de Paris et des Pays-Bas, Paris; Mr Oscar Rydbeck, manager, Skandinaviska Kreditaktiebolaget, Stockholm; Mr T. Tanaka, representative in London of the Bank of Japan; Mr Albert H. Wiggin, Chairman of the Board, Chase National Bank of New York. Mr Wiggin sailed from New York on August 1st, and the first meeting of the Committee is to be held at Basle on August 8th.

The German Banking Resumption.—On August 5th all German banks except savings banks were freed from most of the restrictions imposed upon them immediately after the Danatbank suspension, and in particular were authorised to meet the demands from their customers. This liberty was extended to the Danatbank, which has now reopened, and is making payments without restriction. Details of the measures taken for the reconstitution of the Danatbank will be found in our German correspondent's report on page 268, where he also deals with the banking situation as a whole and on the measures taken to strengthen it. Thanks to these and to Dr. Brüning's broadcast appeal on Tuesday, the first day of the banks' full reopening passed uneventfully, and there is a general impression that more money was paid in than was withdrawn. This news is very satisfactory in view of the widespread apprehensions that had been felt, and it is a tribute both to the self-control of the German people and to the courage and strength of the Government. The restrictions upon withdrawals from savings banks have had for the moment to be maintained, partly because their assets normally and legitimately take a somewhat less liquid form than those of the commercial banks. The main control, however, rests upon foreign exchange dealings, and this has been widened to include every form of payment received in foreign monies by German nationals. Though definite details are not forthcoming, it is believed that all requests for foreign exchange to finance imports are divided into three classes, these being (a) imports of raw materials and necessities which Germany cannot produce; (b) those of semi-finished goods useful to German industry; (c) those of finished (and therefore unessential) goods. Applications under class (a) are granted freely, those under (b) only sparingly, while those under (c) are refused. Thus the crisis has forced upon Germany a regime of trade control, which if continued for long will have serious repercussions inside as well as outside Germany. It is significant that in his broadcast address Dr. Brüning insisted upon the impossibility of Germany shutting herself off from the rest of

the world "inside a Chinese wall," and the inference is that these regulations will only remain in force until the final consolidation of the plans now being discussed to prevent the further withdrawal of short-term funds from Germany. Under such conditions alone, and as a purely temporary emergency measure, can control of this kind be justified.

Cotton's Low Record.—This week, writes our Manchester correspondent, has brought a further decline in prices for raw cotton. With regard to American descriptions values are now lower than at any time since 1914, whilst prices for Egyptian Sakellaridis are cheaper than on any previous occasion since that quality began to be quoted about a dozen years ago. On Wednesday last the quotation for Middling American on the spot in Liverpool was 4.35d. per lb., and compares with 5.53d. per lb., a month earlier, and 7.44d. per lb. a year ago. The low record in 1914 was 4.25d. per lb., on December 12th in that year. With regard to the Egyptian staple the quotation on Wednesday last was 6.65d. per lb., in Liverpool, which compares with 8.45d. per lb. a month ago, and 12.20d. per lb. same time last year. The Egyptian Government has this week estimated the area under cotton for the season 1931-32 at 1,682,000 feddans, which compares with 2,082,420 feddans a year ago. At the end of this week the United States Government will publish important statistics relating to the new crop. There will be a condition figure, an estimate of the probable production and the number of bales ginned. A month ago the Government estimated the acreage at 41,491,000 acres, a decrease of 10 per cent. compared with last year. It was generally believed that this forecast indicated a yield of about 12½ million bales. During the past month the crop has made good progress, and, according to private advices, it is expected that the officials at Washington at the end of this week will estimate the probable production at about 14,000,000 bales. As the carryover from last season was about 9,000,000 bales, abundant supplies are assured as world consumption at the moment is only about 11,000,000 bales per annum. In the circumstances, bearish sentiment in the New York and Liverpool markets is very pronounced. Latterly, however, a considerable short interest has accumulated and, on the whole, the markets are over-sold. It will be unusual for the season to continue without some crop scares, and any news of an adverse nature may have a quick effect upon prices in view of the short interest which undoubtedly exists.

United States Cereal Crops.—The Crop Reporting Board of the Bureau of Statistics of the United States Department of Agriculture has now issued its July estimates of the probable yield of the cereal crops. The figures are shown below, with comparative figures for past years:—

Season (June-July).	(Million bushels.)	Wheat.	Oats.	Maize.	Barley.
1926-27	878	1,182	2,763	266	
1927-28	915	1,449	2,819	357	
1928-29	807	1,228	2,614	303	
1929-30	851	1,402	2,081	326	
1930-31	869	1,306	2,968	267	

The above table clearly illustrates the relative importance of the various cereals grown in the United States. In quantity the maize and oats crops far exceed that of wheat, but it should be remembered that whereas the former are mainly consumed at home, a large proportion of the annual wheat crop is exported. The maize crop, which suffered great damage last year through drought, is expected to establish a record. The total wheat harvest is estimated to yield 18,000,000 bushels more than last year. This is entirely due to the large winter wheat crop, which, at 718,000,000 bushels, shows an increase of 109,000,000 bushels on the previous year. The spring wheat crop, on the other hand, has suffered great damage through unfavourable weather conditions, and its yield at 156,000,000 bushels shows a decrease of 90,000,000 bushels as compared with the last season.

Branches and Agencies throughout the East.

The Loan Debt of Local Authorities.—The Majority of the Economy Committee state that they view with "grave concern" the rapid rise of expenditure of local authorities both on the capital and on revenue sides during a period of falling prices and small growth in the population. To this the Minority reply that "figures of the growth of the loan indebtedness by local authorities must lead to incomplete appreciations and defective conclusions, unless they are considered by reference to the many and varied causes which have led to that growth, and unless there be also taken into account the increased value of the assets possessed by local authorities as a result of that expenditure." To illustrate the point they produce the following table in which loan debt is classified by purposes:—

LOAN DEBT OF LOCAL AUTHORITIES IN ENGLAND AND WALES AT MARCH 31, 1928.

	Distribution of Loan Debt	
	Total amount outstanding.	Per-centage.
1. Education, public libraries and museums	51,016,217	4.55
2. Public health services	87,292,774	7.79
3. Lunatic and mental services	8,078,685	0.72
4. Housing	382,702,233*	34.13
5. Poor relief	8,184,036	0.73
6. Highways, bridges, street lighting, private street works	98,482,250†	8.78
7. Fire brigades, police and administration of justice	5,156,404	0.46
8. Small holdings and allotments	20,282,291	1.81
9. Markets, ferries, waterworks, gas-works, electricity, tramway and omnibus undertakings, harbours, docks, corporation estates, &c. ...	425,829,080	37.98
10. Cemeteries	2,511,973	0.22
11. Other specific services	16,507,625	1.47
12. Unallocated expenditure	10,428,972	0.93
13. Land drainage, embankment and river conservancy	4,785,582	0.43
14. Town planning	843	...
	1,121,258,965‡	100.00%

* Including £39,408,900, the greater part of which is in respect of advances by local authorities to private individuals for the acquisition of houses under the Small Dwellings Acquisition Acts and Housing Acts 1923 to 1925.

† Including £1,772,910 on private street works and other works of private improvement, a large part of which is recoverable from private frontagers.

‡ This is the gross figure before deducting £69,799,407 standing to the credit of sinking funds; the net debt was therefore £1,051,459,558.

This enumeration leads the Minority to dispute the view that local authorities in their own field of expenditure have been "piling up the public burdens." The Majority, on the other hand, recommend the appointment of special economy committees by every local authority in the country.

International Trade in Meat in 1930.—The stability of the price of beef and mutton and lamb during the past year provides a striking contrast to the rapid decline in the value of other foodstuffs such as cereals, and the average British import price of Argentine chilled beef and New Zealand frozen mutton during 1930 was only about 4 per cent. and 9 per cent. respectively below that of the previous year. In view of the importance of meat in the export trade of countries like New Zealand, Argentina and Uruguay, the following estimate of the world's exports

of beef, and mutton and lamb, compiled by a correspondent, are of particular interest:—

Exports of Beef (thousands of cwt.)				
Year.	Australia.	New Zealand.	South America.	Total (incl. other countries).
1924	1,498	648	18,916	21,288
1925	2,468	706	17,348	20,878
1926	1,260	390	16,446	18,558
1927	1,202	420	17,290	19,102
1928	1,323	690	12,929	15,240
1929	1,458	330	11,135	13,403
1930	1,648	420	12,124	14,658

Exports of Mutton and Lamb (thousands of cwt.)				
Year.	Australia.	New Zealand.	South America.	Total (incl. other countries).
1924	420	2,478	2,306	5,724
1925	506	2,600	2,624	4,912
1926	798	2,530	2,078	5,414
1927	512	2,790	2,710	6,036
1928	673	2,840	2,421	5,943
1929	717	2,730	2,471	5,938
1930	760	3,406	2,332	6,550

In the case of beef, the outstanding feature has been the progressive decline in South American exports from 1924 to 1929, which reflects the policy of Argentina to substitute cereal farming for meat growing. During the same period the United States has imported increasing quantities of beef, and the relative scarcity of supplies has been accompanied by an upward tendency in prices. The collapse in the price of cereals in 1930 has led to renewed concentration on meat growing in South America, which is clearly seen in the larger exports during 1930. A large increase in supplies within a short period is, however, not possible. Moreover, imports into this country, which takes between 80 per cent. and 90 per cent. of the total exports, have shown a slight expansion during the past year. At the beginning of this year prices showed, therefore, a slight decline. As British imports continued to expand during the first six months, it appears that the increase in supplies has so far been readily absorbed. It will be seen from the table above that a similar increase has taken place in the exports of mutton and lamb from New Zealand. The United Kingdom, which provides practically the only market for this meat, has been importing increasing quantities, but in this case the tendency of supply to exceed demand has become noticeable at the beginning of this year, and prices at the Smithfield Market are now considerably below those of 1930.

The Union Bank of Switzerland.—The balance sheet of this institution, dated June 30, 1931, throws some light on the recent international movement of funds, in so far as Switzerland is concerned. The picture is necessarily incomplete, as half-yearly statements are not issued by the remainder of the leading Swiss banks, but if the figures of a single bank can be regarded as typical it is clear that there has been an appreciable drift of funds into Switzerland. All figures represent millions of francs:—

	June 30, 1930.	June 30, 1931.	June 31, 1930.	June 30, 1931.
Liabilities.				
Capital fully paid.....	100.0	100.0	100.0	100.0

Balance sheet total.....	827.1	1,014.0	983.1	1,018.4

The most interesting changes during both the past half-year, and also the complete year, are the increases in acceptances and deposits among the liabilities, the increases in cash and bills among the assets, and the heavy fall in the item "due from banks and bankers." It has long been recognised that lack of confidence in Central Europe, of which the present crisis is but the culminating point, has been driving money into Switzerland, and this explains the expansion in deposits, offset by that of the earning assets specified above. The rise in acceptances reflects the low money rates now current in Switzerland, which to-day is one of the cheapest centres upon which to draw. The decline in the amount due from banks and bankers may fairly be regarded as an index to the size of the recent withdrawals of Swiss money from Germany and from Central Europe. Even during the past six months it is equivalent to Mks. 31,000,000 for this single bank alone. With this figure should be read the increase in the gold holdings of the Swiss National Bank during the past half-year, as shown below.

(In millions of francs.)				
	June 30, 1930.	Dec. 30, 1930.	June 30, 1931.	July 23, 1931.
Gold	579	712	840	1,092
Gold exchange.....	300	345	411	487
Total	879	1,057	1,251	1,579

From January 1st to July 23rd the influx of funds into Switzerland, together with the withdrawal by the Swiss banks of part of their balances with other banks, had added Frs. 380 millions to the Swiss National Bank's gold stocks. This sum is equivalent to £15,000,000, or Mks. 307 millions. These figures show that while the Swiss banks undoubtedly had to look after their own interests and those of their customers, the recent heavy flow of funds into Switzerland has contributed to the intensity of the present crisis.

UNITED STATES.

Wage Cuts — Trade and Production — Steel Corporation — Money and Credit.

(FROM OUR CORRESPONDENT.)

NEW YORK, July 29.

ANXIETY among the wage-earners of the country was intensified by the action of the United States Steel Corporation directors in recommending a reduction in salaries of officers and office workers, together with a cut in the quarterly dividend on the common shares. It is an open secret that the Corporation's board is seriously considering reduction in mill workers' wages, and probably only political considerations have prevented a cut before now. Reduction is regarded as fairly certain unless a good improvement in trade prospects takes place shortly. The general interpretation of the dividend reduction is that the directors do not regard the immediate outlook as prepossessing.

Discussion of wages matters has been stirred up afresh by a recent letter written by Mr Robert P. Lamont, in which he stated that, although those industries represented at President Hoover's wage conference two years ago have without exception maintained the wage scales then existing, many corporations have cut dividends and salaries, and "some of them are faced with the prospect of closing down altogether and thus creating more unemployment, or, alternatively, seeking temporary wage reductions." First interpretations of this were that President Hoover was giving way in his opposition to wage cuts. Hasty assurance was given that this was not the case. Doubtless the Administration feels, as do most corporation heads, that wages ought to be maintained as long as possible; but that it is a problem which each industry and company must solve for itself in the light of its special conditions. Undoubtedly, the drift of the

country's leading corporation, United States Steel, toward wage cuts shows the trend of the times.

Lassitude in business is widespread, but beyond severe insect damage to the crops in three or four of the North-Western States nothing new of a discouraging nature has developed. While the crop damage will further cripple the sections of the country involved, it is already bolstering wheat and corn prices. Cotton continues to recede, but the south probably has gone further in adjusting itself to lower prices than has the western grain country. The retail trade reports somewhat better buying recently, but the situation in most basic commodities remains poor. Oil production continues heavy, increasing the nervous tension in the south-west as a result of low prices. The threat of the Governor of Oklahoma to shut down all but stripper wells unless the purchasing companies lift the price of crude oil to a dollar a barrel by the end of this week is not taken seriously. Oil is selling for 15 to 20 cents a barrel, and any increase in price is improbable. Most public declamations on prices and wages are now being made for political effect. Copper is offered at 7½ cents a pound, and some in the trade still look for 7-cent copper. Steel output seems to have a small spurt, the week's production being placed at 32 per cent. of capacity, against 30 per cent. last week. Railroad buying, however, is low, and motor demand is declining. It is reported that the Ford company will shut down for a month pending certain changes in the model. Railroad car loadings are nearly stationary, being about 15 per cent. under a year ago. June earnings are running about 32 per cent. under a year ago, and the six months' reports are 35 per cent. lower. Industrial companies, while doing better in the second quarter than expected, are not finding much improvement in the third quarter. Six months' earnings for the companies which have published reports were about 26 per cent. below last year, whereas the first quarter's profits were 56 per cent. lower than the corresponding period of 1930.

Results of the United States Steel Corporation in second quarter were worse than the general average, the steel industry feeling the full force of lower railroad, motor and building-construction buying, and suffering also from price cutting and sharp competition. However, the report of the Corporation has served to focus attention on the realities of the trade position. Steel earned less than for any quarter since the last quarter of 1914, failing to do more than show 6 cents a share on the preferred stock, and that only because of greatly reduced depreciation charges. By reporting as income an item of over \$7,000,000 profit from the sale of a utility property, the bookkeeping profit amounted to preferred dividend coverage and 12 cents a share on the common. By cutting depreciation and taking certain special credits in the first quarter, 5 cents a share was shown. From actual operations it is apparent that the Corporation is failing to earn its preferred dividend, and it is not surprising that the common payment was reduced from a \$7 to a \$4 annual basis. Wall Street was inclined to interpret the cut as meaning that the Steel directors were not particularly enthusiastic about the near future. Other steel companies have reduced or omitted dividends and are reporting very small profits or actual deficits.

Bill holdings of the Federal Reserve system amount to about \$70,000,000. Approximately this amount is believed to be German bills, including the \$25,000,000 credits recently granted the Reichsbank. If the Reserve Banks are supporting sterling, their purchases for that account also would appear as additions to the bill portfolio. The press of short-term money seeking employment has led the commercial banks into a new practice, which threatens the existence of the bill dealers. They are trading among themselves in bills at one-sixteenths, against the bill dealers' quotations in eighths. The practice may force the dealers to establish a market in smaller fractions, but even that may not help them. Deflation of credit among interior banks goes on, but it is slowed down by the low prices for agricultural products. The practice of extending loans which ordinarily would be paid off with the wheat harvest is rather general, the alternative to refusal being to put the farmer out of the picture as an economic force

in the coming year. Merchants are obliged to do the same thing, thus freezing credit and slowing down purchasing. Country bankers are in effect gambling on higher wheat prices during the next few months. Some of the implement companies are accepting wheat at a price 50 per cent. above the market for part payment of machinery, as they did in the depression following the war, although their experience then was costly. Reporting, member banks of the Reserve system in leading cities reduced security collateral loans last week by \$63,000,000 and their commercial loans declined \$45,000,000. These reductions were not offset by a rise in investments, probably owing to the heavy demand for currency which nervousness over recent bank failures has created. Bank investments dropped \$23,000,000. City banks in the past year have cut security loans by \$1,802,000,000 and bought \$1,171,000,000 in Government bonds and \$343,000,000 of other securities.

FRANCE.

The Credit for London — Franco-German Relations — Iron and Steel — Wheat Situation.

(FROM OUR CORRESPONDENT.)

PARIS, August 5.

THE successful outcome of the Anglo-Franco-American negotiations for the opening, by the Bank of France and the Federal Reserve Bank of New York, of rediscounting credits to a total of £50,000,000 in favour of the Bank of England was received here on Saturday with deep satisfaction. It was regarded as signifying at least a temporary solution of the Anglo-American-German crisis.

A special characteristic of the agreement signed last Saturday is that the three national banks interested are the sole parties to the contract. It is known, however, that each will act with the help of its own national market. In Paris ten of the leading banks will co-operate in the credits to a total of £25,000,000 to be extended from French sources to the Bank of England. The rate of interest has been fixed at 3½ per cent., which would be approximate to the average of the rates now ruling in London and Paris. In a statement issued to the public M. Moret, the Governor of the Bank of France, states that the contract between the Federal Reserve Bank and the Bank of England is in exactly the same terms as that with the Bank of France, just as the credits are in equal moieties of the total.

It is interesting to recall that the London-Paris credit operation of November, 1907, was the outcome of an American financial crisis, which caused withdrawals of capital from London and a similar tying up of credits extended to foreign countries by British banks. The French banks then agreed to accept British paper up to a total of 80,000,000 francs (gold) for rediscounting at the Bank of France, the produce from these operations being placed at the disposal of the London market in the form of gold. The French half of the present rediscounting operation is equivalent to a maximum of 3,100,000,000 francs (paper), however, whereas the maximum represented by the 1907 credits would not be more than 400,000,000 francs of present-day currency. The methods adopted, too, are quite different, although the result will be practically the same. In the present instance, for example, other things being equal, no gold movements will be involved. Rediscounting will be in francs in Paris and in dollars in New York. The British banks will thus be furnished, if required, with enormous supplementary resources from both Paris and New York, and London will have available as much foreign exchange as it is ever likely to need. Sterling is, therefore, henceforward assured against a recurrence of the dangerous fluctuations of the past few weeks. It is not very agreeable to British *amour propre* nevertheless, however well-founded the observation may be, to note that a newspaper of the standing of the *Temps* should take the opportunity to press home the moral that the credits that have been extended to the British market "can in no way dispense the British Government and Parliament from putting an end to the disorder in their public finances,

which will give rise, if it be allowed to continue, to a different kind of monetary peril, as serious as that resulting from the German crisis." This new effort of international co-operation, the *Temps* points out, will give Great Britain time to clear up her own financial situation, and will also enable the evils from which Germany and Central Europe are suffering to be localised and make it possible to limit the losses from an exceptionally violent crisis which, if the British market had been contaminated, would have compromised the gold standard itself and provoked monetary chaos and losses that the world would have been unable to overcome for many long years."

At the moment of writing all indications suggest that, so far as extending direct aid to Germany is concerned, the French attitude continues as *intransigent* as ever, and is likely to remain so as long as Germany's leaders are unable to guarantee the condition of political stability and ease considered as essential by French opinion. To the French mind Germany's financial floundering is of distinctly secondary importance, as compared with the country's unstable political outlook. The predominant factor in the Germanic chaos now lies in the possibility that next Sunday's plebiscite in Prussia may result in a change in the country's political leadership that will plunge Europe, for several years to come, into worse economic confusion than ever. The French man in the street is intensely interested this week in whether Hugenberg's audience with President Hindenburg was the result of the Marshal having sent for him for the purpose of threatening the German Press Lord with arrest unless he renounces a policy that must inevitably plunge Germany into another bankruptcy, or whether, on the contrary, Hugenberg sought the President for the purpose of hectoring him into bowing to the will of the extremists. French respect of Hindenburg, the Chief of State, however, has grown much greater than it ever was for Marshal Hindenburg, the Deputy War Lord, and there are growing hopes that the Republican President may be able before Sunday to induce the unruly leaders of the German Right to listen to reason.

Meanwhile, the movement for Franco-German co-operation, on the lines recently discussed in Paris between the leaders of the two countries, is slowly but surely strengthening at this end. M. Laval, with characteristic reticence, is saying nothing, but thinking much and planning more. Opinion in general inclines to the view that the chances of the French proposals to Germany being accepted have lost nothing, but appreciably gained ground since M. Laval's return from London. French realism is largely based on the inevitability of the force of things, and the events of the past ten days all tend to suggest that Germany herself, if only her present leaders have ordinary luck, must tend more and more towards acceptance of the French thesis as the foundation stone of her own and Europe's future. Concrete evidence of the French trend of thought is offered this week by the activities of a "Comité d'Entente Internationale," consisting of leading politicians, industrialists and financiers, "the object of which is to labour for an international economic entente, of which Franco-German co-operation appears to them to be the essential condition." The politicians include MM. Henry de Jouvenel (former French representative at Geneva) and Yves Le Troquer (former Minister), and other members are M. Francois-Marsal, M. de Peyerhimoff, president of the French Collieries' Association, and the leaders of the chemical, woollen, engineering, electrical, steel and other national industries.

Iron and steel production returns for June, which are issued this week, reveal further substantial declines on the month under both heads. The total output of pig iron was 695,000 tons, against 724,000 tons in May, 801,000 tons in January last, 841,000 tons in June, 1930 (which also represented the monthly average last year), and an average of 864,000 tons in 1929. Crude steel output was 649,000 tons, against 674,000 tons in May, 746,000 tons in January, 753,000 tons in June last year, and monthly averages of 783,000 tons in 1930 and 808,000 tons in 1929. The number of blast furnaces in activity was 122, against 129 in May and 147 in June, 1930.

The Ministry for Agriculture, of which M. Tardieu is now the head, is watching very closely the wheat situation, which is now obviously of vital importance in a country whose economic policy is based on maintaining a sound balance between its manufacturing industry and its food production. A few days ago M. Tardieu warned the public that "an abnormal movement towards lower prices" had been revealed in the wheat market, in the form of reckless offers of French-grown grain, for delivery after the harvest, at prices lower even than those which growers consider insufficient for available supplies. "Our market," the official circular states, "is safeguarded by wholesome protective legislation against such sharp crises as those which exist at present in the world's markets, and this enables producers to react against excessive fluctuations of quotations and obtain prices stabilised at an equitable level." The Minister notified that the law of December, 1929, which gives the authorities effective control over dealings in the corn market (inspection of books, etc.) will be rigorously enforced, and that the tendency which has been noticed lately on the part of millers to mix more than the legal proportion of foreign wheat in grain for flour making will not be tolerated. An important new departure just brought into operation is that henceforward the banks will give ample facilities for financing wheat-growers' crops.

GERMANY.

Banks Reopen — The Danat and the Dresdner — Saxon Banking.

(FROM OUR CORRESPONDENT.)

BERLIN, August 5.

THE removal of the restrictions on payments by banks did not take place until August 5th, and even now this does not apply to savings banks. These are still limited to paying out small sums, and, since the Reichsbank regards it as dangerous to place at their disposal the mark notes required for paying out all deposits, the continuance of the moratorium is also necessary in the interest of the savings banks themselves. Whether the Reichsbank is not too timid in this matter is a much disputed question. Deposits in the German savings banks amount to about 12 milliard marks. If even a small part of this sum should be withdrawn immediately after restrictions were removed, this would require several hundred million marks in new notes. One can understand that the Reichsbank shrank from this possibility. Nevertheless, it would probably have been better to permit the savings banks to make payments in full. This, more than anything else, would have helped to do away with the remnants of panicky feeling that still persist among the German public following the collapse of the Danat Bank, and it can be assumed with almost complete certainty that the newly issued Reichsbank notes would have found their way back to the Reichsbank within a few days.

Before the restrictions on banking operations were removed three problems had to be solved. First of all the Danat Bank had to be put in a position enabling it to make normal payments and measures had to be taken for the protection of other banks that were endangered. In the second place the Reichsbank's discount rate had to be raised sufficiently to counteract effectively the increased demands that would follow for the Reichsbank with the resumption of free payments. And, in the third place, the question of the floating short-term foreign credits had to be cleared up, since no further considerable repayments can be made at the moment.

The Reichsbank decided on July 31st to raise the discount rate from 10 to 15 per cent. and the rate for advances (Lombard rate) from 15 to 20 per cent. At the same time it instructed its various branches to satisfy credit requirements in liberal manner within the limits of the existing legal decrees. Hence, it will now be possible to obtain notes for the time being against negotiable paper which satisfies the Reichsbank's requirements, whereas heretofore a strict rationing compelled the individual seeker after credit to reduce greatly the amount of paper pre-

sented to the Reichsbank for discounting. It is beyond any doubt that a discount rate of such abnormal height cannot be long borne without bringing about an economic shrinkage of important extent. When a calmer feeling is restored everywhere; when, following the resumption of payments, the amounts withdrawn circulate only in normal manner and are not used to make purchases of goods inspired by anxiety; and when, above all, the increased discount rate itself leads to the clearing out of stocks of goods and thus to a refilling of the Reichsbank's devisen coffers, then it will be possible to reduce the rate again to a bearable figure.

The Reichsbank's last report is not unfavourable. The holdings of devisen and gold have increased by about 100 million marks, of which some 13 millions probably are accounted for by gold taken over from the private banks of issue. Since the obligation to offer to the Reichsbank all sums of foreign currency in excess of 20,000 marks did not expire until August 5th, the increase in the holdings of devisen was probably due, for the greater part at least, not to legal compulsion, but to the economic compulsion arising from the shortage of circulating medium. It may be hoped that the increase of the discount rate will continue to work in this respect in the same manner as the restrictive measures obviously have worked. Drafts and cheques have increased by 409 millions to 3,273 million marks, the Treasury certificates of the Reich by 46 millions to 249 millions, and the deposits subject to cheque by 249 to 834 millions. The last-named item has thus reached an unusually high point (it amounted at the end of June to only 398 millions)—a natural consequence of the prohibition of payments by the private banks, which did not apply to the Reichsbank, so that there was an inclination to maintain large deposits there in order to be in a position to make payments at any time. All in all, the end-month strain on the Reichsbank was not great.

The negotiations with foreign countries for an agreement not to withdraw credits from Germany at this time have been carried on, with the result that the large creditors in England and the United States have pledged themselves to leave their short-term credits standing for six months. An agreement along the same line has been reached with France, but not yet with Holland and Switzerland. Hence, as had been foreseen, it has not been possible to bring about anything like a complete consortium in this respect. In order, nevertheless, to prevent a further efflux of money to foreign countries, the provisions regulating money transactions with foreign countries have been made much more drastic by a new emergency decree of August 1st. While it had theretofore only been forbidden to acquire foreign currency in exchange for German money, the right to dispose of foreign currency, holdings abroad and foreign securities is now dependent on the consent of the German financial authorities. Thus, for instance, even the exporter can no longer do what he will with the foreign currency received for his wares. The sending or transferring of German marks to foreign countries and the granting of mark credits to foreigners are also dependent on such consent. Only sums below 3,000 marks are exempt from this requirement. In addition, the decree contains these two important exceptions:

The carrying out of agreements made by groups of foreign creditors and domestic debtors regarding the treatment of the obligations existing between the members of these groups will be controlled by the Reichsbank or by agencies designated by it. The provisions of this decree apply only in so far as their application is not opposed to the fulfilling of obligations arising from such agreements.

In so far, therefore, as agreements to refrain from the withdrawing of credits already exist, these are not affected by the new decree. In like manner the interest and amortisation service of long-term loans is expressly secured, since the financial authorities must approve the acquiring of devisen when these are to be used for such service. In addition, these authorities, in approving the acquiring of foreign currency and its manner of disposal, are bound by instructions from the Government which have not been made public. How the decree will work out will depend above all on whether these instructions will merely hinder an undesirable export of capital or

whether they will also bring about an artificial strangling of imports.

The Danat Bank opened its doors under the same conditions as the remaining banks, with the single exception that all its obligations, whether old or new, are guaranteed by the Reich. Three days before the resumption of payments the Danat Bank made public a plan of reconstruction. It provides that the bank shall for the time being continue to exist as a private institution in its old form. The plan is that a group of industrial friends of the bank are to take over 35 million marks (nominal value) of the Danat Bank shares, which are in part owned by the bank itself and in part by the directors and "Geschäftsinhaber," who handed over their shares gratis. The shares are to be taken over at 125 per cent., which means roundly 43 million marks of new capital for the bank, thus formally restoring its former stock capital of 60 millions. The group carrying this transaction through consists of the twenty biggest industrial concerns in Germany, including the Vereinigte Stahlwerke, Rheinische Braunkohlen-Gesellschaft, Siemens, the A.E.G. and the I.G. Farbenindustrie. In part, as in the case of Siemens and Rheinische Braunkohlen, the members of the group have not been clients of the Danat Bank, but are acting out of personal friendship for Jakob Goldschmidt or for other members of the group. But, encouraging as this willingness of industry to assist is, it is less encouraging that this concentration of the greatest industrial powers in Germany does not itself raise the 43 millions, but has it advanced by the Reich. The credit given by the Reich is for five years, and the sum advanced is to be repaid in five yearly instalments after that date. The bank, formerly a "Kommanditgesellschaft auf Aktien," that is, a liability company with shares, is to be altered into a pure stock company, which will put an end to the personal liability of the "Geschäftsinhaber," the personally responsible managers of the bank, although their liability still exists by law for a further five years as to old debts. All of the managers will probably be eliminated except Jakob Goldschmidt, who devoted great efforts to the reconstruction of the Danat Bank. The original plan was to widen the capital basis of the bank now by increasing the stock capital to 100 million marks, the Reich to take over 40 millions of this. This plan was abandoned, plainly in order to emphasise the purely private character of the bank despite the Reich's guaranty. How great the capital requirements of the Danat will be cannot be seen until the extent of its losses and of the help required from the Reich's guaranty become known.

Almost simultaneously with the plan for the reconstruction of the Danat Bank the public learned to its vast astonishment of steps taken by the Reich to aid the Dresdner Bank. Here, to be sure, the Reich has assumed no responsibility for debts, but it has taken over 300 million marks of preferred shares in order to strengthen the bank's capital against withdrawals of credit. This has caused a general sensation. Rumours affecting the Dresdner Bank persisted ever since the Danat suspended payments. The reason plainly was that the Dresdner, next to the Danat Bank, was the largest creditor of the Nordwolle. It is not yet known whether or to what extent the bank has suffered other losses. But it was in a weak position to withstand the gigantic withdrawals of credits and deposits. The Dresdner had already strained the credit of the Reichsbank to the utmost, and it had no other sources of credit. For the Dresdner Bank, as also for the Danat, the acceptance bank was established in order to secure a supplementary endorsement of negotiable paper for the Reichsbank. This would have been sufficient if the other banks had been ready to assume an unlimited joint guaranty for the Dresdner Bank's paper. It was above all the foreign advisers of the Government—Dr. Sprague and Markus Wallenberg—who insisted that the Dresdner Bank must be equipped with new capital and who, in line with certain Danish and Swedish precedents, were not alarmed at the fact that the Reich intervened here. The Reich naturally has not the necessary 800 millions at its disposal, but it hands over to the Dresdner treasury certificates to that amount as the present value of the shares, and the bank must convert these into cash with the aid of the acceptance

bank. All the directors of the Dresdner Bank, with perhaps one or two exceptions, will also be replaced. The future is uncertain here also. Of the 100 millions of stock capital, about 50 millions are in the bank's possession, in part in the possession of consortiums which are financed with the bank's money, so that of a total capital (stock capital and reserves) of 134 millions, only 84 millions are still in existence. But the affairs of the Dresdner Bank, which has a relatively broader and also more democratic basis than other large banks, are thoroughly sound. The German Reich has now assumed the actual responsibility for two big banks, and the consequences of this development cannot at the moment be foreseen.
