But the view is held in many quarters that the troubles of the two railways have been greatly aggravated by the unprofitable character of some of their subsidiary activities. At the close of 1930 the Canadian Pacific had \$114,135,161 invested in steamships, ocean and coastal, and the net return upon this for the year was \$1,331,919, or 1.1 per cent.; in the preceding year the steamship investment had stood at \$100,992,262 and the return at \$3,219,638, or 3.2 per cent. But these records are magnified by comparison with those of the Canadian Government Mercantile Marine, which is operated in close alliance with the Canadian National, although as a distinct organisation. For seven years it has shown a succession of deficits, ranging from a “low” of \$90,160 in 1926 to a “high” of \$1,440,880, and amounting to \$834,211 in 1930; and in these no account is taken of very heavy depreciation of the ships. If depreciation had been included the loss in 1930 would have been nearly \$6 millions, and the last balance sheet shows an aggregate debit balance to profit and loss account of \$57,640,000. The special West Indian service, which was established in 1929, has been equally unprofitable; and the loss on it, after allowing for interest and depreciation, amounted to \$1,117,869 in 1929 and \$1,362,655 in 1930.

There was a time when the C.P.R. derived a very comfortable annual revenue from its lands and town sites. The last balance sheet showed deferred payments on these properties amounting to \$55,310,829, and “assets” in lands and properties valued at \$62,678,850. But the income from this source has been falling ominously, and the net return of the C.P.R. from land sales in the last three years has been as follows:—

	Sales.	Cancellations.
1928	\$ 4,420,317	\$
1929	2,735,317	
1930	521,965	

The last balance sheet of the C.N.R. carried an item headed “Miscellaneous Physical Property,” whose value was placed at \$57,178,042. Here are the data about the land transactions of the C.N.R. for the last three years:—

	Sales.	Cancellations.
1928	\$ 1,232,170	\$ 309,378
1929	974,760	301,387
1930	398,882	267,400

These figures make it plain that the C.N.R. is deriving no tangible income from these assets.

Both railways own their own express systems—run through subsidiary companies, which contribute substantial sums to the parent corporation for the use of their transportation facilities—but in neither case is the return upon the capital satisfactory. The Canadian Pacific Express has a capital of \$5,400,000, whereof the parent company owns \$5,000,000, and during 1930 this company showed a deficit of \$1,170,501. The Canadian National Express has a capital of \$3,352,213, and its net income in 1930 was \$369,405.

The C.N. Telegraph Company has a nominal capital of \$1,673,625, but the cost of its property and equipment had, at the end of 1930, amounted to \$19,041,453; and in 1930 its net income dropped to \$810,207. According to the telegraphic statistics published by the Bureau of Statistics, the C.P.R., at the end of 1930, had \$15,728,708 invested in its telegraph system and its earnings in that year were \$2,136,564. It is understood that the sleeping-car equipment of both companies yields profitable returns, but the dining- and buffet-car services are apparently run at a loss.

Both companies conduct a large string of hotels, some of them situated in large towns with a permanent clientele, and others utilised only by tourists in the summer. No detailed data about the investment or returns are accessible, but the former in each case runs into millions of dollars, and considerable scepticism is evinced about the profit-making capacities. Some hotels are said to be on a sound paying basis, but others are certainly not; it is known, for instance, that the C.N.R.'s Chateau Laurier, in Ottawa, is operated at a heavy annual loss. In no department of their activities has the wasteful rivalry between the two systems been carried to such a pitch as in the hotel business. The City of Halifax is the classic example; for, with a population of less than 70,000, it has been provided within the last three years with two large modern hotels, either one of which could take care of all the business available, and, after a short spell of very unprofitable operation, the “Lord Nelson,” sponsored by the C.P.R., has been converted into an apartment house.

With regard to the investments carried on its books, neither company is in a happy position. At the end of 1930 the C.P.R. statement showed miscellaneous securities valued at their cost of \$31,701,679, and representing a par value of \$48,146,000; but the market value of these securities is now well below their cost. The C.P.R. owns \$11,100,000 worth of preferred and common stock in the Duluth South Shore and Atlantic Railway, which at present have no value, and it holds \$6,711,800 preferred and \$12,723,500 common stock of the Minneapolis, St. Paul and Sault Ste. Marie Railway, whose combined market value to-day is below a million dollars. A number of the company's other stockholding are of very dubious value, and the same description can be applied to a large majority of the investments of the Canadian National system in subsidiary or affiliated companies.

One of the big problems, therefore, which the Railway Commission will have to tackle, will be the question of the subsidiary activities and frozen investments of the two companies. It is admitted that some of these services are useful ancillaries to railway operations, but the feeling prevails both among railway experts and in financial circles that the capital outlay on these enterprises is disproportionate to the benefits derived from them. An amalgamation of both the telegraph and express systems could yield great economies. In Toronto, for example, the Canadian National has fifteen telegraph offices, each hard by a competing C.P.R. telegraph office, and half a dozen others at points where there is no competition. In scores of towns with a population of less than 2,000 there are two rival telegraph offices where one would easily suffice.

It is argued by many that nothing short of a complete amalgamation of the two systems by some form of partnership between the Government and the C.P.R. can produce the necessary economies in Canada's transportation bill, and it is claimed that in this way savings to the tune of \$100 millions could be effected. But, clearly, the time is not ripe for any scheme of complete amalgamation. For one thing it bristles with political complications and difficulties. It would entail a drastic curtailment of the

number of railway operatives, and every railwayman in Canada would apprehend that his particular job might be imperilled. Furthermore, every little hamlet that saw a prospect of being deprived of its railway connection and relegated to dependence upon a bus system would be up in arms and sending angry deputations to Ottawa to protest. Parliamentary authority would be required for any such amalgamation, and no Opposition could resist the temptation to make political capital out of the fears and discontents which would be generated. A plan of complete amalgamation could hardly be essayed except by a National Government with all parties sharing the responsibility; and at present there is no sign of any such development upon the horizon.

Meanwhile, the fundamental problem which is being set the Railway Commission is to discover ways and means of cutting down the nation's transportation bill to at least manageable dimensions. It can be relied upon to make recommendations which will eliminate many of the duplications in services now existing, but there are obvious political and other difficulties which will set a limit to this form of economy. It is also understood that serious consideration will be given to the problem of segregating such assets as represent interests only indirectly connected with railway operations proper. Such a process of clarification would enable the exact position of the railways in regard to earnings arising out of purely transportation activities to be determined, and would pave the way for the evolution of a freight rate structure and other plans which ought to result in a strengthening of both the financial and operating fortunes of both railways.

AMERICAN POLITICS.

(BY A TRANSATLANTIC CORRESPONDENT.)

THE Seventy-second Congress of the United States is likely to bring into high relief the remarkable change in American political sentiment and conditions which has developed in the last two years. At the general Congressional elections held a year ago the Democrats made very heavy gains and came within an ace of securing control of both the House of Representatives and the Senate. Since then a succession of by-elections for the Lower House has revealed a tide of popular disfavour flowing more strongly than ever against the Republican Party; and the Democrats have now secured definite control of the House of Representatives. The Democratic margin of superiority is narrow, but it will be sufficient for them to elect their nominee to the important office of Speaker, and to secure the chairmanship of the different committees, which play such a large part in the evolution of the legislative programme. In the Senate the Republicans, with forty-eight members as against forty-seven Democrats and one Farmer-Labourite, can nominally command a majority with the aid of the casting vote of the Vice-President, but, as at least a dozen Progressive Republicans headed by Senators Borah and Norris are completely at odds with the Hoover administration on most issues, the latter cannot hope for any more favourable reception for its policies in the Senate than was accorded to them in the last Congress by the coalition of Democrats and Progressive Republicans which was in operation.

The consequence is that President Hoover finds himself faced in the closing stages of his term of office with the embarrassing prospect of hostile majorities in both Houses of Congress. But the supporters of the administration are taking comfort in the fact that the Democrats, being in control of the Lower House, cannot escape responsibility for the sessional programme of legislation. Next to unemployment, taxation is going to be one of the most important issues of the coming session, and the Constitution provides that all revenue measures must originate in the Lower House. President Hoover may make recommendations and suggestions, and his Secretary of the Treasury, Mr. Mellon, may present figures and plans; but the actual taxation bill will be formulated by the Ways and Means Committee of the House of Representatives which the Democrats will control. In view of the

huge deficit, it is taken for granted that a heavy increase of taxation cannot be avoided, but the character of the levies will be a subject of prolonged and bitter controversy.

The Hoover administration and the official Republicans naturally want to avoid as far as possible responsibility for any imposts which would add to their present heavy burden of unpopularity, and Senator Smoot, who is chairman of the Finance Committee of the Senate, has been advocating the imposition of what he calls "luxury taxes" on a heavy scale, though his proposals, which include a Federal tax on motor vehicles, have raised the usual controversy about what constitutes a luxury and what a necessity. The richer elements in the Republican Party, disliking the idea of higher income taxes, are disposed to favour the introduction of a general sales tax. On the other hand, the Progressive Republicans and also some of the "regulars" want to raise the necessary additional revenues by heavy increases of tax on incomes in excess of \$20,000 and by raising the Federal death duties. The determining factor will be the attitude of the Democratic leaders, among whom a similar cleavage of opinion is visible. The more radical elements in the party are sympathetic with the idea of "soaking the rich," but most of the party leaders are indisposed to sponsor any taxation programme calculated to antagonise "big business," and thereby revive its now wavering affections for the Republican Party. As public opinion, however, in its present temper inclines to stiff increases in the tax burdens of the rich, they may not be able to resist the pressure of their followers and their allies, the Progressive Republicans. Indeed, the calculation of President Hoover and his friends is that the Progressive Republican group will try to impose their own taxation and other policies upon the Democrats and will at least partially succeed. The result, according to this calculation, will be an output from the present Congress of a mass of very radical legislation. President Hoover can then recover prestige, at least with the "big business" elements, by exercising his right of veto.

The tariff question is also bound to figure prominently on the stage. The regular Republican politicians give no indication of any recantation of their faith in the merits of high protectionism, but from all quarters of the country there is evidence of a steadily growing disillusionment about its virtues as a promoter of prosperity. Encouraged by this evidence, Senator Cordell Hull, of Tennessee, an able politician, who is the recognised leader of the low tariff wing of the Democratic Party, advocates a resolute drive against the Smoot-Hawley tariff and an amending measure which would restore the rates prevailing before its passage and even bring some of them lower. But notoriously the Smoot-Hawley Bill could never have become law without the support of Democrats who were interested in securing higher protection for industries in their own localities; and it is predicted that these high protectionist Democrats will not abandon their sectional outlook and will be strong enough to prevent anything like a complete reversal of the Smoot-Hawley policy.

On the whole the Hoover administration has a more successful record with its foreign policy than in the domestic field. Public opinion has given widespread support to its attitude about the Manchurian imbroglio and its co-operation with the League of Nations in seeking a peaceful solution. It has also backed President Hoover's actions to further the cause of disarmament and taken his side in his strange controversy with the officials of the Navy League. The President will have to seek from Congress the ratification of his moratorium on war debts and reparations. As the Democratic leaders are firmly pledged to back them, the only serious opposition, which will be easily overcome, will come from the group of intransigent "isolationists" in the Senate headed by Senator Hiram Johnson of California. Within the last year public sentiment in the United States has undergone a remarkable change in its attitude towards European problems and international co-operation; doubts are now expressed whether a proposal for the drastic abatement

of war debts would encounter the widespread popular opposition which two years ago was reckoned as certain.

With the Presidential election now less than a year distant, the preliminary manoeuvres and intrigues are now in full swing and there is great activity in both the Democratic and Republican camps. There have been no developments to suggest that President Hoover will have any difficulty in securing renomination from the Republican Convention, but he will be renominated without any enthusiasm on the part of his followers and with grave misgiving in the bosoms of its party managers. He has his admirers and champions, but he has accumulated for himself a fund of personal unpopularity unequalled by any President since the Civil War, and his relations with the Press have been peculiarly unhappy. The liquor issue is still a constant source of embarrassment to him, and lately the arrest of his own brother-in-law on a charge of "bootlegging" in California has provided the "wets" with material for sarcastic mirth at his expense. The Republican "wets" are still determined to make an effort to insert in the Republican platform a plank which will favour liberalisation of the present prohibition laws, but they are not likely to succeed in this move.

The liquor issue also threatens to split the Democratic Party. Mr Raskob, the chairman of the Democratic National Committee, is campaigning strenuously for a definite commitment of the party to "wetness," and for this purpose has recently sent out a questionnaire to everybody who subscribed to the Democratic campaign fund in 1928 in the hopes that an overwhelming majority of replies in favour of a forthright "wet" plank will have an effect upon the deliberations of the Convention. But the Southern Democratic "drys" are up in arms at these tactics and vow that they will never countenance the selling of their party to the "wets." Governor Roosevelt of New York still remains the first favourite for the Democratic nomination for the Presidency, but his chances of securing it are thought to have weakened in recent weeks.

Notes of the Week.

The Vote of Censure Debate.—On the motion for the adjournment of the House of Commons for the Christmas recess the exiguous official Opposition moved, in accordance with precedent, a vote of censure upon the Government. The Government, also following precedent, allowed two days for the debate, thereby incurring the wrath of the Protectionist group, which had hoped to procure one full day for a debate on tariffs for iron and steel and to secure a straight vote of the House upon that issue. The motion, moved by Sir Stafford Cripps, accused the Government of failure to deal effectively with currency and trade policy or with unemployment, and the chief points in Sir Stafford's speech were a declaration against a return to the gold standard and a demand for British initiative in international action to revive commerce. The Prime Minister, in reply, took occasion to remind the House of the "national" nature of the Government's mandate, and defended his Cabinet not merely against the attack of the Official Opposition, but against Conservative critics who accused the Executive of dilatoriness. Mr MacDonald's most important announcement was that an international conference would quickly follow the deliberations of the Young Plan Advisory Committee. He went on to add that, in his view, "immediate action should be taken" as soon as the experts' findings are available. Mr Amery followed on behalf of the Conservative malcontents, and threatened the Government with disruption if they did not speedily produce a full-blown tariff for iron and steel. But the edge of his attack was blunted by several Conservative speakers, who deplored all attempts to force the Government into ill-considered action; and, finally, Mr Runciman had a sympathetic reception for a speech in which a firm refusal to be coerced was coupled with a brilliant analysis of the complexities of the iron and steel trade and of the

extreme difficulties which they present even to a keen tariff-builder. Mr Runciman clearly impressed the House, and prevented any fresh recruitment to the ranks of the rebels.

The Outlook in India.—While Mr Gandhi, now touring Europe on his way back to his "sunbaked" land, has left these shores with an open mind, Congress is doing its best to force his hand. Mr Gandhi has yet to make his fateful choice between co-operation in the building of a constitution and a re-adoption of his former policy of boycott and civil disobedience. But the Working Committee of the Bengal Provincial Congress has initiated a new campaign for the boycott of everything British, and the Congress Press are asserting that Mr Gandhi on his return will lead a campaign which will speedily land him in gaol. Such action and such assertions are completely out of tune with the non-committal statement issued by the Mahatma at his departure from London last week-end. Meanwhile two pronouncements upon India of unusual importance have been made, one by the present Viceroy, Lord Willingdon, at Calcutta on Monday, and the other by the late Viceroy, Lord Irwin, in a debate on the Round Table Conference in the House of Lords on Tuesday. The former, while frankly admitting the delicacy of the position, especially in Bengal, and reaffirming the Government's unshaken determination to enforce the law and maintain order, welcomed the Prime Minister's statement of policy, and, with words of sturdy optimism, expressed the hope that during his present term of office he would find himself in the position of a "constitutional Governor-General." Lord Irwin, in the House of Lords, where Lord Lloyd fared no better than did Mr Churchill in the Commons in attacking the Government's policy, considered that the chances of an Indian settlement had been "immeasurably advanced" by the Round Table, and made an eloquent appeal for real efforts on both sides for a successful and constructive approach to the task of building the Indian constitution. There is need for response to this appeal in this country as in India. For although the British Government and people have proved that they will keep faith with India, we have our own intransigents here, as Lord Incheape showed in his address on Wednesday to the P. & O. shareholders. Lord Incheape would put the clock back; the extremists of Congress would put it forward. Each provides the other with the powder and shot of embittered controversy and the material of suspicion and distrust. Each equally embarrasses the efforts of statesmen of the West and the East to allow the hands of the clock to move according to plan until the hour strikes for the peaceful evolution of India's constitutional destiny.

Germany's Fourth Decree.—The new Emergency Decree, signed by President von Hindenburg on Tuesday night, may fairly be regarded as Dr. Brüning's last card in the fulfilment of his policy. Stoutly defended by the Chancellor in a broadcast address in which he roundly challenged extremists on either flank and threatened to impose in the last resort martial law, the Decree represents a degree of State interference with economic liberty unparalleled outside the territory of the U.S.S.R. The main features of the enactment are as follows:—

The turnover tax is to be increased from 0.85 to 2 per cent. Wages and salaries are to be cut down to the level prevailing in 1927, and there are to be drastic revisions of official salaries and pensions.

Railway freight rates are to be reduced by 5 to 25 per cent. and similar reductions are to be made in postal rates and charges of such public services as gas, water and electricity.

All prices fixed by cartel conventions are to be reduced to 10 per cent. below the level of last July, and corresponding reductions of other prices are to be secured by a price regulation Commissioner with fairly despotic powers.

The interest rate on fixed-interest-bearing securities, mortgages, etc., other than foreign obligations, is reduced to 6 per cent., with the exception that current interest charges at higher rates than 8 per cent. are to be reduced by amounts ranging from a quarter to a half. Rents are to be reduced by 10 per cent.

Finally, the punishment for treason against the State is increased; the wearing of party uniform is forbidden; and a ban is placed on all political demonstrations and meetings from December 20th to January 3rd.

Westminster Bank Leaflets

For the benefit of that large section of the public which finds itself bewildered by business language, the Westminster Bank issues from time to time simply worded explanations of various ways in which it is able and glad to be of use to its customers. Amongst its publications are the following: *3 Points before Travelling*, notes on the Protection of Travellers from Loss. *3 Thirty-nine Advantages of an Account with the Bank*. *3 The Saving Habit*, an outline of the Home Safe system. *3 Safeguards for Travellers*, a warning against carrying foreign notes. *3 Securities*, their Custody and Supervision. *3 Wills, Trusts, and Settlements*, the Bank as an Executor. Copies may be had on asking at almost any branch, or by addressing a postcard to the Secretary, Westminster Bank Limited.

41 LOTHBURY, LONDON, E.C.2

Coming on top of three previous Emergency Decrees, which have already reduced terribly the German standard of life, and imposed, as it is, in the middle of a crisis in which Germany has five million unemployed, her stock markets closed, her tale of bankruptcies mounting to catastrophic figures, and her whole economic system "frozen" by credit restrictions and standstill agreements, this latest "turn of the screw" will undoubtedly place a dangerous strain on the psychology of the German people. Moreover, we consider one of Dr. Brüning's expedients, the compulsory reduction of interest, to be a perilous step. A call for further sacrifices, it may be argued, was inevitable, and Dr. Brüning may doubtless have feared that it would be impossible to retain Social Democratic support for the Government unless he could point to "deflation" of the rentier. Nevertheless, it is idle to disguise the fact that the Decree has gone much further than its predecessors, in that it enforces by law the definite breach of contractual obligations by methods which recall those practised in the Middle Ages against usurious Jewry. This opens up disquieting possibilities of promises to secure still lower rents and interest rates being made future electoral issues—a prospect not conducive to the retention or investment in Germany of capital owned by German nationals. Moreover, it remains to be seen whether this arbitrary State action in the matter of prices will not ultimately impair rather than improve the security on which Germany's foreign credits repose. Driven to the wall, Germany is making a last heroic effort to meet a desperate situation; and we salute Dr. Brüning's courage. But the outlook, political and economic, in Germany is not rendered more reassuring by this Decree, however cogently the Chancellor may plead that under *force majeure* he had no other alternative.

The Basle Committee.—The Young Plan Advisory Committee assembled formally on Monday, and, to judge by its daily *communiqués*, its deliberations, covering a vast field, seem likely to occupy some weeks. At the first session Signor Beneduce (Italy) was elected chairman of the Committee. It had been decided in advance to co-opt four additional delegates, as provided under the Young Plan, and the choice fell upon Dr. Bindschedler (Switzerland), M. Rydbeck (Sweden), M. Colijn (Holland) and M. Juritch (Yugoslavia). On Tuesday Dr. Melchior (Germany) began a detailed statement on the general economic and financial situation of Germany, in the course of which he emphasised the firm intention of the German Government to maintain the gold standard. A sub-committee was appointed to examine in detail the various German statistics which Dr. Melchior had pro-

duced. On the following day Dr. Melchior continued his exposition of the economic state of Germany, with particular reference to the German balance of payments. Having dealt in detail with the categories of German debts which necessitate external payments, Dr. Melchior explained that the favourable balance of merchandise trade, which had amounted to a monthly average of Rm. 350 millions during the past half-year, reflected partly drastic curtailment of imports, even raw materials, and partly liquidation of German stocks under pressure of high interest rates and withdrawals of credits. With regard to the future, he submitted that the tendency was likely to be reversed in view of the difficulty of finding fresh credits, the repercussions of currency depreciation abroad and the increase in foreign Customs tariffs, exchange restrictions, quotas and other measures of import contraction—factors to which our Berlin correspondent refers in his letter on a later page. On Thursday, examination of the situation of the Reich Budget was begun. So much for the proceedings at Basle, which suggest that the whole question of German capacity will be thoroughly examined by the experts as expeditiously as possible. It would be idle at this juncture to speculate on the scope or terms of their report, which will form material for consideration by the conference of Governments early next year. In this connection the *Times* published on Tuesday a summary of an official Note which the French Government had communicated to all the Governments interested. If the summary is accurate, this Note embodied more or less the views which M. Laval's speeches in the Chamber of Deputies had already revealed. With regard to the Young Plan Advisory Committee, it stated that the French Government preserves a free hand because the terms of the German application for it, "although known in Paris, were not submitted for its final approbation." The indication was given that the French Government considers that the present financial crisis in Germany is not favourable to an inquiry of a final nature into Germany's capacity to pay, and that only "temporary" measures can be recommended for the solution of a "transitional state of affairs." Other Governments, we suggest, are more likely to be impressed with the consideration that any solution which merely "played for time," or perpetuated the atmosphere of crisis by requiring frequent revision, might prolong the state of uncertainty whose continuance helped to render the Hoover moratorium plan ineffective in realising its objects—restoration of confidence and revival of trade.

Washington Resumes.—The seventy-second Congress of the United States was opened on Tuesday. On that day President Hoover read a message of a general nature, which was amplified by special statements on Wednesday on the Budget position and on Thursday on America's foreign policy. In view of the international crisis the third of these messages was naturally awaited with the greatest interest, but as its full terms are not available at the time of writing, comment at the moment must be confined to the two first statements. In the first and more general message Mr Hoover gave a broad sketch of the causes underlying the world crisis and touched upon the steps taken by his Government to co-operate with other Governments in attempting to remove them. Of that we expect to hear more in the statement on foreign policy. To European eyes the most noteworthy passages in the general message were those which emphasised the comparative self-sufficiency of the United States and described measures for organising an internal American revival of activity. With regard to the former, foreign critics (and, indeed, we note, some home critics) find Mr Hoover's speech somewhat contradictory. For his description of the way in which the difficulties of the outside world had upset America contrast rather noticeably with his assertion of America's ability to recover in isolation. Compilers of "parallel columns" might place in curious juxtaposition the admission that "our difficulties in the past year have mainly originated in large degree" from international developments, and that "if we can put our financial resources to work and can ameliorate the financial situation in the railways, I am confident we can

make a large measure of recovery independent of the rest of the world." If international factors were the arbiter of America's fortunes in 1931, how can their influence be disregarded in 1932? It would seem that Mr Hoover may be flying a kite for a policy of isolation. Nor do his proposed measures for internal reorganisation escape criticism on this side; for they appear to savour of an inflationary expansion of banking credit, through the foundation and financing by the Treasury of a huge finance corporation which in its turn would support a network of industrial and agricultural credit institutions. Meanwhile Mr Hoover's Budget message announced definite steps for meeting enormous prospective deficits of \$1,416,989,448 (say £285 millions at par of exchange) for the year ending June 30, 1933, and of \$2,122,683,685 (say £425 millions) for the current financial year. (The deficit for the year 1930-31 was \$902,716,845.) New taxation is proposed to yield \$920 millions. Income tax is to be levied on all incomes over \$20 per week, and over 1,700,000 wage earners will be brought within its scope. Exemptions are also to be reduced, while new or increased taxes are to be placed upon telephones and telegrams, radio gramophones, motor cars, cheques, amusements, jewellery, cigarettes and tobacco, etc. There is also to be an increase from 12 to 12½ per cent. in the corporation tax. It does not follow that this tax programme will pass intact; for, as a correspondent points out on a previous page, Mr Hoover and Mr Mellon submit a programme, but the final composition of the tax schedule is in the hands of the Finance Committee of Congress, upon which Mr Hoover does not command a majority. If the taxpayer in Europe is being chastised with scorpions, the American taxpayer is threatened with whips; but it remains to be seen how far Congress will prefer to borrow rather than to tax.

The League and Manchuria.—In Manchuria, up to the moment of going to press, there has been no change during the week. The south-western corner, including the city of Chinchow, remains under Chinese administration, and is still held by the previous Chinese garrison. Meanwhile, in Paris, the faint improvement which we were able to record last week has faded away, and the Council's retreat has been resumed. The resolution, with a covering statement by Monsieur Briand, which the Council drafted last week, has not commended itself to the authorities in Tokyo. "The whole tone of Monsieur Briand's declaration is declared to be objectionable, as conveying the impression that the Chinese are the wronged parties and that the Japanese are on trial." As for the draft resolution, the Japanese Government has demanded the withdrawal of Paragraph V., which provided that, in case the Japanese troops had not been withdrawn within the Japanese Zone by the time the League Commission reached the spot, the Commission should report to the Council and make recommendations as to what action should be taken. In place of this paragraph, which they propose to delete, the Japanese have suggested the insertion—not in the resolution but in the covering statement—of a passage to the effect that the Council may instruct the Commission to furnish information concerning progress made towards the carrying out of the resolution of September 30th. In other words, the Japanese Government does not repudiate outright its pledge to withdraw to its own zone some time or other, but it rejects any suggestion of a time-limit in any form. The Council is disposed to accept this Japanese amendment, and not to oppose a unilateral declaration by the Japanese delegation, reserving the right to take action against Chinese bandits, if only the Chinese delegation can be persuaded to agree. The Council has also failed to secure the establishment of a neutral zone between the Japanese and Chinese forces; for on this point the Japanese have insisted, not only that the Chinese shall retire to the south of the Great Wall, but that Chinchow, when the Chinese evacuate it, shall not be included in the neutral zone, but shall pass under Japanese occupation. Accordingly, the Council has abandoned the attempt to establish a neutral zone altogether; and, in these circumstances, there is obviously a serious danger that, before the League Commission has started for Manchuria, or has even been appointed, the

Japanese Army may return to the charge and present the Government of Tokyo and the Council at Paris with a fresh *jait accompli* by forcibly ejecting the Chinese garrison and administration from the corner of Manchuria which the Chinese still hold. The humiliation of the League in the Far East is almost complete; and the future effects of this upon the problem of security and disarmament in other parts of the world are incalculable.

The New Spanish Constitution.—On Wednesday the Constituent Assembly (*Cortes Constituyentes*) at Madrid voted the new constitution of the Spanish Republic. This constitution is on "advanced" lines. It sets a good example by incorporating in its provisions the obligations which are entailed in membership of the League and in adherence to the Kellogg Pact. It entitles the Spanish State a "workers' republic"; institutes single-chamber government; allows a referendum on the initiative of 15 per cent. of the electorate; and reflects the recent conflict between the Crown and the Nation in the severity of the penalties which it provides for bringing the executive head of the Government to book should he exceed his powers. Another recent Spanish conflict is reflected in those provisions of the new constitution which relate to the Catholic Church. Religious orders are forbidden to teach or to carry on a trade of any kind; and the Jesuits are disbanded (though not expelled) and are deprived of their property. On the mind of the foreign observer who wishes the Spanish Republic well, the new constitution leaves a certain disquieting sense of unreality. For example, on Tuesday the Cortes carried a Government motion that the recently passed Defence of the Republic Act should be incorporated temporarily in the constitution itself. It is, indeed, paradoxical that a constitution which is intended to secure to Spaniards their classic personal rights should be inaugurated with a rider which gives the Republican Government greater dictatorial powers than those which were previously possessed by the Monarchy. The fact is that the major troubles of the Spanish Republic have still to be faced. The Republic has still to settle its relations with the peasantry, who constitute the vast majority of the population all over the Peninsula, and who have displayed an inclination towards "direct action" in Andalusia; with the church, which has been knocked on the head but not dislodged from its stronghold in the hearts of many millions of Spanish men and women; with Navarre and the Basque Provinces, which are overwhelmingly clerical in sentiment; and with Catalonia, which is determined to enjoy the reality of Catalan self-government. This is a formidable list of imminent problems. In face of them the Provisional Government has shown sound statesmanship in supporting the candidature for the Presidency of the Republic of Señor Alcalá Zamora, notwithstanding the fact that he has lately resigned from the Premiership of the Provisional Government because he differed from his colleagues on the crucial question of the Republic's policy towards the Church. He is both a sincere Republican and a good Catholic. This combination of loyalties is none too common in a country where the relations between Church and people have been what they have been in modern Spain. In supporting the candidature for the Presidency of his late colleague and chief in the Provisional Government, Señor Azaña has shown a broadminded statesmanship which will certainly have its reward.

November Trade Returns.—The preliminary figures for November trade published in the *Board of Trade Journal* are in one respect more encouraging than might have been expected, for raw material imports at £15.8 millions are noticeably better than in previous months and do not compare too unfavourably with those of November, 1930. It is true that the value of raw material imports is now raised owing to the depreciation of sterling, but the decline in their value since November, 1930, is one of only 7.4 per cent., a figure which is almost identical with the decline in wholesale sterling prices of raw materials. Hence it is reasonable to suppose that their

DAME FORTUNE

will smile upon your children

"EDUCATION"

LEGAL & GENERAL ASSURANCE SOCIETY LTD.
Head Office: 10 Fleet Street, London, E.C.4 *Estd. 1836*

volume has recovered to approximately that of a year ago. The following are the actual returns:—

	November, 1930.	October, 1931.	November, 1931.	First Eleven Months	
				1930.	1931.
Imports	£ thou. 79,412	£ thou. 80,685	£ thou. 83,231	£ thou. 955,181	£ thou. 785,206
Exports	44,057	32,832	31,863	532,094	357,086
Re-exports	6,848	5,277	4,967	81,736	58,499
Total exports	50,905	38,109	36,830	613,830	415,585
Excess of imports over total exports	28,507	42,576	46,401	341,351	369,621

November imports of manufactured goods were not greatly in excess of those for October, but were some seven or eight millions higher than those of previous months. Here due allowance must be made for the depreciation of sterling, as well as for "forestalling." Exports so far have shown no improvement. It is clear that stimulus from the depreciation of sterling is slow in taking effect. In view of the world's present policy of trade contraction this is scarcely surprising.

Sterling and Gold Prices.—During the past fortnight, notwithstanding a fall of some 30 cents in the dollar quotation, British wholesale prices, as measured by our index number, have kept relatively steady. We give below the comparative figures of our complete index based on fifty-eight commodity prices:—

"ECONOMIST" INDEX
(1927 = 100).

	Sept. 18, 1931.	Nov. 25, 1931.	Dec. 9, 1931.
Cereals and wheat	64.5	70.4	70.2
Other foods	62.2	65.4	66.3
Textiles	43.7	53.7	55.0
Minerals	67.4	74.5	75.4
Miscellaneous	65.8	66.6	67.0
Complete Index	60.4	65.9	66.6
1913 = 100	83.1	90.7	91.7
1924 = 100	52.2	57.0	57.6

The recent apparent stability of the British wholesale price level in face of exchange depreciation must be read in conjunction with a further abrupt fall in the gold prices of primary commodities. Moreover, as will be seen from the following table, the sterling price of primary products rose by an appreciably larger percentage than did our complete index number:—

SEPTEMBER 18TH = 100.

Date.	Economist Indices.			Irving Fisher, U.S.A.	Statist- ique Générale France.	Milan Chamber of Com- merce, Italy.	Statist- ische Bureau, Germany.
	Complete Index (sterling).	Primary Products (sterling).	Gold Prices.				
Sept. 30th ...	107.8	112.0	94.7	98.7	96.9	98.8	98.9
Oct. 14th ...	108.3	114.3	95.7	98.9	96.9	99.7	98.0
Oct. 28th ...	108.4	114.4	101.4	99.3	95.6	99.9	98.7
Nov. 11th ...	110.3	119.3	103.5	99.3	96.0	99.3	98.3
Nov. 25th ...	109.1	114.8	98.0	98.3	94.2	98.8	97.6
Dec. 9th ...	110.3	117.3	93.0	...	...	...	...

It will be seen that gold prices have suffered in less than a month the catastrophic drop of 10 per cent. Movements in foreign indices, which we reprint from the *Financial Times*, have so far been less violent.

Prices and Monetary Policy.—In the course of his interesting Ludwig Mond lecture, delivered last Monday at Manchester University, Sir Josiah Stamp observed that three statements of policy were likely to be prominent in the near future:—(1) That we should endeavour to gravitate to an exchange rate corresponding with a price level at which our economic machine would function smoothly and at which employment and profits would be satisfactory. (2) That we should test that rate out in its *de facto* stability for a reasonable period before formally stabilising. (3) That we should not in any case formally stabilise until we had secured by international co-operation an understanding about the management of gold. With regard to the third point, we agree with Sir Josiah that to secure identity of view on the international gold problem may be a long and painful task, and we also share his opinion that a period of a constant gold price level and stable exchange level would not necessarily offer a sufficient guarantee against further inconvenient movements in the value of gold which might be accentuated by the resumption of the gold standard by a number of countries at present off that standard. We are unable, however, to follow Sir Josiah in all that he had to say with reference to the first point of policy which he mentioned. If we understand his meaning correctly, he appears to have suggested that while money wages should be pegged at their present level, we should deliberately aim at a general rise in the wholesale level of the order of 25 per cent.—carrying with it an increase of perhaps 10 per cent. in the cost of living—in order to correct the present unstable and artificial distribution of the national income. Presumably Sir Josiah is suggesting that before there can be full employment of our productive capacity there must be an increase in the profitability of enterprise. But he appears to assume that this can be achieved safely by a sort of “selective inflation.” Since money wages are to remain unchanged, he is apparently thinking not in terms of increased consumers’ demand, but on the lines of extension of credit to enterprise and the stimulation, one assumes, of demand for capital goods by public subsidies or State expenditure. Sir Josiah’s ideas are always interesting and rightly provocative of thought, but in this case he appears to us to be suggesting perilous courses. We agree that the effect of exchange depreciation on the wholesale prices of imported commodities will not of itself suffice to correct all the disequilibria which existed before September 21st within our structure of prices and wages; but even if the policy which he appears to contemplate could be carried out without provoking irresistible demands for higher wages at an early stage in the process, it is difficult to see how we could obviate consequent progressive depreciation of sterling which would recreate disequilibrium in our price structure and make the beginning of an all-round inflationary spiral a certainty.

Steel and Tariffs.—In an article published in last week’s *Economist* we endeavoured to set out some of the difficulties and complexities which beset the would-be tariff maker when he comes to the iron and steel trade. Having read the able review of the problem which Mr Runciman gave to the House of Commons on Wednesday, we are surprised at the moderation with which we stated the case. In arguing that the importance of steel users in the life of the nation was greater than that of steel makers, we made a rough computation that, while the heavy iron and steel trades employ about 188,000 workers, nearly 1,405,000 derived their livelihood from “steel using” industries. Apparently, the latter figure was too low, for the President of the Board of Trade gives the figures for employment in the latter category as 1,825,000. “I just put this single appeal to the House,” said Mr Runciman, “when we are dealing with this question do not let us underrate the 1,800,000 and give the whole of our sympathy to the 188,000. That would be unbalanced judgment.” Steel makers, Mr Runciman explained, are more “vocal” than steel users; and, bad though the plight of the British iron and steel industry may be, he pointed out that the comparable industries of the United States and Germany (both Protectionist countries) have

suffered worse than our own. Those who turn to *Hansard* will find columns devoted to an analysis of the component parts of the industry and an exposition of the many complicated factors which merge from any study of it. No impartial observer, we believe, could read the speech without agreeing with Mr Runciman that any attempt to introduce tariffs in connection with this basic industry would, to say the least of it, be “a great gambling risk.”

The Social Services.—At a time when it is so important to watch carefully the trend of public expenditure, it is unfortunate that the Government’s annual White Paper* on what are commonly known as the “social services” should once more make so belated an appearance. The return issued last week refers to the financial year 1929-30 and gives figures of total expenditure under the main heads including sums spent from local rates, parliamentary grants and other receipts (e.g., unemployment and health contributions, fees, rents, etc.), but excluding payments out of loans for capital purposes. We show below comparable figures for England, Scotland and Wales in recent years:—

	“SOCIAL SERVICES” EXPENDITURE. (In Millions.)				
	1921.	1924.	1928.	1929.	1930.
Unemployment insurance...	10.8	48.0	42.8	53.8	53.3
Health insurance	29.9	30.9	37.6	39.9	38.8
War pensions	100.9	69.6	56.9	54.0	54.1
Other pensions	20.8	24.0	45.6†	58.7†	62.2†
Education	88.8	86.6	94.4	97.0	100.5
Working-class housing	4.7	16.6	26.7	31.6	35.6
Poor relief	34.3	41.9	45.5	43.9	50.0
Miscellaneous‡	16.5	14.5	16.5	16.9	12.2
Total	306.7	332.1	366.0	395.8	406.7
Total, less War pensions...	205.8	262.5	309.1	341.8	352.6

† Includes widows’, orphans’ and old age contributory pensions under the Act of 1926.
‡ Including expenditure on hospitals, maternity and lunacy.

The outstanding feature of the foregoing table is the steady growth of these forms of expenditure, which, in the last six years for which figures are available, have increased by over 20 per cent. despite the automatic decline in war pensions, and compare with a pre-war figure of £63.2 millions, expended in 1911. The extent to which the increase between 1923-24 and 1929-30 has been met by local rates, parliamentary grants and “other” receipts, respectively, is shown below:—

	1923-24.	1929-30.
Local rates	£ Mn.	£ Mn.
Parliamentary votes and grants	78.8	93.0
“Other” receipts	175.3	184.0
	86.7	124.3

The growth in “other” receipts is chiefly accounted for by contributory pensions (+ £24 millions) and rents (+ £12.8 millions); unemployment and health insurance contributions both show small declines.

The Dockers’ Wage Out.—The negotiations for a reduction in the wages of dock workers, which were opened as long ago as last May, have at last been brought to a peaceful termination. The original attitude of the men was as uncompromising as the demands of the employers, which involved a reduction in wages of two shillings a day and far-reaching alterations in conditions, were drastic. In consequence, a deadlock was at first reached, but subsequent conversations led to a resumption of the negotiations with both sides in a much more accommodating frame of mind, and the modified proposals of the employers were referred to a sub-committee of the Industrial Council for the Port Industry. The settlement which has now been reached, after prolonged work on the part of this body, involves a reduction of 10d. a day for time workers and a similar cut of 7 per cent. for piece-workers, with a minor modification relating to week-end overtime. The other conditions based on the 1919 agreement and the terms of the Lord Shaw agreement are unchanged. An improve-

ment in the machinery of negotiation has incidentally resulted. This is the first change in dockers’ wages since 1924, and they therefore formed an outstanding example of the rigidity of sheltered wages in face of the steady fall in prices. The determination of the dockers to make “a stand against deflation,” which was the cause of the deadlock throughout the summer, had necessarily to be reconsidered in face of the present extreme shipping depression. Mr Bevin has made a fair bargain for his members by good generalship. He was wise not to make the depreciation of sterling the ground for insistence on the maintenance of wages. In accepting this urgently needed reduction in the margin between sheltered and unsheltered wages, he has contributed in a reasonable spirit to the solution of our burden of high transport costs.

Cotton Trade Disputes.—In one respect the outlook with regard to the threatened troubles in the Lancashire cotton industry, which we discussed in a leading article last week, has improved. “At the end of last week,” writes our Manchester correspondent, “there was an unexpected development in connection with the hours and wages question in the Lancashire cotton industry. At a meeting in Manchester on Friday of the Central Committee of the Cotton Spinners’ and Manufacturers’ Association reports were received from the District Associations with regard to the recommendation of the Central Committee that they should be empowered to give one month’s notice to the operatives of the abrogation of the uniform list of weavers’ wages and all wages agreements. It was announced at the close that whilst the replies showed a large majority in favour of taking the action recommended, it was felt that the majority was not sufficient to justify the giving of the notices determining the wages agreements, and it was decided not to give them. The votes taken at the district associations showed that only 68 per cent. of the members were in favour of action only 68 per cent. of the members were in favour of action being taken. A crisis in the weaving section of the industry, therefore, has been removed for the time being. It is understood that many employers refused to support the Association on this matter owing to uncertainty as to the terms of any new agreement on wages. The Manufacturers’ Association is now compiling an alternative wages list, which in due course will be submitted to the members for their consideration, and if this is adopted the trade unions affected will be approached. So far as can be gathered, the employers in the spinning branch are determined to press their claim for an increase in working hours in the mills. The several trade unions have held meetings and decided to accept the invitation of the Masters’ Federation to a joint conference to discuss the demand. It is expected that this joint meeting will take place in Manchester early next week. A factor of importance, especially in the weaving section, at the moment is that more sheds are being reopened after standing idle, on special terms with the operatives as to wages and working conditions. It is estimated that about 100 mills are running under conditions which are not in accordance with the agreements previously entered into between the Manufacturers’ Association and the Operative Weavers’ Amalgamation. This situation is causing much irregularity, and there is a good deal of undercutting in the market by these firms that are working on advantageous terms with regard to labour costs. There are rumours that more manufacturers will be compelled to resign from the Association, and it is quite evident in many districts the trade union is unable to control its members.” Thus, in spite of the respite from deadlock in the weaving section, the situation in the spinning section remains dangerous.

American Cotton Crop.—On Tuesday last, writes our Manchester correspondent, the Department of Agriculture of the United States Government published what is known as the preliminary final estimate of the cotton crop for this season, the amount being given as 16,918,000 bales, as compared with 16,903,000 bales a month earlier. The forecast was rather below market expecta-

tions, but prices have shown practically no change. The carry-over from last season was about 9,000,000 bales, so the total supplies available are about 26,000,000 bales. It is not likely that world consumption this season will be more than 13,000,000 bales. During the last few weeks a feature of the cotton situation has been the success of the “holding” movement in the United States, and despite the big supplies there is relatively little pressure to sell. An outstanding factor in connection with this year’s cotton crop in America is the large production per acre. This is rather surprising in view of the reports last spring of a decrease in the use of fertilisers. The Department of Agriculture now estimates the output per acre at 200.1 lb. This is the largest figure since 1914, and the total growth will be the second largest on record. Up to the end of November 15,023,000 bales had been ginned. During the last few weeks “gold” cotton prices have been steady, but it is believed in some quarters that early in 1932 the proposals relating to the cutting down of the acreage for next season will have some effect upon the situation. This week the Egyptian Government has estimated the cotton crop there at 6,204,922 cantars, against 6,415,798 cantars a month earlier. The Egyptian cotton crop for last season was 7,552,000 cantars.

The Commercial Bank of Scotland.—The accounts of this institution for the year ended October 31, 1931, are on the whole a good omen for the general British banking results of the current year. Net profits at £386,000 compare very favourably with those of the two preceding years, and the directors have only thought it necessary to allocate £50,000 to contingencies and have not felt obliged to make any reduction in the dividend. It is true that this bank is not implicated in the world crisis to the same extent as the big English banks: for, two years ago, its acceptances only reached the relatively small figure of £586,000. On the other hand, certain Scottish industries have shared to the full in the British trade depression, and so it is a testimony to the bank’s innate strength that its earnings have not been depleted to a greater extent. The principal items in its accounts are given below:—

	1929.	October 31, 1930.	1931.
	£ thou.	£ thou.	£ thou.
Capital paid up	2,250	2,250	2,250
Reserve fund	2,800	2,850	2,850
Deposits	35,229	33,182	32,112
Notes in circulation	3,231	3,418	3,510
Cash	4,133	4,241	4,152
Call money	4,554	4,179	2,165
British Government securities ..	9,530	10,838	12,492
Other investments	648	575	772
Advances	18,637	18,548	16,808
Discounts	3,500	1,818	2,511
Net profits	368	390	386
Reserve fund	50	50	—
Contingencies	—	—	50
Dividend:			
“A” shares	16%	16%	16%
“B” shares	10%	10%	10%

Deposits have not fallen unduly when the circumstances of last October are taken into account, while the contraction in advances is also relatively moderate. There is a fairly big increase in the bank’s holding of British Government securities, which becomes more pronounced when allowance is made for the depreciation in their value which occurred during the bank’s last accounting year.

The Banque de France and Sterling.—It was common knowledge that the Banque de France, together with other foreign banks both central and commercial, had been involved in heavy losses in respect of its sterling balances by the depreciation of the pound. So long as the Banque de France did not draw on its sterling balances, the loss might be regarded in some respects as a matter of bookkeeping; but it was clear that prudence demanded that adequate provision should be made for eventualities. Were the Bank to attempt to meet this loss itself it would more than exhaust its capital and reserves, for these stand at only Frs. 481 millions, whereas if, as stated in the French Chamber this week,

the Bank's sterling holdings amount to £62 millions, the loss between September 21st and this week is of the order of Frs. 2,500 millions. In these circumstances the French Government has decided to give assistance to the Banque de France, and a Bill has been introduced to that effect. The Treasury are to hand to the Banque de France a bond for the amount of the loss, to be exchanged later for negotiable bonds of the sinking fund administration. These bonds will be redeemed progressively with those received by the Bank at the time of the stabilisation of the franc in exchange for old Russian bonds. The Bank will itself contribute towards the amortisation of the bonds by means of an immediate payment and by further annual payments in proportion to its gross profits.

Banque Italo-Belge.—The report of this well-known bank, possessing interests both on the Continent and in South America, shows that the directors have been properly impressed with a need for caution. During the past two years, while not denying commerce legitimate assistance, the board has gradually been restricting the bank's engagements, and consequently has been able to present satisfactory results, notwithstanding the decrease in its operations, South American exchange fluctuations, and other difficulties. This year's dividend policy is equally conservative. The dividend has been reduced from 12 to 10 per cent., and Frs. 3.9 millions added to the bank's undistributed profits. The salient features in the accounts are reproduced below:—

	June 30th.	1929. Frs. mill.	1930. Frs. mill.	1931. Frs. mill.
Liabilities—				
Capital	100.0	100.0	100.0	100.0
Reserves	90.0	100.0	100.0	100.0
Deposits	1,237.2	1,023.7	1,144.7	1,144.7
Correspondents	1,130.0	1,002.5	895.6	895.6
Bills payable	203.3	199.5	229.8	229.8
Assets—				
Cash	370.5	331.4	365.1	365.1
Bills receivable	1,015.5	1,017.8	859.4	859.4
Investments	98.2	91.0	83.1	83.1
Correspondents	542.5	298.1	353.4	353.4
Debtors, current account	742.4	690.3	813.0	813.0
Net profits	22.9	20.0	16.0	16.0
Dividend	12%	12%	10%	10%
Increase (+) or decrease (–) in undistributed profits	–1.8	+4.8	+3.9	+3.9

The decrease in the bank's engagements is reflected mainly in a contraction in balances held with it by its agents and correspondents. Deposits owned by private customers are somewhat higher. The cash position has been strengthened, and the fall in its resources has been met by allowing bills to run off. The maintenance of assistance to commerce is well illustrated by the expansion in the item debtors, current account, which represents short-term advances to the bank's clients.

National Income of the U.S.S.R.—An interesting brochure has been published by the Russian Department of the University of Birmingham dealing with the growth since the war of the national income of the U.S.S.R. in comparison with its 1913 level. The authors have necessarily had to employ official Soviet data as a basis for their calculations, but they have made certain modifications which from their inquiries appear to them to be necessary in the Gosplan figures. As a result, they arrive at the following estimate:—

NATIONAL INCOME.			
(Million Pre-War Roubles)			
	Total.	Index.	Increase.
1913	13,896	100	%
1922-23	8,061	58.0	...
1924-25	10,759	77.4	16.7
1925-26	13,162	94.7	22.3
1926-27	14,086	101.4	7.0
1927-28	15,137	108.9	7.5
1928-29	16,649	119.8	10.0
1929-30	20,407	147.6	22.6
1931 (estimates)	27,185	195.6	33.2

On the basis of the foregoing figures, the index of income per head of the population (1913=100) had risen from 59.7

in 1922-23 to 127.8 in 1929-30, and is provisionally estimated to reach 165.6 in 1931. The rise, *prima facie*, is impressive; but the compilers of the brochure add the important qualification that "the fundamental shortcoming of all calculations of the national income of the U.S.S.R. for the period 1922-31 lies in the failure to recognise the decline in the quality of the goods and commodities produced." This is found to have been the result of two factors—concentration on quantity production, and pressure by the "planning" authorities to secure, often somewhat arbitrarily, a reduction of factory costs. For example, the brochure suggests that, whereas the production of galoshes from the factories of the Rubber Trust in 1928-29 showed a quantitative increase of 48 per cent. of the 1913 level, a statistical "correction," based on comparative durability of pre-war and post-war qualities, would yield a true production figure 26 per cent. below the pre-war datum line. Such "corrections" must obviously be tentative and open to large margins of error, but there seems to be sufficient evidence to warrant the conclusion that U.S.S.R. estimates of the value of national production based on quantity require to be discounted to some extent by considerations of the factor of quality. In considering the finance of the planned development of the U.S.S.R., the report bears testimony to the extraordinary rate of enforced national accumulation of capital which has been brought about by State control through the medium of (1) high prices paid by the consumer for the produce of industry, (2) high trade charges in State trade, (3) drastic taxation, and (4) compulsory subscription to State loans. During the last two years approximately one-third of the national income appears to have been compulsorily saved for capital investment. As a result, even on the questionable assumption that the quality of industrial production of primary commodities is of pre-war standard, personal consumption per head of the population is estimated to be still 5 per cent. below the pre-war level, notwithstanding the large increase shown above in aggregate national production.

The Development of Memel.—An official periodical publication of the Lithuanian Finance Department contained, in its issue of November 10th, an interesting article on the port of Memel. Founded in 1252, five years earlier than Königsberg, this city was dogged for centuries by a series of misfortunes which prevented it from keeping pace with its junior rival. More than once laid waste by fire and sword, it suffered in addition a more permanent handicap in its five hundred years' separation from the Lithuanian hinterland, a separation which was only terminated in 1923. The history of Memel's rise to importance, in part the history of the transformation of Baltic trade, is therefore also largely the history of the development of communication between Memel and its Lithuanian hinterland. Before the war the trade of Memel was thus relatively unimportant. During the war, with the inevitable shift of trade from the ocean to the railways, Memel's connection with her hinterland was greatly improved by the construction, in 1916, of the Klaipėda (Memel)-Prekula and the Pagėiai-Radviliskis lines. During the period of French occupation, in 1920-23, the import trade expanded, but the export of agricultural products, which was later to become so important for Memel, was still mainly carried on through Libau. With the incorporation into Lithuania in 1923 the development of trade with the hinterland began in real earnest; imports expanded more rapidly than exports, but it is confidently anticipated that, as the reorganisation of agriculture proceeds, a substantial agricultural export trade will grow up in place of the timber trade which was formerly the mainstay of Memel but has recently declined. The Finance Department adduces an abundance of statistics in illustration of the growth of the trade of the port. The number of ships entered rose from 694 in 1924 to 980 in 1930, and their registered tonnage from 287,000 to 500,000. Though the average turnover of merchandise trade in 1925-27 was 12 per cent. lower than in 1909-13, the corresponding fall in the turnover of Libau was 74 per cent., and average imports through Memel rose in the same period by

42½ per cent., against a decline of 64 per cent. in those of Libau, so that the relative growth of Memel has been very rapid. In 1927 it enjoyed 29.7 per cent. of the total export trade of Lithuania and 41.85 per cent. of the import trade. The extraordinary severity of the competition of the Vistula ports is, however, signalled by the fact that while the turnover of Königsberg only rose by 37 per cent. between 1924 and 1929 and that of Memel by 61 per cent., the turnovers of Dantzig and Edingen were multiplied fourfold and two thousandfold respectively. The movement southward of the centre of gravity of Baltic trade has, none the less, greatly profited Memel, and a great volume of shipping, including transatlantic passenger lines, enters that port which before the war never entered those waters at all. In consequence, though Memel has lost much of its importance as a timber port, it has made good a claim to the title of the Port of Lithuania.

The Deep-Sea Fisheries.—The returns relating to the deep-sea fisheries in the third quarter of the year show some diminution both in quantity and aggregate first-hand value. Yet, including foreign landings and imports, the supplies of wet fish realised more than £5 millions sterling. The details following are compiled from the statement issued by the Ministry of Agriculture and Fisheries:—

July-September.	Weight in Cwts.		Value.	
	1930.	1931.	1930.	1931.
British caught.				
England and Wales	3,533,414	3,500,008	3,256,325	2,903,080
Scotland	2,358,924	1,926,639	1,602,693	1,278,441
Shetland	...	...	104,694	103,747
Total	5,892,338	5,426,647	4,963,712	4,285,268
Foreign caught	240,996	253,140	295,378	297,868
Imports	244,973	269,534	813,254	762,219

It will be noted that there was a falling off in the quantities of British-caught fish both in England and Wales and Scotland, together nearly half a million cwts. Also a substantial decline in the aggregate realised first hand. Smaller English supplies apparently did nothing to increase the average value during the quarter, that for England and Wales working out at 16s. 7d. per cwt. as against 18s. 4d. per cwt. in the corresponding quarter of last year. In Scotland the reverse was the case, the average being 15s. per cwt., as against 18s. 7½d. The landing of wet fish from the deep-sea fisheries by foreign-owned vessels were slightly heavier, with only a small appreciation in the aggregate sum realised. Imports of wet fish (including herrings from Norway) were more but the value less. In the same period Great Britain exported 125,504 cwts. of wet fish, valued at £207,413, as against 107,588 cwts. and £205,760 in the July-September quarter of last year; also considerable quantities of cured or salted herrings, etc.

Overseas Correspondence.

UNITED STATES.

Industry — International Debts — Congress — Money.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 1.

THE persistent decline in security and commodity markets with the advance of autumn has sapped some of the confidence which had sprung up; but in spite of the obviously unfavourable factors in the situation, hope is still held of trade improvement before the winter is out. The country has seen little of the usual seasonal increase in business. After a mild expansion, the steel industry has again dropped below 30 per cent. of capacity, and railroad freight traffic is falling. The October rise in wheat encouraged farmers who held grain to tighten their grasp, for very little came to market, and thus the paper increase in wealth for the agricultural communities did not become

real. Coal and petroleum production increased this autumn, but unseasonably warm weather until recently has hampered the sale of coal and winter goods. Holiday trade promises to be only fair.

Factory employment has been decreasing since the middle of September, even in woollen mills, where there is usually a seasonal increase. The Federal Reserve Board's index of manufacturing and mining output for October was 74 per cent. of the 1923-25 average, compared with 76 per cent. in the previous month. However, the head of the American Federation of Labor found that his organisation's figures showed the drop in employment for November to be no greater than seasonal, and the same thing was true for October. Nevertheless, he estimated the unemployed at 6,000,000, and thought this figure might rise to 7,500,000 in the next two months.

Railroad net earnings in October, as indicated by reports from a majority of the roads, were about 40 per cent. under a year ago, a somewhat better comparative showing than that for the previous month. Next week railroad labour union leaders will meet in Chicago to decide whether to accede to the request of the railroads for a 10 per cent. cut in wages. There is an even chance they will accept the cut, even though they failed to agree with the railroad executives at the meeting here recently. At any rate, the railroads have served notice on their employees that, failing voluntary reductions soon, they intend to take active steps for lower wages, a process which, if successful, will involve four or five months.

No great surprise was felt here at the news of the Belgian reconsideration of the copper curtailment matter and their acceptance of the compromise offered by American and British interests. It is thought here that Katanga will be allowed to produce for sale approximately 115,000,000 pounds, or 26 per cent. of estimated capacity, that being the percentage which the British and large American producers agreed to take. In addition, it is likely that the Belgians will be allowed to produce 66,000,000 pounds, with provision for holding it off the market, on such terms as would prevent dumping at expiration of the agreement. The way is apparently once more open for further discussion of selling practices for the export association. Dissatisfaction with that phase of the business resulted this week in the withdrawal from the Export Association of the Phelps Dodge Company, which is reported to desire closer adjustment of the Association's price to actual sales made in the domestic market.

At present there are frequently two markets for copper. One is the price at which sales are made by custom smelters who refine for small producers, and the other is the asking price of the large companies. Export price is now fixed on the big producers' asking price, and, consequently, is usually out of line with the actual domestic market. Another proposed change is for the Export Association to handle fire-refined metal as well as electrolytic. It is predicted that Phelps Dodge will rejoin the Association, given Belgian agreement on production and revision of selling rules. Meanwhile an effort is being made to bring small producers into line. Hudson Bay Copper Company and Miami Copper Company, for instance, have not yet agreed to cut in accordance with the latest plan, although Miami was in the 1930 agreement. Hudson Bay, it is understood, is operating at capacity.

Mr Albert H. Wiggin, chairman of the governing board of the Chase National Bank, and Mr Walter Stewart, of Case, Pomeroy and Company, have left for Europe. Wall Street is confident of a favourable outcome to the negotiations on German short-term credits and at least hopeful on the question of reparations. In most quarters here it is still strongly felt that France should be given the lead in the reparations task, and that while the Young Plan should be made to fit new conditions, it should not be scrapped outright. Bankers here have announced a settlement with the German Government, the Reichsbank and the private banks on disputed matters relative to treatment of drafts and acceptances of ninety days' maturity drawn after December 1. Incidentally, repayments under the "standstill" agreement have been larger than permitted withdrawals. Repayments for all countries are estimated at \$250 millions, and it is now believed that

the new agreement will only need to cover \$850 millions. Under the new agreement reached with Germany, American banks are not obliged to accept drafts maturing after the end of February, and may carry such amounts as cash advances. No discrimination will be made in the event of a later settlement against drafts drawn under the present agreement, regardless of maturity. The Gold-diskontbank will extend its guarantee to drafts of ninety days or less accepted by creditor banks before the end of February.

Congress meets next week after more than a year's holiday. Apart from ratification of the German and foreign debt moratorium, its principal task will be to devise a tax and revenue-raising plan to make good the two-billion dollar deficit, which is a certainty for the current fiscal year. The deficit is already in excess of \$800 millions. Higher income taxes are a foregone conclusion; but, in addition, certain forms of luxury taxes are in prospect. Congress is unlikely to tinker with the tariff this session, but it may be asked to make some amendments to the Federal Reserve and the banking acts, and there will, of course, be an attempt to get some new form of farm aid. The close party division is calculated to keep accomplishment low.

Great interest is taken in the Treasury's financing plans for the December 15th tax date, when maturities of \$1,000 millions will have to be met. A long-term issue is not expected, but there is some talk of 1- to 3-year notes. Money conditions have been easier owing to recent gold imports and releases from earmark, along with slack business and lower prices. The gold gain in November was approximately \$105 millions. Money circulation was up \$8 millions last week, but the usual weekly rise at this season is \$50 to \$100 millions. Liquidation in bank loans on securities and in bank investments continues. Reporting member banks of the Reserve system cut their security loans \$37 millions last week, and brokers' loans have dropped further to a new low level around three-quarters of a billion. After reaching a new peak in October, bank failures have diminished rapidly and are now no longer giving much concern. However, the large number of failures has denuded many communities of all banking service. This has compelled people to use currency instead of bank checks for ordinary business transactions and has much to do with the rise in currency circulation. Hoarding alone has by no means been responsible.

GERMANY.

Currency — Foreign Trade — Industry — Politics.
(FROM OUR CORRESPONDENT.)

BERLIN, December 8.

THE strength of the opposition in Germany to any experiment with the currency has been clearly illustrated during the last two weeks by the attitude of the Press to a proposal for the devaluation of the mark. The proposal emanated from a well-known journalist, the chief trade editor of the *Berliner Tageblatt*, Dr. Felix Pinner. Dr. Pinner is opposed, not only to inflation but to imitation of the English example of unlimited depreciation in the external value of the currency. Instead, he proposes that Germany should at one stroke reduce the parity of the mark. He does not advocate the abandonment of the gold standard, but the adoption of a new gold standard on a 20 per cent. lower basis. Despite its cautious form, this proposal has been decisively rejected by all serious financiers and economists in Germany and has encountered severe criticism in the Press. The President of the Bureau of Statistics and head of the Konjunkturinstitut, Professor Wagemann, is also emphatically opposed to any form of devaluation. The danger that a currency once allowed to fall might prove impossible to hold at the desired point is rightly estimated in Germany as exceedingly serious, and the devastating consequences of inflation, for both home conditions and foreign relations, are fully appreciated. No premium on exports would be regarded as compensation, as this rejection of the Pinner proposal once more proves.

How much that means can only be appreciated in the light of the present state of Germany's foreign trade

relations. Until late autumn the German trade balance continued to show increasing export balances, and the October figure constituted a record. Meanwhile, however, a flood tide of protectionism has broken over Europe, and even the tariff increases, detrimental as they are to German exports, are not its worst feature. Their effects are reinforced by exchange depreciation, especially in England, and in many countries, especially those of the north and of the south-east, by exchange regulations, which in many cases have practically the same effect as import prohibitions. According to a publication of the Institut für Konjunkturforschung, exports to Argentina, Egypt, Australia, Bolivia, Brazil, British India, Denmark, Ecuador, Finland, Great Britain, Canada, Mexico, New Zealand, Portugal and Uruguay were hampered by suspension of gold payments, gold export prohibitions or exchange depreciations, and exports to Brazil, Bulgaria, Estonia, Finland, Yugoslavia, Latvia, Austria, Persia, Spain, Czechoslovakia, Turkey and Hungary by the rationing of foreign exchange.

Exchange rationing in most cases means that foreign exchange is provided by the central bank for so-called indispensable exports, and that in consequence the import of finished industrial products, in which Germany is principally interested, gradually has to cease because the exporter receives no payment. In these circumstances the idea is being seriously considered in Germany of establishing with the countries of South-East Europe a sort of exchange clearing arrangement by which the claims of German exporters, as they arise, would be set off against the debts of German importers arising concurrently. An agreement on similar lines has recently been concluded between Germany and Poland. Such a system is likely, however, for practical reasons, to lead to a situation in which imports into a given country are limited by the amount which can be paid for by exports. In trade with South-East Europe that would lead to a great reduction in German exports, as Germany in her trade, for example with Austria, has hitherto had a substantial export surplus. With other South-Eastern States, as for example Roumania and Hungary, equilibrium might perhaps be established, without detriment to the German trade balance, by Germany's importing from these countries grain, especially fodder grain, which she would otherwise have to buy in overseas markets.

The danger of these clearing schemes lies in the fact that if Germany adopts them in her trade with the East she cannot continue to resist their adoption in the West as firmly as she has hitherto done. That, however, would mean that she would also have a balanced trade with those countries with whom she is absolutely obliged to maintain an export surplus, if her balance of payments as a whole is to be maintained. The attainment of these surpluses is of paramount importance not only for Germany but for her commercial and political creditors. Germany will only be able to pay in the measure that she is allowed to export. From this point of view, the destruction of international merchandise trade which is now proceeding everywhere is an unfavourable omen for the success of the reparations and standstill negotiations—or, rather, it is a warning not to expect success from these negotiations alone, but to supplement them by new international agreements on money and merchandise trade and the complex of problems that is involved therewith.

The latest quarterly report of the Institut für Konjunkturforschung gives the following indices of production:—

	Coal.	Rolling Mills.	Ma- chines.	Cement.	Textiles.	Shoes.	China.	Pro- ducers' Goods.	Con- sumers' Goods.
1928 = 100									
1929*	108.3	106.2	100.9	94.5	91.1	103.8	87.4	105.9	93.5
1930	85.4	71.8	88.2	75.5	85.4	80.2	81.6	78.8	84.0
July	90.7	64.9	85.2	82.7	85.9	102.7	73.1	76.1	83.5
September ..	92.3	67.9	86.6	78.2	84.5	108.3	75.3	75.7	84.4
1931	90.2	60.7	54.8	39.0	78.4	78.7	68.0	66.1	70.8
January	79.3	65.5	66.4	48.9	85.6	108.3	61.9	68.6	88.0
April	74.6	63.1	65.2	75.3	86.0	78.8	61.6	66.3	82.1
August	73.5	55.4	61.9	88.2	87.1	81.7	87.7	81.7	74.7
September ..	76.0	60.6	58.0	67.1	87.6	99.7	81.6	84.4	80.0
October	76.7	49.3	...	56.6	...	...	...	...	...

* Monthly average.

In September, 1931, the total index was 66.8 against 78.8 in September, 1930.

At the moment of writing, domestic politics are overshadowed by the anticipation of the new burdens which the emergency decree will impose upon the German taxpayer and on the recipients of wages and salaries. Herr Hitler's reception of foreign Press representatives, and the decision of the National Socialist leader to send Herr Rosenberg, whose views are identical with his own, on a tour of the European capitals as a sort of emissary extraordinary, is a gesture the importance of which has apparently been over-rated abroad. There are no legal means of preventing Herr Hitler from indulging in such gestures: it is not illegal to act as though one were the coming dictator. Other countries ought to realise, however, that this is a trick designed primarily to produce an effect at home—Herr Hitler would like to show that he is taken seriously abroad. There can be no doubt, in spite of the intensification of the danger signals in home politics, that the Brüning Government will remain in power at least until the conclusion of the international negotiations, and longer if the result of the negotiations renders it in any way possible. Even at the Stuttgart election, where the National Socialists have just secured a fresh success by polling double the number of votes they received at the Reichstag elections, they only mustered one-fifth of the electorate, and although their influence in rural sections of the community is stronger, there can be no question of their carrying a majority of the German people, either alone or in combination with the German Nationalists.

AUSTRIA.

Stock Exchange Room — Foreign Trade — Revenue.
(FROM OUR CORRESPONDENT.)

VIENNA, December 7.

FOR the last few days there has been a boom on the Vienna Stock Exchange, and in a very short time many shares have risen as much as 30 per cent. and 40 per cent., and individual shares still more. This movement is all the more remarkable as it is taking place during a period in which most of the share markets of the world are in a state of depression, and the Berlin exchange, which is of the most importance for the Vienna market, has been closed for months. From November 16th to December 4th some of the shares which are known to have registered price increases as follows:—Austrian National Bank from 195 to 261, Alpine Montangesellschaft from 11.50 to 16.95, Gösser Brauerei from 131 to 179.50, Danube Steamship Company from 8.60 to 11, A.E.G. from 9.50 to 15.

The generally accepted explanation of this boom is the desire of the public to have their money placed in some substantial way, as the foreign currency control regulations in the different countries make it impossible to convert the money into foreign means of payment or to invest it in foreign business. It is probable that foreign interests have played an important part in the movement. As the Austrian schilling is being traded in at a discount abroad have registered price increases as follows:—Austrian National Bank from 195 to 261, Alpine Montangesellschaft from 11.50 to 16.95, Gösser Brauerei from 131 to 179.50, Danube Steamship Company from 8.60 to 11, A.E.G. from 9.50 to 15.

There is a strong preference for securities in foreign, especially Czechoslovakian, currencies. The same shares do not by any means show the same tendency in Vienna and in Prague. For instance, during the period mentioned above the shares of the Berg- und Hüttenwerke rose by Sch. 91 in Vienna and by only 25 Czech crowns in Prague (according to the official rate of conversion this amounts to about Sch. 6). Prague iron shares rose by Sch. 45 in Vienna and by Kc. 25 in Prague, and Nordbahn shares by Sch. 370 in Vienna and by only Kc. 250 in Prague. There have even been cases of contrary development; for example, the price of Skoda Works shares rose

by Sch. 38 in Vienna and fell by 30 Czech crowns in Prague. The preference for shares in foreign currency is also illustrated by the fact that the League of Nations loan is quoted at 125, because the coupons are still actually met in dollars. Discount obligations in foreign currencies were also firm. On the other hand, Austrian schilling bonds have depreciated; the Federal Loan of 1930 has fallen from Sch. 85.50 to Sch. 76.10. The Hungarian securities which are dealt in in Vienna are also very firm, though there is no official quotation for these, as the Budapest Stock Exchange is closed. Within the last few weeks, in private dealings, Rima have risen from 21 to 27, Salgo from 23 to 49, Hungarian Coal from 290 to 580, and Hungarian Sugar from 68 to 106 schillings.

The great differences in share prices between Vienna and Prague are partly due to the difficulties placed in the way of share trading. The export of shares of any kind is subject to proof that the securities in question have been brought into Austria at most six months before the date of application for export, and then only for office purposes, for example, for the renewal of the interest sheets. Otherwise, export of shares is in general not permitted.

The obstruction of merchandise traffic in consequence of the foreign currency regulations is still unchanged. Attempts have been made to bridge it by means of clearing treaties with foreign States, and it is said that negotiations will shortly be opened with England with a view to arranging some kind of clearing understanding. The Austrian Parliament has already passed an Act prohibiting the making of payments for import and export purposes between Austria and any country with which such a treaty shall have been made, otherwise than within the clearing agreement. Up to the present only one treaty has been made, and that is with Switzerland. It does not provide for any absolute limitation of exchange of goods, but merely lays it down as a rule that Switzerland may deliver to Austria values amounting to three-quarters of the sum of the values exported by Austria to Switzerland. The remaining 25 per cent. will, however, be used, not to strengthen Austrian holdings of foreign currency, but to meet Austrian financial obligations in Switzerland. The negotiations with Czechoslovakia have so far been abortive, while those with Hungary and Poland may be perfected shortly.

The most difficult part of these negotiations is to check imports. So far, the foreign currency regulations have not caused any great diminution in imports, and the boom in the Austrian coal industry, for instance, seems to be almost over. The Alpine Montangesellschaft, which recently took on 1,000 men, has now given notice to 880. The development of imports also plays an important part in regard to Customs revenues. During the first eleven months of this year Customs duties have amounted to 243 million schillings and have fallen short of estimates by only 11 millions. The drop will be much larger for the whole year, but the fall in imports is partly offset by the increase in duties which was imposed a few months ago.

Every item of the Budget has this year fallen short of the estimates. On the basis of the results from January to October, the year's receipts should be, for example: Excise stamps and legal fees, 114 millions, against an estimate of 119 millions; merchandise turnover tax, 21 millions, against an estimate of 255 million schillings. Direct taxes will yield about 67 million schillings less than was estimated, but it is hoped that the new amolument tax and crisis tax, which are expected to yield 6 million schillings, will help to right matters in the coming year.

There is strong opposition to the latest agreement of the Credit Anstalt with the English creditors, which provides for the nomination of a foreign general manager and political difficulties may ensue. The Government is trying to get the upper hand in these difficulties, and is negotiating with a view to having an Austrian general manager appointed with a foreign director as co-manager. How urgent a solution of the Credit Anstalt problem has become can be seen from the latest report of the Austri-

ational Bank, which shows serious tension. The bill portfolio has risen by 62 millions to the unprecedented high level of 820 million schillings, total circulation has gone up by 68 millions, while the cover has been reduced by 27.3 per cent. In the bill portfolio there are acceptances of the Credit Anstalt amounting to about 600 million schillings.

HUNGARY.

Politics — Budget — Transfer Moratorium — Speculation.

(FROM OUR CORRESPONDENT.)

BUDAPEST, December 7.

THE *Putsch*, planned by a few dangerous hotheads, which was revealed and checked by the police on November 27th, had no connection whatsoever with Legitimist politicians, who are in favour of the reinstallation of the Hapsburg dynasty in Hungary. The Minister of the Interior, speaking in Parliament, rightly called the plotters "desperadoes," who apparently wished to set up a Hungarian Hitler régime, accompanied by looting. After ten days of investigations there is no trace that the plotters had any connection with responsible politicians, neither could they boast an organised following like that of the Nazis in Germany. Though the whole story is not known yet, it seems that its importance had been somewhat exaggerated. This can be explained only by the political uncertainty which has prevailed in Hungary since Count Bethlen resigned.

Parliament is still discussing the League Report on the financial situation of the country. In spite of a six weeks' deluge of oratory, no contribution whatever was made to the real issue; the fundamental fact that the country has been overborrowed from 1927 has been almost totally ignored, and members of all political parties, instead of dealing with the menacing budgetary situation, have lamoured for financial palliatives such as veiled inflation or further borrowing, which, if put into effect, would no doubt ruin what was left from the sound financial structure of the past. In order to preserve the basic financial structure, it is absolutely necessary that current budgetary expenditure should be met from current revenue. Roughly, it is estimated that the first six months will ring in a revenue of 400 million pengö and expenditure will total about 470 million pengö. As the Government has pledged itself to the Financial Committee of the League to reduce the total expenditure of the Administration budget to 890 million pengö, it will be necessary to curtail monthly expenditure in the following six months by 10 million pengö per month. In order to achieve this Count Karolyi will announce shortly what measures the Government has already undertaken and what it further proposes to do. Considering the huge ratio of expenditure on personnel—55 per cent. of the total budget—it is obvious that retrenchment in this category must be forthcoming. Nevertheless, the parties supporting the Government, for petty personal reasons, are obstructing the cutting down of pensions, which would mean a saving of 6 million pengö in the present financial year, and would lower expenditure by 20 millions in a full financial year.

Baron Karolyi, the prospective Finance Minister, went to London to negotiate with the creditors for a suitable standstill agreement and to discuss the terms of the transfer moratorium, which can no longer be postponed, as the National Bank cannot afford to lose from its gold over the 30 million pengö which are necessary to meet the total interest and sinking fund payments due on foreign loans within the next six weeks. It is generally believed here that a transfer moratorium will be declared by the Hungarian Government before Christmas on all foreign obligations, except the interest service of the State loans and the B.I.S. rediscount credit to the National Bank of Hungary. Taking into account the depreciation of the pengö, in which nearly half of Hungary's State debt is contracted, the interest service (without amortisation) of the League Loan of 1924 and the Treasury Bills of 1930 and 1931 amount to approximately 80 million pengö, that the pre-war gold rentes, called the *Caisse Commune*

debts, to 13.5 million pengö, and that of the B.I.S. loan to approximately 10 million pengö—making a total of 53.5 million pengö. As for the rest of Hungary's foreign obligations, short and long term, public and private, a funding agreement will be offered after consultation with the creditors' representatives at an early date. It would be desirable both for Hungary and her creditors to set up a Creditors' Committee, similar to that dealing with frozen German credits, which could deal efficiently with the highly complicated debt situation.

Hungary's ability to pay depends upon what merchandise trade surplus she is able to achieve. Reckoning with a total export of about 500 million pengö in the next twelve months, a merchandise trade surplus of 100 million pengö is the best the country can hope for. The trade situation is becoming worse every day. The clearing agreements upon which the success of all commercial treaties now ultimately depends leave a very meagre, if any, margin in favour of Hungary from which to pay interest on her foreign debts. If Hungary is able in the next six months to meet the interest on her State debts amidst the chaotic condition of foreign trade now prevalent in the Danube Valley, she will have done very well.

The gold pengö experiment, which had worked so well since its introduction in August, did not prove effective enough in the last two weeks to stop an unwarranted rise in stock-market prices which was dangerously inflationary in its character. Consequently the Government was compelled to prohibit dealings in stocks, and newspapers are not allowed to publish quotations of such private dealings as take place in the future. The Hungarian ban on stock-price publications has been issued for precisely the opposite reason to that of Germany. In Berlin and in other German exchanges stocks were quoted very much below the July level, whereas in Hungary gambling—which was, unfortunately, not checked by the banks—brought about a purely inflationary increase of some 50 to 60 per cent.

The old-established banking firm Adolf Kohner and Sons has applied for compulsory composition. Their total liabilities amount to about 15 million pengö and are covered on paper by assets valued at the same figure, but it is very doubtful whether these immobilised assets could be fully realised. A number of British bankers are among the creditors, but no heavy losses need be feared. The liquidation of the firm does not affect the market to any appreciable extent.

HOLLAND.

British Duties — Quota Act — Stock Exchange — New Issues.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, December 9.

THE imposition by England of the import duty of 50 per cent. on an additional list of articles strikes yet another heavy blow at Dutch industries. The Dutch glass industry, in particular, worked principally for the English market, and is now doomed to destruction through the English import duty. The total exports of bottles, etc., from the Netherlands amounted to 1,322,000 guilders in January-October, 1931, as compared with 1,661,000 in the same period of 1930; of these England took 989,000 guilders' worth in 1931 and 1,178,000 guilders' worth in 1930. The *Vereenigde Glasfabrieken*, which had an export quota of 31.3 million bottles in the international bottle-selling syndicate in 1930, and accordingly ranks among the foremost glassworks, is closing down all sections of the factories in the second half of this month. In consequence of the depreciation of sterling, it had already been found necessary to restrict production, so that notice of dismissal had to be given to 550 of the employees; additional discharges will now be entailed by the consequences of the 50 per cent. anti-dumping duties. In January operations will only be resumed in such sections of the works as are necessary for supplying the requirements of the home and the Belgian markets.

A report from the Tilburg woollen fabrics manufacturers states:—"For us the loss of the English market involves a considerable proportion of our turnover, and this applies, generally speaking, to the entire Dutch woollen industry, as Great Britain took fully 40 per cent. of the total exports. In consequence of the severe decline in the value of the English currency, the loss is not only confined to our market in England, but also applies to the other markets to which we have hitherto been exporting, where England, temporarily at least, now has a decided advantage. It is therefore no exaggeration to say that the prospects of that part of our industry which works for the export markets are most precarious. Seeing that increasing protectionism and currency depreciation are keeping out our goods abroad the only possibility of keeping production going at anything like a satisfactory level is provided by the home market. Only 45 per cent. of Netherlands requirements of woollen fabrics is supplied by the home industry, so that there is the possibility of regaining some of the 55 per cent. imported from abroad. This possibility, however, can only be materialised if the Government provides the necessary support by imposing quota measures in good time."

The Dutch leather industry is also menaced, as England takes about 60 per cent. of our production of leather. For our roofing tile industry England is the best customer, and it will hardly be possible to find another outlet. The only hope is, therefore, the retention of the Dutch market for the home industry by means of the restriction of imports. Similar reports have been issued by the bicycle tyre and earthenware industries.

In these circumstances it is not to be wondered at that the Bill for rationing imports was passed unanimously in the Second Chamber this week. This law empowers the Government to fix quotas on the basis of quantity, value or weight; and, maintaining the most-favoured-nation clause, it is to deal with all countries on equal terms. During the discussion of the Bill an amendment was passed requiring all orders issued by the Minister under this quota law to be subsequently ratified by Parliament. Before proceeding to the voting on the quota Bill, the Minister of Labour delivered an address on the economic situation in the Netherlands. According to Mr Verschuur, the situation of trade and industry can, generally speaking, be described as precarious. The state of affairs revealed by the inquiry into the situation on October 1st, the Minister remarked, was *El Dorado* compared with the conditions prevailing to-day. Holland has so far done everything possible to maintain the principles of free trade, the Minister stated. What we have advocated with regard to international trade we have acted upon with complete conviction. So far this country has refrained from retaliation. Now, however, we are being compelled to take measures in self-defence, and in doing so we can only assume the honour of being the last nation to have recourse to measures which, from an international standpoint, can be regarded as wrong. If, by means of this quota scheme, we succeed in alleviating the worst of the blows suffered recently, we shall have to be content. From the outset the object of the Bill has been to limit excessive imports, not by protectionism but by means of quotas. It is important to save the home market as far as possible for the national industries in compensation for the lost outlets abroad. The danger threatening our industry, the Minister said, has to be averted.

On the Amsterdam investment market the tendency last week was extremely weak. The chief reason was the fact that the Minister of Finance did not give notice on December 1st of the earlier redemption of the 6 per cent. Netherlands loan, 1922, which had originally been promised. The Minister had already been given authority to make the bonds for this loan redeemable in March, 1932, and at the same time to conclude a new loan for such amount as was not available for the redemption of this loan. It was considered that 240 million guilders would suffice for this purpose. Many financial institutions which had already counted upon the conversion and had bought the bonds as a purely temporary investment now hastened to liquidate their holdings, and a considerable all-round drop in quotations was the result. The renewed

stream of municipal loans, which at first met with very fair success on the issues market, now proved a disappointment. The disquietude on the bonds market is greater than ever before, and any conversion transaction is totally out of the question.

From the reply of the Minister of Finance to questions in the Second Chamber, it now appears that the Netherlands Bank held £11 millions in sterling balances, and has sold at round 9 and 9.35 guilders to the pound, so that the total loss is about 30 million guilders. For the redemption of the Dutch East Indies sterling loans, the East Indian Government has apparently bought £8½ millions from the Netherlands Bank and £2½ millions from the Java Bank. A Bill has been introduced into Parliament for a new Indies loan of 150 million guilders for the consolidation of floating debt, for which, for the first time, the State of the Netherlands is to give a guarantee. Most of the loan will be marketed abroad; presumably France or possibly Switzerland will be chosen for the purpose.

POLAND.

Frontiers — Bank — Gold Standard — Industry — Agriculture.

(FROM OUR CORRESPONDENT.)

WARSAW, December 8.

PUBLIC opinion has been greatly disturbed over the renewed discussion in the foreign Press—dating from Premier Laval's visit to the United States and the outbreak of Senator Borah—concerning treaty revision and Germany's eastern frontier. This is a subject about which there is no division of opinion in Poland. No matter what other countries think, or what foreign publicists write, all Poles stand very emphatically for existing treaties and frontiers, and they are not in the least doubtful about French support. There is no conceivable pressure that would make Poland voluntarily relinquish her right to the "Corridor" and Polish Upper Silesia. The Foreign Minister, M. Zaleski, will no doubt make this quite clear to British statesmen when he visits London in the near future—if such assurance is necessary.

The statement of the Bank Polski for the end of November shows an increase in gold bullion to 597.7 million zlotys, against 594.0 millions at the end of October and 586.1 millions at the end of September. During the same period foreign exchange holdings serving as cover have declined from 115.8 to 84.4 million zlotys; while *devisen* not serving as cover has declined from 184.1 to 126.5 million zlotys. The total of bills discounted has increased from 634.5 millions on September 30th to 636.0 millions on November 30th, but currency circulation during the same period has been contracted from 1,224.8 to 1,210.9 millions. The gold and gold cover reserve against outstanding currency and sight liabilities was 48.04 per cent. at the close of November, with 42.10 per cent. in actual metal. It is understood that the Bank Polski has adjusted its holdings of *devisen* to allow for the depreciation of sterling, of which the amount owned by the bank was reported to be of minor importance.

There has been no wavering in the Government's determination to maintain the gold standard; nor any development in the situation to indicate that its abandonment may be likely in the near future—desirable as such action might be from the point of view of bacon, coal and other exporting interests which are in direct contact with the British market or British competition in other countries. The financial authorities seem equally determined to avoid the imposition of any restrictions on the movement of foreign exchange. Close attention is undoubtedly being paid to the trade balance, but so long as this continues "active" to the point where adequate exchange is available to meet foreign debt services and commercial debt charges, it is not expected that a general tariff increase or any other form of additional import restriction will be put into effect.

There has been a further sharp decline in industrial output during the past two months, the index of producers

goods compiled by the Institute for Economic Research falling to 81.0 on October 31st. This index is based on a figure of 100.00 for the average of 1925-27. There was undoubtedly a further drop in November. Besides the suspension of building activities for the winter, there has been a very marked decline during the last two months in exports of iron and steel products to the U.S.S.R., on which existing contracts call for execution on a sterling basis. The Upper Silesian mills have suffered heavily because of their acceptance of this business for payment in sterling, but probably nothing like so heavily as the German banks, which have discounted a large volume of these bills during the last two years. Whether or not the Upper Silesian mills intend (or will be able) to complete the execution of their Soviet contracts on a sterling basis is reported to be the subject of discussions now taking place between the Soviet authorities and representatives of the industry; but, in any event, the curtailment in deliveries during the past two months has seriously complicated the industrial situation in Upper Silesia. On the other hand, however, coal orders from the Baltic and Scandinavian countries, payment for which is likewise contracted for in sterling, are being executed promptly, and there has been no diminution in Poland's coal exports because of the depreciation of the pound. But heavy losses are undoubtedly being taken in this connection, despite the further measure of relief which the Government are reported to have granted the coal exporters in the form of lower rates for transport by railway from Upper Silesia to the Baltic seaboard.

Very difficult conditions also prevail in the Lodz textile industry, the spinning and weaving mills having served notice of their intention to shut down entirely from December 15th to January 15th owing to the accumulation of stocks of piece-goods. With the impoverishment of the agricultural community because of low grain and produce prices, the principal market for the products of the Lodz textile industry has been very greatly curtailed. The situation of many of the Lodz mills is believed to be little short of desperate; and, while the Government are supporting two or three of the largest enterprises in order to avoid aggravation of the unemployment problem, the Lodz situation appears to be so badly complicated that the entire available resources of the Government would probably be ineffectual at this stage to save many of the mills, unless there is a speedy improvement in general conditions. The difficulties of the woollen industry, moreover, have been increased by the recent British tariff on clothing and woollen yarn.

The experts are now explaining that Polish agriculture has entered the second phase of the depression represented by low cattle and meat prices. The first phase was low grain prices, with the bottom of that cycle apparently having been reached in the latter part of 1930. Grain price quotations are now substantially higher than they were a year ago, but cattle and meat prices are much lower, as farmers, dissatisfied with low grain prices, have preferred to increase their cattle holdings, employing the grain as feed. In this way, according to the latest animal census figures, the number of pigs increased from 6,047,000 in the middle of 1930 to 7,314,000 one year later; the number of horned cattle likewise increasing from 9,400,000 to 9,782,000. The result during recent weeks has been a catastrophic fall in cattle and meat prices, with the landowners having derived little or no benefit from this year's improvement in grain prices. This improvement, in any event, is more apparent than real, as the present season's rye crop is decidedly below the post-war average. The latest official estimate of grain crops is as follows:—

(In millions of metric quintals.)			
	Average yield 1924-29.	Yield in 1930.	Estimated yield in 1931.
Wheat	17.5	22.4	22.0
Rye	62.3	69.6	56.6
Barley	14.3	14.6	14.7
Oats	23.8	23.5	23.9

As there was no substantial carry-over of grain from previous crops, this year's rye harvest will not be sufficient for domestic needs until the next crop is gathered. A small amount of wheat may also have to

be imported, but barley and oats will be more than adequate. Reports are current that the Government are negotiating for the purchase of a substantial quantity of rye from the U.S.S.R., and it is officially admitted that small amounts of grain have recently been purchased abroad in order to meet certain export commitments. The diminishing use of fertilisers by the peasants, their inability to obtain adequate credits, and the increasing difficulty which is being experienced in arranging for the purchase of tools and implements, all point towards a further curtailment in grain production next year.

SWEDEN.

Fluctuating Crown — Effects on Trade.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, December 5.

Has the rockbottom level for the Swedish crown been reached? Affairs are in a state of flux and it is too early for this question to be answered with any certainty. It can only be stated that this should approximately be the case so long as the depreciation of other paper currencies and, in particular, sterling, does not continue to a more pronounced degree and that the tariff war now commenced does not assume too desperate forms. It can scarcely, however, be contested that the present circumstances have been utilised to the breaking point by speculators. When it was not thought possible to drive the crown any further in a downward direction, the sellers came into the market, both those who purchased currencies as a speculation and those who accumulated export currencies. It would, however, appear wise not to count on any considerable degree of stability for the Swedish crown for the time being. The first days of the present week have shown this clearly, the crown having again followed sterling in its new downhill march, although naturally in this connection the special requirements at the end of the month have played a part. Apart from these factors, however, the fluctuations must be greater than normally so long as the State Bank lacks means of balancing the stresses and the supply of currencies in the market is comparatively limited.

It is, however, manifest that the market cannot actually be so bare of currencies as at one time appeared to be the case. It may be worth bearing in mind that the export figure for October is a record for the year, that capital movements have recently resulted in an import of capital and that our short-term liabilities towards places abroad have now been reduced to insignificance. With regard to the first-mentioned of these factors, October certainly brought a surplus of imports of 22 million crowns, whilst last year it did not exceed 15 million crowns, and the norm for the month has been a surplus of exports of nearly 10 million crowns during the last few years. It must, however, be remembered that the effect of the currency depreciation in stimulating exports and curbing imports can only be expected to reveal itself slowly. In fact the temporary effect upon the balance of trade may even be in the opposite direction. As, moreover, the surplus of imports for the first ten months of the year amounted to Kr. 278,000,000, it therefore appears by no means out of the question that the result for the whole year will be a balance on the import side of about 300 million crowns, as against 250,000 crowns last year.

With a reservation as to the effect which the new trade policy in Europe may have, it may be said that the change for the worse in the balance of payments should not be so large as that shown by the figures of visible trade. As mentioned above, the movements of capital have taken quite a different course from last year. No accurate statistics are available, but the tendency may be said to be indicated pretty well by the monthly figures published by the Inspectorate of Banks. For the first three quarters of 1931, these gave a net import of capital of four million crowns, compared with a surplus of exports for the same period of the previous year of 89 million crowns, and for October the net import amounted to

11 million crowns, which means that the first ten months of the year brought an import of capital of 15 million crowns net, whilst the corresponding figure last year showed an export of capital of 94 million crowns net. It is possible that net shipping earnings for 1931 will be considerably smaller than that for 1931. This does not prevent the balance of payments for 1931 showing a considerably lesser change for the worse than that for 1930.

Output statistics for our most important industries during October show that production has been strikingly uneven. Changes as compared with September indicate a reduction in employment and which in many cases is very pronounced. Last year, the production index of *Svensk Finanstidning* fell from 127 in September to 126 in October (1923-24 = 100), but in such a typically boom year as 1927 a decline took place from 117 to 110. It can therefore scarcely be said that the fall from 114 to 110 last month is particularly remarkable, but the figures give little guidance in forming a judgment as to the general position of affairs.

The labour statistics for the month of October have a clearer meaning. The average figure for the number of applicants for work per 100 vacancies at the public labour bureau rose from 197 in September to 257. It is true that the supply of labour in Sweden is always liable to seasonal fluctuations. The change for the worse which has now taken place cannot, however, be regarded as purely seasonal, as October figures for previous years (with the exception of those for 1921) were considerably better than those for the present year. Last October, for instance, the figure only rose from 146 to 175. Even more instructive are the particulars relative to the number of people employed at the reserve works of the Unemployment Commission. This number rose during the month from 6,700 to 7,200, whilst the corresponding number for a year ago was 2,100. The number of unemployed seeking assistance was, at the beginning of October 40,400, as compared with 35,700 one month earlier and only 8,600 a year ago. It is possible that this, compared with the majority of other countries, is still relatively a very low figure. The unemployment problem is, nevertheless, most serious, the more so because the uncertainty in the currency situation has so far rendered impossible any settlement of the number of important working agreements which are due to expire at the end of the year. The uncertainty created for industry by currency instability is the most serious aspect of the situation.

NORWAY.

Krone Fluctuations — Gold Standard — Stocks.

(FROM OUR CORRESPONDENT.)

TRONDHEIM, December 7.

THE fluctuations of the krone, in relation to the pound as well as to other currencies, have again attracted special interest during the last two weeks. When, during the earlier part of November, the sterling rate was gradually raised from 17.50 to 18.15, it was the general belief that it was intended to maintain this level, which differs from gold parity by 3 points only. However, this rate by no means corresponded to the international value of the krone, and, after a few days of stability, this intention had to be given up. The result was a violent rise of the sterling rate, from 18.15 on November 23rd to 18.70 the next day, followed by a further rise to 18.85 on November 25th. At the same time dollars rose from 4.85 to 5.12, and the other currencies, with the exception of Swedish and Danish kroner, followed suit. Since then sterling has been extremely erratic, the rate being down to 17.70 on December 2nd, while dollars, guilders and other gold currencies have been moving steadily against us.

To Norway, some of whose most vital interests are closely tied to the pound, these fluctuations are most unpleasant, and have caused uneasiness in business circles. The regulations that have been introduced by voluntary arrangement between exporters, importers and bankers are now being put into operation, but obviously their effects

of these measures will not make themselves felt for some time to come. Meanwhile there does not seem to be much that can be done to bring about an improvement of the situation, which is clearly not an outcome of internal conditions in Norway, but a reflection of the general state of affairs all over the world.

With regard to the future of the krone, a subject which has been freely discussed, not without very definite intentions in certain quarters, the Premier recently expressed his opinion in an interview. The gist of his remarks was that the suspension of the gold standard has rather aggravated than improved conditions in the country, and the conclusion drawn in financial circles seems to be that a return to the gold standard is not altogether out of the question.

On account of the heavy rise of the dollar rate, Norwegian dollar bonds have appreciated in a marked degree, while ordinary Government stocks have declined. Shipping shares have been weaker, on account of the numerous restrictions and regulations with regard to international trade, while industrials have been erratic. The report of the Norsk Hydro was published some time ago, showing a heavy contraction of net profits, and the De-No-Fa annual report appeared on Saturday last, likewise evidencing the serious effects of the world depression. It is proposed that the capital of the company, now amounting to 13 million kroner, be written down to 6.5 million kroner.

JAPAN.

Money — Foreign Trade — Crops — Prices — Shipping.

(FROM OUR CORRESPONDENT.)

TOKYO, November 18.

THE attention of the nation is divided between the large gold exports and the Manchurian troubles. The outflow of gold from Japan, which set in after the British suspension of the gold standard, is progressing on a disquietingly large scale, and Japan has lost 204.5 million yen of gold during the past eight weeks. Despite the Government's repeated announcements that Japan will maintain the gold standard, the purchase of foreign bills by Japanese nationals is not proving easy to check. A further 30 million yen of gold shipments is scheduled during the current month. In order to check the gold efflux, the Bank of Japan, on November 5th, again raised its official minimum rate to 6.57 per cent. from 5.84 per cent., to which it had been raised just a month ago. The last bank return records several wide changes. As compared with the last week of September, gold losses amount to 191.6 million yen, and the bank's gold holdings at 626 millions are the lowest since November, 1917. But the note circulation has decreased by only 49.2 millions, and the fiduciary issue has expanded from 170.6 millions to 313 millions. Bankers' deposits are 81 millions lower, while discounts and advances have risen by 52.2 millions. The reserve ratio of gold to outside liabilities has fallen from 57 per cent. to 43 per cent.

The huge gold efflux has naturally caused monetary stringency. Short loans are only available at rates running up to 5½ per cent., and discount rates are up to 6½ per cent. On Friday last week the Tokyo clearing banks' committee agreed upon an increase of the deposit rate by ½ per cent. as from December 1st, but they were still unable to arrive at an agreement with the Osaka and Nagoya bankers in respect of the time and rate of the advance.

The foreign trade returns for October recorded a further heavy decline in the value of both imports and exports compared with October last year. Imports were valued at 77,278,000 yen, a decrease of 25,243,000 yen; while exports by 97,798,000 yen declined by 30,714,000 yen. Omitting the movements of gold bullion, the export balance of trade was 20,520,000 yen, against 25,991,000 yen in October, 1930. Imports were not only the smallest so far this year, but the lowest for any month since August, 1917; while exports were the lowest for any October since 1915. The decline in imports is accounted

for chiefly by raw cotton, sugar, rice and oils; while, on the other hand, cotton piece-goods, refined sugar, marine products, wheat flour, silk piece-goods and paper are largely responsible for the decrease in exports. The decreased Chinese takings are well reflected on the marked contraction in these export items. Among others, cotton piece-goods exports to China shrank to only 8,552,000 square yards, as against 22,930,000 square yards in September and 31,546,000 square yards in October, 1930.

Crop conditions deteriorated during October as a result of the unfavourable weather prevailing in the ripening period. The second official forecast placed this year's rice crop at 55,028,000 koku, or a decrease of a little more than 5 per cent. upon the previous estimate, and of 17.7 per cent. upon the actual yield of last year. The Korean crop also was reported to be poor. The crop in the peninsula was put at 15,911,000 koku, a decrease of 17 per cent. upon the actual yield of 1930. Taking arrivals from Korea and Formosa into account, supplies for home consumption are estimated to fall short by 5.2 million koku, which will be imported in the course of the next twelve months. Rice, however, did not react to the official crop report, and was quoted at far below the "official standard price." The Farm Board decided to continue the duty on rice for another year and to purchase another million koku.

Commodity prices are still falling with undiminished severity. The Bank of Japan's wholesale index number for October registered a further sharp drop of fractionally above 1½ per cent. on the month, and is now 10½ per cent. lower than a year ago. Thirty-one articles out of fifty-six participated in the decline. There was a further general downward movement in the quotations for cereals and textile materials.

Shipping is the worst sufferer from the Chinese boycott and the British suspension of the gold standard. At the middle of November the idle shipping in this country amounted to an unprecedented figure of 420,000 net tons, as compared with 290,000 net tons at the middle of October and 248,000 net tons a year ago. The seasonal inactivity in chartering has driven a number of ocean-going vessels into coastwise services, and competition in home waters is now rather acute.

NEW ZEALAND.

Political Coalition — Supplementary Budget — Reduced Borrowing — Arbitration Reform — Trade.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH, October 14.

SIGNIFICANT political changes have occurred since the presentation of the Budget on July 30th last. The debate on the Budget was interrupted by the decision to set up a Special Economic Committee to explore the general financial situation. The Committee included three members from the United Government Party, three Reform, three Labour, and one Independent member, under the chairmanship of the Prime Minister. Evidence was taken from representatives of farming, trade, industry, finance and from economists. Meantime, Parliament continued to meet, but little was done pending the report of the Committee. After some weeks, however, a Coalition Government of the United and Reform Parties was agreed upon. The United Ministers resigned, and a new Cabinet was appointed under the leadership of the United Prime Minister, the Rt. Hon. G. W. Forbes, consisting of five United and five Reform Ministers. The Rt. Hon. J. G. Coates, leader of the Reform Party, became Minister of Public Works and Unemployment, and the Hon. W. Downie Stewart resumed the portfolios of Finance and Customs which he had held under the Reform Government.

No report has been presented by the Economic Committee, but it is generally believed that no agreement was practicable between the Labour members and other parties on the Committee, and that the new Coalition has been formed to give effect to the views of the United and Reform members. A supplementary Budget, which may be taken to embody these views, was presented by the

Finance Minister on October 6th. Revision of the Budget, it was stated, was made necessary by the fact that, on account of changing conditions, it had been impossible to secure reliable estimates of revenue. The Minister's statement reviewed the Budget presented last July, which anticipated and attempted to cover a prospective deficit of £6,850,000, and which was based mainly on figures up to March 31st, the end of the financial year. Returns for the first half of 1931-32 showed Customs duties to be £750,000 below the estimates, and indicate the probability of further declines in death duties, land revenue and interest on railway capital. The supplementary Budget estimated that the decreased yield from these sources would bring revenue £1,250,000 below the estimates of last July. In addition, relief to farmers (abolition of graduated land tax, £320,000, and subsidy on purchase of fertilisers, £100,000) and to hospitals (£75,000 additional subsidy), less certain exchange profits and interest savings, brought the total estimated deficit up to £1,595,000. This is to be met by further economies yielding £400,000 during the remainder of the present year (and £1,000,000 in a full year), by drawing on reserves for £350,000; by additional Customs duties, £240,000 (mainly 2d. a gallon extra on petrol and heavier tobacco duties); and additional income tax, £550,000. After making these adjustments, revenue for the complete year is estimated at £24,666,000, and expenditure at £24,540,000, leaving a surplus of £126,000.

Both the Coalition Government and the Supplementary Budget have been well received. It is known that unorthodox proposals, for compulsory reduction of all interest on public debt held locally, on mortgages, etc., and for further depreciation of exchange rates, were submitted to the Economic Committee, but these have been firmly rejected, and the Finance Minister has followed orthodox lines in balancing the Budget, mainly by reduction of expenditure and increases of revenue. Reserves are drawn on because it is thought that the depression for the time being is so severe as to justify using emergency funds, which may be repaid when revenue recovers.

Two radical changes are indicated in the statement. The graduated land tax, which is supposed to discourage the holding of large estates, and which has been part of New Zealand's taxation for forty years, has been twice condemned by recent taxation commissions, and is now abolished. In its place is a flat rate of 1d. in the £ on unimproved value, and farmers are to pay income tax, subject to the usual exemptions. It is announced, too, that the Compulsory Arbitration system, which has been in operation since 1894, is to be modified so as to provide for compulsory conciliation and optional arbitration, as recommended by the employers' delegation to the 1928 Industrial Conference. Details of the proposed modification are not yet known, but it may mean the end of compulsory arbitration in industrial disputes for New Zealand.

A further indication that the Government is determined upon sounder financial policy is found in the adoption by Parliament, by a large majority and despite strenuous opposition, of the Report of the Railway Board on Railway Construction. Legislation was passed last session to remove railway administration from political control, and a Railway Board of six members was appointed to undertake the management of railway operation from April 1st last. It was also empowered to report to Parliament on new railway construction. A heavy cut was made in the railway building programme some time ago. Now the Board has reviewed all the new lines under construction, estimated to cost over £12,000,000, of which almost half has been spent, and has recommended in each case that, as further additions must add to the already heavy losses on the railways, construction work should be stopped at once. The adoption of the Report means the cessation of uneconomic railway building and the cessation of overseas borrowing for new railways. The Minister of Finance announces also that no new funds are to be raised this year for State advances, which must be limited to the funds coming in from repayments of mortgages. Consequently the Government's needs for new loan money will be reduced very substantially.

These changes in policy are mainly the result of the difficult economic situation. Comparing the first eight

months of each year, exports were valued at £25,600,000 in 1931, against £43,000,000 in 1929, while imports have declined to £17,000,000 in 1931 from £31,200,000 in 1929. Export prices for the whole of last season were below 1914 levels; internal prices and costs of production, though falling slowly, are still about 40 per cent. above that level. Farmers have suffered heavy losses, and their depression has been passed on to the sheltered industries. Unemployment is severe, and is costing the Government about £2,500,000 for relief work. Meanwhile Government revenue, and particularly customs revenue, has fallen heavily, and taxpayers are protesting against their burdens. It was generally agreed that the situation was serious enough to demand a strong Government to deal effectively with national finance, and the measures adopted, though they imposed greater burdens on income-tax payers, particularly on unearned incomes, and upon motorists, are accepted as probably the best practicable under the circumstances.

It is possible that New Zealand possesses the optimism of youth, but it is widely believed that the present heavy taxation will not be long necessary, and that the clouds of depression are destined soon to lift. This feeling of optimism has been strengthened by Britain's suspension of the gold standard, for New Zealand's currency is closely linked with that of Britain's through the sterling exchange standard that has long been in operation, and prices received for primary products exported have already risen appreciably. A recovery of export prices during the coming season would probably stimulate a large volume of exports, and be followed by rapid expansion of imports and a recovery of buoyancy in Government revenue.

ARGENTINA.

Business Situation — Money — Restrictive Policy.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, November 21.

TRANQUILLITY and order throughout the Republic characterised the General Elections, but although a fortnight has elapsed, final results are not yet obtainable, as the scrutiny under the system of proportional representation takes time. It is nevertheless clear that although General Justo—who may be regarded as likely to carry on the policy that has been followed by the actual provisional Government—will probably be the future President, the Social Democrats will form a strong and, it is to be hoped, an effective opposition in Congress. Effective in the sense that a check will thereby be established on a tendency to ultra-protectionism and accentuated nationalism increasingly in evidence during the last few months.

The balance of trade is now in favour of Argentina, and although this does not mean that the balance of payments has been wholly righted, seeing that the principal invisible imports are constant, even the balance of payments is coming nearer to an equilibrium. Remittances abroad are necessarily reduced by quiet trade and unfavourable exchanges, while debt services have been met with unfailing regularity. Exchange control continues and, though its pros and cons are debated in the Press, a consensus of opinion holds that it has hitherto proved serviceable and that it will perforce be removed if good crops and a fair demand for Argentine produce generally marks the 1931-32 export season. All cereal prices have fallen during November, the latest quotations being \$6.95 paper per 100 kilos. for spot wheat, \$4.90 for maize, \$10.40 for linseed, and \$6.10 for oats. This is roughly a drop of 90 cents to \$1 as compared with the end of October, and, taken in conjunction with the lower quotation for cattle bought by the freezers, explains the local reaction from the obviously excessive optimism that prevailed a month ago.

The general situation is nevertheless healthier than it has been, thanks to enforced economy in all quarters, and it is significant that the reduction of railway wages has been accepted without protest on the part of the unions. Financially, also, the outlook may be considered satisfactory, though the demand for funds wherewith to lift the crops will almost certainly bring about higher rates than

those of 7 to 8 per cent. per annum now ruling. The latest statistics of the Ministry of Finance show that bank deposits are falling, a normal consequence of reduced trade and unemployment, while it is also clear that substantial recourse to the faculty of re-discount must be had between now and the end of the year. Fiscal receipts for the first ten months are \$225,513,771 paper, as against \$247,304,886 for the same period last year, nor can the additional dues recently imposed be expected to make up the difference in what remains of the current year. A spell of dear money is therefore indicated, while the continued limitation of imports, at a time when exports promise to move freely, may be expected to improve the quotation of the Argentine peso, now at 37½d. London and 170 New York, banks' cable drawing rates. The fear of a flight from the peso is believed in many quarters to have been somewhat exaggerated, and the steady improvement in the quotation for national bonds and the cédulas of the National Mortgage Bank must be regarded as a healthy symptom.

Less satisfactory is the apparent indifference of the Argentine in general to the unfavourable position in which foreign investments here stand to-day, their returns being reduced to a level that is almost without precedent. More especially does this apply to transport interests, particularly hard hit by exchange depreciation inasmuch as they collect their freight and passage money in pesos and incur the bulk of their expenditure in foreign currencies. From an external standpoint, improvement in exchange is not only eminently desirable to private interests, but is the one thing calculated to restore general belief in Argentina's immediate prospects.

A policy of restriction and limitation of trade, based on motives of economy, can be carried too far, and the fact that immigration during the first ten months of 1931 only totalled 47,308 persons as against 94,041 last year, is not a healthy sign for a vast and fertile country, however temporarily beneficial it may be to local labour. The sharp rise in the price of all imported goods, which carries with it an almost equivalent increase in the price of similar articles made locally, may also prove a source of trouble in the near future. It is, however, hoped that when Congress assembles the whole question of duties and revenue production will be examined without delay. At present there is a feeling of expectancy in the air, optimistic rather than the reverse, but, pending political certitude, new business enterprise is inclined to hold back until more is known of the state of the harvest, the world demand for Argentine produce, and the financial policy to be adopted by the coming Government.

Letters to the Editor.

CURRENCY DEPRECIATION AND EXPORTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is so much loose and dangerous optimism about the benefits to be obtained in industry from depreciation of our currency that I consider the point raised by Mr Strakosch in his letter published in your issue of December 5th cannot be too often mentioned.

In your comment on this letter you speak of the tendency of extreme currency depreciation to deplete industrial capital. I

"INVESTMENT" AND "THE COURSE OF THE COMING BOOM"

by
L. L. B. ANGAS

The first general reaction in the market, which was forecast in "The Course of the Coming Boom," published on September 21st, has now occurred. A further upswing is now indicated.

The above two books, which are recognised as authoritative text books on the subject, explain the action to be followed by investors with a view to maximum capital appreciation in the course of the rising half of this trade cycle.

"Investment": Macmillan & Co., St. Martin's Street, W.C.2. 6s.
"The Course of the Coming Boom":
St. Clements Press, Portugal Street, W.C.2. 5s.

THE BIRMINGHAM BUREAU OF RESEARCH ON RUSSIAN ECONOMIC CONDITIONS

attached to the Russian Department of the UNIVERSITY OF BIRMINGHAM is issuing a series of MEMORANDA on Vital Issues in the Russia of To-day. The cost of the Service is 8/6 and includes four to six Memoranda per annum. Copies are not sold separately. Cheques should be made payable to the "Birmingham Bureau of Research," and all communications addressed to the Secretary, Russian Department, The University, Birmingham.

The following Memoranda have already appeared:
 May 1931. No. 1. Remarks on the Five Year Plan.
 July 1931. No. 2. The Foreign Trade of the U.S.S.R.
 November 1931. No. 3. The National Income of the U.S.S.R.
 A Fourth Memorandum will be issued in January 1932.

think, for the reasons given below, it would have been better to ascribe this result to all but relatively slight currency depreciation.

Industries benefit from currency depreciation at the expense of the rest of the community in inverse ratio to the proportion of working capital which they require. The heavy industries benefit more, and the finishing industries, which work on large stocks of partly manufactured goods carried on bank credits, benefit less. The finishing industries, which work up imported materials, benefit least of all.

Even with careful management, the finishing industries are likely to find themselves embarrassed by shortage of working capital, owing to the greater sums required to carry work in process so soon as prices begin to rise; but the danger of such embarrassment is multiplied many times by the tendency of suppliers to overlook the elementary fact that any sale at less than replacement value, while providing a tempting book profit, really represents a gift to the purchaser. In the case of a home sale, this is a loss merely to the manufacturer; in the case of a sale abroad, it represents a loss to the community at a time when national resources ought to be husbanded.

In Germany, in the later stages of their currency depreciation, this phenomenon became so marked that even the popular press noticed it and an outcry arose against the "selling up" (Ausverkauf) of Germany. Anyone who crossed the Swiss-German frontier in 1923 will have bitter memories of the rigorous customs examinations both at the last German and the first Swiss station. I myself had all the trouble in the world to persuade a German official that a freshly laundered dress shirt which I had owned for ten years was not newly bought in Germany and therefore subject to the prevailing export prohibition. But the case of Germany in 1923 is different only in degree from that of a country which, like ourselves, is looking forward to "enjoying" the benefits of currency depreciation.

The inevitable tendency of depreciation is to make certain classes of industry more dependent on the banks. The increasing influence of German banks in German industry has, I believe, been a feature of post-war years, and I venture to hazard the suggestion that shortage of working capital owing to inflation has been one of the numerous causes.

The process, however, goes further. The decline in the purchasing power of the fund of deposits out of which banks provide working capital lessens their capacity to help just when help is most needed, and two further consequences ensue, both of which have been most marked in Germany, namely, dear money and increased dependence on foreign credit. I do not think enough attention has been paid to the fact that one of the major causes of Germany's present distresses is the wiping out of the savings of her middle classes, which rendered it necessary for her industry to be financed from abroad, either indirectly through her banks or by direct foreign investment in German businesses. This process was accelerated by the "bargain-hunting" of enterprising foreign capitalists who thought they could get good businesses cheap, but it was inherent in the situation and inevitable.

The optimists among us say that if only we can get cheap money, we can look forward in due course to a boom in industry, and particularly in our exporting industries. In Germany currency depreciation led to years of very dear money and to partial prohibition of exports. It is true that Germany drained to the very dregs the cup which we are sipping, but the conclusion surely is that currency depreciation is far more likely to leave the country concerned burdened with a high bank rate and heavy obligations to foreign banks and capitalists than to put it in a privileged position among industrial States—Yours faithfully,
 GEOFFREY TOULMIN.
 Hampstead.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue].
 (It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Gladstone as Financier and Economist. By Francis W. Hirst. With an Introduction by Henry Neville Gladstone. (London) Ernest Benn, Ltd., 154, Fleet Street. 15s. net.

Mr Hirst's attractive style and analytical ability present readers with a new and pleasant opportunity to examine Gladstonian policy, and there is much in the book which is worthy of the close attention of those who are grappling with modern financial problems.

The Bank of England from Within, 1694-1900. By W. Marston Acres. In two volumes. (London) Oxford University Press, Warwick Square. 30s. net.

An intimate account, based principally upon the documents in the possession of the Bank. The author's object, as stated in the preface, has been to subordinate financial matters "to the main purpose of bringing into prominence the human element in the Bank's history," but in doing so he has by no means detracted from its interest to the economist. The book is beautifully printed and illustrated.

Behind the Scenes of International Finance. By Paul Einzig. (London) Macmillan and Company, Ltd., St. Martin's Street. 7s. 6d. net.

The thesis is that the present international crisis is largely due to the financial weapons adopted by France for the purpose of acquiring political hegemony in Europe.

Property. By Ernest Beaglehole. (London) George Allen and Unwin, Ltd., 40, Museum Street. 10s. 6d. net.

A study of the psychological basis of the institution of property which should be of interest to the general reader as well as to the student.

The Banker, December, 1931. (London) Financial Newspaper Proprietors, Ltd., 20, Bishopsgate. 2s. 6d.

Includes, *inter alia*, the inaugural address of the President of the Institute of Bankers, and editorial articles on "The Government's Tasks" and "The Standstill Agreement and Reparations."

The Bankers' Magazine, December, 1931. (London) Waterlow and Sons, Ltd., London Wall. 2s. 6d. net.

Includes a reprint of the inaugural address of the President of the Institute of Bankers, and also addresses by Mr Beaumont Pease and Sir Ernest Benn on "The Financial Outlook" and "Public Economy" respectively.

Dr. EINZIG'S NEW BOOK BEHIND THE SCENES OF INTERNATIONAL FINANCE

This work discloses the aims, methods, and consequences of recent French financial policy. 7s. 6d. net.

"Dr. Einzig presents a case which makes a remarkably convincing story."—*Morning Post*.

MACMILLAN & CO. LTD. LONDON

The Stock Exchange:

HOLDING COMPANY FINANCE.

If only for its flexibility, British company law deserves the Gilbertian Lord Chancellor's encomium as the embodiment of everything that is excellent. Its further claim, however, to have "no kind of fault or flaw" can scarcely be substantiated, in view of the conclusions reached by Sir Gilbert Garnsey in the latest edition of his classic work on "Holding Companies."* Sir Gilbert is a foremost authority on this type of concern, whose importance has increased in recent years, *pari passu* with the growth in the size of the average unit of industrial production.

Up to three years ago holding companies had no specific legal recognition. The Departmental Committee on Company Law Amendment, whose report was published in May, 1926 (which incidentally recommended that all companies, for the first time, should be under a direct statutory obligation to keep proper books), declared that holding companies should be distinguished from non-holding concerns, suggested a definition, and recommended the addition to the balance sheet of a certificate by the directors, stating how the aggregate profits and losses of subsidiary companies had been dealt with. The new Companies' Act, 1929, embodies these provisions. British shareholders will learn, therefore, with the greater dismay, that the results of Sir Gilbert Garnsey's exhaustive survey, reinforced by the advice of eminent counsel, is the statement that the law, in its new form, "has preserved to a considerable extent the opportunities of avoiding a clear presentation of the true position which existed before the Companies Act, 1929, came into operation."

To describe this state of affairs as regrettable is a serious understatement. The holding company is an ingenious financial and legal device, which enables effective amalgamation and "rationalisation" to be brought about without the loss, on the part of the constituent companies, of their separate *ego*—which means, in the business world, their names, goodwill and established reputation. It enables any group of companies to exploit the advantages of new organisation without relinquishing any intangible assets attaching to the old regime. It has penetrated every branch of industry, and scarcely a single large British concern exists to-day which is not a holding company. Highly complex industrial reconstructions, like the Vickers-Armstrong arrangements, have been enormously helped by resort to it. In short, the holding concern appears destined to be the paramount form of company organisation of the future, and it is the duty of all concerned—Parliament, the law, accountants, directors, investors, and the Stock Exchange—to ensure that it is exploited and regulated in the best interests of the community.

A disadvantage of the holding company, from the investor's point of view, is that it interposes a screen, which may be transparent or extremely opaque, between a group's capital ownership and its actual trading operations. Shareholders are not necessarily informed as to the assets, liabilities or earnings of the subsidiaries which carry on a group's business, but only their financial relations with the holding company. To the extent that the two fail to coincide, an undesirable state of affairs may ensue. How greatly the worth of holding company shares depends on the fortunes of subsidiary concerns is strikingly revealed by the table in the next column, in which we show the proportion of "subsidiary" items to total balance-sheet assets in the case of fourteen large British industrial concerns.

* "Holding Companies and their Published Accounts." By Sir Gilbert Garnsey, K.B.E., F.C.A. Second edition, 1931. (London) Gee and Co. (Publishers), Ltd. 15s.

* At or under cost or as revalued on basis of earning capacity on liquidation of Nobel Industries in 1928.
 † Including advances.

In nine instances, "subsidiary" entries account for over two-thirds of the balance-sheet total. In five cases, the proportion is over three-fourths. Taking the fourteen companies as a whole, investments in subsidiaries and associated companies account for £226 millions, and amounts loaned to subsidiaries (after deducting amounts loaned by them to the holding concern), for £26 millions, out of total balance-sheet assets of £342½ millions. In other words, these companies must stand or fall by the fate of an unknown number of other companies, whose identity, status and condition are hidden in one or two "omnibus" items, representing over 73 per cent., on the average, of each parent company's assets.

What, then, are the provisions made by British Law for publicity regarding the trading affairs of a group, as distinguished from those of its titular head? The answer is disquieting. Sir Gilbert Garnsey's survey suggests that legal provision for disclosure may be rendered largely nugatory by the interposition of one or more secondary holding concerns between the main company and its trading subsidiaries, since the Companies Act does not cover "sub-subsidiaries." A recent example gives point to this contention. When the Gramophone Company and Columbia Graphophone were separate concerns, both were required to state, *inter alia*, how and to what extent provision had been made for any losses of their subsidiary companies, and how far such losses had been taken into account in arriving at their own profit-and-loss statements. Both concerns are now owned by a new holding company, Electric and Musical Industries, which has converted them into private companies. Henceforth, under the Companies Act, the only "subsidiaries" of the new company are Gramophone and Columbia, and investors have no means of learning whether any of the sub-subsidiaries—which actually carry on the lion's share of the combine's trading operations—have made losses. This is highly regrettable, in view of the recent fall in the combine's earning power, to which reference was made on page 1085 of last week's *Economist*.

The Companies Act, in fact, makes provision for the disclosure of the following items in a holding company's legal accounts:—(a) Shares in subsidiary companies; (b) amounts owing from subsidiary companies; (c) amounts owing to subsidiaries; (d) a statement in regard to sub-

subsidiary company results (which does not include disclosure of the actual profits or losses made by any subsidiary); (e) qualifications in the reports of auditors on subsidiary company balance sheets; (f) a statement whenever information regarding subsidiaries is unavailable; and (g) particulars of directors' remuneration in respect of subsidiaries. The law, it will be seen, makes no provision for the publication of consolidated accounts, which treat the subsidiaries as branches of the main business.

Sir Gilbert Garnsey endeavours to do justice to such "advantages" as exist in the present state of the law, which results, e.g., in the setting out of the assets against which alone investors and creditors have a right to proceed, and the avoidance of the "risk" of giving too much information to competitors. The last contention, however, has been the excuse for any and every degree of obscurantism since the company world began, and Sir Gilbert is much more convincing when he proceeds coldly and mercilessly to analyse the defects of the present system. An investor may have a wholly inadequate idea of the assets behind his shares, if a holding company allows profits to accumulate in the hands of its subsidiaries (which pay only small dividends) and fulfils its legal obligations by a statement that "subsidiary profits have been taken into account only to the extent of dividends declared." Again, according to eminent counsel, the holding company's statutory declaration need cover only subsidiary results for a particular year, so that if the accumulated losses of subsidiaries leave the combine as a whole with an adverse balance, there is no obligation to disclose it. Further, if one or more subsidiaries make a loss bringing the whole business to the verge of liquidation, the holding company directors may declare nothing more than that "one or more subsidiaries have incurred a loss which has been carried forward in their accounts and not dealt with in those of the holding company." Finally, the law makes no provision for the writing down of shares in subsidiaries whose assets have deteriorated, as a result of losses, since the shares were acquired.

Thus, the balance sheet as by law established stands condemned as an inadequate statement of the true position. To the publication of the separate balance sheets of all the subsidiaries there are two objections. First, the physical bulk of a year's reports would be enormous. Some holding companies have over a hundred subsidiaries. Secondly, few investors would have the time, skill, patience and knowledge required for a perusal of the resulting mass of figures, and, for various technical reasons, might obtain a misleading impression in any case. By elimination, one arrives at the conclusion that the only satisfactory method is to supplement the legal accounts with a consolidated balance sheet for the whole group of companies. Such a statement is practically universal in America, and in Europe it has been largely adopted by companies which have sought international financial facilities. The Company Law Amendment Committee refused to recommend its compulsory use in Great Britain on the oracular ground that "it might be in the best interests of the shareholders themselves that the accounts should be in a certain form." Sir Gilbert distinguishes a number of more concrete disadvantages of consolidated statements—the most important of which is their failure to show which subsidiaries are making profits and losses, respectively—but nevertheless arrives without difficulty at the conclusion that amalgamated accounts are essential if a shareholder is to form an opinion of the true financial status of the whole of the undertaking. That such a statement is *rara avis* in this country, he attributes partly to opposition from directors "who are not all imbued with the desire to give their shareholders as much information as possible" and to the wide distribution of shareholdings, which tends to make the proprietors an inarticulate body.

Opinion in the British accountancy profession has hardened appreciably in favour of the publication of consolidated balance sheets during the five years since the report of the Company Law Committee was published. The case for their adoption, indeed, appears overwhelming. If shareholders have a legal right to information regarding the assets and trading results of a non-holding company—as they clearly have under the present law—what sound

reason exists for denying them similar information as regards holding companies, merely because the latter's results accrue, as it were, at second rather than first hand? Changes in the law, however, can seldom be speedily effected, and we believe that the ground can best be prepared by the action of influential bodies. In America the enlightened example of the United States Steel Corporation has been a potent influence, and the insistence of the New York Stock Exchange on the filing of consolidated statements has been an effective spur to the weaker brethren. We would urge the directors of great British concerns to emulate the Steel Corporation, and the London Stock Exchange Committee to consider the possibility of anticipating a change in the law, which must come eventually, by making the issue of consolidated accounts a condition precedent to the official quotation of holding company shares.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. December 15.	ACCOUNT. December 17.
-------------------------	--------------------------

The stock markets continued to drift, the unsettled tendency of the pound being partially responsible for a decline in Gilt-edged values in the first part of the week, while the general situation was regarded as too uncertain to encourage further investment in industrials. Disappointment was again expressed over the absence of tangible signs of increased trade, the railway traffic figures being colourless, while unemployment showed a small increase. The November overseas trade figures showed an expansion in imports of raw materials and in the daily average value of British exports, but afforded no conclusive evidence of definite revival, while the decline in certain "gold" bonds and the revelation by President Hoover of America's huge budgetary deficit came as unpleasant reminders of disturbed conditions overseas.

The weakness of Gilt-edged stocks at the beginning of the week was due only in part to foreign liquidation, the market being narrow and dealers inclined to mark down prices for precautionary reasons. War Loan and Funding Loan were particularly affected, the latter losing a whole point on Tuesday. After further selling, a moderate rally occurred, which reached fair proportions on Thursday, though again the extent of changes was disproportionate to the volume of business. India loans were lower on a meagre turnover. Dominion issues held their ground at the outset, but had a less stable tendency in mid-week.

Business in the foreign bond market was of limited extent. Weakness in the sterling bonds of the French railways suggested a flight of foreign holders from their own sterling issues. The weakness of French Rentes was ascribed not only to the partial mid-week recovery in the pound, but to bear selling by French holders apprehensive of the outcome of the Basle Conference. Belgian Sevens were weak, and other European issues unsettled. Among South Americans, Brazilians were dull, though San Paulo issues, by contrast, had a firm appearance, a moderate demand finding the market short of stock. Japanese loans lost ground, and Chinese Boxer Loan suffered from profit-taking after rising as a "gold" stock early in the week.

Dealings in home rails were at a low ebb, a slight excess of sales putting prices lower all round. Argentine issues similarly suffered from scattered liquidation, but became firmer on a rise in the peso and a very slight change for the better in the week's traffic figures. Canadian Pacifics were unable to hold an initial rise, being lower in sympathy with American railroads after the passing of the New York Central dividend.

The Industrial Markets were idle and irregular, with few price changes. International stocks were lower on the absence of American support, while professional operators were disinclined to undertake new commitments in domestic issues. Electrical shares remained uncertain, with a small turnover. No interest was taken in iron and steel shares, the market correctly judging that Mr Runciman would maintain his decision to impose no import

duties for the present. Motor shares remained out of favour. Fords had a heavy tendency, the report of record sales by the French company being offset by fears that other Continental subsidiaries, particularly those operating in Central Europe, were being affected by prevailing depression. Unilever issues were marked up at the outset, following judgment for the company in the whale oil case, but subsequently became easier. Brewery shares remained on offer, a fair amount of selling coming from Scotland and Northern England. Trading in tobacco shares was quiet, but prices were maintained for the most part. Textiles attracted only sporadic interest, Courtaulds being unable to maintain a mid-week rise on provincial inquiries. P. & O. were unaffected by Lord Inchcape's speech (discussed on page 1137). Furness Withy old and new shares weakened slightly, the latter being dealt in around par. Cunard were dull on the report that work on the new liner was being suspended. Insurance shares were dull in sympathy with Gilt-edged, and appreciable selling took place of British bank shares, on fears of a reduction in the final dividends. Both groups, however, benefited from the recovery in Gilt-edged stocks on Thursday.

After an appearance of activity on Monday, the oil share market became quiet and dull. No adverse development was announced, but American influences were chiefly responsible for a steady stream of selling. Rubber shares were featureless until Thursday, when activity developed in some of the leading issues, following a rise in the price of the commodity on reports of a pending agreement to enforce a 50 per cent. cut in production and exports. This outcome, however, of the visit of certain Dutch growers to London, was not well regarded in usually informed quarters. Tea shares again attracted little attention, unfavourable dividend announcements continuing to depress market sentiment.

The mining markets were inactive, and prices showed small movements. The announcement that the South African mines would pay their forthcoming half-yearly dividends in South African currency was expected, and failed to revive activity in the face of French selling. The fall in the price of copper induced heavy offers of Rhodesians. Tin shares were similarly dull on the easier tendency of the commodity, the publication of relatively satisfactory reports by Malayan, Southern Malayan, and Southern Perak failing to arouse interest.

FOREIGN STOCK EXCHANGES. NEW YORK.

The week opened with a certain amount of short covering, due to anticipations that the President's message to Congress would include proposals for an Emergency Finance Corporation, and partly to the unexpected decision of the Interstate Commerce Commission to approve of railroad rate increases, on the lines of its former award, but without making the resulting revenues

subject to a pooling plan. The belief that the Commission had adopted this attitude with foreknowledge of the contents of President Hoover's message was confirmed; but, unfortunately, the message contained other matter which was less to the market's liking. The statement that the budgetary position would require increased taxation for a two-year period, subsequently implemented by the proposals of Mr Mellon, Secretary to the Treasury, had, naturally, a depressing effect on all the markets. Bonds were particularly weak, and numerous shares reached new low levels. Railroads again came heavily on offer, on the passing of the New York Central dividend, which confirmed the market's worst fears. On Thursday, while changes were mostly adverse to holders, bear covering brought an upward reaction in the stocks of the Central Railroad. At the same time, it was understood that the feeling of the conference of railroad workers' representatives at Chicago was against acceptance of a voluntary cut in wages. In general, the view was expressed that the effect of the new tax proposals on industry would more than offset any improvement in sentiment likely to follow the decision to create a Finance Corporation. Trade remains undecided, with Christmas seasonal retail purchasing showing the inevitable results of the hard times through which most parts of the country are passing. Industrial shares, on the average, are at the lowest level since 1923. Freight car loadings in the week ended November 28th were 558,904, as compared with 653,600 in the previous week, 702,085 in the corresponding week of 1930, and an average of 887,285 for the seven years 1924-1930.

PARIS.

The Paris Bourse opened with a more cheerful aspect. The announcement of the special Government measures in connection with the Bank of France's potential losses on its sterling holdings caused a sharp rise in the Bank's stock, while elsewhere the declaration by the Suez Canal Company of a higher dividend than had been anticipated caused a favourable impression. The improved tone, unfortunately, was not maintained. The weakness of Rentes cast a shadow over all markets, the continued liquidation being attributed in some quarters to end-year realisation to satisfy monetary requirements. In the later sessions all the leaders were marked down, Bank of France, Crédit Foncier and Suez Canal ordinary being among the worst sufferers, while on Thursday Rentes were again a shade off.

	Dec. 3, 1931.	Dec. 7, 1931.	Dec. 10, 1931.
Banque de France	10,075	10,400	10,700

Rio Tinto	1,405	1,350	1,301
Royal Dutch	12,300	12,150	11,610

AMSTERDAM.

Firm conditions prevailed at the opening of the Amsterdam stock markets, with Unilever N.V. in strong demand following the favourable outcome of the London lawsuit in connection with whale oil contracts. Philips Lamps and Royal Dutch were both harder, and sugar shares improved. A listless tone developed in mid-week, however, with restricted business. Weakness, which gradually spread to most sections, was due in part to the influence of a depressed bond market. On Wednesday, many issues reached fresh low levels, Amsterdam Trading in particular losing five points in a single session. Tin and shipping shares were especially heavy.

	Dec. 3, 1931.	Dec. 7, 1931.	Dec. 10, 1931.
5 1/2% German	29 1/2	28 1/2	29 1/2
Unilever N.V.	96 1/2	100 1/2	91

Netherlands Ship Union	73	68 1/2	61
Java Cultuur	133 1/2	128	124 1/2

OTHER CENTRES.

Conditions on other European Bourses also deteriorated, with a slightly better tendency later. Brussels was dull, and Stockholm became heavy after an initial show of strength. Prices opened irregularly at Copenhagen, and subsequently trended downwards. Unofficial quotations in Berlin were weaker on the severity of Dr. Brüning's latest decree, and on unofficial versions of the nature of the facts Dr. Melchior was putting before the Basle Conference. Dye Trust was done at 84.00 (against 87.50), Siemens at 108.00 (against 108.75), General Electric at 27.75 (against 28.00), and Reichsbank at 67.75 (against 73.50).

INVESTMENT NOTES.

Building Societies—Important Development.—At a meeting of the Midland Association of Building Societies, held at Birmingham on Tuesday, Mr Harold Bellman, managing director of the Abbey Road Building Society, made an important pronouncement on the policy of the movement. He declared that, as early as the spring of last year, the large societies were seriously considering the possibility that economic depression, combined with the relative saturation of the market for new house property in some areas, might result, in certain instances, in the passing of the limits of prudent lending. The fact is that, even in the absence of the present slump, the societies could not hope to maintain indefinitely their rate of progress of the last decade—during which, as Mr Bellman admitted on Tuesday, four-fifths of the movement's £370 millions of resources have been accumulated—without the setting-up of various stresses and strains. One of these has been due to the greater rapidity of post-war development of the Southern than the Northern societies. This is partially explainable on historical and economic grounds, but it has given rise to what Mr Bellman, in a speech of studiously restrained phraseology, describes as "problems and jealousies." Far more insidious, however, has been the danger that some of the weaker societies may become mere appanages of speculative builders, agents, and other interests concerned with "housing-estate" exploitation. Depression is beginning seriously to affect this form of activity, the number of unemployed workers in the building trades having increased from 147,699 in October, 1930, to 211,565 in October, 1931. This very condition, which suggests to prudent societies the need for still greater prudence, is calculated to incite builders to seek increasing facilities for the disposal of their wares. In point of fact, it was recently discovered that the old rule that a building society borrower should himself find at least 10 per cent. of the purchase price was being broken by some societies; that the latter were advancing, without collateral security, much more than the traditional limit of 75 per cent. of a conservative valuation (the remainder being provided by second mortgage); that they were extending the periods over which repayment was to be made, paying extensive commissions to agents, etc., for bringing new mortgage business, and dealing with borrowers and building trade firms, etc., of doubtful reputation in certain cases. Some areas, consequently, were being over-built. House purchasers, tempted by "small deposit" or "no deposit" terms, were paying builders' prices without due regard to value. The largest societies, and many of the smaller societies (which were, and are, justly proud of the soundness of their methods), steadfastly refused to countenance such practices. The whole movement, however, would have been damaged had the action of a minority of societies accentuated the effects of a decline in property values—the possibility of which has been in the minds of the leaders of the movement for some time past—and caused a serious depreciation in the security behind all building society advances. Investors and depositors in every society will, therefore, be reassured by Mr Bellman's disclosure that efforts to secure, by collective action, a common definition of the limits of prudent lending have been so far successful that the Executive Committee of the National Association of Building Societies has prepared a confidential circular

which has been sent to every society. It is desirable that the task should be completed by an undertaking that the suggestions of the circular will be followed in every case. Garbled versions of the latter's contents have appeared in certain newspapers, which have suggested, for example, that the circular deals with rates to be charged to borrowers or paid to investors. An interview which Mr. Bellman has given to *The Financial News*, however, makes it clear that the terms are confined to the matters referred to in the course of this Note, i.e., to the limits of "prudent lending," and fully deserve the moral support of all building society investors.

Brewery Company Profits.—The accounts published from time to time by companies engaged in the hitherto highly prosperous industry of brewing have taken on a new interest during the last few weeks. Though there has not been time for the effects of the recent increase in the beer tax to be reflected in published balance sheets, the falling off in beer consumption since its imposition suggests that the point of diminishing returns to taxation may have been reached. In the following table we give a list of those companies which have published their results since the beginning of November. The figures suggest that profits had already begun to decline before the recent tax addition:—

Name of Company.	Net Profit, 1929-30.	Ord. Div.	Net Profit, 1930-31.	Ord. Div.	Price, 1931.	Price, Dec. 7, 1931.	Present Yield.

* Tax free.

the aggregate, net profits have declined from £2,700,888 in 1929-30 to £2,481,972 in 1930-31, a falling off of just over 8 per cent. Shareholders, however, have had little reason for complaint. In most cases, where the dividend has been reduced, the "cut" may be regarded rather as a precautionary measure than as the result of financial exigencies. The future is clearly dependent, less on the first than on the means of consumers.

Australian Trade.—In our leading article of November 21st on "The Outlook for Australian Securities" we quoted aggregate figures of Australian exports and imports for the months of July and August last. These figures, as given, were in Australian pounds, whereas our table of external trade for the three financial years ended June 30, 1931, gave the figures in British pounds. The September, 1931, figures have since been received, and to avoid misunderstanding we show below the results for the first quarter of the current financial year in British £s:—

BRITISH CURRENCY.
(000's omitted.)

	Imports.	Exports.
	Merchan. Bullion	Merchan. Bullion
	dis. and Specie. Total.	dis. and Specie. Total.
1931.	£	£
July ...	3,079	4,335
August ...	3,795	3,290
Sept. ...	3,357	4,603

Imports have been running so far at the average rate of £42,000,000 per annum. It is hoped that for the whole year the imports will not exceed £40,000,000. Exports year the imports will not exceed £40,000,000. Exports have been estimated by Professor Copland (in the *Economic Review* for December) at £75,000,000. This

(disregarding the depreciation of sterling) would give Australia a favourable balance of trade of £35,000,000, which should provide sufficient to meet the current external interest payments, with a small margin. It is, of course, very necessary that Australia should begin again to build up reserves in London. According to Professor Copland, the London balance of the trading banks had fallen from £30 millions in the middle of 1929 to £10 millions in the middle of 1931.

Industrial Profits.—The company reports received by us during the month of November revealed a slight improvement on those for last month, the percentage fall in profits being only 35.59 per cent. compared with 58.26 per cent. for October. The number of reports received, and the percentage declines in profits shown, month by month, have been as follows:—

Reports Published in 1931.	No. of Companies.	Variation in Net Profits (1931 compared with 1930).
April	217	— 10.49
May	211	— 22.3
June	192	— 21.93
July	185	— 39.46
August	55	— 19.59
September	74	— 44.02
October	170	— 58.26
November	147	— 35.59

We set out below the figures for various industrial groups, according to reports received during the last two months.

INDUSTRIAL PROFITS—MONTHS OF OCTOBER AND NOVEMBER, 1931.

Group.	No. of Companies.	Net Profit (after Payment of Debenture Interest). Reports received during Oct. and Nov., 1931.		Increase or Decrease.
		1929-30.	1930-31.

Total.....	318	17,002,042	9,299,345	- 45.31

A noticeable feature was the relatively small decline in brewery profits, Bass, Ratcliff and Gretton falling from £538,970 to £523,059 and Peter Walker from £418,005 to £370,458. Wall Paper Manufacturers recorded a profit of £496,766 against £585,200, while Birmingham Small Arms suffered a loss of £204,194, instead of a profit of £148,026. One of the few companies to maintain its position was the Daily Mail Trust, which increased its income from £367,019 to £370,954.

P. & O. Meeting.—In the absence of Lord Inchcape, owing to temporary ill-health, his speech at Wednesday's meeting of the Peninsular and Oriental was read by the Hon. Alexander Shaw. The scope of Lord Inchcape's annual review bears an increasing resemblance to that of the speeches of many British bank chairmen, who say little regarding the figures of their own institutions and a great deal regarding matters at large. Lord Inchcape has deservedly a world-wide reputation as a doughty champion of the best British traditions of conservative finance, sound administration and business enterprise. He may therefore be forgiven the irrelevancy, at a meeting convened to consider the accounts of a shipping company, of extended comments on home and overseas politics. But as regards the obscure passages in the company's accounts, to which reference was made in our Note last week, Lord Inchcape's speech was lamentably uninformative. For example, it merely repeated the cryptic statement that the ability to pay last year's dividend was due, *inter alia*, to "help . . . received

from some of our allies"; but gave no indication of the nature or extent of this help, such as would have enabled stockholders to assess even approximately the company's actual earning power. The book value of the 355 steamers entirely owned by the P. & O. Company was revealed as standing at something like £10 millions less than if depreciation had been allowed merely at 5 per cent. per annum on original cost, and it was shown that a conservative valuation had been applied to the steamers of controlled companies. This is gratifying information, but it adds little to the particulars of the company's internal position which were given in an official statement at the time of the Royal Mail revelations. Lord Inchcape, again, failed to say whether liquid investments were taken at cost or market value, merely declaring that "investments, taken all together, stood at a conservative figure." Throughout Lord Inchcape's speech ran a note of pride in the achievements of the company over whose affairs he has presided so long—which none will begrudge him—and of confidence in its future—which is well-founded. The P. & O. is, indeed, one of the two strongest British shipping concerns. To take its proprietors into its confidence regarding financial matters—at least to the extent laid down by law in the case of concerns registered under the Companies Acts and not, like the P. & O., under Royal Charter—would be a graceful act. More correctly, it would be a fitting consummation of the policy of more complete disclosure which has been inaugurated since the war with Lord Inchcape's approval.

Richard Thomas.—In an article on iron and steel company finance in the *Economist* of November 28th last (page 1,017) it was shown that this South Wales tinplate company, despite its recovery in profits in 1929-30, was still carrying nearly a million pounds of preference dividend arrears, and would be compelled, sooner or later, to effect a capital reconstruction. The accounts now published for the financial year to September 30th last confirm these views. Trading profit has declined from £296,504 to £130,694 and last year's net profit of £203,991 has become a loss of £986. This is struck after crediting £57,861, the balance standing to the account "Reserve for Taxation and Contingencies," debiting £20,000 "provision for anticipated loss on advances made to a subsidiary—Brimtoy, Limited," and making £33,316 "provision for trading losses in excess of undistributed profits of the subsidiary companies":—

	1929.	1930.	1931.
Year to September 30.	£	£	£
Trading profit	173,978	296,504	130,694
Divs. from subsidiaries	57,150	95,069	49,415
Directors' fees	5,928	6,709	5,572
Depreciation	67,336	57,505	65,000
Other charges	130,298	126,368	168,385†
Net profit	27,566	203,991	Dr. 986
Brought forward	232,852	260,418	214,409
Other allocations	...	250,000	Dr. 57,861*
Carried forward	260,418	214,409	213,423

* Transferred from "Reserve for Taxation and Contingencies."
† Including £20,000 anticipated loss on advances and £33,316 provision for losses of subsidiaries.

Comment on the balance sheet can have little value until the various items have been thoroughly overhauled. As far back as October, 1930, it was estimated that £8,500,000 of the company's share capital had been lost or was unrepresented by available assets. The postponement of reconstruction, pending the time when it may be possible to raise fresh money, is comprehensible, but it is unfortunate that general financial depression should have resulted in further delay. The £1 ordinary shares are quoted at 1s. 9d. and the £1 preference shares at 7s.

Carreras.—The latest accounts of these tobacco manufacturers, whose post-war growth has been among the most remarkable features of the trade, give no inkling of the cause of the decline in gross profits last year, from £1,001,870 to £769,518, or roughly by 23 per cent. The report shows, indeed, that only £82,545 has been set

aside for taxation purposes, against £204,655 last year, but the size of the taxation reserve is unknown, since it is lumped, in the balance sheet, in a composite item: "sundry creditors, including reserve for taxes," which stands at £518,732. The net profit is £687,806, compared with £758,308, and the ordinary dividend is cut from 50 per cent. to 35 per cent., less tax:—

	1929.	1930.	1931.
Year to October 31.	£	£	£
Gross profit	1,316,945	1,001,370	769,518

‡ Including £10,000 reserve for fluctuations in exchange.

The balance sheet reveals few major changes. Cash is slightly down at £194,959 and "sundry debtors" show a decrease from £1,001,299 to £887,986. "Stocks" have advanced insignificantly. There can be little doubt as to the fundamental strength of the financial position. The reserve fund stands at £972,777 and liquidity has been maintained. There is, however, ample scope for an informative chairman's speech at the forthcoming meeting. At 3½, the £1 ordinary shares yield £9 17s. per cent.

United Africa.—The United Africa Company was formed in 1929 to amalgamate the interests of the African and Eastern Trade Corporation and the Niger Company, and later the West African interests of Margarine Union. The second report discloses a loss of £1,288,123 against a net profit in the initial year of £24,143. The directors vouchsafe no explanation, but the shareholders are well aware that the company is a victim of the slump in the prices of vegetable oils, which has reduced the West African native to something like penury and seriously diminished the value of the West African export trade. A comparison of the trading results of United Africa for the past two years (treating subsidiary companies as branches) follows:—

	(Years ended April 30th.)	
	1930.	1931.
Trading profits	386,407	Dr. 949,940
Depreciation	276,275	272,899
Income tax	38,616	13,171
Miscellaneous overheads	28,360	35,584
Preliminary expenses, etc.	19,013	16,529
Balance	24,143	Dr. 1,288,123
Carried forward	24,143	Dr. 1,283,980

The balance sheet shows a surplus of current assets (£6,720,208) over current liabilities (£8,845,507) of £3,874,696. No depreciation, however, has been provided in respect of the fixed assets—land and buildings and shares—other than those belonging to the manufacturing subsidiary companies. Land, buildings and goodwill are valued at £5,249,852 and shares in subsidiary companies at £7,576,053. It is obvious that a revaluation of the fixed assets, which has now been promised for two years, will involve a drastic writing down of the share capital. Since the date of the first report the capital has been increased by the issue of £2,781,600 shares and now stands at £15,731,600 in £1 shares. Of this total, it is understood, African and Eastern and the Niger Company each hold £7,100,000 and the Margarine Union the balance. The African and Eastern Company's income is entirely derived from interest on sundry investments (£128,864)

and on the mortgage of £450,000 secured on Africa House, Kingsway, as no dividends are being received from its investment in United Africa. The company discloses a slightly increased profit which is sufficient to cover the dividends on its 6 per cent. "A" preference shares, which are quoted in the market at 14s. 6d. A comparison of its past two years' results is as follows:—

	(Years ended April 30)	
	1930.	1931.
Net profit	17,136	17,470
Directors' fees	2,333	2,000
"A" Preference dividend	14,250	13,800
Carried forward	37,883	39,553

The directors of Lever Brothers have issued a statement to the effect that the proportion of the United Africa loss accruing to them as the parent of the Niger Company has been fully provided for out of revenue, which, nevertheless, will be in excess of the revenue for 1930. The latter permitted of a 10 per cent. dividend on the ordinary capital, held by Unilever. Such a result is gratifying, and it will be of interest both to shareholders and consumers of the company's products to learn, in due course, how it has been brought about.

Anglo-Argentine Tramways Moratorium.—A steady decline in traffic receipts and exchange losses for which the recent rise in the peso-sterling quotation has not yet compensated, have caused the directors of this South American tramway company to seek a moratorium for the interest on the £5,730,132 of 5 per cent. debenture stock. In a circular dated November 17th last, holders of this stock were informed that liquid resources showed a large deficiency as compared with current and loan liabilities, while existing financial conditions made it impossible to obtain further temporary assistance. It had therefore been found impracticable to provide the sinking fund instalment of £22,860 on the 5 per cent. debenture stock and the £142,740 of interest which was due on December 1st last. The scheme of arrangement proposed (a) that payment of the half-yearly interest falling due on December 1, 1931, June 1, 1932, December 1, 1932, and June 1, 1933, should be postponed until December 1, 1936, and that the company should be released from any obligation as regards the sinking fund for the years 1931 and 1932, and (b) that if the trustees prior to December 1, 1933, should notify the company that in their opinion the financial position of the company was not such as to warrant payment by the company of the interest on its due date, the half-yearly payments of interest due on December 1, 1933, and June 1, 1934, should be similarly postponed, and that the company should be released from the sinking fund obligation for 1933. The scheme further proposed that the payments in arrear should carry simple interest at 6 per cent. per annum, and that no dividends should be paid on the share capital until all the arrears of interest on the stock and interest thereon had been paid in full and the sinking fund payments resumed. Two additional directors were to be nominated by the trustees to represent the interests of the 5 per cent. debenture holders during the currency of the scheme. At the meeting of holders convened for November 30th last, however, a quorum (which required holders of 50 per cent. of the stock) was not present, and the decision was postponed till December 15th next. In the meantime, a committee appointed to represent a body of 5 per cent. debenture holders has suggested amendments which are to be submitted for approval. Under the revised scheme, the moratorium is to cover instalments of interest up to and including December 1, 1932, instead of June 1, 1933. A stockholders' committee is to be formed, together with one representative of the trustees, which will be empowered, after consultation with the trustees, to grant a further moratorium in respect of either or both of the half-yearly instalments of interest on the stock for the half-years ending June 1, 1933, and December 1, 1933, if necessary. It is suggested, further, that the company should not declare or pay any dividends until it has applied in purchase or redemption of the stock until the sum of £45,720, or if the moratorium is extended, a

further sum of £22,860. These amounts, after all postponed instalments of interest and interest thereon have been paid in full, may be applied in purchase of the stock in the market or by tender at a price not exceeding par, or in redemption at par by drawings on six months' notice.

New Issues in November.—In the following table we show the new capital raised in London by issue to the public or to shareholders, in November, and in recent years:—

	United Kingdom.	(000's omitted) British Possessions.	Foreign Countries.	Total.
Monthly Average.	£	£	£	£

Nov., 1931	Dr. 450	2,468	Nil	2,028

Encashments of National Savings Certificates during the month exceeded sales by £450,000. The only issue to the public was the £1,400,000 debenture stock of the Gallo-way Water Power under Government guarantee. Shareholders were asked to subscribe for 300,000 ordinary shares of the Midland Counties Electric Supply Company, for 527,350 £1 ordinary shares of Thomas Tilling at 30s. per share, for 20,167 10s. ordinary shares of Clark's Bread at 15s., and for £10,000 of 10 per cent. debenture stock of the San Finx Tin Mines.

In view of the many claims recently made by Petrol Distributing Companies the proprietors of Shell think it desirable to remind the public that—

1

There is more British labour employed in the Shell organisation—

2

There is more British capital invested in the Shell interests—

3

There are more British vessels engaged in transporting Shell products—

than in any other concern dealing in Petroleum Products

4

Every Gallon of Shell Lubricating Oil is blended and packed in this country

De Beers Consolidated.—This important undertaking, writes our mining correspondent, proves to have fared even worse than might have been inferred from the non-payment of the preference dividend in respect of the second half of the financial year. The net profit amounted to no more than £133,740; the preference distribution absorbed £400,000. The carry-forward is reduced by the difference between these two amounts, no appropriation being required for taxation. These disappointing results are, of course, a reflex of the depression which has ruled all over the world, and especially in North and South America—the chief markets for diamonds. So far as can be judged there is little hope of improvement in the immediate future. Our usual tabulated comparison is appended:—

	Year ended June			
	1928.	1929.	1930.	1931.
Diamond sales.....	3,311,780	3,255,790	3,262,670	679,550
Other income.....	588,370	554,000	535,810	750,240
Expenditure, depreciation, &c.	1,707,900	1,761,780	1,671,570	1,296,050
Net profit.....	2,192,250	2,047,010	2,126,910	133,740
To taxation.....	321,970	303,250	302,590	...
Dividend on deferred shares	817,890	817,890	...	...
Rate per share	15/-	15/-	...	...
To reserves	100,000	250,000	...	...
Carried forward.....	500,020	377,400	1,401,720	1,535,460

As a result of the measures taken with a view to the consolidation and control of the diamond industry in South Africa, the balance sheet reveals important changes. So much opposition was aroused by the proposed allotment of deferred shares in exchange for holdings in the New Jagersfontein, the Consolidated Diamond and the Cape Coast Exploration that £2,414,600 debentures were issued for these interests. To take up its proportion of the increased capital of the Diamond Corporation—£812,500—the De Beers transferred the necessary amount from reserve. Thus the appropriation for stabilisation of the diamond trade is increased to £4,238,860 and the reserve reduced to £1,638,850. Investments in other companies have risen by £251,600 to £875,800. Naturally, the financial position has not improved. The surplus of cash assets over liabilities now amounts to £882,000, as against £1,404,650 twelve months ago; and, as previously pointed out, the liquidity of some of the items is doubtful. The current quotation of the deferred shares is about £3 2s. 6d. and of the preferred £5, or less than half the figures ruling a year ago, when a cautionary note was sounded in our columns.

Roan Antelope.—Special interest attaches to the results of this company by reason of the fact that it is the first of the new Northern Rhodesian copper propositions to enter the producing list. Shareholders are called upon to digest the annual report simultaneously with the statement for the quarter ended September 30th. The former document shows important changes in the finances. The debenture issue of £1,500,000 is now fully paid. During the year, no less than £1,708,500 was expended upon development and equipment—including a small deficit on the first three months' output. On June 30th the net

Name.....

Address.....

cash surplus, irrespective of investments, amounted to £228,000. This is relatively moderate; but no great amount of capital outlay remained to be covered. The ore reserves are again given as 108,000,000 tons, value 3.44 per cent. copper, no further drilling having been carried out during the period. In the September quarter 7,370 long tons of electrolytic copper were produced at an operating cost of just over £36 per ton, or 7.85 cents per lb., exclusive of allowances for interest and depreciation. We find that in respect of a score of leading American copper companies the costs, including depreciation, in 1930 ranged from 6.81 cents to 16.69 cents, the general average being between 8.50 and 10.50 cents. With some plant still to come into operation, the Roan is turning out the equivalent of about 4,000 tons of copper per month. Allowing for a moderate further increase, the total may be put at 50,000 tons per annum. It is calculated that costs will be brought down to under £30 per ton, irrespective of the advantage to be derived from the depreciation in sterling. If these results were, in fact, secured, the profits on the basis of the current price of the metal would be sufficient to provide between 40 per cent. and 50 per cent. upon the capital after deduction of debenture interest and a substantial appropriation for depreciation. Uncertain factors in the future, however, are the course of sterling and the possibility of output restriction. The question of debenture redemption should also be kept in mind, though it will not arise for several years.

Broken Hill South.—The full text of the report for the year ended June 30th brings to light the fact that but for the income from investments the accounts would have shown a loss. Mining resulted in a deficit of £65,400; but dividends, interest and sundries made up a net total of £115,700, giving a surplus of £50,300. The dividend (7½ per cent.) absorbed £60,000. An appropriation of £65,000 was made for new plant and development; the unexpended balance of this account from 1930 being £17,850. Thus, £124,840 remains to go forward, against £181,700 brought in. It may be noted that the debenture issue has now been entirely extinguished. At £600,560 the surplus and cash assets (excluding shares in other companies) is £117,300 below the figure of twelve months ago. The disappointing character of last year's results is, of course, attributable to the abnormally low prices ruling for lead, zinc and silver—even though the effects were in an appreciable measure counteracted by the exchange premiums on realisations of metals and by a substantial reduction in working costs. The necessity of further economies is emphasised by the board. At 4,000,000 tons the ore reserves are down 250,000 tons. The difference is fully explained by the suspension of development work, 334,540 tons having meanwhile been extracted. Some months ago an announcement was made to the effect that in the event of maintenance of the improvement in metal prices, a dividend would be declared towards the end of the year. In accordance with this forecast, an interim distribution of 5 per cent. was announced on November 9th. Purchases of these and other Broken Hill shares were recently made by Australian operators on the strength of the recovery in wheat and wool, and by local operators on the strength of rumours as to the imposition of a 10 per cent. tariff on foreign metal imports. In both cases the buyers found themselves a little ahead of events.

Pahang Consolidated.—The average realised for the black tin sold having been £78 9s., against £114 2s. previously, it is no matter for surprise that the profits for the year ended July 31st fell substantially short of the 1929-30 total. Indeed, but for the treatment of higher grade ore, and a substantial saving in costs, the difference would have been greater. The mining profit of £37,200 compares with £63,690 and £98,240 in respect of the two preceding periods. In disbursing only the fixed dividend of 7 per cent. on the cumulative preference shares, absorbing £7,000, the directors have adopted a very conservative policy. The carry-forward of £89,600

represents rather more than double the amount brought in, while the balance sheet indicates a cash surplus of £115,300, subject to the final dividend on the preference shares and a call of £10,000 on an addition to the company's holding of Kuala Keman rubber shares. Apparently the directors were influenced by general conditions as well as by past and prospective litigation relative to the Tin Restriction Act, the claim being made that the company is in a different position from other producers in Malaya. Owing partly to output restriction, and partly to the desirability of "conserving the cash resources in view of the low price of tin," development work was severely cut down. Despite the performance of only 18,920 ft. of driving, etc., against 40,800 ft. in 1929-30, the ore reserves are estimated to be up by approximately 70,000 tons. This is a distinctly favourable feature, placing the company in a position to expand its output if and when conditions permit.

Lake View and Star.—The report to June 30th indicates that the shareholders still require to exercise patience. Operations last year resulted in a net profit of £102,100. Of this, £85,000 has been written off to special development on various leases and £14,300 to depreciation on plant and machinery. Credit is presumably taken for the exchange premium, but not for the gold bounty of 10s. per ounce, as the amount cannot be ascertained until the whole production of Australasia for the year is known. Some time ago a rumour gained currency as to the intention of the Lake View directors to make a note issue something on the lines followed by the Wiluna. Thanks to the increase of earnings by the exchange premium and to a temporary advance from the New Consolidated Gold Fields, this onerous method of financing was avoided. Provision has been made in the accounts for the capitalised Australian expenditure on plant and the like, which has been converted into English currency; but as the floating assets and liabilities in Australia approximately balance each other, it has not been considered necessary to convert these. Note should be taken of the imposition by the Federal Government of fresh duties and taxes, as well as of the action of the State Government in increasing the water rate from 3s. to 5s. 1d. per thousand gallons. These additional changes will largely counteract the effect of the gold bonus. At present the company is dealing with 20-22,000 tons of ore per month. The new treatment plant, having a capacity of 30,000 tons per month, should be completed early next year. A central crushing plant is already operating satisfactorily; a further power unit will be available about the end of this month. The outlay will be presumably be covered in the same way as the capital expenditure of 1930-31. Development—largely concentrated on the Nos. 2 and 4 lodes of the Horseshoe Mine—has proved fruitful. Including probable ore, the reserves are now placed at 1,431,450 tons, averaging 34.45s. an expansion of 863,800 tons in quantity and of 3.85s. in value. At Thursday's meeting a substantial dividend was foreshadowed next year. Lake View 4s. shares now stand at 8s. 6d., comparing with 12s. earlier in the year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Peninsular and Oriental Steam Navigation, Mexican Railway, Imperial Smelting, Lake View and Star, Luipaards Vlei Estates and Gold Mining, British Burmah Petroleum, Malaya General, Lewis Berger and Sons, and Petroleum. Presiding at the annual meeting of the Mexican Railway, Mr Vincent Yorke said that the management were to be congratulated on having reduced expenses as compared with the corresponding half-year by \$542,000, or about 9½ per cent., in the face of a fall in exchange which had affected adversely the purchase of stores and materials bought at gold prices. At the meeting of the British Burmah Petroleum Company the chairman said that the company gave employment in Burmah to some 2,000 men, and were called upon last year to contribute in taxes, royalties, and excise duties nearly £200,000 to the Indian Government, a sum greatly in excess of the whole

of their divisible profits. At the annual meeting of Lake View and Star, the chairman pointed out that the net result of their development work to the end of June last showed that the ore reserves, proved and probable, totalled 1,431,000 tons, of an average value of just under 35s. 6d. per ton. The P. & O. meeting is discussed in a Note on page 1137.

COMPANY MEETINGS, &c.

PENINSULAR AND ORIENTAL STEAM
NAVIGATION COMPANY.

DIFFICULT TRADING CONDITIONS THROUGHOUT THE YEAR.

GREAT BRITAIN'S SPLENDID RECORD IN INDIA.

CRITICISMS OF DOMINION STATUS PROPOSALS.

LORD INCHCAPE ON POSITION AND OUTLOOK.

The ninety-first ordinary general meeting of the Peninsular and Oriental Steam Navigation Company was held, on the 9th instant, at the offices, 122 Leadenhall Street, London, E.C.

The Hon. Alexander Shaw (one of the deputy-chairmen), who presided, said that he knew the stockholders would share the great regret which was felt by the Board that Lord Inchcape, the chairman of the company, was unable to be present personally. Although temporarily laid up, he was dealing day by day—and, indeed, hour by hour—with the business of the company, and his thoughts were certainly with them all at this ninety-first annual meeting.

Mr Donald N. Black, C.A. (the secretary), read the notice convening the meeting and the auditors' report.

LORD INCHCAPE'S ADDRESS.

THE DIVIDEND

The Chairman then read the speech which had been prepared for the meeting by Lord Inchcape, in the course of which he said that, considering the deplorable conditions the company had encountered, the proposed dividend of 6 per cent., free of income tax, would cause no surprise. For the Board's ability to propose that dividend they were indebted partly to the surplus earnings of the P. & O. steamers, but mainly to dividends from outside investments and to help from some of their allies.

A reduction of 10 per cent. in pay of their staff afloat and ashore, which applied also to the Board, had been made on August 1st and loyally accepted. He, the Chairman, might be permitted to add that when the outlook some years ago had become less rosy a considerable sacrifice in his emoluments had been made by a member of the Board, which still continued.

TRADE

He had never known such a period of depression as had endured during the past eighteen months. Steamers had left, week after week, for the company's Eastern ports with thousands of tons of unfilled space, and this had occurred also in many of the homeward ships.

A year ago he had given some statistical figures which made doleful reading. During the year ended September 30th last there had been a further drop in nearly every direction. Only in a very few instances did the figures show an improvement; mostly they were worse.

TRADING CONDITIONS UNDER THE NATIONAL GOVERNMENT.

As to the future of their trade, all the world over, although there were anxious times ahead, he did not view it with dismay. By the common sense of the people the country had now got a strong National Government, and he thought they might confidently look forward to peace in the land, free from the danger of that Bolshevism and Communism which had ruined Russia.

He felt assured we should hear no more of nationalisation, and that industry would be allowed, as heretofore, to work out its own salvation. He was glad to think we now had a man of sound business experience as President of the Board of Trade in the Right Honourable Walter Runciman, than whom there was no one in the country better qualified to fill the office. (Hear, hear.)

BOOK VALUE OF THE FLEETS.

Thanks to the Board's conservative policy in the past, the book value of the 355 steamers entirely owned by the P. & O. Company stood at something like ten millions less than if they had been written down at the rate of 5 per cent. per annum.

If they had reduced the values by only 4 per cent. per annum, the rate allowed for income tax purposes, the steamers would stand in the books at about 12 millions more than they did now.

The book values of the steamers of the companies in which the P. & O. had a controlling interest, but which they did not entirely own, stood very much below their original cost, less 5 per cent. per annum depreciation, but, he added, it mattered little how low the book value of steamers might be if they could not be run to leave a margin of profit on their voyages, which had been too often the case in the past twelve months.

INVESTMENTS.

Their investments, taken altogether, stood at a conservative figure, but it would, of course, be impossible to realise many of them at present, even if it were desirable to do so, which it was not.

There could be but few among those present who had not suffered severely in capital and income during the last two years. It was to be hoped that the Government's reduction in national expenditure might before long enable them to reduce direct taxation, which had for some years been eating up the capital of the country and the savings of the people.

P. AND O. DEBENTURES.

They, the stockholders, would observe from the accounts that there were seven millions of debenture stock falling due in 1940. Up to September 30, 1930, they had provided a special fund of £1,540,000 towards its redemption, and this year had added £100,000, bringing the amount up to £1,640,000, which was invested in Government securities and shown on both sides of the balance sheet. All additions would be similarly dealt with. The board would go on adding to this as far as possible, year by year, and by 1940 he hoped they would have sufficient to discharge the main portion, if not the whole, of the issue. He, the speaker, could not expect to be here in 1940, but he was confident that his successors would carry on the honest, prudent and conservative policy of their forebears.

THE BOARD'S POLICY—ECONOMY WITH EFFICIENCY.

Every effort was being made to keep down the company's expenditure and that of its allies without impairing efficiency. He could not speak too highly of the devotion and endeavour of all their people afloat, ashore at home and abroad, to help the old P. and O. Company in these dreadful times.

Their repairs committee met weekly, when all indents for material and labour were discussed. Repairs and overhauls to hulls and machinery were carried out by Messrs R. and H. Green and Silley Weir in London and Falmouth, where they had up-to-date workshops and dry docks. The head of the firm, Mr Silley, had worked for them for many years most satisfactorily, and had rightly earned the title from all his customers of "Honest John."

No effort was being spared, in London and at all the company's agencies, to give passengers the accommodation they required, and their captains, officers, engineers, doctors, pursers, nursing sisters, stewards, stewardesses and cooks were doing all in their power for passengers' comfort. The convenience and requirements of shippers and consignees were studied in every way and an endeavour made to retain the goodwill which the company was fortunate enough to possess.

Together with Lady Inchcape, he had spent some hours lately inspecting the "Viceroy of India" on the day of her sailing from Tilbury. They found her to be in the most perfect condition to receive her full complement of passengers, notwithstanding that she had arrived from her previous voyage only three days before; and it had been a great pleasure to congratulate her commander, his officers and the company's superintendents on the admirable condition of the ship.

ALLIED MANAGERMENTS—THEIR CORDIAL CO-OPERATION.

He was, he continued, kept in close touch with the working of the company's allies by friendly consultation with the chairmen and their managements, but he never had occasion to interfere with their proposals, as for the most part they knew far more about their particular business than he did, and the attention they devoted to the various interests they controlled was all that could be desired. He would like to express his thanks to Mr Cowan, the chairman of the New Zealand Shipping Company and of the Federal Company; to Sir James Mills, the chairman, and to Mr Aiken, the managing director, of the Union Company of New Zealand; to Mr Christopher, of the Hain Line; Mr Hampton, of the Nourse Line; and to Mr McAllister, the chairman of the General Steam Navigation Company, for the excellent arrangements at the Ballard Pier provided by the Bombay

years. He could not very well thank the Chairman of the British India Company, as he held that office himself—(laughter)—but he desired to thank all the members of the various companies' staffs for their most loyal and efficient service.

The board received many letters of appreciation from passengers in the course of the year and some criticisms. All were courteously acknowledged, and endeavour made to put right anything complained of.

LOSS OF ONLY ONE STEAMER.

During the past year one of the steamers owned by our ally, the Hain Company, came to brief in a dense fog in the Black Sea, and, although salvaged, was so badly damaged that the cost of repairs would have amounted to a disproportionate sum. A compromise was made with the underwriters to treat the vessel as a constructive total loss, and the full insured value was not claimed. This was the only loss, in a good hour be it spoken, during the year in the 356 steamers entirely owned by the P. & O. Company, and it spoke well for the care and capacity of the commanders, officers and engineers not only of the P. & O. Company but also those of their allies. Of course, accidents would happen in entering and leaving port, as their ships had to do thousands of times every year, often in bad weather and fog, but, he added, the watchword of all the skippers and officers was "Safety First."

NEW STEAMERS.

The "Strathnaver" lately left on her maiden voyage to Bombay, Colombo and Australia with 1,416 passengers, the largest number ever carried by a P. & O. steamer. At his (the Chairman's) suggestion their colleague, Lord Glenapp, went out in her to see how things were working and to look into matters in Bombay, Ceylon, Australia, Hong Kong, Shanghai and the Straits Settlements, and they had had some interesting reports from him about the ship and the arrangements on board. Everything went well, and the passengers were all pleased.

Lord Glenapp had made several suggestions, which were being considered. The fuel consumption had been extremely moderate, the speed highly satisfactory and the vibration nil, thanks to Messrs Vickers-Armstrongs, the builders, and to the company's superintendent engineer, Mr. Clarke.

The "Strathnaver," of 22,500 tons gross register, 664 ft. over all, the largest P. & O. steamer which had ever passed through the Suez Canal, made the transit from Port Said to Suez in eleven hours, which spoke well for her manoeuvring and steering qualities, and also for the careful and skilful handling which characterises the canal pilots.

Lord Glenapp was returning from China by the new steamer "Corfu," and would in due course make his report on that vessel and on his inspection of their agencies in the Far East.

LETTERS OF APPRECIATION FROM GOVERNOR OF SUDAN.

Recently he had had a letter from Sir John Maffey, Governor of the Sudan, who wrote:—

"We had most excellent accommodation given us on 'Corfu'; the commander was most helpful and courteous, and everybody on board thought her a delightful ship. The P. & O. deserve the highest measure of success and appreciation for the splendid craft they are putting on the sea, as in these days courage and purpose are not very common qualities."

He, Lord Inchcape, had been to the trial of the sister ship, the "Carthage," on the Clyde a week ago, and made a thorough inspection of the steamer. She would, he was satisfied, prove as favourite a vessel on the Ceylon and China line as the "Corfu." Her speed on trial in rather bad weather was 19½ knots, not fully opened out, and her fuel consumption was quite satisfactory.

MAIL SERVICES.

The mail services had been maintained with unfailing regularity, as mentioned in the report. The mail matter carried by the P. & O. Company during the year was about 96,880 tons.

THE PORT OF LONDON AUTHORITY.

He desired to thank the Port of London Authority for their constant improvements in the facilities for working the port and for the great civility and assistance rendered to all the Authority's constituents by the Chairman, Lord Ritchie, the staff and the workmen.

PORT TRUST AND RAILWAY ARRANGEMENTS AT BOMBAY—PASSENGERS' SATISFACTION.

During last year 8,918 passengers were landed in Bombay from Europe, and not one of their packages had gone astray, which spoke well for their officers, their baggage masters and their stewards.

He would like again to express the Board's appreciation of the excellent arrangements at the Ballard Pier provided by the Bombay

Port Trust for the shipping, landing and distribution of mails and baggage, as well as for the deepening of the approaches to the pier, which enabled the mail steamers to tie up or leave at any time of the day or night. He would also like to thank the railway administration for their admirable service of special trains which arrived and left the Ballard Pier within a few yards of the steamers.

CARGO-WORKING COSTS IN GREAT BRITAIN.

A NEGOTIATED ADJUSTMENT.

For some months past negotiations had been in progress to reduce the costs of working cargo in Great Britain with a view to assist trade and avoid an increase in unemployment. A tentative agreement had now been reached for a modest reduction operative as from January 4th. Mr E. Bevin and Mr F. C. Allen between them had succeeded in putting terms of friendly agreement before both sides which were likely to be accepted, and he (Lord Inchcape) hoped there was now no possibility of a strike which would have been fatal to both sides.

SUEZ CANAL DUES.

The President (the Marquis de Vogüé) and the managing directors of the Suez Canal Company had decided two months ago to make a reduction in the canal dues as from November 15th of 65 gold centimes per ton of 100 cubic feet for ships with cargo and 32½ gold centimes per ton for ships in ballast. This recommendation was arrived at with a view to assisting the shipowners and the Eastern and Australian traders in these bad times, but also in the interests of the shareholders of the Canal Company, as vessels were being diverted to the Cape route by the paucity of cargo, and the Canal traffic was decreasing. This reduction, equivalent to 10 per cent. in the dues, had been much appreciated by foreign as well as by British shipowners, and the London Chamber of Commerce and the Chamber of Shipping had, he noticed, thanked the Canal Company for their decision, which he was sure the stockholders would appreciate.

POSITION IN INDIA.

To those who thought they knew something of India, the proposals put forward in certain quarters were beyond understanding. What had Great Britain done for India in the last seventy or eighty years? She had preserved peace in the country up to two or three years ago, and administered equal justice to all, as she continued to do now. She had given Indians the opportunity to serve in the administration of the country in many capacities, from subordinates in the Civil Service to Collectors, Commissioners of Districts and Governors of Provinces, and to be High Court judges and members of the Executive Council of the Viceroy and the various Presidency Governments. It was true that the offices of Governor-General and Commander-in-Chief of the Army had always been, and were still, held by Britons. It would be an evil day for India and Great Britain if that was ever reversed. (Hear, hear.)

BRITAIN'S PART IN DEVELOPMENT OF INDUSTRY.

When he went to India, nearly sixty years ago, there were 6,200 miles of open railways, mainly constructed by private enterprise. Now there were 42,000 miles, costing about 600 millions sterling, practically all subscribed by Great Britain, with Government guarantee of interest on the capital. There were but few jute mills, woollen, cotton, paper or rice mills; few coal mines, gold mines, iron and steel works. Look, he said, at their numbers now. There were practically no tea gardens or coffee plantations of any size. To-day there were thousands of acres. The oilfields were entirely undeveloped. There were no banking or insurance facilities such as there were now. There were few steamers on the rivers of Bengal or on the Irrawaddy, while to-day there were legions. The coastal trade of India was then a flea-bite compared with what it was to-day, and there had been for many years past an adequate, frequent and regular service by high-class steamers between India, the Persian Gulf, Mauritius, the Straits Settlements, Hong Kong, Shanghai, Japan, Australia, New Zealand and East and South Africa.

Into all these industries hundreds of thousands of British capital had been invested, and the trade of the country had increased by leaps and bounds, providing employment for millions.

He had been a director of the East Indian Railway Company for many years under the chairmanship of that able business man, General Sir Richard Strachey—from whom he had learned much—before it was taken over by the Government. Gradually Government acquired most of the railways, or secured the option of purchase, paying for them by terminable annuities or issues of India stock, which at present was proving rather unfortunate for the country financially. The result of this policy in India might teach the authorities at home not to buy up the railways, but to leave them and their management to private enterprise.

The ports, docks and dry-docks in Calcutta, Bombay, Madras, Rangoon, Karachi, Chittagong, Akyab and many other places had been constructed by the genius of British engineers, and had not

cost the taxpayers of India a penny. Interest on their cost and their working and upkeep were paid for by shipping and trade.

The relations between the British and Indian mercantile communities had always been, as they were to-day, of the most agreeable and friendly description, but that boycott and civil disobedience had been allowed to be preached had, to some extent, shaken confidence in the British Raj.

CONGRESS PARTY'S DEMAND.

Among many interests in India, such as tea gardens, jute mills, coal mines, cotton mills, woollen mills, his firms had two long-established cotton mills and factories in Madras. Relations with their workmen had always been those of mutual friendship. When the mills did fairly well, as they generally did, the workpeople shared in the profits by way of a bonus. The mills were limited liability companies, the shares being on the market in Madras. Last week he had received advices from his partner in Madras stating that the Congress party had intimated that a boycott against the sale of their manufactures would be put up unless they subscribed to the following declarations:—

"That not less than 75 per cent. of the share capital of the company is held by Indians.

"That not less than 66 per cent. of the directors of the company, apart from the ex-officio directors, are and will continue to be Indians.

"That the partners of the agent's firm or the firm itself are not in any way interested in the import trade of foreign yarn or foreign piece goods.

"That the personnel of the management is Indian in outlook and spirit and is pledged to safeguard Indian interests. In pursuance of the above declaration we hereby undertake to do as follows until the Congress ban is removed:—

"No person connected with the management of the mills will engage himself in propaganda hostile to the national movement or participate in any activity organised voluntarily or at the instance or on behalf of the British Government in India in opposition to the movement.

"Recruitment of staff will be restricted to Indians except for special reasons.

"As far as possible we shall pass our insurance, banking and shipping business to Indian insurance companies, Indian banks and Indian steamship companies.

"We shall purchase, as far as possible, store articles of Indian manufacture and will buy such foreign articles as are indispensable and as cannot be replaced by Indian Swadeshi articles.

"We shall not make use of any kind of foreign yarn or foreign silk or artificial silk or thread or yarn made in mills on the boycott list.

"Persons connected with the management of the mills will wear Swadeshi cloth."

PERFECTLY MONSTROUS PROPOSALS

This meant that all cotton or woollen mills owned or managed by British companies or firms were to be compelled to close. It was, as an important London newspaper said a few days ago, "an outrage upon the liberty of British subjects." It meant nothing less than driving the British commercial community out of India, which surely no British Government would ever sanction. (Hear, hear.) He remembered some years ago when discrimination against the British began to be preached he put it before the late Lord Birkenhead, who was then Secretary of State for India, and whose reply was, "The proposal is perfectly monstrous."

If, his lordship continued, the unrest in India and the boycott of British goods and the disposition to turn the British out of the country were abandoned, trade would improve and confidence would be restored. It was his belief that, were the British to give up government of India at the centre, chaos, civil war and slaughter would follow and the country would go to the devil. (Hear, hear.)

Recalling the recent riots and murders, the attempts to assassinate the Viceroy, the Governor of the North-West Province and the Governor of Bombay, he was of the opinion that, if firm action, similar to that which the Governor, Sir Ronald Storrs, and the Secretary of State for the Colonies, Mr Thomas, took when trouble recently broke out in Cyprus, had been taken in India three years ago, things there would have been very different to-day. (Hear, hear.)

DOMINION STATUS FOR INDIA IMPRACTICABLE

He desired to refrain from anything in the nature of intemperate criticism, but, in his humble judgment, the suggestion to give Dominion status to India, a country composed of numerous races of different nationalities, religion and creeds, was a profound mistake. Let his hearers think what Dominion status for India would mean. The British Army would be withdrawn, the King's representative would have no executive power and no right to take part in any way in the government of the country. Australia, New Zealand and Canada had Dominion status, but the population of those countries was entirely British, with one faith. There were

no Indian Princes there, with practically plenary powers over their territories, holding their mandates from the King. Were those powers to be abrogated? How, under Dominion status, was an Indian Prime Minister, with his Cabinet, to rule the country, with its great diversities of people and race? The proposal, so far as he could judge, if adopted, would play havoc all round with the population of over three hundred and fifty millions and with the prosperity which, under British rule, all subjects in India had enjoyed.

What was wanted in India was a firm Central Government to preserve law and order, to continue to give equal justice to all in the country and to put up with no nonsense. (Hear, hear.) He was glad to see that the present Secretary of State, Sir Samuel Hoare, was putting his foot down and was determined to stop the preaching of sedition, murder and outrage.

A NATIONAL DISASTER AVERTED.

The country had gone through an anxious time in the last two years. Socialistic inroads upon the nation's wealth, combined with the drain of war debts, had threatened us with financial disaster and forced us off the gold standard. Our pound note fell in the eyes of the world to not more than 15s., and had since gone lower, and had it not been for the courageous action of our Prime Minister—Mr Ramsay MacDonald—Viscount Snowden, Mr Thomas, Mr Baldwin, Lord Sankey, Lord Hailsham, Mr Neville Chamberlain, Sir Herbert Samuel, Sir Samuel Hoare, Mr Walter Runciman, Sir John Simon, and, among others, their esteemed colleague Sir Robert Horne—(applause)—in deciding to establish a National Government, altogether away from party, and their determination to see that our expenditure did not exceed our income, the pound note might soon have been worth no more internationally than 5s., or even less.

Our grateful thanks were due to these patriotic statesmen, but if he might, with all humility, venture to say so, everyone throughout the country and the British Dominions beyond the seas, from the highest to the lowest, must feel immensely indebted to His Most Gracious Majesty King George the Fifth, Emperor of India, for the part he played in averting what would have been a disastrous calamity for the whole Empire. (Hear, hear.) Well might we all sing from the bottom of our hearts, "God Save the King." (Applause.)

The Chairman concluded by moving the adoption of the report and account, which was seconded by Sir Charles S. Addis, K.C.M.G., and, no questions being asked, it was carried unanimously.

On the motion of the Chairman, seconded by the Rt. Hon. Viscount Churchill, G.C.V.O., a dividend for the half-year ended September 30th last, of 2½ per cent. on the preferred stock, less income tax, and a dividend of 3½ per cent. on the deferred stock, free of income tax, was declared, payment to be made on and after December 16th.

The retiring directors, Mr H. N. Gladstone and the Rt. Hon. Lord Kilbracken, G.C.B., were re-elected.

TRIBUTE TO DIRECTORS AND STAFF.

Mr T. Sandeman, in proposing a cordial vote of thanks to the Chairman, directors and staff for their continued successful management of the company's business, said he would first like to voice the deep regret of the stockholders that Lord Inchcape was unable to be present. They fully sympathised with what had been said, through the Vice-Chairman, about the difficulties connected with the working of this vast concern, but they knew that the officials and staff had all done their best. It was a matter of regret that it had been necessary to make a cut in their salaries, but there was no doubt that the reduction was justified all round. That was especially so when they considered the fact that 8 per cent. was being paid on the deferred stock, which was practically 1½ per cent. on the entire amount of the assets employed in the company. He thought all would agree that they should thank the directors for their labours, hoping that, with renewed prosperity, which they trusted would come, their endeavours would be more successful and they would be relieved of some of their troubles. (Applause.)

Mr Charles T. Green seconded the vote, which was cordially approved.

The Chairman, in acknowledging the compliment, said that he had worked for a great many years in one capacity or another in close touch with, and under, Lord Inchcape, and the more he saw of him the more he marvelled at the wonderful combination of broad vision and genius for detail which he possessed. He (the speaker) believed there was no other man in the country to-day who possessed those two qualities in the same degree, and that went right down not only to his immediate colleagues, but through the whole of the staff, at home, abroad and afloat. To work with him and under him was an inspiration, and he would certainly lose no time in conveying to Lord Inchcape the kind remarks which had been made about him.

On the motion of a stockholder it was resolved to send a special message to Lord Inchcape expressing the regret of the stockholders at his inability to be present.

The proceedings then terminated.

MEXICAN RAILWAY COMPANY, LIMITED.

THE FALL IN COMMODITY PRICES.

MR VINCENT YORKE'S SPEECH.

The 133rd ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 9th instant, at Winchester House, Old Broad Street, London, E.C.

Mr Vincent W. Yorke (the chairman) said: All that I have to say to you to-day might really be summed up in three words, and those are "want of business"! Adequate turnover is necessary for every commercial concern, and especially in a railway where the bulk of the expenses are constant and cannot be reduced, whatever efforts may be made, below a certain level. The reason for this lack of business is not far to seek. As I have indicated at our two last meetings, a country which is dependent for its living on the production of such commodities as oil, silver, lead and copper must suffer severely when these, practically in every case, have fallen to unprecedentedly low prices. Since our last meeting in June, with the exception of silver, in which there has been an appreciation in the last few weeks, these commodities have shown no recovery whatever. I cannot pretend that there has been any improvement of conditions in Mexico, while our own situation has distinctly deteriorated in the last six months.

Passenger revenue has again been adversely affected by commercial depression and road competition, while of the large falling off in receipts for goods traffic, amounting to £780,000, nearly half is in foreign or import traffic, which constitutes our best-earning traffic. The uncertain condition of exchange during the half-year, and a vigorous campaign in favour of national production and national purchases, has very materially affected the volume of importations.

The average daily takings for the half-year are only \$29,800, as compared with \$36,300 for the first half of 1930 and \$35,500 for the first half of 1929, and at this low level of receipts it is almost impossible to make both ends meet.

REDUCTION IN EXPENSES.

Nevertheless, the management are to be congratulated on having reduced expenses as compared with the corresponding half-year by \$542,000, or about 9½ per cent.; and this has been done in the face of a fall in exchange which affects adversely the purchase of stores and materials bought at gold prices. If due allowance be made for this difference in exchange, which is outside our control, made for this difference in exchange, which is outside our control, the saving in expenses would have reached the substantial figure of \$813,000. With a view to further economy, we have felt constrained to authorise the closing for the time being of the Pachuca-Tampico branch, which, for various reasons, had ceased to pay its way.

The net result of the half-year, after deducting loss on exchange and crediting interest on investments, is a deficiency of just over £80,000, which brings up the total of the debit to net revenue to £1,033,000.

I wish that I could speak more hopefully of the results of the current half-year, but traffic have fallen even more heavily since July 1st last, the average takings to date being only \$24,500 per diem, as compared with \$29,800 per diem for the first half-year. These poor returns have resulted in an operating deficit averaging \$91,400 for the months of July, August and September, but I am glad to say that continuous efforts to reduce expenditure have reduced the deficit for October to \$19,400. It is, therefore, practically certain that the results of the half-year will show a substantial loss on operation.

I most sincerely wish that I could find some favourable features in the situation, or some symptoms of recovery in our business, but I have failed to do so. Commercial depression is probably more intense in the United States to-day than in any other part of the world, and Mexico, being contiguous to that country, must inevitably suffer to an equal degree. A substantial and permanent recovery in the price of silver is much to be hoped for, and would do more than anything else to improve business in Mexico. About 60 per cent. of the world's production of silver comes from Mexico, and her currency is now on a silver basis. As you may have noticed, there has been a definite appreciation of silver in terms of gold during the last few weeks, though it does not amount to more than a rise of, say, from 12 pence to 14 pence, but the consensus of informed opinion would seem, I am sorry to say, to be that such a rise as has taken place is due to the activities of speculators and not to natural causes, and under existing conditions no permanent improvement in price can be expected. The question is one of world-wide importance and affects vitally the interests of the Eastern and Western Hemispheres.

EXCHANGE POSITION.

As regards exchange, I informed you at our last meeting that silver currency, in which the bulk of our receipts is paid, stood at a discount of 27 per cent., and shortly afterwards it fell to as low

as 40 per cent. This depreciation brought great inconvenience to commerce, and in July the Government decreed a new monetary law making silver currency legal tender to any amount. Though this amounted to a departure from the gold standard which has stood Mexico and our railway in good stead for the last ten years or more, the result on the exchange value of the silver peso has been hitherto surprisingly satisfactory. The rate of exchange has remained steady for some time past at a figure below 3 pesos to the American dollar, and is to-day at a premium to the pound sterling, being \$8.65, or 27½ pence per peso. In fact, the present position of exchange is the one bright feature to which I can direct your attention to-day. It would be brighter still if there were any prospect of money being available for remittance, but without earnings one cannot remit.

About the same time as the enactment of the new monetary law, a serious effort to balance the budget was made by the Government. This took the form of increased taxation in every direction, and amongst other things a tax on turnover. This is, to my mind, the most unfair tax that human ingenuity has yet discovered, and we ourselves have to pay at the rate of 1 per cent. on our receipts, in spite of our having made an operating loss for the first nine months of the year of \$73,000, the tax at this rate amounting to \$124,000. We have solemnly protested against this imposition, but without avail.

NEW LABOUR LAW.

There remains only for me to say a few words about the new labour law which came into force about two months ago, and it is difficult for me to speak at all definitely with regard to it. It has, on the one hand, certain advantages from our point of view, as it defines more clearly than was defined before the duties of the employees towards the employer; but, on the other hand, it has aroused suspicion in the minds of the workers as to the intentions of the masters. It is probable, therefore, that they may strongly oppose the revision of their contracts which the law entitles us to demand. We had obtained in March last concessions from our men to the extent of a reduction of 10 per cent. in wages by reason of the bad times, and these concessions, which are really vital to our existence, we are most anxious to continue. Much will depend upon the interpretation of the law given by the authorities, and we propose, jointly with the National Railways and the Southern Pacific, to make the strongest possible representations to the Government in the hope of arriving at a satisfactory arrangement for the whole of the railways of the country.

I am afraid that I must end these remarks on the same note of despondency as that on which I began, distasteful as I confess it is to me to do so. But I will say this, that I do not believe that things in Mexico are worse than in most countries of the world; what I have told you as to exchange shows that in this respect, at any rate for the time being, the Mexicans are better off than ourselves. I would also point out that the depression in Mexican commerce does not represent the enormous drop in prosperity which the United States have had to face. For political and possibly sentimental reasons the North American boom never extended to Mexico, and, therefore, the decline in commercial activity has been much slighter and more gradual than with her powerful neighbour. Honest endeavours have been made to balance the budget, the balance of trade is still a favourable one, and political conditions seem to be absolutely stable. From which it follows that Mexico should be in a better condition than many countries to take every advantage of a recovery in business, if and when it sets in.

LATEST INFORMATION.

I will now read a cable just received from the general manager. He says: "Heavy movement of La Villa pilgrims has started. Cereal crops good, but coffee production 30 per cent. below last year. Potrero factory not buying sugar from producers on Vera Cruz al Istmo Railway, but approximately 8,000 tons more sugar will be ground. Rise of banana prices in United States is not expected to increase all rail movement. Imports slightly improving, but Vera Cruz entries greatly below normal. Owing to lower prices, English tinplates, iron sheets and steel sheets being ordered in preference American. High duties, national campaign, and trade depression severely affect imports of high-class goods. Textile mills Orizaba temporarily closed, but can execute orders from stock for a long time. Puebla textile and flour mills working short hours. Owing to decreased traffics intend closing Orizaba locomotive workshop and concentrating Apizaco, saving 31,313 Mexican pesos monthly; discharging 194 men. Rate of exchange to-day, 8 pesos 65 cents to pound sterling. Banco de Mexico notes appearing in limited quantities. Negotiating 10 per cent. decrease in all wages with the labour unions."

That, I think you may take it, is in all the circumstances a satisfactory message.

The report and accounts were unanimously adopted.

When times became more normal, and the Government could see their way to take off the extra duty recently imposed, there was little doubt that their company would be in an excellent position to take advantage of the improved trading conditions.

The report and accounts were unanimously adopted.

MALAYA GENERAL COMPANY, LIMITED.

DIVIDEND OF 2½ PER CENT. DECLARED.

The twenty-third ordinary general meeting of the Malaya General Company, Limited, was held on the 8th instant, at 7 Great Winchester Street, London, E.C.

Mr George M. Weekley (the chairman), in the course of his speech, said: Our rubber realised £30,000 less than in the previous year, the average selling price having dropped from 6½d. to 3½d. per pound, and it is, therefore, surprising that, after allowing £3,132 for depreciation of buildings and machinery, we made a loss of only £2,049. This, of course, was due to our getting down the cost of production to a figure which a year or two ago would have been regarded as impossible. Incidentally, we have now written down our buildings, plant, machinery and furniture to about 20 per cent. of their original cost; and our 5,264 acres of planted rubber stand in the books at only £42 12s. per planted acre, leaving out of account altogether the remaining 2,485 acres of reserve land, &c.

Of the reserve account (now standing at £96,000), £87,201 is represented by actual investments, the great bulk of it being in Government securities, which are worth to-day about 95 per cent. of their cost. Under the circumstances, the directors feel quite justified in recommending a small dividend of 2½ per cent. After meeting the dividend there will still remain at the credit of profit and loss account a balance of £16,600, or about 8½ per cent. on the issued capital. The estate is being maintained in very good condition. The visiting agent reports very favourably upon the standard of upkeep and maintenance throughout the estate.

The year under review has been a most difficult one for all concerned. Unfortunately, many growers continue to produce enormous quantities of rubber in an endeavour to reduce costs, and while doing so they automatically bring down the selling price. We have endeavoured to steer a middle course, by voluntarily confining our output to less than three-fourths of our potential crop. The future of rubber is at the moment a difficult subject to deal with, but having become a vital necessity of modern civilisation it must surely, in the long run, resume its place as a successful industry. Further uses must be found for it, and sooner or later very much larger quantities will be consumed for roadmaking.

Shareholders can all assist in the revival of the industry by using more and more rubber articles in everyday life, and our attention has been called to the excellent qualities of such things as pneumatic upholstery for cars and rubber cushions, &c. Another field which rubber has recently entered is that of furniture upholstery.

The report and accounts were unanimously adopted, and a vote of thanks was accorded to the agents and staff in the East and the secretaries in London.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended December 5, 1931, amounted to £8,503,500 against ordinary expenditure of £8,766,000. After allocating £340,500 to Sinking Fund and having allowed for an increase in Exchequer Balances of £397,435, the operations for the week, as shown below, increased the National Debt by £50,206,000 to £7,780,280,000:—

(000's omitted.)	
Bank of England Advances	2,500
Public Department Advances	18,550

8	Nil		8	Nil	
9	Nil		9	Nil	
10	Nil		10	Nil	

Messrs Samuel Montagu and Company write on December 9, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,711,125 on the 2nd instant, as compared with £120,709,600 on the previous Wednesday. About £750,000 in bar gold arrived from India by the s.s. "Ranpara" on Friday last, but the bulk of this amount had been sold forward, and only a small balance was available for disposal in the open market. A considerable business continues to be done in gold consigned from India, and large amounts have already been engaged for shipment by the s.s. "Viceroy of India," sailing from Bombay this week. On the 11th instant the s.s. "Naldra" is due to arrive in London with £1,800,000 bar gold, and on the 18th instant the s.s. "Kaiser-i-Hind" with £1,600,000. The small quantities of gold offered in the open market during the week have been disposed of to the Continent.

Quotations during the week:—

	Per fine ounce.	Equivalent value of £ sterling.
December 3rd	122s. 3d.	13s. 10-8d.
" 4th	122s. 0d.	13s. 11-1d.
" 5th	124s. 1d.	13s. 8-3d.

" 8th	126s. 6d.	13s. 5-1d.
" 9th	126s. 7-7d.	13s. 7-6d.
Average		

SILVER.

After a fall of $\frac{1}{2}$ d. on the 3rd instant, recovered in full on the following day, prices have followed a pronounced upward trend, and with small buying orders on a poorly supplied market, this was continued until 20 $\frac{1}{2}$ d. and 20 $\frac{1}{2}$ d. were quoted for cash and forward delivery respectively on the 8th instant. Purchases on Continental account have again been a feature. At the higher level speculators have sold and America has forsaken the reluctance to do so, which has been in evidence for the greater part of the week. In consequence, and with some improvement in sterling, prices have reacted sharply to-day.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 30th ultimo to mid-day on the 7th instant:—

	£	Exports.	£
Imports.			
Mexico	55,769	Germany	33,320
U.S.A.	22,289	U.S.A.	29,500
Canada	8,250	British India	75,654
Other countries	8,387	Other countries	12,740
	94,695		151,214

Quotations during the week:—

	IN LONDON.	IN NEW YORK.
	Bar Silver per oz. std. delivery.	Cash Two Months delivery.
December 3rd ..	19 $\frac{1}{2}$ d.	19 $\frac{1}{2}$ d.
" 4th ..	19 $\frac{1}{2}$ d.	19 $\frac{1}{2}$ d.
" 5th ..	19 $\frac{1}{2}$ d.	19 $\frac{1}{2}$ d.
" 6th ..	20 $\frac{1}{2}$ d.	20 $\frac{1}{2}$ d.
" 7th ..	20 $\frac{1}{2}$ d.	20 $\frac{1}{2}$ d.

NOTICES.

Barclays Bank, Ltd., announce the opening of new branches at 82 Westmount Road, Eltham Park, S.E. 9, and at 114 Alexandra Park Road, N.10.

The Swiss Bank Corporation announce that the board of directors have appointed Mr Maurice Golay, hitherto manager of the London office, and Dr Rodolphe Speich, hitherto manager and general secretary in Basle, to be general managers of the Corporation as from January 1, 1932.

Company News.

REPORTS AND NOTICES.

The annual general meeting of the British Overseas Bank, Ltd., provisionally arranged for Tuesday, December 8th, has been postponed until the following Tuesday, December 15th.

The directors of the Central Argentine Railway, Ltd., have unanimously elected the Rt. Hon. Lord Forbes to fill the vacancy on the board caused by the death of his father, the late Rt. Hon. Lord Forbes, P.C.

BANKS.

THE NATIONAL BANK OF SCOTLAND, LIMITED.—The report and balance sheet for the year to October 31, 1931, shows only a small reduction in profits. The dividend is at the rate of 16 per cent., a rate which has been maintained for the past seventeen years. The allocations to various funds are made in different proportions to those of last year, contingent fund receiving £100,000 this time to £20,000 going to heritable property account and £20,000 to the officers' pension fund. The balance carried forward is slightly exceeding the paid-up capital of £1,550,000, considerably less at £72,700. The reserve fund stands at £1,100,000. The balance sheet totals show a contraction from those of the previous year, deposits exceeding the paid-up capital of about £3,000,000. The acceptances at £29,000,000 being lower by about £3,000,000. The acceptances at £2763,000 are again rather higher, but note circulation shows a slight contraction. The Bank holds over £11,000,000 of British Government securities. Advances, combining loans against securities and advances on current account, stand at practically the same figures as a year ago, viz., £13,500,000. The Bank, which was the first of the Scottish banks to open an office in the City of London as far back as 1864, has now opened a branch in the West End of London, the office being situated at 18-20 Regent Street, Piccadilly. In addition, five branches were opened in Scotland during the year.

MISCELLANEOUS.

THE CHARTERED INSTITUTE OF SECRETARIES (HONORARY OFFICERS).—Mr. Francis Robert Edward Davis, O.B.E., secretary of the Great Western Railway Company, has been elected President of the Institute in succession to Mr. Edward Wilshaw. Mr. F. G. Palin, secretary of the British Metal Corporation, Ltd., and Mr. W. G. Hielop, London secretary of Rand Mines, Limited, have been elected Vice-Presidents. Mr. Hildred Carlisle, secretary of the Investment Trust Corporation Limited, has been elected Treasurer.

EASTBOURNE CORPORATION 3 PER CENT. STOCK, 1920-40.—Williams Deacon's Bank, Ltd., give notice that in order to prepare the interest warrants due on December 24, 1931, on the Eastbourne Corporation 3% Stock, 1920-40, the books will be closed from December 11th to December 24th inclusive.

LOW TEMPERATURE CARBONISATION, LTD.—The sales of "Coalite" smokeless fuel and by-products have reached £194,810, a considerable increase over last year. On these sales there is a profit of £25,128, and this does not include a profit on the works' fuel purchased from Doncaster Coalite, Ltd., amounting to about £80,000, the profit on which is retained in the accounts of that company. After paying all the head office expenses, of technical and research staffs, laboratories, &c., there remains a net trading profit of £17,730 10s. 1d. Trading conditions during the year have been more difficult than in the whole history of the company and prices for by-products reached new low levels. In spite of abnormal difficulties, the two works ran at full pressure output was put through, and considerable general progress was made. The directors have deemed it wise to make a large reserve in respect of possible depreciation in the value of securities held in respect of the deposit with M.I.G. Trust, and the loan to Petroleum Refineries, Ltd. The meeting will be held at Cannon Street Hotel on December 15th at 11.30 a.m.

HUDSON'S BAY COMPANY.—As foreshadowed by the Governor at the annual general meeting on July 29, 1931, owing to the existing difficult trade conditions, the company is faced with a heavy loss on the operations of the current year, which ends on May 31st next, and, in these circumstances, the Governor and committee much regret their inability to declare interim dividends on the preference and ordinary shares.

THE CORNBROOK BREWERY COMPANY, LTD.—The net profits for the year ended September 30, 1931, after providing for depreciation and interest, amount to £43,541, as compared with £44,711 for the year ended September 30, 1930, and the available balance, including the amount brought forward from last year, to £52,744, after providing for the dividend on the preference shares and the 5 per cent. already paid on the ordinary shares, and transferring £10,000 to reserve. The directors recommend a payment of final dividend of 5 per cent. on the ordinary shares, making 10 per cent. for the year, and that the balance of £58,369 be carried forward, as against £58,516 brought in.

JOSEPH NATHAN AND COMPANY, LTD.—The directors report that called and preliminary information indicate that the company's accounts for the year ended September 30, 1931, will show a net profit, subject to audit, of £52,137, as compared with £58,065 last year. Trading conditions and exchange restrictions have been so abnormal during the year that the directors regard the results as satisfactory. The report and accounts will be issued in March, when the annual meeting will be held, at which the payment of the usual dividend on the 8 per cent. preferred ordinary shares will be recommended. Warrants for the half-yearly dividend on the 7 per cent. preference shares will be posted on December 31.

SALISBURY, SOUTHERN RHODESIA, £100,000 4½ PER CENT. MUNICIPAL LOAN.—The Standard Bank of South Africa, Ltd., 10 Clements Lane, E.C.4, notify members of certain bonds drawn for redemption at par on December 31, 1931.

TOKYO ELECTRIC LIGHT CO., LTD.—(6 per cent. first mortgage bonds, sterling series).—According to the conditions of the bond, the principal and interest are payable in pounds in gold coin of the United Kingdom of Great Britain and Northern Ireland or of equal to the standard of weight and fineness ruling on June 15, 1928, at the offices of Messrs. Lazard Frères and Co. (Company), Ltd., in London, or in U.S. gold dollars of the standard weight and fineness ruling on June 15, 1928, at the rate of \$4.8665 to the pound sterling, at the principal office of the Guaranty Trust Company of New York in New York. The bondholders can therefore receive payment of the coupon due on December 15, 1931, in sterling calculated at the sight rate of exchange on New York on the day on which the coupon is presented. For example, should the sight rate on New York on the day of presentation be: (a) \$3.40 to the £, a holder of £100 bond would be entitled to receive \$340, less tax, in respect of each coupon of £3; (b) \$3.10 to the £, the holder of such bond would be entitled to receive \$310, less tax, in respect of each coupon of £3.

THE UNITED MOLASSES COMPANY, LTD.—The directors announce that, in view of the position as outlined in the interim report issued to shareholders in September, payment of the preference dividend due on December 15, 1931, will not be made.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LTD.—The results for the month of November are as follows: Production of oil, 40,600 tons; deliveries, 40,590 tons.

ATROCK OIL CO.—Production for October, 11,611 barrels. Production for November, 12,827 barrels.

TAMPICO OIL, LTD.—The total output on the properties in Mexico during October was 19,611 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,471 barrels. Production on the company's properties in Mexico during November was 17,842 barrels, in respect of which the royalty due to Tampico Oil, Ltd., amounted to 1,338 barrels.

TOCUYO OILFIELDS OF VENEZUELA, LTD.—Oil produced during October, 1931, 1,911 tons. Produced during November, 1931, 1,619 tons.

Commercial Reports.

MARKET SUMMARY.

The progressive deepening of the economic depression in almost every country of the world is naturally limiting the market for raw materials to an increasing extent. On the other hand, the production of many primary products has not yet been adjusted to the lower level of consumption with a consequent increase in available supplies. The continuous downward movement in the price of raw materials in terms of gold is therefore scarcely surprising. Among non-ferrous metals, the poor demand for tin caused a further decline in its price in New York, while copper, lead and spelter remained barely steady. In view of the low level of activity in the motor-car industry, there has been little demand for rubber. In textile raw materials, cotton suffered a further setback. Among cereals, wheat, maize, barley, oats and rye were all cheaper in New York. Cocoa and sugar, too, continued to decline. In order to arrest the downward movement in the latter commodity, Mr. T. Chadbourne is credited with the intention of recommending a further cut in world production at the forthcoming International Sugar Conference in Paris. Coffee is one of the few commodities which show a slight improvement. Sterling quotations of commodities which lend themselves to grading and therefore to international arbitrage, are moving largely in sympathy with international values. The sterling values of most of the other commodities have not yet risen in proportion to the fall in the value of the £ in terms of gold. Markets in this country have again been quiet and turnover was generally on a small scale. Foodstuffs, such as meat, butter and cheese have not so far increased in price despite the depreciation in the £. According to reports from various industrial centres the coal trade and the iron and steel industry remain depressed in most districts, and there has been little expansion in exports. On the other hand, the improvement in the cotton, wool and jute trades has been maintained.

THE COAL TRADE.

SHEFFIELD.—Little change has taken place in the South Yorkshire coal market except a reduction of exports to France. The tendency of the market is downward. New export contracts are scarce, although deliveries under old contracts and prices of best steams are maintained. Quotations for the latter are firm at 18s. to 18s. 6d. f.o.b. Demand for industrial fuels has eased, and the quietude of house coal has brought about individual reductions of price. Reductions at this period of the year are exceptional, if not unique. Best ordinary house coal is quoted at from 20s. to 22s. at pits. The improvement in blast-furnace coke continues, and good brands are worth 12s. at ovens.

CARDIFF.—Extremely depressed conditions have continued to prevail on the Cardiff coal market, and both production and exports are considerably less than those in the first half of December last year. Collieries are working very irregularly, and throughout the present week roughly about one-third of the tips at the South Wales ports have been idle. Dry large and dry washed smalls are still firm and commanding prices above the schedule; there is a fairly good inquiry also for anthracite qualities; but for all other grades supplies are excessive and quotations are ruling nominally on the basis of the minimum schedule. At Cairo on Tuesday the tenders were opened for alternative supplies of 140,000 tons and 105,000 tons c.i.f. Alexandria, and 35,000 tons f.o.b. for the Egyptian State Railways, and it transpires that the lowest prices tendered had been submitted by Cardiff firms on the basis of 24s. 11d. c.i.f., and of 17s. 7d. and 17s. 9d. for the f.o.b. supplies. Contractors generally, however, are abstaining from purchases for delivery over 1932 owing to the instability of the exchange position. The following are the current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; cargo smalls, 11s. 6d. to 12s. 6d.; anthracite, best large, 36s. to 38s. 6d.; Red Vein large, 22s. 6d. to 27s. 6d.; machine-made cobbles, 40s. to 48s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 24s. to 24s. 6d.

GLASGOW.—Some stringency has developed in the Scottish coal market as a result of the working of the quota scheme, which has compelled some companies to slow down their rate of production in order to avoid a complete stoppage at an early date. Some

collieries have in fact intimated that pits will cease to produce on the 15th inst. This position has apparently arisen as a result of the increased business done immediately after the departure from the gold standard, which enabled collieries then to enlarge their outputs. The districts mainly affected are Fife and the Lothians, the leading shipping districts. In the markets all sizes of nuts are showing an upward tendency in price, with troubles and doubles scarce. Steam coals are also very firm. Current prices for the shipping trade are approximately as follows (f.o.b. district ports):—**LANARKSHIRE.**—Ell best, 14s. 6d.; splint best, 15s. 15s. 3d.; splint second, 14s. 3d.; navigation, 15s.; navigation second, 14s. 6d.; Hartley, 15s. 6d.; steam, 13s. 9d.; trebles, 16s.; doubles, 13s. 13s. 6d.; singles, 10s.; pearls, 9s.; dross, 9s. **FIFE.**—Screened navigation, 17s.; first-class steam, 13s. 3d.; third-class steam, 12s. 6d.; troubles, 17s. 18s. 6d.; doubles, 13s. 6d. 14s. 6d.; singles, 10s.; pearls, 9s. 6d. **LOTHIANS.**—Prime steam, 12s. 6d. 12s. 9d.; secondary steam, 12s. 3d.; trebles, 16s.; doubles, 13s. 6d.; singles, 10s.; pearls, 9s. 6d. **AYRSHIRE.**—Unscreened navigation, 16s.; jewel, 17s.; steam, 13s. 6d.; trebles, 16s.; doubles, 13s. 9d.; singles, 10s.; pearls, 9s. 3d.; dross, 9s.

IRON AND STEEL.

SHEFFIELD.—The prevailing quietude in iron and steel is being accentuated by preparations for the Christmas holidays, which in most cases will be longer than usual. Business consists largely of oddment orders, and is patchy, consumers being indisposed to make forward commitments until the present financial and fiscal uncertainty is cleared away. A few lines are active. The departments producing large hollow-forged, one-piece drums for high-pressure boilers and containers have been on full time for a long period. The largest individual contract yet booked was for 44 drums for the mammoth Cunarder under construction at Clydebank. A drum weighing more than 100 tons has been produced. Export trade is generally flat. Increased home business in certain descriptions of hand tools is reported. Prices of finished products of steel remain steady, notwithstanding the increased cost of imported materials used in their manufacture. This is due to the existence of large stocks and the paucity of demand. Many selling prices will have to be advanced in the New Year. Extreme slackness prevailed in the cutlery and electro-plate branches. There is a brisk demand for permanent magnets.

MIDDLESBROUGH.—The pig iron markets are extremely quiet. The position of makers of Cleveland iron is that as a result of the spurt of buying a few weeks ago, they have satisfactory order books up to the end of the year, and have been able to reduce stocks to an important extent, but beyond December they require fresh contracts, which are difficult to secure under present conditions. Official prices were unchanged at Tuesday's market, viz.:—No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d.; and No. 4 forge, 57s. f.o.b. or f.o.t. Hematite makers are pretty much in the same position as producers of Cleveland. They are fairly well sold up to the end of the year, but find confidence lacking in regard to forward purchases. They offer ordinary mixed numbers for early delivery at the unchanged figure of 86s., and at 65s. 3d. to 65s. 6d. a few months ahead, although ore prices threaten to advance on account of the adverse exchanges. In the finished trades very little new business of importance is reported, and prices are generally unchanged. The ore market remains almost idle. Best rubio is nominally 16s. 6d. c.i.f., and the current freight Bilbao-Middlesbrough is about 5s. Coke is weak, and supplies of ordinary blast-furnace qualities are now obtainable for early delivery at 16s. 6d. delivered works. The number of blast-furnaces in operation in the district is unchanged at eighteen.

GLASGOW.—The situation in the West of Scotland shows little change from that reported a week ago. At the steel-making plants there are still no signs of any great increase in demand, and makers of semis are also finding business dull. Sheetmakers continue to be well employed, and are doing a steady trade in the thinner gauges, both of black and galvanised, although all plants are not equally well-employed. Tube makers are also slightly better off this week. It is reported that the Lanarkshire County Council have agreed to accept a tender by Messrs. Stewart and Lloyds for pipes to the value of slightly over £10,000. During the week several structural orders have been placed with Glasgow firms, aggregating a quite considerable sum. Another important contract which has come to the West of Scotland this week is one for plant and equipment for a cabinet factory for the Co-operative Wholesale Society at Manchester, which has been secured by the Paisley Engineering firm, Messrs. Thomas White and Sons, Ltd.

CARDIFF.—General conditions in the Welsh tinplate trade are unaltered, prices remaining at 13s. 9d. to 14s. 3d. per basis box. Steel bars are also unchanged at £5 per ton for locally-manufactured material and at about £4 5s. per ton for imported bars. Galvanised sheets are still easy on the basis of £9 2s. 6d. to £9 5s. per ton. The recent improvement in the volume of shipments has been maintained, and stocks are lower than they have been for a considerable period.

OTHER METALS.

TIN.—The declining rate of consumption, which is discouraging purchases, caused a further downward movement in the price of tin in terms of gold. In New York the metal was quoted at 20.56 cents per lb. on Wednesday, against 21.37 cents per lb. a week ago, and 23.12 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £137 5s. to £137 7s. 6d. per ton, compares with £137 5s. to £137 7s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 30,400 tons, show a decrease of 110 tons on the week.

COPPER.—The slight recovery in copper prices, following the sharp break in values after the failure of the international conference of producers, has been maintained during the past week. On Wednesday "Domestic" spot was quoted officially at 6.50 cents per lb. in New York, against 6.50 cents a week ago and 7 cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £38 to £38 2s. 6d., compares with £37 7s. 6d. to £37 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 20,930 tons, show a decrease of 93 tons, while stocks of rough copper, at 772 tons, remain unchanged.

LEAD.—The market in lead has been steady both in New York and London. This steadiness has been due rather to the scarcity of offers than to an increase in demand. In New York the metal was quoted at 3.85 cents per lb. on Wednesday, against 3.85 cents a week ago and 4.05 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £15 6s. 3d. to £15 7s. 6d. per ton, compares with £15 1s. 3d. to £15 5s. on the corresponding day last week.

SPELTER.—A slight spurt in buying caused a small advance in New York early this week. Subsequently the demand subsided, but New York quotations were maintained at the higher level. The turnover in London was small, and values in terms of sterling are a little easier on the week. Wednesday's quotation in New York, at 3.175 cents per lb., shows a rise of 0.05 cent per lb., as compared with that of the corresponding day last week. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," at £14 3s. 9d. to £14 12s. 6d. per ton, against £14 7s. 6d. to £14 17s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and nickel at £95 per ton, and at £250-£255 per ton respectively, have been maintained at last week's level. Antimony again sold at from £28 5s. to £28 10s.; last week's silver. On the spot remained nominally at £20 10s. to £21 per flask, quicksilver was again cheaper at £19 to £19 15s. per bottle, against £19 2s. 6d. to £19 17s. 6d. a week ago.

TEXTILES.

THE COTTON TRADE.—Liverpool.—Imports for the week December 3rd to 9th (inclusive) are 82,782 bales, of which 56,451 are American, 2,312 Argentine, 8,375 Russian, 1,422 Peruvian, 11,248 Egyptian, 1,000 African, 626 East Indian and 1,348 sundries.

Manchester.—There has been no expansion in the volume of transactions, but in certain quarters inquiry has been rather more encouraging, and in small lots a fair turnover has taken place. After some falling off in demand, rather more trade has been under consideration for China, shippers being encouraged by the further rise in the price of silver and the favourable Shanghai exchange rate. Certain makers of grey and white shirtings have sold rather more freely. Useful lines have also been booked for the minor outlets of the Far East, such as Singapore and the Straits Settlements. A substantial inquiry has come through for India, but most of the offers remain disappointing. A fair business, however, has been done in light whites, chiefly for Karachi and Madras, but indications of increased activity before very long for Calcutta, but the political situation abroad causes some uneasiness. There have been a few more bids in standard makes for Egypt and printing cloth have attracted increased attention for the Near East. Very little has been done for South America and the Continent. Casement cloths and furnishing fabrics have been in request for the home trade. The yarn market has presented very little life. Irregularities in quotations for American and Egyptian qualities rather tend to increase. Fair lots of bundles have been sold for China, and trade has also been reported in fine counts for India.

THE WOOL TRADE.—Bradford.—There have been fewer withdrawals at the auctions in Coleman Street this week, writes our correspondent, but scarcely any description is selling at a better price than in October, and in some cases even the highest point of the current sales appears to have been passed. Home and Continental buyers are agreed that there is not likely to be anything gained by securing any big weight of wool to-day beyond prospective requirements. Fine crossbred greasy wool is comparatively dearer than the finer qualities of merinos, but this is purely a reflection of the current demand, and in all descriptions there is every probability of supplies being adequate. The new clip merinos are attracting considerable attention, but prices are quite reasonable, and in the case of superior qualities, sellers could well do with additional competition to lift prices on to a parity which is justified according to the prices forthcoming for average wools. The big supplies of to the prices forthcoming for average wools. Greasy half-breds crossbreds are passing out of hand fairly well. Greasy half-breds are perhaps not realising as much money as last week, but these are

holding their own better than 50's and below. The South American market is in a very similar position to the South African, owing to the adverse rate of exchange, and it is impossible for importers here to make firm offers to the former source. For the time being, this is no doubt helping crossbreds in London, but slipe half-bred lambs are perhaps just a shade in buyers' favour, and three-quarter-bred lambs are very reasonable. For any new business offered in Bradford, topmakers are disposed to sell reasonably. A satisfactory volume of business has again been done within the past few days, including some substantial sales on export account. For the moment these seem to be the standby of the top market, but generally speaking, a selling policy is being pursued so long as wool can be secured on a basis which leaves a slight margin.

THE JUTE TRADE.—Dundee.—There is an undercurrent of steadiness in the jute trade. The raw material is inclined to fluctuate slightly, but on the whole sellers display reserve, and offers are not freely made. Speculators in the Futka market in India have dominated prices of the fibre by their operations and the mills, coming into the market for fair supplies last week, caused an advance. Trade in Calcutta goods has improved recently, and this, combined with a considerable reduction in stocks of goods in the hands of the mills, has had a firmer effect on values. The stocks of hessian in Calcutta were reduced by 11 per cent. at the end of November, compared with those at the end of October, while heavy goods were reduced by 30 per cent. The latter are now under normal, and these have shown the greater tendency to advance, Liverpool twills now being quoted at 61s. 6d., and "B" twills at 56s. for January-March shipment. The value of Daisee assortment is £20 15s. generally asked, but if there were a buyer, he could obtain a limited quantity at £20 10s. for the full group, with three's quoted at that rate, and four's at from £19. Tossa assortment is named at £22 5s. for full group, £22 for three's, and £20 15s. for four's, December-January. White jute is not in much request in this market now, and prices of First Marks and Lightnings are more or less nominal at from £25 and £23 respectively, same shipment. Only a few small sales are taking place meantime. Jute yarns are quiet, but very firm in price. Spinners are quoting not less than 2s. 5d. for common 8 lb. cops, and 2s. 6d. for 8 lb. spools, at which a small business is passing. Twist is firm at from 4½d. to 4½d. for 3-ply 8 lb., and sacking yarns rule unchanged at from 2½d. for 24-lb. weft, and from 3½d. for 8-lb. chains. A few transactions are occurring in Rove at from £22 for 48 lb., and £19 10s. for 200 lb., and carpet yarns are now quite busy at from 3½d. for 14-lb. warp. The finer yarns continue to be quoted at 3s. 1d. for second quality 8 lb. Rio warp, 2s. 10d. for third, and 2s. 8d. for fourth. A large volume of inquiry is being made for jute cloth of all kinds, yet business on the whole remains quiet. Manufacturers are adhering to their prices, however, and 3½d. is firm for 10½ oz. 40 in. hessians, and 2½d. for 8 oz. Considerable quantities of tarpauling are inquired for, and altogether the position holds the promise of much more doing. The linoleum hessian market is practically idle, but prices are firm. Calcutta hessians have been raised to 21s. 11d. for 10 oz. 40 in. and 17s. 10d. for 8 oz., December, and 22s. 2d. and 17s. 11d. for January-March. Spot prices are nominal at 22s. 3d. for 10 oz. and 17s. 3d. for 8 oz.

THE GRAIN MARKETS.

WHEAT.—There has been little change in the international wheat situation this week. The turnover at the principal markets has been on a small scale, but values in terms of gold remained steady until Tuesday. On Wednesday, however, there was a sharp decline in prices which was partly ascribed to Russian and Argentine selling pressure. Despite many favourable factors, such as the decline in the acreage sown this year and the bad start made by the United States winter wheat crop, markets are adversely affected by the deepening of the world depression. The Australian and Argentine crops are now being harvested, but so far weather conditions have been none too favourable. According to the preliminary official estimate, the yield of the Argentine crop, at 27,000,000 quarters, shows a reduction of 2,500,000 quarters on that of a year ago. Sowing in this country has been practically completed. It now appears that the acreage under wheat has been extended considerably in the hope of a guaranteed price following the introduction of a wheat quota next year. On Wednesday, "December" futures were quoted at 52½ cents per bushel in Chicago, against 54 cents on the corresponding day last week, and 63½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Atlantic, ex ship, 34s. 9d. per 496 lbs., as compared with 36s. a week ago; No. 2 Northern Manitoba, Atlantic, ex ship, 31s. 6d., against 32s. 6d.; No. 3 Northern Manitoba, Atlantic, ex ship, 30s. 6d., against 31s. 6d.; Russian, on sample, 27s. 6d. to 30s., against 27s. 6d. to 30s.; Australian, ex ship, 29s. 9d. to 30s. 9d., against 30s. 6d. a week ago.

WHEAT FLOUR.—The international markets in flour have been steady. In this country the demand for flour has been quiet in view of the advance in the price of home-milled qualities. North American shipments, at 273,000 sacks, show an increase of 45,000 sacks as compared with the previous week. Of this total, 72,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 26s. 6d. per sack of 280 lbs., as compared with 25s. 6d. last week; delivered London, 25s. 6d., against 24s. 6d. Manitoba patents, ex store, 26s. 9d. to 31s., against 27s. to 31s. 6d.; and Australian, ex store, 21s. to 23s. 6d., against 21s. 6d. to 22s. 6d. a week ago.

BARLEY.—In view of the increase in offers from Russia and the small volume of buying, feeding barley suffered a slight setback this week in terms of gold. On Wednesday, "December" futures were quoted at 37 cents per bushel in Winnipeg, against 39½ cents last week and 42½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 48 lbs., 25s. to 26s., as compared with 25s. to 26s.; Russian, landed, 23s. per 400 lbs., against 23s. 6d. a week ago.

OATS.—The demand for oats has been on a small scale. Although this cereal was offered at a lower price in terms of gold than last week, buyers failed to respond. "December" futures, which last week stood at 24½ cents per bushel in Chicago, sold at 23½ cents per bushel on Wednesday this week, against 26½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 18s. 6d. per 320 lbs., as compared with 19s. last week; "River Plate," ex ship, 17s. 6d., against 17s. 9d.; "Chilean White," landed, 27s. 6d., against 28s. a week ago.

MAIZE.—The continued heavy shipments of maize by Argentina have resulted in a further downward movement of prices. This is mainly ascribed to the fact that many consumers have now covered their requirements several months ahead. Wednesday's quotation in Chicago for "December" futures, at 35½ cents, shows a fall of 1½ cents per bushel on the week, and one of 9½ cents as compared with the price a month earlier. Quotations in London, Wednesday: "Plate," landed, 17s. 9d. per 480 lbs., as compared with 19s. 3d. last week; "Plate," ex ship, 16s. 6d., as against 18s. 3d.; "Plate," December-January, 17s. 3d., as against 19s. 3d. Yellow maize meal, ex wharf, was quoted at £5 7s. 6d. per ton, against £5 15s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat—				
1 week to December 5.....	Cwts. 61,685	Cwts. 105,929	Cwts. 273,751	Cwts. 261,543

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations in recent weeks, with comparative figures for 1930:—

NEAREST FUTURE.	Jan. 2, 1930.	Dec. 10, 1930.	Jan. 2, 1931.	Nov. 25, 1931.	Dec. 2, 1931.	Dec. 9, 1931.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.	148½	58½	56½	60½	59	57½
Chicago (No. 2 Winter) —Cents per 60 lb.	130½	77½	79½	54½	54	52½

The visible supply of wheat in Canada, at 56,543,000 bushels, shows a decrease on the week of 2,199,000 bushels. Supplies a year ago stood at 55,717,000 bushels.

OTHER FOODS.

SUGAR.—In the absence of buying by refiners, raw-sugar values continued to sag in terms of gold. The decline in prices in terms of gold during the past four weeks amounts to no less than 25 per cent. In view of this situation, Mr T. L. Chadbourne, who will attend the International Sugar Conference in Paris, is credited with the intention of demanding the segregation of an increased quantity of sugar by Java, and of recommending the reduction of next year's international crop by the amount by which it was over-produced this year. The principal markets of raw sugar have been dull this week. "British refined" was advanced 3d. per cwt. on Tuesday. "December" futures in New York were quoted at 1.04 cents per lb. on Wednesday, against 1.11 cents per lb. a week ago, and 1.31 cents per lb. a month earlier. Wednesday's sales of "raws" include "March delivery" at 7s. 0½d. to 7s. 1d. per cwt., against 6s. 10½d. to 6s. 11d., and "May," 1932, at 7s. 2½d. to 7s. 3d., against 7s. to 7s. 1½d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below:—

	Imports.		Deliveries.		Stocks.	
	1931.	1930.	1931.	1930.	1930.	1930.
London	Tons. 1,113	Tons. 1,801	Tons. 1,025	Tons. 1,395	Tons. 5,136	Tons. 25,768
Liverpool ...	13,138	33,973	12,365	13,217	74,276	119,112
Total	14,251	35,774	13,390	14,612	79,412	144,880
Last week ...	12,046	24,839	13,013	14,343	78,551	123,718

COFFEE.—The international coffee situation has been improving recently. In New York, the quotation for Rio No. 7 advanced from 6½ cents per lb. on Wednesday last week to 7 cents per lb. on the corresponding day this week. At Tuesday's auctions in London, there was a keen demand, particularly for the finer varieties, which realised prices considerably above those prevailing during recent weeks. The prices realised were generally higher than a week ago. Brazilian, landed, 751; delivered for home consumption,

106 bags; exported, 159; stocks, 2,806 bags, against 2,449 bags last year. Central American, landed, 2,619 packages; delivered for home consumption, 2,715; exported, 2,158; stocks, 60,825 packages, against 42,458 a year ago. Other kinds, landed, 3,814 packages; delivered for home consumption, 2,543; exported, 689; stocks, 48,836 packages, against 56,106 a year ago.

COCOA.—The market in cocoa has again been dull, and there was a further downward movement in prices in terms of gold. "December" futures were quoted at 4.00 cents per lb. in New York on Wednesday, against 4.24 cents per lb. a week ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, now crop, December-February, at 23s. 6d. per cwt. f.o.b. London contract, shows a fall of 1s. 3d. Last week's movements of cocoa in London were as follows: Landed, 3,232 bags; delivered for home consumption, 6,953 bags; exported, 791 bags; stocks, 132,397 bags, against 163,118 last year.

TEA.—The quantities catalogued for this week's auction comprised 51,264 packages of Indian, 27,223 packages of Ceylon, and 10,887 packages of Java and Sumatra tea. Monday's "Indian" auctions opened with a keen demand and a firm tendency in prices. The quantity of Ceylon tea offered for sale on Tuesday was considerably in excess of that put up for auction a week ago. As a result, prices showed a sagging tendency in the afternoon. The second "Indian" auctions on Wednesday, however, were again characterised by a steady demand at firm prices. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

Week ending	AVERAGE PRICE PER LB.						Total.
	Northern India.	Southern India.	Ceylon.	Java.	Sumatra.	Nyasa-land.	
Dec. 4, 1930	s. d. 1 2-41	s. d. 1 3-27	s. d. 1 7-24	s. d. 0 11-92	s. d. 0 10-76	s. d. 0 10-45	s. d. 1 2-91
Nov. 12, 1931	0 11-67	0 11-11	1 5-73	0 8-49	0 7-46	0 6-90	1 0-35
Nov. 19 "	0 11-27	0 11-60	1 4-68	0 9-12	0 7-45	0 6-74	1 0-03
Nov. 26 "	0 10-86	0 11-67	1 5-33	0 8-51	0 7-81	0 6-99	0 11-83
Dec. 3 "	0 10-72	1 0-63	1 5-33	0 8-20	0 7-69	0 7-41	0 11-72

RICE.—The market in rice has been steady. There has been no recovery in "spot" prices, although "forward" rates were slightly higher. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 9s. 9d. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 95 tons; delivered, 83 tons; stocks, 1,846 tons, as against 1,872 tons last year.

POTATOES.—There was no lack of supplies at the principal markets, but in view of a steady demand, prices remained firm. At the Borough Market, "Best King Edward" sold at from 9s. to 10s. per cwt., as compared with 9s. to 10s. per cwt. a week ago.

SPICES.—The market in spices has been a little steadier. Wednesday's quotation for "Black Singapore" pepper, at 6½d. per lb., shows a rise of ¼d. per lb. on the week. A fortnight ago a similar advance had taken place. Movements of pepper in London during the past week were as follows: Black, landed, 3 tons; delivered, 37 tons; stocks, 336 tons, against 523 tons last year. White, landed, 91 tons; delivered, 66 tons; stocks, 529 tons, against 338 tons a year ago.

MEAT.—Meat values at Smithfield Market showed a slightly firmer tendency this week. English beef, mutton and lamb, and pork realised higher prices. Among foreign meat, Argentine beef was also dearer, but New Zealand mutton declined further. On Wednesday, Argentine beef (chilled hindquarters) was sold at 3s. 10d. to 4s. 4d. per 8 lbs., against 3s. 8d. to 4s. 2d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 2d., as against 2s. 8d. to 3s. 2d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted to 9,599 tons, as compared with 10,010 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.9 per cent. of the supplies, as against 81.9 per cent. a year ago; and imported mutton, mainly New Zealand, formed 68.9 per cent. of the total supply, as against 75.1 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OILSEEDS.—Quiet and rather variable conditions rule in the markets for oilseeds and their products. On reports of harvesting in Argentina being delayed by rains, linseed has a firmer tone, but prices are still mainly subject to exchange fluctuations. Demand, however, is very poor. Old crop Plate on spot or afloat is held for £9 10s., and trading in new crop January-February shipment is recorded at £9, since when 2s. 6d. advance is asked. The quantity of linseed on passage to Europe, at 130,000 tons, is approximately the same as a week ago. New crop Plate is expected to commence shipment any time now. Indian linseed is inactive. Baltic on spot at Hull offers at £10. Cottonseed is quiet, values being above buyers' ideas. Egyptian (black) on spot has been done at £6 and for shipment £6 2s. 6d. to £6 7s. 6d. is quoted. Linseed oil continues to fluctuate widely, with consumers as a rule indifferent. Raw oil on spot ex Hull mill is now worth about £15 10s., while for January-April delivery £15 5s. is the value. Cotton oil is neglected, and lower crude Egyptian ex Hull being obtainable at £18 10s. and common edible at £21 10s. Other seed oils are in quiet demand and about unchanged. Oilcakes are a poor trade for the season and prices are steady.

HIDE, LEATHER AND ALLIED TRADES.—Cattle hides were slightly easier at the auctions held in Manchester this week, several

weights in first clear ox and heifers realising 3d. per lb. less money. Cows also were cheaper, while the market for calf skins was about unchanged. Sheepskins are not a good market at the present time and generally lower prices have to be accepted. Business in foreign hides is not large and tanners are only buying sufficient to cover present needs. In the Frigorifico market sales have been made of Argentine ox at a fraction over 5d., while light ox have changed hands at 5d. Sales have also been made of cows at about 5d., while 5d. is asked for Uruguay ox. Dry South American hides are practically unchanged in value, 6d. being asked for B.A. Americanos, 7d. for M.V. Americanos, and just under 4d. for B.A. Inservibles. Africans seem to evince most interest at the moment and some fair business has been done in these. Dry Capes have changed hands at 7d. and 8d. for firsts and seconds, while unbathed Adis Abebas have realised up to 5d., and Nigerians 6d. Dry-salted Australians are inclined to be weaker in price, with moderate business passing. Business in sole leather continues on the small side, all things considered, and the majority of buyers are now confining their purchases to just sufficient to cover the orders for footwear they have on hand. As a consequence, sales of dry hide bends, although perhaps rather larger than the previous week, are still confined to certain weights and business in English and wet-salted to mediums. Both bellies and shoulders remain a slow market, the only kind in which there is any movement being rough on in the latter. Producers and distributors of upper stock also are finding trade becoming less. Orders for box and willow calf and glacé kid account for the bulk of what trade there is passing, in addition to which sales of patent are made regularly. Rather more interest is being taken in the position of the reptile skin market, but up to the present there has not been much movement in this direction. Carriers of upper leathers experience difficulty in obtaining fresh business and orders are usually confined to small lots of particular lines.

RUBBER.—It appears that a small committee of Dutch rubber experts has been in London to discuss with the Colonial Office and British interests the possibilities of restriction of output. Nothing is known as yet about the results of the negotiations. The news of this move on the part of Dutch producers has scarcely enlivened the market this week. In New York, too, Wednesday's spot price for rubber at 4½ cents per lb. showed no change on the week.

Wednesday's official closing price for standard ribbed smoked sheet in London, at 3d. per lb., shows a rise of 0½d. as compared with the corresponding day last week. In forward positions, business has been done at 3½d. to 3½d. for January-March, against 3½d. to 3½d. and at 3½d. to 3½d. for April-June, 1932, as against 3½d. to 3½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,759 tons; delivered, 1,527 tons; stocks at the end of last week, at 129,805 tons, show an increase of 232 tons as compared with the preceding week.

THE MONEY MARKET.

MONEY has remained very easy again this week. Over the week-end new money was quoted down to 2 per cent., and by the close of business on Saturday was practically unobtainable. Renewals were arranged at 4 per cent. On Monday, when no calling was in evidence, money was again very easy at 4-3½ per cent., but the following day supplies became less plentiful at 4-4½ per cent., owing to

calling by one of the clearing banks and to payments for Treasury bills. On Wednesday no calling took place, and so money was once more in abundance, but on Thursday the clearing bank of the day decided to call, and the rate for new money rose to $4\frac{1}{2}$ per cent. Renewals have been arranged at 4 per cent. all the week. These rates are all extremely low in comparison with discount rates, and so yield bill-brokers an unusually wide margin.

While it is natural for money to be easy immediately after the War Loan dividend payment, it is not usual for extreme ease to persist for so long. No special effort is being made at present to deplete supplies, for no special selling of bills is reported, and this week, as last week, the Treasury bill issue is reduced from £45 to £40 millions. This, however, is not in itself sufficient to explain the ease, especially as this week's Bank return shows that the pre-Christmas expansion in the note circulation has been resumed. One explanation heard in the market is that funds are being accumulated and held in readiness for the big income tax payments due at the end of the month, and that for the moment these are available in the market. In particular, it is suggested that whereas, as a rule, a large portion of the War Loan dividend is reinvested by its recipients immediately after its distribution, on this occasion the money is being kept in reserve for income tax purposes. In any case, it seems likely that the coming tax payments will, owing to their magnitude, create greater seasonal stringency than usual.

	Nov. 26, 1931.	Dec. 3, 1931.	Dec. 10, 1931.	Dec. 17, 1931.	Previous Rate and Date Changed.
Bank Rate	6%	6%	6%	6%	$4\frac{1}{2}$ (Sept. 21, '31)
Banks' Deposit Rate...	4	4	4	4	$2\frac{1}{2}$ (Sept. 21, '31)
Discount / Call	4	4	4	4	$2\frac{1}{2}$ (Sept. 21, '31)
Houses / Notice ...	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$2\frac{1}{2}$ (Sept. 21, '31)
Market rate (3 months' bills)	$5\frac{1}{2}$ -6	$5\frac{1}{2}$ - $\frac{3}{4}$	$5\frac{1}{2}$ -6	$5\frac{1}{2}$ -6	...

In the meantime, conditions in the discount market remain absolutely unchanged. Last week's Treasury bills went at an average rate of £5 12s. 2.91d., against £5 12s. 0.76d. per cent. the week before, and "hot" Treasury bills were this week dealt in at $5\frac{1}{2}$ per cent., which, incidentally, is the current rate for all maturities of Treasury bills. Three months' bank bills continue to be dealt in at rates of $5\frac{1}{2}$ per cent. upwards. Bank rate being charged for German renewals. A line of £4,000,000 six months' New Zealand bills was placed this week at a shade under $6\frac{1}{8}$ per cent. A fair demand has since sprung up for them, and as they are tightly held, those available have commanded rates in the market down to $6\frac{1}{8}$ per cent.

This week the note circulation has risen, seasonally, by £4.7 millions. It is believed that Christmas trade, which earlier in the month was developing unusually slowly, has lately shown signs of more normal activity. In so far as the Banking Department is concerned, the only significant change is the drop of £4.8 millions in the Reserve due to the expansion of £4.7 millions in the note circulation. This brings the Proportion down to 26.6 per cent. Public Deposits are £1.4 millions higher, and Bankers' Deposits £1.8 millions lower, but the last still stand at the high level of £73.3 millions. Taking both departments together, Government Securities are £2.3 millions higher, and Other Securities £1.4 millions higher. Next week's Bank return will be made up on the evening of December 23rd. This will reflect the full Christmas expansion in the note circulation, but will be a day too early to include the first of the market borrowings in preparation for the end of the year. The following return will include most of the preparations, but by then the notes will be coming back from circulation.

Thus it looks as if, at any rate, next week the Proportion will not fall below 20 per cent., and in these circumstances there was not the smallest need to increase the fiduciary limit. Thus the Bank and the Treasury were fully justifi-

fied in continuing the present limit of £275 millions over Christmas and the New Year, the more so as their decision has had a distinctly reassuring effect abroad. In fact, the recent sharp recovery in sterling is in part attributable to the co-incidence of this decision with the recent speech by Mr Chamberlain in the House of Commons, in which he insisted that the Budget would be balanced in fact as well as in theory.

There are, of course, other explanations of the recovery in sterling. A Boston bank failure has given rise to some further anxiety as to the American position, and notice has been taken of the fact that both the French and American Budgets are unbalanced. Foreign banks are again seeking to strengthen their position by withdrawals of funds from New York, and gold shipments and earmarkings have been renewed. Apart from this, the recent low level of sterling appears to have been due to special and non-recurrent causes which are now rapidly ceasing to apply. Though the outlook is conditioned by incalculable political factors, the market is inclined to think that further early recovery is by no means improbable.

The general tone on Wall Street has been extremely dismal, and the failure this week of a medium-sized Boston bank has not improved confidence. Thus there has been a general disposition for foreign holders of dollars to realise, and this is one explanation of the week's recovery in sterling. For the same reason the United States are beginning to lose gold again. During the past week France has shipped nearly \$3,000,000, Holland has taken just over \$1,000,000 in small shipments, and gold has also gone to Belgium and Switzerland. In addition, earmarkings on foreign account have increased by approximately \$4,000,000. Money rates are so far unchanged. Call money is available at $2\frac{1}{2}$ per cent., and $3\frac{1}{2}$ per cent. is quoted in the market for 90-day bankers' acceptances.

The foreign exchange market was inactive, with narrow fluctuations. Sterling appreciated steadily against nearly all the principal currencies, but by Thursday had fallen to rather below the best. New York went from 8.80 to 3.45, after touching 3.47 $\frac{1}{2}$. Montreal was very variable and uncertain at round about 4.20. Paris weakened to 87 $\frac{1}{2}$ from 84 $\frac{1}{2}$, after touching 88 $\frac{1}{2}$. Brussels was steadier at 24 $\frac{1}{2}$, against 23 $\frac{1}{2}$ last week. Milan and Madrid rose to 67 $\frac{1}{2}$ and 40 $\frac{1}{2}$, against 64 and 40 $\frac{1}{2}$. Amsterdam, though hesitant, with doubts prevailing as to the maintenance of the gold standard, was hardly changed on balance at 8 $\frac{1}{2}$. Berlin lost $\frac{1}{4}$ at 14 $\frac{1}{2}$, and Switzerland weakened from 17.00 to 17.70. The Scandinavian exchanges were better on the whole, Stockholm moving against us from 18.15 to 18.00, Copenhagen being unchanged at 18.15, while Oslo weakened from 18.25 to 18.40. Helsingfors was quoted at 235, Bucharest at 580 and Constantinople at 710. The South American exchanges are still largely nominal, with the prevailing restrictions, Rio being weaker by $\frac{1}{8}$ d. at 45 $\frac{1}{2}$ d., Buenos Aires by $\frac{1}{4}$ d. at 40 $\frac{1}{2}$ d., and Montevideo by $\frac{1}{4}$ d. at 31 $\frac{1}{2}$ d. In the Far East the rupee was very firm, and gained $\frac{1}{2}$ d. at 1s. 6 $\frac{3}{4}$ d.; the yen, which fell from 8s. 0d. to 2s. 8d. on the abandonment of the gold standard, has since improved to 2s. 6d. Batavia was quoted at 8.60. In the forward market, New York weakened to round about par for both periods. Paris one month fell from $\frac{1}{4}$ to $\frac{1}{8}$ franc premium, but was unchanged for three months at a premium of $\frac{1}{4}$ franc. Brussels was little changed at $\frac{1}{8}$ belga and $\frac{1}{8}$ belga premium for one and three months respectively. Milan remained at last week's levels. The discount on forward Madrid narrowed to $\frac{1}{2}$ peseta for both periods, as against $\frac{3}{4}$ and $\frac{1}{2}$ peseta last week. Amsterdam went from 1 and 3 cents premium to 5 and 11 cents discount. Berlin is still not quotable. Switzerland was again at par and $\frac{1}{4}$ franc premium. The silver market was firmer in spite of the improvement in sterling, cash rising by $\frac{1}{4}$ d. to 10 $\frac{1}{2}$ d. and forward by the same margin to 20 $\frac{1}{2}$ d. The market was very narrow, and so was easily affected. The China silver exchanges were steady and firm, Hong Kong being unmoved at 1s. 5 $\frac{1}{2}$ d. whilst Shanghai improved by $\frac{1}{4}$ d. to 1s. 11 $\frac{1}{2}$ d.

WAR DEBTS—AND REALITIES.

REPLYING, over eleven years ago, to the British proposal that the United States should cancel the war debt owed by this country to the American Treasury, amounting then to some £850 millions, on condition that Great Britain cancelled the debts (about £1,100 millions, apart from advances of over £500 millions to Russia) due from her late Allies, President Wilson offered little hope of this suggestion being accepted by any United States Government. It was highly improbable, he wrote, that Congress or popular opinion in America would ever permit a cancellation of any part of the British or any Allied Government's debt to the United States as an inducement either to a remission of war debts by Great Britain or to a practical settlement of reparations. A settlement of Germany's reparations obligations within the limits of her capacity to pay would be desirable? Eminently; but the United States Government could not assent to the principle that reparations and governmental indebtedness arising out of the war were mutually inter-connected.

Since 1920 much water—increasingly muddy in texture—has flowed under the world's economic bridges. Into the detailed history of the various debt settlements concluded between 1923 and 1928 we do not propose to enter. We have recalled the attitude adopted by President Wilson a year after the signature of the Treaty of Versailles, because his words were re-echoed in form, albeit with important qualifications, by President Hoover in his message to the Congress Foreign Relations Committee on Thursday of last week. "I do not approve," he said, "even in any remote sense, of the cancellation of debts to the United States. World confidence would not be enhanced by any such action. Reparations are a wholly European problem with which we have no relations."

Had Mr Hoover ended there, the Presidential message would have been of singularly cold comfort to the world outside the United States. He went on, however, to re-state the thesis on which he has relied as justification for the Moratorium Year. The American people, he suggested, should "be wise creditors in their own interest and be good neighbours." The basis of settlement of the debts due to the United States had been the capacity of the debtor to pay; that capacity had been affected by the "abnormal situation now existing in the world"; a number of Governments would be unable to meet further payments to the United States pending the recovery of economic life; and it would therefore be "necessary in some cases to make still further temporary adjustments," i.e., beyond the scope of the present Hoover Year. The President concluded with the recommendation that Congress should re-create the World War Foreign Debt Commission (originally appointed in August, 1922, to negotiate the debt settlements) with "authority to examine the problems that may arise" and report to Congress.

Thus President Hoover, like M. Laval, stands *coram senatu populo-que* on the letter of the legal bond; and, in his insistence on "the abnormal situation" and "temporary adjustments," he appears to share with the French Premier a propensity still to think in terms of giving countries who are garrotted by external indebtedness, first, a whiff of oxygen, and then—another turn of the screw. Nevertheless, his implication that, under the circumstances of to-day, inter-governmental debts represent a problem which demands fresh examination is a significant lead from a President who is only too well aware that "No cancellation" might be made an inconvenient party cry in the forthcoming Presidential election, and that opposition even to revision—illustrated by the present delay in ratifying the twelve months' moratorium—is a potent factor at Washington, whatever views may be held in Wall Street. Such opposition, already strident in the Senate—and that body controls, in a way frequently overlooked in Europe, the foreign policy of the Executive—arises, we believe, not from any lack of goodwill towards America's European debtors, but from a lack of the sense of realities, for whose exercise Mr Mellon, the Secretary to the U.S. Treasury,

pleaded cogently last Friday, when he reminded Congress that the depreciation of sterling—to take one example of freshly-created difficulties—had increased the annual liability of Great Britain on her debt to the United States by 47 per cent., whereas debts due to us from late Allies are payable in sterling.

It is in no way our desire to underline Mr Mellon's emphasis on the burdens of the British taxpayer in particular; nor do we advocate Europe's basing the case for revision of inter-Allied debts on appeals *ad misericordiam* to the United States. After all, though America is a relatively lightly-taxed country, the U.S. Treasury is faced with a deficit running into millions, and the American taxpayer, in the depths of acute industrial depression, may retort that, if it be a question of pity, the shoe pinches West, and not only East, of the Atlantic. If inter-governmental debts are wiped out, it will be, we suggest, not on grounds of compassion or equity, nor even because the debtors promise good behaviour in the matter of armaments (what is the value of a promise extorted from a nation under financial duress?), but because their fulfilment is pronounced to be economically impracticable and their maintenance psychologically vicious.

Let us summarise the essentials of the situation which confronts the world at the end of the Hoover Year next July. To begin with, we must recall the results of the debt settlements themselves. Briefly, Great Britain funded on various dates in 1925-27 war debts from her allies (excluding Russia) amounting, with interest accrued, to about £1,300 millions. The funding agreements provided for payment, ending in 1988, of annuities totalling some £1,190 millions. Calculated on the basis of $4\frac{1}{2}$ per cent. interest (this was the rate at which, for the most part, Liberty Bonds were raised in the United States), the present value of the annuities amounted to rather less than £880 millions, so that the settlements represented in effect a remission of approximately 70 per cent. of the debts incurred. The funding agreements made by the United States with her Allied debtors covered total indebtedness (including some £350 millions of interest accrued) amounting to approximately £2,370 millions—the references throughout are to "gold" pounds—and provided for the payment of annuities, terminating in 1987, of an aggregate amount of about £4,550 millions, with a present value, on a $4\frac{1}{2}$ per cent. basis, of about £1,410 millions. Thus, the effective remission of debt represented by the American settlements amounted on the average to a fraction over 40 per cent.; and, in the case of Great Britain, who undertook to meet annuities totalling over £2,280 millions in respect to a funded debt of £945 millions (including £108 millions of interest) the remission was less than 18 per cent.

It is arguable that Great Britain has treated her debtors on governmental account with a magnanimity not paralleled in the American settlements, but this is not an aspect of the issue on which we desire to lay particular stress. The Governments of each country pursued a policy which at the time seemed to them to be just and advantageous; and what was done was done. In any case, the British policy, crystallised in 1922 by the Balfour Note, was to recover in respect of War Loans to the Allies such a sum as would suffice, together with reparations receipts, to cover the annual payments due to the United States. Accordingly there was included in the British funding agreements a proviso that any excess of receipts by Great Britain would be credited proportionately to the Allied debtors, who on their part agreed to make good proportionately any accruing deficit up to the limits of the credit placed under this arrangement to their name. As matters stand under the terms of the Young Plan and the debt-funding agreements, in the year 1932-33 Great Britain is due to pay to the United States £87 millions (gold), whereas her share of the Young Plan annuities would amount to £18 $\frac{1}{2}$ millions (gold) and her receipts from war debts would be £18 $\frac{1}{2}$ millions (st—).

It is obvious that the cancellation or the drastic downward revision of reparation payments would intimately affect the position of the taxpayers of the Allied countries in relation to their Governments' obligations to the United States. However true it may be, as President Hoover argues, that America has no direct interest in German reparations, it would be idle to disguise the possibility of popular opinion in, say, France or, for the matter of that, Great Britain, being unwilling, in the absence of reparations receipts from Germany, to continue for the next two generations the repayment of principal and interest on account of debts incurred for the purpose of a common war madness for which already no living person under the age of thirty-five can be held to have been remotely responsible. This, however, is a political issue. Economically, the problem is one not so much of the collection of taxes for the annuities payable as of the effects of their transfer from Europe to the United States. On commercial account America is in any case a heavy creditor of Europe as a result of her (now abruptly suspended) post-war foreign lending activity. The payment of interest and amortisation on these commercial loans is in itself calculated to place a considerable strain on the exchanges, and if the United States Senators, who stand four-square for a policy of debt fulfilment, insist on the remittance of European governmental annuities rising from nearly £60 millions (gold) in 1932-33 to £70 millions (gold) in 1940 and nearly £90 millions (gold) in 1980, they may fairly be required to indicate in what form the transfers are to be made. This problem (rendered immeasurably greater by the fall of prices) arises irrespective of the question whether Germany continues or not to make any reparation payments to the Allied Governments.

We would remind the anti-revisionists at Washington that whereas the goods supplied on credit (which the American Treasury provided in turn by borrowing from its nationals) to the Allied Governments were consumed in the rapid crucible of war, the return flow of repayment goods and services—and, with two qualifications, there are no other means by which these obligations can be settled—must be absorbed directly or indirectly by the American market itself. The two qualifications are, firstly, that for purposes of the settlement of international obligations gold is, theoretically, an alternative means of payment. Practically, if the American tariff wall precludes payment in full by direct shipment of a sufficient net surplus of goods, there is no option for the European debtors—who must in any case forfeit power to purchase American exports—but to endeavour to complete the fulfilment of their liabilities by shipments of gold. This process has already been witnessed; and its results have contributed to the maldistribution of gold, the dislocation of credit, the deflation of prices, the catastrophic depression of world trade and the breakdown of the gold standard—a tragic sequence from whose efforts America, in common with other countries, is now suffering grievous distress. The other possibility is that the disturbance might be neutralised temporarily by the resumption of large scale American lending to Europe. In other words, instead of European goods and services being transferred to the United States, American claims on them would be left *in situ* in the form of a growing American ownership of European real assets and instruments of production. But, apart from the political implications of this process, its result would merely be to postpone the evil day and ultimately to produce for the whole of the countries indebted to the United States the same *impasse* as has been created by the application of an analogous process to the particular case of Germany in the years 1924-30. Moreover, so long as the fulfilment of obligations depended on continuous borrowing to meet annuities, there would be a fatal sense of insecurity and fear lest a crisis should recur every time the "lending creditor's" flow of loans was checked, as at present, by domestic disabilities.

In short, we do not believe that the existing programme of inter-Allied debt repayment can be carried out without grave detriment to the economy either of the debtors or of the United States, whose citizens would find it much easier to shoulder the burden of that portion of the United States Treasury's internal indebtedness represented by

war credits than to endure the repercussions on the world's normal industry and commerce occasioned by the enforced accumulation of dollar balances by the debtor countries. The proceedings at Washington this week show that a section at least of American political opinion is still some way from recognition of these unpalatable truths, but American business opinion is probably much nearer accepting the inevitability of dealing drastically with inter-governmental debts than President Hoover's cautious official standpoint would suggest.

THE LEAGUE AND JAPAN: ACT ONE.

THE first act in the Manchurian drama came to an end last week. On Wednesday, December 9th, the text of the Council's new draft resolution, with the covering Presidential declaration, was formally read out in a public meeting. Next day the resolution was unanimously adopted—the Japanese, as well as the Chinese, representative voting this time in the same sense as the rest of the Council—and thereafter, when both Mr Yoshizawa and Dr. Sze had made an interpretative declaration, the special session of the Council, which opened on November 16th, was brought to a close. In the present interval between the end of the first act and the opening of the second, it may be convenient to take stock of the situation and to "look before and after"—a useful exercise, whether we be inclined or disinclined to "pine for what is not."

The Council's new resolution begins by reaffirming the previous unanimous resolution of September 30th. (The intervening draft resolution of October 22nd, in which the Japanese were called upon to withdraw their troops within their own zone by November 16th, never, of course, became operative, because of the single adverse Japanese vote.) The Council now "calls upon the Chinese and Japanese Governments to take all steps necessary to assure the execution of the original resolution, so that the withdrawal of the Japanese troops within the railway zone may be effected as speedily as possible." The Council further "decides to appoint a Commission of five members to study on the spot and to report to the Council on any circumstance which, affecting international relations, threatens to disturb the peace between China and Japan or the good understanding between them on which peace depends." The Chinese and Japanese Governments undertake to afford the Commission all facilities to obtain on the spot whatever information it may require, and they are each to have the right of nominating one assessor. The Commission's activities are subjected to two express limitations. It is not to take a hand in any Sino-Japanese negotiations that may be started, and it has no competence for interfering with "the military arrangements" of either party. On the other hand, the appointment and deliberations of the Commission are not to prejudice in any way the undertaking given by the Japanese Government in the resolution of September 30th as regards the withdrawal of the Japanese troops within the railway zone. Moreover, it is laid down—not, indeed, in the resolution itself, but in the covering declaration—that "if the undertakings given by the two parties according to the resolution of September 30th have not been carried out by the time of the arrival of the Commission, the Commission should report to the Council on the situation as speedily as possible."

As for the Japanese and Chinese reservations, Japan claims a right—notwithstanding the terms of the resolution, though, "admittedly," as "an exceptional measure"—to take military measures against bandits where the lives or property of Japanese subjects are directly involved. China, on her side, enters the caveat that the whole of the Council's resolution will be invalidated by failure to carry out any one of certain principles embodied in it, and the further caveat that her right to reparations and damages remains intact.

This is the situation at the moment. The next act will open with the appointment of the League Commissioners and the arrival of the Commission upon the scene of the conflict. Meanwhile, let us try to cast up a rough interim balance of gain and loss on the proceedings up to date.

The fundamental issue is raised by the statement, in Monsieur Briand's declaration, that "the exceptional treatment of an exceptional question" leaves the Covenant and the Kellogg Pact intact. In what sense is this Manchurian affair "exceptional"? In the sense that Manchuria is a remote and obscure country at the end of the earth? But that is only how Manchuria appears from the European angle of vision; and in this case the European perspective distorts the reality. In reality, as was pointed out in the *Economist* several weeks ago, Manchuria lies as close to the political and the economic heart of the contemporary world as, let us say, Upper Silesia. Or is the Manchurian dispute exceptional because one of the two Powers that are parties to it is in a state of internal turmoil and is at present unable to keep its own house in order, either in Manchuria or elsewhere? In this contention there is evidently some substance; yet before we acquiesce in "exceptional treatment" on that ground, let us pause a moment for reflection. Are we really prepared to concede that the safeguards of the Covenant and the Kellogg Pact shall be suspended to the disadvantage of countries that are passing through internal troubles? Surely there is better ground for contending that it is in these very circumstances that a country is most in need of some kind of organised international protection against aggression at the hands of predatory neighbours. Indeed, it was just for this purpose that the Nine Power Treaty regarding China—an instrument which bears Japan's signature—was negotiated at the Washington Conference. Before we cast our stone at China, let us all be quite sure that we are not living in glass houses. In the present strange state of the world, what country, however orderly and stable it may have been for however many centuries, can be perfectly sure of retaining its internal order and stability in the immediate future? To vary our metaphor, we had better think twice about throwing China to the wolves, in case it may be Europe's turn next. On this showing, it would be improvident as well as immoral to make the present internal disorder of China a ground for regarding the Manchurian affair as an "exceptional question" for which some kind of "exceptional treatment" is to be condoned.

In our judgment, the Manchurian question is not "exceptional" but "crucial"; for it raises the fundamental issue on which the destinies of the League, and the peoples and Governments of the world, co-operating through the instrumentality of the League, are capable of making world law prevail over the lawless will of a "Great Power." This issue came within an ace of being raised eight years ago over the Corfu incident. It loomed up again when the Permanent Mandates Commission had to take France to task, some six years ago, over the administration of her mandate for Syria. On each of these previous occasions the perilous issue was just avoided by compromise, tact and diplomacy. Yet it is an issue which sooner or later is bound to be faced; and the position of the League will remain precarious until it has been faced and

settled by the Great Power, and not the League, having to give way. The crucial importance of this Manchurian affair lies in the fact that, this time, the fat is in the fire. This time, there has been an open conflict of wills between the League Council and Japan over the question whether an international dispute is to be settled by a process which is both international and pacific or by the private military force of one of the parties. The issue is fairly joined, and we have to admit that, in the first round, the lawless Great Power has gained the advantage; but at the same time we must point out that the struggle is not yet finished nor its outcome decided.

What has happened so far? The Japanese have sought to cut the knot of Sino-Japanese complications in Manchuria with the sword. They have overrun, by military operations, vast territories which even the treaties imposed by Japan on China have left under Chinese rule. The Japanese have done this in violation of the Covenant and the Pact and the Nine Power Treaty. They have resorted to acts of war as an instrument of national policy, and the League has failed to restrain them. On the other hand, the Japanese have been compelled by the League to pledge themselves, vis-à-vis the comity of nations, to evacuate, some time or other, the Chinese territories which they have overrun; and they have been compelled to agree to the despatch of a League commission of investigation.

How is the next act likely to develop? We shall hardly be in danger of doing an injustice to Japan if we anticipate that she will try to capitalise the present situation, if she can, to her own permanent advantage. Her policy, we imagine, will be to utilise her military occupation in order to set up, in each of the occupied Chinese provinces, a puppet Government with a Chinese façade and a Japanese interior—local Governments which will depend on Japanese support for arms and funds, and which will therefore have to do whatever the Japanese tell them. When, but only when, these mannikins have been set up in the shop window, the Japanese will withdraw; and they will protest to the world that the *status quo* in Manchuria has been restored and that Japan has fulfilled her bond. That is the natural game for Japan to play; and the first task of the League Commission is surely to see that she does not play it without being shown up. The Commission's second and ultimately more important task is to report on ways and means of enabling the lion and the lamb to lie down together.

In Manchuria, after all, the economic interests of the Chinese and the Japanese are not incompatible but actually complementary. Assuredly there is some basis for a political settlement here; and it is in the measure that the League's emissaries succeed in bringing about a just and acceptable concordat that the League's moral losses in this autumn's Far Eastern crisis will be retrieved. Convinced as we are that the maintenance of civilisation depends on the League's authority, and idle though it be to pretend that that authority has not suffered a serious setback, we are not disposed to agree that the last

ord of the League on Manchuria has yet been said, still as that the League's future influence and efficacy are permanently destroyed. After all, the machinery of the League is still in an experimental stage, which demands flexible use. If it has failed to make Japan bow to its will, has at least focussed on Japanese Manchurian policy the restraining light of world publicity. Swords are sheathed not simply "in silence and injustice," but on the understanding that an international inquiry is to be made, under whose pressure a just peace is to be ensued. The moral, at the moment, is not that tears should be shed over the League's untimely grave, but that every force of sanity and goodwill should be mobilised to reinvigorate its influence.

THE QUOTA QUANDARY.

UNSHAKEN by the opposition of the milling industry, the Government is clearly persevering in its determination to introduce the policy of the quota system for wheat. This policy has two aspects—assistance for the British wheat grower, and assistance for the Dominion wheat grower, the latter to be used as a bargaining weapon in negotiating with the Dominions for preferential treatment of British manufactures. A full statement of policy regarding the British wheat quota will presumably not be made until Parliament reassembles in February; while the Dominion quota scheme will wait to be hammered out at the Imperial Economic Conference at Ottawa in the summer of 1932. But Ministerial statements and inspired Press paragraphs provide a broad outline of the scheme which is likely to be adopted.

It all sounds so facile. British wheat farmers are in trouble. How easy to help them by decreeing that every loaf of bread baked in this country should contain a certain percentage of home-grown wheat, thereby giving the home farmer a certain market. But, like so many things that look easy on the surface, this wheat quota problem bristles with complexities and difficulties. The first is that an assured market is no use to the farmer unless he is also assured a remunerative price. World wheat prices are now depressed, and the farmer can obtain only about 26s. per quarter for his wheat. He is demanding 50s. per quarter, and it is believed that the Government will give it him, in addition to the promise that he shall provide 15 per cent. of all the wheat milled in this country. Either the taxpayer or the consumer has to pay the difference between 26s. and 50s. per quarter. The Government have decided that no public subsidy is to be given; therefore the consumer will pay the difference in the shape of a dearer loaf and there will be a rise in the cost of living which will not be negligible to the biggest bread consumers, who happen to be the poorest section of the community. The quota will in effect impose a tax whose amount will be in inverse proportion to the capacity to pay. That is both morally wrong and economically undesirable.

As to the machinery for enforcing the quota system, it cannot fail to be cumbersome in the extreme. A Monopoly Board, to be run in the interests of the wheat producers, and later actually by producers, has been stressed by the Ministry as a fundamental feature of the scheme. Wheat producers who refuse to tie themselves by contract to the monopoly will necessarily be denied any benefit, and this provision may conflict with the traditional individualism of our farmers. Moreover, the very words "producers' monopoly" applied to a vital necessity are scarcely calculated to commend themselves to consumers, and the precedents for a board, set up by Government, buying and selling wheat are not encouraging—Russia, the U.S. Federal Farm Board, and our own war-time experience being the leading examples.

Administratively the scheme will require an army of officials in order to prevent fraud or evasion. All millers' books and records are to be open to frequent inspection by officials of the Ministry or of the monopoly—a provision which while doubtless necessary, the millers describe as

intolerable bureaucratic interference. Beyond question, the aggravation of bureaucracy in so many countries which are experimenting with wheat quotas has already had a serious effect on the world wheat market. Mill inspection will, however, be a relatively small fraction of the total administrative apparatus involved. A grading and inspection service is to be set up to decide what constitutes "millable wheat," and to assess discounts for varying qualities. Grading wheat is a much more intricate task than marking a side of beef, for instance; and the grading will need to refer not to a small high-grade fraction—as is the case with most of the national marks—but to the bulk of an extraordinarily heterogeneous crop. In borderline cases the decision of the grading official will mean a difference of about 100 per cent. in the price paid to the farmer, since the quota price anticipated is about double the present world price at which non-millable wheat will tend to sell.

There is another factor. The country buyers will be licensed agents of the monopoly and will be authorised to issue quota certificates only on original sales by farmers. It is contemplated, however, that millers will return considerable quantities of wheat to farms for poultry feed, preferring to cut their loss rather than to mill the wheat and disturb their established flour brands—the Ministry definitely advocates this course of action. But if a country buyer could be induced—either by fraud or connivance—to issue a second certificate for such wheat, or for any English wheat sale other than an original sale from first hands, or for any imported wheat, the defrauder would make a profit of some 24s. a quarter at current price levels. To realise the magnitude of this inducement to evasion, it need only be said that normally grain merchants work on a margin of 1½d. a quarter. It should be realised also that numerous wheats grown on the Continent are indistinguishable from certain types of English wheat. Considerable bootlegging of this kind is reported to have occurred in the Continental quota-using countries.

If the machinery can be made to work, the wheat grower will benefit at the cost of the community. But whether the agricultural industry as a whole will benefit is extremely doubtful. Wheat growing represents only a small fraction of the total value of our agricultural output—some 3 per cent. Our farmers are purchasers of wheat in the form of wheat feeds (mill offals), feed wheat, flour, baked goods and seed to a much larger extent than they are sellers of millable wheat. Exact statistics are not available either as to their sales or their purchases, but the latter may well exceed the former five-fold or more. Will our farmers as a whole benefit from the adoption of price-raising restrictions on an article whereof they buy overwhelmingly more than they sell?

Without enumerating any more of the host of difficulties surrounding the home quota scheme, let us turn to the position as it will be when complicated by the superimposition of a Dominion quota. The Canadian Prime Minister, Mr. Bennett, who was in London recently, has announced that the Dominion quota is to be 70 per cent. If so, then we shall only be allowed to purchase 15 per cent. of our wheat from foreign countries. How great a diversion of trade this implies will be seen from the figures of our wheat imports in recent years.

	(Million cwt.)				
	1926.	1927.	1928.	1929.	1930.
Total imports	96.3	110.4	103.6	111.8	104.8
From the Empire	47.6	52.1	52.8	40.3	42.4
From foreign countries ...	48.7	58.3	50.8	71.5	62.4

In only one of the last five years have the Dominions supplied as much as 50 per cent. of our imports, and in the last two years together less than 40 per cent. Under our present free system we are able to draw our supplies at the lowest world prices, and our takings from the chief producing countries vary largely in accordance with harvest features in two hemispheres. This important advantage is now to be sacrificed. How the figures for

the chief suppliers vary year by year is shown in the following table:—

From	IMPORTS OF WHEAT. (Million cwt.)				
	1926.	1927.	1928.	1929.	1930.
British India	2.7	5.0	1.5	0.1	3.3
Australia	9.2	14.8	10.2	12.8	12.7
Canada	35.7	32.2	41.2	27.2	26.2
United States	31.2	35.6	23.7	22.3	21.0
Argentina	11.9	19.5	24.4	45.4	15.2

No longer, if the Government's intention is carried out, are we to be able to take advantage of a bumper crop in Argentina or U.S.A., if the weather is unpropitious in Australia or Canada. The fixation of an Empire quota at the beginning of a season, when no man can forecast the nature of the crop, is likely to produce in some years a chaotic position. We would say to Sir John Gilmour, "Can'st thou bind the sweet influences of the Pleiades or loose the bands of Orion?"

It is self-evident from the figures given above that diversion of the grain trade on the scale threatened would seriously affect our general trade with America and Argentina, where the drastic curtailment of exports of wheat to Britain could not fail to produce a lessened demand for British goods. Can we believe that Canada and Australia, with a total population between them no greater than that of New York and Pennsylvania, could quickly make up to us for our inevitable export losses in North and South America? Moreover, the quota system is bound to produce grave dislocation in our grain markets. Because they have so far been free from political interference, our wheat markets have established themselves as focal centres of world trade in this most important of all commodities. The volume of wheat moving in international trade, whose price is registered by reference to the Liverpool wheat futures market, is far larger than our own imports. This business of international price registration and world price-level insurance is far more important than is commonly realised, and brings incidental support to almost every item of our invisible exports. Chicago and Rotterdam are anxious enough to secure the business in place of Liverpool. If our markets are to be parcelled out into one section for English wheat, another section for Dominion wheat, and a further section for foreign wheats, it is difficult to see how we are to retain our focal position.

We have not the space here to discuss the problem of how to obviate the danger of Dominion "pools" exploiting the British consumer, or the many other difficulties that beset the operation of the Empire quota, nor to discuss the vexed question of foreign flour. But we have said enough, perhaps, to indicate the vast range of the disturbance and interference which is entailed by the Government's decision to single out for the receipt of State aid a comparatively unimportant branch of our agricultural industry, and in which, generally speaking, the British farmer is unable (by no means entirely through his own fault) to compete successfully with growers in other climes. Before it is too late will not the Government carefully consider whether the game is worth the candle?

LANCASHIRE'S REORGANISATION SCHEME.

At last there appears to be a real hope that the Lancashire cotton industry is to make a co-operative effort to achieve constructive reorganisation. The Joint Committee of Cotton Trade Organisations has issued drastic proposals with a view to eliminating redundant plant. The gist of the Committee's plan is that money should be raised by a levy upon existing looms and spindles and should be used to immobilise surplus machinery, thereby freeing the industry from the economic waste of inter-necine competition between mills and sheds few of which for years past have been working to anything like full capacity.

The Committee's inquiries revealed that at the end of June "mills containing over 11½ million spindles and 150,000 looms were closed, and that the remainder were working far below their normal capacity." What hope

All Baltic and Scandinavian Currencies bought and sold by

SKANDINAVISKA KREDITAKTIEBOLAGET

Phone Stockholm 0101

is there of a trade recovery adequate to occupy all these productive resources? The Committee see no hope, for they point out that even an increase of 20 to 25 per cent. over the volume of production of 1930 would still leave one-fifth of the industry's capacity unfilled. Since, therefore, they believe that trade will not expand enough to employ the machinery, they have decided that the only course is to decrease output capacity to a level more in consonance with any probable trade demand. To achieve this end they propose that a body of three trustees should be appointed by Parliament for three or five years, and should be empowered to purchase machinery from any willing seller with a view to its immobilisation. The funds for such purpose, it is proposed, should be provided by a levy not exceeding 3d. per spindle and 7s. 6d. per loom (with correspondingly appropriate rates for other sections) and that the levy should be universal and compulsory; and on the security of the levy the trustees would raise loans redeemable in ten years. For the purposes of the scheme the industry is to be divided into five sections:—(1) Spinning (excluding doubling); (2) weaving; (3) bleaching; (4) dyeing; (5) printing. The equivalent of the levy in each section would be applied to the purchase and immobilisation of surplus machinery in that section. Panels of assessors would be set up in each section, with whom the trustees would consult. The magnitude of the task cannot be accurately foretold. But to illustrate the working of the scheme, let it be supposed that the trustees after consulting the assessors decided that their purpose could be achieved by acquiring mills and plant equivalent to 10,000,000 spindles and 100,000 looms. Let the cost be put, as a guess, at from £2,500,000 to £2,750,000. The annual service on a loan for that amount repayable in ten years, bearing interest at 6 per cent., with an amortisation fund invested to yield 4 per cent., would not exceed £400,000. Such a burden, unwelcome though any addition to overhead costs must be, is of lesser magnitude than has sometimes been assumed to be inevitable in a reorganisation scheme of this kind.

Such an outline is the scheme which the Joint Committee of Cotton Trade Organisations has produced—over eighteen months since the Government Committee of Inquiry into the cotton industry reported—to give effect to the principle, now at length agreed, that co-operative efforts at reorganisation are necessary and that such efforts are impeded by the present large excess of productive capacity. It would be idle to pretend that the plan is ideal. Based, as it is, on lines analogous to those instituted for a similar purpose by the shipbuilders, it is open to the criticism that, however moderate may be the levy to be raised on the remaining spindles and looms, the cost of eliminating redundant units will form an uneconomic addition to the overhead charges of the producers on whom the industry's competitive future is to depend. Another weakness is that only such plant can be acquired out of the proceeds of the compulsory levy as the owners are willing to sell. Though a greater departure from *laissez faire* would perhaps be unacceptable in Lancashire, even under the duress of the present trade depression, more scientific and effective rationalisation would be likely to accrue were the authorities entrusted with the administration of the scheme vested with powers to decide what mills should be regarded as redundant or incapable of fitting into the structure of an efficient, well-organised industry.

With these reservations, we nevertheless welcome this tardy scheme for co-operative effort in Lancashire as a

highly preferable alternative to the long-continued policy of wasteful internecine competition, under-employment and drift. We hope, therefore, that the cotton industry will adopt the proposal, and that its rather cool reception in Lancashire will not prove to be the forerunner of obstructive opposition. There is this which may be said in favour of the scheme: the application of the healthy, though in these later days, unpopular purge of bankruptcy has been obstructed in Lancashire not only by lack of decision and common purpose on the part of the creditor banks, but by the fact that, owing to the cotton industry's system of capitalisation, many millions of uncalled capital could be wrung from reluctant shareholders before closing down became inevitable. The process of economic attrition is, in fact, so slow that it involves the prolongation of intolerable waste and the risk of the strongest concerns being so reduced by inordinate competition towards the level of the weakest, that enterprise for reorganisation might in the end prove to be as lacking as capital for re-equipment. If the premise of the Joint Committee of Cotton Trade Organisations be accepted—and it is difficult to dissent with any confidence—that there is no prospect of Lancashire's existing plant ever again being employed up to 100 per cent. of its capacity, then the scheme which has now been evolved is probably the best solution of the immediate difficulty which could be found. We trust, however, that Lancashire will realise, if the scheme is adopted and implemented by the legislation which Parliament is to be asked to pass, that this negative side of rationalisation, i.e., the scrapping of redundant plant, must find its complement in the effective reorganisation of the remaining productive capacity, on a competitive basis, if any recovery of Lancashire's lost prosperity is to be assured.

THE MALAYAN RUBBER POSITION.

The following account of the situation in Malaya, sent us by a correspondent now visiting the Straits Settlements, was written before the recent developments in connection with restriction plans, on which we comment in an Investment Note on a later page.

THE effect of continued low prices for rubber is visible in many drastic changes in Malayan estate practice. Costs have had to be reduced and much has been accomplished in this direction. Estates which previously worked at a cost of about 5½d. are now working at 2½d. f.o.b., and this figure in many cases has been reduced to 2d. Although these extreme low figures may be temporary, nothing short of a world trade boom is likely to raise them to their previous level, unless it be a widespread and fatal disease amongst rubber trees.

Among the chief measures adopted to reduce costs, coolie wages have been reduced by at least 20 per cent. and a higher standard of work has been introduced. This has facilitated the reduction of labour forces and only the healthiest and most efficient have been retained. Periodic tapping has been widely adopted because it produces a higher rate of yield, even though the actual annual yield may be lower (e.g., an area formerly yielding 400 lbs. per acre per year will usually yield at the rate of 500 or 600 lbs. per acre for several months after a rest). This enables the tapper to bring in more latex each day, which reduces the tapping cost. Supervision has been reduced by periodic tapping because areas out of tapping require little European supervision. In this way the acreage of rubber per assistant has been increased from five hundred to two thousand or more. Asiatic supervision under European superintendents is the solution that has been most frequently adopted. Weeding or similar cultivation is either included in the tapper's task or done by the tapper as afternoon work at a low rate of pay. Actually very few places attempt to keep the ground clear of weeds and practice varies as to which of the many indigenous growths are removed. So far nothing but benefit seems to have accrued to the rubber from this policy.

The contract system of tapping with Chinese has been widely adopted. Owing to the low price of tin there are many Chinese coolies out of work. Contractors employ

them on estates and pay them little more than their food. Malayan law allows the Chinese contractor to supply food to his coolies and make a profit out of the transaction, whereas the estate owner employing Tamils is not allowed to do this. At present the Chinese contractors realise the position, and if they can keep their labour together and avoid a loss on the contract they are content. Many have resorted to keeping pigs, the care of which provides occupation for the coolies' spare time. The disadvantage of this system from the estate point of view is that trees may be wounded by bad tapping and too much bark may be consumed; but employment is now so scarce that a high standard of work can be obtained with comparatively little supervision.

Such conditions are obviously temporary, and the present must be regarded as a period of transition. For twenty-five years Malaya has depended solely upon rubber and tin, because no other activity offered similar rewards. Paddy growing was restricted to certain districts and, broadly, Malaya imported rice, tinned foods and frozen meat for the entire population. Husbandry was unattractive compared with rubber growing. Now this has changed: the kampong holder has little bark left on his trees and he is growing vegetables instead of buying tinned fish. Thousands of acres of paddy are being planted in isolated plots that were merely abandoned swamps. Tobacco is proving a profitable and popular crop. The leaf is sold for local consumption. Maize and vegetables are to be seen everywhere, and pigs are kept to supply the Chinese population of the towns.

Both Indian and Chinese coolies who have been a long time in the country are becoming permanent settlers and husbandry is increasing. Ultimately this must be for the good of Malaya. Although many of the unemployed labourers elect to remain in Malaya, over a hundred thousand have returned to India and China. Lines stand empty and shops are closed all over the country, but what is left is much sounder than the somewhat hectic prosperity of six years ago.

During the transitional period while Malaya is getting her population back to the normal habits of an agricultural community, shipments of rubber may be expected to keep up. Asiatic owners of small areas either tap the rubber themselves or employ one or two coolies to help them. By paying the coolies little more than their food and by keeping pigs and growing vegetables the small holders make a living. In the meantime they are becoming more and more self supporting, so that they have less need of the rubber revenue to buy food. The large estate owners have either succeeded in getting their costs down to the market price or so near to that figure that they can carry on for a long time out of reserves, or they are still hoping for a restriction scheme which will enable them to avoid liquidation. Rumours of restriction have hitherto stimulated the flow of latex more successfully than cultivation, fertilisation, or even budgrafting.

The outlook for rubber from the point of view of the shareholder in public companies is obscure. Unlike the native the company cannot grow its own livelihood. So far the alternatives appear to be whether to produce rubber or nothing. The potential output of rubber is already in the neighbourhood of a million tons a year and consumption is apparently some three hundred thousand tons less. The native will always be attracted by rubber because it is the most easily negotiable form of produce. It can be tapped and sold within a few hours, so that as long as there is a market for native rubber a considerable supply is assured. Moreover, the work of tapping and coagulating is probably the easiest and most congenial of all the tasks involved in collecting and preparing a crop for sale.

But the outlook for the shareholder in the best rubber companies is by no means hopeless. Generally, costs have been reduced by treating rubber more like a forest product and less like a market garden crop. Clean weeding has given way to selective weeding and selective weeding may have to give way to maintaining tapping paths. The economic unit of management is increasing in size; the factory practice is being rendered more efficient. The large tyre companies appear to prefer the uniform product of the European-owned estate. It is, therefore, probable that by further economies and close attention to

manufacturers' requirements estates will be able to make profits. But if this proves impossible the estates will either be taken over by natives, or the estate management will have to accept the work of distribution, and not merely sell, but market and distribute the rubber. Hitherto the rubber industry has been divided into growers, distributors and manufacturers. It is becoming increasingly obvious that distribution is a function of production. Certain manufacturers have recognised that collection is a function of consumption and have established not merely buying departments but dealing departments. They found that they could buy more advantageously by dealing, and the existence of dealers proves that they can sell more advantageously by dealing than estates can sell by not dealing. Small estate companies are at a disadvantage if they try to deal. The ultimate hope of the shareholders should, therefore, be that such companies may amalgamate, reduce overhead expenses and be in a position, if necessary, to become dealers and distributors.

THE CUNARD.

ON December 10th the Cunard Steam Ship Company announced their decision to suspend work upon the new giant liner, "No. 534," under construction at Clydebank. In their statement, which they issued to their shareholders, the directors observed that whereas it is the policy of the company ultimately to replace the three large ships at present carrying on their weekly Atlantic express sailings with two ships of just sufficient size and power to carry on this service, world conditions have now arisen of an unprecedented character which render some postponement of the plan advisable as a proper precaution. Furthermore, the company is not at present earning its depreciation on the old ships; there is as yet no apparent limit to the decline in the North Atlantic passenger and freight traffic; and there is a glut of tonnage in this trade, including vessels partially subsidised by foreign Governments and which, therefore, need not earn enough to meet their full depreciation charge. A final point in the directors' statement is that whereas it has been their practice to finance construction out of depreciation account, meanwhile drawing and discounting bills of exchange, the international crisis has changed the whole financial background and made continued use of this type of finance less easy than before. Thus construction of this vessel is suspended pending some change in prospects.

The Cunard Company's decision naturally came as a shock to the public. At Clydebank alone some 3,000 men have suddenly been thrown out of work, while many thousands in subsidiary trades will also be affected. More than this, the ideal of British maritime supremacy has always had a firm hold on the imagination of the man in the street, and the postponement of the much-heralded attempt to regain the "blue riband" of the Atlantic from the new German liner "Bremen" caused widespread dismay, as if it were a symbol of Britain's "hauling down the flag." The Government was pressed in Parliament for an indication that assistance, whether by loan or guarantee, might be forthcoming; but the President of the Board of Trade stated that financial help had not been solicited by the company and would in any case have to be refused. Subsequently, public interest in the fate of the Cunarder has been almost pathetically illustrated by offers of small financial contributions made by individuals through the medium of the popular Press, and plans have been vaguely canvassed whereby the company might be enabled to proceed with the construction by the provision of capital raised on some form of novel "patriotic" lines.

C'est magnifique, mais ce n'est pas la guerre. So far as the question of Government assistance is concerned, it is easy to make out a *prima facie* case for special help, and such a case need not be wholly based on sentimental grounds. The majority of the men thrown out of work by the decision to suspend the construction of the new liner will not be able to find other employment, and will

become a charge upon the Unemployment Insurance Fund, while the restriction of purchasing power and loss of orders in many directions consequent upon the decision will react unfavourably upon the Exchequer in other ways. Nevertheless, we find it difficult to quarrel with the Government's attitude. Whatever case there may be for the expenditure of public money in productive capital development in contradistinction to purely eleemosynary relief work, the completion of a gigantic floating hotel, designed to meet a special luxury need, whose upkeep and operation after completion would require enormous outlay—whatever might be the income receipts—on the part of its owners, is by no means a convincingly obvious channel into which State funds should be poured. Moreover, so much economic damage has been done by State subventions to shipping of other countries during the past decade, and so vigorously have we denounced these policies of subsidy, that the Government would have been inconsistent had it now decided to join in the costly game of State competition in the stimulation of tonnage construction.

The fact remains, moreover, that, apart from the Insurance Agreement Act of 1930, the Cunard Line did not ask the Government to give it financial aid. It should be borne in mind that "No. 534" was intended to be not a net addition to the company's assets, but a replacement vessel. Whatever may be said as to the technical merits of utilising bill market finance in this connection, it is clear that the cost of replacement construction should properly be borne out of depreciation account, and that there would be objections on several grounds to such construction being financed by a long-term loan issue ranking prior to the equity, to say nothing of existing obligations. During the early stages of the new vessel's construction the company had the advantage of being able to place their bills at extremely low rates; they were aware when they made their plans that discount rates are subject to wide fluctuations; and though they cannot be blamed for failure to foresee a 6 per cent. Bank rate, we find it difficult to believe that the effect of having to place bills for remaining contracts at possibly 7 per cent. would of itself have been sufficient to determine the company's decision to suspend building had they been satisfied that, on completion, "No. 534" would be a profit-earning unit of their fleet.

In fact, the implications of the Cunard Line's circular, with its reference to the glut of tonnage in the North Atlantic trade, the inability of existing vessels to earn their depreciation, and the "grave outlook" for 1932 are all to the contrary. The plain truth is that whatever was the position when the vessel was first laid down, to-day the prospect of future demand for this class of luxury vessel is highly questionable. The basis of the Cunard Line's calculation in planning their construction programme was that two vessels should do the work of three, and until the completion of "No. 534's" contemplated sister ship—say, in 1937, or so—the new giant liner would presumably not have been utilised to her maximum economic capacity. What conditions are likely to be six or seven years hence, no man can say; but what can be said is that, at present, the North Atlantic express services, based, as they are, on extremely high passage rates, conditioned by the inordinate cost of extra speed, combined with absurd extravagances of cocktail bars, gymnasias, rows of shops and swimming pools, are already far in excess of traffic requirements; and if and when the French liner now under construction with Government assistance is completed, the saturation point will be still further exceeded.

National pride in the possession of the world's largest and fastest vessel is all very well; indeed, it is a highly commendable instinct. The evidence of popular desire that a great British steamship company should not be defeated by adverse circumstances is a welcome sign of national confidence in the future. But business remains business, and the Cunard Line may be trusted to know their own business best. If, weighing all the circumstances, not excluding the risk of damage to the structure of the half-completed hull, the company decide not to continue construction until they have better assurance that the completed vessel will be an asset rather than a liability, all we can say is that, on many grounds, the decision is to be regretted. But that does not mean that it is not the only possible decision to take.

Notes of the Week.

Storm Clouds over India.—The news from India is frankly disquieting. In the United Provinces the "No-Rent" campaign, launched by Congress agitators, has reached dimensions so threatening that an Ordinance has been issued by the Viceroy giving the Provincial Government drastic powers to deal with persons suspected of incitement. In Bengal, to which the campaign for non-payment of land rents shows signs of spreading, the police are conducting systematic searches for suspects under the powers given them by the recent Ordinance applicable to that Province; and a number of arrests have been made. There have been renewed threats of organised boycott, and last Sunday the District Magistrate of Comilla was shot dead by two young Bengali girls, students at the local Government High School. The utilisation of women as agents of terrorist murder is a new and revolting departure in the history of Indian political outrage. Meanwhile, Mr Gandhi, passing through Italy on his return journey to India, has accorded an interview to the *Giornale d'Italia* in which, if he is correctly reported, he shows regrettable signs of closing the open mind which he professed to have at the termination of the Round Table Conference in London. "I return to India," he is said to have declared, "to continue the struggle against England, which will be, as heretofore, without violence. But in passive resistance India has formidable reserves of strength and means which England has every reason to fear. . . . England will be badly hit by the boycotting movement which will be a powerful means of aggravating the British crisis." If this, indeed, be the spirit in which Mr Gandhi is returning to India, the outlook is dark. However much Mr Gandhi, with his curious capacity for verbal mystification, may talk of a struggle without violence and of "the emergence of the cream of India" as "the centre of the spiritual and economic development of Asia," he must realise only too clearly, in the face of the already threatening tendencies in Bengal and the United Provinces, that unless he rises to the height of his responsibilities and uses his unmatched influence in favour of co-operation and constitutional progress, he is invoking for India a dismal future of disorder and bloodshed in which all sane councils of goodwill must founder.

Dr. Brüning's Position.—In view of the drastic terms of the fourth Emergency Decree, whose provisions were briefly noted in last week's *Economist* and are reviewed in greater detail in the despatch from our Berlin correspondent which we print on a later page of this issue, there was some reason for apprehension as to the political consequences which this Draconian measure might have in Germany. Happily Dr. Brüning so far appears to be riding the storm without serious difficulty. The Procedure Committee of the Reichstag rejected on Wednesday a proposal that the Reichstag, which adjourned from October 16th to February 23rd, should be immediately reconvened. The Communists, the Nazis and the German People's Party supported the application, but the Government retained the support of the Social Democrats and of the Centre elements other than the Volkspartei. The Landvolkspartei, which was not represented at the meeting of the Committee, intimated to the chairman that the Decree to some extent met the wishes of the agrarians and that they saw no advantage in summoning the Reichstag. Meanwhile, Herr Hitler, having been prevented from transmitting a broadcast talk to America, has beguiled himself by allowing it to leak out that he has issued an "order paper," somewhat ludicrously, for the formation of a Nazi flying corps and has issued a lengthy reply to the Chancellor's broadcast speech in a special article in his journal, the *Völkischer Beobachter*. In his manifesto he proclaims that the Nazis will come to power by legal means; but unless Herr Hitler is prepared to enter a coalition of the Right and the Centre, which would give him a limited scope for the fulfilment of his idealistic programme, if programme he can be said to have, it is not easy to see how the Nazi leader envisages

an open avenue to absolute power on constitutional lines. If, on the other hand, he resorts to extra-constitutional methods, he runs a grave risk of annihilation. In this dilemma he is not in a position at this moment effectively to challenge Dr. Brüning's position. Economic, rather than political chaos, is the immediate danger with which the present German Government has to deal.

Progress at Basle.—While the negotiations in Berlin between the representatives of the German debtors and the banks of the creditor countries in the Standstill Agreement appear to be making slow progress (and until the Governmental conference on the future of reparations next year has reached finality, it is difficult to see how any but temporary or tentative decisions can be reached), the Young Plan Advisory Committee has got to grips, more rapidly than might have been expected, with the crux of its task. The Experts have communicated very little to the Press this week as to the course of the proceedings, but it is known that the objective survey of the factual data relating to Germany's economic position is now more or less completed and the work of drafting the Committee's conclusions has begun. It remains to be seen how far the text of the report, when finally formulated, will contain clear-cut proposals for the statesmen to endorse, modify or reject. It may be that the Experts will deem it to be of greatest service that they should confine themselves largely to marshalling the facts, indicating what appear to them to be their implications, and leaving it to the Governments and to public opinion to draw the conclusions. The correspondents of the English Press at Basle speak hopefully of the report being ready by Christmas. If these hopes are fulfilled the Committee will have carried out its functions with commendable rapidity. If all the countries concerned have a few weeks to study the report before the plenary Reparations Conference meets, it will be all to the good.

Government Changes at Nanking.—Last Tuesday's concourse of Chinese students at Nanking wrecked the Foreign Ministry of the Chinese Republic and attacked the party headquarters of the Kuomintang. There are reported to be 60,000 students already congregated in Nanking and 20,000 more on their way thither. Dictator by students is a well-known political malady which attacks countries that are politically immature when they are in a revolutionary condition. The first signal example in modern history was the student unrest in Germany during the period of reaction after the Befreiungskrieg, and the same phenomenon has presented itself at later dates in Russia and Egypt and India, and now in China. This week's *émeute* of students at Nanking has had important consequences or coincidences—whichever they may be. On the same day, the Nanking Government resigned. The most sensational resignation is that of Marshal Chiang Kai-shek from the Presidency of the Republic. Yet Marshal Chiang, when one comes to think of it, has resigned high office and gone into retirement two or three times before during the last half-dozen years, and each time he has emerged and come into power again. We prophesy that this time, once more, when the Chinese Central Government is reconstructed, the Marshal will be found in high military command, though he may temporarily divest himself of his civil functions. As for Mr Wellington Koo's resignation of the Foreign Ministry, this is less significant; for Mr Koo has only taken office at Nanking since the beginning of the crisis, and neither he nor any other Foreign Minister in his position could expect to survive the outcome of the first act of the Manchurian drama. Perhaps the most serious of the resignations is that of Mr T. V. Soong, the Minister of Finance. Mr Soong is Marshal Chiang's brother-in-law; but it was not inevitable that Soong's fall should be involved in Chiang's, for Mr Soong is an independent force in Chinese politics, and he holds his thankless office by right of personal merit. Mr Soong has never wearied of well-doing in circumstances which have conspired to break any Finance Minister's heart, and though he is a

young man, even for a Chinese politician, he has already achieved more solid work for his country than any other single man who has come into the front rank since the beginning of the Chinese Revolution. It is to be hoped that Mr Soong's resignation may be reconsidered, for at the Ministry of Finance he is almost indispensable. His elimination will help none of the causes which his colleagues or rivals have at heart. It will neither promote amity between Nanking and Canton, nor help China as a whole to put her house in order for her security against Japanese aggression.

and at Tokyo.—On December 11th, the day after the close of the League Council's session at Paris, Baron Wakatsuki's Government at Tokyo tendered its resignation. A new Government was formed last Sunday, and its first act was to go off the gold standard. This act—on whose economic effects we comment in a later Note—was evidently the point of policy on which the new Government came in and the old Government went out. It is evident that Baron Wakatsuki did not fall by reason of the Manchurian crisis; for the close of the League Council's special session had registered a substantial success for Japan in the first round of her struggle with the League. At most we may conjecture that a change of Government, which was already inevitable for other reasons, was postponed, by consent, until the outcome of the proceedings at Paris was assured. For the rest, the change may be put down to personal and party considerations—the Minseitō Party going out of office into opposition and the Seiyūkai coming out of opposition into office. When all is said, however, it is a remarkable coincidence that, within a week of the adoption of the League Council's resolution of December 12th, there should have been a change of Government both in Tokyo and at Nanking.

The Burma Conference.—The event tenor of the Burma Round Table Conference was temporarily interrupted on Monday, when three delegates representing the more advanced wing of Burmese politicians walked out of the Conference as a protest against the statement of Government policy made by the chairman, Lord Peel, last week. Harmony was, however, restored on Wednesday, when, following speeches by Lord Peel and Lord Lothian on the scope of the Conference, the three protesters expressed themselves sufficiently satisfied to resume participation in the discussions. Lord Peel said that the object of the Conference was "to frame a Constitution embodying responsible government in Central as well as Provincial matters, subject to reservations and safeguards"; while Lord Lothian, who made it clear that the Prime Minister's policy declaration to the India Round Table Conference was applicable to the future constitution of Burma, said that what remained to be done was to have a discussion and hear views from all sides before the Government made up its mind on the nature of the reservations and safeguards. On the whole the Conference appears to be making smooth progress. Although one or two of the delegates make play with such phrases as "complete independence" and "Dominion status," the majority clearly accept the necessity for "reserving" the army for at least an initial period, during which gradual "Burmanisation" may be attempted. Nor does agreement appear difficult over the exclusion of the "backward" States from the Constitutional scheme, the chief matter of controversy in this connection being how far the Central Legislature should be concerned with the control of those "States" and how far the Governor should be responsible for them. Burma looks like beating India in the race for self-government.

The Disarmament Service at St. Paul's.—The national service of prayer on behalf of the World Disarmament Conference, held in St. Paul's last Tuesday, was a remarkable demonstration. The Government was represented by the Prime Minister, the Lord President of the Council, and the Foreign Secretary; and other Ministers

present included the Secretary for Air, the Under-Secretary for War, and the Parliamentary Secretary to the Admiralty. The foreign diplomatic missions accredited to the Court of St. James's were represented, among others, by the French, Japanese and Polish Ambassadors, the Italian Chargé d'Affaires, and the German Counsellor of Embassy. There were leading representatives of all the Protestant Churches in this country; of the City of London and the London boroughs; and of a number of philanthropic organisations, religious and secular. The service was presided over by the Archbishop of Canterbury; and, in the address which he delivered, Dr. Lang said the tremendous things that have to be said in sober but not obscure or unemphatic language. "The civilised world," he began, "is approaching one of the turning-points in its history. Beyond question the International Conference on Disarmament which is to meet at Geneva next February will be the most momentous assembly which has taken place since the Peace Conference at the end of the war. . . . And who can doubt that in another world war civilisation itself might perish?" The Archbishop went on to quote the passage in the Versailles Treaty in which the Allied and Associated Powers have pledged themselves to make the compulsory unilateral disarmament of Germany the first step towards voluntary disarmament all round. He quoted Sir John Simon's authority for calling armaments the symptom of a disease—"and that disease is fear." Citing the 300 bilateral treaties which have been concluded since the war, and the Kellogg Pact, which has received the adherence of sixty-one States, he asked his congregation: "Are not such solemn pledges enough to banish fear? If they are not, the question arises whether these States are to be trusted to mean what they have said and to stand by their pledged word. If there be any doubt as to the answer, the very grave and ominous question remains: Has civilisation itself the strength of will, of conviction, of courage, to maintain the ideals on which its very existence depends?" This is indeed the fateful question which this present generation is doomed to answer, one way or the other.

Cotton Trade Hours.—On Tuesday last, writes our Manchester correspondent, there was a further development in connection with the demand of the Lancashire cotton-spinning employers for increased hours in the mills. The Masters' Federation had given the trade unions notice that the agreement of 1919, which reduced the hours from 55½ to 48 per week, would be terminated on December 31st. The joint conference on Tuesday met to discuss the situation; and Mr F. Mills, the President of the Federation, made a comprehensive statement giving the reasons for the action of the employers. He emphasised the fact that during the depression many attempts had been made to reduce the costs of production, without any success; and although the employers did not want to interfere with the standard of living which had been secured by the operatives, they were of opinion that if this standard was false it could not be maintained. After a lengthy discussion, the Masters' Federation asked the trade union representatives if they were prepared to negotiate a new agreement to take the place of the 1919 agreement. The operatives considered this request in private, and later replied that with regret they were unable to accede to the request. The conference therefore resulted in a deadlock. It is possible that some further action will be taken before the end of the month, but it is assumed that from January 1st work will be carried on in the mills on day-to-day agreements. Should the proprietors of any mills endeavour to fix terms with their workpeople which are less favourable than under the 1919 agreement the Operative Spinners' Amalgamation will, of course, be compelled to take action. Such an irregular position cannot be considered satisfactory, and it is hoped that some way out of the difficulty will be found. The attitude of the spinning employers on this question has undoubtedly been affected by the success during the last few months of doublers in Yorkshire, where the operatives have reverted to a working week of 55½ hours. It should be appreciated

that, although the weaving employers were present at the conference in Manchester this week as signatories to the 1919 agreement, they have not so far joined the Master Spinners' Federation in the claim for longer hours.

Wages in the Mercantile Marine.—The agreement announced this week whereby the wages of navigating and engine-room officers in the British Mercantile Marine will be reduced as from January 31st by 10 per cent. represents, presumably, one portion of an all-round readjustment of labour costs in the Merchant Service so far as the personnel afloat is concerned. Combined with the 7 per cent. reduction which comes into operation at the beginning of January in the wage payments to dock workers, this lightening of the burden of wage costs should offer some relief to the shipping industry at a time when the acuteness of the trade depression is illustrated by an unparalleled volume of unemployed tonnage. Judged by comparison with the remuneration of shore workers, the emoluments of certificated officers in the Mercantile Marine are not high (the first mate, for example, of a large cargo liner will in future receive something of the order of £200 a year, plus his keep while on board), but there appears to have been no previous alteration in the standard scales of pay since 1925, and since that year not only has the cost of living fallen considerably, but the earnings of shipping and the industry's capacity to provide wages have been progressively reduced. The shipping industry has a Joint Board which has functioned successfully for many years in the negotiation of wages and conditions of employment, and it is satisfactory that the present agreement has been reached without disturbance of the good relations existing between employers and employed. In view of the consideration that emoluments attractive enough under present circumstances to an unmarried man, whose expenses on board ship are practically negligible, may be inadequate for an officer who has a family to support on shore, it is curious that the shipping industry has not explored the possibilities of adopting a scheme of family allowances, whose application to the peculiar circumstances of this employment seems particularly suitable.

International Production.—The partial collapse of the world's credit structure caused, as might be expected, a sharp contraction in industrial activity during the third quarter of the current year. In the following table we have converted the indices of the physical volume of production of various countries to a percentage of the average of 1928:—

INTERNATIONAL PRODUCTION INDICES.
(1928 = 100.)

Period.	Canada.	France.	Germany.	Poland.	Sweden.	United Kingdom.	United States.
1929 average	111.6	109.4	101.8	99.8	122.7	106.0	107.2
1930	94.9	110.2	84.3	82.2	119.1	97.9	86.5
1930—First Quarter	100.1	113.1	89.3	84.6	134.6	105.1	94.6
Second "	101.2	113.1	89.3	84.6	134.6	105.1	94.6
Third "	91.7	109.4	79.5	79.9	124.9	97.7	93.1
Fourth "	86.7	106.3	75.0	82.2	114.3	94.3	83.2
1931—First Quarter	84.9	104.4	70.2	72.0	108.5	90.0	77.2
Second "	84.3	101.3	74.9	72.3	100.0	87.1	78.7
Third "	78.3(e)	95.0	68.2(d)	71.4	98.2	84.9	71.5(d)

(a) Quarterly Index. (b) Adjusted for seasonal variations. (c) Partly adjusted for seasonal variations. (d) Provisional. (e) July, August.

A comparison of the past quarter with the April-June period of 1931 shows that none of the principal industrial countries escaped the effects of the financial crisis. The decline was most pronounced in France, Germany and the United States. Compared with the average volume of production in 1928, Germany and the United States show

a drop of 31.8 per cent. and 28.5 per cent. respectively. The index for France, on the other hand, records a decrease of only 5 per cent. The monthly indices, which are available for all countries, with the exception of the United Kingdom, reveal a steady decline from July to September. According to present information, the direction of the production curve of most countries is still downwards.

Japan Suspends Gold Payments.—One of the first actions of the new Japanese Government has been to suspend the gold standard, for on December 13th it was announced that gold exports would be prohibited as from the following day. Four days later, the convertibility into gold of the notes of the Bank of Japan, the Bank of Chosen, and the Bank of Taiwan was suspended. The decision hardly took the London money market by surprise, for during the past few months there has been a very heavy drain of gold from Japan to the United States, amounting, it is believed, to a net 265 million yen. This has reduced the Bank of Japan's gold stocks to 560 million yen. Such a drain could not be endured indefinitely, and, as under present conditions it was impossible to arrange foreign credits, Japan had no option but to depart from gold. The yen immediately fell from 2s. 9d. to 2s. 4d., and after minor fluctuations closed on Thursday at 2s. 5½d., or only 5d. above parity with sterling. Japan's decision will undoubtedly have some reactions upon our Far Eastern trade, for it has largely nullified the competitive advantage Lancashire gained when we suspended the gold standard, and it is possible that considerations of this kind were in the minds of the Japanese Government when they reached this week's decision. At the same time, Far Eastern trade has lately been so much upset by "nationalist" anti-pathies, often culminating in the boycott of goods, that the exchange and price factors have been of less importance than they would be in less disturbed political conditions.

Germany's Export Surplus.—In the obscure circumstances of the moment, the estimation of Germany's future capacity to create a surplus of merchandise exports is obviously one of the problems of major complexity to which the Young Plan Advisory Committee is now having to give consideration. The latest figures, relating to the month of November, show a distinct change in the recent trend:—

GERMANY'S FOREIGN TRADE.
(Millions of Reichsmark).

Period.	Exports of German Produce.		
	Not Imports.	Excluding Reparations.	Reparations.
1928 Monthly Average	1,167	968	55
1929 " "	1,121	1,055	68
1930 " "	866	944	59
1931 Monthly Average,			
1931 January-June	634	753	41
July	563	792	35
August	454	777	26
September	448	812	23
October	483	866	13
November	482	738	10

It will be seen that net imports reached their lowest point of contraction in September, and the repetition in November of the October increase suggests that notwithstanding the curtailment of German purchasing power the necessity to effect replacements of raw materials may reverse, for a time at least, the declining movement of the first nine months of the year. On the other side of the account, the fall in exports is presumably a not surprising reflection of the growing impediments to foreign trade created by the tightening stranglehold of exchange restrictions throughout Europe. Reviewing the figures for the past five months, it may be inferred with comparative certainty that the upward fluctuation in September and October represented to a large extent "forced sales" of goods in the hands of liquidators of bankrupt concerns. It remains to be seen whether it will be possible for Germany to maintain her exports at some 70 per cent. of the 1929 level without allowing imports to exceed considerably the 45 per cent. of that level which they now represent.

Iron and Steel Production in November.—A further slight improvement in the production of pig iron took place in November, the number of blast furnaces in operation increasing by four to 70, and the output of pig iron rising from 284,200 tons in October to 296,400 tons, an increase in the daily rate of 8 per cent. Steel production remained practically stationary at 459,200 tons. As was anticipated, imports of iron and steel, at 379,400 tons, showed a substantial rise; for it was obvious that efforts would be made by the Continent to increase their exports to this market in view of the possibilities of a tariff. The excess of imports over exports also increased substantially, for exports rose by only 36,900 tons to 195,700 tons. The principal items contributing to the increase in imports were pig iron, which increased by 6,500 tons to 35,600 tons; sheet and tinplate bars, which increased by 40,800 tons to 109,400 tons; billets, blooms and slabs, which increased by 5,700 tons to 68,400 tons; and steel bars, rods, etc., which increased by 8,900 tons to 35,400 tons. The principal items responsible for the slight increase in exports were sleepers and fishplates, which rose by 7,500 tons to 9,500 tons, pig iron by 4,200 tons to 18,000 tons, thick plates and sheets by 5,800 tons to 8,800 tons, and black plates and sheets by 3,300 tons to 16,100 tons. Unemployment in the industry at the end of October was 44.1 per cent., a figure higher than in any other large industry except shipbuilding (59 per cent.) and marine engineering (49.7 per cent.). In order to overcome the effects of the depreciation of sterling Continental makers still further reduced their prices. The gold prices of sheet bars, f.o.b. Antwerp, declined from £2 18s. per ton at the end of September to £2 16s. at the end of October and to £2 12s. at the end of November; prices of girders declined from £3 1s. to £2 19s. and to £2 16s.; and merchant bars from £3 2s. to £3 1s. and to £2 17s.

American Motor Car Production.—The American motor car manufacturing industry affords an outstanding example of the effect of the world depression upon the demand for non-essential commodities and services. The decrease in purchasing power has reduced the volume of sales of motor cars during recent months to a mere fraction of what they were in 1929. The following table shows the production and exports of vehicles since 1928 for the United States and Canada:—

PRODUCTION AND EXPORTS OF MOTOR VEHICLES.
(Thousands.)

Period.	U.S.A.				Canada.			
	Production.		Exports.		Production.		Exports.	
	Total No.	Private Cars.	Total No.	Per-centage of Production.	Total No.	Private Cars.	Total No.	Per-centage of Production.
1928 Monthly Av.	363.2	318.0	42.3	11.6	20.2	16.4	6.6	32.9
1929 Monthly Av.	446.5	382.3	44.7	10.0	21.9	17.3	8.5	38.6
1930 Monthly Av.	279.6	234.5	19.8	7.1	12.8	10.5	3.9	30.2
1931 Jan. - July Monthly Av.	262.2	219.8	13.9	5.3	11.0	8.8	1.7	15.5
1931 July	218.5	184.2	10.0	4.6	4.2	3.2	0.9	22.1
1931 August	187.2	155.4	8.1	4.3	4.5	3.4	0.7	16.3
1931 September	140.6	109.2	6.7	6.2	2.6	2.1	0.7	26.1
1931 October	80.1	58.4	...	...	1.4	0.8	...	...

It will be seen that a sharp decline in production during 1930 was followed by a period of relative stability during the first half of the current year. Since July last, however, factory sales have been decreasing rapidly, and it is significant that the decrease in exports has been even more pronounced than that of home sales. In October, production in the United States had fallen to 18 per cent. of the monthly average for 1929. The corresponding figure for Canada, at 6.4 per cent., shows an even greater drop. An interesting feature is the relatively smaller decrease in the output of commercial vehicles as compared with private cars. Under these circumstances the sharp decline in the profits recorded by the principal American companies is by no means astonishing.

The Canadian Census.—Our Ottawa correspondent writes:—The Dominion Statistician, who is the Chief Census Commissioner, has now made public a preliminary return of the population of Canada as recorded by the seventh census taken last June, and the total, as well as the detailed figures, for provinces with comparative data are given below:—

Province.	Population.		Increase or decrease 1931 over 1921.	
	1921.	1931.	Number.	Per cent.
Canada	8,787,949	10,353,778	1,565,829	17.82
Prince Edward Island	88,615	88,040	-575	-0.65
Nova Scotia	523,837	512,027	-11,810	-2.25
New Brunswick	387,876	408,255	20,379	5.25
Quebec	2,360,665	2,869,793	508,888	21.56
Ontario	2,933,662	3,426,488	492,826	16.80
Manitoba	610,118	699,841	89,723	14.71
Saskatchewan	757,510	921,281	163,771	21.62
Alberta	588,454	727,497	139,043	23.63
British Columbia	524,582	689,210	164,628	31.38
Yukon	4,157	4,213	56	1.35
Northwest Territories	7,988	7,133	-855	-10.70
Canadian Navy	485	...	...	...

The gain of 17.82 for the decade represents a steady growth of population, but it is substantially smaller than the percentage gain in the previous decade, which was 21.95, and in view of the fact that since June, 1921, there have been admitted to Canada more than 1,200,000 immigrants it is decidedly disappointing. If Canada had been able to retain her immigrants as well as her natural increase, her population would now have been approaching twelve million souls instead of 10,353,778. The heavy loss is accounted for partly by the steady southward exodus to the United States which was in progress until the slump began and partly to a backward movement of population to Europe. The largest percentage gain (31.38 per cent.) is in British Columbia, followed by Alberta (23.63 per cent.), Saskatchewan (21.62 per cent.) and Quebec (21.56 per cent.); the Maritime provinces, which have suffered most from emigration are virtually stagnant, as their aggregate increase is only some 8,000. Quebec has the largest aggregate gain (508,888), and as it is the "key" province whose population divided by 65, the fixed number of its seats in the Federal House of Commons, furnishes the quota used to determine the number of Federal seats allocated to the other provinces, the redistribution which must follow each census will produce this time very little shifting of the balance of political power. British Columbia will gain two seats and Alberta one, while Nova Scotia will lose two and New Brunswick one, and the representation of the other provinces will be unchanged.

The Burden of Taxation.—In a paper read this week before the Manchester Statistical Society, Dr. W. H. Coates offered an estimate of the national income for 1931 on the lines of that made by Dr. Bowley and Sir Josiah Stamp for 1924. He arrived at a total of £3,842 millions, against £4,213 millions for 1924, and further suggested that, as the national income was substantially higher in 1929 than in 1924, the drop between 1929 and 1931 must have been at least £500 millions. The distribution of the income tax payable on this reduced income is so uneven that, on Dr. Coates' estimate, the 85,000 people who are liable to surtax and who have a total income of £467 millions, had to provide a total of £183½ millions in income tax and surtax as well as some £19 millions in death duties, that is to say, very considerably more than half their income. This is a burden which, in Dr. Coates' view, if it continues to press for more than a limited period upon our shrunken national income, is bound to endanger the economic structure. In spite of the exchange losses which may be sustained by exporters of capital, extortionate taxation is bound to lead to a fight from the currency, and a point will be reached when this movement will affect not only new savings, but funds which should have been devoted to maintenance and replacement. If taxation continues so high as to produce this destructive effect upon capital, Dr. Coates considers (and, given his premises, it is difficult to see on what grounds it would be possible to differ from him) that the general rate of interest would rise and the distribution of income

would shift to the disadvantage of labour. Thus the incidence of taxation would automatically be spread in the long run over the whole community. This is a warning which those who clamour for the unconditional maintenance of public expenditure at the expense of the taxpayer would do well to heed. It might also be well if those who are responsible for the administration of the national finances would take note of his suggestion that regard must be had, not merely to the scientific view of the effect of taxation, but to the popular view, since this is one of the matters in which what people believe to be true is almost as important as what is actually true.

National Bank of Scotland.—Like other Scottish institutions, this bank, which is affiliated to Lloyds Bank, has well maintained its profits in the face of adverse circumstances. The allocation to contingencies has been very properly raised from £50,000 to £100,000, but the dividend of 16 per cent. is unaltered, and as less provision is required this year for internal funds such as the Heritable Property account and the Officers' Pension Scheme, the increased needs of contingencies are met without any appreciable reduction in the carry-forward. The salient items in the bank's accounts are summarised below:—

October 31st.	1929.	1930.	1931.
Liabilities:—	£ thou.	£ thou.	£ thou.
Capital paid up	1,100	1,100	1,100
Reserve fund	1,550	1,550	1,550
Note circulation	2,601	2,420	2,299
Deposits	32,155	32,266	29,077
Acceptances	512	705	763
Endorsements, &c.	963	741	769
Assets:—			
Cash	2,820	2,679	2,525
Balances with other banks, &c. ...	1,638	1,815	1,427
Call money	2,760	3,058	2,728
Investments	11,036	11,761	11,683
Bills	4,515	3,883	1,769
Loans on stocks	1,522	2,396	2,022
Advances	12,695	11,364	11,456
Net profits	281	277	270
To reserve fund	50	...	...
To contingencies	...	50	100
Dividend	16%	16%	16%

The contraction in the bank's deposits is definitely ascribed in the directors' report to the autumn withdrawal of foreign funds, and the slight depletion of the bank's cash resources may be due to the same cause. In the main, however, the loss of funds has been met by allowing bills to run off, for the bank's bill portfolio has been reduced to the low level of £1,769,000. Investments and advances are well maintained, and there is a slight but welcome increase in acceptances.

British Overseas Bank.—In his annual address to the shareholders, on December 15th, Viscount Churchill, the chairman of the British Overseas Bank, began by reviewing the world crisis of 1931—with its progress first from Austria to Germany, and thence to England and the United States. This naturally led him to a discussion of our suspension of the gold standard, and, in particular, to our current monetary policy. He conceded that the immediate effect of the suspension had been that British industry had benefited, but he contended that this benefit was transient and illusory, and that with the present depression in world conditions, and with our vital dependence upon foreign trade, we could not look for any substantial improvement. "Until the exchanges of the world become freer," he said, "and an effective forward exchange market has been restored to enable traders to cover their exchange risks, our prospects remain uncertain." Lord Churchill, however, did not favour the immediate stabilisation of sterling. He thought it best for us to preserve a free hand, and to wait until there was better assurance of international co-operation directed towards the proper working of the gold standard. Above all, it was first necessary to revive the normal flow of surplus funds from the short-term to the long-term market, where they would no longer be the menace to monetary stability that they have proved to be in the immediate past. Referring to

the bank's own affairs, Lord Churchill explained that the position of outstanding German, Austrian and Hungarian credits in no way gave rise to anxiety, for the reason that the bank had been conducting this class of business on the very lines laid down later by the Standstill Committee. Surprisingly little provision had been required for bad debts; nor had the bank's holdings of Government securities and shares in the Anglo-Polish Bank been a source of trouble. Unfortunately, the bank's remaining investments, whose book value was £565,000, have involved the bank in considerable loss, and this explains the current allocation of £100,000 to contingencies. A small part of the loss arises from exchange and price fluctuations, accentuated by the closing of so many foreign bourses, but the British Overseas Bank was unlucky enough to hold a large block of Credit-Anstalt shares, and these show a deficiency of their book value of £99,563. Mr A. C. D. Gairdner, who also spoke at the meeting, laid stress upon the fact that credit rests not on gold, but upon confidence and on the belief that the borrower will carry out his obligations to the lender. He deprecated the excessive degree to which credit is to-day related to gold and measured by percentages. Speaking as an "old-fashioned banker," he insisted upon the need for reducing debt and expenditure.

Ionian Bank.—The report and accounts of this bank both show that the past year has been extremely difficult. In particular, special provision of £105,000 has had to be made for bad and doubtful debts. To meet this, £50,000 has had to be transferred from the reserve fund to current profit and loss, and the year's dividend is reduced to 2 per cent. To cover the depreciation on the bank's investments, £75,000 has also had to be allocated from the reserve fund to investments reserve. These operations reduce the reserve fund from £225,000 to £100,000. The main items in the accounts are summarised below:—

	1929.	1930.	1931.
Liabilities:—	£ thou.	£ thou.	£ thou.
Issued capital	600	600	600
Reserve fund	200	225	100
Investments reserve	50	25	100
Deposits	3,849	3,844	3,413
Outstanding advices, exchange contracts, &c.	524	291	453
Acceptances	32	60	122
Assets:—			
Cash	715	631	476
Balances with correspondents	84	129	138
Investments	908	975	1,256
Bills receivable	911	793	518
Advances	2,568	2,300	1,987
Outstanding advices, exchange contracts, &c.	338	179	174
Gross profits	408	408	356
Net profits	48	40	47
To or from reserve fund	Nil	Nil	50*
Dividend	7%	6%	2%

* Excluding transfer to investment reserve.

Many of the changes in the bank's accounts are familiar in the current year's banking history. On the liabilities side, the item of "outstanding advices, etc.," includes contingencies; and this may explain its large increase, especially as the contra item on the assets side is practically unchanged. The doubling of the bank's acceptances in the face of the growing trade depression may be due to seasonal causes, but may equally arise from the immobilisation under one of the many standstill agreements of some of the bank's credits. The elucidation of this point would be of value. The big increase in investments other than British Government securities (from £250,000 to £537,000) also needs explanation, in view of the depreciation of many classes of securities and the need for making the special provision alluded to above. Doubtless there is a simple explanation of all these points; but in these days, when it is so necessary to maintain confidence, bank directorates would do well to give their shareholders and customers the fullest amount of information that is permissible. The shareholders' meeting is due to take place on December 31st.

Overseas Correspondence.

UNITED STATES.

Railroads — Treasury — Banking — Industry.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 5.

RUMOURS of the growing strength of Hitlerism in Germany and of the possible abandonment of gold by that country have been somewhat disturbing to markets here, but on the whole the disposition has been to put a pleasant face on the matter. Immediate interest is more closely connected with German repayment of short-term loans and bank balances than with reparations.

No decided change in domestic business conditions has taken place in the past week, but the cumulative effects of slack trade were made more manifest in the receivership proceedings for two railroads. A large bank consolidation in New York appears to have been misinterpreted abroad and, combined with the anxiety over German debts, and revived fears over the banking situation; but the atmosphere is now clearer, and it can be said with assurance that the position is stronger now than it has been.

The National Credit Corporation, formed at the suggestion of President Hoover to aid banks, has made another announcement, reiterating in effect its former statements that all applications for loans receive prompt response, but that the amount borrowed so far has not been large enough to warrant payment by subscribing banks of their quota. Funds are obtained locally on notes of the Credit Corporation. The ease and promptness with which aid may now be secured has undoubtedly done much to restore the serenity over the banking situation and to diminish the call for funds. The Corporation says that so far no applications for loans have been refused.

Receivership for the Wabash Railway, followed by one for the Ann Arbor lines, controlled and largely supported by the former, was more or less of a foregone conclusion, based on trade conditions. The Wabash was brought into prominence a few years ago because of its purchase by speculative interests in their fight for a strong strategic position in the eastern merger movement. Virtual control was obtained at an enormous price by the Pennsylvania Railroad, as a check to the New York Central, Baltimore and Ohio, and Van Sweringen interests, principally since Wabash itself had borrowed money and bought control of the Lehigh Valley, a road important in itself. For a while during prosperous times the Wabash was helped by diversion of traffic, but depression forced this traffic to follow the cheapest routes, and with revenues thus reduced and the fixed charges greatly increased as a result of the bonds sold to buy Lehigh Valley, Ann Arbor and other railroad stocks, the Wabash was forced to go under. It had been supposed that the strong Pennsylvania would keep Wabash a going concern, but receivership, under a friendly receiver, doubtless held more advantages, and in any case, since it had ordered Pennsylvania to dispose of Wabash, the Interstate Commerce Commission might have frowned on advance of money from that source.

Since the depression began in 1929 there have been four major railroad receiverships—the Seaboard Air Line, the Florida East Coast, the Wabash and the Ann Arbor. As a partial offset, the Chicago and Alton, forced into difficulties during the war-time recession, was reorganised under Baltimore and Ohio ownership. Two other roads, the Minneapolis and St. Louis and the Iowa Central, have been operated by receivers for a good many years.

A number of unimportant short lines are in receivership or virtually there, but their fate is bound up with neighbouring large systems. In 1916, a bad year for the railroads, just before Government war-time operation, railroad bonds and notes in default totalled \$885 millions. The total is now \$420 millions, the largest since that time. The decline in a dozen or more railroad stocks to prices of a few dollars a share indicates the likelihood of other

receiverships. Five or six roads are having difficulty in financing current operations and meeting early obligations, but in the main they are lines which had expanded on more or less illegitimate prosperity a few years ago and paid out large dividends instead of providing for a rainy day.

The trunk line roads with permanent traffic connections are certain to weather the depression, and while some of them have had to resort to large bank loans as a stop gap pending a better bond market which will permit long-term financing, and while their dividends will probably be omitted, there is no question of the safety of their bonds. New York Central, Pennsylvania, Union Pacific, Santa Fé, Southern Pacific, Baltimore and Ohio, Great Northern, Northern Pacific, Burlington, Chesapeake and Ohio, and Norfolk and Western are roads included in this category.

The Treasury is expected to announce on Monday its financing plans for the December 15th tax date. Most bankers in Wall Street look for loans of well over \$1,000 millions to meet maturities of a little over \$900 millions, and short-term borrowing is likely. Possibly the Treasury will not wish to borrow at longer than two years. Private capital flotations continue small, being almost wholly confined to municipal loans, averaging \$15 to \$20 millions weekly.

Tax collections for the fourth quarter are not expected to exceed \$250 millions, or about half the payments during the period of prosperity. The first work of the new Congress, which meets next week, will be, after approval of the Hoover moratorium, to consider the Budget for the next fiscal year. This will involve as an immediate measure the establishment of new income-tax schedules. Probably the base will be widened considerably and rates increased as well, the old 1924 schedules being regarded as the most that can be expected at first. In addition to the income-tax rates provided therein, the probability of excise-duty impositions is large. These will include theatre tickets, luxuries of various sorts, and possibly an automobile sales tax. An earnest attempt will be made by the Administration to provide as much money as possible from taxation and as little as possible from new borrowing, although some new loans will be unavoidable.

Much can be done by the Government in reducing expenditures. Not only is a wide field open to Congress in cutting off enormous appropriations for the various forms of subsidies, such as those given the Shipping Board and the Farm Board, but great savings can doubtless be made in administrative expenditure. Current expenditure is much in excess of those of the years of greatest prosperity, and it is not too much to expect a reduction in the coming year of at least \$300 millions.

Gold shipped this week to France was of a special nature, though bankers would not be surprised, nor at all chagrined, if another large part of the French balances here were repatriated. For the first time for months the Reserve System reduced its holdings of Government securities, the item for the week of December 2nd dropping \$10 millions, but this was not significant of a change in policy. Bill holdings also ran off sharply, and in spite of larger borrowings by member banks, the total Reserve Bank credit outstanding dropped \$37 millions, with a slight increase in the reserve ratio on a mild increase in currency circulation, due to month-end operations.

Seasonal trade expansion is very slight. The steel industry has lost further ground and is operating around 20 per cent. of capacity. Railroad traffic is now following the seasonal downward trend. October net earnings were down 43 per cent. for the railroads, and it is estimated that income in 1931 will be the smallest ever earned. The decline from 1929 is placed at 57 per cent. Earnings for 1931 will amount to about 2 per cent. on valuation for the roads as a whole. Motor output for November is estimated at the National Automobile Chamber of Commerce at slightly above 65,000 vehicles, the smallest for any month since the records were first compiled in 1921. Little is expected of the current month, but the New Year may bring improvement with the introduction of new models.

FRANCE.

Electoral Law — Bank's Sterling Losses — Prices — Industry — Foreign Trade.

(FROM OUR CORRESPONDENT.)

PARIS, December 16.

THE Chamber, after a night sitting which lasted until two o'clock yesterday, and which was characterised by stubborn Socialist and Radical-Socialist opposition, has adopted the new convention between the Government and the Bank of France, which has for its object the recoupment of the Bank for the loss it has suffered, in regard to its holdings in sterling exchange, as a consequence of the abandonment of the gold standard by Great Britain.

The preamble to the Bill embodying the new conventions between the State and the Bank of France sets forth that the Bank's stock of sterling exchange, at the moment the British Government announced its intention to abandon the gold standard, amounted to £62,000,000, and that the loss automatically involved, on the basis of exchange rates actually applied, was about 2,500,000,000 francs. The Bill provides that on December 24th next, when the bank usually closes its financial year, it shall revalue its holdings of sterling on the basis of the then existing rate of exchange, and that the loss incurred shall be made good by the State, by the handing to the bank of a Treasury Bond, maturing in 1945, the date of the expiration of the present charter, this Bond being exchangeable against negotiable bonds issued by the Caisse d'Amortissement, and of the same kind as those which the bank received, on the stabilisation of the franc, in respect of its holding of what are known as "the Russian Bonds." The amount of this Bond will be revised half-yearly, in order to cover possible losses of the same character. Its definite amount will be fixed only at such date as the convertibility of sterling currency into gold has been re-established. The progressive reimbursement of the new bonds will be assured from the profits on minting of silver, the budget annuity of one per cent. applicable to non-amortised bonds, and other resources covered by the currency laws and conventions. The budget annuity already existing will be automatically increased in proportion to the amount of the new bonds, and its service will be undertaken by the Caisse d'Amortissement. The bank, further, will contribute towards the amortissement a sum of 200,000,000 francs, which will be payable in full on December 24th next, and in addition one-fifth of its own share in the annual gross profits shown by the bank over and above a total of 650,000,000 francs. The extinction of the loss falling on the bank, it is pointed out, will thus be progressively assured by new contributions from the bank itself and, thanks to the intervention of the Caisse d'Amortissement, will involve no immediate burden on the Treasury. The Bill, after a rather exciting debate, was adopted (on a vote of confidence) by 307 votes against 274, the minority including 110 Socialists, 103 Radicals and the eleven Communist deputies.

To-night has been fixed for the opening of the discussion on the Bill to amend the electoral law in respect of the present system of second ballots. Under the present law, if no candidate secures a clear majority of the votes cast at the first ballot, a second ballot is necessary, a fortnight later, on which occasion a bare majority over the candidate obtaining the next largest number of votes is sufficient to secure election. The effect of this system hitherto has been largely to vitiate the real object of the electoral law by fostering an exaggerated number of three-cornered contests, with the inevitable result of an extraordinary proportion of second ballots, which have given rise to all kinds of inter-party alliances of questionable character. The success of the Cartel des Gauches at the 1924 elections, for example, was largely due to Socialist and Radical-Socialist candidates pooling their votes in cases in which fighting independently would undoubtedly have resulted in the return of Moderate candidates. The fact that the Socialists now form the

largest party in the Chamber (with 111 seats against 110 held by the Radicals) has been largely due to the fact that moderate and reactionary electors at several recent by-elections have cast their votes for extremist candidates, in order to keep out followers of M. Herriot, whose return to power is regarded by Clericalists as much more likely, and therefore likely to prove more dangerous, than the advent of a Socialist Cabinet.

The Bill provides that candidates, in order to secure election at the first ballot, must receive the votes of at least one-fourth of the electors on the roll and 40 per cent. of the votes cast. If no candidate satisfies these two stipulations, a second ballot under similar conditions must take place two Sundays later. Radicals and Socialists, who appear to have everything to lose and nothing to gain from the adoption of the new method, have decided to fight the Bill by every means in their power, which is understood to mean unrestricted obstruction. All parties regard the Bill as of vital importance, and its adoption is likely to settle the question whether Socialists-cum-Radicals will assume power after the pending general elections. From the international point of view, the result of the debate just beginning is of the highest importance, as any shifting of the majority in the Chamber towards the Left would undoubtedly have an enormous effect on French policy in regard to disarmament, German reparations and other vital questions.

With the slowly but steadily growing pressure due to the general economic crisis, wholesale and retail prices continue to fall. The general index for wholesale prices at the end of November is returned by the Statistique Générale as 417 (July, 1914 = 100), as compared with 423 in October and 504 in November last year. The drop in the general figure has been due chiefly to the decline in raw material prices, which dropped nine points (textiles being 11 points lower), while that representing foodstuffs is only four points lower. The figure for wheat prices (official quotations in Paris market) fell from 583 to 570 during the month (585 in November, 1930). The index of retail prices in Paris of thirteen commodities of common household use is returned for November as 529 (113 gold), against 541 in the previous month and 687 in November last year.

Industrial production indices for October, as issued by the Statistique Générale, show a continued drop in output, although this is surprisingly small. The general index figure for the month is 117 (1913 = 100), a drop of two points on the month as compared with a mean of 110 in 1930 (the high record year), 139 in 1929 and 127 in 1928. Engineering is three points lower on the month; metallurgy five, textiles two, leather two, paper three, motor-car output 22 and rubber 13. Building, the situation of which is popularly regarded here as indicative, remains stationary at 121, as in August and September, as compared with means of 137 in 1930 and 122 in 1929.

The foreign trade returns for November indicate a decline in both exports and imports on the month, but an appreciable diminution in the adverse balance. Exports are returned as 2,385,081,000 francs (or the smallest in value since the stabilisation of the franc), against 2,534,630,000 francs in October. Imports were 2,890,990,000 francs (the first time for many years when the monthly total has dropped below 3,000 millions), against 3,128,199,000 francs in the previous month.

GERMANY.

Emergency Decree — Government and Nazis.

(FROM OUR CORRESPONDENT.)

BERLIN, December 15.

IN issuing the "Fourth Emergency Decree for the Safeguarding of Economy and Finance and for the Protection of Internal Peace," the Government followed the following train of reasoning: Germany must have low prices in order to maintain her exports in face of the new wave of protectionism and exchange depreciation. To make possible a reduction of prices, a sudden substantial reduction of wages is necessary (the emergency decree provides

for a reduction of wages to the level of January 10, 1927, that is to say, by 10 per cent., and in many cases even by 15 per cent.). So great a reduction of wages is, however, impossible without an immediate sensible reduction in the cost of living; it is impossible to wait until the general reduction in prices has produced its effect on the cost of living. It is therefore essential that some item which plays an essential part in the wage-earner's budget be immediately reduced by law. The only item which lends itself to such treatment is rent. But rents cannot be reduced without a reduction in mortgage interest, and so the Chancellor arrived at his decision to reduce the rate of interest by decree, although the warnings which have been uttered on this subject had made a great impression upon him, and such serious interference with the structure of the economic system is not in accordance with his principles.

Whatever the objections to the reduction in the rate of interest, it is impossible not to recognise that the Government's chain of argument is logical. Nobody who considers as rapid and severe a reduction of wages as this decree introduces to be unconditionally necessary can avoid a conclusion in favour of interest reduction, even if he is as familiar with the arguments against it as is Dr. Brüning. The method by which the interest reduction is to be carried out does, however, betray the hasty character of the decision. Interest rates on all mortgages and public and private mortgage bonds are reduced in so far as they exceed 6 per cent. Debts at 8 per cent. are to be charged 6 per cent.; interest from 8-12 per cent. is to be reduced by a quarter, and on interest in excess of 12 per cent. there will be a reduction of a quarter in the part between 6 and 12 per cent. and of a half in the part of it which exceeds 12 per cent. Interest of 6 per cent. and under is not affected. Thus anybody who bought Berlin 6 per cent. loan at the current rate of 67½ at the end of 1930 will retain his interest unchanged, although it represents a yield of 8.8 per cent. on his investment. A person, on the other hand, who bought 7 per cent. Berlin Transport loan at the same date, at the rate of 85½, and has so far had almost exactly the same yield 85½, and will now be mulcted of one-seventh of his from it, will now be mulcted of one of the 8 per cent. city receipts, and if he preferred higher price he will even lose loans at a correspondingly higher price he will even lose a quarter. As bond quotations have promptly adjusted themselves, this means a corresponding loss of capital.

Foreign loans are, of course, excluded from the conversion, as also are mortgages which were pledged as security for foreign loans. These absolutely necessary exceptions create further special difficulties; for example, house owners who have built their houses with money borrowed abroad cannot reduce their rents, while their tenants are suffering the same curtailments of income as everybody else.

The reduction of rents which constitutes the kernel of the price reduction programme amounts, in the case of the older houses, to 10 per cent. of the pre-war rent, which means 7.8 per cent. of the present rent. In the case of houses built since the war, the relief arising from the reduction of mortgage interest will be distributed among the tenants. This is bound to create great inequalities, but, in general, the reduction will be much the greatest where rents have hitherto, owing to mortgages at high rates, been the dearest. Moreover, all tenants will have the right to give notice if their rents are not reduced 20 per cent. below the level of the beginning of 1931.

The reduction of commodity prices is to be achieved by a Government threat to all cartels and other price associations of compulsory dissolution if prices are not reduced by 10 per cent. below those of June 30, 1931. The prices of coal and potash, which are subject to Government control, will be reduced forthwith by 10 per cent. In order to supervise the execution of these provisions and, further, to bring about a reduction of retail prices, Dr. Goerdeler, the former Mayor of Leipzig, has been appointed Price Commissioner. Part of his duty is to induce the municipalities to reduce the charges of their public utility undertakings. His powers are very extensive; he can, for example, close down undertakings which keep their prices too high in defiance of his regulations. Herr Goerdeler

has, however, announced that he does not believe in the possibility of reducing prices by order, that he does not wish to be hailed as a worker of miracles, and that he does not intend to be arbitrary in the exercise of his plenary powers.

The emergency decree has restored the balance of the Budget. The Minister of Finance has announced that without it there would have been a fresh deficit of Rm. 400-450 millions. The provisions of the decree and the steps which are being taken in connection with it will result in the following increases of income and reductions of expenditure by the Reich: reduction of official salaries, 50 million marks; earlier income-tax payments 50 millions; increase of turnover tax, 120 millions; profits from coinage and economies, 230 millions, making a total of 450 millions.

The necessity of increasing the turnover tax in order to balance the Budget is a weakness in the programme, as a rise in this particular tax tends to counteract the movement for a reduction in prices, but the Government had no choice in this matter. They had to produce additional income, and this was the only tax whose yield it seemed possible to increase. It is being raised from 0.85 per cent. to 2 per cent., but a modification is planned which will avoid or, at any rate, reduce the accumulation of the tax burden where the same commodity changes hands repeatedly, especially at different stages of manufacture.

Everybody in Germany realises that the emergency decree involves a serious attack upon the security of contracts. It is generally felt that the Government has taken upon itself tasks which cannot, in a capitalistically-organised society, be recognised as proper to a Government, and upon which even the Socialist Governments immediately after the revolution would not have ventured. It is, however, a question of emergency Government action. The Brüning Government themselves do not regard their action as desirable in principle, but as a chain of necessities from which they could not extricate themselves. The determination with which the Chancellor undertook tasks of such immense difficulty has strengthened the position of his Cabinet.

In spite of the severe wage reductions, the Parliamentary Social Democratic Party, which had hitherto been somewhat critical of the Government, has recently decided to continue the policy of "toleration." The 1931 report of the Zentralverband des deutschen Bank- und Bankiergewerbes which has just appeared, shows plainly that Dr. Brüning has also gained ground in business circles. It contains the following comment on the new decree:—

To the very last moment we resisted with the greatest determination the attacks on private property, and especially upon the rights of German holders of capital and of loans, which have now succeeded. We did so, not in defence of the material interests of our members, but in grave anxiety as to the consequences which must arise from such violation of pledges, and in defence of convictions which are widely shared by economists, by the technical Press and even by members of the Government itself. Even now we are surrendering none of these convictions. We bow, for the time being, to the necessity of the moment, for in the foreground of all our deliberations stands the consciousness that it is just now a question of life and death for the German people. The Government, who at such a moment are defending against the foreigner the Fatherland's right to existence, have the right to demand that everyone who calls himself a German shall stand by them firmly.

The Bankenverband adds:—

If the German Government now summons our Fatherland to a last effort in order to make one more attempt to overcome our difficulties until a final international settlement is reached, it must be clearly and unmistakably stated that all these endeavours will be in vain if this settlement does not at last create a true peace, and if it is not so framed as to meet the economic needs of the world.

In the broadcast speech in which he made the decree public, Dr. Brüning declared very severely that he would take extensive and forcible measures to counter any attack upon the authority of the Government, and that he would regard no movement as legitimate, even if it intended to keep within the law until it came into power, if its purpose was afterwards to interfere illegally with the personal and political rights of its opponents. That was a comprehensive and unequivocal rejection of the claim of the National Socialists to rank as a Party with legal aims. Herr Hitler is not to think that Dr. Brüning will voluntarily hand over the helm to him, or that he regards

him as an eligible ally, and as the National Socialists, according to the various by-election results, are far from commanding a majority of the German electors, Herr Hitler will have to confine himself to creating parliamentary difficulties, with the aid of the Communists. The political provisions of the decree show that the Chancellor is in earnest: the regulations relating to the possession of arms are made more strict, the wearing of political badges or uniforms except at home is forbidden, and political meetings and political pamphlets are prohibited during Christmas.

AUSTRIA.

Stock Exchange — Banking — Foreign Trade.

(FROM OUR CORRESPONDENT.)

VIENNA, December 14.

THE boom on the Vienna Stock Exchange has ceased just as quickly as it began. No change has taken place in the prospects which the general economic position indicates for price levels of shares, but the banks seem to be following a different policy on the exchange. This has probably been done at the suggestion of the National Bank, which probably regarded the rise in share prices as an undesirable symptom of fear of the schilling. As, in addition, reports from foreign markets all showed weakness, and the Prague market in particular was sluggish, there were reductions all along the line in Vienna, though a few securities were well maintained.

Czechoslovakian shares were also weaker, which means that the question of exchange rates was not taken into consideration, but, on the whole, the drop in Vienna was much greater on this occasion than that in Prague. The decline in the share quotations was accompanied by a recovery in most of the loan scrip also placed abroad. For instance, League of Nations Loan improved from 125 to 131.50, Federal Loan of 1930 from 76.10 to 77.75, Housing Scheme Loan from 74.50 to 75.35. In the second week of December the shares of the Austrian National Bank sank from 261 to 239, Austrian Building Company from 31.25 to 27.25, State Railway Company from 22.50 to 21.90, Gösser Brewery from 179.50 to 150, A.E.G. from 15 to 13.80, Elin Elektrizität from 24.25 to 20.80, Styrian Magnesite from 45 to 36.50, Alpine Montangesellschaft from 16.95 to 12.50, Oesterreichische Eisenbahnverkehrsanstalt von 33.50 to 31, Semperit Rubber from 62 to 53. Some securities were well maintained; for example, Felten and Guillaume eased only from 183.75 to 182.50, and Grazer Waggon from 12 to 11.25.

The values of securities bearing fixed rates of interest were possibly influenced by a belief that the current urgent demand for a reduction of the bank rate might be conceded. In the position of the National Bank there is, however, no indication which would justify this hope. After great stringency at the close of November, the relaxation experienced during the first week of December was extremely slight. Withdrawals from the financial institutions are again increasing, a fact which is partly explained by preparation for Christmas purchasing, and also by the circumstance that the usual Christmas gratuities are this year being paid to employees very tardily and are in many cases much reduced. In the first week of December the bill portfolio and the total circulation each receded by only four million schillings, and even this recession, modest though it is, was accompanied by a decrease in holdings of foreign values amounting to about 500,000 schillings. Furthermore, the mortgage credits of the National Bank have recently been greatly increased. On December 7th they stood at 20 million schillings, in comparison with 3.5 millions two months ago, which, however, indicates that the National Bank is devoting some attention to investment in share values, which it had previously neglected completely. The cover ratio still remains at 27.8 per cent.

In the circumstances, it is only natural that considerable anxiety is felt in regard to the handling of affairs at

the end of the year. The rumours spread by the Opposition to the effect that the Federal Railways will not be able to pay the wages of the staff in January are certainly exaggerated, but there can be no doubt that all enterprises, both public and private, are approaching the National Bank with tremendous demands, while, on the other hand, the position of exchange rates calls for the greatest caution and stringency in the according of credits. The foreign attacks upon the schilling, which were most noticeable in Germany and in Switzerland, have so far been repulsed. In regard to the Swiss bear movement, in particular, the clearance contract between Austria and Switzerland, which has just come into force, has removed all possibility of advancing the pretext that a possible schilling offer in Zurich or Basle has anything to do with actual supply and demand. In the clearing treaty it is provided that payments for merchandise trade may be effected only through the Austrian and the Swiss National Banks, and that the surplus of foreign trade, which is guaranteed to Austria under the treaty to an extent of 33 per cent., is to go to liquidate Swiss financial claims. As far as purely legitimate business is concerned, the schilling may, therefore, quite well disappear from the Swiss markets.

Commercially, however, little satisfaction is felt in Vienna at this treaty, which will be the pattern of a number of other similar treaties with England, France, Hungary, Poland, Yugoslavia and other countries. It is true that the importer is relieved of anxiety about procuring the means of payment of the delivering country, but he must deposit with the National Bank, even before receipt of the goods, 100 per cent. of the total value of the invoices marked with import sanction. Only people who are acquainted with the tardiness of payments in Central European business life can comprehend the significance of this decree. On the other hand, the exporter does not get as heretofore the proceeds of the exports in foreign exchange for the purpose of purchasing raw materials, as no foreign exchange at all comes into the country, as it is all booked for clearing. It remains to be seen whether this exchange, which is really nothing but primitive barter, will satisfy modern requirements. In any case, it is hard to see how the deficit in the balance of foreign trade can be remedied by this means; it is just those countries with which Austrian foreign trade shows a marked deficit which will not conclude clearing treaties.

The deficit in the balance of foreign trade, which in recent years has averaged about 900 million schillings, will probably amount to 800 schillings this year, but this recession is not due to limitation of imports, but chiefly to the general decline in foreign trade turnover caused by the crisis. In one direction very energetic measures are to be taken against imports. The import of coal, which in previous years amounted to 200 to 250 million schillings, is to be reduced by the introduction of compulsory measures to ensure the use of Austrian coal. A committee elected for this special purpose will decide in which cases Austrian coal must be used partially or exclusively. In particular, the coal merchants are to be obliged to sell a certain percentage of Austrian coal along with the foreign coal. Austria has only brown coal, of which three million tons were raised in the year 1930, as compared with two million tons in 1919. Foreign brown coal has been thrust off the Austrian market, as Austrian brown coal now fills 88 per cent. of the total requirement. But Austria has practically no hard coal, and in the year 1930 she had to import four million tons of this product. The new law is designed to increase the use of brown coal, but this is only possible if suitable adaptation of furnaces is made. In spite of the foreign currency restrictions, offers of foreign coal have been very large, and include offers from England.

The affairs of the Credit-Anstalt have not yet been settled. The carrying out of the arrangement made with the English creditors is meeting with difficulties. The nomination of the managing director is not yet decided; and the proposed cancellation of the collective agreement with the employees is also meeting with obstructions, and it is not certain when these will be removed, for political complications are feared.

HUNGARY.

Politics — Banking — Investment.

(FROM OUR CORRESPONDENT.)

BUDAPEST, December 14.

COUNT KÁROLYI has emerged with strengthened prestige from a political crisis which threatened to bring down his Cabinet owing to the unwillingness of the Government's supporting parties to vote the proposed economies on pension and rent allowances. In spite of the resignation of the representative of the Christian Party in the Cabinet and the menacing party split, the Prime Minister, supported by Count Bethlen, the leader of the United Party, issued an Emergency Decree by whose provisions the necessary reduction of pensions will take effect on January 1st, and that of the rent allowances on May 1, 1932. The saving in the present financial year will be only 6 million pengő, but in a full budget year it will amount to 15 million pengő. Further economies were announced—though not in detail—by the Prime Minister in his parliamentary *exposé* closing the debate on the league Report. Count Károlyi has emphasised the firm intention of the Government to keep budgetary expenditure within 890 millions for the present financial year, as promised to the Financial Committee of the League.

The members of the Christian Party and the Opposition have left the Committee of Thirty-three, an emergency advisory committee specially created in August to deal with urgent financial questions. The resigning Opposition members have explained their discontent by the lack of determined policy on the part of the Government to balance the budget, while those of the Christian Party have resigned because their counter-proposals to save on other than pension services were not accepted by the Government. Count Károlyi retorted that as in the past so in the future every suggestion, coming either from private members of his own party or of the Opposition, to cut down expenditure will receive his utmost consideration. Both the Cabinet and the Committee, which has only 23 members at present, will be reorganised. Baron Kórányi is expected to take the portfolio of Finances after his return from London; the Ministry of Labour and Welfare will be merged into the Ministry of Commerce for reasons of administrative economy.

The Prime Minister has emphatically stated that the Government will not inflate and will, by pursuing a sound budgetary policy in the future, assist the National Bank to safeguard the stability of the pengő on the gold standard. So far as the internal purchasing power of the pengő is concerned, the National Bank has been successful. On the other hand, owing to the restrictions in foreign exchange dealings the pengő cannot be sold at par abroad, and dollar rates occasionally find a premium of 50 per cent. and more in the "black" market. But, in spite of that, the basic financial structure of the country is still standing, and it can be maintained provided, first, that the budget is balanced; second, that the transfer moratorium is declared, and third, that the note circulation remains on its present level.

The weekly balance sheets of the National Bank reflects the paradoxical phenomenon of a deflated note circulation accompanied by an inflated bill portfolio. The note circulation, having reached its peak at 507 million pengő in August, has oscillated between 335 and 400 million pengő in October, November and the first two weeks of December, which is about 15 per cent. less than the average circulation in the same period of last year. On the other hand, the bill portfolio has more than doubled, i.e., from an average of 200-250 million pengő to more than 500 million pengő if we add the \$20 million rediscount credit of the B.I.S. to the National Bank's own bill holding, which has oscillated between 360 and 421.8 million in the last three months. From these figures it is quite clear that the complaints which have been made in Parliament of credit restriction by the National Bank are wholly unfounded. On the contrary, the bill portfolio is too high, and under normal circumstances it would undoubtedly cause a credit inflation. But this is not the case now.

New credits are not granted, and the banks' idle money is lying at the National Bank, whose sight deposits oscillate between 140-160 million pengő, as against 30-40 million pengő a year ago. Fear and nervousness are responsible for the increased liquid reserves of the banks and for the contraction of the note circulation which is attributed by the ignorant to a deflationist policy on the part of the National Bank.

The amount of total saving deposits and current accounts placed with the twelve biggest banking institutions and the Postal Savings Bank has decreased from 1,448.5 million pengő at the end of 1930 to 1,200.7 million pengő on October 31, 1931, a decrease of 247.8 million pengő in ten months, of which 41.0 million pengő occurred in October. Further decreases must be reckoned with in November and in December. The fall in deposits and current accounts in the first half of the year is due mainly to the withdrawal of foreign credits and the domestic flight of capital, amounting probably to 100 million pengő, and in the second half of the year mostly to the self-liquidation process by withdrawal of deposits and repayment of debts, repayment of taxes and living on capital in the absence of a sufficient current income.

The decrease of the volume of credit corresponding to the withdrawal of deposits for direct investments is a desirable development, because it lessens the risk of sudden runs on the banks, which cannot be foreseen. The gold pengő experiment, which was intended to create confidence in bank deposits, has worked very well so far, but nevertheless in the last weeks signs of converting cash and savings into *Sachwerte* (investments backed by commodities) are more and more apparent. This development originated in recent weeks in Austria, where banking deposits are not provided with the gold clause and has resulted in a boom of the hitherto neglected stocks. The scramble for securities quietened down in Budapest owing to the prohibition of quotations, but there is an increasing demand for real estate, and some of the retail traders record good business, which shows that money is taking refuge in *Sachwerte*. So far so good, provided that the market is carefully watched by the National Bank and the authorities, and unwarranted inflationary price increases are ruthlessly checked. There are plenty of over-indebted real estates and stocks awaiting liquidation which could not be disposed of until recently. If this natural process proceeds smoothly, the economic and financial structure of the country can only gain by it, as the commercial banks will be able to thaw out some of their frozen assets and reduce their huge portfolio at the National Bank, whose rate has hitherto been ineffective.

HOLLAND.

Loss of Markets — Industry — Exchanges.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, December 15.

THE distress in Dutch industry is becoming more and more acute, especially now that in addition to the loss of the English market our outlet in Germany is being menaced too. The new emergency decree there, with its reductions in wages, interest and rents, provides such a cut in costs for the German exporting industries that it is now entirely out of the question for Dutch goods to compete, so still more markets will thus be lost to our products. The movement for extending the domestic market by means of customs unions with other countries is therefore growing more and more insistent. In this connection the Committee for Economic Defence of the agricultural and horticultural organisations, comprising all organised growers in these branches, presented a petition to the Minister of Home Affairs and Agriculture, stating:—

Since the difficulties with payments in Germany seriously curtailed our outlet to that country, France has instituted a quota system which not only represents a great obstacle to export to that country, but renders it impossible to continue normal commercial intercourse built up by years of arduous labour. In Austria there are foreign exchange regulations which make it practically impossible

to export to that country, while Britain daily publishes lists of articles subjected to such high duties as to be ruinous to any export to her. In considering what means of defence are available, our thoughts turn in the first place to the Oslo convention.

The measures adopted by Germany, France and England, may not be equally onerous for all the signatories of the Oslo pact, but it is undeniable that they have all been badly hit by them. All the signatory States are no doubt considering what steps can be taken for the defence of their own industries. How much stronger would the efforts in that direction be if only each State did not act independently, but resorted to concerted action. Taking the populations of the five signatories to the Oslo treaty (Netherlands, 8 millions; Belgium, 8 millions; Denmark, 3.5 millions; Sweden, 6 millions; Norway, 3 millions), it will be seen that the group represents 28.5 million inhabitants, which does not make a bad showing in comparison with France (41 millions), Great Britain (45 millions), and Germany (64 millions), especially considering that the Oslo signatories have so far been countries of good purchasing power. We are convinced that if the Oslo powers were to present themselves as one united block, the three big nations referred to would listen to their views with far more deference than they do now.

With regard to the treaty of Oslo, the memorandum in connection with the discussions in the First Chamber states that:—

Now that the parties are voluntarily applying the treaty pending its ratification, the simple regulations are being put into practice in such a way as to give rise to no objection or lack of uniformity.

The Ministers are also of opinion that the economic position of Belgium, and the Netherlands, is such that intensive commercial intercourse between the two countries is possible, and should be encouraged, now that our exports in other directions are encountering more and more obstacles. The Government is devoting its full attention to economic co-operation between the Netherlands and Belgium, as is evident from the fact that negotiations are in progress for a new commercial treaty with Belgium.

The Ministers are in agreement with the members who considered that the co-operation between the five signatory States should not lead to mutual preferential duties, which would not be applicable to non-signatory States. The point is in fact, that the most-favoured-nation clause remains inviolate. As far as can be ascertained, England also does not intend to diverge from the strict application of the clause.

The state of affairs in the Twente textile industry is already such that a second wage cut of 5 per cent. has had to be announced. The result has been that last Monday the employees of about 20 factories went on strike. According to preliminary figures, 12,000 to 13,000 employees are involved in the conflict, and practically the entire industry is now idle. On the whole, the situation is quiet in the strike district.

The distress in the Netherlands boot and shoe industry has also reached a critical point. One of the largest of the shoe manufacturers in Brabant, Van Schyndel, has already been declared bankrupt. Unemployment in this branch of industry is increasing day by day in consequence of the loss of foreign markets, coupled with the increasing imports of boots and shoes from abroad. A petition has been presented to the Government setting forth the seriousness of the menace which is threatening the existence of the Dutch boot and shoe industry, the effect which the present import regulations involve on employment, and the urgency of subjecting imports of boots and shoes to a drastic system of quotas.

With regard to the Amsterdam foreign exchange market, the pound sterling and the yen reached new low records again. The suspension of the gold standard in Japan is of particular significance for the Dutch East Indies, where Japan does considerable trade, as will be seen from the following table:—

JAPANESE EXPORTS TO DUTCH EAST INDIES.

	Value in Million Guilders.	Percentage of E. Indies Total Imports.
1926	82.17	9.60
1927	90.12	10.51
1928	93.68	9.88
1929	114.84	10.91
1930	100.12	12.01

It will be seen that there has been an increase in Japan's exports to the Dutch East Indies the last three years, expressed as a percentage of the latter's total imports. No doubt this tendency will be still further accentuated through the depreciation of the yen, to the detriment of Dutch industries exporting to the Indies.

The Netherlands exchequer is once more resorting to the issue of exchequer bonds, to an amount of 110 million guilders at the most. On the bonds market the tendency

has been very depressed, and first-class State and municipal loans reached new low records. The share market also was very weak, although in the last few days a slight recovery has manifested itself, both for bonds and for shares.

During the past week there have again been considerable imports of gold into Holland, comprising two big shipments from Paris and one from New York, so that the gold position of the Netherlands bank has once more been strengthened. Rumours circulated in England, to the effect that Holland was also to abandon the gold standard very shortly, were officially denied here.

GREECE.

Mr Maximos' Suggestions — Bank of Greece.

(FROM OUR CORRESPONDENT.)

ATHENS, December 10.

A SENSATION was produced the other day by an article published in the Athenian Press and written by the retired governor of the National Bank of Greece, M. D. Maximos, whose opinions carry great weight here. M. Maximos considers that the restrictive measures taken by the authorities for the protection of the national currency are not sufficient; that, owing to the world crisis, the balance of international payments of Greece seems to be passive and to be becoming still more passive; that the bank of issue has to fill the gap from its holdings of foreign exchange, which serve as cover for the note circulation, with a corresponding contraction of the latter; and that this method leads to a perilous path, for the cover of the circulation must be preserved by all means. He, therefore, proposes that, in addition to the measures already taken, a decision should be adopted by virtue of which the coupons of the Greek external loans shall be payable in drachmas. Bondholders residing in Greece will receive drachmas, while foreign bondholders will be paid by scrips issued and payable—by drawings—in the foreign currency in which their coupons would normally be payable.

M. Maximos further suggested, for the sake of a unified regulation of credit and the circulation, that the Bank of Greece—the bank of issue established in 1928 for the stabilisation of the drachma—and the National Bank of Greece—the former bank of issue and by far the most powerful credit institution of the country—should be governed by a common board of directors, thus making a *de facto* fusion of the two institutions, and avoiding the great risks which are entailed, according to him, by the separation of the central bank functions from the National Bank of Greece.

After the publication of this article, made with the knowledge and the consent of the Prime Minister, M. Maximos had a long interview with M. Venizelos, after which the following statement was made by the latter:—

The Prime Minister received M. Maximos and congratulated him upon the fact that the suggestions contained in his article are based on the cardinal necessity of preserving the stabilisation of the drachma. He added, however, that he does not approve at all of the measures proposed by M. Maximos. These measures, in fact, presuppose that the efforts being made for an understanding among the great Powers with a view to restoring normal economic conditions in the world, will definitely fail. M. Venizelos, without overlooking the gravity of the international situation, thinks that hopes still exist that an understanding among the Great Powers will be reached, an understanding which will allow the financing by external loans of the public productive works carried on in Greece to be continued. In this way, both the reserve of the Bank of Greece will be maintained—in conjunction, moreover, with the restrictive measures adopted—and the national income will increase after the completion of the productive works, so that there will not exist in future any danger for the equilibrium of the international accounts of the country. Should these hopes be frustrated, we shall be in time to take then the measures indicated for safeguarding the stability of the currency (which constitutes the fundamental basis of the policy not only of the Government but of all the political parties, as recent debates in Parliament have proved), and securing the continuation of the execution of the public works. In arriving at these measures, however, our action must have as a fundamental principle that a unilateral repudiation of our contractual obligations cannot fail to have the worst results both for our public and our private credit.

It will be noticed that, in the above statement of M. Venizelos, no mention is made of the second part of M. Maximos' proposal concerning the co-ordination of the policies of the Bank of Greece and the National Bank by the creation of a common board of directors for the two banks. The attitude of the Government on this question has not been officially stated. In the meantime, the newly-elected Governor of the Bank of Greece has gone abroad to meet the Governors of the Bank of England, the Banque de France and the B.I.S. The report, according to which he is authorised to negotiate the granting of foreign credits to Greece, is officially denied. On the other hand, a Bill has been presented to Parliament providing, *inter alia*, for the writing-off of the loss sustained by the Bank of Greece from its sterling holdings, partly by an immediate transfer from its reserves, and partly by instalments spread over five years.

A reduction, varying from 5 to 10 per cent., of the salaries of public employees has been decided upon by the Government, effective from January 1st.

TURKEY.

Revenue — Import Restrictions — Trade Treaties — Banking.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, December 2.

THE Turkish Minister of Finance, answering an objection in the Assembly about the new "crisis tax," said: "I have no doubt that our functionaries are hard hit, but so is the Treasury." These words were sufficient to persuade the Assembly to bring the tax into operation from the first day of this month. Otherwise the Treasury would have lost 800,000 Turkish pounds, of which it is badly in need to meet the deficit in the Budget receipts of 1931-32. The Minister of Finance estimates that the deficit which will have to be met at the end of the financial year will be at least 20 million Turkish pounds. The statistics of the first four months of the financial year (which began in June) show that there has been a year (which began in June) show that there has been a diminution in receipts of six millions as compared with the 1930-31, and seventeen millions as compared with the average receipts of the same period in the previous three years. The decrease appears to be progressive, and the estimated deficit of twenty millions which is now mentioned as likely will probably be exceeded.

At present there seems to be no light on the situation from any quarter. The provinces are calling heavily on the central Treasury to meet their deficits, and owing to these calls the Treasury currency reserve has fallen from 100 million French francs a year ago to 42 millions. The railways, from which an increase of revenue had been hoped, have disappointed expectations despite a heavier traffic, and it appears that hardly more than a third of the three million Turkish pounds which were anticipated from this source will be realised. In the first nine months of 1931 exports went down by 17 per cent.—from 99 million Turkish pounds to 82 millions—or, say, 25 to 30 millions for the year. Contraband imports across the Syrian and eastern frontier are estimated, after an official inquiry, at the colossal sum of 50 millions, and this smugglers' trade is said to have a strong organisation which it will be difficult and, in view of the huge area involved, very costly to break. The Government has also to pay some 15 millions for orders in foreign countries.

It is evident from this that the Finance Minister has to look far and wide for new resources beyond the 7 or 8 millions which the "crisis tax" may bring in, and which will hardly do more than fill the leakage caused by the restriction of imports. Since the "crisis tax" only covers salaried workers, the Cabinet is at present devising further taxes of a special kind upon capitalists, house-property owners, and the rentier class, as well as the professional class. It is possible that the salaries of the highest State officials will be cut to 400 Turkish pounds. At the same time the various measures contemplated to compress the State monopoly organisations, to find new outlets for exports if possible, and to stop all non-essential State works (while not losing ground on what has already

NATIONAL BANK OF GREECE Established 1841

been achieved), will do something to give the Finance Ministry the extra aid it needs. It is recognised, however, that these are not fundamental measures, and that the limit has already been almost reached in these economies.

Owing to the serious outlook and to the fact that economic factors must now govern the parliamentary arrangements of the State, a law has been passed making it possible to submit the Budget, in future, three months before the beginning of the financial year. At present it is submitted six or seven months before. The financial year is to begin in March instead of June, and the Assembly is to have two sessions instead of a continuous six-month session as at present. One will be held in November and part of December, and the second from February to some time after the end of June according to business. This will make it possible to re-present the 1932-33 Budget in February next, after its estimate of revenue at 184 million Turkish pounds has been cut down to the 150 millions which the current year has shown to be the extreme limit of possibility.

The quota system which has been put into force to restrict imports is working more smoothly. It is, however, only the advance guard of the "compensation" system which the Government is determined to establish, as far as it can, in its exchanges with foreign countries and its commercial treaties. Most of Turkey's commercial treaties expire next year, and the Government will notify the countries concerned, according as they expire, that future treaties must aim at "compensation." This has been achieved in the recently negotiated treaties with Czechoslovakia, Poland and Hungary. These countries have agreed to take Turkish tobacco to make up the excess of their imports into Turkey as compared with Turkey's exports to them. But the Finance Minister pointed out in the Assembly that there would be difficulties in applying such a system to countries which have no State factories or other organisations to absorb the purchases stipulated. He emphasised, however, that where the trade balance of a country is very seriously against Turkey, and consistently so over a number of years past, the Government will insist on an equilibrium being established, though it does not intend to use the new decree-law restricting imports to bring this about *de facto* in contravention of the existing treaties. The present restrictions are only in the proportion of 20 to 25 per cent., and will be diminished if speculation is found to arise on any item. It appears that many quotas will be made more favourable to importers in the coming three-monthly list which will be published in ten days, while luxury quotas will be made practically prohibitive. Three million dollars' worth of gold bars have just come across Europe from Cherbourg and America, and have been sent down to Angora to be placed in the new Central Bank of Issue and to constitute the beginning of a gold reserve for the national currency. The purchase was made by the Agricultural Bank, which will re-sell to the Central Bank. The Agricultural Bank is about to issue new

bonds to the amount of 6,000,000 Turkish pounds, bearing interest at 6 per cent., for the purpose of buying uncultivated land to be distributed to the poorer peasants who are at present obliged to work as labourers. The peasants will pay interest at 6½ per cent. These bonds will be guaranteed by the Treasury, apart from the guarantee of the Bank. In the present year this Turkish bank realised a profit of 701,905 Turkish pounds, which has been used to cover the fall in the value of the bank's reserve, due to the decline in sterling.

HONGKONG.

Currency Situation — Budget — Census — Manchuria.
(FROM OUR CORRESPONDENT.)

HONGKONG, November 12.

For the past two years Hongkong has been one of the very few commercial centres of the world free from trade depression. The collapse in exchange was, from a trade point of view, a blessing in disguise, and however hardly it bore on the foreign resident with home commitments it cleared the godowns of stocks, attracted money to the Colony, and stimulated local industries. Generally speaking, Chinese dealers have profited by the situation and have been enabled to clear off old indebtedness. Money has circulated more freely, and the drop in world commodity prices has, to a large extent, offset the lower purchasing power of the dollar.

The departure from the gold standard in England has, however, created a new situation. Chinese dealers, who had already covered their exchange requirements for goods arriving in the autumn, are at a big disadvantage against those who took the chance of a rise in exchange; and the members of the Piece Goods Guild, who have bound themselves to refrain from buying for six months from September 21st, may find themselves threatened by outsiders who can import piece-goods on a basis of exchange 50 per cent. higher than the level at which bulk business for next spring has been booked. The fact that the rate of the Hongkong dollar has risen from under 1s. to over 1s. 6d. in the course of seven weeks has completely upset confidence. The extensive purchases of bar silver in New York are unaccountable, for there seems to be no reason to suppose that the world supply of silver has suddenly changed from a glut to a shortage. Yet the price of silver is tending steadily upwards, and although many people predict a crash in the near future few of them are bold enough to back their opinion. In the meantime merchants and dealers are holding off from entering into sterling transactions until the outlook is clearer, and for the moment trade is more or less at a standstill.

The Hongkong Budget for 1932, which was recently introduced, creates a fresh record for the figures of revenue and expenditure. Nearly \$34 millions has to be provided to meet an expenditure estimated at 20 per cent. more than that for 1930, and only a very small proportion of the extra amount is being devoted to development work. The Government are still pursuing a very cautious policy, and are not yet in a position to carry out schemes which were contemplated as far back as 1925, when the anti-British boycott called a halt to many desirable developments. A large civil service, recruited on a sterling basis of pay, accounts for much of the increased expenditure, as the drop in the value of the Hongkong dollar has sent up the cost of salaries by nearly 100 per cent. compared with 1929. The present Budget has been based on an exchange rate of 1s., and as the revenue is raised almost entirely in local currency any permanent improvement in exchange during 1932 will leave a surplus at the end of the year. New taxation has been estimated to produce over \$2 millions, and during the coming year it is proposed to institute a betting tax which should bring in considerably more than the 250,000 which the Government expect. As usual, the official Budget speech contains a reference to Hongkong as a lightly-taxed Colony, but while this may be true in

comparison with other Crown Colonies, the fact remains that the cost of living mounts steadily and each year seems to bring some additional burden to trade.

The census of the Colony, taken on March 7th, shows a total population of 849,751, an increase of 215,307 over the figures for 1921. There has been a remarkable increase in the population of Kowloon, situated on the mainland opposite the City of Victoria. Kowloon, which has an area of 18.7 square miles, now has over 264,000 inhabitants as compared with 125,000 in 1921, an increase of 113 per cent. The defence forces stationed in the Colony, 7,682, outnumber the civil population of British race, which is returned as 6,684. Of the total population of the Colony, persons of Chinese race form 96.67 per cent. There are about 1,000 Eurasians and nearly 3,000 Portuguese, and of the other communities the Japanese are the largest with over 2,000. In one portion of the City of Victoria the density of the population is about 1,200 to the acre, the average for the main part of the city, 211 acres in extent, being 916.95 persons per acre.

The reunion of Canton and Nanking has still to be accomplished. A fortnight ago a strong delegation set out from Canton to heal the breach, and so confident were they that their mission would succeed that the newspapers were provided with ample material to celebrate the re-establishment of a united Kuomintang Government and made use of it somewhat prematurely. It was erroneously assumed that Chiang Kai-Shek would efface himself, and so the Canton delegates received a very rude shock when they discovered that Chiang had no such intention. Fruitless negotiations have ended in a part of the delegation returning to Canton, but the remainder are in Shanghai searching for a way out of the impasse. It is, however, significant that Li Chai Sum, who has been Chiang's prisoner for the past two and a half years, has been allowed to pay an unofficial visit to Canton, and it is quite possible that he may shortly resume his post as Governor of the two Kwang provinces. There seems to be no doubt that the party in control of Canton is anxious to join up with the Central Government, but it looks as if they will only be allowed to do so by accepting Chiang Kai-Shek as their chief. It is evident that Chiang is in a stronger position than most people assumed, and if he can bring back the dissenters to the Kuomintang fold he will add still further to a prestige which took a long time to establish but is now widely acknowledged.

Letters to the Editor.

CURRENCY DEPRECIATION AND EXPORTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr G. Strakosch defines "the balance of trade" as the excess of the value of home-owned output of goods and services (other than gold) placed at the disposal of foreigners over the value of the corresponding foreign-owned output placed at our disposal. No one will question the validity of this definition, but it is permissible to question its implications as drawn by your correspondent. Trade between England and other countries, in the limited sense of goods and services, is, of course, extremely unlikely to "balance." This is due to the

"INVESTMENT" AND "THE COURSE OF THE COMING BOOM"

by
L. L. B. ANGLAS

The first general reaction in the market, which was forecast in "The Course of the Coming Boom," published on September 21st, has now occurred. A further upswing is now indicated.

The above two books, which are recognised as authoritative text books on the subject, explain the action to be followed by investors with a view to maximum capital appreciation in the course of the rising half of the trade cycle.

"Investment" : Macmillan & Co., St. Martin's Street, W.C.2. 4s.
"The Course of the Coming Boom" : St. Clements Press, Portugal Street, W.C.2. 5s.

fact that we are a large creditor nation, and also to other considerations, such as foreign investment of sterling balances in this country, and so on. Naturally, your correspondent appreciates this, and I do not gather that he takes exception to these conditions. But he is impressed by the fact that any sudden withdrawal of sterling balances falsifies "the balance of trade," as defined by him, owing to the inelasticity of the foreign demand for our goods.

This is true, but I would point out, first, that this falsification is practically unavoidable, and, secondly, that it is a purely temporary phenomenon. If, for example, someone attempted to sell, say, £100 millions of War Loan on the Stock Exchange in one day, the price realised would be out of all proportion to the real value of the stock, but the injury would chiefly accrue to the seller, and not the buyer. So it is with the withdrawal by the foreigner of his sterling balances. But your correspondent goes further than this. He is concerned with the fact of our existing adverse trade balance, which, to the extent that it is not explained by our creditor position, etc., he apparently thinks, though he does not say so explicitly, should be rectified by tariffs. My answer is that an adverse trade balance (apart from these factors) is a myth, and that no individual—and a fortiori no nation—buys goods and services at a higher price than it can realise in its own market, and therefore the definition of a balance of trade as "excess of value" is inapplicable in the present circumstances.

In any case, tariffs are no remedy for an artificial rate of exchange, or, at best, a very bad one, though there may be something to be said in the present abnormal circumstances for some control of the foreign exchanges, and much to be said for an early stabilisation of the pound. I agree that artificially depressed rates of exchange are injurious to this country; but depressed rates, even for an abnormal situation, are useless, the reason for which can be best given by an example. If a man is absorbing a certain amount of poison in his general diet (artificial exchange), the remedy is not to reduce the total amount of his food, a procedure which might starve the patient, but to give him food without the poison. Your correspondent, if I understand him correctly, wishes to roast a pig by burning down the house.—Yours faithfully,

FRANK MORRIS.

GERMANY'S STATISTICAL ABSTRACT.*

NOBODY goes very far in economic or political argument without reference to "The Statistical Abstract of the United Kingdom." Now that Germany is constantly in the forefront of such argument, a corresponding volume of official German statistics is an asset to the reference shelf, and the German statistical year book has the additional advantage of an international section which gives comparative statistics of population, with the most important census classifications, agricultural production, industrial activity, transport and communications, trade, prices, labour and finance. The purely German figures cover a very wide range in great detail, and are for the most part subdivided by States and provinces. Though the headings are in German only, anybody who is accustomed to statistical tables would have little difficulty, even without any knowledge of the language, in understanding them with the aid of a good dictionary.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Slovakia Then and Now. Arranged by R. W. Seton-Watson. (London) George Allen and Unwin, 40, Museum Street. 12s. 6d. net.

A collection of illustrated articles by a number of Slovak authors. They deal with a wide range of cultural and economic aspects of life in Slovakia.

"Statistisches Jahrbuch für das Deutsche Reich." 1931 (lin) Verlag von Reimar Hobbing.

This Money Maze. By Robert Eisler. Preface by Sir Josiah Stamp; Foreword by Sir Thomas Barclay. (London) The Search Publishing Company, Ltd., 53, Basset Road. 1s.

A description of the causes which led up to the present crisis, and a suggested solution.

Rural Banking Reform. By Charles W. Collins. (London) Macmillan and Company, St. Martin's Street. 10s. net.

A study of the effect on rural communities of current movements in banking organisation in the United States.

Whitaker's Almanack, 1932. (London) 12, Warwick Lane. 3s. and 6s. net.

The saying that "good wine needs no bush" is very true of "Whitaker's." Perhaps no other single reference book of convenient size offers answers to such a wide range of likely questions, ranging from the food imports of Great Britain to hall-marks on porcelain.

Genetic Principles in Medicine and Social Science. By Lancelot Hogben. (London) Williams and Norgate, Ltd., 38, Great Ormond Street. 15s. net.

A discussion of the material available to the human geneticist and of the extent to which genetical concepts can profitably be brought into the field of sociological discussion.

The Methods of Statistics. By L. H. C. Tippett. (London) Williams and Norgate, Ltd., 38, Great Ormond Street, W.C.1. 15s.

A treatise designed primarily for biologists. The mathematical knowledge required of the reader does not extend beyond the binomial theorem and elementary calculus.

Transport and Communications. By K. G. Fendon. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 2s. 6d. net.

A description of the economic characteristics and recent growth of the principal modes of transport.

The Gold Standard and the Crisis. By C. Ralph Curtis. (London) Charles Griffin and Company, Ltd., 42, Drury Lane. 2s. net.

A booklet designed to enable the ordinary business man to understand the present crisis.

The League of Nations Hand Map of the World. Edited by George Philip. (London) George Philip and Son, Ltd., 32, Fleet Street. 3s. 6d.

This folding map illustrates the activities of the League all over the world and the territorial changes that have occurred since 1914.

The Round Table, December, 1931. (London) Macmillan and Company, Ltd., St. Martin's Street. 5s. net.

Includes articles on "Great Britain and the Financial Earthquake"; "The European Problems of the United States"; "The World and the Crisis" and "Germany in the Storm."

The Stock Exchange:

BREWERY SHARES AND TAXATION.

"I PROPOSE to increase both the Customs and Excise duties on all the ordinary descriptions of beer by 31s. per standard barrel. That increase represents one penny per pint on beer of average gravity and price."

With these words Mr (now Viscount) Snowden, in the course of his Emergency Budget speech on September 10th, informed the House of Commons of his decision to bring the beer duty up to nearly fifteen times the pre-war rate. He thus conferred on beer, which had contributed £75,698,000 of a total tax revenue of £681,294,000 in the financial year 1930-31, the privilege of finding an extra (estimated) £4,500,000 before next April and an additional £10,000,000 in 1932-33. The new duty has provoked a storm of opposition from the trade. By all appearances, a vigorous campaign may be launched to secure some modification of the duty in the next Budget. In the meantime, how far has the duty affected the outlook for brewery shares?

There is no question but that production and consumption have fallen steeply since the duty was introduced. The number of standard barrels charged with duty in October was 26.8 per cent. and the number in November 21.9 per cent. below the corresponding monthly figures of last year. But the conclusion drawn in some quarters—that the average of these figures, say, 24½ per cent., can be taken as a rough indication of the decline which is likely to occur next year, solely as a result of the higher duty—obviously cannot be substantiated. In the first place, conditions since September have been abnormal. The *Brewers' Journal* itself, a month ago, described comparisons between the post-Budget output figures and the corresponding returns for 1930 as "unreal," since they reflected numerous exceptional factors. These, it was declared, included increased pre-Budget brewings and enhanced accumulation of stocks by retailers in anticipation of a higher duty, the reluctance of the public to pay an extra penny per pint (a psychological factor which might tend to "wear off"), the differing incidence of higher prices as between bottled and draught beers, and

what was described as the "very general" brewing of new beers of lower gravity.

This last point is important. Beer is anything but a uniform product. It is brewed in varying qualities and types ranging from gravities of 1,023 degrees to 1,115 degrees. Large breweries may turn out as many as thirty different varieties. In the case of certain breweries whose reputations have been largely founded on beers of a gravity of approximately 1,055 degrees, an extra penny per pint to the public would represent an additional 24s. per standard barrel, against the 31s. payable to the Exchequer. In many cases, however, the whole of the impost has been passed on. Bottlers, in general, have passed on to retailers an additional 8d. per dozen half pints, and the corresponding increase to the consumer has varied considerably. Bottled beers are estimated to account for between 15 and 20 per cent. of the total consumption, but in the case of some companies, like Bass and Guinness, the proportion is very much higher. In general, there has been a tendency to meet the consumer's unwillingness to pay more by giving him a product of lower average specific gravity, and obviously a period of weeks or months must elapse before "stability" in these respects can be even approximately expected.

A second reason for not regarding the fall in production in October and November last (as compared with the corresponding figures of last year) as a reliable index of the "permanent" decline in demand to be expected as a consequence of the higher duty alone, is based on the fact that a considerable falling off, as compared with 1930, must necessarily have been expected in the absence of any change in taxation. The average number of standard barrels charged with duty in the first nine months of this year was 9 per cent. below the average for the whole of last year, the decrease reflecting in part the historic long-term decline in the trend of beer consumption, but mainly the effect of prolonged industrial depression on general purchasing power. The enhanced sacrifices imposed on all classes under the September Budget must needs have

accentuated this tendency. This was doubtless in Lord Snowden's mind when he budgeted (so far as can be deduced from his revenue estimate) for a falling off in consumption, after the higher duty, of between 17½ and 20 per cent. Actually, the November drop of 21.9 per cent. was not much above the higher of these two figures. As the discrepancy is believed to be decreasing week by week further experience may well show that the late Chancellor's estimate was not very far out. Even if the full revenue budgeted for is not realised in what remains of the present financial year, it may be that the Treasury will obtain higher total revenue under the new regime than the old, and will, therefore, be loath to lower the duty. Incidentally, although the average decline in the barrelage charged with duty over the two months of October-November comes out at 24.37 per cent. expressed in standard barrels, the decline in terms of bulk barrels, as a result of changes in gravity, is estimated to have been only about 18 per cent.

If brewery shareholders are to be required to face the unpleasant prospect of a period of reduced profits, it may, at least, be urged that this contingency has been forced on them somewhat later than on their colleagues in most other industries. Since the war, brewery earnings have been distinguished, in the majority of cases, both by their stability and their high average level. An analysis of figures given in the *Brewery Manual* last September, supplemented by particulars up to the present month, shows that, even in a period of trade depression, out of 222 that, even in a period of trade depression, out of 222 breweries with an ordinary capital of £75 millions, some 169 companies, representing 83 per cent. of the total capital, paid dividends of 10 per cent. and over, while 47, accounting for nearly one-third of the capital, paid dividends ranging from 20 to over 35 per cent. Our own regular compilations of British industrial profits show the following results over the last eleven years:—

Reports Published during Twelve Months to June 30.	Breweries.			All Groups Analysed.*		
	No. of Companies.	Earnings per Ord. Share.	Dividends per Ord. Share.	No. of Companies.	Earnings per Ord. Share.	Dividends per Ord. Share.

‡ Total ordinary capital, £1,367,036,006.

How far has brewery output, during the present depression, fluctuated by comparison with that of industry as a whole? An approximate answer is given in the table below, which sets out, quarter by quarter, since the beginning of 1929, (a) the Board of Trade's index of production in ten of the leading British groups of industries, and (b) the beer of the leading British groups of industries, and (c) the beer brewing figures, estimated in terms of bulk barrelage, which is a better index of "factory activity" than the standard barrelage figures, which are affected by variations in gravities. The average for the year 1929 is taken as 100 in each case.

The beer brewing figures have a wider seasonal fluctuation than those of British industry generally. The nine-month and yearly averages, however, suggest that, up to last September, the brewing industry had taken the impact of economic depression later than most other trades, and had shown an appreciably smaller decline during the period of the slump. The above figures do not include imported beers, which represent almost exclusively the produce of the Irish factories of Arthur Guinness. Following the latter company's extensive advertising campaign, a marked rise occurred in imports in 1930. A slight decline was registered, however, in the eight months to August this year, followed by a drop of 23½ per cent. in October and November (as compared with the same months of 1930) after the imposition of the higher duty.

On whatever lines responsibility for the drop in beer consumption be apportioned, as between decreased national purchasing power and increased taxation, a decline in brewery profits during the next few months would appear to be a contingency of which shareholders should take due cognisance. They will look, naturally, for greatest relative stability in profits to those companies whose efficiency is high, whose internal finances are strong, and whose capital structure is relatively "low-gearred," i.e., contains the lowest proportion of fixed interest to equity stocks. The post-war financial policy of the brewery industry has been commendably conservative, and the reserve position of most companies is strong above the average, though a higher proportion of reserves is frequently invested "in the business" than in outside securities. On the other hand, most breweries have large amounts of debentures and preference shares outstanding. The table at the foot of the previous page gives relevant particulars for a number of breweries, and enables the investor to see how far recent profits have fluctuated, what are the dimensions of "free reserves," and of "outside securities," and how different stocks ranked for priority in the distribution of earnings in respect of the last complete year.

The figures may tend to reassure nervous holders as to the prospects of brewery shares in the immediate future. They show that earnings could fall by one-half to two-thirds without encroaching on the requirements of preference shares, and by one-fifth to one-fourth without necessitating any drafts on reserves and amounts carried forward, in order to maintain ordinary dividends at last year's levels. That there will be some reduction of dividends is more than probable, but the figures in the last two lines of the table suggest that the share market has already discounted this possibility to a considerable extent. Earnings over the next few months will be governed not merely by factors resulting from the maintenance or possible modification of the present level of taxation, but even more by prospects of economic recovery in the world in general and Great Britain in particular. Shareholders, however, may desire to look a little further ahead. The future historian, who is in the happy position of regarding even the cataclysm of 1930-31, in perspective, as a melancholy episode in the world's onward march, may deem the period, nevertheless, a decisive one for the brewery industry. He may find that a hard-pressed Chancellor of the Exchequer, in September, 1931, unwittingly brought the industry sharply against a problem which, in any case, it must have faced sooner or later—that of maintaining a rate of profit, well above the average for most other industries, in the face of a steady decline in consumption. The industry has not been unaware of the latter's long-term trend, which has been attributable mainly to a historical change in national habits, whose roots go deep.

The brewery trade's efforts to meet this situation have comprised, on the one hand, a progressive reduction in working costs through closer organisation and enhanced internal efficiency, and, on the other, a rebuilding and modernisation of retail premises and a gradual but steady

movement away from the mere selling of drink towards "refreshment catering" in a broader sense. It may be surmised that what the trade really fears, at the moment, is not a temporary period of lower earnings, due to abnormal depression and taxation, but the possibility that part of the resultant drop in consumption may be permanent—that those, in short, who drink less beer from compulsion now may drink less from choice later on. This is a question whose implications brewery directors and shareholders will not overlook. Disregarding the purely short-term aspects of the matter, the net result of Lord Snowden's intervention two months ago may be that the pace of the "silent revolution" in the industry's methods, scope and objectives, which has been proceeding for at least a decade, may be considerably expedited. It remains to be seen whether the process, meanwhile, will call for lower dividends and the retention of even larger earnings for capital purposes.

THE WEEK IN THE MARKETS. THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
January 5.

ACCOUNT.
January 7.

MARKET conditions remained dull and largely featureless, the volume of business showing a daily decline. Apart from Japan's decision to leave gold (the effect of which is discussed in an Investment Note on page 1190), the week's news was colourless, all concerned preferring to await the issue of the report of the Basle Committee before committing themselves either way. The eloquence of American Congressmen was scarcely a market factor, though the appreciable hardening of American political opinion against war debt "concessions" provoked a certain misgiving. The pound sterling remained relatively stable, immediate interest being transferred to the Dutch guilder as the possible next object of "attack" in the "gold struggle."

The Gilt-edged market proved surprisingly sensitive, prices receding at the outset, after the previous week's recovery. Although the market believed that some large interests might desire to lighten their holdings, they were regarded as strong enough to nurse the market on any reaction. Prices, indeed, were firm again in mid-week, but reacted after the Bank of England's decision not to alter its discount rate. Long-dated India loans had an easier tone, but the official statement that Australia would meet her January 1st commitments in London without difficulty caused a moderate marking-up of prices of Commonwealth issues.

The Foreign Bond market was subdued and generally depressed. German issues were unable to maintain their initial firmness, and French railway sterling bonds further lost ground despite the steadier exchange. Argentine issues were in moderate demand, but Brazilian bonds lost ground on the restrained references to the outlook in the speech of the chairman of the Bank of London and South America. A pessimistic construction was placed on the news from the East, the abandonment of the gold standard being regarded as a sign of a difficult Japanese financial situation, while the resignation of the Chinese President and the Nanking student disturbances were taken as auguries of further political instability in China.

Home Rails were lower on scattered selling, the market choosing to regard the week's traffic figures as unfavourable, although the aggregate decline was little more than that of the previous week's returns. Great Western was among the worst sufferers, despite an estimate that the company would pay a dividend of 3 per cent. for 1931. Among foreign railways, Argentines were firm at the outset on favourable crop reports, but were subsequently neglected. Canadian Pacific were steady.

The Industrial markets were dull, listless and unsettled, operators seeing little to "go for" at home or abroad, while the mood both of New York and the European centres was unfavourable. Textile shares were easier on fears that Japan's departure from gold would remove the differential advantages of British producers

in Eastern markets. Speculative activity in rayon shares was damped by Mr Samuel Courtauld's announcement that any remission of the Excise duty would be immediately passed on to consumers. Apart from a few investment orders, electrical shares were comparatively neglected. London Electric Supply, however, were firm on the decision to capitalise £150,000 of reserves as a one in four bonus to existing holders. The provinces continued to offer motor shares, particularly Leyland, while Ford showed weakness on fears regarding the results of the Central and Northern European subsidiaries for 1931. Breweries were irregular, the market being affected by the intimation that, in the absence of a change in present duties, Mitchells and Butlers might find it necessary to reduce their final dividend. The outlook for the industry is discussed in a leading article on an earlier page. The news of the abandonment of work on the new Cunard liner produced a wave of mild pessimism in the market, and may have contributed to the small response to the Furness Withy issue. Coal and steel shares remained out of favour, Babcock and Wilcox being pressed for sale from the North. Dorman Long were easier on the eloquent picture drawn by the chairman of the industry's difficulties. Bank shares, as always, reflected the movements of Gilt-edged at one remove, being firmer on balance but irregular at times. Business in insurance shares was of small dimensions, without measurable price changes in most instances.

Oil shares opened dull, Paris sending over numerous small selling orders, while unfavourable financial reports from Amsterdam caused selling of Royal Dutch. Later in the week, however, a temporary cessation of selling encouraged a few cautious bargain hunters. The rubber industry, after last week's brief speculative flash, settled back into a semi-comatose condition. The commodity failed to hold its rise, and the absence of official confirmation of the reported restriction negotiations discussed on page 1192, left the share market unsupported in the face of the poor American rubber consumption figures for November. Tea shares remained quiet and uninteresting, though prices, with a few exceptions, were maintained. The prevailing apathy made the mining share markets even less responsive than before to moderately favourable developments. Kaffirs showed not a spark of life on the publication of the batches of December dividends. The East Rand payment alone—the first since 1924—aroused any enthusiasm, payments in some other cases failing to come up to the highest market expectation. Among Rhodesians, Rhokana were weak, the speech of the chairman at the annual meeting suggesting that the percentage of copper restriction at present under discussion among the world's producers, was much more severe than had been anticipated. Tintos slumped further, though reports of a pending capital issue were discredited. Tin shares failed to respond to the higher price of the metal. The market received a pleasant surprise when the Burma Corporation, which had passed its final dividend, declared an interim dividend and bonus totalling 2 annas per share.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The week opened inauspiciously, with many prominent issues at new low levels. Among the more serious features was the weakness of bonds, which continued to be offered on behalf of investment trusts and banks, as well as private individuals. Selling of Japanese bonds was limited by the general belief that Japan would be able to maintain her dollar payments, but in other parts of the bond market the selling was undoubtedly of a forced character. The instability of share prices at the outset was due to conditions ruling in earlier weeks, including depressed trade, higher taxation prospects and, to some extent, bear speculation. The Stock Exchange, however, during the week, has published a survey showing that although the short interest increased during November by more than 1,000,000 shares to a total of 3,500,000, it was widely distributed over many stocks. Mr Whitney, the President of the Stock Exchange, has deprecated the giving of exaggerated significance to short sales as a depressing factor in market prices, his analysis showing that frequently such sales account for a limited proportion of the total transactions, and that, in any case, the real factors determining the level of prices are outside the control of any market operators. Railroad stocks were steadier than in recent weeks. The passing of the Common dividend of the Baltimore and Ohio was expected. Official news of the attitude of the Union representatives towards the proposed wage cuts was still lacking, but it was understood that the determined attitude of the railroad executives had somewhat influenced the Union leaders, who were discussing the advisability of acceptance of a 10 per cent. reduction, as an alternative to involuntary acceptance of a larger and unconditional cut later on. On Thursday renewed weakness occurred all down the list, and prices generally sought lower levels.

Commodity prices were uncertain, wheat breaking sharply on Wednesday. Steel operations are now estimated at 25 per cent. of capacity. Freight car loadings for the week ended December 5th were 636,463, against 558,904 in the previous week, 787,173 in the corresponding week of 1930, and an average of 937,959 over the period 1924-30. The New York Times business index for the week to December 5th was 63.8, against 63.7 for the previous week.

* 2-hour session.

PARIS.

The Paris Bourse opened with a dull appearance on Monday, quotations showing considerable irregularity, with a downward movement on balance. The abandonment of the gold standard by Japan produced an unfavourable impression, and in other respects the market was inclined to take a restrained view of international possibilities. On the other hand, a keen demand was in evidence for Rentes from certain public institutions, prices rising steadily. Rio Tintos were out of favour, though the fall was checked by bear covering. The mid-month settlement was carried out under depressing conditions. A firm tone obtained on Thursday in most sections, Rentes continuing in demand.

AMSTERDAM.

A better initial tone obtained on the Amsterdam Bourse, though business continued of small proportions. The appreciation of sterling was favourably regarded, but the depreciation of the Dutch florin checked speculative operations in the home market, though its effect on quotations, with a few exceptions, was not considerable. Unilevers, Philips Lamps, and Royal Dutch all opened firmer, but failed to hold their rise, Royal Dutch falling on Wednesday week to a new low level. Rubber shares relapsed into idleness on the absence of authentic news regarding the London negotiations. The bond market was relatively firm, but "Young" bonds were again largely on offer.

OTHER CENTRES.

In most of the minor European centres Bourse conditions were dull and inactive. Brussels made a fair start, but profit-taking occurred in mid-week. Milan had a heavy appearance, the sharp fall in Banca Commerciale causing sympathetic weakness in other markets. Copenhagen remained depressed, and Stockholm was quiet, while the unexpected announcement of two important bank failures tended still further to retard business at Oslo. Permission has now been granted to members of the Berlin Bourse to meet for one hour each week to discuss questions of the moment, but not to deal or make prices. Unofficial quotations have shown a further decline, Dye Trust being done at 71.50 (against 84.00), Siemens at 105.00 (against 108.00), A.E.G. at 25.25 (against 27.75), and Reichsbank at 65.50 (against 67.75).

LONDON ACTIVE SECURITY PRICES AND YIELDS.

NOTE.—Shares with a New York quotation, or with definite American interest, are distinguished by italics.

In calculating the yields on the stocks and shares quoted below allowance is made for interest accrued since the last payment. Where stocks are definitely redeemable at a $\frac{1}{2}\%$ in the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated on the dividends paid by the company during the last year.

INVESTMENT NOTES.

Japanese Bonds.—The suspension of the gold standard by Japan was the signal for a general marking down of Japanese Government bonds—a procedure not entirely logical, since the external trading position of Japan should be assisted by the depreciation of the yen. Japan may, for example, recover some of the textile business she has tended to lose to Lancashire since Great Britain suspended the gold standard last September. It is true that the burden of Japan's external debt will be heavier in so far as its service must be met in gold dollars, but, fortunately for the country, the major proportion of its external debt is due to Great Britain, whose currency is also on a non-gold basis. According to Moody's "Government and Municipal Record" 63.36 per cent. of the Japanese external Government debt is held in sterling and 25.99 per cent. in dollars. Of the sterling loans only the 5 1/2 per cent. Conversion Loan of 1930 carries the privilege of interest payments in dollars or sterling at a fixed rate of exchange of \$4.8665 to the £. The following table shows the decline in Japanese bonds which has occurred since September 29th:—

	Sept. 29.	Oct. 14.	Dec. 12.	Dec. 17.	Flat Yield %
Japanese Govt. {

* Not guaranteed by Japanese Government.

† Allowing for gold premium on dollar interest.

The market in Japanese bonds had been reactionary before the gold suspension, on account of the Sino-Japanese dispute. The political factor, however, is now regarded as less important than the economic. If the yen maintains a stable front at its lower levels a more confident view may be taken of Japanese Government securities, though there are certain features in the financial position on which the London market is not well informed.

Cunard and White Star.—The suspension of work on the new Cunard liner took the share market by surprise. Though its causes were clearly understood, it was regarded as, to say the least, a bad national advertisement. The market had already discounted the probability of a further passing of the ordinary dividend, and the shares, which were 8s. on the eve of the announcement, are now no lower than 6s. 6d. The preference stocks were more greatly affected, the 5 per cent. cumulative falling from 53 to 40 on the company's statement that after providing for depreciation there would be no profits out of which to pay the dividend for the half-year to December 31st next. The suspension of building of "Ship No. 534" is discussed elsewhere in this issue. The company's circular to shareholders, in addition, gives valuable information regarding recent abortive negotiations for the purchase of the White Star Atlantic fleet. It would appear that the initiative came originally from the Voting Trustees of the Royal Mail Company. In October, 1930, at the latter's

request, the Cunard directors offered to purchase certain White Star ships for a "substantial" cash amount but made their acceptance conditional on the Treasury extending towards the company, in respect of "Ship No. 534" and her projected sister ship, the financial terms under which the "Mauretania" and the "Lusitania" were built. These not being forthcoming, the Cunard's offer was refused, and the matter remained in abeyance for eight months. Last June, however, the Cunard was again asked to take an interest. By that time, presumably, the effect of depression on Cunard profits precluded a cash offer, and the Cunard suggested that payment for White Star ships should take the form of Cunard ordinary shares. This suggestion, in turn, was refused; but last October the directors were again pressed to make an offer, considerations of "the national interest" being invoked on this occasion. They departed, accordingly, sufficiently from their previous standpoint to offer for the White Star fleet (including a new ship, the "Georgie," then under construction) some £500,000 in cash, and an undisclosed balance in income debenture stock, with an over-riding guarantee that, up to 4 1/2 per cent., the interest on such stock would not be less than any dividend paid on Cunard ordinary shares. This offer was also refused. It would appear, indeed, between the lines, that the two parties were never in sight of an agreement. The Cunard statement suggests that accord could not be reached as regards fundamental matters such as the valuation of the White Star ships, the terms of payment, or the conditions surrounding the purchase of the "Georgie"—the Royal Mail trustees apparently desiring that the Cunard should assume liability for a bank loan of £670,000 and should accept £453,000 of bills drawn by the builders. In the light of last week's news it would seem that the Cunard Company went to the extreme limit of concession, having regard to its own financial position, without being able to satisfy the legitimate desires of the Royal Mail trustees. It is, indeed, unfortunate from many points of view that an offer which the Cunard Company would doubtless have welcomed in normal times should have fallen to be made under present conditions of world-wide shipping depression. As Sir Frederick Lewis hinted at the last Furness Withy meeting, negotiations between the latter company and the Royal Mail trustees have also been broken off, for the present at least, and it is evident that the task of easing the Royal Mail group's position by judicious disposal of certain of its saleable assets is proving anything but easy.

Royal Mail Report.—The report of the Royal Mail Steam Packet Company for the year ended December 31st last serves merely a formal purpose. The group's position was explained in painful detail as long ago as last February by Sir William McIntock, and the real interest of debenture and stockholders lies in the scheme of re-arrangement which the voting trustees have the onerous duty of formulating early next year. The report gives the loss for 1930 as £566,219. This figure affords some indication of the company's trading difficulties during that year, but has little precise significance, since it has been struck before making any allowance for depreciation. It naturally does not include any receipts by way of profit on the sale of ships and investments. These have been put to reserve and are shown separately at £308,289. They appear to have arisen mainly from the sale of the company's holding of the ordinary and preference shares of the Argentine Navigation Company. Sir William McIntock's estimate of the company's 1930 net loss, last February, appeared to have been conservatively framed, the figure given in the present report, on a comparable basis, being appreciably less. A comparison of the present balance sheet with its predecessor appears on a later page, and a summary of the Cunard Company's statement with regard to negotiations with the Royal Mail voting trustees for the purchase of certain White Star ships is given in the preceding "Note." The Voting Trustees are apparently tackling their task, the difficulties of which have significantly increased since their first appointment, with a determination to face up to realities on the one hand, and to give nothing away needlessly on the other. Mr P. G. Mylne Mitchell has

become chairman of the Royal Mail Company, and further changes are announced in the board—whose members, at their own request, are receiving no fees. Mr Walter Runciman has resigned his deputy-chairmanship on his acceptance of office in the Government, Mr W. Lewis having taken his place.

United Africa Reconstruction.—In a "Note" in our last week's issue, dealing with the accounts of United Africa, we remarked that a revaluation of the fixed assets, which had been promised for two years, would involve a drastic writing-down of the share capital. The chairman of African and Eastern Trade Corporation, at the shareholders' meeting on Wednesday, announced that a reconstruction scheme had, in fact, been prepared in collaboration with the Unilever group, involving the writing-down of the United Africa assets by about £8 millions, a rearrangement of the equity interest (giving the Unilever group 80 per cent. of the ordinary shares against the present 55 per cent.), and a diminution of the 50 per cent. voting rights now held by African and Eastern. This appears to be a hard bargain which the shareholders of the African and Eastern should not accept without careful consideration of the facts. Colonel Beddington, their chairman, explained the tight corner in which United Africa found itself. As is usual, the banks and acceptance houses, which he called "the credit-givers," were blamed for the trouble. In view of the limited facilities which the credit-givers were prepared to grant for 1932, it was found that a sum of not less than £3 1/2 millions of fresh capital would have to be introduced into the business. This would involve a subscription by African and Eastern, in proportion to its existing equity interest, of £1,579,623. Unfortunately, the African and Eastern had only £500,000 available. The Unilever group suggested that they would be willing to subscribe £3 millions of fresh capital if the African and Eastern subscribed £500,000, on condition that the capital of the United Africa should be written down from £15,731,600 to about £7,750,000, that the total share capital should be of one class, held as to 20 per cent. by the African and Eastern and as to 80 per cent. by the Unilever group, and that the articles be altered so that African and Eastern should cease to have an equal vote in the affairs of United Africa and should be represented on the board in future by three directors only. Further conditions were that in the event of new capital being subscribed the African and Eastern should be invited to subscribe pro rata, and that if the profits of United Africa available for distribution permitted it, the Unilever group would agree to such a distribution as allowed African and Eastern to receive by way of dividend on its holding of the reduced share capital a sum equal to the annual dividend of £18,000, payable on its present issue of the "A" preference capital, any disagreement about distribution of profits being settled by arbitration. A special meeting of the shareholders of African and Eastern has been called for December 30th. The chairman intimated that the question of a writing down of the capital of African and Eastern would also have to be considered in due course. With regard to the outlook of United Africa, Colonel Beddington referred both to the serious fall in commodity prices and the competition of plantation-grown palm oil from the Dutch East Indies. Obviously, the company's position, at the moment, is difficult, but African and Eastern shareholders, nevertheless, will regard the terms offered as severe. In particular, they are likely to ask why no effort is being made as regards the "B" preference shares, of which £3,066,165 is issued as against £300,000 of "A" preference capital.

Dorman Long Meeting.—At the annual meeting of this famous iron and steel company, whose accounts we discussed last week, Mr Charles Mitchell drew an objective picture of conditions in the industry. He dwelt upon the indispensability of technical rationalisation for the industry as a whole, and the efforts his own company had made to maintain their technique and organisation at the

highest level by research on a national and international basis. Mr Mitchell pointed out that it was not the material which was at fault, but the market for it—that provided the company could get a sufficient volume of work to enable it to keep up a fair percentage of production, reasonable profits would be realised even at to-day's prices. He adduced the following figures of output in support of his point:—

	Year to Sept. 30, 1930.	Year to Sept. 30, 1931.	Reduction This Year.
	Tons.	Tons.	%
Coal	3,197,942	2,244,690	29.81
Coke	1,141,257	680,137	40.40
Pig iron	1,036,270	588,511	43.21
Steel ingots	1,039,298	617,506	40.58
Finished steel	792,835	492,668	37.86
Invoiced value of sales (excluding bridges)...	£10,340,297	£6,665,489	35.54

With regard to rumoured merger schemes on the North-East Coast, Mr Mitchell emphasised the necessity of large-scale reconstruction, but dropped no hint as to the stage reached in any specific negotiations. He insisted that to be effective every scheme would necessarily involve specialisation of output and a higher degree of concentration than had yet been realised in this country. The capital expenditure would be heavy, and there would not have to be any misdirection of effort or unnecessary duplication of outlay.

South Durham and Cargo Fleet.—The latest results of these "Furness," North-East Coast iron and steel companies may be read side by side with those of Dorman, Long, with whose name they have been linked in recent unofficial reports of merger negotiations. South Durham Steel and Iron shows a trading profit of £56,411, compared with £85,044 for 1930. After deduction of the usual

charges, and the addition of £24,472 made up of "surpluses on the sale of Government securities and on income tax account," net profit at £35,068 compares with £39,229 for the previous twelve months:—

	Year to September 30,		
	1929.	1930.	1931.
Profit	95,471	85,044	80,883
Fees	2,315	2,315	2,315
Depreciation	40,000	30,000	30,000
Debt interest	13,500	13,500	13,500
Net profit	39,656	39,229	35,068
Brought forward	138,008	138,664	138,893
Preference dividend	18,000	18,000	18,000
No. of times covered	2.2	2.2	1.9
Ordinary dividend:—			
Amount	21,000	21,000	14,000
Earned %	6.1	6.1	4.8
Paid %	6	6	4
Carried forward	138,664	138,893	141,961

The Cargo Fleet company has suffered less from the prevailing depression. Profit has actually increased from £88,809 to £85,667, and £45,000 is allocated to depreciation instead of £43,000. Net profit is £1,473, compared with £976. For the tenth year in succession no dividend is paid. The carry-forward is increased from £186,431 to £187,904. Both companies have maintained their liquid position. In the case of South Durham a reserve £1,285,000 is held against an ordinary capital of £350,000 and "B" ordinary shares of £578,624 (which have not yet received a dividend). The £1 ordinary shares at par yield about £4 3s. per cent., less tax, allowing for dividend. The "B" shares are quoted at 7s. 6d.

American Railroads and Wage Cuts.—In a leading article, which appeared in our issue of December 5th last, (page 1076), on the position of American Railroads, reference was made to the counter-proposals of the railroad executives to the proposition of the Interstate Commerce Commission regarding the increase in rates. The Commission suggested that the additional revenues should be pooled and the proceeds distributed among the weaker companies which were unable to meet their fixed charges. The big railroads, however, proposed that the distribution should be by way of loans from the pool. The Commission has now completely abandoned its high intentions. It has approved of the rate increases without a pooling plan at all, merely expressing a hope that the strong companies will make voluntary loans to the weaker lines, but declaring that it has no jurisdiction over such matters. It was believed that this change of tone anticipated President Hoover's reference to a proposed new finance corporation to make loans direct to railroads and render a pooling plan unnecessary. The big railroads, however, having gained their point, appear to have been willing to adhere to their first suggestion, for the latest reports refer to the formation of a Railroad Credit Corporation to administer the revenues accruing from the increased rates and to make loans as required to the weak companies. With regard to the wage problem, the railway union leaders are still deliberating

OFFER TO NEW READERS.

Name.....

Address.....

over the reduction proposals, and the executives show signs of impatience. The Chicago and North Western has ordered a cut in the maintenance-day wages of 12½ per cent., to be enforced immediately without waiting for the result of arbitration. A strike may follow on this line. The President of the Atchison Topeka and Santa Fé will shortly move a 15 per cent. reduction in wages under the procedure of the Railway Labour Act unless the men place into effect immediately the 10 per cent. reduction which has been ordered. It is considered possible that the union leaders may eventually decide to discuss the possibility of a wage reduction provided the executives promise greater security of employment, and, in particular, offer to "spread over" the work on hand to avoid any further dismissals of men.

Rubber Restriction?—In the last ten days rubber has been as high as 3½d. before falling back to 3d. The rise followed a newspaper report that an agreement in principle had been reached between the Colonial Office and the Dutch rubber growers providing for restriction of rubber production in Malaya and of rubber exports from the Dutch East Indies by as much as 50 per cent., and that Dutch representatives, who had been in England, had returned to Holland to secure the necessary consent to the scheme from a large majority of growers. The market had received earlier and less circumstantial rumours with scepticism, but gave some credence to last week's report. Hitherto, the Dutch Government has refused to move without a virtually unanimous appeal from its growers, which has not been forthcoming. Recently, however, Dutch opinion has hardened in favour of restriction, and Britain's departure from the gold standard has brought matters to a head. The depreciation of the pound affords British producers an important differential advantage, and the attitude of some Dutch growers is expressed by the statement that they desire either that Holland should come off gold and enable them to compete with British growers on equal terms at the present low scale of values, or that, if their country remains on gold, steps should be taken to bring about a rise of prices which would benefit British and Dutch producers alike. How far the British Colonial Office has consulted its own growers is uncertain. It is understood that representatives of the Rubber Growers' Association have been called for discussions at the Colonial Office during recent weeks, but the trade as a whole is entirely in the dark as to the ground covered in these talks, and merely regards the terms unofficially disclosed last week as probably near the mark because of the strength of the rebuke they provoke from the authorities. Meanwhile, rubber production and consumption are a little nearer a state of balance than can be said of many other commodities. The world's shipments for the ten months to October are put at 667,000 tons, against 693,000 tons in the corresponding period of 1930, exports from Malaya having fallen off by 5½ per cent., and from Ceylon by 21 per cent. Dutch East Indies exports, however, have risen by 6 per cent., the increase being traceable more to estate than to native rubber. On the demand side, American consumption has proved disappointing, the low car production figures (particularly those for October), showing that rubber demand at present is chiefly for "replacement" purposes. Rubber stocks in America increased during November by 18,989 tons to a total of 292,501 tons, while rubber afloat for the United States at the end of last month increased by 10,350 tons to a total of 77,443 tons. British stocks, on the other hand, over the last four months have actually fallen. The consumption of countries outside the United States is keeping up relatively well, Russia's takings, in particular, being well above those of 1930. In these circumstances, restriction of anything like 50 per cent., even if it fell short of complete enforcement in some producing areas, might be sufficient to force up market prices, though whether it would be in the best interests of the industry is another matter. It would, of course, largely increase production costs. Indeed, unless quotations rose to something between 6d. and 8d., its effect in Malaya might be the reverse of that intended, since it might drive out of production the "margin"

estates which are now existing on the brink of starvation by tapping "all out". Temporary and non-economic price rises in the past have been the bane of the rubber industry. For an appreciation of the long-term prospect of rubber growers, in the absence of arbitrary measures, we would refer our readers to an article from a correspondent which appears on page 1168 of this issue.

Silver and the Investor.—An informative Supplement on "Silver," published this week by *The Financial News*, contains a fair statement of the case for and against bimetalism—a controversy, once regarded as extinct, which has been given an apparent lease of life by the recent "revolt" of numerous countries against the Gold Standard. The Supplement, from the investor's point of view, enforces the lesson that silver, as a direct or indirect investment medium, is among the most speculative of all commodities. Apart altogether from any possible future changes in the nature and volume of demand, the metal is found in association with many others, and is seldom or never mined as an end in itself. Consequently, it is practically impossible to ascertain the economic cost of silver production in any single mine, and the amount produced is influenced by the price of the metal only to the extent that variations in the latter may affect a company's policy in treating ore with a relatively high or low silver proportion. Hence, speculative investment based on the adoption of any particular view with regard to the future of silver, may take the form of a purchase of the commodity, or of Mexican Government bonds (whose future prospects depend primarily on the course of silver), or even of the shares of large British companies—like P. and O., Indo-China Steam Navigation, or British-American Tobacco. These companies, having a significant stake in the East, are likely to benefit from any rise in the value of the circulating medium of many Eastern countries. The shares of companies which are predominantly silver producers (situated mainly in Mexico and Canada), are affected, at the moment, not only by depressed metal market conditions which give an uncertain quality to many balance-sheet valuations, but also by the fact that development in some cases, particularly in Canada, is not yet at an advanced stage. Some of the largest producers are, in fact, "mixed" concerns, like Burma Corporation, Confact, American Smelting and Refining, the Broken Hill group of Australian concerns, and the Electrolytic Zinc Company of Australasia. A purchaser of the shares of these companies, however, is a "bull" not merely of silver, but in equal or greater measure of metals like copper, lead and zinc.

Tin-Dredging Results.—The annual reports of an important trio of the well-known Cornish group of Malayan Eastern tin-dredging enterprises—the Malayan, Southern Malayan and Perak—strikingly reflect the results of restriction of output in conjunction with fall in the price of the metal. They also indicate what can be done by efficient management even under disadvantageous conditions. Despite the conduct of operations on a reduced scale, the Malayan Dredging last year reduced its mine costs to the equivalent of £59 15s. per ton of metallic tin. A net profit of £38,000 resulted (including £1,300 from realisation of investments), permitting the payment of dividends totalling 17½ per cent. In respect of the year ended June 30, 1930, the shareholders received 47½ per cent., but the earnings were swollen by £26,900 from realisations. Last year the substantial sum of £79,300 was expended upon additional dredging and other plant. The charge against profit and loss was supplemented by the transfer of £10,000 from share premium account, leaving the balance-sheet entry at the very moderate figure of £150,000. Investments at £231,900 are £62,000 down. Of the company's area of 2,177 acres, 953 have been worked out. The Southern Malayan—a subsidiary of the Malayan Dredging made a net profit of £43,400, against £96,700, and paid 10 per cent. in place of a total of 27½ per cent. By the year's depreciation allowance of £20,200, the book value of the plant and machinery has

been written down to £180,000. At £50,500 the investments show an increase of £15,500. The area worked out amounted to 64 acres, but 30 acres were acquired. Southern Perak earned only £1,900, an individual adverse factor being the low values carried by the ground treated. By drawing to some extent upon the carry-forward, the directors were able to squeeze out a dividend of 2½ per cent. For 1929-30 an aggregate of 18½ per cent. was disbursed, leaving the enhanced balance of £15,650 to go forward. During the past session 40½ acres were dredged out, making a total of 286 acres; but leases for an additional 140 acres are in course of issue. By allotment of the 17,000 reserve shares at 25s., the company has paid off the balance of the Trade Facilities loan and placed itself in a better financial position. The report of the Kamunting reflects the acquisition of the Pangnga undertaking—though the former property is situated in Malaya and the latter in Siam. Hence the fact that, despite restriction, the output amounted to 1,228 tons, as against 1,097 tons for the Kamunting only in 1929-30. The gross profit amounted to £37,900. Of this £11,780 was required for service of the debentures issued in connection with the absorption, the balance being carried forward. The directors, however, consider that the position warrants the declaration of an interim dividend of 3 per cent. upon the increased capital of £625,000. The last distribution was 10 per cent. in respect of 1928-29. Of the book premium of £50,000 arising from the issue of 1,000,000 shares to the Pangnga company, £48,160 has been written off to depreciation and the like. In the circumstances no significance would attach to any comparison of operating results. From the dividend receivable upon its holding of Kamunting shares, the Pangnga declares 2½ per cent. This is the first distribution. The company was registered in April, 1927.

Rhokana Corporation.—The report now presented covers the acquisition of the N'Changa and Bwana M'Kubwa undertakings. The accounts are therefore of a somewhat complicated character. In the balance sheet the shares allotted to the Bwana are taken at their former current value of £6 5s., representing £3,343,750. From this is deducted the par value of the shares (£500,000), plus £522,350 for writing down the Bwana assets. Then the shares exchanged for N'Changas are taken at £6 7s., representing £800,670. The deduction of par value, with £484,300 for writing down, leaves £210,300. From the net grand total of £1,195,100, the sum of £119,000 is transferred to property reserve account. Amalgamation and debenture issue expenses—£181,600—are extinguished by the transfer of a corresponding amount from capital reserve account. The same fund is called upon to wipe out the £101,750 working debit in respect of the Bwana Mine (now shut down), also the shareholdings in concerns other than the Mufulira. Some 2½ million 2s. shares in the latter concern figure at £822,100, plus £22,000 advances. The cash resources on June 30th were substantial, and about 1½ millions remained to be called up on the debenture issue. The total indicated ore reserves in the N'Kana-N'Changa properties are set out as 270,780,000

FIGURES OF A.M.P. ASSURANCE

By careful and prudent administration the A.M.P. has made more than £42,000,000 for the benefit of its Policyholders since its establishment in 1849, and this, after providing for all expenses of management, commission, taxes, etc. A.M.P. premiums are low, Bonuses high and policies, as before the largest British Mutual Life Office, world-wide. Assets £33,000,000. Annual Income £11,800,000. Full particulars on application.

MUTUAL PROVIDENT SOCIETY
73-76 King William St., London, E.C.4.
Established 1849.

D. E. WALKER, Manager for the United Kingdom.

tons, averaging 4.3 per cent. copper—equivalent to 11,788,560 short tons. The concentrator is now in operation, and the smelter is due to start early next year. Presumably the scale of output by the Rhokana and the policy to be adopted in reference to the Mufulira await the outcome of the copper negotiations. At the meeting Sir Auckland Geddes, the chairman, stated that "a satisfactory arrangement had been practically arrived at with regard to curtailment (of production)—dependent, of course, upon a further agreement being made on marketing. The cut proposed is no less than 75 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: British Overseas Bank, Bank of London and South America, National Bank of Scotland, Central Uruguay Railway of Monte Video, Orient Steam Navigation, India Rubber, Gutta Percha and Telegraph Works, Richard Thomas and Co., Agar Cross and Co., Hall's Oxford Brewery, Samuel Allsopp and Sons, Showell's Brewery, Camp Bird, and Santa Gertrudis. At the annual meeting of the Bank of London and South America, Mr Beaumont Pease observed that the trade balance in favour of Argentina for the ten months ended October 31st last was 76,954,000 gold dollars, but that this figure did not include the value of invisible imports, an amount which it was difficult to calculate exactly, but which was estimated by some to be in the neighbourhood of £30,000,000 per annum. At the annual meeting of Camp Bird, the chairman, Mr F. W. Baker, pointed out that the sulphur supply of Australia was of very material importance to that country, for it was used in the manufacture of superphosphates, necessary to Australia as an agricultural country. Reference is made to the question of taxation, dealt with at the Brewery Company meetings, in a leading article on an earlier page.

CAPITAL ISSUES.

It is announced that the result of the offer by Furness Withy of 2,000,000 new £1 ordinary shares to existing holders at 21s. has been as follows:—

	£
Rights to new shares exercised by shareholders.....	417,715
Applications for excess shares	50,904
Balance to be taken up by guarantors.....	1,531,381
	2,000,000

This disappointing result is due entirely to unfavourable market conditions, which prejudiced the success of an issue of admittedly high standing.

COMPANY MEETINGS, &c.

BRITISH OVERSEAS BANK, LIMITED.

A YEAR OF FINANCIAL CRISES.

WORLDWIDE ECONOMIC DEPRESSION.

EFFECTS OF "STANDSTILL" AGREEMENTS.

TRADE SITUATION AT HOME.

SUSPENSION OF GOLD STANDARD.

A TEMPORARY AND ILLUSORY REMEDY.

VISCOUNT CHURCHILL'S ADDRESS.

The twelfth annual general meeting of the British Overseas Bank, Limited, was held at the Bank's premises, 33, Gracechurch Street, London, E.C., on December 15th.

The Right Hon. Viscount Churchill, G.C.V.O. (chairman of the bank), presided.

The Chairman: Ladies and Gentlemen, I will ask the Secretary to read the notice convening the meeting.

The Deputy-Manager and Secretary (Mr. A. E. Thorne) read the notice convening the meeting.

The Chairman: The Secretary will now read the report of the auditors.

Mr. Thorne then read the report of the auditors. The Chairman: Ladies and Gentlemen, I now rise to submit the report and accounts. As you know, they have been circulated and, as is usual, you will doubtless agree that we should take them as read. (Agreed.)

During the last six months the situation both here and in the rest of the world has suffered rapid and fundamental changes. What will come out of them in the end it is impossible to say, but there is no doubt that difficult as the last period has been there are as great or greater problems ahead which must be solved before recovery can be looked for. In this country at least, and none too soon, we are making a vigorous effort to face and overcome our difficulties. But the struggle has only now started and the end is not yet clear.

SPREAD OF DEPRESSION

At our meeting last year I referred to the causes that had led to the change from comparative prosperity to severe depression—that is to say, war debts, tariffs, taxation, maldistribution of gold, and so on, which by their cumulative effect had wiped out most of the progress made during the post-war decade, and had reduced the economic life of the world to a condition of complete uncertainty and obscurity. Throughout this year the level of economic activity has fallen steadily, and as it fell new weak spots in the structure began to be disclosed. Economic depression has led to financial crisis, and this crisis has spread rapidly from one country to another, so that by to-day none has escaped. The collapse of the Credit Anstalt in May was the first sign. This, the largest bank in Vienna, had interests not only in Austria but in all the neighbouring countries, and, although the intervention of the Austrian Government averted an immediate banking breakdown in Austria itself, this could not prevent the repercussions of the affair spreading widely in Europe.

GERMANY'S CREDITS

Germany was the next country to be affected. Her foreign exchange position was already known to be precarious, and the resemblance of the German banking structure to that of Austria gave rise to general anxiety to an extent that may have been unjustified at the time. In any case, withdrawals of foreign funds began in June, and in spite of President Hoover's intervention and of the concerted action of foreign central banks in granting credits to assist the Reichsbank, these withdrawals persisted with increasing intensity. Finally, the Darmstadter, one of the most important of the German banks, was forced to close its doors.

A complete upset of German banking and exchange ensued. The German Government intervened and instituted a drastic control over foreign exchange and stock exchange dealings and over other financial activities.

In order to avert the political consequences of a public recognition of the breakdown which had in fact taken place, the interested Powers met hurriedly in London and requested the bankers who had advanced short-term credits to Germany to relieve the situa-

tion for the time being by not insisting on repayment. In this way was brought about the so-called Standstill Agreement between Germany and her foreign creditors, regulating all the short-term indebtedness of German concerns to foreign bankers. In the meantime the intimate connection in the public mind between one of the largest banks in Hungary and the Credit Anstalt brought about a similar attempt to withdraw funds from Hungary, where the position was aggravated by the complete collapse in price of all its exports. There, too, the situation was only prevented from falling into chaos by the arrangement of a Standstill Agreement.

FAR-REACHING RESULTS

The German, even more than the Austrian and the Hungarian crisis, led to far-reaching results abroad. The short-term position of Great Britain was already known to be none too strong, and the budgetary fears and unfavourable trade balance added to anxiety both here and abroad. In addition, many foreign banks, finding themselves gravely embarrassed by the German crisis, which had immobilised a large quantity of their funds, were forced to reduce their balances in London in order to maintain their own liquidity. In consequence a rush of foreign withdrawals set in. Now, although we have enormous foreign assets, the proportion available in liquid form is insufficient to deal with a situation of this nature. And so it followed that in spite of the credits raised abroad by the Bank of England and the Treasury, the pressure on sterling proved too great, and finally, on September 21st, the obligation of the Bank of England to pay gold on demand was suspended.

THE AMERICAN PHASE

The next phase of the world panic centred in America. There for some time past the banking structure had not inspired confidence and hoarding of coin and notes had been going on for many months. On the top of this the breakdown of the gold standard in England aroused fears among foreign holders of dollars and an enormous rush of withdrawals occurred. Gold was exported at an unheard-of rate, mostly to France and also to Switzerland, Holland and Belgium. Fortunately, owing to its vast gold holdings, America was not particularly susceptible to attacks of this kind, and the drain, after some weeks of anxiety, diminished in volume and has now practically ceased. On the other hand, however, the hoped-for industrial recovery in the United States has not taken place, unemployment continues on an unprecedented level, and attempt after attempt has failed to restore confidence in an early improvement. In the meantime, in addition to Great Britain, most of the Dominions and India, South America, Scandinavia and some other countries of Europe, and now Japan, have been forced off the gold standard; whilst Germany, Austria and many other important countries are maintained on it only by such stringent regulations that amount, in fact, if not in name, to a moratorium on foreign obligations. For the rest, official intervention and control so hamper payments in every part of the world that, apart from ourselves, the United States, France, Switzerland, Holland and Belgium remain the only countries with anything approaching a free exchange market.

DESTRUCTION OF CONFIDENCE

As I said, confidence has been destroyed throughout the world, and this has disclosed with catastrophic results the weaknesses inherent in the present structure. In Europe, reparations and war debt levies, and nationalism carried to excess—both in tariff walls and expenditure on armaments—have disorganised the flow of trade and capital, straining the resources of some countries almost to exhaustion and piling up gold in others who were incapable of turning it to any constructive use. Such a situation obviously

The Chairman: Those in favour kindly hold up their hands; on the contrary; carried unanimously. I now call upon Mr Hindley to move a resolution.

MR HINDLEY'S SPEECH.

Mr R. T. Hindley (advisory director): My Lord, ladies and gentlemen, the resolution which I have the privilege to move is:— "That the directors retiring by rotation—Mr Nigel L. Campbell and Sir George E. May, Bart.—be re-elected, and that Mr Duncan Alexander Stirling's appointment to the board be confirmed." It gives me very great pleasure to move that.

The speeches of our chairman and Mr Gairdner have brought home to us, if it was necessary to do so, that banking is more than routine and that those who control, on your behalf, the policy of the bank should be men of vision as well as men of ability. We have had the pleasure of working together with the present directors for many years. We have learned to respect them and we have earned to know something of their very great ability and character. Mr. Campbell, whose business is partly that of banking and partly that of an advisor who is called into council in many difficult cases—you might almost call him a specialist—is so well known in the City that I am certain that we are envious in having him constantly on our board to help in the elucidation of problems which come before the directors week by week.

In Sir George May we have one who was called in when affairs had got to such a state that they could not be allowed to go on any longer, and I think the whole country—I might say the whole Empire—is indebted to Sir George May for the report of his committee, which brought home to everyone the fundamental difficulties in which this country was placed. (Hear, hear.) We are very proud to have him connected with us, and we are very grateful for the help that he gives us. (Hear, hear.)

Then in Mr Stirling we have a newcomer who is well known in the City. I had the privilege of meeting Mr Stirling for the first time in somewhat difficult circumstances about twelve months ago, when I can only say that Mr Stirling was of the greatest help.

I appreciated in a very high degree what Mr Stirling did on that occasion, and I was doubly pleased when a few months later I found that he had become closely associated with our bank. It is because of the feeling that I have personally, and, if I may say so, on your behalf, towards those three gentlemen, that I have the greatest pleasure in proposing the resolution which I have read to you. (Applause.)

I will ask Mr Norman Hird to second the resolution.

Mr Norman L. Hird (advisory director): Lord Churchill, ladies and gentlemen, I have very much pleasure in seconding the resolution. Mr Hindley has dealt with it very fully and nothing remains for me to say.

The Chairman: Those in favour kindly hold up their hands; on the contrary; carried unanimously. I will now ask Mr Donne to propose a resolution.

Mr E. F. Donne: I have pleasure in proposing:—"That the retiring auditors, Messrs George A. Touche and Company and Messrs McClelland, Ker and Company, be re-appointed as auditors of the company for the current year at the same remuneration, namely, a collective fee of seven hundred and fifty pounds."

Mr E. S. Bishop: Mr. Chairman, ladies and gentlemen, I beg to second the resolution.

The Chairman: Those in favour kindly hold up their hands; on the contrary; carried unanimously. That, ladies and gentlemen, concludes our business. I thank you very much indeed for coming here.

VOTE OF THANKS.

Mr E. Grant Hooper: Ladies and gentlemen, before we part I feel sure that you will agree with me that someone on this side of the table should express our obligation to the chairman for his most interesting address, to the managing director for his interesting speech, to the board generally and to the officials and staff of the company for the admirable work which they have done for us and which is represented by the balance sheet we are considering to-day. (Hear, hear.)

As a previous speaker said, I think that to most of us the report was almost an agreeable surprise. I feel sure that all of us who have any interest in public affairs must have been aware of the very difficult times that everybody connected with banking or finance must have passed through during the past year. I have been very interested in the two addresses which you, Sir, and Mr Gairdner, have been good enough to deliver to us. I am sure at my friend who raised the point will find them fully reported, and the world generally will have the advantage of considering the views which have been placed before us to-day. (Hear, hear.) I again express our thanks to you, Sir, and I beg to move:—"That the best thanks of the meeting be tendered to the chair-

man, the directors and the staff." (Applause.) I feel sure that somebody will be good enough to second that.

Mr F. Hewson: I shall be very pleased to second that. Mr Grant Hooper: I put that to you, ladies and gentlemen. All those in favour; on the contrary; carried unanimously.

The Chairman: I am extremely grateful to Mr Grant Hooper for the kind words he has used in proposing this vote of thanks to us. I am sure we all appreciate the way in which you have acquiesced in it, ladies and gentlemen. I hope that the change of date of our meeting from December 8th to December 15th has not put any of you to serious inconvenience. It was necessary to do that as our friend Mr Gairdner was, I am sorry to say, unwell, and I felt that it was most important that we should postpone the meeting in order that he might be able to attend. He has got to take care of himself, and that is a matter into which I always have to look very closely. I can assure you that we missed him very much when he was away. However, the board carried on in a most admirable manner. They gave me, personally, whenever I wanted it, most kindly, sensible and proper advice, and I can assure you that the team work—and I call it team work advisedly—which goes on in this bank is to a great extent the reason why our results are as good as they are (Applause.) I thank you very much for coming here to-day.

The proceedings then terminated.

ORIENT STEAM NAVIGATION COMPANY, LIMITED.

REVIEW OF A DIFFICULT YEAR.

The thirty-second ordinary general meeting of Orient Steam Navigation Company, Limited, was held, on the 15th instant, at 3 and 5, Fenchurch Avenue, London, Sir Alan G. Anderson presiding.

The Chairman, in the course of his speech, said: The accounts do not show the full disturbance of the economic typhoon and next year will certainly be much worse, but we have known for years that the danger was approaching and have had time to prepare. Through a generation of reasonably prosperous trading you have always supported the managers in putting by to depreciation, reserves and contingencies, sums, the full amount of which has never been disclosed, and, while you have denied yourselves unknown dividends by this prudent policy, you have provided generously and in advance to meet the misfortune which comes to all shipping lines and may fall more heavily upon us than upon our neighbours, whose investments are more scattered.

The results of working and income from investments leave a margin over expenses, which is swelled this year by a profit of £100,596 on the sale of certain investments at a price exceeding their cost to us. With the addition of this non-recurrent item, the revenue for the year meets all the year's expenditure and leaves £308,095, which suffices to meet the statutory depreciation of 4 per cent. on first cost of ships, to pay the preference dividends, and by taking £48,020 from the carry-forward, to pay a 5 per cent. dividend on the ordinary shares, which we recommend. In the circumstances, we are pleased with this result, and we hope you will be. We recommend the transfer of £100,000 from contingencies to increase the carry-over to £153,321.

While the immediate future looks very black, we can congratulate ourselves on having passed through these two years without loss, and, as this dividend will deplete our savings by less than the amount we put to reserve last year, our position after two years of storm will be as strong as before the storm broke. We owe nothing to bankers or shipbuilders, nor have we any debenture debt, and the whole of our depreciation, which is shown this year as £219,810, goes to swell our liquid resources.

Turning to the detail of our work, the passenger trade has been deplorable and is getting worse. So far as we can calculate, of the berths offered by all British lines for saloon passengers less than one-third were occupied on reaching Australia. This was not so bad, but for the return voyage only some 17 per cent. of the berths were occupied on leaving Australia, which is not half the normal load, and means heavy loss next year for all first-class carriers. It is clear that, until our customers have restored their economic position and can afford to spend a few months abroad, no competitive effort by shipowners will materially increase the saloon traffic. In third class no new settlers are needed in Australia, so Government-assisted migration by all lines has practically ceased, falling 97 per cent. in three years.

We despatched the Orford, Orontes and Oronsay on fourteen pleasure cruises, the same number as the previous year, and earned almost exactly the same revenue. This result, in a year in which resort hotels are reported to have suffered declines ranging from 15 per cent. to 30 per cent., shows that the public increasingly realise what a good holiday they can have at sea and at how little cost and trouble.

Australia has the resilience of youth and will, we hope, rapidly correct her own economic mistakes, just as England is now correcting hers, but it is Great Britain and not Australia which must make the move and give the lead to the world out of an economic morass in which we need never have stuck. So long as great creditor nations press their exports on the world's market and insist on being paid what is owed them for exports and for loans and at the same time refuse to accept payment in goods and services, so long gold will rise in price, commodities will fall in price, debts will become impossible to repay, men everywhere will be unemployed and the shareholders of the Orient Line will go without their reward for providing a modern, well-designed and, I hope, well-managed fleet.

The report and accounts were unanimously adopted.

CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO, LIMITED.

TRAFFICS WELL MAINTAINED.

The ordinary general meeting of the Central Uruguay Railway Company of Monte Video, Limited, was held, on the 17th instant, at River Plate House, Finsbury Circus, London.

Mr Frank Henderson (the chairman) said that the year had been one of extreme and unprecedented difficulty. An adverse trade balance and an unbalanced Budget, followed by a rapid fall in the exchange value of the dollar, and acute commercial depression generally, had contributed to a final result previously unknown in the annals of this company.

The year's traffic from a currency point of view had not been altogether unsatisfactory, and the total decrease in the currency earnings from all sources had been only 2 per cent., and was more than off-set by a reduction of 6 per cent. in the total expenditure. The continued depreciation in the sterling value of the dollar, however, which was the root cause of all the trouble, rendered comparisons of no practical value. Unfortunately, the remedy did not lie with them. All they could do was to economise in expenditure and increase rates in so far as local ability to pay and road competition would permit. The raising of the tariffs had not come into force until October, so that the full effect of this and of economies would not be felt until the current year, but no one could forecast what course the exchange rate would pursue.

A study of the revenue account showed that, in spite of the spreading of the loss on exchange, they had not been able to make provision for all charges without drawing upon the balance of revenue brought in from the previous year to the extent of some £17,500, which precluded a final dividend upon the preference shares being now recommended.

A law, hurriedly passed without warning on October 14th, had prohibited, up to December 31st, the remittance by foreign companies of funds for debenture interest and dividend purposes, the equivalent pesos to be deposited in a local bank, to be released as to 25 per cent. monthly from January 1st. That law was no doubt designed to improve the exchange value of the dollar, and, whether from this cause or not, an improvement had taken place. The remittance of funds, however, even for general purposes here, was a matter of extreme difficulty. It was a very unsatisfactory state of affairs, but the company would meet its commitments on January 1st next.

The report and accounts were unanimously adopted.

INDIA RUBBER, GUTTA PERCHA, AND TELEGRAPH WORKS COMPANY, LIMITED.

IMPROVED TRADING RESULTS DESPITE DIFFICULT CONDITIONS

The sixty-eighth ordinary general meeting of the India Rubber, Gutta Percha, and Telegraph Works Company, Limited, was held, on the 15th instant, at Southern House, London, E.C., Sir John Ferguson, K.B.E., M.P. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: While the result of the year's trading shows a marked improvement on that of the previous year, your directors very much regret that the loss for the period under review amounts to £51,593, as compared with £95,977 in the previous year.

The improvement, therefore, over last year's results, has been secured in the face of conditions of extreme difficulty, and there is no doubt whatever that the wide-reaching economies and reorganisation which have been put into effect, have very materially contributed to keeping the loss down to the figures mentioned. It also must be borne in mind that the company has by no means reaped the full benefit during the period under review of many of these economies.

PROFIT AND LOSS ACCOUNT.

With reference to the profit and loss account, I do not propose to enter into a comparison with the previous year, inasmuch as a different system of allocating and analysing our expenditure has now been adopted, and, for the sake of economy in internal work, we have completely merged the detailed trading accounts resulting from the management of the Palmer Tyre, Limited, with our own figures, instead of bringing merely the final result of that subsidiary into account, as was formerly the practice.

Dealing with the loss for the year, I wish to emphasise that this has been arrived at after charging depreciation of fixed assets, amounting to £49,926, and depreciation of stock amounting to approximately £33,000, but it also includes a credit of £8,602, being excessive provision for income tax which is no longer required. As a matter of interest, I might mention here that approximately £48,000 was spent out of revenue for maintaining our plant, buildings and equipment in an efficient condition.

In spite of the fact that Silvertown's turnover in money decreased by about 10 per cent. compared with the previous thirteen months 1929-30, yet I am pleased to say that the trading result shows a very substantial improvement. This has been made possible by the extensive reduction in overhead expenditure which has been effected by the reorganisation and consequent economies.

With regard to wages, I would like to repeat the statement made last year, that it is not the board's policy to reduce these. Our experience during the period under review has fully justified this policy.

I must now refer to the reconstruction that has been taking place at Silvertown, owing to the decision to close our Burton factory and transfer to Silvertown all Burton's manufacturing plant. When I tell you that the plans for this work were commenced at the end of June, and at the present date all the production plant from Burton is installed and is mostly in operation, you will appreciate that the task has been carried out in a way which reflects the greatest credit upon all the officials concerned.

POPULARITY OF PALMER PRODUCTS.

We are satisfied that in our Palmer motor tyre we now have a product which fully meets the requirements of the public, and which gives better service in relation to price than any other tyre on the market. Our sales of these tyres show a substantial increase over the preceding year.

In the new range of motor cycle and cycle tyres which we have just introduced we are satisfied that we have products which have never been surpassed in appearance and serviceability. We are confident of securing a marked increase in their sales.

Our improved "Silver King" and "Lynx" golf balls are becoming increasingly popular, and the new "Long Range Plus Silver King" for the low handicap golfer has been very well received.

The reorganisation of all sections of the company's business has continued throughout the period under review, and is, in fact, still continuing.

As to the future, this largely depends upon the development of industrial and commercial conditions. I would emphasise that definite trade revival necessitates improvement in world conditions and the stimulation of international trade. There are very few signs of this at present.

I can, however, say with the utmost confidence that, as a consequence of reorganisation, the company is now in a better position than it has been for many years past to take full advantage of every opportunity that the business revival may offer.

The report and accounts were adopted.

BANK OF LONDON AND SOUTH AMERICA, LIMITED

DIFFICULTIES OF PAST YEAR.

MR BEAUMONT PEASE ON CONDITIONS IN SOUTH AMERICA.

The sixty-ninth ordinary general meeting of the Bank of London and South America, Limited, was held, on the 15th instant, at the head office of the Bank, 6, 7, and 8, Tokenhouse Yard, London.

Mr J. W. Beaumont Pease (the chairman) presided, and in the course of his speech, said: Before analysing the accounts, I must impress upon you that the world-wide financial and trade depression has been very acutely felt in the countries in which we operate. The difficulties cannot be lightly dismissed, and the end of them is not yet in sight. The hopes of better conditions in South America which were entertained at the beginning of the year were unfulfilled, as the benefits of large harvests were minimised by abnormally low and unremunerative prices, and commercial failures have this year taken place on a scale without precedent. Political unrest in some parts of that Continent has had an unsettling effect in others, and financial troubles have harassed the Governments who have honourably striven to meet their commitments, and protect the credit that is essential to their progress. In spite of the trade restrictions which they were compelled to impose, and other expedients to which they had recourse, their efforts, in some cases, have not obviated default in the service of their foreign debts. But let me add that although things have been so bad they might have been worse. Little imagination is required to envisage the distress which would have prevailed had the harvests been meagre, had the political turmoils not been strongly handled, and had the countries allowed their finances to drift.

TRADE BALANCE DIFFICULTIES.

One of the main factors in the financial difficulties of the South American Republics, and one that is common to all, is the trade balance, which, where not actually adverse, has not reached the figure necessary to provide a sufficient margin for the service of the foreign loans and other invisible imports. The diminished trade balances have brought in their train a fall in exchange rates, only partially checked by the outflow of available gold, and accentuated by the inability to obtain fresh credits from former money-lending centres. Eventually each nation, for the protection of its currency, was forced to adopt a system of exchange control which, with slight local differences in working, consists of a species of exchange clearing, where drawings on the exterior can be effected only against available supplies of foreign currencies.

Unbalanced Budgets were a corollary of diminished income and the greater cost of remittances for debt service at a lower exchange. Increased tariffs have been imposed with the object, on the one hand, of restricting imports to improve the trade balance, and on the other hand to provide revenue for Budget-balancing purposes. Without going into the debatable question as to whether this expedient can perform the double rôle for an indefinite period, the effect from the South American importer's point of view has been discouraging, and a limitation of commerce has ensued: and this limited movement is further hampered by the frequent inability of a merchant to pay his matured bills for lack of available exchange.

The foregoing brief outline of the influences which have been general in those countries where we are interested will, I hope, have conveyed some idea of the impediments which trade, and its ally banking, have encountered during the past year.

BOARD'S FINANCIAL POLICY.

In view of the foregoing, and of the prevailing situation, your board felt that the time had arrived when it was desirable to strengthen the inner reserve of your bank, which has been done by a transfer of £1,500,000 from published reserve, leaving the latter at £1,500,000. This enabled us to provide for depreciation on capital employed abroad, all bad and doubtful debts, and leave a substantially increased balance in contingency reserve for eventualities should they arise. Since the books were closed on September 30th, there has been a considerable recovery in South American exchanges in terms of sterling, with the result that there has been a material improvement in the value of our capital employed abroad which, for the moment, is in excess of our book value. Nevertheless, the course of those exchanges is still undefined, and it will be a matter of satisfaction to you that additional provision has thus been created in the bank's inner reserve to meet an unfavourable reaction in rates, should it recur. Moreover, it would be unwise at this juncture to conclude that, in the process of world-wide readjustment of values, further embarrassment may not be caused to traders, and immunity from bad and doubtful debts cannot be taken for granted. Your published reserve was built up as a fortification against such times as the present, and I am sure you will approve of the board's action. You

will readily understand that at a time of universal difficulty it is more than ever necessary for your bank, true to its tradition of primarily safeguarding the interests of its depositors, to keep a strong financial position, and so it is that our cash in hand and at bankers at £10,575,000 is higher by £1,870,000 than last year's figure, and is equivalent to nearly 31 per cent. of current and deposit accounts, etc., which stand at £34,312,000, as against £39,363,000 last year. Had the rates of exchange of the previous year been applicable, cash would have shown as £12,800,000, while the actual deposits of the public, which are included in the item current and deposit accounts, would have stood at £1,578,000 higher than last year, or, say, £35,683,000, as compared with £34,105,000. These figures will convince you not only of our strength, but of the confidence of depositors in the bank.

This year, as already stated, we have dealt with our bad and doubtful debts through contingency reserve, which leaves the gross profit at £1,455,000, a reduction of £299,000 as compared with last year's figure of £1,754,000, which latter, however, was arrived at after providing for normal bad and doubtful debts. Charges at head office and branches, amounting to £1,105,000, are less by £241,000. Lower exchange rates have been principally responsible for the reductions in both gross profit and charges. The former, however, has fallen in a greater proportion than the latter, but effective measures are being taken to meet the harder conditions of profit-making, and an appreciable reduction in charges will be reflected in the current year's working.

PROFIT AND ALLOCATIONS.

Adding to the profit for the year, viz., £331,897 15s. the sum of £181,444 17s. 8d. brought forward from last year, we arrive at a total of £513,342 12s. 8d. An interim dividend of 3 per cent. was paid to you in June last, and the directors now recommend a final distribution of a further 2 per cent., making 5 per cent., less income tax, in all, which absorbs £177,000. It is further proposed to allocate to contingency account the sum of £150,000, and this will leave £186,342 12s. 8d. to be carried forward in profit and loss account.

I do not pretend that these results can be other than disappointing to shareholders if looked at from the point of view of the dividend alone, but I am asking you to take a much wider view than this of the responsibilities of bankers. They have a threefold public to whom they are responsible: firstly, their depositors; secondly, the trading and commercial public; and, thirdly, the shareholders. In so far as they fulfil their duty to the first two categories so also will they be working in the interests of the last. In these times of uncertainty we have thought it desirable to maintain a position of cash liquidity surpassed, I imagine, by few, if any, banks. But, obviously, to hold nearly a third of our total commitments to the public in actual cash is not a profitable procedure, and this is one of the principal causes of our reduced profits. We feel confident, however, that our shareholders will applaud our action, and realise that a very conservative policy in these days must be to their ultimate advantage.

CONDITIONS IN ARGENTINA.

The beginning of the year saw Argentina with a new and strong provisional Government, a firm resolve to set her financial affairs in order, and a harvest of abundant promise which was later amply fulfilled. It was recognised that the country had many difficulties to overcome, but that if rapid reorganisation were possible her vigour and wealth would certainly achieve it. Circumstances beyond her control have, however, checked her speed, but that it has been possible, in a period of universal dejection, not only to pay the interest on her external indebtedness but to reduce it by 212 million paper pesos, upholds what I stated last year as regards her affairs.

The trade balance in favour of Argentina for the ten months ended October 31st last was 76,954,000 gold dollars, but this figure does not include the value of the invisible imports—viz., debt service, freights, interest on foreign capital and the like, an amount which it is difficult to calculate exactly, but which is estimated by some to be in the neighbourhood of £30,000,000 per annum.

The abandonment of the gold standard by Great Britain has brought forward prominently the possibility of obtaining supplies from the United Kingdom of goods hitherto furnished by our competitors. This aspect of affairs will appeal to British manufacturers, who are able also to profit from the efforts made by His Royal Highness the Prince of Wales to promote an increase in our export trade to Argentina.

BRAZIL AND OTHER COUNTRIES.

During the past year many aspects of Brazil's foreign trade have given cause for satisfaction. The volume of merchandise exported,

CAMP BIRD, LIMITED.

YEAR'S RESULTS—LAKE GEORGE MINE.

The thirtieth ordinary general meeting of Camp Bird, Limited, was held, on the 11th instant, at River Plate House, Finsbury Circus, London, Mr F. W. Baker, the chairman, presiding.

The Secretary (Mr E. C. Leaman, F.C.I.S.), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that interest and dividends on investments were very much down this year, and profit on realisation of investments also showed a very large decrease. The heavy reductions in the company's income from these two items, coupled with the fact that there was no balance of profit from the Camp Bird Mine this year, as against £7,000 last year, practically halved the company's income for the year under review. Practically the whole of the balance of £67,161 remaining was absorbed in paying the preference dividend for the half-year ended December 31, 1930, interest on the seven per cent. debentures of the company, income tax, and the writing off the balance of capital reorganisation expenses. These expenses have now been finally liquidated. There remained a balance of £18,908 on the debit side of this year's profit and loss account which had been deducted from the amount of £73,286 brought forward from the previous year, leaving a balance of £54,377 which the board proposed to carry forward to next year.

PROBLEM OF OUTPUT.

The Chairman, having detailed their various interests, continued: As to the future, there seems some hope that the New Year may see some enhancement in the commodity prices in which we are interested, by reason of the arrangements and understandings which have been arrived at by the big world producers to curtail production. Negotiations were started in the States dealing with copper, and now I gather are being continued on this side, to bring about a serious reduction in output in the leading copper mines of the world. Cartel arrangements have been definitely effected for the curtailment of zinc and lead production, and the automatic reduction in output in these three commodities must affect the world's production of silver, as silver in a number of world mines is secured as a by-product in the mining of copper, zinc, and lead.

I will now turn to the several properties in which we are interested. As you know, the Camp Bird Mine has been worked by tributors. Last year's result gave us a profit of over £7,000 after meeting all expenses at the property. This year's result was only £3,460, which is absorbed in the maintenance of the mine and tunnel plant, and payment of taxes, insurance and general expenses, leaving a small debit balance of £175.

LAKE GEORGE MINE.

Referring to Lake George Metal Corporation. With the completion of the development work mentioned in last year's report, the Lake George Mine was completely closed down during the year as the tonnage of ore reserves was sufficiently large to cover many years' operations. The work done prior to the suspension of operations effectively solved the metallurgical difficulties and made the ore reserve position secure. Plans have been prepared for a plant to treat 1,000 tons per day, and an enabling Bill for the construction of a railway to the property has been passed by the New South Wales Government.

The company's advisers are actively engaged in developing a process for the recovery of sulphur from Lake George ores, which, if successful, will materially affect the type of plant to be erected.

The Lake George ore contains about 40 per cent. pyrites, the pyrites yielding 50 per cent. sulphur. The possible solution of a process to treat and recover the sulphur contained in the pyritic ore would result in our being able to furnish Australia with a very substantial part of its supply of sulphur, nearly all of which is now imported into Australia from abroad at an annual cost to Australia of over £500,000.

The sulphur supply for Australia is a very material question to that country, for it is used in the manufacture of superphosphates which Australia as an agricultural country needs, and statistics show consumption to be on a steadily increasing yearly basis. Furthermore, it may interest you to know that sulphur produced in New South Wales is subject to a substantial bounty from its Government, that Government being keenly interested in the development of its own sulphur supplies.

I feel justified in saying that with a higher range of metal prices for zinc and lead, and a successful outcome of this sulphur recovery process, we shall have in the Lake George Mine, when equipped and in operation, an interest which should furnish us with very large revenue for many years to come.

The report and accounts were adopted.

although some 80,000 tons below last year's movement, was considerably in excess of previous years; the sterling value of exports was less than in recent years, but on the other hand, the volume of imports this year has shown a remarkable diminution of 1,200,000 tons. By the end of October the surplus value of exports over imports was £16,891,000, the highest on record for many years past, and indicates the possibility of a net surplus for the year of approximately £20,000,000.

A favourable augury is the probability of a period of political stability in Chile. In October, Don Juan Esteban Montero, who represents the more conservative element of the country, was elected to the Presidency by a vote that was nearly double that of his nearest rival. He assumed office on the 5th instant, and will have the country behind him in his endeavours to solve its many problems.

The financial difficulties which I have had occasion to mention on previous occasions as weighing on Colombia have persisted during the past year.

Paraguay, although not wholly immune from the universal troubles, has been less affected than many other of the South American Republics. The demand for her products by her big neighbours is constant, and while here, as elsewhere, values have fallen, good crops have been obtained.

From the short review that I have given you of the countries with which we are concerned, you will, I think, appreciate the very stormy waters in which we have been navigating for some time past, particularly during the last year. That our ship has come through the economic blast and is safe and sound must be a satisfaction to you all. The storm may have lost some of its intensity, but it would be foolish to think or say that South American waters are smooth once more. This may happen in one, two or even more years: the date is beyond my powers of prediction. Meanwhile, we shall carry on as we have done during the last sixty-nine years. The earning of profits may be difficult, and in some places may even be impossible for a time, but safety and liquidity are the order of our day, and this to our shareholders and to our depositors is the fundamental consideration.

Mr Richard Foster (deputy-chairman) seconded the resolution, which was carried unanimously. The retiring directors were re-elected, the auditors reappointed, and cordial votes of thanks to the chairman, managers and staff both in London and abroad terminated the proceedings.

THE NATIONAL BANK OF SCOTLAND, LIMITED.

The 106th annual general meeting of the proprietors of the National Bank of Scotland, Ltd., was held in the bank's head office, Edinburgh, on the 17th instant, the Most Honourable the Marquess of Zetland, P.C., G.C.S.I., G.C.I.E., the Governor of the Bank, presiding.

The Lord Marquess, in moving the adoption of the report and accounts, having dealt with the economic conditions, said:—It is a matter for congratulation that in a period marked by unusually difficult conditions the results shown are reasonably satisfactory. It will be noted that of the balance at profit and loss account available for distribution, namely £344,727, the amount proposed to be dispensed in dividend, namely £132,000, is a small proportion, considerably less than one-half, indeed, it is only 38 per cent. of the total. Of the balance a sum of £100,000 has been allocated to contingent fund, £20,000 to heritable property account, £20,000 to staff pension fund, and the remainder £72,727 falls to be carried forward. All bad and doubtful debts have been duly provided for. While the deposits show a substantial reduction from the high level of the previous year, this is accounted for, not by the contraction of the ordinary business of the bank, which has been well maintained despite adverse conditions, but by the withdrawals during the autumn of substantial amounts of foreign money repatriated by holders abroad for their own needs. Deposit accounts continue to be more and more taken advantage of, and now constitute an important part of the Bank's business, giving scope also for still further development and extension. The reserve fund stands at £1,550,000, being £450,000 in excess of the paid up capital of the bank, while a sum of £72,000 is carried forward to next year's accounts.

On the assets side, the immediately liquid resources stand at a relatively high level, not taking into account a considerable holding of Treasury bills, while the bank's investments in British Government securities appear in the balance sheet at £11,173,000. These figures are lower than the market value at October 31st. It will be seen from the balance sheet and from the figures I have quoted, that the extent and liquidity of the bank's resources place it in a favourable position to meet, on the revival of business, the requirements of trade and industry which are meantime receiving the generous support of the bank.

The resolution was carried unanimously.

SANTA GERTRUDIS COMPANY, LIMITED.**MR. F. W. BAKER ON THE SILVER POSITION.**

The twenty-third ordinary general meeting of the Santa Gertrudis Company, Limited, was held, on the 11th instant, at River Plate House, Finsbury Circus, London, Mr F. W. Baker, the chairman, presiding.

The Chairman, in moving the adoption of the report and statement of accounts, said that the profit for the year amounted to £205,091, as against £317,522 last year, and after providing for reserve for income tax and a small item of £562 for a bad debt there was carried to the balance sheet £171,461, being the net profit for the year. By adding the balance of £39,063 brought forward from the previous accounts they arrived at a total of £210,524, out of which dividends amounting to 2s. 3d. per share, which absorbed £174,757, were paid, leaving a balance of £35,767 to be carried forward to next year. Having regard to the extremely low average price of silver ruling during the past year the profits made by the company and the dividends paid in respect of that year must be considered satisfactory.

Since the end of the company's financial year the price of silver had shown some violent fluctuations. It should be remembered that spasmodic high prices with a persistent low level could not materially affect the company's income. The sterling prices of silver were now, of course, considerably higher than they were in September last by reason of the depreciated value of the pound in terms of gold. Consequently the company stood to make a profit on exchange as regarded the actual remittance of funds to this country.

SILVER MARKET AND DIVIDEND PROSPECTS.

The prospect of a continuance of dividend payments entirely depended on the trend of the silver market. If, instead of having a widely fluctuating price, there was a steady silver market around the present level he saw no reason why they should not be in a position to continue dividend distributions half-yearly, but the basis obviously would be dependent on the tonnage treated and the trend of silver prices. The monthly profits since the commencement of the present financial year had, on the average, been lower than the average monthly profits of last year, and the average silver prices had also been lower in terms of gold. Consequently a policy of caution was indicated in the payment of dividends and the directors were of opinion that this would be followed by declaring an interim dividend of 6d. per share, less income tax, payable on January 21st next, which had been done and was announced in the Press. If they maintained the present range of prices he was hopeful that they might be able to pay an increased dividend in June.

Referring at length to some of the salient features of the year's operations, the chairman said, in the course of his remarks, that the company retained a very substantial interest in the Mexican Corporation which, through its Mexican Company, held a 50 per cent. interest in both the Fresnillo and the Teixitlan mines. Developments at the Fresnillo mine during the year had shown exceedingly good results. There had been a diminution in the reserves of oxide ore and a large increase in the reserves of sulphide ore. These excellent results had put the ore reserves in a strong position, so that the development programme, which was reduced to some extent during the period under review, would be further curtailed during the current year, with a resulting reduction in working expenses.

Unfortunately, neither the excellent ore disclosures made nor the successful efforts of the local management to reduce costs had been or could be productive of profitable results in the face of prevailing conditions of world trade, which had caused metal prices to descend to record low levels, and, in addition, had lessened the demand for concentrates, resulting in limitation of output and the accumulation of stocks.

APPRECIABLE INCREASE IN METAL PRICES.

As to the future prices for metals, which had so important a bearing on the company's earning power from the various properties in which they were interested, there had within the last two months been an appreciable increase in the price of silver, zinc and lead.

At the meeting last year he told the shareholders that reserves had been created over past years to meet a position which the directors had realised would have to be faced—namely, the possible exhaustion of the company's existing mines, and he stated that the directors, after consultation with some of the large shareholders, had before them a policy of meeting any diminution in Santa Gertrudis earnings by the investment of such an amount as might be necessary of these reserves in the acquisition of some other mining property that would enable the company to continue as a dividend-earning organisation. He reported to them that it was for this purpose that they had acquired an interest in the Lake George Mine. They were now on the eve of closing a negotiation for a lease of a zinc-lead-silver mine at Zacatecas, one of the oldest silver camps in Mexico.

Mr J. A. Agnew seconded the resolution, which was unanimously adopted.

AGAR, CROSS AND COMPANY, LIMITED.**YEAR OF ABNORMAL CONDITIONS.**

The twenty-fifth ordinary general meeting of Agar, Cross and Company, Limited, was held, on the 11th instant, at Dorland House, Regent Street, London, S.W.1.

Mr Thomas F. Agar (the chairman), who presided, said: All over the world trading conditions during the year under review were entirely abnormal, the prices of commodities having actually in many cases fallen below the cost of production.

The Argentine Republic has come through a particularly trying time, but the careful way in which the Argentine Provisional Government has been handling the financial position shows that everything possible is being done by the Government to foster the well-being of the country.

The Argentine, as you are all aware, is largely dependent on its exports of cereals and meat, and, if only the improvement in the prices of cereals which took place some weeks ago could be maintained, there should be a quick and rapid improvement in business conditions ruling there. This price for cereals is, to my mind, the most important matter which could affect the position, as a good harvest with improved prices would obviously affect the value of the Argentine peso as compared with foreign currencies, and for companies such as ours the welfare of the farmer and the rate of exchange at which we can make our remittances to the United States of America and Great Britain, with which to pay for the goods we export to the Argentine, are the all-important factors to an improvement in the welfare of our company.

The latest reports of the wheat and linseed crops are good, and camp conditions are excellent. With regard to maize we understand there is a talk of a record acreage in Argentina this coming season.

Continuing, he said: Turning now more particularly to the position of our own company, when we issued our report last year, namely, in November, 1930, we had no anticipation of the conditions which subsequently supervened. In the preceding year the country had passed through a very bad crop year, which had had a serious effect on the demand for all requirements, particularly those which our company supplies; but, on the other hand, the crop prospects were then splendid, and it was then hoped that with such crop prospects realised, the demand would be greatly stimulated and that the country would quickly recover.

Prices of cereals had been falling, but at the beginning of November, 1930, wheat was still at over \$7 c/l per 100 kilos, and, even up to the middle of December it had not fallen below \$6. Later on, the price fell to \$4.70, and no one could possibly have imagined that such could happen.

EXCHANGE.

Again, there was exchange. Until the middle of December, 1930, exchange had ranged round about 38½d. on London and 128 on New York. In January it went down to 32½d. on London and 140 on New York, and since then, as is well known, it has fluctuated wildly, and has been as low as 29d. on London and 183 on New York. Such extreme falls in exchange, of course, were quite impossible to recover in sale prices.

Our expectations a year ago for the sales of harvester thrashers and tractors were quite good. These expectations, unfortunately, were entirely falsified, and this radical change in the position in this one line gives you an indication of what generally happened to our sales through the catastrophic fall in the grain and linseed prices.

Briefly put, I would summarise the main causes which adversely affected the company's results for the last year as (1) The extraordinarily low level to which the prices of cereals fell; (2) depreciated exchange; (3) abnormal bad debts; (4) abnormal trade interest charges.

The chairman then referred to the prospects for the current year as being still unfavourable, although there were signs of improvement to some extent in cereal prices and notably in the exchanges.

Mr Henry S. F. Alexander then dealt with the balance sheet and accounts, comparing the figures with those of the previous year and in particular referring to any notable changes. He commented on the reduction in stock and the reduction in the amount due to sundry creditors, and explained that before arriving at the profits the company had made their usual very ample allowance for depreciation, not only on buildings, but on their plant, machinery, motor vehicles, &c.

The Chairman then moved the formal resolution regarding the accounts, and in doing so said that he would like to tell the shareholders that some months ago the directors had appointed Mr Henry S. F. Alexander to be one of the joint managing directors of the company.

The report and accounts were unanimously adopted.

RICHARD THOMAS AND COMPANY, LIMITED.**THE DUMPING OF FOREIGN STEEL.**

The eighty-second ordinary general meeting of Richard Thomas and Company, Limited, was held, on the 17th instant, at River Plate House, London, E.C.

Mr W. J. Firth (chairman and managing director) said that the total gross profit for the year was £180,017, less £33,316 provision for trading losses in excess of undistributed profits of subsidiaries. The financial year under review had opened not unfavourably, but, as the months passed, conditions had become steadily worse. Their difficulties had been greatly aggravated by the importation by their competitors of Continental steel at a price 20s. to 25s. per ton below cost of manufacture in this country and, he believed, on the Continent. Supported by that low raw-material cost, competitors had been able to quote 5s. to 10s. per ton below this company's production cost and still secure for themselves a very handsome margin of profit.

Their company was responsible, as manufacturers and exporters, for over 40 per cent. of the total British exports of tinplates, and a not unimportant percentage of the total exports of galvanised sheets, until they were forced some fifteen months ago to close down their Redbourn works and curtail their production of steel in Wales and, in self defence, to import Continental steel for a portion of their steel requirements. The lower prices had not brought increased trade to this country, or increased trade to the company. The demand had been governed, as it always would be, by world conditions, and the world during the past eighteen months had been consuming substantially less tinplates and galvanised sheets than normally.

NEED OF PROTECTION.

The present poor demand was due to nothing more or less than lack of confidence in future values, and that briefly was the malady from which the whole business world to-day suffered. It could not be cured by any one country, but it was in the power of the Government of every country to make a maximum effort to put the affairs of their own country in order, and it obviously lay within the power of our Government to create confidence in the steel trade by giving ample protection against the poisonous effect the importation of these "dumped" bars had on the power of the steel trade to find increased employment for the workpeople.

For many months the whole sheet and tinplate trade of the country had been working 40 per cent. to 50 per cent. below production capacity, and the steel trade, on which the sheet and tinplate trade depended, had suffered a still greater percentage of idleness.

Since the end of their financial year they had somewhat increased their production activities at the finished end, aiming at finding work for as many of their workpeople as was practicable without increasing their losses, but trading conditions to-day were worse than they had been in September last, and their order book showed them little or no profit, so that, unless conditions substantially improved during the second half of the year, they would again have to present disappointing results. He took the view, however, that the tide was about to turn and was hopeful that when they met again in July he would be able to report an improved outlook, but only provided that the steel trade had meanwhile been given some measure of protection.

Protection for their steel industry would not, of course, wholly solve the world depression. Before that was completely solved four first-class problems must be disposed of—the reparation, the Indian question, the re-valuation of silver, and a absurdity, the world recognition that prohibitive tariff walls caused a contraction world recognition that prohibitive tariff walls caused a contraction and not an expansion of world business. He took the view that national aspirations could be carried too far and that tariffs would one day have to be replaced by international agreements. Meanwhile, arguments between nations must be carried on tariff to tariff.

They had no ground for apprehension in regard to pressure from their bankers, who held securities against the loans amounting to £1,238,893, and also a mortgage on the New Sharlston Collieries. But for the invaluable support which their bankers had given them throughout the most critical period in their history, it would have been impossible, unless new capital had been provided, for the company to carry on. English banks, like English justice, stood high—examples to the whole world of British integrity and reliability.

With regard to reconstruction, while it was intended to place a scheme before the shareholders at the earliest possible moment, the board felt that the world-wide apprehension of what would happen in February or June if France persisted in her present attitude made it premature for the board to indicate a reconstruction date now.

The report and accounts were unanimously adopted.

SHOWELL'S BREWERY COMPANY, LIMITED.**MR JAMES DAVENPORT ON SOUND FINANCIAL POSITION.**

The annual meeting of Showell's Brewery Company was held at Winchester House, Old Broad Street, on the 16th instant. Mr James Davenport, chairman, presided.

Mr James Davenport, in moving the adoption of the report and accounts, said the directors were proud of the balance sheet. The position it disclosed had not been attained in a night, but it had come from the persistent following, through all the years the present board had been in charge, of a policy of conservative and prudent finance. He had told them at their annual meetings that stored away in the balance sheet were substantial inner reserves, apart from the open reserve, which with the allocation they asked them to approve had been brought up to the round figure of £103,000. This year they had transferred from the sundry creditors and contingencies fund £87,645, being inner reserves which had accumulated in the seventeen years their present board had been in control. He summed up the balance sheet as one of great strength and one which in these dark and troubled days it was a comfort to look at.

The profit and loss account showed, after providing for debenture interest requiring £10,300, a net profit of just under £36,000, against £39,000 twelve months ago. It permitted them to pay the same dividend of 2½ per cent. on the ordinary shares, to carry to reserve account £5,000 as before, and to carry forward just under £16,000. They would agree that these were gratifying results in these difficult and trying times.

A word as to the future. Their barrelage during the year had of course declined; it could not be otherwise with the abnormal unemployment and depression. It had declined farther since the additional duty imposed in September last. Conditions had proved that the limits of taxation on beer—now nearly fifteen times what it was pre-war, had been overstepped, and damage was being done not only to the brewing industry itself but to many associated industries, with no benefit whatever to the Exchequer. The total amount they had paid on last year's trading for beer duty, income tax, licences and other direct payments to the Exchequer amounted to over £263,000. The profit available for the shareholders of the Company was £36,000. The country was being strangled with taxation.

The reports and accounts were unanimously adopted.

HALL'S OXFORD BREWERY, LIMITED.**EXCESSIVE BEER DUTY CAUSING DISCONTENT.**

The annual meeting of Hall's Oxford Brewery, Limited, was held, on the 16th instant, at Winchester House, Old Broad Street, London, Sir Rhys Williams, Bart. (chairman of the company), presiding.

The Chairman said:—This is the thirty-fifth annual meeting of Hall's Oxford Brewery Company. I regret to say that the profits for the year ended September 30th last are less than for the previous years, but considering the depression in all trades in this country a decrease of £2,000 is not a very serious matter and less than might have been anticipated. The company has continued its policy of expending substantial sums on the improvement of its licensed houses, and there is little doubt that the added comfort and smart appearance of our licensed premises have done a great deal towards retaining our trade. The company has also spent considerable sums on plant of the most modern type in our bottling department, and our output of bottled beer continues to improve. Our trade for the past year considering the conditions has not been unsatisfactory, but the future is uncertain.

The imposition of an extra duty of 31s. per standard barrel has come at a most unfortunate time, and its results are far-reaching. Wages are down and working men cannot afford to pay, and refuse to pay, the higher price for beer. The resentment is growing apace. As the majority of working men are beer drinkers it is a very serious matter for any Government to cause such universal discontent. For the months of October and November the output throughout the country shows a decrease equal to 20 to 30 per cent. This tax will cause decreases in the staffs of brewery companies, disastrous loss of profits to licence holders, loss of trade to growers of barley and hops, to maltsters, transport workers and all the trades dependent on the brewing industry, with a consequent increase of unemployment. I trust that the repeal of this duty will be one of the first acts of the Government when Parliament meets again.

He moved that the directors' statement and accounts for the year ended September 30th be adopted and that a dividend of 12 per cent. be paid, making with the interim dividend already paid 22 per cent. for the year, free of income tax.

Mr J. J. Calder seconded, and it was carried. A vote of thanks to the chairman, directors and staff terminated the proceedings.

SAMUEL ALLSOPP AND SONS, LIMITED.

EFFECT OF INCREASED BEER DUTY.

The forty-third annual general meeting of Samuel Allsopp and Sons, Limited, was held, on the 16th instant, at Winchester House, London, Sir William B. Peat, C.V.O. (the chairman), presiding.

The Secretary (Mr T. H. Collinson) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the profits for the year, after deduction of interest, sinking fund, repairs, depreciation, etc., amounted to £174,111, as compared with £145,323 in the preceding year. The directors proposed to transfer £25,000 to reserve, thereby increasing the published reserve to £285,000, to pay a dividend of 9 per cent. on the ordinary shares, as against 8½ per cent. last year, and to carry forward £72,187, an increase of £12,397 over the amount brought in. The profit on trading was practically the same as in the previous year, while interest and dividends had increased by £20,283. With regard to the trade as a whole, he would point out that the barrellage upon which duty was charged had gone down in 1931, by comparison with 1914, by about 50 per cent. The reason for that was undoubtedly the heavy taxation which had been imposed in the form of beer duty. The net amount of duty received by the Government in 1931 was close on £70,000,000. No chairman of any considerable brewery enterprise had failed to call the attention of the shareholders to the unfortunate conditions of their trade, and he was compelled to endorse the views generally expressed on this subject. The crisis in the beer trade arose when the new duty of 31s. per standard barrel, which equalled more than 1d. per pint, was put on in September last, and some of the brewers passed on that extra duty to their customers or, alternatively, sold a beer of less gravity. Whichever course was adopted aroused the hostility of their licensed holders and their customers and further diminished the output of the brewing trade by anything between 20 per cent. and 30 per cent. The ultimate result to the industry remained to be seen. The present general outcry was raised, not only against the additional tax of 1d. per pint, but against the enormous increase in the duty from 7s. 9d. per barrel at the beginning of the war to £5 14s. at the present time. Those who were paying that duty considered themselves entitled to raise a serious objection and ask redress at the hands of the Government.

The resolution was unanimously adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended December 12, 1931, amounted to £8,470,000 against ordinary expenditure of £16,285,900. After allocating £190,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £139,852, the operations for the week, as shown below, increased the National Debt by £8,146,000 to £7,788,426,000:—

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

1931.	ARRIVALS.	£	1931.	WITHDRAWALS.	£
Dec. 11			Dec. 11		
12			12		
13			13		
14			14		
15			15		
16			16		
17			17		

Messrs Samuel Montagu and Company write on December 16, 1931, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £120,712,162 on the 9th instant, as compared with £120,711,125 on the previous Wednesday. About £1,800,000 in bar gold arrived from India by the s.s. "Nahdera" on Friday last, but the bulk of this amount had been sold forward and only a small balance was available for disposal in the open market, together with small supplies from outside sources. There is no diminution in the gold shipments from India and a large amount has been engaged for the s.s. "Strathnaver," sailing from Bombay this week. On the 25th instant the s.s. "Mooltan" is due to arrive in London from Bombay with £1,800,000 bar gold, and on January 1, 1932, the s.s. "Viceroy of India" with £3,300,000.

Average		

SILVER.

Prices have continued to fluctuate under the influence of sterling exchange and of speculative operations, but business has again been on rather a small scale. America has sent fairly prominent buying orders for forward delivery but has been inclined to offer spot, and yesterday the premium on forward delivery widened to 1d. To-day, however, the premium on forward delivery widened to 1d. Continent have both bought and sold moderately, but operators in general are still showing hesitation. Advice from the Far East reflect only in comparatively small degree recent developments in China and Japan, and the ultimate effect, if any, upon the price of silver, of the Japanese Decree of the 13th instant placing an embargo upon the export of gold, is awaited with interest. The following were the United Kingdom imports and exports of silver registered from mid-day on the 7th instant to mid-day on the 14th instant:—

	£	₹
Imports.		
United States	143,286	
Egypt	28,130	
Other countries	17,094	
	188,510	
Exports.

NOTICE.

The directors of the Anglo-South American Bank, Ltd., announce that Mr. R. J. Hose has been obliged through ill health to retire from the position of chairman of the board of directors, and that, after consultation with the Governor of the Bank of England, they have elected Sir Bertram Hornsby, C.B.E., to be a director, and have appointed him to be chairman of the board.

REPORTS AND NOTICES.

MISCELLANEOUS.

ABBEY ROAD BUILDING SOCIETY.—The management of the Abbey Road Building Society announces that no reduction of the rate paid to shareholders or depositors is contemplated in 1932. Dividends and interest at the rates already announced for the current half-year will be posted to all concerned on the 31st instant.

HYDRO-ELECTRIC CAPITAL SCHEME.—The Hydro-Electric Securities Corporation proposes to reduce the preferred capital from £20,000,000 to £10,062,000, and to reduce the capital, represented by common stock, from £34,190,860 to £7,381,965. In regard to the preferred capital, the board has received an offer from the International Holding and Investment Company, Ltd., and the Société Anonyme de Placement whereby these companies surrender for cancellation 993,800 \$10 preferred shares, and in consideration of this, are relieved of their liability to subscribe the \$20 uncalled of the subscription price of, respectively, 465,000 and 31,900 common shares, of which \$5 per share has been paid by them. Having regard to the shrinkage in the market value of assets, the directors will not declare any common dividend in respect of the final quarter of 1931, although the estimated ordinary income for this period would have permitted of a distribution of 25 cents a share for the quarter. The necessary meeting will be held in Montreal on January 8, 1932.

LAUTARO NITRATE.—Against a trading profit of £747,815 in 1929-30, there is a trading loss of £81,662. Adding thereto expenses, interest, depreciation, &c., the total loss is £856,511, from which is deducted £320,356 brought in, leaving a final deficit of £536,155. The net profit a year ago was £32,543. Production amounted to 367,606 metric tons, against 640,178 in the previous year. Three of the plants which were in production during the year are now closed. There is an increase in bank overdrafts by over £1,040,000, to £2,243,980.

MAGADI SODA COMPANY (REJECTION OF IMPERIAL CHEMICAL INDUSTRIES OFFER).—The offer of compromise of the rights of the debenture holders of the Magadi Soda Company made by Imperial Chemical Industries was rejected at the meeting held on December 10th. Sir Harry McGowan, who presided, said that proxies had been deposited amounting to £73,200 definitely voting against the resolution, and it was clear that it was impossible to secure the three-quarters majority necessary for carrying the resolution. A proposal for the adjournment of the meeting was also lost.

STEWARTS AND LLOYDS AND SCOTTISH TUBE. SHARE EXCHANGE OFFER.—An offer is now being made by Stewart and Lloyds for shares of the Scottish Tube Company. The terms proposed are that for each 5 per cent. cumulative preference share in the Scottish Tube there will be issued one 5 per cent. cumulative preference share in Stewart and Lloyds, Ltd., and for each six Scottish Tube £1 ordinary shares there will be issued five £1 Deferred shares of Stewart and Lloyds. The offer is conditional on its acceptance by 90 per cent. of each class of Scottish Tube shareholders. If, however, less than 90 per cent. but not less than 75 per cent. of each class accept and special resolutions are passed by the latter percentage putting the Scottish Tube Company into liquidation

and providing for the purchase by Stewart and Lloyds of the Scottish Tube Company's assets, Stewart and Lloyds will carry the matter through.

THE UNION-CASTLE MAIL STEAMSHIP COMPANY, LIMITED.—The directors have had under anxious consideration for some time past the question of the dividends on the company's 4½ per cent. "A" and 6½ per cent. cumulative preference shares, and it had been their earnest hope and desire that circumstances would have permitted payment to be made at least of the dividends that were due on July 1, 1931, even if it was found necessary to defer, for the present, the payment of those due on January 1st next. After surveying the matter from every angle, however, the board has decided, with the utmost reluctance, that it is not expedient, under existing conditions, for the Company to make a payment on account of the preference dividends. The trading results of the company for the latter half of the year have not shown the improvement that had been hoped for, as a continued world depression has tended detrimentally to affect the South African trade to a greater extent than heretofore, with consequent diminution in the volume of passenger and cargo business. The maintenance of the gold standard by South Africa has reacted adversely upon the overseas trade of the Union. The company's outstanding

RAILWAY RECEIPTS.

CARDIFF.—There has been no appreciable improvement this week in the state of business on the Cardiff coal market. With the approach of the holidays the stem sheets of the collieries are a little better than they have been recently, but there has been no pressure of prompt business, and little inquiry for contract supplies over next year. The allocation of the usual contracts of the Egyptian State Railways, the Brazilian Central Railways, and the Spanish M.Z.A. Railways, is expected shortly. Dry coals are the only grade to show any firmness, and for all other qualities quotations are on the basis of the minimum schedule. The reduction of 2s. per ton in the schedule price of banked smalls has led to a slight increase in sales, but the current supply of slack is still considerably in excess of the current effective demand. The mild weather is reacting unfavourably on the house coal market, and there has been only a very slight expansion in industrial consumption as the result of the effects of the sterling depreciation on the iron and steel trades. The following are the current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 4½d.; best drys, 18s. 6d. to 19s.; Black Veins, 18s. 3d. to 18s. 6d.; Western Valleys, 17s. 9d. to 18s.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams, 13s. 6d.; cargo smalls, 11s. 6d. to 12s. 6d.; coking smalls, 13s. 6d. to 13s. 9d.; anthracite best, large, 30s. to 38s. 6d.; Red Vein, large, 22s. 6d. to 27s. 6d.; French nuts, 40s. to 48s. 6d.; stove nuts, 39s. 6d. to 43s. 6d.; rubbly culm, 8s. 3d. to 8s. 9d.; foundry coke, 32s. 6d. to 36s.; patent fuel, 19s.; pitwood, ex ship, 24s. to 24s. 6d.

IRON AND STEEL.

MIDDLESBROUGH.—Extreme quietness prevails on the market for Cleveland iron. The approaching holidays and reduced requirements are causing deliveries of pig iron to be curtailed, as consumers do not wish to carry more stock over the end of the year than is necessary. Practically all supplies required before closing down have already been arranged. Some further purchases will be necessary for the new year, but consumers are in no hurry and seem inclined to wait as long as possible. Very little business was reported at the weekly market on Tuesday, and official prices were unchanged, viz., No. 1, 61s.; No. 3, 58s. 6d.; No. 4 foundry, 57s. 6d., and No. 4 forge, 57s. f.o.b. or f.o.t. Hematite is also a dull market. Small quantities have been sold within the last few days to complete requirements for this year, but although enquiries have been circulating for the first quarter, and even further ahead very little business has matured. Prompt lots of ordinary mixed numbers are offered at 65s. per ton, or possibly a shade less, and it would now be possible to buy at this figure for January-March. Stocks in makers' hands continue to decline, and there will be no increase in the production at present. Shipments of pig iron are only on a poor scale, the clearances to 15th inst. totalling only 5,682 tons, against 8,504 tons to same date in November. In the finished departments new business is very scarce, but structural works have a fair amount of work still to execute, and sheets are in rather better demand, 24-gauge galvanized corrugated sheets are 19 5s.; and 24-gauge black sheets 18. The British Steel Makers, at a meeting in London this week, decided to make no change in prices. The Furness Shipbuilding Company, Ltd., on the Tees, have just secured an order for an oil tank steamer of about 3,000 tons deadweight, for Canadian owners, against keen competition. The ore market remains practically idle, best rubio is nominally 16s. 6d. c.i.f. for prompt delivery, and a small boat was fixed Bilbao/Middlesbrough last week at 6s. 1½d. Coke is in quiet demand, and ordinary blast-furnace qualities are offering at 16s. 6d. delivered consuming works. The number of furnaces in operation on the North-East Coast is now 17, one recently producing basic having just gone out at Cargo Fleet Works for repairs.

SHEFFIELD.—Production of open-hearth steel increased in November, but most of the improvement has since disappeared, and the position at the moment is quiet. Several of the large works have arranged for an extended stoppage at Christmas. The experience of firms engaged in other branches of steel is similar. The spurt which occurred on the abandonment of the gold standard has nearly expended itself. The market for steel-making alloys is almost stagnant as regards forward business, very few contracts for next year's supplies having been placed. Producers on the Continent are unwilling to contract, owing to the uncertainty of the exchanges, and prefer to deal in oddment quantities. Prices of such materials are stiffening. The Board of Trade returns for November indicate that the depreciation of sterling has not benefited the export trade in steel, tools or cutlery. The figures relating to these commodities were very low. On the other hand, imports of tools and cutlery were the largest ever recorded in a month. This trade, however, has now practically ceased. Prices of Sheffield commodities continue steady, but those of foreign tools have in some cases been advanced. Unemployment is increasing.

GLASGOW.—Almost every section of the industrial world of the Clyde district is seriously concerned over the suspension of work on the Cunarder at Clydebank. In addition to the thousands of men

who have been engaged on the construction of the vessel being thrown out of employment, a number of local firms who had received orders in connection with the equipment have been asked to suspend operations meantime. Steelmakers and makers of semi-continues to find business quiet. Sheet makers are able to keep mills going at practically output capacity, and there is a steady flow of orders coming in, although prices are not attractive from the seller's point of view. Manufacturers are obtaining a good amount of work, orders coming in being described as small but fairly numerous.

ARDIFF.—Fairly steady conditions have ruled this week in the South Wales tinplate trade. The recent improvement in output has been maintained, and prices are fairly firm, round about 14s. per basis box. Foreign steel bars are still being delivered in large quantities, at between £4 2s. 6d. and £4 5s. per ton, while Welsh bars are unchanged at £5 per ton. Galvanized sheets are slightly firmer at £9 5s. per ton f.o.b.

OTHER METALS.

TIN.—In the absence of an increase in buying in the United States, the market in tin was dull this week. A slight improvement became noticeable on Wednesday owing to the steady demand of the metal in London. In New York the metal was quoted at 21.85 cents per lb. on Wednesday, against 20.55 cents per lb. a week ago, and 22.85 a month ago. Wednesday's official closing quotations in London in terms of sterling for "standard" cash, at £138 2s. 6d. to £138 5s. per ton, compares with £137 5s. to £137 7s. 6d. on the corresponding day last week. Stocks in London and Liverpool at the end of last week, at 30,798 tons, show an increase of 398 tons on the week.

COPPER.—Business in copper remained quiet, and in New York sales took place below the official quotations. On Wednesday, the markets were enlivened a little by a report that an agreement had been reached whereby the operations of the Copper Exporters, Inc., had been revised, and that domestic and export prices would in future be brought into line. On Wednesday, "Domestic" spot was quoted officially at 6.75 cents per lb. in New York, against 6.50 cents a week ago and 6.75 cents a month ago. Wednesday's official closing price for "standard cash" in London, in terms of sterling, at £37 17s. 6d. to £37 18s. 9d., compares with £38 to £38 2s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 20,586 tons, show a decrease of 345 tons, while stocks of rough copper, at 722 tons, were 50 tons smaller.

LEAD.—Little interest has been shown for lead this week, but owing to the attitude of reserve of sellers, prices remained steady. In New York the metal was quoted at 3.75 cents per lb. on Wednesday, against 3.85 cents a week ago and 4.05 cents a month ago. Wednesday's official closing quotation for "soft foreign" in London in terms of sterling, at £14 7s. 6d. to £15 2s. 6d. per ton, compares with £15 6s. 3d. to £15 7s. 6d. on the corresponding day last week.

SPELTER.—Last week's improvement in demand has not been maintained, and prices recorded a slight decline. Wednesday's quotation in New York, at 3.15 cents per lb., shows a fall of 0.025 cent per lb., as compared with that of the corresponding day last week. Wednesday's official closing quotations in London in terms of sterling for "good ordinary brands," were £14 2s. 6d. to £14 12s. 6d. per ton, against £14 3s. 9d. to £14 12s. 6d. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals the quotations for aluminium and foreign antimony, at £95 per ton and at £28 5s. to £28 10s. per ton respectively, have been maintained at last week's level. In view of the appreciation of the £ in terms of gold, nickel was reduced from £250-£255 to £245-£250 per ton. Quicksilver, on the spot, was nominal at £20-£20 10s. against £20 10s.-£21 a week ago.

TEXTILES.

THE COTTON TRADE.—Liverpool.—The imports for the week December 10th to 16th (inclusive) are 95,934 bales, of which 37,735 bales are American, 557 Argentine, 3,051 Brazilian, 5,727 Peruvian, 26,419 Egyptian, 323 African, 225 East Indian, 21,453 Russian, and 444 sundries.

Manchester.—The market has continued generally steady, but business has not flowed freely. The number of inquiries warrants the assumption that goods are wanted, but great difficulties are met with in arranging terms of contracts. It is quite evident that, owing to the unsettled world situation, buyers are afraid to commit themselves very far ahead. The outlook in India continues very uncertain and, according to Mr. Gandhi, the boycott will be intensified on his return. Fair scattered cloth sales, however, have been put through for Karachi and Madras in light whites and bids for Calcutta remain very poor. It is feared that Japan's decision to go off the gold standard will affect adversely business with the Far East, but if the boycott of Japanese goods continues there is every likelihood of Lancashire's bigger trade being maintained. During the last few days fair quantities of white shirtings have been booked for Shanghai and Hong Kong. Printing cloths have attracted a fair amount of attention for several outlets East and West. Not much has been done for Egypt and only a restricted turnover has taken place for South America and the Continent. Favourable reports on the whole continue to be received from the home trade. Prices of American and Egyptian yarns have been rather easier when tested. A limited business has been done in home counts, the sales being less than the production. A moderate turnover has been reported in export yarns for China, India and the Near East.

THE WOOL TRADE.—Bradford.—Last Thursday the final series of Colonial sales for the year came to a close. All things considered, writes our correspondent, the series has been generally good, although values for every class of the raw material declined during the latter half of the series. This is to be regretted, because a weak finish always sends back buyers to consuming centres with less confidence than if the close were strong and values firm. The less disturbing factors in the commercial world in general have no doubt operated adversely upon the course of the auctions, and the uncertainty prevailing generally about the future of business has caused buyers to lower their limits, and they were not prepared to buy as freely as they might have done. Some Continental sections have been very limited in their operations, but Germany and Belgium have taken more wool than the majority expected. Now that French manufacturers have had cut off an important market for its dress goods means that new markets must be found for the sale of her yarns and pieces. The sales finished with the bulk of the opening advances wiped out. The best showing was made by fine crossbreds and superfine quality merinos. All sections of the trade seem to be working on a 7½ to 10 per cent. decline. The difficulties in connection with the sale of the South African clip remain, though exchange rates are a little lower this week than last. There is no change in consuming centres, although tops are generally a trifle cheaper.

THE GRAIN MARKETS.

WHEAT.—The reaction in wheat values following upon the rapid advance of prices in October and early November appears to have been arrested. There has been a decided improvement in the international wheat situation during the past week. Russia is now shipping small quantities, and exports from Danubian countries also continue to decline. On the other hand, Argentina and Australia are now shipping large quantities of new wheat, though not enough to affect markets adversely. Primary receipts in North America continue on a small scale. There is, therefore, no undue pressure on the markets, and our forecast, that quotations would

not react to the low level prevailing in August and September, have proved correct. At the same time it must be remembered that France, Germany and Italy can only mill small quantities of foreign wheat, owing to restrictive measures. Native supplies will, however, probably be exhausted in spring, and the buying movement which is then to be expected should have a steadying influence on the market. Incidentally, the Dominion Bureau of Statistics (Canada) has just published a report of the value of the principal field crops during the past season. The total amount realised by farmers for wheat has been estimated at \$108,000,000 against \$174,000,000 a year ago. Mr. J. H. Thomas has announced last week that the Government is prepared to offer the Dominions a wheat quota, provided that a genuine *quid pro quo* can be obtained. Reference to this scheme, and to a statement by Mr. Bennett, Prime Minister of Canada, is made on an earlier page. On Wednesday, "December" futures were quoted at 54½ cents per bushel in Chicago, against 52½ cents on the corresponding day last week, and 63½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, Vancouver, ex ship, 33s. 6d. per 496 lbs., as compared with 34s. 9d. a week ago; No. 2 Northern Manitoba, Vancouver, ex ship, 30s. 6d. to 31s. 9d., against 31s. 6d.; No. 3 Northern Manitoba, Vancouver, ex ship, 29s. 6d. to 30s. 9d., against 30s. 6d.; Russian, on sample, 27s. 6d. to 30s., against 27s. 6d. to 30s.; Australian, ex ship, 29s. 6d. to 30s. 3d., against 29s. 9d. to 30s. 9d. a week ago.

WHEAT FLOUR.—The market in flour has been quiet, and prices in terms of gold have been slightly lower: North American shipments, at 186,000 sacks, show a decrease of 87,000 sacks as compared with the previous week. Of this total, 28,000 sacks have been consigned to Europe. Quotations in London, Wednesday: Straight run, delivered country, 26s. per sack of 280 lbs., as compared with 26s. 6d. last week; delivered London, 25s., against 25s. 6d. Manitoba patents, ex store, 26s. to 30s., against 26s. 9d. to 31s.; and Australian, ex store, 20s. 6d. to 21s. 6d., against 21s. to 22s. 6d. a week ago.

BARLEY.—Offerings of feeding barley have not been on a big scale this week. As a consequence, prices in terms of gold hardened a little. On Wednesday, "December" futures were quoted at 38½ cents per bushel in Winnipeg, against 37 cents last week and 43½ cents a month ago. Quotations in London, Wednesday: "English feeding," f.o.r., per 48 lbs., 25s. to 26s., as compared with 25s. to 26s.; Russian, landed, 22s. 6d. per 400 lbs., against 23s. a week ago.

OATS.—There has been a slight increase in the demand for oats, and prices in terms of gold subsequently recovered a little. "December" futures, which last week stood at 24½ cents per bushel in Chicago, sold at 24½ cents per bushel on Wednesday this week, against 26½ cents a month ago. Quotations in London, Wednesday: "River Plate," landed, 17s. 6d. per 320 lbs., as compared with 18s. 6d. last week; "River Plate," ex ship, 16s. 6d., against 17s. 6d.; "Chilean White," landed, 27s. 6d., against 27s. 6d. a week ago.

MAILE.—After the recent period of heavy shipments from Argentina, and the consequent decline in prices, a slight reduction, in exports last week brought about a rally in quotations. Wednes-

The Frankfurter Zeitung

the leading German economic Journal, will inform you fully and systematically in a thoroughly objective manner regarding German financial and economic conditions and with regard to the general international business situation in Germany.

The 75th Anniversary Edition of the Frankfurter Zeitung has just appeared. Post-war world economic developments—the requirements, as seen by internationally famous experts, for constructing a successful economic system that is based on free enterprise and upon which can be built a sound general prosperity.... are the subjects which comprise the keynote of this 75th Anniversary Edition of the Frankfurter Zeitung.

The price of the „75th Anniversary Edition of the Frankfurter Zeitung“ is RM 10.—

Subscription Rates for the „Frankfurter Zeitung“ are RM17.50 monthly

48 GRACECHURCH ST., LONDON, E.C.3

day's quotation in Chicago for "December" futures, at 37 cents, shows a rise of 1½ cents per bushel on the week, but a fall of 1½ cents as compared with the price a month earlier. Quotations in London on Wednesday: "Plate," landed, 18s. 3d. per 480 lbs., as compared with 17s. 9d. last week; "Plate," ex ship, 17s., as against 16s. 6d.; "Plate," December-January, 17s. 9d., as against 17s. 3d. Yellow maize meal, ex wharf, was quoted at £5 7s. 6d. per ton, against £5 7s. 6d. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sales of home-grown wheat during the harvest years 1931-32, 1930-31, 1929-30, 1928-29:—

	1931-1932.	1930-1931.	1929-1930.	1928-1929.
Estimated sales of home-grown wheat:				
1 week to December 12	Owta. 82,018	Owta. 105,929	Owta. 273,751	Owta. 281,543
15 weeks to December 12	1,119,075	2,047,452	4,156,789	4,436,829

NAVY MIXTURE or NAVY CUT TOBACCO

In the calm contemplation of a pipe of good tobacco new hopes are born and life's little problems are viewed in their true perspective.

1/1
PER OUNCE

NOTES

The visible supply of wheat in Canada, at 56,859,000 bushels, shows an increase on the week of 316,000 bushels. Supplies a year ago stood at 59,418,000 bushels.

OTHER FOODS.

SUGAR.—Refiners in North America continued to purchase for immediate requirements only, which caused prices in terms of gold to decline further. Meanwhile, the market is eagerly awaiting the outcome of the International Sugar Conference in Paris. The raw sugar markets have again been inactive during the past week. "December" futures in New York were quoted at 1·02 cents per lb. on Wednesday, against 1·04 cents per lb. a week ago, and 1·27 cents per lb. a month earlier. Wednesday's sales of "raws" include "March delivery" at 6s. 9½d. to 6s. 10d. per cwt., against 7s. 0½d. to 7s. 1d., and "May," 1932, at 7s., against 7s. 2½d. to 7s. 3d. on the corresponding day last week. The movements of raw sugar in London and Liverpool during last week are set out in the table below :—

	Imports.		Deliveries.		Stocks.	
	1931. Tons.	1930. Tons.	1931. Tons.	1930. Tons.	1931. Tons.	1930. Tons.
London ...	1,189	294	1,180	1,728	5,145	24,334
Liverpool	9,507	24,261	12,267	13,054	71,516	130,319
Total	10,676	24,555	13,427	14,782	76,661	154,653
Last week	14,251	35,774	13,390	14,612	79,412	144,880

COFFEE.—The recent improvement in the situation of coffee has been maintained, and Rio No. 7 was again quoted at 7 cents per lb. in New York. The quantities offered at Tuesday's auctions in London met a good demand at firm prices. Last week's movements of coffee in London were as follows:—Brazilian, landed, nil; delivered for home consumption, 128 bags; exported, 41; stocks, 2,637 bags, against 2,820 bags last year. Central American, landed, 6,917 packages; delivered for home consumption, 2,407; exported, 4,089; stocks, 61,266 packages, against 40,326 a year ago. Other kinds, landed, 929 packages; delivered for home consumption, 2,408; exported, 1,818; stocks, 45,539 packages, against 60,227 a year ago.

COCOA.—Despite the sharp decline in prices during recent weeks, there has been no revival in demand. On the contrary, values continued to sag during the past week. "December" futures were quoted at 3-99 cents per lb. in New York on Wednesday, against 4-00 cents per lb. a week ago. As compared with the corresponding day last week, Wednesday's quotation for Accra, fair fermented, new crop, January-March, at 23s. per cwt. f.o.b. London contract, shows a fall of 6d. per cwt. Last week's movements of cocoa in London were as follows: Landed, 6,216 bags; delivered for home consumption, 5,486 bags; exported, 110 bags; stocks, 133,017 bags, as against 158,596 last year.

TEA.—The quantities catalogued for this week's auction comprised 55,492 packages of Indian, 30,407 packages of Ceylon, and 8,877 packages of Java and Sumatra tea. Monday's Indian auctions opened a little quieter than a week ago. There was no improvement at the "Ceylon" sales on Tuesday, although they were the last before the holidays. Indian tea was again in quiet demand on Wednesday. On the whole, values showed a weaker tendency, with the exception of high grade varieties. The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account:—

ACCOUNT:

AVERAGE PRICE PER LB.

RICE.—The demand for rice has been steady and prices have been maintained. Wednesday's "spot" quotation for Burma No. 2, cleaned, at 9s. 9d. per cwt., shows no change as compared with last week. Movements in London during the past week were as follows: Landed, 109 tons; delivered, 130 tons; stocks, 1,817 tons, as against 1,396 tons last year.

POTATOES.—Supplies have been less abundant in relation to demand, and prices generally advanced 6d. per cwt. At the Borough Market, "Best King Edward" sold at from 9s. 6d. to 10s. 6d. per cwt., as compared with 8s. to 10s. per cwt. a week ago.

SPICES.—The spot market for spices has been quiet, and the forward market was slightly easier. Wednesday's quotation for the "Black Singapore" pepper, at 6½d. per lb., shows no change on the week. Movements in pepper in London during the past week were as follows: Black, landed, 6 tons; delivered, 0 tons; stocks, 328 tons, against 466 tons last year. White, landed, 90 tons; delivered, 76 tons; stocks, 502 tons, against 313 tons a year ago.

MEAT.—Both home-killed and foreign beef has again been *scarce* at Smithfield Market this week. Pork has also been slightly dearer, but mutton and lamb remained unchanged. On Wednesday, Argentine beef (chilled hindquarters) was sold at 4s. to 4s. 6d. per lb., against 3s. 10d. to 4s. 4d. on the corresponding day last week, while New Zealand frozen mutton realised 2s. 6d. to 3s. 2d., as against 2s. 6d. to 3s. 2d. a week ago. According to the Smithfield Market official report, supplies of meat during last week amounted

OVERSEAS TRADE RETURNS.

to 10,402 tons, as compared with 9,822 tons in the corresponding week last year. Imported beef, principally Argentine, formed 82.1 per cent. of the supplies, as against 82.4 per cent. a year ago; and imported mutton, mainly New Zealand, formed 73 per cent. of the total supply, as against 69.2 per cent. last year.

MISCELLANEOUS COMMODITIES.

VEGETABLE OILS AND OLSEEDS.—Quiet and on the whole easy conditions rule in the markets for oilseeds and their products. Demand, both for oils and oilcakes, is disappointing, and this is affecting the demand for seeds, &c. Values of linseed are somewhat lower following an improvement in sterling, current quotations for Plate, on spot and *afloat*, being around £9 7s. 6d.; while new seed, January to March shipment, is quoted £9 2s. 6d., after £9 paid for January-February and £9 2s. 6d. December clearance. Calcutta to London, December-January, has been done at £10 16s. 3d. The quantity of linseed *afloat* for Europe has been reduced to 124,800 tons. On the basis of the official report as to condition, Argentina is estimated to have next year an exportable surplus of over two million tons, and Uruguay 150,000 tons, but in trade circles these figures are regarded as erring on the side of caution. Cottonseed is very quiet and lower in forward positions, Egyptian (black) for December loading quoting £8 2s. 6d. and February-March £8 5s. Linseed oil has been very erratic, but is now rather steadier. Raw oil on spot, ex Hull, is quoted £15, and January-April delivery £14 15s. Cotton oil is neglected, and crude Egyptian, ex Hull mill, is obtainable at £18 and common edible at £21 per ton. Oilcakes and meals are quiet, but quotations are about unchanged.

HIDE, LEATHER AND ALLIED TRADES.—Hides from home-slaughtered cattle were weaker in price at the sales held in Manchester this week. All first clear ox and heifers were reduced by 4d. to 4d. per lb. "Seconds," with the exception of 60/69 lbs. which declined 4d. per lb., remained unchanged, but for cows from 4d. to 4d. less was accepted. Calfskins also show a slight advance. Sheepskins are a poor market, and are making from 3d. to 6d. each less. Sales of foreign hides have been of small dimensions, and quotations for most descriptions are lower in view of the appreciation of sterling. In the South American market, Argentine ox are now being offered at 4d., with 4d. being asked for seconds. Dry hides are also inclined to be weaker, B.A. Americanos having changed hands at 6 1/2d., while 3 1/2d. has been accepted for Inservibles. Turnover in Africans has been small, with 7d. and 6d. paid for first and second dries, and 1d. less for drysalted 20/30 lbs. Few transactions have been concluded in Australians, which are still considered too high in price. Demand for sole leather this week has further diminished, and producers and distributors do not look for any improvement in the position until the New Year. A moderate turnover has been done in English and wet-salted bonds for repairing purposes, and this class of trade has accounted for the bulk of the business done. The requirements of manufacturers have been slight, and have consisted mainly of small lots which have been urgently required. Some fair sales have been made of pinned shoulders and bellies, but the call for rough offal has been further restricted. Quiet conditions are also noticeable in regard to upper leathers, and what business there is being done is usually in connection with small parcels of the staple lines. There have been inquiries for low-

priced reptile skins, but so far it would seem that holders of stock have not been able to get down to the low level of prices mentioned by buyers.

RUBBER.—At the end of last week the market in London has been active, following rumours that Dutch interests had accepted a proposal of a cut of 50 per cent. in output. Prices advanced rapidly, and on Friday last week 3½d. per lb. was paid. This rumour was, however, denied, and quotations quickly fell back to a lower level. It seems, nevertheless, probable that the Dutch interests may, after all, agree to a scheme of restriction in the near future. Meanwhile, the statistical position of rubber continues to deteriorate. As we show on an earlier page, the output of motor vehicles in America during October has declined to a mere fraction of the level of 1929. In New York, Wednesday's spot price for rubber at 4½ cents per lb. shows an advance of ¼ cent on the week.

CANADIAN CLUB tobacco

Navy Cut · Flake · Curly Cut · Mixture and Rough Cut

Grown next door to Virginia in America's sunniest spot

11½^{d.} per oz. for 2 oz. 1/10

Issued by Godfrey Phillips Limited, proprietors. Established 1844.

Wednesday's official closing price for standard ribbed smoked sheet in London, at 3d. per lb., shows no change as compared with the corresponding day last week. In forward positions, business has been done at 3½d. to 3¼d. for January-March, against 3½d. to 3¼d.; and at 3¼d. to 3½d. for April-June, 1932, against 3¼d. to 3½d. a week ago. Movements of rubber in London and Liverpool during the past week were as follows: Landed, 1,642 tons; delivered, 1,505 tons; stocks at the end of last week, at 129,942 tons, show an increase of 137 tons as compared with the preceding week.

Treasury bill payments have to be crowded into four days. Money into the New Year was quoted at 5½-6 per cent., and the rate is expected to harden before the end of the month.

This change in the situation was not unexpected. In all probability Christmas currency requirements have made further inroads alike on the joint-stock banks' cash holdings and on the Bank of England Reserve. Owing to the Christmas holidays the *Economist* goes to press before the publication of this week's Bank return, but it is reasonable to look for an expansion in the note circulation to about £368 millions, and a reduction in the Reserve to about £28 millions. Provided that the Banking Department's liabilities remain unchanged, this would reduce the Proportion to about 25 per cent., but inasmuch as the increased monetary stringency points to a contraction in Bankers' Deposits, the Proportion may turn out to be slightly higher. At its lowest, the Proportion is large enough to show that the corner of the Christmas currency expansion has been safely turned without having to authorise a further increase in the fiduciary note issue, and so on every ground it is a matter for congratulation that any temptation to make such an increase was resisted.

	Dec. 3, 1931.	Dec. 10, 1931.	Dec. 17, 1931.	Dec. 22, 1931.	Previous Rate and Date Changed.
Bank Rate	6%	6%	6%	6%	4½ (Sept. 21, '31)
Banks' Deposit Rate...	4	4	4	4	2½ (Sept. 21, '31)
Discount / Call	4	4	4	4	2½ (Sept. 21, '31)
Houses { Notice ...	4½	4½	4½	4½	2½ (Sept. 21, '31)
Market rate (3 months bills)	5½-6	5½-6	5½-6	5½-6	...

Last week's Treasury bill issue was for £40 millions, or the same as the preceding week, but the increased monetary stringency and the approach of the New Year reduced applications slightly from £45.9 to £42.4 millions. For the same reason the average tender rate advanced a trifle from 5½ 12s. 2.91d. to 5½ 13s. 1.65d. per cent. The rate for "hot" Treasury bills also hardened from 5½ first to 5½ and later to 5½ per cent. This again reflects the approach of the turn of the year. Three months' bank bills are still quoted at 5½ per cent. and upwards to Bank rate. The progress of events abroad, and especially the uncompromising attitude of Congress at Washington, has not been such as to bring German renewal bills more into favour. Business in the discount market has, in fact, been very restricted, and is likely to remain so until after the New Year and until the world outlook becomes more settled. There were some dealings in December bills this week. Originally they were quoted at 4½ per cent., but by Tuesday afternoon more were available and the rate went to 4½ per cent.

Market borrowing in anticipation of the end of the year was due to begin on Christmas Eve, and from then until December 31st money is expected to be unobtainable, except in the case of loans into next year. It is as yet impossible to tell how severe will be the pressure on December 31st. The restrictions on forward exchange dealings mean that there will not be the usual foreign exchange settlement, and this will ease the situation to some extent. The interesting point is whether the banks will be influenced at all by the Macmillan Report's strictures on the practice of "window-dressing," so that they do not call at the end of this year so heavily as in the past. From this point of view it will be of interest, when their balance sheets appear next month, to compare their cash ratios for December 31, 1931, with those of previous years.

On many grounds it is to be hoped that the banks will be influenced by this section of the Macmillan Report, for, apart from the general arguments against the practice, it is particularly desirable this year that temporary inflation of credit—which is what market borrowings at the Bank and the big increase in Bankers' Deposits both mean—

should be avoided. Rightly or wrongly, the Bank will not lend for less than a week, and at the end of the year many loans can only be arranged for longer periods. The result is that this credit inflation lasts to a greater or less degree for over a fortnight, and this year, with the Banking Department's Reserve depleted by gold losses, the Proportion might well be during this fortnight run down to a low level. This, in turn, might give rise to misconception and needless apprehension abroad, which might have undesirable consequences. We hope, therefore, that the authorities concerned will bear these possibilities in mind, and, while we agree that it is essential that our banks should show that they are able to augment their cash resources whenever it is desirable, we suggest that on this occasion at least they should be guided by the need of preserving a proper balance in all the components of the credit structure of the country.

Call money has stiffened up in New York, the current rate being 3 per cent. this week, against 2½ per cent. a week ago. This rise is probably due to greater activity in the stock markets, for the monetary position is unchanged. Ninety-day bankers' acceptances are still quoted in the open market at 3½-3 per cent. The gold efflux, in evidence last week, has for the moment been checked. There is a net decrease of \$1,300,000 in earmarkings, and only a small shipment of \$140,000 to Holland was reported.

The foreign exchange market has not been very active since our note of last week, but in the interval the £ broke very sharply only to recover, though not entirely, later. New York moved from 3.45 to 3.30½ after 3.84. Montreal rallied at one time to 4.12½, but was finally unchanged on balance at 4.20. Paris went at one time to 84½, but recovered to 86½. Brussels went fractionally against us at 24½, as did Madrid at 40.00, against 40.75 last week. Milan hardened from 67½ to 69½. Amsterdam, after some hesitation, gained ½ at 8.42. Berlin was unchanged at 14½. Switzerland was 17.35 against 17.80 last week. The Scandinavian exchanges were steady and firm, Stockholm being unchanged at 18.00, Oslo gaining 15 points at 18.25, and Copenhagen ½ at 18½. Helsinki, Bucharest and Constantinople were all fractionally against us at 240, 565 and 700 respectively. The South American exchanges were still largely nominal, Rio losing ½d. at 4½d., whilst Buenos Aires gained ½d. at 41½d. and Montevideo ½d. at 31½d. In the Far East the rupee remained firm at last week's quotation of 1s. 6½d. The yen lost a penny at 2s. 5d., and Batavia gained 20 points to 8.40. In the forward market dollars went to ½ cent discount for both periods. Paris weakened by ½ to ½ franc premium for one month, and by ½ to ½ franc premium for three. Forward belgas and lire were unchanged. One month's Madrid remained at ½ peseta discount, but three months widened to ½ peseta discount, against ½ peseta last week. Amsterdam, after being higher, settled down to 4 and 8 cents discount, or rather lower than last week. No quotation was available for Berlin, and Switzerland was unchanged at par and ½ franc premiums. The silver market was quiet and trading small. In the absence of offers and with some speculative buying prices rose by ½d. to 20½d. for cash, and by ½d. to 20½d. for forward. The China silver exchanges were but little affected, Hong Kong being unchanged at 1s. 5½d., whilst Shanghai rose by ½d. to 1s. 11½d.

ECONOMIST INTELLIGENCE BRANCH.

Our Intelligence Branch, which has been amalgamated with Moody's Investors Service, Ltd., is available to our readers for the supply of economic, statistical and other information, at a charge proportionate to the work involved. Inquiries should be addressed to Moody's Economist Services, 8, Beaverly Street, London, E.C.4.

MONTHLY TRADE SUPPLEMENT

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

WINTER SOLSTICE.

At this moment, when the sun has reached his greatest southern declination, Europe is suffering from more than normal wintry weather; politically a cold wind is blowing eastward across the Atlantic. As we write, the fate of the President Hoover's Moratorium Resolution is still in the balance; the Senate at Washington has still to pronounce its verdict. But on Saturday last the House of Representatives, which passed the Resolution by 317 votes to 100, appended to it a rider without which the voting would, to all appearances, have been very different. The amendment, whose wording implies the rejection of the President's proposal that the War Debt Funding Commission should be re-established, reads as follows:—

"It is hereby expressly declared to be against the policy of Congress that any of the indebtedness of foreign countries to the United States should be in any manner cancelled or reduced; and nothing in this joint resolution shall be construed as indicating a contrary policy, or as implying that favourable consideration will be given at any time to a change in the policy hereby declared." The amendment, it will be seen, makes no explicit reference to prolongation of the twelve months' moratorium—an omission which the Senate may yet rectify—but for all practical purposes it effectively ties the hands of the Administration in any forthcoming negotiations of the whole interconnected issue of reparation with regard to war debts. It is plain that—notwithstanding the serious warning which Mr Stimson appears to have conveyed to the Ways and Means Committee of the House of Representatives, and the equally plain speaking of the President of the National City Bank before the Finance Committee of the Senate—the elected representatives of the American people, in a sort of angry revulsion from a world crisis whose repercussions on the United States they may resent, but cannot ignore, have once more retreated into "isolationism."

The situation thus revealed contrasts sadly with that which existed six months ago. Midsummer saw one bright gleam of hope on the horizon. President Hoover's Administration had taken the bold and far-sighted step of endeavouring to arrest the drift towards international monetary collapse by proposing the suspension for a year of all payments on account of inter-governmental indebtedness. That step had received the support of leading members of both parties in Congress and had touched the imagination of the great majority of the American people as an act of statesmanship which bade fair to give the United States a dominant rôle in world affairs. For a moment it looked as though the countries of the world, under America's lead, would have a unique chance of co-operating effectively in a joint approach to the many inter-related problems of financial obligations, tariffs, armaments and political security with which they were confronted, and under whose weight their economic life was staggering.

Dis aliter visum. Chilled at the outset by what appeared in American eyes to be the cold and calculating reception by France of their President's generous proposal, enthusiasm in the United States for the Hoover Plan waned progressively as its fruits were seen to be materially meagre. Reparations and war debts had played a large part in contributing to the world depression? Very well; but they had been suspended for a year, and, if its cause had been correctly analysed, the depression should lift. But the depression did not lift; on the contrary, with uncertainty as to the future of events after July, 1932, still unresolved, "safety first" liquidation of international credits still continued; restriction was piled on trade restriction in a desperate effort to maintain the stability of currencies threatened by excessive withdrawals; potential foreign purchasers of American manufactures were less and less able to buy; and the United States had to shoulder a still heavier burden of distressful unemployment, widespread bank suspensions, and mounting budget deficits.

Thus, having failed at the very beginning to appreciate that the Hoover scheme was flung into the international

field with too little preparation of French opinion in advance, and having failed throughout to realise that no mere breathing space for twelve months could recreate the necessary spirit of lost confidence and enterprise until the suspended problems had been resolutely faced and solved, the American people are now evidently inclined to adopt the illogical attitude of having as little more to do as possible with an outside world which has responded so unsatisfactorily to their President's stimulus. Just as "no political entanglement" was a compelling slogan a decade ago, so "no financial interdependence" seems likely to-day to hypnotise America as a 100 per cent. definition of "patriotic" foreign policy.

On the "long-run" implications of America's present reversion to type, we do not propose to speculate. It may be that all forecasts of world development based on the supposition that America was destined to be one of the world's great lending countries must be revised; or it may be that "isolationism" in the United States, no less than the "Buy British" movement in this country, will prove to be a passing phenomenon created—like many another curious economic manifestation—by the fear and bewilderment begotten of the present crisis. We are concerned to-day with the immediate future, and it would be idle to disguise the fact that the attitude of the Congress at Washington has imported a new and serious complication into the problem which the Governments of Europe have got to face next January. By then the Young Plan Advisory Committee will have presented its report; it will have marshalled all the available data relating to the capacity of Germany to make reparation payments; and on such data a decision will have to be reached—whether or not the experts make any specific recommendations—as to the amount which the German Government is to be asked to pay either, say, in the next two years or in the more distant future. But is there any economist or statesman in the world who is prepared to say that a politically acceptable answer which will "work" can be given to this question if a decision has to proceed on the assumption that the payment of war debts to America is an unconditional obligation susceptible of no modification?

So closely related to each other are the problems of various nations' capacity and willingness to make international payments on governmental account, the future of tariff barriers, the future of the world's monetary policy, and, in particular, the future working of the gold standard in its bearing on the level of prices, that a section of opinion in this country appears to favour the inclusion of all these matters on the agenda of next month's assembly of statesmen, which would then take the form of an economic conference complementary in scope, and presumably coincident in time, with the Disarmament Conference, within whose ambit will fall the remaining issue of political security. We are inclined to question the advisability of pursuing at one conference such a wide and ambitious programme. However intimate may be the relation of one aspect of the problem to another, it may be better to proceed by stages and to deal first with the most urgent question, the reparation obligations of Germany. Yet, if the Administration of the United States, with its hands tied in advance by the resolution of Congress on policy, is precluded from doing more than sending to this conference an observer who will be debarred by his instructions from participating in any discussion as to the possible revision of debts, how is the almost inevitable resulting impasse to be resolved?

For, let us speak bluntly, though France may be alone in having officially stated that she will consent to no downward revision of the full Young Plan annuities unless there is a proportionate scaling down of her indebtedness to the United States, there is little room for doubt that the Parliament at Westminster—though it might be readier than the Chamber in Paris to see a clean sweep made of all reparation payments for ever—would be no more

inclined than the Palais Bourbon to vote a budget containing provision for payment of the annuity to America if there were no credit item of reparations to set on the other side of the account.

In saying this we are far from implying that we should regard an enforced European default as other than a deplorable development. There is no absolute injustice in America's insistence on the repayment of her war advances to the European Allied countries, and to depict the United States as Shylock demanding his pound of flesh is both to overlook the facts of the American Treasury situation and to be inconsistent with Europe's own decision, not so many years ago, to enter into agreements, duly ratified by the various Parliaments, for settlement of the debts due. Moreover, though it be true that political debts incurred by Governments do not possess the same moral sanction in practice as private obligations (to suggest that individuals feel as deeply with regard to the probity of their State in matters of this sort as they do with reference to their personal debts, is to overstrain the conception of the *volonté générale*); nevertheless a general default by Europe in respect of Government debts to America would be one more shock, and a very ugly shock, to financial confidence.

We do not believe that American opinion would welcome such a development or regard it with less regret than we should ourselves; but the danger is that unless a fresh helpful line of action can be devised, matters will drift into an *impasse* from which there are only two ways out—maintenance on paper of reparations at a figure which will force Germany into catastrophic default, or settlement of reparations on a basis which will force the reparation creditors into repudiation. And obviously the only difference between these alternatives is one of time.

What, then, is to be done? The Governments of Europe cannot wait for the slow process of economic education to filter through the United States, nor is much good likely to be achieved by a long-range bombardment of Washington by foreign ministerial speeches or diplomatic Notes. It is tempting to suggest that President Hoover might be induced to send to next month's reparation conference not a member or members of his Executive, but a Congressional delegation, who would thus be brought face to face with the difficulties, from a sense of whose reality Congress appears at present to be so hopelessly divorced. It may well be that hopes of a definite settlement should in any case not be placed too high. We may perhaps have to reconcile ourselves to the prospect of yet another interim step towards removing the cancer of intolerable international indebtedness from the body of the world politic. But, at least, if a representative body of American politicians were to attend the conference, the hopes of American co-operation, which ran high when this year's sun stood at its summer solstice and which have been sadly dimmed in this winter of world discontent, might not be wholly lost.

We cry for the moon? It may be so. Yet, if—as we are reluctant to believe—the past week's debate represents the last word of Congress on the question of war debts, then Europe, with a definite lead (we hope) from the British Government, must perforce re-orientate its policies in face of the fact that American co-operation in "freeing the ship" from wrecked financial "top-hammer" cannot be relied upon in practical calculations. And, in stating the implications of this development, it is as well to be frank. The refusal of Congress to recognise that recent developments in prices, currency values and tariff policy are contingencies which were never contemplated when the debt settlements were signed, creates a position with which the debtors, with the best will in the world, can no longer cope. Greatly as we should regret the emergence of a situation in which Europe found, at last, a unity of purpose in concerting—albeit under *force majeure*—a formal joint repudiation of trans-Atlantic obligations, it is vital for the future of civilisation that the States of Europe should not be robbed, next month, of the chance of mutual agreement by the single obstacle presented by the claims of another Continent whose people, when all is said, must learn with us, however reluctantly, the bitter lesson that war does not pay.

MR RUNCIMAN'S THIRD SCHEDULE.

On the opposite page we print an analysis of the trade affected by Mr Runciman's third—and, we sincerely hope, last—Order under the Abnormal Importations Act. On the basis of 1930 figures his first Order affected imports to the value of about £28 millions; his second, imports to the value of £6½ millions, and his third restrictive effort is aimed at imports which last year amounted to £20½ millions. His first schedule suggested a careful avoidance of taxing important raw materials; his second brought under its operation such essential raw materials as woollen and worsted yarns; and now in his third Order the President of the Board of Trade—fresh from his valiant stand against the insistent demands of the iron and steel industries—has given heed to a still small voice from Lancashire, and imposed 50 per cent. duties on cotton piece-goods.

This concession to Protectionism is small, statistically, but not in principle. Even in the bad year 1930 Lancashire produced 3,500 million square yards of piece-goods, of which 1,050 million square yards were sold in the home market. In that year the aggregate foreign imports amounted to no more than 70 million square yards. They are now to be prohibited—for a duty of 50 per cent. plus the effect of exchange depreciation amounts to that. By this one item in his schedule Mr Runciman has surely stirred up a hornet's nest. What about the finishing industry, which was interested in these specialised imports? What are the feelings of the yarn manufacturers, who, without protection themselves, know that foreign weavers, now shut out from the British market, will of obvious necessity restrict their yarn purchases from Lancashire? Mr Runciman seems, indeed, to have outrun any efforts that might have been expected from the most enthusiastic protectionist (who would, one supposes, hesitate to introduce protection into the Lancashire Free Trade citadel), in order to shut out certain classes of goods, mainly specialities not produced in this country, which, in so far as they come in, are the raw material of finishing industries. In the first schedule we hoped that we could detect some logic in Mr Runciman's fiscal madness; in his third schedule we search rather despairingly for any.

A statistical White Paper* has been issued, presumably to explain the third Order. We survey the figures without discovering any idea of a guiding principle. Some of the goods now subjected to duty came into our ports in substantially increased quantities in November, and some did not. Those that did so, doubtless did so on Mr Runciman's indirect invitation. Foreign exporters, and home importers, of some goods sensed the probability that they would shortly engage the attention of the Board of Trade, and took the obvious steps. In many such cases the threat of tariffs is the only reason why imports have increased, and this fact leads us to ask the question whether by these emergency duties the Government have not taken the most effective steps open to them to prevent the balance of payments from correcting itself automatically under the natural working of the depreciated exchange. The importers have behaved according to the everlasting canons of human nature. Mr Runciman, in the rôle of bar tender, has warned them that in a few minutes he will be calling "Time, gentlemen, please," and they have promptly given their orders.

The third schedule is also noteworthy as a good example of the inextricable tangles which always beset the feet of the tariff-maker at all times and in all lands. Here is an instance. Electric light bulbs are imported into this country by manufacturers who use them in the construction of electric lamps. These manufacturers, scenting the danger of a duty, have rapidly laid in such stocks as they can afford. Therefore, in the eyes of the Board of Trade, there is a case of "abnormal imports," and a case for a duty. But the resultant duty is applied not merely to electric bulbs, but to a much wider class of goods, classified as "illuminating glassware." What

* Excluding various items, already subject to duty under the "Abnormal Importations (Customs Duties) No. 1 Order, 1931."

is the result? The duty falls on lamp globes and lamp shades, of which there is normally a big importation, which, as it happens, has not been swollen in recent weeks. The reason why "forestalling imports" have not taken place in this category is that foreign suppliers and their British customers never conceived a duty to be likely, for the simple reason that our home factories cannot cope with more than a small fraction of the home demand. Various estimates have been made of the capacity of British glassworks to cater for the lighting glassware (lamp and shades) market. The estimates, we are told, vary between 0.6 per cent. and 4 per cent. Careful investigators believe that in the whole of this country there are less than 150 skilled blowers of moulds in the lighting glass industry, whereas, if Britain were to supply the requirements of the home market, thousands would be immediately required. Thus in the middle of winter, the busy season for artificial lighting, the Board of Trade has suddenly clapped a 50 per cent. duty on essential goods which we do not adequately produce in this country, in addition to the 40 per cent. handicap already imposed upon imports by the depreciation of sterling (for most of these imports come from countries adhering to the gold standard). Moreover, in the electric bulb industry in this country a "ring" already exists, which is making fat profits out of the home consumer. Unless the Board of Trade admit and rectify a serious mistake, not only will an essential utility article reach prohibitive prices shortly through lack of supplies, but also the "ring," producing a sectionalised product, will be able to exaggerate the monopoly profits already exacted from the helpless consumer. If Mr Runciman had wished to give the country a pretty little illustration of the pitfalls of protection, he could hardly have done better.

The cotton duties, too, quite apart from the principle involved, present special difficulties of their own. The duty is imposed on goods "wholly or partly of cotton." This means that piece-goods which have any trace of cotton in them will be subject to a full tax of 50 per cent. Hat-makers will pay more for their satin linings; the materials used by makers up of "mixed" rayon piece goods purchased from abroad will carry the new 50 per cent. duty in addition to the duty of 88½ per cent. imposed by Mr. Churchill.

And what, after all, is the economic justification for these essays in protection? Now that the pound is divorced from gold, the balance of payments, if left to itself, will and must automatically regain an even keel. Fears or threats of tariffs retard the natural process by increasing imports as far as is feasible; but even in the presence of such fears and threats there is a very effective check to a big inflow of imports, namely the barrier already erected by the exchange conditions against the goods originating in gold countries. In a word, Mr Runciman is fighting an unreal bogey; but the weapons which he selects threaten to produce a very real rise in the prices of some of the essential commodities selected for his attack. Moreover, it is only necessary to glance at the annexed page of statistics to realise the measure of disturbance caused to the trade of countries which, already in dire difficulties, will find it harder than ever to meet their obligations to this country.

In connection with this third Order we find only one consolation. In the case of many of the goods scheduled, the duty imposed is not protective, but prohibitive, and therefore obviously of a temporary or "emergency" nature. Goods taxed, in cases where they come from gold countries, have to face a duty ranging up to over 100 per cent., and some of them have to add to this a previously existing duty of 88½ per cent. That is prohibition, and cannot be claimed or used as the basis for building up a permanent tariff. We wonder whether Mr Runciman has deliberately introduced this aspect into his third Order, with the object of showing the world that he is attempting merely to deal with the emergency of the moment, without in any way prejudicing the future fiscal policy of this country, in the formation of which the National Government retains a free hand. If so, it is just conceivable that the third Order, bad as it seems, may be the best of the three. But, in any case, it is a dangerous game.

THE PROGRESS OF TANGANYIKA.

(BY A CORRESPONDENT.)

TANGANYIKA is the largest single territory under British administration, outside the self-governing Dominions, seven times the size of Great Britain and larger than any Crown colony. It has an area of 374,000 square miles, with a coast line of over 500 miles, and at least one good harbour at Dar-es-Salaam, which is the chief town. It has a population of 5,000,000 natives, and some 33,000 non-natives, of whom 25,000 are Indian. Yet it is only a part of the former German colony of East Africa; for a part of that territory was allotted to Portugal, and another part—and that the most populous—was given under a mandate to Belgium, and is known as Ruanda Urundi. By its situation Tanganyika is destined to play a dominant part in the future of British East Africa, since it lies in the centre of a ring of British colonies and protectorates, Kenya and Uganda to the north, Nyasaland and Northern Rhodesia to the south, and the island of Zanzibar on the east. The policy pursued in Tanganyika must inevitably influence the policy in these other territories, for, as the Hilton-Young Commission recommended and as the Government has recognised, there must be one principle of native policy in the vast East African region. Now the policy which the administration is to pursue in Tanganyika is defined with some exactness in the deed of trust under which Great Britain rules the country. The mandatory shall "promote, to the utmost, the material and moral well-being and the social progress of the inhabitants. He shall prohibit all forms of compulsory and forced labour except for essential public works, and then only in return for adequate remuneration; protect the natives from abuse and measures of fraud by the careful supervision of labour contracts; in the framing of laws relating to the holding of land, take into consideration native customs and respect the rights and safeguard the interests of the natives, and shall prohibit the transfer of native land, except to other natives, without the consent of the public authorities."

The administration has acted according to the spirit and the letter of this mandate. It regards the native as the primary element of the country, and the white settler as an experimental factor. There are no native reserves of land as in Kenya, but the Government regards itself throughout as the trustee for the natives. It allows transfer of land to non-natives only on leasehold tenure and for a term not exceeding 99 years, and subject to the condition that enough land remains for the native tribes, and that the land transferred will be used for productive development and its produce can be readily marketed. In fact, less than 1 per cent. of the soil has hitherto been alienated to non-natives. The Hilton-Young Commission pointed out that part of the territory was fitted for large farming and part for corporate exploitation, and that there was more land than the inhabitants required, so that there is room for fresh settlement. The trust for humanity, therefore, which is implicit in the mandate, the development of the vast economic resources, can be executed without derogating from the primary trust for the well-being of the native inhabitants; and, indeed, they are complementary parts of a single obligation which cannot be fully performed if any part is neglected.

The British administration has in recent years done much for the development of the resources of the territory. It devoted part of the loan of 10 millions, raised with a Treasury guarantee under the East Africa Loans Act of 1926, to the construction of railways. From the east to west, 770 miles, from Dar-es-Salaam to Kigoma on Lake Tanganyika, and now it has built a branch of 250 miles to Mwanza on Lake Victoria, linking that lake also with the sea, and is building another from Moshi to Arusha, which will link the territory with Uganda and Kenya. There are motor roads in dry weather extending over 10,000 miles; and, since the beginning of this year, a regular air mail has been instituted from England to Mwanza in nine days, thus reducing the time for the post to the mandated territory by twenty-three days. The Joint Committee of Parliament on Closer Union in East Africa, which recommended the formation of a

opposed to

any attempt at political federation, urged that there was a real field for co-ordination and co-operation in the administration of transport, including railways and ports, Customs, and technical services. There should be an Adviser on transport for the different regions, who would be a member of the Governors' Conference and secure uniform treatment in place of the present competing rates.

The principal trade of the country is with Great Britain, though, by the self-denying ordinance of the mandatory regime, no preferential tariff in favour of British goods may be passed. Great Britain, on the other hand, has granted to Tanganyika products the benefit of Imperial preference, for she may confer, though she may not receive, benefits. The total imports of last year represented a value of just under £4,000,000, a decrease of £800,000 from 1929; and the total exports were of a value of £2,600,000, which represented a decrease of over a million pounds from the previous year. Imports from the British Empire accounted for 60 per cent. of the total. There was an increase of the quantities of the principal exports, sisal, ground-nuts and coffee, and a decline only in cotton; so that the marked fall in value is due to the general fall of prices and not to a failure of production. A beginning has been made with mining development, and the territory has exports of gold, diamonds and mica. The annual revenue and expenditure of the Government are about £2,000,000, which, having regard to the area and the size of the population, is a modest figure, and works out at a taxation of 12s. per head. But in view of the general economic crisis, the administration has appointed a committee to consider means of retrenchment.

The political development of the territory is characterised by the introduction of the system known as indirect administration, or ruling by native chiefs, who are regarded as an integral part of the machinery of government, with defined powers of taxation and administration, and not dependent on the will of English executive officers. The system has been introduced from Nigeria with happy results, and is an earnest of the determination of the mandatory to train the people to self-government. A college has been established at Tabora for the sons of chiefs, where they are educated, on the lines of an English public school, to take their part in ruling their peoples. The mandatory holds that the best safeguard of the interests of the white settler is the building up of a contented law-abiding native community taking its share of the administration. At the same time, it has set up a legislative council composed of fourteen official members and ten non-official members, of whom seven are Europeans and three Indians. The native interests are protected by the official majority. The council has to deal with the larger functions of government, such as taxation, customs, health, the improvement of agriculture and public works. The tribal concerns are left to the chiefs and their native councillors. By this parallel fostering of representative and native institutions the Government of Tanganyika is tackling the main problem of Central Africa, to discover the basis on which the white and black races can live together under conditions of rapid economic change, and with adequate opportunity for political development. As the Joint Committee pointed out, the principle of trusteeship implies not only the avoidance of injustice to the natives, but also the time and opportunity to develop their latent aspirations, and play such part as they may eventually be capable of playing in the ultimate destiny of the country.

THE YEAR'S NEW CAPITAL.

THE most cursory glance at the statistics of London's new capital issues in the past year, which, according to custom, we present in this article, will reveal the blight that fell upon the operation of new financing after the turn of the year. In the first half of 1931 the total output of London's new capital market was slightly more than half the total recorded for the first half of 1930. Thereafter the world crisis hit London with relentless force, and we find that in the second half of this year new

capital applications reached the puny total of £12.9 millions, in comparison with £98.2 and £110.9 respectively in the corresponding periods of 1930 and 1929. A close observer of the London money market, had he awakened to-day after a year's sleep, would first rub his eyes and then refuse to admit the accuracy of the following table:—

CLASSES OF BORROWERS.

A mere £4 millions represents the total new financing in the December quarter by home trade and industry. No foreign or colonial government or corporation, no foreign railway, no rubber, oil or mining company, floated an issue in London between October 1st and the end of the year. The British Government, despite the Treasury's difficulties, floated no loan. The figures in the above table under the heading "British Government" refer entirely to National Savings Certificates. In the first three quarters of the year it was a healthy sign that, in spite of the trade malaise and widespread unemployment, new sales of Savings Certificates steadily and regularly exceeded encashments. It is one of the disquieting signs of the December quarter that the tide has turned and that encashments are exceeding new sales. The classification of issues is given in more detailed form in the next table:—

Description.	Whole Year, 1930.	Year, 1931.		
		Three Quarters to Sept. 30.	Fourth Quarter.	Total, Whole Year, 1931.
British Government loans.....	65,640,000	12,550,000	Dr. 1,850,000	10,700,000
Dominion and Colonial Government loans	49,081,300	30,571,600	NH	30,571,600
Foreign Government loans	21,330,000	1,740,000	NH	1,740,000
British Corporations, County and Public Board Loans	41,657,600	6,705,300	1,302,000	8,007,300
Colonial Corporations and Public Board Loans	3,001,500	NH	NH	NH
Foreign Corporations	16,119,500	NH	NH	NH
Colonial railways	2,875,600	NH	NH	NH
Foreign railways	7,615,000	2,910,000	NH	2,910,000
Australasian mines.....	257,800	NH	NH	NH
South African mines	493,500	371,900	NH	371,900
Other mines	4,597,500	8,953,300	10,000	8,963,300
Exploration, financial and investment trusts	6,316,000	2,949,500	NH	2,949,500
Breweries and distilleries	2,078,500	112,500	NH	112,500
Merchants, importers, &c.	NH	337,500	NH	337,500
Stores and trading	3,220,300	10,401,300	NH	10,401,300
Estate and land	445,400	124,700	15,000	139,700
Rubber.....	1,160,000	151,000	23,800	174,800
Oil.....	8,050,000	NH	NH	NH
Iron, steel, coal, and engineering	1,285,000	42,500	25,000	67,500
Electric light, power, and telegraph	3,728,400	3,838,300	378,800	4,217,100
Tramways and omnibuses	NH	98,000	NH	98,000
Motor traction and manufacturing	681,600	6,300,000	802,300	7,102,300
Gas and water	5,393,300	429,000	NH	429,000
Hotels, theatres, and entertainments	20,000	82,500	NH	82,500
Patents and proprietary articles	367,500	500,000	NH	500,000
Docks, harbours, and shipping	NH	1,020,000	2,100,000	3,120,000
Banks and insurance	3,023,600	136,400	NH	136,400
Manufacturing and miscellaneous	21,361,800	8,139,900	1,072,300	9,212,200
	267,800,700	98,265,200	3,879,200	102,144,400

The year's total, after separating British Government operations from the rest, was £92 millions, against £202

reasonable views. The moral is that Australia has "had some." In general, the election shows that in Australia, as in other countries, the electorate are willing to face up to the hard facts of the world crisis provided that they are put fairly and squarely before them.

Mr Gandhi's Denial.—We quoted in these columns last week an interview with Mr Gandhi, which was published in the well-known Italian journal, the *Giornale d'Italia*. This interview aroused widespread interest and anxiety, because it represented the Mahatma as stating his definite decision to resume his passive resistance campaign upon his return to India. Mr Gandhi has since denied that he gave this interview. On the other hand, Signor Gayda, the correspondent of the *Giornale d'Italia*, refuses to accept the denial, and affirms that he made notes of the precise words used by Mr Gandhi in the presence of witnesses. There is no ground whatever for impugning the good faith either of the newspaper or its correspondent. But, on the other hand, Mr Gandhi's denial of the most unfortunate utterances is very welcome in that, publicly, at any rate, he remains uncommitted to any obstructive line of policy. So while sympathising with the position into which the *Giornale d'Italia* has been placed, the most helpful view to take in the interests of India and Britain is that the incident of the interview is a mystery. Meanwhile let us cling to the hope that in his return journey "across the summery seas to his sun-baked land" the Congress leader will reach at last the realisation that it is only by adopting the very reverse of the policy attributed to him in this interview that he can use his influence to save his own countrymen from untold and unnecessary misfortunes.

The Egyptian Parliament Reassembles.—The second session of the Egyptian Parliament under the new constitution was opened on December 17th. Its opening neither follows nor heralds any substantial change in the political situation—internal or external. The internal political situation in Egypt is still governed by the refusal of both the Wafd and the Liberal Party to recognise the constitutionality of Sidky Pasha's regime, and *a fortiori* the legitimacy of the anti-democratic constitutional changes which have been put into force, under this regime, by royal decree. The Opposition maintain that the democratic constitution of 1923 has not ceased to be valid; and they give expression to their protest by boycotting the new Parliament. This boycott is being maintained against the second session as well as the first, and the internal political situation is not materially altered by the individual secession of Ziwar Pasha, a former Prime Minister who played a rather docile part in one tense phase of Anglo-Egyptian relations, from the ranks of the Opposition to the Government's side. Ziwar Pasha signed the joint Wafdist-Liberal Resolution of May 7th last on the constitutional issue; he has now accepted a seat in the Senate at Sidky Pasha's hands. His action, however, does not appear to portend any widespread breach in the solidarity of the Opposition; and, if the contemporary history of other Islamic countries—e.g., Turkey—is any guide, we may expect the Opposition not only to hold its ground but to win the day in the long run over the King and "the King's friends." As for the political relations between Egypt and Great Britain, these remain unaffected. There is at present no prospect of Anglo-Egyptian negotiations being resumed, though we may take it as certain that one day they will not only be resumed but will be carried to a successful issue. The goal at which all parties in both countries are aiming is a comprehensive settlement on a treaty basis, in lieu of the present anomalous relation resting on the unilateral British declaration of February, 1922. This goal will assuredly be reached in the end; but there is one proviso on which any British Government is bound to insist. We shall only be willing to conclude a treaty of this permanent importance with an Egyptian Government which is able to satisfy us that it is genuinely representative of the Egyptian people. Meanwhile, in Egypt, as in Britain

and in the world at large, political aspirations have temporarily been driven into the background by economic and financial anxieties. As one of the countries which depend for their livelihood on selling abroad some single, staple product, Egypt is peculiarly hard hit by the crisis. And whatever may be the merits or demerits of Sidky Pasha's politics, there seems little doubt that he is a capable man of business. From the preceding Wafd Government he inherited an unsuccessful attempt to maintain the price of Egyptian cotton by Government purchases of surplus stocks, and he has been wrestling with the cotton problem—and the whole agrarian problem which is bound up with it—ever since. He is now attempting to restrict the cultivation of cotton and to stimulate alternative crops and industries.

A Hungarian Moratorium.—From the letter of our Budapest correspondent which is printed on a later page of this issue, it appears that by the time these words are in print a moratorium on transfers will have been declared in Hungary. This will not come as a surprise to those readers who have followed week by week our correspondent's survey of the steady march of Hungary's economic position towards the brink of this necessary decision. The only bright spots in the situation are that Hungary now has a strong hand in control of her finances and that the Government has firmly announced its refusal to contemplate a policy of inflation. Nevertheless, and in spite of the fact that the declaration of the moratorium was fully expected, the event must be regarded as a grave warning of the growing paralysis of trade and credit which is slowly but surely strengthening and extending its grip upon large areas of the European continent. It serves also as a reminder that unless concerted remedial policies are adopted, Hungary may not long remain the only country which is driven to resort to this drastic expedient. The event, therefore, emphasises the extreme urgency for co-operative international adoption of policies which, by freeing trade from some of its shackles, will gradually unfreeze the frozen and restore a little circulation to the numbed system of credit. What precise reactions the declaration of the transfer moratorium in Hungary will have upon other individual countries cannot at the moment be gauged. But it is understood that this new Christmas "frost" will be felt most severely in the first instance by American and British creditors.

The End of the Muslim Congress.—The Jerusalem Congress terminated its session in the small hours on the morning of December 17th; and it is now possible, to some extent, to gauge its significance and estimate its prospects. On the personal issue which caused some disturbance at the opening meetings, it looks as though the Mufti of Jerusalem had won a decided victory over his opponents in the Palestinian Muslim community. At any rate, he has been elected chairman of the permanent executive committee. For the rest, it would appear that the Congress, which set out to be an Islamic affair, ended by crystallising into an Arab affair. More than 70 per cent. of the delegates came from Syria in the widest sense (including Palestine and Transjordan, as well as the territories under French mandate) and from Egypt; and when the Congress was being addressed by an Indian delegate it responded enthusiastically to his declaration that a union of the Arabic-speaking countries would ensure the future security of Islam. Unity was also preached by a Shi'i delegate from Najaf, one of the Shi'i holy cities in Iraq. This was a remarkable portent; for the Shi'ah have hitherto held themselves rather sullenly aloof from movements for the promotion of Pan-Islamic solidarity. Here again, however, the fraternal gesture of an Iraqi Shi'i towards the Sunni world may resolve itself into a *rapprochement* of the Iraqi Arabs towards their fellow Arabs of Syria and Egypt. We may also note that the life-membership on themselves; that one prominent Indian delegate, Mawlana Shawgat Ali, who had been elected to the permanent executive, has withdrawn his

acceptance; and that the point over which the Congress, during its session, took the strongest line was the alleged barbarity of the Italian repressive measures in the African Arab country of Libya. Indeed, one of the Egyptian delegates, 'Abdurrahman Bey 'Azzam, has been deported by the Palestinian Government on account of the violence of his anti-Italian pronouncements. All these facts point to the same conclusion: the Congress, if it achieves permanence at all, will achieve it as an Arab rather than as an Islamic organisation. And this is, of course, what we should expect *a priori*; for the general tendency in the Islamic world since the war has been for the old solidarity of Islam—a politico-religious society transcending nationality and race—to break up under the impact of the disintegrating Occidental force of nationalism. In this matter the revolutionary action of the Turks, who are the leading Islamic people, has probably been decisive. The Indian Muslims, again, are displaying a tendency to think more and more in terms of a local Indian political development. In these circumstances, Pan-Islamism naturally tends to contract into Pan-Arabism—that is, into another local national movement which is neither a Turkish nor an Indian Muslim concern. For Pan-Arabism there may still be a future, for the Arab peoples are drawn together not only by their common national language but by their common aspiration to throw off the ascendancy of the Western Powers. Except for the two Arab States of the Arabian Peninsula—the Yemen and the Najd-Hijaz—the Arab countries from Morocco to Iraq inclusive are all at this moment in some degree under the domination of either France or Italy or Great Britain. Here is a practical motive for co-operation and this co-operation is likely to be particularly strong and effective between the Egyptians on the one hand and the Syrians (in the widest sense) on the other; for there is a specially close political intimacy between Islamic Syria and Islamic Egypt which has asserted itself repeatedly being the union of these millennium—the last occasion being the rule of Muhammad 'Ali in two Arab countries under the nineteenth century. If we hear the "thirties" of the nineteenth century, it will almost certainly be in this connection.

The Fascist Oath and Academic Liberty.—At a time when Fascist foreign policy—as expounded by the Duce himself as well as by Signor Grandi—is so much in consonance with the best sense and the truest interests of the world in general, it is more than ever unfortunate that, in home affairs, the Fascist Government should continue to steer a different course. An Italian Royal Decree, which was published last August, requires all teachers in Italian Government institutions for higher education to take an oath of allegiance not only to the Crown, but to the Fascist regime, and to inculcate loyalty to Fascism into the minds of their pupils. The Fascist authorities claim that this requirement is merely an adaptation of an old practice to the new situation. In Italy, as in the majority of Continental European countries, professors are Government employees, who have to take an oath of allegiance like other civil servants. In a Fascist State, it is argued, it is logical that the customary oath should carry with it an obligation to foster the now established political creed. The dissenting professors justly reply that there is a vast difference in this matter between the general and the particular. A general oath of allegiance to the State in whose service they work does no violence to their conscience. A particular oath to preach the doctrines—their science. A particular oath of one political party, with a contentious revolutionary creed, which has seized a monopoly of political power by main force, is a wholly different matter. These open dissentients, as was to be expected in the circumstances, are not numerous. Out of 1,225 teachers affected, 1,132 have taken the oath already, while 81 of the rest have only delayed through absence on sick leave or for some other temporary reason. This leaves only twelve who have refused, but these twelve include some distinguished scholars: for example, Signor Orlando, former Prime Minister, and Senator Ruffini, a former Minister of Education and former member of the League

of Nations Committee of Intellectual Co-operation. It is also noteworthy that the twelve dissentients include professors of mathematics and the physical sciences as well as the humanities—though, in the teaching of these non-human subjects, the case of conscience would seldom arise directly. The twelve are to lose their posts; but the protest which they have made at the cost of this personal sacrifice will not have been in vain. The world has reason to be grateful to them for being faithful to the cause of intellectual liberty and intellectual honesty—a common cause which is always in jeopardy in bad times like these.

Cotton Trade Labour Problems.—Our Manchester correspondent writes:—There are no signs at the time of writing of any fresh action being taken with regard to the hours and wages question in the Lancashire cotton industry. The Master Spinners' Federation has, it will be recalled, decided to terminate the agreement of 1919 on December 31st, and the operatives have refused to negotiate a new agreement with the employers. The situation was considered by the General Committee of the Master Spinners' Federation at the end of last week, and it was decided not to make any further move in the matter. Everything points, therefore, to the old agreement being abrogated at the end of the year, and from the beginning of January the mills will work according to day-to-day agreements. It remains to be seen what will happen if any employers attempt to make special arrangements with their workpeople with regard to hours and wages. The agreement of 1919 provided for a reduction in working hours from 55½ to 48 per week, and also an increase in wages of 30 per cent. on list rates to compensate the workpeople for the shorter hours. From January 1st, therefore, should any employers persuade their operatives to work longer hours or at reduced wages, there will not be any technical breach on their part of an agreement with the trade unions. It may be admitted that the employers anticipate that firms in certain outside districts may be able to secure concessions in labour conditions from their workpeople. Such a development, however, if extended, would mean much irregularity and a certain amount of chaos. The operatives in the weaving branch have again had under consideration the more looms per weaver system. Although no particulars have been announced, it is understood that the Operative Weavers' Amalgamation is about to place certain proposals before the Cotton Spinners' and Manufacturers' Association. This system of more looms per weaver is growing steadily in Lancashire despite the opposition of the trade unions. More cases are also reported of sheds being reopened on special terms with the operatives, and manufacturing concerns who are members of the Manufacturers' Association, and who have to be loyal to the agreements with the trade unions, are feeling this outside competition rather severely.

Census of Production—Iron and Steel.—The first volume of the preliminary reports of the census of production for 1930 appeared, with commendable promptitude, as a supplement to *The Board of Trade Journal* for December 10th, and deals with the metal trades. The following table, compiled from the more detailed tables in the separate sections, shows the value of the net output (i.e., gross value less cost of materials and work given out to other firms) for each category, in 1924 and in 1930:—

	Net Output (000's omitted).		Net output per Employee.		Price, 1930, as percentage of 1924.*
	1924.	1930.	1924.	1930.	
Blast furnaces	5,257	3,882	195	204	71-77
Steel smelting works and rolling mills....	30,906	24,800	202	187	74-86
Tinplate.....	6,372	4,909	228	198	67-79
Wrought iron and steel tubes and fit- tings.....	5,382	5,347	217	221	73-83
Wire and wire manu- factures	6,029	4,082	243	200	70-80

* The figures here given show the range of price changes among principal classes included in each group.

Allowing for the fall in prices, the actual output, and still more the net output per employee, has been somewhat better maintained than most people would probably have expected. The decline in gross output is illustrated by the following table of certain of the most important products:—

	Total Output (In thousand tons).	
	1924.	1930.
Pig iron and ferro-alloys.....	7,359.8	6,186.3
Steel ingots, other than electric and crucible steel.....	7,715.6	6,882.0
Steel plates and sheets not under $\frac{1}{2}$ in.....	1,123.5	1,078.7
Tinplate bars.....	1,222.9	919.5
Sheet bars.....	891.0	737.9
Tinned plates.....	733.1	673.7
Wrought iron and steel tubes.....	406.9	449.4
Iron and steel wire.....	275.6	234.2

There is some evidence here that the depression has been more serious among the less fully-manufactured goods than among the more finished products. The output of wrought iron and steel tubes has actually increased, whereas the production of pig iron has fallen about 16 per cent.; and the output of tinned plates has fallen little over 8 per cent., whereas that of tinplate bars has declined by over a quarter.

Employment and the Cost of Living in November.—

Taking the country as a whole, there was a further slight improvement in employment during November. According to the *Ministry of Labour Gazette*, among insured workers in Great Britain and Northern Ireland the percentage unemployed on November 23rd was 21.4, as compared with 21.9 per cent. on October 26th and 18.9 per cent. a year ago. It is estimated that the number of insured persons in employment on November 23rd amounted to approximately 9,510,500—74,500 more than at the end of October, but 53,400 less than a year ago. The total number of persons registered as wholly unemployed on November 23rd was 2,070,442, as compared with 2,127,943 last month and 1,659,867 at the end of November, 1930. Those temporarily without work numbered 435,705—46,848 less than a month ago and 85,600 less than a year ago—while the unemployed among those usually in casual employment amounted to 108,968 at November 23rd, as compared with 115,596 in October and 105,288 last year. With regard to the cost of living, there was a seasonal increase during the month, and the index number of the Ministry of Labour stood on December 1st at 48 per cent. above the level of July, 1914, as compared with 46 per cent. on November 1st and 55 per cent. a year ago. For food alone the corresponding figures were 32, 30 and 41 per cent. respectively.

Benefit Rules and Unemployment Data.—The use of unemployment statistics to illustrate the movement of industrial activity in Great Britain has been somewhat hampered during recent weeks by the difficulty of distinguishing the effects upon the numbers of registered unemployed of changes in the regulations governing the payment of benefit. The Ministry of Labour now explains, in the current issue of its *Gazette*, that persons whose claims to unemployment benefit have been disallowed are entitled, and have certain inducements, to continue to register as applicants for work, and as long as they do so they are counted on the registers. If they do not continue to register, their books are removed into the "two months' file" and continue for two months to be included in the statistics. Thus the changes in benefit regulations which came into effect in November will not be reflected in the statistics until next January. The first date on which they could have influenced the numbers on the registers was November 23rd, and at that date the numbers had fallen by approximately 123,000 since October 19th. Of this decline, the Ministry of Labour attributes 68,000 to improvement in employment and 55,000 to the new conditions for receipt of benefit. No doubt the Ministry will furnish a similar estimate for the larger changes which are to be anticipated in January.

An Upper Silesian Failure.—Our Warsaw correspondent writes:—The depreciation of the pound sterling is ascribed as the reason for the "Huta Pokoj" (Friedenshütte) Company having this week made application for judicial supervision. In its application to the courts "Huta Pokoj" claims to have assets in excess of liabilities of more than 40 million zlotys (almost one million sterling at gold parity), but, of course, a considerable part of these assets are frozen. "Huta Pokoj" is one of the largest coal, iron and steel enterprises of Polish Upper Silesia, employing more than 6,000 workers when operating in full. This enterprise for the past three years has been one of the principal Polish suppliers of iron and steel products to Soviet Russia, which business has been done wholly on a sterling basis. The company's coal contracts with the Baltic and Scandinavian markets have likewise called for payment in sterling. Representatives of the Upper Silesian industry have been trying to persuade the Soviet authorities to meet their sterling bills at gold parity, but the Soviets have apparently refused to discuss such a proposal, because they claim to have suffered much more in London by the fall of sterling than they have gained through their Polish contracts. The Upper Silesian mills are hoping, however, to secure at least some postponement in the execution of the balance of their Soviet orders. If they were forced to complete them at the present depreciation of the pound, and with no means available at the moment for discounting the Soviet bills, no doubt other mills would be quickly forced to follow the example of "Huta Pokoj" in applying for court protection.

Norwegian Banking Troubles.—After three or four years of steady banking development, writes our Trondheim correspondent, the news to-day that two of our leading banks, Den Norske Creditbank and the Bergens Privatbank, had suspended their payments came like a bolt from the blue. One of our smaller banks, the Oplands Privatbank, also had to stop payments as from to-day. At a Cabinet meeting last night a resolution was passed, on the authority of the Bank Acts of 1924, granting the two former banks a three months' moratorium, during which the banks will have the necessary time to arrange for the continuance of their operations. A communiqué has been published to-day by each of the two banks, from which it appears that the step just taken is due chiefly to the present difficult conditions of trade and industry all over the world, aggravated by the setback from the protracted labour dispute in this country, and also—especially as far as the Bergens Privatbank is concerned—by the precarious position of the shipping industry. It is expressly stated that depositors need have no fear for their capital, and that their interests are fully safeguarded. Sufficient capital is also believed to be left to enable the banks to continue their widespread operations. The news seems to have caused no real anxiety among the public; conditions in the banks in Oslo, Bergen, and other cities to-day were quiet; and it is the general feeling that there is every reason to believe that these important banks will be able to restore confidence both abroad and at home.

Banking in Spain.—Our Madrid correspondent writes:—The new Banking Law, affecting principally the Bank of Spain, has been approved in spite of the protests of the national bank, and is now in force. The articles of the law to which the Bank of Spain principally takes exception are, first, that which increases the credits to be extended by the Bank to the State from 10 to 12 per cent. of the annual budget expenditure when the latter exceeds 8,500 million pesetas, and stipulates further more, that these advances must be made in gold or silver at the option of the Minister of Finance. The Bank points out that, under the conditions of Article 8, the transfer of gold to the Treasury in the form of advances makes them liable to a proportionately higher tax on the

December 26, 1931.]

circulation of bank notes, which they consider very unjust. In the second place, they strongly object to the article which transfers to the Government the right to fix the official rates for discounts and advances. As a matter of fact, the whole of the report of the Bank of Spain seems to be an insinuation that the new law is an abuse of power by the Government and that its respective stipulations are based on what is called over here "the law of the funnel," which may be translated as "heads I win, tails you lose." The protest has, however, come to nothing, and, apart from small modifications of detail, the fundamental principles of the law are being put into practice without delay. In an attempt to minimise the effects of the restrictions on commercial operations in foreign currencies which coincide with the beginning of the orange export season, the Bank of Spain has now agreed to discount the bills in foreign currencies which result from the export of Spanish products, the operations being effected through the intermediary of the Banco Exterior de España instead of direct with the central banking institution. This measure removes a serious difficulty from the paths of the private banks which have hitherto been compelled to sell their sight drafts to the Bank of Spain against their purchases of long bills in foreign currencies.

Overseas Correspondence.

UNITED STATES.

Budget — Wages — Railroads.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 11.

THE reaction of Wall Street to the Administration's programme for balancing the Budget is at best one of patient resignation. It feels that at least a beginning has been made and is happy to note that there is less attempt at Washington to live on the happy assumption that trade depression will soon be over. Nevertheless, most people would rather have seen even less optimism in that respect than plainly is entertained by the backers of the new tax and expenditure programme. In brief, the new taxes are based on the supposition that there will be only two more years of slow business, and that improvement will begin next year. Everyone would like to see this implied prophecy become a reality, but it is felt that taxation should be based on the opposite assumption, and even more so that Government expenditures should be so planned.

The essence of the opposition which has developed in Wall Street to the insufficiency of the Hoover programme is that it puts too little stress on reduction of expenditure. It does not attempt a completely balanced budget before the 1934 fiscal year, and in the next two years leaves virtually half the estimated deficits to be raised by Treasury borrowing. This, of course, acts as an invitation to Congress to spend money, on the assumption that, if a billion must be raised anyhow with new loans, a billion and a half might as well be found.

For all that, financial leaders believe that the country is at last so thoroughly alive to the seriousness of the situation that Congress will not dare to jeopardise Government credit by adding to the deficit, and that the worst excess of expenditure over receipts is over. The new tax Bill, as proposed, doubles the number of prospective taxpayers, and this, along with higher rates and special Excise taxes, will bring in about \$400 millions in the last half of the fiscal year ending June 30th next, and will produce about \$900 millions in the following twelve months. The deficit for the last fiscal year was \$903 millions. It is estimated at \$2,123,000,000 for the current year and at \$1,750,000,000 for the following year. If the new taxes yield according to the estimates they will cut down the

deficit to \$1,733,000,000 for this fiscal year and to \$497,000,000 for the next year. This reduction of the prospective deficit is to be accomplished to a greater extent by new Excise taxes than by higher income taxes. Articles affected include motor cars, radios and phonographs, bank cheques, telegraph and telephone messages, "transfers" and tobacco. Vocal opposition to the programme has already developed in Congress, directed partly against the nature of the Excise taxes and partly against the effort to cover so much of the deficit by taxes rather than by borrowing. When the smoke clears, however, it is likely that Congress, realising its responsibilities, may widen the Excise tax field.

President Hoover has put forward numerous and varied proposals. He would form a finance body, which he terms the Emergency Reconstruction Corporation, to take a loan from the Treasury and sell its own debentures and lend money to all sorts of industries in distress. This plan, while not particularly liked for itself, may prove, in the present state of public nervous disorder, to be a confidence restorative as was the National Credit Corporation, floated by the banks to help banks. If properly administered, it might have a soothing effect without too much expense to the country.

Wall Street, also, is hopeful that proposals to help the railroads by empowering the Interstate Commerce Commission to exercise more regulation over competitors such as water and motor transport may be adopted. It is not particularly sanguine of a change in the Federal Reserve Banking Act to widen the field for eligible paper, of which it approves, but which it does not think would be of much use in ending the business depression. Plenty of eligible paper is in existence; the trouble is insufficient trade activity to use credit which might be built upon it.

The December financing plans of the Treasury, as was expected, were confined to short-term issues. Subscriptions were asked for \$1,300,000,000 of six months' to one year obligations. In addition to maturities, the new financing will increase the public debt by a little over \$300 millions. The Treasury overdraft at the December 15 tax date will probably be from \$200 to \$250 millions, causing a temporary ease in the money market.

No decision has yet been reached at the meeting of labour leaders on wage cuts. Individual railroads are announcing their intention of reducing trainmen's wages by 10 per cent. if no voluntary agreement is arrived at; and it is still felt that, in order to obtain concessions, if not on the amount of the cut, at least on working rules, the unions will make a voluntary reduction, but the leaders, naturally, do not wish to be in the position of giving up without a struggle. In any event, the question of strikes is rather remote. Rules of seniority have placed the older men in most jobs, and they, also, are high in union offices. Their feeling is one of conciliation.

The Interstate Commerce Commission has suddenly withdrawn from its stand on freight rate increases. In answer to the proposal of the roads, which were prepared to accept the increases allowed a few months ago with the proviso that added revenues be turned into a pool and given to needy roads unable to cover interest charges, and that the pooled funds be lent instead of given outright, the Commission has withdrawn its insistence on the pooling plan. The roads have decided to establish this pool in any case, but on a loan basis; and the new and higher rates ought to be in effect early in the year. The new schedule may add \$100 millions in annual revenue, but it is of much less importance than lower wages. Railroad securities continue weak, with further dividend omissions, including that of the New York Central, which had paid dividends without interruption for over 60 years, but some help has been given savings banks and insurance companies through a recommendation of a New York State legislative committee that the law be amended to suspend the provisions as applied to this year of the State's legal requirements on bonds.

FRANCE.

Defeat of Electoral Bill — Bank's Sterling Losses — Revenue.

(FROM OUR CORRESPONDENT.)

PARIS, December 21.

THE proposal for the modification of the electoral system by what amounted for all practical purposes to the suppression of the system of "second ballots," and from which so much had been expected in regard to the pending general elections, resulted in a fiasco last week, when it was formally brought before the Chamber. The Government ranks, who were somewhat divided among themselves, showed little interest in the subject, when it was first brought before the Chamber last Wednesday, with the result that, in the preliminary skirmishing, the Socialist-Radical Opposition only just failed (by nine votes) to secure the positive rejection of the proposal. When the debate was continued, on the following day, the dislike of even Government supporters for the measure appeared to have been accentuated. After a spirited speech against the measure by M. Herriot, the Government proposal to fix the following Wednesday for a full-dress debate on the Bill was defeated by 234 votes against 228 (with no fewer than 124 abstentions, involving every party in the Chamber), so that the proposal may now be regarded as stillborn.

As the Government did not make the question one of confidence, this rather unexpected result has had no serious effect on their tenure of office. At the same time, the incident has had an unpleasant effect, and it is more than probable that only the uncertain general situation in respect of the German application for a moratorium has induced the Opposition to refrain from pressing their victory to a more serious conclusion. The whole matter may probably be explained by the fact that a good many supporters of the Government itself have not yet forgotten that M. Mandel, the prime mover of the measure, filled a particularly active rôle during M. Clemenceau's historic war Cabinet, which resulted in much heart-burning among members of a large number of politicians of widely differing parties. For the rest, on all essential questions the Laval Cabinet's situation apparently remains strong and unshaken.

The vote on the measure by which the State, through the Caisse d'Amortissement, will compensate the Bank of France for the diminution in the value of its stock of sterling exchange due to the abandonment of the gold standard by Great Britain, has been the subject of much comment in the French Press. On the whole, however, the step taken by the Government has been received with satisfaction by public opinion. The Finance Minister, M. Flandin, in his speech in the Chamber in regard to the Bill for the relief of the Bank of France, pointed out that, shortly before the stabilisation of the franc, M. Poincaré declared that "the State's stock of foreign exchange would remain at the bank, but that the State would receive the profits therefrom and also assume the losses." The Government's proposal to compensate the bank for its sterling exchange losses was a question of loyalty to the bank. From the moment when the State participated in the profits made by the bank, it was impossible to suggest that it should not participate in the losses.

Replying to Socialist criticisms of the Government policy and to the assertion that the bank had made a profit of "over 2,000,000,000 francs" from its exchange transactions, and that this was concealed under the heading of "sundries" in its balance sheet, the Finance Minister justified the policy pursued by the institution and admitted, for the sake of argument, that the profit from this source might be fixed at about 1,500,000,000 francs. M. Germain Martin, the present Minister's predecessor, pointed out that the accounts contained no entry in regard to this 1,500,000,000 francs, and asked if it were included under "sundries." M. Flandin retorted that possibly the bank would communicate direct to

M. Germain Martin its sundries account, but that for his part, in this delicate question of the relations between the bank and the State, he desired the bank to preserve its absolute independence in the management of its business.

The revenue returns for November, which were issued this evening, indicate total recoveries from all budgetary sources of 3,957,000,000 francs, of which 3,909,973,000 francs were from normal and permanent sources, as compared with 4,022,000,000 francs in November, 1930, and 4,113,898,000 francs in November, 1929. Indirect taxation and monopolies yielded 76,431,000 francs more than Budget estimates, against a deficit of 1,078,000 francs in October. Customs produced 44 millions more than in November, 1930, while the taxes on turnover tax were 70 millions, or about 10 per cent. lower.

GERMANY.

Price Reductions — Insolvencies.

(FROM OUR CORRESPONDENT.)

BERLIN, December 20.

THE latest quarterly report of the Institut für Konjunkturforschung gives a most gloomy economic forecast both for Germany and for the world. According to the report, Great Britain alone shows any signs of economic activity, and these are due to the depreciation of sterling. Everywhere else there has been a further setback, especially in the industries which manufacture producers' goods, which have been severely hit by the credit crisis. The markets for agricultural products, after a transitory rise, have also again become weak.

The Institut regards the paralysis of the credit markets as the primary cause of the continued deterioration in the economic position: "With the extension of the crisis to the credit and currency mechanism," says the report, "the world economic depression has entered upon a new and decisive stage. As long as this acute stringency and this 'strike' of lenders persists even in the creditor countries, there can be no improvement. All such price recoveries as have been seen in individual markets during the last few weeks can only be temporary, as long as stocks remain so excessive, unless they are supported by a simultaneous revival in consumption. Recovery can only set in when the liquidity of the credit apparatus is restored and an adequate supply of credit is ensured, and this has not yet been done, even in the creditor countries."

Great as is the importance of psychological influences, the Konjunkturinstitut does not regard the credit crisis purely as a crisis of confidence or even as a "chance accompaniment of the process of world economic liquidation." The Institut is of opinion that the world banking and credit system was still in a sound condition at the turn of the trade cycle, and that its position was only impaired, and confidence undermined, when the decline in the prices of goods on the world markets brought about a depreciation in the foundations upon which credit is based.

According to the Institut, the decline of activity in Germany has accelerated during the last few months. Unemployment has increased, apart from the seasonal movement, and the Institut lays special stress on the fact that the consumption of rolled iron has been halved since July. The consumers' industries are in a somewhat better position, and "this is in part attributable to the fact that the greater the lack of confidence in the money and credit system, the more savings are devoted to consumption."

The reduction of 10 per cent. in the maximum price of coal, which was introduced by the emergency decree, has now been followed by an average reduction of 10 per cent. in the iron industry. The industry proposes at the same time to effect a further reduction for those customers who can prove that they never buy iron from works outside the German iron syndicate, which means in practice that the use of foreign iron is to be discouraged. The reduction in the price of iron is probably less than the users and the authorities had hoped for.

The Price Supervisory Commissioner, who was appointed under the emergency decree to effect reductions in the prices of the necessities of life, has given his first attention to the prices of bread and meat, and has achieved substantial reductions in several towns. He has met with greater opposition in respect of the charges of public utility undertakings, as these are for the most part owned by local authorities, whose financial difficulties are intensified by any reduction. The reduction of tramway fares is being facilitated by the Reich, which is itself assuming part of the loss by exempting the tramways from the transport tax.

Negotiations are also proceeding with the Post Office for a reduction of its charges. Such a reduction is being demanded by the public with especial insistence, as the State Railways, simultaneously with the publication of the emergency decree, reduced their rates, especially rates for goods in the higher classes, for which road competition was particularly serious. There seems, however, to be resistance in influential quarters to the reduction in postal charges, as the increased profits from the Post Office which are to arise from the reduction in official salaries were included in the latest Budget estimates.

One of the oldest industrial undertakings in Germany, the Maschinenfabrik A. Borsig G.m.b.H. of Berlin-Tegel, has had to announce its insolvency. The firm is almost a hundred years old and was one of the earliest firms to whom Germany owes her position among the industrial countries of the world. The Maschinenfabrik Borsig constitutes only a part, albeit the most important part, of the Borsig concern. At the head of the group is the Handelsgesellschaft Borsig, which holds all the shares of the now insolvent company and also all the shares of the Borsig-Werke A.G. in Upper Silesia, and shares of the Borsig-Lokomotiv-Werke G.m.b.H. 40 per cent. of the Borsig-Lokomotiv-Werke G.m.b.H. The last-named was only founded a few months ago, when the A.E.G. took 60 per cent. of the shares of the Borsig Lokomotivfabrik for 7½ million marks and thereby relieved Borsig of a financial burden. The Borsig-Werke A.G. in Upper Silesia has large ironfoundries and coal mines. Nothing is known of its financial condition, but there is no doubt that, in common with the rest of the mining industry of Upper Silesia, it has been severely hit by the crisis. The financial position of the now insolvent Maschinenfabrik Borsig has not yet been made known to the public. As the company has never published balance sheets, its financial structure is not known. There are rumours of debts of some 20 millions. The principal creditor is the D.D. Bank, whose recent refusal of a supplementary credit of 200,000 marks was the final inducement to the declaration of insolvency.

Borsig's financial difficulties are of long standing. Political, technical and personal conditions have led to the decline of the house. After the war, Borsig, like Krupp's, which, though much larger, was also constructed as a purely family undertaking, underwent a complete technical transformation upon the cessation of army orders, which had played a very large part in its business. This transformation was, however, far less successful than that of Krupp, owing in part to the partition of Upper Silesia, and in part to the weakening of the domestic market, and in part to inadequate leadership. In the end, the Maschinenfabrik Borsig was only producing 20 per cent. of its output for the German market, and of the other 80 per cent. half went to Russia. The crisis in the world market was therefore particularly devastating to this firm, and the fact that the Borsig brothers obstinately insisted on keeping it a family business and refused to turn it into a joint stock company meant that the opportunity of financial reconstruction, during the years when capital was easier to obtain, was allowed to slip. Negotiations with the banks and other creditors are now in progress with a view to maintaining the firm in existence. It still has Rm. 12 millions of unfulfilled orders on its books.

Two other large industrial undertakings have declared themselves insolvent this week. One is the Hannoversche Maschinenbau A.G. (Hanomag), which wrote down its capital from 14 to 8.74 millions last July. In this case also the crisis was rendered acute by the refusal of the

banks to grant fresh credits. Since, like Borsig, it sold its locomotive works, a few months ago, its principal activity has been the production of small cars and agricultural tractors. The third big engineering failure this week was that of the firm of Adolf Bleichert and Company of Leipzig, about half of whose share capital is held by Fette and Guilleaume of Cologne. This company also has an international reputation and the Saxon State Bank Adka is trying to keep it afloat.

HUNGARY.

Moratorium — Politics — Finance — Exchange Rationing.

(FROM OUR CORRESPONDENT.)

BUDAPEST, December 19.

THE transfer moratorium on Hungary's frozen short-term debts and the interest and amortisation service of her foreign obligations, so it is rumoured, will be declared by the Government on Wednesday, December 23rd. It is certain that the service of the League Loan of 1924, both interest and sinking fund, amounting to some 30 million pengő, will be met in foreign exchanges as and when due, and in all probability other State obligations will have priority over private debts.

During the debate on the League Report in the Upper House, both the rapporteur, Dr. Egry, and Dr. Teleszky, the chief financial adviser to the Government, have paid high tribute to the comments of the *Economist*, the former having quoted the editorial view taken on November 7th as justifying his thesis that a poor debtor nation cannot meet the nearly 300 million pengő annual service of her foreign debts by producing a corresponding merchandise trade surplus at a time when exports are falling and markets are barred. The latter fully endorsed the figure of 100 million pengő mentioned in these columns on December 12th as the maximum sum for which Hungary could obtain foreign exchange, out of a merchandise trade surplus, for the service of her foreign debt in the next year. Closing the debate of the Upper House, Count Károlyi, the Prime Minister, again emphatically declared that Hungary will not inflate, and that the safeguarding of the stability of the currency will be his chief endeavour. The Government's position was greatly strengthened by the acceptance by Baron Korányi of the portfolio of Finances, which had not been filled since August, owing to the reluctance of parliamentarians and financiers to take responsibility for the drastic measures needed to preserve the basic financial structure of the country. Baron Korányi assumed a thankless job, but his prestige and his experience as Finance Minister in 1919 and in 1924, when he collaborated with the League authorities, affords good reason to hope that he will be able to deal with the situation.

The monthly statement of the Treasury for the first four months of the financial year disclosed a revenue of 292.1 million pengő and an actual expenditure of 306.3 million pengő, leaving a deficit of 74.2 million pengő. In addition to the deficit, advances of 19.4 million pengő were made by the Treasury, of which 10 millions were to the State railways, 4.4 million pengő to the State ironworks and 5 million pengő to other purposes. The budget of the State undertakings shows in the same period a revenue of 197.4 million pengő and an actual expenditure of 183.7 million pengő, leaving a surplus of 3.7 million pengő. The deficit on the Administration Budget was met from the proceeds of loans amounting to 126.1 million pengő, in which the French loan of 354 million francs contracted in the form of one-year Treasury Bonds is included. The cash position of the State Administration at the end of October shows 75.8 million pengő. As the November receipts were greatly in excess of the estimates and of the actual expenditure, the budgetary position is much better now than it was expected to be a month ago. The new Finance Minister has already declared that he will cut down expenditure, as he fully realises that the depressed

economic conditions make impossible any recourse to further taxation to fill the budgetary deficit.

The National Bank has issued an interesting statement of its policy of foreign exchange rationing since the control of all transactions in *divisen* was assumed by the Bank. Between August 1st and December 9th the Bank obtained from the proceeds of the Treasury Bonds (in August) 87.7 million pengö, from the surrender of private holdings 15.8 million pengö, and from export *divisen* 53.8 million pengö; scarcely 150 million pengö in all. Therefrom the bank allowed 90.5 million pengö for the payment of interest and amortisation of foreign debts, 38.5 million pengö for merchandise imports, and about 1.8 million pengö for other purposes. These figures clearly demonstrate that the National Bank did its utmost to meet the payments due on Hungary's foreign debt, even at the expense of the vital interests of the production and trade of the country. In view of the fact that the total gold and foreign exchange of the bank on December 15th amounted to 117 million pengö, the holding which is absolutely essential as cover for the note circulation of 350-450 million pengö, it is obvious that the declaration of the transfer moratorium could not have been longer delayed.

ITALY.

Istituto Mobiliare — Bank of Italy — Trade.

(FROM OUR CORRESPONDENT.)

TURIN, December 14.

ON December 5th the first meeting took place of the promoters of the new Istituto Mobiliare Italiano, all of them representatives of public departments, public bodies and savings banks. Subscriptions to capital amounted to 550 million lire, instead of the statutory 500 millions. Directors will not receive fees for their work, and will not contract any personal liability in consequence of their administration. They will only be responsible for the execution of their mandate, which probably means that directors, being mostly public servants or nominees of public bodies, will be responsible for the faithful carrying out of orders of their constituent bodies. At the subsequent first meeting of the board of directors, Signor Mussolini pointed out that the aim of the Institute is not the salvage of worthless organisations, but aid to sound economic firms which have been shaken by the crisis. No catastrophic revolution in the economic structure of Italian companies is contemplated. Senator Mayer, the chairman, enlarged on this topic, insisting that nobody aimed at introducing, under the cloak of the Institute, socialisation of industry. The Institute will not accept responsibility for transactions or mistakes prior to its birth, and is to maintain absolute independence of private interests.

These statements were aimed clearly at reassuring public opinion against misgivings about excessive State intervention in business life and the possibility of the Institute's taking excessive risks in its long-term operations. The Banca Commerciale seems thus to have been only an incident in promoting the creation of a body whose scope is much larger. From a passing hint of Senator Mayer it may be supposed that the State will give its guarantee to all debentures issued by the Institute. It would have been difficult, indeed, to issue successfully two sorts of debentures, as the non-guaranteed series would have been deemed by the public as of inferior standing and not so desirable as the guaranteed. Senator Mayer hopes at the same time that the Institute will never be obliged to call upon the State to make good its guarantee.

The changes in the balance sheet items of the Bank of Italy after the suspension of the gold standard in England are important, but limited to gold reserve and discounts and advances. The appreciable increase between

September 20th and November 30th of the gold reserve by 218.3 million lire has been offset by the diminution of the foreign bills and securities reserve by about one milliard lire. The resulting decrease in the *total* reserve is 746.7 million lire, not an excessive price to pay for the maintenance of the stability of the lira. Speculations are keen as to the loss sustained by the Bank of Italy on account of sterling reserves held on September 20th and as to the amount of sterling bills sold in the meantime; but the Bank is keeping its own counsel.

The counterpart of the decrease in the gold reserve is not to be sought in a decrease of current liabilities, as the total of notes issued, plus State and private deposits, including all categories of State current accounts, is unchanged. The proceeds from gold reserve sales were used in the internal market, increasing discounts and advances by 892.4 million lire. As, however, during the past year, between the same dates, gold reserves also decreased by 502.5 and discounts and advances increased by 507 million lire, it may be that the increase of internal discounts and the reduction of foreign assets are due to ordinary seasonal influences. It looks as though the circulation had reached bottom, and the situation requires most careful handling of credit policy by the Central Bank, especially as the ordinary banks seem to be more dependent on the Bank of Italy than they used to be. If the note issues are to be kept at the present level the influence of the Central Bank should therefore be exercised in favour of credit restriction. The task is not at present very difficult, as the financial requirements of the market are not heavy.

The wheat quota system established by a decree of June 30, 1931, providing that wheat flour should contain only 5 per cent. of foreign wheat, raised the internal wheat price, which rose from 750 to about 1,000 lire per ton. A new decree of October 22nd therefore increased the permitted quota of foreign wheat from 5 to 25 per cent. The Italian Press is making no fuss about the new British Customs duties on imports. According to Italian statistics imports from Great Britain were 1,821.2 million lire in 1927, 1,777.2 in 1928, 2,089.6 in 1929, and 1,673.3 in 1930; exports to Great Britain 1,527.6 in 1927, 1,399.1 in 1928, 1,459.6 in 1929, and 1,185.4 in 1930. For the first seven months of 1931 imports were 761.7 million lire and exports 725.3 million lire. The most important item hit by the new British duties is leather gloves, of which 56 million lire worth were exported to Great Britain for the first eight months of the year.

Nobody suggests that contraction of foreign trade is good; but some consolation is drawn from the fact that imports decreased in the first ten months from 14.9 in 1930 to 9.9 billion lire in 1931, or 31 per cent.; while exports decreased only from 10.1 to 8.2 billion lire, or 18 per cent. As the average price of exported goods was reduced from 19.7 per cent., it appears that we were able to sell only a slightly increased quantity. The trade deficit decreased, therefore, from 5.5 billion lire in the first ten months of 1929 to 4.3 in the corresponding period of 1930 and 1.7 in 1931. As the invisible exports, however, were certainly not entirely wiped out, it appears as though the international current payments account will balance in 1931. If, therefore, the gold reserves are declining—the decrease in total reserves was from 9,624.8 million lire at December 31, 1930, to 7,987.5 at November 30, 1931—the causes are to be sought elsewhere. That exporters are depositing in foreign banks part of the sums due to them is improbable, as their need of funds is great and their unfortunate experience with sterling assets has made everybody shy of foreign investments. A few currents of capital export toward France and Switzerland persist; but they are subterranean and very slight, as foreign exchange regulations are strict and strictly enforced. Exchange is sold only on presentation of invoices and of customers' or other documents stating that the goods to be paid for have been already received. The most likely explanation is that foreign deposits have been recalled, forcing the Central Bank to sell exchange against discount of internal papers.

CZECHOSLOVAKIA.

Unemployment — Exchanges — Commercial Relations.

(FROM OUR CORRESPONDENT.)

PRAGUE, December 15.

THE number of unemployed in Czechoslovakia rose to 336,874 in November, which is 33 per cent. more than in the preceding month. The method of computing these figures is said not to be up to date, and their accuracy is being challenged on the ground that seasonal workers, who are normally unemployed at this time, are included. To alleviate unemployment the Minister for Social Welfare has put forward a Bill to curtail working hours from 48 to 40 weekly. This Bill is being opposed by industrialists, who point out that with employment as uneven as it is at present such uniform reduction would be difficult to put into effect and would also increase the cost of production. As Czechoslovakia adheres to the principle of monetary stability, these steps would not be in harmony with her general line of policy, especially with regard to the price level. The establishment of a State Unemployment Fund is also proposed by the Minister.

Those industries which are dependent on exports are the greatest sufferers. The export trade everywhere encounters insuperable obstacles in the shape of tariff duties or foreign exchange restrictions. It suffers in the first place through the way in which foreign exchange abroad is apportioned and through the means by which payments for exports are made impossible. In this respect a clear arrangement has been concluded with Austria and an agreement with Hungary is being negotiated. On the other hand, the competition of countries with depreciated currencies as, for instance, that of British woollens, is keenly felt. Under these conditions it is probable that Czechoslovakia will have to adopt some form of rationing of foreign exchange and to make still stricter her system of import licences.

Home consumption has diminished as a result of the reduction of the buying power of the consumer, which has been further lowered by the reduction of salaries and wages of public employees on the one hand, and by the raising of the income tax on the other. A general drop in sales and production is noticeable in the heavy iron and engineering trades; out of the twenty-seven blast furnaces only eight are working. A considerable decline of dividends may therefore be expected.

The foreign exchange restrictions lately introduced are showing, in one sense, favourable results. The adverse flow has been stopped and the supplies at the National Bank have risen. The money market is fairly stringent. The banks and other financial institutions are trying to keep larger cash reserves, but deposits, although irregular, are showing an upward tendency. The Bourse has been inactive, both in gilt-edged securities and in shares. The Stock Exchange index dropped further in November and reached the lowest level for years. An unusual decline was registered in the Skoda Works shares and the Hungarian gold rente, and other industrial shares have been very low. The prices of commodities have been declining further; the wholesale price index in gold fell at the end of November to 104.3.

The Ministry of Finance, in their efforts to find new revenue, propose to raise the match and lighter tax. All offices have been given strict orders to effect economies in the current year. The negotiations to raise a new French loan have reached an advanced stage. If they are brought to a successful conclusion, a considerable relaxation on the money market may be expected, and business interests would expect a reduction of the discount rate, in the hope that that would lead to a general reduction of rates. The negotiations with Hungary for a new commercial treaty continue and it is hoped that they may be concluded before the end of this month.

SWITZERLAND.

Industrial Depression — Wage Reduction Proposals.

(FROM OUR CORRESPONDENT.)

GENEVA, December 10.

THANKS to the fact that she is not over-industrialised, Switzerland remained untouched by the economic crisis longer than other countries, but she is now in the grip of it, and conditions seem to grow worse week after week. Trade and industry are equally hit by the slump, and the situation has grown much worse in the watchmaking, textiles, machines and hotel industries. Several big watchmaking factories in the Jura region and Geneva are now closing down; one of the oldest silk weaving manufactures in Zurich has gone bankrupt; one of the most ancient and reputed machine factories in Zurich is now in difficulties and has obtained from the Court a moratorium for the payment of its dividend and other debts, and it is now being reorganised on a new basis; many textiles manufactures in Eastern Switzerland have been closed and several others are in a difficult position.

These difficulties are due, on the one hand, to the general slump in foreign trade, and, on the other hand, to the drop in sterling value and other currencies. The crisis is serious in the hotel industry, and it is probable that the coming winter season will be a bad one despite the reductions and facilities offered to foreign visitors by the Swiss railways, though Swiss hotel keepers have agreed on a reduction of from 10 to 20 per cent. in their pension prices. It is hoped that these measures will help in minimising the effects of the crisis in the tourist industry, which is so seriously hit that a number of hotels will not be opened during the winter, and that it was at one time suggested that the train service on some mountain railways should be stopped.

Switzerland is feeling the effects of the crisis all the more, as, owing to the comparatively high production cost of her products, she finds it hard to compete with other countries on the international market. Prices, generally, are high in Switzerland, mainly in consequence of Customs duties and taxation, on the one hand, and of transport rates and wages, on the other hand. This is shown by the fact that the cost of living index was 149 (1913 = 100) in September, compared with 145 in Britain, 134 in Germany, 131 in Italy, and 122 in France, and that the wholesale index (1914 = 100) was 106 in September.

A sensation was created here the other day when M. Musy, chief of the Federal Finance Department, boldly stated in public that the moment was coming when it would be necessary to agree on a general reduction of wages and salaries. That statement was welcomed by employers in general and by taxpayers, who are of opinion that taxes might be reduced when the salaries of State officials have been lowered. It met with a cold reception at the hands of workers and employees, who think that a reduction in their wages would not be followed by a drop in the cost of living. M. Musy has not yet made any definite proposal, and his statement should be regarded as a *ballon d'essai* for the purpose of sounding the country's feelings. Should some definite proposal be made by the Government, it would meet with the opposition of the Socialists and syndicates, and might be the beginning of a period of unrest. On the other hand, any independent and impartial person will agree that a general reduction in salaries should be the beginning of a reduction in the cost of living; it would enable the Federal Government to lower transport rates on the railways and postal charges, and it also should induce it to lower the Customs barriers, which are heavily handicapping trade and industry.

It is, moreover, felt that a reduction in salaries would have a great influence on Cantonal and Communal finances, and consequently on taxation, as the wages bill is a heavy burden for all Cantons. Should the crisis grow worse, the Government might be compelled to bring about in the near future a reduction of salaries and pensions in order not to endanger the financial situation of the country, and to ease the very serious condition of trade and industry.

CANADA.

Agriculture — New Loan — Trade — Business.

(FROM OUR CORRESPONDENT.)

OTTAWA, December 1.

THE West has had low temperatures, but in Eastern Canada livestock in many places is still out of doors, and the farmers have been able to make great headway in their autumn cultivation. Farmers in the West are for the time being greatly discouraged about the downward trend of wheat prices, with which the fall in sterling is principally credited. Thanks to the fact that navigation on the St. Lawrence will close in the near future, there have been heavy shipments of grain out of Montreal in the past fortnight. According to the Bureau of Statistics the stocks of Canadian grain in store in Canada and the United States amounted, on November 20th, to 182,330,072 bushels, a gain of 8,000,000 bushels over the previous week, but 22,000,000 bushels below the figure for the corresponding date in 1930. There has been some discussion in the Press about the suggestion that the Canadian Government intended to ask that any preference granted by Britain to Canadian products should only be made available to such as were shipped direct from Canadian ports, the object being mainly to divert to St. John and Halifax shipments of Canadian grain now made out of American ports like Boston and Baltimore; but, judging by the attitude of the *Montreal Gazette*, this proposal is not popular in Montreal for, if carried into effect, it would invite reprisals from the United States which would deprive the port of Montreal of the substantial export trade in American grain now enjoyed by it.

Tariff developments in Great Britain are being followed with keen interest in Canada, but no tangible results are anticipated until the Imperial Economic Conference meets. However, in some quarters the view is advanced that the emergency tariff, with its preferences for imports from the Dominions, may induce more American manufacturers to cross over into Canada, and the United Typewriter Company, which has been the assembling and distributing organisation in Canada for the Underwood Typewriter Company, has announced its intention of building a plant in Canada to produce for its British market.

The past week has witnessed the successful flotation of the Dominion of Canada National Service Loan. It was offered to the public in bonds of five and ten years, the former at 99 and the latter at 99½, giving a yield of rather over 5 per cent. to the investor. The Government has had the satisfaction of being able to make a complete success of this loan. The books were opened to the public on November 23rd, and by the end of the month, thanks largely to heavy subscriptions from the United States and applications of \$5,000,000 each from the Canadian Pacific Railway Company and the Sun Life Insurance Company, the limit of \$150,000,000 which had been set for the loan had been reached. However, Mr Rhodes, the acting Finance Minister, announced that the books would be kept open until November 30th in order to permit people who had been holding back their subscriptions until the end of the month so as to get interest on their savings accounts for the full month, to have an opportunity of subscribing. It is now predicted that the total amount of the applications will be near the 200 million dollar mark, and the Government, in view of the continuing shrinkage in revenues, will probably accept the whole sum offered.

The latest trade returns for October continue to make very depressing reading, and the following are the figures, with the corresponding data for October, 1930:—

	October, 1930.	October, 1931.
Imports	78,358,351	45,932,572
Exports	82,781,428	55,537,917

There was thus a favourable balance of trade of, roughly, \$10,000,000, and the decline in imports has been pro-

portionately greater than that in exports. Trade figures recently published in Washington give evidence of a tremendous curtailment of the trade exchanges of Canada and the United States as a result of their high tariff policies. In the fiscal year ending June 30, 1931, American exports to Canada and Newfoundland were valued at \$530,000,000, as compared with \$830,000,000 in 1930 and \$999,000,000 in 1929. Imports from Canada and Newfoundland showed a smaller shrinkage, and the respective figures for the same three years are \$334,000,000, \$487,000,000 and \$516,000,000.

The Government is, despite the imminence of the Imperial Conference, apparently bent upon anticipating it by further trade treaties with the other Dominions. At any rate, arrangements have been made that, presuming the Forbes Ministry is returned to power at the general election on December 2, Mr Stevens, Canada's Minister of Trade and Commerce, and Mr Downie Stewart, New Zealand's Minister of Finance, will set forth simultaneously and meet in Honolulu in order to carry on by personal discussion the negotiations for a new trade treaty which were renewed last summer. The Government has also arranged for a ship called "The New Northland" to leave Halifax on January 8th on what is styled a Canadian trade exhibition cruise to the West Indies, the enterprise being an effort to increase the interchange of products between the Dominion and the British West Indian Islands.

General business conditions show if anything a slight recession. The car-loading figure for the week ending November 21st at 53,164 cars shows declines of 2,801 cars and 7,182 cars respectively from the figures for the previous week and the corresponding week of 1930. An analysis of car-loading statistics made by the Bureau of Statistics after adjustment for seasonal variations shows that loadings are currently 21 per cent. below normal, and the usual autumnal upturn, which ordinarily reaches its peak about the end of October, failed to materialise this year. The continuance of mild weather, while it has helped the unemployment situation, has retarded the sale of winter seasonal goods, and both wholesale and retail merchants report business as dull and requiring stimulation by special sales. New building construction is at a low ebb, and the value of building permits authorised in 61 cities during October was only \$8,718,402, a decline of 31.7 per cent. compared with October, 1930. The value of permits for the first ten months is substantially lower than the average for the ten-year period 1930.

Manufacturing industry remains very uneven, and, while some industries are profiting by the exchange situation, which gives them substantial extra protection against American imports, others are working well below capacity. The industries engaged in the production of goods like food and clothing for direct consumption are faring best, and the equipment industries are suffering most. The index of employment in manufacturing stood on November 1st at 88.8, as compared with 104.6 and 117.2 on November 1, 1930 and 1929, respectively, and is at its lowest point since November 1, 1921. Liberal papers are quoting these statistics to draw the moral that the high tariff policy of the Ministry has not restored prosperity to industry and has aggravated unemployment. The newspaper industry showed some improvement in its export figures in October, but its difficulties are still serious. However, hopes are entertained that conferences which have been taking place once more in Montreal between leaders of the industry will result in a merger of most of the leading companies, which will make possible great operating economies.

On December 1st, in accordance with legislation passed at the last session of the Canadian Parliament, the Mint at Ottawa, which has for years been operated as a branch of the Royal Mint in London, passed under the control of the Canadian Government. No change is being made in its methods of operation or staff, but the latter now become members of the Canadian, instead of the British, Civil Service.

IRISH FREE STATE.

British Tariff — Transport Legislation — Drumm Battery.

(FROM OUR CORRESPONDENT.)

DUBLIN, December 12.

THE Anglo-Irish Treaty has now been in operation for ten years, and on the whole both parties have every reason to be satisfied with its results. The Treaty has been modified in one or two respects, but on each occasion the modification has been made with the fullest consent of both parties. The letter and the spirit of the agreement have been scrupulously observed by Great Britain and the Free State, and the relations between the two countries have been uniformly friendly and cordial. The proposed amendment to the Statute of Westminster caused a certain amount of alarm, but the threatened dangers were avoided by the correct and sensible attitude of the British Government. It is impossible to be blind to the fact that the coming general election in the Free State may possibly create a difficult situation in respect of some of the clauses of the Treaty, but it may perhaps legitimately be hoped that the closeness of the economic and financial ties between the two countries concerned will stand in the way of mutual forbearance and underdictate the necessity of the delicate issues that may arise.

The adoption by Great Britain of measures which are protective in effect if not in intention has naturally aroused the keenest interest in the Free State. It is not perhaps sufficiently realised that, not only is Great Britain the Free State's best customer, but also that the Free State has proved to be the largest market in the world for British exports this year. The fiscal policies of two countries so situated cannot be a matter of indifference to each other. The fact that the Abnormal Importations Act contains no provision for drawbacks may have important repercussions on the re-export trade to the Free State, and it is possible that direct trading with Continental exporters may be one result of the anti-dumping measure. Moreover, the British wheat quota scheme, in so far as it raises the cost of production of flour in England, may assist the Free State mills. The protection which has been so clamorously demanded for the flour-milling industry may be thus afforded as the result of the change of policy in Great Britain. Farmers are naturally anxious regarding the further measures that will be taken to protect British agriculture. Will cattle and dairy products be protected, and, if so, what degree of Imperial preference will be allowed? These are questions of vital importance to the Free State.

Two Bills dealing with the transport problem have been introduced in the Dail by the Government. The first, which deals with road transport, provides that all passenger road services must be licensed by the Minister for Industry and Commerce. The Minister has complete discretion to grant or refuse a licence having regard to the adequacy of the existing services and the equipment of the applicant. Conditions may be imposed respecting the terminal points, the frequency of services, and the type of vehicle used. In granting licences the Minister will give preferential treatment to applicants who propose to employ Free State labour in the construction or repair of vehicles. Existing services will not be refused licences except when it can be proved that they are inadequate or inefficient. The right to fix maximum charges for new and existing services is conferred on the Minister.

The second Bill deals with rail transport. The Minister may modify the statutory minimum services required of baronially guaranteed railways, or may dispense with such services altogether if satisfactory alternative means of transport are available. The number of directors of the Great Southern Railway is to be reduced to eight. The running of road services by the railways is declared to be an ancillary or secondary function of their business, and is thus taken out of the control of the Railway Tribunal. The result of these two measures will be to rationalise passenger transport in the Free State, by restricting unreasonable cut-throat competition by mushroom bus companies and by increasing the competitive power of the

railway companies on the roads. The question of the road transport of goods, which has become so pressing in recent years, is not affected by these Bills, and still awaits solution.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

(It would be a convenience to our readers if publishers would make a point of notifying us of the prices of books sent for inclusion in this column.)

Nationhood for India. By Lord Meston. (London) Oxford University Press, Warwick Square. 5s. net.

The author's object in this very readable little book is to furnish "a certain amount of intelligible material . . . to those who, though not intimate with Indian conditions, wish to follow with understanding the coming changes in the Indian scene."

Survey of American Foreign Relations, 1931. By Charles P. Howland. (London) Oxford University Press, Warwick Square. 28s. net.

Section I. of this very valuable volume is devoted to relations with Mexico, which are considered in great detail against an historical background; Section II. to the armaments limitation question; and Section III. to post-war financial relations.

Archiv für Eisenbahnwesen, November-December, 1930. (Berlin) Verlag von Julius Springer.

This number contains the concluding article of the series by Dr. Merkert on price formation in transport industries. There are also articles on State supervision of the Reichsbahn, and on the Reichsbahn pensions and insurance systems.

Bulletin of the National Association of Wool Manufacturers, October, 1931. (Boston) National Association of Wool Manufacturers, 80, Federal Street. 50 cents.

A quarterly bulletin containing woollen news and statistics of the United States and other countries.

International Labour Review, November, 1931. (London) George Allen and Unwin, Ltd., 30, Museum Street. 2s. 6d.

Includes an article by G. de Michelis on "A World Programme of Organic Economic Reconstruction."

Oil Facts and Figures, November, 1931. Compiled and published by Fredo. C. Mathieson and Sons, 16, Copthall Avenue, London. 1s. 6d.

A convenient pocket tabulation of the financial results of oil companies, which shows also the area of their territory, the number of wells, and the number of wells producing.

Club Accounts and their Control. By Harold Tansley Witt. Second Edition. (London) Gee and Company (Publishers), Limited, 8, Kirby Street. 5s. net.

A little book which should be useful to all club secretaries.

Deutschland und die Weltwirtschaft. By Gregor Bienstock. (Berlin) J. H. W. Dietz Nachf.

An attempt to show Germany's place in a cross-section of world economy.

Rubber Facts and Figures, October, 1931. (London) Fredo. C. Mathieson and Sons, 16, Copthall Avenue. 2s.

A useful pocket collection of statistics.

Annali di Economia. (Milan) Università Bocconi Editrice.

A treatise on the war-time and post-war history of the German mark.

A Register of Civilian Aircraft. Compiled by W. O. Manning and R. L. Preston. (London) Sir Isaac Pitman and Sons, Ltd., Parker Street, Kingsway. 2s. 6d. net.

European Exchange Tables. By L. S. Dee. (London) Gall and Inglis, 13, Henrietta Street. 2s. net.

A useful "ready reckoner" of sterling equivalents in the principal European currencies.

India Chamber of Commerce Calcutta. Annual Report of the Committee for the year 1930. (Calcutta) Indian Chamber of Commerce, 135, Canning Street.

New York Insurance Report. Part I. Joint Stock and Mutual Fire and Marine Insurance Companies, Lloyds and Inter-Insurers. (New York) Insurance Department.

The report for the year ended December, 1930.

The Stock Exchange:

THE OIL POSITION.

THE experience of recent months has been discouraging to those who have regarded effective international co-operation in the oil-producing industry as a practical proposition. It might have been thought that, if anything could have brought about such a development, it would have been the disastrous conditions of this year, when crude oil in America has been almost given away. Strenuous efforts have, in fact, been made to bring producers of all countries into line on a restriction policy, but they have always ended in complete failure.

Estimates of world production this year, which have been prepared by Mr Garfias, the foreign manager of the Cities Service Oil Company, show that three-quarters of the decline in the production of the United States has been offset by an increase in the production of Russia and Roumania—a striking commentary on “the futility of trying to remedy world-wide conditions in any commodity by controlling only a few of the sources of supply.” If the estimates of Mr Garfias are correct, there will be only a slight decline in world production this year:—

	(000's omitted.)		
	1930.	1931.	Change.
United States	Barrels. 898,000	Barrels. 856,000	- 4.7
Russia	135,165	158,000	+ 16.9
Venezuela	137,675	118,000	- 14.3
Roumania	41,680	48,000	+ 15.2
Persia	45,420	47,000	+ 3.5
Dutch East Indies ..	40,150	39,000	- 2.9
Mexico	39,530	34,000	- 14.0
Colombia	20,346	18,000	- 11.5
Peru	12,458	11,500	- 7.7
Others	48,300	49,500	+ 2.5
	1,418,724	1,379,000	- 2.6

The big international oil combines have always declared their willingness to enter into a world restriction scheme. Mr Kessler, of the Royal Dutch-Shell group, propounded an elaborate scheme this year for grouping producing countries into five, allotting quotas and penalising those who produced in excess of their quota by a cash payment, which would be pooled and distributed to those producers

INTERNATIONAL OIL GROUPING.

BASIS OF PARTNERSHIP IN ROYAL DUTCH-SHELL GROUP IS 60 PER CENT. TO ROYAL DUTCH AND 40 PER CENT. TO SHELL TRANSPORT.

December 26, 1931.]

who kept within their quotas. This plan found little favour in America. A conference of American oil producers at Tulsa, Oklahoma, in November put forward an alternative “world stabilisation scheme” which contained the following provisions:—

- (1) The limitation of American production by inter-State compacts;
- (2) The curtailment of foreign imports into the U.S.A. to 140,000 barrels daily;
- (3) An absolute embargo on the imports into the U.S.A. of refined oils;
- (4) The curtailment of production of American-owned foreign fields;
- (5) The limitation of foreign production by international treaty.

It was understood that the Royal-Dutch-Shell and Anglo-Persian-Burmah Oil groups were prepared to collaborate by restricting production in Burma, the Dutch East Indies, Persia and Iraq. The independently-minded American companies operating in Venezuela, however, were opposed to any scheme which prohibited the free entry of their oil into the American market. Due account should, of course, be taken of the anxiety of producers outside the big oil combines to secure an outlet for their surplus production. This may explain why the restriction agreement in Roumania was broken by the Steaua agreement in Roumania was broken by the difficulties encountered in the restriction movement in America.

It was pointed out recently in a report of a well-known Stock Exchange firm that it is a common fallacy that individual operators in America can combine to reduce production. In the first place, such a combination is illegal. In the second place, there are far too many producers—by tens of thousands—to make any agreement practicable. In the third place, the royalty owners or lessors could and would object. The only possibility is State action. An individual State, like California, can enact laws to prevent “waste” which the operators can render effective, but this does not go very far. That is why the Governors of Texas and Oklahoma this year disregarded the law, and, for a hectic period, closed down production in the flush-producing fields actually by force of arms. A certain producing oil company had no difficulty in obtaining a ruling in the courts that this high-handed action was illegal, but in the flush areas of Oklahoma and East Texas was supported the two militaristic Governors, for no fair-minded citizen desired to see the natural wealth of his land being run to waste. Thus it was due to admittedly extra-legal action that restriction was made effective in two oil-producing States; the oil operators individually could have accomplished nothing. If production can be controlled only by illegal methods in America, there is little hope of controlling it by legal methods internationally.

At the present time world production is again running in excess of world consumption. For the first ten months of the year production was restricted in America below the

level of consumption, and a welcome reduction in stocks was effected, as is shown by the figures in the previous column, supplied by the U.S. Bureau of Mines.

International co-operation in marketing is a more feasible proposition than co-operation in production. The large petrol companies have always sold at agreed prices in Great Britain, and similar price agreements have been in force from time to time in Europe. But this co-operation was carried a big step forward this year, when the Royal Dutch-Shell group and the Anglo-Persian Oil Company agreed to pool their distributing organisations in Great Britain and to form a new company called Shell-Mex and B.P., Ltd. This new combine is marketing the petrols of the two groups without favouring one against another, the sole idea being to eliminate duplication in storage and distributing plant, and to avoid unnecessary transport. It is understood that the British subsidiaries of the Standard Oil Company of New Jersey (Anglo-American Oil Company, Red Line Motor Spirit Company, and Glico Petroleum) were invited to enter the combine, and in some quarters it is believed to be only a matter of time before these companies join hands with their British competitors. The chart which we show at the bottom of the preceding page reveals the intimate degree to which the Royal Dutch-Shell groups and Anglo-Persian-Burmah Oil groups are now associated. In their most important markets—India, the Eastern markets outside India, and Great Britain—these groups are now absolutely identical as regards the organisation of distribution. In each theatre a different arrangement exists regarding the distribution of profits, but as regards actual trade operations, rationalisation is complete. It is surprising that the disastrous trading conditions of this year have not driven other rival groups into similarly close partnership.

Some idea of the trading conditions of 1931 may be obtained from the following table of crude oil and gasoline prices in America:—

At end of Month.	GASOLINE PRICES.		CRUDE OIL PRICES.			
	“U.S.” Motor Grade ex Oklahoma Refinery.		Sante Fe Springs Crude (Gravity 29° A.P.I.).		Mid-Continent Crude (Gravity 36° A.P.I.).	
	1930.	1931.	1930.	1931.	1930.	1931.
January	Cents per gallon. 6.25	4.25	Dollars per barrel. 1.15	1.28	Dollars per barrel. 1.45	0.95
February	6.00	4.00	1.15	1.28	1.20	0.95
March	6.50	3.50	1.37	0.38	1.20	0.59
April	7.25	3.25	1.37	0.38	1.29	0.59
May	7.00	2.75	0.62	0.38	1.29	0.59
June	6.25	2.50	1.37	0.73	1.29	0.33

† Before Federal taxes.

index of the fall in oil company profits. As stocks of oil have necessarily been written down out of revenue to new low prices, oil profits in 1931 will be evanescent. For example, the earnings of the leading oil companies in America, reporting for the first nine months of this year, which are shown in the preceding column, indicate that the writing down of stocks has involved the majority of concerns in heavy losses, while, in the case of the few companies which have made a profit, the decline in earnings ranges from 60 per cent. to 75 per cent.

Under these adverse trading conditions, the dividend policy of the leading oil companies must inevitably be conservative. The Burmah Oil has halved its interim dividend, paying only 5 per cent., while the Royal Dutch-Shell Transport and Anglo-Persian companies have decided to postpone their interim dividends altogether. The following table shows the highest and lowest prices this year, the present market price, and the yields, on the assumption that the final dividends will be repeated at the reduced levels of last year:—

Company.	Dividends %, 1930.		Prices, 1931.		Present Middle Price.	Pre-estimated Div. %	Approx. Yield %
	Interim.	Final.	Highest.	Lowest.			
Anglo-Persian Oil £1	5	10	56/10½	26/6	30/7½	10	6.53
Burmah Oil Co. £1	10	12½	73/1½	33/1½	33/1½	12½	7.55
Royal Dutch £100	10	7	26½	13	33/9	7	6.15
Shell Transport £1	10 free	7½ free	77/6	28/1½	33/9	7½	5.93*
Venezuelan Oil £1	5	12½	35/11½	15/7½	16/10½	12½	14.82

* Gross.

† Free of tax.

Investors may be driven to the conclusion that it is unwise to buy the equity stocks of the large oil combines while there is no sign of any improvement in retail prices. The increase in the price of petrol in this country, which is foreshadowed for next month, is due entirely to the depreciation of sterling in terms of gold, and should not be construed as an indication that the oil markets have taken a turn for the better. Efforts further to restrict production in America are being renewed—the last suggestion being to shut down all wells on Sunday so as to reduce production by one-seventh—and it is generally felt that, if no new prolific oilfield is developed, crude oil prices will not find lower levels. The past history of the American oil industry, however, gives no great confidence that production will be kept within the bounds dictated by consumption. In all probability the consumption of gasoline, which in America has actually increased by 1½ per cent. this year, is only now beginning to feel the full effects of the world trade depression. So far the American refiners have given no sign that they are aware of the urgent need of reducing their refining operations.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.
January 5.

ACCOUNT.
January 7.

THE volume of business declined progressively before the holidays. Despite the week-end recovery in New York, the tone remained dull in all markets, though, in many cases, dealings were insufficient to test prices. Part of the scattered selling of Gilt-edged was attributed to fears that the report of the Basle Committee would put prices temporarily lower after the holidays, and partly to the imminence of the income-tax date. The relative firmness of commodity prices had only a slightly stimulative effect on the more speculative markets, its causes being regarded as largely psychological, in connection with restriction schemes and rumours of schemes, with no evidence of a healthy revival in consumption. The shortening of Saturday business hours by closure at noon, which came into operation last Saturday, imposed no hardship on the "House," which would in any case have transacted a lower volume of business last Saturday than for many weeks past. A moderate amount of option business was done, following the raising of the Stock Exchange Committee's ban as from Monday, but it would require much

more than the restoration of normal speculative facilities, at the moment, to restore normal speculative enterprise.

Gilt-edged opened dull, and quotable declines were recorded throughout the list as the week's dealings progressed. India loans showed slight change, and the expected victory of the Labour Party's opponents in the Australian elections failed to produce a renewal of activity in Commonwealth issues.

Business in foreign bonds was restricted, though prices on the whole were somewhat firmer. German bonds enjoyed a slight temporary recovery on Mr Lamont's declaration at Washington of faith in Germany's ability eventually to meet her indebtedness. Hungarian issues reacted less than had been expected to the moratorium announcement. Chinese loans were in moderate demand, the 1913 issue being quietly absorbed in anticipation of forthcoming drawings. Japanese showed a slight recovery, South Manchurian railway stocks being inquired for.

Home rails remained quiet, with a slightly easier tendency. Argentine rails were steady on satisfactory crop forecasts and slightly harder wheat prices.

Business before the Christmas holidays remained on a progressively restricted scale in the industrial share markets. The permanence of the American improvement was distrusted, and profit-taking occurred before Wall Street opened on Monday. Movements in domestic share prices were narrow and irregular. Cables and Wireless were firmer on the November figures, which suggested that part of the competitive advantage following the devaluation of the pound had been retained. Electrical shares were neglected. Among motor shares, Leyland and Ford showed a modest recovery. The profit and dividend figures of British-American Tobacco (set out on p. 1240) were regarded as very satisfactory, but the shares failed to benefit. Textile issues were a shade firmer, but interest in brewery shares continued to dwindle. Option dealings were restarted in "international" shares, like Hydro Electric, International Nickel, and Electric and Musical Industries, and in leading British counters like Courtaulds, Vickers and British Celanese, without appreciably affecting prices either way.

Oil shares remained outside the scope of the New York week-end recovery, and remained a dull market, Royal Dutch being again pressed from the Continent. Rubber shares were firm with the commodity, diplomatic denials of restriction negotiations being scarcely given serious consideration. The tea share market showed few signs of life, prices continuing slowly to recede. Although option business was reopened in shares like Sub Nigel and East Rand, Kaffirs generally had an undecided tendency, and failed to attract even professional interest. The rise in copper prices on circumstantial reports of a restriction agreement to take effect with the New Year was not proportionately reflected in the share market, Tintos suffering another decline, and Rhodesians being idle, with the exception of "Chartered," which were purchased on the imminence of a dividend declaration. A slight demand occurred for low-cost tin shares on the improvement in the price of the metal.

OFFER TO NEW READERS.

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8, Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets enjoyed a short but sharp recovery at the end of last week, bonds and railroad issues being prominent in the movement. Technical conditions were chiefly responsible for the temporary up-turn, many markets being over-sold and ready to react to favourable rumours, including a report that the banks had formed a pool to support bonds. The rise was unable to maintain itself in the face of profit-taking and selling for tax losses, and before Monday evening prices were trending downwards from the best. Much discussion centred round the possibility that the Pennsylvania Railroad might pass its dividends for the first time since 1856, partly owing to reduced earnings and partly to the reported tendency of dividends a condition of leaders to make the suspension of dividends a condition of agreement to a 10 per cent. wage reduction. The present omens are, however, that wages will be reduced in any case. Christmas trade has continued to run below last year's levels. Steel production stands around 25 per cent. of capacity. The New York Times business index for the week ended December 12th was 62.2, against 63.8 in the previous week.

CANADA.

From the middle of November until the New York rally, last week-end, a series of sharp recessions wiped out more than all the gains recorded in the first half of the month. Undoubtedly a difficult winter lies ahead for industrial companies, but an encouraging factor has been the halt in the downward trend of commodity prices, and hopes are entertained that the Special Railway Commission may offer some solution of a baffling railway problem. The Federal Government has had a sympathetic response to its new loan. The original issue of \$150 millions was oversubscribed by \$65 millions, and the whole amount was taken up. The generous rate of interest offered (5 per cent.) has, however, tended to depress the bonds of provinces and municipalities.

INVESTMENT NOTES.

Publicity in Company Accounts.—Three important contributions have recently been made to contemporary discussion of the contents and utility of company accounts. The first comes from the Council of the Institute of Chartered Accountants. Although the outcome of the Kysant case was satisfactory to accountants, the company's auditor being acquitted, the case raised a number of important questions. Regarding these, the Opinion given to the Institute by Mr Wilfrid Greene, K.C., and Mr. Cecil W. Turner is, in effect, an expressing of unwillingness to give any opinion at all, since the Kysant case was criminal and not civil, related to a Chartered and not an ordinary limited company, and rested upon a complicated set of facts and figures peculiar to itself. That a judgment should be construed with special reference to the facts of each case is a familiar rule of law, but it is difficult to see how any case can ever be brought forward, on such a question as "secret reserves," on which the issue will not turn on special facts and figures. As the Council's *ex cathedra* pronouncements have a semi-judicial character, this reticence is comprehensible, though it is none the less regrettable from the investor's point of view. On one single point, however, counsel are positive—that auditors cannot dissociate themselves from all responsibility for a company's profit and loss account, as distinct from its balance sheet, since the latter includes among its statutory items the balance brought in from profit and loss. In a speech at Leeds, on December 11th, Mr Henry Morgan, President of the Society of Incorporated Accountants and Auditors, appears to take a different view, suggesting that an auditor's responsibility in this respect is "indefinite," and should be defined by fresh provisions in the Companies' Acts. Mr Morgan rightly insists on the crucial nature of the information in the profit and loss account, since earning capacity is the ultimate basis of the valuation of such balance-sheet

assets as buildings, plant and machinery. Meanwhile, shareholders who are anxious to make the most of what directors and auditors actually send them will find useful hints in a paper on "Financial Accounts in Management Control," read by Mr B. Biddle before the Business Research and Management Association on December 10th. Much of Mr Biddle's address was concerned with internal administration, and related to figures of turnover, orders received, etc., regarding which shareholders are not taken into their directors' confidence. As regards published balance sheets, however, Mr Biddle's contention was that much could be learned regarding the financial health of a business by calculating, over periods of years, the ratios between different sets of items. He instanced, in this connection, the ratios of current assets to current liabilities, of total "real" assets to total liabilities, of "net worth" ("real" assets of all kinds, less external liabilities), to total assets, of sales (where given), to fixed assets, net profits to net worth, etc. The aim of the author of the paper, apparently, was less to urge the merits of any special ratios than to emphasise the importance of compiling regular series of such figures. Various points of criticism arise, and, generally speaking, published accounts vary so considerably, both as regards their contents and their faithfulness as reproductions of the true position, that any "ratios" an outside shareholder can compute are bound to be much less reliable and informative than those which the manless reliable and informative than those which the management, with its fuller material, is able to construct for its own guidance. Nevertheless, Mr Biddle has indicated an avenue which has been explored much less in this country than in America, and his detailed suggestions may be commended in particular to those who are responsible for advising investors as to the purchase of particular stocks and shares.

The "Bear" Defended.—As from Monday last, the Stock Exchange Committee has repealed its temporary regulation prohibiting the transaction of fresh option business. This is a welcome sign of returning tranquillity

Truth

"Truth lies at the bottom of a well," said a philosopher, but this is only half a truth.

Truth may be a living thing both in our ordinary and business life, for a sincere attachment to truth, modern and scientific, is a sure bulwark for the mind.

The habit of truth makes a man exact in all his relations with his fellow men. His word is his bond. It means that in business the thing he sells is exactly what he says it is without equivocation.

The Chatwood Security stands for truth. It is exactly what we say it is. It is not offered on a price competitive basis, but to those who desire to have the best. We refuse business offered at a price which would require us to lower our standard of craftsmanship.

at the Treasury, at whose request, it would appear, the ban was originally imposed. For the present, however, the prohibition of fresh continuation business remains, and it would be interesting to know whether the powers that be are apprehensive of a renewed outbreak of "bull" or of "bear" activity. Whenever prices are weak the "bear" is generally singled out as a scapegoat. This has happened in America, and has provoked a vigorous defence of the bear from no less a person than Mr Richard Whitney, the President of the New York Stock Exchange, who, in a nation-wide broadcast speech, has quoted statistics showing that the short interest has, in effect, steadied the market and restricted price fluctuations. The President of the New York Stock Exchange (writes a "House" correspondent) occupies a position very different indeed from that of the Chairman of the London Stock Exchange Committee. He is an apostle of Stock Exchange propaganda, who writes, lectures, broadcasts, "campaigns" against the bucket shop, and explains publicly the importance of Stock Exchange ramifications. The Chairman of the London Stock Exchange Committee probably puts in as many hours of work per diem, but has no direct contact with the outside public. The bear is probably hated more heartily here than in America. Nine out of ten Britons have never been a bear in their lives, and are never likely to be. Bear selling is confined largely to the professional and semi-professional speculator, who is under no delusion as to the risk he is taking. There is a wide difference between the "covered" and "uncovered" bear. Apart from the case in which a seller is protected by shares available under option, the ordinary covered bear actually owns the shares that he sells. If the market goes against him, he can deliver what he has sold and take the money. The uncovered bear, however, who has neither the shares nor the assurance that he will be able to borrow them, naturally has a far more dangerous position. A bear account can frequently be built up, in the Stock Exchange, almost involuntarily. Dealers who have sold shares to brokers in the ordinary way of business, without any intention of "going short," may decide to wait before buying back what they are not required to deliver until the next settling day. Thus a bear account, as Mr Richard Whitney has pointed out, has a hidden reserve of strength, since the bears must come in as buyers sooner or later. Under a system of cash dealings, which precludes any but limited bear speculation, violent price fluctuations are liable to occur. The real reason for the bear's unpopularity is ignorance of his real function, on the part of a public which is ineradicably a bull.

London Hotel Companies.—Industrial depressions invariably tend to restrict the mobility of the population, both for "pleasure" and commercial purposes. The accounts of a representative selection of hotel companies (operating predominantly in London), which have published their results since the beginning of the current year, reveal a sharp fall in net profits. The aggregate earnings of the eleven companies shown below reveal a decline of 23.5 per cent. in their latest accounts:—

Name of Company.	Previous Year.		Latest Year.		Price, 1931.		Present Price.	Yield %.

* Tax free. † Prof. ord.

Only two companies of the eleven—Cranston's Hotels and the Strand Hotel—have recorded an increased profit, while in some instances, particularly the Carlton Hotel and Rubens Rembrandt, net earnings have fallen nearly to vanishing point. As regards dividends, three companies

have maintained their rate of distribution, and one, the Strand Hotel, has increased it, while four have decided to conserve their resources and make no payment whatever.

Royal Mail Meeting.—Royal Mail debenture and stockholders derived tangible comfort from Monday's meeting, which made fairly clear two matters in doubt a few months ago—that the Royal Mail had hopes of salvation and that enough would remain, after the surgeon's knife, to be worth saving. The 1930 accounts were discussed in our last issue. Although the new chairman, Mr P. G. Mylne Mitchell, declared on Monday that traffic and rates conditions had shown no general improvement this year, abler management has converted a working deficit of £126,000 in 1930 into a surplus of over £100,000 in 1931, before providing for interest and depreciation. Given even a slight world trade revival, Mr Mitchell believes, the fleet is capable of earning satisfactory profits. Sir William McIntock, dealing with the financial position, repeated his figures, given last February, to the effect that about £9 millions out of Royal Mail Company assets of £17½ millions was valueless—or worse than valueless, since £1,138,418 was due and unpaid in respect of calls on investments. The larger part of the loss on the company's operations in 1930 was attributable to the payment of interest on obligations which the company had contracted to meet, irrespective of trading results. Substantial progress, Sir William declared, had been made towards a comprehensive scheme of re-arrangement, the aim of the voting trustees being to secure agreement among the multitude of different interests concerned before submitting their scheme to the court. An operating company would be formed to control all the ships of the group in the South American trade, the board of which would be elected by the creditors, the Royal Mail Company itself becoming merely a holding concern. On the same day, Mr Justice Eve sanctioned the company's application for a scheme of arrangement, extending for a further three months (to March 31, 1932), the moratorium previously granted, subject to a question raised by counsel for the trustees for the first debenture holders regarding a specific charge in the latter's favour of the fully-paid shares owned by the Royal Mail in other companies.

Richard Thomas' Assets.—At last Thursday's meeting the new chairman, Mr W. J. Firth, declared that the total assets of the Richard Thomas group, which amounted on paper to £10,000,000, were overvalued to the extent of approximately £4,000,000, representing money lost through excess expenditure on the company's Redbourn property. After deduction from "real" assets of £6,000,000 (including approximately £2,000,000, "which might almost be considered as liquid") of total liabilities of £3,568,541, a surplus of £2,436,459 remained. The whole of the ordinary capital had therefore been lost, but slightly more than 15s. in the £ of the preference capital remained intact. The necessity of replacing the lost capital had involved the board in borrowings from their bankers in order to carry on their business, and the interest on such borrowings was a great handicap from the dividend point of view. There was no reason for apprehension with regard to pressure from the bankers, who held securities against the loans amounting to £1,238,899 and also a mortgage on the New Charlston Collieries. It was proposed to place a reconstruction scheme before shareholders at the earliest possible moment, though world-wide depression made it impossible for the board to give a definite date.

British American Tobacco.—In a preliminary statement the directors report a decline in net profits from £8,501,560 to £5,394,448 for the year to September 30, 1931. Preference dividend absorbs £585,000, against £555,000, and a final dividend on the ordinary capital is recommended of 8d. per £1 of stock, tax free, making 20 per cent., tax free, for the year against 25 per cent. for the previous twelve months.

	Year to September 30,		
	1929.	1930.	1931.

Benevolent fund.....	100,000	...	...
Carried forward.....	1,748,772	1,800,144	1,833,040

* Free of tax.

The carry forward item is increased slightly from £1,800,144 to £1,833,040. Accompanying the preliminary statement is an interim ordinary dividend declaration of 10d. per £1 of stock, tax free, on account of the year ending September 30, 1932. This represents a payment of 4.17 per cent., and is at the same rate as last year. At 3½ the £1 stock units give a yield of £5 9s. 6d. per cent., tax free, allowing for the final dividend of 3½ per cent.

Crittall Manufacturing.—The latest accounts are not unsatisfactory in view of the prevailing conditions. Gross profit at £203,351 compares with £250,204 for 1930, while net profit amounts to £94,007 against £105,669. The directors, however, have taken the prudent course of making no further addition to the 2½ per cent. ordinary dividend declared in March, and have set up instead a contingencies reserve with an initial allocation of £25,000:—

	Year to August 31.

† Transferred from share premium account.

‡ Contingency reserve.

The accounts show that amounts previously set aside for depreciation reserve, totalling £150,000, have this year been deducted from fixed assets, while a sum in excess of £48,000 has been charged on the £1,132,051 of fixed capital before arriving at the profit figure. Stock, it is stated, has been valued "with full regard to prevailing conditions," while the directors are satisfied that the "temporary depreciation which may have arisen in the company's interest in Germany and the U.S.A." is amply covered by reserves, which stand in the balance sheet at £270,000, or more than 40 per cent. of the investment valuation. Debtors account for £1,189,775, and debts for only £488,605. The current ordinary share quotation of 18s., allowing a yield of only £3 17s. per cent., discounts a revival in future earnings.

Tin Restriction and the Tin Pool.—The speeches of chairmen at recent meetings of tin-producing companies show that the industry is by no means united in its attitude towards the restriction scheme. For example, Mr C. V. Stephens, chairman of the Malayan Tin, Southern Malayan and Southern Perak Dredging Companies, formerly an opponent of restriction, appears now to have accepted it, *faute de mieux*. He informed his shareholders at the general meetings on Tuesday last week that the industry would have been in a deplorable condition in the absence of Government measures, but agreed that the adoption of 1929 as a datum year had placed Malaya in an unfavourable comparative position with some other countries,

whose output had shown less expansion in 1930. Even Mr Stephens' grudging complacency is not shared, however, by certain other chairmen, such as Mr Frisby, of Pahang Consolidated (to whose views we referred in a Note in the Economist of December 5th), or Mr. F. E. Mair, chairman of Gopeng Consolidated, and other tin companies. There is, however, another aspect of the present arrangements upon which no company chairman appears to have commented. The International Tin Pool, which was formed in August "to work in close co-operation with the International Tin Committee," with the immediate object of acquiring a substantial portion of the world's existing stocks, is a private enterprise whose avowed aim is the maintenance and ultimate raising of tin prices. The Pool was not formed until the Governments, which are parties to the international restriction scheme, had declared that the quota agreement would be continued for a period not exceeding three years—that is, to August 12, 1934, providing that the Pool's stocks had not previously been liquidated. The chairman of the Committee of Control of the Pool, we understand, is Sir John Campbell, Financial Adviser to the Colonial Office and representative of the Malayan and Nigerian Governments on the International Tin Committee. It appears anomalous that an expert who represents Government interests on the restriction committee should also represent private interests on the Tin Pool. No objection could be raised if the Governments concerned were participating in the Pool by way of profit, but they are not; nor do they exercise direct control over the operations of the Pool, although the details of the Pool Agreement have been "communicated confidentially" to the various Governments. The world's visible supplies of tin are now approximately 50,000 tons. The Pool has acquired approximately 19,000 tons of tin, the whole of which appears in "visible supplies," and it has given out that it does not intend to liquidate an initial 5 per cent. of its holding until the price has reached £165 (originally fixed at £150) per ton for a calendar month on the London Metal Exchange. The present price is £142.

The Rand December Dividends.—As a whole, writes our mining correspondent, the distributions of the Witwatersrand gold mining companies for the second half of the current year were regarded as slightly disappointing. In some degree this may be attributed to the unduly optimistic nature of the expectations entertained in certain quarters. Numerous shareholders thought that the rates would be increased by the "gold premium"—an idea in which they had been encouraged by not a few lay papers. Others, looking solely at the monthly output figures, ignored counterbalancing factors. A striking example is provided by the Sub Nigel. For the final six months of 1931 (estimating the December result at the same as November's) the mine profits have totalled

£397,730, against £705,650 for the financial year ended June 30th. But under the terms upon which the exploitation of the "Lease" area was granted, the Union Government is taking an increased share of profits. For 1930-31 this sum amounted to £79,260, as compared with £11,880 in 1928-29. Hence the increase of no more than 5 per cent in dividend. Hopes regarding the Randfontein, again, were pitched in too high a key. The official forecast of a return to the dividend list this December has been borne out by events, but the rate of payment falls substantially below that generally looked for. On the other hand, the declaration of the East Rand—the first since 1924—was fully up to expectations.

This table does not include declarations made at dates other than June and December.

In most cases the dividends for the second are the same as for the first half of 1931, but in several the total slightly exceeds that of the preceding year. The most important exception to this rule is provided by the New Modder, whose earnings shrink with the "life" of the mine. As regards the finance concerns, the "Johnnies" company announces that although the profits earned for the half year would in ordinary circumstances fully justify a distribution, the directors have decided not to make any interim payment owing to the unsettled financial conditions now prevailing. A year ago, similarly, there was no interim distribution, but 1s. 6d. less tax was paid for the financial period ended June 30th last. Contrariwise, the New Era, which returned to the list with an interim dividend in June, will make no final payment, the profits earned being required to cover depreciation on holdings. On the present occasion a new point arises consequent upon Great Britain's departure from the gold standard. The dividends due to British holders will be paid at the rate of exchange ruling on January 19th—the day the warrants will be sent out from the Johannesburg offices to local holders. Unless any very marked alteration in the exchange rate takes place in the meantime, holders in this country will receive in sterling a premium of between 40 and 50 per cent. upon the amounts declared in South African pounds.

Castbury
Maker
of Fine Chocolates.

Trepca.—Encouraging results have been secured by this member of the Chester-Beatty group, whose property is situated in Yugoslavia. Production started in August, 1930. For the year ended September 30th last a net profit was made of £109,800. Preliminary expenses absorbed £36,740, and £55,000 was required for a dividend of 5 per cent. The financial position is comfortable, permitting an increase of 50 per cent. in the capacity of the treatment plant. The latter has exceeded expectations in regard both to quantity of ore treated and percentage of extraction. At 2,100,000 tons, value 10.5 per cent. lead and 7.8 per cent. zinc, the latest ore reserve estimate shows an increase in quantity, with a decrease in grade, compared with its predecessor. These features are explained by the inclusion of low-grade material which can be worked profitably at the current level of costs. For last year the average was only 18s. 8d. per ton. This compares with 30s. 1d. at the Broken Hill South, operating on a larger scale. The value of the ore treated was somewhat above the average of the reserves—a point to be kept in mind in any endeavour to compute the effect upon the company's fortunes of a rally in metals. Still it is apparent that the concern stands to benefit in a marked degree from any improvement in the demand for its products.

Sulphide Corporation.—For the year ended June 30, 1930, this Australasian undertaking was only able to pay 5 per cent. upon its preference shares, as compared with 15 per cent. on both classes of capital in the preceding period. Operations during the past session resulted in an actual net loss of £87,700. For this the "disastrous fall in metal prices" and the restriction of output at the company's treatment works were jointly responsible. Towards meeting the position, economies in costs were effected at the properties, while the directors and salaried staff agreed to cuts in their emoluments. Nevertheless, increased burdens were placed upon industries by enactments of the New South Wales Legislature in disregard of the proverbial danger of "killing the goose."

CARRERAS LIMITED.

GRATIFYING RESULTS IN A DIFFICULT YEAR.

The twenty-eighth annual general meeting of Carreras, Limited, was held, on the 18th instant, at Arcadia Works, Hampstead Road, London, Sir Louis B. Baron, Bart. (chairman and managing director), presiding.

The Chairman, in moving the adoption of the report and accounts, said: After writing off all expenses, including a contribution to the staff superannuation fund, and making full provision for depreciations, the net profit for the year amounts to £736,192, and the amount available for disposal, including the net amount brought forward, is £1,777,511. This sum your directors propose to appropriate as set out in the report, leaving a balance of £1,104,918 to carry forward to next year.

At our last annual general meeting, you may remember that I referred to the year which had just closed as a very difficult one. Whilst that was correct, I am sure you will appreciate that the year we have just completed was beset with even greater problems than any that has gone before—problems which affected not only our own industry, but which were common to all large manufacturing and trading concerns throughout the country.

POSITION OF COMPANY FULLY MAINTAINED.

Your directors feel that, although conditions have been so adverse, the company has achieved a result on which you, as shareholders, are to be congratulated. Although the net profit is lower than in some recent years, it will probably interest you to know that we made as much gross profit as in the last year, and but for the fact that abnormal selling and advertising costs were necessitated through the general depression and intensive competition we have experienced during the year under review, the figures would have been up to or beyond last year's level. Taking all these facts into consideration, your directors feel that there is reason for gratification that, during an exceedingly difficult period, the high position of the company in the tobacco industry has been fully maintained. You, as shareholders, can rest assured that, during this trying period of transition, our aim will be, not so much to show outstanding and immediate results, as to preserve unimpaired the strength of our business, and the best way to accomplish this is by using all possible means and resources to maintain the quality and turnover of the company's brands, and to keep their merits prominently before the smoking public.

We continue to keep a very strong position in practically all our export markets, which will show you that there is no reason to lose confidence in regard to our foreign trade, and I believe that, as soon as the re-adjustment of world conditions takes effect, and things get back to normal again, we shall be able, not only to maintain our position, but to show progress.

Turning to the home trade, the difficult conditions and intensive competition which I indicated in my speech last year have become still more intensified, and the cost of advertising and selling our products, as I previously mentioned, has exceeded by a considerable amount the figure for any preceding year, but you will appreciate that, in a period of increasing competition, such expenditure had to be made, and you will be gratified to know that the expenditure has fully justified itself. We have been able to stand up against heavy odds, and retain the goodwill both of the public and the trade, while we have employed our entire staff of contented work-people at full wages throughout the whole year.

BURDEN OF NEW DUTY.

In September last, the Chancellor of the Exchequer increased the duty on tobacco by 8d. per lb., and we now have to pay 9s. 6d. per lb. for all the tobacco we clear from bond—a very heavy rate indeed. This increase of 8d. per lb., so far as cigarettes are concerned, has been borne entirely by us and other manufacturers; it was in operation for about six weeks of the financial year under review, and has of course contributed to the increase of our costs and the reduction of our profits. This extra burden has had to be shouldered by our company, in common with others, during the current year, and as this, in my opinion, is the limit of taxation which the industry can stand, it is to be hoped that this extra duty will be one of the first to be removed when the finances of the country begin to recover from their present embarrassed state.

Within the last three months we have entered a new field in the cigarette world, with a brand of the "5 for 2d." standard. It is called Carreras' "Clubs," and this tobacco has been carefully blended to meet the taste of that very large section of the community who prefer a cigarette of the size and character represented by our latest product. Although only a short time has elapsed since "Clubs" were introduced, I am pleased to tell you that

our anticipations as to the figures we expected to reach have been surpassed.

With regard to the coming year, you will not expect me to attempt to forecast in any detail the course of events in the immediate future, but in spite of the difficulties which confront the business community, I look forward with hope and optimism.

Mr. William J. Yapp seconded the resolution, which was carried unanimously.

ROAN ANTELOPE COPPER MINES, LIMITED.

GRATIFYING RESULTS—LOW PRODUCTION COSTS.

The fourth ordinary general meeting of the Roan Antelope Copper Mines, Limited, was held, on the 18th instant, at Winchester House, Old Broad Street, London, Mr. A. Chester Beatty (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The current operating cost of about £30 per ton makes your company one of the cheapest copper producers in the world. This may be taken as a representative cost on the tonnage treated. These costs represent "all-in" costs of electrolytic copper at the refinery, the London price of which is now about £44 per long ton. The costs include all charges, with the exception of interest and depreciation. Copper production up to the end of November has all been sold, and at an average figure which leaves an operating surplus.

Roan copper is exceptionally free from impurities, and the blister copper now being produced assays over 99.5 per cent. copper. We expect to establish a considerable market for our product, both as blister copper and as fire refined copper.

I have recently returned from a conference of all the important copper producers of the world, and am glad to say that a scheme of restriction of output is practically agreed. The Rhodesian mines have decided to join in this restriction scheme.

I should like briefly to summarise what your company has achieved to date: We have proved over one hundred million tons of ore with an average copper content of about 3.44 per cent., and there still remain over four thousand acres not tested, but on which it is known that the Roan series of ore-bearing rocks exist. The plant has been proved to have a capacity of 75,000 short tons of copper per annum, which can be produced at a cost below our most sanguine expectations, showing a substantial margin of operating surplus even with copper selling at its unprecedentedly low level of to-day.

ENTERPRISE!

¶ The intrepid enterprise of Columbus over four centuries ago opened up all the possibilities of an undeveloped Continent.

¶ Since then, the enterprise of succeeding generations has resulted in phenomenal development of the vast resources of the New World.

¶ To-day a great and growing volume of overseas trade is transacted annually by the Latin American Republics, and complete facilities for every description of modern banking business are afforded by

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST. LONDON, E.C2

The average price of copper during the last thirty years has been about £68 per long ton of electrolytic copper, and had we now anything like normal times we should have been making enormous profits. We have only completed the first construction and development stage. It has always been intended, when circumstances warrant, to duplicate the plant, which can be done at a comparatively moderate cost.

In spite of the existing difficult circumstances, I feel we can face the future of our business with the utmost confidence.

A cable has just been received from the mine giving the December half-monthly production as follows: "83,800 tons milled (all produced from underground, as stock pile has been exhausted). Average grade 3.85 per cent. copper. Smelter production 2,557 short tons of blister copper.

The report and accounts were adopted.

Government Returns, &c.

NATIONAL ACCOUNTS.

The total ordinary revenue for the week ended December 19, 1931, amounted to £10,999,000 against ordinary expenditure of £9,867,200. After allocating £325,000 to Sinking Fund and having allowed for an increase in Exchequer Balances of £570,383, the operations for the week, as shown below, decreased the National Debt by £237,000 to £7,788,189,000:—

UNITED RAILWAYS OF THE HAVANA AND REGIA WAREHOUSES, LIMITED.—The transfer books of the 4 per cent. redeemable debenture stock have been closed from December 1 to 15, 1931, inclusive, for the preparation of warrants for interest due January 1, 1932. The holders of the 4 per cent. debentures and debenture stock are notified that as regards the half-yearly interest due on January 1 and July 1, 1932, such interest is, under the scheme of arrangement sanctioned by the Court in July, 1930, payable out of the dividends on the shares of the American and Foreign Power Company, Inc., held by the trustees of the trust deed securing those debentures and debenture stock. As such dividends are payable quarterly and those for the quarters ending January 1 and July 1, 1932, will not be received before those dates, the respective payment of the January and July, 1932, coupons of the debentures and the respective issue of the warrants for the interest on the debenture stock will be made immediately after the dividends on the shares for the respective complete half years to January 1 and July 1, 1932, are available to meet such coupons and interest warrants.

WANKIN COLLINS COMPANY, LTD.—At the annual general meeting of the company, a final dividend of 2 1/2 per cent., less income tax, was declared in respect of the company's financial year ended August 31, 1931, making 2 1/2 per cent. less income tax, for the year, payable on December 4, 1931, to all shareholders registered on the books of the company as at November 9, 1931.

THE WHITEHEAD IRON AND STEEL COMPANY, LTD.—The directors of the Whitehead Iron and Steel Company, Ltd., report that the trading profit for the half-year ending September 30, 1931, maintains approximately the same level as the preceding half-year. The directors state that this is considered satisfactory having regard firstly to the abnormally difficult trading conditions of the last quarter and, secondly, to the period being a transitional one in which the company's business was being entirely reorganised. This reorganisation is now completed; a new semi-continuous mill has been put into successful operation; the Frodoz works have been closed, and the whole of the company's production and offices have been centralised at the Newport works. This has effected a very substantial reduction in costs, which has only been slightly felt in the past half-year. Having regard, however, to the continued uncertainty to the industrial outlook, the directors consider the proper course is to conserve the company's resources, and defer consideration of a dividend until conditions become more stabilised.

DEBENHAMS SECURITIES, LIMITED.—After consultation with the directors of Debenhams Limited, it has been decided to postpone the declaration of the dividend on the 7 1/2 per cent. cumulative preference shares, due on December 31, 1931. It has been provided by the sum required for the payment of this dividend would have been provided by the payment of an interim dividend on the ordinary shares of Debenhams Limited, but in view of the prevailing conditions the directors of that company deem it prudent not to declare an interim dividend on their ordinary shares at the present time. The sales of the popular-priced businesses have been well maintained, but the higher-grade businesses are suffering from the restricted spending power of their customers, consequent upon high taxation and trade depression. As these influences seem likely to continue to operate for some time, it is to be feared that no pronounced improvement in this section can be anticipated in the immediate future. The directors, while regretting the disappointment this will cause to shareholders, are satisfied that the decision of the board of Debenhams Limited to postpone the declaration of a dividend on the ordinary shares of that company until such time as the results of the whole year's trading can be more clearly foreseen, is a right and proper one in present circumstances.

THE UNION-CARTER MAIL STEAMSHIP COMPANY, LTD.—The half-year's debenture interest payable on February 1, 1932, will be met in due course.

THE MILLON AND ASKAM HEMATITE IRON COMPANY, LTD.—After full consideration the directors have decided to withhold the payment of the preference dividend due on January 1st. The directors regret the decision, but believe it prudent in view of the serious depression which still continues in the iron trade.

The Economist

MONTHLY SUPPLEMENT.

SATURDAY, JULY 25, 1931.

No. 98.

New Series.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

THE business world has lately been completely over shadowed by the international crisis, and it is hardly an exaggeration to say that the outlook changes from day to day, and even from hour to hour. The Hoover declaration, calling for a year's reparations and debt moratorium, had an immediate effect upon the world's commodity markets and stock exchanges. Prices shot up smartly, the most depressed industries. For a few days there was a disposition to hope for signs of broadening trade inquiry.

Then followed delays, hesitations and doubts. Markets which had been revived by sentiment alone promptly reacted, and prices sagged towards the levels at which they had previously stood. Moreover, the German situation rapidly deteriorated, until it reached the critical days of the past two weeks. It was inevitable that world trade and finance should have been involved in these uncertainties. To mention but one obvious example, the wool trade in London and Bradford, in Roubaix and Tourcoing, and also in the wool-growing centres immediately felt the effects of the big Nordwolle failure in Germany, with its severance of so many of the links of the international wool trade. The German banking suspensions and the partial moratorium at once affected every financial centre and every holder and acceptor of bills drawn against German credits. Banks all over the world at once began to strengthen and conserve their cash resources, and to do so drew freely on their London balances. This in turn moved all the leading exchanges against the pound, and led to an immediate and heavy drain of gold from London to all important foreign centres, with the honourable exception of New York. A state of strain at once developed in the London discount market, and spread into the country's banking system and so into the industrial life of the nation.

In these circumstances pages are useful mainly for purposes of record, for the situation is changing every day, and the alternatives of a German collapse or a permanent solution of the crisis condition every present estimate of our industrial situation. To-day, there is no doubt that the long continuance of the crisis and the present uncertainty are weighing somewhat heavily upon British industrialists, who to-day are inclined to confess that they can see no immediate ground for hope. It must be remembered, too, that the holiday season is almost upon us, and that, even if times were normal, business would be beginning to fall away. In these conditions it is hardly a matter for surprise that unemployment shows no signs of decreasing, that the June trade returns were again disappointing, and that regarding the normal indications

of the business activity of the nation, signs of improvement are few and far between.

Moreover, granted that a general breakdown in Central Europe can be avoided, the whole situation, from the point of view of international trade, holds elements of grave uncertainty. There is no doubt that Germany's reparations obligations have forced her to sacrifice everything to the task of building up an adequate export surplus. She has done so, but at a heavy price, and our share of that price has been to suffer intense German competition in all our markets. A permanent reduction of Germany's reparation burden would doubtless have the effect of diminishing that competition to some extent. On the other hand, for the early future, if Germany has to make a desperate effort to reduce, or even support the present reduction of her foreign short-term credits, she may be compelled to "dump" exports on a scale highly upsetting to the rest of Europe's commerce.

Thus, for the moment, we are forced to derive such consolation as may be from minor points of advantage. Whatever view be taken in the long run of the decision to facilitate Russian purchases in this country of machinery, it will be of immediate benefit to the industries directly concerned. So, too, will be the modification of the Chinese Boxer Indemnity, with its provisions for the Chinese purchase of British railway material. The electrical engineering industry is progressing in the face of current adversities, and in a number of minor industries activity is being fairly well maintained. For example, makers of pedal cycles tell a quite encouraging story. Finally, and in some ways the most important of all, the fall in wholesale prices appears to have been checked, though here judgment must be reserved until the international situation becomes clearer.

For this, patience is still needed; and even when international politics become more settled it must not be ignored that the problems of previous months still await solution. Disparities between prices and costs must still be bridged, stocks of staple commodities must still be liquidated, and budgets must still be brought within the taxpayer's capacity to bear them. An international settlement, and even a reparations and debt moratorium will not by themselves solve these problems; but at the best will facilitate their solution. For industrial recovery, it is not enough to live from day to day. Real expansion of trade and greater employment in industry cannot be looked for with confidence until there are clearer signs that the whole intricate nexus of economic difficulties from which the world is suffering is at least on the way to being disentangled.

GOVERNMENT, &c.

SAN PAULO COFFEE REALISATION LOAN, 1930.—The returns for the fourth month of the second year's operation of the scheme in connection with the above loan as compared with the fixed minimum figures are as follows:—

	Month ending October 31, 1931.	Total for Four Months from July 1, 1931.	Minimum to be Received for Year ending June 30, 1932.*
Special tax at 73 cents (3s.) per bag on port entries.....	\$718,336.06	\$276,583 12s. 8d. and \$1,631,164.31	\$7,299,750 (£1,500,000)
Redemptions. Government coffee.....	\$304,156.25†	\$99,933 17s. 11d. and \$730,296.71	\$3,649,875 (£750,000) being 300,000 bags at \$12.16625 (£2 10s.) per bag
Planters' coffee.....	\$547,481.24†	\$198,123 15s. and \$1,225,755.71	\$5,569,775 (£1,350,000) being 1,350,000 bags at \$4.8665 (£1) per bag

Port entries 1,178,483 bags. 4,217,124 bags. 10,000,000 bags.
* As from September 28, 1931, all remittances are to be made in dollars at the exchange rate of \$4.8665 = £1.
† These figures include £11,448 4s. 5d. already remitted and F. Fca. 4,800,000 for which exchange has been secured in respect of coffee sold and awaiting shipment. For the purpose of this statement these sums have been converted into dollars at current rates of exchange.

Santos stock available on October 31, 1931, was 791,204 bags, as against a fixed minimum of 1,000,000 bags. The shortage is reported to be due to the fact that the large amount of coffee shipped during the last few days of the month was in excess of the capacity of the railways to bring in fresh coffee to replenish the stock; this fixed minimum is expected to be again attained shortly. Up to October 31, 1931, the proceeds of the export tax of 10s. per bag had been applied by the National Coffee Council in the purchase for destruction of 2,057,116 bags of coffee, 1,861,419 bags of which had actually been destroyed.

MISCELLANEOUS.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY.—The earnings report for the past nine months, compared with corresponding period a year ago, is as follows:—

	9 Months Ending Sept. 30, 1930.	9 Months Ending Sept. 30, 1931.
Earnings:		
Dividends.....	110,383,792.58	114,057,112.83
Interest.....	20,256,179.08	20,384,135.33
Telephone operating revenues.....	86,065,210.71	82,995,474.65
Miscellaneous revenues.....	1,008,418.91	1,063,454.15
Total.....	217,713,601.28	219,100,176.96
Expenses, including taxes.....	69,623,407.51	66,933,643.43
Net earnings.....	148,090,193.77	152,166,533.53
Deduct interest.....	24,640,011.17	23,710,218.38
Net income.....	123,450,182.60	128,456,315.15
Deduct dividends.....	101,119,330.84	121,646,888.75
Balance.....	22,330,851.76	6,809,426.40

Net income per share \$8.13 \$7.00

* Subject to minor changes when final figures for September are available.

THE COLNE VALLEY WATER COMPANY.—The Colne Valley Water Company have decided to reduce still further their charges by 10 per cent. of the authorised increase of charges under their Act of 1922, as from the quarter commencing December 26, 1931. The effect of this reduction is to reduce the charges for domestic supplies of water to the equivalent of the pre-war authorised charges of the company.

IMPERIAL AND INTERNATIONAL COMMUNICATIONS, LTD.—Estimated traffic receipts for eleven months ended November 30, 1930 and 1931:—

	1930.	1931.	Rise or Fall.
January.....	519,485	412,908	- 106,577
February.....	460,052	390,461	- 69,591
March.....	492,316	447,668	- 44,648
April.....	456,120	386,706	- 69,414
May.....	466,279	371,704	- 94,575
June.....	413,471	374,502	- 38,969
July.....	437,220	377,774	- 59,446
August.....	411,090	334,325	- 76,764
September.....	424,138	410,216	- 13,922
October.....	446,097	454,279	+ 8,182
November.....	402,886	427,062	+ 24,176

Aggregate for eleven months, January to November, 1930 and 1931..... 4,929,154 4,387,606† - 541,548

* The sum of £21,000 must be deducted from the message receipts for November, 1931, in making a comparison with November, 1930, owing to changed conditions of sharing traffic.

† In comparing aggregates, regard must be had to the notes issued with the traffic figures for March to November, 1931.

DENMAN PICTURE HOUSES, LTD.—The third annual report and accounts shows net profit for the year, including income from investments, &c., £335,859, against £265,567 for the preceding year. Adding balance brought forward, there is an available total of £402,696; last year, £309,194. The following appropriations and distributions have been made: Amount written off preliminary formation and debenture stock issue expenses, £12,853 against nil; reserve for amortisation and depreciation of leaseholds, £22,000 against £10,937; interest on debenture stock to March 31, 1931, £208,323 against £210,000; first mortgage debenture stock sinking fund, £35,000 against nil; income tax, nil against £21,419; interim

dividend of 2½ per cent. on ordinary shares, £35,000 against nil, leaving a balance of £88,918 against £66,837 to go forward. The whole of the issued and fully-paid share capital, with the exception of a very small number of shares, is held by Gaumont-British Picture Corporation, Ltd. Referring to the balance sheet, the only alterations of note on the assets side are: Freehold and leasehold theatre properties, &c., at £1,975,149, show an increase of £282,352 over last year's figure of £1,692,797; cash at bank and in hand, £144,166 (last year, £387,101); £12,853 has been written off preliminary and formation expenses, which now stand at £20,000. On the liabilities side: Amounts owing to subsidiary companies on loan and current accounts, £41,338 (last year, £4,102); other creditors and credit balances, £62,192 (last year, £47,636); reserve for amortisation and depreciation of leaseholds, &c., £61,604, against £41,875 last year.

Commercial Reports.

MARKET SUMMARY.

In view of the approach of the Christmas holidays the principal international commodity markets have been quiet and turnover has, consequently, been on a small scale. The general tendency of prices in terms of gold has been irregular, and in many cases the slight improvement recorded last week has been lost.

CEREALS.—The advance in the gold price of cereals which took place last week has not been maintained. Wheat, maize, oats and rye were all cheaper this week. The weakness of wheat prices is ascribed mainly to the small volume of "cash" demand and to liquidation.

OTHER FOODS.—The recent improvement in coffee prices has been maintained. Dr. Osvaldo Aranha, Minister of Finance of Brazil, has announced that it was the intention of the National Coffee Council to eliminate the lower grades in order to maintain prices. On the other hand, cocoa and sugar suffered a further setback. It appears that the International Sugar Council will meet in Paris on January 5th with the purpose of discussing the reduction of the export quotas fixed on May 9th last. Another subject for discussion will be the possibility of Russia's entry into the Council.

COTTON.—Towards the end of last week there was a sharp advance in American cotton prices, following an expansion of buying by consuming interests. On Monday, however, a considerable amount of liquidation caused a slight setback.

RUBBER.—Rumours that the Dutch Government had agreed to the adoption of a restriction scheme led to an improvement in prices. These rumours have subsequently been denied at the Hague, with a consequent weakening of prices. It appears, however, that the Dutch Government are considering the restriction problem in the light of the report on the recent discussions in London.

NON-FERROUS METALS.—The outstanding event of the week in the metal markets has been a report that an agreement between American, British, Belgian and Rhodesian copper producers on a restriction scheme is on the point of being reached in New York, and will come into force on January 1st. Prices of copper show a sharp advance on last week. Spelter and lead have been neglected, but tin experienced a slight improvement following the announcement of the Committee of Control of the International Tin Pool that the Pool's holding has been increased to 19,000 tons, and that the sliding scale of prices originally fixed for the release of the Pool's holding had been revised in an upward direction.

HOME TRADE STATISTICS.—JUNE, 1931.

* Average weekly figures.

HOME INDUSTRIES AND TRADE.

The following reports on British industries cover, in most cases, the period to the middle of July; in the remainder they relate to the month of June.

THE COAL TRADE.

Although a general coal stoppage was averted at the eleventh hour by new legislation extending the *status quo* for one year, a considerable amount of harm was done to the industry by the uncertainty that prevailed right up to the last moment. Forward business during June was inevitably checked, and in the South Wales area July shipments have suffered accordingly. The main news of interest from Cardiff is the gaining of an Egyptian State Railways contract for 100,000 tons of Monmouthshire coals on the basis of 24s. 1d., c.i.f. Alexandria. On the North-East Coast there is a slightly better demand for patent oven foundry coke, and prices have advanced a shilling a ton from their recent low level. Durham coals remain weak. Demand for house coal is limited, but certain Lancashire qualities are in request. Export orders for South Yorkshire steams are restricted, and the home demand for industrial fuel is still disappointing.

IRON AND STEEL.

The June production figures were again disappointing. Pig iron output was two per cent. below the May level, after allowing for the one day's less production, and the number of furnaces in blast fell during June from 80 to 76. Pig iron output for the first half of 1931 was only 2,000,600 tons, against a corresponding figure of 3,720,100 tons for 1930. The steel output figures for the first half-year were nearly as disappointing, 2,650,100 tons for 1931 compared with 4,361,700 tons for 1930. Steel imports for June, at 246,300 tons, were the highest for the year, but even so imports for the first half of 1931 were only 1,276,900 tons, against 1,533,000 tons in the first half of 1930. This emphasises the salient fact of the situation, namely, the lack of demand for steel. As a result the industry has been living mainly on sentiment, having improved with the Hoover declaration and having since reacted. Prices of Continental "semis," it is true, are a little firmer, but consumers are well supplied, and so English makers have not benefited. Stagnation in the shipyards means that there is no demand for steel plates, and the recent improvement in the tinplate industry is so far one in tone rather than in actual business. In other branches of the industry some dissatisfaction was felt at the failure of steel-makers to reduce their prices, and orders are still only coming forward very slowly.

ENGINEERING.

The state of the industry remains very bad, and a despondent view is taken of the outlook. It is true that a settlement was successfully reached on the wages question, which at one time threatened to end in a deadlock, but unemployment remains at the high figure of 26 per cent., June machinery exports were worse than ever, and orders remain very scarce. The recent decision of the Exports Credits Advisory Committee to recommend the granting of extended credits to Russia for the purchase of heavy machinery should bring forward fresh orders, particularly for textile machinists, and British manufacturers are being advised to accept Russian business (with proper caution), mainly on the ground that if they refuse it will go to some other country. Some hopes are placed upon the recent institution of the Chinese Purchasing Commission, set up under the terms of the new Boxer Indemnity Agreement. This is to direct the expenditure by China of £3,500,000 on engineering and railway orders—mainly upon locomotives, boilers and equipment plant—and should prove of benefit to the industries concerned. Lloyd's shipbuilding returns are most disappointing. Tonnage under construction at the end of June, at 555,603 gross tons, was the lowest since December, 1887, and 836,460 tons less than a year ago.

ELECTRICAL INDUSTRY.

Conditions have greatly improved from the manufacturing point of view, and June, in fact, has been the best month of the year. Orders to the value of £400,000 were received during that month. July also promises well. Two large orders for generating plant totalling 40,000 kw. have come from South Africa; while on home account the extension of the Lots Road Power Station of the London Underground Railways has led to the placing of an order for a 18,750 kw. turbo-alternator set.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

Period.	Home.	Export.	Total.
1926—Monthly Average	84	100	88
1927	87	195	114
1928	75	112	85
1929	83	157	102
1930	66	211	103
1931—June	59	212	98
July	55	232	100
August	63	245	109
September	63	221	103
October	64	181	94
November	61	171	89
December	75	152	95
1931—January	69	150	90
February	66	123	75
March	62	126	74
April	63	130	76
May	63	137	79
June	65	128	78

These figures represent a twelve-months' moving average ending with the month specified in the table. This explains why the June activity is not reflected in a corresponding increase in the June indices.

PRODUCTION OF ELECTRICITY.

In the *Economist* of July 10, 1928 (pages 57-8), we published a new index of electrical generation in the chief industrial areas of Great Britain. We show below a résumé of the results achieved during recent periods:—

INDEX OF GENERATION OF ELECTRICITY.*

Period.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Ship-building, Heavy Engineering.	General Engineering and Automobile Construction.	Chemical.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.
1926—Monthly average	119	100	138	162	134	120
1927	146	143	158	210	163	139
1928	156	150	177	237	190	147
1929	171	164	211	260	196	160
1930	167	152	216	234	215	156
1931—June	140	130	177	208	175	127
July	143	127	193	220	182	137

May	148	124	196	178	191	135
June	149	125	193	205	206	151

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

† Increase due to special causes.

The "corrected" figure, allowing for seasonal fluctuations and the steady expansion in the use of electricity, was 90.0 in June, against 84.2 in May and 89.0 in June last year. It will be noticed that the corrected figure shows an increase on last month.

MOTOR INDUSTRY.

Trade remains very quiet in the motor-car section. Manufacturers are already beginning to concentrate upon next season's production. In the commercial section there is a fairly keen demand for light lorries, but demand for heavy lorries is not so good. The motor-cycle trade is very dull, but sales of pedal cycles are reported to have improved over last year.

THE COTTON TRADE.

Conditions recently have not been favourable. The German crisis has had its effect upon operations, and the wider fluctuations in raw material prices have also had a disturbing influence. Nevertheless, the tone of the Manchester market has recently improved, and rather more business has been done. Much uncertainty exists as to future raw material supplies. The acreage in the American belt has been officially estimated by the Government at a reduction of 10 per cent. on last year. Cloth manufacturers have continued to meet with rather more inquiry. A few more sales have taken place for India in light whites and printed and dyed goods, and the political situation seems to be rather quieter. Very little has been done in standard makes for China, but further operations have occurred in fancies. The Egyptian and Near East markets have been disappointing. A fair business has been done for the West Coast of Africa, and there are indications of rather more activity for South America. Home demand has kept up fairly well. Taking the situation as a whole, it is difficult for manufacturers to restart idle machinery and improve prices, but prospects appear to be a little brighter. It has been another unsatisfactory month for spinners of American yarns, and much difficulty has been experienced in clearing the limited output. Some producers of Egyptian counts have sold rather more freely, but in most instances very unremunerative prices have had to be taken.

THE WOOL TEXTILE TRADE.

This industry has responded very closely to the fluctuations in the international situation. The opening of the July London sales was relatively encouraging, greasy combing merinos only falling by 5 per cent. in price, greasy fine half-breds $7\frac{1}{2}$ per cent., and other cross-breeds 10 to 15 per cent. as compared with the close of the previous sales. Those reductions were less than was at one time anticipated, and Bradford top-makers were correspondingly strengthened. As the sales progressed the German crisis and the repercussions of the German wool failure had their effect, and in the end the sales were closed two days before their proper date. These difficulties have also brought to an end the German business of Bradford export houses. The French strike, which had lasted three months, is now being settled, but Bradford in its turn is faced with labour trouble among the wool combers. Top prices are still firm, but business in yarns and piece-goods is very limited, makers of yarns for export being particularly hard hit by the international crisis.

THE RAYON TRADE.

The turnover in rayon yarns and fabrics for the home trade has been very well maintained during the past month, especially in view of the fact that a seasonal decline might have been expected. Overseas business has been disappointing, though there has been more inquiry. Consumption by the weaving trade is much larger than that of the hosiery and knitting trade.

THE LINEN TRADE.

Advances have been paid on June quotations for Russian flaxes, both Baltic and Soviet. Very little flax is offering, and values are likely to go higher owing to the lack of supplies. Yarns have come in for more attention, and producers are refusing new business at recent prices. In view of the general heavy decline in the textile export returns for June, the returns for linen piece goods are relatively excellent and the outlook encouraging.

BOOTS AND SHOES.

A few Northampton manufacturers are busy, but this month is regarded as being "between seasons," and retailers are not placing forward orders. Consequently, many makers are unable to work at full capacity, and they also complain of price-cutting and of competition from users of inferior materials. Leicester reports moderate home business, and no improvement in export business, which is very limited. There has been a further moderate recovery in the Bristol heavy boot trade.

THE POTTERY TRADE.

Business is still very disappointing, and manufacturers are as yet unable to take advantage of further technical improvements recently made in certain sections of the industry. Some manufacturers profess to have noticed a slight improvement in tone, but with the approach of the holidays this has not succeeded in stimulating any appreciable increase in orders.

THE CHEMICAL INDUSTRY.

There is no great improvement in the volume of business, but there is undoubtedly a brighter tone in some sections. Among heavy chemicals, sales of alkali and chlorine products continue poor. Exports of caustic have declined in comparison with June last year, and competition from the Russian production is very keen. The demand for acids has also been slack. Exports of coal tar products were actually higher in June, 1931, than in the corresponding period of last year, this being largely due to an advance in creosote. Trade in refined tar also steadily improved during the month. Pitch has been the subject of a certain number of inquiries, but the improvement seems to have been of rather a temporary nature. Pharmaceutical business is at a low level. Bismuth salts have been advanced in price, but most other price changes have been downwards. Reports of the dyestuffs industries

have not been very encouraging. Essential oils have been the best feature of the month, the improvement in these products, both in the amount of business, and in price, being very marked.

AGRICULTURE.

Unfavourable weather during the greater part of June somewhat discounted the early promise shown by corn crops. Wheat, barley and oats were expected to yield crops slightly below average. The quality of early potatoes was usually good and yields were about average. The appearance of the main crop was promising. Root crops were rather backward. Hops appeared likely to yield below average crops. Haymaking started later than usual, but was general at the end of June. It was expected that the yield of both seeds and meadow hay will be above average. Grass was abundant in the pastures and livestock on the whole were doing well. Milk yields were about normal.

SHIPPING.

After having been relatively stable in January-May, on the low level established last winter, shipping freights underwent a rather sharp reaction in June. Growing nervousness on account of the financial crisis in Central Europe and uncertainty as to the probable volume of 1931-32 Russian exports have, since then, further restricted business in the grain markets; the coal trade has been dull; miscellaneous cargoes have been scanty; and chartering on all routes has been on a very disappointing scale.

BUILDING.

As reflected in the unemployment statistics compiled by the Ministry of Labour, employment in June was slightly worse than in the preceding month, the actual percentage being 18.6 per cent. It was only fairly good in a few centres, notably on the outskirts of London. According to returns furnished by 145 urban authorities, plans passed for new buildings during June amounted to a total estimated cost of £5,217,000, against £5,698,000 in May, and £5,517,800 in June last year. Dwelling-houses accounted for £3,471,900 of this total.

RETAIL TRADE.

A London store reports that up to the end of June business was very encouraging, but since then sales have fallen away.

a Excluding coal imports.

d Revised figures.

STATE OF TRADE ABROAD.

The Central European crisis has had its repercussions in practically every country, and prices and the tone of business have fluctuated in accordance with successive developments. There is as yet no indication of any genuine improvement in trade.

BRITISH EMPIRE.

Australia.—Excessive rains have caused floods and soaked wheat fields in New South Wales and Victoria, but a wheat yield equal to a five-year average is still possible. Pastoral conditions are satisfactory. A larger wool clip and increased lamb exports are expected. Trade generally is no better, and buying demand is concentrated upon necessities and low-priced goods. For the past eleven months a favourable trade balance of £27,000,000 (Australian) is reported.

Canada.—June trade statistics suggest a slight business improvement, and retail sales have expanded. Crop prospects are excellent in the east, but rain is needed in Southern Alberta and most of Saskatchewan. Drought and winds have done disastrous damage in the three Prairie Provinces, and prospects there are very adverse. Recent wheat shipments have been on a scale double that of last year, but at poor prices.

India.—The Bombay raw cotton market rallied towards the end of June, on the Hoover declaration and Mr MacDonald's statement on Indian credit, and also owing to a good demand from home mills and from China and Japan. In the piece-goods trade, Japanese goods sold plentifully, though at unremunerative prices, but there was little demand for British goods. Sales generally were affected by the delay in the arrival of the monsoon, and stocks of local goods have increased.

South Africa.—Good early rains have fallen throughout the winter rainfall area, and very extensive ploughing and sowing of winter grain and fodder crops is reported. Stock is in good condition, and a successful winter lambing season is expected. Exports of citrus fruits for 1931 are estimated at 2,147,000 cases, which exceeds the figure for last year by 137,206 cases. The maize crop is expected to be below the average. Indications point to the larger portion of the crop being yellow maize, as, owing to the lateness of the rain, planting of white maize was affected. Estimates on April 25th were 15,953,000 bags, but the forecast may have to be reduced. Sugar sales for May were greater than in the same month of last year. Estimate of the new crop is 365,000 tons, a decrease of 25,000 tons over last year. Manufacturers generally show a slight improvement, but competition is very keen and trade still difficult. Business conditions generally show a slightly better tone. Wholesale trade is a little more active, but definite signs of an approaching return to normal business are still absent.

EUROPE.

France.—The dispute in the textile industries is now coming to an end, and the workers are gradually returning to the mills. The wool industry is still very depressed, and its difficulties have been accentuated by several local financial troubles and by the German crisis, with its reaction upon the international wool trade. The difficulties of the coal trade continue, and it is estimated that during the current year stocks at pithead have risen from 1,200,000 to over 4,000,000 tons. Measures are being taken for restricting, by means of a quota system, the importation of foreign coal. In the heavy industries there is no improvement in the demand for pig iron, but there is a slightly better export demand for steel, though this is hardly sufficient to absorb existing stocks.

Belgium.—Conditions in the Belgian iron and steel trades are much the same as in the French industry, a slightly better demand for steel products having become noticeable. In the coal trades, the anthracite market is a little more active, but further reductions in industrial fuel prices have failed to bring about any additional sales. The majority of textile undertakings are still working short time, and in the glass industry output, especially of bottles, is still in excess of demand.

Germany.—It is still too early to measure the full effect of the crisis upon German industry, but so far as can be told manufacturers are carrying on as best they can in face of the recent banking suspensions, the imposition of penalty high money rates, and the new regulations governing and rationing internal and external money payments. Even so, the Nordwolle failure has had wide commercial as well as financial repercussions, and such an event as the temporary closing of the Ford motor works at Cologne, due to the crisis, is indicative of what is happening. There is no doubt that unless the present state of financial tension is quickly relieved, German industry will find it increasingly difficult to obtain the finance it needs, and that this will bring about a steady increase in industrial stagnation.

Holland.—Dutch finance and trade are so closely connected with Germany, of which Holland is one of the natural outlets, that no real progress is possible so long as the German crisis continues. Unemployment, consequently, remains unchanged, and only the usual slight seasonal improvement in business has taken place. Money is extremely plentiful, but under present conditions there is no demand. New capital issues are largely confined to conversion operations.

Scandinavia.—The timber trade is dull and inactive, the market for planed wood being particularly unsatisfactory. A new agreement providing for the restriction of wood pulp output by a further 15 per cent. (making 30 per cent. in all) has been made between Scandinavian and Central European interests. Danish trade with Germany has been interrupted by the crisis, but every effort is being made to maintain butter exports.

Spain.—Drought, followed by excessive rains, has affected the harvest, both in quality and quantity. Efforts are being made to develop the Spanish motor industry by means of granting rebates

on the duties on imported parts. The intention is to stimulate the assembly of cars in Spain built partly out of foreign and as far as possible out of home-made parts.

UNITED STATES OF AMERICA.

The seasonal decline in industry and trade continued during early June, but the Hoover moratorium proposals had a transitory effect, and commodity prices turned upwards after a steady decline that had lasted three months, while stock prices registered their most spectacular improvements since 1929. The decline in the steel industry was too great to be wholly a seasonal movement, and activity fell to as low as 35 per cent. of capacity. Automobile production fell seasonally, the month's output being estimated at 250,000 vehicles. Freight movements were 18 per cent. below last year's level, but textile mills continued their improvement. Brokers' loans have again contracted, notwithstanding the rise in stock prices. Money remains abundant and rates low.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London:—

LATIN AMERICA.

The sowing of wheat in Argentina is practically finished, and the early-sown grain is germinating well. Ploughing and sowing for the linseed and other crops are proceeding. The sterling value of the peso is fractionally lower than a month ago, but the official returns of Argentine foreign trade for the first five months of 1931 reveal a surplus of merchandise exports of some 20 million pesos gold, against an excess of imports of 29 million pesos in the corresponding months of 1930. Gold exports were 89,021,000 pesos, against only 928,000 pesos. Brazilian conditions show no appreciable improvement, although the various measures instituted to support the coffee market are being actively applied. Chile is taking special steps to prevent depreciation in the exchange value of the currency, and, pending a comprehensive arrangement to deal with the credit situation, is suspending remittances for the service of the external debt during the current month, lodging the corresponding amounts in legal currency in a special account at the Banco Central de Chile. In Peru, the political situation appears slightly better. Generally, it may be said that progress in commercial conditions in the South and Central American countries must await an increase in international credit facilities, which, in turn, will be dependent upon clarification of the financial situation in Europe.

FAR EAST.

Japanese exports for the first half of 1931 amounted to only Y. 577 millions and imports to only Y. 690 millions. The combined figure of Y. 1,267 millions is the lowest on record for recent years, but this contraction has had one good result in that it has reduced the adverse visible trade balance to Y. 113 millions, or 49 per cent. below that of the first half of 1930. The net gold outflow for the first half of 1931 was only Y. 8 millions, against Y. 223 millions in the first six months of 1930. The stock and commodity markets improved on the first news of the Hoover moratorium proposals, and the general tone is much better than it has been for some months past.

Recent Shanghai cables state that the market is quiet and that prices are lower. Trade with Korea is suspended owing to Chinese disturbances, and Yangtse orders for piece-goods are seriously curtailed.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, AUGUST 29, 1931.

No. 99.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD

AUGUST is the holiday month, and business is normally at a low ebb and subject to certain interruptions. When to this seasonal influence are added the repercussions of the crisis both at home and abroad, culminating in a threat to the stability of sterling and the fall of the Labour Government, it is scarcely surprising that a review of the trade situation should fail to elicit any signs of recovery from the already acute pre-existing depression. Wholesale prices respects the position has grown worse. Wholesale prices have definitely reacted both at home and abroad after their momentary rally inspired by the Hoover declaration. Unemployment in Great Britain rose from a percentage of 21.8 in June to one of 22.6 in July, and the absolute figure for August 17th was as high as 2,719,376. With the exception of a slight improvement in the iron and steel and tinplate industries, the gradual deterioration was spread over most of our staple trades.

Of the evidence afforded by our series of indices of business activity (the complete table will be found on a later page), the best that can be said is that, though the volume of employment, particularly in "heavy" industry, continues its progressive decline and many of the "key" figures (e.g., exports, shipping movement, railway freight traffic, etc.) stand sadly lower than a year ago, there are no signs of any catastrophically rapid worsening of the position during the past two months. Indeed, the indices of consumption of cotton and of iron and steel provide this month a little of encouragement, and the apparent rate of consumption of power suggests that, allowing for the time of year, a moderate volume of industrial activity in some directions at least is still being maintained.

Apart, however, from these crumbs of comfort, the extent of the economic malaise needs little emphasis, and it is quite impossible this year to formulate any views on the autumn outlook. The effect upon trade of such recent and important developments as the inauguration of a "national" government pledged to drastic economies in Great Britain, and the recommendations of the Basle Committee, designed to give Germany a breathing space of six months are still incalculable; and, while there is ground for hope that both will be ultimately beneficial to commerce, it cannot be said how soon such benefits will begin to show themselves.

Furthermore, it must be emphasised that the enforcement of economy in Great Britain and the relief proposed to Germany are steps which, though essential, are calculated to deal only with the immediate and pressing needs of the situation. In both countries long-term and more fundamental remedies are also required. In Germany's case the Basle Committee has pointed the way. Her political relations with her neighbours and her external liabilities must both be so adjusted as to render her a desirable country in which to invest long-term capital. England's long-term remedy must equally be enunciated in no less unequivocal terms. It is that British costs, and indeed the whole British scale of values, must be re-adjusted in consonance with the heavy fall in primary prices of the past few years and with the scale of values existing in the world at large to-day.

When reference is made to the fall in world prices, wholesale prices are usually understood; and reference to the list of commodities that go to make up the Economist or any other standard wholesale price index number quickly shows that wholesale prices in this sense a synonym for "retail" prices really stand for consumers' prices. This is the crux of the whole situation. It is producers' prices that have fallen so drastically during the past two years, and it is consumers' prices that have lagged behind, to some extent in all countries, but particularly so in England. Now consumers' prices are built up of producers' prices plus transport, distribution and other charges, most of which in practice consist of wages, rent, interest and other fixed charges. Once this point is appreciated, it is clear that all the items specified in the last sentence hold each other up by a species of mutual support, and the producer, too, is faced with the necessity of paying wages and all his other costs on this inflated scale.

It is this reduction of costs all along the line that is the long-term problem before the Government and the country to-day. As a laboratory experiment it should not be insoluble, for if wages, rent, interest and also consumers' prices (or the cost of living) all came down equally and at once, no one would be the worse off. Unfortunately it cannot be solved in a laboratory, but must be dealt with amidst the contending claims and arguments advanced by the bulk of the population of the country. It will take a strong and resolute Government to brush aside these claims, to ensure that each makes his due contribution and, above all, that a minimum of time-lag occurs between wages and prices in their joint readjustment.

STATE OF TRADE ABROAD.

The European crisis continues to affect business in nearly every country. There is as yet no indication of any genuine improvement in trade.

BRITISH EMPIRE.

Australia.—The political situation is definitely clearer as the result of the adoption of definite economy measures and the progress of the internal loans conversion scheme towards success. The reductions in wages, salaries, pensions and interest rates have been accepted without any marked resistance. General business conditions are no better, but the winter season has ended with less difficulty than was expected. The approaching wool clip is expected to be large and well grown.

Canada.—July crop reports were again disconcerting, and over huge areas wheat crops have been destroyed by drought. There was no improvement in business conditions during July and the bad harvest will inevitably depress rural purchasing power during the coming winter. Coal and automobile production declined during July, and newspaper showed no real signs of recovery. There was, however, a welcome revival in lumber exports.

India.—Though somewhat below normal, the monsoon has proved adequate, and at the end of July standing crops were in fair condition. Bombay raw cotton prices reacted in sympathy with the American break, but there were fair sales to Far East consumers. Dealings in piece-goods were confined mainly to Japanese goods, but fair sales of local goods are reported, and many mills are booked ahead for some months. Tea prices remain low, but the market tone is more satisfactory, and at times bidding was keen. Rangoon reports a sharp rise in paddy prices, due to the possibilities of serious damage to the Chinese rice crop by the Yangtze floods.

South Africa.—Dry weather conditions have prevailed, but winter prospects are good, with stock and veld in satisfactory condition. The April maize estimate of 15,953,000 bags is likely to prove excessive, owing to damage to late maize by frost. Plantings of wheat and feed crops have been considerably increased in the Eastern Cape Province. Industrial conditions are, on the whole, quiet, but some activity is to be found in the Johannesburg engineering and building trades. There is a decided improvement in the ostrich feather market. Business generally is quiet, due partly to a seasonal recession but partly to a weaker tendency of wool and skin prices and to the uncertainty regarding maize prices.

EUROPE.

France.—The coal trade was interrupted in August by public holidays. Demand is no better, and the new measures regulating imports have not yet made their effect felt. There is keen competition among pig-iron producers, and, in view of the recent reduction in coke prices, it is thought that next month pig-iron prices will be lowered, perhaps by Frs. 10 per ton. The steel trade is dull and unsettled by the announcement by the new Comptoir of a basis price of Frs. 500 per ton for steel bars. Confidence is still lacking in the textile trades. Lille linen weavers are now busy on a big Government contract. The Roubaix strike is definitely at an end, and the workers have had to accept a 4 per cent. wage reduction. Business is bad, and short time very general. German difficulties have had serious repercussions.

Belgium.—The coal trade is dull, and interest is centred mainly upon the negotiations now in progress with Germany for a mutual import agreement. Iron and steel prices are weak, with French and German competition in greater evidence. The break-up of the Foundry Iron Comptoir is foreshadowed owing to the threatened withdrawal of the most important member. Conditions in the glass industry are no better.

Germany.—In some respects the financial aspect is clearer, for the banks have been reopened without any trouble arising, and a reduction in the Reichsbank rate from 15 per cent. to 10 per cent. has proved practicable. The Basle report, too, foreshadows measures which will give Germany six months' respite from the withdrawal of foreign funds. On the other hand, foreign exchange dealings are still controlled, the bourses remain closed, and business and production are still hampered by the financial situation. Evidence of this is found in the postponement of building operations, and this is reacting upon makers of steel joists, concrete and other building material. Merchants in general are finding it difficult to take delivery of goods under existing contracts, owing to the falling off in their own sales.

Holland.—The international crisis has restricted Stock Exchange dealings and new capital issues, but there is no sign of weakness. There have been heavy imports of gold from abroad during the past month. The difficulty of selling goods to Germany has been felt with particular severity by agriculturists, and trade in perishable products has suffered very much. The coal export trade has been severely hit by the recent restrictions on import into France. The disparity between wholesale and retail prices persists, and to it is attributed a large share in the present labour unrest.

Scandinavia.—The situation in the Norwegian whaling industry has changed, and it is now possible that activities will not be suspended this season. Some uncertainty in the timber trade has arisen from the issue of a decree regulating timber imports. It is designed to protect the Norwegian industry, but its exact scope is not very clear. Business in planed wood is still very quiet. The general labour dispute is still unsettled. Sweden reports a better demand for strong sulphate cellulose wood pulp. Timber exports are still affected by Russian shipments. There has been a welcome improvement in Danish butter and bacon prices.

Switzerland.—The watch industry is to be reorganised under the direction of a new holding company, to be called the Société

Générale de l'Horlogerie Suisse, S.A. This has the support of the chief banks, and may receive Government financial assistance. Industrial conditions are still depressed, and tourist trade has suffered from the German crisis and the absence of German visitors.

Austria.—Business has been greatly restricted by the crisis, leading to prolonged banking troubles and acute monetary stringency. Unemployment has steadily increased since the middle of June, and in some industries employment available is less than half that of two years ago. The Stock Exchange has been influenced by the crisis, and, in particular by the suspension of dealings in Hungarian securities.

UNITED STATES OF AMERICA.

During July business was at a seasonally low ebb. Steel mills were working at an average of 34 per cent. of capacity, falling to 32 per cent. at the end of the month. Automobile output was estimated at 210,000 units, a figure which though in accordance with current demand was 14 per cent. below the June level. Stocks of copper have again risen, and now stand at a record height. There is the possibility of a complete closing down of mines in the autumn. Car loadings, at a weekly average of 733,000 cars, were slightly below the June figure, and freight movements were 18 per cent. below last year. Dealings on Wall Street were limited in volume. Money was plentiful and rates very low.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London:—

AMERICAN TRADE STATISTICS—JULY, 1931.

	June, 1931	July, 1931	July, '30

LATIN AMERICA.

The trade situation in the South American countries continues to be adversely affected by the uncertainty of world conditions and the absence of any appreciable recovery in the primary commodity markets. Large shipments of grain are being made from Argentina, the maize crop being very heavy, but the benefit to the Republic is offset by the low level of prices. On the other hand, it is to be noted that the drastic curtailment of imports has resulted in a favourable trade balance for the first half of 1931 of some 41,000,000 pesos (gold), against an adverse balance of 36,000,000 pesos in January-June, 1930. In Brazil trade is still depressed, but there are signs of an improvement in basic economic conditions. Inactivity in Chilean trade has rendered the national financial situation very difficult, and has necessitated the complete postponement of payments on the external debt until next year. In Peru, the whole trade situation is extremely difficult and the outlook obscure. Colombian trade is still quiet, although the increased confidence recently in evidence in that country is maintained. Business conditions in Venezuela, Ecuador and Salvador continue dull.

FAR EAST.

Business with China has been seriously affected by the Yangtze floods, and trade at Hankow is, in the ordinary sense of the term, now practically impossible. The Shanghai market is consequently very dull, and clearances are poor.

Japanese exports of cotton piece-goods to China were accelerated during July in anticipation of a threatened boycott. A small rice crop is expected, as a result of bad weather, and the Department of Agriculture will cease exporting on the completion of existing contracts. The Mitsui and Mitsubishi shipbuilding interests have entered into an agreement to co-operate, and all orders will be accepted jointly. Money was stringent during July, partly because of the withdrawal of foreign balances owing to the German crisis.

The Economist

MONTHLY SUPPLEMENT.

SATURDAY, SEPTEMBER 26, 1931.

No. 100.

New Series.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

The review of business conditions at home and abroad contained in this issue of the Trade Supplement relates almost entirely to the period immediately preceding the suspension of the gold standard in this country, it presents a picture of how matters stood when the breaking-point was reached, and it therefore provides a datum line from which future progress or retrogression can be measured. The picture, however, is a blurred one, for the business world was beset with perplexities arising from the rapid sequence of events beginning with the Austrian and German crisis and ending with the formation of the National Government in Great Britain and the presentation of the new Budget and Economy Bill. The industrial world realised that financial affairs were falling into a state of confusion, and, up to a point, were prepared to entrust their rectification to those best qualified to undertake the task. Both before and after the suspension of the gold standard, however, industrialists did not feel able to lay their own plans ahead, and for this, among other reasons the depression became steadily more accentuated during August and early September.

Evidence of this is to be found both in our series of indices of business activity, published on a later page, and in the adjacent statistics. Unemployment, it is true, was only fractionally higher in August than in July, and the increase is probably fully explained by the holidays. Coming to actual details, improvements in coal mining, jute manufacture and the boot and shoe trades, largely offset a further deterioration in the heavy industries. The August trades, and in building and allied industries, while iron and steel production figures were deplorable, there was a marked setback in the overseas trade returns. Railway receipts were inflated by the holiday traffic, but there was a further small setback in shipping freights. Commodity and security prices fell to new low levels, this being the inevitable consequence of foreign funds from increases, the heavy withdrawal of foreign funds from London, and the many political and financial uncertainties both at home and abroad. Further contributory causes were such events as the August American cotton crop estimates and the resultant heavy break in cotton prices. Such was the position when England had to abandon the gold standard. At the moment British industry is faced with a high Bank rate, and political uncertainty,

and it is to be hoped that in both respects the situation will be improved before long. Even so, it is still quite impossible to say how future developments will affect British industry. There is now a disposition to argue that the depreciation of the pound has presented the country with a joint tariff against imports and a bounty upon exports, and in certain quarters an optimistic view of our industrial outlook is being advanced, encouraged perhaps by the advances in commodity prices that have already taken place. Such a view is, to say the least of it, premature. For one thing, past experience has shown that in course of time internal prices, wages, and production costs adjust themselves to changes in the external value of a nation's currency, though if the latter is fluctuating violently, there may never be time for the adjustment to be effected. Still, such adjustment involves the automatic disappearance of both the tariff and bounty element in the initial depreciation of the currency, and all that remains is a lightening of the burden of both public and private debts—with a corresponding loss to the creditors—and probably some reduction in real wages.

Again, it is most likely that England's abandonment of gold will be followed by other countries. Denmark has already followed the lead, and similar decisions elsewhere are expected. In fact the repercussions in many Continental centres are likely to be very serious indeed, and even the strongest centres cannot wholly disregard the losses they will inevitably incur through the depreciation of their sterling holdings. British trade after all depends in an exceptional degree on world trade. If this declines more acutely than in past months, we cannot remain immune. The real consequences of our abandonment of the gold standard have yet to take effect.

This view is confirmed by the foreign reports contained on later pages of the Supplement, which, of course, refer to the position immediately before September 21st. To judge from these, France, Germany, the United States are all experiencing serious difficulties both commercial and financial, and these are shared in not only by the countries of Central Europe that have long been in trouble, but also by countries such as Holland, Switzerland and the Scandinavian nations, which hitherto have been considered sound. Such an atmosphere is not likely to bring about a speedy improvement in business.

HOME INDUSTRIES AND TRADE.

The following reports on British industries cover, in most cases, the period to the middle of September. In the remainder they relate to the month of August. It will be noted that all reports were received prior to the suspension of the gold standard.

THE COAL TRADE.

House coal prices were increased by 1s. 6d. a ton at the beginning of September, but demand, though fair, has since been somewhat below average. Gas coal and fuel for electricity works have lately been moving off well, but home sales of industrial fuel are affected by the stagnation in the heavy trades. There is, however, a good demand for large Northumberland coals, and some collieries have exhausted their quotas. South Wales reported some revival in export business at the end of August, but trade has since fallen away, partly because of the French import restrictions.

IRON AND STEEL.

The August production figures were extremely disappointing, being, in fact, the lowest recorded for any month since the war, except when production was interrupted by labour troubles. Demand from the shipyards is now reduced to a minimum, and owing to the depression on the Continent foreign semi-manufactured steel has been available at prices well below the cost of production. It remains to be seen what effect the depreciation of sterling will have; but early this week the opinion was expressed that it would not be sufficient to give any real stimulus to the industry.

ENGINEERING.

The industry has lately become very depressed, and the latest unemployment returns give a figure of 27.1 per cent. In the marine engineering branch unemployment runs as high as 50 per cent., and as many men normally employed in this branch have been transferred to other work, the real stagnation is still more pronounced. Elsewhere the volume of new orders has become very much reduced, and at the moment industrialists are perplexed as to the financial outlook. Makers of locomotives and rolling stock are far less active than a year ago, and textile machinists are practically idle. The machine tool trade is better employed, mainly on replacement orders. The additional allowance for obsolescence conceded in the recent Budget is welcomed, but it is thought that it will have little actual effect upon the industry.

PRODUCTION OF ELECTRICITY.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical generation in the chief industrial areas of Great Britain. We show below a résumé of the results achieved during recent periods:—

INDEX OF GENERATION OF ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Period.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.

July	142	117	204	209	192	143
August	143	121	182	197	197	145

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.
† Increase due to special causes.

The "corrected" figure, allowing for seasonal fluctuations and the steady expansion in the use of electricity, was 90.3 in August, against 88.0 in July and 88.3 in August of last year.

ELECTRICAL INDUSTRY.

Manufacturing activity in August was quiet, but not to the extent suggested by the index numbers, which represent a twelve months' moving average. September shows little improvement, no order of outstanding importance having been received on home account, while the only export order of note was for turbo-generator equipments for Russia totalling 10,000 kw.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

MOTOR INDUSTRY.

During the past month the motor industry has been busily engaged on the manufacture of their 1932 models in readiness for the coming Exhibition. Sales have started earlier this year than is usual, with the result that many factories are now in full production. The export of motors continues to be considerably below the comparable figures for the corresponding months of 1929 and 1930, though in New Zealand a greater proportion of the available market has been secured. There has so far been no unseasonal decline in the commercial vehicle industry, but the motor cycle trade continues extremely quiet.

THE COTTON TRADE.

No improvement has taken place in the cotton industry, and in spite of fluctuations in raw material rates there has been little actual change in the level of values. Supplies continue abundant and, with favourable reports regarding American and Egyptian crops, higher gold prices can hardly be looked for. There has been an increased inquiry for piece-goods on behalf of China, the bulk of the business being done in cloths suitable for printing and dyeing, though a few contracts have been arranged in bleached shirtings. Very little business has been done with India, though Karachi and Madras have taken a certain amount of light fabrics. South American business has been adversely affected by the fall in exchange rates, and the home trade is influenced by the financial crisis, wholesale houses fearing that clearances will be affected by the reduced spending power of the public. In the yarn trade it has been quite exceptional for more than retail lots to be sold in American and Egyptian counts, and ruling prices continue very poor.

THE WOOL TEXTILE TRADES.

The fifth series of London sales opened on September 15th, and initial results, though showing declines of 10 to 16 per cent. on the July prices, were rather better than had been expected. In spite of the continued disparity between raw wool and top prices, top makers were also somewhat more cheerful. Yarns were subject to keen competition at unremunerative prices, and the market was further depressed by the existence of heavy stocks. Business in piece-goods is limited. Following the suspension of the gold standard, raw wool prices at the London sales were advanced by 5 per cent., while at Bradford most top makers withdrew their quotations.

THE RAYON TRADE.

There has been a substantial increase in the demand for rayon yarns during the last month, but prices are very irregular with a great deal of bargaining on big orders. The home trade has been responsible for the greater part of the business, though a slight improvement has recently taken place in Dominion markets. All classes of goods have shared in the general improvement.

THE LINEN TRADE.

Although flax purchases are mainly confined to bare necessities there have been some small speculative contracts for new crop Russian material. European crops, including those of the U.S.S.R. and the Balkan States, are 30 per cent. below those of last year. Yarns are in medium demand, and cloth orders are expanding.

BOOTS AND SHOES.

Trade is still slow with keen competition for orders, and many Northampton factories are working short time. Leicester reports a slight recovery in home demand, and Bristol makers of heavy foot-wear received a fair number of orders for the autumn and winter.

THE POTTERY TRADE.

Business remains very quiet, but Christmas orders are beginning to come to hand, and this is improving the situation.

THE CHEMICAL INDUSTRY.

Business has been very restricted, but prices for the most part have remained fairly steady, with slight reductions in formaldehyde, lead acetate and potassium carbonate. Sales of acetone have been satisfactory, and those of charcoal, naphtha and general solvents have improved. A steady increase in demand for coal tar products has resulted in higher prices and lower stocks. In the pharmaceutical chemicals there has been little of interest with the exception of the bromide position, in which British makers have been experiencing severe German competition. In overseas trade there was a slightly smaller decrease in exports as compared with the corresponding month last year than was the case last July, while imports show a decline in nearly every item.

AGRICULTURE.

The harvest has been late this year owing to the slow maturity of crops in the sunless weather, while some damage has been done by heavy rains. The quality of grain generally is moderate, though yield per acre of the main potato crop is about average, though owing to disease there will be a larger proportion of unsound produce. Roots have been badly in need of sun and warmth, and it is expected that the yield will be below the normal. Hop picking has begun late, and yields are expected to be high. The yield of both seed and meadow hay was expected to be high, but later cuts have been badly weathered. Grass continues plentiful, and livestock have done well with milk yields about normal.

SHIPPING.

Quiet conditions generally continue to prevail in the whole-cargo shipping trade, which has been further hampered latterly by uncertainty in regard to the financial situation. A fair volume of business has been transacted for the carriage of Plate grain at steady rates on the whole, and chartering from the Black Sea and Danube has also been moderately active. On the other hand, the North American market remains dull and featureless, and requirements east of the Suez Canal have been comparatively few; while the outward coal trade has been on a limited scale, with values displaying an irregular tendency on most routes.

BUILDING.

According to the Ministry of Labour's returns, employment was again fractionally worse, the August percentage being 19.7, against 18.9 per cent. for July. It was still good at Hull and Oxford. According to returns furnished by 142 urban authorities, plans passed for new buildings during July comprised a total estimated cost of £3,046,300, as compared with £7,556,400 in July, and £3,514,700 in August, 1930. Dwelling houses accounted for £2,001,400 of this total.

RETAIL TRADE.

A London store reports that the month began well. The announcement, however, of the Budget and Economy Bill details caused a slight falling-off in business, owing to fears by the public that their spending power would be reduced. According to the calculations of Incorporated Association of Retail Distributors, published in the *Board of Trade Journal*, the money value of total sales during August was 4.8 per cent. below those of August last year. Allowing for the holidays, the figure agrees very closely with the decline of 4.3 per cent. for the current year to date, and, having regard to the fall in retail prices since a year ago, it seems probable that the volume of retail trade has been maintained. As regards detailed changes, food sales for August showed a decline of 6.0 per cent., and other departments only 2.8 per cent. Stocks, again expressed in value, showed a decline of 6.8 per cent., while employment was slightly better than a year ago.

Excluding coal imports.

c Provisional figures.

a Excluding coal imports.

c Provisional figures.

STATE OF TRADE ABROAD.

The European crisis continues to affect business in nearly every country. There is as yet no indication of any genuine improvement in trade.

BRITISH EMPIRE.

Australia.—Substantial Government and private economies are failing to compensate for the effects of unsettlement abroad. Still, there has been a 55 per cent. contraction in imports, while exports of merchandise are well maintained, and a large rural production is anticipated. Both internal trade and secondary industry are dull, with unemployment increasing. There has been a large wool clip and good lambing, but the wool market is tending towards a lower level. Butter exports have been heavy.

Canada.—The harvest was nearly completed by the end of August, and it was then clear that, in accordance with previous forecasts, the total yield would be low. Quality, however, is described as a good average. Eastern Canada reports an excellent fruit crop, but prices are deplorably low. The general business depression was accentuated during August by the holidays, and most industries were operating well below capacity.

India.—The monsoon has been satisfactory, and, with the exception of the Northern and Eastern parts of Bengal and Assam, where much damage has been done by floods, the prospects of standing crops are generally fair. Prior to the unsettlements caused by the suspension of the gold standard in England prices of cotton fell in sympathy with those for American cotton, and sales were extremely poor, especially as foreign growths were being imported at competitive prices. The acreage estimate shows a reduction of 6 per cent. as compared with this time last year at 13,926,000 acres, against 14,875,000 acres. Dealings in piece-goods have been extremely poor following the heavy fall in the price of cotton on the publication of the American Bureau Report.

South Africa.—Excellent rains have fallen throughout the greater part of the country and have greatly improved agricultural and pastoral prospects. Wheat crops are very promising. Business generally remains quiet, but the Rand engineering industries and sheeting and blanket factories at East London and Durban are well employed.

EUROPE.

France.—Restriction of imports has so far not had any appreciable effect on the coal trade, and it is unlikely that any improvement will result until the large stocks accumulated in anticipation have been consumed. The heavy industries continue dull, and there has been a continued fall in the prices of iron and steel, which has reduced considerably the margin of profit to producers, so that exports have been virtually non-existent. Activity in the cotton industry continues to decline, and many spindles are now standing idle. The wool trade is also operating on a very restricted basis, due to the uncertainty in Central Europe, the further fall in raw wool prices and recent business difficulties. Many jute factories have closed down through lack of orders.

Belgium.—The coal trade continues dull with no demand, and many pits in the Borinage district are closing down. An agreement has been reached with Germany with regard to the importation of coal, which provides for a reduction both in production and imports. The latter will be reduced to 200,000 tons, and will be subject to licence. Both the cotton and woollen industries have lost further ground and are now very depressed.

Germany.—The standstill agreement with foreign bank creditors has now been signed, and the necessary emergency decrees have been issued. It is felt that the terms of the agreement impose heavy burdens upon German industry, and the clause authorising the partial release of foreign holdings of marks may lead to a further outflow of gold. A big winter increase in unemployment is anticipated, and relief schemes are now under discussion. Reports from the steel trades state that export business and prices are falling away, while home demand is seriously restricted by the financial crisis.

Holland.—That the influence of the general depression is being felt on the national revenue is reflected in the Budget, which has just been published, for after showing a surplus on the "ordinary" services from 1924 to 1930 amounting in the aggregate to about £27,000,000, the deficit on the ordinary services for 1931 is estimated at about £2,250,000. This does not include the requirements of the special "crisis" services, which will have to be covered. Customs duties which were 8 per cent. are being raised to 10 per cent., civil service salaries are being subjected to cuts, and other economies are being effected. Trade and banking have been affected by the German and British crises, and the coal industry by the recent French and Belgian restrictions upon imports. Reports from the East Indies are very discouraging.

Scandinavia.—The one bright feature in Norwegian news is the termination of the most protracted labour conflict the country has ever seen. It is not yet known what permanent effect the five months' stoppage will prove to have had on Norwegian export industries—particularly on the paper trade, which has been largely captured by Finnish, Swedish, German and Canadian mills. The planned wood market, too, has continued to go from bad to worse, and there is likelihood of still further declines in shipments. Meanwhile mills are heavily overstocked, and there is little need for the cutting of logs this autumn. In Sweden the violent fall in prices suffered by the Kreuger concern on the New York and London Stock Exchanges has done a fair amount of harm. The depreciation of leading securities amounted to 16 per cent., while that of

the Kreuger concern alone was as much as 25 per cent. There is no change in the timber situation. In Denmark bacon prices have been weak, but butter prices retained most of their rise of a month ago.

Switzerland.—Economic conditions continue to be influenced by the world crisis, and apart from heavy gold imports amounting to 88.4 million francs in August, both imports and exports show a further decline. Prices of raw materials are still falling, and foreign competition is increasing, while the prospect of a British tariff is causing some alarm. The tourist season has been bad, and, coupled with a fall in goods traffic, railway revenues have decreased. Business with Russia has increased.

UNITED STATES OF AMERICA.

Trade continues dull, with further declines in the basic industries. Steel mill operations average only 32 per cent. of capacity, and automobile production is substantially lower, with an estimated output of 175,000 units. There is some improvement in the tin, shoe and textile industries. Freight movements have expanded, but are still well below the normal for the time of year. Railway gross earnings are 17 per cent. below those for last year. There is greater steadiness in commodity prices despite the recent net decline.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service of New York and London:—

AMERICAN TRADE STATISTICS—AUGUST, 1931.			
	July.	Aug.	Aug., '30.
EMPLOYMENT—(June, 1914=100)†	86.0	...	...

LATIN AMERICA.			
While the situation in South America continues to be affected by world conditions, the Argentine is enjoying a fair measure of prosperity. The latest official trade returns disclose the fact that an adverse balance of merchandise trade in the first seven months of 1930, amounting to 50,000,000 pesos (gold), has been converted into a surplus of exports of a similar amount for the corresponding period of the current year. The aggregate value of imports has considerably decreased, while exports have increased by as much as 74 per cent., which has limited the decline in total values to less than 3 per cent. Exchange rates for both the Argentine and Uruguay have continued weak. The lower level of exchange in Brazil has assisted local industries there, particularly in the textile trade centres at San Paulo. Chilean commerce continues inactive, and Peruvian trade is depressed owing to political uncertainties and the fall in cotton prices.			

FAR EAST.

Business with China continues to be affected by the disastrous floods, and may be said to be almost at a standstill. Japan raw silk sales have been decidedly favourable, and markets are firm on reports of the short crop of cocoons. Cotton yarns continue to show a falling tendency on account of the increase in American cotton crop estimates.

PRODUCTION. (Thousands of Metric Tons.)

Unless otherwise stated, the figures represent authorised share issue of new joint stock companies at home, and the increase of capital of existing companies. Bonus shares are excluded from the figures of the U.K., both bonus shares and conversions are excluded. In the case of the Netherlands and the railway issues. "Rijksbank" and "Rijksbank" issues exceeding Fls. 100,000 on the Dutch market and conversions. Until end 1922 paper mark. "Société de Banque Suisse" incorporation for subscriptions on Swiss market including obligations and Local Govt. loans. India, compiled by "Commercial & Financial Chronicle." † Up to 1927, authorised issues, excluding western departments; since 1928 amounts actually issued, whole territory.

The Economist

MONTHLY SUPPLEMENT.

SATURDAY, OCTOBER 31, 1931.

No. 101.

New Series.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

THE current review of business conditions at home and abroad carries the story until the first month of the October, and so covers roughly the first month of the suspension of the gold standard. The impression to be gleaned from the reports published upon subsequent pages and also from such general indicators as commodity prices and the unemployment returns is that the stimulus afforded to the British export trades by the pension of gold payments is so far acting slowly and irregularly. Certain trades, it is true, have definitely

the business world was so convinced of the dangerous consequences of a Labour victory that there was a distinct disinclination to enter into fresh commitments until the result of the polls was known. The financial world took a slightly different view, for during the progress of the election sterling strengthened, and Stock Exchange prices improved. Clearly large repatriations of British funds from abroad have been taking place, though this may have been as much due to lack of confidence in foreign centres as a return of confidence in London.

Some observers are inclined to believe that the 6 per cent. Bank rate was maintained in force during the election primarily as a precautionary measure against any unsettling effects that the election might have at home and abroad. Be that as it may, there is little doubt that so high a rate, if indefinitely continued, would have a deterrent affect upon trade, both because it directly raises the cost of bank advances, and also because it tends to deflect funds into the money market and more particularly into Treasury bills. Now that the election is over there would, perhaps, be ground for hoping for an early reduction in the rate, were it not for the upward trend of rediscount rates abroad, with the prospect of further increases in important centres. If the authorities decide to make no change immediately, it can only be because they are influenced by the position in foreign centres.

improved, and these include some of our most depressed industries. Cotton is a prominent example, and so are certain sections of the export coal trade. The lighter branches of the steel trade are also more active; there is a bigger business in merino tops; and encouraging reports come from motor manufacturers and from the linen and rayon trades. On the other hand, railway traffics are still disappointing, and there is some reason to fear that even where there has been a revival it possesses a somewhat shallow basis. For example, the recent wool sales proved so satisfactory that it was decided to extend them by three days. This was done, but in the end demand began to fall away and prices became noticeably weaker. Finally, there is little evidence of movement in the heavier industries, such as makers of constructional steel or of big engineering plant. In short, there is as yet no disposition to launch out into new capital expenditure, and the continued lack of business in the new capital market firms this from the financial angle.

This lack of enterprise is due to several causes. First and foremost no one is able to "take a view." No one knows when or where sterling will settle down, or what is going to happen in foreign countries. The solvency of different financial centres, the ability or desire of other countries to remain upon the gold standard, the basis of new contracts, tariff changes, currency movements, all factors attended to-day with the utmost uncertainty, yet they are equally factors which are vital to the conduct of business. At home, too, there have been two serious obstacles in the way of immediate business progress. One is the general election and the other is the 6 per cent. Bank rate.

A general election always delays business, and this election has been no exception to the rule. Though there was never any real doubt as to a Government majority,

HOME INDUSTRIES AND TRADE.

The following reports on British industries cover, in most cases, the period to the middle of October. In the remainder they relate to the month of September.

THE COAL TRADE.

Export trade possesses distinctly better prospects than for some time past. The South Wales steam-coal trade is steadier, employment is more regular, and shipments are expanding. There is little improvement in Durham, but Northumberland collieries have booked so many new orders that the quota for the last quarter of the year has been raised from 80 to 94 per cent. In Scotland, however, a lull has succeeded the initial rush immediately after the suspension of the gold standard. So far, home industrial demand is slow in materialising, and current orders are being met out of stock. The house coal trade has been retarded by the warm weather.

IRON AND STEEL.

The general tone of the industry is appreciably better. There are more inquiries and orders for pig iron, and stocks are being substantially reduced. There is a prospect of three fresh furnaces being blown in. Makers of semi-manufactured steel on the North-East Coast are better employed, and foreign competition has become a less serious factor. A good demand has arisen for light material such as galvanised sheets, but orders for heavy steel, such as joists and girders, are hanging back. It is believed that capital expenditure generally is being held up until after the result of the election is known.

ENGINEERING.

Apart from some increase in the number of inquiries, no real improvement is yet noticeable, and it is believed that orders are being delayed until after the election. There is, however, a slightly better feeling in the machine tool trades, and as these are one of the "key industries" of the country, such a movement may indicate an approaching revival in industrial activity generally. Locomotive and rolling-stock builders report a better inquiry, but textile machinists and makers of agricultural machinery remain inactive. The September shipbuilding returns were very bad, and marine engineers are still suffering from the depression in this industry. Some hopes, however, are rested upon the fact that the first part of the new shipyard wages agreement came into force at the beginning of October.

PRODUCTION OF ELECTRICITY.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical generation in the chief industrial areas of Great Britain. We show below a résumé of the results achieved during recent periods:—

INDEX OF GENERATION OF ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Period.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, and Heavy Engineering.	General Engineering and Automobile Construction.	Chemicals.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.
1926—Monthly average	119	100	138	162	134	120
1927	146	143	158	210	163	139
1928	156	150	177	237	190	147
1929	171	164	211	260	196	160
1930	167	152	216	234	215	156
1930—September	156	137	223	282†	203	144
October	161	150	195	244	222	158

September	157	130	222	213	158	158

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.
† Increase due to special causes.

The general improvement in the figures is of a purely seasonal character. The corrected figure for September, allowing for seasonal fluctuations and the steady expansion in the use of electricity, was 89.0 against 90.3 in August and 92.6 in September of last year.

ELECTRICAL INDUSTRY.

No export orders were received during early October. Home orders amounting to 25,000 k.w. were placed by the Government and by railway undertakings for turbines and rotary converters.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

MOTOR INDUSTRY.

Motor manufacturing activity is now showing definite signs of increase. The percentage of unemployment in the chief centres is dropping, and there is every reason to expect that this decrease will continue. Considering the general depression, the commercial vehicle industry, in particular, has maintained a high level. Exports of vehicles for September, 1931, show an increase of over 2 per cent. when compared with 1930. The total for the nine months, however, is still down by about 25 per cent. It is thought that this decrease will be much smaller by the end of the year if the exchange value of the £ remains at its present level.

THE COTTON TRADE.

A definite change for the better has shown itself, due almost entirely to the suspension of the gold standard. The hardening movement in raw material rates as a result of the depreciation in the value of the £ has stimulated activity in manufactured goods, and exporters have now a decided advantage in competing against countries that are still on the gold standard. There has not been much alteration in prospective supplies of raw cotton. It is now recognised that the output throughout the world this season will be abundant. In the weaving branch the feature of interest has been the revival of demand for China, where a big business has been done in standard makes and fancies. India has been disappointing, but inquiry has lately broadened, and more trade has been put through in fine goods, especially for Karachi and Madras. Increased activity has been reported in bleached shirtings for Egypt. More business has been done for Java and Singapore. Heavy goods have moved off more freely for certain African outlets, and cloths suitable for printing and dyeing have attracted considerable attention for South America and the Continent. When prices began to advance, home houses were caught short of supplies, and substantial contracts have been arranged with makers. There is now a tendency for production to increase in most Lancashire weaving towns. Spinners of yarn have gained definite ground, and prices in American and Egyptian counts have been put up to a greater extent than the rise in the raw material. A big business has been done in twist and weft. The extensive buying in two-fold yarns for China has caused much comment. During the last few days rather more demand has been experienced in bundle yarns for India. Doublers have sold freely and are now busier than for a long time back.

THE WOOL TEXTILE TRADES.

The suspension of the gold standard gave an initial stimulus to the wool trade, and it was possible to extend the recent London sales for three days and dispose of an additional 24,000 bales. It was noticeable, however, that prices weakened towards the end of the sales, and it was then apparent that a big expansion in business was not likely until after the election. Top prices hardened appreciably in the last week of September, and have since been steady at the new levels. There has been a good consumption of merino, but there is scope for more movement in medium and low cross-breeds.

THE RAYON TRADE.

The turnover in rayon yarns has been at a higher level than for some months past, and most of the factories are better employed. There has been no upward movement in viscose prices following the suspension of the gold standard, but there has been a much firmer tendency. Acetate yarns are weak in price, but demand is now improving. In both fabrics and yarns domestic demand is providing most of the orders, though there has been rather more moving with the Dominions and China.

THE LINEN TRADE.

The suspension of the gold standard led to an immediate withdrawal of all flax offering from abroad. Subsequently isolated parcels were negotiated at sharply advanced limits, and values are now 15 per cent. up on August levels, but holders are not selling. Very large transactions have taken place in all classes of linen yarns and cloth, both for home and export. In the North of Ireland most mills and factories are now working to capacity, and have contracts to cover production for four to six months ahead. Prices are very firm at advanced rates.

BOOTS AND SHOES.

The Northampton boot and shoe trade reports that the suspension of the gold standard has stimulated business, and that home retailers are busily replenishing their stocks. Export orders at Northampton are also better, but Leicester believes that foreign business is being held back by the uncertain outlook abroad. Leather prices have risen appreciably, and shoe manufacturers have bought heavily ahead. Stocks, consequently, are being rapidly exhausted, and some anxiety is felt as to the price basis upon which future supplies will have to be bought.

THE POTTERY TRADE.

There has been a definite improvement in tone. Many earthenware manufacturers are now working full time, and there is much less unemployment in the pottery section.

THE CHEMICAL INDUSTRY.

Business was limited during the greater part of September, but at the beginning of the present month increased activity was experienced and now there is a very fair demand in the home market for a large number of items. Increased interest in industrial chemicals has been particularly noticeable. There has been a general advance in the price of imported products owing to the fall of sterling, but in the price of home-made products there has been very little alteration. Markets for pharmaceuticals and essential oils have been very erratic, and a macerated chemicals and essential oils pending more settled conditions. Number of sellers have withdrawn pending more settled conditions. The question of Conventions, in which both British and foreign makers are interested, has not yet been considered, and rates are nominally unchanged. Business in coal-tar products has been satisfactory, the export trade, especially in tar oil and creosote oil, showing a considerable improvement.

AGRICULTURE.

According to an official report, the excessive wet and lack of sunshine during September resulted in a good deal of corn being harvested in damp and soft condition. The yield per acre of wheat and barley was forecasted to be below and that of oats slightly above average. Disease amongst potatoes will materially reduce the crop of sound tubers going into clamps, and the yield per acre below average was forecasted. Yields of root crops will be somewhat below average. Some progress was made in ploughing leys, but little cleaning was possible of fallow and stubbles, which were rather dirty. Cattle and sheep generally did well, and milk yields were well maintained on the whole, though showing a seasonal tendency to fall.

SHIPPING.

Business has suffered considerable dislocation as a result of the British suspension of the gold standard. Except for Argentine grain, however, cargo traffic has been inactive, but there has been a better inquiry for colliers. Freight rates quoted in sterling have risen as a result of the depreciation of the pound, but the rise has been irregular.

BUILDING.

According to the Ministry of Labour's returns, employment was again worse, the September percentage being 21.7, against 19.7 per cent. in August. The percentage in September last year was 15.5 per cent. Employment at present is fairly good in some centres, including Coventry, Hull, Leicester, Nottingham and Plymouth. According to returns furnished by 145 urban authorities, plans passed for new buildings during September comprised a total estimated cost of £5,456,300, against £3,143,000 in August and £6,908,200 in September last year. Dwelling-houses accounted for £3,933,700 of this total, factories and workshops for £163,600, business premises, shops and warehouses for £316,700, and other buildings and additions and alterations for £1,042,300.

RETAIL TRADE.

A London store reports business to be difficult. More customers are being served, but returns are reduced by the low level of prices and by the efforts towards personal economy being made by the general public.

a Excluding coal imports.

d Revised figures.

STATE OF TRADE ABROAD.

Reports from all quarters tell of the serious dislocation to trade caused by the British suspension of the gold standard. In Germany and Central Europe the situation remains very difficult and uncertain.

BRITISH EMPIRE.

Australia.—Export trade has been stimulated by exchange movements subsequent to Great Britain's suspension of the gold standard and by the fact that the Australian pound still remains in the same relation to sterling as it did two months ago. Prices and markets for exports of Australian primary products alike are better. Internal trade, however, shows no improvement. The wool clip is large and well-grown, but though demand is stronger prices are still below costs of production. There is an exceptionally heavy surplus of butter and fat lambs available for export.

Canada.—On October 19th an Order-in-Council was issued prohibiting the export of gold except under licence, and this implies the virtual abandonment of the gold standard. The Canadian dollar is at a premium on sterling, but at a discount against gold currencies. Business conditions show but little change. Exporters to the British market are finding trade checked by the depreciation of the pound, and the basic industries are working below capacity. The wheat position remains unsatisfactory, with prices still low and foreign demand declining.

India.—The Bombay raw cotton market rose sharply on the suspension of the gold standard in England, and there was more interest shown by Lancashire and Chinese buyers. September demand for Manchester goods was very limited, notwithstanding the rise in cotton prices, but heavy sales of Indian goods took place, owing to fears that the new Budget would contain an excise duty. The increase in the Customs duties and the failure to impose an excise duty will, it is believed, react in favour of Indian goods, and will, consequently, lead to a diminished Japanese demand for raw cotton. The Calcutta jute market experienced a strong demand immediately after the British suspension of the gold standard, but prices have advanced and this has checked business.

South Africa.—Trade has been checked by the depreciation of sterling and other currencies, and dealers are exercising great caution. A heavy decline is expected in exports. Wool prices fell at the opening of the season, and most manufacturers report decreased activity. Drought conditions during September caused serious damage in most sections, but good rains fell in early October and the outlook is in this respect much better.

EUROPE.

France.—There is a keen demand for house coal, but the market for industrial fuel is no better. Output of pig iron is still excessive and competition is keen. It is not believed, however, that in exchange of Frs. 100 is low enough to give British pig iron much of an opening. The textile trades are very dull, the Roubaix woolen industry being particularly hard hit by the depreciation of the pound, which has closed the English market to cloth manufacturers, and may expose spinners to the competition of British yarn.

Belgium.—The iron and steel trades, with their big export trade to England, are feeling acutely the depreciation of the pound, the more so as all contracts have habitually been arranged in sterling, which no longer provides a reliable basis. Coal imports are henceforward to be regulated on a quota basis, and it is hoped that this will enable existing stocks at Belgian pits to be cleared, especially as Belgian owners have agreed to reduce output by 10 per cent.

Germany.—The coal trade is at the moment more active, as during the summer the financial stringency had forced consumers to reduce their stocks to a minimum, and these are now having to be replenished. The heavy industries have been placed in a difficult position by the depreciation of sterling, which has upset the whole basis of Continental iron and steel prices. The internal situation remains very difficult. Notwithstanding the standstill agreement, there has been a further drain of funds from Germany, with further demands on the Reichsbank. Unemployment rose to 3,550,000 by the end of September, but the increase during the month was only 140,000, which is a comparatively small figure.

Holland.—The British suspension of the gold standard has inflicted considerable losses upon Dutch traders who had sterling contracts outstanding, and the recent development of dealings in forward exchange have been generally welcomed. There has been a serious increase in unemployment, but the winter outlook is not so assuring.

Scandinavia.—The main event of recent weeks has been the suspension of the gold standard in all three Scandinavian countries. The Norwegian timber trade has been very unsettled owing to difficulties of arranging a basis for prices to be paid by British importers, and later in the month, owing to the suspension of gold payments by Finland. In Sweden, however, timber sales have been more active, and sterling prices have risen by 10s. to £1 per standard. Prices of Danish agricultural produce have been erratic, but farmers have, so far, not yet derived any real assistance from the depreciation of the krone.

Switzerland.—As in other countries, exporters are seriously perurbed by the depreciation of sterling, and the German situation is a cause of further anxiety. This explains the general weakness of the Bourse, particularly in Swiss bank shares.

Central Europe.—Austrian trade is depressed owing to the difficulty of collecting outstanding debts from Hungary, and trade with

Jugoslavia, Poland and Czechoslovakia is also hampered by exchange restrictions and financial stringency.

UNITED STATES OF AMERICA.

During September the industrial situation was practically unchanged, and the normal seasonal expansion was lacking. Steel mill operations have again contracted and early in October stood at only 29 per cent. of capacity. Automobile production also decreased during September from 175,000 to 160,000 units. Construction contracts were above the August level, but were still 20 per cent. below last year. There was an inadequate improvement in freight movements, accompanied by a further decline in railroad earnings. The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service of New York and London:—

AMERICAN TRADE STATISTICS—SEPTEMBER 1931.

LATIN AMERICA.

In Argentina growing wheat is in excellent condition, except that there have been spasmodic appearances of rust, which so far do not appear to be spreading. The linseed and oats crops are excellent, and the maize already sprouting is in satisfactory condition. During the past week, an Exchange Control Commission has been established in Argentina, charged with imposing regulations upon dealings, and with fixing rates for the purchase of foreign currencies. In Chile, commercial conditions remain dull, although it is to be noted that, as a result of the restriction of imports, a surplus of exports was established in the first six months of 1931 of some 42,000,000 pesos, against an import surplus of 21,000,000 pesos in January-June, 1930. The victory of Senor Juan Esteban Montero in the recent Presidential elections is regarded with satisfaction in commercial quarters. In Brazil there has been some improvement in the Sao Paulo coffee market, and prices have advanced slightly, while exports have been more active. There has as yet been no relief from the commercial depression in Peru, but increased trading activity and greater confidence is observed in certain directions in Colombia. Trade is somewhat difficult in Ecuador, Venezuela and the other Central American countries.

FAR EAST.

Generally speaking, Chinese trade has been stimulated by the rise in the sterling price of silver. Due to the depreciation of the pound offerings at the Shanghai piece-goods auctions have become heavier and are being well absorbed. Demand from the North of China, however, has been checked by the Manchurian troubles. Japanese trade has been gravely disturbed by the British suspension of the gold standard, the main reason being that all foreign trade is habitually conducted in sterling. Exports to China have also been put an end to by the Manchurian dispute. These events have made the outlook very obscure, and brought about a heavy fall in share prices at the end of September, so much so that it was necessary to close the Stock Exchanges for a week. Large gold shipments have been made to the United States, but it has been announced that there is no intention of suspending the gold standard.

The Economist

MONTHLY SUPPLEMENT

21 DEC 1931

New Series. SATURDAY, NOVEMBER 28, 1931. No. 102.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

THE STATE OF TRADE AT HOME AND ABROAD.

Now that two months have elapsed since the suspension of gold payments, it is possible to assess the immediate effects. It is clear that certain industries have benefited to a moderate extent. The textile trades are definitely more active, and are also able to hold out for better prices. The general tone in the engineering industries is more hopeful; unemployment is a little less serious, and inquiries are beginning to circulate more freely, though it is generally admitted that order books are not so far any fuller. On the other hand, many of the advan-

tages conferred upon the export coal trade by the depreciation of sterling have already been neutralised by such developments as the French surtax upon British imports and the determination of Poland to maintain her subsidised coal exports at all costs. Again, the improvement in the iron and steel trades is confined to the lighter branches, which require only a relatively small tonnage of steel. The heavier branches are suffering from the continued depression in shipbuilding and the reluctance of industrialists generally to launch out into new capital expenditure, or, indeed, to bring out new issues of capital. Finally, the Continental steel trade is so disorganised and so badly in need of orders that attempts are being made to undercut British prices even at the present level of sterling.

To a certain degree the initial favourable impact of the depreciation of sterling upon British industry is beginning to wear off, and the fact is having to be faced that world trade as a whole is still in a desperate position. In certain directions, it is true, relief has been forthcoming, for the recent rise in wheat, wool and silver prices has enhanced the purchasing power of the countries directly concerned. It is still doubtful, however, how sound a basis these price increases possess, and last week's reaction in wheat and silver prices confirms these doubts. Financially, Europe is still hanging upon a successful solution of the problems of German reparations and the standstill agreement; and, unless favourable developments in these directions, commanding favourable developments in money and credit, is bound to be lacking, the news received from abroad almost every day of fresh restrictions upon ports and exchange dealings shows that the world is rapidly drifting into a position where international trade will be brought to a standstill, for the simple reason that no country will be willing to buy. The effect of this upon standing international debts, both public and private, and also upon the export trade of this and other countries, is unpleasant to contemplate. International trade and exchange, above all, needs a free market in which to operate, and a free market is rapidly disappearing. In these circumstances it is not surprising that the decline in unemployment has been very moderate, amounting to only 249,000 since September 21st. October changes in various industries included a marked improvement in employment in all textile industries, and also some improvement in mining, metal manufacture, general engineering, motor vehicles, and in clothing, boots and shoes, glass and paper. There was the usual seasonal decline in building and public works, in hotel services, and in the distributive and transport trades. Early November witnessed a further decline in the total of unemployment, but this was largely due to the coming into force of the new Act striking "anomalous" classes of unemployed workers off the lists.

Money has become more stringent, and present indications are that the uncertainty abroad and the Bank's gold losses at the end of October have between them minimised all chances of an early reduction in Bank rate. The discount market has been inactive, and the prevailing lack of confidence is well illustrated by a reluctance to take up not only German renewal bills drawn under the standstill agreement, but also a certain number of other commercial bills. Finally, sterling has

lately depreciated to under \$8.65. Too much significance must not be attached to this fall, especially as it occurred in a very narrow market. In any case, the decline is readily explained by seasonal pressure upon sterling, the covering of goods imported in anticipation of any British tariff, and the natural reaction after exchange speculation on the result of the election.

The truth is that the world's troubles are far from being at an end. At home, income-tax demands are likely to have a further adverse effect both upon purchasing power and upon the public's ability or will to provide industry with fresh capital. Abroad, the difficulties of Germany and of Central and South-Eastern Europe will equally be a deterrent to trade and enterprise, until a solution is reached. In Germany's case international action is now being taken, but time is very short and the work to be got through is very intricate and arduous. It is no exaggeration to say that only the utmost international goodwill can relieve an almost desperate situation.

Unless otherwise stated, the figures represent authorised share issues of new joint stock companies at home, and the increase of capital of existing companies. Bonus shares are excluded from the figures of the U.S.A., Romania, Switzerland and Czechoslovakia. In the case of the Netherlands and the U.K. both bonus shares and conversions are included. Excluding Treasury Bills, a £50 large including Colonial and other issues, 1925, foreign issues, since 1924, excluding amalgamations and conversions. Until 1922 paper marks, "Société de Banque Suisse," invitation for subscriptions on Swiss market including obligations and Local Govt. loans. p India controlled by "Commercial & Financial Chronicle." y Up to 1927, authorised issues, excluding western departments; since 1928 amounts actually issued, whole territory.

UNEMPLOYMENT.

Percentage of persons unemployed in trade unions or in official unemployment insurance schemes (Belgium and U.K.).

HOME INDUSTRIES AND TRADE.

The following reports on British industries cover, in most cases, the period to the middle of November. In the remainder they relate to the month of October.

THE COAL TRADE.

Export trade is dull as the advantages derived from the depreciation of sterling have been largely offset by foreign quotas and other restrictions upon imports, and, in particular, by the new French countervailing import surtax of 15 per cent. upon British coal, which for the moment has brought Cardiff export business with France to a standstill. Glasgow reports a fair amount of prompt business, but forward demand is slow. In Yorkshire a steady sale of house coal is noticeable, but other centres state that demand is not increasing as quickly as might be expected at this time of year. There is a better tone in the market for industrial fuel, but actual off-take is only improving very slowly.

IRON AND STEEL.

The suspension of the gold standard led to a certain scramble to cover immediate and early commitments, and, as a result, stocks of pig iron were reduced and output was increased. The October production figures were 284,200 tons, against 248,000 tons the previous month, and during October the number of furnaces in blast rose from 62 to 66. Steel production expanded from 400,500 to 457,000 tons. The outlook, however, is still very doubtful, as the suspension of gold payments has added nothing to the purchasing power of world consumers, and the Continental trade is still making heavy sacrifices to obtain business, even to the extent of undercutting British sterling prices in the British market. Heavy imports of semi-manufactured steel are believed to have been made during early November. As regards home demand for steel, the lighter trades, such as wire and sheets, are now more active, but these only absorb a small tonnage of steel, and there is no improvement in the heavier industries. Shipbuilding is as depressed as ever, and the absence of new capital issues shows that no early demand for structural steel, machinery, or other "capital" goods can be expected.

ENGINEERING.

Since the election a feeling of greater confidence has become noticeable, and, while it is premature to say that there is any appreciable improvement in the state of order books, employment is a little better. The machine-tool trades are a shade more active, and locomotive builders are expecting a few more foreign orders. The revival in the textile trades should eventually help textile machinists, but the marine engineering section is still very depressed, and it is the wrong time of year for any revival among makers of agricultural machinery.

PRODUCTION OF ELECTRICITY.

In the *Economist* of July 10, 1926 (pages 57-8), we published a new index of electrical generation in the chief industrial areas of Great Britain. We show below a résumé of the results achieved during recent periods:—

INDEX OF GENERATION OF ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Period.	Britain, excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering.	General Engineering and Automobile Construction.	Chemical.	Marine Transport, Docks, etc.	Textiles, Cotton, and Wool.
1925—Monthly average	119	100	138	162	134	120

September	157	130	222	213	212	158
October	176	149	240	219	232	160

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.
† Increase due to special causes.

These figures represent a genuine, as opposed to a seasonal, improvement. The corrected figure for October, allowing for seasonal fluctuation and the steady expansion in the use of electricity, was 91.8, against 89.0 in September and 88.2 in October of last year. The current figure is the highest recorded since last January.

ELECTRICAL INDUSTRY.

The export market remains depressed. On home account, an important order was received for two hydro-electric generating sets for installation in the Central Scotland electricity scheme. These are the first large hydro-electric generating plants built for use in this country.

INDEX OF NEW ORDERS RECEIVED BY ELECTRICAL MANUFACTURING INDUSTRY.*

		(1920=100.)

MOTOR INDUSTRY.

Most motor manufacturers are very satisfied with the orders taken at the recent Shows at Olympia, and report that inquiries are coming through at a fairly normal rate. Unemployment in the industry is still on the decline, and, although the exports are below the 1930 level, orders from abroad are increasing. The estimated production year, October-September, 1931, in the private car section is only 5.3 per cent. below that of 1930, whilst the goods vehicles show an increase of 0.7 per cent. This gives a total decrease of 4.3 per cent. The Motor Cycle Show opens on November 30th, and it is hoped that it will result in renewed activity in that branch of the industry.

THE COTTON TRADE.

Although lately the tone of the Manchester market has been rather quieter, the increased activity has been generally well maintained. Spinners and manufacturers have met with a persistent demand, and most producers have been enabled to extend their order lists. Sellers are now presenting a much stiffer front to customers, and it is difficult for buyers to obtain price concessions. There has been very little change in raw material values, but the demand from spinners has fallen off somewhat. In the cloth section a favourable development has been the expansion in the inquiry for India, and, although most of the offers have been a long way out, there has been some improvement in sales for Calcutta, Karachi, Madras and the up-country markets. Most of the buying has been in light goods, and, to a lesser degree, in white shirtings. Trade for China has been checked by the reaction in the price of silver, but an encouraging business has been put through in standard makes and fancies. Merchants are very anxious that manufacturers should keep up to contract time with deliveries. Rather more has been done in fine goods for Singapore. Turnover for Egypt and the Near East is disappointing, but useful support has come from East and West Africa, and printing and finishing styles have been in request for South America and the Continent. The healthier demand in home trade fabrics has continued. Most manufacturers have now more work in hand, but the restarting of idle looms has not been very rapid. Yarn prices have continued much firmer. There has been a further expansion of production, and the output is now about 75 per cent. of full capacity. A considerable turnover has again taken place in bundle yarns for China, and there are signs of rather more activity for India.

THE WOOL TEXTILE TRADES.

The industry has definitely improved, and, according to one estimate, 15 per cent. more machinery is in operation than two months ago. Raw material prices are substantially higher, and Tuesday's opening quotations at the London sales registered an advance over October of 5-15 per cent. Top-makers are now displaying some reluctance to accept fresh business at current rates. Spinners and makers of woollen goods are well booked ahead, in some cases into next year. The worsted branch of the industry is less satisfactory.

THE JUTE TRADE.

Conditions are steadily improving, and spinners and manufacturers are increasing their output. The raw jute market has been strong, partly owing to this season's short crop. In these circumstances yarn and cloth prices are hardening, and this upward trend is bringing out fresh business. There is a general impression at Dundee that the corner has been definitely turned.

THE RAYON TRADE.

Demand is at a very high level, and most of the yarn producers are booked well ahead. Home orders have accounted for the bulk of the production, and the new restricting duty on imported hose is certain to result in a big rush to buy rayon yarns in Nottingham and Leicester.

THE LINEN TRADE.

All classes of flax are firm at recent advances. The non-arrival of Soviet supplies purchased for delivery several months ago has caused grave concern to spinners. The new crop of Irish flax is the smallest on record, and growers are most reluctant sellers. Yarn and cloth on record are finding buyers, and potential purchasers are finding business continues to expand, and potential purchasers are finding difficulty in fixing delivery terms owing to the volume of orders already in hand.

BOOTS AND SHOES.

While several factories at Northampton have had to work full time to deal with a rush of orders, activity generally has been irregular, and the industry is still working below normal capacity. Home orders for the spring trade are very slow in coming forward, while in the export branch the advantages of the depreciation of sterling are in some markets being offset by special anti-dumping surtaxes. Leather prices are steady, and many consumers are believed to hold good stocks.

THE POTTERY TRADE.

China manufacturers are now less active as Christmas orders have already been largely completed. Makers of earthenware are still relatively busy.

THE CHEMICAL INDUSTRY.

The home chemical market experienced greatly increased activity during the month of October, but business is now rather quiet. Industrial chemicals have been in satisfactory demand, business having improved considerably during the past two months. Amongst the products which have increased in price are chlorates, oxalic acid and improved grades of acetic acid. The Convention rates for lead oxides have also advanced. Coal-tar products have been in good demand, the best items being refined pitch and some grades of pyridine have increased in price. A fair volume of business has continued in Xylol, toluole, naphthalene, pitch and some grades of pyridine have been in demand. Quotations for hexamine and lactic acid have been in the new levels. Aspirin, hexamine and lactic acid have been in good demand. The tone of the essential oils market is satisfactory. No appreciable improvement has yet occurred in the export trade, and the returns for October were mostly well below those of the corresponding month of the previous year. Amongst the few items the export of which have increased are potassium nitrate, chromate

and bichromate and coal tar dyes. As contrasted with the decrease in exports, imports increased by £336,941 over the total for October last year.

AGRICULTURE.

According to an official report, in most districts the lifting and clamping of potatoes was nearing completion by the end of October. Quality was variable, and most of the crop was considerably affected by disease. Root crops have benefited from better weather conditions, but yields will be under average in most areas. Sugar beet crops, but yields will be under average in most areas. Good progress was made with cultivation, except on heavy lands, which had become hardened. Pasture was generally abundant, and the outlook for winter keep satisfactory. Stock was in good condition, and milk yields about normal.

SHIPPING.

Freights, quoted in sterling, have risen by 10-15 per cent. on most routes as the result of the fall in the pound, but the volume of business tends to decline rather than increase. The Plate market, in particular, has absorbed less tonnage.

BUILDING.

According to the Ministry of Labour's returns, there was a further general decline in employment during October, in spite of the fact that weather conditions were generally favourable for outside work. The October unemployment percentage was 24.7, against 21.0 in September and 17.7 in October of last year. According to returns furnished by 142 urban authorities, plans passed for new buildings during October comprised a total estimated cost of £4,717,100, against £5,391,200 in September and £7,832,700 in October, 1930. Dwelling-houses accounted for £2,739,200 of this total, factories and workshops for £117,900, business premises, shops and warehouses for £912,200, and other buildings and additions and alterations for £947,800.

RETAIL TRADE.

A London store reports that trade has been depressed by unseasonable weather and the political situation, but that better business is hoped for with the opening of the Christmas season. Retail trade throughout the country showed a relatively heavy decline of 6.1 per cent. in October as compared with October last year. This may be due to the General Election.

New Series.

The tables in the following pages show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations, supplemented from our records.

HOME AND ABROAD

THE STATE OF TRADE AT HOME AND ABROAD.

THE STATE OF TRADE

THREE months have now elapsed since the British suspension of gold payments, and it is becoming clear that the resulting stimulus to British industry is being neutralised by the curtailment in the volume of world trade as a whole, and that no real permanent benefit has so far materialised. The November iron and steel production figures were, it is true, a shade better than in October, and four more furnaces came into operation. Later reports, however, show that this improvement was only temporary, for business is now slipping back to its former level.

more depleted than ever, and a whole host of new import duties and embargoes, foreign exchange restrictions and the like are springing up all over the world, with such avowed objects as checking "exchange dumping" by countries off the gold standard and of preserving the stability of different countries' currency. The French customs surtax, which has so badly damaged the Cardiff coal trade, is one example of this. The drastic exchange restrictions in force in Central Europe and South America are other examples. Matters in Central Europe have virtually reached a *reductio ad absurdum*, for special "clearing" arrangements

NOVEMBER, 1931.

virtually reached a *reductio ad absurdum*, for special "clearing" arrangements are now being elaborated, under which payments for imports and exports are made direct into a special account in the central bank of the importers' country and then set off directly against each other. Such a scheme is in force not only between countries whose finances are in a critical condition, but also between those countries and more stable countries such as Switzerland. Austria hopes to conclude a similar arrangement with England. Apart from these reversions to quasi-barter trade, exporters in all countries are experiencing considerable difficulty in repatriating the money obtained for their goods, and in some cases are having to lock it up indefinitely in a foreign bank. Germany's recent losses of *devisen* in the face of her big export surplus of the early autumn are to some extent explained by this difficulty.

There are, it is true, some brighter features in the picture. Some industries report fair progress, among them being the locomotive and motor-building trades, and the rayon and linen textile industries. The unemployment returns for November, published in the Labour Gazette, also show that improvements occurred in the coal-mining, glass, tinplate, general engineering, textiles, leather, paper, dock and harbour services, and the distribution trades. Against these, setbacks have to be recorded in iron and steel, shipbuilding, and building and contracting. In the field of distribution, Christmas trade, which early in December seemed to be hanging fire, has since picked up, though the increase in the note circulation registered during the week ended December 16th was of less than normal dimensions.

Exports of British goods have so far failed to record an improvement. This is not surprising, as any stimulus arising from the suspension of the gold standard was not expected to reveal itself before the January returns at the earliest. Unfortunately it is by no means certain that any such improvement will occur. Purchasing power abroad is

Internal prices have remained steady during the past month. The external depreciation of sterling was, in fact, offset by a fall in gold prices, but a more potent factor is possibly the steady growth in the number of countries on the gold standard who are beginning to form a "sterling pool." Most of the Empire, Scandinavia, Japan, the South American republics are all to-day nearer to sterling than gold, and many of the countries nominally on the gold standard only adhere to it in name and not in fact. It is not impossible that the time is approaching when sterling will re-establish itself as the world's standard of value, and when the gold standard countries will form a minority, with the value of gold subordinated to and governed by that of sterling. But though that would certainly be one solution of the world's monetary problems, conjectures on these lines to-day are premature. The salient fact of the moment is that world confidence is lacking and world trade is shrinking. The restoration of confidence, and the freeing and revival of commerce are the aims which world statesmen have to pursue in the New Year.

London: Printed for the Proprietors THE ECONOMIST NEWSPAPER, Ltd., by EYRE AND SPOTTISWOODS LIMITED, His Majesty's Printers, East Harding Street, London, E.C. 4. Published by the Proprietors at 8, Bouverie Street, Fleet Street, E.C. 4.—Saturday, November 23, 1961.

In the home trade, the Metropolitan Railway has just placed a large contract for a 25,000 k.w. turbine for its generating station at Neasden. A number of small orders for generating equipment for industrial purposes have also been received. Export trade remains depressed, but as a result of orders placed during December next month's output should record an improvement.

Business remains steady, with raw material prices only fluctuating slightly and sellers displaying some reserve. Calcutta stocks have been reduced, and the mills have been buying more freely. Dundee yarn prices are very firm, but business is quiet. There is a big inquiry for all descriptions of jute cloth, but so far orders have been limited in size, as manufacturers have refused to make any price concessions.

According to a report by a London store, Christmas trade was slow in starting, but towards the middle of December there was a decided improvement.

• Provisional figures.

Unless otherwise stated, the figures represent authorised share issue of new joint stock companies at home, and the increase of capital of existing companies. Bonus shares are excluded from the figures of the U.K.A., Romania, Switzerland and Czechoslovakia. In the case of the Netherlands and the U.K., both bonus shares and conversions are excluded. c. Re-issuing Treasury Bills. d. Excl. large railway issues. f. "Rijksbank" issues exceeding Fls. 100,000 on the Dutch market. g. Including Colonial, and since Jan. 1925, foreign issues. h. Since 1924, excluding amalgamations and conversions. i. Until end 1924 paper market. j. "Société de Banque Belge" invitation for subscriptions on Swiss market including obligations and Local Govt. loans. k. India, compiled by "Commercial & Financial Chronicle." l. Up to 1927, authorised issues, excluding western departments; since 1928 amounts actually issued, whole territory. † Dr. O. G.

GENERAL RESULTS OF THE YEAR.

Insurance is one of our major industries. Life assurance is represented by 5 million policies in force for a face value in sums assured and bonuses of over £1,500 millions; the accumulated total life funds exceed £250 millions and the funds of industrial companies total some £125 millions. Fire and accident insurance, which is largely an export trade, is responsible for premiums of £125 millions, while marine insurance, excluding Lloyds, controls a premium income of £13 millions. Each separate branch of insurance has its own peculiar problems and features; but, unfortunately, these are often so technical in character that the layman quickly finds the penetration of this insurance jungle to be no light task. Nor are the published accounts susceptible of ready analysis by any but the trained observer. The purpose, then, of this introductory article will be to consider the results of representative companies as a whole, reserving for more detailed analysis on later pages the individual figures and features of each department. Experience has shown this method of treatment to be the most suitable for a general understanding, and the fact that the results are presented throughout on a uniform basis facilitates comparison between one office and another, and between the results of different years.

The table which follows sets out the relevant figures for twenty-two of the largest companies, and invites their consideration under three main heads:—

(1) The Underwriting Profits.

At the outset it is necessary to explain that the figures in columns (2), (3) and (5) do not necessarily agree with the profits shown in the companies' own accounts. Accounting practices vary with the idiosyncrasies of managements; and, in order to secure uniformity, the fire and accident profits have been recalculated, where necessary, on the basis of the commonly accepted standard of a reserve for unexpired risks on December 31st equal to 40 per cent. of the premiums, and they exclude also any interest earnings left in the departmental accounts. In the case of marine insurance, the company's own practice has been followed, except that interest earnings when left in the account have been deducted from underwriting profits. From the sum of the departmental profits thus obtained has been deducted the balance of items shown direct in the profit and loss accounts and properly appertaining to the business as a whole.

Column (4) shows the contribution to net trading surplus from the operations of the life, annuity and sinking fund accounts. The profits in these departments are not merely, as in the case of fire, accident and marine

Company.	Total Premium Income (excluding Life, Annuity, and Sinking Fund).	Underwriting Profits.				Dividend Position.			Reserve Position.	
		Net Trading Surplus after deducting charges direct to Profit and Loss Account (excluding Life, Annuity, and Sinking Fund).	Ratio of Net Trading Surplus to Premiums.	Contribution to Net Trading Surplus from Life, Annuity, and Sinking Fund.	Total Net Trading Surplus.	Net Interest Earnings after deducting Debenture Interest and Preference Dividends.	Cost of Dividend on Ordinary Shares.	Proportion of Dividend met by Interest Earnings.	Funds (excluding Life, Annuity, and Sinking Fund), including all other reserve funds but excluding outstanding liabilities and share capital.	Ratio—Funds to Premium Income.

insurance, the balance of the premiums remaining after deducting claims, expenses and reserve for unexpired risk. The process here involves a complete actuarial valuation of the existing contracts and a comparison between their present value and the value of the assets comprising the fund. In most cases this valuation is made every five years, but some offices make a triennial and others an annual valuation. It follows therefore that the absence of a contribution in 1930 from these sources merely means that no periodical valuation was due to be made last year. The actual contributions in some cases represent three or five years' profits, and in others one-third or one-fifth of the total valuation profits, where the company's practice is to credit an equal amount each year to profit and loss account.

(2) The Dividend Position.

Insurance companies are by nature conservative institutions, and this traditional characteristic is strongly reflected in their dividend policy. As a general rule, the net trading surplus is left to augment reserves, and companies seek to limit dividends to an amount which can be met out of interest earnings. The practice has much to commend it, since undesirable fluctuations in dividends are thereby avoided, and increases are conditioned by the expansion of the premium income.

(3) The Reserve Position.

The reserves, excluding for this purpose those belonging to the life department, are made up of a number of different items. The first line of defence is the departmental unexpired risk reserves supplemented by any additional reserves left in the departmental accounts.

LIFE ASSURANCE.

FEATURES OF THE YEAR 1930.

In spite of the steady deepening of the trade depression throughout the whole of last year, the volume of new life policies effected has shown an increased rate of growth. This is perhaps the most striking feature of the year. For whereas trade conditions have left their mark on the fire and accident departments in the shape of reduced premiums, and a tendency towards higher claims, the life offices have been quick to point the moral and turn the situation to their advantage. Continued depreciation of Stock Exchange securities has gradually reduced confidence in that medium of investment to a low ebb, and in these circumstances the stability and strength of British Life Offices have shone forth in added contrast. Again, the necessity of taking some steps to restore losses suffered by depreciation has furnished an additional motive for effecting a life policy. Other factors which have played a part have been the automatically increased value of the rebate of income tax following from the imposition of a higher standard rate of tax, the higher death duties, and the cumulative effect of the ceaseless propaganda carried out by the offices themselves. A filip has been provided by the development of a new type of policy supplying a greatly increased measure of protection for the family man at a very small extra outlay. The benefits offered vary with different offices, but, in general, conform to the general plan of a whole life assurance for, say, £1,000, coupled with an annual payment of £120, commencing on death within the first twenty years and continuing until the end of that period. Thus, in the event of premature death just

Next there are the general and special reserves appearing in the balance sheet, and the profit and loss account balance and, lastly, the share capital. The catastrophe hazard inherent in insurance requires the constant building up of reserves commensurate with expansion of premium income, and the relation between the two is a valuable criterion of financial strength. The ideal position is generally considered to have been reached when total resources, apart from share capital, are equal to one year's premium income. The figures in columns (9) and (10) indicate that this exacting standard has now in many cases been surpassed.

In order to facilitate comparison with previous years, the following summary has been added, showing the aggregate figures for each of the past five years. Reference to this composite table brings out clearly the unfavourable features of 1930, namely, a reduced premium income and a smaller trading surplus. The 1930 net trading surplus of 1.7 per cent. of the premiums is the smallest of any in the last five years, and this low rate illustrates the narrow margin between profit and loss. The smaller premium income is reflected in lower interest earnings, and the reduction in the latter has meant that a larger proportion of trading surplus has been drawn upon to meet dividend payments. Although the circumstance is largely due to the reduced premiums, it is, nevertheless, satisfactory to observe the general improvement in the reserve position last year. We may conclude this preliminary analysis with the feeling that, though 1930 has been less favourable than earlier years, the comparison is with a period of abnormal prosperity.

when the need is greatest, the dependents will have an income of approximately £170 per annum instead of a mere £50 per annum as would be the case but for the additional income benefit.

The larger new business of 1930 has been achieved in spite of the cessation of surtax single-premium policies, which though relatively few in number have artificially inflated the business of those offices which have catered for this class of business. This question of surtax policies is referred to in greater detail in an article dealing with single-premium business.

In the management of the invested funds, the year 1930 has provided a succession of anxious problems. Declining industrial profits, political instability, and the slump in commodity prices all over the world led to heavy Stock Exchange depreciation in many classes of security. The only really bright spot was the progressive cheapening of money reflected in a 10 per cent. rise in British Government securities during the year.

NEW BUSINESS.

FIGURES relating to the volume of new business transacted are published annually in the Board of Trade Returns, and from these the following table has been compiled:—

Year.	Aggregate Net New Sum Assured under New Policies.	Increase or Decrease per cent. compared with Preceding Year.	Year.	Aggregate Net New Sum Assured under New Policies.	Increase or Decrease per cent. compared with Preceding Year.
1919	131 millions	+ 79.5	1925	130 millions	+ 4.8
1920	146 "	+ 11.5	1926	129 "	- .8
1921	109 "	- 25.3	1927	148 "	+ 14.7

* Figures relate to period 21st November 1929 to 31st December 1930.

† Gross Figures.

It will be observed that the aggregate total of British offices for 1930 shows an increase of 2.1 per cent. over the 1929 figure. Of the individual groups of offices, the composite companies make the best showing with an increase of 10 per cent., while in the case of the mutual offices the increase is 5 per cent. The 1930 totals, both of the proprietary life offices and of the industrial-cum-ordinary company life offices are lower than those of 1929, but the decline is more apparent than real. In each case the aggregate results are weighted by one large office, the Sun Life in the former group and the Pearl in the latter. These companies, and more particularly the Sun Life, have been affected by the cessation of policies offered for super tax saving purposes by way of single premiums. Among the mutual companies the largest increases are shown by the Provident Mutual, the Scottish Widows and the Standard, while in the composite group the continued expansion of the Legal and General is outstanding, though the Northern has achieved a considerably larger total.

* Adjusted figures. Reversionary Securities are assumed to earn 6 per cent. net.

The figures in the table exhibit the greatly increased importance of the interest factor in total profits since 1913. In that year the margin over 3 per cent. was for the whole group of offices £1 1s. 8d. per cent., whereas in 1930 the margin amounted to £1 14s. 6d. per cent., an increase of 60 per cent. For the first time for some years the rate of earnings has declined, from £4 16s. 2d. per cent. in 1929 to £4 14s. 6d. per cent. in 1930. This decline is, of course, due to the rise in the standard rate of income tax from 4s. to 4s. 6d. in the £, but since this rise of itself might have been expected to reduce the net interest rate by some 2s. 6d. per cent., it seems clear that there has been some small increase in the gross earnings. The range from the lowest to the highest interest earnings of individual British offices as shown in our table is very wide. The lowest rate shown is £4 4s. 4d. per cent. and the highest £5 5s. 8d. per cent., and there are several instances of rates under 4½ per cent. and over 5 per cent. Having regard to the recent establishment of British Government long-term securities on a definitely lower yield basis, to the gradual lowering of interest rate on first-class mortgages, and to the general expectation of cheap money, it seems likely that no further improvement in interest earnings can be anticipated. If the average rate of interest is maintained a little longer at its present level it will probably be by reason of a lessening of the extreme spread now prevailing between individual offices, though the immediate effect of depreciation on foreign Government bonds and on industrial fixed-interest stocks may possibly defer the general tendency.

LIFE OFFICE INVESTMENTS.

Events of the past two years have severely tested the financial strength of British life offices, for 1929 was responsible for heavy depreciation in all the stock exchanges of the world, and 1930, though it had its bright spots, was little better. The progressive deterioration in the economic position of certain European and South American countries, and, amongst the Dominions, of Australia, has been reflected in continuous depreciation of their respective securities. At home the weekly traffic losses of the group railways has been accompanied by a steady fall in the price of the prior charge stocks as well as by a slump in the ordinary stocks; while the deepening of the trade depression was responsible for a general collapse in industrial ordinary shares. Certain offices have substantial interests in Australia, in home rail prior-charge stocks, and in foreign Government bonds, and probably all have suffered losses of varying degree from investments in these classes; and those offices which pursue a more aggressive policy have experienced the added depreciation from ordinary shareholdings. The only important source of appreciation last year lay in the 10 per cent. rise in British Government securities, which, in fact, more than recovered the whole of the ground lost in 1929. The average investment in British Government securities is still appreciable—some 17 per cent.—and to this is due the fact that, in spite of everything, certain companies were able to report a net gain in capital values last year.

We have been accustomed to publish a table in this section showing the investments classified under four broad divisions:—(1) mortgages and loans; (2) British Government securities; (3) other Stock Exchange

securities; (4) properties, reversionary investments and miscellaneous assets. In the circumstances the importance of more complete information in regard to Stock Exchange securities is obvious, and the constitution of this group has, therefore, been shown in greater detail in the table which follows.

The table clearly illustrates the great divergence of view on investment policy. In the form in which the figures are now presented, the first group—mortgages and loans—is the largest; and, taking the mutual offices by way of example, the proportion of total assets so invested ranges from 12 per cent. to 45 per cent. Again, the percentage invested in British Government securities varies among the mutual offices from 6 per cent. to 33 per cent. The table illustrates also the extent of the interest now taken in ordinary shares, for the average percentage in this type of investment is now 5.4 per cent. (in the mutual office group it is 8.1 per cent.). Moreover, it is not confined to one or two offices. In the mutual office group, comprising fifteen companies, five have invested upwards of 11 per cent. of their funds in this way, and four other companies between 5 per cent. and 10 per cent. of their funds.

VALUATION RESULTS.

This review of life assurance during 1930 is concluded with a detailed analysis of the results of valuations made last year by those offices which were due to conduct these periodical investigations. The process of a valuation consists in comparing the actuarial present value of the liabilities represented by the policies in force with the value of the assets comprising the funds. The difference is the surplus available for distribution to the policyholders in the form of reversionary bonus. In the case of mutual offices the whole of this surplus belongs to the members, the with-profits policyholders. In the case of proprietary companies, usually 90 per cent. belongs to the policyholders and 10 per cent. to the shareholders, though, in some few instances, the basis of division is 95 per cent. and 5 per cent. Others, again, have an arrangement whereby the with-profits fund belongs wholly

to the policyholders, the shareholders taking the profits on the without-profits fund and annuities, while a further variation is sometimes encountered where the shareholders take a certain percentage of the premium income. In the analyses which follow the exact basis of division is everywhere indicated.

In order to facilitate reference and comparison, analysis of the results has been made on a uniform method. In-vestment profits and losses, to the extent to which these are shown in the revenue accounts for each year, have been extracted and are shown separately from interest profit, be termed the trading surplus arising from interest profit, from favourable mortality, and from economical administration. The distinction in these times is obviously important, though, owing to official reticence on the subject of investment profits and losses, it is seldom possible to make it. Transfers to reserve and to staff pension funds, where these are shown either in the accounts or in the valuation report, have been treated as allocations from profits.

The results themselves indicate in nearly every case increased trading surpluses, and in most cases higher rates of bonus. Bearing in mind the review already made of the various factors involved, it is probable that the increased surpluses are mostly indicative of still greater prosperity, but, from the published figures, it is not easy to determine how much of the increase is due to mere expansion in the business, and how much to improved profit-earning capacity.

The Ordinary Branch with-profits policyholders will receive the same rate of reversionary bonus as before, namely, 42s. per cent. on the sums assured. The whole of the Industrial Branch surplus belongs to the shareholders, but two years ago the Board conceded voluntarily to the with-profits policyholders a small share. The 1930 share is increased to £70,000 (out of a total surplus of £494,000) and is to be utilised for increasing the sums payable on claims by death or maturity during the current year.

THE LATEST DEVELOPMENT IN LIFE ASSURANCE

Those things about us which are connected with our home life all reflect the march of progress. The motor-car is a wonder of mechanical invention and perfection. It is elegant, comfortable and, above all, cheap. Electric lighting has displaced gas, oil lamps or candles, and fittings are designed to diffuse a soft and efficient light. Central heating keeps the whole house warm, does the work of many fires cleanly and cheaply. Just as these things minister to our material comfort, so does Life Assurance minister to our peace of mind. Life Assurance is indispensable to the security of those we love and who depend on us. Exemplifying the latest development in Life Assurance is the Triple Benefit Policy. The benefits under this policy have been carefully planned in order to meet fully and completely the needs of the young married man. The policy provides:—A payment on death before age 65, for use in paying Death Duties and other expenses and to reorganise the home. Payments of Monthly Instalments, not subject to Income Tax, from the date of death until the expiration of 20 years from the date of the policy, and a further substantial sum at the end of that period to assist materially in meeting the living expenses of a widow and/or children; and a payment of a substantial sum if age 65 be attained as provision for Old Age. Premiums may be paid monthly by Banker's Order and the usual abatement of Income Tax may be obtained. Think of it! For a few pounds a month a man may obtain complete freedom from responsibility as to the financial position of his wife and family after his death; and, furthermore, he will find that at age 65, when the policy matures, that the cost of the Assurance cover during all the years has been provided out of interest on his premiums—i.e., he withdraws at maturity an amount about equal to his outlay.

The London Life is a mutual society, and the profits belong exclusively to the with-profits policyholders, of which there are two classes. In the Reduction of Premiums fund the profits are allotted in the form of a reduction, after the first seven years, from the full rates of premium payable. The existing rates of reduction have been increased, as a result of the 1930 valuation, by 2 per cent., compared with 3 per cent. in each of the last few years, and now range from 138 per cent. in the oldest series to 48 per cent. in the current series. In the Reversionary Bonus fund the bonus has been maintained for 1930 at the same rate as formerly, namely, 40s. per cent. on the sums assured and existing bonuses.

Notwithstanding the heavy depreciation on securities during the last two years, the exceptionally large undivided surplus carried forward from previous years has enabled this Society to maintain the previous high rates of bonus. Thus for whole life assurances the reversionary bonus is 51s. per cent. compound, and for endowment assurances the rate is 45s. per cent. compound.

The 1930 reversionary bonus for Ordinary Branch policyholders is the same as before, viz., 40s. per cent. on the sum assured.

In common with other leading industrial companies, the Pearl inaugurated two years ago a profit-sharing scheme for the industrial policyholders. The amount appropriated for this in 1930 shows a substantial increase, and absorbs some 45 per cent. of the total surplus. The scheme takes the form of a reversionary bonus varying directly with the premiums paid. For whole life assurances effected prior to 1924 at a weekly premium of 1s. the bonus is 16s., and for endowment assurances the bonus is 12s. for corresponding policies at the same weekly premium.

In the Ordinary Branch the 1930 reversionary bonus or whole life assurances has been raised from 50s. per cent. on the sum assured to 52s. per cent., while for endowment assurances the rate remains the same as before, viz., 40s. per cent. on the sum assured.

Industrial Branch policyholders have enjoyed the benefit of a definite profit-sharing scheme since 1907. The benefit of a definite profit-sharing scheme in 1930 was in excess of 60 per cent. For policies effected on or after January 1, 1923, the bonus is now on the same familiar lines as that granted to Ordinary Branch policies, namely, a reversionary addition to the sum assured whenever the matter is payable. The 1930 rate is 84s. per cent., the same as before. Under pre-1923 policies the bonus is payable only in the event of a claim arising within a period of years, now increased from 15 to 16. The actual rate varies with the duration in force.

A reversionary bonus of 44s. per cent. on the sums assured (the same rate as before) has been declared in the Ordinary Branch. Policyholders in the Industrial Branch were conceded for the first time in 1928 a share of the surplus. The 1930 allocations to the policyholders is practically the same amount as that for 1929, and has been utilised for the same purpose, namely, to increase the benefits under different classes of policy in order to bring them into line with the more favourable contracts now offered by the company in its current prospectus.

to annual valuations was inaugurated with an increase in the reversionary bonus from 40s. per cent. simple to 42s. per cent. compound, and this rate has been maintained ever since. The company has also "mutualised" itself by the acquisition from the shareholders of their capital and participating rights in consideration of the creation of a new fixed 5 per cent. stock. The interest on this stock is covered by the interest earnings of a Guarantee Fund established for the purpose, so that in practice the whole of the life profits now belong to the policyholders.

The Wesleyan and General is the only example of an Industrial-cum-Ordinary Company operating on Mutual lines. The 1930 bonus in the Ordinary Branch is the same as before, viz., 48s. per cent. of the sums assured for whole life assurances and 42s. per cent. for endowment assurances. In the Industrial Branch the scheme of dis-

tribution in force since 1927 provides for three-fifths of the profits being allocated to the policyholders and one-fifth each to the Ordinary Branch and Outside Staff respectively. The policyholders' portion is utilised each year for the purpose of gradually waiving payment of all premiums after age 65 and so brings existing policies into line with those offered under the Society's current prospectus. In accordance with this arrangement, the premiums on all those policies entitled to share in the 1930 distribution will cease after age 71 provided 21 years' premiums have then been paid.

Caledonian.		Triennial Valuations.	
		1923-27.	1928-30.
		£	£
Trading surplus earned during period	526,935	466,032	
Profits from securities	130,000	186,000	
Brought forward	50,148	80,176

	447,083	732,208	

Hitherto the Caledonian has made a quinquennial distribution of profits. The present distribution, however, is for a period of three years and the company intends to distribute triennially in future. The reversionary bonus for the valuation period 1923-1927 was 48s. per cent. per annum on the sums assured. For this first triennial period the same rate has been declared for endowment assurance policies, while the rate for whole-life assurances has been raised to 50s. per cent. per annum. In thus differentiating between the two classes of policy the Company has followed the practice of a number of other offices and has given practical recognition to the superior bonus-earning power, under present circumstances, of whole-life policies.

Although the above figures relate to the results of the valuation on a net premium of 2½ per cent. basis, the Society has decided henceforward to abandon this method and in the future to conduct valuations on an experience basis. This is an important innovation which has much to commend it and the decision has given rise to a good deal of discussion in actuarial circles. The new basis (a valuation on which has been made and is published along with the results of the old method) utilises for mortality with the Eastern Counties Rural Districts table founded on the 1921 Census, a rate of interest of 4 per cent., and a provision for future expenses approximately equal to the present expense ratio. Further, and this is really the crux of the new method, specific provision for future bonuses as a liability will be made and included in the total liabilities.

With regard to the bonuses now declared, these are at varying rates for whole-life assurances and range from

APPLICATIONS FOR AGENCIES INVITED.

ALFRED SKEGGS, F.C.I.I., MANAGING DIRECTOR.

32s. 6d. per cent. per annum on the sums assured to over £10 per cent. For endowment assurances the reversionary bonus is 32s. 6d. per cent. per annum (calculated on the sum assured and existing bonuses) plus a further 15s. per cent. per annum of the sum assured payable only on survival of the endowment assurance term. At the 1926 valuation the bonuses ranged from 30s. per cent. to £8½ per cent. for whole life assurances, while for endowment assurances the ordinary compound bonus of 30s. per cent. was supplemented by a further 15s. per cent. of the sum assured payable only on survival.

	1921-25.	1926-30.
Surplus earned during quinquennium	£ 528,165	£ 870,840

„ Strengthening of actuarial reserves	...	282,000
„ Carried forward to next quinquennium	191,823	106,911
	559,391	1,063,663

This statement shows the true trading surplus, but since the published figure represents the balance after adding £282,000 to internal reserves. The shareholders' rights are based on the published figures and are rather more than usually favourable since they take 20 per cent. of profits from pre-1911 policies and 10 per cent. from post-1910 policies. The rate of reversionary bonus for the with-profits policyholders has been raised from 40s. per cent. per annum (calculated on the sum assured and existing bonuses) to 45s. per cent. per annum—and is obviously well within the disclosed earnings.

	1923-25.	1926-30.
Trading surplus earned during period	£ 1,224,313	£ 3,205,479
Investment profits brought into account	...	26,436
Brought forward	37,148	54,880
	1,261,461	3,286,795

	1923-25.	1926-30.

„ Shareholders	81,340	422,046
„ Carried forward	54,880	125,514
	1,261,461	3,286,795

The foregoing figures are indicative of the rapid expansion of the Company's business. For the quinquennium now ended the rate of reversionary bonus is 40s. per cent. per annum (calculated on the sum assured and existing bonuses), compared with 36s. per cent. per annum for the preceding valuation period.

The with-profits policyholders are entitled to 90 per cent. of the profits of the life assurance fund, while the shareholders take the remaining 10 per cent. as well as the whole of the annuity fund and sinking fund profits. Thus, of the above sum of £422,046 allocated to shareholders, £304,359 was derived from the life assurance fund.

MUNICH REINSURANCE COMPANY OF MUNICH

Münchener Rückversicherungs-Gesellschaft.

On the 30th of June, 1930, the resources of the Company were:

Capital fully subscribed	RM 20,007,500
General Reserves	„ 15,200,000
Premium- and Loss-Reserves	„ 237,359,969
Carry-forward to new account	„ 144,724

Total: RM 272,712,193

A reversionary bonus for the quinquennium 1926-1930 has been declared at the rate of 50s. per cent. per annum on the sums assured (compared with 55s. per cent. per annum for the preceding valuation period), but the interim bonus for the quinquennium now current has been limited to 45s. per cent. The results of the previous valuation in so far as they relate to the with-profits fund are for a period of two years only and are therefore not comparable with those for the quinquennial period now under review. The shareholders have no interest in the profits of the with-profits fund and derive their portion from the whole of the profits of the non-profits fund and of the annuity fund.

	1921-25.	1926-30.
Surplus earned during quinquennium	£ 2,787,769	£ 4,526,338

„ Carried forward to next quinquennium	254,385	451,019
	2,846,217	4,442,389

The surplus, the whole of which belongs to the with-profits policyholders, is distributed in the form of a reversionary bonus at rates varying according to age at entry, to duration, and to class of policy, and exact comparison with the bonuses declared five years previously is difficult. It is stated, however, in the report that the actual rates now declared work out on the average at between 10 per cent. and 15 per cent. greater than the 1925 rates. For whole-life policies the rates range from 54s. per cent. per annum to 95s. per cent. per annum (calculated on the sums assured) and for endowment from 38s. per cent. to 60s. per cent.

The whole of the profits in the with-profits fund belong to the with-profits policyholders, and the shareholders' interest is confined to the non-profits fund and the annuity fund.

In its 1930 distribution the company has adopted the practice of declaring a higher rate of bonus to whole-life policies, the rate for this class being 50s. per cent. per annum of the sum assured, compared with 46s. per cent. per annum for endowment assurances. The rate of bonus declared at the 1925 valuation was 45s. per cent. per annum for all classes of policy.

The reversionary bonus for the five years ended December 31, 1930, is at the rate of 40s. per cent. per annum of the sums assured and existing bonuses and compares with 35s. per cent. per annum for the preceding five years. As the figures indicate this is a conservative distribution and absorbs only two-thirds of the profits available.

	1921-25.	1926-30.
Surplus earned during quinquennium	978,257	1,144,498
Brought forward from previous quinquennium	101,443	189,024
	1,079,700	1,333,522

Carried forward to next quinquennium	189,024	161,686
	1,079,700	1,333,522

On this occasion the valuation has been made on a 2½ per cent. interest basis, instead of 3 per cent. as hitherto. The amount required so to strengthen the reserves is not disclosed, but it is clear that the real undistributed balance of trading surplus is appreciably greater than appears from the published figures.

The reversionary bonus has been raised from 40s. per cent. per annum (calculated on the sums assured and existing bonuses) to 42s. 6d. per cent. per annum.

The Society is a mutual office with no shareholders.

For the five years 1926-1930 the Company has declared a reversionary bonus at the rate of 48s. per cent. per annum of the sum assured. This rate compares with 43s. per cent. per annum declared five years previously.

FIRE INSURANCE.

From an underwriting point of view the year 1930 may be regarded with some degree of satisfaction; for the detailed figures set out in the table opposite show that the aggregate rate of profit for 23 of the principal companies works out at 5.8 per cent. of the premiums, and compares with 6.2 per cent. of the premiums, and adverse trading conditions and falling commodity prices usually combine to increase moral hazard, and this factor no doubt operated adversely on claims costs last year. So far as this country is concerned, statistics of fire wastage compiled and published by the *Times* indicate an actual reduction from £11,784,000 in 1929 to £9,016,000 in 1930, but the reverse has been true in the United States and Canada (whence upwards of 50 per cent. of total premiums are derived). In U.S.A. the cost of fires is estimated to have increased from \$421,704,000 in 1929 to \$464,116,000 in 1930, a difference of 10 per cent.

The disturbing feature of 1930 has been the pronounced, and almost universal decline in premium incomes. Falling commodity prices, with the concomitant of reduced volume of production, and of movement of goods, have, of course, rendered a falling off inevitable; though it is probable that this has been accentuated in certain directions by manufacturers seeking economies at the expense of their insurance cover. Some compensation for this fall in premiums has been automatically derived from the release from underwriting reserves of 40 per cent. of the reduction in premiums, but approximately half of this advantage has been offset by higher commission and expenses. For the purpose of comparing the aggregate results with those of former years, a supplementary table has been added above showing the total results in each of the past five years from 1926.

THE HALL MARK OF
STERLING QUALITY IN
MUTUAL LIFE ASSURANCE

SCOTTISH WIDOWS
FUND

A LIFE POLICY THAT GROWS AFTER PAYMENTS CEASE

At the age of 30 you may obtain immediate life assurance cover for a minimum of £1,000 at little more than £30 a year.

After 20 years you make no further payments. Your policy will show Sum Assured and Bonuses £1,420. Ten years later it will amount to £1,630 and will keep increasing.

Ask for quotation at your own age.

(In the above example the present rate of Bonus and the existing Income Tax Abatement are assumed.)

BRITANNIC ASSURANCE COMPANY LIMITED

Chief Offices: (Est. 1866)

From this table it will be seen that commission has absorbed 19 per cent. of the 1930 premiums, and that the percentage has been steadily rising each year. The provisions of the tariff presumably set a limit on commission on home business, and the rise can, therefore, be attributed to the foreign business, and represents, no doubt, the cost of the concessions made to retain connections against the rising influence of native companies. The same disquieting tendency is evident in the ratio of expenses to premiums. The increased pressure of overhead charges on the lower premiums has made some increase in the ratio unavoidable; and yet with 26 per cent. of the premiums gone in expenses, the offices expose themselves to a good deal of justifiable criticism.

Reference to the detailed results of individual offices shows that, on the whole, those companies which have produced satisfactory results in past years have maintained their reputation for consistency. The Alliance, with its comparative freedom from foreign business, and a very high-class home connection, has again achieved the largest rate of profit, and the General Accident and the London and Lancashire are not far behind. Three companies, the Caledonian, the Motor Union, and the Prudential, have converted a loss in 1929 into a profit last year. The only company which realised a loss in 1930 was the Century.

MARINE INSURANCE.

Those companies which transact marine insurance only or mainly, adopt the practice of presenting their accounts in a form which indicates the results of the underwriting of two years previously. The method adopted is to keep open each year's underwriting account for two years, and thereafter to close it by a transfer to suspense account, any balance remaining being regarded as profit. So it is that the 1930 reports of those companies exhibit results for the most part of the underwriting account of the year 1929. These results for a number of representative companies are shown below, and it is satisfactory to find that in nearly every case the 1929 account yielded a better result than its predecessor. In addition to the figures relating to marine companies the results of the marine departments of a number of large composite offices are also set out in detail. It is the usual practice for the marine account of a composite office to be drawn up on the same form as for fire and accident business, so that claims are completely unrelated to the premiums. But it is clear that here, too, there has been some improvement, and also that a number of companies whose marine account had previously given rise to heavy losses and great anxiety have materially strengthened their position.

A number of factors have combined to reduce the volume of business offering, with the result that competition in an already too large market has been intensified. The trade depression, indeed, has had the double effect of reducing the volume and value of cargoes requiring cover, and also of producing an ever growing total of idle tonnage. A heavy decline in premiums, which will be more marked when the returns of the 1930 account become available, is the result. Nevertheless, it is believed that, although hull business has been unsatisfactory, cargo business has produced a profit. London, moreover, has been able to maintain her position as the leading market. As always, the security afforded in London is unquestionable, and the security factor has been given added importance by the failure during 1930 of certain Continental companies with substantial marine accounts.

ACCIDENT INSURANCE.

INCLUDING ACCIDENT, EMPLOYERS' LIABILITY AND MISCELLANEOUS.

Personal accident business has a limited appeal, and the premium income is small. Although the aggregate figures indicate a small increase in the rate of profit, from 5.8 per cent. to 6.2 per cent., the total is weighted by the extraordinarily fine profit of 32.7 per cent. earned by the Eagle Star and British Dominions. This result, it may be noted, is due as much to low commission cost (10.6 per cent.) compared with an average of 21 per cent. and moderate expenses, as to favourable claims experience. The premium income for employers' liability business, the figures for which relate to home business, has been

reasonably well maintained in view of its close relation to pay rolls. The rate of profit pursues an unexciting course, and is stabilised at around 10 per cent. as a result of the Home Office agreement. Under this agreement commission is limited to 10 per cent., and the account is managed in order to show a claims ratio of 62½ per cent., any difference above or below this figure being made the subject of an adjustment in the succeeding year's premium.

In the Miscellaneous section the premium income shows a small increase. Although the figures include American "casualty" business, which has suffered a heavy fall in premiums, they include a number of miscellaneous forms of insurance, which still afford chances of increased revenue, and the exploitation of these new fields has counteracted the fall in other directions. In one important respect 1930 has yielded a substantial increase in premiums, namely, motor-car insurance. The provisions of Part II. of the Road Traffic Act, 1930, which came into force on January 1, 1931, virtually compelled motor-vehicle owners to effect insurance policies to cover their third-party liabilities. The bulk of the new policies came from motor-cycle owners who were notoriously an under-insured class. The effect on underwriting of these provisions of the new Act will not, of course, be seen until the 1931 results are available. The aggregate underwriting results of 1930 have been coloured by the poor underwriting of only 2.7 per cent. is a poor return for the anxieties of managing so large a premium revenue as £53 millions.

The meagre profit yielded by the miscellaneous section in recent years is exhibited in the following summary table:—

Year.	Premium Income.	Underwriting Profit.	
		Amount.	Percentage of Premiums.
1925	44,954,285	1,677,820	3.7
1926	47,507,426	1,520,341	3.2

BRITISH BANKING AND THE CRISIS.

In reviewing recent banking history it is impossible to dissociate it from the crisis both at home and abroad, or even to ignore the many political attacks and criticisms that have been launched against the banks since the change of Government. The main details of the political end of the story are already fairly well known, and, in any case, do not concern this review. There are, however, certain banking aspects that can usefully be discussed.

It is first necessary to clear the ground. The average man, and even many politicians, fall into the mistake of regarding the "City" as a single homogeneous unit acting with a single mind and following a unified plan. Thus the complaint has been launched that the City has been borrowing short from one centre in order to lend short to another centre; or has over-borrowed short and over-lent long. Whether or not this has happened, it must be emphasised that in the vast majority of cases the borrowing and lending are two separate operations, usually undertaken by separate individuals or houses. There has been no conscious design of borrowing in order to lend as part of a single deliberate plan.

Again, the average man should remember that there is no single cause of the crisis. It has arisen from a whole host of circumstances, some good and some bad, some within the control of the City of London, others within the field of international finance, and still others quite unconnected with finance at all. Some of these are outlined below, roughly in chronological order.

(a) London has long acted as the world's bank and in the unsettled post-war years became the repository of large foreign balances, which were sent to London as one of the few safe centres. This explained the accumulation of London's large French balances of several years ago. This function of London's has for long been profitable to the country, and an important favourable item in our balance of payments, but it exposes London to the risk of a run that every banker has to face when confidence either in his stability or in that of the financial world begins to deteriorate.

(b) The war, with its legacy of war debts and reparations, set up all sorts of undesirable financial cross-currents. These have contributed to a serious mal-adjustment and maldistribution of the world's monetary gold, which precipitated a serious fall in world prices, thereby, among other unwelcome consequences, increasing the burden of war debts and reparations to an intolerable degree.

(c) The stabilisation of the franc, the recovery of France, and other technical causes connected with the French banking and financial system had led since 1929 to the steady repatriation of French balances held in London. All the way through it had been necessary to cover this movement mainly by gold shipments, or, alternatively, to take special measures to attract foreign funds to London. In short, for some time London had been having to re-borrow in order to meet the French demands.

(d) Partly as a result of factors already mentioned, the world has for nearly two years been in the throes of a major trade depression. This has led in England to a vast increase in unemployment, to a serious shrinkage of our visible and invisible exports, and to a contraction of budget revenue.

(e) Consequently the British Budget, like those of other countries, was thrown out of balance. Also, the growth of unemployment temporarily threw out of balance the unemployment insurance fund, and forced it to run up a heavy debt to meet its current expenditure. This gave the impression that while we purported to balance our budget, in actual fact we were only doing so by regarding as recoverable in the future certain expenditure which in all probability would eventually have to be written off as a loss.

(f) To meet the above exigencies London was having to borrow short abroad. Last winter's open market policy of the Bank was designed to establish London

discount rates at above the world level and so attract money to London. Of recent years most London banks have, as a result of competition between themselves, been offering relatively high rates for fixed deposits. Even so, the fruits of these operations did not offset the French repatriations already mentioned, for the Macmillan Report calculates that between the end of 1928, and March, 1931, the net short-term liability of London was reduced from £302 to £254 millions. Later events were to show that even that last figure was sufficiently formidable.

(g) In the early summer came the Austrian and German crises, with their repercussions first throughout Central Europe and then throughout the world. By the middle of July, the world's financial nerves were badly on edge, especially as the Hoover declaration had been accepted too late.

(h) Then followed the drain of funds from London, due to a combination of the above causes, and met in the first place by gold shipments amounting to £84 millions. At the end of July came the announcement of the Bank of England foreign credits for £50 millions, only a day before the revelations of the May Report, with its shock to financial opinion both at home and abroad.

This, roughly, is the background to the crisis, which first brought down the Labour Government and then led to the suspension of the gold standard. In a complex situation dominated by world-wide disturbance and disequilibrium the part played by individual banking action was relatively small. The immediate cause of the crisis was the big drain from London on capital account. The sudden disappearance, under the stress of the world trade depression, of our normal favourable balance of payments, was to a limited extent a contributory factor. Yet it was then, and still is, of only minor consequence for the most pessimistic estimate was only one of £2 millions a week, whereas on occasions in August, funds of several times that amount were withdrawn on capital account in a single day, and it has since been announced that withdrawals between the middle of July and the suspension of the gold standard on September 21st were over £200,000,000, or at a rate of not two but of over twenty millions a week. These withdrawals, huge though they were, were not due to any international conspiracy against London, nor to any attempt by foreign banking interests to dictate terms to the British Government. Indeed, in the matter of the Bank and Treasury credits both Paris and New York rendered all the assistance that lay within their powers. Paradoxically enough, in their later stages they were due to an increasing degree to banking and financial weakness abroad. Foreign banks drew upon their London balances, not so much because of the doubts they felt in London's stability, as because of their need to reinforce their cash against the doubts their customers were beginning to feel in their own stability.

The suspension of the gold standard is still far too recent an event for its consequences to be ripe for considered review. From the purely banking standpoint, the immediate results were a tribute to the strength of British banks and the confidence rightly placed in them by the public. It was not necessary to proclaim a Bank Holiday on September 21st, and probably not one person in a thousand ever suspected that such a course of action might have been desirable. Yet in the majority of foreign countries the temporary closing of the banks would, under parallel circumstances, have been imperative. Again, there has been no increase in the note circulation, which by pointing to withdrawals of deposits is the first sign of a lack of confidence in the banking system; this is in sharp contrast to the recent experience of France and the United States.

THE MACMILLAN REPORT IN RETROSPECT.

(BY A CORRESPONDENT.)

No one who read the Macmillan Report when it was published in July can have been surprised by the events of the weeks that followed. The point which the Committee regarded as being of supreme importance was that immediate steps should be taken to check the "violent down turn of prices, the effects of which upon political and social stability have already been very great. The problems thus raised transcend in importance any others of our time and generation, and we have regarded it as our main task to expound their significance and to bring forward suggestions for their solution."

These suggestions form Part II of the Report, but unhappily few of the foreign bankers who could have learned most from the Report seem to have studied these chapters. If they began to finger the Report, they got no further than Section 260, which revealed for the first time the extent of the net liability of London in respect of funds deposited here for a short period. It is ironical to trace the extent to which the Macmillan Report, which preached the paramount importance of raising prices, by alarming foreign bankers as to the position of London, became a contributory factor in the headlong course of deflation that has done such damage since the Report was published. The systematic freezing of German liabilities, the default of Chile and Brazil, the Budget introduced by a National Government in its struggle to keep this country on the gold standard which nevertheless had to be abandoned on September 21st after over £200,000,000 had been withdrawn from London—these are the major events in this chronicle of deflation. Ordinary mortals have felt its effects in the form of increased unemployment, lower wages (notably in U.S.A.), still lower commodity and Stock Exchange prices and higher taxation.

These wider aspects of the situation are generally overlooked, because the abandonment of the gold standard and the uncertainty of the future state of Parties has concentrated attention upon England. For the moment it appears to the newspaper reader that conditions have so changed that the Macmillan Report may now be shelved. When the pound is only worth \$3.90 and when the apologists of the National Government make our flesh creep with fear of the horrors of inflation, we quickly forget that the Macmillan Committee urged us to take steps to avoid further deflation; and yet it is now more than ever important that these recommendations should not be lost sight of.

There are two facts to be observed:—

(1) Provided a tight hold is kept over the Budget, the note circulation and bank credit, there is no serious danger of inflation in England. Manufacturers, merchants, stockbrokers and bankers have all felt the strong hold which the Central Institution has over the monetary system; the grip is even so tight that unless it is relaxed in due course it may prevent trade from making full use of the depreciation of the pound.

(2) France, the United States, Germany, Holland and other countries that have remained on a gold standard are still pursuing a deflationary course which daily aggravates the burden of all indebtedness fixed in terms of money.

These are gloomy observations, but there is one encouraging feature in the whole situation. England and the countries who have followed her in suspending the gold standard have regained their freedom of choice and are no longer bound to follow the monetary policy of the two gold-holding nations. Rather it is now possible for England and the Empire to lead the way out of the depression.

How England will use her opportunity has yet to be seen. Our political leaders have, since September 21st, thought only of the combinations and permutations of Party politics, while our financial leaders

have been busied with the purely negative task of preventing the pound from falling below \$3.50. It is no reflection upon those who control our destinies to say that they have no policy at this moment. On the other hand it is a compliment, for it is evidence that they recognise that "these problems transcend in importance any others of our time." It would be a nightmare if there were any reason to fear that the Treasury and the Bank of England had closed their minds to any other idea except the return to the status quo vaguely shadowed in the announcement of the suspension of the gold standard made on September 21st. "It has become necessary to suspend for the time being the operation of Sub-section 2 of Section 1 of the Gold Standard Act of 1925, which requires the Banks to sell gold at a fixed price. . . . The ultimate resources of this country are enormous, and there is no doubt that the present exchange difficulties will prove only temporary."

A statement was made by the board of directors of the Netherlands Bank on September 26th that "by virtue of conversations recently held with the Bank of England, and in view of the particular character of our sterling assets, we have every reason to believe that we need not fear any loss on these assets." This has been read to mean that at least one well-informed Central Bank believes that it will again be possible to buy \$4.86 with one pound. Instinctively we may feel that it is our bounden duty to push the pound uphill and wages down dale until we can pay our creditors and collect our debts at par. But before instinct runs away with us again as it did in 1925, let us read the Macmillan Report and remember that between 1925 and 1931 "the difficulty of our national problem was most increased by the relative over-valuation of the pound sterling." The Hebrew prophets tried to justify God's ways to man by saying: "Woe unto you; you are punished because you have done evil." The Macmillan Report says the same thing in the language proper to Blue Books: "The recent world-wide fall of prices is best described as a monetary phenomenon which has occurred as the result of the monetary system failing to solve successfully a problem of unprecedented difficulty and complexity set it by a conjunction of highly intractable non-monetary phenomena." Let us heed the prophets of 1931 and err no more. "It should be our object to increase the power to exercise deliberate control over the price level. . . . With the gradual growth of knowledge and experience, and particularly with the further development of suitable machinery for regular international co-operation, the possibility of such deliberate control should steadily increase; we should forward these ends to the best of our powers by being ready to attempt the task and to gain experience by practice."

The Committee were rather cautious in their advice as to what should be done, because they were fettered by the existence of the gold standard. They did not explain what they understood by stabilisation of prices, and explanation is necessary because, as Professor D. H. Robertson has pointed out in the *Banker* (August, 1931): "After what was hailed at the time as the most successful experiment in stabilisation has turned out in retrospect to be one of the greatest over-investment booms in history, it is no longer possible to pretend that everybody knows, near enough for practical purposes, what stability means."

At a moment when no one has any decided policy the members of the Macmillan Committee could render a great public service by writing a second volume to tell us what to do next. Perhaps in such a second volume the Report would be shorter and the addenda more numerous. The Report itself might consist only of a sound rating of the Joint-Bank Banks and the other parties concerned for having

taken no notice of the "Proposals Relating to Information and Statistics" contained in chapter V of Part II. But even if there were no agreement as to the future of the pound, the careful study of the question would be of great importance in emphasising the complexity of the problems involved and preventing us from making any rash attempt to restore the

Golden Age. It may be fanciful to suggest that the busy men who formed the Macmillan Committee should resume their work in order to write a second volume. But this is the more reason why the rest of us should make the fullest possible use of the Report which they have given us by thinking hard about the suggestions they have made.

THE NIEMEYER REPORT ON NEW ZEALAND.

(BY OUR CHRISTCHURCH CORRESPONDENT.)

This report was issued before the suspension of the gold standard in Great Britain, and its conclusions will obviously have to be reconsidered or modified in the light of that event.

On the outbreak of war in 1914 New Zealand, together with other parts of the Empire, suspended the existing gold standard regulations. The Banking Amendment Act, 1914, permitted the issue of proclamations decreeing that bank notes should be full legal tender for periods specified. Since then, successive proclamations have maintained a purely paper standard, and the latest proclamation, gazetted in December, 1928, expires on January 10, 1932. Despite the absence of effective currency regulation, however, New Zealand's exchanges have been maintained throughout the whole period fairly close to parity with sterling. The fact is that the standard actually in operation before the war was not a gold standard, though all the regulations of a gold standard were present, but a sterling exchange standard operated not through cash but through credit. It had become an established practice of the banks which financed overseas trade transactions to maintain reserves against overseas payments, not in New Zealand, which is far from the centre for the clearing of international trade payments. Hence all of the banks operating in New Zealand had offices in London, and held there considerable funds used mainly for exchange purposes. In exchange for credit in New Zealand, these banks would buy or sell credit in sterling at rates fixed from time to time and usually maintained within the gold points. Throughout the years of the war and up till the present time this system has been maintained, and only once during the period since the suspension of gold has there appeared evidence of in the New Zealand balance of payments evidence of conditions which would be likely to cause market appreciation or depreciation of exchange rates. Australia, however, has operated practically the same system, and five of the six banks operating in New Zealand operate also in Australia. It is generally believed that the banks pool their exchange funds from different sources and make little distinction between amounts held in London on New Zealand and on Australian account. In consequence, the New Zealand exchange rate on London is likely to be affected by the Australian rate. In 1921 a very heavy adverse balance of trade occurred in both countries and the exchange moved about 3 per cent. against New Zealand. In 1928-29, owing entirely to Australian influences, the exchange moved about 8 per cent. against sterling. Again in 1930-31, though the New Zealand balance of international payments appears to be little, if any, worse than in 1926-27, when the exchange moved 1 per cent. only, the rates quoted by the banks show a depreciation of New Zealand currency of about 9 per cent. This is held locally to be due very largely to the influence of Australia's much more unfavourable rates.

It was mainly the unaccustomed variations in exchange rates that prompted the Government to invite Sir Otto Niemeier, who happened to be in Australia, to visit New Zealand about September, 1930, and to report on the regulation of New Zealand currency and exchange. His report, which was presented to the New Zealand Government some months ago, and was issued with the New Zealand Budget at

the end of July, is a model of clearness and condensation, and reviews briefly the main features of the monetary standard operated in New Zealand. It points out that in New Zealand credit is a much more important factor than currency, that gold circulation is neither necessary nor desirable, and that the sterling exchange standard in operation can be maintained effectively without the need for gold reserves in New Zealand. It recommends a uniform legal tender note issue—at present notes are issued by all of the six trading banks—and considers possible issuing authorities. A Note Issue Board would have no effective means of regulating exchanges; a currency and Exchange Board might issue notes and buy or sell exchange at fixed rates against reserves held abroad, but it would have little influence over credit conditions, which are all important in New Zealand. Sir Otto recommends, therefore, the establishment of a Central Reserve Bank, which must be entirely independent of any political control. The bank should hold all Government accounts, together with deposits from other banks, amounting to at least 7 per cent. of their demand liabilities and 3 per cent. of their time liabilities. It should be responsible for the management of a uniform note issue and should hold a reserve in gold and short-term credits, mainly in London, amounting to 30 per cent. of its notes and demand liabilities combined. With one small exception, it should pay no interest on deposit or current accounts, and its powers and duties generally are those of a central reserve bank maintaining its assets in very liquid form. The bank also is to be obliged to buy or sell sterling in amounts of not less than £5,000 at rates corresponding to the gold export and import points, which are about 1½ per cent. above and below parity. Its notes are to be legal tender within New Zealand, and the existing prohibition on the export of gold is to be withdrawn.

These recommendations follow very closely the main outlines of modern central reserve banks in other countries, with some modifications suited to the special conditions to be met. Some objection will perhaps be raised to the proposals on the ground that there is in New Zealand no bill market, no short loan market, and, generally speaking, no money market in the full sense of the term. This anticipated objection has been countered in the report with the statement that in the absence of such factors there is a gap in the financial structure of the country, and that this gap can be filled in no more effective way than by the establishment of a reserve bank. In any case, it is now well established that the methods of control adopted by a central reserve bank must be suited to the market in which it works, and, given full co-operation with the ordinary trading banks, there need be little fear that effective methods of control will be evolved. Effective co-operation with the existing banks, however, will probably be essential to a central bank's success in its initial stages.

So far, the banks have expressed no opinion on the report. In addition, there is a considerable body of opinion in New Zealand which leans towards State banking. The report is most emphatic, and in view of recent events in this part of the world, is undoubtedly right in its opposition to political influence in any form whatever. It explicitly disqualifies

members of Parliament and civil servants from the bank's directorate. Some discussion is probable on this aspect of its constitution. On the other hand, the proposals made in the report are a bold attempt to establish machinery which will not only stabilise New Zealand currency and exchange on a secure basis and on a definite relationship with gold, but will also centralise both the note issue and the banking system. If adopted, the recommendations should make it pos-

sible to export for profitable use abroad the present note reserve held in gold and amounting to £7 millions, and to effect other appreciable economies throughout the banking system. In effect, the report suggests the establishment of a pivotal piece of machinery necessary for the rationalisation of currency, banking and exchange, not only within New Zealand, but between New Zealand and the rest of the Empire as well.

BRITISH BANK SHARES.

BRITISH bank shares, which remained comparatively steady during the early stages of the long decline in Stock Exchange values, which began in February, 1929, have recently shown a perceptibly downward tendency. The following table, based on "The Actuaries' Investment Index," shows how the prices and yields of eleven bank and discount company ordinary shares have fluctuated in comparison with those of 131 industrial ordinary shares:—

	Price Index.							
	Dec. 31, 1928.	Dec. 31, 1929.	Dec. 30, 1930.	June 30, 1931.	July 28, 1931.	Sept. 1, 1931.	Sept. 15, 1931.	Sept. 23, 1931.
Bank and Discount Company Shares	100.0	90.2	96.8	89.1	86.2	78.7	78.1	72.7
Industrial Shares	100.0	81.9	64.3	55.8	52.9	47.4	46.7	49.4
	Average Yields (Per Cent.).							
	Dec. 31, 1928.	Dec. 31, 1929.	Dec. 30, 1930.	June 30, 1931.	July 28, 1931.	Sept. 1, 1931.	Sept. 15, 1931.	Sept. 23, 1931.
Bank and Discount Company Shares	5.19	5.78	5.38	5.83	5.82	6.37	6.42	6.91
Industrial Shares	5.14	6.81	7.21	6.63	6.98	7.75	7.90	7.66

The initial depreciation in bank shares was much less than in ordinary shares as a whole. During 1930, indeed, bank shares rose on balance while other equities continued rapidly to depreciate. In the last nine months, however, the prices of bank shares have fallen on the average by nearly 25 per cent., and although their depreciation from the highest level before the slump is still much less than that which has occurred in industrials, the "boom" movement in equities which followed the unlinking of sterling from gold on September 20th was the signal, actually, for further selling of the equities of the banks. An average yield of nearly 7 per cent. on the shares of the great British banks and discount houses is in itself a symbol of abnormal conditions.

The main factors in the decline in values are readily ascertainable. The policy of conservative distribution of profits, followed by every great British banking institution without exception after the war, the stability of bank dividends, and the admittedly strong internal reserve position of the great British institutions—all these factors tended to provide bank shares with a "gilt-edged" clientèle. When the banks, however, reduced their dividends this year, in respect of profits earned in 1930, their decision (which reflected a true appraisal of the difficult economic outlook, and was in harmony with every traditional cause of sound finance) tended to disappoint some investors who had cherished the illusion that banking profits had little direct correlation with industrial conditions.

The psychological effects of the European crisis in July further were accentuated in the market by irresponsible quasi-political attacks on the British banking system. The failure of certain Continental institutions of the first importance—including the Austrian Credit Anstalt in May, the German Danatbank in July, and the French Banque Nationale de Credit in September—further affected investment sentiment. The economic tribulations of British Dominions like Canada, Australia and New Zealand, the plight of Eastern silver-using countries, and the exchange diffi-

culties and defaults of various South American States combined to depress the shares of banks doing specialised overseas business. The decision of September 20th to suspend the convertibility of sterling, finally, was regarded by some short-sighted holders as a "bear point" for British banks, which, with very few exceptions, had been prominently identified with the return to gold six years earlier.

The fall in values has been greatest in the case of shares with an uncalled liability, a selection of which is given below:—

Share.	Amt. of Share.	Paid up.	High-est Price, 1930.	Price, End June, 1931.	Price, Oct. 5, 1931.	Yield, Per Cent.
Lloyds	5	1	66/-	55/-	44/6	8 14 9
Martins	20	24	7 1/2	5 1/2	4 1/2	8 0 0

The disinclination of some investors to any share with a heavy financial liability in present conditions may be readily understood. It cannot be too strongly emphasised, however, that analogies between the position of British and of many Continental and other foreign institutions may be dangerously misleading. The financial position of the big British joint-stock banks remains strong, for reasons discussed at length on other pages of this Supplement. It is improbable that the banks will call up unpaid capital, to provide additional resources of which they have no present need, merely as a "gesture," since the latter's moral effect on depositors and shareholders might be the reverse of that intended. For those who dislike partly-paid shares on principle, however, a separate table is given below, confined to fully-paid shares:—

Bank.	Denom-ination.	Highest Price, 1930.	Price, End June, 1931.	Price, Oct. 5, 1931.	Yield per Cent.
Agricultural Bank of Egypt	£ 5	7 1/2	7	5 1/2	9 1 9

In the past the yield on fully-paid shares in the leading British banks has normally been little higher than that obtainable on British stocks, though shares in other banks, even when fully paid, have been regarded as somewhat more speculative. Until the present world crisis is resolved, even the strongest institutions will probably deem a conservative dividend policy indispensable. As long-term holdings, however, the shares of British banks, with their inherent strength, will remain sound investments on every assumption but that of a complete collapse in sterling. If this possibility may be ruled out, the present discrepancy between the yields on fully- and partly-paid shares of domestic institutions appears greater than facts can justify. Indeed, many investors would

doubtless regard a calling up of capital at, or near par, as an excellent opportunity to "get in on the ground floor."

The interests of British banks doing a large business in areas like South America, Australia and the East, however, must necessarily be bound up with the prospects of recovery, in these countries, from severe economic depression. The investor's safeguard, in all these cases, is the strong internal position of the institutions concerned, built up by years of conservative finance, pursued with an eye precisely to the occurrence of conditions like the present. It need scarcely be said that a policy of selectivity in investment has as much relevance during an economic blizzard as in more normal times.

AMERICAN BANKING DEVELOPMENTS. (BY AN AMERICAN CORRESPONDENT.)

In the United States, as in other parts of the world, the summer of 1931 is likely to be long remembered as a period of striking and anxious occurrences in finance and banking. These occurrences have been, it is true, of a nature not precisely the same as the parallel events taking place elsewhere, but beneath the surface they have been calculated in some particulars to arouse the same sort of anxiety that has been inspired abroad.

The underlying position and background of the situation has, however, in some respects at least, been favourable. In order to understand the basic facts in the situation, it is worth while to note the principal changes in bank conditions that have occurred. In the following brief table is afforded a digest of the major items furnished weekly by the reporting member banks of the Federal Reserve System.

	Sept. 2, 1931.	Increase or Decrease since Sept. 3, 1930.
Loans and investments, total	\$ 22,063	- 1,105
Loans, total	14,398	- 2,432
On securities	6,519	- 1,838
All other	7,879	+ 594
Investments, total	7,665	+ 1,327
United States Government securities	4,046	+ 191
Other securities	3,619	+ 21
Reserve with Federal Reserve banks	1,807	+ 20
Cash in vault	227	+ 385
Net demand deposits	13,244	+ 468
Time deposits	7,003	+ 26
Government deposits	42	+ 205
Due from banks	1,374	- 302
Due to banks	3,192	+ 28
Borrowing from Federal Reserve banks	107	+ 28

From these figures it will be observed that large progress has been made in the direction of liquidation of the frozen assets left by the panic of 1929. Loans on securities now amount to little more than \$6,500,000,000, and this represents a drop of about \$2,000,000,000 from high point in the late spring of 1930. It is to be noted, of course, that there has been a corresponding increase in investments, which are now \$1,827,000,000 higher than they were a year ago; and, as compared with low point somewhat earlier, are nearly as much increased as the loans on securities have been decreased. The investment portfolio, however, is, on the whole, much more liquid than the loans on securities, and the situation of the banks correspondingly improved. Among the investments, as the more complete statements of portfolio published from time to time for all banks demonstrate, is now incurring, enormous deficit which the Treasury is now incurring, from month to month, and which has been in course of development for more than a year. The absorption of the sum of \$2,000,000,000 in secured loans, liquidated by throwing the collateral on the market, would go far to account for the weakness of security prices during the past twelve months.

In view of these general developments, the question may be asked what is the true condition of the banks themselves at the end of such a period of rectification. The number of bank failures has been somewhat reduced, no doubt, but not very much. Nearly 100 banks a month are still, more or less regularly, being placed in the hands of receivers, nor can it be said that they are all "small" institutions. The event in Chicago earlier in the summer, where over thirty banks were closed or consolidated with others in the course of a week—among them being one considerable institution—illustrates the true nature of things. More recently the closing of all the banks in one of the larger manufacturing towns of Ohio gave another view of the banking situation. In the South, where many banks hold cotton paper in great quantities, the very low price of cotton renders the paper impossible to collect, at present at least, and a large crop of bank failures must be the inevitable result during the winter. Nevertheless, and in spite of the pessimistic assertions of some who believe that the widespread hoarding of money is equal in bad effect to the existence of the "frozen loans" of last year, a dispassionate judgment would be unquestionably that the banks have gone a long way toward clearing up the conditions that preceded the panic of 1929. There is still, however, much to be done.

This process of restoration would be much more promising and better assured of success were it possible to feel that there had not been deterioration in other respects. But, during the summer, the Hoover "war debt holiday" brought to a head, or at least recognised, the existence of other conditions which had been known and admitted by a few but had not been generally spoken of. For years past there has been growing up a dangerous and inflationary use of the bankers' acceptance, which is now admitted to be little more than a finance bill or piece of accommodation paper. Particularly during the year 1930 was there a disposition to take on as elements in bank portfolios more and more bills, nominally representing the financing of trade between European countries, but really representing goods stored in such countries, especially in Central Europe. These goods had been purchased largely at high prices prevailing before, or soon after, the breakdown of 1929; and to expect liquidation without loss was obviously out of the question. For a good while, therefore, there had been expectation in informed quarters of a collapse of some sort. This came when it was announced that Germany could not pay her short-term credits. Then ensued the negotiations whose outcome are common knowledge. These make it plain that lines are common knowledge. These make it plain that the eventual collection, if effected, will be merely as the result of very slow processes. In short, both the banks and the Reserve System have had to reconcile themselves to the fact that what was being held as a secondary reserve is, in truth, frozen credit, and likely to remain such. This state of things is manifestly the hardest on a small number of banks, although the

German paper had been pretty well diffused throughout the country.

In distributing the large British credit of this summer the New York banks have likewise taken on a substantial burden of some \$200,000,000 of one-year notes revolving on a sixty to ninety-day basis. These are, of course, not eligible for discount at Reserve banks. They are thus in a sense "frozen"—that is to say, would not be available for quick conversion into cash if needed. Then, to cap the climax, the banks have had to absorb about \$300,000,000 of Treasury short-dated bills (above what had been expected or considered normal at this season) while they have likewise had to share a good deal in the placing of the \$800,000,000 of long-term bonds which the Treasury had thought to sell at 8 per cent. to the private investor, but which have been received without enthusiasm. All these operations—necessary or unavoidable as they may have been when viewed from an immediate standpoint—have, of course, tended to "tie up" bank funds still more.

Probably, one result of what has thus taken place has been the steady liquidating sales of corporation and foreign bonds that have come upon the market in recent times. Among them have been a good many foreign securities of the better class which had been widely purchased by commercial banks. Hard pressed by necessities of various kinds, and among others by the desire to share in the financing operations attendant upon the German and British credit negotiations, the banks have found in some respects the easiest plan that of selling bonds, taking losses if any and realising cash. Of course, this has absorbed popular buying power and kept the market from getting the support it might otherwise have had, so that one result of the summer's financing and banking has unquestionably

been that of lessening the position of domestic and foreign corporate securities of the better grades. Yet the action so taken has tended to keep the balance of the bank portfolios more nearly even than would otherwise have been the case, and has prevented institutions from becoming hopelessly waterlogged with long-term notes, bonds and credits.

The flow of gold into the United States continued into September, mainly from South America and the East. Official statements then recognised the existence of some \$5,000,000,000 of gold in the United States. According to the spokesmen of the Government regarding gold, about \$2,000,000,000 of this great accumulation represented money that had been driven out from its original places of deposit by "lack of confidence" in the conditions existing abroad. This influx prevented banks from feeling the pinch otherwise caused by their own unliquid position as seriously as they ordinarily would. On the other hand, the hoarding of sums now estimated with apparent reliability as high as \$1,000,000,000 in some measure offset the inward flow of gold in its effects on banking. Still, a good deal of the hoarding has evidently taken the form of Federal Reserve notes, leaving the new importations of the specie to go into the vaults of the banks with the results already outlined. Since then the movement has been reversed, for from September 16th to October 4th, the Federal Reserve system lost through exports or earmarking \$400,000,000 of gold. Much of this loss was due to the decision of certain European central banks to abandon the gold exchange standard, and to turn their holdings of dollars into gold. It is estimated that, in theory, the United States can lose another \$1,000,000,000 of gold without reaching the danger point, but it seems likely that further losses will cause some stringency and inconvenience.

THE BANKING POSITION IN FRANCE.

(BY A CORRESPONDENT.)

THE French banking system has just gone through a somewhat critical period. The Banque Nationale de Crédit, which after the Crédit Lyonnais, the Société Générale and the Comptoir National d'Escompte, is the most important French deposit bank, has threatened to break down. It has only been able to continue its operations thanks to the immediate intervention of the Banque de France and several big banking establishments who have consented to advance the necessary funds to allow it to fulfil all its engagements.

For several months it was known that the position of the Banque Nationale de Crédit was a rather difficult one. This establishment had followed an imprudent policy, for it had not taken care to preserve liquid or easily realisable funds in counterpart of its engagements at sight, and it had not hesitated to immobilise an important part of its capital in industry. Besides, it had not sufficiently spread its risks.

The economic crisis having gravely compromised the solvency of the principal debtors of the Banque Nationale de Crédit, depositors got frightened and withdrew their deposits. For a time the Banque Nationale de Crédit could face the situation by utilising the margin of its rediscount facilities at the Banque de France, but as the withdrawals went on they finally lost their last resources, and had to solicit the help of the other banks which, in agreement with the Issue Institute, supplied the necessary funds to enable it to fulfil its engagements.

That the failure of the Banque Nationale de Crédit was easily prevented is partly due to the excellent position of the other big French deposit banks. In the course of the last years, the Crédit Lyonnais, the Société Générale, the Comptoir National d'Escompte and the Crédit Industriel et Commercial, which constitute the principal pillars of the French banking structure, have followed an extremely wise policy. They have constantly striven to maintain assets easily realisable to meet their engagements at sight. They have

systematically refused to have recourse to investments which, although more remunerative, were of an illiquid character.

In the course of the last few months they have shown themselves even more rigorous than in the past. Not only have they avoided more or less risky investments but they have constantly tried to increase their liquidity. This is proved by the statement below.

PRINCIPAL ITEMS OF THE BALANCES OF THE BIG FRENCH DEPOSIT BANKS.

(Crédit Lyonnais, Société Générale, Comptoir National d'Escompte and Crédit Industriel Commercial.)

ASSETS.	Dec. 31, 1930.	Mar. 31, 1931.	June 30, 1931.	July 31, 1931.
			France, million.	
Cash and bank balances	3,957	4,359	5,499	8,179
Balances with correspondents	4,642	4,644	4,995	2,916
Commercial portfolio	20,224	21,221	22,336	20,734
Advances and "reports" (debtors)	1,577	1,509	1,345	1,338
Account-currents	10,119	10,009	9,281	8,797
LIABILITIES.	Dec. 31, 1930.	Mar. 31, 1931.	June 30, 1931.	July 31, 1931.
			France, million.	
Current and deposit accounts:				
At sight	35,284	36,106	37,938	36,642
Fixed term	1,397	1,669	1,564	1,539
Bills payable	921	1,076	1,020	848
Portfolio of securities	212	213	223	228

The Crédit Lyonnais, the Société Générale, the Comptoir National d'Escompte, the Crédit Industriel and Commercial are the only French banks who publish a monthly balance sheet. Although the Banque Nationale de Crédit shows a bigger amount of deposits than the Crédit Industriel and Commercial, it has never considered it expedient to publish a monthly balance sheet.

It will be seen that the cash resources have greatly increased, particularly between June and July. The

October 10, 1931.]

figures for August and September are not known yet, but they do not seem to indicate a fresh increase, as the credits accorded to the Bank of England have probably contributed to weaken their treasury.

Why did the French banks so strongly increase their cash balances last July? Two reasons have guided their policy. First of all they tried to prevent too marked a depression in money rates. Since 1929 the outside discount rate has fallen in Paris from 3½ to 1½ per cent., and the banks were unable to make equivalent reductions in the rate of interest allowed to their own depositors. This meant a contraction in the bank's margin of profit, and to keep this within bounds the big banks came to an understanding to limit the supply of liquid funds and thus to check the fall in money rates.

Furthermore, the banks considered themselves bound to strengthen their cash resources so as to be in a position to face a "run," for the French public is rather distrustful and apprehensive, as was seen last year when the breakdown of the Banque Adam, which was an establishment of secondary importance, provoked a panic amongst the public. On that occasion there were formidable withdrawals of deposits from banks which were considered safe and solid, and the Banque de France had to advance to the banks, last November, nearly two milliards to allow them to pass through this totally unjustifiable crisis.

Now the big deposit banks had realised for some time the difficult position of the Banque Nationale de Crédit, and so endeavoured to increase their cash balances so as to always enable them to meet their engagements and if necessary to give their help to the defaulting establishment. They were well inspired, because, thanks to their strong position, they could take over the engagements of the Banque Nationale de Crédit and avoid the closing of this establishment.

By what means did the banks increase their cash balances? In the first place they benefited by fresh deposits. Between December 31, 1930, and July 31, 1931, the total of their accounts-current rose from 86,681 millions to 88,181 millions. The French banks did not lend these funds to the market, but retained them. In the second place, they reduced their credits. The amount of their loans, commercial, portfolio, advances and "reports," accounts-current (debtors) diminished from 81,920 millions in December, 1930, to 80,869 millions in July, 1931, i.e., a reduction of 1,051 millions. Lastly, the banks have reduced their foreign balances.

The monthly balance sheets do not give the exact figure of the foreign balances of the French banks, but the variations of the item "Balances with correspondents" are very symptomatic. During the period in question they diminished from 4,642 to 2,916 millions, i.e., by 1,726 millions. This is the item which has proportionally registered the heaviest reduction.

The position of the Bank of France was at the same time much strengthened. During the month of July alone its gold reserve ("Encaisse-or") increased by two million of francs. The chief items are shown below:—

ASSETS.	End Dec., 1930.	End Mar., 1931.	End June, 1931.	Sept. 18, 1931.
			France, million.	
Gold "encaisse-or"	53,578	56,116	56,426	58,575
Foreign bills	26,147	26,278	26,188	25,121
Commercial Portfolio	8,460	7,112	5,597	6,855
LIABILITIES.	End Dec., 1930.	End Mar., 1931.	End June, 1931.	Sept. 18, 1931.
Note circulation	76,436	77,864	76,927	77,575
Private current accounts	11,126	12,049	14,600	18,084
Public and Treasury accounts	4,639	2,399	888	1,417
Ante-mortem cash	7,986	9,374	7,625	6,761
Percentage of gold cover	53.17	54.90	56.07	56.23

The percentage of gold cover has gone up from 53.17 per cent. to 56.23 per cent., while private accounts-current have risen from 11,126 millions in September, 1930, to 18,084 millions in September, 1931.

BANCA COMMERCIALE ITALIANA

(Limited Company incorporated in Italy.)

Established in 1894. Head Office: MILAN. Capital: 700 million Lire. Reserves 580 million Lire.

Branches in every centre of commercial and industrial importance in Italy, and in most of the best known tourist resorts; also in London, New York, Istanbul (Constantinople) and Izmir (Smyrna).

Affiliated and Auxiliary Institutions in France (Paris and Riviera), Switzerland, Czecho-Slovakia, Poland, Yugoslavia, Austria, Hungary, Bulgaria, Roumania, Greece, Egypt, Morocco, U.S.A., Brazil, Argentina, Chile, Uruguay, Peru, Colombia, Ecuador, etc. Representative in Berlin.

ALL OF WHOM
TRANSACT BANK-
ING BUSINESS IN
ALL BRANCHES.

TRAVELLERS' CHEQUES ISSUED,
free of charge, in Pounds Sterling, Dollars, Lire
and Francs, payable in all parts of the world.

Correspondents to the Italian Treasury.

Still, as we have seen, it is little likely that she would make use of it. The four big deposit banks are in an extremely solid and liquid position. It is true that they

(BY A CORRESPONDENT.)

Immediately after the return to Berlin of the President of the Reichsbank the currency crisis developed into a banking crisis. For days the condition of the Darmstädter Bank, in particular, had been recognised as very dangerous. On Sunday, July 12th, it was announced that it was impossible to help it out of its difficulties, and on the 13th the public learned that the Darmstädter Bank had closed and the Reich had taken over the guarantee of its debts. This decision precipitated a run on all banks and savings societies, for which they were not prepared; so on July 14th two general bank holidays were proclaimed; since then Germany has led an isolated existence as far as finance is concerned, completely cut off from external events.

It is certainly possible that other French banks may find themselves in difficulties; but there is no risk of any serious shock to the French banking structure. If banks should be obliged to solicit help, it would only be establishments of secondary importance. Their deposits are not large, and it would be easy to come to their assistance. The means at disposal of the Bank of France, and the extremely strong position of the big establishments are guarantees for the future of the French banking organisation as a whole.

Meanwhile negotiations had been opened with foreign bank creditors for a standstill agreement in respect of short-term foreign loans which had not already been withdrawn. The proceedings were started by the London Conference on July 23rd, and the details were agreed upon by a bankers' committee meeting at the B.I.S. on August 18th, but the Basle agreement left a large number of points open. It had first to be submitted to the national committees of creditors in the respective countries, and the standstill agreement did not come into force until September 17th, retrospectively as from September 1st, for six months. This agreement only

In the Dresdner Bank, of which the Reich has become the principal shareholder by taking over the preference shares, the reorganisation of the directorate is already complete. Of the former directors all but two have gone, and of those two Herr Nathan may very likely

CENTRAL EUROPEAN BANKING.
(CORRESPONDENT.)

TRAL EUROPEAN
(BY A CORRESPONDENT.)

The Austro-Hungarian monarchy was a debtor State in the pre-war period, but it was less dependent on foreign funds than its impoverished succession States in the post-war years. With the possible exception of Czechoslovakia, which is more or less a creditor nation, the other succession States are all debtor nations. Austria and Hungary, after the League of Nations intervention to reconstruct their finances in 1922 and 1924 borrowed mainly in London and New York. Thanks to the old-established banking institutes in Vienna and in Budapest, and their good connection with the British and American banking houses, credits were easily obtained both at long and short terms in London and in New York, and, to a lesser extent, in the auxiliary markets of Switzerland, Holland and Sweden. French capital played a minor part in the

Bank. An such foundation. In addition to these concrete banking problems, the Government has also been intensively preoccupied during recent weeks with the problem of bank control in general. The outcome has been the establishment of a "Reich Commissioner for Banking" who is subordinate to the Minister for Economics. In addition, a Board of Banking Control is to be appointed at the Reichsbank, consisting of the President of the Reichsbank as chairman, the Secretaries to the Ministries of Finance and Economics, a member of the Reichsbank directorate and the Commissioner. The Board of Control is to lay down the lines on which the Commissioner is to carry out his duties. He is to keep himself continuously informed of the state of German banking credit, especially in their relations with other countries, and to influence general banking policy in the economic interest of Germany as a whole. As to exactly what that means the Government itself does not seem quite clear. The Commissioner is empowered to demand from the banks any information he considers necessary, to take part in general meetings and directors' meetings, and to demand the calling of a general meeting. The former Stock Exchange Commissioner of the Prussian Ministry of Commerce has been appointed to the office of Banking Commissioner. It is too soon to say how this system of supervision will work out in practice.

The banking system of the Central European countries is similar to that of Germany. The banks and, in some cases, the saving banks, notably in Hungary, are *banques d'affaires*, and are not only interested in accumulating deposits and making advances to their customers, but are more or less engaged in financing and participating in commercial and industrial undertakings. Foreign capital is interested in almost all Austrian and Hungarian banking institutions and, to a lesser extent, in the banks of the other succession States. Shareholders include British, German, French, Swiss, Belgian, Dutch, Italian and American interests. The close connection between banks and industry is partly responsible for the frozen assets of the banks, which led to difficulties when foreign credits borrowed on short term were withdrawn from the Austrian and the Hungarian banks. It is well known that all foreign creditors of the Austrian Credit Anstalt obtained a guarantee from the Austrian Government for a two years' prolongation of their short-term claims, which are estimated at \$78,000,000, or more than 500 million Austrian schilling. The amount due to British banks is \$27,000,000, and to Americans \$24,000,000, while the remainder is due to French, Dutch, Swiss, German and other banks. The other Austrian banks concluded recently an agreement with their foreign creditors for the prolongation and the gradual repayment of 210 million schilling (\$30,000,000).

The standstill agreement of the Hungarian banks is being negotiated. The total short-term debts of the Hungarian banks (State and municipal debts not included) is estimated at about \$75,000,000. As there is no chance of immediate repayment, foreign bankers would do well to agree to a standstill agreement without further delay. Czechoslovak banks are not directly involved in the psychological crisis which resulted in the withdrawal of foreign funds from the other Central

European countries, as they are working mainly with domestic resources. The Roumanian and Yugoslav banks were not so hardly hit as the Austrian and Hungarian banking institutions, because they could not borrow directly in the London and New York markets to a great extent. On the contrary, Roumania, Yugoslavia, etc., absorbed a considerable part of the foreign credits of the Austrian Credit Anstalt, and as these credits were frozen in industrial undertakings, they have aggravated the position of the Credit Anstalt.

As the half-yearly balance sheets of the banks are not available, it is difficult to see the losses sustained by them, the more so because the crisis only reached its climax in July and August. There is little doubt that the resources of the banks in all Central European countries have considerably diminished on account of the bad debts of their customers and through the fall of security prices. It would be desirable that the Central European banks should disclose monthly or, at least, quarterly balance sheets on the pattern provided by the Niemeyer Report for Brazil. Recent German and Swiss legislation and the proposal in the Niemeyer Report for the supervision of all banks either by the State or through the Central Bank provide precedents which are certainly desirable for all Central European countries. It is satisfactory that the Financial Committee of the League of Nations has realised this necessity and has asked the Austrian Government to change the existing Banking Law.

With the exception of Austria, there are too many banks in Central Europe. The earlier concentration process of the Austrian banks was necessitated by their high working expenses and heavy losses resulting from

the dismemberment of the Austro-Hungarian monarchy. In Hungary so far no mergers have taken place, but they cannot be long delayed. It is important that the Government and the National Bank should extend the necessary assistance to the amalgamations which are in preparation. While the Austrian and Hungarian banks played a very essential part in the recovery of their countries after the inflation period, which destroyed practically all mobile capital in Austria and Hungary, they are not free from blame for not having restricted their foreign short-term commitments in time.

The future of the Central European banks is closely connected with the monetary policy of the big creditor nations. It would certainly be in the interest of all Central European countries and banks that wholesale prices should rise on the world markets, because that would help those countries to sell their goods abroad, and without an export surplus or new credits it is difficult to see how they can possibly pay their old debts. Nevertheless, it is essential that the stability of all Central European currencies should be maintained on the gold standard, as no small borrowing nation can depart from the gold standard without risking an endless currency depreciation. It should be remembered that, with the exception of Czechoslovakia, all Central European countries are debtor nations, with heavy obligations fixed in gold currencies. Still, Great Britain's suspension of the gold standard should benefit considerably the Central European countries if they succeed in maintaining their currencies on the gold standard, as a great portion of their foreign debts are contracted in sterling.

THE AUSTRALIAN BANKING YEAR.

As was inevitable, recent Australian banking history has been inextricably bound up with the development of the political situation from the investigations of the Niemeyer Commission to the comprehensive scheme of voluntary debt conversion and economies put through last August by the Government with the active co-operation of the banks. All through the political and financial vicissitudes of this year, which included the temporary *de facto* abandonment of the gold standard, the banks have followed a clear-cut line of policy. On the one hand they have felt it their duty to assist the Government in its legitimate and practical proposals to the full limit of their powers. On the other hand, they have felt bound to warn the Governments, both of the Commonwealth and the States, whenever they began to depart from the limits of sound financial policy.

Evidence of practical assistance afforded by the banks can readily be cited. In the summer of 1930, when the financial situation first became acute, the trading banks agreed to create an exchange pool of their sterling

resources and to give the Governments first call upon this pool for the purpose of meeting the service of their external debts. This decision was not a light one, for it forced the banks to ration the normal and legitimate demands of their customers for sterling, and numerous and notorious cases of hardship were recorded. It is true that early in 1931 one of the leading banks broke away from the pool, but by this time the pool had outlived its usefulness, for an unofficial market in exchange had sprung up, and it was clearly advisable to abandon the pool and recognise the undoubted fact that the Australian pound had fallen to a substantial discount and that for the moment Australia was off the gold standard. Even so, the maintenance of the pool for six months had been of material assistance to the Governments.

Furthermore, the banking world in both Australia and London again and again helped the Government to borrow against short-term debt maturities at times when potential lenders were inclined to askance at Australia's finances. In September,

£5,000,000 of maturing short-term Treasury bills were replaced by six months bills at the relatively favourable rate of £8 0s. 2d. per cent. At the same time the Bank of England agreed to help in providing for the repayment of further loans maturing that year. The Australian banks had a prominent share in the success of the £28,000,000 Conversion Loan launched internally at the end of 1930. Finally, when after repeated warnings from the banks, some of which are cited below, the Commonwealth Government adopted the recommendations of the Melbourne Conference and carried through a comprehensive plan of financial reform on sound lines, the banks gave all the support within their powers. The plan rested on the one side upon a general reduction of wages, salaries, pensions and also of interest rates, and, on the other side, upon a scheme of voluntary debt conversion designed to reduce the interest on the internal debt by 22½ per cent. The banks helped in many ways. They agreed to reduce their own interest rates both on deposits and advances,

provided, of course, that rates agreed for fixed deposits remained intact pending the expiry of such agreements. They, no doubt, gave technical advice regarding the terms of the conversion scheme. Most important of all, when the time came for offers of voluntary conversion to be made, the banks, as important holders of Australian Government stock, were the first to volunteer in accordance with the terms of the plan.

At the same time it can fairly be claimed that the banks, by their repeated warnings during the past fifteen months, have helped to turn Australian finance onto the right lines. The first and most comprehensive of these warnings were those uttered by the Niemeyer Commission just over a year ago; for it must not be forgotten that Sir Otto Niemeyer and his colleagues were despatched by the Bank of England at the invitation of the Australian Government, following an appeal by the latter for aid in dealing with its indebtedness in London. The following spring, when bills were introduced with the open design of inflating the Australian

currency and of restoring the 1929 price-level, the banks felt bound to protest, just as the Commonwealth Bank felt obliged last April to warn the Government that it was approaching the limit of the bank's powers to provide the administration with fresh financial accommodation. The failure of the New South Wales State Savings Banks came as a swift and unpleasant confirmation of the justice of this warning and of the dangers of the financial extravagances of the Government of that particular State.

A month later, when giving evidence before the Senate on the Commonwealth Bank Act Amendment Bill—one of the inflationary measures referred to above—Sir Robert Gibson, the chairman of the Commonwealth Bank, felt bound to return to the charge. He opposed definitely any permanent departure from the gold standard, and while he objected to the clause in the Bill forcing the Commonwealth Bank to ship part of its minimum gold stocks to London, stated that he regarded such gold shipments as a lesser evil than that of default. He warned the Senate, and through them the Government, that Australia's financial situation at the time was such as to preclude any re-borrowing in London upon reasonable terms. There is every reason to regard this statement of Sir Robert Gibson as having

helped to pave the way for the financial reforms of recent months. The banks, however, are still exercising vigilance. As recently as last month they warned the Government against further borrowing.

A year which witnessed the virtual abandonment of the gold standard, numerous and serious financial vicissitudes, and a world-wide trade depression from which Australia as a primary producer has suffered to the full, has inevitably been an unremunerative and difficult year for the banks. Some indication of their troubles is given in the accounts quoted below, though it must be emphasised that the accounts equally reveal the success with which the banks are weathering the storm with unimpaired strength. There has been a general contraction in acceptances and deposits, but cash and investments have on the whole been maintained, and the fall in deposits has been met by a contraction in earning assets comprised under the heading "bills, loans and advances." This explains the decline in net profits, necessarily reflected in dividend reductions, but the bank accounts equally make it plain that the exchange depreciation of the Australian pound has not been accompanied by credit inflation, and that the banks have increased their liquidity. In the circumstances this is no mean achievement.

BANKING IN CANADA.

(BY A CORRESPONDENT.)

The Canadian banks have been passing through a difficult and trying year, for the Dominion has felt the full impact of the world-wide economic depression, and bankers have had to struggle with the problems created by hard times both for agriculture and industry. During the recent boom years, when money was being eagerly sought for all kinds of new enterprises, the banks had to exercise careful judgment about their loans and to function as a restraining conservative force; but the drastic contraction of business and, consequently, of the demand for credit has materially altered their problems. Their chief difficulties have come through frozen credits and the embarrassments of corporations and individuals who had borrowed heavily and been unable to meet their obligations. It is an open secret that the serious financial plight of a number of the pulp and paper companies has been a source of worry to certain banks for the past two years, but this particular burden has been substantially alleviated by the

reorganisation of the capital structure of the Canada Power and Paper Co. The agricultural depression in the prairie country, aggravated this year by a partial crop failure, has left the banks with a quantity of loan to farmers whose liquidation must perforce be postponed, and they have been subjected to a considerable barrage of criticism from western politicians for their present conservative attitude towards further loans to farmers. Indeed, during the past year the banking system of Canada has been the target for almost continuous attack, and there have been put forward, both inside and outside of Parliament, a variety of reforming proposals ranging from the establishment of a central bank of rediscount to the abandonment of the gold standard and deliberate depreciation of the currency, the latter course being urged on the ground that it would operate as a bonus for the export of agricultural products. Considerable support has also developed for bimetallism, and Mr J. F. Darling, during a visit to

the Dominion, received a good deal of encouragement for his propaganda in favour of the stabilisation of silver at a fixed ratio value to gold; among others, Mr Arthur Meighen, a former Conservative Premier, has lent his high authority to the idea.

The latest banking statement, covering up to the end of July, tells the story of the present situation, the comparative data for June, 1930, and July, 1931, being appended:—

		ASSETS.		LIABILITIES.

Total Liabilities.....
Credit Index*.....

* Ratio of current and call loans in Canada to demand and savings deposits in Canada.
One of its most significant items is the gain of 49 million dollars in savings deposits in the last twelve months. In July, 1930, they stood at \$1,402,000,000, having dropped 128 million dollars from their peak figure of January, 1929; but their recovery to

situation than the somewhat over-extended position in which the banks found themselves two years ago before the great stock market débâcle began. As the result of the increase in savings and the decrease in outstanding loans, the banks have found themselves in a single year with roughly 370 million dollars of funds available for investment. \$24,000,000 of advances secured from the Dominion Government under the Finance Act have been repaid, and only two of the banks are under any liability under this head to the Federal Treasury. The shrinkage in stock-market speculation has shut off in a large measure one profitable outlet for the surplus money of the Canadian banks in the New York call market, and, as a consequence, they have turned to the policy of investing a much larger proportion of their funds in bonds, with the result that during the year the security holdings of the banks have increased from 447 to 693 million dollars. The proportion of total bank assets invested in

securities is now almost as high as it was before the last business boom began, and presumably the banks will hold their security investments until such time as revived business needs generate a demand for loans. Undoubtedly the present year will witness a substantial diminution of the profits of the Canadian banks, but although the market values of all their stocks have shown a notable recession, in some cases the drop being 30 per cent., there is no apprehension that any dividends will have to be cut this year. On the whole the Canadian banks seem to be weathering the economic blizzard very comfortably; they are now reduced to ten in number through the disappearance of the Weyburn Securities Bank, a small western institution which, although not in a state of insolvency, had become involved in difficulties through frozen loans to farmers, and was, with the approval of the Finance Department, taken over by the Imperial Bank of Canada.

INDIAN BANKING.

In view of India's peculiar political, economic and financial difficulties, super-imposed upon the general world depression, it was inevitable that the leading bank balance sheets for the end of 1930 should have registered a definite contraction. At home, 1930 witnessed a contraction in imports and exports of the order of 25 per cent., a heavy fall in the internal price-level, heavy deficits in both the Central and Provincial Budgets, and a period of continued political unrest, which found vent in riots, faction fights and boycotts. Abroad, there was the world trade depression and the collapse of world prices, which particularly affected India, as a producer of primary commodities. In short, the impairment of her general financial situation was such as to necessitate in the summer of 1931 the announcement by the British Government that, should need arise, they were prepared to apply to the British Parliament for authority to give financial support under suitable conditions to the Government of India in order to maintain the credit of the country pending the settlement of the constitutional problem and the formulation of provisions for the future maintenance of India's credit. Even though this undertaking had a definitely contingent character, it emphasised the difficult position

of Indian finances. Further evidence of this difficulty is to be found in the abnormal increase in Bank rate on August 6th from 6 to 7 per cent.

The summary of Indian banking accounts given below in the main reflects these adverse developments. The note circulation and deposits have both fallen in consonance with the decline of prices, while the contraction in discounts and advances can be traced to the same cause. Bad trade and the uncertain outlook have partly forced and partly induced Indian bankers to add to their liquidity by increasing the less remunerative portions of their assets such as cash and investments. The net result is that, as has happened in other countries, the Indian banks, though in a stronger position, are contributing less to the productive activity of the country.

When the gold standard was suspended in Great Britain three weeks ago, a decree was issued in India "suspending the obligation of the Government of India to sell sterling or gold against rupees," and it was simultaneously decided to endeavour to maintain the link with sterling on the fixed rupee-sterling rate of 1s. 6d. This decision evoked some political opposition, but those who remember the commercial difficulties of India immediately after the war, when the rupee was tem-

porarily upon a gold basis, will not question its wisdom. The Government is now exercising its powers under the above decree by only selling sterling for genuine trade purposes, for the fulfilment of obligations incurred before September 21st, and for reasonable domestic requirements. This follows closely the present practice of the British Treasury. These initial steps were followed up by fresh budgetary proposals, consisting of both new taxation and economics designed to meet the

existing deficit due to short-fall of revenue. This was essential, if the stability of the rupee were to be maintained, but, apart from this, India's own position, and the suspension of the gold standard in London, may make it more difficult for her to borrow afresh or to replace maturing debt. Thus, despite the existence of a gold and sterling currency reserve of nearly £40,000,000, the financial outlook is not free from anxiety.

in the country were not sound. In fact, last year was a period of relative prosperity in the Free State. While all prices fell, the price of exports, especially live stock, fell far less rapidly and disastrously than that of imports, and the terms of trade moved distinctly in favour of the country. The collapse in the price of cereals and animal feeding stuffs was beneficial to Irish farmers by lowering the cost of their raw materials, while the price of their principal product was maintained at a relatively satisfactory level.

To what extent this prosperity can be expected to continue is difficult to say. Within the last month the first really serious fall in livestock prices has been felt. Naturally the Irish farmer's lot depends upon the conditions of purchasing power in England, and recent events have exercised an unsettling influence in his chief market. It is now hoped that the depreciation of the pound will cause a rise in food prices which will benefit farmers, and it is hoped in some quarters that Great Britain will impose a tariff on foodstuffs with imperial preference.

The Free State currency is, of course, linked to sterling into which it is convertible. When the British pound depreciates, the Irish pound automatically depreciates by exactly the same amount. The Free State has thus been driven off the gold standard through no fault of its own. None of the conditions that gave rise to difficulties in Great Britain are present in the Free State. The Budget is balanced, the balance of payments is almost certainly favourable, and the dole is

This table shows the changes that took place in Irish banking during last year. It also shows the different ratio between advances and deposits in the Free State and in Northern Ireland. As one would have suspected, the ratio is small in the Free State, where a very large part of the banks' assets are held in the form of investments. Indeed, the Free State banks have been described by disappointed borrowers as glorified investment trusts. The general nature of their business enables them to work on a very small cash reserve, so that the proportion of their earning assets is abnormally high.

Last year was a period of prosperity for Irish banks, many of which earned increased profits. The half-

yearly statements issued in July indicate that profits have been maintained in all cases, and no bank has thought it necessary to diminish the rate of dividend distribution. This prosperity is largely the result of the cheap money rates which prevailed until this summer. Irish banks always derive advantages from cheap money. They employ only a small part of their assets in the London short-money market, and succeed in securing a wide margin between their deposit rate and the rate of interest on their advances. These conditions, however, would not in themselves suffice to make banking prosperous if the underlying conditions

non-existent. The inherently sound condition of the country's finance is reflected in the refusal of the Irish banks to raise their rate following the raising of Bank rate in London to 6 per cent.

The Currency Amendment Act, 1930, has removed the limitation previously in force whereby the British Government securities which might be held as backing for the legal tender notes should be of a kind maturing within twelve months. In exercise of the discretion conferred by this Act, the Currency Commission has acquired British Government securities of maturity exceeding twelve months amounting to £1,470,552.

* Irish Free State.

Provision is further made in this Act for widening the class of securities that may be held as backing for the legal tender notes by means of a unanimous request by the Currency Commission followed by an order of the Minister for Finance subject to the approval of both Houses. This procedure may possibly be utilised if there is any desire to acquire securities other than British in face of the present crisis.

The volume of the legal tender notes issued fluctuated last year between a minimum of £6,632,767 and a maximum of £8,019,408. The consolidated bank notes amounting to £6,000,000 continued in circulation. Efforts are being made to withdraw from circulation the old private issues of the banks, and in this

connection a dispute has arisen between the British and Free State Governments regarding the "dead" notes, to which both Governments lay claim. Negotiations in this matter are pending. The banks have been required by the Currency Commission to lodge security for the protection of the consolidated bank notes. The interest on securities so lodged is still the property of the banks.

The surplus income of the Currency Commission for the year 1930-31 amounted to £227,946, of which £103,000 was paid to the Exchequer. The decline in the surplus income from the 1929-30 figures of £324,267 was caused by the fall in the rates for short-term investment.

SOUTH AFRICAN BANKING.

IF it were possible for any one country to remain prosperous while all others were overshadowed in deep industrial and financial depression, South Africa, as the principal producer of the world's supply of gold, should be that one; for gold is the one commodity of which there is a scarcity to-day and the only metal whose price can never fall below a fixed and quite profitable limit. Moreover, with prices of everything else going down, it has been possible in recent times in many cases to effect appreciable reductions in costs of production. In fact, though agriculture, which is, of course, one of the chief industries of South Africa, has been sharing the fate of agriculture in every other country, and other minor industries are almost equally depressed, in a large

£89,773,659, and with £51,245,432 in 1929. Cash, at £28,082,764, is lower by nearly one million pounds, but this does not represent more than a fractional decline in liquidity. Investments show an increase of about half a million. Profits, however, are in all cases lower, and in the case of one bank operating outside South Africa have fallen heavily. As a result of the financial crisis in Great Britain, gold has gone to a very substantial premium, which, of course, fluctuates widely according to the prevailing value of sterling. The South African pound, which before the crisis was normally at about $\frac{1}{4}$ per cent. discount on the British pound for cable transfers, stood immediately after the suspension of the gold standard at a buying rate of £85 per £100 sterling and a selling rate of £90 per £100 sterling. A few days

Notes:—Figures for 1913 are preliminary. South African banks announced later, however, the South African banks announced that the exchange rates for selling in South Africa were 10s. 6d. for the pound sterling.

measure, to judge from the banking figures, South Africa has actually escaped much of the sufferings of other nations. Unfortunately, banking experience in other parts of Africa has been such as to suggest that those areas have not escaped the consequences of the trade depression.

Even so, the table of aggregate figures given below reveals, in comparison with other countries, quite a remarkable state of affairs, for in many items of the banks' accounts increases have been recorded. Deposits in 1931 again show an increase over the previous year, and among assets, discounts and advances are up to £91,744,800, compared with last year's figures of

later, however, the South African banks announced that the exchange rates for selling in South Africa were cancelled, and that quotations would only be given on application for spot transactions. Meanwhile, difficult as it may be to maintain its decision in view of the increasing demand for her gold by foreign countries, the Union Government of South Africa has decided to adhere to the gold standard, though it is possible that an embargo may be placed upon the export of South African sovereigns. In any case, it is possible to view the future of South Africa with considerable hope, and the strong position of her banks will enable her to take full advantage of any improvement in business.

MIDLAND BANK LIMITED

"The Service of the Midland Bank"

The first customer of the Midland Bank could never have foreseen the breadth and variety of the facilities available to his countless successors. It is the aim of the booklet bearing the above title to describe some of the services which the Bank now offers to actual and potential customers

A copy of the booklet is obtainable at any of the 2,100 branches of the Bank

EVERY MODERN BANKING SERVICE

TO INDIVIDUALS

All classes of trusteeship and executorship can be entrusted to the House, thus relieving you of responsibility and anxiety and ensuring expert management. The House will also serve you in practically all your affairs with which the handling of money or property is concerned; such as, for example, income tax and surtax returns, letters of credit for foreign travel, etc.

TO COMPANIES

The special and responsible duties of stock and share registration and transfer cannot usually be handled so efficiently as a department of your own business. These duties can be undertaken by the House both efficiently and economically.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED.

The report of the directors states that the net profit to June 30, 1930, after making provision for all charges, rebate, &c., amounts to £491,409, which, together with £507,901 brought forward, makes a total of £999,310, of which £169,234 was absorbed by the interim dividend on the "A" shares, leaving an available balance of £830,076. In view of the world-wide depression in commodity prices, which has an important effect on all the countries in which the bank operates, the directors have deemed it prudent to strengthen the internal reserves by transferring to contingency account the premium received on the issue of "B" shares made in December last, after deducting the commission paid on such issue, and are also allocating to that account the sum of £350,000 from appropriation account. The directors accordingly recommend that £169,234 be applied to the payment of a final dividend of 6s. per "A" share, less 1s. come tax, making a total distribution for the year of 10 per cent.; £48,948 be applied to the payment of a dividend of 11s. 4d. per "B" share, less income tax, being a distribution at the rate of 10 per cent. per annum, calculated proportionately on the instalments of capital paid up as from the due dates thereof; £30,000 be added to the staff pension fund; £26,743 be placed to legal reserves in Chile, Colombia and Ecuador; £350,000 be transferred to contingency account; and that the balance of £207,151 be carried forward.

BALANCE SHEET—June 30, 1930.

LIABILITIES.	£	ASSETS.	£
Issued capital—£73,466 "A" shares of £10 each, £5 paid, £4,367,330; 1,265,340 "B" shares of £1 each, fully paid, £1,265,340	8,632,670	Cash in hand, at bankers and at short notice	7,490,092

BANCA COMMERCIALE ITALIANA.

The report presented at the annual meeting, held in Milan on March 28, 1931, is as follows: Net profit, Lire 87,902,350; 5 per cent. dividend on the capital of Lire 700,000,000, Lire 35,000,000; 5 per cent. to the board of directors, Lire 2,645,118; leaving Lire 50,257,232. Out of this it is proposed to pay an additional dividend of 7 per cent. on the capital, Lire 49,000,000, which will leave a balance of Lire 1,257,232. To this is to be added the amount carried forward from previous years, Lire 28,437,043, leaving a balance to be carried forward of Lire 29,694,275.

BANK OF LONDON AND SOUTH AMERICA, LIMITED.

The report for the year ended September 30, 1930, states that the net profit, after deducting all expenses, amounts to £390,472, to which has to be added £209,573 brought forward from last year, making a total of £600,045, out of which the interim dividend of 4 per cent., paid in June last, amounted to £141,000. From the unappropriated balance of £458,445 the directors recommend the following distribution:—To dividend of 5 per cent., payable December 22, 1930, making 9 per cent. for the year, subject to income tax, £177,000; to contingency reserve, £100,000; to profit and loss carried forward, £181,445—£458,445.

BALANCE SHEET—September 30, 1930.

THE BRITISH BANK OF SOUTH AMERICA, LIMITED.

The report for the financial year ended December 31st last states that the gross profits, after allowing for rebate of interest on current bills and drafts, for interest on deposits, and after making ample provision for bad and doubtful debts and contingencies, amount to £292,100; this, with the balance of £108,625 brought forward from the previous year, makes £400,725. After deducting all charges at the head office and branches, including directors' remuneration, government taxes in Brazil, &c., amounting to £201,965, there remains £198,760 available. A dividend on account of 10s. per share, amounting to £50,000, was paid in September, 1930, and it is recommended that a further dividend of 6s. per share, amounting to £30,000, be declared, making, for the year, a distribution of 16s. per share, or 8 per cent., subject to income tax, on the paid-up capital of the bank of £1,000,000. After making this transfer and paying this dividend, there will remain the sum of £118,760, which the directors propose to carry forward.

BALANCE SHEET—December 31, 1930.

LIABILITIES.		ASSETS.

COMMERCIAL BANK OF THE NEAR EAST,
LIMITED.

The directors presented the following statement of profits for the year ended December 31, 1930:—Net profit for the year, £8,236; add balance brought forward from the year ended December 31, 1929, £384—£8,620; deduct interim dividend at 5 per cent. per annum, less income tax, for the half-year ended June 30, 1930, which was paid on September 2, 1930, £3,875; leaving a balance of £4,745. The directors recommend the distribution of this amount as follows:—To transfer to reserve fund, including the 5 per cent. required by the articles of association, £500; to payment of a final dividend for the half-year to December 31, 1930, at the rate of 5 per cent. per annum, less income tax at 4s. 6d. per £, making a total payment for the year of 5 per cent., £3,875; to carry forward to the current year, £370—£4,745.

HAMBROS BANK LIMITED.

According to the report submitted at the general meeting on May 28, 1931, after payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, and income tax, the accounts show a profit of £310,303. Deducting the directors' remuneration of £15,182 and adding the balance brought forward from last year of £91,792, there remains an available total of £386,913. After setting aside £100,000 to contingency reserve account and allowing the sum of £58,125 for the interim dividend on the £10 shares and £9,300 for the interim dividend on the £1 "A" shares paid on October 29, 1930, the directors now recommend the payment of a further dividend of 15 per cent., less income tax, on the £10 shares, making a total of 22½ per cent. for the year, less income tax, and a further dividend of 3 per cent., less income tax, on the £1 "A" shares, making a total of 6 per cent. for the year, less income tax, and that the balance of £93,938 be carried forward.

BALANCE SHEET—March 31, 1931.

THE HONGKONG AND SHANGHAI BANKING CORPORATION.

The report presented to the meeting held on February 28, 1931, states that the net profits for the year, together with \$3,387,478 balance brought forward from last account, and making provision for bad and doubtful accounts and contingencies, amount to \$24,114,209. The directors recommend the transfer of \$500,000 from the profit and loss account to the silver reserve, which will then stand at \$10,000,000. They also recommend writing off bank premises account the sum of \$1,000,000. After making these transfers, deducting the interim dividend of £3 per share, paid on August 11th last, viz., £480,000 at 1s. 3½d. = \$7,432,258, and remuneration to directors, there remains for appropriation \$15,131,951, out of which the directors recommend the payment of a final dividend of £3 per share, viz., £480,000, and a bonus of £1 per share, viz., £160,000, amounting in all to £640,000, which, at 1s. 1½d., the rate of the day, will absorb \$11,702,867. The balance, \$3,429,093, to be carried to new profit and loss account.

BALANCE SHEET—December 31, 1930.

IONIAN BANK, LIMITED.

The report presented at the meeting on December 16, 1930, states that the profits (provision having been made for expenses of management, losses, all bad and doubtful debts, rates, taxes, and income tax at the branches and in England) amount to £39,531; to which has to be added the balance brought forward from last year, £25,058—£64,589; from which there has been paid interim dividend for the year ended August 30, 1930, at 3s. per share, subject to income tax, paid June 3, 1930, £18,000; leaving available for distribution, £46,589. This the directors propose should be disposed of as follows:—Final dividend for the said period at 3s. per share, subject to income tax, £18,000; leaving a balance to be carried forward of £28,589.

BALANCE SHEET—August 30, 1930.

THE IMPERIAL BANK OF PERSIA.

According to the directors' report, the profits for the year ended March 20, after making provision for expenses of management, general charges in London and at chief office and branches, income tax, royalty, and bad and doubtful debts, amount to £93,013, to which has to be added £44,880 brought forward from last account, making a total of £137,893. The assets and liabilities of the branches in Persia have been converted at the rate of exchange of 89½ Krans. per £ sterling, being the rate on March 20, 1931, as fixed by the Control Commission appointed by the Persian Government. The rate last year was Krans. 59½. The directors now recommend payment of a final dividend of 7s. per share, and a bonus of 2s. per share, making, with the interim dividend of 4s. per share, a total for the year of 13s., free of income tax. It is also proposed to add £20,000 to reserve, which is thereby increased to £670,000; to write off bank premises £10,000, and to carry forward £42,893.

BALANCE SHEET—March 20, 1931.

Note.—Contingent liabilities: Redescribed bank bills, £53,633; guarantees, confirmed credits and forward foreign exchange contracts, £78,463.		Sundry securities (at under market value)	81,177
		Loans, overdrafts and other balances (including currency with bankers abroad, £109,234) (less reserve for doubtful debts)	689,999
		Customers' liabilities for acceptances	4,200,950
	2,840,945		2,840,945

The directors' report for the year ended June 30, 1931, states that after making provision for bad and doubtful debts, income tax, expenses of management and all other charges, and including £19,637 brought forward, there

remains to the credit of profit and loss account a balance of £35,200. The directors consider it prudent to conserve the bank's resources, and therefore recommend the placing of £25,000 to reserve for contingencies and the carrying forward of £10,200.

THE CRAFT OF CRIME

When Bill Sykes and the Artful Dodger represented the craft of crime little ingenuity was needed to counter it. To-day the modern burglar commands all the resources of science. His ingenuity is wonderful. His knowledge of engineering practice is complete and his skill must be admitted—yet we in no way fear him. For almost one hundred years we have been at war with the burglar, and he has yet to win his first battle against The Chatwood Security. What The Chatwood Safe has it holds, for delivery only to the keeper of the key.

October 10, 1931.]

THE NATIONAL BANK OF EGYPT.

The report presented at the meeting held in Cairo on March 19, 1931, states that the gross profit for the year ended December 31, 1930, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for doubtful debts, amounts to £1,078,343. After deducting from this sum for directors' fees £15,250, for current expenses, £464,055, there remains £599,038. In conformity with Article 49 of the bank's statutes, a dividend of 4 per cent. is payable on the share capital, £120,000. After this distribution there remains £479,038; adding to this the balance brought forward from last year, £228,481, the amount available is £707,519. The directors consider it prudent to allocate to special reserve for contingencies a sum of £50,000, which leaves £657,519. From this amount the directors recommend the payment of an additional dividend of 14 per cent. on the share capital, which will absorb £420,000, and to carry forward the balance of £237,519.

OTTOMAN BANK.

According to the report, the accounts made up to December 31, 1930, after providing for bad and doubtful debts out of revenue and provisions previously made, show an amount available of £138,271, including £27,319 brought forward from the previous year. The committee recommend that a distribution be made at the rate of 3s. per share payable in Istanbul, London and Paris on June 29, 1931, and that, of the surplus, the sum of £40,000 be appropriated as provision for contingencies, leaving £23,271 to be carried forward to the current year.

SOCIÉTÉ GÉNÉRALE.

(Pour Favoriser le Développement du Commerce et de
l'Industrie en France.)

THE YOKOHAMA SPECIE BANK, LIMITED.

The report for the half-year ending December 31, 1930, states that the net profit of the bank, after providing for all bad and doubtful debts, rebate on bills, &c. shows 12,936,139 yen, inclusive of 6,353,667 yen brought forward from last account. The directors propose that 1,600,000 yen be added to the reserve fund, and recommend a dividend at the rate of 10 per cent. per annum, which will absorb 5,000,000 yen. The balance, 6,436,139 yen, will be carried forward to the credit of next account.

THE NATIONAL BANK LIMITED.

ESTABLISHED 1835.

Head Offices: 13-17, OLD BROAD STREET, LONDON, E.C. 2, and 288 Branches and Sub-Offices in Gt. Britain and Ireland.
Capital Subscribed, £7,500,000. Paid up, £1,500,000. Reserve Fund, £1,485,000. Deposits, etc. (as at 30th June, 1931), £37,047,500

THE NATIONAL BANK AFFORDS A BANKING SERVICE COMPLETE IN EVERY RESPECT.

Current Accounts.—Current Accounts are conducted in conformity with the usual practice of Bankers. Intelligent may be made for the credit of customers' accounts at any Branch of the Bank, or at any of the Offices of its Agents in Great Britain, and, by arrangement, similar facilities are available for the encashment of cheques. Customers may obtain Advances upon negotiable securities and approved Bills are discounted.

Deposit Accounts.—Sums of money from £10 upwards are received from the public and interest allowed at the current rate as published from time to time. Small Savings Accounts of one shilling and upwards are also opened, on which interest is allowed and Home Safes are available for small depositors—explanatory leaflets may be had on application.

Collections and Remittances.—The collection of Bills, Dividends, Coupons, Annuities, Pensions, &c., is undertaken. Open credits arranged and telegraphic remittances effected.

Foreign and Colonial Business.—Drafts are issued on the Bank's Agents and Correspondents throughout the world. World-Wide Circular Letters of Credit and Circular Notes are also issued. Cable Transfers are effected. Documentary Credits established, approved Foreign Currency purchased, and every description of Foreign and Colonial Business transacted.

Income Tax Repayment Claims, Returns for Assessment, &c., prepared on behalf of Shareholders and Customers. Particulars may be obtained at all Branches or applications may be made direct to the Head Offices of the Bank.

Executor and Trustee.—The Bank is prepared, in approved cases, to act as Executor and Trustee of Wills, Trustees of Settlements, Trustee for Debenture Holders, &c. Particulars and terms may be obtained at all Branches or by direct application to the Head Offices of the Bank.

The Agency of Country, Colonial and Foreign Banks is undertaken by the Bank.

BANKING SERVICE

A SERVICE complete is available to customers of the Williams Deacon's Bank Ltd. Extensively developed in recent years—this service includes Intelligence Departments, the Managers of which are, at all times, prepared to give up-to-date information on questions relative to Trade, Financial and other conditions prevailing in any part of the world.

The Bank is a Trust Corporation, and as such is prepared to act as Trustee or Executor for most needs, either business or private.

Enquiries may be made at any branch of the Bank.
